58. Dr. Allison Fall performed an Independent Medical Examination on behalf of Respondents. She reviewed Claimant's medical records, interviewed Claimant, and physically examined him. The primary basis of Dr. Fall's opinion is that the mechanism of injury described by Claimant was insufficient to cause a cervical spine trauma or shoulder injury and that Claimant's shoulder condition is preexisting. For example, Claimant stated that the accident caused him to get thrown into the doorframe, in which he hit his left shoulder and head. Claimant further testified that his impact into the doorframe bent the doorframe. He also testified that when he drove into the median, at approximately 75 mph, he was bounced around like a pinball. However, Dr. Fall concluded that the accident did not cause Claimant to be thrown into the doorframe because the nurse practitioner who treated Claimant the day after the accident did not note that Claimant's left shoulder and head hit the door frame. Although Dr. Fall indicates that the nurse practitioner's notes do not indicate Claimant's left shoulder and head hit the doorframe, she does not account for a possible plausible explanation for such in her analysis in determining causation. A plausible explanation could be that such information was not provided to the nurse practitioner, or if it was, it was not written down. It should be noted that the nurse practitioner's notes are very brief and somewhat cryptic. Dr. Fall also fails to address whether the mechanism described by Claimant, if true, would account for Claimant's injuries. Therefore, Dr. Fall's opinion on causation is not found to be persuasive or credible.

59. Dr. Fall also bases her opinion that the shoulder injury is not related based on the fact that there is one medical report dated October 27, 2015 in which Claimant is being treated for his diabetes and complains of left shoulder pain. The medical report states Claimant hurt his shoulder playing basketball. Claimant, however, returned to the doctor on January 26, 2016, for diabetes and a cold and did not complain of left shoulder pain. Claimant again returned to the doctor on February 16, 2016, and did not complain of left shoulder pain. Claimant returned an additional time on March 22, 2016 for knee pain and did not complain of shoulder pain. Moreover, Claimant credibly testified at hearing that he has not played basketball since he was in high school and did not hurt his shoulder playing basketball, or doing anything else, before the auto accident. Dr. Fall did not ask Claimant about the discrepancy and allow Claimant to provide a possible explanation for the note in his medical record and factor that into her causation analysis. Moreover, Dr. Fall did not comment on the fact that Claimant did not complain of any shoulder pain during the three medical appointments he had prior to the motor vehicle accident. Dr. Fall also failed to analyze whether Claimant's auto accident might have aggravated a preexisting shoulder condition. Instead, Dr. Fall notes the discrepancy and concludes Claimant's shoulder condition was preexisting and not related to the auto accident. Therefore, this ALJ does not find Dr. Fall's opinions to be credible or persuasive.

60. Claimant testified credibly that, while he may have told Nurse Hablutzel that his left shoulder hurt when he saw her on October 27, 2015 (Claimant's Exhibit 9, p. 69), he did not tell her that he got it from playing basketball, since he had not played basketball since high school. He testified credibly that he never hurt his left shoulder prior to his accident on August 9, 2016. No medical evidence was presented to suggest that any prior shoulder injury or treatment occurred prior to August 9, 2016, except for Nurse Hablutzel's notation on October 27, 2015.

61. Claimant testified credibly that prior to the August 9, 2016 accident he did not have problems with his hands, elbow, or any part his arms although he had diabetes. He stated that he did have pins and needles and that a couple of his toes were going numb.

62. Claimant never hurt his neck prior to his accident of August 9, 2016.

63. Dr. Perez wrote a disability certificate dated January 13, 2017 indicating that Claimant could not work. (Claimant's Exhibit 8, p. 20). He wrote a second disability certificate taking Claimant off work on February 10, 2017. (Claimant's Exhibit 8, p. 14).

64. Claimant suffered a shoulder injury and neck injury during the August 9, 2016 motor vehicle accident.

65. Claimant verbally notified Employer of his accident and injuries on the day of the accident, August 9, 2016, and two days later, August 11, 2016. Employer failed to designate any medical providers. Therefore, the right of selection passed to

Claimant and Claimant obtained medical treatment on his own. Claimant sought general medical treatment from N.P. Hablutzel. Claimant sought medical treatment for his shoulder from Dr. Perez. Claimant also sought medical treatment for his neck from Dr. Prusmack. Therefore, N.P. Hablutzel, Dr. Perez, and Dr. Prusmack are authorized providers.

66. Claimant's left shoulder injury required surgery. Claimant underwent shoulder surgery on January 4, 2017. The left shoulder surgery obtained by Claimant was reasonable, necessary, and related to the August 9, 2016 accident.

67. Claimant's neck injury also required surgery. Claimant underwent neck surgery on May 18, 2017. The neck surgery obtained by Claimant was reasonable, necessary, and related to the August 9, 2016 accident.

68. After Claimant underwent shoulder surgery on January 4, 2017, Claimant was unable to perform his regular job duties. In addition, after Claimant underwent neck surgery on May 18, 2017, Claimant was unable to perform his regular job duties.

69. There is no evidence in the record from any medical provider that indicates that Claimant is at MMI or is released to his regular job.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979) The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of Claimant nor in favor of the rights of Respondents and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and

draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *Robinson v. Youth Track*, 4-649-298 (ICAO May 15, 2007).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Issue I: Whether Claimant suffered a work-related injury to his left shoulder and neck on August 9, 2016 when he was involved in an automobile accident while driving from Sterling Colorado to Greenwood Village Colorado for a management meeting.

Compensability

In order to recover benefits Claimant must prove by a preponderance of the evidence that his injury was proximately caused by an injury arising out of and in the course of his employment. Section 8-41-301(1)(b) & (c), C.R.S*.; see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). An injury occurs "in the course of" employment where Claimant demonstrates the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *See Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991). The "arising out of" element is narrower and requires claimant to show a causal connection between the employment and the injury such that the injury has its origins in the employee's work-related functions and is sufficiently related to those functions to be considered part of the employment contract. *See Triad Painting Co. v. Blair*, *supra.*

Generally, injuries that occur while a claimant is going to or coming from the place of employment are not considered to have arisen out of and in the course of the employment. *Madden v. Mountain West Fabricators,* 977 P.2d 861 (Colo. 1999). However, various factors may be considered in determining whether travel to and from work arises out of and in the course of employment. These factors include, but are not limited to: (1) whether the travel occurred during working hours; (2) whether the travel

was on or off the employer's premises; (3) whether the travel was contemplated by the employment contract; (4) whether the employment created a special "zone of danger." Thus, an injury sustained during travel initiated at the direct or implied request of the employer, or during travel that confers a benefit on the employer beyond the employee's mere arrival at work is, barring some deviation, sufficient to satisfy the arising out of and in the course of tests because the travel is contemplated by the employment contract. *Id.* at 865.

Therefore, where an employee is in a travel status, as distinguished from simply going to and from work, he is normally within the course of his employment from the time he leaves his home until he returns to it. *Electric Mutual Liability Insurance Co. v. Industrial Commission*, 391 P.2d 677 (Colo. 1964); *O. P. Skaggs Co. v. Nixon*, 72 P.2d 1102 (Colo. 1937). The 'travel status' exception is applicable where an employee is required to travel away from his home city or town on his employer's business. See, e.g., *Employers' Liability Assurance Corp. v. Industrial Commission*, 363 P.2d 646 (Colo. 1961); *Alexander Film Co. v. Industrial Commission*, 319 P.2d 1074 (Colo. 1957); *Tatum-Reese Development Corp. v. Industrial Commission*, 490 P.2d 94, (Colo. App. 1971).

Claimant lives and works in Sterling, Colorado. Claimant manages the Grease Monkey in Sterling, Colorado. As part of his employment, Claimant is required to travel for a mandatory management meeting the first Tuesday of every month. Therefore, attendance and travel to the meeting was at the express request of Employer. The meeting was necessary for Employer to go over the operation and performance of each store with each store manager.

The location of the management meeting varies. On August 9, 2016, Claimant was required to travel and attend the monthly management meeting in Greenwood Village, Colorado, at 7:00 a.m. The location of the meeting was approximately 150 miles from Claimant's home. Claimant left Sterling Colorado at approximately 3:30 a.m. and was driving - traveling - westbound on Interstate 76 towards Greenwood Village Colorado. At approximately 4:00 a.m., while driving – traveling - to the management meeting, Claimant was involved in an automobile accident.

This ALJ concludes that Claimant has proven by a preponderance of the evidence that at the time of the accident, he was in travel status. Therefore, Claimant has established that his auto accident arose out of the course of his employment.

Whether Claimant injured his left shoulder and neck during the August 9, 2016 automobile accident.

Claimant was required to prove by a preponderance of the evidence that at the time of the injury he was performing service arising out of and in the course of the employment, and that the alleged injury was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates,

accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). The question of whether Claimant met the burden of proof to establish a compensable injury is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

This ALJ finds and concludes that Claimant has met his burden to prove, by preponderance of the evidence, that he suffered work-related injuries to his left shoulder and neck on August 9, 2016. That evidence includes the following:

Claimant was involved in a motor vehicle accident on August 9, 2016. While his vehicle did not make contact with another vehicle or a person, he was forced to take evasive actions to avoid striking a person on the highway. In the process he forcefully turned his steering wheel to the left and then to the right while traveling at 75 miles per hour, causing his van to travel precariously in a grassy median and lean up on two wheels. His sudden evasive action also caused his head and body to forcibly strike the driver's door of his vehicle, causing injuries to his left shoulder and neck. The preponderance of the medical evidence, the Colorado State Patrol Traffic Report dated August 9, 2016, photographs of the scene, a recorded statement given to a Progressive Insurance representative, an "Accident Investigation Report", and mobile phone and text record all support Claimant's credible testimony about the details of the accident.

The preponderance of evidence also supports a conclusion that Claimant hurt his left shoulder in the MVA. Claimant reported a left shoulder injury in the 'Accident Investigation Report". While Nurse Hablutzel's records between August 10, 2016 and November 15, 2016 do not refer to a shoulder injury, a report of the latter date does document that Claimant gave a history of a left arm injured in the MVA. Claimant testified credibly that his neck problem was the primary presenting problem between August 9, 2016 and November 11, 2016, that he reported the shoulder problems to Nurse Hablutzel and his physical therapists between those two dates, but that he may not have always reported a left shoulder at every visit. This ALJ finds and concludes that Claimant did suffer a shoulder injury on August 9, 2016 because such an injury is consistent with the mechanism of injury: a sudden, violent blow to the shoulder as it struck the driver's side door when Claimant forcibly turned the steering wheel of his van to avoid striking a person moving toward him.

This ALJ is not persuaded by the opinion of Dr. Fall that a serious left shoulder injury caused by the MVA is questionable given one medical record documenting an alleged basketball injury with accompanying paresthesias. Claimant credibly testified that he never told Nurse Hablutzel that he injured his left shoulder while playing basketball. Even if he reported shoulder problems on one occasion prior to the MVA, the record is devoid of any other evidence that Claimant sought treatment for his left shoulder at any other time prior to the accident, or that he was unable to perform the heavy duties required of an auto mechanic prior to that time. This ALJ finds and

concludes that Dr. Fall's opinion that there is no evidence of a left shoulder injury caused by the incident on August 9, 2016 is not credible.

This ALJ finds and concludes that Claimant suffered a compensable injury to his neck on August 9, 2016. Beginning August 10, 2016, Nurse Hablutzel documented a neck injury, and there is no evidence in her records prior to that time that Claimant reported any neck problems. Dr. Prusmack has documented pathology at C5-6 and C6-7 which he has opined is associated with Claimant's work related injury on August 9, 2016. The record is devoid of any medical records documenting treatment for any pre-existing cervical degenerative problems. Claimant credibly testified that, while he was able to return to work full time, he had to rely on his employees to do the heavy work, which is consistent with his testimony that he continued to have neck problems until he sought treatment with Dr. Prusmack. This ALJ finds it plausible that Claimant injured his neck when he forcefully turned his steering wheel during his evasive maneuvers and struck his head, neck and left side of his body on the driver's side door.

This ALJ does not find credible Dr. Fall's opinion that the only diagnosis which is possibly caused by slamming on the brakes and swerving would have been a mild cervical myofascial or muscular pain and that "there was no significant mechanism of injury to cause a cervical spine trauma." In this regard, this ALJ is persuaded by the uncontroverted testimony of Claimant that he was travelling 75 miles per hour at the time he swerved, causing his van to travel at high speed in the grass median and that he got bounced around like a pinball before he slammed on his brakes. This ALJ finds that such a mechanism was significant enough to cause a serious neck injury that went beyond "a mild cervical myofascial or muscular pain."

The above evidence, taken together, supports a conclusion that Claimant suffered compensable injuries to his left shoulder and neck while in travel status on August 9, 2016.

Issue II. Whether Claimant Sustained a Separate Shoulder Injury on November 11, 2016. This claim has been assigned WC. No. 5-046-036.

Section 8-41-301(1)(c), C.R.S., requires that an injury be "proximately caused by an injury or occupational disease arising out of and in the course of the employee's employment." Thus, Claimant is required to prove a direct causal relationship between the injury and the disability and need for treatment. However, the industrial injury need not be the sole cause of the disability if the injury is a significant, direct, and consequential factor in the disability. See *Subsequent Injury Fund v. Industrial Claim Appeals Office,* 131 P.3d 1224 (Colo. App. 2006); *Joslins Dry Goods Co. v. Industrial Claim Appeals Office,* 21 P.3d 866 (Colo. App. 2001); *Seifried v. Industrial Commission,* 736 P.2d 1262 (Colo. App. 1986). Consistent with this principle Colorado recognizes the "chain of causation" analysis holding that results flowing proximately and naturally from an industrial injury are considered to be compensable consequences of the injury.

Thus, if the industrial injury leaves the body in a weakened condition and the weakened condition plays a causative role in producing additional disability the disability is a compensable consequence of the industrial injury. *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970); *Price Mine Service, Inc. v. Industrial Claim Appeals Office,* 64 P.3d936 (Colo. App. 2003); *Jarosinski v. Industrial Claim Appeals Office,* 62 P.3d 1082 (Colo. App. 2002). If the injury leaves the body weakened and subject to an opportunistic infection, and the infection results in disability and need for treatment, the disability and need for treatment are proximate results of the industrial injury. *See Johnson v. Industrial Commission,* 148 Colo. 561, 366 P.2d 864 (1961).

On November 11, 2016, Claimant was at work attempting to loosen an oil pan plug with a wrench. While attempting to loosen the oil pan plug, Claimant felt pain and a tear in his left shoulder. Claimant immediately related the pain in his left shoulder to the injury he sustained in the automobile accident on August 9, 2016. The incident that occurred on November 11, 2016 was not a separate and distinct injury. This ALJ concludes that the August 9, 2016 accident and injury to Claimant's shoulder put Claimant's left shoulder in a weakened condition. This ALJ concludes that the additional pain felt on November 11, 2016 was proximately caused by, and relates back to, the August 9, 2016 injury.

Issue III. Whether Respondents are liable for Claimant's left shoulder surgery which was performed on January 4, 2017.

Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. C.R.S. § 8-42-101. However, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. C.R.S. § 8-41-301(1)(c); *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000). The evidence must establish the causal connection with reasonable probability, but it need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 30 Colo. App. 224, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 2993. A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 293 (1951).

In this case, Claimant did not have any significant or disabling shoulder problems prior to the automobile accident. After the accident of August 9, 2016, Claimant developed pain and functional limitations in his left shoulder. The accident put Claimant's shoulder in a weakened condition. On November 11, 2016, Claimant was working and felt additional pain in his left shoulder. Claimant then presented to Dr. Perez for treatment. In his report of January 4, 2017, Dr. Perez stated that Claimant

> [P]resented with a 5 month history of ongoing left shoulder pain after being involved in MVC 8/8/2016. He had pain to neck and left shoulder immediately after the accident however focused on rehab for the cervical spine since he had some motion in the shoulder. He noted difficulty lifting his left arm above his head and was awkward for him but in November 2016 he was at work doing some overhead work developed sharp pain and subsequent definite inability to lift his arm any longer. He had an MRI obtained which revealed a complete supraspinatus rotator cuff tear. We discussed treatment options for this injury and he elected to proceed with surgical repair.

Claimant credibly testified that he needed the surgery because he had severe pain and inability to lift his left arm any longer, and that he wanted to get his shoulder repaired as soon as possible so that he could return to work. Accordingly, this ALJ finds and concludes that the left rotator cuff surgery performed by Dr. Perez was reasonably necessary and related to the August 9, 2016 accident.

Therefore, this ALJ concludes that Claimant has proven by a preponderance of the evidence that the shoulder surgery was reasonable, necessary, and related to the August 9, 2016 motor vehicle accident.

Authorized Medical Treatment

Authorization to provide medical treatment refers to a medical provider's legal authority to provide medical treatment to the claimant with the expectation that the insurer will compensate the provider for the services rendered. *Bunch v. Industrial Claim Appeals Office,* 148 P.3d 381 (Colo. App. 2006); *One Hour Cleaners v. Industrial Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995).

Section 8-43-404(5)(a)(I)(A), applicable to this 2016 injury and claim for benefits, provides that:

> In all cases of injury, the employer or insurer shall provide a list of at least four physicians or four corporate medical providers or at least two physicians and two corporate medical providers, where available, in the first instance, from which list an injured employee may select the physician who attends said injured employee.

The statute further provides that if "the services of a physician are not tendered at the time of injury, the employee shall have the right to select a physician or chiropractor."

This statute affords the employer the right to designate at least four physicians and/or corporate providers that are deemed authorized to provide medical treatment.

Consistent with the version of § 8-43-404(5)(a) that was amended in 1997, the current version provides that the employer's right to designate the authorized providers may be lost and the right of selection passed to the Claimant if medical services are not tendered "at the time of injury." *See Rogers v. Industrial Claim Appeals Office,* 746 P.2d 565 (Colo. App. 1987).

Carrier Liability for Medical Services Provided After Notice of Injury

Section 8-42-101(6)(a), C.R.S. provides in relevant part:

> If an employer receives notice of injury or, if insured, the employer's insurance carrier, after notice of the injury, fails to furnish reasonable and necessary medical treatment to the injured worker for a claim that is…found to be compensable, the employer or carrier shall reimburse the claimant, or any insurer …that pays for related medical treatment, for the costs of reasonable and necessary treatment that was provided.

In this case, Claimant advised Employer that he was involved in an accident while driving from his house in Sterling Colorado to the management meeting in Greenwood Village Colorado. Claimant provided this notice to Ms. Post on August 11, 2016. Although given notice of a work related accident and injury, Employer did not provide Claimant a list of medical providers consistent with C.R.S 8-43-404(5)(a)(I)(A). Therefore, the right of selection passed to Claimant. Claimant selected Dr. Perez to treat his left shoulder and Dr. Perez is authorized.

The left shoulder surgery was reasonable, necessary, and related to the August 9, 2016 accident and was provided by an authorized provider. Therefore, Claimant has established by a preponderance of the evidence that Respondents are liable for the left shoulder surgery performed by Dr. Perez on January 4, 2016.

Issue IV: Whether Claimant is entitled to temporary total disability benefits starting January 4, 2017.

To prove entitlement to TTD benefits, Claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d

637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S., requires Claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair Claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). TTD benefits ordinarily continue until one of the occurrences listed in § 8-42-105(3), C.R.S.; *City of Colorado Springs v. Industrial Claim Appeals Office, supra*.

The existence of disability presents a question of fact for the ALJ. There is no requirement that the claimant produce evidence of medical restrictions imposed by an ATP, or by any other physician. Rather, lay evidence alone may be sufficient to establish disability. *Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997).

Since Claimant had injury-related left shoulder surgery on January 4, 2017, he was unable to work thereafter. Dr. Perez wrote a disability certificate dated January 13, 2017 indicating that Claimant could not work. This ALJ can reasonably infer that Dr. Perez intended to take Claimant off work beginning on the date of surgery. In addition, Claimant had neck surgery on May 18, 2017. Therefore, this ALJ finds and concludes that Claimant has established by a preponderance of the evidence that he is entitled to TTD beginning January 4, 2017 and continuing until ended by further order or by operation of law.

Issue V: Whether Respondents are liable for Claimant's neck surgery performed on May 18, 2017.

Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. C.R.S. § 8-42-101. However, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. C.R.S. § 8-41-301(1)(c); *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000). The evidence must establish the causal connection with reasonable probability, but it need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 30 Colo. App. 224, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 2993. A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 293 (1951).

This ALJ is persuaded that cervical surgery is reasonably necessary by the opinion of Dr. Prusmack that Claimant had failed to improve with conservative care for the 6 months before April 17, 2017, that he had progressive bilateral arm weakness and the presence of severe stenosis bilaterally in the neck, and that surgery was necessary to address these issues. This ALJ is also persuaded that cervical surgery was reasonably necessary by the credible testimony of Claimant that he was losing feeling in his hands. This ALJ accepts as credible the opinion of Dr. Prusack that the need for surgery is related to Claimant's work-related injury on August 9, 2016.

Therefore, Claimant has established by a preponderance of the evidence that the May 18, 2017 neck surgery was reasonable, necessary, and related to the August 9, 2016 accident.

Authorized Medical Treatment

Authorization to provide medical treatment refers to a medical provider's legal authority to provide medical treatment to the claimant with the expectation that the insurer will compensate the provider for the services rendered. *Bunch v. Industrial Claim Appeals Office,* 148 P.3d 381 (Colo. App. 2006); *One Hour Cleaners v. Industrial Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995).

Section 8-43-404(5)(a)(I)(A), applicable to this 2016 injury and claim for benefits, provides that:

> In all cases of injury, the employer or insurer shall provide a list of at least four physicians or four corporate medical providers or at least two physicians and two corporate medical providers, where available, in the first instance, from which list an injured employee may select the physician who attends said injured employee.

The statute further provides that if "the services of a physician are not tendered at the time of injury, the employee shall have the right to select a physician or chiropractor."

This statute affords the employer the right to designate at least four physicians and/or corporate providers that are deemed authorized to provide medical treatment. Consistent with the version of § 8-43-404(5)(a) that was amended in 1997, the current version provides that the employer's right to designate the authorized providers may be lost and the right of selection passed to the Claimant if medical services are not tendered "at the time of injury." *See Rogers v. Industrial Claim Appeals Office,* 746 P.2d 565 (Colo. App. 1987).

Claimant had given verbal notice to Employer on August 11, 2016 about his neck injury that occurred while he was driving to the management meeting. Employer failed to designate a medical provider. In addition, Claimant filed a Workers' Claim for

Compensation on January 30, 2017. Therefore, both Employer and Insurer had "notice" within the meaning of Section 8-42-101(6)(a), C.R.S. Neither Employer nor Insurer designated any medical providers to treat Claimant for his August 9, 2016 neck injury. Therefore, the right of selection passed to Claimant and Claimant selected Dr. Prusmack to treat his neck condition and Dr. Prusmack is an authorized provider.

Carrier Liability for Medical Services Provided After Notice of Injury

Section 8-42-101(6)(a), C.R.S. provides in relevant part:

> If an employer receives notice of injury or, if insured, the employer's insurance carrier, after notice of the injury, fails to furnish reasonable and necessary medical treatment to the injured worker for a claim that is…found to be compensable, the employer or carrier shall reimburse the claimant, or any insurer …that pays for related medical treatment, for the costs of reasonable and necessary treatment that was provided.

After notice of the injury, Respondents failed to furnish reasonable and necessary medical treatment. Claimant ultimately underwent neck surgery on May 18, 2017. The May 18, 2017 neck surgery was reasonable, necessary, and related to the August 9, 2016 accident and provided by an authorized provider.

Therefore, this ALJ finds and concludes that Claimant has established by a preponderance of the evidence that Respondents are liable for the May 18, 2017 neck surgery.

Issue VI: Whether Respondents are liable for other medical expenses incurred since August 9, 2016.

Given that Claimant has met his burden to prove that he suffered a compensable neck injury and left shoulder injury in the August 9, 2016 motor vehicle accident, this ALJ finds and concludes that Respondents are liable for reasonable, necessary, and related medical treatment to cure and relieve Claimant from the effects of his August 9, 2016 industrial accident in which he hurt his left shoulder and neck.

Issue VII: Whether Claimant should be penalized for his failure to report his injury pursuant to 8-43-102(1)(a) from January 4, 2017 through January 30, 2017.

Section 8-43-102(1)(a) provides that an employee that sustains an injury from an accident "shall notify the said employee's employer in writing of the injury within four

days of the occurrence of the injury." If the employee fails to report the injury in writing "said employee may lose up to one day's compensation for each day's failure to so report." Because the statute uses the word "may," imposition of a penalty for late reporting is left to the discretion of the ALJ. *LeFou v. Waste Management*, W.C. No. 4-519-354 (I.C.A.O. March 6, 2003).

This ALJ finds and concludes that Claimant, as a reasonable person, did not appreciate the probable compensable nature of his neck and shoulder injuries until a few weeks prior to filing his first written claim for compensation on January 30, 2017 when he spoke to his attorney about such a claim. None of his supervisors or Respondent-Employer Human Resources representatives advised him to file a claim, and none filed one for him, prior to that time. The undated Accident Investigation Report regarding the August 9, 2016 accident makes no reference to a workers' compensation event, although it indicates that Claimant was driving to a manager meeting from Sterling to Denver. This ALJ can reasonably infer that it is not intuitively obvious to a layperson that injuries while traveling are compensable events, and there is no evidence in the record that anyone educated Claimant about his right to workers' compensation benefits until his discussion with an attorney a few weeks before January 3, 2017. In addition, based on Claimant's credible testimony and available records, this ALJ concludes that Respondent-Employer representatives were aware of the August 9, 2016 accident and injuries. Under these circumstances this ALJ finds and concludes that Claimant should not be penalized for late reporting of his injury.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant suffered a compensable injury to his left shoulder and neck on August 9, 2016.

2. Claimant did not suffer a separate work related injury to his left shoulder on November 11, 2016. Therefore, Claimant's claim for benefits under W.C. No. 5-046-036 is denied and dismissed.

3. Respondents shall pay for Claimant's January 4, 2017, left shoulder surgery pursuant to the Colorado Workers' Compensation Medical Fee Schedule.

4. Respondents shall pay Claimant TTD at the rate of $562.94 as of January 4, 2017.

5. Respondents shall pay for Claimant's May 18, 2017, neck surgery pursuant to the Colorado Workers' Compensation Medical Fee Schedule.

6. Respondents shall pay for Claimant's reasonable, necessary, and related medical treatment for his neck and left shoulder incurred since August 9, 2016.

7. Respondents request for penalties pursuant to Section 8-43-102(1)(a) is denied.

8. Respondents shall pay Claimant interest at the rate of 8% per annum on compensation benefits not paid when due.

9. Dr. James Hebard, of Banner Health, in Greeley, Colorado, shall be Claimant's primary authorized treating physician.

10. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 30, 2017

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Whether Claimant has proven by a preponderance of the evidence that she was disabled from performing her normal job duties and, as a result, potentially entitled to receive temporary total disability ("TTD") benefits beginning March 16, 2017 and continuing.

- If Claimant has proven that she was disabled from performing her regular job duties, whether respondents have proven that Claimant committed a volitional act that led to her termination of employment so that she is not entitled to receive TTD benefits?

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant, a 59-year-old female, was employed as a customer service agent for Employer, an aviation service provider that contracts with airlines to perform certain tasks or functions in the aviation industry.

2. Employer has a contract with an airline. The airline requires all customer service agents to attend a two-week training program in Fort Lauderdale, Florida, within the first ninety days of employment to learn how to perform the required duties. Claimant testified she understood this requirement to attend the training within the first ninety days of employment.

3. Claimant was ultimately terminated from employment with the airline on March 16, 2017 for her failure to attend the training. Three training opportunities were scheduled prior to Claimant's admitted injury:

   - Claimant was first scheduled to attend the mandatory training around the end of September and into October 2016. However, the airline canceled that training due to adverse weather conditions.

   - Claimant was subsequently scheduled to attend the mandatory training in November of 2016. The airline postpone that training because of high volume travel.

   - Claimant was scheduled a third time to attend the mandatory training. This training session was to take place in early January 2017. Claimant did not attend this training because she planned on leaving her job with Employer to move to Arkansas to care for her elderly father. She informed the airline in early December 2016 that by January 15, 2017 she would no

longer be working for the airline because she was moving back to Arkansas and had interviews lined up for a job there. "I told them that I didn't want to waste their money, because I didn't know if I was staying."

- Claimant testified that she understood that if Employer could not reschedule her training that she could "be released," and that she "probably wouldn't have a job . . . 'casuse the training is – was mandatory."

4. Claimant sustained an industrial injury to her back on December 14, 2016 while lifting heavy and oversized luggage. Employer provided Claimant's medical treatment.

5. Claimant's injury did not require her to miss time from work. She continued to work light duty and Employer accommodated her work ten to fifteen pound lifting restriction, and provided her seating so she could stand or sit while performing her job duties. Claimant worked for several months between her industrial injury and her termination.

6. Following her December 14, 2016 industrial injury, Claimant decided to remain with Employer. She was offered light duty work based on her restrictions, doing basic functions at the ticket counter.

7. In early February, 2017, Claimant's work restrictions were lifting no more than ten pounds and sitting fifty percent of the time.

8. Two additional training opportunities were scheduled prior to Claimant's termination:

- Dava "Deedee" Mitchell-Wood, Employer's General Manager, asked the airline for an extension for Claimant to attend the mandatory training. The airline granted Ms. Mitchell-Wood's request. Claimant was scheduled to attend the training in February of 2017.
  - Claimant again refused to attend this scheduled and mandatory training, telling Ms. Mitchell-Wood that she would not go to the training because she would have to miss her medical appointments.
  - Claimant did not timely provide a medical note that said she could not attend the training class in February of 2017.
  - As a result, claimant had refused to attend two mandatory trainings without medical support by February of 2017.
- Claimant was scheduled for a fifth time to attend the mandatory training. This time the training was scheduled to take place beginning March 4, 2017.

- Ms. Mitchell-Wood contacted Concentra in Florida and arranged for Claimant to have her medical appointments in Florida during the two weeks she would be at training.

- Claimant failed to attend the training. This was the third time that claimant refused to attend the mandatory training of her own volition.

- Claimant saw Dr. Cava on March 2, 2017. While Dr. Cava's report states that Claimant "should not go to the training class this weekend," no persuasive evidence supports a finding that Claimant provided that documentation to Employer

- Claimant admitted that she did not want to go to the mandatory training in March of 2017.

9. Despite being able to work with no time off after her December, 2016 injury, she refused to attend the mandatory training in January of 2017 because she planned to terminate her employment; and February of 2017 because she could not miss her medical appointments in Colorado. Prior to these two missed trainings, Claimant did not report to Employer that she was unable to attend due to her medical condition.

10. On February 28, 2017, Dr. Cava treated Claimant at a regularly scheduled appointment. At that time she did not restrict Claimant from working her entire shift, allowed her to stand and walk, and provided that Claimant "[s]hould be sitting 75% of the time." The ALJ finds that these restrictions would not have prevented Claimant from taking a four hour flight or participating in training.

11. Forty-six hours later Claimant returned to Dr. Cava for what appears to be an unscheduled visit for a "recheck of injuries." Claimant told Dr. Cava that she did not feel like she could go to the training, and that she did not want to go. Given Claimant's restrictions less than two days before this appointment, the unscheduled visit, and Claimant's acknowledgement that she did not want to attend the March training; the ALJ finds it more likely than not that Dr. Cava then wrote a report recommending that Claimant not attend the training seminar at Claimant's request. This reduces the persuasiveness of Dr. Cava's report.

12. Claimant had been providing Ms. Mitchell-Wood a copy of her restriction notices since she was placed on light duty. However, Claimant did not provide Ms. Mitchell-Wood the March 2, 2017 Concentra medical report where Dr. Cava noted that Claimant should not fly/attend the training seminar.

13. Even during Claimant's termination meeting with Ms. Mitchell-Wood, Claimant did not provide Ms. Mitchell-Wood with the Dr. Cava's March 2, 2017 report.

14. After Claimant failed to attend the March 2017 training, Ms. Mitchell-Wood spoke with the airline and attempted to obtain yet another extension for Claimant to attend the training. The airline informed Ms. Mitchell-Wood that another extension

would not be given because Claimant has exceed the 90-day requirement as she had been on the contract since October 2016.

15. As a result, Ms. Mitchell-Wood terminated Claimant on March 16, 2017. Claimant acknowledged that she knew she would be terminated if she missed the mandatory training.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The termination statutes provide that in cases where a temporarily disabled employee is "responsible for termination of employment, the resulting wage loss shall not be attributed to the on-the-job injury." The concept of responsibility reintroduces the concept of "fault" as it was used in termination cases prior to *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 58 P.3d 1061 (Colo. App. 2002). Hence, the issue is whether the claimant engaged in volitional conduct which was the cause of the termination. Conduct is volitional if the claimant exercised some degree of control over the circumstances leading to the termination in light of the totality of the circumstances. *See Padilla v. Digital Equipment Corp.*, 902 P.2d 414 (Colo. App. 1994); *Aguilar v. Matrix Logistic, Inc.*, W.C. No. 4-473-075 (December 5, 2002).

There is no dispute that Claimant failed to attend the mandatory training three times of Claimant's own volition.

Claimant informed Employer that she was not going to attend the December 2016 training because she was going to quit her job in mid-January 2017 and move to Arkansas. She never claimed that the reason for the failure to attend the training was due to her back injury.

Moreover, Claimant was able to work light duty with lifting restrictions of 10-15 pounds and sitting up to at least fifty or seventy five percent of the time. Claimant was able to work after her injury and did not miss time from work due to her injuries. Claimant did not make a claim for temporary disability benefits prior to her termination on March 16, 2017. As a result, Claimant had the capability of functioning well despite her injury.

Ms. Mitchell-Wood contacted the airline and asked for an extension for Claimant to attend another training seminar. The airline agreed and scheduled another training seminar in February of 2017. Claimant again informed Employer that she would not be attending the training. There was no doctor's note recommending that Claimant should not attend the February 2017 training. Instead, Claimant indicated that she did not want to miss her medical appointments. Claimant was still working and did not receive medical clearance to avoid the training.

Employer gave Claimant a last chance to attend the training seminar. The fifth training seminar for Claimant was scheduled for March 4, 2017, and Respondents arranged for Claimant to be able to attend her medical appointments in Florida during the training. The Employer had taken care of the specific concern that allegedly kept Claimant from attending the mandatory training in February.

Claimant indicated that she did not want to attend the training. As a result, she told Dr. Cava that she did not feel like she could go to the training and Dr. Cava wrote a note that Claimant should not fly or attend the training seminar.

The note from Dr. Cava lacks persuasiveness as Claimant was capable of performing light duty work and able to travel forty-six hours earlier. Additionally, Claimant had not previously argued that she could not attend the training due to medical restrictions.

Moreover, Claimant failed to provide Dr. Cava's report to Ms. Mitchell-Wood. She also failed to bring it up during her termination meeting.

After Claimant failed to attend the seminar for the fifth time, Employer had no option but to terminate Claimant because of her refusal to attend the mandatory training. Claimant knew she would be terminated and that the training was mandatory.

Under the circumstances, there is substantial and persuasive evidence that Claimant was responsible for her own termination from employment due to her volitional refusal to attend the mandatory training in Fort Lauderdale, Florida within the 90-day deadline set by the airline and Employer. Accordingly, Claimant is not entitled to TTD benefits following her termination.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. The substantial evidence supports the conclusion that Claimant is not entitled to temporary disability benefits from March 16, 2016 to present. Respondents have proven that Claimant was responsible for her termination from employment. As a result, the request for TTD benefits is denied and dismissed with prejudice.

2. All other issues are reserved.

3. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 31, 2017

Denver, CO 80203

ISSUES

I. Has Claimant proven, by a preponderance of evidence, that he sustained a compensable injury in the course and scope of his employment on December 2, 2016?

II. Has Claimant proven, by a preponderance of evidence, that his admitted claim for his injury which occurred on July 23, 1993 should be reopened, based upon a change in condition?

III. Has Claimant proven, by a preponderance of evidence, that the proposed left-knee arthroplasty is reasonable, necessary and related to either his admitted injury of July 23, 1993 or his alleged injury of December 2, 2016?

FINDINGS OF FACT

Based upon the evidence received at hearing, the ALJ enters the following Findings of Fact:

Available Medical and Procedural History

1. Claimant sustained an admitted work-related injury to his left-knee on May 21, 1987. According to his treating physician, Dr. Daniel Olson, he hurt his left-knee when he twisted his knee while using a jackhammer. *(*Ex H, p. 21). Diagnoses included repair of the *lateral* meniscus of the left knee and degenerative arthritis of the left knee.

2. In his medical notes, Dr. Olson remarked that claimant had a pre-existing surgery for a non-work related injury to his left-knee. On February 22, 1991, he noted that Claimant had a surgery 16 years prior which "required *removal* of [claimant's] medial meniscus." (*Id.* at p. 22). (emphasis added).

3. On April 21, 1991, Dr. Olson again indicated that Claimant had undergone a medial meniscectomy for his non-work related injury from 16 years ago. (Id at p. 24). He noted that Claimant had undergone a lateral meniscectomy in April of 1989 for his work-related injury. *Id.* He remarked that claimant had post-traumatic arthritis "due to both injuries, with greater proportion to [the] old injury." Claimant was given a 30% lower-extremity impairment rating (12% whole person) for the May 12, 1987 injury. *Id.* He assigned 0% for the injury from the 16-year-old surgery for his *medial* meniscus. *Id.*

4. On April 17, 1991, Dr. Olson noted that Claimant would require indefinite treatment, and stated that he would "probably require a proximal tibial osteotomy within 5 years and a total knee arthroplasty within the next 15 years." (*Id.* at p. 27).

5. Claimant sustained another admitted work-related injury to his left-knee as a result of a motor vehicle accident on July 23, 1993. Claimant returned to Dr. Olsen. (*Id.* at p. 30). On February 8, 1995, Dr. Olson noted that Claimant had his left-knee "scoped." (*Id.* at p. 32). Further detail is limited, but Dr. Olsen further references this injury as "Recent contusion; Arthroscopic removal of loose bodies" (Id. At p.34). No mention is made of any removal of meniscus, or that any torsional force was applied to the knee in this auto accident.

6. Dr. Olson noted that Claimant had marked joint space narrowing, with the medial side, which was "bone on bone", worse than the lateral side. Claimant's diagnosis was "degenerative, traumatic arthritis of the left knee." Dr. Olson further noted that "P: Will no doubt require TKR (total knee replacement) in 10 year time frame." Claimant was cleared to return to regular work.

7. Dr. Olson issued Claimant a new impairment rating on March 10, 1996. He assigned Claimant a 35% lower extremity impairment rating. (*Id.* at p. 35). He apportioned the impairment rating, assigning 30% to the May 21, 1987 injury, and an additional 5% to the July 23, 1993 injury. He again noted that Claimant would need a total knee replacement in the future. (*Id.* at p. 36).

8. Respondents filed a final admission of liability in WC 4-185-568 on March 28, 1997, and admitted to provide post-MMI medical care while reserving their rights to dispute the reasonableness, necessity or relatedness of any future medical care. (Ex. C.)

9. Claimant continued to receive periodic treatment from Dr. Olson after being placed at MMI for his July 23, 1993 injury. He continued to work regular duty. Claimant started taking Celebrex on July 8, 1999. (Ex. H, p. 41). Claimant continued to take Celebrex with good results noted at follow-up visits every six months. Claimant's post-traumatic arthritis was noted as stable on January 14, 2002. (*Id.* at p. 60).

10. On March 1, 2004, Dr. Olson remarked that Claimant had developed "a very slight varus deformity…." (*Id.* at p. 72). A varus deformity was again noted on September 7, 2004. (*Id.* at p. 76).

11. By April 3, 2006, Claimant was beginning to notice instability in his left knee. (*Id.* at p. 89). His pain levels were up to 5-7 out of 10, 60% of the time. Claimant began receiving Synvisc injections in 2009 from Dr. Roger Davis, who noted good relief. (Ex H. p. 110). On March 28, 2013, Dr. Olson noted that Claimant was doing "remarkably well." (*Id.* at p. 125).

12. Dr. Olson noted "more aching as the years go by" on April 17, 2014. Ex. H, p. 134). He was cleared to continue regular duty work. .

13. Claimant returned to Dr. Olson on December 28, 2015. (Ex. H, p.147). He noted that the Synvisc injections from Dr. Davis were not helping as much as before.

Dr. Olson noted that Dr. Davis felt that Claimant would need a total knee replacement soon, and recommended Dr. Shawn Nakamura. Dr. Olson noted that Claimant had a varus deformity, now with inability to fully extend his left knee. Dr. Olson decided to wait six months before considering a referral for an arthroplasty.

14. On June 27, 2016, Dr. Olson stated that Claimant would need a total knee replacement soon, but Claimant wanted to wait until after he retired. (Ex H, at p.150).

15. A separation checklist signed by employer and Claimant note that Claimant's last date of work as December 23, 2016. (Ex. L, pp.184,185). Claimant wrote that he resigned to retire and that it was "time to go."

16. Claimant returned to Dr. Olson on December 27, 2016. (Ex. H, pp.153, 154). Dr. Olson noted that Claimant had recently retired. Dr. Olson referred Claimant to Dr. Nakamura for surgical evaluation. Dr. Olson made no notes of any new injury or incident concerning claimant's left-knee.

17. On January 4, 2017, Claimant was evaluated at Dr. Davis' office. (Ex I, pp. 159-162). Claimant told Dr. Davis that he had a recent worsening in his pain. Dr. Davis stated that Claimant "*denies* any specific re-injuries." (emphasis added). Dr. Davis made no note of any new injury or incident concerning claimant's left-knee. At an earlier appointment with Claimant on April 30, 2009, Dr. Davis had noted that Claimant….has had a long history of left knee pain and poor function, dating back to the initial injury back in his school days with an open *medial arthrotomy in 1973*, and then had subsequent work injuries while working at the CF&I, with the most recent work injury being 7-23-1993…(Ex. 4, p. 28)(emphasis added).

18. Dr. Davis saw Claimant again on January 16, 2017. Again, Dr. Davis made no note of any new injury or incident concerning claimant's left-knee. (Ex. I, p. 163-165). At a visit dated January 23, 2017, Dr. Davis again made no note of any new injury or incident concerning claimant's left-knee. (*Id.* at pp.166-168).

19. Claimant underwent an x-ray of the left-knee on January 26, 2017. (Ex. K, p. 183). It showed complete joint space loss of the medial compartment and "to a lesser extent" the lateral compartment. There was also "extensive degenerative changes to the patellar femoral compartment."

20. Claimant was evaluated by Dr. Shawn Nakamura on January 26, 2017. (Ex. J, p.172-177). Dr. Nakamura noted that Claimant had "medial compartment 100% narrowing, lateral compartment 50% narrowing…." He further noted that Claimant had a significant varus deformity. Claimant told Dr. Nakamura that he "initially injured his left knee back in high school playing football and actually had to have cartilage removed from his left knee. Since that time, he has had four left knee arthroscopies since 1987." Dr. Nakamura made no note of any new injury or incident concerning Claimant's left knee. Dr. Nakamura did not make any indication as to which injury or injuries necessitated the proposed arthroplasty. On February 6, 2017, Dr. Nakamura submitted a request for a left total knee arthroplasty for degenerative joint disease.

21. At a January 30, 2017 visit, Dr. Davis again made no note of any new injury or incident concerning claimant's left-knee. (Ex. I, pp. 170-171).

22. On March 3, 2017, Claimant filed a claim for workers compensation. (Ex. D). He wrote that his date of injury was December 2, 2016. He claimed that he injured his left-knee, and that "physical work made left knee injury *worse."* There was no mention of any particular acute incident. On March 14, 2017, Claimant filed a first report of injury. (Ex. E). Again, claimant stated that physical work made his left knee *worse*, but noted no particular acute incident. (emphasis added).

23. Respondents filed a notice of contest on March 23, 2017. (Ex. F).

24. Dr. James Lindberg performed an IME of Claimant on April 18, 2017. (Ex. G, pp. 17-20). Dr. Lindberg noted that Claimant stated that he had four knee surgeries between his 1987 work-related injury and his work-related automobile accident. Claimant told Dr. Lindberg that on December 2, 2016, "he stepped in a hole with a slight twist to his left knee and started having more symptoms." Claimant told Dr. Lindberg that his left-knee had been "bow-legged" for 16 or 17 years. Physical exam revealed that claimant had "medial instability with a solid end point secondary to his complete loss of joint space on the inside of his knee." Dr. Lindberg noted that his record review began with records beginning with a 2003 visit with Dr. Olson.

25. With respect to his impressions, Dr. Lindberg remarked that Claimant "did not provide any information about an injury in 1973. However, he did have a Worker's Compensation injury in 1987 that required four knee surgeries." Dr. Lindberg indicated that Claimant did have end stage severe osteoarthritis, and indicated that the proposed arthroplasty was related to Claimant's 1987 injury rather than his 1993 injury. He noted that Claimant did not suffer any new work related injury on December 2, 2016, remarking that the "knee was already in dire straits and was at end stage well before this."

26. At a visit dated June 27, 2017, Dr. Olson again made no note of any new injury or incident concerning claimant's left-knee. (Ex. H pp.157–158). Dr. Olson remarked that Claimant's arthritis "stems back to an injury from 1987 but was combined with an injury in 1993."

Claimant's Testimony

27. Claimant testified at hearing. He testified that he hit the front of his knee on the dashboard during the July 23, 1993 automobile collision. Claimant testified that he has had three, not four, surgeries to his left knee.

28. Claimant testified that the pain he felt in his knee as a result of the 1993 accident was in his knee cap. He testified that he returned to work without restrictions after both of his 1987 and 1993 injuries. Claimant testified that his physical limitations got progressively worse after the 1993 accident.

29. Claimant testified that his left-knee became bowed over the last 14 to 15 years.

30. Claimant testified that on December 2, 2016, while at work, he got out of a truck to inspect a valve. He testified that he stepped in a small depression and twisted his left-knee. Claimant admitted that he did not report the injury, stating that he already had an appointment with Dr. Olson on December 27, 2016, and already knew that he would be referred for a total knee replacement.

31. Claimant testified that he sustained the 1976 injury as a result of slipping on a ladder while working at a packing company. He testified that he would have been 19 or 20 years old when he had his procedure as a result of that injury.

32. Claimant testified his job with employer was unionized, that he was union president, and that he was aware of the rules concerning the reporting of injuries. He was aware that employer had a rule that work-related injuries were supposed to be reported when they occurred. Claimant inferred that he did not report the injury because of witnessing "persecution" of other workers who reported injuries. Claimant admitted that he did not tell Dr. Olson about his December 2, 2016 injury when he saw him on December 27, 2016. Claimant testified that he did not recall denying specific re-injury to Dr. Davis.

33. Claimant testified that he knew he was in need of a total knee replacement prior to the December 2, 2016 incident. He admitted that he would have still being treating with Dr. Olson, Dr. Davis, and Dr. Nakamura irrespective of the December 2, 2016 incident. He admitted that he missed no work due to the December 2, 2016 incident. The ALJ finds that Claimant, while sincere overall, is simply an incomplete historian, especially in connection with earlier medical events in his life. Claimant might not accurately recall now exactly many surgeries he has had. His recall of more recent events is far more accurate. During his long relationship with Dr. Olsen, Claimant did his best to provide accurate information at the time he provided it.

Dr. Lindberg's Testimony

34. Dr. James Lindberg testified at hearing. He has been licensed to practice medicine since 1975. He practiced medicine as an orthopedic surgeon, specializing in shoulders, knees, and hips, until 2012. His practice involved performing surgeries on the meniscus as well as total knee replacements. He is level II certified by the Colorado Division of Workers' Compensation. Dr. Lindberg was tendered and accepted as an expert in orthopedic medicine.

35. Dr. Lindberg testified that the records described in his IME report were the records that he had at the time that he issued his original opinion. He testified that he had received additional records since the time that he authored his report. He testified that he has since received reports from Dr. Olson 1991 and 1995 concerning Claimant's impairment ratings.

36. Dr. Lindberg testified that following the 1993 injury, Claimant had a contusion, and underwent an arthroscopy with removal of loose bodies which would have been caused by arthritis. Dr. Lindberg testified that Claimant already had a documented history of knee osteoarthritis prior to his 1993 injury, which Dr. Olson remarked was primarily due to the earlier non-work related injury as opposed to the 1987 injury.

37. Dr. Lindberg testified that the 1993 injury has "virtually nothing" to do with Claimant's need for a total knee replacement. He noted that the critical injury causing the need for the total knee replacement was the non-work related injury necessitating a medial meniscectomy. Dr. Lindberg testified that claimant's medial joint compartment has completely failed and collapsed, and has bone on bone arthritis. With respect to his lateral joint compartment, Dr. Lindberg testified that claimant has some osteophyte formation, but that the arthritis is far worse on the medial side compared to the lateral side.

38. Dr. Lindberg testified that it was impossible to know without additional records, but suspected that Claimant might have also suffered a pre-existing ACL injury which could have rendered claimant susceptible to the development of knee osteoarthritis.

39. Dr. Lindberg testified that Claimant needs a total knee replacement to correct his significant varus deformity secondary to his advanced, end stage posttraumatic arthritis. He testified that to get to Claimant's ten degree varus deformity, claimant had to have erosion of the bone on the medial side of the knee, which is what necessitates Claimant's knee replacement. He testified that generally, total knee replacements are not performed for a 50% loss of joint space as Claimant has on the lateral side.

40. Dr. Lindberg testified that the meniscus acts as cushion between the bones that meet at the knee joint. He explained that removal of the meniscus predisposes an individual to the development of knee arthritis due to the decrease in cushioning. Dr. Lindberg remarked that an arthroscopy addresses, rather than causes, arthritis.

41. Dr. Lindberg remarked that claimant's varus or "bow-legged" deformity is necessarily a result of his medial meniscectomy and subsequent arthritis. Had claimant's more severe arthritis developed on his lateral side, he would have developed a valgus deformity, or "knock-kneed" appearance. Dr. Lindberg further explained that claimant's varus deformity could contribute to patellar-femoral tracking issues, which could account for his more recently noted symptoms or issues in the patella-femoral compartment.

42. Dr. Lindberg testified that meniscectomies performed at a young age almost always result in the need for total knee replacement eventually. Accordingly, Claimant would have likely needed a total knee replacement due to the medial meniscectomy irrespective of the subsequent injuries/surgeries. Dr. Lindberg noted that

based upon the surgical techniques that were typically employed at the time of Claimant's medial meniscectomy (occurring years prior to his 1987 work injury), the entire medial meniscus was likely removed.

43. Dr. Lindberg explained that the imagine studies requested by Dr. Nakamura showed the sides of the knee rather than the front.

44. Dr. Lindberg testified that he accurately recorded what Claimant told him with respect to his pre-existing injuries and surgeries. He testified that had he had Dr. Olson's MMI reports from his work-related injuries, his initial report would have been different. Dr. Lindberg did not have the opportunity to prepare a supplemental report because he was out of the state to deal with a death in his family. The ALJ finds Dr. Lindberg to be credible and persuasive in his analysis and explanation of the available records.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ enters the following Conclusions of Law:

Generally

A. The purpose of the Workers Compensation Act of Colorado (Act), C.R.S. 8-40-101, *et seq*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *§ 8-40-102(1), C.R.S*. The claimant shoulders the burden of proving by a preponderance of the evidence that he is a covered employee who suffered an "injury" arising out of and in the course of employment. *§8-41-301(1), C.R.S.; Faulkner v. Industrial Claim Appeals Office, 12 P.3d 844 (Colo. App. 2000); City of Boulder v. Streeb, 706 P.2d 786 (Colo. 1985); Pacesetter Corp. v. Collett, 33 P.3d 1230 (Colo. App. 2001).* A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark, 197 Colo. 306, 592 P.2d 792 (1979)*. The facts in a workers compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. *§ 8-43-201, C.R.S*. A workers compensation claim is decided on its merits. *§8-43-201, supra.*

B. In accordance with C.R.S. 8-43-215, this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, *84 P.3d 1023 (Colo. 2004).* This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, 5 P.3d 385 (Colo. App. 2000).*

C. In determining credibility, the ALJ should consider the witnesses' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16.

Compensability of the December 2, 2016 Incident

D. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals* Office, 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals* Office, 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals. Office,* 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones,* 688 P.2d 1116 (Colo. 1984).

E. Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any benefits are awarded. § 8-41-301 (1)(c) C.R.S.*; Faulkner v. Indus. Claim Appeals Off.,* 12 P.3d 844, 846 (Colo. App. 2000). The question of causation is generally one of fact for the determination by the ALJ. *Faulkner,* 12 P.3d at 846. The mere fact that a claimant experiences pain at work does not necessarily require a finding of a compensable injury. In *Miranda v. Best Western Rio Grande Inn*, W.C. No. 4-663-169 (ICAO April 11, 2007), the panel stated "[p]ain is a typical symptom caused by the aggravation of pre-existing condition. However, an incident which merely elicits pain symptoms caused by a pre-existing condition does not compel a finding that the claimant sustained a compensable injury."

F. The Workers' Compensation Act creates a distinction between an "accident": and an "injury." The term "accident" refers to an "unexpected, unusual, or undersigned occurrence." §8-40-201(1), C.R.S. In contrast, an "injury" contemplates the physical or emotional trauma caused by an "accident." And "accident" is the cause and "Injury" is the result. No benefits flow to the victim of an industrial accident unless the accident causes a compensable "injury." A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967). *Soto-Carrion v. C & T Plumbing, Inc.,* WC 4-650-711 (ICAO February 15, 2007).

G. The mere fact that a claimant experiences pain at work does not necessarily require a finding of a compensable injury. In *Miranda v. Best Western Rio Grande Inn*, W.C. No. 4-663-169 (ICAO April 11, 2007), the panel stated "[p]ain is a typical symptom caused by the aggravation of pre-existing condition. However, an incident which merely elicits pain symptoms caused by a pre-existing condition does not compel a finding that the claimant sustained a compensable injury."

H. Claimant has not sustained his burden of proof that he suffered an acute, compensable *injury* on December 2, 2016, for the following reasons:

- He did not tell his employer about this alleged work incident, despite knowing he was required to do so.
- There is no medical opinion that he suffered a new work-related injury; in fact, Claimant denied to Dr. Davis that he had any new injury.
- Claimant missed no work as a result of this incident.
- The incident required no medical treatment; in fact, Claimant did not even tell his ATP of this incident, since Claimant already knew he would need a knee replacement.
- There is no evidence that this incident caused any disability, independent of what he was already experiencing; rather, Claimant continued with the regular course of his existing medical care.

Reopening of the July 23, 1993 Injury

I. Section 8-43-303(1), C.R.S. provides that a Worker's Compensation award may be reopened based on a change in condition. In seeking to reopen a claim the claimant shoulders the burden of proving his condition has changed and he is entitled to benefits by a preponderance of the evidence. *Osborne v. Industrial Commission*, 725 P.2d 63, 65 (Colo. App. 1986). A change in condition refers either to a change in the condition of the original compensable injury or to a change in a claimant's physical or mental condition that is causally connected to the original injury. *Jarosinski v. Industrial Claim Appeals Office,* 62 P.3d 1082, 1084 (Colo. App. 2002). A "change in condition" pertains to changes that occur after a claim is closed. *In re Caraveo,* W.C. No. 4-358-465 (ICAP, Oct. 25, 2006). The determination of whether a claimant has sustained his burden of proof to reopen a claim is one of fact for the ALJ. *In re Nguyen,* W.C. No. 4-543-945 (ICAP, July 19, 2004).

J. Claimant has failed to meet his burden of proof that he sustained a change in condition that is causally connected to his July 23, 1993 injury. Claimant's most severe symptoms relate to the *medial* aspect of his left knee. He has 100% loss of joint space in his medial compartment, resulting in a severe varus deformity due to significant bone loss. Dr. Nakamura's assessment also notes that the medial

compartment is in much worse condition than the lateral compartment. There is no medical opinion that Claimant needs a total knee replacement due solely to the issues in his lateral and/or patella-femoral knee compartments. Claimant needs an arthroplasty to correct the severe arthritis in the medial compartment, which was caused by claimant's original medial meniscectomy, which the ALJ finds occurred years before his first work injury in 1987. Dr. Lindberg credibility explained that a meniscectomy at a young age almost always necessitates a total knee replacement later in life, due to the loss of cushioning within the knee joint. There is no evidence that the 1993 injury is the cause of claimant's need for surgery or the deterioration in his medial knee compartment. The surgical record from the arthroscopy is not in evidence, but it is referenced in Dr. Olsen's ongoing records. There is no evidence of what loose bodies were removed in 1993, where they were located, or the degree in arthritic change caused by the surgery, if any. Claimant's position that the 1993 injury or surgery caused his current deteriorated condition, or necessitates the arthroplasty, is unpersuasive. When Dr. Olson rated Claimant for his 1993 injury, he apportioned the vast majority of claimant's impairment to the 1987 work injury.

K. In 1991, prior to the injury Claimant is seeking to reopen, Dr. Olson was already telling Claimant that he would probably need a total knee replacement in the future. At that time, Dr. Olson was also noting that Claimant's arthritis was largely due to his pre-existing non-work related condition, rather than the 1987 work injury. Dr. Olson's opinion supports Dr. Lindberg's conclusion that Claimant was in need of arthroplasty regardless of his 1993 injury, and that his medial compartment arthritis is due to the 1976 injury. There is no evidence that the 1993 injury altered the course of Claimant's treatment or accelerated the deterioration of his medial knee compartment. Claimant's knee would have deteriorated to the point of needing an arthroplasty irrespective of the 1993 accident. Claimant has not shown that his condition deteriorated because of the 1993 traffic accident.

Relatedness of the Proposed Arthroplasty

L. C.R.S. § 8-42-101 (1) (a) provides that respondents shall furnish medical care and treatment reasonably necessary to cure and relieve the effects of the injury. Claimant bears the burden of proof of showing that medical benefits are causally related to his work-related injury or condition. *Ashburn v. La Plata School District 9R,* W.C. No. 3-062-779 (May 4, 2007). Therefore, claimant is not entitled to medical care that is not causally related to his work-related injury or condition. As noted in *Bekkouche v. Riviera Electric*, W.C. No. 4-514-998 (May 10, 2007), "A showing that the compensable injury caused the need for treatment is a threshold prerequisite to the further showing that treatment is reasonable and necessary." Where the relatedness, reasonableness or necessity of medical treatment is disputed, claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc.,* W.C. No. 4-117-758 (ICAO April 7, 2003).

M. Claimant has not shown that the proposed knee replacement surgery is related to either his December 2, 2016 incident or the July 23, 1993 injury. Claimant did not sustain a compensable injury on December 2, 2016 that would entitle him to an award of medical benefits. The surgery was already noted as a high probability before either of these incidents occurred. The ALJ finds that Claimant's proposed arthroplasty, while certainly reasonable and necessary, is now necessitated by his end stage medial compartment arthritis caused by his non-work related injury from the 1970s.

ORDER

It is therefore ordered that:

1. Claimant's request for Workers Compensation benefits as a result of the alleged December 2, 2016 incident is denied and dismissed.

2. Claimant request to reopen Workers' Compensation Claim No. 4-185-568 based upon a change in condition is denied and dismissed.

3. Claimant request for a left knee arthroplasty is denied and dismissed.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Colorado Springs, Colorado 80906

ISSUES

- Whether Claimant has proven by a preponderance of the evidence that she was disabled from performing her normal job duties and, as a result, potentially entitled to receive temporary total disability ("TTD") benefits beginning March 16, 2017 and continuing.

- If Claimant has proven that she was disabled from performing her regular job duties, whether respondents have proven that Claimant committed a volitional act that led to her termination of employment so that she is not entitled to receive TTD benefits?

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant, a 59-year-old female, was employed as a customer service agent for Employer, an aviation service provider that contracts with airlines to perform certain tasks or functions in the aviation industry.

2. Employer has a contract with an airline. The airline requires all customer service agents to attend a two-week training program in Fort Lauderdale, Florida, within the first ninety days of employment to learn how to perform the required duties. Claimant testified she understood this requirement to attend the training within the first ninety days of employment.

3. Claimant was ultimately terminated from employment with the airline on March 16, 2017 for her failure to attend the training. Three training opportunities were scheduled prior to Claimant's admitted injury:

   - Claimant was first scheduled to attend the mandatory training around the end of September and into October 2016. However, the airline canceled that training due to adverse weather conditions.

   - Claimant was subsequently scheduled to attend the mandatory training in November of 2016. The airline postpone that training because of high volume travel.

   - Claimant was scheduled a third time to attend the mandatory training. This training session was to take place in early January 2017. Claimant did not attend this training because she planned on leaving her job with Employer to move to Arkansas to care for her elderly father. She informed the airline in early December 2016 that by January 15, 2017 she would no

longer be working for the airline because she was moving back to Arkansas and had interviews lined up for a job there. "I told them that I didn't want to waste their money, because I didn't know if I was staying."

- Claimant testified that she understood that if Employer could not reschedule her training that she could "be released," and that she "probably wouldn't have a job . . . 'casuse the training is – was mandatory."

4. Claimant sustained an industrial injury to her back on December 14, 2016 while lifting heavy and oversized luggage. Employer provided Claimant's medical treatment.

5. Claimant's injury did not require her to miss time from work. She continued to work light duty and Employer accommodated her work ten to fifteen pound lifting restriction, and provided her seating so she could stand or sit while performing her job duties. Claimant worked for several months between her industrial injury and her termination.

6. Following her December 14, 2016 industrial injury, Claimant decided to remain with Employer. She was offered light duty work based on her restrictions, doing basic functions at the ticket counter.

7. In early February, 2017, Claimant's work restrictions were lifting no more than ten pounds and sitting fifty percent of the time.

8. Two additional training opportunities were scheduled prior to Claimant's termination:

- Dava "Deedee" Mitchell-Wood, Employer's General Manager, asked the airline for an extension for Claimant to attend the mandatory training. The airline granted Ms. Mitchell-Wood's request. Claimant was scheduled to attend the training in February of 2017.
  - Claimant again refused to attend this scheduled and mandatory training, telling Ms. Mitchell-Wood that she would not go to the training because she would have to miss her medical appointments.
  - Claimant did not timely provide a medical note that said she could not attend the training class in February of 2017.
  - As a result, claimant had refused to attend two mandatory trainings without medical support by February of 2017.
- Claimant was scheduled for a fifth time to attend the mandatory training. This time the training was scheduled to take place beginning March 4, 2017.

- Ms. Mitchell-Wood contacted Concentra in Florida and arranged for Claimant to have her medical appointments in Florida during the two weeks she would be at training.

- Claimant failed to attend the training. This was the third time that claimant refused to attend the mandatory training of her own volition.

- Claimant saw Dr. Cava on March 2, 2017. While Dr. Cava's report states that Claimant "should not go to the training class this weekend," no persuasive evidence supports a finding that Claimant provided that documentation to Employer

- Claimant admitted that she did not want to go to the mandatory training in March of 2017.

9. Despite being able to work with no time off after her December, 2016 injury, she refused to attend the mandatory training in January of 2017 because she planned to terminate her employment; and February of 2017 because she could not miss her medical appointments in Colorado. Prior to these two missed trainings, Claimant did not report to Employer that she was unable to attend due to her medical condition.

10. On February 28, 2017, Dr. Cava treated Claimant at a regularly scheduled appointment. At that time she did not restrict Claimant from working her entire shift, allowed her to stand and walk, and provided that Claimant "[s]hould be sitting 75% of the time." The ALJ finds that these restrictions would not have prevented Claimant from taking a four hour flight or participating in training.

11. Forty-six hours later Claimant returned to Dr. Cava for what appears to be an unscheduled visit for a "recheck of injuries." Claimant told Dr. Cava that she did not feel like she could go to the training, and that she did not want to go. Given Claimant's restrictions less than two days before this appointment, the unscheduled visit, and Claimant's acknowledgement that she did not want to attend the March training; the ALJ finds it more likely than not that Dr. Cava then wrote a report recommending that Claimant not attend the training seminar at Claimant's request. This reduces the persuasiveness of Dr. Cava's report.

12. Claimant had been providing Ms. Mitchell-Wood a copy of her restriction notices since she was placed on light duty. However, Claimant did not provide Ms. Mitchell-Wood the March 2, 2017 Concentra medical report where Dr. Cava noted that Claimant should not fly/attend the training seminar.

13. Even during Claimant's termination meeting with Ms. Mitchell-Wood, Claimant did not provide Ms. Mitchell-Wood with the Dr. Cava's March 2, 2017 report.

14. After Claimant failed to attend the March 2017 training, Ms. Mitchell-Wood spoke with the airline and attempted to obtain yet another extension for Claimant to attend the training. The airline informed Ms. Mitchell-Wood that another extension

would not be given because Claimant has exceed the 90-day requirement as she had been on the contract since October 2016.

15. As a result, Ms. Mitchell-Wood terminated Claimant on March 16, 2017. Claimant acknowledged that she knew she would be terminated if she missed the mandatory training.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The termination statutes provide that in cases where a temporarily disabled employee is "responsible for termination of employment, the resulting wage loss shall not be attributed to the on-the-job injury." The concept of responsibility reintroduces the concept of "fault" as it was used in termination cases prior to *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 58 P.3d 1061 (Colo. App. 2002). Hence, the issue is whether the claimant engaged in volitional conduct which was the cause of the termination. Conduct is volitional if the claimant exercised some degree of control over the circumstances leading to the termination in light of the totality of the circumstances. *See Padilla v. Digital Equipment Corp.*, 902 P.2d 414 (Colo. App. 1994); *Aguilar v. Matrix Logistic, Inc.*, W.C. No. 4-473-075 (December 5, 2002).

There is no dispute that Claimant failed to attend the mandatory training three times of Claimant's own volition.

Claimant informed Employer that she was not going to attend the December 2016 training because she was going to quit her job in mid-January 2017 and move to Arkansas. She never claimed that the reason for the failure to attend the training was due to her back injury.

Moreover, Claimant was able to work light duty with lifting restrictions of 10-15 pounds and sitting up to at least fifty or seventy five percent of the time. Claimant was able to work after her injury and did not miss time from work due to her injuries. Claimant did not make a claim for temporary disability benefits prior to her termination on March 16, 2017. As a result, Claimant had the capability of functioning well despite her injury.

Ms. Mitchell-Wood contacted the airline and asked for an extension for Claimant to attend another training seminar. The airline agreed and scheduled another training seminar in February of 2017. Claimant again informed Employer that she would not be attending the training. There was no doctor's note recommending that Claimant should not attend the February 2017 training. Instead, Claimant indicated that she did not want to miss her medical appointments. Claimant was still working and did not receive medical clearance to avoid the training.

Employer gave Claimant a last chance to attend the training seminar. The fifth training seminar for Claimant was scheduled for March 4, 2017, and Respondents arranged for Claimant to be able to attend her medical appointments in Florida during the training. The Employer had taken care of the specific concern that allegedly kept Claimant from attending the mandatory training in February.

Claimant indicated that she did not want to attend the training. As a result, she told Dr. Cava that she did not feel like she could go to the training and Dr. Cava wrote a note that Claimant should not fly or attend the training seminar.

The note from Dr. Cava lacks persuasiveness as Claimant was capable of performing light duty work and able to travel forty-six hours earlier. Additionally, Claimant had not previously argued that she could not attend the training due to medical restrictions.

Moreover, Claimant failed to provide Dr. Cava's report to Ms. Mitchell-Wood. She also failed to bring it up during her termination meeting.

After Claimant failed to attend the seminar for the fifth time, Employer had no option but to terminate Claimant because of her refusal to attend the mandatory training. Claimant knew she would be terminated and that the training was mandatory.

Under the circumstances, there is substantial and persuasive evidence that Claimant was responsible for her own termination from employment due to her volitional refusal to attend the mandatory training in Fort Lauderdale, Florida within the 90-day deadline set by the airline and Employer. Accordingly, Claimant is not entitled to TTD benefits following her termination.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. The substantial evidence supports the conclusion that Claimant is not entitled to temporary disability benefits from March 16, 2016 to present. Respondents have proven that Claimant was responsible for her termination from employment. As a result, the request for TTD benefits is denied and dismissed with prejudice.

2. All other issues are reserved.

3. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 31, 2017

/s/ Kimberly Turnbow
Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Whether claimant had proven by a preponderance of the evidence that the L5-S1 epidural steroid injection ("ESI") recommended by Colorado Injury and Pain Specialists is reasonable medical treatment necessary to cure and relieve claimant from the effects of the May 6, 2015 work injury.

FINDINGS OF FACT

1. Claimant worked for employer at employer's quarry. On May 6, 2015, claimant suffered crush injuries to his bilateral lower legs. The injury occurred when claimant was cutting marble and a large piece of marble fell and crushed claimant's legs. Claimant immediately underwent multiple surgeries to his lower legs. These surgeries were performed by Dr. Ferdinand Liotta.

2. Following the injury claimant treated with Dan Burnell, PA-C, under the supervision of claimant's authorized treating physician ("ATP") Dr. Kevin Pulsipher. Claimant was first seen by Mr. Burnell on May 28, 2015. On July 24, 2015, Mr. Burnell recorded that claimant was experiencing low back pain. On that same date, Mr. Burnell described claimant's gait as "severely antalgic".

3. On July 1, 2015, Dr. Liotta referred claimant for pain management treatment. Claimant began treating with Colorado Injury and Pain Specialists on August 18, 2015 and was seen by Dr. William James. Dr. James opined that claimant's pain symptoms could be the result of complex regional pain syndrome ("CRPS"). At that time, Dr. James recommended right lumbar sympathetic blocks.

4. Claimant underwent lumbar sympathetic blocks on September 11, 2015, September 18, 2015, and January 18, 2016. Each time the lumbar sympathetic block was administered at the right L3 level.

5. On February 1, 2016, claimant returned to Colorado Injury and Pain Specialists and treated with Elizabeth Crawford, CNP. At that time, claimant reported to Ms. Crawford that he did not wish to receive left sided lumbar sympathetic blocks because he felt that the right sided blocks did not provide much relief.

6. Claimant underwent extensive physical therapy following his surgeries. On January 12, 2016, claimant's physical therapist noted that claimant was complaining of low back pain. At that time claimant's gait was described as "slightly antalgic".

7. On March 16, 2016, claimant returned to Colorado Injury and Pain Specialists and was seen by Dr. Raymond Sohn and reported that he was experiencing back pain. At that time, Dr. Sohn discussed with claimant the possibility of using an implanted spinal cord stimulator ("SCS"). Claimant declined to purse SCS treatment.

8. On April 8, 2016, Dr. Pulsipher determined that claimant had reached maximum medical improvement ("MMI"). Dr. Pulsipher also assessed permanent impairment ratings for both of claimant's legs. Specifically, Dr. Pulsipher assigned an impairment rating of 35% for claimant's left lower extremity and 32% for claimant's right lower extremity. On that same date, Dr. Pulsipher noted that claimant's gait was "mildly antalgic".

9. On June 17, 2016, Ms. Crawford recommended a magnetic resonance image ("MRI") of claimant's lumbar spine to "ensure that the increased weakness in [claimant's] legs is not due to stenosis in his lumbar spine". Thereafter, on July 15, 2016, Ms. Crawford again mentioned the need for an MRI to evaluate whether claimant's leg weakness was caused by radiculopathy.

10. On August 11, 2016, claimant attended a Division-sponsored independent medical examination ("DIME") with Dr. John Hughes. In connection with the DIME, Dr. Hughes reviewed claimant's medical records, obtained a medical history, and performed a physical examination of claimant. Following the DIME, Dr. Hughes issued a report and opined that claimant had not developed CRPS and no further diagnostic testing was warranted. Dr. Hughes agreed with Dr. Pulsipher that claimant reached MMI on April 8, 2016. Dr. Hughes assessed a permanent impairment rating of 35% for claimant's left lower extremity and a permanent impairment rating of 35% for claimant's right lower extremity.

11. On August 22, 2016, an MRI of claimant's lumbar spine showed degenerative disc changes and a right paracentral bulge at the L5-S1 level with annular tear producing slight impingement on the S1 nerve roots, particularly on the right.

12. On September 9, 2016, Ms. Crawford recommended an epidural steroid injection ("ESI") at the L5-S1 level to treat claimant's radicular symptoms in his legs. Colorado Injury and Pain Specialists requested authorization for the recommended ESI on September 12, 2016.

13. On September 15, 2016, Dr. James Ogsbury reviewed the request for an ESI at the L5-S1 level. Dr. Ogsbury determined that although the recommended injection may be medically reasonable, claimant's low back symptoms are not related to the May 6, 2015 work injury because claimant did not complain of low back pain until 13 months after the injury. Additionally Dr. Ogsbury opined that claimant's altered gait has not caused his low back pain. Based upon Dr. Ogsbury's opinion respondents denied authorization for the lumbar ESI.

14. Based upon Dr. Hughes' August 11, 2016 DIME report, respondents filed a final admission of liability ("FAL") on October 3, 2016 admitting for the MMI date of April 8, 2016 and permanent impairment ratings of 35% right lower extremity and 35% left lower extremity. [1]

15. On November 23, 2016, claimant underwent a functional capacity evaluation ("FCE") with Pat Riley, PT. In her FCE report, Ms. Riley noted that claimant had "gait deviations" that worsened the further claimant walked.

16. Dr. Pulsipher's deposition was taken on April 10, 2017. Dr. Pulsipher testified that the intent of the recommended ESI is to dull the nerve function and minimize pain. Due to claimant's significant pain and particularly given the diagnosis of CRPS, it is Dr. Pulsipher's opinion that blocking that nerve root is a reasonable method of treatment. Dr. Pulsipher also testified that the purpose of the previous lumbar sympathetic blocks was to address the pain claimant has radiating into his right leg. Dr. Pulsipher also testified that claimant's altered gait could have an effect on claimant's low back.

17. The ALJ credits the medical records and finds that claimant was experiencing low back pain as early as July 24, 2015 when he reported it to Mr. Burnell. The ALJ credits the medical records and finds that because of the work injury claimant has an altered gait. The ALJ credits the opinion of Dr. Pulsipher that an altered gait could have an effect on claimant's low back.

18. The ALJ credits the opinions of Dr. Pulsipher and Ms. Crawford over the contrary opinions of Drs. Hughes and Ogsbury and finds that claimant's low back and radicular symptoms are related to the work injury. The ALJ credits the opinions of Dr. Pulsipher and Ms. Crawford over the contrary opinions of Drs. Hughes and Ogsbury and finds that the recommended ESI would provide claimant with some level or relief of these symptoms.

19. The ALJ finds that the claimant has successfully demonstrated that it is more likely than not that the recommended ESI is reasonable medical treatment necessary to cure and relieve claimant from the effects of this work injury.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197

[1] An amended FAL was filed on April 12, 2017 for purposes of recalculating claimant's temporary total disability ("TTD") benefits based upon an adjusted average weekly wage ("AWW"). There were no changes to claimant's date of MMI or permanent impairment ratings.

Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., (2014). A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2014).

3. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with" a preexisting disease or infirmity to produce disability or need for treatment. *See H & H Warehouse v. Vicory, supra.*

4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

5. As found, claimant has demonstrated by a preponderance of the evidence that his low back and radicular symptoms are related to the May 6, 2015 work injury. As found, the medical records and the opinions of Dr. Pulsipher and Ms. Crawford are credible and persuasive.

6. As found, claimant has demonstrated by a preponderance of the evidence that the recommended L5-S1 ESI is reasonable medical treatment necessary to cure and relieve claimant from the effects of the May 6, 2015 work injury. As found, the opinions of Dr. Pulsipher and Ms. Crawford are credible and persuasive.

ORDER

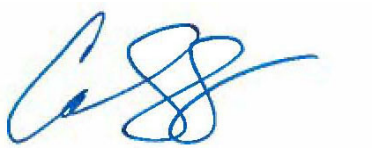
It is therefore ordered that:

1. Respondents shall pay for the recommended ESI at the L5-S1 level, pursuant to the Colorado Medical Fee Schedule.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Dated: July 3, 2017



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

I. Has Claimant sustained any compensable injuries to her cervical spine, lumbar spine, right knee, or from headaches, as a result of a motor vehicle accident occurring on August 5, 2016.

II. If her claims are compensable, what medical reimbursement or payment of unpaid medical bills for treatment already rendered, is reasonable and necessary.

III. If her claims are compensable, what Temporary Partial Disability ("TPD") are payable.

IV. If her claims are compensable, did Claimant fail to timely report her injury to her employer, thus subjecting her to penalties.

STIPULATIONS

At the outset of the hearing, the following Stipulations were reached by the parties, and approved by the ALJ:

1) The motor vehicle accident at issue arose out of, and was in the course of Claimant's employment. The issue at hearing is whether Claimant sustained any actual injury as a result of the MVA.

2) The ALJ is to determine what body parts, if any, were injured in the MVA, and will determine what medical bills qualify for reimbursement or payment.

3) Claimant's average weekly wage prior to the date of injury is $4,196.42 and after the date of injury is $3,952.85, yielding a difference of $243.57 per week. If claimant is determined to be eligible for Temporary Partial Disability benefits, the TPD rate is $162.38.

4) Temporary total disability benefits are not relevant at this time, but both parties reserve the right to litigate the issue of Temporary Total Disability benefits in the future if necessary.

5) Claimant's Authorized Treating Physician ("ATP") is Dr. Daniel Olson.

FINDINGS OF FACT

Based upon the evidence received at hearing, the ALJ enters the following Findings of Fact:

1. Claimant is a home health nurse for Aim Home Health, LLC. She is a registered nurse and provides skilled nursing services to residential clients. She provides this service in the Pueblo, Colorado community.

2. Claimant's employment requires her to travel by motor vehicle to the homes of her clients. During her typical work day, claimant travels from one home to the next of each of her residential clients.

3. On August 5, 2016, Claimant was involved in a motor vehicle accident ("MVA") with a third party, at approximately 2:32 p.m. The MVA occurred while claimant was driving from the home of one residential client to the next. The parties stipulate, and the ALJ so finds, that this accident arose out of, and was in the course of employment.

4. Claimant's wages are based on the number of patients she sees, and the nature of the treatment to be provided. Prior to the date of injury, claimant testified that she saw approximately 20-25 patients per day. After the date of injury, claimant testified that she sees approximately 12 patients. Despite the reduction in the number of patients seen, claimant's wages have dropped by $243.57 per week.

5. Prior to the date of injury, claimant generally worked only Monday through Friday from approximately 7:00 a.m. to approximately 5:30 or 6:00 p.m. Claimant testified that she now works generally 7 days per week, working from approximately 7:00 a.m. to 9:00 p.m.

6. The MVA occurred when a car driven by a third party incorrectly entered the intersection in which claimant was traveling. Claimant testified that she slammed on the brakes with her right foot/leg in an attempt to avoid the collision but was unsuccessful. Claimant estimated her speed prior to employing her brakes to be approximately 20 miles per hour.

7. The airbags, however, did not deploy. The accident report lists the damage to Claimant's car, confined to the right front, as "slight", with no corresponding damage to the undercarriage. According to an IME report by Dr. Ridings, his understanding of airbag deployment is that it might occur at speeds between 8 and 14 mph.

8. The ALJ finds that this MVA (like most) occurred suddenly and unexpectedly. Despite Claimant's good faith in estimating her speed, due to her rapid deceleration, the actual speed at impact was likely far less than 20 mph, perhaps 10 mph or less. Claimant was rightfully focused on the events unfolding in front of her, not her speedometer. The ALJ further finds that Claimant was applying her brake with her right foot, all the way down, through the point of impact.

9. Claimant now alleges to have sustained injuries to her cervical spine, lumbar spine, and right knee in the MVA. Specifically, claimant alleges that her cervical and lumbar spine pain has increased, the frequency and severity of her preexisting headaches have increased, and that she sustained a posterior horn meniscal tear of partial width and partial thickness (a partial meniscal tear), a torn medial patellar retinaculum and probable traumatic chondromalacia, all as a result of the MVA.

10. Claimant testified that following the MVA, she was very concerned about her cervical spine and that when police responded to the scene, she requested to be transported to the emergency department. Claimant was transported by AMR from the scene of the MVA to Parkview emergency department by ambulance.

11. In 2006, Claimant underwent a cervical spine fusion at C5-6. Claimant admitted in her testimony and claimant's medical records clearly demonstrate that claimant has significant preexisting cervical spine injuries for which she has previously undergone a fusion at C5-C6. Claimant acknowledged in her testimony that she has received and continues to receive regular, long time care from pain management specialist, Dr. Brandon Green and his staff, including Nurse Practitioners Jeffrey Johnson and Lisa Clough, far pre-dating the MVA, for significant preexisting conditions in her cervical spine, headaches, and other pain complaints. She further testified, credibly, that it was the preexisting condition in her cervical spine that had caused her immediate concern following this MVA. She as far less focused on other pain she might otherwise have noted.

12. Prior to Claimant's transport by AMR, AMR personnel completed a Pre-Hospital Care Report detailing claimant's pain complaints and concerns. Claimant's stated complaint to AMR personnel was lateral neck pain with some tingling down her left arm. Claimant did not mention any complaints of lower back pain or right knee pain. (Ex A, pp.22, 24).

13. Upon arrival at the Parkview emergency department, Claimant complained only of left sided neck stiffness radiating up toward her occiput and down her left shoulder, with aching at the base of her skull, more left than right. Claimant also reported a brief hit of her elbow and that she had experienced some intermittent tingling of her ring and small fingers of her left hand. The emergency department physician who examined and evaluated claimant, Dr. Elizabeth Skewes, documented that Claimant had no other complaints or findings. (Ex A, p. 18)

14. Claimant did not complain of any right knee pain related to the MVA during her examination and evaluation at Parkview Medical Center emergency department. (Ex. A, pp. 18-21)

15. Claimant testified that she did not undergo any kind of imaging studies, including but not limited to an MRI scan, at the emergency department because "they don't do MRI's in the ER." However, the emergency department records indicate that Dr. Skewes considered imaging studies but deemed there was no clinical indication for

such studies as Claimant had no bony tenderness of her neck and was experiencing only a spasm that had not begun immediately after the MVA but instead had developed in the time frame following the MVA. (Ex. A, p. 20) The ALJ finds that while Claimant may have had a sincere belief that this emergency room did have MRI facilities, she did not hear this from emergency personnel.

16. Claimant testified that following the MVA, she presented to Nurse Practitioner Lisa Clough at Southern Colorado Clinic in the family practice of Dr. Spencer Walker (not with the pain management practice of Dr. Green) on August 8, 2016 for an appointment that had already been scheduled for non-related purposes. She further testified that during this appointment, she reported to Ms. Clough that she had just been involved in an MVA and that she described all of her pain complaints, including right knee pain, to Ms. Clough.

17. Claimant agrees that it is a reasonable standard of practice to document your patient's complaints. She testified that Lisa Clough is a good nurse and she has confidence in her as a good nurse, and that she would expect Ms. Clough to have documented claimant's complaints.

18. Ms. Clough's medical record for the August 9, 2016 medical appointment does not mention the MVA, nor any pain complaints in the cervical spine, lumbar spine and/or right knee. (Ex L, pp. 210-216) Ms. Clough conducted a Review of Systems as well as a physical examination of claimant where it is clearly documented that Claimant *denies* any joint pain, stiffness, muscle weakness and muscle aches, (Ex L, p. 211), and that Claimant was in no acute distress. (Ex L, p. 213)(emphasis added).

19. Claimant returned to Ms. Clough on September 6, 2016 for follow-up on this unrelated medical issue. Just as on August 9, 2016, she reported no complaints of pain or problems with the cervical spine, lumbar spine, or right knee. The patient *denies* joint pain, stiffness, muscle weakness, and muscle aches. (Ex. L, pp. 217-223)(emphasis added).

20. Claimant testified that since her cervical fusion in 2006, she has received and continues to receive medical care from pain management specialist, Dr. Brandon Green, and his staff, including Nurse Practitioners Jeffrey Johnson and Lisa Clough, at St. Mary Corwin Physician Partners. This is supported by the medical records. (Ex. B)

21. Following the MVA, claimant did not seek treatment at St. Mary Corwin Physician Partners until August 30, 2016. On that date, she was examined and evaluated by Nurse Practitioner Jeffrey Johnson. (Ex B, pp. 83-88). On this date, Claimant reported to Mr. Johnson that she had been involved in the MVA (listing date of the MVA as Aug 15) and complained of an exacerbation or flare up of pain in her *neck and lower back.* (Ex B, p. 84). At this visit, Claimant did not express any complaints of *right knee pain* as being related to the MVA. (Ex B, pp. 83-88).

22. Prior to the MVA, Dr. Green's records document that Claimant has a long

history of preexisting, chronic lumbar spine pain, RE B, Bates 41-54, 59-82, as well as right knee pain and complaints. Claimant now denies that she had right knee complaints, but the medical records document otherwise. (Ex B, pp. 65-82):

a. September 16, 2015: Claimant complains of *right knee pain.* It is noted that claimant is to consider a Supartz injection. Medical dictation indicates that claimant complained of bilateral knee pain, with the right knee hurting worse: "Patient also complaints of left knee pain and stiffness however is *not as bad as the right knee* what has sharp shooting pains." (Ex B, p.65).

b. December 14, 2015. Claimant continues to complain of bilateral knee pain, and specifically *right knee pain* for which a Supartz injection continues to be recommended. (Ex. B, p. 71). Medical dictation documents that Claimant specifically complained of right knee pain. (Ex. B, p. 72).

c. March 8, 2016: Claimant continues to complain of bilateral knee pain and specifically *right knee pain.* A Supartz injection is still recommended. (Ex. B, p. 77)

23. On August 30, 2016, when Claimant presented to Dr. Green, her right knee complaints were consistent with her prior complaints. There is no documented change in the nature of Claimant's complaints regarding her right knee nor is there any objective medical change in the right knee on examination following the MVA. (Ex B, pp. 83-88). A referral to Dr. Nakamura is made on this date for claimant's bilateral knee pain, but his referral is made without mention of the MVA. (Ex B, p. 83).

24. Claimant also denied that she has ever had any treatment for her lumbar spine prior to the MVA. However, Dr. Green's records plainly document that Claimant complained regularly of low back pain prior to the MVA, and was referred for physical therapy and for x-rays of the lumbar spine. (Ex B, pp. 41-54, 59-82).

a. July 20, 2015: It is noted in the Assessment Plan that Claimant complains of lumbar spine pain. Claimant was referred for physical therapy. (Ex B, p. 41).

b. July 27, 2015: Lumbar back pain continues to be noted in the Assessment Plan. The History of Present Illness (HPI) documents that, "Today patient presently complaining of … low back pain. Low back pain increased with prolonged sitting and driving in a car." Claimant directed to continue with physical therapy. (Ex B, p. 60).

c. September 16, 2015: Assessment and Plan notes that Claimant continues to complain of lumbar pain and that *she's currently in physical therapy.* Claimant diagnosed with lumbar spondylosis and an *x-ray of claimant's lumbar spine* is ordered. Detailed in the History of Present

Illness (HPI): "[C]hronic neck and mid and low back pain. Patient presently complaining of … *low back pain."* (Ex. B, pp. 65-66).

d. December 15, 2015: In the Assessment and Plan, among other diagnoses, Claimant is diagnosed with lumbar spondylosis with myelopathy and it is noted to be specific in the lumbar region. The Additional Plan Notes indicate that Claimant is being treated with tizanidine for lumbar muscle spasms, that she is continuing in physical therapy for her lumbar spine, that she is given a diagnosis of lumbar spondylosis, and that she is now a candidate for medial branch blocks. (Ex. B, p. 71).

e. March 8, 2016: This record documents that Claimant was returning because of back pain and that Claimant admitted to having lumbar spine pain *that goes up and down* in severity. (Ex. B, pp. 77-78).

25. Claimant admitted in her testimony that she failed to report the MVA as a work injury to her employer until October 25, 2016. RE N. She reported the MVA to employer representative on October 25, 2016 and together claimant and Mr. Musso completed the First Report of Injury. (Ex N).

26. Claimant testified that some time prior to reporting the injury to Mr. Musso, she spoke with a co-worker, Kathy Bueno, about the MVA. Claimant further testified, however, that she knew Ms. Bueno not to be the appropriate person to whom the MVA should be reported and that when she spoke to Ms. Bueno, Claimant was not officially reporting the MVA to the employer.

27. Because neither the employer nor insurer was aware of the MVA until October 25, 2016 when Claimant first reported the work injury, Claimant's first medical appointment with the ATP was on November 8, 2016. (Ex. F, pp. 146-155).

28. The ALJ does find that under the totality of the circumstances, Claimant's reasons for not reporting this work injury sooner, due to confusion on auto liability and medical coverage, are plausible. Claimant was not sufficiently knowledgeable of the workers compensation process to report it right away. This MVA was not withheld from employer in bad faith; it would be in Claimant's best interests to report it at once, had only she known. Nonetheless, an ATP was not assigned until November 8, 2016.

29. In the meantime, Claimant had an MRI on her right knee performed on November 1, 2016 (Ex 4, pp. 143,144). The pertinent findings are as noted:

> FINDINGS: ….Severe chondromalacia of the patella which ***may be*** *acute.* Medial patellar retinaculum is torn. Large somewhat complex *likely* bloody joint effusion.

> Medial compartment: …There is a *significant tear* of the lateral aspect of the posterior horn of the medial meniscus. …
>
> Lateral compartment: The anterior cruciate ligament is poorly defined and findings are *suspicious* for a partial-width, partial thickness tear which ***may be*** *subacute.*
>
> IMPRESSION: Posterior horn medial meniscal tear. …*Subacute* partial-thickness partial-width tear ACL. Large complex joint effusion. … Torn medial patellar retinaculum and *probable* traumatic chondromalacia. Medial femoral condylar and medial tibial plateau contusion. (emphasis added).

30. On November 8, 2016, Claimant was examined and evaluated by Physician's Assistant Teresa Kuhn. Ms. Kuhn documents in the November 8, 2016 medical record at Paragraph 3.b. of the M164 form that causation and relatedness of claimant's pain complaints and symptoms are "Undetermined". (Ex. F, p. 146).

31. During the November 8, 2016 ATP appointment, Claimant reported that following the MVA, *she had continued to work regular duty without restrictions* ***and had no problems doing so*****.** (Ex. F, p. 147)(emphasis added).

32. Ms. Kuhn returned Claimant to work following the November 8, 2016 appointment with no restrictions. (Ex. F, p 146). Ms. Kuhn also made referrals of Claimant to Dr. Green, Dr. Rawat, and Dr. Nakamura on November 8, 2016. (Ex F, pp. 153-155).

33. Claimant presented for treatment at Dr. Shawn Nakamura's office at St. Mary Corwin Physician Partners Orthopedics for a follow-up on her right knee. (Ex 2, pp. 117–121). The right knee MRI was reviewed with Claimant. Dr. Nakamura diagnosed an ACL tear, medial collateral ligament sprain of knee, patellar disorder, and traumatic tear of meniscus of knee. (Ex. 2, p. 122). Arthroscopic surgery was recommended by Dr. Nakamura. Specifically, Dr. Nakamura recommends that a right knee arthroscopy, medial and lateral meniscectomy, and lateral lease be performed.

34. The Orthopedic Surgeon, Dr. Shawn Nakamura, opined in a narrative report dated April 6, 2017 that: "[I]t is more likely than not that Dayna's current right knee injury was caused by the work place accident of August 5, 2016." (Ex 2, p. 122). Dr. Nakamura further opined that: "[T]he August 5, 2016 accident brought about the need for the current treatment" that he has recommended in order to treat Claimant's right knee injury. (Ex. 2, p. 123).

35. It is unclear from the record that Dr. Nakamura had a complete medical history from Claimant, including her complaints of knee pain dating at least to 2015.

36. Claimant was scheduled to return to the ATP on November 22, 2016 but was a no call, no show. The ATP sent correspondence dated November 23, 2016 to Claimant advising her that she was to reschedule her appointment. (Ex. F, p. 156).

37. Following the November 23, 2016 letter, Claimant scheduled and kept an appointment with the ATP on December 13, 2016. On this date, Claimant was evaluated by Dr. Daniel Olson.

38. Dr. Olson documents in the December 13, 2016 medical report that compensability of the claim has been denied by the insurer but that the insurer has authorized medical visits. (Ex F, p. 158). Due to time constraints, Dr. Olson was not able to complete a physical examination of Claimant on this date. Dr. Olson also viewed the MRI report, and noted that it was "significantly abnormal".

39. Dr. Olson assigned temporary work restrictions from December 13, 2016 to January 24, 2017, recommending that Claimant avoid frequent squatting, kneeling and frequent stairs, and that Claimant should avoid single person transfers. The work restrictions recommended by Dr. Olson were effective through January 24, 2017. (Ex. F, p. 158).

40. Claimant was scheduled to return to the ATP on January 24, 2017. Again, she was a no call, no show for that appointment. The ATP's office sent correspondence to Claimant dated January 26, 2017 advising Claimant that she needed to reschedule her appointment or face discharge as a patient. (Ex. F, pp. 162).

41. Claimant was familiar with the process for rescheduling an appointment following a missed appointment, as she had done so previously. (Ex. F, pp. 156, 158) Nevertheless, Claimant failed to reschedule the January 24, 2017 missed appointment and on February 23, 2017, Claimant was discharged for non-compliance. (Ex. F, pp.163-164).

42. Claimant agreed that subsequent to her discharge for non-compliance, her attorney arranged for Claimant's reinstatement of care with Dr. Olson. Claimant testified, however, that she has never made any further appointments with Dr. Olson.

43. No other treating provider has assigned work restrictions to Claimant.

44. Claimant's counsel referred Claimant for an IME with Dr. Miguel Castrejon on February 8, 2017. Dr. Castrejon was admitted as an expert in the field of Physical Medicine & Rehabilitation at the hearing.

45. Dr. Castrejon issued an initial IME report following the February 8, 2017 IME. (Ex 8). Dr. Castrejon testified that when he conducted the IME of Claimant on February 8, 2017, he was under the impression and belief that he had been provided with copies of all of Claimant's medical records relevant to this claim.

46. Dr. Castrejon subsequently was contacted by Claimant's attorney via written correspondence on March 27 and 30, 2017 under cover of which additional medical records pertaining to this claim were sent. (Ex. 8, p. 223). Dr. Castrejon subsequently issued a Supplemental Report based on the additional medical records.

47. Dr. Castrejon testified that upon receipt of the additional medical records transmitted to him by Claimant's counsel on March 27 and 30, 2017, he was under the impression and belief that he had now been provided with copies of all of Claimant's medical records relevant to this claim.

48. In both of Dr. Castrejon's IME report and Supplemental Report, he documents that claimant **denied** any prior *lumbar* spine complaints, pain, or treatment and any prior *right knee* complaints, pain or treatment. (Ex. 8 p. 213)(emphasis added).

49. Dr. Castrejon opined in his reports and testified that it is his medical opinion that the injury to Claimant's right knee was caused by the MVA. He refers to Claimant's MRI of the right knee taken on November 1, 2016 and which shows some trace edema within the patella and joint effusion that may be somewhat bloody, in support of his opinion that the knee was injured in the MVA. (Ex G, p. 170). Dr. Castrejon also testified that he had not seen a bloody joint effusion on an MRI that was not associated with an injury of a non-traumatic nature. Dr. Castrejon also testified that he speculates that Claimant's knee was hyperextended during the MVA, causing the injury to the right knee.

50. Similarly, citing no documented history of prior need for treatment as it pertains to the lumbar spine, Dr. Castrejon opined that Claimant's lumbar spine requires a combination of chiropractic and physical therapy as a result of the MVA. He determined that there was **no injury to Claimant's cervical spine and that Claimant did not require any treatment as related to the MVA for her chronic headaches.** (Ex. 8, pp. 219-222). (emphasis added).

51. Dr. Castrejon admitted that he had received none of Claimant's treatment records documenting prior right knee complaints and treatment and prior lumbar spine complaints and treatment prior to issuing either the IME report or the Supplement Report. Indeed, Dr. Castrejon admitted that he had only received Dr. Green's records just the day prior to the hearing.

52. The ALJ finds that Dr. Castrejon did not have all relevant medical records when conducting his IME of Claimant and in formulating his opinions regarding causation and relatedness.

53. Dr. Castrejon testified and also noted in his reports that Claimant denied prior treatment to the lumbar spine and right knee. On cross examination, Dr. Castrejon admitted that Claimant was untruthful in this regard. The ALJ finds that Claimant was neither truthful with her own IME physician, nor with other treatment providers, regarding her preexisting pain in her right knee and lumbar spine. The ALJ further finds that of all professions, a nurse should be especially cognizant of the need for an accurate medical history at all times during treatment or evaluation. The ALJ further finds that as a nurse, Claimant should have been particularly aware of the need to keep all medical appointments with her ATP.

54. Dr. Castrejon also testified that he was under the impression and belief that Claimant had complained of right knee pain related to the MVA early on in her treatment, citing the referral of claimant to Dr. Nakamura some time prior to Claimant's August 30, 2017 appointment with Dr. Green/Jeffrey Johnson.

55. On cross examination, Dr. Castrejon conceded that he was mistaken and that the referral to Dr. Nakamura by Dr. Green was made on August 30, 2017 for this first time. Claimant had not yet seen Dr. Nakamura or previously registered right knee complaints. (Ex B, p. 83).

56. Dr. Castrejon agreed on cross examination that Claimant did not report any right knee complaints immediately following the MVA when she presented to the emergency department at Parkview Medical Center.

57. Respondents called Dr. Eric Ridings to testify as a medical expert in their case in chief. Dr. Ridings is licensed in the State of Colorado as a medical doctor; he has practiced medicine for 24 years, more than 21 of which have been in the State of Colorado. Dr. Ridings has been Level II accredited since 1997 and is Board Certified in Physical Medicine & Rehabilitation.

58. Dr. Ridings was admitted as an expert in the field of Physical Medicine & Rehabilitation.

59. Dr. Ridings conducted an IME of Claimant on March 1, 2017, after which he issued an IME report. Dr. Ridings issued a supplemental IME report on March 13, 2017 to address the Supplemental Report submitted by Dr. Castrejon. (Ex. C).

60. Prior to the IME, Dr. Ridings received and reviewed all of Claimant's relevant medical records, including but not limited to the records of Dr. Green documenting claimant's preexisting lumbar spine and right knee complaints.

61. While obtaining the Claimant's personal history, Claimant denied any prior lumbar spine or right knee complaints, pain or treatment. (Ex 7, p. 107) Dr. Ridings' review of Claimant's medical records found this to be untrue. The ALJ finds that Claimant's statements regarding preexisting complaints of her right knee and back to Dr. Ridings were not true. The ALJ further finds that, as a nurse, Claimant, of all professionals, knew or should have known that an accurate medical history is of paramount importance in a proper evaluation and treatment plan. Her misstatements to Dr. Ridings were not made of mere carelessness, inadvertence, or lack of sophistication.

62. Claimant provided a description of the mechanism of injury to Dr. Ridings, which he included in his reports. Claimant's description of the mechanism of injury includes her slamming on the brakes with her right foot and leg, with her foot, tibia, and femur all aligned in a straight extension of the right leg. Claimant estimated her speed at approximately 20 mph and she informed Dr. Ridings that there was no airbag

deployment.

63. Dr. Ridings testified that this mechanism of injury, which has been consistently described by Claimant, would not have caused injury to Claimant's right knee. Instead, with the leg in a straight extended position, the axial force of the MVA (the vehicle stops but the body keeps moving forward), would have transmitted up Claimant's straightened leg, moving past the knee and into the hip joint, likely causing injury to the hip joint.

64. Claimant did not sustain any injury to her right hip from this MVA.

65. With regard to Dr. Castrejon's speculation that Claimant's knee hyperextended during the collision, thus contributing to the meniscal tear, Dr. Ridings testified that meniscal tears requires some sort of rotary force or some source form the side. The description of the mechanism of injury consistently given by Claimant is not consistent with any type of rotary or side force and would not have caused a discreet posterior horn tear.

66. Addressing the possible bloody effusion noted on the MRI scan and relied upon by Dr. Castrejon in forming his opinion that the knee injury is related to the MVA, Dr. Ridings testified that the MRI does not definitively identify the white area as blood and it is often difficult to tell whether the whiteness that shows on MRI studies is actually blood on the joint. Assuming, however, that the white area is indicative of blood on the joint, Dr. Ridings testified that the blood present on the scan would still remain from three months earlier, when this MVA occurred.

67. Dr. Ridings further testified that with regard to the diagnosis of probable traumatic chondromalacia as a result of the MVA, there is no possible way claimant could have had such a severe loss of cartilage under the kneecap through this mechanism of injury; the mechanics of a straight leg, such as Claimant described, would not permit any force to the patella and thus, there could be no injury there.

68. Dr. Ridings disagrees with Dr. Castrejon that Claimant sustained any right knee injury in the MVA. Dr. Ridings concurs that the MRI study shows problems in Claimant's right knee.

69. However, he points out that if the injuries identified on the MRI actually occurred as a result of the MVA, Claimant more likely than not would have experienced significant pain and swelling which would have been very evident upon her presentation to the emergency department at Parkview Medical Center. Moreover, he opined that Claimant would not have been able to continue working regular duty with no difficulty as Claimant reported to the ATP on November 8, 2016.

70. With regard to Claimant's lumbar spine, Dr. Ridings testified that Claimant has a significant history of prior lumbar spine complaints and treatment which are, in his expert medical opinion, the source of Claimant's current complaints. Dr. Ridings

referred to longitudinal documentation from Dr. Green's records regarding Claimant's pain scale ratings, which have remained relatively consistent prior to and following the MVA, and the claimant's own admission that she continued to work regular duty without difficulty following the MVA, that Claimant at most may have suffered a temporary exacerbation of her preexisting complaints, but that the MVA did not cause any actual injury, nor did it accelerate or aggravate claimant's prior lumbar spine condition.

71. Dr. Ridings concurs with Dr. Castrejon that Claimant did not sustain injury to her cervical spine as a result of the MVA, and also that Claimant's complaints of headaches is unrelated to the MVA.

72. Dr. Ridings testified that Claimant does not require any work restrictions as related to the MVA and that she is not eligible for any impairment rating, as Claimant sustained no compensable injuries as a result of the MVA.

73. Based on the totality of the records, which Dr. Ridings correctly points out in testimony that Dr. Castrejon did not have when conducting the IME and/or issuing his IME report and Supplemental Reports, that Dr. Castrejon's opinions and conclusions are incomplete.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ enters the following Conclusions of Law:

Generally

A. The Workers' Compensation Act creates a distinction between an "accident": and an "injury." The term "accident" refers to an "unexpected, unusual, or undersigned occurrence." §8-40-201(1), C.R.S. In contrast, an "injury" contemplates the physical or emotional trauma caused by an "accident." And "accident" is the cause and "Injury" is the result. No benefits flow to the victim of an industrial accident unless the accident causes a compensable "injury." A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967). *Soto-Carrion v. C & T Plumbing, Inc.,* WC 4-650-711 (ICAO February 15, 2007).

B. The mere fact that a claimant experiences pain at work does not necessarily require a finding of a compensable injury. In *Miranda v. Best Western Rio Grande Inn*, W.C. No. 4-663-169 (ICAO April 11, 2007), the panel stated "[p]ain is a typical symptom caused by the aggravation of pre-existing condition. However, an incident which merely elicits pain symptoms caused by a pre-existing condition does not compel a finding that the claimant sustained a compensable injury."

C. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to

benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals* Office, 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals* Office, 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals. Office,* 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones,* 688 P.2d 1116 (Colo. 1984).

D. Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any benefits are awarded. § 8-41-301 (1)(c) C.R.S.*; Faulkner v. Indus. Claim Appeals Off.,* 12 P.3d 844, 846 (Colo. App. 2000). The question of causation is generally one of fact for the determination by the ALJ. *Faulkner,* 12 P.3d at 846. The mere fact that a claimant experiences pain at work does not necessarily require a finding of a compensable injury. In *Miranda v. Best Western Rio Grande Inn*, W.C. No. 4-663-169 (ICAO April 11, 2007), the panel stated "[p]ain is a typical symptom caused by the aggravation of pre-existing condition. However, an incident which merely elicits pain symptoms caused by a pre-existing condition does not compel a finding that the claimant sustained a compensable injury."

E. To prove entitlement to temporary partial disability (TPD) benefits, claimant must prove that the industrial injury contributed to some degree to a temporary wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Thus, if the injury in part contributes to the wage loss, TPD benefits must continue until one of the elements of §8-42-106(2), *supra*, is satisfied. *Champion Auto Body v. Industrial Claim Appeals Office*, *supra.* §8-42-106(2)(a), *supra*, provides that TPD benefits cease when the employee reaches maximum medical improvement.

F. Every employee who sustains an injury resulting from an accident shall notify said employee's employer in writing of the injury within four days of the occurrence of the injury. If the employee fails to report the injury in writing, the employee may lose up to once day's compensation for each day's failure to so report. §8-43-102(1)(a), C.R.S.

G. In deciding whether an injured work has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Indus. Claim Appeals Office, supra*. The ALJ determines the credibility of the witnesses. *Arenas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay

witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App., 131, 134 P. 254 (1913*); see also Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witnesses' testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion. *See Magnetic Engineering Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

H. The weight and credibility to be assigned expert medical opinion is a matter within the fact finding authority of the ALJ. *Cordova v. Indus. Claim Appeals Office, supra.* The ALJ should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke*, 139 Colo. 305, 338 P.2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education, and may accept all, part, or none of the testimony of a particular medical expert. *See § 8-43-210, C.R.S.; One Hour Cleaners v. Indus. Claim Appeals Office*, 914 P.2d 501 (Colo. Ap. 1995); *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968); *see also Dow Chemical Co. v. Indus. Claim Appeals Office*, 843 P.2d 122 (Colo. App. 1992)(ALJ may credit one medical opinion to the exclusion of a contrary medical opinion).

Claimant's Cervical Spine and Headaches

I. Dr. Castrejon, who is Claimant's retained expert, does not believe that Claimant sustained any compensable injury to her cervical spine or for her headaches. Dr. Ridings concurs with this opinion. The ALJ finds that Claimant did not suffer any compensable injuries to her cervical spine, nor did any headaches result from this MVA.

Claimant's Right Knee Complaints

J. Claimant's medical records make several references to prior, preexisting complaints regarding the right knee. In fact, Claimant's right knee pain was significant enough and so consistent that Claimant's pain doctor, Dr. Green, recommended that Claimant undergo Supartz injections. While Claimant never underwent the injections, the fundamental nature of Claimant's pain complaints of her right knee did not change. Due to the pain symptoms that Claimant had been experiencing for months prior to the MVA, Dr. Green ultimately referred Claimant to Dr. Nakamura, an orthopedic specialist, for evaluation and treatment. The referral to Dr. Nakamura does not appear to be connected to the MVA which is now the subject of this claim.

K. Claimant relies on the medical opinion of Dr. Castrejon to show that she sustained an injury to her right knee in the MVA and that she requires treatment for it. Claimant failed to provide Dr. Castrejon with all relevant medical records until right before the hearing. Dr. Castrejon never had the opportunity to thoroughly review the records, and discuss the records of Claimant's prior complaints and treatment. Claimant was not even verbally forthcoming with her own expert witness in denying her preexisting right knee complaints. Such failure to accurately disclose, from a trained nurse no less, unfairly placed Dr. Castrejon into a professionally untenable position.

L. Conversely, prior to conducting his IME of claimant, Dr. Ridings was provided with all of Claimant's relevant medical records, including Dr. Green's records. In both the AMR records prior to transport of Claimant to Parkview Medical Center emergency department, and the emergency department records, Claimant had not complaints of any right knee pain related to the MVA at all. Claimant made no complaints regarding her right knee as related to the MVA until August 30, 2016, nearly once month following the date of injury. It wasn't until November 1, 2016 that Claimant underwent an MRI scan of the right knee. While the MRI scan does show a partial meniscal tear and possible traumatic chondromalacia, as Dr. Ridings pointed out in his IME reports and in his testimony, the indications on the MRI do not definitively point the MVA itself as the cause of the meniscal tear or chondromalacia. At various times, the MRI report uses the terms "likely", "may be", "probable", "some trace" "suggestive of" and "suspicious". Through no fault of the radiologist, especially given the remote date of this MRI post-injury, Claimant's maladies cannot be objectively linked to the MVA at issue.

M. Claimant has failed to provide by a preponderance of the evidence that she sustained any injuries to her right knee from the MVA. The mechanism of injury described by Claimant indicates that her right leg was extended in a straight line, with the foot, tibia, and femur completely aligned. Thus, when Claimant impacted the other vehicle, the force involved to the right leg was an axial force. Such a force, particularly at this speed, is not likely to cause a meniscal tear, as a meniscal tear generally requires some type of rotary force or a force from the side.

Claimant's Lumbar Spine Complaints

N. Similarly, with regard to Claimant's lumbar spine, Claimant's medical records repeatedly document ongoing lumbar spine complaints. Claimant similarly denied, to both her own IME, as well as Respondent's IME, preexisting lumbar issues. Claimant was already diagnosed with lumbar spondylosis and was referred for physical therapy. Claimant attended physical therapy four times and then self-terminated the sessions. Shortly prior to the MVA, Claimant was still complaining of lumbar spine pain, and had been deemed a candidate for medial branch blocks. Claimant has failed to show, by a preponderance of the evidence, that her lumbar problems arose out of the MVA.

Temporary Partial Disability, Medical Bills Outstanding, and Penalties

O. Claimant has not met her burden of proof in showing any compensable injuries from this MVA. There is no further need to address Temporary Partial Disability benefits, Medical Bills, or Penalties.

ORDER

It is therefore ordered that:

1. Claimant's request for Workers Compensation benefits is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Whether Respondents January 6, 2017, Final Admission of Liability (FAL) based upon the report of Dr. Daniel Olson placing Claimant at MMI on August 8, 2016 is valid since she was never seen by Dr. Olson.

FINDINGS OF FACT

Based upon the stipulated facts and exhibits submitted, the ALJ enters the following findings:

1. Claimant sustained an admitted injury on June 6, 2016, when a trash dumpster lid closed on her wrist as she was taking out trash in the course of her duties for Employer.

2. Claimant was given a Designated Provider list and elected to pursue medical treatment with Centura Centers for Occupational Medicine (CCOM).

3. At CCOM, PA-C Byrne examined Claimant on August 8, 2016, and opined she had reached maximum medical improvement (MMI) with no impairment and no permanent work restrictions. The authorized treating physician, Dr. Daniel Olson, reviewed PA-C Byrne's report and co-signed a WC164 form with PA-C Byrne that placed Claimant at MMI as of August 8, 2016, with no permanent restrictions, no need for maintenance care and with no permanent impairment.

4. At no time was Claimant personally seen or examined by Dr. Olson, who is Level II accredited. On the date of MMI, Claimant was only seen and examined by PA-C Byrne.

5. Respondents filed a Final Admission of Liability on January 6, 2017, based on the August 8, 2016 medical report co-signed by Dr. Olson and PA-C Byrne.

6. Claimant timely objected to the Final Admission of Liability and filed a Notice and Proposal to Select IME. Claimant also timely filed an Application for Hearing contesting that she was properly placed at MMI by a treating physician. The Division IME process has been held in abeyance pending resolution of Claimant's contention she was not properly placed at MMI.

7. On April 10, 2017, a *Samms* conference was held with Dr. Olson and counsel for both Respondents and Claimant. Dr. Olson confirmed he had never personally examined Claimant and had relied on PA-C Byrne's August 8, 2016 notes and report in arriving at his opinion Claimant was at MMI with no permanent impairment.

8. If this claim had proceeded to hearing as opposed to submission by briefs, Claimant would have testified that she has not fully recovered from her injury and continues to experience pain and limitations on range of motion. Respondents would have maintained their position that the Claimant had fully recovered from her injury and was at MMI.

9. Throughout this claim Claimant has been a resident of the state of Colorado.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S., *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of the respondents. *Section 8-43-201, C.R.S.*

B. In accordance with Section 8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5. P3.d 385 (Colo. App. 2000).

The Validity of Respondents January 6, 2017 Final Admission of Liability

C. In this case, Claimant argues that she was never properly placed at MMI because she was never examined by her authorized treating physician (ATP), Dr. Olson. Therefore, Claimant contends that the FAL filed January 6, 2017 is *"void ab initio."* Respondents counter that Dr. Olson was not required to personally examine Claimant prior to placing her at MMI without permanent impairment and Respondents' January 6, 2017, Final Admission of Liability based on Dr. Olson's MMI report is valid. Based upon the parties' stipulation concerning the facts and the exhibits submitted, the ALJ concurs with Respondents.

D. The Workers' Compensation Act does not specifically discuss whether an authorized treating physician ("ATP") must personally examine a Claimant when placing her at maximum medical improvement (MMI). Rather, the Act provides only that an ATP shall make the MMI determination. *See* C.R.S. §8-42-107(8)(b)(I). Claimant interprets the Act as requiring the APT to personally examine a claimant to determine MMI. The Workers' Compensation Rules of Procedure (WCRP) also speak to this issue and provide additional direction concerning the issue raised by Claimant.

E. WCRP Rule 16-5(A)(6) regulates the use of Physicians Assistants (PA's) in Colorado Workers' Compensation Claims. WCRP 16-5(A)(6)(a) states: "All Colorado Workers' Compensation claims (medical only or lost time claims) shall have an "authorized treating physician" responsible for all services rendered to an injured worker by any PA or NP." In furtherance of this mandate, WCRP 16-5(A)(6)(d) provides: "For services performed by an NP or a PA, the authorized treating physician must counter sign patient records related to the injured worker's inability to work resulting from the claimed work injury or disease, and the injured worker's ability to return to regular or modified employment. The authorized treating physician also must counter sign Form WC 164. The signature of the physician provider shall serve as a certification that all requirements of this rule have been met." This section suggests that the ATP must countersign documents in three different scenarios: 1) patient records related to worker's inability to work; 2) patient records related to ability to return to work; and 3) a Form WC 164. Thus, this section explicitly permits, and in fact requires, the authorized treating physician to cosign a WC 164.

F. WRCP 16-7(F)(1), mandates the following: "Authorized treating physicians sign (or countersign) and submit to the payer, with their initial and final visit billings, a completed "Physician's Report of Workers' Compensation Injury" (Form WC 164) specifying… (b) The report type as 'closing' when the authorized treating physician (generally the designated or selected physician) managing the total workers' compensation claim of the patient determines the injured worker has reached maximum medical improvement (MMI) for all injuries or diseases covered under this workers' compensation claim, with or without a permanent impairment." Again, this section explicitly permits, and in fact requires, the authorized treating physician to cosign a WC 164.

G. Perhaps most relevant to the matter at hand, the delegation statute, C.R.S. §12-36-106(5)(a), states that a licensed physician may delegate "the authority to perform acts that constitute the practice of medicine and acts that physicians are authorized by law to perform" to licensed physician assistants ("PA"). In concluding that Respondents' January 6, 2017 FAL is valid, the undersigned ALJ finds the Colorado Court of Appeals case of *Sims v. Indus. Claims Appeals Office*, 797 P.2d 777 (Colo. App. 1990), instructive. In *Sims* the Court pronounced the basic rule that PA's can make decisions about a claimant's status without the claimant seeing the ATP. Ms. Sims fell at work; afterwards, the employer referred her to a PA working under the direction of a licensed medical doctor (i.e., the ATP). *Id.* at 779. Upon examination, the PA determined that she was not injured. *Id.* He then referred her to an orthopedic surgeon, who corroborated the PA's findings. *Id.* The PA then released Ms. Sims to work without restrictions. *Id.*

Importantly, the ATP never examined her. *Id.* Ms. Sims argued that the Panel erred in accepting PA's testimony because he was not a medical doctor, and thus the PA's testimony was not competent evidence. *Id.* The Court of Appeals cited C.R.S. §12-36-106(5)(a) in holding that because the PA's supervising doctor delegated the authority to examine patients and make subsequent determinations, the PA's testimony concerning Ms. Sims injury was competent. *Id.* at 779–81.

H. While the facts are not directly aligned with the case at bar, the *Sims* decision signals that PA's are permitted to exercise significant discretion in determining a claimant's medical status without the ATP ever personally seeing the claimant. Indeed in *Sims*, the PA was legally permitted to issue a decision concerning the claimant's medical condition and her ability to work without restriction. Moreover, his testimony regarding the same was considered competent evidence despite his not being a physician and without the claimant ever seeing the ATP. This mirrors what occurred in the matter at hand when Dr. Olson reviewed and adopted PA-C Byrne's decision to place claimant at MMI without impairment. Here, the undersigned ALJ finds and concludes that Dr. Olson's conduct satisfied C.R.S. § 8-42-107(8)(b)(I), WCRP 16-5(A)(6)(d), WCRP 16-7(F)(1) and C.R.S. § 12-36-106(5)(a). Specifically, the ALJ concludes that Dr. Olson reviewed the findings of PA –C Byrnes and approved the same by co-signing the WC 164 form. Accordingly, the ALJ concludes that he, as the ATP made the determination Claimant had reached MMI. As noted, the Act and Rules of Procedure only require the ATP to make the MMI determination but not proscribe the examination methods to reach that decision. Claimant's assertion that Dr. Olson is required to physically examine Claimant to place her at MMI is not supported by any statute, rule or applicable case law. Consequently, the ALJ concludes that the FAL filed January 6, 2017, is valid. Claimant may proceed with her requested DIME.

ORDER

It is therefore ordered that:

1. Claimant has failed to prove, by a preponderance of the evidence, that the January 6, 2017 FAL is invalid.

2. Claimant may proceed with her requested DIME.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding

procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 5, 2017

/s/ Richard M. Lamphere

Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he sustained a compensable mental impairment during the course and scope of his employment with Employer on September 16, 2016.

2. Whether Claimant has proven by a preponderance of the evidence that the medical treatment he has received was authorized, reasonable and necessary to cure or relieve the effects of his mental impairment.

3. Whether Claimant has demonstrated by a preponderance of the evidence that he is entitled to receive Temporary Total Disability (TTD) benefits for the period November 7, 2016 until terminated by statute.

STIPULATION

The parties agreed that Claimant earned an Average Weekly Wage (AWW) of $477.87 subject to modification based on the status of his fringe benefits from Employer.

FINDINGS OF FACT

1. Claimant worked for Employer as a cashier at a large supermarket. On September 16, 2016 he was taking his afternoon break. He walked outside and sat at a picnic table with co-workers Jainish Patel and Lance Hopkins-Dukes. Claimant sat on one side of the table and his co-workers sat on the opposite side.

2. An unidentified man approached the picnic table. In response to the man Claimant stood up from the table and stated that he was going inside to use the restroom. The man then poked Claimant in the stomach with his finger and directed him to sit back down. The man pulled up his shirt, revealed a "switchblade" knife and held the knife on Claimant's shoulder with the blade facing Claimant's neck. Claimant then pushed the assailant away and walked briskly back into the supermarket. He remarked that his heart was racing and his palms were sweaty. Claimant informed Assistant Store Manager Doug Parker of the knife incident and completed his work shift.

3. Claimant's co-worker Lance Hopkins-Dukes testified at the hearing in this matter. He explained that he was taking a break with Claimant during the September 16, 2016 knife incident. Mr. Hopkins-Dukes remarked that the assailant appeared to be mentally weird or unstable as he approached the picnic table. The assailant pointed a knife at Claimant's neck for approximately two to three seconds with his hand on Claimant's left shoulder. In response to Mr. Hopkins-Dukes' inquiry of "what's that," the perpetrator dropped the knife and Claimant returned to the supermarket. Mr. Hopkins-

Dukes entered the store and informed Mr. Parker that a man was behaving strangely in the outside break area. He commented that Claimant did not express anxiety or stress after the incident.

4. Mr. Parker testified that he was informed of the September 16, 2016 knife incident and went outside to the break area. He observed the assailant behaving oddly and advised him about complaints regarding the knife. The perpetrator then left the area with a friend.

5. Mr. Parker questioned Claimant about the knife episode. Claimant explained that the perpetrator had placed a knife toward his throat but it was not a "big deal" and he was doing fine. Claimant did not appear to be shaking or otherwise behaving anxiously during the discussion. Mr. Parker asked Claimant whether he should call the police but Claimant declined and reiterated that the knife episode was "no big deal."

6. Mr. Parker testified that he sent an e-mail to corporate management notifying them of the incident sometime on September 16, 2016. He received a response to the e-mail the morning of September 17, 2016 that instructed him to obtain statements from the witnesses to the incident. Therefore, Mr. Parker called Claimant to his office and asked him to complete a Voluntary Statement. Despite Claimant's testimony that he immediately began experiencing panic attacks and nightmares as a result of the incident, the Voluntary Statement made no mention of any worsening symptoms, panic attacks, nightmares, or any other issues concerning the incident. Furthermore, Mr. Parker testified that Claimant completed the Statement while in his office and showed no signs of distress at having to recount the events in the statement.

7. Claimant has suffered an extensive previous history of psychological and emotional difficulties. Claimant grew up in foster care and suffered from abuse. He specifically noted relationship difficulties with his mother and father, an incident in which he stabbed his father, his incarceration for the stabbing incident and psychiatric care. He acknowledged a history of depression and Post-Traumatic Stress Disorder (PTSD) that he associated with his childhood. However, he felt he was able to cope and function in his life and at work despite his emotional difficulties.

8. Calie Yaklich testified that for all of 2016 she was the Front-end Manager for Employer. She was responsible for supervising employees working the cash registers, self-checkout stand, service desk and customer service desk. She remarked that she became Claimant's supervisor when Claimant was transferred to a cashier position beginning the last week of September 2015. However, she was familiar with Claimant's psychiatric issues even before becoming his supervisor because she frequently spoke to Claimant while they were on break. Ms. Yaklich commented that Claimant frequently talked to her about "stories from his childhood," his history of abuse and his ongoing psychiatric problems.

9. Claimant originally worked in the produce department for Employer and engaged in very little customer interaction. However, Claimant had a difficult time

dealing with his supervisor so he requested a transfer into a cashier position. Ms. Yaklich remarked that she was concerned about Claimant's transfer to a cashier position because of his "overall attitude," the fact that he "didn't like people" and difficulties in creating the friendly environment Employer required of its employees.

10. Wage records reveal that Claimant's last week in the produce department ended on September 26, 2015. He began working as a cashier for Employer during the week ending October 3, 2015. After his transfer to the cashier position Ms. Yaklich remarked that Claimant consistently had difficulties "interacting with customers in a positive way, carrying a positive attitude, smiling, taking direction from not just me, but his other managers." She commented that during the summer of 2016 Claimant's interaction with customers and attitude had deteriorated to the point where action needed to be taken. Therefore, sometime in July 2016, Ms. Yaklich and Store Manager Dustin Bentley had a meeting with Claimant to discuss their concerns.

11. Claimant acknowledged that he had a meeting with Mr. Bentley and Ms. Yaklich in July, but testified that the meeting occurred in July 2015 instead of July 2016. However, the meeting must have occurred in July 2016 because Claimant was not in the cashier position in July 2015, Ms. Yaklich was not his supervisor in July 2015 and Mr. Bentley did not start working at Employer's Store 18 until December 2015.

12. Mr. Bentley testified that the July 2016 meeting originally started as a "coaching opportunity" to discuss Claimant's attitude and demeanor in the cashier position. However, because Claimant became emotional as the meeting progressed Mr. Bentley asked him how he was feeling. At that point Claimant "started bringing up about the emotional issues he was having, we talked about the fact that he was not sleeping well, he was staying up late, that he mentioned that he would be up really late, 2 – 3 o'clock in the morning walking around, at that point the conversation kinda changed from the coaching opportunity to a discussion about Claimant's emotional state." Claimant was "crying, and talked about things that he had been dealing with in the past, things that he is dealing with currently, at one point he said you would never imagine the things I have to deal with." As a result of Claimant's emotional state, Mr. Bentley informed Claimant that he and Ms. Yaklich were there to support him. Mr. Bentley also reminded Claimant that Employer had a third-party service from which he could seek treatment or support.

13. On August 22, 2016 Claimant sought treatment from Associates in Family Medicine. He visited Physician's Assistant Julie Thornton complaining of fatigue, mild headache, shaky muscles, mild shortness of breath, nausea and vomiting. P.A. Thornton documented that Claimant provided a history of "post traumatic depression that has not responded to medication or therapy." She noted that Claimant "[n]eeds to rest for 48 hours: work on fluid replacements." To address Claimant's fatigue, P.A. Thornton wrote a note taking Claimant off work for approximately 48 hours due to his symptoms of "pharyngitis/fatigue."

14. On September 1, 2016 Claimant returned to Associates in Family Medicine and visited Physician's Assistant Joshua Barber. P.A. Barber specifically

evaluated Claimant for "ongoing fatigue, malaise, insomnia for the past 6-8 months… states he does wake up often…also complains of more recent onset increase in headaches… intermittent rapid heartbeats …" Claimant again mentioned his past medical history of depression and PTSD. P.A. Barber diagnosed "Other fatigue, Other insomnia, Globus sensation, Frequent headaches." Claimant underwent a number of blood and other tests. At the conclusion of the visit Claimant was scheduled for an appointment with a primary care physician for "ongoing evaluation."

15. On September 6, 2016 Claimant returned to Associates in Family Medicine and visited Erin M. Schrunk, M.D. for an examination. Claimant reported that he "[g]oes to bed every night between 10:00 p.m. to midnight, but awakens about 5x/night due to history of abuse. States he wakes up because he is worried about his surroundings and always on 'high alert' due to abuse in his history. Has been to counseling for 5 years." Dr. Schrunk administered the Generalized Anxiety Disorder 7-item scale (GAD-7) to measure Claimant's level of anxiety and the Patient Health Questionnaire (PHQ-9) to measure Claimant's level of depression. She remarked that Claimant exhibited a history of depression and PTSD. Dr. Schrunk diagnosed Claimant with hypersomnolence, PTSD and an acute upper respiratory infection. She began Claimant on antidepressant medication.

16. Claimant testified that his psychological and emotional symptoms worsened over time. He explained that he was eating less, sleeping less, isolating himself, nervous around people and continuing to have severe nightmares and flashbacks. He remarked that his nightmares frequently consisted of being held at knifepoint, being stabbed and having his throat cut. Claimant commented that he began struggling with his job and his emotional issues were much more severe than he had suffered prior to the September 16, 2016 knife incident. Moreover, he stated that it was not unusual to have challenging customers who were annoying or rude, but felt that was just part of the job that he tolerated before September 16, 2016.

17. Claimant felt he needed a couple of weeks off work to regroup. He contacted Employer and received forms to be completed by his doctor. On November 7, 2016 Claimant visited Dr. Schrunk with the disability paperwork from Employer. Dr. Schrunk completed the forms and noted that September 6, 2016 was the approximate date Claimant's condition commenced. Claimant anticipated short-term disability benefits during his two weeks off work. However, when he was not paid for his time off he contacted Employer's Human Resources Department and explained what had happened on September 16, 2016. Human Resources employees told Claimant that the incident involved a Workers' Compensation claim.

18. On December 8, 2016 Claimant completed the requisite Workers' Compensation paperwork. Employer referred Claimant to Concentra Medical Centers for treatment. Pursuant to the Concentra referral, Claimant visited Joel Cohen, Ph.D. on December 15, 2016 and December 29, 2016. Dr. Cohen's comprehensive report dated December 15, 2016 documented Claimant's psychological history, the incident of September 16, 2016 and the deterioration of his mental status. Dr. Cohen commented that Claimant has a long-standing history of chronic PTSD with "symptoms that have

varied in intensity over the course of his life depending upon the circumstances that he finds himself in." He also noted that he did not believe Claimant was receiving psychological counseling at the time of the September 16, 2016 knife incident. Dr. Cohen summarized:

> Again, what I do need to reaffirm is that regardless of his long standing psychological and psychiatric history the fact of the matter is I would suspect that most people when confronted with the situation as he described at the job site would have at least the possibility of transient and anxiety symptoms specific to that incident and hence it is something that I do believe we should justifiably address..

Dr. Cohen acknowledged that Claimant suffered both injury and non-injury related psychological issues. He diagnosed Claimant with an "acute stress reaction" and recommended psychological care as a result of the September 16, 2016 incident.

19. On March 6, 2017 Claimant underwent an independent medical examination with Stephen A. Moe, M.D. Dr. Moe concluded that Claimant's psychological difficulties were not caused by the September 16, 2016 knife incident. He detailed:

> [Claimant's] symptoms of depression and anxiety have been caused by a combination of long standing psychological vulnerabilities, the stress that he experienced while working as a cashier, and unhappiness about events related to his pursuit of compensated disability; consequently, he has misattributed his symptoms to the workplace incident of September 16, 2016.

In support of his opinion, Dr. Moe noted that Claimant's presentation did not change when discussing the events of September 16, 2016. The lack of change suggested a lesser degree of distress than Claimant had described. Furthermore, the cashiering position was difficult for Claimant and he was "stressed out" prior to the incident of September 16, 2016.

20. Dr. Moe recounted Claimant's description of the September 16, 2016 knife incident. He related that Claimant felt Employer did not care about him because his supervisor did not call the police. Dr. Moe noted that Claimant maintained his condition deteriorated in the weeks following the incident and described his symptoms. He also detailed Claimant's significant pre-existing psychiatric history. Based on a comprehensive review of Claimant's psychological history and the September 16, 2016 knife incident Dr. Moe attributed Claimant's psychiatric symptoms to the coalescence of two factors. First, Claimant suffered from the enduring effects of childhood mistreatment. Second, Claimant experienced stress as a result of interpersonal interaction with customers. Dr. Moe explained that the two preceding factors caused emotional distress that was intolerable and caused Claimant to request a leave of absence. However, when Claimant learned that he would not receive income during the leave of absence he initiated a Workers' Compensation claim. Notably, in the weeks

following the September 16, 2016 knife incident Claimant attributed his symptoms to childhood difficulties and work stress. However, reports of the September 16, 2016 knife incident were "conspicuously absent" in Claimant's medical records shortly after the event. Accordingly, Claimant's psychological symptoms were caused by his long-standing psychological vulnerabilities and the stress associated with working as a cashier. Claimant's PTSD and other psychological difficulties were not caused or aggravated by the September 16, 2016 knife incident.

21. On May 7, 2017 Peter Kaplan, PhD testified through an evidentiary deposition in this matter. Dr. Kaplan agreed with Dr. Moe that Claimant suffers from long-standing psychological vulnerabilities. However, contrary to Dr. Moe he did not agree that stress caused by Claimant working as a cashier was a significant factor. Dr. Kaplan stated that he was surprised Dr. Moe did not mention the incident with the knife in his causation analysis. He remarked "[t]hat seemed to be a catalyst for an exacerbation of his emotional response." Dr. Kaplan explained:

> There's pre-trauma factors that suggest a person is going to be more vulnerable to PTSD and that's prior mental disorders, prior trauma and what the prior trauma has done to his cognition, his beliefs, those rules, as well as his view of the world. And, as I said, [Claimant is] fatalistic and the learned helplessness and pessimism. So you take the catalyst and that's going to exacerbate everything.

22. Initially, Dr. Kaplan determined that the September 16, 2016 knife incident was traumatic to Claimant because of his description of the event. He noted that Claimant "fit all of the symptoms of a PTSD client." Dr. Kaplan essentially asserted that, because Claimant suffered PTSD symptoms after the September 16, 2016 incident, the incident must have caused his symptoms. However, Dr. Kaplan failed to sufficiently recognize that Claimant suffered a long history and had again been diagnosed with PTSD by his medical provider 10 days prior to the September 16, 2016 incident. Therefore, Dr. Kaplan failed to adequately address the causal connection between the September 16, 2016 knife incident and his PTSD symptoms. Moreover, contrary to Dr. Kaplan's testimony that Claimant was in denial and suffers from "learned helplessness," Claimant's treatment in August, September, October and November, 2016 reflects that he was not in denial concerning the continued worsening of his psychiatric condition. Instead, Claimant took affirmative steps to improve his psychiatric condition by seeking treatment for his worsening psychiatric condition.

23. On May 9, 2017 the parties conducted the pre-hearing evidentiary deposition of Dr. Moe. Dr. Moe maintained that Claimant's PTSD and other psychological difficulties were not caused by the September 16, 2016 knife incident. He agreed that Claimant suffers from chronic PTSD but disagrees with other providers who have stated the diagnosis is related to the event on September 16, 2016. Dr. Moe testified Claimant was struggling emotionally even before the incident of September 16, 2016. He stated there were two alternatives concerning the event of September 16, 2016: "[w]hat happened after September 16, 2016 was merely a continuation of emotional distress caused by other reasons, or Claimant's pre-existing emotional

distress made him particularly vulnerable such that he reacted especially badly to the trigger of 9/16/16." Dr. Moe reasoned that the first option was the most likely and that the incident of September 16, 2016 did not either cause or aggravate Claimant's PTSD. Dr. Moe emphasized that, if Claimant had never experienced the incident on September 16, 2016, the worsening of his condition could be explained entirely by the recurrence of his pre-existing PTSD symptoms combined with his dissatisfaction with his job duties as a cashier. Dr. Moe summarized that the September 16, 2016 knife incident had nothing "to do with the symptoms and functional problems [Claimant] displayed." Instead, when Claimant learned he would not receive compensation for his time off in November 2016 and would need to file a Workers' Compensation claim to receive paid time off, he created "an entirely new narrative" and attributed the cause of his worsening PTSD symptoms to the knife incident at work.

24. Claimant has failed to establish that it is more probably true than not that he sustained a compensable mental impairment during the course and scope of his employment with Employer on September 16, 2016. Claimant recounted that on September 16, 2016 he was taking an outside break while working as a cashier for Employer. An unidentified man approached Claimant, revealed a "switchblade" knife and held the knife on Claimant's shoulder with the blade facing Claimant's neck. Claimant then pushed the assailant away and walked briskly back into the supermarket. He remarked that his heart was racing and his palms were sweaty. Claimant maintained that his psychological and emotional symptoms worsened over time after the knife incident. He explained that he was eating less, sleeping less, isolating himself, nervous around people and continuing to have severe nightmares and flashbacks. Claimant summarized that he began struggling with his job and his emotional issues became much more severe after the September 16, 2016 knife incident.

25. The mental impairment statute in the Workers' Compensation Act requires a psychologically traumatic event that would evoke significant symptoms of distress in workers in similar circumstances. The record reveals that Claimant has suffered an extensive previous history of psychological and emotional difficulties. Claimant grew up in foster care and suffered abuse. He specifically noted relationship difficulties with his mother and father, an incident in which he stabbed his father, his incarceration for the stabbing incident and psychiatric care. He acknowledged a history of depression and PTSD that he associated with his childhood. After Claimant's transfer to the cashier position in late September 2015 Ms. Yaklich remarked that he consistently had difficulties "interacting with customers in a positive way, carrying a positive attitude, smiling, taking direction from not just me, but his other managers." She commented that during the summer of 2016 Claimant's interaction with customers and attitude had deteriorated to the point where action was required.

26. In a July 2016 meeting with Ms. Yaklich and Mr. Bentley Claimant was "crying, and talked about things that he had been dealing with in the past, things that he is dealing with currently, at one point he said you would never imagine the things I have to deal with." As a result of Claimant's emotional state, Mr. Bentley informed Claimant that he and Ms. Yaklich were there to support him. On August 22, 2016 Claimant sought treatment from Associates in Family Medicine. By September 6, 2016 Claimant

reported to Dr. Schrunk that he awakened approximately five times each night because of his history of abuse. He stated that "he wakes up because he is worried about his surroundings and always on 'high alert' due to abuse in his history. Has been to counseling for 5 years." After psychological assessments Dr. Schrunk remarked that Claimant exhibited a history of depression and PTSD. Dr. Schrunk diagnosed Claimant with hypersomnolence, PTSD and an acute upper respiratory infection.

27. The medical records and testimony reflect that the September 16, 2016 knife incident simply did not constitute a trigger for Claimant's continuing waxing and waning PTSD symptoms. Initially, on the disability paperwork from Employer, Dr. Schrunk noted that September 6, 2016 was the approximate date Claimant's condition commenced. Furthermore, Dr. Cohen commented that Claimant suffered a long-standing history of chronic PTSD with "symptoms that have varied in intensity over the course of his life depending upon the circumstances that he finds himself in." He diagnosed Claimant with an "acute stress reaction" and recommended psychological care as a result of the September 16, 2016 incident. Dr. Moe concluded that Claimant's PTSD and other psychological difficulties were not caused by the September 16, 2016 knife incident. Dr. Moe explained that Claimant was struggling emotionally even before September 16, 2016 and noted two alternatives concerning the knife incident. The event was either a continuation of recurring emotional distress or Claimant's pre-existing emotional distress rendered him susceptible to significant psychological symptoms as a result of the September 16, 2016 incident. Dr. Moe reasoned that the first option was the most likely. Dr. Moe emphasized that, if Claimant had never experienced the incident on September 16, 2016, the worsening of his condition could be explained entirely by the recurrence of his pre-existing PTSD symptoms combined with his dissatisfaction with his job duties as a cashier.

28. In contrast, although Dr. Kaplan acknowledged that Claimant suffers from long-standing psychological difficulties, he determined that the September 16, 2016 knife incident constituted a catalyst for the development of Claimant's significant psychological problems. Furthermore, Claimant's work as a cashier was not a cause of his psychological deterioration. However, Dr. Kaplan failed to sufficiently recognize that Claimant suffered a long history of PTSD that was worsening and had again been diagnosed 10 days prior to the September 16, 2016 incident. Dr. Kaplan simply failed to adequately address the causal connection between the September 16, 2016 knife incident and Claimant's PTSD symptoms. Moreover, contrary to Dr. Kaplan's testimony that Claimant was in denial and suffers from "learned helplessness," Claimant's treatment in August, September, October and November, 2016 reflects that he was not in denial concerning the continued worsening of his psychiatric symptoms. Finally, the bulk of the persuasive medical records and testimony reflect that the knife incident was not a causative factor in the worsening of Claimant's psychiatric condition. Accordingly, Claimant has failed to demonstrate that he suffered from a permanent mental impairment as a result of a psychologically traumatic event that was outside of a similarly situated worker's experience while working as a cashier for Employer on September 16, 2016. Claimant's request for Workers' Compensation benefits is thus denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAP, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. The Workers' Compensation Act has authorized recovery for a broad range of physical injuries, but has "sharply limited" a claimant's potential recovery for mental injuries. *Mobley v. King Soopers*, WC No. 4-359-644 (ICAP, Mar. 9, 2011). Enhanced proof requirements for mental impairment claims exist because "evidence of causation is less subject to direct proof than in cases where the psychological consequence follows a physical injury." *Davidson v. City of Loveland Police Department*, WC No. 4-292-298 (ICAP, Oct. 12, 2001), *citing Oberle v. Industrial Claim Appeals Office*, 919 P.2d 918 (Colo. App. 1996). A claimant experiencing physical symptoms caused by emotional stress is subject to the requirements of the mental

stress statutes. *Granados v. Comcast Corporation*, WC No. 4-724-768 (ICAP, Feb. 19, 2010).

6. Section 8-41-301(2)(a), C.R.S. imposes additional evidentiary requirements regarding mental impairment claims. The section provides, in relevant part:

> A claim of mental impairment must be proven by evidence supported by the testimony of a licensed physician or psychologist. For purposes of this subsection (2), "mental impairment" means a recognized, permanent disability arising from an accidental injury arising out of and in the course of employment when the accidental injury involves no physical injury and consists of a psychologically traumatic event that is generally outside of a worker's usual experience and would evoke significant symptoms of distress in a worker in similar circumstances. A mental impairment shall not be considered to arise out of and in the course of employment if it results from a disciplinary action, work evaluation, job transfer, lay-off, demotion, promotion, termination, retirement, or similar action taken in good faith by the employer.

The definition of "mental impairment" consists of two clauses that each contains three elements. The first clause requires a claimant to prove the injury consists of: "1) a recognized, permanent disability that, 2) arises from an accidental injury involving no physical injury, and 3) arises out of the course and scope of employment. *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023, 1030 (Colo. 2004). The second clause requires the claimant to prove the injury is: "1) a psychologically traumatic event, 2) generally outside a worker's usual experience, and 3) that would evoke significant symptoms of distress in a similarly situated worker." *Id.*

7. As found, Claimant has failed to establish by a preponderance of the evidence that he sustained a compensable mental impairment during the course and scope of his employment with Employer on September 16, 2016. Claimant recounted that on September 16, 2016 he was taking an outside break while working as a cashier for Employer. An unidentified man approached Claimant, revealed a "switchblade" knife and held the knife on Claimant's shoulder with the blade facing Claimant's neck. Claimant then pushed the assailant away and walked briskly back into the supermarket. He remarked that his heart was racing and his palms were sweaty. Claimant maintained that his psychological and emotional symptoms worsened over time after the knife incident. He explained that he was eating less, sleeping less, isolating himself, nervous around people and continuing to have severe nightmares and flashbacks. Claimant summarized that he began struggling with his job and his emotional issues became much more severe after the September 16, 2016 knife incident.

8. As found, the mental impairment statute in the Workers' Compensation Act requires a psychologically traumatic event that would evoke significant symptoms of distress in workers in similar circumstances. The record reveals that Claimant has suffered an extensive previous history of psychological and emotional difficulties.

Claimant grew up in foster care and suffered abuse. He specifically noted relationship difficulties with his mother and father, an incident in which he stabbed his father, his incarceration for the stabbing incident and psychiatric care. He acknowledged a history of depression and PTSD that he associated with his childhood. After Claimant's transfer to the cashier position in late September 2015 Ms. Yaklich remarked that he consistently had difficulties "interacting with customers in a positive way, carrying a positive attitude, smiling, taking direction from not just me, but his other managers." She commented that during the summer of 2016 Claimant's interaction with customers and attitude had deteriorated to the point where action was required.

9. As found, in a July 2016 meeting with Ms. Yaklich and Mr. Bentley Claimant was "crying, and talked about things that he had been dealing with in the past, things that he is dealing with currently, at one point he said you would never imagine the things I have to deal with." As a result of Claimant's emotional state, Mr. Bentley informed Claimant that he and Ms. Yaklich were there to support him. On August 22, 2016 Claimant sought treatment from Associates in Family Medicine. By September 6, 2016 Claimant reported to Dr. Schrunk that he awakened approximately five times each night because of his history of abuse. He stated that "he wakes up because he is worried about his surroundings and always on 'high alert' due to abuse in his history. Has been to counseling for 5 years." After psychological assessments Dr. Schrunk remarked that Claimant exhibited a history of depression and PTSD. Dr. Schrunk diagnosed Claimant with hypersomnolence, PTSD and an acute upper respiratory infection.

10. As found, the medical records and testimony reflect that the September 16, 2016 knife incident simply did not constitute a trigger for Claimant's continuing waxing and waning PTSD symptoms. Initially, on the disability paperwork from Employer, Dr. Schrunk noted that September 6, 2016 was the approximate date Claimant's condition commenced. Furthermore, Dr. Cohen commented that Claimant suffered a long-standing history of chronic PTSD with "symptoms that have varied in intensity over the course of his life depending upon the circumstances that he finds himself in." He diagnosed Claimant with an "acute stress reaction" and recommended psychological care as a result of the September 16, 2016 incident. Dr. Moe concluded that Claimant's PTSD and other psychological difficulties were not caused by the September 16, 2016 knife incident. Dr. Moe explained that Claimant was struggling emotionally even before September 16, 2016 and noted two alternatives concerning the knife incident. The event was either a continuation of recurring emotional distress or Claimant's pre-existing emotional distress rendered him susceptible to significant psychological symptoms as a result of the September 16, 2016 incident. Dr. Moe reasoned that the first option was the most likely. Dr. Moe emphasized that, if Claimant had never experienced the incident on September 16, 2016, the worsening of his condition could be explained entirely by the recurrence of his pre-existing PTSD symptoms combined with his dissatisfaction with his job duties as a cashier.

11. As found, in contrast, although Dr. Kaplan acknowledged that Claimant suffers from long-standing psychological difficulties, he determined that the September

16, 2016 knife incident constituted a catalyst for the development of Claimant's significant psychological problems. Furthermore, Claimant's work as a cashier was not a cause of his psychological deterioration. However, Dr. Kaplan failed to sufficiently recognize that Claimant suffered a long history of PTSD that was worsening and had again been diagnosed 10 days prior to the September 16, 2016 incident. Dr. Kaplan simply failed to adequately address the causal connection between the September 16, 2016 knife incident and Claimant's PTSD symptoms. Moreover, contrary to Dr. Kaplan's testimony that Claimant was in denial and suffers from "learned helplessness," Claimant's treatment in August, September, October and November, 2016 reflects that he was not in denial concerning the continued worsening of his psychiatric symptoms. Finally, the bulk of the persuasive medical records and testimony reflect that the knife incident was not a causative factor in the worsening of Claimant's psychiatric condition. Accordingly, Claimant has failed to demonstrate that he suffered from a permanent mental impairment as a result of a psychologically traumatic event that was outside of a similarly situated worker's experience while working as a cashier for Employer on September 16, 2016. Claimant's request for Workers' Compensation benefits is thus denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's request for Workers' Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: July 5, 2017.

ISSUES

1. Whether Claimant's Motion to Add Indispensable Parties should be granted pursuant to C.R.C.P. Rule 19.

2. Whether Claimant's Motion to Amend Caption of the Pleadings to reflect the additional Respondent Employers should be granted.

3. Is Claimant entitled to penalties for Respondent's continued violations of the Colorado Workers' Compensation Act and the Orders dated February 16, 2011 and March 5, 2012?

4. Is Claimant entitled to medical benefits to cure and relieve the effects of his industrial injury?

FINDINGS OF FACT

1. On March 9, 2010, Claimant was injured in a car accident while working for Thomas S. Wright, who was President and owner of Wright Group Event Services, Inc. ("Employer"). Claimant was riding in a vehicle owned by Employer which was headed toward a job site to perform party/event services. The vehicle Claimant was riding in was following a second vehicle owned by Employer when the brakes in Claimant's vehicle failed, causing the vehicle to hit the front vehicle and flip. Claimant was injured in the motor vehicle accident.

2. Claimant applied for hearing. Neither Thomas Wright nor Employer filed a Response to the Application for Hearing.

3. On December 23, 2010, a hearing was held in from of ALJ Michael E. Harr. The pleadings for that hearing listed Claimant's employer as "WGSP LLC." "Wright Group Event Services, LLC," was listed as Insurer/Respondents. Mr. Wright appeared pro se to represent WGSP LLC and Wright Group Event Services, LLC. Robert M. Maes represented Claimant. That case was captioned 4-823-822-01.

4. At the December 23, 2010 hearing, Mr. Wright did not dispute that Claimant was injured while performing work for a company Mr. Wright owned. However, he stated that no company named WGSP LLC existed, and that the name Wright Group Event Services, LLC was incorrect: the correct name was Wright Group Event Services Inc. Mr. Wright stated on the record that he was present representing Wright Group Event Services Inc. as President of that entity.

5. At hearing, Mr. Wright stated that Wright Group Event Services Inc. was a party rental business located at 4800 Colorado Boulevard, and that he ran Wright Group Event Services Inc. He raised improper service as a defense, in that the name on the pleading, Wright Group Event Services, LLC, should have been Wright Group Event Services Inc.

6. According to filings with the Colorado Secretary of State's office, Wright Group Event Services, Inc. was formed on February 22, 2005 and dissolved on January 2, 2010. The principal office mailing address was listed as 4800 Colorado Boulevard, Denver, Colorado 80216. Tom Steuart Wright was listed as the registered agent. Exhibit A.

7. Hence, Wright Group Event Services Inc. had been dissolved prior to December 23, 2010 hearing and prior to Mr. Wright's representations to Judge Harr.

8. Mr. Wright further stated on the record that the two trucks that were involved in the car accident on March 9, 2010 in which Claimant was hurt were his.

9. Mr. Wright testified that his company did not have Workers' Compensation insurance at the time of the accident. He further testified that he gave Claimant $100.00 after the accident.

10. At that hearing, Mr. Wright did not disclose that he owned, operated, or was the President, Member, or Manager of a multitude of closely-held entities; all involved in the party and event planning/supply/rental business, many of which existed at the time of the accident and some of which were similarly named, including:

a. WGSP LLC, which was formed on February 28, 2008, and was delinquent as of August 1, 2009. Exhibit N. It had a trade name of Soapoint Graphics. Exhibit B. The description of this entity's business was graphic design and graphic production. *Id.* The registered agent's name was Tom Wright, with a principal office street address and the registered agent's street address both listed as 4800 Colorado Blvd., Denver, CO 80216. Exhibit N.

b. Soapoint Graphics LLC, which filed an Annual Report on March 9, 2009 and March 3, 2010, indicating it was in business at the time of the accident and at the time of the hearing. Annual reports were filed for this entity every year up through 2016.

c. 4800 Colorado Blvd., LLC, formed August 8, 2006 and voluntarily dissolved March 27, 2014. Exhibit C. The registered agent of 4800 Colorado Blvd. LLC is listed as Thomas Wright[1], with the registered agent street address listed as 4800 Colorado Blvd., Denver, CO 80216. *Id.* A statement of dissolution was filed on March 27, 2014. The name and address of the person filing the dissolution was Thomas S. Wright, 1400 Yosemite Street, Denver, CO 80220. 4800 Colorado Blvd., LLC was in business at the time of the accident and at the time of the hearing.

[1] The registered agent was eventually changed to Gerald R. Hendricks, and then back to Thomas S. Wright. *See* Exhibits E and F.

d. WGES, Inc. was formed May 9, 2005 and voluntarily dissolved August 26, 2013. Thomas Wright was the registered agent, with a mailing address listed as 4800 Colorado Blvd., Denver, CO 80216, United States. Exhibit D. Another WGES, Inc. filing listed Susan L. Wright as the registered agent. *Id.* In another filing, Quinten Wright is listed as the registered agent. *Id.* WGES, Inc. was in business at the time of the accident and at the time of the hearing.

e. WGES, LLC was formed May 4, 2009, and voluntarily dissolved on October 23, 2012. Thomas Stewart Wright is listed as the registered agent, with a mailing address of 4800 Colorado Blvd, Denver, CO 80216. The principal office address is also listed as 4800 Colorado Blvd., Denver, CO 80216. Exhibit G. WGES filed documents stating that it conducted business under the name "Guru Graphics." *Id.* WGES, LLC was in business at the time of the accident and at the time of the hearing.

f. The 3730, L.L.C. was incorporated on or around November 5, 2002, with Thomas Wright listed as the registered agent and the initial manager, with all management vested in the manager. The mailing address is listed as 1400 Yosemite Street, Denver CO 80220. Exhibit E.

g. Rent-Rite Super Kegs West Ltd. was formed December 16, 1991 and is in good standing. The registered agent is Thomas S. Wright, with a principal office mailing address of 4800 Colorado Blvd., Denver, CO 80216, and a street address of 1400 Yosemite St., Denver, CO 80220.[2] Exhibit F. Thomas S. Wright is listed as President of Rent-Rite Super Kegs West Ltd. *Id.* Rent-Rite Super Kegs West Ltd. was in business at the time of the accident and at the time of the hearing. Additional secretary of state filings indicate that Rent-Rite Super Kegs West Ltd. uses multiple names under which it conducts business. The person who filed the Secretary of State paperwork listing all of the names under which Rent-Rite Super Kegs West Ltd. conducts business, is Thomas Wright, with the address of 4800 Colorado Blvd., Denver, Co 80216. Ex F. Those other business names are:

    i. Colorado Convention Decorating. The business description of Colorado Convention Decorating is "rentals of equipment." The address of the principal place of business is 4809 Colorado Boulevard, Denver, Colorado 80216.

    ii. Rent Rite Superkegs West Ltd. This business description is listed as manufacturing and sales.

[2] The address of place of business was eventually changed to 3652-54 Marion Street, Denver, CO 80205. Exhibit F.

iii. RentComm Racing Radios. This business description is rental and sales of communications equipment.

iv. Structure Rite.

v. Wright Group Events Services.

vi. Wright Group of Companies.

vii. Wright Group Structures.

viii. Elite International Productions. This business description is listed as "special events, trade shows, structures, rentals."

ix. Wright Security Group. This business description is security systems.

x. Rent Rite West Productions. This business description is listed as rentals of equipment.

xi. The Chairman. The business description is rental and resale of chairs/table/barstools.

xii. Guru Graphics. The business description is reprographics and signage. Exhibit F.

h. GES Rental Services, LLC, formed June 2, 2011 and in good standing. The principal office street addresses and principal office mailing address are both listed as 1400 Yosemite Street, Denver, CO 80220, with Thomas S. Wright as the registered agent. The address of the person who filed the Secretary of State paperwork was listed as 4800 Colorado Blvd., Denver, CO 80216. A subsequent filing states that the registered agent mailing address and the principal office street address both are 4800 Colorado Blvd. Denver, CO 80216. Exhibit K.

i. Yosemite Management LLC, formed January 2, 2014 and in good standing. The registered agent is Thomas Wright. The principal office street address and registered agent's address are both listed as 1400 Yosemite Street, Aurora, CO 80247. The name of the person forming the limited liability company is Thomas S. Wright, with a mailing address of 1400 Yosemite Street, Aurora, Colorado 80247. Exhibit L.

j. Eventus, LTD., formed January 20, 2016 by Thomas Wright. Exhibit M.

11. At the December 23, 2010 hearing, Claimant's counsel requested a 60 day continuance in order to serve what he was led by Mr. Wright to believe was the

proper legal entity, Wright Group Event Services, Inc., which was granted by Judge Harr.

12. The next hearing was held on February 14, 2011 with Judge Harr presiding. Mr. Maes represented Claimant. Mr. Wright did not appear.

13. Mr. Maes submitted a transcript of the December 23, 2010 hearing into evidence at the February 14, 2011 hearing. Judge Harr treated that transcript as follows: "even though I turned that prior hearing into a prehearing conference I can consider this [the transcript] as testimony on the merits for this hearing." Exhibit 3, p.10.

14. On February 16, 2011, ALJ Harr issued a Findings of Fact, Conclusions of Law, and Order in case WC 4-823-822, which was now captioned *Jose Angel Talamantes, Claimant, vs. Wright Group Event Services, Inc., Employer, and Non-Insured, Insurer, Respondent*. Exhibit 4, p.1.

15. Judge Harr ordered the following:

a. Employer to pay Claimant TTD benefits in the amount of $7,165.28;

b. Employer to pay Claimant ongoing TTD benefits at the rate of $47.14 per day until Claimant reached MMI or was released to return to his regular work. This rate included a 50% penalty for Wright Group Event Services, Inc.'s failure to have Workers' Compensation insurance.

c. Employer to pay the costs of Claimant's medical treatment at Denver Health Medical Center; a Dr. Wise; the Inner City Health Center; Diversified Radiology; and Exempla HealthCare;

d. Insurer to pay Claimant interest at the rate of 8% per annum on compensation benefits not paid when due;

e. Or, in lieu of payment of the above compensation, Employer to deposit the sum of $11,619.87 with the Division of Workers' Compensation, as trustee; or, file a bond in the sum of $11,619.87 with the Division of Workers' Compensation within ten days of the date of the order;

f. That Employer notify the Division of Workers' Compensation of payments made pursuant to the order; and

g. That the filing of any appeal would not relieve Employer of the obligation to pay the designated sum to the trustee or to file the bond. Exhibit 4, p.6.

16. On or around July 11, 2011, the Industrial Claim Appeals Office affirmed Judge Harr's February 16, 2011 Order. Exhibit 4. Respondent did not appeal to the Court of Appeals and therefore the February 16, 2011 is a binding, final Order.

17. On February 21, 2012, a hearing in case number 4-823-822-02 was held in front of ALJ Edwin L. Felter. The case was now captioned "*Jose Talamantes, Claimant, v. WGSP, LLC, d/b/a Wright Group Event Services, Inc., Employer, and Non-Insured, Non-Insured Respondent*." Exhibit 6. Claimant was again represented by Mr. Maes. The reason for this hearing was that neither Mr. Wright nor his entities had complied with Judge Harr's order.

18. In his Response to Claimant's Application for this Hearing, Mr. Wright stated "The [Employer] was the unjustly accused. I would like to state, on behalf of my company, that this 'worker' is an illegal alien and was not authorized to work on our job site, therefore I cannot pay him…I dispute any charges that are being presented to me." *Id.* Mr. Wright's time to dispute the charges or present facts concerning Claimant's work for him had passed.

19. On March 5, 2012, Judge Felter issued a Full Findings of Fact, Conclusions of Law and Order. He found that the Respondent(s) had failed to pay disability and medical compensation, and that Claimant, because of his continued and untreated injuries, was unable to return to work. He further found that no physician had cleared Claimant to return to work. Judge Felter noted that Claimant's lack of legal work status did not bar him from receiving workers' compensation benefits.

20. Judge Felter concluded that "the argument and intention reflected by the statements on the Respondent's Response are proof that the violation was a knowing, intentional and willful act. The Respondent knowingly failed to comply with ALJ Harr's order of February 16, 2011…[t]he Respondent's conduct in failing to obey ALJ Harr's decision of February 16, 2011 was objectively unreasonable and unsupported by any rational argument based in law or fact." *Id.*

21. Judge Felter concluded that a penalty of $85.00 per day was appropriate given the delay in the delivery of treatment to Claimant, and given that Respondent, while violating ALJ Harr's order, was still operating its business. *Id.*

22. Judge Felter ordered the following:

a. In addition to complying with Judge Harr's February 16, 2011, Respondent to pay $30,514.00 in penalties, 75% or $22,885.50 payable to the Claimant and 25%, or $7,628.50 payable to the Division of Workers' Compensation;

b. Respondent to pay ongoing penalties of $85.00 per day from February 22, 2012 until it complies with ALJ Harr's February 16, 2012 order;

c. Respondent to pay Claimant $34,505.37 indemnity benefits and penalties, retroactively and forthwith. Additionally, the

Respondent to pay the Division of Workers' Compensation $7,628.50 (25% penalty) retroactively and forthwith;

d. Respondent to pay $540.00 in medical benefits to Claimant for medical costs the Claimant incurred, subject to the Division of workers' compensation medical fee schedule;

e. Respondent to pay Claimant statutory interest at 8% interest per annum on all amounts due and not paid when due. Exhibit 6.

23. Respondent did not appeal Judge Felter's order.

24. Claimant filed a Motion for Entry of Judgment of both Judge Harr and Judge Felter's orders in Denver District Court, case number 2012 CV 7417. Exhibit 7.

25. On June 4, 2013, the District Court Judge granted Claimant's motion, stating:

> It is further ordered that judgment enter in favor of the plaintiff and against Defendants, Wright Group Event Services, LLC. aka, Wright Group Event Services, Inc., aka Thomas Wright, dba WGSPLLC, and in favor of the Plaintiff in the amount of $34,505.37, interest in the amount of $4,376.10, attorneys fees in the amount of $1,875.00 and costs in the amount of $282.00. *Id.*

26. Neither Mr. Wright nor counsel for Mr. Wright appeared in the Denver District Court proceedings. Unknown to Claimant or his counsel, Mr. Wright and his wife, Susan Leigh Wright, had filed a voluntary petition in bankruptcy on November 5, 2012. Hence, the bankruptcy's automatic stay was inadvertently violated.

27. On the bankruptcy petition, Mr. Wright listed the following as other names used by debtor, including married, maiden, and trade names: "aka Stewart Wright; S. Wright; also member, officer, shareholder of: WGES, LLC; Rent Rite Super Kegs West, Ltd.; Wright Group Event Services; Wright Group Event Services, Inc,; and 3730, LLC." Susan Leigh Wright listed another name as Sue Lee Wright. Exhibit 8.

28. On or around November 5, 2012, Mr. Wright, along with his wife, signed a verification of creditor matrix, under the statement "the above named Debtor(s) hereby verified that the attached matrix list of creditors is true and correct to the best of our knowledge." *Id.* Mr. and Mrs. Wright did not list Claimant as a creditor which prevented Claimant from filing a proof of claim, despite the fact that he was one of the 20 largest creditors.

29. Even after Claimant's counsel called Mr. Wright's counsel, Mr. Wright did not amend the matrix of creditors to include Claimant.

30. In December of 2013, Claimant filed a Motion of Creditors to Allow Late Filing of Proof of Claim. *Id.*

31. On March 14, 2014, Mr. Wright voluntarily moved to dismiss the petition for bankruptcy, and on May 13, 2014, the Court issued the dismissal order.

32. On February 9, 2016, Mr. Wright filed a motion to set aside the earlier Denver District Court judgment against Mr. Wright and his affiliated entities due to the violation of the bankruptcy automatic stay. Exhibit 9.

33. Significantly, in the February 9, 2016 motion, Mr. Wright wrote that "'Wright Group Event Services, Inc.' was dissolved in January 2010 and was not doing business when the underlying accident occurred." Exhibit 9, p.2, fn 1. This statement is in direct conflict with Mr. Wright's testimony at the December 23, 2010 hearing in front of Judge Harr, in which he stated that the name Wright Group Event Services, LLC was incorrect, the correct name was Wright Group Services Inc., and that he was present representing Wright Group Event Services Inc. as President of that corporation. In fact, as explained above, the first hearing in front of ALJ Harr had to be continued to a second day of hearing specifically because of Mr. Wright's testimony that Claimant's counsel had served the wrong entity, and that the correct entity was Wright Group Event Services Inc.

34. On March 15, 2016, the Denver District Court judge granted the motion in part (he denied Mr. Wright's request for attorneys fees), and declared that the June 4, 2013 Order of Judgment was void ab initio. *Id.*

35. On July 7, 2016, a different Denver District Court judge issued an order, nunc pro tunc March 15, 2016, in which she ruled that the judgment on June 4, 2013 was vacated as against Defendants Thomas Wright, Wright Group Event Services, LLC, and WGSPLLC. She denied the motion to set aside the judgment as against Defendant Wright Group Event Services, Inc. Exhibit 11.

36. On August 15, 2016, Claimant filed an application for this hearing. He delivered the application for hearing to "Tom Wright, Wright Group Event Services, DBA WGSPLLC, 1400 Yosemite Denver CO 80220" and to Derek Lindenschmidt, Esq., 100 Garfield St., #300, Denver, CO 80206.

37. On August 30, 2016, Claimant's counsel sent a Hearing Confirmation to Duncan Barber, Esq., informing him of the date and time of this hearing.

38. On September 1, 2016, the OAC sent notice of this hearing to Tom Wright at Wright Group Event Services, Inc., 1400 Yosemite, Denver, CO 80220. This notice contained an incorrect hearing date.

39. On September 2, 2016, the OAC sent a corrected notice of this hearing to Tom Wright, Wright Group Event Services, Inc., at 1400 Yosemite, Denver, CO 80220.

40. On November 10, 2016, Claimant's counsel sent a Case Information Sheet to Respondent's counsel, Derek Lindenschmidt.

41. At the November 17, 2016 hearing in this case, neither Respondent nor counsel appeared, despite the fact that counsel Derek Lindenschmidt had entered his appearance in or around December of 2015.

42. At the hearing, it was confirmed, and it is found as fact, that Mr. Wright is currently operating many party and event supply and rental companies under many different names that are going concerns; that he has an active website evidencing these going concerns; and that he has numerous physical assets.

43. Mr. Wright was the principal, has authority to bind Respondent Employer, and has appeared on its behalf. He filed pleadings on behalf of the entity which employed Claimant. Mr. Wright has held himself out as one and the same as Respondent Employer.

44. At the November 17, 2016 hearing, Claimant credibly testified, and it is found as fact, that Claimant has not reached maximum medical improvement, is in pain, has not returned to work, is still medically unable to work, and has never been paid any of the amounts due him. He further credibly testified that a physician has recommended an operation for his back, and that he cannot get the operation. Claimant cannot work or improve his medical condition with back surgery specifically because of Mr. Wright and his industrial injury working for Mr. Wright.

45. Thomas Wright is an indispensable party to this litigation.

46. On November 23, 2016, Derek Lindenschmidt, who had worked at the same firm as Duncan E. Barber, Shapiro Bieging Barber Otteson LLP, filed a Notice of Withdrawal as counsel for Wright Group Event Services, Inc. This notice failed to comply with the requirements for withdrawal under the OACRP and the Colorado Rules of Civil Procedure. No order has been issued allowing Mr. Lindenschmidt's withdrawal.

47. In that same pleading, the following statement appeared: "All further communications and filings should be directed to the following attorney, Duncan E. Barber, who continues to represent the Employer." (emphasis added). No order allowing Mr. Barber's withdrawal has been issued.

48. Respondents have knowingly and willfully violated the previous orders issued by ALJ Harr and ALJ Felter. Respondents have not cured these violations.[3]

49. Evidence and inferences inconsistent with these findings were not persuasive.

[3] The ALJ notes Respondents are subject to continuing penalties for these violations.

CONCLUSIONS OF LAW

General

1. The purpose of the Workers' Compensation Act ("Act") of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S.

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

3. In accordance with § 8-43-207, C.R.S., administrative law judges have the power "to determine any controversy concerning any issue arising under the Workers' Compensation Act . . .[t]he powers granted under the hearing provision are broad and extend to all proceedings before an ALJ." *Renaissance Salon v. Industrial Claim Appeals*, 994 P.2d 447, 450 (1999); *Colorado Auto Body, Inc. v. Newton*, 160 Colo. 113, 414 P.2d 480 (1966).

4. Claimant has requested that the following entities be joined in this case; that the corporate veil be pierced as against Mr. Wright; and that the caption in this case be changed to reflect the following as employer-respondents in this case: Thomas S. Wright, individually and as CEO, shareholder, officer and representative of all corporate and business entities registered with the State of Colorado, including Wright Group Event Services, LLC.; Soapoint Graphics, LLC; 4800 Colorado Boulevard, LLC; WGES, Inc.; The 3730, LLC; Rent Rite Super Kegs West, LTD.; WGES, LLC.; Wright Group Ultra Events, LLC; RSLW, LLC; GES Rental Services; LLC, Soapoint Graphics, LLC, aka WGSP LLC; RSLW, LCC; Sutomi, LLC; Eventus, LLC; Yosemite Management, LLC., and trade names used by the above.

Joinder

5. The Colorado Rules of Civil Procedure apply to workers' compensation cases to the extent they are not inconsistent with the provisions of the Workers' Compensation Act. *Renaissance Salon* at 449; *Nova v. Industrial Claim Appeals Office*, 754 P.2d 800 (Colo. App. 1988). The Workers' Compensation Act does not prohibit joinder of parties.

6. C.R.C.P. 19, Joinder of Persons Needed for Just Adjudication, states "[a] person who is properly subject to service of process in the action shall be joined as a party in the action if in his absence complete relief cannot be accorded among those already parties." C.R.C.P.19(a)(1).

7. The ALJ concludes that the entities named in paragraph 10 above are necessary for a just adjudication for Claimant in this matter. Claimant was hurt while working for Respondent seven years ago this March. Despite having two final orders awarding him benefits and medical care, and despite the Act's purpose of assuring quick and efficient delivery of disability and medical benefits to injured workers, Claimant has yet to receive any of the medical care he needs and has yet to see any of the benefits he was lawfully and finally awarded. Claimant has been unable to work, through no fault of his own, for seven years.

8. Mr. Wright, on the other hand, continued and continues to work through a multitude of entities, all involved in one way or the other in the party and event planning and supply business. That business was the business Mr. Wright was in when Claimant was hurt, which Mr. Wright admitted on the record in front of Judge Harr. Claimant was hurt while performing party/event services for Mr. Wright.

9. The ALJ concludes, based on Mr. Wright's actions to date, that one reason Mr. Wright has formed some of these other entities is to avoid responsibility for the legal obligations he has arising from this case. The ALJ makes this conclusion for several reasons, including: Mr. Wright asserted improper service at the hearing in front of Judge Harr, necessitating a delay in adjudication by causing the need for a second hearing to "correct" the name of the employer. However, Mr. Wright's statement about the "correct" name was false. Wright Group Event Services Inc. had already been dissolved, a fact Mr. Wright was quick to remind the Denver District Court in his Motion to Set Aside. Furthermore, Mr. Wright failed to list Claimant as a creditor in his bankruptcy petition, when he clearly knew of Judge Harr and Judge Felter's decisions. Also, Mr. Wright failed to appear at the District Court proceeding. Had he appeared, he could have informed the court of his bankruptcy filing. By failing to appear, Claimant had to spend more time, money and effort due to the automatic stay in bankruptcy that voided the judgments. Mr. Wright withdrew his petition for bankruptcy at a later date. Finally, Mr. Wright failed to appear at the second hearing in front of Judge Harr, despite proper notice; failed to appear at the hearing in from of Judge Felter, despite proper notice; failed to appear at any of the Denver District Court proceedings, and failed to appear at this proceeding, despite the fact that proper notice was sent.

10. In short, the ALJ concludes that Mr. Wright has done everything everything in his power to evade complying with Judge Harr and Judge Felter's orders.

11. The ALJ further concludes, based on Mr. Wright's actions to date, that unless the entities in paragraph 10 of the Findings of Fact are joined in this proceeding, complete relief will never be accorded to Claimant.

Piercing the Corporate Veil

11. To pierce the corporate veil a three-part analysis is required. The court must first determine if the corporate entities or entities are the "alter egos" of the person in question. Factors to consider include:

(1) the corporation is operated as a distinct business entity;

(2) funds and assets are commingled;

(3) adequate corporate records are maintained;

(4) the nature and form of the entity's ownership and control facilitate misuse by an insider;

(5) the business is thinly capitalized;

(6) the corporation is used as a "mere shell";

(7) legal formalities are disregarded; and

(8) corporate funds or assets are used for noncorporate purposes. Phillips, 139 P.3d at 644; Leonard, 63 P.3d at 330. *McCallum Family L.L.C. v. Winger*, 221 P.3d 69, 74 (Col. App. 2009).

12. Not all of these factors need be present to establish that the entities are alter egos of the person involved, and the burden of proof is by a preponderance of the evidence. *Id.* The fourth factor above is clearly met: the nature and form of the entities' ownership and control by Mr. Wright facilitated Mr. Wright's misuse of those entities in order to avoid responsibility for the previous judgments. The ALJ concludes that the entities are mere shells for the same reason.

13. The ALJ concludes that Claimant has met his burden of proving that the entities in question, which will be specifically listed below, are the alter ego of Mr. Wright.

14. Secondly, a court must determine "whether justice requires recognizing the substance of the relationship between the person or entity sought to be held liable and the corporation over the form because the corporate fiction was 'used to perpetrate a fraud or defeat a rightful claim.'" *Id*., (citing *Reader v. Dertina & Assocs. Mktg., Inc*., 693 P.2d 398, 399 (Colo.App.1984) for the proposition that piercing the corporate veil is appropriate "where the corporate entity has been used to defeat public convenience, or to justify or protect wrong, fraud, or crime, or in other similar situations where equity requires").

15. Piercing the corporate veil also applies to limited liability companies. *Sheffield Servs. Co. v. Trowbridge*, 211 P.3d 714, 721-22 (Colo. App. 2009).

16. Based on the facts found above, the ALJ concludes that Mr. Wright used the corporate fiction to defeat two rightful claims and to justify and protect the wrongs that occurred. Also, the equities in this case clearly require that the corporate veil be pierced, and therefore the second prong is met.

17. Third, "the court must consider whether an equitable result will be achieved by disregarding the corporate form and holding a shareholder or other insider personally liable for the acts of the business entity." *McCallum Family L.L.C. v. Winger*, 221 P.3d 69, 74 (Col. App. 2009); Sheffield, 211 P.3d at 721-22. The goal of this doctrine is achieving an equitable result. *McCallum Family L.L.C. v. Winger* at 74.

18. The ALJ concludes that the third prong has been met as well. The undersigned is persuaded, based on Mr. Wright's actions to date, that without piercing the corporate veil, no equitable resolution will ever be achieved for Claimant. He has been unable to work for almost seven years, is in pain, and requires back surgery that he cannot have, all through no fault of his own and stemming from Mr. Wright's actions.

ORDER

IT IS THEREFORE ORDERED THAT:

1. Claimant's Motion to Add Indispensable Parties is granted pursuant to C.R.C.P. Rule 19. The following entities and individual are joined in this case as employer-respondents: Thomas S. Wright, individually and as CEO, shareholder, officer and representative of all corporate and business entities registered with the State of Colorado, including Wright Group Event Services, LLC.; Soapoint Graphics, LLC; 4800 Colorado Boulevard, LLC; WGES, Inc.; The 3730, LLC; Rent Rite Super Kegs West, LTD.; WGES, LLC.; Wright Group Ultra Events, LLC; RSLW, LLC; GES Rental Services; LLC, Soapoint Graphics, LLC, aka WGSP LLC; RSLW, LCC; Sutomi, LLC; Eventus, LLC; Yosemite Management, LLC., and trade names used by the above.

2. Claimant's Motion to Amend Caption of the Pleadings is granted. The caption of this case shall be amended as of the date of this Order to reflect the joined employer-respondents.

3. Employer-Respondents shall comply with the orders of February 16, 2011 and December 23, 2011 and March 5, 2012.

4. Employer-Respondents shall pay the aggregate amount of on-going benefits and penalties to the Claimant that have accrued from December 23, 2011 to March 5, 2012 and from March 5, 2012 to November 17, 2016.

5. Employer-Respondents shall pay all on-going indemnity, medical benefits and penalties to Claimant.

6. Employer-Respondents shall pay the claimant interest at the rate of 8% per annum on all amounts not paid when due.

7. All matters not determined herein are reserved for future determination.

DATED: July 5, 2017

Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-029-307-01

ISSUES

- Whether Claimant sustained a compensable work injury on October 15, 2016.
- Whether Claimant's implant rupture was causally related to any alleged work injury on October 15, 2016.
- Whether Claimant is owed Temporary Partial Disability benefits between October 15, 2016 and November 8, 2016.
- Whether Claimant is entitled to medical benefits.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant was employed as a package handler for Employer. Her position involved loading trucks to prepare them for delivery.

2. Claimant testified that she sustained a work related injury on October 15, 2016, when a 12" x 12" package landed on her chest, allegedly causing pain and bruising to her right breast.

3. Claimant testified that she did not immediately report the injury because she was embarrassed. Rather, she finished her shift, went home, slept, and called her manager when she woke up. Claimant could not recall who she called to report the injury, but indicated that she left a voicemail for one of her managers.

4. On October 18, 2016, Claimant reported her injury to Michael Bonniwell, Employer's assistant senior manager. Claimant's report did not provide details of the injury and Claimant was unable to identify an exact time, date or location of her alleged injury. When Mr. Bonniwell asked Claimant why she had not reported sooner, Claimant could not explain.

5. When Claimant reported the claim, Mr. Bonniwell gave Claimant Employer's designated provider list. Claimant sought treatment at Good Samaritan Medical Center on October 18, 2016. Claimant's chief concern was that her right breast implant was leaking.

6. Claimant reported having had bruising over her right breast which had resolved by the time of her visit. At hearing, Claimant testified that the bruising was close to the middle of her chest and that the box actually struck both of her breasts.

Three days after the alleged incident, the alleged bruising had already resolved: "she states she had a bruise over the upper inner quadrant of the right breast, which has since resolved." Claimant testified at hearing that on October 18, 2016, the bruise had dissipated, but the area where the bruise was, was still red. However, the emergency room physician at Good Samaritan noted upon physical examination, "[n]o skin redness. No skin break down or open wound."

7. On October 18, 2016, Claimant had a CT scan of her chest. The scan revealed asymmetric implants with irregular left implant and peri-implant complex fluid consistent with implant rupture and peri-implant hematoma and/or silicone. The CT scan did not conclusively establish that there had been any hematoma, or bloody fluid around the implant, as a CT cannot differentiate between the implant fluid, and any other fluids. Claimant's self-report of a soft tissue hematoma or bruising is not confirmed by objective testing or by physical examination.

8. Respondents referred Claimant to treat with Workers Compensation provider Dr. Dean L. Prok whom she saw on October 19, 2016. At that time, Claimant reported that "her right implant was decreasing in size" and related that she "had a CT scan [in the emergency room] that showed a rupture of the *right* implant."

9. Dr. Prok referred Claimant for a plastic surgery evaluation, indicating that he could not determine whether it was more likely than not that Claimant had sustained a work related injury. Dr. Prok indicated that "based on the reported history of a box falling on the chest, the mechanism appears to fit the injury complaint with a ruptured breast implant on that [right] side, but if additional information from the plastic surgery specialist provides suggestion of other causality, this may be reconsidered in the future." At Dr. Prok's initial evaluation, he was under the impression that: 1) the right implant was the ruptured implant, 2) that he was evaluating the relatedness of a right implant rupture, and 3) Claimant had no chest or breast pain or complaints prior to the alleged injury.

10. Claimant reported that she had not had any breast symptoms until the October 15, 2016 box incident. However, on November 3, 2016, Claimant consulted with plastic surgeon William Saber, M.D., and reported that "over the last 3 months … the left [implant] has been harder and harder." Thus, by Claimant's own report, her symptoms began in August, two months prior to the alleged work incident. Claimant also admitted to Respondents' IME physician, Dr. Allison Fall, that prior to the injury she was often unable to sleep on her left side due to breast pain.

11. Dr. Saber noted Claimant to be a moderately reliable historian. He noted Claimant reported that "at one point the left [implant] got firm after the surgery and was massaged by a surgeon and she felt or heard an audible 'pop.'" Dr. Saber noted "no bruises on either breasts or axillae." Dr. Saber indicated that Claimant had evidence of "capsular contracture with pectoralis major muscle displaced superiorly likely due to release and retraction following her surgical procedure and placement of rather large implants."

12. Dr. Saber's initially assessed:

    - "breast implants for poor dimensional match to the patient's frame with a multitude of issues including capsular contracture, rippling, and dissymmetry ….Question relationship of trauma to the above findings."

    - Claimant's implants were over 13 years old, and implant failure increases with age of implants.

    - "the etiology may be due to a combination of large implants, time and possibly trauma."

    - "ruptures are usually silent and it is somewhat of concern to me the degree of pain she had out of proportion of what I would expect with a rupture, though capsular contracture can cause symptoms."

13. Dr. Saber did not believe that the capsular contracture was related to the alleged work injury ("capsular contracture…likely due to release and retraction following her surgical procedure"). Dr. Saber concluded that Claimant's implant rupture was not more likely than not caused by the alleged work injury. To the contrary, he questioned the possible relationship to trauma.

14. On November 7, 2016, Claimant returned to Dr. Prok. At that time, Claimant indicated that "it was uncertain to her whether or not the specialist felt her work-related event was causally related to the problem with her ruptured *right* implant." Claimant also reported that "she was a part-time employee at [Employer] and did not have insurance related to this."

15. On April 19, 2017Dr. Allison Fall conducted a Respondents sponsored independent medical examination of the Claimant. Dr. Fall testified live at hearing. She testified as follows:

    - Prior to her independent medical evaluation, Dr. Fall reviewed the Claimant's prior medical records. At the evaluation, Dr. Fall had the Claimant fill out a medical history questionnaire and performed a physical evaluation.

    - Claimant mentioned in passing that a box fell, hitting her in the chest. However, Claimant did not provide Dr. Fall with a detailed description of the mechanism of injury, and did not explain the alleged injury in the same manner that she testified.

    - Dr. Fall opined that based on medical records and Claimant's reporting, the only injury she may have sustained was potentially a bruise, but that bruising would not require any medical care or treatment.

- Dr. Fall also acknowledged the absence of any objective evidence of bruising in Claimant's medical records.

- Dr. Fall testified that the useful life of implants is around 10 years, and that after 10 years the incidence of silent ruptures is great.

- Dr. Fall testified that based on her research, implant ruptures due to trauma are very rare. If an implant were to rupture based on trauma, Dr. Fall would expect to see severe, deep bruising, that would not resolve in just three days.

- Dr. Fall also noted that based on Claimant's report that the alleged trauma was to her right side, and the alleged bruising was to the right side, she would expect any injury to be localized to that side.

16. Dr. Fall testified, consistent with Dr. Saber's opinions, that silent ruptures do not cause symptoms, although a capsular contracture may. Capsular contracture causes tightness in the breast, and makes rupture of the implant more likely. Both Dr. Fall and Dr. Saber agree that the capsular contracture was preexisting, and not related to any alleged work injury on October 15, 2016.

17. Based on the totality of the evidence, the ALJ finds it is more likely than not that Claimant's implant rupture was due to a capsular contracture that had been symptomatic prior to the alleged work injury.

18. Claimant testified that she could still lift after the injury, and felt that she could still do her job. She was following the doctor's orders by being on modified duty.

19. Claimant admits that she voluntarily resigned on November 8, 2016.

20. This indicates that the Claimant's implant rupture was not likely due to an acute traumatic event. Claimant has since had four different jobs, ranging from production line work to catering.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

A claimant's right to compensation initially hinges upon a determination that the claimant suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. C.R.S. §8-41-301. Claimant shoulders the burden of proving by a preponderance of the evidence that she sustained an injury arising out of and within the course of his/her employment. C.R.S. §8-41-301(1), *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985).

A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page*

v. Clark, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimant nor in favor of the rights of respondents. C.R.S. §8-43-201.

A "compensable" injury is one that requires medical treatment or causes disability. For a claim to be compensable, a claimant must establish the existence of both an "accident" and an "injury." *City of Boulder v. Payne*, 426 P.2d 194 (Colo. 1967). No benefits are owed to a victim of an industrial accident unless the accident results in a compensable "injury." *Wherry v. City and County of Denver*, W.C. 4-475-818, (ICAO March 7, 2002). A "compensable" injury is one which results in an injury requiring medical treatment or causing disability.

In order to prove causation, it is not necessary to establish that the industrial injury was the sole cause of the need for treatment. Rather, it is sufficient if the injury is a "significant" cause of the need for treatment in the sense that there is a direct relationship between the precipitating event and the need for treatment. However, where an industrial injury merely causes the discovery of the underlying disease to happen sooner, but does not accelerate the need for the surgery for the underlying disease, treatment for the preexisting condition is not compensable. *Robinson v. Youth Track*, 4-649-298 (ICAO May 15, 2007).

The fact that a work-related incident may elicit an increase in pain is not enough to establish a compensable aggravation or injury. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo.App.1985). The mere experience of symptoms at work does not require a finding that employment proximately caused the underlying condition. *Harris v. Golden Peaks Nursing*, W.C. No. 4-680-878 (June 4, 2008); *Cotts v. Exempla*, W.C. No 4-606- 563 (August 18, 2005).

A workers' compensation case is decided on its merits. C.R.S. § 8-43-201. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000). When determining credibility of witnesses, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonable or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936).

The ALJ finds that Claimant has not met her burden of proving by a preponderance of the evidence that she sustained an injury arising out of and within the course of her employment.

The ALJ finds the Claimant is not a reliable historian for the following reasons:

- Claimant's initial reports of the injury are much less detailed than her testimony at hearing;

- Claimant testified that she called her manager to report the injury after she went home , however she could not identify who she called, and did not relay that information to Mr. Bonniwell when she reported the injury to him, even upon questioning.

- Claimant reported bruising over her right breast to the medical providers, but at hearing reported the bruising was close to the middle of her chest.

- Claimant testified at hearing that the box struck both of her breasts, but reported to her physicians that the box hit her right side.

- Despite Claimant's self-report of bruising, no medical provider noted any bruising or redness on examination.

- Claimant testified she was asymptomatic prior to the alleged injury. However, she reported to Dr. Saber that she had pain in the left breast that prohibited her from sleeping on that side, and also indicated that over the three months prior to the alleged injury her left implant had been increasing in firmness.

The ALJ also considers Claimant's report that she does not have insurance to cover the implant rupture as an underlying motive for her reporting of a work injury.

The ALJ finds that Claimant may have sustained some mild bruising as a result of the October 15, 2016 incident. The ALJ finds, however, that bruises are not compensable injuries requiring medical intervention.

The ALJ credits the testimony, reports, and opinions of Drs. Saber, Prok, and Fall that the alleged work injury on October 15, 2016 did not likely cause her implant rupture.

The ALJ finds that Claimant has failed to establish by a preponderance of the evidence that she sustained a compensable injury.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant did not sustain a compensable work related injury on October 15, 2016.

2. Claimant's implant rupture was not caused, aggravated or accelerated by any alleged work injury.

3. Claimant's request for medical benefits to cure her implant rupture is denied and dismissed.

4. Claimant's request for temporary total disability benefits is denied and dismissed.

5. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 3, 2017

/s/ Kimberly Turnbow
Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

The following issues were raised for consideration at hearing:

1. Did Respondents prove by a preponderance of the evidence that Claimant's injury resulted from a willful failure to obey a reasonable safety rule adopted by Employer for the safety of employees?

2. Did Claimant prove by a preponderance of the evidence that his average weekly wage (AWW) should be increased, and if so, by what amount?

FINDINGS OF FACT

Having considered the evidence presented at hearing, the following Findings of Fact are reached.

1. Claimant is a 56 year old man, born November 18, 1960, weighs 320 lbs. and is employed at Denver International Airport (DIA) for Employer. Claimant has worked for Employer approximately five years. In Claimant's position for Employer, he was required to operate vehicles at DIA and required to ride as a passenger in Employer's vehicles.

2. On November 3, 2016, Claimant was riding as a passenger in a 2011 Toyota Rav 4, an Employer owned vehicle, when he was involved in a rollover accident. The credible evidence presented at hearing established that during the rollover accident Claimant was not wearing a seatbelt.

3. In its "[Employer] Vehicle Driving and Usage Policy," the employer requires that drivers and passengers should "always" wear seat belts while operating employer-owned vehicles during work hours.

4. Claimant credibly testified that he was aware of the Employer's safety belt policy. Claimant claimed that he understood the Employer's written policy to require the driver ensure that they are restrained and that all passengers in the vehicle are restrained also. Claimant further testified that he understood that Employer's seatbelt policy placed all the responsibility on the driver to ensure all riders in the vehicle were belted. Claimant's claim regarding his understanding of the Employer's seat policy was not deemed credible.

5. The ALJ finds that the Employer's written policy regarding seat belt usage of its employees while in the course and scope of their employment in Employers'

vehicles was reasonable and Claimant understood the policy. The Employer policy required that the "Driver shall always wear seat belts and require the same of passengers."

6. Employer provided Claimant with safe driving training upon hire, including training regarding safety belt usage. Claimant admitted that as part of his initial training upon hire for Employer, he took a test regarding training topics. This test, which was signed by Claimant, included a topic on whether seat belt use was a safe driving habit for the Employer. Claimant answered the test question affirmatively that seat belt usage is a safe driving habit for Employer.

7. In addition to this training, Employer provides occasional safety presentations and bulletins to its employees. Some of these bulletins include information regarding safety belt use. Mr. Glen Spies, an Assistant Operations Manager for Employer at DIA, and Mr. Mark Hennessy, Fleet Manager for Employer, were safety trainers who make presentations to employees. Mr. Spies and Mr. Hennessy testified to emphasizing the importance of seatbelt usage during their oral presentations. And, on November 19, 2015, Claimant signed a training bulletin which contained a quiz regarding "Competency." In that bulletin, Claimant answered affirmatively to a question that, "You can maintain safe driving habits by driving the speed limit, fastening your seatbelt, maintaining your vehicle, don't follow too closely behind other vehicles, and take extra care in bad weather."

8. Claimant credibly testified that he is responsible for presenting the safety rules to new employees regarding safe driving habits, including seat belt usage.

9. Claimant maintained that he was wearing his seat belt at the time of the November 3, 2016, motor vehicle accident. Claimant testified the seat belt was fully operational on the date of the accident, however, he could not tell if it was on properly. Claimant testified that when he and the vehicle driver began their trip on November 3, 2016, he distinctly recalled hearing the seatbelt reminder bell ringing in the car and remembered thinking that it was ringing because he was without his seatbelt. He testified that he recalled fastening his seatbelt after hearing the vehicle reminder bell. Claimant testimony was not deemed credible.

10. Immediately after the accident occurred, Mr. Spies responded to the accident site. He explained that the photographs contained in Respondents' Exhibit D were consistent with what he observed when he arrived at the accident site. Specifically, with regard to the seat belts, Mr. Spies testified the driver side seat belt was dangling out the door as depicted in the photo exhibits and the passenger side seat belt had no slack in it as shown in photo exhibits.

11. Mr. Hennessy examined the vehicle after it had been towed from the accident site to a salvage yard in Brighton. He made similar observations of the vehicle seat belts as did Mr. Spies.

12. Mark Passamaneck, a physical engineer and an expert in accident reconstruction, examined the vehicle at the salvage yard. Mr. Passamaneck testified that when he observed the vehicle the seat belts were in the same position as identified in the photo exhibits. He opined that the passage of time and the towing of the vehicle to different locations could not have changed the condition of the seat belts when he examined it.

13. Mr. Passamaneck physically examined the seat belts on both the passenger and driver side of the vehicle. He examined the seat belts for any marks and whether the seat belt was locked in place. Mr. Passamaneck opined that the driver's side seat belt was not damaged in any way and that it had been "pyrotechnically retracted" as a result of the accident, which he explained meant that it was locked in the position it was in at the time of the accident. He further opined that there was sufficient room underneath the driver's side seat belt for an occupant to be in the seat and buckled at the time of the accident.

14. Mr. Passamaneck explained that when a vehicle's airbags are deployed, there is a pyrotechnic device that is in the cabling for the seat belt. And, that pyrotechnic device retracts the seat belt four to six inches, shortening the seat belt, to prevent people from sliding under the seat belt, keeping them pressed into the seat and reducing injury.

15. Regarding the passenger side seat belt, Mr. Passamaneck observed that the belt was taut without any slack. He credibly opined that the passenger seat belt was found tight against the car side pillar at the time of the accident because the passenger was not wearing the seatbelt.

16. Mr. Passamaneck explained that once a seat belt was locked into place by the pyrotechnic mechanism after an accident, the only way to move the seat belt is to physically take the entire seat belt assembly apart and replace the mechanism.

17. Mr. Passamaneck also examined the passenger side seat to confirm the seat belt was not damaged or in bad repair. He found no evidence of malfunctioning. Specifically, Mr. Passamaneck confirmed there was no braking or damaging of the pall in the seat belt buckle.

18. The medical records also establish Claimant had no injury or bruising to his right shoulder or right chest, the area most often injured on a restrained passenger in a motor vehicle accident. Indeed, the records document the accident had no effect on Claimant's right shoulder, which had been surgically repaired eighteen months prior to the accident. Claimant testified he had no bruising or trauma to his right arm and shoulder.

19. As proof Claimant was wearing his seat belt, Claimant proffered a picture of bruising on his left chest and left bicep. Mr. Passamaneck credibly opined that Claimant's left sided chest and arm bruises were consistent with impact rather than restraint by a seat belt. Mr. Passamaneck credibly testified that, in a side impact accident that caused the vehicle to roll over; such as in this case, an unrestrained passenger would hit the roof with the left side of the body causing impact bruising.

20. The conclusion that Claimant lacked credibility regarding his use of the seat belt was further bolstered by Claimant's testimony that Employer never enforced the seatbelt policy and his testimony that debate among employees was ongoing about the necessity of using seatbelts. Claimant contended that since duties often required employees to stop and exit their vehicle every 200 feet, using seatbelts when performing these duties was unreasonable.

21. Finally, Claimant testified that he always pushes his seat way back causing the placement of his seatbelt to be across his chest. Claimant testified that placement of the seatbelt across his chest explains the bruising on his left chest and left arm. Claimant's testimony was not deemed credible and Mr. Passamaneck's explanation of Claimant's pattern of bruising was deemed more credible. Mr. Passamaneck's credibly testified that an unbelted passenger in a rollover accident would hit the roof of the vehicle with his left chest and arm causing the bruising seen on Claimant's left chest and arm.

22. Considering the totality of the evidence, it is found that the weight of the credible evidence supports a finding that Claimant's injuries were caused by Claimant's willful failure to use a safety device and that Claimant willfully failed to obey a reasonable safety rule resulting in a 50% reduction in Claimant's workers' compensation benefits.

23. Respondents have admitted to an average weekly wage of $656.82, which was calculated based upon Claimant's wages for the year prior to the date of injury. The ALJ finds that Claimant's wages during the period of June 3, 2016, through November 4, 2016, is a more fair representation of his earnings. Therefore, the ALJ finds and determines that $744.21 is Claimant's AWW.

CONCLUSIONS OF LAW

Having entered the foregoing Findings of Fact, the following Conclusions of Law reached.

1. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that

which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201, C.R.S. Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado*, 717 P.2d 1000 (Colo. App. 1986).

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). A Workers' Compensation case is decided on its merits. Section 8-43-201. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

3. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodeneck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull*, 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. *Arenas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office*, 297 P.3d 964, 2012 COA 85. The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); a/so see *Heinicke v. Indus. Claim Appeals Office*, 197 P.3d 220 (Colo. App.2008).

4. The totality of the credible and persuasive evidence presented at hearing established that Claimant willfully failed to obey a reasonable rule adopted by Employer for the safety of employees. The "safety rule" penalty is only applicable if the violation is "willful." *Lori's Family Dining, Inc. v. Industrial Claim Appeals Office*, 907 P.2d 715 (Colo. App. 1995). Violation of a rule is not "willful" unless the claimant intentionally did the forbidden act. *Bennett Properties Co. v. Industrial Commission,* 437 P.2d 548 (Colo. 1968); *Stockdale v. Industrial Commission*, 232

P. 669 (Colo. 1925); *Brown v. Great Peaks, Inc*., W.C. No. 4-368-112 (Industrial Claim Appeals Office, July 29, 1999). A violation which is the product of mere negligence, forgetfulness or inadvertence is not "willful." *Johnson v. Denver Tramway Corp.*, 171 P.2d 410 (Colo. 1946).

5. The record evidence established that Claimant intentionally failed to wear a seat belt. Claimant was trained in seatbelt usage and was entrusted with the duty to train other employees in seatbelt usage. Claimant, in testimony, expressed doubt about Employer's enforcement of its seatbelt policy and claimed that he and his co-workers felt wearing a seatbelt was unreasonable when performing certain duties. Claimant, at 320 lbs., explains special placement of his seatbelt which was supposed to account for bruising on his left side. Claimant was all over the place in his testimony, at once, claiming to distinctly remember putting on his seatbelt and yet explaining that Employer was lax in enforcement of seatbelt usage and employees thought seatbelt usage was unreasonable.

6. It is concluded that Claimant violated the Employer's reasonable safety rule and did so "willfully." Consequently, Respondents are entitled to a 50% reduction in compensation provide in the Act. Section 8-43-112(1)(b), C.R.S.

7. Claimant established by a preponderance of the evidence that his AWW is $744.21.

ORDER

It is therefore ordered that:

1. Respondents' liability to Claimant for compensation under the Act for the November 3, 2016, injury is reduced by 50%. Section 8-43-112(1)(b), C.R.S.

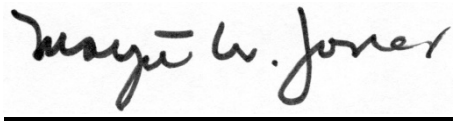
2. Claimant's AWW is $744.21.

3. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 5, 2017_



Margot W. Jones, Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Whether Respondents overcame, by clear and convincing evidence, Dr. Jack Rook's DIME opinion that the Claimant sustained 27 percent whole person impairment as a result of the December 1, 2015, accident.

- Whether Claimant proved, by a preponderance of the evidence, that she requires medical treatment to maintain her condition at MMI.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. On November 30, 2015, Claimant presented to her primary care provider, Dr. Martin McDermott, for worsening fibromyalgia pain. Claimant complained of difficulty walking and with any movement. Claimant also stated that she had gone to "Urgent Care on Saturday" for lower abdominal pain. "Last week felt like she pulled a muscle in her lower groin area at work while dumping a heavy box in the trash, since then has had intermittent sharp pain." Claimant stated she planned to call workman's [sic] comp about the abdominal pain in case it was related to her injury there. Dr. McDermott noted if Claimant's pain was deemed not work-related, he would pursue an ultrasound or other diagnostics, as indicated.

2. On December 1, 2015, at 5:15 p.m., Claimant presented to Platte Valley Medical Center Emergency Room complaining of abdominal pain. Claimant gave a history of lifting boxes into a dumpster at work that morning and feeling a "tear" in her lower abdomen. Claimant was sent for an ultrasound to rule out a hernia. The ultrasound was read as showing a hematoma, but no hernia. The diagnostic impression included strain of abdominal muscle and abdominal wall hematoma.

3. On December 2, 2015, Claimant, as Employer's Store Manager, completed the Employer's First Report of Injury. On the Employer's First Report, Claimant indicated the injury occurred at 9:15 a.m. Claimant reported her injury was a strain to her abdomen and groin.

4. On December 10, 2015, physician assistant, Kathryn Garver, evaluated Claimant. Claimant gave PA Garver a history of her injury occurring when she was throwing boxes in the dumpster. Claimant reported her pain felt "like a bubble in her stomach that was poking". PA Garver's December 10, 2015, treatment note references "right-sided back pain, without sciatica." On physical exam, Claimant exhibited normal range of right hip motion, with pain on flexion and abduction, normal strength, no bony

tenderness, no swelling, no crepitus, and no deformity. Claimant also exhibited normal lumbar range of motion.

5. Dr. J. Tashof Bernton credibly and persuasively testified it is not medically probable Claimant would have had normal hip range of motion and normal lumbar motion ten days post-injury when her symptoms would have been most severe, and then the dramatically limited lumbar range of motion she demonstrated when Dr. Rook evaluated her two years later. Dr. Bernton explained range of motion loss is greatest when an injury is acute because it is associated with muscle strain, muscle spasm and inflammation. Range of motion then increases over time. Dr. Bernton testified, "The range of motion demonstrated by [Claimant] both by Dr. Rook's evaluation and on [his] evaluation, demonstrated dramatically limited range of motion of the lumbar spine in a fashion, first of all, not consistent with the ability to perform activities of daily living, and secondly, dramatically inconsistent with the records of the initial presentation of this back problem when it would have been at their – when it would have been at its worst."

6. On December 23, 2015, Claimant returned to Platte Valley Medical Center, again complaining of abdominal pain. Claimant reported that she was lifting boxes at work on December 1, 2015, when she "moved wrong" and had resulting right lower quadrant abdominal pain. The report documents the December 1, 2015, emergency department evaluation with a "fairly unremarkable" ultrasound showing a "possible hematoma." Claimant reported the abdominal pain persisting since the date of injury and now radiating to the back and right groin. Claimant underwent an emergent CT scan of the abdomen. On exam, Claimant was "chatting with niece, discussing Christmas dinner." The Emergency Room report documented a diagnostic impression of "abdominal pain" and noted "the patient is overall well-appearing with a nonacute abdominal exam. CT imaging does not reveal any obvious etiology for the patient's symptoms".

7. On December 30, 2015, PA Garver reevaluated Claimant. Claimant also consulted by phone with Dr. Julie Mullen. PA Garver noted, "Her [sic] and I agree based on similar CT findings in May, unlikely her symptoms are related to work. Possible that the work injury may have aggravated an underlying issue. Recommended follow-up for [Claimant] with primary care physician and GYN for evaluation of symptoms." The report notes that Claimant left the appointment before PA Garver finished Claimant's plan and Workers' Compensation paperwork. When the PA later called Claimant, "[Claimant] extremely angry. She is mad that we are dismissing her and making her pay for all her medical bills for something that was not her fault etc etc . . . [Claimant] got off the phone still extremely upset."

8. On December 29, 2015, Dr. McDermott, Claimant's PCP, reevaluated her. His work-related assessment remained "strain of abdominal muscle".

9. On January 7, 2016, Dr. Heather Banks evaluated Claimant. Claimant continued to complain of pain in the abdominal wall. She also complained of "many other symptoms such as numbness, pain, and tingling in the bottom of her feet and hands," which she attributed to the December 1, 2015, injury. Dr. Banks noted Claimant

was “extremely painful, out of proportion to pathology.” Dr. Banks also commented, “[Claimant] is extremely tender/painful given the mechanism of injury and I am wondering if her underlying fibromyalgia is playing into this.”

10. On January 15, 2016, Dr. McDermott first notes Claimant’s severe tenderness in the right SI joint, with difficulty getting up and down from the exam table. Dr. Bernton credibly and persuasively testified that it is not medically probable that severe right SI joint tenderness, with “a lot” of difficulty getting up and down from the exam table, would first present six weeks post-accident if it were related to the December 1, 2015, work injury.

11. On February 11, 2016, Dr. Bernton evaluated Claimant at Respondents’ request. Dr. Bernton opined Claimant’s findings were consistent with an SI joint strain associated with a pre-existing leg length discrepancy. Dr. Bernton credibly opined the original occupational injury was an abdominal wall strain, which has resolved. On the date of his February 11, 2016 evaluation, Claimant’s symptoms were consistent with SI joint strain and possible lumbar disc disease, neither was work-related.

12. Claimant was referred to Michael Simone, DC, for treatment of her December 1, 2015, injuries. Claimant told Dr. Simone that she went to the emergency room where she was told she had torn abdominal muscles. “She said her pain then moved to the right lower back.” Dr. Bernton credibly testified that it is not medically probable an SI joint strain would present as abdominal pain that moved to the low back. “Abdominal pain is not part of the spectrum of SI pain. Period.” On April 18, 2016, when Dr. Simone evaluated Claimant, Claimant could bend to a fairly normal range of motion, at a point in time when she was presumably worse. Dr. Bernton credibly testified, based on the diagnosis of SI joint strain, there is no medical explanation for Claimant’s decrease in range of motion between Dr. Simone’s examination and Dr. Rook’s examination. Dr. Simone last examined Claimant on July 14, 2016, one month prior to her placement at MMI. On that date, her lumbar range of motion was 90 degrees (150 percent of normal); extension was 20 degrees (80 percent of normal); left lateral flexion was 25 degrees (100 percent of normal and increased by 25 percent); Claimant was having minimal pain in the right sacroiliac area; her right lateral flexion was 25 degrees (100 percent of normal); left and right rotation were both 30 degrees (100 percent of normal). These measurements are far in excess of the range of motion as measured by Drs. Rook and Bernton.

1. On July 15, 2016, authorized treating physician, Dr. Brian Williams, placed Claimant at MMI from the December 1, 2015, accident. At the time Dr. Williams placed the claimant at MMI, he opined:

> Back, range of motion for her cervical, thoracic, and lumbar spines were evaluated grossly. By my assessment, was that her flexion, extension, rotation, and lateral flexion were full and normal for all spinal segments. So, I deferred formal measurements.

13. Dr. Bernton credibly testified that, although "eyeballing it" for range of motion is less precise than using an inclinometer, there is a gross difference between either 14 and 25 degrees of lumbar motion and full and normal range of motion." Dr. Bernton credibly testified the range of motion assigned by Dr. Rook was submaximal and not accurate.

14. On July 27, 2016, Insurer filed a Final Admission of Liability for six percent scheduled impairment to Claimant's right hip and denied medical treatment post-MMI, consistent with the opinions of the authorized treating physician, Dr. Brian Williams.

15. Claimant objected to the July 27, 2016, Final Admission and requested a Division IME. Dr. Jack Rook was selected as the Division Examiner. Dr. Rook examined Claimant on November 7, 2016. Based on his review of the medical records and his evaluation of Claimant, Dr. Rook assigned a work-related diagnosis of "right-sided sacroiliac joint dysfunction". He opined Claimant reached MMI on July 15, 2016, consistent with the opinions of the authorized treating physician. Dr. Rook assigned five percent whole person impairment per Table53 (II) (B) for specific disorders of the spine. Dr. Rook also calculated 23 percent whole person impairment for loss of lumbar range of motion. Five percent and 23 percent whole person impairments combine to 27 percent whole person impairment. Dr. Rook made general recommendations for maintenance care to be provided by Claimant's primary care provider, Dr. McDermott.

16. On March 7, 2017, Dr. Bernton re-evaluated Claimant at Respondents' request. Based on his repeat evaluation, Dr. Bernton opined Claimant remained at MMI from the December 1, 2015, work injury, with no work-related restrictions and no need for medical treatment to maintain MMI. Dr. Bernton further credibly opined, that if one were to find Claimant's SI joint complaints work-related (which he does not), it was clear that the range of motion both he and Dr. Rook measured was grossly sub-maximal. Using sub-maximal range of motion to determine permanent physical impairment is inconsistent with the *AMA Guides to the Evaluation of Permanent Impairment*, Third Edition, (Revised) (*AMA Guides)* and the instructions of the Division of Workers' Compensation that only maximal range of motion is valid and may be utilized for impairment ratings.

17. Dr. Bernton testified at hearing on Respondents' behalf. Dr. Bernton credibly testified Dr. Rook clearly erred in assigning five percent whole person impairment per Table 53 (II) (B) of *the AMA Guides* for Claimant's alleged SI strain for multiple reasons. Dr. Bernton credibly testified, the *AMA Guides* tell rating physicians that when a medically sufficient evaluation is carried out, the clinical status of the individual will be documented accurately. If the current findings are consistent with the results of previous clinical evaluations performed by other observers, then essentially the findings may be compared with the tables and an impairment rating obtained. The threshold question, though, is to compare the measurements and determine whether

they are consistent with other measurements in the record. If the numbers are not consistent, the rater must explain why. Dr. Rook did not determine whether his measurements were consistent with the record or at least did not explain it in the record as required.

18. Dr. Bernton testified Claimant has a long history of fibromyalgia, has had multiple musculoskeletal complaints over time, and the day before the injury said she had an abdominal strain twisting. Dr. Bernton related concern with the accuracy of Claimant's ability as a historian when the next day Claimant sought treatment reporting that "today, I had an abdominal strain twisting." Further, Claimant initially reported no musculoskeletal complaints, and then ten days later demonstrates some SI problems. Dr. Bernton attributed the SI problems to Claimant's history and of leg length discrepancy, rather than to her work injury finding the later unlikely.

19. Dr. Bernton also credibly testified it is not medically probable Claimant suffered a discrete injury to her right SI joint on December 1, 2015 without experiencing immediate pain in that region. One would not have later onset of pain.

20. Dr. Bernton credibly testified Dr. Rook clearly erred in assigning Claimant 23 percent whole person impairment for loss of lumbar motion for the alleged SI joint strain.

- He explained initially, that as a Division Examiner, you can only rate maximal range of motion. It was clear based on the totality of the evidence the range of motion Claimant demonstrated to Dr. Rook was not her maximal range of motion.

- Twenty-five percent lumbar flexion as Claimant demonstrated to Dr. Rook did not make sense physiologically. Twenty-five degrees flexion is consistent with ankylosing spondylitis, where the spine fuses together and loses the bony ability to flex. It does not happen with an SI joint strain.

- Equally, important, as a Division Examiner, you look through the medical records and evaluate past range of motion measurements. Claimant's range of motion prior to MMI, when her condition was presumably worse, was much greater than that measured by Dr. Rook.

- Dr. Bernton credibly testified the sacroiliac joint is not associated with lumbar flexion, which occurs in the vertebral bodies.

- Dr. Rook failed to verify Claimant's demonstrated range of motion by checking lumbar flexion in different positions, as Dr. Bernton did.

- Dr. Bernton explained that the Division's protocol is to give a patient two opportunities to provide a maximal range of motion. If one range of motion measurement is sub-maximal, the rater should measure again. If the second range of motion is sub-maximal, then range of motion should

not be rated. Dr. Bernton opined that both his and Dr. Rooks' measurements were sub-maximal range of motion measurements.

21. Dr. Bernton watched video surveillance from inside Employer's location which showed Claimant bending to 90 degrees and doing other activities which she reported to medical providers she was unable to do.

22. Dr. Bernton explained that his was not a difference of opinion with Dr. Rook, but rather "it's a difference of opinion between Dr. Rook and reality." "I mean, by looking at the video, you know that [Dr. Rook's] range of motion [measurements] didn't represent her maximum range. Period. End of story. So, it's not just a difference of opinion. It's an incorrect rating."

23. Dr. Rook opined that Claimant would require maintenance care including follow-up with her primary care physician, Dr. McDermott at three to four month intervals, up to two sacroiliac joint injections on an annual basis, and chiropractic care once per month.

24. Claimant did not testify that she desired maintenance care or to the efficacy of any of the treatments recommended by Dr. Rook when they were performed prior to MMI. The records of Claimant's chiropractor, Dr. Simone suggest Claimant's pain complaints are aggravated by her pre-existing fibromyalgia.

25. Dr. Bernton testified Claimant does not have a ratable work-related impairment and she does not require treatment on that basis. Further, per Dr. Bernton, Claimant is going to have problems associated with her leg length discrepancy and fibromyalgia, neither of which is related to the work injury, into the indefinite future. In his opinion, Claimant needs no treatment for the SI problem that is different from the treatment she is already undergoing for fibromyalgia.

26. Dr. Bernton's opinions and testimony of are more credible and persuasive than the opinions of Dr. Rook on diagnosis, permanent physical impairment, and Claimant's need for medical treatment post-MMI.

27. Respondents have overcome Dr. Rook's opinions of on the issue of permanent physical impairment.

28. Claimant has failed to prove, by a preponderance of the evidence, that she requires medical treatment to maintain her condition at MMI.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Legal Principals

The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

In accordance with *Section 8-43-215, C.R.S.,* this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met their burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensecki v. ICAO*, 183 P.3d 684 (Colo. App. *2008).* In short, the ALJ determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). As found, the ALJ credits the opinions of Dr. Bernton as more credible and persuasive than the opinions of Dr. Rook regarding Claimant's work-related diagnosis, permanent physical impairment and the reasonableness, necessity and relatedness of Claimant's need for medical treatment to maintain her condition at MMI.

Medical Benefits

A claimant is entitled to medical benefits that are reasonably necessary to cure or relieve the effects of the industrial injury or to maintain her condition at MMI. *See* § 8-

42-101(1), C.R.S. 2003; *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). The question of whether the need for treatment is causally related to an industrial injury is one of fact. *Walmart Stores, Inc. v. Industrial Claims Office, supra*. Similarly, the question of whether medical treatment is reasonable and necessary to cure or relieve the effects of an industrial injury is one of fact. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). Where the relatedness, reasonableness, or necessity of medical treatment is disputed, the claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc*., W.C. No. 4-117-758 (ICAO April 7, 2003). Based upon the evidence presented, the ALJ concludes that Claimant has failed to prove she requires medical treatment to maintain her condition at MMI.

Overcoming the Division IME

A DIME physician must rate impairment in accordance with the provisions of the *AMA Guides.* Section 8-42-101(3.7), C.R.S.; § 8-42-107(8)(c), C.R.S.; *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117 (Colo. App. 2003).

The DIME physician's finding of impairment is binding unless overcome by clear and convincing evidence. Section 8-42-107(8)(c). Whether the DIME physician properly applied the *AMA Guides*, and ultimately whether the rating has been overcome by clear and convincing evidence, are issues of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 2002 (Colo. App. 2000).

The *AMA Guides* require that there be a longitudinal history in the treating provider's medical records to establish "causation of impairment."

> To establish that a factor *did* contribute to an impairment must rely on documentation of the circumstances under which the factor was present and verification that the type and magnitude of the factor were sufficient and bore the necessary temporal relationship to the condition. The existence of an impairment does not create a presumption of contribution by a factor with which the impairment is often associated.

AMA Guides to the Evaluation of Permanent Impairment, 3d Ed., Revised, 2.2 [Emphasis in original].

Dr. Bernton credibly testified that Claimant's initial treatment note from Platte Valley Medical Center dated December 1, 2015, is not consistent with her later reports to occupational physicians and fails to establish a longitudinal history and causation of an SI joint injury. Dr. Bernton credibly testified it is not medically probable Claimant would have suffered a discrete injury to the SI joint, which is "heavily innervated," and not have experienced immediate pain symptoms from that injury. As found, Dr. Bernton's opinion, that Claimant did not suffer an injury to her SI joint on December 1,

2015, and Dr. Rook's opinion that she did, are not merely differences of opinion. Dr. Rook clearly erred in assigning a five percent whole person impairment per Table 53 (II) (B), of the *AMA Guides*.

The *AMA Guides* and the Division of Workers' Compensation require that impairment for loss of range of motion be based on a claimant's maximal range of motion. Dr. Bernton credibly testified Dr. Rook's range of motion measurement were sub-maximal and in error. Thus Dr. Rook's assignment of a 23 percent whole person impairment, was clearly error. As found, Dr. Bernton's opinion that Dr. Rook clearly erred in assigning the claimant 23 percent whole person impairment for loss of lumbar motion is credible and persuasive.

Dr. Bernton's opinions on the issue of diagnosis and permanent physical impairment are more credible and persuasive than the opinions of Dr. Rook. Claimant had normal or near normal lumbar range of motion as measured by all providers until Dr. Rook. In connection with Dr. Rook's evaluation, Dr. Rook did not have the benefit of the Battery for Health Improvement-2 testing, performed by Dr. Bernton, which indicated Claimant's pain complaints are probably somatoform in nature. Dr. Rook did not review the in-store security video reviewed by Dr. Bernton, which shows Claimant demonstrating normal lumbar range of motion. Dr. Bernton credibly testified he did not merely have a difference of opinion with Dr. Rook, but that Dr. Rook was clearly wrong in his assessment of permanent physical impairment.

The ALJ concludes the Respondents have overcome the opinions of the Division IME, Dr. Rook, by clear and convincing evidence.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request for additional benefits not previously admitted and paid is denied and dismissed.

2. Claimant's request for an award of medical benefits to maintain her condition at MMI is denied and dismissed.

3. All matters not determined herein, and not closed by operation of law, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Did Claimant prove by a preponderance of the evidence that his inguinal hernia condition arose out of and in the course of his employment?

- Did Respondents prove Claimant is subject to penalties for a late report of his injury?

FINDINGS OF FACT

1. Claimant has worked for Employer for 21 years.

2. Claimant's job duties include parking and fueling trucks for part of his shift, the other part he loads boxes onto trucks. The boxes come down a chute on to a conveyor, which are then put onto trucks. The packages can weigh anywhere from 2 pounds to 70 pounds. Approximately 10% of the packages are irregular boxes, which can weigh up to 140 pounds.

3. Claimant testified his job required him to load 200 packages per hour. He always exceeded the requirements of his job. The ALJ inferred Claimant's job required a great deal of lifting and twisting.

4. There was no evidence in the record of a prior injury or treatment for a hernia.

5. Claimant testified he had other employment, including Pasco Health Care Services in which he took care of his severely disabled child every other week. He was not required to perform heavy lifting in this job. Claimant also testified he worked for Argus, which provided security for events like concerts. He was not required to lift it in this job. He had not engaged in any activities which required heavy lifting, including remodeling.

6. Claimant testified he was working on January 6, 2017 and felt discomfort, as well as a bulging sensation while loading packages. He could not identify a particular box which caused the discomfort, but said he felt worse as the day went on.

7. Respondents did not introduce evidence to contradict Claimant's testimony that he was loading packages on January 6, 2017. The ALJ concluded Claimant was performing his regular job duties, which included lifting and loading 200 packages per hour for at least 50% of his shift that day.

8. Claimant was not engaged in a remodeling project or other activities which involved heavy lifting at this time.

9. Claimant testified he did not immediately treat for his symptoms. The discomfort got worse. Approximately two weeks later, he went to the doctor for flu symptoms, as he required a doctor's note to return to work. He asked the doctor to check his hernia.

10. Medical records from Rocky Mountain Urgent care, dated January 18, 2017 were admitted and hearing. "Hernia? X 1 week; vomiting, diarrhea X 2 days" were listed as the problem/symptoms. The diagnosis was gastroenteritis and left inguinal hernia. Claimant was given a prescription for Zofran, along with a referral to a surgeon, as the hernia was considered reducible. Claimant was also given work restrictions of no heavy lifting.

11. Claimant testified the doctor at Rocky Mountain told him to report the injury as a work injury.

12. Claimant was referred to Concentra and was evaluated on January 20, 2017 by Lacie Esser, PA and Brian Counts, M.D. In the medical history, Claimant noted it was one or two weeks ago that he noted his left groin area felt strange after lifting/moving packages. On examination, the left inguinal region had fullness, but no bulging. PA Esser's assessment was groin discomfort, left. The report, which was dictated by PA Esser and signed by Dr. Counts, contained the opinion that there was a greater than 50% probability that Claimant's symptoms were related to work. The ALJ credited this opinion. Claimant was referred for an ultrasound. Claimant's restrictions specified he could lift push/pull up to 20 pounds occasionally. Dr. Counts completed a M-164 form on or about January 25, 2017 in which he noted his objective findings were consistent with Claimant's history and/or work-related mechanism of injury illness.

13. An Employer's First Report of Injury was completed on January 21, 2017. This report stated Claimant was loading packages on to a trailer and was completed by Alejandro Gomez.

14. On January 30, 2017, Claimant underwent an ultrasound at Touchstone Imaging. Jeffrey Guyon, M.D. read the films and diagnosed a direct inguinal hernia on the left. The ALJ found this was objective evidence of the hernia.

15. Claimant returned to Concentra on January 26, 2017. At that time, he reported continued pain, slightly worse. He noted swelling and symptoms after a long day of work. PA Esser's assessment was groin discomfort, left; left groin mass. Claimant was referred to a general surgeon.

16. Claimant testified he never had a major injury while working for Employer. He didn't pay that close attention to signs or postings around the office regarding

reporting injuries at work. Claimant did not dispute that he was required to report any injury within four working days. Claimant did not report his work injury within four days, as required.

17. Claimant testified he went to the appointment at the surgeon's office and waited for an hour. The surgeon was running late and Claimant left the office.

18. Claimant requested to see a different surgeon, given his experience with Dr. Weaver.

19. On February 22, 2017, Claimant returned to Concentra and was examined by Jennifer Pula, M.D. Claimant had sharp/shooting pain with the discomfort. On examination, Dr. Pula noted left inguinal nodes were enlarged. Her diagnosis was inguinal hernia, left. Claimant was dispensed Naproxen and referred to a surgeon. The ALJ infers that Dr. Pula was of the opinion Claimant's hernia was work related; hence the surgical referral.

20. On May 10, 2017, Claimant was evaluated by F. Mark Paz, M.D. at the request of Respondent. This evaluation took place after Claimant underwent surgery for repair of the left inguinal hernia. At the time of the evaluation, Claimant reported pain 3/10 in the left inguinal region, but Claimant felt he was improving. Dr. Paz opined that it was not medically probable that the left inguinal hernia was causally related to the reference January 6, 2017 injury date. He stated Claimant did not provide a mechanism of injury, as there was no specific lifting event. Dr. Paz opined Claimant's history was consistent with development of left inguinal region symptoms which were insidious, slowly evolving, with a specific timing of onset, and not associated with a specific event. Dr. Paz believed Claimant should reach MMI at 4-6 weeks following the repair of the inguinal hernia.

21. Dr. Paz testified as an expert in internal medicine and occupational medicine at hearing. He is Level II accredited pursuant to the WCRP. He has treated patients with occupational injuries since 1992.

22. Dr. Paz noted there were two types of hernias, direct and indirect, of which this was the former. A direct hernia can be caused by various activities, including coughing. The hernia is the result of the change of intra-abdominal pressure which causes part of the abdomen to be pushed through the abdominal wall. Dr. Paz testified it would be atypical for Claimant not to experience pain if he had suffered the hernia at work. In reviewing the ultrasound report, Dr. Paz thought the age of Claimant's hernia could be anywhere from 1-2 months. Dr. Paz disagreed with the analysis of Claimant's ATP that there was a greater than 50% probability that his work activities caused the hernia. Dr. Paz stated there was no evidence of a specific incident which caused the hernia. Dr. Paz testified it was not medically probable based on the available information that Claimant's hernia was work-related. On cross-examination, Dr. Paz agreed lifting could cause a hernia, but he thought it was an insidious, slowly evolving condition. The ALJ was not persuaded by Dr. Paz' opinion, as it took a very constrained

view concerning the mechanism of injury, essentially foreclosing any possibility that lifting boxes at work precipitated the hernia.

23. Claimant established by a preponderance of the evidence that lifting at work caused the left inguinal hernia.

24. Respondents established Claimant failed to report his injury within four days. Claimant reported his injury on January 21, 2017.

25. Evidence and inferences inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1),C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). In the case at bench, the credibility of Claimant, as well as Dr. Paz was determinative on the compensability issue.

Compensability of Left Inguinal Hernia

The legal standard applicable to the compensability issue is found in § 8-41-301(1)(c), C.R.S., which provides as a condition for the recovery of workers' compensation benefits the injury must be "proximately caused by an injury or occupational disease arising out of and in the course of the employment". *Loofbourrow v. Industrial Claim Appeals Office*, 321 P.3d 548 (Colo. App. 2011), *aff'd Harman-Bergstedt, Inc. v. Loofbourrow*, 320 P.3d 327 (Colo. 2014).

A "compensable" injury is one which is disabling and entitles the Claimant to compensation in the form of disability benefits. *Id*.; *Romero v. Industrial Commission*, 632 P.2d 1052 (Colo. App. 1981). Conversely, no benefits flow to the victim of an industrial accident unless the accident results in a compensable "injury". Id.; § 8-41-301, C.R.S. The question of whether Claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000). The ALJ determined Claimant proved he suffered a compensable injury in the case at bench.

As a starting point, Claimant's job with Employer was a physical one; loading packages required lifting and twisting. He testified that he injured himself while moving boxes from the conveyor to a truck. Although, he could not specify which particular box he was lifting, Claimant felt pain while performing his job duties. The evidence admitted at hearing, including Claimant's testimony, established he was performing this job on January 6, 2015. (Findings of Fact 6-7). No contrary evidence was presented. The ALJ credited Claimant's testimony that he experienced symptoms while working on January 6, 2015.

In addition, Claimant's treating physicians offered the opinion that his inguinal hernia was caused by work. The work relatedness of the left inguinal hernia was established in the records of PA Esser/Dr. Counts and Dr. Pula. (Findings of Fact 10, 12, and 19). The ALJ credited those opinions over those offered by Dr. Paz.

In making this determination, the ALJ considered Respondents' argument that Claimant did not prove a precise mechanism of injury. The ALJ concluded Claimant's testimony established by a preponderance of the evidence that he was moving and lifting packages when the hernia occurred, which was supported by the medical evidence. Therefore, Claimant met his burden of proof and showed he sustained a compensable injury.

Penalties for Untimely Reporting

Respondents seek a penalty against Claimant because he failed timely to report the injury in writing as required by § 8-43-102(1)(a), C.R.S. The ALJ concluded Respondents met their burden of proof on this issue. (Findings of Fact 13, 24).

§ 8-43-102(1)(a) provides that an employee that sustains an injury from an accident “shall notify the said employee’s employer in writing of the injury within four days of the occurrence of the injury”. If the employee fails to report the injury in writing “said employee may lose up to one day’s compensation for each day’s failure to so report”. Because the statute uses the word “may,” imposition of a penalty for late reporting is left to the discretion of the ALJ. *LeFou v. Waste Management,* W.C. No. 4-519-354 (I.C.A.O. March 6, 2003).

Based on the evidence before the Court, there was no dispute Claimant delayed in reporting his injury. Accordingly, the ALJ concluded Claimant is subject to a penalty

for late reporting of the work injury. That period of late reporting was 15 days. To the extent Claimant receives indemnity benefits, he shall be penalized one day of compensation for each day he delayed reporting the injury.

ORDER

It is therefore ordered that:

1. Claimant suffered a compensable industrial injury while working for Employer

2. Respondents shall provide medical benefits to cure and relieve the effects of Claimant's injury, including the Claimant's treatment at Concentra and the surgery to repair the left inguinal hernia.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Whether Respondents overcame, by clear and convincing evidence, Dr. Jack Rook's DIME opinion that the Claimant sustained 27 percent whole person impairment as a result of the December 1, 2015, accident.

- Whether Claimant proved, by a preponderance of the evidence, that she requires medical treatment to maintain her condition at MMI.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. On November 30, 2015, Claimant presented to her primary care provider, Dr. Martin McDermott, for worsening fibromyalgia pain. Claimant complained of difficulty walking and with any movement. Claimant also stated that she had gone to "Urgent Care on Saturday" for lower abdominal pain. "Last week felt like she pulled a muscle in her lower groin area at work while dumping a heavy box in the trash, since then has had intermittent sharp pain." Claimant stated she planned to call workman's [sic] comp about the abdominal pain in case it was related to her injury there. Dr. McDermott noted if Claimant's pain was deemed not work-related, he would pursue an ultrasound or other diagnostics, as indicated.

2. On December 1, 2015, at 5:15 p.m., Claimant presented to Platte Valley Medical Center Emergency Room complaining of abdominal pain. Claimant gave a history of lifting boxes into a dumpster at work that morning and feeling a "tear" in her lower abdomen. Claimant was sent for an ultrasound to rule out a hernia. The ultrasound was read as showing a hematoma, but no hernia. The diagnostic impression included strain of abdominal muscle and abdominal wall hematoma.

3. On December 2, 2015, Claimant, as Employer's Store Manager, completed the Employer's First Report of Injury. On the Employer's First Report, Claimant indicated the injury occurred at 9:15 a.m. Claimant reported her injury was a strain to her abdomen and groin.

4. On December 10, 2015, physician assistant, Kathryn Garver, evaluated Claimant. Claimant gave PA Garver a history of her injury occurring when she was throwing boxes in the dumpster. Claimant reported her pain felt "like a bubble in her stomach that was poking". PA Garver's December 10, 2015, treatment note references "right-sided back pain, without sciatica." On physical exam, Claimant exhibited normal range of right hip motion, with pain on flexion and abduction, normal strength, no bony

tenderness, no swelling, no crepitus, and no deformity. Claimant also exhibited normal lumbar range of motion.

5. Dr. J. Tashof Bernton credibly and persuasively testified it is not medically probable Claimant would have had normal hip range of motion and normal lumbar motion ten days post-injury when her symptoms would have been most severe, and then the dramatically limited lumbar range of motion she demonstrated when Dr. Rook evaluated her two years later. Dr. Bernton explained range of motion loss is greatest when an injury is acute because it is associated with muscle strain, muscle spasm and inflammation. Range of motion then increases over time. Dr. Bernton testified, "The range of motion demonstrated by [Claimant] both by Dr. Rook's evaluation and on [his] evaluation, demonstrated dramatically limited range of motion of the lumbar spine in a fashion, first of all, not consistent with the ability to perform activities of daily living, and secondly, dramatically inconsistent with the records of the initial presentation of this back problem when it would have been at their – when it would have been at its worst."

6. On December 23, 2015, Claimant returned to Platte Valley Medical Center, again complaining of abdominal pain. Claimant reported that she was lifting boxes at work on December 1, 2015, when she "moved wrong" and had resulting right lower quadrant abdominal pain. The report documents the December 1, 2015, emergency department evaluation with a "fairly unremarkable" ultrasound showing a "possible hematoma." Claimant reported the abdominal pain persisting since the date of injury and now radiating to the back and right groin. Claimant underwent an emergent CT scan of the abdomen. On exam, Claimant was "chatting with niece, discussing Christmas dinner." The Emergency Room report documented a diagnostic impression of "abdominal pain" and noted "the patient is overall well-appearing with a nonacute abdominal exam. CT imaging does not reveal any obvious etiology for the patient's symptoms".

7. On December 30, 2015, PA Garver reevaluated Claimant. Claimant also consulted by phone with Dr. Julie Mullen. PA Garver noted, "Her [sic] and I agree based on similar CT findings in May, unlikely her symptoms are related to work. Possible that the work injury may have aggravated an underlying issue. Recommended follow-up for [Claimant] with primary care physician and GYN for evaluation of symptoms." The report notes that Claimant left the appointment before PA Garver finished Claimant's plan and Workers' Compensation paperwork. When the PA later called Claimant, "[Claimant] extremely angry. She is mad that we are dismissing her and making her pay for all her medical bills for something that was not her fault etc etc . . . [Claimant] got off the phone still extremely upset."

8. On December 29, 2015, Dr. McDermott, Claimant's PCP, reevaluated her. His work-related assessment remained "strain of abdominal muscle".

9. On January 7, 2016, Dr. Heather Banks evaluated Claimant. Claimant continued to complain of pain in the abdominal wall. She also complained of "many other symptoms such as numbness, pain, and tingling in the bottom of her feet and hands," which she attributed to the December 1, 2015, injury. Dr. Banks noted Claimant

was “extremely painful, out of proportion to pathology.” Dr. Banks also commented, “[Claimant] is extremely tender/painful given the mechanism of injury and I am wondering if her underlying fibromyalgia is playing into this.”

10. On January 15, 2016, Dr. McDermott first notes Claimant’s severe tenderness in the right SI joint, with difficulty getting up and down from the exam table. Dr. Bernton credibly and persuasively testified that it is not medically probable that severe right SI joint tenderness, with “a lot” of difficulty getting up and down from the exam table, would first present six weeks post-accident if it were related to the December 1, 2015, work injury.

11. On February 11, 2016, Dr. Bernton evaluated Claimant at Respondents’ request. Dr. Bernton opined Claimant’s findings were consistent with an SI joint strain associated with a pre-existing leg length discrepancy. Dr. Bernton credibly opined the original occupational injury was an abdominal wall strain, which has resolved. On the date of his February 11, 2016 evaluation, Claimant’s symptoms were consistent with SI joint strain and possible lumbar disc disease, neither was work-related.

12. Claimant was referred to Michael Simone, DC, for treatment of her December 1, 2015, injuries. Claimant told Dr. Simone that she went to the emergency room where she was told she had torn abdominal muscles. “She said her pain then moved to the right lower back.” Dr. Bernton credibly testified that it is not medically probable an SI joint strain would present as abdominal pain that moved to the low back. “Abdominal pain is not part of the spectrum of SI pain. Period.” On April 18, 2016, when Dr. Simone evaluated Claimant, Claimant could bend to a fairly normal range of motion, at a point in time when she was presumably worse. Dr. Bernton credibly testified, based on the diagnosis of SI joint strain, there is no medical explanation for Claimant’s decrease in range of motion between Dr. Simone’s examination and Dr. Rook’s examination. Dr. Simone last examined Claimant on July 14, 2016, one month prior to her placement at MMI. On that date, her lumbar range of motion was 90 degrees (150 percent of normal); extension was 20 degrees (80 percent of normal); left lateral flexion was 25 degrees (100 percent of normal and increased by 25 percent); Claimant was having minimal pain in the right sacroiliac area; her right lateral flexion was 25 degrees (100 percent of normal); left and right rotation were both 30 degrees (100 percent of normal). These measurements are far in excess of the range of motion as measured by Drs. Rook and Bernton.

1. On July 15, 2016, authorized treating physician, Dr. Brian Williams, placed Claimant at MMI from the December 1, 2015, accident. At the time Dr. Williams placed the claimant at MMI, he opined:

> Back, range of motion for her cervical, thoracic, and lumbar spines were evaluated grossly. By my assessment, was that her flexion, extension, rotation, and lateral flexion were full and normal for all spinal segments. So, I deferred formal measurements.

13. Dr. Bernton credibly testified that, although "eyeballing it" for range of motion is less precise than using an inclinometer, there is a gross difference between either 14 and 25 degrees of lumbar motion and full and normal range of motion." Dr. Bernton credibly testified the range of motion assigned by Dr. Rook was submaximal and not accurate.

14. On July 27, 2016, Insurer filed a Final Admission of Liability for six percent scheduled impairment to Claimant's right hip and denied medical treatment post-MMI, consistent with the opinions of the authorized treating physician, Dr. Brian Williams.

15. Claimant objected to the July 27, 2016, Final Admission and requested a Division IME. Dr. Jack Rook was selected as the Division Examiner. Dr. Rook examined Claimant on November 7, 2016. Based on his review of the medical records and his evaluation of Claimant, Dr. Rook assigned a work-related diagnosis of "right-sided sacroiliac joint dysfunction". He opined Claimant reached MMI on July 15, 2016, consistent with the opinions of the authorized treating physician. Dr. Rook assigned five percent whole person impairment per Table53 (II) (B) for specific disorders of the spine. Dr. Rook also calculated 23 percent whole person impairment for loss of lumbar range of motion. Five percent and 23 percent whole person impairments combine to 27 percent whole person impairment. Dr. Rook made general recommendations for maintenance care to be provided by Claimant's primary care provider, Dr. McDermott.

16. On March 7, 2017, Dr. Bernton re-evaluated Claimant at Respondents' request. Based on his repeat evaluation, Dr. Bernton opined Claimant remained at MMI from the December 1, 2015, work injury, with no work-related restrictions and no need for medical treatment to maintain MMI. Dr. Bernton further credibly opined, that if one were to find Claimant's SI joint complaints work-related (which he does not), it was clear that the range of motion both he and Dr. Rook measured was grossly sub-maximal. Using sub-maximal range of motion to determine permanent physical impairment is inconsistent with the *AMA Guides to the Evaluation of Permanent Impairment*, Third Edition, (Revised) (*AMA Guides)* and the instructions of the Division of Workers' Compensation that only maximal range of motion is valid and may be utilized for impairment ratings.

17. Dr. Bernton testified at hearing on Respondents' behalf. Dr. Bernton credibly testified Dr. Rook clearly erred in assigning five percent whole person impairment per Table 53 (II) (B) of *the AMA Guides* for Claimant's alleged SI strain for multiple reasons. Dr. Bernton credibly testified, the *AMA Guides* tell rating physicians that when a medically sufficient evaluation is carried out, the clinical status of the individual will be documented accurately. If the current findings are consistent with the results of previous clinical evaluations performed by other observers, then essentially the findings may be compared with the tables and an impairment rating obtained. The threshold question, though, is to compare the measurements and determine whether

they are consistent with other measurements in the record. If the numbers are not consistent, the rater must explain why. Dr. Rook did not determine whether his measurements were consistent with the record or at least did not explain it in the record as required.

18. Dr. Bernton testified Claimant has a long history of fibromyalgia, has had multiple musculoskeletal complaints over time, and the day before the injury said she had an abdominal strain twisting. Dr. Bernton related concern with the accuracy of Claimant's ability as a historian when the next day Claimant sought treatment reporting that "today, I had an abdominal strain twisting." Further, Claimant initially reported no musculoskeletal complaints, and then ten days later demonstrates some SI problems. Dr. Bernton attributed the SI problems to Claimant's history and of leg length discrepancy, rather than to her work injury finding the later unlikely.

19. Dr. Bernton also credibly testified it is not medically probable Claimant suffered a discrete injury to her right SI joint on December 1, 2015 without experiencing immediate pain in that region. One would not have later onset of pain.

20. Dr. Bernton credibly testified Dr. Rook clearly erred in assigning Claimant 23 percent whole person impairment for loss of lumbar motion for the alleged SI joint strain.

- He explained initially, that as a Division Examiner, you can only rate maximal range of motion. It was clear based on the totality of the evidence the range of motion Claimant demonstrated to Dr. Rook was not her maximal range of motion.

- Twenty-five percent lumbar flexion as Claimant demonstrated to Dr. Rook did not make sense physiologically. Twenty-five degrees flexion is consistent with ankylosing spondylitis, where the spine fuses together and loses the bony ability to flex. It does not happen with an SI joint strain.

- Equally, important, as a Division Examiner, you look through the medical records and evaluate past range of motion measurements. Claimant's range of motion prior to MMI, when her condition was presumably worse, was much greater than that measured by Dr. Rook.

- Dr. Bernton credibly testified the sacroiliac joint is not associated with lumbar flexion, which occurs in the vertebral bodies.

- Dr. Rook failed to verify Claimant's demonstrated range of motion by checking lumbar flexion in different positions, as Dr. Bernton did.

- Dr. Bernton explained that the Division's protocol is to give a patient two opportunities to provide a maximal range of motion. If one range of motion measurement is sub-maximal, the rater should measure again. If the second range of motion is sub-maximal, then range of motion should

not be rated. Dr. Bernton opined that both his and Dr. Rooks' measurements were sub-maximal range of motion measurements.

21. Dr. Bernton watched video surveillance from inside Employer's location which showed Claimant bending to 90 degrees and doing other activities which she reported to medical providers she was unable to do.

22. Dr. Bernton explained that his was not a difference of opinion with Dr. Rook, but rather "it's a difference of opinion between Dr. Rook and reality." "I mean, by looking at the video, you know that [Dr. Rook's] range of motion [measurements] didn't represent her maximum range. Period. End of story. So, it's not just a difference of opinion. It's an incorrect rating."

23. Dr. Rook opined that Claimant would require maintenance care including follow-up with her primary care physician, Dr. McDermott at three to four month intervals, up to two sacroiliac joint injections on an annual basis, and chiropractic care once per month.

24. Claimant did not testify that she desired maintenance care or to the efficacy of any of the treatments recommended by Dr. Rook when they were performed prior to MMI. The records of Claimant's chiropractor, Dr. Simone suggest Claimant's pain complaints are aggravated by her pre-existing fibromyalgia.

25. Dr. Bernton testified Claimant does not have a ratable work-related impairment and she does not require treatment on that basis. Further, per Dr. Bernton, Claimant is going to have problems associated with her leg length discrepancy and fibromyalgia, neither of which is related to the work injury, into the indefinite future. In his opinion, Claimant needs no treatment for the SI problem that is different from the treatment she is already undergoing for fibromyalgia.

26. Dr. Bernton's opinions and testimony of are more credible and persuasive than the opinions of Dr. Rook on diagnosis, permanent physical impairment, and Claimant's need for medical treatment post-MMI.

27. Respondents have overcome Dr. Rook's opinions of on the issue of permanent physical impairment.

28. Claimant has failed to prove, by a preponderance of the evidence, that she requires medical treatment to maintain her condition at MMI.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Legal Principals

The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

In accordance with *Section 8-43-215, C.R.S.,* this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met their burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensecki v. ICAO*, 183 P.3d 684 (Colo. App. *2008).* In short, the ALJ determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). As found, the ALJ credits the opinions of Dr. Bernton as more credible and persuasive than the opinions of Dr. Rook regarding Claimant's work-related diagnosis, permanent physical impairment and the reasonableness, necessity and relatedness of Claimant's need for medical treatment to maintain her condition at MMI.

Medical Benefits

A claimant is entitled to medical benefits that are reasonably necessary to cure or relieve the effects of the industrial injury or to maintain her condition at MMI. *See* § 8-

42-101(1), C.R.S. 2003; *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). The question of whether the need for treatment is causally related to an industrial injury is one of fact. *Walmart Stores, Inc. v. Industrial Claims Office, supra*. Similarly, the question of whether medical treatment is reasonable and necessary to cure or relieve the effects of an industrial injury is one of fact. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). Where the relatedness, reasonableness, or necessity of medical treatment is disputed, the claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc*., W.C. No. 4-117-758 (ICAO April 7, 2003). Based upon the evidence presented, the ALJ concludes that Claimant has failed to prove she requires medical treatment to maintain her condition at MMI.

Overcoming the Division IME

A DIME physician must rate impairment in accordance with the provisions of the *AMA Guides.* Section 8-42-101(3.7), C.R.S.; § 8-42-107(8)(c), C.R.S.; *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117 (Colo. App. 2003).

The DIME physician's finding of impairment is binding unless overcome by clear and convincing evidence. Section 8-42-107(8)(c). Whether the DIME physician properly applied the *AMA Guides*, and ultimately whether the rating has been overcome by clear and convincing evidence, are issues of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 2002 (Colo. App. 2000).

The *AMA Guides* require that there be a longitudinal history in the treating provider's medical records to establish "causation of impairment."

> To establish that a factor *did* contribute to an impairment must rely on documentation of the circumstances under which the factor was present and verification that the type and magnitude of the factor were sufficient and bore the necessary temporal relationship to the condition. The existence of an impairment does not create a presumption of contribution by a factor with which the impairment is often associated.

AMA Guides to the Evaluation of Permanent Impairment, 3d Ed., Revised, 2.2 [Emphasis in original].

Dr. Bernton credibly testified that Claimant's initial treatment note from Platte Valley Medical Center dated December 1, 2015, is not consistent with her later reports to occupational physicians and fails to establish a longitudinal history and causation of an SI joint injury. Dr. Bernton credibly testified it is not medically probable Claimant would have suffered a discrete injury to the SI joint, which is "heavily innervated," and not have experienced immediate pain symptoms from that injury. As found, Dr. Bernton's opinion, that Claimant did not suffer an injury to her SI joint on December 1,

2015, and Dr. Rook's opinion that she did, are not merely differences of opinion. Dr. Rook clearly erred in assigning a five percent whole person impairment per Table 53 (II) (B), of the *AMA Guides*.

The *AMA Guides* and the Division of Workers' Compensation require that impairment for loss of range of motion be based on a claimant's maximal range of motion. Dr. Bernton credibly testified Dr. Rook's range of motion measurement were sub-maximal and in error. Thus Dr. Rook's assignment of a 23 percent whole person impairment, was clearly error. As found, Dr. Bernton's opinion that Dr. Rook clearly erred in assigning the claimant 23 percent whole person impairment for loss of lumbar motion is credible and persuasive.

Dr. Bernton's opinions on the issue of diagnosis and permanent physical impairment are more credible and persuasive than the opinions of Dr. Rook. Claimant had normal or near normal lumbar range of motion as measured by all providers until Dr. Rook. In connection with Dr. Rook's evaluation, Dr. Rook did not have the benefit of the Battery for Health Improvement-2 testing, performed by Dr. Bernton, which indicated Claimant's pain complaints are probably somatoform in nature. Dr. Rook did not review the in-store security video reviewed by Dr. Bernton, which shows Claimant demonstrating normal lumbar range of motion. Dr. Bernton credibly testified he did not merely have a difference of opinion with Dr. Rook, but that Dr. Rook was clearly wrong in his assessment of permanent physical impairment.

The ALJ concludes the Respondents have overcome the opinions of the Division IME, Dr. Rook, by clear and convincing evidence.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request for additional benefits not previously admitted and paid is denied and dismissed.

2. Claimant's request for an award of medical benefits to maintain her condition at MMI is denied and dismissed.

3. All matters not determined herein, and not closed by operation of law, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 5, 2017

Denver, CO 80203

ISSUE

Whether Claimant has demonstrated by a preponderance of the evidence that lower back surgery in the form of a microdiscectomy recommended by William D. Biggs, M.D. is reasonable, necessary and causally related to his January 5, 2017 admitted industrial injury.

FINDINGS OF FACT

1. Claimant is a 64 year old male who worked for Employer as a Service Manager. His job duties involved delivering fuel, digging trenches, installing gas lines and filling propane tanks.

2. During December 2016 Claimant developed right buttock pain. He visited Justin Green, D.C. for an examination. Claimant had been visiting Dr. Green approximately twice each year since 2000 primarily for upper back and neck pain. Dr. Green noted that Claimant had bone spurs and recommended an MRI. Claimant's symptoms continued to increase during December 2016.

3. On December 31, 2016 Claimant visited the Centura Emergency Room for an evaluation. He received treatment from Maureen Moore, N.P. Claimant told N.P. Moore that "his pain is generally worse at the end of his work day and that for the past week at the end of his work his [pain] became worse and worse causing difficulty sleeping." He further stated that he had "seen his chiropractor multiple times since had no improvement." Claimant's chief complaint was "back pain that began over one week earlier and was "gradually worsening." Claimant did not associate the pain with any known injury and only reported "generalized work." His pain was right-sided and radiated into the right-buttock and right-lower leg. Claimant was diagnosed with sciatica and received a Medrol Prednisone Dosepak. N.P. Moore referred Claimant for a surgical consultation with William D. Biggs, M.D.

4. On January 3, 2017 Claimant returned to Dr. Green for an evaluation. Dr. Green noted lower back pain with right-sided symptoms. The notes suggest that Claimant may have been changing tires and was suffering severe pain. Throughout Dr. Green's notes a box for right-sided symptoms is circled or checked.

5. On January 5, 2017 Claimant was performing a propane leak test at a customer's residence. There were approximately seven inches of snow on the ground and a garden hose was coiled underneath the snow behind Claimant. Claimant stepped backwards, tripped on the garden hose and fell to the ground. When he landed, he struck his hip, thigh or buttocks region on a steel post.

6. Claimant completed the leak test and walked to his truck. When he depressed the accelerator on his truck he immediately experienced shooting pain down his right leg. Claimant estimated that he developed the shooting pain approximately 20-25 minutes after his fall to the ground.

7. On January 9, 2017 Claimant underwent an MRI of the lumbar spine. The MRI revealed disc desiccation with a mild concentric disc bulge and a tiny annular tear at L4-L5. There was also desiccation and a mild concentric disc bulge at L5 -S1. There was also moderate right lateral recess stenosis at L5-S1. The radiologist summarized "degenerative disc disease is worst at L5-S1 where there is a right paracentral disc extrusion causing moderate right lateral recess stenosis and mild mass effect on the transiting right S1 nerve root." The report did not note any acute fracture.

8. On January 16, 2017 Claimant visited Dr. Biggs for an examination. Claimant recounted that, while he was delivering propane for Employer on January 5, 2017, he tripped over a hose that was covered in snow and hit his buttocks on a flange. Claimant remarked that he had been suffering "some sciatic symptoms over the last month" that had been improving, but the January 5, 2017 incident aggravated his condition. Dr. Biggs noted that Claimant had undergone a lumbar MRI. The MRI revealed degeneration at L5-S1 and a disc herniation impinging on the right S1 nerve root. He diagnosed Claimant with a lumbar disc herniation and degeneration at L5-S1. Dr. Biggs recommended an S1 selective nerve root block. He commented that, if the nerve block failed, surgery in the form of a lumbar discectomy at S1 might be warranted.

9. After undergoing a right transforaminal epidural steroid injection on February 9, 2017 Claimant visited James Rafferty, D.O. on February 24, 2017 for an evaluation. Dr. Rafferty noted that Claimant had tripped and fallen on his right buttock while filling a propane tank at work. Claimant reported that he did not respond to the epidural steroid injection and still experiences pain, numbness and tingling over the right buttocks region. He also mentioned persistent weakness in the right lower extremity. Dr. Rafferty diagnosed Claimant with a lumbar disc herniation, including radiculopathy at L5-S1, and referred him back to Dr. Biggs.

10. On February 24, 2017 Claimant returned to Dr. Biggs for an examination. Claimant reported no improvement in his symptoms. On February 28, 2017 Dr. Biggs submitted a surgical authorization request for a L5-S1 microdiscectomy.

11. On March 8, 2017 neurosurgeon James Ogsbury, M.D. conducted a records review of Claimant's case. He determined that Claimant did not likely suffer a new injury on January 5, 2017 and recommended an independent medical examination for a conclusive causality determination. Nevertheless, in addressing causation, Dr. Ogsbury explained:

> [W]ith regard to the issue of causation, the patient clearly has a long history of antecedent low back problems with at least buttock pain and perhaps sciatica and a recent episode of at least buttock pain treated by the chiropractor. Obviously, the patient implied that there was some

> worsening after the fall, but the magnitude of worsening (specifically the difference between the pre-episode clinical status and the post-episode clinical status) is not clear….However, my initial impression is that this sounds like more likely one of the many flares that this patient undergoes and if that is indeed the case (that is, that this is simply part of the long history of intermittent flare-ups of low back pain and sciatica), then this would not be considered a significant exacerbation.

Following Dr. Ogsbury's opinion, Respondents denied Claimant's request for the surgery on March 9, 2017.

12. On March 14, 2017 Dr. Biggs authored a letter appealing the denial of the surgical request. He disagreed with Dr. Ogsbury and explained that Claimant suffered an aggravation of his pre-existing lower back condition when he fell while working on January 5, 2017. Dr. Biggs remarked that "it is clear that [Claimant] herniated the disc at that point." He commented that he did not know if Claimant had a disc herniation prior to January 5, 2017 because there had been no MRI's before the tripping incident. However, he remarked that Claimant "definitely did not have the leg weakness and did not have the severity of symptoms that he was having prior to his trip and fall." Dr. Biggs summarized that "there is no question in my mind" that Claimant suffered a work-related injury on January 5, 2017.

13. On March 31, 2017 Dr. Rafferty authored a letter supporting Dr. Biggs' request for a L5-S1 microdiscectomy. He disagreed with Dr. Ogsbury's determination that Claimant did not require a L5-S1 microdiscectomy to relieve the effects of his January 5, 2017 lower back injury. Dr. Rafferty noted that Claimant suffered an industrial injury on January 5, 2017 while filling a propane tank in his work for Employer. Moreover, Claimant's symptoms were consistent with the January 5, 2017 mechanism of injury. He emphasized that the work incident caused Claimant's symptoms and "[t]hat does not seem to be debatable." Although Dr. Rafferty mentioned that Claimant has suffered minor lower back pain and symptoms in the thoracic region, "it has been many years since [Claimant] has experienced even a minimal amount of low back pain." Dr. Rafferty stated that he disagreed with Dr. Ogsbury's comment that Claimant has suffered a long history of lower back symptoms and a recent episode of possible buttocks pain or sciatica. Furthermore, Dr. Rafferty stated that, even if Claimant suffered from pre-existing lower back symptoms, the January 5, 2017 accident significantly worsened his condition because he began using pain medication and suffered numbness and tingling in his right leg after the event. Finally, in addressing proximate causation Dr. Raffery explained that Claimant would not have developed lower back symptoms in the absence of the January 5, 2017 accident. Accordingly, Dr. Rafferty reasoned that Claimant required an L5-S1 microdiscectomy to relieve the effects of his January 5, 2017 fall while working for Employer.

14. On May 18, 2017 Claimant underwent an independent medical examination with Brian Lambden, M.D. Claimant relayed to Dr. Lambden that he had a history of back pain since 1988 and was previously told by a physician that he had a disc herniation. He told Dr. Lambden that his strength had improved "but he has always

been weak since that time. He says he did okay and basically learned his limits. He would avoid doing heavy work…and he found that he could not ride horses." Dr. Lambden summarized that Claimant had been suffering from back pain dating back to the late 1980's and had "associated weakness, lack of full function, unable to ride a horse without increasing back pain, so he has been dealing with the back pain for quite some time." Dr. Lambden's assessments included "prior history of work injury in 1988 with low back pain and sciatica, supposedly radiating into the left lower extremity with associated weakness and reduced function…." as well as "prior history of chronic waxing and waning back pain for many years…." He also noted the sudden onset of increasing lower back pain on December 1, 2016.

15. In addressing causation, Dr. Lambden remarked that he was having difficulty agreeing with Drs. Biggs and Rafferty. He commented that he was "not completely sure both of these physicians [had] a complete medical history." Dr. Lambden explained that their opinions on causality were not consistent with Claimant's pre-existing medical records. He noted that the records from Dr. Green and the emergency room visit of December 31, 2016 specifically mentioned "escalating pain symptoms radiating into his buttock with pain radiating into the SI and then into the right calf, but also generalized muscle weakness dating back to April 2013."

16. With regard to whether the January 5, 2017 incident caused an exacerbation or aggravation in Claimant's pre-existing condition, Dr. Lambden reasoned:

> Based on my careful analysis and review of records, it would be my opinion that this fall more likely did not aggravate his condition based on the fact that [Claimant] already had a long history of chronic low back pain with intermittent leg pain, which dramatically increased on 12/1/16 with treatment by a chiropractor for the these very same symptoms, followed by an acute emergency room visit on 12/31/16 for these very same symptoms with documented right lower extremity radiculopathy treated with a Medrol Dosepak.

He noted that Claimant was already scheduled to visit Dr. Biggs prior to January 5, 2017 and there was no significant change in his medical course following the trip and fall. Dr. Lambden commented that, although there was no previous lumbar MRI, "it would be more likely than not that Claimant's disc extrusion [was] present" prior to the accident of January 5, 2017.

17. Dr. Lambden concluded that the January 5, 2017 fall did not change the course of Claimant's chronic lower back pain or right lower extremity radiculopathy. He stated that Claimant's only diagnosis related to the January 5, 2017 incident was a right gluteal contusion. Dr. Lambden summarized that the proposed microdiscectomy was not related to the January 5, 2017 incident and Claimant's symptoms were more likely than not related to a pre-existing disc extrusion.

18. Claimant testified at the hearing in this matter. He provided differing accounts of the nature of his pain prior to January 5, 2017. Claimant explained that he did not have lower back pain prior to January 5, 2017 but suffered pain in his buttock or hip. However, Claimant acknowledged that his medical records established a history of lower back pain. He also recognized that he complained of lower back pain to Dr. Green and at the emergency room on December 31, 2016. Nevertheless, Claimant characterized the distinction between buttock pain and back pain as immaterial. He remarked that he was consistent in what he told his medical providers and maintained that he disclosed pre-existing symptoms in his buttock or hip to Drs. Biggs and Rafferty.

19. Dr. Lambden testified at the hearing in this matter consistently with his independent medical examination report. He remarked that the proposed microdiscectomy is not related to Claimant's January 5, 2017 trip and fall. Instead, Dr. Lambden commented that Claimant's need for a microdiscectomy was the result of his pre-existing lower back condition as reflected in the medical records of Dr. Green and the University of Colorado emergency room. He noted that Claimant's lumbar MRI findings were consistent with degenerative changes instead of an acute injury on January 5, 2017. Moreover, Dr. Lambden remarked that Claimant exhibited bilateral lower extremity atrophy. The atrophy supported Dr. Lambden's conclusion that Claimant suffered leg weakness prior to January 5, 2017.

20. Claimant has failed to demonstrate that it is more probably true than not that lower back surgery in the form of a microdiscectomy recommended by Dr. Biggs is causally related to his January 5, 2017 admitted industrial injury. Initially, on January 5, 2017 Claimant was performing a propane leak test at a customer's residence. There were approximately seven inches of snow on the ground and a garden hose was coiled underneath the snow behind Claimant. Claimant stepped backwards, tripped on the garden hose and fell to the ground. He completed the leak test and walked to his truck. When he depressed the accelerator on his truck he immediately experienced shooting pain down his right leg. After conservative medical treatment Claimant underwent a lumbar MRI. The MRI revealed degeneration at L5-S1 and a disc herniation impinging on the right S1 nerve root.

21. On February 28, 2017 Dr. Biggs submitted a surgical authorization request for a L5-S1 microdiscectomy. However, Dr. Ogsbury determined that Claimant did not likely suffer a new injury on January 5, 2017 because of his chronic, prior lower back symptoms. Respondents thus denied the surgical request. Dr. Biggs authored a letter appealing the denial. He disagreed with Dr. Ogsbury and explained that Claimant suffered an aggravation of his pre-existing lower back condition when he fell while working on January 5, 2017. Dr. Biggs remarked that "it is clear that [claimant] herniated the disc at that point." He remarked that Claimant "definitely did not have the leg weakness and did not have the severity of symptoms that he was having prior to his trip and fall." Dr. Rafferty also disagreed with Dr. Ogsbury's determination that Claimant did not require a L5-S1 microdiscectomy to relieve the effects of his January 5, 2017 lower back injury. He noted that Claimant's symptoms were consistent with the January 5, 2017 mechanism of injury. Furthermore, Dr. Rafferty stated that, even if Claimant suffered from pre-existing lower back symptoms, the January 5, 2017 accident

significantly worsened his condition because he began using pain medication and suffered numbness and tingling in his right leg after the event. Finally, in addressing proximate causation Dr. Raffery explained that Claimant would not have developed lower back symptoms in the absence of the January 5, 2017 accident.

22. Dr. Lambden persuasively determined that the January 5, 2017 incident did not aggravate Claimant's condition because he already had a long history of chronic lower back pain with intermittent leg pain. Dr. Lambden remarked that he was having difficulty agreeing with Drs. Rafferty and Biggs because their opinions on causality were not consistent with Claimant's pre-existing medical records. He noted that the records from chiropractor Dr. Green and the emergency room visit of December 31, 2016 specifically mentioned "escalating pain symptoms radiating into his buttock with pain radiating into the S1 and then into the right calf, but also generalized muscle weakness dating back to April 2013." In fact, Claimant visited Dr. Green in December 2016 with complaints of right buttock pain. Claimant's symptoms continued to increase throughout the month. By December 31, 2016 Claimant visited the Centura Emergency Room for an evaluation. He was diagnosed with sciatica and received a Medrol Prednisone Dosepak for his pain. Dr. Lambden concluded that the January 5, 2017 fall did not change the course of Claimant's chronic lower back pain or right lower extremity radiculopathy. He stated that Claimant's only diagnosis related to the January 5, 2017 incident was a right gluteal contusion. Dr. Lambden summarized that the proposed microdiscectomy was not related to the January 5, 2017 incident and Claimant's symptoms were more likely than not related to a pre-existing disc extrusion.

23. The medical records and letters of Drs. Biggs and Rafferty do not reveal that they reviewed or adequately considered the treatment notes from Dr. Green or the December 31, 2016 emergency room visit. In contrast, Dr. Lambden has evaluated the causation aspect of the surgical request with all of the relevant information. Dr. Lambden explained that Claimant's need for a microdiscectomy was not caused by his January 5, 2017 fall. Instead, Claimant's pre-existing medical records reveal increasing lower back pain and right lower extremity radicular symptoms prior to January 5, 2017. Accordingly, the bulk of the persuasive evidence reflects that the microdiscectomy recommended by Dr. Biggs is not causally related to Claimant's January 5, 2017 trip and fall.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either

the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAP, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAP, Nov. 13, 2000).

5. As found, Claimant has failed to demonstrate by a preponderance of the evidence that lower back surgery in the form of a microdiscectomy recommended by Dr. Biggs is causally related to his January 5, 2017 admitted industrial injury. Initially, on January 5, 2017 Claimant was performing a propane leak test at a customer's residence. There were approximately seven inches of snow on the ground and a garden hose was coiled underneath the snow behind Claimant. Claimant stepped backwards, tripped on the garden hose and fell to the ground. He completed the leak test and walked to his truck. When he depressed the accelerator on his truck he immediately experienced shooting pain down his right leg. After conservative medical treatment Claimant underwent a lumbar MRI. The MRI revealed degeneration at L5-S1 and a disc herniation impinging on the right S1 nerve root.

6. As found, on February 28, 2017 Dr. Biggs submitted a surgical authorization request for a L5-S1 microdiscectomy. However, Dr. Ogsbury determined that Claimant did not likely suffer a new injury on January 5, 2017 because of his chronic, prior lower back symptoms. Respondents thus denied the surgical request. Dr. Biggs authored a letter appealing the denial. He disagreed with Dr. Ogsbury and explained that Claimant suffered an aggravation of his pre-existing lower back condition when he fell while working on January 5, 2017. Dr. Biggs remarked that "it is clear that [claimant] herniated the disc at that point." He remarked that Claimant "definitely did not

have the leg weakness and did not have the severity of symptoms that he was having prior to his trip and fall." Dr. Rafferty also disagreed with Dr. Ogsbury's determination that Claimant did not require a L5-S1 microdiscectomy to relieve the effects of his January 5, 2017 lower back injury. He noted that Claimant's symptoms were consistent with the January 5, 2017 mechanism of injury. Furthermore, Dr. Rafferty stated that, even if Claimant suffered from pre-existing lower back symptoms, the January 5, 2017 accident significantly worsened his condition because he began using pain medication and suffered numbness and tingling in his right leg after the event. Finally, in addressing proximate causation Dr. Raffery explained that Claimant would not have developed lower back symptoms in the absence of the January 5, 2017 accident.

7. As found, Dr. Lambden persuasively determined that the January 5, 2017 incident did not aggravate Claimant's condition because he already had a long history of chronic lower back pain with intermittent leg pain. Dr. Lambden remarked that he was having difficulty agreeing with Drs. Rafferty and Biggs because their opinions on causality were not consistent with Claimant's pre-existing medical records. He noted that the records from chiropractor Dr. Green and the emergency room visit of December 31, 2016 specifically mentioned "escalating pain symptoms radiating into his buttock with pain radiating into the S1 and then into the right calf, but also generalized muscle weakness dating back to April 2013." In fact, Claimant visited Dr. Green in December 2016 with complaints of right buttock pain. Claimant's symptoms continued to increase throughout the month. By December 31, 2016 Claimant visited the Centura Emergency Room for an evaluation. He was diagnosed with sciatica and received a Medrol Prednisone Dosepak for his pain. Dr. Lambden concluded that the January 5, 2017 fall did not change the course of Claimant's chronic lower back pain or right lower extremity radiculopathy. He stated that Claimant's only diagnosis related to the January 5, 2017 incident was a right gluteal contusion. Dr. Lambden summarized that the proposed microdiscectomy was not related to the January 5, 2017 incident and Claimant's symptoms were more likely than not related to a pre-existing disc extrusion.

8. As found, the medical records and letters of Drs. Biggs and Rafferty do not reveal that they reviewed or adequately considered the treatment notes from Dr. Green or the December 31, 2016 emergency room visit. In contrast, Dr. Lambden has evaluated the causation aspect of the surgical request with all of the relevant information. Dr. Lambden explained that Claimant's need for a microdiscectomy was not caused by his January 5, 2017 fall. Instead, Claimant's pre-existing medical records reveal increasing lower back pain and right lower extremity radicular symptoms prior to January 5, 2017. Accordingly, the bulk of the persuasive evidence reflects that the microdiscectomy recommended by Dr. Biggs is not causally related to Claimant's January 5, 2017 trip and fall.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request for a microdiscectomy as recommended by Dr. Biggs is denied and dismissed.

2. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

Did Claimant prove that a C4-C7 fusion proposed by Dr. Sung is reasonable and necessary treatment for his admitted injury?

FINDINGS OF FACT

1. Claimant is a firefighter with Employer. He injured his neck on July 21, 2016 while working the scene of a serious motor vehicle accident. He slipped on a piece of plastic and fell backward onto his outstretched right arm. Claimant's head "whipped" backward and to the right, the force of which was magnified by the weight of his 5-6 pound helmet.

2. Claimant immediately felt pain in his neck. Within ten minutes of the incident, Claimant developed "pins and needles" going down his right arm to his thumb and index finger.

3. Employer referred Claimant to Integrity Urgent Care, which has been the primary occupational medicine provider.

4. Claimant had a cervical MRI on July 27, 2016. The radiologist interpreted the MRI as showing: (1) "severe" right-sided facet arthropathy and hypertrophy at C3-4 and C4-5 causing significant stenosis and crowding/impingement of the right C4 and C5 nerve roots; (2) increased T2 signal in and around the C3-4 and C4-5 facet joints; (3) "mild" bilateral facet arthropathy and bony spurring on the left side at C5-6 protruding into the neural foramen and left lateral recess, causing chronic foraminal and lateral recess stenosis with "crowding" of the left C6 nerve; (4) moderate right neural foraminal stenosis and mild right lateral recess stenosis at C6-7 "without nerve compression." The radiologist commented that the right C3-4 and C4-5 facet abnormalities were more pronounced than expected and may be related to trauma. The radiologist suggested a CT scan to further evaluate the facet arthropathy.

5. Claimant saw Dr. Roger Sung for a surgical consultation on August 4, 2016. His physical examination was within normal limits except for mild cervical tenderness. Dr. Sung's interpretation of the MRI differed slightly from that of the radiologist. Dr. Sung noted multilevel degenerative changes with neuroforaminal narrowing on the right side at C4-5, C5-6, and C6-7. Dr. Sung did not comment on the left-side findings the radiologist appreciated at C5-6. Dr. Sung referred Claimant to Dr. Mark Meyer for epidural steroid injections (ESIs) at C4-7. Claimant was eager to return to work as soon as possible, so Dr. Sung released him to modified duty.

6. Claimant's first appointment with Dr. Meyer occurred on August 31, 2016. Claimant reported pain, numbness and tingling at the base of his neck on the right side,

extending into the trapezius and right shoulder, down the right biceps into the right thumb and right index finger. Dr. Meyer noted the imaging studies showed neuroforaminal stenosis and impingement of the right C4, C5, and C6 nerve roots. Dr. Meyer thought he could cover C4 through C8 with a single injection. He recommended Claimant postpone PT because he was in too much pain to tolerate it.

7. Dr. Meyer administered three fluoroscopically-guided cervical ESIs between September 13, 2016 and January 17, 2017. The first injection was targeted at C6-7 and the other two were directed to the C5-6 level. The third injection also included a diagnostic C6 selective nerve root block (SNRB). Claimant had no symptom relief "whatsoever" from the ESIs or the SNRB.

8. Claimant worked modified duty for approximately two months. On October 16, 2016, he was at the scene of another accident and experienced severe pain while trying to help with the Jaws of Life. Claimant's officer noticed his condition and sent him home. He has been off work since then.

9. Claimant saw Dr. Rachel Basse for an Independent Medical Examination (IME) at Respondents' request on November 8, 2016. Claimant was "very frustrated" and "bummed" about being out of work. Claimant was having difficulty sleeping due to his symptoms and had curtailed most recreational activities. Dr. Basse noted a "possible" decreased right biceps reflex. Pinprick sensation was normal. Strength was excellent except "possible slight decrease in the right biceps compared to the left." Claimant was tender at approximately C5-6 in the facet and paraspinal regions, and palpation caused numbness going to the right thumb and index finger.

10. Dr. Basse opined Claimant "has local right approximately C5-6 level symptoms with radiating paresthesias in a C6 distribution. His right biceps reflex is down very slightly and his right biceps strength is also very slightly decreased." Dr. Basse recommended EMG/NCV testing to rule out an acute right C6 radiculopathy. If the EMG were positive, Claimant should consider a transforaminal ESIs at that level. If ESIs did not help, Claimant should return to Dr. Sung for consideration of surgery.

11. Dr. Michael Sparr performed EMG/NCV testing on November 21, 2016. Claimant reported constant radiating pain into the lateral right arm, dorsal forearm, thumb and index finger, with intermittent numbness and tingling. Claimant was exquisitely tender to palpation of the right-side C3-C4, C4-5 and C5-6 facets. Palpation of the facets caused radiating pain in the right upper extremity similar to Claimant's usual symptoms. Claimant's cervical range of motion was significantly limited. Facet loading was "markedly positive." There was significant muscle tension and myofascial tightening of the cervical and parascapular musculature.

12. Dr. Sparr performed an EMG of multiple upper extremity muscles and the cervical paraspinals within the C5, C6, and C7 myotomes. There was normal insertional activity in all upper extremity myotomes with no evidence of acute denervation. Cervical paraspinal denervation was evident at C4-5, C5-6, and C6-7, which Dr. Sparr opined can reflect damage to the posterior primary rami but "is not diagnostic of cervical

radiculopathy in the absence of additional denervation within the upper extremity myotomes." Accordingly, Dr. Sparr characterized the electrodiagnostic study as "essentially normal."

13. Dr. Sparr opined much of Claimant's cervical pain was likely facetogenic, corresponding to the MRI findings. He stated the upper extremity symptoms "are likely triggered by severe facet arthralgias causing profound myofascial tightness and cervical radiculitis, versus somewhat of a myogenic thoracic outlet syndrome." He recommended right-sided facet injections and a course of massage therapy to decrease cervical myofascial tightness.

14. Claimant returned Dr. Sung on January 18, 2017, and reported his right upper extremity symptoms had slowly worsened. Dr. Sung recommended a C4 to C7 discectomy and fusion.

15. Dr. Michael Janssen reviewed the surgical request for Insurer on January 23, 2017. He noted Claimant's extensive degenerative changes predated the injury. Dr. Janssen opined "the surgery in itself may be indicated . . . [n]onetheless, the indications for this surgery . . . are not occupationally related." Dr. Janssen further opined "if the surgeon continues to feel this is appropriate despite a negative EMG and a long-standing chronic condition, it should be approached with caution through his private health care coverage, as more likely than not, it would probably keep this patient from returning to this type of an occupation."

16. Claimant saw Dr. Jack Rook for an IME at the request of his counsel on March 20, 2017. Claimant reported 7/10 right-sided neck pain with severe paresthesias from his neck down the right upper extremity to the thumb and index finger. Physical examination of the right upper extremity revealed a decreased right biceps reflex and decreased pinprick sensation in the thumb and index finger of the right hand. There was palpable spasm and severe tenderness with palpation of the right paracervical musculature, and moderate tenderness of the right upper trapezius. Dr. Rook diagnosed cervical radiculopathy with physical examination findings consistent with involvement of the right C5 and C6 motor nerve roots and the C6 and C7 sensory nerve roots. Dr. Rook also noted the MRI showed right C4 nerve root impingement and evidence of acute injury to the right C3-4 and C4-5 facet joints. Dr. Rook opined the whiplash event and violent right lateral flexion of his head would have caused acute compression of several right-side cervical nerve roots.

17. Dr. Rook disagreed with Dr. Sparr's interpretation of the EMG as normal, because denervation in the paracervical musculature is evidence of a nerve root injury involving at least the posterior ramus motor nerve roots. He opined the upper extremity denervation potentials may have been lost because the EMG was performed so long after the injury. He also noted the EMG results cannot be used to assess the possibility of a C4 radiculopathy because it tested no muscles enervated by the right C4 nerve root. Dr. Rook opined that any surgery may need to include the C3-4 level.

18. Dr. Brian Reiss performed an IME for Respondents on May 17, 2017. Dr. Reiss opined the proposed surgery is unlikely to relieve Claimant's symptoms. He noted that the most severe MRI findings are at C3-4 and C4-5, neither of which has been investigated with facet blocks, medial branch blocks, or ESIs. Dr. Reiss stated there were no significant MRI findings at C5-6 or C6-7 on the right side, and no findings which could account for Claimant's right thumb and index finger numbness. As a result, Dr. Reiss opined that the requested fusion would be very unlikely to relieve Claimant's upper extremity symptoms. Dr. Reiss further opined the proposed fusion would put additional stress on the degenerated C3-4 level and likely cause additional problems in the future. Dr. Reiss opined surgery is premature because Claimant's pain generator has not been adequately identified. He stated there is no good objective evidence to support that Claimant's pain is coming from C5-6 or C6-7, but there it is good objective evidence to conclude Claimant's pain is coming from C3-4 and C4-5.

19. Dr. Reiss proposed an alternate plan beginning with facet blocks at C3-4 and C4-5, which he believes will improve Claimant's symptomatology. However, if the facet blocks are unsuccessful, Claimant should try medial branch blocks at those levels, possibly followed by facet rhizotomies. If those interventions do not help, the next step would be right-side ESIs at C3 and C4. Finally, depending on Claimant's response to the diagnostic (and potentially therapeutic) blocks, Claimant may need a posterior decompressive surgery at C3-4 and C4-5.

20. Dr. Sung testified in a deposition dated May 25, 2017. Dr. Sung reviewed the MRI images and saw compression at C4-5, C5-6, and C6-7 to account for Claimant's radicular symptoms. Dr. Sung disagreed with the radiologist's interpretation of significant nerve compression at C3-4. Dr. Sung agrees that injections targeting C3-4 and C4-5 might help Claimant's axial neck pain, but does not think they will address Claimant's upper extremity symptoms. Dr. Sung opined that a negative EMG does not rule out radiculopathy, and Claimant's lack of response to the previous cervical injections is not necessarily a contraindication to surgery.

21. Dr. Reiss testified at hearing to elaborate on the opinions expressed in his IME report. Although Dr. Reiss did not have the MRI images available during his IME, he reviewed the films before the hearing. Dr. Reiss agreed with the radiologist's interpretation of the MRI and did not see evidence of right-side nerve root compression at C5-6 or C6-7. Dr. Reiss stated the significant findings at C5-6 are actually on the left side. Dr. Reiss opined Claimant's symptoms "mimic" a C6 radiculopathy, but are not a true radiculopathy because there is no compression of the C6 nerve root. Dr. Reiss opined the C6 nerve root may have been temporarily compressed and injured during his accident, which could account for some of Claimant's symptoms in the C6 distribution. But surgery would not relieve those symptoms because there is no ongoing compression of the nerve. Alternatively, Claimant's symptoms may reflect thoracic outlet syndrome or may be caused by tightness and spasm of the cervical muscles. He indicated none of those issues would respond to the proposed fusion.

22. Claimant failed to prove that the C4-C7 fusion proposed by Dr. Sung is reasonable and necessary at this time. The ALJ finds the surgery is not reasonable and

necessary now because Claimant has not tried Dr. Reiss' proposed treatment plan, which has a reasonable prospect of alleviating Claimant's symptoms or further diagnosing his condition.

CONCLUSIONS OF LAW

The respondents are liable for medical treatment which is reasonably necessary to cure and relieve the effects of an industrial injury. § 8-42-101(1)(a); *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997); *Country Squire Kennels v. Tarshis*, 899 P. 2d 362 (Colo. App. 1995). Even after an admission of liability is filed, the respondents retain the right to dispute the relatedness of any particular treatment, and the mere occurrence of a compensable injury does not compel the ALJ to find that all subsequent medical treatment was caused by the industrial injury. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997); *McIntyre v. KI, LLC*, W.C. No. 4-805-040 (ICAO, Jul. 2, 2010). Where a claimant's entitlement to medical benefits is disputed, the claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). The claimant must also prove that the requested treatment is reasonable and necessary." Section 8-42-101(1)(a). The claimant must prove entitlement to medical benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case are not interpreted liberally, in favor of either claimant or respondents. Section 8-43-201.

The ALJ found this case to be particularly challenging. Claimant is highly credible and obviously motivated to improve his condition so he can resume a normal life. Nobody is disputing that Claimant has significant symptoms, and he is understandably searching for a solution to them. The ALJ is faced with a disagreement between two surgeons, both of whom presented cogent, well-reasoned explanations for their recommendations. The surgery proposed by Dr. Sung may certainly be helpful, but if Dr. Reiss is correct, the surgery will not help at all, and may actually make Claimant worse.

Part of the difficulty in this case is that the MRI is subject to differing interpretations. While MRIs are very useful diagnostic tools, they are not perfect, and more subtle abnormalities can be difficult to interpret definitively. The ALJ is reluctant to second-guess Claimant's treating surgeon, but also hesitant to approve such a major procedure while there are still unexplored options and potential pain generators.

Dr. Reiss' hypothesis can be tested with minimal risk to Claimant and in a relatively short period. If more focused evaluation reveals the C3-4 level is not a significant source of symptoms, Claimant can still pursue surgery in the future. Although the ALJ is sympathetic to Claimant's desire to obtain relief quickly, Claimant does not appear to have the sort of progressive neurological deficits that would require surgery on an urgent basis. Based on the evidence presented, the ALJ concludes it is most appropriate to pursue Dr. Reiss' proposed treatment plan before moving forward with

the proposed fusion. Accordingly, Claimant has failed to prove that a C4-C7 fusion is reasonable and necessary at this time.

This decision is not intended to foreclose Claimant's ability to pursue this or any other surgery at a later date if Dr. Reiss' proposed treatment plan proves unsuccessful.

ORDER

It is therefore ordered that:

1. Claimant's request for authorization of a C4-C7 fusion surgery is denied.

2. Respondents shall cover the treatment plan recommended by Dr. Reiss.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at http://www.colorado.gov/dpa/oac/forms-WC.htm

DATED: July 12, 2017

Patrick C.H. Spencer II

Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-013-808-03

ISSUES

- Whether Claimant established by a preponderance of the evidence that she sustained a compensable occupational disease in the form a right shoulder injury during the course and scope of her employment with Employer?

- Whether Claimant has established by a preponderance of the evidence that she is entitled to receive authorized medical treatment that is reasonable and necessary to cure or relieve the effects of her industrial injury?

- Whether Claimant has demonstrated by a preponderance of the evidence that she is entitled to receive Temporary Total Disability (TTD) benefits beginning on May 6, 2015, until properly terminated under law?

- Whether Claimant was responsible for her termination?

STIPULATIONS

- Claimant earned an Average Weekly Wage (AWW) of $504.15 while working for Employer.

- Claimant has two Colorado workers' compensation claims stemming from the same alleged injury. This Colorado Workers' Compensation Claim, identified as W.C. No. 5-013-808, and W.C. No. 4-992-580. W.C. No. 4-992-580 is merged and consolidated with this claim, W.C. No. 5-013-808-03.

- If this claim is compensable, Respondents are entitled to a dollar for dollar offset of all unemployment insurance benefits Claimant received from the Department of Labor received from after the last date that Claimant worked for the insured, May 5, 2015.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Employer hired Claimant in January 2008 to work at one of its McDonald's fast food restaurants in Denver, Colorado. Claimant's initial job was crew person, and in January 2013, Employer promoted Claimant to shift manager.

2. When Claimant began employment with Employer her duties included deep frying French fries. This involved physically lifting and moving approximately ten 35 – 40 pound boxes of product from a freezer maintained at zero degrees from a high shelf onto a cart, pushing or pulling the cart to a hot area by the fryers, and lifting bags

of products from the cases into a smaller freezer or into the fryer. Claimant testified that when she became shift manager in 2013 she continued to fry hash browns in the morning and French fries in the afternoon. Claimant had to enter the freezer and return to a hot cooking area for both products. Claimant testified that when the restaurant is busy, she performs any job that needs to be done and had to do whatever her supervisor, Mithzy Saenz, told her to do.

3. Claimant testified that she begins work at 5:30 a.m. and that until other employees come in, she is responsible for working the two drive-through lanes, making coffee, frying hash browns, preparing other food items, and giving food to drive through customers. Her duties also included counting seven cash registers, inspecting the restrooms, checking the location's security, running numerous reports on a computer, going into the two freezers to check their temperatures, checking for past-due products in the freezers, checking inventories, and logging some results by hand into a red book.

4. During the hearing, Claimant relied exclusively on the interpreter. The ALJ observed that Claimant did not watch others in the courtroom as they spoke, but rather focused singly on the interpreter. Additionally, she did not attempt to answer any questions before they were translated into Mandarin. Medical records from April 26, 2016 note that Claimant's son "who is Chinese speaking" provided translation services, and that Claimant spoke "limited English." Claimant was accompanied by a professional interpreter at her Respondents sponsored IME, and at her unemployment benefits hearing.

5. Claimant testified that she began experiencing bilateral shoulder pain beginning in April or May 2014, which is consistent with Employer's first report of injury.

6. On April 1, 2015, Claimant sought medical attention from Dr. Christopher Mote for her bilateral shoulder pain. Dr. Mote provided Claimant a letter explaining that she was experiencing bilateral shoulder pain with reduced range of motion, and was undergoing further testing to determine the cause of her severe pain. The note provided, "She is not to return to work until her next appointment in 7-10 days at which time we will re evaluate her readiness to return to work."

7. Claimant testified that she showed the note to her manager, Mithzy Saenz, explaining that she needed time off and to take medication. Ms. Saenz did not inquire whether Claimant was injured at work, did not refer Claimant to a Workers' Compensation medical provider, and did not complete any report of injury.

8. Claimant associated her symptoms with going from hot areas around the frying equipment to the extreme cold of the freezers, and then back to the hot fryer area. She also attributed her symptoms to lifting heavy boxes of frozen from above shoulder level.

9. Claimant returned to Dr. Mote on April 23, 2015; April 29, 2015; and May 6, 2015. Dr. Mote wrote similar letters after each of these visits noting that Claimant

could not return to a job that required significant lifting or overhead work, and that Claimant was a candidate for short term disability.

10. Claimant testified that she faxed Employer the April 1, 2015, and April 23, 2015, notes and called Employer. Employer did not respond to her faxed notes or return her phone calls. Claimant later faxed the April 29, 2015; and May 6, 2015, notes to Employer's office and left additional phone messages. Again, Employer did not respond to her faxed notes or return her phone calls.

11. Claimant's last day of work was May 5, 2015. She did not return to work after that because Employer would not limit her duties to comply with her doctor's restrictions. Claimant testified that she was forced to leave because of her injury.

12. Claimant testified that Employer did not recognize her work restrictions and had her perform her regular duties. Claimant testified that continuing to work her regular duties caused her symptoms to worsen.

13. On May 18, 2015, Claimant treated with Cherie Reichart, M.D. Dr. Reichart gave Claimant a letter stating that Claimant had a chronic right frozen shoulder and was disabled at that time. Claimant testified she faxed the note to Employer's office and left two phone messages. Again, Employer did not respond.

14. On August 12, 2015, Dr. Reichart referred Claimant for an MRI of her right shoulder. Bao Nguyen, M.D. performed the MRI. His impression was "mild central rotator cuff tendinosis with early/shallow bursal surface fraying of the anterior distal supraspinatus tendon."

15. On August 14, 2015, Dr. Reichart referred Claimant for physical therapy to evaluate and treat Claimant for the problems identified by MRI and for her diagnosis of frozen shoulder. Dr. Reichart referred Claimant to two specific physical therapy offices. Claimant faxed the physical therapy referral to Employer's office. Employer did not respond. Claimant was not able to participate in physical therapy because it is not covered by Medicaid, Claimant's private insurer.

16. On August 17, 2015, Dr. Reichart treated Claimant and provided another letter stating that Claimant was unable to work because of her frozen shoulder.

17. Employer's first report of injury was not completed until August 28, 2015. Employer left numerous questions unanswered, responded "unknown" to seven questions, and incorrectly indicated that Claimant's illness caused her death.

18. Claimant's medical history includes rheumatoid arthritis diagnosed in April 2015 and malnutrition which was not diagnosed until March 2016. The malnutrition diagnosis was accompanied by a diagnosis of chronic pancreatitis. Between March 26, 2016 and April 5, 2016, Claimant was hospitalized at Parker Adventist for the surgical removal of a pancreatic tumor which the ALJ reasonably infers contributed to her malnutrition diagnosis.

19. On March 27, 2017, Claimant underwent a Respondents' sponsored medical examination performed by Linda A. Mitchell, M.D. According to Dr. Mitchell's report, her entire evaluation of Claimant lasted approximately forty minutes. Dr. Mitchell reviewed five medical records and Exhibit N, Claimant's purported job duties, dated June 6, 2016. After examining Claimant, Dr. Mitchell diagnosed bilateral adhesive capsulitis and rheumatoid arthritis. Dr. Mitchell did not address Claimant's right shoulder MRI, or Dr. Nguyen's impression of "mild central rotator cuff tendinosis with early/shallow bursal surface fraying of the anterior distal supraspinatus tendon. Basing her causation analysis on Employer's purported job description; Dr. Mitchell determined Claimant's condition was not work related.

20. Dr. Mitchell testified at hearing as an expert in occupational medicine. The ALJ notes that while Dr. Mitchell graduated from medical school in 1984, she did not complete her residency in occupational medicine until June 1999. Dr. Mitchell has held ten different jobs since graduating from medical school. Dr. Mitchell testified that she did not review x-rays of Claimant's shoulders or the MRI. Rather she noticed that the MRI was negative for acute bony abnormalities. Relying on Exhibit N, Dr. Mitchell opined that Claimant's shoulder problems were not caused by her work duties.

21. On cross examination, Dr. Mitchell acknowledged that Exhibit N did not accurately reflect Claimant's job duties. She also conceded the following:

- Rheumatoid arthritis can be identified on MRI but was not identified on Claimant's MRI. Had it been present, a radiologist would note it.
- Adhesive capsulitis can follow rotator cuff lesions which Claimant had.
- Repetitive lifting and repetitive trauma can cause rotator cuff lesions.
- Claimant's decreased range of motion is consistent with a rotator cuff injury.
- If Claimant had rheumatoid arthritis, she would be more susceptible to further injury by performing her actual job duties.

22. Exhibit N, Claimant's purported job duties, provides that Claimant:

- Never bent her neck
- Never bent at her waist
- Never squatted, climbed, knelt, or crawled
- Never twisted her neck (Employer left blank whether Claimant twisted at the waist)
- Never power grasped with either had

- Never pushed or pulled with either hand
- Never reached above shoulder level
- Never reached below shoulder level
- Never lifts anything
- Never carries anything
- Was not exposed to extremes in temperature

The ALJ finds that Exhibit N is not a credible description of Claimant's job duties. It defies common sense, and Claimant's credible testimony, that Claimant only used her arms at shoulder level and never lifted or carried anything. That Claimant was not required to work in extreme temperatures was directly contradicted by Claimant's credible testimony that she was required to go into two freezers to check their temperatures, and to check for past-due products.

23. Ms. Saenz admitted that as a crew member, Claimant was required to move frozen boxes of food stacked four to five feet high out of the freezers, to lift and carry the boxes to a cart, and to push or pull the cart to the fry area. When asked about Claimant's exposure to extreme temperatures, she acknowledged that the freezers are maintained at zero degrees, but Claimant was exposed to extreme temperatures "only if you consider zero degrees to be extreme."

24. Claimant filed an application for unemployment benefits which was initially denied. Claimant appealed the denial and a hearing was held on April 4, 2016. The hearing officer found that Claimant left her employment because she could not physically perform her job duties, and that Employer's accommodations had been inadequate because Employer still required Claimant to perform duties that required her to reach overhead. The hearing officer further found that Claimant "told her supervisor that she had to quit because she could not do the work," and "if not for her physical inability to perform her job, the Claimant would not have quit." The Hearing officer concluded that Claimant was not at fault for her termination because the circumstances causing it were outside of her control.

25. Ms. Saenz testified on behalf of Respondents that she was Claimant's supervisor from 2013 until Claimant stopped working for Employer, and that she observed Claimant working four or five days a week. Although Ms. Saenz acknowledged that she arrived at work after Claimant, she testified that Claimant never lifted or carried anything at work. She never saw Claimant lift her arms above her head or work in the freezer. She further testified that Claimant was "good at delegating," and that she spoke with Claimant in English "all of the time." Ms. Saenz testified that if Claimant were to have lifted anything, the heaviest items were 35 pound boxes of frozen French fries and 19 pound boxes of hash browns.

26. When asked when Claimant notified her of Claimant's injury, Ms. Saenz responded not by giving a date, but rather by saying that Claimant had asked for a week of vacation a month in advance to have surgery on her arm. No persuasive evidence supports a finding that Claimant had arm surgery.

27. Ms. Saenz testified that before Claimant reported shoulder problems, she "took a lot of pills," and said she had arthritis "all over her body." No persuasive evidence supports Ms. Saenz' testimony. Rather, Claimant was not conclusively diagnosed with rheumatoid arthritis until after reporting her shoulder problems.

28. The ALJ finds that Claimant is an accurate and credible historian. Her testimony was consistent with objective evidence. The ALJ finds Claimant to be credible.

29. The ALJ finds Ms. Saenz not credible. Her testimony that Claimant never lifted or carried anything at work, that Claimant never lifted her arms above her head, and never worked in the freezer is untenable. Ms. Saenz's testimony that Claimant was "good at delegating," and that she spoke with Claimant in English "all of the time," are controverted by Claimant's use of an interpreter at medical appointments, at her unemployment benefits hearing, and in court, and by her consistent presentation throughout the hearing.

30. At the close of the hearing Claimant asked the ALJ whether the Office of Administrative Courts could pay the interpreter's fees.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. C.R.S. § 8-40-102(1). A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. C.R.S. § 8-43-201. A Workers' Compensation case is decided on its merits. C.R.S. § 8-43-201.

The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

The test for distinguishing between an accidental injury and an occupational disease is whether the injury can be traced to a particular time, place and cause. *Campbell v. IBM Corp.*, 867 P.2d 77, 81 (Colo. App. 1993). "Occupational disease" is defined by C.R.S. § 8-40-201(14), as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

A claimant is required to prove by a preponderance of the evidence that the alleged occupational disease was directly or proximately caused by the employment or working conditions. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office,* 989 P.2d 251, 252 (Colo. App. 1999). Moreover, C.R.S. § 8-40-201(14) imposes proof requirements in addition to those required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819, 824 (Colo. 1993). A claimant is entitled to recovery only if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id.* Where there is no evidence that occupational exposure to a hazard is a necessary precondition to development of the disease, the claimant suffers from an occupational disease only to the extent that the occupational exposure contributed to the disability. *Id*.

When the precipitating cause of an injury is a pre-existing condition that the claimant brings to the workplace, the injury is not compensable unless a "special hazard" of the employment combines with the pre-existing condition to contribute to the injury. *In Re Shelton,* W.C. No. 4-724-391 (ICAP, May 30, 2008). The rationale for the rule is that, in the absence of a special hazard, an injury due to the claimant's preexisting condition does not bear a sufficient causal relationship to the employment to "arise out of" the employment. *Id.* A condition does not constitute a "special hazard" if it is "'ubiquitous' in the sense that it is found generally outside of the employment." *In Re Booker,* W.C. No. 4-661-649 (ICAP, May 23, 2007).

The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, Oct. 27, 2008), the fact that a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship, simply based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his

symptoms does not mean there is a causal connection between the claimant's injury and work activities.

The ALJ concludes that Claimant established by a preponderance of the evidence that she experienced an aggravation or acceleration of a preexisting condition, namely rheumatoid arthritis. The Judge credits Claimant's testimony about her job duties which include lifting, pushing, pulling and exposure to extreme temperatures. The Judge finds Employer's witness and job description to be incredible. And the Judge finds Dr. Mitchell's opinions expressed in her report not persuasive as they are based on Employer's not credible job description. Rather, the Judge credits Dr. Mitchell's testimony on cross examination that (1) Rheumatoid arthritis can be identified on MRI but was not identified on Claimant's MRI. (2) Had it been present, a radiologist would note it. (3) Adhesive capsulitis can follow rotator cuff lesions which Claimant had. (4) Repetitive lifting and repetitive trauma can cause rotator cuff lesions. (5) Claimant's decreased range of motion is consistent with a rotator cuff injury. And (6) If Claimant had rheumatoid arthritis, she would be more susceptible to further injury by performing her actual job duties.

Claimant has established by a preponderance of the evidence that she is entitled to receive authorized medical treatment that is reasonable and necessary to cure or relieve the effects of her industrial injury.

The employer bears the burden of establishing by a preponderance of the evidence that a claimant was terminated for cause or was responsible for the separation from employment. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1132 (Colo. App. 2008).

The ALJ concludes based on the totality of the evidence that Employer did not establish by a preponderance of the evidence that Claimant was responsible for her termination. Rather, the Judge credits Claimant's testimony that Employer gave Claimant duties beyond her restrictions and did not take Claimant off work during her disability. The Judge finds Employer's witness's testimony about encouraging Claimant to work within her restrictions not incredible. The Judge credits Claimant's testimony that she repeatedly provided Employer with copies of her doctor's notes and received no response from Employer. Thus, Respondents have not persuaded the Judge that Claimant was responsible for her termination.

Claimant has demonstrated by a preponderance of the evidence that she is entitled to receive Temporary Total Disability (TTD) benefits beginning on May 6, 2015, until properly terminated under law.

OAC Rule 21 A provides that all proceedings be conducted in English. A party that does not adequately speak or understand English must arrange for a foreign language interpreter to be present at any hearing. Additionally, the Office of Administrative Courts shall not provide foreign language interpreters. Therefore, the OAC is unable to pay for Claimant's interpreter.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim is compensable.

2. Claimant is entitled to receive authorized medical treatment that is reasonable and necessary to cure or relieve the effects of her industrial injury. Respondents are responsible for payment for such care from the time she reported her injury until terminated by order or operation of law.

3. Claimant shall receive temporary total disability benefits from April 15, 2015 until terminated by order or operation of law.

4. Insurer shall pay claimant interest at the rate of 8% per annum on compensation benefits not paid when due.

5. Issues not expressly decided herein are reserved to the parties for future determination.

6. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 17, 2017

/s/ Kimberly Turnbow
Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-013-808-03

ISSUES

- Whether Claimant established by a preponderance of the evidence that she sustained a compensable occupational disease in the form a right shoulder injury during the course and scope of her employment with Employer?

- Whether Claimant has established by a preponderance of the evidence that she is entitled to receive authorized medical treatment that is reasonable and necessary to cure or relieve the effects of her industrial injury?

- Whether Claimant has demonstrated by a preponderance of the evidence that she is entitled to receive Temporary Total Disability (TTD) benefits beginning on May 6, 2015, until properly terminated under law?

- Whether Claimant was responsible for her termination?

STIPULATIONS

- Claimant earned an Average Weekly Wage (AWW) of $504.15 while working for Employer.

- Claimant has two Colorado workers' compensation claims stemming from the same alleged injury. This Colorado Workers' Compensation Claim, identified as W.C. No. 5-013-808, and W.C. No. 4-992-580. W.C. No. 4-992-580 is merged and consolidated with this claim, W.C. No. 5-013-808-03.

- If this claim is compensable, Respondents are entitled to a dollar for dollar offset of all unemployment insurance benefits Claimant received from the Department of Labor received from after the last date that Claimant worked for the insured, May 5, 2015.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Employer hired Claimant in January 2008 to work at one of its McDonald's fast food restaurants in Denver, Colorado. Claimant's initial job was crew person, and in January 2013, Employer promoted Claimant to shift manager.

2. When Claimant began employment with Employer her duties included deep frying French fries. This involved physically lifting and moving approximately ten 35 – 40 pound boxes of product from a freezer maintained at zero degrees from a high shelf onto a cart, pushing or pulling the cart to a hot area by the fryers, and lifting bags

of products from the cases into a smaller freezer or into the fryer. Claimant testified that when she became shift manager in 2013 she continued to fry hash browns in the morning and French fries in the afternoon. Claimant had to enter the freezer and return to a hot cooking area for both products. Claimant testified that when the restaurant is busy, she performs any job that needs to be done and had to do whatever her supervisor, Mithzy Saenz, told her to do.

3. Claimant testified that she begins work at 5:30 a.m. and that until other employees come in, she is responsible for working the two drive-through lanes, making coffee, frying hash browns, preparing other food items, and giving food to drive through customers. Her duties also included counting seven cash registers, inspecting the restrooms, checking the location's security, running numerous reports on a computer, going into the two freezers to check their temperatures, checking for past-due products in the freezers, checking inventories, and logging some results by hand into a red book.

4. During the hearing, Claimant relied exclusively on the interpreter. The ALJ observed that Claimant did not watch others in the courtroom as they spoke, but rather focused singly on the interpreter. Additionally, she did not attempt to answer any questions before they were translated into Mandarin. Medical records from April 26, 2016 note that Claimant's son "who is Chinese speaking" provided translation services, and that Claimant spoke "limited English." Claimant was accompanied by a professional interpreter at her Respondents sponsored IME, and at her unemployment benefits hearing.

5. Claimant testified that she began experiencing bilateral shoulder pain beginning in April or May 2014, which is consistent with Employer's first report of injury.

6. On April 1, 2015, Claimant sought medical attention from Dr. Christopher Mote for her bilateral shoulder pain. Dr. Mote provided Claimant a letter explaining that she was experiencing bilateral shoulder pain with reduced range of motion, and was undergoing further testing to determine the cause of her severe pain. The note provided, "She is not to return to work until her next appointment in 7-10 days at which time we will re evaluate her readiness to return to work."

7. Claimant testified that she showed the note to her manager, Mithzy Saenz, explaining that she needed time off and to take medication. Ms. Saenz did not inquire whether Claimant was injured at work, did not refer Claimant to a Workers' Compensation medical provider, and did not complete any report of injury.

8. Claimant associated her symptoms with going from hot areas around the frying equipment to the extreme cold of the freezers, and then back to the hot fryer area. She also attributed her symptoms to lifting heavy boxes of frozen from above shoulder level.

9. Claimant returned to Dr. Mote on April 23, 2015; April 29, 2015; and May 6, 2015. Dr. Mote wrote similar letters after each of these visits noting that Claimant

could not return to a job that required significant lifting or overhead work, and that Claimant was a candidate for short term disability.

10. Claimant testified that she faxed Employer the April 1, 2015, and April 23, 2015, notes and called Employer. Employer did not respond to her faxed notes or return her phone calls. Claimant later faxed the April 29, 2015; and May 6, 2015, notes to Employer's office and left additional phone messages. Again, Employer did not respond to her faxed notes or return her phone calls.

11. Claimant's last day of work was May 5, 2015. She did not return to work after that because Employer would not limit her duties to comply with her doctor's restrictions. Claimant testified that she was forced to leave because of her injury.

12. Claimant testified that Employer did not recognize her work restrictions and had her perform her regular duties. Claimant testified that continuing to work her regular duties caused her symptoms to worsen.

13. On May 18, 2015, Claimant treated with Cherie Reichart, M.D. Dr. Reichart gave Claimant a letter stating that Claimant had a chronic right frozen shoulder and was disabled at that time. Claimant testified she faxed the note to Employer's office and left two phone messages. Again, Employer did not respond.

14. On August 12, 2015, Dr. Reichart referred Claimant for an MRI of her right shoulder. Bao Nguyen, M.D. performed the MRI. His impression was "mild central rotator cuff tendinosis with early/shallow bursal surface fraying of the anterior distal supraspinatus tendon."

15. On August 14, 2015, Dr. Reichart referred Claimant for physical therapy to evaluate and treat Claimant for the problems identified by MRI and for her diagnosis of frozen shoulder. Dr. Reichart referred Claimant to two specific physical therapy offices. Claimant faxed the physical therapy referral to Employer's office. Employer did not respond. Claimant was not able to participate in physical therapy because it is not covered by Medicaid, Claimant's private insurer.

16. On August 17, 2015, Dr. Reichart treated Claimant and provided another letter stating that Claimant was unable to work because of her frozen shoulder.

17. Employer's first report of injury was not completed until August 28, 2015. Employer left numerous questions unanswered, responded "unknown" to seven questions, and incorrectly indicated that Claimant's illness caused her death.

18. Claimant's medical history includes rheumatoid arthritis diagnosed in April 2015 and malnutrition which was not diagnosed until March 2016. The malnutrition diagnosis was accompanied by a diagnosis of chronic pancreatitis. Between March 26, 2016 and April 5, 2016, Claimant was hospitalized at Parker Adventist for the surgical removal of a pancreatic tumor which the ALJ reasonably infers contributed to her malnutrition diagnosis.

19. On March 27, 2017, Claimant underwent a Respondents' sponsored medical examination performed by Linda A. Mitchell, M.D. According to Dr. Mitchell's report, her entire evaluation of Claimant lasted approximately forty minutes. Dr. Mitchell reviewed five medical records and Exhibit N, Claimant's purported job duties, dated June 6, 2016. After examining Claimant, Dr. Mitchell diagnosed bilateral adhesive capsulitis and rheumatoid arthritis. Dr. Mitchell did not address Claimant's right shoulder MRI, or Dr. Nguyen's impression of "mild central rotator cuff tendinosis with early/shallow bursal surface fraying of the anterior distal supraspinatus tendon. Basing her causation analysis on Employer's purported job description; Dr. Mitchell determined Claimant's condition was not work related.

20. Dr. Mitchell testified at hearing as an expert in occupational medicine. The ALJ notes that while Dr. Mitchell graduated from medical school in 1984, she did not complete her residency in occupational medicine until June 1999. Dr. Mitchell has held ten different jobs since graduating from medical school. Dr. Mitchell testified that she did not review x-rays of Claimant's shoulders or the MRI. Rather she noticed that the MRI was negative for acute bony abnormalities. Relying on Exhibit N, Dr. Mitchell opined that Claimant's shoulder problems were not caused by her work duties.

21. On cross examination, Dr. Mitchell acknowledged that Exhibit N did not accurately reflect Claimant's job duties. She also conceded the following:

- Rheumatoid arthritis can be identified on MRI but was not identified on Claimant's MRI. Had it been present, a radiologist would note it.
- Adhesive capsulitis can follow rotator cuff lesions which Claimant had.
- Repetitive lifting and repetitive trauma can cause rotator cuff lesions.
- Claimant's decreased range of motion is consistent with a rotator cuff injury.
- If Claimant had rheumatoid arthritis, she would be more susceptible to further injury by performing her actual job duties.

22. Exhibit N, Claimant's purported job duties, provides that Claimant:

- Never bent her neck
- Never bent at her waist
- Never squatted, climbed, knelt, or crawled
- Never twisted her neck (Employer left blank whether Claimant twisted at the waist)
- Never power grasped with either had

- Never pushed or pulled with either hand
- Never reached above shoulder level
- Never reached below shoulder level
- Never lifts anything
- Never carries anything
- Was not exposed to extremes in temperature

The ALJ finds that Exhibit N is not a credible description of Claimant's job duties. It defies common sense, and Claimant's credible testimony, that Claimant only used her arms at shoulder level and never lifted or carried anything. That Claimant was not required to work in extreme temperatures was directly contradicted by Claimant's credible testimony that she was required to go into two freezers to check their temperatures, and to check for past-due products.

23. Ms. Saenz admitted that as a crew member, Claimant was required to move frozen boxes of food stacked four to five feet high out of the freezers, to lift and carry the boxes to a cart, and to push or pull the cart to the fry area. When asked about Claimant's exposure to extreme temperatures, she acknowledged that the freezers are maintained at zero degrees, but Claimant was exposed to extreme temperatures "only if you consider zero degrees to be extreme."

24. Claimant filed an application for unemployment benefits which was initially denied. Claimant appealed the denial and a hearing was held on April 4, 2016. The hearing officer found that Claimant left her employment because she could not physically perform her job duties, and that Employer's accommodations had been inadequate because Employer still required Claimant to perform duties that required her to reach overhead. The hearing officer further found that Claimant "told her supervisor that she had to quit because she could not do the work," and "if not for her physical inability to perform her job, the Claimant would not have quit." The Hearing officer concluded that Claimant was not at fault for her termination because the circumstances causing it were outside of her control.

25. Ms. Saenz testified on behalf of Respondents that she was Claimant's supervisor from 2013 until Claimant stopped working for Employer, and that she observed Claimant working four or five days a week. Although Ms. Saenz acknowledged that she arrived at work after Claimant, she testified that Claimant never lifted or carried anything at work. She never saw Claimant lift her arms above her head or work in the freezer. She further testified that Claimant was "good at delegating," and that she spoke with Claimant in English "all of the time." Ms. Saenz testified that if Claimant were to have lifted anything, the heaviest items were 35 pound boxes of frozen French fries and 19 pound boxes of hash browns.

26. When asked when Claimant notified her of Claimant's injury, Ms. Saenz responded not by giving a date, but rather by saying that Claimant had asked for a week of vacation a month in advance to have surgery on her arm. No persuasive evidence supports a finding that Claimant had arm surgery.

27. Ms. Saenz testified that before Claimant reported shoulder problems, she "took a lot of pills," and said she had arthritis "all over her body." No persuasive evidence supports Ms. Saenz' testimony. Rather, Claimant was not conclusively diagnosed with rheumatoid arthritis until after reporting her shoulder problems.

28. The ALJ finds that Claimant is an accurate and credible historian. Her testimony was consistent with objective evidence. The ALJ finds Claimant to be credible.

29. The ALJ finds Ms. Saenz not credible. Her testimony that Claimant never lifted or carried anything at work, that Claimant never lifted her arms above her head, and never worked in the freezer is untenable. Ms. Saenz's testimony that Claimant was "good at delegating," and that she spoke with Claimant in English "all of the time," are controverted by Claimant's use of an interpreter at medical appointments, at her unemployment benefits hearing, and in court, and by her consistent presentation throughout the hearing.

30. At the close of the hearing Claimant asked the ALJ whether the Office of Administrative Courts could pay the interpreter's fees.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. C.R.S. § 8-40-102(1). A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. C.R.S. § 8-43-201. A Workers' Compensation case is decided on its merits. C.R.S. § 8-43-201.

The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

The test for distinguishing between an accidental injury and an occupational disease is whether the injury can be traced to a particular time, place and cause. *Campbell v. IBM Corp.*, 867 P.2d 77, 81 (Colo. App. 1993). "Occupational disease" is defined by C.R.S. § 8-40-201(14), as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

A claimant is required to prove by a preponderance of the evidence that the alleged occupational disease was directly or proximately caused by the employment or working conditions. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office,* 989 P.2d 251, 252 (Colo. App. 1999). Moreover, C.R.S. § 8-40-201(14) imposes proof requirements in addition to those required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819, 824 (Colo. 1993). A claimant is entitled to recovery only if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id.* Where there is no evidence that occupational exposure to a hazard is a necessary precondition to development of the disease, the claimant suffers from an occupational disease only to the extent that the occupational exposure contributed to the disability. *Id*.

When the precipitating cause of an injury is a pre-existing condition that the claimant brings to the workplace, the injury is not compensable unless a "special hazard" of the employment combines with the pre-existing condition to contribute to the injury. *In Re Shelton,* W.C. No. 4-724-391 (ICAP, May 30, 2008). The rationale for the rule is that, in the absence of a special hazard, an injury due to the claimant's preexisting condition does not bear a sufficient causal relationship to the employment to "arise out of" the employment. *Id.* A condition does not constitute a "special hazard" if it is "'ubiquitous' in the sense that it is found generally outside of the employment." *In Re Booker,* W.C. No. 4-661-649 (ICAP, May 23, 2007).

The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, Oct. 27, 2008), the fact that a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship, simply based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his

symptoms does not mean there is a causal connection between the claimant's injury and work activities.

The ALJ concludes that Claimant established by a preponderance of the evidence that she experienced an aggravation or acceleration of a preexisting condition, namely rheumatoid arthritis. The Judge credits Claimant's testimony about her job duties which include lifting, pushing, pulling and exposure to extreme temperatures. The Judge finds Employer's witness and job description to be incredible. And the Judge finds Dr. Mitchell's opinions expressed in her report not persuasive as they are based on Employer's not credible job description. Rather, the Judge credits Dr. Mitchell's testimony on cross examination that (1) Rheumatoid arthritis can be identified on MRI but was not identified on Claimant's MRI. (2) Had it been present, a radiologist would note it. (3) Adhesive capsulitis can follow rotator cuff lesions which Claimant had. (4) Repetitive lifting and repetitive trauma can cause rotator cuff lesions. (5) Claimant's decreased range of motion is consistent with a rotator cuff injury. And (6) If Claimant had rheumatoid arthritis, she would be more susceptible to further injury by performing her actual job duties.

Claimant has established by a preponderance of the evidence that she is entitled to receive authorized medical treatment that is reasonable and necessary to cure or relieve the effects of her industrial injury.

The employer bears the burden of establishing by a preponderance of the evidence that a claimant was terminated for cause or was responsible for the separation from employment. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1132 (Colo. App. 2008).

The ALJ concludes based on the totality of the evidence that Employer did not establish by a preponderance of the evidence that Claimant was responsible for her termination. Rather, the Judge credits Claimant's testimony that Employer gave Claimant duties beyond her restrictions and did not take Claimant off work during her disability. The Judge finds Employer's witness's testimony about encouraging Claimant to work within her restrictions not incredible. The Judge credits Claimant's testimony that she repeatedly provided Employer with copies of her doctor's notes and received no response from Employer. Thus, Respondents have not persuaded the Judge that Claimant was responsible for her termination.

Claimant has demonstrated by a preponderance of the evidence that she is entitled to receive Temporary Total Disability (TTD) benefits beginning on May 6, 2015, until properly terminated under law.

OAC Rule 21 A provides that all proceedings be conducted in English. A party that does not adequately speak or understand English must arrange for a foreign language interpreter to be present at any hearing. Additionally, the Office of Administrative Courts shall not provide foreign language interpreters. Therefore, the OAC is unable to pay for Claimant's interpreter.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim is compensable.

2. Claimant is entitled to receive authorized medical treatment that is reasonable and necessary to cure or relieve the effects of her industrial injury. Respondents are responsible for payment for such care from the time she reported her injury until terminated by order or operation of law.

3. Claimant shall receive temporary total disability benefits from April 15, 2015 until terminated by order or operation of law.

4. Insurer shall pay claimant interest at the rate of 8% per annum on compensation benefits not paid when due.

5. Issues not expressly decided herein are reserved to the parties for future determination.

6. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Denver, CO 80203

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that additional spinal injections as proposed by Dr. Finn are reasonable and necessary to treat Claimant's industrial injury?

II. Has Claimant shown, by a preponderance of the evidence, that his continued prescriptions for narcotic medications are reasonable and necessary to treat Claimant's industrial injury?

FINDINGS OF FACT

Based upon the evidence received at hearing, the ALJ makes the following Findings of Fact:

1. Claimant sustained a compensable injury to his low back on or about January 19, 2010 as a result of falling off a step ladder.

2. Dr. Kathy McCranie performed an independent medical examination on January 28, 2016. Dr. McCranie issued her report as a result of that IME (Ex A, pp. 11-25). As part of her evaluation, Dr. McCranie performed a medical record review. Dr. McCranie's medical record review appears to document the medical treatment that Claimant has received as a result of this injury up through the IME date. This treatment included surgery by Dr. George Frey on November 1, 2010 (Ex. A, p. 14).

3. Dr. Frey performed a minimally invasive posterior spinal fusion of the L3-L5 levels. At the time of Dr. McCranie's evaluation, Claimant reported taking 3 to 4 tablets of Oxycodone a day, as well as another 3 to 4 tablets of Norco. Dr. McCranie eventually concluded that Claimant's current narcotic regimen was not appropriate and only partially related to his work injury. As such, Dr. McCranie, at that time, recommended that Claimant should be weaned off of his narcotic medication so that Claimant would be on a significantly smaller dose of narcotics.

4. According to the medical record review performed by Dr. McCranie, Claimant saw a neurologist, Dr. Wolff, on August 10, 2015. Following that examination, Dr. Wolff believed that Claimant may have the diagnosis of chronic inflammatory demyelinating polyneuropathy (CIDP). In her January 28, 2016 report, Dr. McCranie was concerned that this potential diagnosis could be contributing to Claimant's overall pain presentation. At hearing, Dr. McCranie confirmed that Claimant developed this potential CIDP subsequent to his work injury.

5. Claimant saw Dr. Marc Treihaft, a neurologist, on September 28, 2016 (Ex. B, pp. 26-35). Following his evaluation, Dr. Treihaft diagnosed Claimant with a severe sensorimotor polyneuropathy with axial greater than demyelinating features. In his report, Dr. Treihaft was of the opinion that Claimant's severe sensorimotor polyneuropathy was not causally related to the work injury. Dr. McCranie has consistently rendered the opinion that this polyneuropathy was not causally related to his work injury (Ex. A, pp. 10, 24).

6. At hearing, Dr. McCranie testified as to the difference between a radiculopathy and a polyneuropathy. Specifically, Dr. McCranie stated that a radiculopathy is a constellation of symptoms that extend into an extremity as a result of a compressed disk of the spine. Polyneuropathy, on the other hand, is a constellation of symptoms (including pain) that are the result of nerve damage more distal to the trunk. As a result, Dr. McCranie is of the opinion that Claimant's current pain complaints are a combination of any residual radiculopathy as a result of his work injury, and the new, subsequently developed polyneuropathy with the onset date of sometime in 2012.

7. Claimant testified as to the complaints that he was having, particularly complaints that he was having in his feet. As Dr. McCranie has noted, the symptoms that Claimant is reporting in his feet are not because of the work injury, but because of the polyneuropathy.

8. Dr. Treihaft indicated that, with regards to his current pain management, he was receiving benefit in the range of 25% for his neuropathic (sensorimotor polyneuropathy) pain (Ex. B, p. 31). As a result, Dr. McCranie, in her report dated November 8, 2016, concurred with Dr. Treihaft's opinion that 25% of Claimant's symptomology was related to his non-work related sensorimotor polyneuropathy and the other 75% was related to his work injury (Ex A, p. 10).

9. Claimant eventually began treating with Dr. Kenneth Finn. As noted in Dr. McCranie's February 14, 2017 clinical note, Dr. Finn performed his initial evaluation on January 9, 2017 (Ex. A, p. 8). Following his examination, Dr. Finn recommended that Claimant undergo a bilateral L5 epidural steroid injection, and if that was not effective, a bilateral L5-S1 facet block. Respondents, through counsel, indicated at hearing that a former authorized treating physician for Claimant, Dr. Clapp, had made a referral to Dr. Finn for treatment.

10. Dr. McCranie, in a report dated February 14, 2017, indicated that the injections that Dr. Finn was recommending would not be considered reasonable and necessary (Ex. A, p. 9). Dr. McCranie noted that Claimant had previously undergone L5-S1 epidural injections at two levels, without any meaningful relief. As a result, he would not be considered a candidate for a repeat steroid epidural injection.

11. With regards to the lumbar facet injections, Dr. McCranie noted that Claimant had previously undergone medial branch blocks for which he had no diagnostic response. At hearing, Dr. McCranie testified as to the similarity between the facet blocks recommended by Dr. Finn, and the previous medial branch blocks that were performed on Claimant. The facet blocks recommended by Dr. Finn can be both diagnostic and therapeutic for facet generated pain. The medial branch blocks, on the other hand, are only considered diagnostic for facet generated pain. Because Claimant did not have significant enough relief of pain following the medial branch blocks, it was Dr. McCranie's opinion that Claimant did not have a pain generator in his facets. This, in turn, would make the facet blocks recommended by Dr. Finn neither medically reasonable nor necessary.

12. Claimant returned to see Dr. McCranie on May 9, 2017 (Ex. A, pp. 1-7). At that point in time, Claimant had reduced his pain medication to the point that he was only taking two Norco tablets per day (Ex. A, p. 3). Dr. McCranie also noted that Claimant's pain levels had actually dropped from his reported pain levels during the January 28, 2016 evaluation. Dr. McCranie also noted that Claimant continued to perform his regular job duties without any limitations.

13. As a result, it was Dr. McCranie's opinion that Claimant should completely wean off his narcotic medication inasmuch as he has demonstrated the ability to do so, and because ongoing consumption of narcotics at this point (seven years post injury) would no longer be considered reasonable and necessary. Specifically, Dr. McCranie believed that Claimant should wean himself completely off his medications in the next 8 to 12 weeks. Thereafter, it would no longer be considered reasonable and necessary for Claimant to be on any kind of narcotic medication for his work-related injury.

14. In her IME report, Dr. McCranie further noted that Claimant's continued usage of opioids and benzodiazepines is not recommended, "due to the incidence of *death* from respiratory depression with this drug combination" (Ex A, p.24)(emphasis added). Further, according to the Medical Treatment Guidelines, Dr. McCranie noted that "only *one* short acting opioid medication should be used for pain management rather than the two used in the case of Mr. Soden" (Ex. A, p. 25)(emphasis added).

15. In the absence of contrary evidence, the ALJ finds the opinions of Dr. McCranie, and those of Dr. Treihaft, to be credible and professionally rendered, if not persuasive in their entirety.

16. Claimant testified at hearing that the pain he is now experiencing was in no way present prior to his industrial injury. He still suffers from "chronic pain". Claimant had had disputes with Dr. Clapp over his continued prescription of opioid medications, and has made efforts, on his own, to wean himself down from prescribed dosages. He believes his condition might be worsening.

17. The ALJ finds Claimant to be a sincere and credible historian (to his own medical providers, to the IME physicians, and in his testimony) in describing, to the best of his abilities, the symptoms he has experienced, and his desire and commitment for the best medical outcome he can achieve.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

A. Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. C.R.S. Section 8-42-101. The right to workers' compensation benefits, including medical benefits, however, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment is proximately caused by an injury arising out of an in the course of employment. C.R.S. Section 8-41-301(1)(c); Faulkner v. Industrial Claim Appeals Office, 12 P.3rd 844 (Colo. App. 2000).

B. Respondents are free to challenge the reasonableness and necessity of current or newly requested treatment, notwithstanding its position regarding previous medical care on a case. See Kroupa v. Industrial Claim Appeals Office, 53 P.3rd 192 (Colo. App. 2002). The question of whether a particular medical treatment is reasonable and necessary and/or related to the claim is one of fact for determination from the ALJ. Id.; Walmart Stores Inc. v. Industrial Claim Appeals Office, 989 P.2d 251 (Colo. App. 1999). Claimant continues to bear the burden to prove her right to specific medical benefits. HLJ Management Group, Inc. v. Kim, 804 P.2d 250 (Colo. App. 1990).

C. To further address the concerns raised by Claimant, the ALJ, in drawing these Conclusions of Law, is not foreclosing further medical treatment for Claimant's industrial injury, which might be shown by competent evidence to be reasonable and necessary. Claimant is encouraged to continue working with his Authorized Treating Provider to seek further Workers Compensation benefits. Such treatment might, or might not, be challenged by Respondents when the time arises. If so challenged, this does not constitute "harassment" by Respondents. It is not necessarily a challenge to anyone's integrity. Rather, it is due diligence which Respondent's are legally authorized to exercise. The interplay of prescribed medications-related or not to the injury at issue-may be discussed to determine the most reasonable course of treatment. When Workers Compensation is paying the bills, the ALJ must make certain decisions. Unfortunately, this can become difficult and uncomfortable for an injured worker to navigate, but it is the state of the law, and Claimant is encouraged to participate in any future legal proceedings to the best of his abilities. In the event some future treatment might be denied, Claimant may always seek treatment outside the Workers Compensation system through whatever means are available.

Injections

D. The ALJ concludes that further injections as recommended by Dr. Finn would not be considered reasonable and necessary. The injections which Dr. Finn is recommending are injections that Claimant has had in the past, with no significant therapeutic or diagnostic benefit. Because there was no significant benefit following these prior injections, Dr. McCranie is of the opinion that Claimant would receive significant benefit from any future injections.[1] At hearing, Claimant provided no testimony that he actually wanted to go through with these injections.

E. As noted in Respondents' Application for Hearing, these injections became an issue for a hearing, inasmuch as Dr. Finn had requested prior authorization for these injections. This, in turn, led to Respondents' Application for Hearing in order to comply with Rule 16-10 of the Workers Compensation Rules.

F. The ALJ concludes that further spinal injections for this claim are not longer reasonable and necessary.

Opioid Medications

G. Dr. McCranie, from her initial evaluation, was of the opinion that Claimant needed to be weaned down from his narcotic medication. Claimant has weaned himself on his own, so that he is only taking low levels of narcotic medications at this time. At the same time that Claimant has been reducing his pain medications, his reported pain levels have actually decreased.

H. As such, Dr. McCranie indicated that there was no reason why Claimant needed to continue to be on narcotic medication for this work injury. As such, Dr. McCranie indicated that Claimant should gradually reduce the remaining levels of narcotics that he is taking so that within a period of no more than 12 weeks, he would be completely weaned off his narcotic medication.

I. According Dr. McCranie's reports and testimony, Claimant's residual symptoms as a result of his work injury are now stable. As a result, there is no evidence in the record that Claimant's symptoms resulting from the work injury will somehow worsen in the future.

J. Claimant has subsequently developed a polyneuropathy, unrelated to his work injury. If it goes untreated, according to Dr. McCranie, it will likely worsen over time. Consequently, to the extent that Claimant's ongoing pain presentation may worsen over time, Respondents submit that that increase in

[1] At hearing, Dr. McCranie testified that, based on her review of Dr. Finn's reports, it does not appear that Dr. Finn reviewed any of the medical records documenting the treatment that Claimant had in the past. Dr. McCranie thought this was important inasmuch as these records documented the fact that Claimant received no substantial benefit from previous injections.

pain will be the result of his polyneuropathy, and not as a result of any residuals of his work injury.

K. However, even both of Respondents experts concur that, as of the filing of their respective reports, only 25% of Claimant's existing symptoms are attributable to his recent polyneuropathy. The remaining 75% is still attributable, and therefore related, to the effects of his compensable work injury. The ALJ has neither seen nor heard evidence to the contrary.

L. While Claimant is laudably in the process of weaning himself off of opioids, and there are admitted risks to some of his concurrent medications, the authorized treating physician(s) for Claimant are in the best position to determine when, and how, Claimant will wean himself off these medications. As of this Order, these medications are still 75% related to his work injury. The ALJ will not further prescribe the details of the weaning process.

ORDER

It is therefore ordered that:

1. The spinal injections as recommended by Dr. Finn need not be provided by Respondents.

2. Respondents' request to reduce, and eventually eliminate, Claimant's prescribed narcotic medications is denied and dismissed.

3. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 18, 2017

/s/ William G. Edie
William G. Edie
Administrative Law Judge
Office of Administrative Courts
2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

ISSUES

The following issues were raised for consideration at hearing:

1. Whether Claimant proved by a preponderance of the evidence that she suffered a work related injury in the course and scope of her employment for Employer on October 2, 2015; and

2. Whether Claimant proved by a preponderance of the evidence that she is entitled to reasonably necessary and related medical benefits.

FINDINGS OF FACT

Having considered the evidence presented at hearing, the following Findings of Fact are entered.

1. Employer is a meat packing company. Claimant is 44 years old female who resides in Greeley, Colorado. Claimant commenced her employment for Employer on May 18, 2015. Claimant work in a department in which her job duties involved packing a beef meat product (menudo) into a plastic bag, placing the bag into a box, confirming the weight of the box to be 10.9 pounds, and pushing the box onto a conveyor belt. Claimant was supervised in this position by Manual Villarreal.

2. Claimant allegedly injured her left shoulder on the job while lifting or pushing five boxes of meat product on October 2, 2017.

3. Mr. Villarreal has worked at the JBS beef plant for 22 years. Mr. Villarreal has performed the same job duties that Claimant was assigned to perform on her alleged date of injury. Mr. Villarreal testified that the job of packing the meat product involves working at about waist height. The job entails the packer taking the meat product, placing it into a plastic bag and then placing the plastic bag into a box. The box is approximately 12" long, 8" wide, and 4" deep. The boxes are filled with meat product while on a scale and weighed to ensure that the weight of the product is 10.9 pounds. The packer then pushes the box forward onto a conveyor belt.

4. Mr. Villarreal testified that occasionally the conveyor gets backed up, and the packer will then need to move a filled box by lifting the box and placing it on a holding table one or two steps to either the right or the left of the packer. Once the conveyor is clear, the box from the holding table is then lifted and placed back onto the packing surface, and then pushed or lifted onto the conveyor. Mr. Villarreal credibly testified that at no time is there any reason for the employee to lift more than one box at a time. The packer is never required to lift the boxes above shoulder height.

5. Mr. Villarreal denies that Claimant informed him of any pain complaints on October 2, 2015, but instead he was made aware of Claimant's pain complaints on October 5, 2015. According to Mr. Villarreal, after Claimant notified him of her shoulder pain on October 5, 2015, he then escorted Claimant to the Employer's Health Services Department (Health Services). An incident report completed by Claimant notes that she was lifting boxes when she noticed pain in her left shoulder. At Health Services on October 5, 2015, Claimant was noted to have full range of motion and full strength in the left upper extremity; Claimant was provided with Ibuprofen and an ice pack to the shoulder area.

6. At Respondents' request, Claimant was evaluated by Dr. Jeffrey Wunder on February 17, 2016. Dr. Wunder provided an independent medical examination report dated February 17, 2016. Dr. Wunder credibly testified at hearing. Dr. Wunder deemed a Board Certified expert in physical medicine and rehabilitation with Level II accreditation through the Colorado Division of Workers' Compensation.

7. Dr. Wunder reviewed Claimant's medical records, including an emergency room record from Poudre Valley Hospital in Fort Collins, Colorado dated October 16, 2015. The emergency room record reflected that Claimant complained of pain in her left shoulder, however, she exhibited full range of motion in the shoulder.

8. On February 17, 2016, Dr. Wunder's examination of Claimant revealed that Claimant complained of diffuse upper extremity pain; complaints that were non-specific for any injury. Dr. Wunder concluded that Claimant does not have a working diagnosis involving her left shoulder. Utilizing the Medical Treatment Guidelines for Shoulder Injuries (MTG), Dr. Wunder analyzed each of Claimant's left shoulder pain complaints for occupational relationship. Dr. Wunder credibly testified that none of Claimant's job activities fall within the categories for an occupational relationship as defined under the MTG.

9. Addressing the findings on Claimant's shoulder MRI of September 7, 2016, Dr. Wunder testified that without consistent objective clinical findings correlating to the MRI findings, the MRI is not of assistance in the causation analysis.

10. Claimant described to Dr. Wunder that her injury occurred while pushing a box of meat product. However, at hearing Claimant testified that her pain started while lifting boxes.

11. Dr. Wunder credibly testified that there are non-organic issues involved in Claimant's presentation. Specifically, Dr. Wunder concluded that Claimant presented with symptom magnification issues, with non-organic finding on neurologic examination and that Claimant's work activities do not meet any of the DOWC guides for any kind of shoulder injury as a result of her work activities.

12. In closing argument, contained in Claimant's post hearing written submission, Claimant contends that the Judge should find that she is entitled to an order awarding payment of past and future medical bills. Claimant also seeks an award

of one and one half years salary because she claims unjust termination of her employment. Claimant asserts additional conditions of her employment, involving allegations of bullying and name calling, that should be redressed in this matter.

CONCLUSIONS OF LAW

Having entered the foregoing Findings of Fact, the following Conclusions of Law are reached.

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A Claimant in a worker's compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a worker's compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A worker's compensation case is decided on its merits. Section 8-43-201, C.R.S.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2005).

4. Mr. Villarreal credibly testified that the boxes Claimant packed never weighed more than 10.9 pounds. He further credibly testified that the filled box is typically pushed onto the conveyor belt. He testified that occasionally the box is lifted to be placed on a holding table 1 to 2 steps away from Claimant. Mr. Villarreal credibly testified and the court finds that there was no reason for Claimant to lift more than one box at a time as part of the packer job duties.

5. The medical evidence and testimony of Dr. Wunder is credible and persuasive. Dr. Wunder opined that the pain complaints and Claimant's job activities, as described by Claimant, are not the type of activities that result in a medical condition involving the left shoulder. Dr. Wunder persuasively testified that nonoccupational factors are causing Claimant's pain complaints.

6. Claimant has failed to establish that she sustained a compensable injury to her left shoulder. The judge finds that Claimant's job activities are not responsible for her medical condition involving the left shoulder.

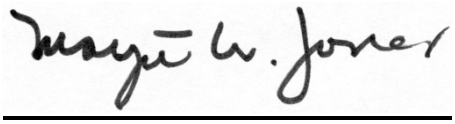
ORDER

It is therefore ordered that:

Claimant's claim for worker's compensation benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 17, 2017



Margot W. Jones, Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that he suffered a compensable injury to his lumbar spine on December 5 and 6, 2016?

II. Has Claimant shown, by a preponderance of the evidence, that his medical expenses to treat his lumbar spine should be paid to the following providers: Concentra, Penrose-St. Francis, American Medical Response, Dr. Daniel Fellhauer, and Actions Potential?

STIPULATIONS

At the outset of the hearing, the parties announced the following Stipulations, which were accepted by the ALJ:

I. Claimant's Average Weekly Wage is $406.75.

II. Should this claim be compensable, the period of Temporary Total Disability shall run from December 7, 2016 through February 9, 2017.

III. The issue of Temporary Partial Disability was withdrawn.

FINDINGS OF FACT

Based upon the evidence received at hearing, the ALJ makes the following Findings of Fact:

1. Claimant was injured on December 5, 2016 while working as a custodian at NSR Solutions, Inc. He testified that his employer, NSR Solutions, Inc. (hereinafter referred to as "NSR") was awarded the contract to clean various buildings on Peterson Air Force Base in August of 2016. The Claimant testified that as he was cleaning the restroom on December 5, 2016, he attempted to pull a trash bag out of a trash can. He testified that the trash bag became caught on the can resulting in him having to pull harder to release the bag. He eventually pulled the can as well as the trash bag. He testified that when the trash bag got stuck, he felt the immediate onset of pain on the left side in his lumbar spine. Claimant testified that having less time to complete his work contributed to his accident, because he had to work faster.

2. He continued to mop and finish his duties on 12/5/16, believing that the injury was not serious. He stated that he did not report the injury to his employer on 12/5/16

because he thought that if he went home, iced his back and took Ibuprofen, the pain would subside. Although the pain did not subside, the Claimant went to work the next morning, December 6, 2016, and attempted to complete his job duties. He stated that he bent over to clean a urinal, he felt an immediate stab of pain in his lower back and his leg gave out causing him to fall and brace himself against the wall. He testified that the pain was so severe that he was forced to stay in that bent over position until the pain subsided enough that he could make it to the front of the building. He went to the building management office and called his supervisor, Donna Valdez, to report the injury. Upon the recommendation of the building manager, an ambulance was called to transport the Claimant to Penrose-St. Francis Hospital.

3. The Claimant testified that he was given oxycodone and cyclobenzaprine at the emergency room and was discharged later that day. On December 8, 2016, he followed up with Concentra, his employer's authorized treatment provider. The Claimant was seen by Kenneth Ginsburg, P.A. who noted bilateral muscle spasms in the Claimant's lumbar spine as well as tenderness from L1 through L5. He also noted that flexion and extension of the lumbar spine and thoracolumbar sidebending was painful. He diagnosed the Claimant with a lumbar and sacroiliac sprain and prescribed Meloxicam and Methocarbamol.

4. Claimant was referred by P.A. Ginsburg for physical therapy and he took the Claimant off work due the fact that his medications were sedating. (Exh. 12, pp. 1-4). The Claimant continued to receive physical therapy throughout most of December and was seen again at Concentra by P.A. Ginsburg on December 16, 2016. On that date, he returned the Claimant to work with physical restrictions to include lifting no more than 20 pounds occasionally (up to 3 hours per day) and push/pulling up to 20 pounds occasionally (up to 3 hours per day). The Employer was unable to accommodate these restrictions and Claimant remained off work.

5. The Claimant further testified that he previously injured his lumbar spine in 1976 when he fell out of a window. That injury resulted in compression fractures of some of his lumbar vertebra. He still has occasional pain which he attributes to that injury but it has never restricted his activities and he described it as "a different kind of pain" than he has now. He testified that he has consistently worked out and exercised to keep "in shape" and reduce any episodes of back pain from his prior back injury. The Claimant testified he also strained/sprained his lumbar spine in 2010 while at work. This resolved after a round of physical therapy. The Claimant also injured his back in a work-related injury in 2012. Claimant stated that after treatment, the pain resolved, and he has not had any major problems with his back until this injury.

6. On December 27, 2016, Respondents filed a Notice of Contest (citing, without further explanation "Further investigation")(Exh. 3), and the Claimant was notified by Concentra that his physical therapy was discontinued because his case had been closed. The Claimant testified that his condition was improving while he was undergoing physical therapy prior to his claim being closed. Since he felt he still needed treatment, he followed up with his primary care physician, Dr. Daniel Fellhauer.

He saw Dr. Fellhauer on January 9, 2017 who referred him for physical therapy and continued his physical restrictions of no lifting greater than 20 pounds and no excessive repetitive bending, stooping, pushing or pulling for a period of three weeks. The Claimant began physical therapy at Action Potential (Exh. 14) and continued until he could no longer afford the co-pays under his private health insurance. The ALJ finds that his physical therapy and treatment was discontinued by Concentra for non-medical reasons. The ALJ further finds that Claimant's actions were reasonable in seeking alternative treatment, and that he was compliant with his physicians' instructions.

7. On January 26, 2017, the Claimant returned to Concentra for a one time evaluation which the carrier authorized. The medical record from that date notes that the "case was closed by the insurance carrier and apparently he acquired legal assistance and has been authorized for conservative treatment only". Dr. Randall Jones saw Claimant and referred the Claimant for twelve additional physical therapy sessions. Dr. Jones also continued the Claimant's physical restrictions of no lifting greater than 20 pounds occasionally and no pushing or pulling greater than 20 pounds occasionally. On February 9, 2017, the Claimant returned to Concentra and Dr. Jones noted that the Claimant was 80-90% back to pre-injury level" and returned the Claimant to work at his regular duties with no physical restrictions. The Claimant testified at hearing that he returned to work on February 10, 2017 and has continued to work since that time at full duty, being able "to do the trash, the bathrooms, *everything*". (emphasis added).

8. The Claimant was seen by Dr. William Ciccone for an IME at the request of the Respondents on February 22, 2017. Dr. Ciccone testified by deposition on May 3, 3017. Dr. Ciccone also opined that the Claimant sustained a minor strain/strain to his lumbar spine as a result of having to forcefully pull a trash bag out of a trash can. A strain/sprain type injury is consistent with the mechanism of injury that the Claimant described. He opined that the weight of the trash is irrelevant in forming his opinion (Dr. Ciccone Depo. pp. 7-8). Rather, the fact that the liner was stuck and the Claimant had to pull harder to dislodge it was more relevant in forming his opinion. Dr. Ciccone testified that a positive finding in all three of these physical examinations is based on Claimant's subjective complaints. (Dr. Ciccone Depo, pp 4-6). Dr. Ciccone noted that there was no objective evidence that Claimant suffered a strain, and that his findings were based on the mechanism of injury described by Claimant, and the complaints of pain reported by Claimant. (Dr. Ciccone Depo. p8: ll.18-25; p.9: ll.1-4). Dr. Ciccone noted that his findings are also based on the veracity of the Claimant's complaints. (Dr. Ciccone Depo, p.6, ll.8-10).

9. Dr. Ciccone further opined that this injury did not aggravate or accelerate any of the long-standing problems the Claimant had with his back; rather, this was a new injury. He recommended that the Claimant be restarted in PT in order to review an appropriate home exercise program and return to full work duties. (Exh. 10). Dr. Ciccone opined that the Claimant's prior lower back injuries probably made him a little more susceptible to injuring his lower back. (Dr. Ciccone Depo. pp. 10-11).

10. The Claimant was seen by Dr. Timothy Hall for an IME on April 5, 2017. (Exh. 5). Dr. Hall, a board-certified physiatrist testified by evidentiary deposition on behalf of the Claimant. (Exh. 6). Dr. Hall opined to a reasonable degree of medical probability that the Claimant sustained a lumbar spine strain on December 5, 2016 when he attempted to lift the trash can liner and it got stuck. He testified that the mechanism of injury as described by the Claimant was consistent with the Claimant's physical complaints on December 5 and 6, 2016.

11. Dr. Hall noted in his physical exam of the Claimant that there was an asymmetry to the Claimant's posterior superior iliac spines as well as a very tender trigger point to the left quadratus lumborum. The Claimant's sacrotuberous ligaments were tender and the left psoas muscle was tight and tender, inhibiting flexion of the Claimant's hip. (Dr. Hall Depo. p. 8, ll. 1-6). Dr. Hall testified that the asymmetry to the posterior superior spine as well the lack of hip extension is considered to be objective medical findings. (Dr. Hall Depo. p. 13, ll. 14-20). Dr. Hall further opined that he agreed with the Respondent's IME physician, Dr. William Ciccone, regarding the fact that the mechanism of injury as described by the Claimant could result in a strain of one's lumbar spine and/or sacroiliac joint. (Dr. Hall Depo. p. 14, ll. 3-13).

12. Dr. Hall also explained that the day an injury occurs or even the day after an injury occurs, one may not be able to tell an individual sustained an injury simply by observing him. He explained that sprains/strains

> are based on inflammation, and often, it's a day, two, three days after the actual event that the inflammation really develops to the point of creating a lot of symptomatology. So you might not see any signs that someone is in pain the day after an event. Often, you see very little the day of the event, again, because it's like car accidents. You see this all the time when the ambulance gets there, it's like, oh, I'm OK.....the next day, they wake up and they can't get out of bed; and that's about the inflammation. It's the inflammation that causes the pain. So this is–it's not an unusual event or happening to have an event and not be such a big deal. But, then, within the ensuing next couple of days, it becomes a bigger deal." (Dr. Hall Depo. p. 16-17).

Dr. Hall opined that the Claimant's preexisting vertebral fractures which occurred in the 1970's did not play a part in this injury although any soft tissue injuries which occurred at the time of the fractures could create intermittent chronic issues over time and make an individual more susceptible to injury. (Dr. Hall Depo. p. 21, ll. 3-10).

13. Dr. Hall further opined that if Claimant was sitting in a chair after his initial injury while pulling trash out of the bin, you would probably see Claimant "not wanting to sit in one position, wanting to change positions." (Dr. Hall Depo, p.15:18-25; 16:1-8).

14. The Claimant testified that, besides doing his usual job as a custodian, he has also been the Union Shop Steward for his Union for the last six years. He explained

that his job involves protecting his fellow employees and helping them file grievances if they have disputes with the Employer. After the Claimant had finished his custodial duties on 12/5/16, he attended a meeting with Donna Valdez, Nayereh Rassoulpour and Elicia Santisteven. The subject of the meeting was the lack of appropriate time afforded Ms. Santisteven to complete her job duties. In August 2016, NSR was awarded the contract to clean certain buildings on Peterson Air Force Base. The former employer had allowed the employees, including Ms. Santisteven, seven hours to complete their custodial duties. NSR now required that the custodians complete essentially the same duties within five hours. Mr. Estrada felt that five hours was not enough time and admitted that he became very agitated during that meeting, raised his voice and left the meeting before it was concluded. He testified that he did so because he felt that his employer was not listening to the issues and was dismissive of both him and Ms. Santisteven.

15. On November 29, 2016, Claimant, working within his job as the Shop Steward, filed a formal grievance with NSR outlining the employee's issues with the reduced time allowed to complete their duties. (Exh. L, p.166). Claimant drafted a letter to Donna Valdez, the project manager with NSR Solutions. (Exh. L). The letter presented a grievance for Claimant and the other employees that worked in his building, arguing that the employees did not have enough time to complete their tasks, that someone could get injured given the fast work pace, and that "someone is bound to have an accident." (Exhibit L). Claimant testified that he hand-delivered the letter to Donna Valdez, and that his employer did nothing about his complaints. However, the employer did hold a grievance meeting with Claimant on December 5, 2016, to discuss the issues aired in Claimant's November 29, 2016 letter. (Exh. L, letter from Donna Valdez).

16. One issue raised prior to the grievance meeting, as noted in the "Grievance Form" filled out and signed by the aggrieved employee Salvador Estrada, was the "failure of management to recognize and protect the safety of its employees, forcing custodians to work at a frantic pace." (Exh. L). Claimant testified the frantic work pace resulting in an employee getting hurt would be proof that the Respondents' policy was not safe. However, at the grievance meeting several hours after his accident, Claimant did not tell his supervisor or the CEO that he suffered an injury earlier in the day due to the fast work pace.

17. Ms. Rassoulpour testified that during the meeting, Claimant did not show any obvious signs of pain such as grimaces, facial expressions, or verbally indicating that he needed breaks or a rest. During the meeting, Ms. Rassoulpour questioned whether the employees actually did need more time to complete their work. Ms. Rassoulpour proposed switching building assignments of the employees, to ensure employees were familiar with the other buildings.

18. Claimant testified that potentially losing his building assignment did not upset him. Claimant worked in Building 1 for seven years, and has great relationships with the building tenants. Claimant's grievance meeting was less than a month before Christmas. (Exh. L). Unlike other building assignments, in Building 1, Claimant worked in the same property the entire day, and did not have to switch between buildings, which Claimant testified can be a hassle depending on the person.

19. During the meeting, Claimant admits he became “upset” and “angry.” Claimant testified that he was upset because of his workload and the lack of time. Ms. Rassoulpour testified that she told Claimant he would be relocated to another building assignment. Ms. Rassoulpour testified that immediately after she discussed relocating Claimant, he became visibly upset, jumped up, and expressed his displeasure with having employees moved around.

20. Claimant testified that he stood up, gesturing, raised his voice, and left the meeting without permission of his supervisor or the company CEO. In testifying that he ended the meeting, Claimant admitted that he did not have authority to do so, and that the meeting would have to be finished at a later date due to his departure.

21. Claimant testified that he was not concerned about any repercussions for the manner in which he left the meeting. In contrast, Ms. Rassoulpour testified that the manner in which Claimant left the meeting was insubordination, and that she could have punished Claimant.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Worker’s Compensation Act of Colorado (Act), " 8-40-101, *et seq*., C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1), C.R.S*. The claimant shoulders the burden of proving by a preponderance of the evidence that he is a covered employee who suffered an injury arising out of and in the course of employment. *Section 8-41-301(1), C.R.S.; Faulker v. Industrial Claim Appeals Office, 12 P.3d 844 (Colo.App. 2000); City of Boulder v. Streeb, 706 P.2d 786 (Colo. 1985); Pacesetter Corp. v. Collett, 33 P.3d 1230 (Colo.App. 2001).* A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark, 197 Colo. 306, 592 P.2d 792 (1979)*. The facts in a worker’s compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. *Section 8-43-201, C.R.S*. A worker’s compensation claim is decided on its merits. *Section 8-43-201, supra.* In accordance with §8-43-215, C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, *84 P.3d 1023 (Colo. 2004).* This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, 5 P.3d 385(Colo.App.2000)*

B. In determining credibility, the ALJ should consider the witness's manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16.

Compensability

C. For an injury to be compensable under the Act, it must arise out of and occur within the course and scope of employment. *Price v. Industrial Claim Appeals Office*, 919 P.2d 207, 210 (Colo. 1996). The "arising out of" test is one of causation. It requires that the injury have its origins in an employee's work related functions, and be sufficiently related thereto so as to be considered part of the employee's service to the employer. In this regard, there is no presumption that an injury which occurs in the course of a worker's employment arises out of the employment. *Finn v. Industrial Commission,* 165 Colo. 106, 437 P.2d 542 (1968); *see also, Industrial Commission v. London & Lancashire Indemnity Co.,* 135 Colo. 372, 311 P.2d 705 (1957) (*mere fact that the decedent fell to his death on the employer's premises did not give rise to presumption that the fall arose out of and in course of employment*). Rather, it is the Claimant's burden to prove by a preponderance of the evidence that there is a direct causal relationship between the employment and the injuries. §8-43-201, C.R.S. 2006; *Ramsdell v, Horn,* 781 P.2d 150 (Colo. App. 1989).

D. The determination of whether there is a sufficient "nexus" or causal relationship between the claimant's employment and the injury is one of fact which the ALJ must determine based on the totality of the circumstances. *In Re Question Submitted by the United States Court of Appeals,* 759 P.2d 17 (Colo. 1988); *Moorhead Machinery & Boiler Co. v. Del Valle,* 934 P.2d 861 (Colo. App. 1996). The existence of a causal relationship between the Claimant's job and his lumbar sprain/strain is a question of fact. *F.R. Orr Construction v. Rinta, 717 P.2d 965 (Colo. App. 1985).*

E. All of the physicians who have examined the Claimant, to include PA Ginsburg and Dr. Randall Jones at Concentra, Dr. William Ciccone and Dr. Timothy Hall have now opined that the Claimant sustained a lumbar strain/sprain on December 5, 2016. This was then aggravated by his cleaning duties on December 6, 2016. This ALJ finds the Claimant's testimony regarding the facts and circumstances of his injury from these dates to be sufficiently credible. The persuasive evidence demonstrates that Claimant injured his lumbar spine on December 5, 2016 which was further aggravated by his custodial duties on December 6, 2016 resulting in his lumbar sprain/strain. While the ALJ is skeptical of Claimant's claims that he was not particularly upset about changing buildings, nor that he was unconcerned about leaving this grievance meeting abruptly, such rationalizations do not overcome the medical evidence. Nor is the possible political motive (calling attention to the faster work pace) sufficient to lead the

ALJ to conclude that his report of injuries was somehow retaliatory. Claimant simply strained his back.

Medical Benefits

F. Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. Section 8-42-101(1)(a), C.R.S.; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). However, the respondents are only liable for authorized treatment or emergency medical treatment, which may be obtained without prior authorization. See § 8-42-101(1), C.R.S.; *Pickett v. Colorado State Hospital*, 32 Colo. App. 282, 513 P.2d 228 (1973); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

G. Claimant sought emergency medical treatment after his back “gave out” while cleaning the urinal on December 6, 2016. He was taken by ambulance (American Medical Response) to Penrose-St. Francis Hospital. This ALJ finds that the treatment rendered by American Medical Response and Penrose-St. Francis was "emergent" in nature because the Claimant’s back pain was so severe that he could hardly ambulate. It was severe enough that an ambulance was called by building management. Respondents are liable for the medical treatment provided by American Medical Response and Penrose-St. Francis Hospital.

H. Authorization refers to a physician’s legal status to treat the industrial injury at the respondents’ expense. *Bunch v. Industrial Claim Appeals Office*, 148 P.3d 381 (Colo. App. 2006); *Popke v. Industrial Claim Appeals Office*, 944 p.2d 677 (Colo. App. 1997). Once an ATP has been designated, the claimant may not ordinarily change physicians or employ additional physicians without obtaining permission from the insurer or an ALJ. If the claimant does so, the respondents are not liable for the unauthorized treatment. *Yeck v. Industrial Claim Appeals Office*, 996 p.2d 228 (Colo. App. 1999).

I. Authorized providers include those medical providers to whom the claimant is directly referred by the employer, as well as providers to whom an ATP refers the claimant in the normal progression of authorized treatment. *Town of Ignacio v. Industrial Claim Appeals Office*, 70 P.3d 513 (Colo. App. 2002); *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997). Whether an ATP has made a referral in the normal progression of authorized treatment is a question of fact for the ALJ. *Suetrack USA v. Industrial Claim Appeals Office*, 902 P.2d 854 (Colo. App. 1995). Respondents designated Concentra Medical Clinic to attend to the claimed injury pursuant to W.C.R.P. 8-2(A) and C.R.S. § 8-43-404(5)(a)(I)(A). The ALJ concludes that Concentra is the designated provider for this claim. Since this claim is deemed compensable, Respondents are liable for the medical treatment provided by Concentra.

J. The respondent is liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of the industrial injury. *Yeck v. Industrial Claim Appeals Office, 996 P.2d 228 (Colo. App. 1999); Sims v. Industrial*

Claim Appeals Office, 797 P.2d 777 (Colo. App. 1990). Pursuant to § 8-43-404(5)(a), C.R.S., the employer or insurer is afforded the right in the first instance to provide a list of at least three physicians from which list the injured employee may select the physician who attends him. However, § 8-43-404(5)(a), C.R.S. implicitly contemplates that the respondent will designate a physician who is willing to provide treatment. *See Ruybal v. University Health Sciences Center, 768 P.2d 1259 (Colo. App. 1988); Tellez v. Teledyne Water Pic, W.C. No. 3-990-062 (March 24, 1992), aff'd, Teledyne Water Pic v. Industrial Claim Appeals Office, Colo. App. 92CA0643 (Dec. 24, 1992) (NSOP)*. Thus, if the physician selected by the respondent refuses to treat the claimant for non-medical reasons, and the respondent fails to appoint a new treating physician, the right of selection passes to the claimant, and the physician selected by the claimant is authorized. *See Ruybal v. University Health Sciences Center, supra; Teledyne Water Pic v. Industrial Claim Appeals Office, supra; Buhrmann v. University of Colorado Health Sciences Center, W.C. No. 4-253-689 (Nov. 4, 1996); Ragan v Dominion Services, Inc., W.C. No. 4-127-475 (Sept. 3, 1993)*. Whether the ATP refused to treat the claimant for non-medical reasons, whether the insurer had notice of the refusal to treat, and whether the insurer "forthwith" designated a physician who was willing to treat the claimant are questions of fact for resolution by the ALJ. *See Lutz v. Industrial Claim Appeals Office, 24 P.3d 29 (Colo. App. 2000); Ruybal v. University Health Sciences Center, supra; Medina v. La Jara Potato Growers, W.C. No. 4-128-326 (June 1, 1998)*.

K. In this case, the Claimant credibly testified that after he received the Notice of Contest in late December 2016, Concentra notified him that the case had been closed by the insurance carrier and he could not continue treatment at the facility. This is further substantiated by the January 26, 2017 note from PA-C Ginsburg (of Concentra) wherein he noted "ONE TIME EVALUATION TODAY. Case was closed by the insurance carrier and apparently he acquired legal assistance and has been authorized for conservative treatment only". (Exh. 12).

L. The rationale for allowing the passing the right of selection to Claimant is explained, citing *Ruybal*, in *Montano v. Jewish Family Services, W.C. No. 4-396-343 (March 9, 2000).*

> …the purpose of the requirement to designate a physician willing to treat the claimant is to insure that the medical treatment will be considered "authorized" if the claimant succeeds in proving the disputed treatment is compensable (*as found herein*)…(in workers compensation proceedings the term "authorization" refers to a physician's status as a health care provider legally authorized to treat the injured worker). If the Insurer were free to designate an authorized physician who was unwilling to treat the claimant until issues of legal liability were resolved, and the claimant were not then free to select her own authorized physician willing to treat without regard to the Insurer's legal liability, the claimant would be left in a dilemma. Either the claimant would be required to forego treatment until the legal issues are resolved, or the claimant could procure necessary treatment with the understanding that the treatment will never be compensated because it is, by definition,

> unauthorized. The rule established by Ruybal avoids the dilemma by allowing the right of first selection to pass to the claimant where the Insurer fails to designate a physician willing to treat the claimant without regard to issues of legal liability.

M. This ALJ finds that Concentra refused to treat the Claimant for non-medical reasons (denial of the claim by Pinnacol for "Further investigation"); the January 26, 2017 note from Concentra implies that Pinnacol Assurance had knowledge of Concentra's refusal to continue to treat; and Pinnacol did not designate a physician who was willing to treat the Claimant until January 26, 2017. This delay in designation is not deemed to be "forthwith" and this ALJ finds that the right of selection passed to the Claimant as of the end of December 2016, when he was denied treatment. All treatment with Dr. Daniel Fellhauer is deemed authorized and his bills shall be paid by Respondents. As Dr. Fellhauer is an authorized provider, his referral to Action Potential is also deemed authorized. All bills from Action Potential shall be paid by Respondents.

Temporary Total Disability

N. By all accounts, Claimant reached maximum medical improvement on February 10, 2017. He returned to full duty, without restrictions, on this date. By stipulation, since his injuries were compensable, Claimant is owed Temporary Total Disability from December 7, 2016 through February 9, 2017. As noted, Claimant's Average Weekly Wage was stipulated to be $406.75.

ORDER

It is therefore ordered that:

1. Respondents will pay all reasonable and necessary medical expenses from American Medical Response, Penrose-St. Francis Hospital, Concentra, Dr. Daniel Fellhauer, and Action Potential to treat this injury.

2. Respondents will pay temporary total disability benefits from 12/7/16 through 2/9/17, based upon the average weekly wage stipulated to be $406.75.

3. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 20, 2017

/s/ William G. Edie
William G. Edie
Administrative Law Judge
Office of Administrative Courts
2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

ISSUES

- Whether claimant has demonstrated by a preponderance of the evidence that she is entitled to convert her scheduled impairment rating to a whole person award.

- Whether claimant has demonstrated by a preponderance of the evidence that her average weekly wage ("AWW") should be increased to include the cost of health insurance.

- Previously the parties stipulated on the issue of temporary partial disability ("TPD") benefits and an AWW $551.22. Based upon that stipulation, any adjustment to claimant's AWW in this order will only apply to the payment of permanent partial disability ("PPD") benefits.

FINDINGS OF FACT

1. Claimant began her employment with employer on June 1, 1992. She sustained an admitted injury to her right shoulder on January 8, 2014.[1] At the time of the injury claimant was working in the floral department. The injury occurred when the claimant was attempting to use a stem cutter to cut woody stems. Claimant testified that she immediately felt pain in her right shoulder and clavicle.

2. On January 29, 2014, claimant first treated with her authorized treating physician ("ATP") Dr. Patrick O'Meara. Claimant reported to Dr. O'Meara that she had significant swelling and tenderness over the sternoclavicular joint. Dr. O'Meara diagnosed a sprain to claimant's right shoulder and sternoclavicular joint.

3. On March 10, 2014, claimant completed a one-time change of physician from Dr. O'Meara to Dr. Jeffrey Krebs. Claimant was first seen by Dr. Krebs on March 31, 2014. At that time, Dr. Krebs recorded that claimant had tenderness over the right sternoclavicular joint and pain into her right shoulder. Dr. Krebs recommended a magnetic resonance image ("MRI") of claimant's right shoulder. Claimant testified that due to the pain in her right shoulder she could not raise her right arm in March 2014.

4. On May 21, 2014, respondents sent claimant for an independent medical examination ("IME") with Dr. Kathy McCranie. In connection with the IME, Dr. McCranie reviewed claimant's medical records, obtained a medical history, and performed a physical examination of claimant. During the IME, claimant reported to Dr. McCranie

[1] Early in this claim there was some confusion as to the actual date of claimant's work injury versus the date she reported the injury to employer. The parties agree that the injury occurred on January 8, 2014, even though the recorded date of injury is January 27, 2014.

that she had pain around her right sternum and clavicle with pain in the top and back of her shoulder. Following the IME, Dr. McCranie issued a report in which she opined that it would be necessary to obtain a right shoulder MRI and a work site evaluation.

5. On July 22, 2014, an MRI of claimant's right shoulder showed a mild subacromial/subdeltoid bursitis and mild grade 1 sprain of the acromioclavicular joint ("AC") joint.

6. On August 12, 2014, Dr. McCranie reviewed the MRI results and authored an addendum to her IME report in which she opined that claimant's right shoulder injury was not work related.

7. Claimant did not seek treatment again with Dr. Krebs until November 5, 2015. Claimant testified that she waited to return to Dr. Krebs because she believed employer would not allow her to receive treatment. On November 5, 2015, Dr. Krebs noted palpable crepitus in claimant's right shoulder and "clunking sounds" with internal and external rotation. Dr. Krebs opined that claimant's right shoulder symptoms were caused by her use of the stem cutter at work.

8. Claimant testified that during this claim she has received various modes of treatment including a cortisone shot,[2] physical therapy, massage therapy, and acupuncture. Claimant testified that she received some benefit from the injection, physical therapy, and massage therapy. Claimant has been instructed to continue with a home exercise program.

9. A hearing was previously held on the issues of compensability, medical benefits, and temporary partial disability ("TPD") benefits. On June 13, 2016, Administrative Law Judge Keith Mottram issued an order finding that claimant's January 2014 injury was compensable.

10. Following the determination that claimant's injury was compensable, respondents sent claimant for a mandatory appointment with Dr. Krebs on July 12, 2016. At that time, Dr. Krebs noted that claimant was tender over the right anterior shoulder and the pectoralis major was narrowed "at its point of insertion over the right shoulder laterally".

11. On August 12, 2016, employer offered claimant a full-time position that complied with claimant's work restrictions. Claimant declined that position and did not return to work for employer.

12. On August 29, 2016, an MRI of claimant's right shoulder showed mild subacromial/subdeltoid bursitis, a stable minor interstitial tearing of the anterior supraspinatus tendon and mild acromioclavicular joint degenerative changes.

[2] On October 12, 2016, Dr. Timothy Judkins administered a right subacromial corticosteroid injection.

13. On November 23, 2016, respondents sent claimant for an IME with Dr. Wallace Larson. In connection with the IME, Dr. Larson reviewed claimant's medical records, obtained a medical history, and performed a physical examination of claimant. At that time, claimant reported her symptoms as pain in the anterior and lateral shoulder and down the right humerus and into the back of the shoulder. Claimant also described to Dr. Larson tenderness throughout her entire right deltoid, trapezius, and right clavicle area. Following the IME, Dr. Larson issued a report in which he opined that claimant's right shoulder symptoms are caused by normal degenerative changes. Dr. Larson also opined that claimant did not have any permanent impairment and could return to full duty work.

14. Dr. Krebs placed claimant at maximum medical improvement ("MMI") on January 11, 2017 and assessed a permanent impairment rating of 15% for claimant's right upper extremity. At that time, Dr. Krebs also released claimant to full duty with no restrictions. Claimant testified that at the time she was placed at MMI she continued to have pain in her right shoulder and clavicle, and swelling in her clavicle.

15. On January 31, 2017, respondent filed a Final Admission of Liability ("FAL") admitting for the MMI date of January 11, 2017 and the impairment rating of 15% for claimant's right upper extremity.

16. On February 9, 2017, claimant timely filed an objection to the FAL and filed the application for hearing in this matter.

17. On March 27, 2017, Dr. Larson was provided with additional medical records and was asked to opine as to whether claimant was entitled to a whole person impairment rating. Dr. Larson opined that because claimant's impairment is limited to her right upper extremity and does not extend beyond that extremity, claimant is not entitled to a whole person impairment rating.

18. Claimant testified that her current symptoms include pain in the "capsule" of her right shoulder and into her clavicle area. Claimant testified that she always has pain following any activity involving her right upper extremity. Claimant described the pain in her shoulder as "pricks of pain and tenderness". In addition, claimant describes pain and swelling in her clavicle. Claimant testified that although she has no pain when she shrugs her right shoulder, she feels a "grainy" sensation when she attempts to rotate that shoulder. Claimant testified that she does not have any pain or issues with the muscles at the base of her neck.

19. Claimant testified that during her employment with employer she had health, dental, and vision insurance coverage for herself, her spouse, and her two stepchildren. On March 1, 2015, employer sent claimant a COBRA[3] notice informing claimant that she had until April 29, 2015 to enroll in continuing health insurance coverage. Per the COBRA letter, the cost of enrollment for claimant and her family was

[3] Consolidated Omnibus Budget Reconciliation Act of 1985 ("COBRA").

$2,014.98 per month (health insurance $1,862.98; dental insurance $130.46; and vision insurance $21.24). This equates to $465.00 per week. Claimant did not purchase this insurance.

20. Claimant testified that she began new employment with Express Employment Professionals ("Express") at the end of March 2017 as a staffing consultant. Claimant testified that she was initially hired on a temporary and part-time basis and currently works "minimal hours". Claimant also testified that her position with Express includes desk work and some office cleaning.

21. Claimant testified that she enrolled in vision insurance with Express for herself and her spouse, but has not enrolled in health or dental insurance with her new employer. Records entered into evidence indicate that the cost for claimant to obtain insurance with Express for herself and her family would be $78.52 per week; ($54.14 per week for medical insurance; $17.82 per week for dental insurance; and $6.56 per week for vision insurance).

22. The ALJ finds claimant's testimony at hearing regarding her symptoms following the work injury to be credible and persuasive. The ALJ notes that claimant's testimony is supported by the medical records. The ALJ credits claimant's testimony and the medical records and finds that claimant has established that it is more likely than not that her injury has resulted in a functional impairment that involves a part of the body that is not contained on the schedule of impairment set forth at Section 8-42-107(2), C.R.S., specifically the pain and swelling in her clavicle.

23. The ALJ credits the March 1, 2015 COBRA letter entered into evidence and finds that the cost to continue insurance for claimant and her family is $2,014.98 per month, or $465.00 per week. The ALJ finds that claimant has demonstrated that it is more likely than not that her AWW should be increased by $465.00 to reflect the cost of continued insurance coverage.

24. The ALJ recognizes that claimant has enrolled in vision insurance with her new employer, Express. However, the ALJ finds no persuasive argument to apply that amount in recalculating claimant's AWW. On the contrary, the ALJ finds that the cost listed in the March 1, 2015 COBRA letter is the accurate cost to claimant for continuing insurance.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197

Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., (2013). A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2013).

3. Section 8-42-107(1) states in pertinent part:

> (a) When an injury results in permanent medical impairment and the employee has an injury or injuries enumerated in the schedule set forth in subsection (2) of this section, the employee shall be limited to medical impairment benefits as specified in subsection (2) of this section.
>
> (b) When an injury results in permanent medical impairment and the employee has an injury or injuries not on the schedule specified in subsection (2) of this section, the employee shall be limited to medical impairment benefits as specified in subsection (8) of this section.

4. The question of whether the claimant has sustained an "injury" which is on or off the schedule of impairment depends on whether the claimant has sustained a "functional impairment" to a part of the body that is not contained on the schedule. *Strauch v. PSL Swedish Health Care System*, 917 P.2d 366 (Colo. App. 1996). Functional impairment need not take any particular impairment. Discomfort which interferes with the claimant's ability to use a portion of his or her body may be considered "impairment." *Mader v. Popejoy Construction Company, Inc.*, W.C. No. 4-198-489, (ICAO August 9, 1996). Pain and discomfort which limits a claimant's ability to use a portion of his or her body may be considered a "functional impairment" for determining whether an injury is on or off the schedule. *See, e.g., Beck v. Mile Hi Express Inc.*, W.C. No. 4-238-483 (ICAO February 11, 1997).

5. It is the claimant's burden of proof by a preponderance of the evidence to establish both that she suffered a permanent impairment and that the permanent impairment is either contained on the schedule set forth at subsection (2) or not on the schedule specified in subsection (2). Further, it is the claimant's burden to prove by a preponderance of the evidence the extent of the permanent impairment.

6. As found, claimant has demonstrated by a preponderance of the evidence that she suffered a functional impairment to a part of the body that is not contained on the schedule. As found, claimant has proven by a preponderance of the evidence that she is entitled to an award of permanent impairment benefits based on a conversion to an impairment rating of 9% whole person pursuant to Section 8-42-107(8), C.R.S. As found, claimant's testimony and the medical records are credible and persuasive.

7. The ALJ must determine an employee's AWW by calculating the monetary rate at which services are paid the employee under the contract of hire in force at the time of the injury, which must include any advantage or fringe benefit provided to the claimant in lieu of wages. Section 8-42-102(2), C.R.S.; *Celebrity Custom Builders v. Industrial Claim Appeals Office*, 916 P.2d 539 (Colo. App. 1995).

8. Claimant's AWW must also include the employee's cost of continuing the employer's group health insurance plan, and upon termination of the continuation, the employee's cost of conversion to a similar or lesser insurance plan. Section 8-40-201(19)(b), C.R.S. It is not required that the employee actually purchase the insurance coverage for the AWW to be increased. *Ray v. Industrial Claim Appeals Office*, 124 P.3d 891 (Colo. App. 2005), aff'd. 145 P.3d 661 (Colo. 2006).

9. As found, claimant's AWW shall be increased to reflect the cost of continuation of insurance coverage. Therefore, claimant's AWW shall be increased by $465.00 to an AWW of $1,016.22. As found, the information contained in the March 1, 2015 COBRA letter is credible and persuasive.

ORDER

It is therefore ordered that:

1. Employer shall pay permanent partial disability ("PPD") benefits to claimant based upon an impairment rating of 9% whole person.

2. Claimant's average weekly wage ("AWW") is increased to $1,016.22, but only for purposes of calculating PPD benefits owed to claimant and not to any retroactive temporary disability benefits.

3. Employer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed

it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Dated: July 11, 2017

Grand Junction, Colorado 81501

ISSUES

1. Did Claimant prove by a preponderance of the evidence that she is entitled to an award of the specific post-MMI medical benefit, namely a subarachnoid shunt of the cervical syrinx as requested by ATP Nathan E. Simmons, M.D.?

2. Did Respondent establish by a preponderance of the evidence that all future maintenance medical benefits should be terminated?

FINDINGS OF FACT

1. In 2007, Claimant worked for Employer as an adjunct professor.

2. Claimant's medical history was significant in that she had prior cervical and thoracic pain for which she received treatment. Claimant testified she sustained injuries as a result of playing softball and a motor vehicle accident in 1995. Included in the evidence admitted at hearing were medical reports from her family physician in Virginia.[1]

3. Claimant was seen by Stephen Melhorn, D.O. on March 2, 1995, at which time recurrent neck pain was noted after a motor vehicle accident ("MVA"). By way of history, it was noted Claimant had previously treated the symptoms with Ibuprofen, ice and manipulation therapy with a chiropractor. Dr. Melhorn's impression was cervical and thoracic somatic dysfunction. The medical records documented the fact Claimant received periodic courses of treatment from 1995-2004, including osteopathic manipulative therapy and physical therapy ("PT"). The ALJ noted there was no reference in these records to a diagnosis of or treatment for a cervical syrinx.

4. Claimant also treated for migraine headaches. More particularly, medical records from the Family Practice Specialists of Richmond were admitted at hearing.[2] These records contained no references to cervical pain and/or treatment.

5. On March 7, 2007 (approximately seven weeks before the subject accident), Claimant was evaluated by Joseph Hermann, M.D. for pain in the upper left part of her back. Dr. Hermann's impression was thoracic muscle strain. Claimant was prescribed Soma and OMT treatment.

[1] Exhibit E.

[2] Exhibit F.

6. There was no evidence in the record that Claimant underwent a MRI or CT scan prior to April 2007. Prior to 2008, there was no radiographic evidence that Claimant had cervical syringomyelia.

7. On April 27, 2007, Claimant sustained an admitted industrial injury when she was involved in a motor vehicle accident ("MVA"). She was driving on US 36 after meeting with an intern when she was rear-ended by another vehicle.

8. Claimant testified she injured her neck, low back and shoulders in the collision and was transported by ambulance to the Emergency Department of Exempla Good Samaritan Medical Center. Claimant complained of pain in her cervical spine, as well as a headache. The discharge diagnosis included: closed head injury and motor vehicle accident.

9. Claimant received treatment through Concentra, who was the ATP for Employer. Claimant was initially evaluated by Glenn Petersen, PA on April 26, 2007, who diagnosed cervical, thoracic and lumbar strain. Claimant received conservative care and was initially placed at MMI on July 31, 2007 by Steve Danahey, M.D.[3]

10. An MRI of Claimant's cervical spine was performed on March 31, 2008. The films were read by Jeffrey Guyon, M.D., whose impression was lower cervical and upper thoracic syringomyelia, with septated fluid collection within the cervical cord and marked expansion of the cord as a result. The largest portion of the syrinx was present at C7-T1, but there was also dilatation of the central canal above and below this level, extending to the C2 level and inferiorly into the upper thoracic spine. Posterior disc protrusions were present at C5-6 and C6-7, with mild to moderate canal stenosis and slight compression of the anterior aspect of the cervical cord at these levels. No evidence of subluxation or fracture was identified. Dr. Guyon noted Claimant's history included the fact that the patient sustained a motor vehicle accident one year ago. It was possible that this was posttraumatic, especially given the disc protrusions evident at C5-6 and C6-7.

11. Claimant testified at hearing that the MRI which was done on her cervical spine on March 31, 2008 was the first MRI ever done of her cervical spine. That was the first time she was ever informed she had a cervical syrinx.

12. On May 2, 2008, Claimant was evaluated by James Ogsbury III, MD. At that time, Claimant had complaints of neck pain and shoulder pain, with some weakness and numbness in the left hand. Dr. Ogsbury's impression was cervical spondylosis; neck and left shoulder pain and numbess, work-related; syringomelia C5/6 through T3/4 large, doubt work related. Dr. Ogsbury opined that "[g]iven the magnitude of the syrinx it is very difficult to imagine that the syrinx is related to a traumatic event; it is inconceivable to me that trauma, producing this magnitude of the syrinx, would not produce dramatic symptoms from the beginning". Dr. Ogsbury recommended more PT

[3] All of the 2007 treatment records were not admitted at hearing, but were summarized in Dr. Shogan's record review. [Exhibit 16, p. 67].

and massage therapy. Dr. Ogsbury referred Claimant to Kevin Lillehei, M.D.,[4] but suggested it be done on a private basis.

13. Claimant was evaluated by Dr. Danahey on May 7, 2008. At that time, she reported ongoing pain and discomfort at the base of her neck and her left upper shoulder. Dr. Danahey's diagnoses were: cervical sprain/strain, with questioned left radicular component; syringomyelia, doubt work-related. Dr. Danahey agreed with the referral to Dr. Lillehei, but believed at least the initial evaluation should be through the workers' compensation system. Dr. Danahey requested Dr. Lillehei's opinion on the causation of the syrinx, Claimant's neck complaints, along with the disc bulges. He also restarted Claimant's PT program.

14. On June 16, 2008, Dr. Lillehei evaluated Claimant. He reviewed the MRI scans and noted this appeared to be a non-tumor related cervical syrinx, the etiology of which was unclear. Dr. Lillehei felt this could be secondary to trauma or could very well be iatrogenic with her symptoms exacerbated by the traumatic episode. His plan was to obtain an EMG to rule out the finding of a possible associated radiculopathy from her two-level degenerative disease. This would help determine what symptoms were related to the syrinx.

15. Claimant returned to Dr. Lillehei on July 10, 2008. Claimant had completed the EMG, which showed mild slowing of the median nerve and a new MRI, which was unchanged. Dr. Lillehei opined the cervical syrinx was related to trauma. A disruption of normal spinal fluid had occurred, which can occur from some hemorrhage into the subarachnoid space with secondary adhesions of the arachnid. Dr. Lillehei stated it was possible that this was a pre-existing condition, but nevertheless it was "significantly" exacerbated by her accident. The ALJ was persuaded by this opinion.

16. On December 2, 2008, a General Admission of Liability ("GAL") was filed on behalf of Respondent. In the general remarks section, it was noted this was a revised admission, admitting for medical benefits for a cervical spine syrinx.

17. Claimant returned to Dr. Danahey on December 17, 2008, at which time her symptoms were described as stable. Dr. Danahey noted on the M-164 that Claimant's condition was work-related. Claimant was to undergo an MRI and also return to Dr. Pitzer for trigger point injections.

18. Dr. Danahey determined Claimant reached MMI on February 1, 2009. Claimant sustained no permanent impairment and had no work restrictions. As far as maintenance treatment, Dr. Danahey recommended trigger point injections with Dr. Pitzer, which were performed.

19. On March 2, 2009, a Final Admission of Liability ("FAL") was filed on behalf of Respondent. In the FAL, Respondent admitted for reasonable and necessary medical benefits after MMI.

[4] Dr. Lillehei is a neurosurgeon.

20. Claimant moved to New Hampshire and started treating with Patricia B. Quebada-Clerkin, M.D. at the Dartmouth-Hitchcock Medical Center. Dr. Quebada-Clerkin was an ATP. In the initial note of December 21, 2009, Dr. Quebada-Clerkin documented Claimant's history of being rear-ended in a car accident in 2006. She had persistent bilateral trapezius pain and numbness, more significant on the left. Ultimately, a workup was done (including an MRI), which identified a sizable syrinx from C3 to T5. Dr. Quebada-Clerkin did not have imaging studies available, but the reports specified the syrinx measured approximately 8.7mm. in diameter and was multiseptated, causing some moderate cord expansion**.**

21. Dr. Quebada-Clerkin noted Claimant's symptoms were controlled with conservative therapies. While trigger point injections and other therapies had not worked for her, Botox injections in the trapezius area had given her quite a significant amount of relief. Claimant had no complaints of weakness in her arms or legs. No paresthesias in her arms or legs. No bowel or bladder problems. She had no neck pain, back pin, or lower extremity pain or upper extremity pain. On examination, Claimant had no neurologic dysfunction and brisk reflexes. Dr. Quebada-Clerkin recommended continued conservative therapy and surveillance MRI imaging.

22. Claimant returned to Dr. Quebada-Clerkin on February 8, 2010, at which time she reported no new neurological problems. Dr. Quebada-Clerkin described the syrinx as "post-traumatic". The syrinx was stable and Dr. Quebada-Clerkin was not recommending surgical intervention.

23. On June 22, 2010, Claimant was evaluated by Thomas Ward, M.D. to whom she had been referred by Dr. Quebada-Clerkin for a consultation. Dr. Ward noted Claimant's history of migraines, with aura and without aura, because for several minutes before some of the headaches, the right side of her face would feel odd, which he suspected was sensory aura. She also had a history of being involved in a motor vehicle accident in 2006 after which she developed a post-traumatic syrinx from C3 to T5 and an exacerbation of neck pain, shoulder pain, and worsening of her headaches. The ALJ inferred Dr. Ward believed the MVA worsened exacerbated the syrinx condition in his use of the words "post-traumatic". Dr. Ward noted Claimant had some tendency for her head to pull to the side, so that would be described as a posttraumatic cervical dystonia or torticollis. On examination Claimant had discomfort over the left trapezius, but the posterior paraspinous cervical musculature was not tight. Dr. Ward treated Claimant's migraines by medications and administered a Botox injection in the left trapezius.

24. On February 15, 2011, Claimant underwent a cervical spine MRI and the films were read by John McIntyre, M.D. Dr. McIntyre's findings included: a marked dilatation of the central canal**,** which began minimally at the inferior aspect of C4. Marked dilatation of the canal began at approximately C5-C6 and extended into the thoracic spine. The appearance of the central canal syrinx in the cervical cord was similar to the prior examination. The greatest dimension was in the 11 mm. range and was unchanged in appearance from prior examination at the C7 level. There was no abnormal enhancement. Dr. McIntyre's impression was: 1. Stable appearance of

central cord syrinx in the cervical spine; 2. No mass or abnormal enhancement; 3. disc degenerative changes similar to prior exam; 4. Increase in size of central and left paracentral disc extrusion at T7-T8.

25. On April 1, 2014, Claimant was examined by Peter Quintero, M.D., at the request of Respondent.[5] Claimant complained of numbness in the supraspinatus region, which are varied in severity, as well as a burning sensation. She also had numbness going down her arms. She related she experienced two types of headaches, one of which was a non-migrainous, with variable frequency. She also experienced migraine headaches approximately one time per month. On examination, Dr. Quintero noted normal thoracic curvature, as well as no pain with palpation of thoracic and lumbar sacral spine. Full range of motion was present. Dr. Quintero described Claimant as presenting with a diagnosis of cervical thoracic syringomyelia; neck and proximal left shoulder pain and paresthesias; and recurrent headaches. He divided these conditions into two groups; finding the non-accident related diagnoses included migraine headache disorder; syringomyelia; bilateral epicondylitis; and anxiety. The accident related diagnoses were: muscular contraction headache; exacerbation of syringomyelia. The ALJ was persuaded by Dr. Quintero's opinion that Claimant's migraine headache disorder, epicondilytis and anxiety were not aggravated by the accident.

26. Dr. Quintero noted the syringomyelia may have pre-dated the accident and given her pre-existing history of neck pain and numbness down her arms, these have could have been caused by this condition. However, Dr. Quintero noted with the subsequent development of increased neck pain and numbness of the proximal shoulder and lower back region, it was his opinion that this syringomyelia was made worse by the accident. He did not recommend any additional Botox injections for treatment. Dr. Quintero opined Claimant should be seen at least once a year by Dr. Lillehei or other neurosurgeon to evaluate any possible worsening of the syringomyelia. The ALJ found this opinion concerning causation and the need for maintenance treatment to be persuasive.

27. On January 7, 2014, Nathan E. Simmons, M.D., evaluated Claimant in what was described a follow-up evaluation (the note referenced a prior evaluation in 2012). Claimant had experienced an increase in symptoms after lifting weights.[6] Dr. Simmons reviewed Claimant's recent MRI and noted that "[t]o our review, there has been no significant change in the overall dimensions or scope of the syrinx".[7] He did not recommend any treatment, including surgery. The ALJ concluded that the MRI was objective evidence that the increased pain Claimant experienced while lifting weights was a transitory event and did not aggravate the cervical syrinx.

[5] Dr. Quintero's report documented he was a board-certified neurologist.

[6] This was also referenced in PT notes admitted as Exhibit L, p. 52.

[7] The MRI report was summarized in Exhibit N, pp. 108.

28. The ALJ notes that medical records from the 2011-16 time-frame, which were admitted at hearing documented regular evaluations and treatment for migraine headaches. Gregory Andrecyk, M.D., who was Claimant's family physician, was copied on reports from the various providers who treated Claimant. Claimant regularly took medications for migraines. The ALJ notes there was no evidence in the record Claimant required treatment for what she described to Dr. Quintero as "non-migraine" headaches during 2011-2016. A review of the medical records revealed Claimant did not treat for "contraction" headaches after 2011. Respondent is not liable for treatment of migraine headaches.

29. Claimant testified her neck symptoms have worsened over time. These symptoms were also becoming more frequent. She described the pain as a stabbing pain, which extended to her shoulder.

30. On April 21, 2016, Claimant returned to Dr. Simmons. She reported increasing neuropathic symptoms into her arms, as well as some axial pain. Dr. Simmons noted the syrinx did not look significantly changed in its overall size and configuration. He recommended addressing the syrinx with syringosubarachnoid shunting. The ALJ noted this was the last medical record from Dr. Simmons admitted at hearing and inferred he felt this treatment was the next step in her treatment course after the MVA.

31. Stephen Shogan, M.D. reviewed Claimant's treatment records at Respondent's request. In response to the question of whether the recommended surgery was reasonable, necessary and causally related April 27, 2007 MVA, Dr. Shogan opined it was reasonable to consider undergoing the surgery being recommended. However, he noted this surgery had no guarantee of bringing about relief of Claimant's symptoms and because the syrinx had multiple areas of septation, this could reduce the likelihood of success. Dr. Shogan characterized the causation question as more difficult. He noted Claimant had been experiencing cervical spine pain prior to the accident, which was similar to what she experienced after the MVA. He believed the MVA exacerbated her cervical spine symptoms, but she experienced improvement after the exacerbation. Dr. Shogan also noted Claimant had experienced several exacerbations since the MVA and she was placed at MMI on two occasions. Dr. Shogan thought it was speculative to state the syrinx was related to the MVA and did not believe causation could be stated to a reasonable degree of medical probability.

32. Dr. Shogan opined maintenance treatments including PT, injections and other conservative modalities were reasonable for maintenance and symptom control. He once again noted it was not possible to correlate this need for treatment with the April 27, 2007 MVA.

33. Based upon the totality of the medical evidence, the ALJ concluded the April 27, 2007 MVA exacerbated Claimant's cervical syrinx.

34. Claimant proved the shunt procedure is reasonable and necessary to maintain MMI or prevent the deterioration of her condition (syringomyelia).

35. Claimant has not proven that treatment of migraine headaches, epicondylitis, and anxiety is reasonable and necessary or related to her industrial injury.

36. Respondent failed to prove that post-MMI medical benefits should be terminated.

37. Evidence and inferences inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Generally, Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. § 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Grover Medical Benefits

In cases where the Respondents file a FAL admitting for ongoing medical benefits after MMI, it retains the right to challenge the compensability, reasonableness, and necessity of specific treatments. *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003). When Respondent challenges Claimant's request for specific medical treatment, Claimant bears the burden of proof to establish entitlement to the benefits. *Ford v. Regional Transportation District,* W.C. No. 4-309-217 (ICAO February 12, 2009). The question of whether Claimant proved that specific treatment is reasonable and

necessary to maintain her condition after MMI or relieve ongoing symptoms is one of fact for the ALJ. *See Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

Respondent argued that Claimant most probably had the syrinx condition, which was undiagnosed, before the MVA. Respondent pointed to the cervical spine symptoms and treatment Claimant received before the subject accident as support for this contention. Respondent also averred that, at most, this was a temporary aggravation of the syrinx condition, which was resolved at the time Claimant was placed at MMI. Respondent pointed to the medical evidence in the form of the scans, which showed no change in the syrinx in the intervening nine years since the accident.

A review of the medical records admitted at hearing revealed a divergence of medical opinions on whether the April 27, 2017 MVA exacerbated the cervical syrinx. Claimant relied on the opinions of Dr. Danahey, Lillehei and Quintero. Respondent asserted Dr. Ogsbury's and Shogan's opinions on causation were determinative, as well as the fact that the medical records since the MVA showed no change in the syrinx condition. The ALJ was persuaded that the weight of the evidence established this condition was aggravated and/or accelerated by the MVA. Further, the evidence showed Claimant required treatment, as well as diagnostic testing related to this condition.

In coming to this conclusion, the ALJ relied upon the opinions of Claimant's ATPs. Specifically, Dr. Danahey, initially questioned whether the syrinx condition was aggravated by the MVA and was the cause of her symptoms. (Finding of Fact 13) Dr. Lillehei also questioned the etiology of Claimant's symptoms (Finding of Fact 14.) After additional diagnostic testing, Dr. Lillehei concluded the MVA significantly aggravated the Claimant's syrinx condition (Finding of Fact 15). Dr. Danahey also concluded the syrinx condition was related to the accident. (Finding of Fact 17).

As found, the records of Drs. Quebada-Clerkin and Ward also supported this conclusion. Also, Dr. Quintero opined that the MVA aggravated Claimant's syrinx condition, even though he felt it predated the accident. (Finding of Fact 26). In addition, in continuing to treat the syrinx condition (including the request to perform the surgical shunt procedure), the ALJ inferred that Dr. Simmons opined Claimant's need for further treatment was related to the motor vehicle accident of April 27, 2007. (Finding of Fact 30). Therefore, after treating Claimant and evaluating the objective evidence in the form of diagnostic tests, Claimant's treating physicians concluded that the syrinx condition was work-related. The ALJ credited those opinions.

The ALJ next considered whether the proposed surgical procedure was reasonable and necessary. As determined in Findings of Fact 33-34, the weight of the medical evidence led the ALJ to answer this question in the affirmative and conclude the proposed treatment reasonable and necessary. Even Dr. Shogan (Respondent's expert) supported this conclusion, although he wondered about the efficacy of the proposed procedure. (Finding of Fact 31). Accordingly, Claimant met her burden of proof on this issue and Respondent is required to provide this benefit.

Finally, The ALJ determined Respondent did not meet its burden of proof to withdraw the FAL by establishing it was no longer liable for *Grover* medical benefits. As found, Claimant is entitled to continue to receive treatment for the syrinx condition. However, Respondent is not required to pay for treatment of migraine headaches, epicondylitis and anxiety, which were not caused or aggravated by the accident. (Finding of Fact 35). This includes treatment with Dr. Andrecyk, Claimant's personal physician.

ORDER

It is therefore ordered that:

1. Respondent shall pay for the syrinx treatment recommend by Dr. Simmons, pursuant to the Colorado Workers' Compensation Medical Fee Schedule. Respondent shall pay for treatment following that procedure.

2. Respondent's request for termination of post-MMI medical benefits is denied. Respondent shall continue to provide *Grover* medical benefits for Claimant's syringomyelia condition, including diagnostic testing.

3. Respondent is not required to pay for treatment of migraine headaches, epicondylitis, and anxiety.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a

petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether Claimant has proven by a preponderance of the evidence that she sustained a compensable left knee injury during the course and scope of her employment with Employer on August 18, 2014 in case number 4-972-238-02.

2. Whether Respondents have produced clear and convincing evidence to overcome the Division Independent Medical Examination (DIME) opinion of Bennett I. Machanic, M.D. that Claimant has not reached Maximum Medical Improvement (MMI) and suffered a 20% whole person impairment rating as a result of her April 8, 2016 admitted left knee injury in case number 5-012-306-01.

3. A determination of Claimant's Average Weekly Wage (AWW).

4. Whether Claimant has demonstrated by a preponderance of the evidence that she is entitled to receive Temporary total Disability (TTD) benefits for the period April 13, 2016 until terminated by statute.

FINDINGS OF FACT

1. Claimant is a 54 year old female who has worked as a Greenhouse Laborer for Employer since 2009. Claimant filed two Workers' Compensation claims involving her left knee that are the subject of this Order.

August 18, 2014 Date of Injury (Case Number 4-972-238-02)

2. Claimant testified that on August 18, 2014 she suffered a left knee injury during the course of her employment while descending a ladder. While carrying garden materials Claimant misjudged the final rung of the ladder and fell onto both knees. Although Claimant notified her supervisor Jesus Padron of the incident she did not report any injury and declined medical treatment. Claimant subsequently continued to perform her regular job duties until she was laid-off for the season in September 2014. Claimant did not obtain any medical care for her left knee from August through November 2014.

3. Claimant returned to work for Employer in December 2014. On December 24, 2014 Claimant told co-worker Letty Calderon that she was going home from work because her leg hurt. When Ms. Calderon asked Claimant if she fell or hurt herself at work, Claimant stated: "No, this happened at home." Another co-worker, Alma Rodriguez, saw Claimant at work sometime after Christmas. Ms. Rodriguez greeted Claimant and asked her what happened because she was on crutches. Claimant responded that she hurt her leg after tripping on some carpet at home. Claimant stated

that she tried to work with her injured leg, but it hurt too much and she had gone to see her personal care physician.

4. Claimant first sought medical treatment for her left knee on December 26, 2014 through Advanced Urgent Care. She was diagnosed with a synovial/Baker's cyst of the left knee. Claimant noted that she had started having pain in the left knee within the past three days and her symptoms had progressively worsened. The physician concluded that there was "no injury." Claimant did not mention any ladder incident at work on August 18, 2014.

5. On January 2, 2015 Claimant visited knee surgeon Mitchel E. Robinson, M.D. at Panorama Orthopedics & Spine Center for an evaluation. Claimant did not mention any work injury on August 14, 2014. Dr. Robinson documented that Claimant presented with pain, crepitus, swelling, decreased range of motion, stiffness, weakness and instability of the left knee. He reported that Claimant "states that the symptoms have been acute non-traumatic" and "began 1 day ago." A physical examination revealed diffuse tenderness, severe crepitation and a negative McMurray's test of the left knee. An x-ray reflected severe tricompartment osteoarthritis. Dr. Robinson injected Claimant's left knee with cortisone. He commented that Claimant might require a total left knee replacement as her symptoms warranted.

6. On January 9, 2015 Employer completed a First Report of Injury regarding the August 18, 2014 incident. Claimant noted that she fell from a ladder and declined treatment through Employer's designated medical provider. The document also noted that Claimant did not lose any time from work as a result of the August 18, 2014 incident.

7. Based on a referral from Dr. Robinson, Claimant visited knee surgeon Aaron Baxter, M.D. on February 5, 2015 for an examination. Dr. Baxter took a history from Claimant that she "injured her left knee *a* few weeks ago while at work. Since then the knee has continued to be painful. She has difficulty weight bearing. There is increased pain at work." Claimant did not mention that she sustained any injury approximately five months earlier on August 18, 2014 when she was descending a ladder at work.

8. Dr. Baxter diagnosed Claimant with degenerative arthritis of the left knee and discussed the possibility of a total left knee arthroscopy. Dr. Baxter did not determine that the need for a total left knee replacement was work-related. He instead suggested that the procedure should be scheduled outside of the Workers' Compensation system because of Claimant's osteoarthritis. Claimant received a left knee injection that provided some relief. She was scheduled for a total left knee replacement but ultimately declined the procedure. Dr. Baxter recommended a return visit when Claimant's left knee symptoms worsened.

9. On August 10, 2016 Claimant filed a Claim for Workers' Compensation for the August 18, 2014 incident. The claim was assigned case number 4-972-238-02.

10. Claimant has failed to prove that it is more probably true than not that she sustained a compensable left knee injury during the course and scope of her employment with Employer on August 18, 2014 in case number 4-972-238-02. Initially, Claimant told Employer that she had fallen from a ladder but declined medical care. She then continued to work her regular, full duty job until September 2014 when she was laid off for the season. Claimant did not seek medical treatment for her left knee until December 2014. She returned to work on crutches and told two co-workers on that she hurt her left knee at home.

11. On December 26, 2014 Claimant sought treatment through Advanced Urgent Care. Claimant noted that she had started having pain in the left knee within the past three days and her symptoms had progressively worsened. Claimant subsequently visited knee surgeons Drs. Robinson and Baxter in January 2015. Instead, Claimant presented to Dr. Robinson on January 2, 2015 with pain, crepitus, swelling, decreased range of motion, stiffness, weakness and instability on the left knee but failed to mention anything about the ladder incident. Claimant told Dr. Baxter that she had injured her knee at work a few weeks before the January 2015 visit. Drs. Robinson and Baxter determined that Claimant might need a left total knee replacement because of her severe, degenerative osteoarthritis. Claimant did not file a claim for Workers' Compensation until August 10, 2016 or approximately two years after the ladder incident. The significant temporal delay, numerous inconsistencies regarding the date of a left knee injury, failure to mention an August 18, 2014 event to medical providers and significant degenerative osteoarthritis renders it speculative to attribute Claimant's left knee symptoms to a fall from a ladder at work on August 18, 2014. Accordingly, Claimant's claim for Workers' Compensation benefits in case number 4-972-238-02 is denied and dismissed.

April 8, 2016 Date of Injury (Case Number 5-012-306-01)

12. Claimant explained that on April 8, 2016 she was walking briskly near an area with flower pots and pallets while working for Employer. Her right foot caught one of the pallets and she fell to the ground on her hands and knees. Claimant remained on the ground for 10 minutes before being helped up by her supervisor and a coworker. Claimant was unable to complete her shift.

13. On April 12, 2016 Claimant presented to Authorized Treating Physician (ATP) Katherine Drapeau, D.O. at HealthONE Occupational Medicine and Rehabilitation with complaints of bilateral knee pain. Claimant specifically reported anterior and posterior pain in her left knee. Dr. Drapeau noted a prior similar injury in which Claimant fell from a ladder. Claimant reported that she was symptom-free prior to the recent fall and rated her current pain at an 8/10 or 9/10. X-rays of Claimant's left knee revealed degenerative joint disease with several loose bodies as well as mildly decreased medial and lateral joint space. Dr. Drapeau diagnosed Claimant with bilateral knee contusions. She prescribed Naproxen, a knee brace and physical therapy. Dr. Drapeau restricted Claimant to only seated work.

14. On May 10, 2016 Claimant underwent a left knee MRI. The MRI revealed a torn medial meniscus.

15. On May 26, 2016 Claimant visited Christopher Isaacs, M.D. for an orthopedic evaluation. Claimant reported that she tripped over a pallet and fell onto her left knee. Dr. Isaacs reviewed the May 18, 2016 MRI that showed complex tearing of the medial and lateral meniscus, mild degenerative changes of the tibiofemoral joint and more significant degenerative changes at the patellofemoral joint. He diagnosed a symptomatic, torn medial and lateral meniscus of the left knee and mild degenerative joint disease. Dr. Isaacs recommended a knee arthroscopy and debridement.

16. On June 14, 2016 James P. Lindberg, M.D. conducted a Physician Advisor review for Insurer. He determined that Claimant's knee complaints were caused by her pre-existing osteoarthritis. Insurer denied Dr. Isaacs' surgical request.

17. On June 21, 2016 Dr. Isaacs sent an appeal to Insurer requesting authorization for Claimant's surgery. He explained:

> Following the event she underwent an MRI which demonstrated complex tearing of her menisci. On the MRI there is an effusion consistent with recent injury. There is no documentation that she had tearing of her meniscus prior to the date of her injury.
>
> I am in receipt of the denial for surgery from Dr. Lindberg. He is denying surgery based on the fact that she had problems with her knee in the past. However, the extent of the problems was not documented. I am not aware of a prior MRI that shows she had a torn meniscus prior to this injury.

18. On August 15, 2016 Claimant underwent a comprehensive independent medical examination with knee surgeon Jon Erickson, M.D. Dr. Erickson engaged in a Level II accredited causality determination and conducted a thorough medical records review. He determined that Claimant's left knee complaints were caused by advanced, chronic, degenerative and pre-existing tri-compartmental osteoarthritis. There was no objective evidence of worsening or aggravation related to the admitted April 8, 2016 knee contusions.

19. On August 31, 2016 ATP Dr. Drapeau placed Claimant at Maximum Medical Improvement (MMI) effective August 15, 2016 for her left knee. She commented that Claimant did not suffer any permanent impairment or require medical maintenance care. On September 2, 2016 Insurer filed a Final Admission of Liability (FAL) consistent with Dr. Drapeau's MMI and impairment determinations.

20. Claimant challenged Dr. Drapeau's MMI and impairment determinations and sought a Division Independent Medical Examination (DIME). On January 18, 2017 Claimant underwent a DIME with Bennett I. Machanic, M.D. He concluded that Claimant had not reached MMI because she required some form of knee surgery. Dr.

Machanic remarked that "the pivotal event is April 8, 2016 but it is not even clear precisely what happened that day." He explained:

> I think there were significant degenerative changes in the left knee, but the April 8, 2016, event appears to have been the point where significant pathology and ongoing impairment developed. Unfortunately the medical record is rather conflicting whether Claimant had additional injuries or not. Under the circumstances in the absence of preceding MRI studies and better documentation of other injuries, I must say that we cannot easily apportion this and it is easiest and most rational to place the entire situation as of April 8, 2016, but it is not even clear precisely what happened on that day.

21. Dr. Machanic concluded that Claimant suffers significant left knee problems and requires surgery. However, he did not know whether the surgery involved an arthroscopic procedure or a total left knee replacement because the type of surgery was admittedly "beyond my area of specialization and I would defer the surgical choices to the surgeons."

22. Dr. Machanic assigned Claimant a 49% left lower extremity rating that converted to a 20% whole person impairment rating. The rating included an impairment for arthritis and a meniscus tear. At the end of his report Dr. Machanic recommended that Claimant have medial meniscus tear surgery because the meniscal tears were consistent with the work injury. Dr. Machanic repeated that "I must caution that there are inconsistencies in the record and it is hard for me to accept at face value that everything that I see clinically today is just related to the one injury of April 8, 2016."

23. On April 18, 2017 Claimant underwent an independent medical examination with Dr. Lindberg. In addressing causation, Dr. Lindberg determined that Claimant's left knee MRI did not reflect an acute injury. Dr. Lindberg also did not think Claimant's injuries were traumatic enough to cause the meniscal tears or that the mechanism of injury was consistent with meniscal tears. He concluded that Claimant's problem was advanced osteoarthritis secondary to age and patellar malalignment. Contrary to Dr. Machanic's DIME opinion Dr. Lindberg explained that that there was no evidence of an aggravation, acceleration, or exacerbation because Claimant was already symptomatic. Accordingly, Claimant did not suffer an industrial left knee injury on April 8, 2016.

24. Dr. Erickson testified at the hearing in this matter. He maintained that Claimant's left knee complaints were caused by advanced, chronic, degenerative and pre-existing tri-compartmental osteoarthritis. There was no objective evidence of worsening or aggravation in Claimant's left knee related to the admitted April 8, 2016 knee contusions. Dr. Erickson noted that "had this minor injury not occurred to her knee it is more likely than not that her symptoms would be identical to what they are right now."

25. Dr. Lindberg also testified at the hearing in this matter. He maintained that Claimant's left knee complaints were caused by chronic, degenerative and pre-existing osteoarthritis. There was no objective evidence of worsening or aggravation in Claimant's left knee related to the admitted April 8, 2016 injury. Dr. Lindberg commented that Claimant's left knee MRI revealed a chronic, degenerative condition and not an acute injury. He specifically remarked that Claimant's left knee condition was in the same condition that it would have been absent the April 8, 2016 fall.

26. Dr. Lindberg also addressed Dr. Machanic's DIME determination. He explained that physicians are instructed at the Division of Workers' Compensation Level II training course to perform a causality assessment regarding an injury. However, Dr. Machanic failed to perform a causality assessment, violated the Level II training mandate and thus erred in his DIME determination that Claimant has not reached MMI.

27. On June 6, 2017 the parties conducted the post-hearing evidentiary deposition of Dr. Machanic. Dr. Machanic testified that Claimant suffered a left knee injury on April 8, 2016 and required surgical intervention to alleviate her pain. He deferred to surgeons for a determination of the appropriate type of left knee surgery. Dr. Machanic specifically explained that "I am responding to four orthopedic surgeons, but I'm cast in the role, actually, of the referee because I'm a Level II examiner, so I don't really take sides." Dr. Machanic summarized that Claimant suffered from pre-existing left knee structural problems that made her more susceptible to an injury. However, in the absence of a previous impairment rating apportionment was inappropriate. Finally, Dr. Mechanic explained that, because Claimant had not reached MMI and requires surgery, he only assigned a provisional impairment rating.

28. On June 15, 2017 the parties conducted the post-hearing evidentiary deposition of Dr. Erickson. Dr. Erickson evaluated the cause of Claimant's left knee symptoms. In conducting a causation analysis, he considered diagnostic testing, medical records, subjective complaints and medical literature. Dr. Erickson testified that osteoarthritis of the knee joint and progression of symptoms without injury is detailed in the medical literature. Sometimes arthritic knee pain happens with a specific activity and sometimes the knee just starts hurting. "But the thing that is important is that the osteoarthritis is not going to get better over time. It is going to get worse. And as it gets worse, somewhere in there you are going to start having symptoms, which are unremitting . . ." Claimant's minor work-related knee contusions in April 2016 did not cause her left knee symptoms or accelerate the need for a total knee replacement.

29. Dr. Erickson detailed that Claimant required a total knee replacement prior to her April 8, 2016 injury:

> Dr. Robinson may have opined that somewhere down the road [Claimant] would need a total knee replacement, but we have another medical opinion from Dr. Baxter, when he evaluated her, that in April – or February of 2015, that she needs a total knee. He was ready to proceed with scheduling except she declined the offer. So I don't know how we can make a cogent argument that if she saw an orthopedic surgeon in

February 2015, who, after reviewing her imaging studies and listening to her symptoms, was ready to schedule a total knee replacement. How in the world can we say that now it is the result of this injury on April 8th? It just doesn't float."

30. Respondents have produced clear and convincing evidence to overcome the DIME opinion of Dr. Machanic that Claimant has not reached MMI and suffered a 20% whole person impairment rating as a result of her April 8, 2016 admitted left knee injury. Initially, Dr. Machanic concluded that Claimant had not reached MMI for her April 8, 2016 left knee injury because she required some form of knee surgery. However, knee surgeons Drs. Lindberg and Erickson both conducted a thorough records review and engaged in a Level II accredited causality assessment regarding Claimant's continued left knee symptoms. They explained that Claimant's left knee complaints were caused by advanced, chronic, degenerative and pre-existing tri-compartmental osteoarthritis. There was no objective evidence of worsening or aggravation in Claimant's left knee related to the April 8, 2016 admitted industrial injury. In contrast to Dr. Machanic's DIME determination, Claimant reached MMI without any impairment for her April 8, 2016 left knee injury.

31. Drs. Lindberg and Erickson persuasively explained that Dr. Machanic failed to conduct a causality assessment in accordance with the Colorado Division of Worker's Compensation Level II accredited teachings. Dr. Machanic did not provide any analysis to support his conclusion that Claimant's April 8, 2016 injury was the "pivotal event" because it rendered her left knee permanently symptomatic. He also did not explain why he concluded that Claimant's continued symptoms are from the April 8, 2016 incident and not the progression of severe osteoarthritis that Drs. Robinson and Baxter predicted would continue absent subsequent injury. Drs. Lindberg and Erickson persuasively explained that Dr. Machanic, as the DIME physician, was required to analyze causality based upon the Colorado Division of Workers' Compensation Level II accredited teachings, not "pick somebody to believe" and base his opinion on Claimant's statements even when contradicted by the medical records. Notably, Dr. Machanic explained that "we cannot easily apportion this and it is easiest and most rational to place the entire situation as of April 8, 2016, but it is not even clear precisely what happened on that day." Finally, Dr. Machanic erroneously assigned Claimant a 20% whole person impairment rating as a result of her April 8, 2016 admitted left knee injury because her symptoms were the result of the continued progression of severe osteoarthritis.

32. Drs. Lindberg and Erickson persuasively concluded that Dr. Machanic's DIME opinions regarding MMI and permanent impairment were incorrect. Because Claimant's current symptoms are related to the expected progression of the pre-existing and non-work related osteoarthritis, Claimant's is not entitled to a permanent impairment rating. Based on the opinions of Drs. Lindberg and Erickson, Dr. Machanic failed to perform a causality assessment pursuant to the Level II teachings. Instead, Dr. Machanic merely deferred to other doctors because it was the "easiest and most rational" to attribute Claimant's symptoms to the April 8, 2016 incident. Accordingly, Respondents have produced unmistakable evidence free from serious or substantial

doubt that Dr. Machanic's MMI determination and permanent impairment rating were incorrect. Based on the determination of ATP Dr. Drapeau Claimant reached MMI on August 15, 2016 with no permanent impairment.

33. Claimant worked approximately 40 hours per week plus occasional overtime for Employer. She earned $9.46 each hour. In considering Claimant's pay stubs for the period ending January 9, 2016 through April 2, 2016, Claimant earned a total of $7,111.85 from Employer. Dividing $7,111.85 by seven biweekly pay periods yields an AWW of $507.99. Claimant also paid $39.14 each week for health and dental insurance. Adding $507.99 and $39.14 yields a total AWW of $547.13. An AWW of $547.13 constitutes a fair approximation of Claimant's wage loss and diminished earning capacity.

34. Claimant has demonstrated that it is more probably true than not that she is entitled to receive TTD benefits for the period April 13, 2016 until terminated by statute. Respondents have overcome Dr. Machanic's DIME determination by clear and convincing evidence that Claimant has not reached MMI. ATP Dr. Drapeau persuasively concluded that Claimant reached MMI on August 15, 2016 with no permanent impairment. Claimant's entitlement to TTD benefits terminated by operation of law when she reached MMI. Accordingly, Claimant shall receive TTD benefits for her admitted April 8, 2016 left knee injury for the period April 13, 2016 until she reached MMI on August 15, 2016.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and

bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Compensability of August 18, 2014 Date of Injury (Case Number 4-972-238-02)

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAP, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

7. As found, Claimant has failed to prove by a preponderance of the evidence that she sustained a compensable left knee injury during the course and scope of her employment with Employer on August 18, 2014 in case number 4-972-238-02. Initially, Claimant told Employer that she had fallen from a ladder but declined medical care. She then continued to work her regular, full duty job until September 2014 when she was laid off for the season. Claimant did not seek medical treatment for her left knee until December 2014. She returned to work on crutches and told two co-workers on that she hurt her left knee at home.

8. As found, On December 26, 2014 Claimant sought treatment through Advanced Urgent Care. Claimant noted that she had started having pain in the left knee within the past three days and her symptoms had progressively worsened. Claimant subsequently visited knee surgeons Drs. Robinson and Baxter in January 2015. Instead, Claimant presented to Dr. Robinson on January 2, 2015 with pain, crepitus, swelling, decreased range of motion, stiffness, weakness and instability on the left knee but failed to mention anything about the ladder incident. Claimant told Dr. Baxter that she had injured her knee at work a few weeks before the January 2015 visit. Drs. Robinson and Baxter determined that Claimant might need a left total knee replacement because of her severe, degenerative osteoarthritis. Claimant did not file a claim for Workers' Compensation until August 10, 2016 or approximately two years after the ladder incident. The significant temporal delay, numerous inconsistencies regarding the date of a left knee injury, failure to mention an August 18, 2014 event to medical providers and significant degenerative osteoarthritis renders it speculative to attribute Claimant's left knee symptoms to a fall from a ladder at work on August 18, 2014. Accordingly, Claimant's claim for Workers' Compensation benefits in case number 4-972-238-02 is denied and dismissed.

Overcoming the DIME

9. In ascertaining a DIME physician's opinion, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998). A DIME physician's determination regarding MMI and permanent impairment consists of his initial report and any subsequent opinions. *In Re Dazzio,* W.C. No. 4-660-149 (ICAP, June 30, 2008); *see Andrade v. Industrial Claim Appeals Office,* 121 P.3d 328 (Colo. App. 2005).

10. A DIME physician is required to rate a claimant's impairment in accordance with the *AMA Guides*. §8-42-107(8)(c), C.R.S.; *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117, 1118 (Colo. App. 2003). However, deviations from the *AMA Guides* do not mandate that the DIME physician's impairment rating was incorrect. *In Re Gurrola,* W.C. No. 4-631-447 (ICAP, Nov. 13, 2006). Instead, the ALJ may consider a technical deviation from the *AMA Guides* in determining the weight to be accorded the DIME physician's findings. *Id.* Whether the DIME physician properly applied the *AMA Guides* to determine an impairment rating is generally a question of fact for the ALJ. *In Re Goffinett,* W.C. No. 4-677-750 (ICAP, Apr. 16, 2008).

. 11. A DIME physician's findings of MMI, causation, and impairment are binding on the parties unless overcome by "clear and convincing evidence." §8-42-107(8)(b)(III), C.R.S.; *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear

and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAP, July 19, 2004); *see Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAP, Nov. 17, 2000).

12. As found, Respondents have produced clear and convincing evidence to overcome the DIME opinion of Dr. Machanic that Claimant has not reached MMI and suffered a 20% whole person impairment rating as a result of her April 8, 2016 admitted left knee injury. Initially, Dr. Machanic concluded that Claimant had not reached MMI for her April 8, 2016 left knee injury because she required some form of knee surgery. However, knee surgeons Drs. Lindberg and Erickson both conducted a thorough records review and engaged in a Level II accredited causality assessment regarding Claimant's continued left knee symptoms. They explained that Claimant's left knee complaints were caused by advanced, chronic, degenerative and pre-existing tri-compartmental osteoarthritis. There was no objective evidence of worsening or aggravation in Claimant's left knee related to the April 8, 2016 admitted industrial injury. In contrast to Dr. Machanic's DIME determination, Claimant reached MMI without any impairment for her April 8, 2016 left knee injury.

13. As found, Drs. Lindberg and Erickson persuasively explained that Dr. Machanic failed to conduct a causality assessment in accordance with the Colorado Division of Worker's Compensation Level II accredited teachings. Dr. Machanic did not provide any analysis to support his conclusion that Claimant's April 8, 2016 injury was the "pivotal event" because it rendered her left knee permanently symptomatic. He also did not explain why he concluded that Claimant's continued symptoms are from the April 8, 2016 incident and not the progression of severe osteoarthritis that Drs. Robinson and Baxter predicted would continue absent subsequent injury. Drs. Lindberg and Erickson persuasively explained that Dr. Machanic, as the DIME physician, was required to analyze causality based upon the Colorado Division of Workers' Compensation Level II accredited teachings, not "pick somebody to believe" and base his opinion on Claimant's statements even when contradicted by the medical records. Notably, Dr. Machanic explained that "we cannot easily apportion this and it is easiest and most rational to place the entire situation as of April 8, 2016, but it is not even clear precisely what happened on that day." Finally, Dr. Machanic erroneously assigned Claimant a 20% whole person impairment rating as a result of her April 8, 2016 admitted left knee injury because her symptoms were the result of the continued progression of severe osteoarthritis.

14. As found, Drs. Lindberg and Erickson persuasively concluded that Dr. Machanic's DIME opinions regarding MMI and permanent impairment were incorrect. Because Claimant's current symptoms are related to the expected progression of the pre-existing and non-work related osteoarthritis, Claimant's is not entitled to a permanent impairment rating. Based on the opinions of Drs. Lindberg and Erickson, Dr. Machanic failed to perform a causality assessment pursuant to the Level II teachings. Instead, Dr. Machanic merely deferred to other doctors because it was the "easiest and most rational" to attribute Claimant's symptoms to the April 8, 2016 incident. Accordingly, Respondents have produced unmistakable evidence free from serious or substantial doubt that Dr. Machanic's MMI determination and permanent impairment

rating were incorrect. Based on the determination of ATP Dr. Drapeau Claimant reached MMI on August 15, 2016 with no permanent impairment.

Average Weekly Wage

15. Section 8-42-102(2), C.R.S. requires the Judge to determine a claimant's AWW based on his earnings at the time of injury. The Judge must calculate the money rate at which services are paid to the claimant under the contract of hire in force at the time of injury. *Pizza Hut v. ICAO,* 18 P.3d 867, 869 (Colo. App. 2001). However, §8-42-102(3), C.R.S. authorizes a Judge to exercise discretionary authority to calculate an AWW in another manner if the prescribed methods will not fairly calculate the AWW based on the particular circumstances. *Campbell v. IBM Corp.,* 867 P.2d 77, 82 (Colo. App. 1993). The overall objective in calculating an AWW is to arrive at a fair approximation of a claimant's wage loss and diminished earning capacity. *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO May 7, 1997). Therefore, §8-42-102(3), C.R.S. grants an ALJ substantial discretion to modify the AWW if the statutorily prescribed method will not fairly compute a claimant's wages based on the particular circumstances of the case. *In Re Broomfield,* W.C. No. 4-651-471 (ICAP, Mar. 5, 2007). As found, an AWW of $1200.00 constitutes a fair approximation of Claimant's wage loss and diminished earning capacity. As found, an AWW of $547.13 constitutes a fair approximation of Claimant's wage loss and diminished earning capacity.

Temporary Total Disability Benefits

16. Section 8-42-103(1), C.R.S. requires a claimant seeking temporary disability benefits to establish a causal connection between the industrial injury and subsequent wage loss. *Champion Auto Body v. Industrial Claim Appeals Office*, 950 P.2d 671 (Colo. App. 1997). To demonstrate entitlement to TTD benefits a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability and the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The term "disability," connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by the claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). A claimant suffers from an impairment of earning capacity when he has a complete inability to work or there are restrictions that impair his ability to effectively and properly perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

17. As found, Claimant has demonstrated by a preponderance of the evidence that she is entitled to receive TTD benefits for the period April 13, 2016 until terminated by statute. Respondents have overcome Dr. Machanic's DIME determination by clear and convincing evidence that Claimant has not reached MMI. ATP Dr. Drapeau persuasively concluded that Claimant reached MMI on August 15, 2016 with no permanent impairment. Claimant's entitlement to TTD benefits terminated by operation of law when she reached MMI. Accordingly, Claimant shall receive TTD benefits for her admitted April 8, 2016 left knee injury for the period April 13, 2016 until she reached MMI on August 15, 2016.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's Workers' Compensation claim in case number 4-972-238-02 is denied and dismissed.

2. Respondents have overcome DIME Dr. Machanic's MMI and permanent impairment determinations by clear and convincing evidence. Claimant reached MMI on April 15, 2016 with no permanent impairment.

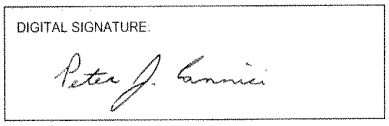
3. Claimant earned an AWW of $547.13.

4. Claimant shall receive TTD benefits for the period April 13, 2016 until she reached MMI on August 15, 2016.

5. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: July 21, 2017.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
633 17th Street Suite 1300
Denver, CO 80202

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that she sustained a work related injury, trigger finger of the right thumb, in the course and scope of her employment with Employer.

2. Whether Claimant has established by a preponderance of the evidence an entitlement to a general award of reasonable and necessary medical benefits to treat trigger finger of the right thumb.

PRELIMINARY ISSUES

Claimant failed to respond to Respondents' interrogatories and failed to respond even after an order to compel was issued. Respondents filed a motion to strike Claimant's application for hearing with prejudice. After hearing from the parties, and although Claimant showed no good cause for failing to comply with the order, the ALJ denied the motion and found that striking the application with prejudice was too harsh a sanction. Respondents then elected to proceed with hearing.

Claimant was self-represented and was provided an advisement. Claimant elected to proceed with the hearing.

FINDINGS OF FACT

1. Claimant works for Employer as a child support technician and has been so employed since August of 2001.

2. Claimant's job is primarily sedentary at a computer desk. Claimant believes that her daily work activities of typing and using a mouse caused pain in her right thumb.

3. Claimant began to experience pain in her right thumb in December of 2016 but did not make any report to Employer until February of 2017 because the pain was not as constant. On February 1, 2017 Claimant reported to her supervisor that she believed she had a work related injury from repetitive motion. *See* Exhibit B.

4. Employer referred Claimant for treatment.

5. On February 6, 2017 Claimant was evaluated by Hyeongdo Kim, M.D. Claimant reported that on January 12, 2017 while working, her right thumb suddenly felt

funny and locked up with 7-8/10 pain. Claimant reported that since then her right thumb was constantly sore and frequently locked. Claimant reported that the pain was on the right thumb down to the base of the thumb with numbness and tingling but no radiation. Claimant reported trouble grabbing things, clicking her car remote button, and brushing her teeth. Claimant reported that the pain woke her up in the middle of the night and that she had ordered a brace for her thumb which helped to not exacerbate her symptoms. On examination, Dr. Kim noted tenderness to palpation along the palmer and dorsal surface of the right thumb with mild edema vs. hypertrophy on the right thenar eminence and that the range of motion of the right thumb was limited by locking on the DIP joint. Dr. Kim found the examination to be suspicious for trigger thumb. Dr. Kim performed a review of Claimant's work duties and home hobbies that revealed no cumulative trauma. Dr. Kim noted that Claimant had no use of hand tools for extended amount of hours and that Claimant was not exposed to repetition and force of greater than 1 kg with cycle time of less than 1 minute or awkward posture. *See* Exhibit F.

6. Dr. Kim opined that Claimant's work duties lacked risk factors for developing trigger finger. Dr. Kim opined that Claimant's problem was not work related and recommended Claimant follow up with a primary care physician. *See* Exhibit F.

7. On February 14, 2017 Respondents filed a Notice of Contest indicating the claim was contested/denied as the injury/illness was not work related. *See* Exhibit C.

8. On February 21, 2017 Claimant filed an Application for Hearing. *See* Exhibit D.

9. On May 30, 2017 a job demands analysis (JDA) was performed by vocational evaluator Joseph Blythe. Mr. Blythe observed Claimant perform her normal job duties for a period of four hours. Mr. Blythe issued a report dated June 2, 2017. *See* Exhibit I.

10. Mr. Blythe found that Claimant's job involved frequent fingering, 34% to 66% frequency which he noted in the comments involved a variety of activities such as using a computer mouse, keyboard, writing, telephone, cell phone, and processing documents. *See* Exhibit I.

11. Mr. Blythe found in his four hour observation period that Claimant used the mouse for 1 hour and 25 minutes, and used the keyboard for 1 hour and 8 minutes. He extrapolated this to be 21.4 minutes of mouse use per hour and 17.1 minutes of keyboard use per hour. As Claimant works an 8 hour work day, he concluded that Claimant would use the mouse for 2.9 hours in an 8 hour day and would use the keyboard for 2.3 hours in an 8 hour day. *See* Exhibit I.

12. On June 27, 2017 Jonathan Sollender, M.D. performed a records review of Claimant's case. Dr. Sollender reviewed the Colorado Division of Workers' Compensation Medical Treatment Guidelines for work-relatedness of a cumulative

trauma condition and reviewed the JDA performed by Mr. Blythe. Dr. Sollender opined that the JDA showed that Claimant did not have a single occupational risk factor present that could naturally lead to the development of a cumulative trauma condition. Dr. Sollender opined that mousing with the right hand for 2.9 hours per day was below the 4 hour threshold considered significant for development of cumulative trauma disorders. *See* Exhibit G.

13. Dr. Sollender opined that with no occupational risk factors present during the JDA observation at Claimant's work site, Claimant's diagnoses would not be logically related to her occupational exposure. Dr. Sollender noted that triggering of the thumb would be expected to occur from a significant repetitive exposure to active flexion and extension of the thumb and would not be anticipated to occur from mousing and that the amount performed by Claimant was below the cumulative trauma standards. Dr. Sollender opined that Claimant's work was neither repetitive, forceful, awkward, and did not involve lengthy computing skills to cause right upper extremity symptoms and Dr. Sollender recommended denying the claim based on lack of work relatedness. *See* Exhibit G.

14. Dr. Sollender testified at hearing consistent with his written report. Dr. Sollender opined that Claimant had trigger finger of the right thumb. Dr. Sollender opined that Claimant had no primary or secondary risk factors from her employment that would lead to the development of work related right trigger finger. Dr. Sollender opined that there was no causal relationship to Claimant's work and that there was insufficient combination of force and repetition in Claimant's work. Dr. Sollender opined that typing or tapping a key did not involve sufficient force and was clearly not 2 pounds of force.

15. Claimant maintained at hearing that due the number of years she worked at the position for Employer and because she had no other injuries, the right thumb trigger finger was work related. Claimant indicated that she disagreed with Dr. Sollender and with the research in the medical treatment guidelines. Claimant contributed her typing and carrying stuff to have caused her injury. Claimant indicated that she underwent surgery in April of 2017 for the right trigger finger and that she was now able to bend her thumb and was continuing to do self therapy.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

Claimant is required to prove by a preponderance of the evidence that the conditions for which she seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. *See* § 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

An occupational disease is a disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment. *See* § 8-40-201(14), C.R.S. A claimant seeking benefits for an occupational disease must establish the existence of the disease and that it was directly and proximately caused by the claimant's employment duties or working conditions. *Wal-Mart Stores, Inc. v. Industrial Claims Office,* 989 P. 2d 251 (Colo. App. 1999); *Cowin & Co. v. Medina,* 860 P.2d 535 (Colo. App. 1992). In deciding whether the Claimant has met his burden of proof, the ALJ is empowered to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to testimony, and draw plausible inferences from the evidence. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002).

Claimant has failed to meet her burden of proof to establish that her trigger finger of the right thumb was directly and proximately caused by her employment duties or her working conditions. The JDA concluded that Claimant's position did not meet the requirements under the medical treatment guidelines for any primary or secondary risk factors. The ALJ finds credible and persuasive that the amount of time spent performing activities is not significant enough to cause trigger finger. The testimony of Mr. Blythe and Dr. Sollender is found credible and persuasive. The JDA and the amount of time spent on activities was derived from direct observation of Claimant in her normal work capacity. The ultimate opinion of Dr. Sollender that the condition is not work related is found credible and persuasive, and is consistent with the JDA, the medical treatment guidelines, and the opinion of Dr. Kim. Although Claimant believes her condition to be work related, her belief does not meet the burden of proof to establish a work related condition. The claim is denied and dismissed.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish by a preponderance of the evidence that she sustained a work related injury to her right upper extremity/trigger finger in the course and scope of her employment with Employer. The claim is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty

(20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 24, 2017

Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUE

The issue whether Claimant proved by a preponderance of the evidence that the need for surgery to his left knee relates to the December 10, 2015, work injury was raised for consideration.

FINDINGS OF FACT

Having considered the evidence presented at hearing, the following Findings of Fact are entered.

1. Claimant is a 57 year old man who had worked for Employer as a technical analyst. Claimant's duties required him to travel to offices in Weld County and set up computer stations. Claimant had been working for Employer as a technical analyst for eighteen months.

2. In 1996, Claimant underwent left knee surgery, an ACL reconstruction and meniscectomy with Dr. Papilion.

3. On December 10, 2015, Claimant sustained a compensable injury to his left lower extremity when he walked into a handicap rail and folded over the rail. The railing's height was approximately at Claimant's mid thigh.

4. On December 10, 2015, Claimant worked the remainder of his scheduled work duties and went home. After a few hours, he noticed significant swelling in his leg and sought attention in the emergency room.

5. At the emergency room, Claimant's chief complaint consisted of "left midthigh pain after walking into an unseen guardrail." While in the emergency room, Claimant reported lower extremity pain with an onset of approximately four hours prior and reported that his symptoms were worsening. Claimant reported a direct blow to his left thigh when he ran into a guardrail, striking the left thigh on the edge of the guardrail. Claimant did not report left knee pain, but rather lower extremity pain. While in the emergency room, Claimant underwent x-rays to his lower extremity, which did not reveal any fractures of the femur. The radiologist also commented that the left knee showed severe tricompartmental osteoarthritis with loose bodies. Claimant was discharged with instructions regarding a lower extremity contusion.

6. Respondents admitted liability and provided Claimant with temporary disability benefits as well as medical benefits. Claimant treated primarily under the direction of Dr. Keefe and Physician Assistant Malcolm Slaton at Workwell

Occupational. Claimant initially saw Dr. Keefe on December 18, 2015. Specifically, Claimant reported "as part of his work duties on December 10, 2015, he was carrying a box outside and did not see a guardrail and ran into it, with the main point of impact being the left upper leg, which was the height of the guardrail. As he hit the rail, he fell forward over rail and was able to push back over the rail with his hands on the ground to recover his position." At that time, Claimant reported swelling in the left upper thigh, which had gone down slightly, as well as swelling around his left knee. Claimant did not report left knee pain.

7. On December 29, 2015, Claimant returned to Dr. Keefe and reported that the left lower extremity swelling had resolved, but Claimant reported pain and "clicking" in his left knee. Dr. Keefe recommended physical therapy. On January 22, 2016, Claimant underwent a physical therapy evaluation at Workwell. Claimant reported that his right knee was also starting to hurt.

8. On January 29, 2016, Claimant underwent an MRI of the left knee, which revealed: (1) Extensive, complex tearing, likely chiefly degenerative in nature, of nearly the entirety of the medial and lateral menisci; (2) Severe medial compartment chondral degenerative changes, with full thickness loss of articular cartilage throughout nearly the entirety of the medial compartment. Moderate to severe chondral degenerative changes were also present along the central/medial aspect of the lateral compartment; (3) Abnormal appearance to patient's ACL graft, chronic full thickness disruption is suspected.

9. On February 4, 2016, Claimant saw Dr. Keefe, who noted that Claimant underwent the MRI to the left knee, which revealed severe degenerative changes and medial and lateral meniscal tears, probably on a degenerative basis. Dr. Keefe noted that he could not determine how much of Claimant's condition is caused by the work injury. Dr. Keefe noted that he would check with the orthopedist for his formal recommendations regarding the knee. He noted that if there was a proposed surgery, determination of work relatedness would be controversial. Dr. Keefe further noted that the only remaining issue is Claimant's knee pain which he opined was explained by what is seen on MRI.

10. On February 24, 2016, Claimant returned to Dr. Keefe. Dr. Keefe noted that Claimant's MRI showed significant severe degenerative changes that would need to be addressed by an orthopedist. Dr. Keefe repeated his opinion that the relatedness of the left knee condition would be controversial and because of the knee degenerative condition the findings in the knee are not work related.

11. On March 31, 2016, Claimant underwent x-rays to the left knee, which revealed: (1) Severe osteoarthritis at the medial compartment of the left knee, with bone on bone articulation of the medial femoral condyle and medial tibial plateau with subchondral cysts and ostephytes at this joint space.

12. On April 19, 2016, Claimant saw Dr. Papilion, who noted that Claimant was known to him from a previous ACL reconstruction and meniscectomy in his left knee in 1996. Dr. Papilion noted that Claimant had done well with both of these knee surgeries.

13. Claimant reported that he sustained an acute injury on December 10, 2015, when a railing struck him in the anterior left thigh. Claimant reported that he hyperextended his hip and had immediate pain and swelling. He noted that x-rays were taken which revealed no significant evidence for fracture but there were early degenerative changes in both hips, and severe degenerative changes in both knees, left much greater than the right. He noted an MRI of the left knee revealed full thickness chondral loss tricompartmental throughout with severe degenerative changes. There was felt to be chronic disruption of the ACL graft.

14. Dr. Papilion noted that Claimant had several physicians treating, including occupational medicine, as well as orthopedic surgeons Dr. Scott Dhupar and Dr. Thomas Pazik. Dr. Papilion further noted that the other treaters opined that Claimant has severe osteoarthritis in both knees preexisting the work injury. Dr. Papilion noted that Claimant states that he was asymptomatic prior to the work injury.

15. Upon physical examination, Dr. Papilion recommended an MRI with regard to Claimant's left hip which he opined was related to the work injury of December 10, 2015. However, with regard to the left knee, Dr. Papilion diagnosed end-stage degenerative osteoarthritis and opined that Claimant did not injure the knee in the work-related incident. Despite the fact that Claimant denies symptoms prior to the work incident, Dr. Papilion opined that there was clear evidence on x-rays of severe degenerative changes and Claimant is an excellent candidate for bilateral total knee arthroplasty covered through Claimant's private health insurance.

16. On June 21, 2016, Claimant saw Dr. Papilion who reported that Claimant had undergone his MRI of the left hip, which revealed complex tearing of the anterior superior acetabular labrum, as well as early degenerative changes in the hip. Dr. Papilion referred Claimant to Dr. Newman. In regard to the left knee, Dr. Papilion opined that Claimant has significant degenerative changes with various deformities in his left knee. Claimant was placed in a medial unloader ACL brace. The doctor further opined that Claimant is a candidate for total knee arthroplasty unrelated to the work injury of December 2015. On June 27, 2016, Claimant saw Dr. Newman who noted significant degeneration in the left knee, and due to the fact that Claimant's left knee is the most symptomatically, Dr. Newman intended to address the knee first.

17. On September 14, 2016, Dr. Newman opined that Claimant's need for a left hip arthroscopy related to the work-related injury as such injury aggravated Claimant's preexisting condition in his left hip.

18. On October 11, 2016, Claimant underwent the initial evaluation for physical therapy for the left hip with Todd Smith. Claimant did not report to the physical therapist injuring his knee at the time of the work-related injury to his left hip.

19. On his own, Claimant sought treatment with Dr. Hale on November 16, 2016, as it pertained to his bilateral knee pain. Claimant initially reported a history of multiple knee injuries in the past. Claimant had meniscal treatment of the right knee, as well as a delayed reconstruction of the left knee ACL, as well as meniscal pathology. Over time he has noted significant increasing knee pain, as well as overall bowlegged deformity of both lower extremities. The pain started to inhibit his activities of daily living. Claimant had good relief with anti-inflammatory medications, however, these medications no longer provide relief. Claimant underwent a steroid injection and a series of viscosupplementation in each knee in the past.

20. Claimant did not report any type of work-related injury to the left knee to Dr. Hale. Dr. Hale opined that Claimant's pain was concordant with his x-ray findings, that the left knee is worse than the right and that both are well within the spectrum of replacement based solely on x-ray.

21. On November 1, 2016, Claimant saw Dr. Keefe who noted that the knee surgery would take precedent over the hip. Claimant underwent a bilateral total knee replacement with Dr. Hale on November 28, 2016. Dr. Hale's medical records are devoid of information regarding an injury to the left knee.

22. Subsequent to surgery, Claimant was hospitalized at Northern Colorado Rehabilitation Hospital for approximately eight days from December 1, 2016 to December 9, 2016 (R. Ex. G). According to such records, Claimant reported a history of severe chronic osteoarthritis with no mention of any type of left knee injury (R. Ex. C; pp.120-153).

23. On March 8, 2017, Claimant saw Physician Assistant (PA) Slaton who reported that Claimant continued to have postsurgical problems associated with his bilateral knee replacements. On April 11, 2017, PA Slaton noted that Claimant was having significant problems associated with his knees and these symptoms were not work related.

24. On March 13, 2017, Dr. Bisgard performed an independent medical evaluation at Respondent's request. Claimant reported the mechanism of injury that he walked directly into the rail and struck his upper left thigh. Claimant reported immediate pain in his left thigh area. He reported resuming his work day despite the pain in the left lower extremity.

25. Dr. Bisgard conducted a detailed medical records review and physical examination of the Claimant. She concluded, based upon a reasonable degree of medical probability, that the previously asymptomatic pathology in Claimant's left hip became symptomatic as a result of the work injury, and therefore considered it work-

related. However, with regard to Claimant's left knee and the need for surgery, she opined that the need for surgery was not due to the work injury. Dr. Bisgard opined that the mechanism of injury involved Claimant's upper thigh, there was no direct blow to either knee and, based on the diagnostic studies, the need for knee surgery was not due to an aggravation or acceleration of Claimant's pre-existing condition caused by his December 2015 work injury.

26. At hearing, Claimant testified that he hyperextended his left knee at the time of the injury. However, this report of hyperextension of the left knee is inconsistent with Claimant's report of the mechanism of injury to Dr. Bisgard, Dr. Keefe, Dr. Papilion, his emergency room providers, Dr. Hale, and to his physical therapist. Claimant testimony was not deemed credible.

27. Claimant claimed he reported hyperextension of the left knee to the emergency room providers and that the emergency room records are not accurate in that the records do make mention of hyperextension. Claimant's testimony in this regard is not deemed credible.

28. Claimant testified, contrary to his reports to a physical therapist and Dr. Hale, that he did not undergo any type of Synvisc injections but only received one cortisone injection. Yet, records reflect that on October 11, 2016, a physical therapist noted that Claimant reported being offered Synvisc injections by his primary care provider and Claimant reported to Dr. Hale on November 16, 2016, that he had undergone a series of viscosupplementation injections in each knee in the past.

29. During Claimant's nine-day hospitalization at Northern Colorado Rehabilitation Hospital records do not reflect any type of work-related injury or fall to the knee.

30. Dr. Bisgard was admitted as an expert in occupational medicine. Dr. Bisgard provided credible and persuasive medical testimony regarding the causation and need for a total knee replacement to Claimant's left knee. Dr. Bisgard testified that Claimant sustained a very significant hematoma to his left upper thigh, and an injury involving his groin, which permanently aggravated an underlying osteoarthritic condition in his hip and he also sustained a labral tear of the hip, which was directly due to the work incident. However, Dr. Bisgard opined that he did not sustain an aggravation to his underlying left knee condition at the time of the work injury. Dr. Bisgard credibly opined that Claimant's underlying knee condition was very severe and longstanding, but that also, the MRI revealed evidence of a chronic breakdown of the prior ACL surgery that Dr. Papilion performed. Dr. Bisgard also testified that she placed weight on Dr. Papilion's opinion regarding causation, who she noted had the information that Claimant denied any symptoms in the left knee leading up to the December 10, 2015, work-related injury, but still maintained the opinion that such surgery should be carried out outside the Workers' Compensation system.

31. Dr. Bisgard further explained that in this particular case, the mechanism of injury is the most important factor and Claimant simply did not impact his left knee at the time of the work-related injury. Dr. Bisgard explained that looking strictly at the mechanism of injury, Claimant's development of symptoms throughout his entire leg due to the significant hematoma certainly existed and that gravity would pull that swelling down, causing significant swelling throughout the entire leg. However, Dr. Bisgard testified that does not correlate to a specific injury to the left knee and Dr. Bisgard received no report of hyperextension of the left knee nor did she find such a report in the medical records.

32. Dr. Bisgard relied upon Dr. Hale's November 16, 2016, initial report in support of her opinion that Claimant was going to require bilateral knee replacements, and such was a matter of time. She explained that the causation question is whether or not the work event accelerated the need for the total knee replacement. Dr. Bisgard relies on Dr. Hale's analysis of the x-rays showing findings so significant he recommended surgery on the bilateral knees, even though the right knee was asymptomatic.

33. Dr. Bisgard testified that she agreed with PA Slaton, as well as Dr. Papilion, that the need for Claimant's left bilateral knee replacement did not relate to the work injury. Dr. Bisgard credibly opined within a reasonable degree of medical probability, Claimant was a surgical candidate for a left total knee replacement prior to the work injury and would have required this surgery regardless of the injury to the hip.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, et seq., C.R.S. (2016), is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The Act's legislative declaration balances the interests of claimants and employers. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999 (Colo. App. 2005). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimant nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See Prudential Insurance Co. v. Cline, 98 Colo. 275, 57

P.2d 1205 (1936); CJI, Civil 3:16 (2005). A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

3. A claimant is required to prove by a preponderance of the evidence that the conditions for which he seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. See Section 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.*, 961 P.2d 571 (Colo. App. 1998). "[I]f a disability were 95% attributable to a pre-existing, but stable condition, and 5% attributable to an occupational injury, the resulting disability is still compensable if the injury has caused the dormant condition to become disabling." *Seifried v. Industrial Com'n of State of Colo*., 736 P.2d 1262, 1263 (Colo. App. 1986). However, an injury must be "significant" in that it must bear a direct causal relationship between the precipitating event and the resulting disability. *Colorado Fuel and Iron Corp. v. Industrial Commission*, 380 P 2d 28 (Colo. 1963). In this case, Claimant did not sustain an injury to the left knee. Rather, as documented in the medical records submitted, Claimant sustained an injury to his upper thigh and hip, not the knee. While Claimant reported pain in his entire left leg, such pain was due to swelling as explained during Dr. Bisgard's testimony. There is no credible or persuasive evidence linking Claimant's leg swelling to the need for surgery to address the preexisting severe osteoarthritis.

4. A compensable injury may be the result of an industrial aggravation of a pre-existing condition so long as the aggravation is the proximate cause of the disability or need for treatment. *H&H Warehouse v. Vicory*, 805 P.2d 1167, 1169 (Colo. App. 1990). However, the question of whether a particular disability is the result of the natural progression of a pre-existing condition, or the subsequent aggravation or acceleration of that condition, is itself a question of fact. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3rd 637 (Colo. App. 2001).

5. Respondent concedes that Claimant sustained a compensable injury to his left thigh and hip as a result of an aggravation of a preexisting arthritic condition in his left hip. However, the evidence taken as a whole reflects that Claimant suffers from a preexisting severe chronic left knee condition. According to Dr. Bisgard, the treatment recommended for the left knee condition subsequent to the work injury mirrored that treatment that Claimant required prior to the work injury, a total knee replacement. Dr. Bisgard credibly testified that Claimant's preexisting severe osteoarthritis demonstrated upon MRI and x-ray the need for surgery. As such, while the work injury may have exacerbated Claimant's symptoms in the hip and increased symptoms in the knee due to swelling, the need for surgery was inevitable and the injury did not aggravate or contribute to such condition requiring surgery. This is supported by the opinions of Claimant's treating orthopedist, Dr. Papilion, his treating physician, Dr. Keefe and PA Slaton.

6. Accordingly, it is concluded that Claimant failed to establish a causative relationship between the December 10, 2015, work injury to the left thigh and hip and the need for a total left knee replacement. As such, Respondents are not liable for the cost of Claimant's left knee surgery.

ORDER

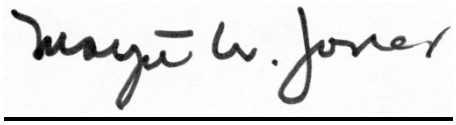
It is therefore ordered that:

Claimant's claim is denied and dismissed.

All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 24, 2017



Margot W. Jones, Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that she sustained a compensable injury to her right knee on January 9, 2016.

2. If Claimant has established a compensable injury, whether Claimant has established by a preponderance of the evidence that her subsequently treated mental health condition is causally related to the January 9, 2016 knee injury.

3. If Claimant has established a compensable injury, whether Claimant has established by a preponderance of the evidence that she is entitled to all reasonable, necessary, and related medical treatment for her right knee injury and mental health condition.

4. If Claimant has established a compensable injury, whether Claimant has proven by a preponderance of the evidence that she is entitled to temporary total disability ("TTD") benefits for the following time periods: January 10, 2016; February 25, 2016 through February 29, 2016; March 11, 2016 through March 14, 2016; March 25, 2016 through May 31, 2016; October 4, 2016 through October 12, 2016; October 27, 2016 through December 26, 2016; and January 23, 2017 through Claimant's date of maximum medical improvement ("MMI") of April 10, 2017.

5. If Claimant is entitled to TTD benefits, whether Respondents are entitled to an offset for short-term and long-term disability benefits paid to Claimant.

STIPULATIONS

1. The parties have stipulated to an average weekly wage of $571.31.

2. The parties have stipulated to Dr. Mary Zickefoose as the authorized treating provider.

3. The parties have stipulated that Claimant has received a monthly long-term disability benefit beginning February 7, 2017 and ongoing.

FINDINGS OF FACT

1. Claimant began working for Employer in February 2014 as a clerical specialist. Claimant subsequently began cross-training to become a healthcare technician which included assisting nurses with patients. On January 9, 2016, Claimant was assisting a nurse transporting a patient to an operating room. The patient was lying in an electric hospital bed. While the nurse was pushing the hospital bed into the elevator, the bed struck the medial side of Claimant's right knee. Claimant testified that her knee hyper-

extended and hit the elevator wall, and that she felt pain and soreness. Claimant reported the incident to the charge nurse and clerk and received same-day treatment at Employer's on-site urgent care clinic. Medical records from the on-site clinic note tenderness in Claimant's right knee over the medial joint line with no swelling or ecchymoses. Claimant was diagnosed with a knee contusion and provided an ice pack, knee brace, and ibuprofen. No work restrictions were noted.

2. On January 11, 2016, Claimant presented to Lori Szczukowski, M.D. at the Center for Occupational Safety and Health at OHSC. Claimant reported that a co-worker drove an electronic bed into the elevator which "shoved [Claimant's] right knee and pinned it between the bed and the elevator." Dr. Szczukowski noted Claimant did not finish her shift on January 9, 2016 "Because the knee hurt so much she was sent home," and further noted Claimant did not work on January 10, 2016. Claimant complained of continuing knee pain. On physical examination, Dr. Szczukowski noted tenderness on the medial aspect of Claimant's right knee across the joint line superior and inferior to the joint, and limited range of motion. Dr. Szczukowski further noted that there was no swelling, deformity, or ligament instability. Dr. Szczukowski assessed a right knee contusion and released Claimant to work with restrictions, noting Claimant needed to be able to apply cryotherapy.

3. Claimant underwent an MRI of her right knee without contrast on February 22, 2016. The MRI revealed mild edema in the superior lateral aspect of Hoffa's fat pad consistent with patellofemoral syndrome. Scott Tomsick, M.D. noted normal cruciate and collateral ligaments, normal menisci, and no joint effusion or internal derangement.

4. On February 24, 2016, Ann Dickson, M.D. evaluated Claimant at Denver Health Medical Center. Claimant complained of worsening pain located mostly in the medial side of her right knee. Claimant denied any numbness or radicular symptoms. Claimant reported a history of being physically active prior to the injury, including climbing the incline in Colorado Springs on a regular basis. Dr. Dickson noted Claimant wore a knee brace, used ice occasionally, and took over-the-counter Tylenol. Dr. Dickson further noted Claimant called out sick from work "on several occasions because she did not feel that she can sit all night long on her job." On physical examination, Dr. Dickson noted tenderness over the medial aspect of the right knee, no edema, no erythema and no effusion. Dr. Dickson remarked that the MRI showed signs of patellofemoral syndrome on the lateral side, noting Claimant's symptoms were primarily on the medial side of her knee. Dr. Dickson further noted that Claimant history of being physically active would account for some of the patellofemoral syndrome. Dr. Dickson assessed Claimant with a right knee contusion and remarked that it was "concerning" Claimant had minimal improvement over a nearly 6-week period. Dr. Dickson recommended physical therapy, anti-inflammatory medication, naproxen, and icing. Dr. Dickson released Claimant to work with the following restrictions: change positions at least every 30 minutes, use supports under chair to elevate leg and extend leg sometimes, no kneeling, crawling, climbing or squatting, no restraint of individuals or lifting patients, and no ladders or working at heights.

5. On March 11, 2016, Claimant presented to Dr. Dickson for an unscheduled visit requesting time off from work. Claimant reported that she found it difficult to work a full 12-hour shift even with Employer accommodating her work restrictions. Dr. Dickson noted Claimant had taken most of the past week off of work on her own recognizance, and that Claimant felt she was receiving negative feedback from her co-workers due to the injury. On examination, Dr. Dickson noted Claimant was tender to palpation in the medial sulcus adjacent to the lower pole of the patella but non-tender along the joint lines and lateral aspect of the knee. Dr. Dickson further noted mild tenderness over the patella diffusely and that there was no edema, erythema, or effusion. Dr. Dickson stated,

> I can find nothing on the knee examination to explain the severity of her symptoms. The MRI, as noted previously, showed a mild patellofemoral syndrome, which in any case is on the lateral aspect of the knee rather than the area of her pain. I have to wonder whether the discord with her colleagues is contributing to her desire to be off work.

Dr. Dickson released Claimant to work with the following restrictions: sedentary at least 20 minutes out of every ½ hour, stand and change positions at least five minutes every ½ hour and continue the prior restrictions for climbing, lifting, kneeling and squatting.

6. On March 15, 2016 Claimant presented to Thomas McDonough, M.D. Claimant reported pain and swelling in her right knee. On examination, Dr. McDonough noted tenderness along the lateral patellar facet and tenderness over the medial retinaculum, no effusion, and no medial or lateral instability. Dr. McDonough opined that Claimant was "essentially normal with the exception of mild edema in the fat pad, felt to be consistent with patellofemoral syndrome." Dr. McDonough assessed knee pain and a knee contusion and referred Claimant back to a workers' compensation physician. Dr. McDonough recommended conservative treatment and a work capacity evaluation.

7. Claimant began physical therapy in mid-March 2016. Claimant continued to report pain in her right knee after multiple physical therapy sessions. On March 21, 2016, David Blair at Denver Health and Hospital Authority referred Claimant to Dr. Michelle Pepper, a pain specialist.

8. On March 24, 2016, Claimant sought treatment with Daniel Wood, M.D., a non-workers' compensation provider. Claimant reported worsening right knee pain on the medial aspect of her patellofemoral border. Claimant reported that nothing improved the pain and that the pain was affecting her ability to sleep and perform full shifts at her job. On examination, Dr. Wood noted extreme tenderness to palpation along the medial border of the patella and no effusion, ecchymosis or obvious deformity. Dr. Wood gave an impression of right knee lateral patellar compression syndrome and recommended Claimant continue physical therapy. Dr. Wood prescribed Claimant indomethacin, and administered the first of three Hyalgan injections. Claimant testified that she asked Dr. Wood to take her off of work, and that she then applied for FMLA leave and short-term disability benefits. Claimant testified that she was on FMLA leave from late March 2016

through May 2016. Claimant testified that there was work available for her in March 2016 that was within her work restrictions.

9. Michelle Pepper, M.D. evaluated Claimant on March 30, 2016. Dr. Pepper noted that the February 2016 MRI demonstrated mild edema in the superolateral Hoffa's fat pad and assessed a sprain of the right knee. Dr. Pepper noted Claimant was off of work to receive an injection. Dr. Pepper noted that the injections Claimant received were to address Claimant's pre-existing, non-work related patellofemoral syndrome, and that the "flare of pain making it difficult for her to go to work today would be considered part of that…" Dr. Pepper further remarked,

> We discussed that she has pain medially along her knee, possibly related to the contusion she suffered from the work injury but certainly should have resolved at this point in time. There is no significant structural abnormality in her knee prohibiting her from returning to work. The findings of edema in the superolateral area of Hoffa's fat pad does not correlate with her medial knee pain. She was released back to work on full duty as of today.

10. Gennet Gemeda at Denver Health Medical Center evaluated Claimant on March 31, 2016 and opined that Claimant's right knee pain was consistent and out of proportion to the history of knee contusion. She prescribed Claimant gabapentin and referred Claimant to behavioral health to learn improved coping techniques.

11. On May 12, 2016, David Blair, M.D. at Denver Health and Hospital Authority noted Claimant's condition was unchanged and stated Claimant "Continues to have somewhat disabling right knee pain in spite of no internal derangement on MRI, PT, injections and the passage of 4 months." He referred Claimant to an orthopedist, Dr. Hewitt.

12. On May 25, 2016, Gabriel Pepper, M.D. at Denver Health and Hospital Authority evaluated Claimant. Claimant reported being very frustrated and knowing something was seriously wrong with her knee and no one could figure it out. He noted Claimant's pain was the same as at time of the initial injury, even after undergoing conservative therapy, NSAIDS, physical therapy, an MRI, a physiatry evaluation, and courses of knee injections. He remarked that Claimant had knee pain with no significant structural abnormality to explain her symptoms. He further noted that, per a recent physiatry evaluation, there were no indications for additional treatment and suggested Claimant may benefit from counseling to better control her chronic pain.

13. On May 25, 2016, Claimant was released to work effective May 31, 2016.

14. On June 3, 2016, Michael Hewitt, M.D. evaluated Claimant. Claimant complained of constant pain with difficulty walking and sleeping. Dr. Hewitt noted that x-ray images demonstrated well-preserved medial, lateral and patellofemoral joint space, no abnormal soft tissue calcification, no patellar tilt or subluxation, and no evidence of a stress fracture. On examination, Dr. Hewitt noted minimal knee effusion, no ligamentous

laxity, diffuse anterior and medial tenderness, and mild pain with patellar compression. Dr. Hewitt diagnosed Claimant with knee pain and stated Claimant's "clinical complaints significantly outweigh the findings on exam and imaging. She does not have evidence of infection." Dr. Hewitt administered a cortisone injection and prescribed vicodin and gapapentin. In a June 7, 2016 medical record, Claimant reported receiving 1.5 days of relief from the injection and then experiencing persistent pain thereafter.

15. Also on June 3, 2016, Edwin Healey, M.D. conducted an Independent Medical Examination ("IME") at the request of Claimant. Dr. Healey conducted a review of limited medical records and performed a physical examination. Claimant reported chronic right medial knee pain with radiation into the patella, thigh and calf. Claimant rated the pain on average as an 8/10. Claimant reported that the gabapentin and vicodin gave her 10% relief, and that a TENS unit previously provided to Claimant gave some relief. Claimant reported having no prior injury to her right knee or experiencing right knee pain prior to the injury. On examination, Dr. Healey noted exquisite tenderness over the right medial joint line and effusion. Dr. Healey diagnosed a right medial knee contusion and right patellofemoral syndrome. Dr. Healey recommended Claimant undergo a right saphenous nerve infrapatellar nerve block to determine if traumatic right infrapatellar nerve neuropathy was the cause of Claimant's ongoing right knee pain and swelling. Dr. Healey further recommended increasing Claimant's gabapentin dosage, starting amitriptyline, and lidoderm patches or neuropathic cream, and undergoing an EMG/nerve conduction velocity study if there was no improvement. Dr. Healey opined that, within a reasonable degree of medical probability, Claimant right knee symptoms were causally and directly related to her January 6, 2016 work-related knee trauma, and that traumatic infrapatellar neuropathy must be ruled out.

16. Dr. Hewitt reevaluated Claimant on June 10, 2016. Dr. Hewitt noted Claimant had symptoms "concerning for possible infrapatellar branch of the saphenous nerve injury." Dr. Hewitt referred Claimant to Dr. Kawasaki to proceed with a diagnostic and therapeutic saphenous nerve block.

17. On June 20, 2016 Carlos Cebrian, M.D. performed an IME of Claimant at the request of Respondents. Dr. Cebrian issued an IME report dated July 7, 2016. Dr. Cebrian reviewed Claimant's medical records and physically examined Claimant. On examination, Dr. Cebrian noted tenderness to palpation on the medial tibial plateau and no swelling, bruising or redness. As pre-existing, non-work-related conditions, Dr. Cebrian assessed, among other things, right lateral patellofemoral syndrome, depression, and anxiety. Dr. Cebrian assessed a work-related right knee contusion. Dr. Cebrian further opined that it was possible Claimant also sustained an injury to her infrapatellar saphenous nerve. Dr. Cebrian noted that the mechanism of injury could lead to injury of the infrapatellar saphenous nerve, that Claimant's symptoms in the medial aspect of the knee fit with the distribution of the infrapatellar saphenous nerve, and that the nerve "can be injured without significant swelling if the nerve is contacted directly." Dr. Cebrian recommended Claimant receive an infrapatellar saphenous nerve injection for diagnostic and possibly therapeutic purposes. Dr. Cebrian opined that "A positive response would occur if there was complete or almost complete relief from the pain documented with functional improvement." Dr. Cebrian cautioned that the

performing physician should be "very careful in determining a positive response," based on Claimant's responses to prior injections, noting the need for demonstrated and documented functional improvement. Dr. Cebrian stated that if there was a diagnostic response to the nerve injection, his medically probable opinion was that Claimant sustained an injury to the infrapatellar saphenous nerve as a result the January 9, 2016 incident. Dr. Cebrian noted that if the injection was not diagnostic, no further treatment was required, and that Claimant, at most, sustained a knee contusion.

18. Claimant presented to M. Susan Zickefoose, M.D. at Denver Health and Hospital Authority on July 19 and July 21, 2016. Claimant reported continued knee pain that she described as a burning pain in the medial superior aspect of her knee. Claimant reported that she could not concentrate or work when the pain became severe. Claimant reported being frustrated because her knee was not improving and because "everything has been placed on hold." During a follow-up evaluation on August 2, 2016, Claimant reported having suicidal thoughts. Dr. Zickefoose assessed single episode major depressive disorder and recommended that Claimant attend a consultation with a clinical psychologist, Dr. La Certe. Dr. Zickefoose also recommended Claimant see a pain specialist, referred Claimant for a nerve block, and continued Claimant's modified work restrictions.

19. Claimant attempted to commit suicide on August 3, 2016 by taking an overdose of prescription medications. Claimant testified that she attempted to commit suicide and wanted to "give up" because she felt as though nothing was working to address her pain.

20. Claimant presented to Usama Ghazi, D.O. on August 4, 2016 to address the suspected infrapatellar saphenous nerve neuralgia. Dr. Ghazi noted Claimant's recent suicide attempt. Claimant informed Dr. Ghazi that she was "not necessarily trying to kill herself but wanted relief." Claimant reported swelling, increased warmth and coolness, darkening of color of the skin, and difficulty with flexion, extension, prolonged weight bearing, and walking for more than 15 minutes. On examination, Dr. Ghazi noted edema and hyperemia along the medial aspect and the infrapatellar aspect of the right knee. Dr. Ghazi noted tenderness over the knee and the pes anserine bursa with no patellar tenderness. Dr. Ghazi further noted,

> Anterior femoral cutaneous nerve is minimally tender to palpation radiating to the superior aspect of the patella. It is the saphenous nerve that has the most sensitivity with light touch causing pain over the medial aspect of the shin and the infrapatellar branches on the medial and lateral aspects of the underside of the patella…Palpation of the adductor hiatus where the saphenous nerve exits the adductor musculature is exquisitely tender and radiates into the medial patella, inferior patella, and down the medial shin.

Dr. Ghazi gave an impression of right-sided neuritis of the right knee involving the right saphenous nerve distribution and right infrapatellar branch distribution, inferior and medial patellar pain secondary to infrapatellar neuralgia, and pes anserine bursitis. Dr. Ghazi further stated,

> Edema and temperature changes noted on examination today with hyperesthesia and allodynia reported subjectively, suggestive of possible sympathetic-mediated pain/complex regional pain syndrome/neurogenic inflammation (regardless of clinical diagnosis, there is objective clinical evidence consistent with at the very least neurogenic edema and some sympathetic abnormalities in this area.

Dr. Ghazi performed a right saphenous nerve block and a right infrapatellar nerve block. Claimant reported 100% relief of the burning sensation in her knee. Dr. Ghazi noted reduction in swelling and resolution of the hyperemia. Claimant reported 0/10 pain to heavy palpation along the adductor hiatus, medial knee and infrapatellar branch. Claimant also reported no pain with standing, ambulating, squatting, kneeling and crawling. Dr. Ghazi recommended Claimant cease the use of gabapentin and provided Claimant samples of horizant and meloxicam. Dr. Ghazi also scheduled Claimant for two right-sided lumbar sympathetic blocks and saphenous nerve blocks to be performed simultaneously.

21. On August 29, 2016, Daniel James White, M.D. at Denver Health Medical Center noted Claimant knee pain was stable at a 5/10 and that Claimant was considering returning to work.

22. On August 22 and August 30, 2016, Lance La Certe, Psy.D. performed a behavioral medicine evaluation of Claimant. Dr. La Certe issued a report dated August 30, 2016. Dr. La Certe reviewed Claimant medical records, conducted diagnostic interview, and administered objective tests. Claimant reported to Dr. La Certe that she experienced a burning pain to the medial aspect of her right knee, which she rated at a 5/10. Dr. La Certe noted that the nerve block performed by Dr. Ghazi reduced Claimant's pain from 8/10 to 5/10, and allowed Claimant to get four to five hours of sleep as compared to prior periods of no sleep. Claimant denied any previous psychological history. Regarding the objective tests performed, Dr. La Certe noted Claimant scored higher than 76% of patients asked to fake bad. Dr. La Certe further noted Claimant had an extreme level of reported somatic complaints, scoring higher than 99% of patients. Dr. La Certe noted Claimant's borderline personality trait scores were higher than 95% of patients, and that her anxiety and depression scores were within the average range for pain patients.

23. Dr. La Certe diagnosed Claimant with claim-related single-episode major depressive disorder and medial right knee pain. Dr. La Certe also noted "R/O pain disorder affecting other medical condition (claim related)…" Dr. La Certe noted that his objective tests corroborated his clinical impressions, stating,

> Her extreme level of somatic complaints does not appear reasonable given the nature of a focal injury. Most significant are item responses consistent with Borderline characteristics. These findings help explain my observations of a somewhat dramatic presentation. They also help explain why she has had such extreme responses (suicidality) to a single injury.

Dr. La Certe opined that there were a number of risk factors affecting the outcome of Claimant's injury, which Dr. La Certe stated included, but were not limited to:

> …acute pain which has transitioned to chronic; her unresolved anger related to her perception she has been treated incompetently for many months, told by at least one provider the pain was 'in her head', and not having been listened to; a dramatic presentation; possible character pathology; there presence of an attorney with the possibility of litigation; severe depression with suicidal acting out; lack of psychological sophistication and insight, accompanied by an absence of adaptive coping skills.

Dr. La Certe referred Claimant for psychological/behavioral medicine treatment, estimating Claimant would need 14-16 sessions of cognitive-behavioral treatment.

24. Dr. Ghazi performed a second right lumbar sympathetic block and right saphenous and infrapatellar nerve block on September 8, 2016. Dr. Ghazi noted the following post-injection findings, in part:

> Temperature increased to 81.2 degrees in the right leg with marked vasodilation, erythema, and warmth in the right leg consistent with successful sympathetic blockade…Tinel's test over the saphenous nerve at the adductor hiatus and medial joint line and Tinel's over the infrapatellar branch of the medial aspect of the joint line of the knee went from positive preoperatively to negative postoperatively. Postoperative pain level was 0/10 at rest with palpation and Tinel's versus preoperative pain levels of 5/10 at rest and 8/10 during palpation and Tinel's of the saphenous and infrapatellar branches.

Dr. Ghazi noted Claimant had "remarkable improvements in both mood and outlook," and that Claimant felt "the last set of injections have been remarkably beneficial in reducing the overall sensitivity and swelling, and she notes that she does not have edema constantly over the knee anymore…" Claimant reported at least 80% reduction in her overall symptomatology and severity since receiving the prior injection.

25. Claimant continued to treat with Dr. La Certe. On September 16, 2016, Dr. La Certe noted Claimant had suicidal and homicidal ideations, and had been experiencing auditory hallucinations since January or February 2016, which Claimant described as a dial tone sound and then beeping. Dr. La Certe noted that there were some mild, psychotic processes associated with Claimant's major depressive disorder. On September 19, 2016, Claimant reported pain at 3-4/10. Claimant reported an absence of auditory hallucinations and and denied homicidal and suicidal thoughts, relating her improvement to the reduction in pain. As of September 27, 2016, Claimant reported that the auditory hallucinations returned and that her pain was at a 4/10.

26. Dr. Ghazi performed a third right saphenous nerve block and right stellate ganglion block on September 22, 2016. Dr. Ghazi noted the following pre-operative

diagnoses: complex regional pain syndrome ("CRPS") of the right lower extremity, neuritis of right thigh, knee and patella, right saphenous neuralgia, and infrapatellar neuralgia. Dr. Ghazi concluded Claimant had 100% anesthetic relief following the repeat lumbar sympathetic block and repeat right saphenous nerve block. Dr. Ghazi noted Claimant's mood was remarkably improved, and that Claimant could be placed at MMI if she was doing well at a follow-up visit.

27. On October 3, 2016, Dr. La Certe noted Claimant's mental status had dramatically improved due to a combination of stable sleep and the absence of pain. Dr. La Certe noted that he would release Claimant back to work if Claimant's improved mental status continued into the next week.

28. During a follow-up evaluation with Dr. Zickefoose on October 4, 2016, Claimant reported pain at a 2/10, and that she had been pain-free for two days prior. Dr. Zickefoose opined that Claimant's condition had improved and that Claimant was doing well both physically and emotionally, noting that, however, Claimant still "gets angry." Dr. Zickefoose anticipated releasing Claimant to modified duty at the next visit and full duty in two to three weeks.

29. On October 5, 2016, Dr. La Certe noted absence of leg pain, stable sleep, and the absence of auditory hallucinations. Claimant reported continuing problems with anxiety, irritability and anger. Dr. La Certe noted that if Claimant's improved mental status remained he would set up a return to work structure beginning within the next one to two days.

30. Claimant attended a follow-up evaluation with Dr. Ghazi on October 10, 2016. Claimant rated her pain at a 2/10. Claimant reported feeling optimistic and that the injections had "given her real hope." Claimant reported she was not severely depressed or experiencing anxiety. On physical examination, Dr. Ghazi noted mild tenderness and pain in the knee with no edema. Dr. Ghazi gave the following impression: patellofemoral pain on right knee with hoffitis, complex regional pain syndrome ("CRPS") of the right knee involving saphenous and infrapatellar branch, and resolution of edema in the anterior right knee with significant but incomplete reduction of neuralgia. Dr. Ghazi recommended Claimant receive one final set of injections.

31. On October 11, 2016, Claimant reported to Dr. La Certe that she was experiencing a return of suicidal ideations. Dr. La Certe noted, "Claimant's mental status remains brittle despite significant improvement in her claimant's related physical pain."

32. On October 12, 2016, Dr. Zickefoose released Claimant to modified duty working six hours a day for three days a week, day shift only. Claimant reported improved sleep to Dr. La Certe on October 13, 2016. On October 18, 2016, Claimant reported increased pain levels at a 4/10 and admitted having brief suicidal thoughts after coming in contact with a gunshot wound patient at work.

33. On October 25, 2016, Claimant reported having flashbacks to her suicide attempt. Dr. La Certe opined that there appeared to be a direct correlation with the

increase of Claimant's flashbacks and Claimant's return to work, and took Claimant' off of work for at least the next six to eight weeks, remarking that Claimant's mental status was "too brittle."

34. On October 26, 2016, Claimant reported having no pain in her right knee since the previous Thursday. Dr. Zickefoose noted, "Patient believes she may not need the last set of injections but we will to see if they are approved and then decide if she wants to have them done."

35. Also on October 26, 2016, Dr. Cebrian issued a Rule 16 Occupational Health Consultation report regarding whether Dr. Ghazi's request for a repeat right lumbar sympathetic block and right saphenous nerve block were medically reasonable, necessary and related to the January 9, 2016 claim. Dr. Cebrian reviewed additional medical records and opined that Claimant did not have CRPS. Dr. Cebrian referred to the Colorado Division of Workers' Compensation Medical Treatment Guidelines ("MTG") for diagnosing CRPS and opined that Claimant did not meet the clinical diagnosis of CRPS. Dr. Cebrian noted that, because Claimant did not meet the clinical diagnosis of CRPS under the MTG, there was no need to pursue testing to confirm the diagnosis. Dr. Cebrian opined that the lumbar sympathetic blocks should never have been performed, and that further lumbar sympathetic blocks and saphenous or infrapatellar nerve blocks were not medically reasonable or necessary. Dr. Cebrian referred to Claimant's mental condition as a "larger issue" and opined that Claimant's "Subjective responses to injections or other invasive procedures during this time are fraught with unreliable responses." Dr. Cebrian recommended Claimant undergo a psychiatric IME.

36. In a medical note dated November 10, 2016, Dr. Zickefoose noted Claimant was not having knee pain and deemed Claimant's right knee pain and "other specified mononeuropathies" of Claimant's right lower limb had resolved.

37. On November 25, 2016, Robert Kleinman, M.D. performed a psychiatric IME of Claimant at the request of Respondents. Dr. Kleinman reviewed Claimant's medical records and conducted a psychiatric interview of Claimant. Claimant reported that she began getting depressed in March 2016 and that "She felt like her life was over because she thought that her knee would never get better." Claimant related her depression to her knee pain and not getting what Claimant deemed to be adequate treatment for her knee. Claimant reported being irritable, experiencing nightmares and flashbacks, and hearing a beeping sound in her head. Claimant reported that she "loved her life and had no worries before the injury," and that she did not receive any psychiatric treatment prior to the injury. Dr. Kleinman questioned Claimant regarding a February 17, 2015 Antepartum Record Problem List which documented that Claimant complained of being depressed since 2009 and had a history of anxiety. The medical record further noted Claimant declined speaking to a social worker or psychologist, and that she was not on medication. Claimant denied to Dr. Kleinman that she had been since 2009 and explained that the depression in 2015 could have been due to relationship problems with her then-boyfriend.

38. Dr. Kleinman opined that Claimant had a history of depression and anxiety, and noted it was logical to consider Claimant has somatoform disorder. Dr. Kleinman opined that Claimant "roots of depression go back to her personality," and referred to psychological testing completed by Dr. La Certe, which indicated the presence of somatization, borderline personality disorder characteristics, and faking bad. Dr. Kleinman diagnosed Claimant with borderline personality traits, persistent depressive disorder by history, major depressive disorder, and psychological factors affecting mental condition. Dr. Kleinman opined that Claimant's physical complaints were out of proportion to the objective medical findings, and that Claimant's depression was out of proportion to the injury. Dr. Kleinman further opined that Claimant's hallucinations and depression were unrelated to the work injury stating, "It is illogical to consider that her pain was causing depression when her pain is not supported by objective findings. It is more likely that the pre-existing condition of depression with characteristics of a borderline personality disorder is responsible for the exaggerated physical complaints." Dr. Kleinman opined that Claimant's "borderline personality characteristics and depression pre-disposed her to the dramatic presentation that followed the occupational incident."

39. Dr. Kleinman further opined that Claimant was at MMI regarding her mental health as of October 4, 2016, and that Claimant did not have any psychological restrictions or limitations preventing her from returning to work. Dr. Kleinman opined that secondary gain was responsible for Claimant's presentation and prolonged recovery stating, "The major contributing factors to [Claimant's] presentation are her pre-existing and untreated depression and anxiety and her untreated borderline personality traits. The elevator incident was not a contributing factor to the current emotional complaints."

40. On November 30, 2016 Dr. Cebrian issued a Supplemental IME Report after reviewing additional medical records and physically examining Claimant. Dr. Cebrian again opined that Claimant does not have CRPS and that her patellofemoral syndrome is not work-related. Dr. Cebrian opined that it is not medically probable Claimant sustained an injury to her infrapatellar saphenous nerve, based on Claimant's unreliable responses to multiple different types of injections. Dr. Cebrian referenced Dr. La Certe's and Dr. Kleinman's evaluations, and agreed with Dr. Kleinman that Claimant has somatoform disorder. Regarding Dr. Ghazi performing an injection on Claimant the day following Claimant's suicide attempt, Dr. Cebrian stated, "It would be impossible to accurately assess her response to treatment that relied on primarily a subjective response due to her emotionally vulnerable state, that in her opinion, was tied to her injury." Dr. Cebrian opined that it was not possible to accurately assess Claimant's responses to the injections due to the somatoform disorder, and that Claimant's positive and short-lived responses to different injections were not based on treating any physical pathology. Dr. Cebrian again opined that Claimant's claim-related condition is at most a right knee contusion, that Claimant reached MMI, and that no additional medical treatment was indicated. Dr. Cebrian further opined that there was no medical reason Claimant could not work in a full and unrestricted capacity.

41. On January 5, 2017, Dr. La Certe noted that he processed Claimant's return to work last week. Claimant reported anxiety. Dr. La Certe noted that the helipad, elevator

and SICU were triggers for Claimant at work. Dr. La Certe restricted Claimant to working three days per week, four hours per day.

42. On January 21, 2017, Dr. La Certe noted Claimant experienced returning suicidal ideations, and that her sleep had been significantly compromised by nightmares. Claimant reported pain at a 2/10. Dr. La Certe noted Claimant was no longer preoccupied with the pain and that it did not appear that the pain was contributing to her current emotional state. Dr. La Certe noted that continuing work for Employer involving clinical contact was not appropriate stating, "I do not want her to be in any environment which could expose her to triggers as a result of direct or indirect patient contact." Dr. La Certe took Claimant off of work starting January 23, 2017. Dr. La Certe noted that there was a "strong possibility" that Claimant could not return to Employer's work environment. In a medical note dated January 23, 2017, Dr. Zickefoose noted that, the week prior, Claimant had been exposed to a patient who attempted suicide.

43. Claimant has not worked for Employer since January 23, 2017. Claimant testified at hearing that she missed time at work in January 2017 because she was exposed to a suicidal patient, which caused her own suicidal thoughts and nightmares. Claimant testified that she missed work during periods from February through May 2016 due to being irritable and in pain. Claimant testified that she missed work in October 2016 due to depression. Claimant testified that she is currently not working.

44. Claimant further testified that she did not have any knee problems prior to the January 9, 2016 injury, and no knee injuries subsequent to the January 9, 2016 injury. Claimant testified that she began feeling depressed in May 2016 because the doctors basically told her there was nothing else that could be done for her knee. Claimant testified that she had no prior suicide attempts and had not felt similarly depressed in the past. Claimant testified that she experienced anxiety during a prior period of working as a dispatcher, but that the anxiety had resolved prior to the January 9, 2016 injury. Claimant testified that the physical therapy she received for the knee injury was ineffective, but that the nerve blocks administered by Dr. Ghazi were helpful. Claimant testified that she is doing "way better" now. Claimant testified that she continues to experience some pain but that the pain is not as bad as she previously experienced.

45. Dr. Cebrian testified at hearing on behalf of Respondents as an expert in occupational medicine. Dr. Cebrian opined that, within a reasonable degree of medical probability, Claimant did not sustain any claim-related injury, nor was there any aggravation or acceleration of a pre-existing condition causing the need for treatment. Dr. Cebrian testified that he no longer believes Claimant sustained a knee contusion, referring to the absence of documented swelling or bruising in the medical records from the first few evaluations. Dr. Cebrian further testified that, after receiving information on Claimant's mental health condition, he did not believe Claimant sustained any injury to the saphenous nerve or infrapatellar branch. Dr. Cebrian opined that Claimant's subjective reports are unreliable due to her vulnerable psychological state and somatic complaints. Dr. Cebrian testified that the February 26, 2016 MRI documented patellar femoral syndrome, which was not causally related to the work incident because the

objective findings on the lateral side did not correlate with Claimant's reported symptoms on the medial side. Dr. Cebrian disagreed with Dr. Ghazi's diagnosis of CRPS. Dr. Cebrian testified that the MTG requires an individual must meet three of four categories of clinically positive findings to establish and then confirm the diagnosis with objective testing. Dr. Cebrian testified that Claimant did not reach the lower threshold to establish clinical CRPS.

46. Dr. Cebrian disagreed that Claimant's injury caused her suicide attempt. Dr. Cebrian opined that Claimant's psychological response was out of proportion to a minor injury and was clearly related to pre-existing psychological issues. Dr. Cebrian testified that, as of October 27, 2016, there was no indication of any physical issues preventing Claimant from working. Dr. Cebrian further opined that Claimant's mental triggers to the hospital environment and her auditory hallucinations are unrelated to the knee injury. Dr. Cebrian further testified that, if Claimant did sustain a knee contusion, the initial evaluation and treatment she received was reasonable.

47. Dr. Kleinman testified at hearing on behalf of Respondents as an expert in psychiatry. Dr. Kleinman testified consistent with his IME report. Dr. Kleinman testified that Claimant had history of depression for which she probably should have received prior treatment. Dr. Kleinman opined, within a reasonable degree of medical probability, that Claimant had depression, somatoform disorder, borderline personality traits, and a pain disorder. Dr. Kleinman indicated Claimant was faking bad. Dr. Kleinman opined that Claimant's psychological issues, including the suicide and the need for psychological medication, were pre-existing and not causally related to the knee injury. Dr. Kleinman testified that one could expect some situational depression after an injury, but that it was illogical to see this degree of depression and suicidality as a result of a minor injury with few objective findings. Dr. Kleinman opined that Claimant has poor coping skills and that her psychological issues are a result of Claimant's borderline personality traits and not the knee injury. Dr. Kleinman further opined that Claimant's "pre-existing predisposition" caused the somatoform disorder, and that her pre-existing condition is "ineffective coping." Dr. Kleinman testified that depression can affect how people report their symptoms and responses to treatment, and that Claimant's positive responses to Dr. Ghazi's injections could be a placebo, or could be due to Claimant's psychological issues.

48. Dr. La Certe testified at hearing on behalf of Claimant as an expert in psychology. Dr. La Certe testified consistent with his reports and medical notes. Dr. La Certe opined that, within a reasonable degree of medical probability, Claimant's psychological issues, including her depression, are related to the January 9, 2016 knee injury. Dr. La Certe testified Claimant had some prior reactive depression to a pregnancy in 2015, and had been on Xanax in 2011 for an anxiety attack; however, he was unaware of any going psychological conditions leading up to the January 9, 2016 injury. Dr. La Certe testified that Claimant worked for Employer for 2.5 years prior to the injury without any difficulty functioning. Dr. La Certe opined that Claimant was psychologically unsophisticated and had no coping mechanisms, and that such factors could result in a minor injury being catastrophic. Dr. La Certe characterized Claimant's psychological condition as a pre-disposition, and testified that her psychological

condition affected Claimant's ability to heal from the injury and her ability to return work. Dr. La Certe opined that Claimant's suicide attempt was directly related to the knee injury. Dr. La Certe agreed Claimant had a pain disorder, but disagreed Claimant was motivated by secondary gain. Dr. La Certe further opined that Claimant's mental health characteristics exacerbated the injury. Dr. La Certe testified that Claimant still requires additional mental health treatment and cannot return to work for Employer, as triggers present in the clinical work environment cause a regression in Claimant's mental status.

49. Debby Esler testified at hearing on behalf of Respondents. Ms. Esler works for Employer as a Workers' Compensation Insurance Specialist. Ms. Esler testified that Claimant's work restrictions were communicated to her supervisors. Ms. Esler testified that Employer was able to accommodate Dr. Dickson's February 24, 2016 work restrictions and that work was available for Claimant from February 25-29, 2016. Ms. Esler further testified that work accommodating Claimant's March 11, 2016, March 21, 2016, April 7, 2016, May 12, 2016 and October 4, 2016 restrictions was available for Claimant. Ms. Esler testified that Claimant had been working on and off for Employer after January 9 2016, and that Employer extended the June 2, 2016 written modified job offer to Claimant as a formal offer. Ms. Esler testified that no job offer in writing was made in writing to Claimant prior to such time, and that that Employer has not sent Claimant an offer of modified duty since she last worked for Employer in January 2017. Ms. Esler testified that Claimant is no longer employed with Employer because Employer could not accommodate restrictions prohibiting her from working in a clinical environment.

50. Ms. Esler testified that Claimant was paid $404.96 per week in short-term disability benefits from April 7, 2016 through May 31, 2016, and $354.02 per week in short-term disability benefits from August 5, 2016 through December 17, 2016. Ms. Esler testified that the short-term disability premium and long-term disability premium is fully-funded by Employer.

51. Claimant's testimony is found credible and persuasive.

52. The opinions of Drs. Ghazi, La Certe and other treating physicians are found more credible and persuasive than the contradictory opinions of Drs. Cebrian, Kleinman, and Glenova.

53. Claimant has proven by a preponderance of the evidence that she sustained a compensable injury to her right knee on January 9, 2016 and that her mental condition was a natural consequence of the compensable knee injury.

54. Claimant has proven by a preponderance of the evidence that she is entitled to reasonable and necessary medical treatment related to Claimant's right knee injury and resulting mental health condition.

55. Claimant has proven by a preponderance of the evidence that she is entitled to TTD benefits for the periods January 10, 2016; February 25, 2016 through February 29, 2016; March 11, 2016 through March 14, 2016; March 25, 2016 through May 31, 2016;

October 4, 2016 through October 12, 2016; October 27, 2016 through December 26, 2016; and January 23, 2017 through April 10, 2017.

56. Respondents are entitled to offset any TTD benefits paid to Claimant as a consequence of her receipt of short-term disability and long-term disability benefits.

57. The evidence and inferences inconsistent with these findings were not credible and persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

Claimtn was required to prove by a preponderance of the evidence that at the time of the injury she was performing service arising out of and in the course of the employment, and that the alleged injury was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). The question of whether the claimant met the burden of proof to establish a compensable injury is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

An employer is responsible for the direct and natural consequences which flow from a compensable injury. *Vanadium Corp. Of America,* 307 P.2d 454 (Colo. 1957); *Hembry v. ICAO,* 878 P.2d 114, 115 (Colo. App. 1995). Whether a causal connection exists between the work-related injury and subsequent injury is a question of fact. *Baca v. Helm,* 682 P.2d 474 (Colo.1984); *Hembry v. Indus. Claim Appeals Office of State of Colo.*, 878 P.2d 114, 115 (Colo. App. 1994).

When evaluating this issue of causation the ALJ may consider the provisions of the MTG because they represent the accepted standards of practice in workers' compensation cases and were adopted pursuant to an express grant of statutory authority. However, the MTG are not dispositive of the issue of causation and the ALJ need not give them any more weight than he determines they are entitled to in light of the totality of the evidence. *See Cahill v. Patty Jewett Golf Course,* WC 4-729-518 (ICAO February 23, 2009); *Siminoe v. Worldwide Flight Services,* WC 4-535-290 (ICAO November 21, 2006).

Right Knee Injury

As found, Claimant established by a preponderance of the evidence that she sustained a compensable right knee injury on January 9, 2016. Drs. Szczukowsi, Dickson, McDonough and Healey credibly opined that Claimant sustained a work-related right knee contusion. Claimant's symptoms were located in the area where she was struck on the knee by the hospital bed. Per multiple physicians, Claimant continued to report knee symptoms long after the knee contusion should have resolved, and there were no objective findings on the MRI of significant abnormality. However, it was not until approximately six months after the date of injury that the possibility of a saphenous and infrapatellar nerve injury was suggested. Dr. Ghazi credibly opined that Claimant sustained work-related CRPS involving saphenous neuralgia and infrapatellar neuralgia. The medical records document a decrease in physical symptoms and an increase in functional improvement after Claimant received injections performed by Dr. Ghazi to address the saphenous neuralgia and infrapatellar neuralgia. Claimant also credibly testified that the injections performed by Dr. Ghazi were helpful. Moreover, although Dr.

Cebrian ultimately opined that Claimant did not sustain a saphenous or infrapatellar nerve injury, Dr. Cebrian stated in his initial IME report that the mechanism of injury could have caused a saphenous nerve injury, and that Claimant's symptoms could be consistent with a saphenous nerve injury. While Dr. Cebrian deemed Claimant's positive response to Dr. Ghazi's injections to be unreliable due to Claimant's mental condition, the ALJ is not persuaded Claimant's reported relief from the injections is wholly unreliable. Regarding Claimant's patellofemoral syndrome, the ALJ credits the opinions of Drs. Dickson, McDonough, Wood, and Pepper that such condition is pre-existing and not work-related.

Mental Health Condition

As found, Claimant established by a preponderance of the evidence that her mental condition is a direct and natural consequence that flowed proximately from the January 9, 2016 industrial injury. Dr. La Certe credibly testified that the knee injury combined with Claimant's pre-existing psychological issues to cause Claimant's depression, suicide attempt, and the need for mental health treatment. Claimant credibly refuted a history of depression and ongoing psychological issues or treatment leading up to the work injury. It was not until after the January 9, 2016 work injury that Claimant's mental health condition deteriorated to the point of requiring mental health treatment. Claimant credibly testified that the pain from the injury caused her depression and suicide attempt. The ALJ is persuaded the industrial injury combined with Claimant's pre-existing poor coping mechanisms and borderline personality traits to produce the need for mental health treatment.

Medical Benefits

A respondent is liable to provide such medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury." Section 8-42-101(1)(a), C.R.S. *Colorado Compensation Insurance Authority v. Nofio*, 886 P.2d 714 (Colo. 1994). The determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ. *See generally Parker v. Iowa Tanklines, Inc.*, W.C. No. 4-517-537 (May 31, 2006); *Chacon v. J.W. Gibson Well Service Company*, W. C. No. 4-445-060 (February 22, 2002).

As found, Claimant has proven by a preponderance of the evidence that she is entitled to receive reasonable and necessary medical treatment related to the January 9, 2016 industrial injury, including treatment for the right knee injury as well as treatment for Claimant's mental health as related to the right knee injury.

Temporary Total Disability Benefits

To prove entitlement to TTD benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *PDM Molding, Inc. v. Stanberg*, 898 P.2d

542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S., requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). TTD benefits ordinarily continue until one of the occurrences listed in § 8-42-105(3), C.R.S.; *City of Colorado Springs v. Industrial Claim Appeals Office, supra*.

The existence of disability presents a question of fact for the ALJ. There is no requirement that the claimant produce evidence of medical restrictions imposed by an ATP, or by any other physician. Rather, lay evidence alone may be sufficient to establish disability. *Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997).

As found, Claimant has proved by a preponderance of the evidence that she is entitled to TTD benefits for periods January 10, 2016; February 25, 2016 through February 29, 2016; March 11, 2016 through March 14, 2016; March 25, 2016 through May 31, 2016; October 4, 2016 through October 12, 2016; October 27, 2016 through December 26, 2016; and January 23, 2017 through April 10, 2017. Claimant credibly testified that she missed work during such time periods either due to pain, irritability or depression resulting from the work injury. Consequently, Claimant was “disabled” within the meaning of Section 8-42-105, C.R.S. and is entitled to TTD benefits. Although Respondents presented evidence that there was work available to Claimant within her restrictions until October 4, 2016, Respondents failed to provide Claimant with a valid modified job offer aside from the June 2, 2016 offer, which became invalid when Claimant’s restrictions dropped from working twelve hours per day to eight hours per day on July 7, 2016. The ALJ concludes Claimant was physically and/or mentally restricted from her usual job duties, and no valid modified employment was offered to Claimant for the time periods listed herein. Because Claimant’s period of disability lasted longer than two weeks from the date she left work as a consequence of her injury, TTD is recoverable from the date Claimant first left work, January 10, 2016. See Section 8-42-103(1)(b), C.R.S.

Offsets

Pursuant to Section 8-42-103(1)(d)(I), C.R.S., the aggregate benefits payable to a claimant for TTD shall be reduced, but not below zero, “by an amount equal as nearly as practical” to the amount of any benefits paid to a Claimant under any disability plan financed in whole or in part by the employer, subject to the following limitations:

(A) Where the employee has contributed to the . . . disability plan, benefits shall be reduced . . . *in an amount proportional to the employer's percentage of total contributions to the employer . . . disability plan.*

(B) Where the employer . . . disability plan provides by its terms that benefits are precluded there under in whole or in part if benefits are awarded under articles 40 to 47 of this title, the reduction provided in paragraph (d) shall not be applicable to the extent of the amount so precluded.

The "offsets" provided for under Section 8-42-103(1)(d)(I), C.R.S. are statutory in nature. Consequently, respondents are entitled to apply the provisions of Section 8-42-103(1)(d)(I), C.R.S and offset the TTD benefits to be paid to Claimant if the circumstances raised by Section 8-42-103(1)(d)(I), C.R.S. otherwise apply to the case.

As found, Claimant is entitled to TTD benefits and received periodic short-term and long-term disability benefits under an employer sponsored disability plan. Ms. Esler credibly testified Claimant did not contribute to the disability plan. Respondents are entitled to applicable offsets for short-term and long-term disability paid to Claimant.

ORDER

It is therefore ordered that:

1. Claimant has established by a preponderance of the evidence that she sustained a compensable injury to her right knee on January 9, 2016 and that her subsequent mental health condition is a compensable consequence of the original knee injury.

2. Claimant is entitled to all reasonable, necessary, and related medical treatment for her right knee and mental health condition.

3. Respondents shall pay Claimant TTD for the periods of January 10, 2016; February 25, 2016 through February 29, 2016; March 11, 2016 through March 14, 2016; March 25, 2016 through May 31, 2016; October 4, 2016 through October 12, 2016; October 27, 2016 through December 26, 2016; and January 3, 2017 through April 10, 2017.

4. Respondents are entitled to offset Claimant's TTD for short-term disability benefits and long-term disability benefits received by Claimant during the applicable time periods.

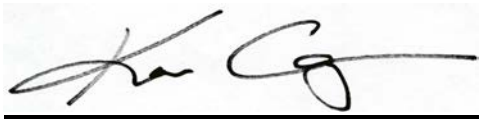
5. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver,

CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 25, 2017



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that he is entitled to an award of penalties from Respondent, for a violation of §8-43-401(2)(a), C.R.S.?

II. Has Claimant shown, by a preponderance of the evidence, that he is entitled to an award of penalties from Respondent, for a violation of §8-43-304(1), C.R.S.?

III. Have Respondents shown, by a preponderance of the evidence, the affirmative defense afforded by §8-43-304(4), C.R.S., that Claimant has filed to state, with the required specificity, the grounds on which any claimed penalty is being asserted under §8-43-304(1), C.R.S.?

STIPULATIONS

As noted, the parties have stipulated to the following facts, which the ALJ accepts and finds to be true:

1. The claimant was injured in an admitted accident in the course and scope of his employment with the Respondent Employer on December 5, 2013.

2. The claimant was placed at maximum medical improvement by authorized treating physician, Dr. Albert Hattem, on October 13, 2015.

3. Dr. Hattem assigned seventeen percent scheduled impairment to the claimant's left upper extremity resulting from the industrial injury.

4. The carrier filed an October 20, 2015, Final Admission admitting liability consistent with Dr. Hattem's opinions on MMI, impairment and the claimant's need for medical treatment post-MMI and commenced payment of PPD.

5. The claimant timely objected and requested a Division IME.

6. Dr. Miguel Castrejon was selected as the Division Examiner. Dr. Castrejon examined the claimant on April 6, 2016.

7. Dr. Castrejon agreed with the October 13, 2015, MMI date, but assigned 27 percent scheduled impairment to the claimant's left upper extremity injuries.

8. Twenty-seven percent scheduled impairment has a value of $15,449.61.

9. As of the date of the Division IME, $5,423.40 in PPD had been paid to the claimant.

10. The carrier filed a May 20, 2016, Amended Final Admission consistent with Dr. Castrejon's opinions on MMI and permanent physical impairment.

11. On May 24, 2016, the carrier issued a lump sum payment of $5,722.08 in PPD to the claimant.

12. On January 25, 2017, the claimant, through counsel, filed an Application for Hearing endorsing the issue of penalties, "C.R.S. 8-43-304(1) Violated provision of Workers' Compensation Act by failing to pay PPD owed. C.R.S. 8-43-401(2)(a) Failed to pay PPD benefits owed."

13. No additional PPD benefits were paid to claimant until March 14, 2017, when a lump sum payment of $3,504.13 was made by the carrier.

14. On June 23, 2017, a final payment of $732.77 was issued to the claimant by the carrier.

ADDITIONAL FINDINGS OF FACT

Based upon the evidence received at hearing, the ALJ makes the following Additional Findings of Fact:

1. From the Exhibits tendered and admitted, the ALJ has drawn certain inferences, and concludes that certain errors were committed by the adjuster(s) while processing this claim. The FAL erroneously indicates that $9727.52 *had been previously paid* to Claimant, based upon the 17% rating originally assigned. Such amount would have paid the claim in full, had it been timely paid. The revised 27% rating agreed upon yielded a total, revised award of $15,449.61.

2. The above inference is made as follows: 9727.52 divided by 15,449.61 yields the identical ratio (.6296) as dividing 17 by 27. Thus, the adjuster erroneously believed that the claim had previously been paid in full by paying $9727.52, based on the 17% rating. The new balance due (in the eyes of the adjuster, based upon the revised 27% rating) would now be $5,722.08. This was indeed paid on 5-24-16, 6 days after the FAL was issued. The adjuster thus believed the obligation was paid in full on this date. It wasn't.

3. In fact, at the time of the FAL, only $5423.40 had been paid on the claim. Adding the payment of 5-24-16 of $5722.08 yielded an actual balance due of $4304.13. Based upon the evidence admitted herein (disregarding withdrawn exhibits), Respondent was placed on notice of this deficiency when the Application for penalties was filed on 1-25-17.

4. Respondent was then neither timely nor accurate in rectifying the problem. On 3-14-17, the adjuster then paid out $3,504.13, erroneously believing, once again, that this would bring the balance to zero. It would have, had the additional $800 previously

paid to Claimant been for PPD. It wasn't. That $800 had been paid (promptly, at least) on 1-21-16 to settle the companion *disfigurement* claim. The adjuster had now erroneously credited the PPD account for this $800.

5. Thus, in reality, a balance still remained of $800 for the admitted PPD portion of the claim, as of 3-14-17. For reasons unclear from the record, on the FAL remarks, the adjuster had claimed an *offset* of $50.**8**4 (despite putting $50.**5**4 on the overpayment line-yet another mistake, albeit minor). Five days before the hearing, on 6-23-17 the adjuster made an additional PPD payment of $732.77.

6. Inexplicably, this still left a balance of $16.39, which (according to Claimant's position statement, but not in the exhibits) was paid on 7-17-17. Thus, on said date, post hearing, the PPD was truly, finally paid in full (giving this adjuster the benefit of the doubt that Respondents were ever actually entitled to an offset of $50.84; if not, that's yet *another* mistake). For clarity, a summary chart, prepared by the ALJ, follows as an additional Finding of Fact.

7. A number of terms possibly come to mind regarding the handling of this file: negligent, inexperienced, overworked, indifferent, perhaps even reckless- *but not willful. Willful* would imply some financial motive, and a level of attention to the file which is plainly not present here. The ALJ finds that the actions of Respondent, aggravating though they might be, were not willful.

	Erroneous*	Actual
5-20-2016 FAL	15,449.61	15,449.61
(prior payments under 17% rating-Error #1)*	(9,727.53)*	(5,423.40)
balance owed	5,722.08	10,026.61
"final" payment 5-24-16	(5,722.08)	(5,722.08)
Balance as of 5-24-16	-0-	4,304.13
1-25-17 App filed- (Adjuster put on notice)	4,304.13	
3-14-17 (error #2 by adjuster)*

6-23-17 payment		(732.77)
Balance due 6-28-17 Hearing Date		16.39
7-17-17 FINAL payment (per Claimant's Position Stmt)		(16.39)
Actual balance today		-0-

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1).* Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The ALJ, as the fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990) Moreover, the ALJ may accept all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion).

C. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Penalties under C.R.S 8-43-401(2)(a)

D. Penalties under § 8–43–401(2)(a) are awarded for the "willful withholding" of permanent partial disability benefits. In the context of the Act, the term "willful" has been defined to mean acting with deliberate intent. *City of Las Animas v. Maupin,* 804 P.2d 285 (Colo.App.1990). The failure to timely pay PPD benefits does not subject the Respondent Insurer to penalties unless the failure is the result of its deliberate intent. Further, "willful and wanton misconduct connotes acts or omissions that extend beyond

mere unreasonableness". *See generally, Terror Mining Co. v. Roter,* 866 P.2d 929, 933-934 (Colo. 1994). Conduct which is the result of mere carelessness, negligence, forgetfulness, remissness or oversight does not rise to the level of willful action. *See Johnson v. Denver Tramway Corp*., 115 Colo. 214, 171 P.2d 410 (1946).

E. The party asserting a proposition carries the burden of proof. Further, consideration should be given to which party would prevail in the absence of any evidence on the subject. *Cowin and Co. v. Medina*, 860 P.2d 535 (Colo. App. 1992). The claimant, as the proponent for imposition of a penalty, carried the burden of proof to establish that the insurer's failure to timely pay permanent partial disability benefits was willful. *See Johnson v. Denver Tramway Corp, supra*.

F. Claimant presented insufficient evidence concerning the reasons for the Insurer's late payment of PPD, and no persuasive evidence that the Insurer acted "willfully" in its failure to timely pay permanent partial disability benefits. In the absence of evidence to the contrary, the insurer's conduct could have been the result of any number of reasons, such as mere carelessness, oversight, or negligence, which would not subject it to a penalty under § 8-43-401(2)(a), C.R.S. The claimant failed to meet his burden of proving the Insurer willfully withheld payment of permanent partial disability benefits.

Penalties under C.R.S. 8-43-304(1) and (4)

G. Section 8-43-304(4), C.R.S., provides, in relevant part, "In any application for hearing for any penalty pursuant to subsection (1) of this section, the applicant ***shall state*** with specificity the grounds on which the penalty is being asserted." (Emphasis added) This section imposes a specific statutory pleading standard for penalty claims with which the claimant failed to comply.

H. Under Rule 8(A), O.A.C.R.P., the parties to a workers' compensation proceeding are required to use the Application for Hearing and Notice to Set form provided by the OAC, or on a substantially similar form. The Application for Hearing form generated by the Colorado Office of Administrative Courts requires the party seeking penalties to set forth "the dates on which you claim the violation began and ended".

I. Words and phrases shall be read in context and construed according to the rules of grammar and common usage. Words and phrases that have acquired a technical or particular meaning, whether by legislative definition or otherwise shall be construed accordingly. Section 2-4-101, C.R.S. The use of the word "shall" in a legislative enactment is presumed to connote a mandatory meaning. *Burns v. Board of Assessment Appeals of State of Colorado,* 820 P.2d 1175 (Colo.App. 1991).

J. Claimant's Application for Hearing only adequately notified Respondents of a claimed violation of section 8-43-401(2)(a), C.R.S., which provides for a specific penalty, stating, that should an insurer *willfully withhold* permanent partial disability benefits within 30 days of when due, the insurer or self-insured employer shall pay a

penalty to the division of ten percent of the amount of such benefits due. Other than section 8-43-401(2)(a), C.R.S., the Claimant failed to state with specificity any specific statutory section under which penalties were sought. The Claimant failed to set forth the date any claimed violation for an award of general penalties began and ended in his Application for Hearing.

K. The general penalty provision contained in section 8-43-304(1),C.R.S., sets forth four categories of conduct and authorizes the imposition of the described penalties when an employer or insurer: (1) violates any provision of the Act; (2) does any act prohibited by the Act; (3) fails or refuses to perform any duty lawfully enjoined within the time prescribed by the director or the panel, *for which no penalty has been specifically provided,* or (4) fails, neglects or refuses to obey any lawful order of the director or the panel. *See Holliday v. Bestop, Inc.,* 23 P.3d 700 (Colo. 2001). The limiting phrase contained in § 8-43-304(1), C.R.S., "for which no penalty has been specifically provided" modifies the first three categories, but does not modify the fourth category, which is disobeying a lawful *order. Holliday v. Bestop, Inc., supra.; Pena v. Industrial Claim Appeals Office,* 111 P.3d 84 (Colo.App. 2005). The term *"order"* as used in § 8-43-304(1), C.R.S. includes a rule or regulation. See § 8-40-201(15), C.R.S.; *Holliday v. Bestop, Inc., supra; Paint Connection Plus v. Industrial Claim Appeals Office,* 240 P.3d 429 (Colo.App. 2010). The only penalty the claimant pled was a violation of §8-43-401(2)(a), C.R.S. That cause of action has been addressed herein, with a finding that the conduct was not "willful".

L. A violation of "articles 40 to 47 of this title" precedes the alternative penalty clause and is thereby subject to its limitations. *In the Matter of the Claim of Pamela K. Ringler v. King Soopers,* W.C. 4-121-888-11 (March 13, 2013) (2013 WL 1164346) citing *Barbieri v. Helzberg's Diamond Shops,* W.C. No. 4-679-315 (September 25, 2008).

M. Section 8-43-304(1) is a residual penalty clause which applies when no other provision of the Act prescribes a penalty for the conduct in question. *Holliday v. Industrial Claim Appeals Office,* 997 P.2d 1212 (Colo. App. 1999), *cert. granted,* May 15, 2000; *Sears v. Penrose Hospital,* 942 P.2d 1345 (Colo. App. 1997). Section 8-43-402(2)(a), C.R.S. 1999, provides that an insurer which "willfully withholds permanent partial disability benefits" within thirty days of when due, "must pay a penalty to the division of ten percent of the amount of such benefits due." At the commencement of the hearing, the Claimant's representative specifically stated the basis of the claim for penalties was "nonpayment of" permanent partial disability benefits." This statement was entirely consistent with the issues endorsed on the Claimant's Application for Hearing, which noted the basis of the claim for penalties was the insurer's alleged failure to pay permanent partial disability benefits. *See, In the Matter of the Claim of Patricia J. al-Hafeez v. Futurecall Telemarketing West, Inc.,* W. C. No. 4-206-420, 2000 WL 1138206, at *5 (July 24, 2000).

N. Additional case law provides guidance on the specificity required to plead a violation of the general penalty provision. In *In the Matter of the Claim of Halimo Salad*

v. JBS USA, LLC, W.C. No. 4-886-842-06 (March 27, 2014), Claimant alleged penalties for

> [f]iling or relying on false and fraudulent Entry of Appearance and other pleadings and correspondence to conceal, advance, and further longstanding fraud involving designation of non-existent employer in this and other countless other workers' compensation matters and in likewise fraudulently claiming it's a "clerical error", contrary to 8-43-304(1) and 8-43-402.

Respondents moved for summary judgment, requesting that Claimant's application be stricken for failure to identify the alleged fraudulent practices, the specific documents which support Claimant's contentions, or identify the dates the alleged violations began and ended. The ALJ granted summary judgment. In upholding summary judgment, the ICAO noted that Claimant never identified the statute, rule, or order which was allegedly violated by Respondent's errors. Further, Claimant failed to reference how such errors were implicated in her penalty claim. Nor did Claimant specify which filings were at issue, or how Respondent's actions impacted her claim in any manner.

O. Further guidance for the specificity required in requesting penalties under 8-43-304 can be found in *In the Matter of the Claim of Curtis Lovett v. Stroup Insurance Services,* W.C. No. 4-808-092-04 (August 30, 2013). Claimant in *Lovett* sought medical benefits, and claimed penalties for "violation of Rule 16 regarding medical denials for preauthorization with completed request". Respondents replied to the penalty claim by stating in their Response "Failure to state grounds with specific or clarity, §8-43-304(4), CRS." The ALJ denied the request for penalties, noting that the instructions on the Application for Hearing advise the party to "Describe with specificity the grounds on which a penalty is asserted, including the order, rule or section of the statute allegedly violated, and the dates on which you claim the violation began and ended."

P. In upholding the ALJ, the ICAO noted that "violation of rule 16 regarding medical denials for preauthorization with completed request" does not state the basis for a penalty. "To the extent the claimant alleged a violation of the procedures established in Rule 16 governing such a denial, the claimant is required to cite the specific procedure involved. This is a requirement of §8-43-304(4) *and the OAC application instructions.* (emphasis added). Those instructions also request a statement of the dates on which it is claimed the violation began and ended." The ICAO concluded that *Lovett* had failed to satisfy any of the three pleading conditions.

Q. Respondents met their burden of proving the affirmative defense set forth in section 8-43-304(4), C.R.S., failure to set forth with specificity the grounds on which the penalty being sought under section 8-43-304(1), C.R.S. was being asserted. The purpose of the specificity requirement not only allows Respondents the opportunity to properly defend the claim at hearing; properly pled, an Application for penalties would allow Respondents to meet the laudatory goal of correcting any problems promptly. Presumably, this is what any reasonable Claimant would seek, instead of a windfall. The general penalty sought by claimant herein under section 8-43-304(1), C.R.S., is therefore precluded.

ORDER

It is therefore ordered that:

1. Claimant's request for penalties pursuant to §8-43-401(2)(a) is denied and dismissed.

2. Claimant's request for penalties pursuant to §8-43-304(1) is denied and dismissed for failure to plead with sufficient specificity.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether Claimant has produced clear and convincing evidence to overcome the Division Independent Medical Examination (DIME) opinion of Stanley H. Ginsburg, M.D. that she reached Maximum Medical Improvement (MMI) on October 26, 2015 as a result of her September 21, 2014 admitted right shoulder injury.

2. If Claimant is at MMI, whether she has established by a preponderance of the evidence that DIME Dr. Ginsburg's 6% scheduled impairment rating for her admitted right shoulder injury was incorrect.

3. Whether Respondents have demonstrated by a preponderance of the evidence that they are entitled to withdraw their June 8, 2016 Final Admission of Liability (FAL) that acknowledged reasonable, necessary and related medical maintenance benefits designed to relieve the effects of Claimant's September 21, 2014 industrial injury or prevent further deterioration of her condition pursuant to *Grover v. Industrial Comm'n.,* 759 P.2d 705 (Colo. 1988).

FINDINGS OF FACT

1. Claimant worked as a Cashier for Employer. On September 21, 2014 she suffered an admitted industrial injury to her right shoulder. While Claimant was lifting a 36-pack of water her right arm jerked downward and she experienced immediate pain.

2. Claimant began receiving conservative treatment from Authorized Treating Physician (ATP) Thomas White, M.D. An MRI revealed a complete tear to a portion of Claimant's supraspinatus tendon. Dr. White referred Claimant to Robert Hunter, M.D. for a surgical consultation.

3. On March 23, 2015 Claimant underwent right shoulder surgery. Dr. Hunter performed a right shoulder rotator cuff repair and AC joint resection decompression with acromioplasty.

4. Claimant underwent post-operative conservative treatment and physical therapy for several months. She explained that while she was undergoing physical therapy she developed left shoulder pain. Claimant did not recall when her left shoulder began to hurt and did not correlate any specific injury to her symptoms. Instead, Claimant contends that her left shoulder complaints were caused by overcompensation after her right shoulder surgery. She commented that her left shoulder pain is progressively worsening and her right shoulder symptoms are worse than they were before surgery.

5. On October 26, 2015 Dr. White concluded that Claimant had reached Maximum Medical Improvement (MMI) for her September 21, 2014 admitted right shoulder injury. Dr. White released Claimant from care without impairment or the need for maintenance treatment. He explained to Claimant that it might take up to one year for complete recovery from surgery because of her age and history of injury. Dr. White explained that continuing numbness and difficulties that Claimant was experiencing in both shoulders was not work-related.

6. Claimant challenged Dr. White's MMI and impairment determinations and sought a Division Independent Medical Examination (DIME). On March 31, 2016 Claimant underwent a DIME with Stanley H. Ginsburg, M.D. Dr. Ginsburg agreed with Dr. White that Claimant had reached MMI for her right shoulder on October 26, 2015 and her left shoulder complaints were not work-related. Dr. Ginsburg disagreed with Dr. White's 0% permanent impairment rating and assigned a 6% scheduled impairment for Claimant's right shoulder range of motion deficits. He also noted that Claimant was entitled to medical maintenance care.

7. On June 8, 2016 Respondents field an Amended FAL consistent with Dr. Ginsburg's MMI determination and impairment rating. The FAL also recognized that Claimant was entitled to receive medical maintenance benefits.

8. On June 14, 2016 Claimant underwent an independent medical examination with Timothy Hall, M.D. Dr. Hall disagreed with Dr. Ginsburg's findings and concluded that Claimant had not reached MMI. He determined that Claimant's left shoulder complaints were work related due to overcompensation following surgery and she required additional medical treatment for both shoulders. Dr. Hall also provided Claimant with a 16% scheduled impairment rating for the right shoulder. He noted that Dr. Ginsburg failed to include a 10% rating for resection of the bone performed during shoulder surgery in addition to a range of motion impairment.

9. On June 17, 2016 Claimant underwent a second right shoulder MRI. The MRI revealed an intact supraspinatus tendon and evidence of tendinopathy with no objective evidence of additional tearing or fraying.

10. On September 21, 2016 Claimant underwent an independent medical examination with Carlos Cebrian, M.D. Dr. Cebrian performed a physical examination and medical records review. He agreed with Drs. White and Ginsburg that Claimant had reached MMI on October 26, 2015 and her left shoulder complaints were not work-related. Dr. Cebrian remarked that Claimant had poor posture with rounded shoulders and kyphosis of the cervical spine. He noted that Claimant had not been working for several months. There was no explanation for her continued left shoulder symptoms because her activities lacked the combination of repetition and force to produce an injury. Dr. Cebrian agreed with the 6% scheduled impairment rating for Claimant's right shoulder assigned by Dr. Ginsburg. He noted that Dr. Ginsburg correctly did not assign an additional impairment for a distal clavicle resection because Claimant had undergone an acromioplasty. Dr. Cebrian explained that an acromioplasty is a minor shaving of the bone that is different from a resection of the bone.

11. Dr. Hall testified at the hearing in this matter. He maintained that Claimant had not reached MMI and required additional left shoulder treatment. Dr. Hall commented that overcompensation was a common condition with shoulder injuries and Claimant had guarded her right shoulder following surgery. He noted that Claimant warranted an additional 10% scheduled impairment rating for a distal clavicle resection. Dr. Hall remarked that a 10% rating for a distal clavicle resection was mandatory pursuant to the Colorado Division of Workers' Compensation *Impairment Rating Tips* (*Impairment Rating Tips*).

12. Claimant also testified at the hearing in this matter. She explained that she continues to suffer pain in both of her shoulders. Claimant acknowledged that she has not worked for Employer since January 2016 but her pain symptoms continue to worsen.

13. Dr. Cebrian testified at the hearing in this matter. He agreed with Dr. Ginsburg that Claimant reached MMI on October 26, 2015 and warranted a 6% scheduled impairment rating for her right shoulder injury. However, Dr. Cebrian disagreed with Dr. Ginsburg that Claimant required medical maintenance treatment. He explained that Claimant suffered from kyphosis and would continue to experience pain due to degenerative, age-related factors.

14. Dr. Cebrian also explained that Dr. Hall incorrectly concluded that Claimant's left shoulder condition was causally related to her September 21, 2014 injury. He commented that Claimant did not mention any left shoulder symptoms prior to reaching MMI. Moreover, he disagreed with Dr. Hall that Claimant warranted a 16% extremity rating for her right shoulder injury based on range of motion deficits and the distal clavicle resection. Although Dr. Cebrian acknowledged that Claimant was entitled to a 6% extremity impairment rating for range of motion deficits, the additional 10% rating noted by Dr. Hall was inappropriate. Relying on the *Impairment Rating Tips,* Dr. Cebrian commented that it is not mandatory to assign a 10% rating based on the specific procedure. Instead, Dr. Cebrian noted that the rating physician has discretion to assign the additional impairment "if" warranted and based on the total clinical picture. He specifically commented that the *Impairment Rating Tips* are designed to capture all possible surgical outcomes. Notably, a physician can assign "up to" an additional 10% impairment. Dr. Cebrian concluded that the additional impairment was not warranted.

15. Claimant has failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Ginsburg that she reached MMI on October 26, 2015 as a result of her September 21, 2014 admitted right shoulder injury. Initially, Dr. Ginsburg agreed with ATP Dr. White that Claimant had reached MMI for her right shoulder on October 26, 2015 and her left shoulder complaints were not work-related. Moreover, Dr. Cebrian agreed with Drs. White and Ginsburg that Claimant had reached MMI on October 26, 2015 and her left shoulder complaints were not work-related. Dr. Cebrian remarked that Claimant had poor posture with rounded shoulders and kyphosis of the cervical spine. He noted that Claimant had not been working for several months. There was no explanation for her continued left shoulder symptoms because her activities lacked the requisite repetition and force to produce an injury.

16. In contrast, Dr. Hall disagreed with Dr. Ginsburg's findings and concluded that Claimant had not reached MMI. He determined that Claimant's left shoulder complaints were work-related due to overcompensation following surgery and she required additional medical treatment for both shoulders. However, Dr. Hall did not detail how Dr. Ginsburg erred in determining that Claimant reached MMI on October 26, 2015 or otherwise incorrectly applied the *AMA Guides for the Evaluation of Permanent Impairment Third Edition (Revised) (AMA Guides*). Accordingly, Claimant has failed to produce unmistakable evidence free from serious or substantial doubt that Dr. Ginsburg's MMI determination was incorrect.

17. Claimant has failed to establish that it is more probably true than not that DIME Dr. Ginsburg's 6% scheduled impairment rating for her admitted right shoulder injury was incorrect. Initially, Dr. Ginsburg assigned a 6% scheduled impairment rating for Claimant's right shoulder range of motion deficits. In contrast, Dr. Hall noted that Claimant warranted an additional 10% scheduled rating for a distal clavicle resection. He remarked that a 10% rating for a distal clavicle resection was mandatory pursuant to the *Impairment Rating Tips*. Nevertheless, Dr. Hall acknowledged that only a small portion of the bone was shaved during the surgical procedure.

18. Dr. Cebrian persuasively agreed with Dr. Ginsburg that Claimant warranted a 6% scheduled impairment rating for her admitted right shoulder injury. He disagreed with Dr. Hall that Claimant warranted a 16% extremity rating for her right shoulder injury based on range of motion deficits and the distal clavicle resection. Specifically, the additional 10% rating noted by Dr. Hall was inappropriate. Relying on the *Impairment Rating Tips,* Dr. Cebrian commented that it is not mandatory to issue a 10% rating based on the specific procedure. Instead, Dr. Cebrian noted that the rating physician has discretion to assign the additional impairment "if" warranted and based on the total clinical picture. Dr. Cebrian specifically commented that the *Impairment Rating Tips* are designed to capture all possible surgical outcomes. Notably, a physician can assign "up to" an additional 10% impairment. The record thus reveals that Dr. Ginsburg properly exercised his discretion by assigning a 6% scheduled impairment rating for Claimant's admitted right shoulder injury.

19. Respondents have established that it is more probably true than not that they are entitled to withdraw their June 8, 2016 FAL that acknowledged reasonable, necessary and related medical maintenance benefits designed to relieve the effects of Claimant's September 21, 2014 industrial injury or prevent further deterioration of her condition. ATP Dr. White placed Claimant at MMI on October 26, 2015 without the need for maintenance treatment. He had explained to Claimant that it might take up to one year for complete recovery from surgery because of her age and history of injury. Dr. White remarked that continuing numbness and difficulties that Claimant was experiencing in her shoulders was not work-related. Dr. Cebrian also determined that Claimant did not require medical maintenance treatment. He explained that Claimant suffered from kyphosis and would continue to experience pain due to degenerative, age-related factors. Although Dr. Ginsburg recommended medical maintenance treatment, the persuasive opinions of Drs. White and Cebrian reflect that additional care will not likely relieve the effects of Claimant's September 21, 2014 industrial injury or

prevent further deterioration of her condition. Respondents are thus permitted to withdraw their admission for medical maintenance treatment in the June 8, 2016 FAL.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Overcoming the DIME

4. In ascertaining a DIME physician's opinion, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998). A DIME physician's determination regarding MMI and permanent impairment consists of his initial report and any subsequent opinions. *In Re Dazzio,* W.C. No. 4-660-149 (ICAP, June 30, 2008); *see Andrade v. Industrial Claim Appeals Office,* 121 P.3d 328 (Colo. App. 2005).

5. A DIME physician is required to rate a claimant's impairment in accordance with the *AMA Guides*. §8-42-107(8)(c), C.R.S.; *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117, 1118 (Colo. App. 2003). However, deviations from the *AMA Guides* do not mandate that the DIME physician's impairment rating was incorrect. *In Re Gurrola,* W.C. No. 4-631-447 (ICAP, Nov. 13, 2006). Instead, the ALJ may consider a technical deviation from the *AMA Guides* in determining the weight to be accorded the DIME physician's findings. *Id.* Whether the DIME physician properly

applied the *AMA Guides* to determine an impairment rating is generally a question of fact for the ALJ. *In Re Goffinett,* W.C. No. 4-677-750 (ICAP, Apr. 16, 2008).

. 6. A DIME physician's findings of MMI, causation, and impairment are binding on the parties unless overcome by "clear and convincing evidence." §8-42-107(8)(b)(III), C.R.S.; *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAP, July 19, 2004); *see Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAP, Nov. 17, 2000).

7. However, the DIME provisions of §8-42-107(8)(c), C.R.S. only apply in cases of whole body impairment. *See Egan v. Industrial Claim Appeals Office*, 971 P.2d 664, 666 (Colo. App. 1998). The percentage rating for scheduled benefits is determined based simply upon the preponderance of the evidence standard. *See In Re Baran,* W.C. No. 4-906-018 (ICAP, Oct. 16, 2015). Because Dr. Ginsburg assigned a right shoulder extremity impairment rating, the preponderance standard applies in evaluating her permanent impairment.

8. As found, Claimant has failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Ginsburg that she reached MMI on October 26, 2015 as a result of her September 21, 2014 admitted right shoulder injury. Initially, Dr. Ginsburg agreed with ATP Dr. White that Claimant had reached MMI for her right shoulder on October 26, 2015 and her left shoulder complaints were not work-related. Moreover, Dr. Cebrian agreed with Drs. White and Ginsburg that Claimant had reached MMI on October 26, 2015 and her left shoulder complaints were not work-related. Dr. Cebrian remarked that Claimant had poor posture with rounded shoulders and kyphosis of the cervical spine. He noted that Claimant had not been working for several months. There was no explanation for her continued left shoulder symptoms because her activities lacked the requisite repetition and force to produce an injury.

9. As found, in contrast, Dr. Hall disagreed with Dr. Ginsburg's findings and concluded that Claimant had not reached MMI. He determined that Claimant's left shoulder complaints were work-related due to overcompensation following surgery and she required additional medical treatment for both shoulders. However, Dr. Hall did not detail how Dr. Ginsburg erred in determining that Claimant reached MMI on October 26, 2015 or otherwise incorrectly applied the *AMA Guides for the Evaluation of Permanent Impairment Third Edition (Revised) (AMA Guides*). Accordingly, Claimant has failed to produce unmistakable evidence free from serious or substantial doubt that Dr. Ginsburg's MMI determination was incorrect.

10. As found, Claimant has failed to establish by a preponderance of the evidence that DIME Dr. Ginsburg's 6% scheduled impairment rating for her admitted right shoulder injury was incorrect. Initially, Dr. Ginsburg assigned a 6% scheduled impairment rating for Claimant's right shoulder range of motion deficits. In contrast, Dr. Hall noted that Claimant warranted an additional 10% scheduled rating for a distal clavicle resection. He remarked that a 10% rating for a distal clavicle resection was mandatory pursuant to the *Impairment Rating Tips*. Nevertheless, Dr. Hall acknowledged that only a small portion of the bone was shaved during the surgical procedure.

11. As found, Dr. Cebrian persuasively agreed with Dr. Ginsburg that Claimant warranted a 6% scheduled impairment rating for his admitted right shoulder injury. He disagreed with Dr. Hall that Claimant warranted a 16% extremity rating for her right shoulder injury based on range of motion deficits and the distal clavicle resection. Specifically, the additional 10% rating noted by Dr. Hall was inappropriate. Relying on the *Impairment Rating Tips,* Dr. Cebrian commented that it is not mandatory to issue a 10% rating based on the specific procedure. Instead, Dr. Cebrian noted that the rating physician has discretion to assign the additional impairment "if" warranted and based on the total clinical picture. Dr. Cebrian specifically commented that the *Impairment Rating Tips* are designed to capture all possible surgical outcomes. Notably, a physician can assign "up to" an additional 10% impairment. The record thus reveals that Dr. Ginsburg properly exercised his discretion by assigning a 6% scheduled impairment rating for Claimant's admitted right shoulder injury.

Withdrawing the FAL/Medical Maintenance Benefits

12. To prove entitlement to medical maintenance benefits, a claimant must present substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve the effects of the industrial injury or prevent further deterioration of his condition. *Grover v. Industrial Comm'n.,* 759 P.2d 705, 710-13 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609, 611 (Colo. App. 1995). Once a claimant establishes the probable need for future medical treatment he "is entitled to a general award of future medical benefits, subject to the employer's right to contest compensability, reasonableness, or necessity." *Hanna v. Print Expediters, Inc.*, 77 P.3d 863, 866 (Colo. App. 2003); *see Karathanasis v. Chilis Grill & Bar,* W.C. No. 4-461-989 (ICAP, Aug. 8, 2003). Whether a claimant has presented substantial evidence justifying an award of *Grover* medical benefits is one of fact for determination by the Judge. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 919 P.2d 701, 704 (Colo. App. 1999).

13. The court of appeals has previously concluded that the burden of proof to establish compensability remained on the claimant even when an employer was attempting to withdraw an admission of liability. However, the Colorado Workers' Compensation Act has since been amended to change the burden of proof when respondents are attempting to withdraw admissions of liability. Specifically, respondents must now prove by a preponderance of evidence that the claimant did not suffer a compensable injury as defined under Colorado law. §8-43-201(1) (2015),

C.R.S. On February 18, 2008 Respondents filed a FAL in response to Dr. Crosby's MMI and impairment determinations. The FAL also specified that Claimant was entitled to receive reasonable, necessary and related medical benefits. In order to withdraw the FAL Respondents thus have the burden of proving by a preponderance of the evidence that Claimant is not entitled to receive reasonable, necessary and related medical maintenance benefits designed to relieve the effects of her April 18, 2005 industrial injury or prevent further deterioration of her condition pursuant to *Grover v. Industrial Comm'n.,* 759 P.2d 705 (Colo. 1988).

14. As found, Respondents have established that it is more probably true than not that they are entitled to withdraw their June 8, 2016 FAL that acknowledged reasonable, necessary and related medical maintenance benefits designed to relieve the effects of Claimant's September 21, 2014 industrial injury or prevent further deterioration of her condition. ATP Dr. White placed Claimant at MMI on October 26, 2015 without the need for maintenance treatment. He had explained to Claimant that it might take up to one year for complete recovery from surgery because of her age and history of injury. Dr. White remarked that continuing numbness and difficulties that Claimant was experiencing in her shoulders was not work-related. Dr. Cebrian also determined that Claimant did not require medical maintenance treatment. He explained that Claimant suffered from kyphosis and would continue to experience pain due to degenerative, age-related factors. Although Dr. Ginsburg recommended medical maintenance treatment, the persuasive opinions of Drs. White and Cebrian reflect that additional care will not likely relieve the effects of Claimant's September 21, 2014 industrial injury or prevent further deterioration of her condition.. Respondents are thus permitted to withdraw their admission for medical maintenance treatment in the June 8, 2016 FAL.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant has failed to overcome the DIME opinion of Dr. Ginsburg. She reached MMI on October 26, 2015.

2. Claimant sustained a 6% scheduled impairment for her right shoulder as a result of her September 21, 2014 injury.

3. Respondents are permitted to withdraw their admission for medical maintenance treatment in the June 8, 2016 FAL.

4. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20)

days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that he suffered a compensable left foot injury during the course and scope of his employment with Employer on December 19, 2015.

2. Whether Claimant has proven by a preponderance of the evidence that he is entitled to receive reasonable, necessary and causally related medical benefits for his left foot injury.

3. Whether Claimant has established by a preponderance of the evidence that he is entitled to receive Temporary Total Disability (TTD) benefits.

4. Whether Respondents have demonstrated by a preponderance of the evidence that Claimant is precluded from receiving indemnity benefits because he was responsible for his termination from employment under §8-42-105(4) C.R.S and §8-42-103(1)(g) C.R.S. (collectively "termination statutes").

FINDINGS OF FACT

1. Claimant began employment with Employer as a Seasonal Worker in approximately October 2015. His job duties involved working in the stockroom, sorting boxes and unloading inventory from truck deliveries.

2. On October 19, 2015 Claimant received an Employee Handbook that detailed Employer's various employment policies. The Handbook specifically outlined the duty of an employee to immediately report an occupational injury to a manager. Claimant confirmed his receipt and acknowledgment of these policies by his signature on October 19, 2015 and hearing testimony.

3. On November 10, 2015 Claimant reported to Manager Jeremy Waldorff that he had tripped over some boxes, landed on his left hand and forearm and was experiencing soreness. Employer directed Claimant to NextCare Urgent Care for medical treatment. He was diagnosed with a left hand crush injury. After conservative care he reached Maximum Medical Improvement (MMI) on January 10, 2015.

4. Claimant testified that on December 10, 2015 he arrived at work to find the warehouse dark and devoid of other employees. He reported to his station and began sorting inventory. Claimant explained that as he was working at a sorting table he was suddenly struck from behind on his left side at knee level by a two-wheeled cart. He immediately experienced pain in his left knee and "let out a yell." Claimant rubbed his left knee area for approximately five minutes to alleviate the pain. He did not turn around to see who had struck him because something was telling him it would not be

safe to turn around. He speculated that he might have been struck by a coworker who had been disciplined due to Claimant's November 10, 2015 injury. The coworker had been angry and planning to get back at him for reporting the injury.

5. As the day progressed Claimant began to experience severe pain in both feet and had difficulty walking. Claimant completed his shift and went home. He did not report his left leg injury.

6. On December 29, 2015 Claimant visited Next Care Urgent Care for an evaluation. He reported aching and swelling in his left foot that had started approximately four weeks earlier. Claimant had been moving boxes when his feet began to hurt. His left leg was also very swollen. The report specified that "there was no injury." Claimant was diagnosed with "edema of the left lower extremity."

7. Mr. Waldorff testified that Claimant called him on December 17, 2015 and advised that he would not be reporting to work for the rest of the week because his feet had swelled. Mr. Waldorff responded that he would thus see Claimant on Monday, December 21, 2015. However, Claimant did not report to work on either December 21, 2015 or December 22, 2015. He was thus terminated effective December 22, 2015.

8. Mr. Waldorff did not hear from Claimant again until January 25, 2016. He received a letter at employer's store asserting Claimant was injured between November 13, 2015 and December 4, 2015. Mr. Waldorff testified that he checked with his co-managers and Claimant's coworkers, but no one was aware of Claimant's left leg injury. Finally, no employee or manager had been disciplined for Claimant's November 10, 2015 injury.

9. Henry J. Roth, M.D. testified at the hearing in this matter. He reviewed Claimant's medical records and remarked that Claimant's first medical visit after the December 10, 2015 event did not include a description of the mechanism of injury. Moreover, Dr. Roth commented that a June 24, 2016 MRI reviewed by an orthopedist at Claimant's personal medical provider Kaiser Permanente did not reveal any fracture in Claimant's left lower extremity. Furthermore, Claimant's contention that he was struck at knee level by a cart would not have caused heel and foot pain. Dr. Roth explained that Claimant suffered from bilateral lower extremity and foot symptoms. Claimant specifically exhibited swelling in both feet that suggested a disease process or vascular compromise in his legs. Dr. Roth summarized that Claimant did not suffer an acute injury and his lower extremity symptoms are not related to his work activities for Employer on December 10, 2015.

10. Claimant has failed to demonstrate that it is more probably true than not that he suffered a compensable left foot injury during the course and scope of his employment with Employer on December 10, 2015. Claimant explained that while working at a sorting table on December 10, 2015 he was suddenly struck from behind on his left side at knee level by a two-wheeled cart. He immediately experienced pain in his left knee and "let out a yell." However, the medical records, testimony and

persuasive medical opinion of Dr. Roth reflect that Claimant did not suffer an acute injury while at work on December 10, 2015.

11. On December 29, 2015 Claimant visited Next Care Urgent Care for an evaluation. He reported aching and swelling in his left foot that had started approximately four weeks earlier. Claimant had been moving boxes when his feet began to hurt. His left leg was also very swollen. Claimant was diagnosed with "edema of the left lower extremity." On January 25, 2016 Mr. Waldorff received a letter at employer's store asserting Claimant was injured between November 13, 2015 and December 4, 2015. Mr. Waldorff testified that he checked with his co-managers and Claimant's coworkers, but no one was aware of Claimant's left leg injury. Furthermore, an MRI of Claimant's left lower extremity did not reveal any acute fracture. Finally, Dr. Roth persuasively explained that Claimant suffered from bilateral lower extremity and foot symptoms. Claimant specifically exhibited swelling in both feet that suggested a disease process or vascular compromise in his legs. Dr. Roth summarized that Claimant did not suffer an acute injury and his lower extremity symptoms are not related to his work activities for Employer on December 10, 2015. Accordingly, Claimant's work activities on December 10, 2015 did not aggravate, accelerate or combine with his pre-existing condition to produce a need for medical treatment.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAP, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

7. As found, Claimant has failed to demonstrate by a preponderance of the evidence that he suffered a compensable left foot injury during the course and scope of his employment with Employer on December 10, 2015. Claimant explained that while working at a sorting table on December 10, 2015 he was suddenly struck from behind on his left side at knee level by a two-wheeled cart. He immediately experienced pain in his left knee and "let out a yell." However, the medical records, testimony and persuasive medical opinion of Dr. Roth reflect that Claimant did not suffer an acute injury while at work on December 10, 2015.

8. As found, on December 29, 2015 Claimant visited Next Care Urgent Care for an evaluation. He reported aching and swelling in his left foot that had started approximately four weeks earlier. Claimant had been moving boxes when his feet began to hurt. His left leg was also very swollen. Claimant was diagnosed with "edema of the left lower extremity." On January 25, 2016 Mr. Waldorff received a letter at employer's store asserting Claimant was injured between November 13, 2015 and

December 4, 2015. Mr. Waldorff testified that he checked with his co-managers and Claimant's coworkers, but no one was aware of Claimant's left leg injury. Furthermore, an MRI of Claimant's left lower extremity did not reveal any acute fracture. Finally, Dr. Roth persuasively explained that Claimant suffered from bilateral lower extremity and foot symptoms. Claimant specifically exhibited swelling in both feet that suggested a disease process or vascular compromise in his legs. Dr. Roth summarized that Claimant did not suffer an acute injury and his lower extremity symptoms are not related to his work activities for Employer on December 10, 2015. Accordingly, Claimant's work activities on December 10, 2015 did not aggravate, accelerate or combine with his pre-existing condition to produce a need for medical treatment.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's request for Workers' Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: July 27, 2017.

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he sustained a compensable injury on June 21, 2015.

2. Whether Claimant has established by a preponderance of the evidence that he is entitled to a general award of reasonable and necessary medical benefits to treat his June 21, 2015 injury.

STIPULATIONS

1. Claimant's average weekly wage is $856.52.

FINDINGS OF FACT

1. Claimant was employed by Employer as a night crew foreman and was employed by Employer for approximately 11 years.

2. Claimant alleges that on June 21, 2015, Employer's power jack was unavailable and he was using and moving a manual jack to unload a trailer when he felt a pop in his left shoulder and sustained an injury.

3. Claimant testified that prior to June 21, 2015 he had problems with both of his shoulders that were moderate and that he was able to work with the problems. Claimant testified that his pain became severe on June 21, 2015 when he felt the pop in his left shoulder and that he then contacted his own physician Dr. Weinerman for treatment. Claimant testified that Dr. Weinerman had previously treated Claimant's knees.

4. Claimant also alleges that he reported the injury to his supervisor on June 21, 2015 and that he was told that he needed to see the company doctor.

5. On the Workers' Claim for Compensation form, Claimant indicated that he was unloading a trailer with a manual jack on June 21, 2015 and was pulling a heavy skid off the trailer when he heard a pop in his left shoulder. *See* Exhibits 1, A.

6. Claimant was referred by Employer for treatment and was evaluated at Health One on June 22, 2015. At this visit, Claimant did not report that he was injured the day prior on June 21, 2015. Rather, he reported that he was injured nearly one month prior on May 27, 2015 while pulling a heavy manual jack and pulling backwards when he felt a sharp sudden pain in the left shoulder. Claimant reported that he had

continued to work but with significant pain and that by the end of the week he decided to see his orthopedist, Dr. Weinerman who recommended an MRI. *See* Exhibit H.

7. The records of Dr. Weinerman show that Claimant had treatment beginning in mid May of 2015 for his bilateral shoulder problems.

8. On May 19, 2015 Claimant was evaluated by Dr. Weinerman for bilateral shoulder pain. On the patient medical history form, Claimant noted the onset of symptoms as January of 2015, that the symptoms were not due to an accident or workers comp issue, and that his pain was sharp and radiating at a level of 9.5/10. Claimant reported to Dr. Weinerman that he had bilateral shoulder pain with the left shoulder worse. Claimant reported that his pain was aggravated by activities of daily living and denied any specific injury to the shoulder. Claimant reported that the shoulder pain had been on and off for years and that he was supposed to get an MRI done several years ago but did not. Dr. Weinerman found positive neer impingement signs, positive Obrien's tests, and recommended that Claimant undergo bilateral shoulder MRIs. Dr. Weinerman noted he would see Claimant after the MRIs were obtained, diagnosed impingement syndrome, and recommended no reaching above shoulder level. *See* Exhibits 5, D.

9. On June 1, 2015 Claimant underwent MRI scans of his left shoulder and his right shoulder that were interpreted by Bao Nguyen, M.D.

10. For the left shoulder MRI, Dr. Nguyen provided the impression of: central rotator cuff tendinosis with high-grade partial tearing of the undersurfaces of the distal supraspinatus and some anterior fibers of the infraspinatus tendon; curved acromion and arthritic AC joint; type IV SLAP lesion and nearly ruptured long biceps tendon along its intracapsular segment; some fraying of the distal subscapularis tendon. *See* Exhibits 6, G.

11. For the right shoulder MRI, Dr. Nguyen compared it to the prior November, 2013 MRI and noted that several issues were again seen. Dr. Nguyen provided the impression of: central rotator cuff tendinosis with high grade partial tearing of both distal supraspinatus and infraspinatus tendons; narrowed coracoacromial outlet due to a laterally downsloping curved acromion and a severely arthritic acromioclavicular joint; tear of the anterosuperior labrum with some tear propagation into the biceps anchor; fraying of the long biceps tendon at the far left lateral rotator interval; intratendinous fissuring of the upper distal fibers of the subscapularis tendon; and a small concave deformity of the posterolateral surface of the humeral head, suggesting a possible non acute Hills Sachs lesion. *See* Exhibits 7, G.

12. On June 11, 2015 Claimant was evaluated by Dr. Weinerman to follow up on the bilateral shoulder MRIs. Dr. Weinerman found abnormal partial articular surface rotator cuff tear type IV SLAP lesions and shoulder bursitis, bilaterally. Dr. Weinerman diagnosed chronic SLAP tears and chronic partial rotator cuff tears. Bilateral ultrasound guided shoulder injections were performed at this visit by Dr. Weinerman and he

recommended that Claimant complete a home exercise program and provided restrictions of no reaching above the shoulder level. *See* Exhibits 5, E.

13. Despite Claimant's testimony and reports that he saw Dr. Weinerman either after the June 21, 2015 alleged incident, or a week after a May 27, 2015 incident, the records reflect that his first visit with Dr. Weinerman was on May 19, 2015. Additionally, at the May 19, 2015 visit Claimant reported both that his severe pain had begun in January of 2015 and that he had problems with his shoulders on and off for years.

14. Claimant's history shows that he was evaluated for shoulder pain and impingement in the fall of 2013. In November of 2013 Claimant underwent an MRI of his right shoulder that showed: central rotator cuff tendinosis; a high grade partial tear of the distal supraspinatus tendon; severely arthritic acromioclavicular joint; a laterally downsloping acromion; a possible tear of the anterosuperior labrum with extension into the biceps anchor suggesting a type IV SLAP lesion; and suspected small partial tear of the long biceps tendon at the far left lateral rotator interval. It was noted that Claimant was unable to tolerate the full MRI scan due to claustrophobia and that a supplemental study would be performed. There is no evidence that the November 2013 MRI was rescheduled or that additional images were taken until Dr. Weinerman ordered the more recent June 1, 2015 bilateral shoulder MRIs. *See* Exhibits 5, G.

15. Claimant's history also shows degenerative problems in his knees dating back to 2008. *See* Exhibit G.

16. Ten days after the June 11, 2015 bilateral shoulder injections performed by Dr. Weinerman, Claimant alleges that he sustained the work related injury at question in this claim.

17. In the incident report completed by Employer, the description of the incident/injury is listed both as damage over time from push-pulling u-boats and as unloading a truck with a jack on June 21, 2015. An assistant store manager provided a written statement indicating that Claimant came into the store on June 21, 2015 with a doctor's note explaining that Claimant had pain in his shoulder from, over time, pulling boats, cages, and using the manual jack when the power jack was not working. Claimant's doctor's paperwork was dated June 1, 2015. Claimant was asked why he waited to file a claim and Claimant reported that the issue wasn't bothering him until the other day. It was explained to Claimant that he could not return to work until he was released and that he needed to see a workman's comp doctor. *See* Exhibit K.

18. Shortly after the alleged June 21, 2015 work injury, Claimant resigned from his employment with Employer. Claimant submitted a resignation letter effective July 4, 2015. Claimant had intended and planned to retire before the alleged work injury happened as he was 62 years old and had been waiting for his youngest child to finish college. *See* Exhibits 10, J.

19. On August 13, 2015 Claimant was evaluated at the Denver Arthritis Clinic for inflammatory polyarthropathy. *See* Exhibit H.

20. On August 20, 2015, Insurer denied the claim for injury/illness not being work related and indicated pre-existing bilateral shoulder problems. *See* Exhibit 3.

21. On October 1, 2015 Dr. Weinerman issued a letter indicating that Claimant was being seen for left shoulder pain and that he believed it was from years of repetitive overhead use of Claimant's arm at work. *See* Exhibit 5.

22. On January 10, 2016 Claimant submitted a letter to claims adjuster, Sharmie Jensen. Claimant reported that his orthopedic specialist, Dr. Weinerman disagreed with the decision to deny Claimant's workers' compensation claim and that Dr. Weinerman believed that the work duties over the last 10 years with Employer were the cause of Claimant's left shoulder symptoms and findings. In the letter, Claimant stated that his symptoms in the left shoulder began in May of 2015 and that he was initially not sure of the source of the left shoulder pain but that the symptoms significantly worsened on May 27, 2015 when he was pulling a loaded pallet of grocery products with a manual pallet jack and felt a sharp pain in the left upper shoulder. *See* Exhibit 4.

23. On November 2, 2016 Claimant underwent an independent medical examination performed by Wallace Larson, M.D. Claimant reported that he was unloading a delivery on June 21, 2015 when he pulled a skid off a trailer with a manual jack and felt something pop in his left shoulder. Claimant reported that he had continued shoulder pain and continued to work light duty with a 20 pound limit and was restricted from lifting above his head. Claimant reported that he went to orthopedic surgeon Dr. Weinerman, that an MRI was performed, and that he was told he would eventually need surgery. Claimant reported that he had received at least three injections that took away half of the pain but that it flared up at night. *See* Exhibits 8, H.

24. Claimant reported to Dr. Larson that he had some prior sore aching in his left shoulder but not bad enough to seek any treatment and that he had no prior treatment but soreness that may have been present since early 2014. Claimant reported that his right shoulder was okay. Claimant reported that he retired in July of 2015 and that it was too difficult to continue. On examination, Dr. Larson found reduced range of motion and painful rotation, tenderness, positive impingement tests, positive speed's tests, and that Claimant was somewhat weaker on the left side compared to the right. *See* Exhibits 8, H.

25. After reviewing medical records Dr. Larson opined that Claimant did not have a workers' compensation injury. Dr. Larson noted that the medical records showed bilateral shoulder pain that was aggravated by activities of daily living and found similar degenerative changes in both of Claimant's shoulders including degenerative changes of the rotator cuffs and likely bilateral SLAP tears. Dr. Larson opined that the medical records including the May 19, 2015 record of Dr. Weinerman indicate a chronic

process aggravated by activities of daily living with no specific episode of trauma. Dr. Larson opined that Claimant did not have industrial causation but had degenerative changes in both of his shoulders. *See* Exhibits 8, H.

26. On March 2, 2017 Dr. Weinerman issued a consultation note. In the note he indicated that he disagreed with Dr. Larson's finding and opined that he did not think there was any question that the injury Claimant sustained at work when unloading groceries and pulling a skid with a manual jack was part of the problem. Dr. Weinerman opined that Claimant may have had some pre-existing shoulder problems including some possible rotator cuff pathology, but that there was no question that the injury exacerbated the condition and caused Claimant the need to come in for evaluation and caused significant permanent damage to the left rotator cuff beyond what Claimant was experiencing before the injury. Dr. Weinerman opined that Claimant's rotator cuff injury was exacerbated by the injury significantly and that surgery was a potential option. *See* Exhibit 5.

27. Claimant's testimony is not found credible or persuasive. Claimant's reports of date of injury vary from May 27, 2015 to June 21, 2015 and his reports of onset of pain and symptoms are not clear or consistent throughout the claim.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned

expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

Claimant is required to prove by a preponderance of the evidence that the conditions for which he seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. *See* § 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant has failed to meet his burden to establish that he sustained a work related left shoulder injury on June 21, 2015. Claimant also has not established that he aggravated or accelerated what is shown by medical records to be a severe pre-existing left shoulder condition such to produce disability or the need for medical treatment. As found above, it is unclear from the testimony and various records what the actual date of injury is. Claimant testified and is claiming a specific injury and incident on June 21, 2015 where he alleges his left shoulder popped while unloading a trailer. However, he provided this same alleged mechanism of injury explanation with an injury date of May 27, 2015 to both Health One and to Insurer. The records reflect that Claimant went to Dr. Weinerman on May 19, 2015 prior to either the reported May 27 or June 21 incident date and that on May 19, 2015 Claimant reported that his pain was 9.5/10 and had

begun in January of 2015 with no specific incident or injury. Claimant also reported to Dr. Weinerman that he had pain in his shoulders that had been on and off for years.

As found above, a 2013 MRI of the right shoulder showed severe problems. Although there was no MRI of the left shoulder in 2013, the June 1, 2015 MRI of the left shoulder shows severe degenerative problems in the left shoulder that pre-date the incident which allegedly occurred 20 days after the MRI was performed. Dr. Larson's opinion that Claimant does not have a workers' compensation injury is found credible and persuasive. Dr. Larson noted similar degenerative changes in both the left shoulder and right shoulder including the degenerative changes in the rotator cuffs and bilateral SLAP tears. Dr. Larson opined credibly that the medical records indicate a chronic process and that there was no industrial causation. As found above, Claimant had bilateral shoulder injections prior to June 21, 2015, Claimant had 9.5/10 pain prior to June 21, 2015, and Claimant had restrictions on his ability to lift overhead or work prior to June 21, 2015.

Although Claimant is alleging a specific incident on June 21, 2015 that caused him injury or the need for medical treatment, Claimant is not found credible or persuasive. Rather, the evidence establishes that Claimant had ongoing shoulder problems that he reported had been on and off for several years, Claimant had reported that the severe pain in the left shoulder began in January of 2015, and Claimant had received significant treatment in the months just prior to this alleged injury. Claimant is not found credible that an incident occurred on June 21, 2015 aggravating his condition or accelerating his need for treatment. Rather, Claimant had severe pre-existing problems with his left shoulder that pre-dated June 21, 2015 and Claimant has failed to establish a causal connection to his employment duties.

The opinions of Dr. Weinerman on causation are not found persuasive. Initially in October of 2015 Dr. Weinerman issued a letter indicating that he believed Claimant's left shoulder pain was from years of repetitive overhead use of Claimant's arm at work. However, Claimant is not alleging an occupational disease in this case, but rather that a specific injury occurred. Later, in March of 2017, Dr. Weinerman issued a consultation note in response to Dr. Larson's IME report. In this note, Dr. Weinerman opined that although Claimant may have had some pre-existing shoulder problems including some possible rotator cuff pathology, the injury at work exacerbated the underlying problems and caused Claimant to come in for evaluation and caused Claimant further damage to the rotator cuff beyond what Claimant was experiencing before the injury occurred. Dr. Weinerman appears to be unaware that Claimant came in for evaluation, underwent MRIs, and received injections prior to the alleged injury in this case. It was not the alleged injury on June 21, 2015 that caused Claimant to come in for evaluation. Rather, it was Claimant's underlying pre-existing shoulder problems and as he told Dr. Weinerman at the May 19, 2015 appointment, the severe pain and problems dated back to at least January of 2015. Dr. Weinerman fails to account for the discrepancies in dates of the injury, treatment, and onset of severe pain and thus is not found persuasive.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish by a preponderance of the evidence that he sustained a compensable injury on June 21, 2015.

2. Claimant therefore is not entitled to an award of medical benefits and his claim is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 26, 2017,

/s/ Michelle E. Jones

Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-962-740-06

ISSUES

- Whether Respondents overcame the Division IME Report of Clarence Henke, M.D. dated January 12, 2017, as it pertains to MMI, PPD, and relatedness of Claimant's cervical spine treatment.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. On September 25, 2014 and September 26, 2014, Claimant sustained admitted work related injuries to her neck, right arm, and right shoulder.

2. The mechanism of injury Claimant reported to Dr. Freutter, who prepared a Physician's Report of Workers' Compensation Injury, was that she was standing on a ladder holding a steel and Plexiglas shelf over her head on the palm of her right hand. She reported that the shelf weighed "40 pounds or more," but testified at hearing that the shelf weighed ninety pounds. On September 27, 2014, Claimant reported that she was "installing shelf on ladder approx. 12' in air."

3. Claimant's injury complaints evolved over time.

- On September 27, 2014, when Claimant first sought treatment, she complained of right arm and shoulder pain, rating it as 6/10. On physical examination, her neck was supple and non-tender. X-rays of Claimant's right shoulder revealed no acute fracture or dislocation, mild degenerative arthritis of her acromioclavicular joint, and osteopenia. Her provider diagnosed a right shoulder sprain and right elbow neuropathy.

- On December 12, 2014, Levi Miller, D.O. noted that Claimant's chief complaints were of right elbow pain, weakness, and numbness. Claimant exhibited full range of motion and Dr. Miller ruled out cervical radiculopathy and other cervical spine injuries as Claimant's EMG and MRI studies and her physical examination did not support any diagnosis.

- On January 13, 2015, Flory Kreutter, M.D., noted that Claimant's cervical spine was very sensitive to light touch.

- On June 24, 2015, Claimant presented to Dr. Fall with neck pain as her chief complaint, followed by right shoulder and right elbow pain. Dr. Fall noted that Claimant exhibited "significant pain behaviors, rendering her examination nearly impossible." It appeared that Claimant was "voluntarily

guarding throughout the examination, and she gave poor effort with strength testing."

- On August 9, 2016, Dr. Fall noted that Claimant was no longer complaining of pain and numbness in her right arm.

4. Claimant's mental health status was identified as a potential or actual cause of her symptoms by her treatment providers.

- On October 4, 2014, Dr. Kreutter noted Claimant's anxiety and depression.

- On January 14, 2015, Dr. Kreutter twice noted, "Need to do a mental health screening to determine any underlying problems which could contribute to [her condition]."

- On June 24, 2015, Dr. Fall's assessment included, "Rule out somatoform disorder, conversion disorder, factitious disorder, or other psychological issues playing a role in her presentation and perceived disability." Dr. Fall recommended Claimant undergo a psychological evaluation.

- On April 11, 2016, Claimant failed to appear for a Demand Psychological Evaluation with Ron Carbaugh, Psy.D.

- On August 9, 2016 Dr. Fall's impressions included, "Rule out somatoform or conversion disorder." Dr. Fall recommended Claimant pursue treatment through her primary care provider for consideration of psychiatric referral for somatoform or conversion disorder.

- Several of Claimant's treatment providers noted that her objective findings were not consistent with her high levels of pain, and that Claimant exhibited pain behaviors.

- Several of Claimant's treatment providers noted that her complaints did not follow dermatome patterns and that her pain complaints did not make sense physiologically.

- Claimant refused to complete the DIME Summary Sheet prior to her examination.

- When asked whether she would attend a mental health evaluation, Claimant refused to answer.

5. Dr. Michael Horner primarily treated Claimant's neck and shoulder, while Dr. James Johnson primarily treated Claimant's shoulder and arm.

6. On March 14, 2016, Dr. Johnson wrote that Claimant's primary problem was her neck injury and that her shoulder was a minor concern.

7. On June 6, 2016, Dr. Homer noted that Claimant might be at MMI depending on her reaction to Botox injections which Dr. Horner was administering that day. "If she does not respond to the Botox treatment done at today's visit, then she will be at maximum medical improvement." Claimant had a serious negative reaction to the injections.

8. On June 24, 2015, Allison Fall, M.D., performed a second Respondents sponsored IME. Dr. Fall reported that Claimant was at MMI without impairment, and that there was no work-related injury to Claimant's cervical spine. Dr. Fall supported this conclusion by detailing Claimant's mechanism(s) of injury and Claimant's initial emergency room complaints.

9. On June 28, 2016, Dr. Horner answered a letter sent to him by Respondents' counsel opining that Claimant was at MMI for her cervical spine, but not for any other injury for which he had treatment appointments scheduled.

10. On August 9, 2016, Claimant returned to Dr. Fall for a follow-up IME.

11. On November 7, 2016, Claimant returned to Dr. Johnson for additional treatment. At that time, he opined that her primary source of symptoms was from her scapula-thoracic bursa.

12. On March 13, 2017, Claimant returned to Dr. Johnson who requested a repeat MRI of Claimant's right shoulder.

13. Although Dr. Homer placed Claimant's cervical spine injury at MMI on June 28, 2016, neither Dr. Homer nor Dr. Johnson placed Claimant at MMI for her other injuries after twenty-four months of treatment. Respondents applied for and obtained a "24 Month" DIME.

14. On December 27, 2017, Dr. Clarence E. Henke performed Claimant's DIME evaluation. He was instructed to examine and evaluate Claimant's right shoulder and right upper extremity, and to address the issues of MMI, impairment rating, and whether any further medical treatment would be necessary.

15. In his January 12, 2017 report, Dr. Henke determined Claimant was not at MMI for her neck and right upper extremity injuries.

16. Dr. Henke's report and conclusions are flawed in the following ways:

- Claimant testified at Hearing that Dr. Henke spoke with her husband regarding her claim, and Respondents contend that such conduct violates Rule 11-6(A). That rule specifically provides as follows: "(A) During the IME process, there shall be no communication allowed between the parties and the IME physician unless approved by the Director, or an administrative law judge. Any violation may result in cancellation of the IME." Rule 11-6(A) ensures that the opinion of the IME physician is perceived to be unbiased because it is not influenced by unregulated

communications from either party. *See Brownson-Rausin v. Industrial Claim Appeals Office*, 131 P.3d 1172, 1178 (Colo. App. 2005). Because Claimant's husband is not a party to this case, the ALJ finds no Rule 11-6(A) violation.

- Dr. Henke did not rate any impairment, a required step in the DIME process.

- Dr. Henke's findings pertaining to MMI and Claimant's cervical spine are not supported by meaningful analysis.

- Dr. Henke's examination and report were completed without having numerous relevant and necessary medical records, including Dr. Fall's August 9, 2016 IME Report. Claimant also refused to complete the DIME Summary Sheet prior to her examination. Without having all of the medical records at his disposal, especially Dr. Fall's second IME Report, Dr. Henke could not provide complete and accurate findings. Dr. Fall opined in her second IME report, among other things, that Claimant's cervical spine complaints were not related to the work related injury, that Claimant was at MMI without impairment, and that no further intervention was needed.

- Dr. Henke failed to provide any details or analysis as to why Claimant is not at MMI, or what needs to be done for Claimant to reach MMI.

- Dr. Henke recommended that Claimant should follow-up with Dr. Johnson for further orthopedic evaluation and treatment recommendations, which could include surgical intervention. Dr. Henke failed to state what body part Claimant should follow up with, what type of orthopedic evaluation Claimant needs, or why further orthopedic evaluation is necessary, despite nearly three years of treatment without any perceived benefit. Additionally, none of Claimant's treatment providers have recommended surgery, while several have found surgical intervention to be contraindicated.

17. Dr. Fall credibly testified that not only was Claimant at MMI without impairment, but that there was no work-related injury to Claimant's cervical spine.

- Dr. Fall supported this conclusion by detailing the mechanism(s) of injury and the initial complaints by Claimant at the emergency room.

- Despite nearly three years of extensive treatment, Claimant's function has not improved and her pain has worsened. Dr. Fall credibly testified that the objective findings on the MRIs, EMGs, and x-ray reports do not support Claimant's subjective pain complaints or reasons why Claimant claims the necessity of the arm sling.

18. Dr. Fall credibly testified that Claimant does not have CRPS, that none of the records state she has CRPS, that no provider has stated she currently has CRPS, and that Claimant does not meet the criteria for a CRPS diagnosis.

- Dr. Fall credibly testified that Claimant's medical records include no documentation of allodynia, vasomotor (temperature asymmetry and/or skin or color changes), sudomotor changes, such as edema and sweating changes, or motor or trophic changes with motor dysfunction, such as tremor, or dystonia.

- Dr. Fall testified that in the clinical evaluation, there also must be one sign and two more categories, with those categories being: sensory, vasomotor, sudomotor/edema, and motor/trophic. Dr. Fall stated Claimant did not meet these criteria as well.

- Dr. Fall further testified that the two IMEs she performed on Claimant did not document findings consistent with clinical CRPS, Dr. Horner's examinations have not documented findings consistent with clinical CRPS, and the DIME physician did not document findings consistent with CRPS. Nor did the DIME physician diagnose CRPS. Dr. Johnson noted only that Claimant could have CRPS in the future, but did not find that Claimant clinically had it at the time he saw her.

- Dr. Fall testified that psychological evaluations are indicated in any workup of CRPS to rule out any other underlying issues, but Claimant failed to comply with this recommendation and refused to appear for her demand psychological evaluation that was scheduled with Dr. Carbaugh on April 11, 2016. Dr. Fall concurred with Dr. Kreutter's opinion that there was a lack of known "dermatomes" and that Claimant should seek psychological examination.

19. None of Claimant's treatment provided any relief.

- Claimant reported to Dr. Henke that medications, rest, physical therapy, and injections "have not provided any relief." Also, Claimant stated "that she had achieved only 2% of her pre-injury level of health and [was] continuing to regress in her recovery."

- Claimant reported to Dr. Miller that she had no improvement from any of her initial treatments.

- On August 9, 2016, Claimant reported to Dr. Fall that her pain was alleviated by "nothing."

- Claimant's treatment included oral and topical medications, extensive physical therapy, home exercise programs, chiropractic care, trigger point injections, Botox injections, dry needling, and deep tissue massage.

Claimant testified without equivocation that all of the treatment she received was of no help. Further, none of her symptoms had improved since the date of her injury, they had only grown worse.

20. Claimant was equivocal about further treatment. When asked if she would like more injections, Claimant responded that she could not answer because she did not know which ones. When asked if she would proceed with surgery if it were offered, she responded, "That would depend on the outcome."

21. Claimant's presentation at hearing was inconsistent. As Dr. Fall testified, Claimant became rigid and "fixed" when she testified; in comparison to the more fluid and fuller range of motion she exhibited when she sat at counsel's table. The ALJ made the same observation.

22. The ALJ finds Claimant not credible. She exaggerated her pain and symptoms. Claimant's refusal to undergo a psychological examination, her testimony that no treatment has provided any relief, and her ambivalence about additional treatment undermines her credibility concerning the presence of an actual injury. Additionally, several of Claimant's treatment providers found no objective evidence to support Claimant's complaints of non-physiologic and subjective severe pain. This finding is further supported by Claimant's inconsistent presentation at hearing.

23. The ALJ finds Dr. Fall's analysis and opinions to be more well-informed, thorough, credible and persuasive than those of DIME Dr. Henke.

24. The ALJ finds that Respondents have overcome by clear and convincing evidence the DIME doctor's opinions on the issues of MMI, PPD, and the relatedness of Claimant's cervical spine treatment.

25. ATP, Dr. Homer, placed Claimant's cervical spine injury at MMI on June 28, 2016. Claimant received no impairment rating for her cervical spine injury.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. bvApp. 2001). Even if other evidence in the record may have supported a contrary inference, it is for

the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

The finding of a DIME physician concerning MMI or a claimant's medical impairment rating is binding on the parties unless it is overcome by clear and convincing evidence. C.R.S. 8-42-107(8)(b)(III). Clear and convincing evidence is that which is "highly probable and free from serious or substantial doubt." Thus, the party challenging the DIME physician's finding must produce evidence contradicting the DIME which is unmistakable and free from serious or substantial doubt showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995*); Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App. 2002).

Respondents have produced evidence contradicting the DIME which the ALJ finds is unmistakable and free from serious or substantial doubt showing it highly probable the DIME physician is incorrect. The DIME doctor reviewed only a portion of Claimant's medical records and failed to consider Dr. Fall's second IME report. He did not rate any impairment as required. Dr. Henke failed to provide any details or analysis as to why Claimant is not at MMI, or what needs to be done for Claimant to reach MMI. Dr. Henke failed to state what body part Claimant should follow up with, what type of orthopedic evaluation Claimant needs, or why further orthopedic evaluation is necessary, despite nearly three years of treatment without any perceived benefit.

The determination of MMI must be made by an authorized treating physician. § 8-42-107(8)(b)(I), C.R.S.; *Town of Ignacio v. ICAO*, 70 p.3d 513 (Colo. App. 2002). The ALJ concludes that ATP Dr. Homer placed Claimant's cervical spine injury at MMI on June 28, 2016, with no impairment.

The ALJ credits Dr. Fall's opinion and other providers' concerns that the source of Claimant's symptoms may be the result of a psychological disorder. The ALJ has found Claimant (1) has failed to respond to multiple treatments for nearly three years, (2) has inadequate objective findings to support her high levels of pain, (3) is ambiguous about pursuing further treatment, and (4) has refused to submit to a psychological evaluation. The ALJ concludes that a psychological evaluation is required to evaluate whether any further treatment is related to or reasonably necessary to cure and relieve Claimant from the effects of her right upper extremity injuries.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents have overcome the Division IME Report of Clarence Henke, M.D., dated January 12, 2017, by clear and convincing evidence, as it pertains to MMI, PPD, and relatedness of Claimant's cervical spine treatment.

2. Claimant reached MMI as of June 28, 2016, and without permanent impairment. As a result, Claimant does not require any further treatment with regard to her cervical spine.

3. Claimant shall attend a Psychological Evaluation with Ron Carbaugh, Psy.D., within thirty days of service of this Order.

4. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 27, 2017

/s/ Kimberly Turnbow
Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that she sustained a compensable injury on October 17, 2016.

2. Whether Claimant has established by a preponderance of the evidence that she is entitled to a general award of reasonable and necessary medical benefits to treat her October 17, 2016 injury.

STIPULATIONS

1. Claimant's average weekly wage is $520.00.

FINDINGS OF FACT

1. Claimant was employed by Employer as a housekeeper. Her duties included entering rooms after patients left, cleaning the rooms, changing the sheets, and preparing the rooms for new patients. Employer's job description notes a heavy physical workload with physical requirements including: pushing, pulling, and lifting up to 50 pounds; and standing, walking, bending, pushing, kneeling, and stooping. *See* Exhibit 15.

2. Claimant alleges that on October 17, 2016 she arrived to work and checked the board to know which patients would be checking out and which rooms would need to be cleaned that shift.

3. Claimant testified that she went to the closet and realized that she would need more sheets. Claimant testified that she went to the clean linen closet and took out a package of heavy sheets, put the package on her right shoulder, and went through the hallways to get to a cart where she typically put clean linens. Claimant testified that the cart was higher than her and that she needed to push her right shoulder upward to get the sheets onto the cart. Claimant alleges she felt a pulling in her shoulder and neck at that time with no pain and that she kept working.

4. Claimant testified that she first felt pain 2-3 days later and that the pain increased daily. Claimant reported that she sent a text message to her supervisor on October 23, 2016 reporting the incident since she could no longer bear the pain and that on October 24, 2016 while at work she made a report of the injury and was referred for treatment.

5. Prior to her alleged injury, Claimant had been evaluated by her primary care provider on December 2, 2015 and October 5, 2016.

6. On December 2, 2015 Claimant was evaluated by Luz Marcela Serrano, M.D. Claimant reported that she worked in housekeeping for Employer and that she had developed pain on her upper extremities that started on her shoulders and radiated to both arms. Claimant reported moderate pain and that it was waking her from sleep. Claimant reported no heavy lifting or trauma. Claimant reported pain on the biceps region bilaterally, that she was unable to sleep on her sides, and a noticed decreased in strength. Dr. Serrano noted review of systems positive for myalgias, back pain, and joint pain and that Claimant had pain on examination in the cervical spine, paraspinal muscles, and medial and lateral epicondylitis bilaterally. Dr. Serrano ordered x-rays of Claimant's cervical spine that were noted to be negative with no significant arthritis but mild degenerative joint disease. Dr. Serrano assessed: acquired hypothyroidism; myalgia and myositis; radicular pain; paresthesias; prediabetes; and morbid obesity. *See* Exhibit D.

7. On October 5, 2016 Claimant was evaluated by Dr. Serrano. It was noted that Claimant presented for joint pain. Claimant reported bilateral upper extremity pain with an onset of three weeks prior in the biceps region radiating down to wrists with constant pain. Claimant reported working in housekeeping with heavy lifting. Claimant also complained of blurry vision. Dr. Serrano assessed: myalgia; pain in both upper extremities; visual disturbance; pre-diabetes; acquired hypothyroidism; bmi 39.0-39.9 adult; and generalized abdominal pain. Dr. Serrano opined that Claimant had an unclear etiology for her myalgias but suspected it was due to the line of work and heavy lifting. Dr. Serrano completed lab work. *See* Exhibit D.

8. On October 6, 2016 Dr. Serrano called Claimant to notify Claimant that the lab work showed normal kidney and liver functions, worsening pre-diabetes, and hypothyroidism. Dr. Serrano noted that there was no need to adjust Claimant's medications. Dr. Serrano noted that overall the labs were normal and that Dr. Serrano could not explain Claimant's body aches but that she suspected it may be associated with the type of work Claimant does. *See* Exhibit D.

9. Approximately two weeks after this visit with Dr. Serrano, Claimant alleges the work injury. After reporting the alleged October 17, 2016 injury on October 24, 2016, Claimant was referred for treatment and went initially to Rocky Mountain Urgent Care.

10. Claimant was evaluated on October 24, 2016 at Rocky Mountain Urgent Care by Michelle Baker, PA-C. Claimant reported pain in her right arm and back from carrying a packet of 100 sheets on October 17, 2016. Claimant reported that two days after lifting the heavy package of sheets she developed pain. PA Baker recommended a sling, rest, voltaren, and diclofenac. PA Baker referred Claimant to see a workers' compensation physician for follow-up. *See* Exhibits C, 9.

11. On November 3, 2016 Claimant was evaluated by Devin Jacobs, PA-C. Claimant reported that on October 17, 2016 she was carrying a package of sheets that weighed approximately 30 pounds on top of her right shoulder. Claimant reported that she threw the sheets off her right shoulder with a mild twinge of discomfort which gradually got worse. PA Jacobs noted tenderness to palpation to the right rhomboids, and muscle tension with mild spasm. He found pain in abduction range of motion and in internal rotation right midline spine. Claimant's cervical spine was noted to have no tenderness and full range of motion. PA Jacobs assessed strain of right shoulder, provided work restrictions, and referred Claimant for physical therapy. *See* Exhibits B, 10.

12. On November 7, 2016 Claimant underwent physical therapy with Patrick Morrissey, PT. PT Morrissey noted that Claimant's right shoulder strain correlated with her impairments including active range of motion, pain, and muscle performance. *See* Exhibit 11.

13. On November 9, 2016 Claimant was evaluated by PA Jacobs. Claimant reported continued pain in the lateral and posterior shoulder with occasional radiation to the right mid upper arm. Claimant reported overall feeling better but that the pain that morning had been worse than yesterday. Claimant reported spasms at night and that her pain level was 6/10. PA Jacobs noted under review of systems: muscle pain; joint swelling, and joint stiffness. He continued to assess strain of right shoulder and continued work restrictions. *See* Exhibits B, 10.

14. On December 7, 2016 Claimant was evaluated by Dr. Serrano. Claimant reported being injured on October 17, 2016 at work after grabbing sheets from a supply office and lifting onto her right shoulder and that she developed pain four days after the heavy lifting in the mid back. Claimant reported pain in the mid back, limited range of motion with trouble twisting, and pain on the right trapezius and radiating to the forearm. Claimant reported no longer being covered by workman's comp for unclear reasons and that she wanted to have a personal evaluation because she still had pain. Dr. Serrano found Claimant positive for myalgias, back pain, joint pain, and neck pain. On examination Dr. Serrano found that the right shoulder exhibited decreased range of motion, tenderness, pain, spasm, and decreased strength. Dr. Serrano assessed right shoulder injury/muscle strain and recommended work restrictions and physical therapy. *See* Exhibits D, 12.

15. On January 16, 2017 Claimant was evaluated by Dr. Serrano. Claimant reported that her symptoms improved as long as she was doing physical therapy. Claimant reported that at work her restrictions were not being followed. Claimant reported that her work, pain, and shoulder symptoms were having an effect on her mood. Dr. Serrano continued to assess right shoulder injury/muscle strain, continued work restrictions, and noted her anticipation that Claimant would be able to return to work without restrictions once Claimant finished physical therapy in six more weeks. Dr. Serrano noted Claimant's low score on the depression assessment and strongly

advised Claimant to start depression medications. Claimant indicated that she wanted to do natural methods first. *See* Exhibits D, 12.

16. On January 31, 2017 Claimant was evaluated by Timothy Lewan, M.D. Claimant reported being there for depression symptoms that had been constant and ongoing for several weeks. Claimant reported being angry at times and that her blood pressure was mildly elevated and significantly elevated at work that she attributed to being so mad. Dr. Lewan assessed: moderate episode of recurrent major depressive disorder, anxiety, and elevated blood pressure. Claimant reported wanting to restart Zoloft and that she had success with Zoloft in the past. Dr. Lewan noted that counseling could be helpful and that Claimant was to follow up with Dr. Serrano. *See* Exhibit 12.

17. On March 13, 2017 Claimant was evaluated by Dr. Serrano. Dr. Serrano noted that Claimant was present for headaches and blood pressure concerns and that Claimant was seen a few weeks ago after developing headaches and high blood pressure while at work and was found to have major depressive disorder and was prescribed Zoloft. Claimant reported that she did not take the Zoloft because she was concerned about side effects. Claimant reported being stressed about a workman's comp case and potential outcomes and lawyer fees. Dr. Serrano assessed headache, sleep disturbance, moderate episode of recurrent major depressive disorder, elevated blood pressure, pre-diabetes, and acquired hypothyroidism. *See* Exhibit 12.

18. On April 10, 2017 Claimant was evaluated by Dr. Serrano. Claimant reported that her headaches were better, that she had been laid off work, and that she felt that her health was better. Dr. Serrano recommended follow up for depression and headaches in about six weeks, that Claimant continue medications, and that it may be okay to discharge Claimant and suspected stress may have been cause of headaches. *See* Exhibit 12.

19. On June 13, 2017 Claimant underwent an independent medical evaluation performed by Lawrence Lesnak, M.D. Claimant reported that on October 17, 2016 while working she had obtained a package of clean sheets, lifted them and placed them onto the top of her right shoulder and walked through several hallways. Claimant reported that she was in the process of leaning forward to let the package of clean sheets slide off her shoulder onto a nearby cart when she felt a sudden pop in her right suprascapular region but that other than the pop she had no initial symptoms. Claimant reported that approximately three days later she began to notice some right sided lower thoracic/infrascapular pains, right suprascapular pains, and some diffuse right arm pains. Claimant indicated that she was referred to physical therapy which helped a little bit but that she soon found out her claim had been denied. *See* Exhibits A, 13.

20. Claimant reported that she went to her primary care provider in December because of her ongoing symptoms and that her primary provider recommended physical therapy and medications and again Claimant reported that the physical therapy seemed to help. Claimant also reported that during this time she noticed her depression

becoming much worse. Claimant reported frequent muscle cramping in her right suprascapular region and right inferior scapular region typically occurring late in the afternoon or evening hours with intermittent popping sensations involving her right shoulder whenever she moves in certain directions. Claimant reported frequent cramping sensations and some pain involving her right posterior upper arm that seemed to be associated with any type of overhead activities. Claimant reported no history of prior right upper back, capular/suprascapular, shoulder, or right upper extremity symptoms or injuries. *See* Exhibits A, 13.

21. Dr. Lesnak reviewed medical records and performed a physical examination. Dr. Lesnak opined that there did not appear to be any medical evidence to suggest that Claimant sustained any type of injurious event during work hours on October 17, 2016. Dr. Lesnak noted that the reported mechanism of injury would place no anatomic stresses on the Claimant's right shoulder and an injury could not have occurred based on the specific incident Claimant alleges occurred. Dr. Lesnak also opined that if Claimant had sustained an acute soft tissue or bony injury, she would have had symptoms immediately and not three days later and that a three day period was not consistent with any type of injurious event. Dr. Lesnak also noted that Claimant clearly had similar symptomatology documented by her primary care provider just 12 days prior to the alleged incident as well as similar symptoms documented in December of 2015 and that they were noted without trauma. *See* Exhibits A, 13.

22. As part of the independent medical evaluation, Claimant also underwent a computerized outcome assessment. Dr. Lesnak noted that Claimant scored a 39 on the modified zung depression index and an 18 on the modified somatic pain questionnaire. Dr. Lesnak opined that scores placed Claimant in the distressed depressive category for psychosocial functioning. Dr. Lesnak also noted scores from the Dallas Pain Questionnaire. Dr. Lesnak opined that the test results suggested that there were significant psychosocial factors that were influencing Claimant's symptoms, recovery, and perceived function. Dr. Lesnak opined that the extremely high level of somatic pain complaints reported may suggest an underlying somatization/somataform disorder. Dr. Lesnak opined that patients with extremely high levels of somatic pain complaints are often times very unreliable and that the reproducible objective findings must be relied upon rather than the subjective complaints in these types of patients. Dr. Lesnak opined that Claimant also had a long history of chronic depression and had discontinued high dose antidepressant medications on her own in early 2016. Dr. Lesnak suspected that Claimant had progressive depressive symptoms resulting in worsening somatic pain complaints that were completely unrelated to any job activities. *See* Exhibits A, 13.

23. Dr. Lesnak testified at hearing consistent with his written report. Dr. Lesnak reported that Claimant demonstrated the actual mechanism of injury at the evaluation and that her testimony at hearing was completely different than what she had reported to him at the evaluation. Dr. Lesnak also noted that Claimant had denied to him that she had any prior symptoms involving her right shoulder or right upper extremity, despite diffuse neck, bilateral shoulder, and bilateral upper extremity

symptoms noted in the medical records in December of 2015 and again 12 days prior to the alleged injury. Dr. Lesnak noted that Claimant had also denied prior problems at Rocky Mountain Urgent Care and at Concentra.

24. Dr. Lesnak's opinions are found credible and persuasive.

25. Jonathan Guenther, Employer's director of plant operations testified at hearing. After the alleged injury was reported, Mr. Guenther attempted to find footage of the injury on the facility's video system. Mr. Guenther checked the location, date, and time reported by Claimant but did not find footage to match Claimant's report. Mr. Guenther also checked footage throughout the entire shift from different areas of the facility and also on days before and after the 17th. Mr. Guenther was able to view Claimant in the videos, but did not see any footage of Claimant carrying a package on her right shoulder in his review. After reviewing footage, Mr. Guenther went back to Claimant to verify he was looking at the right time and place. Mr. Guenther testified credibly that he was trying to help Claimant to find the incident to show she was injured. Despite his attempts, Mr. Guenther was unable to find any footage of the alleged injury.

26. Claimant, overall, is not found credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned

expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

Claimant is required to prove by a preponderance of the evidence that the conditions for which she seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. *See* § 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant has failed to meet her burden of proof to establish that she sustained a work related injury on October 17, 2016. Claimant's testimony and reports to medical providers about the mechanism of injury are inconsistent. Claimant also failed to report to various medical providers that she had bilateral upper extremity symptoms that she had been treating for prior to her alleged injury. Dr. Lesnak is found credible and persuasive that the injury could not have occurred as alleged due to the lack of anatomic stresses on the right shoulder. He also is credible that if any acute injury had occurred, Claimant would have had more immediate symptoms rather than a 2-3 day delay of onset. The ALJ finds Claimant not to be credible or persuasive. Claimant, as found above, failed to report pre-existing problems of diffuse pain in her bilateral extremities, prior shoulder pain, and prior neck pain to providers despite having had

such significant pain that it prevented her from sleeping and required diagnostic imaging. Claimant also has psychosocial issues including possible somatoaform and chronic depression which can impact her perception and makes her subjective complaints unreliable. Additionally, despite attempting to find video footage Mr. Guenther was unable to view the incident that Claimant alleges occurred. Dr. Lesnak addressed the issues of credibility and psychosocial issues along with his opinions on mechanism of injury and delay in onset of symptoms. Dr. Lesnak's opinion that there was no work related injury is credible and persuasive and consistent with the weight of the overall evidence. Claimant has failed to meet her burden.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish by a preponderance of the evidence that she sustained a compensable injury on October 17, 2016.

2. Claimant therefore is not entitled to an award of medical benefits and her claim is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 31, 2017,

/s/ Michelle E. Jones

_____

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUES

I. Whether Claimant produced clear and convincing evidence to overcome Dr. Allison Fall's Division IME opinions regarding causation and permanent medical impairment?

II. Whether Claimant has established, by a preponderance of the evidence, that he is permanently and totally disabled as a consequence of the admitted work related injuries he sustained on December 30, 2006?

III. Whether Claimant has proven by a preponderance of the evidence that he is entitled to maintenance medical benefits?

IV. Whether Claimant is entitled to an award of disfigurement benefits pursuant to C.R.S. § 8-42-108?

FINDINGS OF FACT

This claim has been the subject of considerable prior litigation with hearings taking place before ALJ Martin Stuber on September 29, November 21 and November 22, 2011. Following those hearings, ALJ Stuber issued an order on December 30, 2011, which meticulously sets forth the factual background surrounding Claimant's work related accident, the injuries sustained in that accident and the treatment received therefore. Having carefully reviewed the evidentiary record, including the aforementioned deposition transcripts, the undersigned ALJ finds support for Judge Stuber's factual findings. Consequently, the undersigned adopts the content of ALJ Stuber's December 30, 2011 order to find as follows:

1. Claimant worked for Employer as a commercial truck driver. On December 30, 2006, Claimant rear ended another semi truck at 40 mph while driving eastbound in snow and ice on Interstate 80 near Ogallala, Nebraska when another semi unexpectedly moved into his lane of traffic. Claimant attempted to stop but hit the back of the other semi and impacted the windshield with his face. He was not wearing a seat belt.

2. Claimant was transported to an emergency room (ER) in Ogallala where an initial Glasgow Coma Scale score was a perfect 15 but slipped to 14/15 due to some confusion. Claimant was intubated to protect his airway and a CT scan was performed. The CT revealed a Le Fort II fracture of the basal skull and fractures of the right facial and nasal bones. Claimant was subsequently transported by life flight to a hospital in Scottsbluff, Nebraska for higher level care.

3. Upon arrival in Scottsbluff assessment revealed facial lacerations and "massive facial swelling" which prevented Claimant's eyes from opening. The CT scan obtained in Ogallala was interpreted as demonstrating multiple facial fractures that would likely require open reduction and internal fixation (ORIF) surgery. Claimant was admitted to the intensive care unit and a facial trauma surgeon was consulted.

4. On December 31, 2006, Dr. James Massey diagnosed Claimant with Le Fort II-III fractures. Claimant was taken to the operating room where Dr. Massey he performed an ORIF procedure with fixation plates to reconstruct the facial bones.

5. On January 5, 2007, Claimant reported complaints of vertical diplopia. Ophthalmological consultation was requested and Claimant was assessed with a mild vertical deviation by Dr. Jud Martin for which observation was suggested.

6. On January 7, 2007, Dr. Oscar Sanchez from rehabilitation services was consulted to assess Claimant's rehabilitative upon discharge. Dr. Sanchez diagnosed Claimant with a right, mild traumatic brain injury (hereafter "TBI") and questioned whether Claimant had mild cognitive deficits. He also noted that Claimant suffered cervicalgia with muscle spasms/whiplash in addition to a questionable C5-C6 anterolisthesis without spinal cord injury.

7. Claimant has a prior history of injury to the head and neck. On July 4, 2005 Claimant fell in a shower and sustained a mild concussion, neck and back sprain while working for Crete Carriers. A head CT on that date was normal with normal gray/white matter configuration and no abnormal parenchymal attenuation density. CT of the neck demonstrated mild degeneration in lumbar and cervical spines. He was released without impairment, but was terminated by Crete Carriers due to dysfunctional behavior. Claimant was then hired by Employer on December 27, 2005 as an over the road truck driver. Claimant worked for Employer without incident until the automobile accident on December 30, 2006.

8. Following his December 30, 2006 MVA, Claimant returned to Colorado Springs where he underwent an MRI of the cervical spine which demonstrated displacement at C5-C6 and ligament injury at C5 through C7.

9. A neuropsychological evaluation conducted by David Hopkins, Ph.D., on Jan. 15 & 18, 2007, noted that Claimant had prior depression that had been stable on Zoloft for about two years. He concluded there was moderate neurobehavioral dysfunction, consistent with acute TBI, with evidence for coup-countercoup pattern of dysfunction. He recommended psychotherapy and cognitive rehabilitation.

10. On January 22, 2007, Dr. Leppard examined Claimant, who reported the history of the accident including Claimant having struck his face. Following the collision he recalled "taking off his seat belt, and being dazed in a fog." Dr. Leppard noted that Claimant had suffered Le Fort II/III facial fractures, which had been surgically repaired by Dr. James Massey on December 31, 2006. She also noted that he had been

diagnosed with traumatic brain injury and that x-rays had been "suspicious for C5-6 anterolisthesis and an MRI of the cervical spine was performed showing an interspinous ligament injury starting at C5-6 and extending through T1-2." Dr. Leppard referred Claimant for speech therapy.

11. Claimant initially improved with the speech therapy, but he then regressed. By May 8, 2007, Dr. Leppard noted that Claimant had problems completing sentences. She also observed right hand waxing and tremor. Dr. Leppard suspended therapy and referred claimant to Dr. Dale Mann for psychological evaluation.

12. On June 1, 2007, Dr. Leppard questioned whether Claimant was suffering seizures and referred him to Dr. William Herrera at Colorado Springs Neurological Associates. On June 11, 2007, Dr. Herrera examined Claimant, who complained of "persistent episodes of dizziness, lightheadedness and intense headaches with nausea." Claimant reported a history in the last six weeks of tremors of the hands. Dr. Herrera diagnosed postconcussion syndrome, memory loss and tremor. Dr. Herrera referred Claimant for an electroencephalogram ("EEG"). The initial August 2, 2007, EEG at Memorial Hospital was normal with no seizure activity.

13. Claimant was seen in follow up by ENT Cameron Shaw, M.D. on August 7, 2007, complaining of progressive ringing in his ears. Dr. Shaw assessed tinnitus, hearing loss and balance issues. On March 7, 2008 testing indicated hearing loss in both ears. Dr. Shaw diagnosed Claimant with "[l]abyrinthine dysfunction secondary to head trauma" and tinnitus. He recommended hearing aids.

14. Claimant was seen by Dale Mann, Ph.D., for repeat neuropsychological testing on Nov. 5, 2007 which showed severe impairment of attention and language; moderate impairment of executive functioning; mild to moderate impairment of memory; and mild impairment of spatial functioning. Validity was questioned, but Claimant's testing results were viewed as being consistent with cognitive deficits magnified by issues associated with pain and depression.

15. On February 14, 2008, an MRI of Claimant's brain was obtained. The MRI revealed multiple areas of increased T2 signal involving the subcortical white matter on both sides and slightly more pronounced in the frontal regions, unchanged compared to the March 2007 MRI.

16. On April 17, 2008, Dr. Randolph Robinson performed jaw surgery on Claimant. Following this hospitalization, Claimant had an episode of dizziness and was hospitalized on May 2, 2008. A second EEG was performed, which Dr. Eric Foltz interpreted as normal.

17. On July 29, 2008, neurologist Eric Foltz, M.D. saw Claimant for an epilepsy consult. He noted Claimant began having seizures following surgery to wire his jaw shut in April of 2008. Dr. Foltz diagnosed epilepsy, TBI, weakness and confusion. Dr. Foltz recommended in home skilled nursing care. A long term video EEG on October 6

to 8, 2008 noted slowing in both hemispheres of the brain and Dr. Foltz noted "frontal temporal sharp waves interlictally."

18. Dr. Leppard referred Claimant to Antony Ricci, Ph.D. for psychotherapy. Dr. Ricci evaluated Claimant on August 7, 2008. Dr. Ricci diagnosed Post Traumatic Stress Disorder ("PTSD") and required immediate and urgent care to address symptoms associated with PTSD and post concussive difficulties, as well as ongoing chronic pain.

19. Dr. Leppard would subsequently withdraw as Claimant's treating provider due to concerns that her treatment relationship with Claimant had become antagonistic. Dr. Thomas Higginbotham agreed to act as Claimant's primary authorized treating provider (ATP). On October 14, 2008, Dr. Higginbotham examined Claimant and prescribed 24/7 skilled nursing care by his wife, who is a registered nurse. On December 19, 2008, Dr. Higginbotham completed a medical records review and recommended, among other things, further follow up with the Epilepsy Center at University Hospital in Denver as well as continued follow up with his neurologists in Colorado Springs. As part of this treatment plan, Dr. Higginbotham referred Claimant to Dr. Laura Strom at the Epilepsy Center in Denver. In discussing his seizures, Dr. Higginbotham indicated that Claimant had "uncontrolled and persistent" seizures, which were still under evaluation. Similar to his testimony at hearing, Dr. Higginbotham previously reported that he visited Claimant in his home and noted absent type seizures while he was there.

20. On Sept. 1, 2008, Dr. Anthony Ricci, Ph.D. reported significant balance difficulties, inability to follow discussion and disorientation in all spheres. In a letter dated Sept. 23, 2008, Claimant was noted to be "seriously dysfunctional" in activities of daily living and perceived that he was a burden to society and his family.

21. On February 2, 2009, Dr. Higginbotham documented in his clinical note that Claimant had three to four seizures in his office requiring that he be taken to the emergency room. Dr. Higginbotham noted continued instability due to his seizure activity. Emergency room records documented tonic clonic seizures and that Claimant had bitten his tongue. The February 3, 2009, EEG at Memorial Hospital was read as normal. Claimant was transported to University Hospital at that time.

22. Claimant underwent a video-monitored EEG at University Hospital in Denver under the direction of Dr. Strom. Dr. Strom reported that the February 4, 2009, EEG did not show seizure activity; however, she noted "some bifrontal sharp waves, which are rare." Additionally, she recorded that during the sleep state "there is also some evidence of interictal epileptiform discharges." A video EEG on February 6 and 7, 2009, was interpreted by Dr. Chantal O'Brien as abnormal due to moderate to severe theta delta slowing. Claimant was maintained on anti-seizure medications during his entire hospitalization.

23. On May 12, 2009, Claimant underwent another video EEG at University Hospital. Dr. Archana Shrestha reported no EEG changes that correlated with any

events. He concluded that Claimant had nonepileptic seizures. Dr. Mark Spitz agreed that the observed events were nonepileptic. He noted, however, that cyanotic events reported by Claimant's wife were probable epileptic events.

24. On July 28, 2009, Dr. Higginbotham noted that Claimant had been experiencing serious seizure activities which, according to his wife, caused him to turn blue and that one of the seizures had caused him to break an upper incisor.

25. Dr. Ricci observed "a series of clonic tonic seizures in [his] office that went on for about 15 minutes" on July 30, 2009. He recorded that "[t]he nature of the activity appears to start with the upper quadrant, primarily on the left. There appears to be violent irregular movement starting with the left extremity, quickly moving to the right, and then proceeding down the trunk to involving both the lower extremities. He clearly lost awareness during most of the experience, but did appear to recover on three occasions before relapsing into another series of clonic/tonic movements with loss of awareness and function."

26. On August 18, 2009, Dr. Woodcock performed a neurological evaluation, upon referral by Dr. Higginbotham. Dr. Woodcock concluded that Claimant's movements, shaking, tremors, and many of his seizures were part of a regressive psychological state. Dr. Woodcock noted that, even if Claimant has actual neurological seizures, many of the seizures were psychogenic.

27. On August 20, 2009, Dr. Strom met with Claimant and noted that he had been monitored by the Epilepsy monitoring unit and that numerous nonepileptic events had been captured. Her impression was that he had "severe bifrontal encephalomalacia due to motor vehicle accident head injury. He has seizures and I think nonepileptic seizures." She also thought that he had a movement disorder. She noted that Claimant's case was complex in trying to sort out what was biological and what was volitional.

28. On September 30, 2009, Dr. Higginbotham noted improvement in Claimant's seizures, which he attributed to the medication Vimpat which had been prescribed by Dr. Strom. He also noted that when Claimant sat for extended periods of time, he would experience tremors of his hands and arms and that his eyes would roll back. Voice commands and shaking were required to rouse him and then he appeared startled and unable to comprehend what had just occurred.

29. On Oct. 30, 2009, Dr. Ricci noted that Dr. Jonathan Woodcock had made observations of poor acceptance and denial, similar to his, and also reported that Claimant had a "syncope/seizure event" while leaving his office.

30. Claimant was seen by Urologist Richard Walsh, M.D., on Dec. 24, 2009 for urinary urgency and incontinency. Dr. Walsh opined that Claimant's 2006 injury was the sole contributing factor for his symptoms. Dr. Walsh testified by deposition, as a urology expert, that Claimant was having 3 to 4 incontinence episodes per day and up

to 7 episodes at night. Dr. Walsh diagnosed him with neurogenic bladder resulting from a TBI. He indicated that neurogenic bladder can be caused by any sort of head trauma with damage to the cerebrum which is the front portion of the brain. He tried medication and peripheral nerve stimulation unsuccessfully, which is not unusual. The only remaining options for Claimant are botox injections in the groin area multiple times per year or a sacral nerve stimulator implanted under the skin, and Claimant would need ongoing care.

31. On March 3, 2010, Dr. Higginbotham again witnessed what he described as a "classic tonic/clonic seizure" at Dr. Kania's office which is near his own. He indicated that Claimant "was having one of his more typical tonic/clonic seizures with some confusion afterwards." He also noted that when he saw Claimant in the emergency room following this event, Claimant was "upset then confused." Claimant expressed frustration and anger at the treatment he had received from emergency personnel, and Dr. Higginbotham noted that "[s]ubacute postictal aggression in patients with epilepsy after frontal head injury has been described in the literature."

32. On May 25, 2010, Dr. Higginbotham's office note reflects that Claimant was having significant problems with concentration, walking and lifting his feet off of the floor, extending his legs, continued diplopia, poor balance and photosensitivity. He requested a neuro-optometry assessment at that time.

33. On July 28, 2010, Claimant was witnessed to have a tonic clonic seizure during an outpatient MRI at University Hospital. He was described as having a loss of consciousness followed by 15 to 20 minutes of confusion. The nurse described that she "[a]rrived to find pt side lying on stretcher, tremulous esp to head & upper torso, wretching with some bldtinged [sic] emesis." Dr. Strom discussed the MRI findings in her clinic note of August 27, 2010. She indicated that the MRI "showed some generalized sulcal and ventricular prominence, which is mild to moderate and nonspecific. There were some scattered punctate patchy foci of T2 hyperintensities subcortical and periventricular, pretty consistent with chronic white matter infarct or some other microangiopathic ischemic related changes." She also noted that in examining Claimant, there was cognitive slowing and that he had to be reoriented to the discussion as it was clear he stopped listening to the conversation. "

34. An MRI was conducted at the request of Dr. Strom on July 29, 2010. The test indicated that the "T2 signal brightening are in the subcortical, periventricular and deep white matter. These are consistent with chronic white matter infarcts and/or other microangiopathic ischemic-related changes."

35. A video EEG on July 28 and 29, 2010, was interpreted by Dr. Shrestha as showing no EEG changes in connection with nonepileptic head and arm shaking.

36. On August 6, 2010, Dr. Thwaites, a neuropsychologist, performed an independent medical examination ("IME") for respondents. Dr. Thwaites diagnosed a mild TBI, but noted that it would not be associated with the level of neurological

symptoms reported by Claimant. He thought that it was unusual to have later onset of seizures after a mild TBI. He could not make sense of the entirety of Claimant's case and suggested additional diagnostic study.

37. On August 24, 2010, Dr. Phillips, a neurologist specializing in epilepsy, performed an IME for respondents. In her November 6, 2010, report, Dr. Phillips concluded that Claimant did not have epilepsy. She noted that his numerous EEGs did not correlate with any seizures and that his history and clinical examination did not indicate that he had epilepsy. She concluded that Claimant had nonepileptic psychogenic seizures and nonphysiologic tremors. Dr. Phillips noted that Claimant had a preexisting history of depression and did not think that his work injury caused his psychiatric issues. She strongly suspected a volitional component, but deferred to a psychiatrist. Dr. Phillips subsequently supplemented her report by noting that the February 4-5, 2009 EEG was abnormally slow, but that it was due to sleep and multiple drugs being administered. She reiterated that the EEG did not show epileptiform discharges. She agreed that frontal lobe epilepsy can be difficult to diagnose and are often confused with psychogenic nonepileptic seizures. She disagreed that the February 2009 increase of sharp waves on the EEG indicated seizure activity.

38. On October 13, 2010, Dr. Michael Saxerud, O.D., conducted a vision evaluation for diplopia resulting from the accident on December 30, 2006. Dr. Saxerud indicated that a combination of base out prism for the horizontal strabismus and vertical prism for the vertical strabismus improved claimant's vision. He could look ahead while walking instead of at his feet. He also bent over to view a small piece of paper on the floor and indicated that he could now see it clearly and without double vision. While looking at the paper, Claimant began having a seizure that lasted approximately 30 minutes and was witnessed by Dr. Saxerud.

39. On November 5, 2010, Dr. Strom indicated that claimant was experiencing increased tremor and that any kind of stimulation caused him to have greater tremor, increased vision problems and lowered energy levels. Dr. Strom opined that the tremor was "probably consistent with autonomic overdrive rather than on the basis of ganglia movement disorder. Seizures, of course, are controlled fairly well on his antiepileptic drugs and the use of Valium p.r.n."

40. On Nov. 11, 2010 Dr. Higginbotham noted improvement with the prism glasses.

41. On February 8, 2011, Dr. Ricci responded to the IME report by Dr. Phillips and disagreed with her conclusions, noting that Claimant had suffered chronic clonic tonic seizures in his office on several occasions. Supporting this opinion, Dr. Ricci indicated that Claimant had "lost awareness and presented with all prodromal and postictal attendant patterns."

42. On April 20, 2011, Dr. Saxerud determined that Claimant's vision had improved with the prism glasses; however, he was still suffering from minor seizures and was only able to wear the glasses for 10 to 15 minutes at a time. He determined that the

improvement made was as much as he could provide.

43. On April 11, 2011, Dr. Stephen Moe, a psychiatrist, performed an IME for respondents. Dr. Moe noted that Claimant appeared to be cognitively-impaired during the first part of the interview, but Claimant then became angry and fluent during the latter part of the interview. Dr. Moe concluded that Claimant had an intentional adoption of an illness role, probably due to a factitious disorder rather than malingering. Dr. Moe acknowledged that it was possible that Claimant had conversion disorder, especially for his seizures, for which he needed additional psychiatric treatment. He suggested that Dr. Strom acknowledge that Claimant did not have epilepsy, remove his medications, and that Dr. Higginbotham and Dr. Ricci refer Claimant for a behavioral therapy program. He suggested that they be removed as ATP if they refuse.

44. A sleep assessment was conducted by Dr. Jean Tsai of the University of Colorado Hospital on June 8, 2011. She found that repetitive movements caused tremors of Claimant's entire body, he could not get out of a chair without using his walking stick, and he had difficulty walking. She indicated that contributing factors to his sleep difficulties included TBI, which has been reported to cause a hyper arousal state that is resulting in insomnia. She thought that some of the movements at night may be a result of the stimulus related tremors that he has while awake. She recommended trying to treat his sleep apnea in an effort to improve his sleep.

45. On June 9, 2011, Dr. Ricci responded to Dr. Moe's IME report. He concluded that Claimant had suffered a mild to moderate TBI with increasing cognitive impairment following surgery. He noted efforts to introduce biofeedback and trauma reduction techniques; however, Claimant had been unable to maintain focus due to overstimulation and pain associated with his physical injuries. Dr. Ricci opined, contrary to the conclusions of Dr. Moe, that Claimant had sustained a coup-contra coup "frontal dysexecutive syndrome, worsened by repeat trauma following facial surgery with anesthesia cognitive changes (POCD), falls which have produced additional trauma, and psychological factors (including PTSD) superimposed on unique personality features with 'black and white' thinking, denial, escapism, and poor acceptance of disability. Also contributory are the chronic pain features and non-restorative poor quality sleep."

46. On June 13, 2011, Claimant was examined by Dr. Benzi Kluger, a tremor specialist at University Hospital in Denver. He noted that the tremor at rest was larger than typical for Parkinson's Disease, but with similar frequency. He indicated that the tremor was "present in both extremities, but that with specific maneuvers, such as holding his hands out in front of him or holding them close underneath his chin, but not touching, as well as with finger-nose-finger, the tremor becomes more and more pronounced, with higher and higher amplitude." He determined that Claimant suffered from Holmes Tremor "which is a tremor that can be the result of an injury to either the cerebellum or cerebellar outflow tracts." He prescribed the medication Sinemet to treat the condition.

47. On June 30, 2011, Dr. Higginbotham placed Claimant at maximum medical improvement ("MMI"). He determined that Claimant had sustained a 95% impairment rating based upon multiple conditions he associated with the work injury, including impairments associated with brain disorders, injuries to the cervical spine, right shoulder, carpal tunnel, vision and hearing, cardiopulmonary disorder, endocrine disorder, gastrointestinal disorder and mental/behavioral dysfunction. He recommended life care planning and indicated that Claimant would need indefinite care with planning to include long term care possibly in a skilled facility. He found no apportionment for Claimant's condition. Respondents would seek a Division Independent Medical Examination (DIME) contesting Dr. Higginbotham's opinions regarding permanent impairment.

48. On June 30, 2011, Dr. L. Barton Goldman, a physiatrist, performed an IME for Respondents. Dr. Goldman agreed with the conclusions of Dr. Phillips and noted that Dr. Strom and Dr. Higginbotham had not had the advantage of being able to read all of the voluminous medical records in this case. He agreed that Claimant suffered a mild TBI, with mild to moderate residual impairment, but probably did not suffer epilepsy. Dr. Goldman suggested that concerted effort be made to assess and treat Claimant's psychiatric difficulties. He agreed with Dr. Moe's recommendation for a week-long day treatment program. He recommended that 24/7 nursing care be evaluated in the context of the day treatment program. Dr. Goldman would go on to testify at the prior hearing before ALJ Stuber. As part of his December 30, 2011 order, ALJ Stuber noted that Dr. Goldman "thought that claimant's condition was consistent with factitious disorder, for which treatment would only make it worse. He thought that the psychogenic seizures were not caused by the work injury, but the work injury merely unmasked claimant's coping mechanism."

49. On an unknown date in the summer of 2011, Claimant's wife separated from him and ceased to provide his 24/7 nursing care. A professional nursing service took over responsibility for such care.

50. Alexander Jacobs, M.D. performed the requested DIME on Dec. 14, 2011. He spent over one hundred hours reviewing medical records dating back to 2000. Dr. Jacobs determined Claimant was at MMI on July 1, 2011 for his shoulder, neck diplopia and carpal tunnel syndrome, but not for his brain, central nervous system and psychiatric conditions noting that Claimant clearly had problems with judgment, performing complex tasks and problem solving when challenged. He assigned an advisory combined impairment rating of 41% whole person.

51. As noted, a hearing spanning three days was held before ALJ Stuber after which he issued an order on December 30, 2011 addressing Respondents request to withdraw additional treatment for Claimant's work related injuries. In denying the request ALJ Stuber found:

> Respondents have failed to prove by a preponderance of the evidence that claimant needs no additional medical treatment for his admitted work

> injuries. In spite of the voluminous medical records and testimony over three days of hearing, this case is focused on the existence or absence of epilepsy. Two of the expert witnesses have probative evidence about that issue: Dr. Strom and Dr. Phillips. Both are highly respected neurologists who specialize in epilepsy. Dr. Strom, the ATP, works at a specialized research hospital. Dr. Strom's testimony is persuasive that her real-time reading of the video EEG demonstrates sharp waves that are a "footprint" of frontal lobe seizure activity; although she concedes that they are not actual seizures at that time. Dr. Phillips disagrees with Dr. Strom's interpretation of the EEG data. Dr. Phillips, however, only had access to portions of the EEG that were archived by a technician. Dr. Strom had access to all of the digital EEG data in real-time. Dr. Strom simply has better information from which to draw her conclusions. The record evidence demonstrates that claimant probably has some epileptic seizures, for which he needs the medical treatment provided by Dr. Strom, Dr. Higginbotham, and Dr. Ricci. Clearly, without any dispute, claimant has enormous psychological problems for which he also needs ongoing medical treatment. Dr. Ricci particularly is providing that expert rehabilitation psychological intervention. Respondents argue that the treatment has not worked, indicating that it is not reasonable. The vast weight of the record evidence, however, is that treatment of psychogenic seizures is very difficult and not terribly successful. The record evidence demonstrates that the correct protocol is to provide psychotherapy, as provided by Dr. Ricci. As Dr. Goldman noted, this is a very complex case and every medical provider or IME physician should be receptive to differing opinions to determine what truly is the best treatment plan for claimant. Respondents' proposed plan of terminating all treatment based upon the absence of any neurologic or subconscious psychogenic component to claimant's condition is not persuasive. Perhaps in future days, additional data will inform the physicians. The current record evidence does not support respondents' proposal to terminate treatment.

52. In a February 13, 2012, report, Dr. Higginbotham disagreed with the Dr. Jacobs' 20% impairment for the brain because Claimant required constant supervision. He also thought there should be ratings for tinnitus, equilibrium and autonomic nervous system dysfunction.

53. On April 16, 2012, cardiologist David Rosenbaum, M.D., who was seeing Claimant for syncope indicated that Claimant's condition was mostly related to seizures and TBI. On April 25, 2014, he noted the syncope seemed to be improved and seizures were better with his medications and medical marijuana. On December 12, 2014, Dr. Rosenbaum noted that he was now stable concerning the syncope with medication.

54. On February 16, 2013, Dr. Strom concluded some of the seizures were non-epileptic. She noted improved sleep with the use of marijuana. On February 28, 2013, Dr. Higginbotham noted a decrease in seizures and that medical marijuana had been useful for "anxiety, insomnia, seizures, and pain." By August 21, 2014, Nurse

Practitioner (NP), Carol Hennessy indicated that Claimant was stable with regard to epilepsy.

55. On April 1, 2014, nursing care had been discontinued for about two weeks. Claimant was doing "pretty well" and was happy to be more independent with no major seizures since March.

56. On May 21, 2014, Dr. Seaman, D.D.S., M.S., issued a letter indicating that Claimant's dental treatment was related to the accident and was currently maintenance care.

57. On March 7, 2016, Dr. Higginbotham issued permanent work restrictions. On July 12, 2016, he noted that Claimant could walk a short time without his staff. He encouraged Claimant to walk more without his staff.

58. On September 7, 2016, Dr. Allison Fall performed a follow-up DIME. She noted that Claimant specifically reported a diagnosis of PTSD that is allegedly related to his December 30, 2006 work incident. During his DIME Claimant failed to disclose a prior history/diagnosis of PTSD occurring around 1990 when he was employed as a law enforcement officer by the New Mexico State Patrol.[1]

59. Following her examination, Dr. Fall prepared a written report wherein she opined that Claimant was at MMI as of July 1, 2011 with a 12% whole person permanent impairment rating for cervical pain and rigidity. Dr. Fall specifically opined that the neck was the only work-related condition on this claim and that there was no need for medical restrictions or further treatment related to the work injury. She felt that Claimant's non-epileptiform seizures and possible conversion or factitious disorder are not work-related diagnoses. She opined that there was no permanent impairment for a traumatic brain injury based upon lack of correlating objective findings. She also concluded that Claimant's psychiatry diagnosis was pre-existing, and although he may have had a temporary exacerbation, there is no permanent impairment regarding his psychiatric condition. Finally, Dr. Fall did not believe there was any need for further medical treatment or work restrictions based upon the injury of December 30, 2016.

60. On Dec. 27, 2016, a long term EEG captured eight seizures, all nonepileptic. Claimant's remaining seizure medications were discontinued and group therapy was ordered for treatment of nonepileptic seizures.

61. On February 14, 2017, Dr. Strom reviewed Dr. Fall's DIME report and issued a rebuttal indicating that Claimant's posture and head movements were consistent with neck and back pain and that his balance disturbance was chronic partially due to poor eye sight, but when well rested he could ambulate fairly well. She noted that TBI is a common cause of Holmes Tremor and pointed out that Le Fort II and III fractures are known to be markers for increased risk of head injury due to mechanical forces

[1] Claimant worked for the New Mexico State Patrol for 14 years. He was terminated 1991 due to a psychological condition.

necessary to produce the fracture. She concluded that Claimant does not have factitious disorder because his condition lacks volition. She indicated that opinions that Claimant did not have epilepsy at any time are wrong since two EEG's captured interlictal markers of seizures. She also noted improvement with cognition, attention, reduced startle response, headaches and tremor over time.

62. Dr. Stom, testified by deposition as an expert in epileptology on February 27, 2017. She indicated that the bifrontal sharp waves are a footprint of an epileptic seizure. She did not understand how Dr. Phillips could have looked at a similar MRI and say there was no evidence of shearing and did not think it would have been reasonable for Dr. Phillips to reach a different conclusion than she in this regard. She testified that Le Fort fractures are severe fractures and require a lot of force to produce. She indicated Claimant suffered a coup countercoup injury which can result in axonal shearing and cause confusion and mild to moderate cognitive impairment. She noted Claimant has white matter disease, also known as ischemia or diffuse axonal injury, which can be caused by trauma such as a Le Fort fracture, and shows up as white spots on MRI imaging. Dr. Strom noted it is common for people to have epileptic and nonepileptic seizures. Based upon the Dec. 2016 EEG she determined that Claimant no longer has epileptic seizures and now only has nonepileptic seizures resulting from a conversion disorder, which she described is a nonvolitional psychological condition as opposed to a factious disorder which she opined was a volitional disorder. She confirmed that a person can begin with epileptic seizures which can diminish over time. She has seen improvement in Claimant's condition. Currently she sees more good days walking, more tolerance to light, lowered startle response, his tremor seems to have resolved and his sleep has improved. He manages his attention and the headaches better. She did not agree that all treatment should be discontinued and indicated that Claimant could regress in terms of his headaches and tremors if botox treatment were discontinued. With regard to future treatment she was not sure about the nonepileptic seizures but thought he would continue to need headache treatment and balance issues would likely continue.

63. Henry Roth, M.D., testified by deposition as an expert in occupational medicine. entirely upon a record review. Dr. Roth concluded that Claimant sustained no brain injury or impairment for the same. He also felt that Claimant had no impairment for psychiatric conditions or low back pain. He generally agreed with Dr. Fall's DIME report but felt that Claimant's neck condition was also pre-existing. On cross examination, he admitted that there had been no seizures prior to the 2006 work injury. He did not review EEG's, only reports, and admitted his analysis of secondary gain factors was speculation. He agreed IME's should be fair, impartial, unbiased, and should not favor the position of one party or the party paying the bill. He agreed IME's and record reviewers should be thorough, which involved reviewing all medical records, and that DIME's should have the same standards as IME's. He agreed information favorable to an opposing party should not be left out of reports but was cross examined concerning communication with an attorney in a prior case where he discussed leaving such information out of his report. He admitted the records referenced in his report were the only ones he reviewed and he had not requested additional records and there were no

medical or Employer records of atypical behavior involving Claimant from August of 2005 to December 30, 2006. He agreed that Claimant's motor vehicle accident was a significant mechanism of injury but had only reviewed IME reports completed prior to the 2011 Hearing and Dr. Jacob's DIME. After that date, he had not reviewed any records from 2010 to 2014, and only some of the totality of records generated by Claimant's physicians between 2014 and the time of his records review. He did not review any of the rebuttal reports issued by Claimant's providers. He indicated it took him 40 hours to complete his review and report.

64. Dr. Fall testified by deposition as an expert in physical medicine and rehabilitation (physiatry) on March 9, 2017. She reiterated her opinion that Claimant's nonepileptic seizures, which her report indicates are claim-related, were actually not claim related. She indicated that it did not appear to her that Claimant had a significant head injury, did not have seizures and never should have been on seizure medication. She endorsed the opinions of the RIME epileptologist, Barbara Phillips, M.D. as more convincing than Claimant's epilep-tologist, Dr. Strom, though she did not recall reviewing Dr. Phillips' report. She deferred to Dr. Moe regarding factitious disorder. She determined Claimant had suffered a mild TBI, but believed it should have resolved within three months. She concluded that balance issues, headaches, or other symptoms were not claim-related and gave no impairment for TBI. She was unable to determine if he had dental injuries and declined to associate urinary condition with the work injury. She determined the date of MMI to be the date that the prior DIME, Dr. Jacobs, conducted his evaluation because she did not find impairment for brain injury, the central nervous system or psychiatric condition which she determined were pre-existing conditions. She believed Claimant could have had a brief aggravation of pre-existing anxiety or depression, but that there was no evidence of ongoing psychiatric issues. She rated Claimant's neck because she thought it was plausible it could have been injured and he did have ongoing cervical complaints. She declined medical maintenance. She agreed that a DIME should be fair, impartial, unbiased, thorough and should take all pertinent information into account. She agreed that a large volume of records does not diminish the DIME's responsibility to provide an accurate evaluation. She endorsed reviewing a box of medical records for about five hours, but could not say what percentage she "flipped" through. She admitted that the main IME's reviewed were Dr. Roth and Dr. Jacobs. She did not know that Dr. Phillips, Dr. Roth and Dr. Thwaites were not treating physicians and admitted that she relied heavily upon the RIME physician's conclusions. She relied upon Dr. Moe for the conclusion that Claimant's tremor was volitional and not caused by the work injury. She thought Dr. Roth had performed an extensive medical records review but did not know that he had only reviewed IME's and the original DIME up to 2012, had reviewed no records between 2012 to 2014 and did not review the majority of the records from 2014 to 2016. She had no knowledge of multiple medical reports from providers and was even unaware of the providers themselves. She did not know providers had witnessed seizure activity of Claimant, that a cardiologist had diagnosed syncope related to dysfunctional blood pressure associated with traumatic brain injury, that a urologist had diagnosed neurogenic bladder associated with traumatic brain injury, or that the ENT, had concluded Claimant's balance issues stemmed from the work injury and that he

would have tinnitus for the remainder of his life. She did not rate Claimant for tinnitus because it was a pre-existing condition, but could not identify any record indicating the presence of tinnitus prior to the work injury. She indicated Claimant never had epilepsy, but was unfamiliar with what signs epileptologists look for on EEG and did not know that two neurologists had documented residual effects of epileptiform discharges on EEGs.

65. Thomas Higginbotham, D.O. testified at hearing as an expert in occupational and environmental medicine consistent with his records. When he first met Claimant, he had several kinds of seizures, was on multiple seizure medications and received Valium injections when they became too intense. He was photosensitive, had double vision, difficulty communicating, sonosensitivity, tremors and he had poor sleep. He did not walk normally and needed an assistive device and 24/7 nursing care. Dr. Higginbotham noted that it takes a lot of force to cause a Le Fort II and III fracture and opined that Claimant suffered a coup-countercoup injury in the collision which caused axonal shearing. The coup injury would have caused the frontal lobe (which controls personality, mood, judgment and impulsivity) to impact with the front of the skull. The countercoup injury would have caused the occipital lobe (which controls vision and balance) to impact the back of the skull. He indicated axonal shearing could affect the autonomic nervous system controlling bodily functions such as taste, smell and hearing. He thought Claimant's headaches came from the face or his neck problems. He reviewed a CT of Claimant done on July 4, 2005 and noted that it was normal with no abnormalities. He indicated that there was no evidence of white matter hyperintensities and when compared to the Aug. 21, 2008 CT, he noted mild diffuse atrophy and scattered foci of white matter which indicated to him that there had been a change since the 2005 CT. He confirmed that the white matter intensities would be expected with diffuse axonal injury. He endorsed Claimant's use of prism glasses to bring the midline of vision into the right perspective and indicated this was consistent with occipital injury. With regard to the video surveillance, he indicated that the footage showing Claimant walking without his staff and glasses was different than he had seen in the office, but he saw a couple of times that Claimant lost his balance, then regained it quickly. He noted that he has encouraged Claimant to walk without his staff in the last year or two.

66. With regard to Dr. Fall's DIME report, Dr. Higginbotham believed there were gross misperceptions about Claimant's multiple conditions. He concluded she had relied upon RIME reports for her opinion. In noting that she took six hours to review medical records he indicated it took him 20 hours and he knew the case and had seen Mr. Sanchez around 120 times since he began treating him. He noted that records providers such as Dr. Shaw, Dr. Rosenbaum, Dr. Walsh, Dr. Salcetti, Dr. Seaman and Dr. Ricci were not reviewed and she had not reviewed many of his own notes. He disagreed with the DIME that Claimant did not suffer from a seizure disorder and noted there was no prior history of seizures. He disagreed that Mr. Sanchez did not have impairment for a brain injury because that has been the center of Claimant's care. Dr. Higginbotham felt that Dr. Roth's report had no merit, was incomplete and biased because he started from the premise that Mr. Sanchez was a liar, which was unfounded.

67. Dr. Higginbotham's diagnosis was initial epileptiform seizures which recently became nonepileptic only, photosensitivity, sonosensitivity, motion sensitivity, balance dysfunction, autonomic dysfunction related to the head injury, disordered breathing with obstructive sleep apnea due to nasal fractures, some ongoing movement disorder patterns, neurogenic bladder, tinnitus, post traumatic visual syndrome, chronic pain and adjustment reactions with depression and anxiety. He noted Claimant is receiving an increased dose of Zoloft compared to his pre-accident dose. Dr. Higginbotham noted improvement with decreased seizures, photosensitivity, sonosensitivity and motion sensitivity; the movement disorder is improved; headaches continue but have improved with botox; the cervical, thoracic and lumbar muscle tension has improved; he is better emotionally and behaviorally; his blood pressure is better controlled and sleep is better. He indicated that on bad days Claimant will present as very imbalanced and wears his tinted glasses. On good days he does not wear his glasses and is more capable of conversation. He recently revised Claimant's impairment rating with current knowledge and assigned 47% whole person impairment due to improvement. Regarding the differences between his rating and the DIME's, he indicated that the primary difference is the DIME's failure to recognize the brain injury and disequilibrium. He noted Claimant is on half the medications now than in the past and that the DIME did not address the blood pressure, GI issues, Claimant's constant pain, or the three-drug combination for mood and depression. He disagreed with the DIME that Claimant does not need ongoing care for medication management and treatment. He indicated that all treatment has been reasonable and related to the December 30, 2006 automobile collision.

68. Dr. Anthony Ricci, Ph.D. testified consistent with his records as an expert in psychology and rehabilitation psychology. He described Claimant's initial presentation as highly dysfunctional with significant anxiety, depression, paranoia and situational adjustment. Claimant was initially incapable of performing daily activities without monitoring and was legally incompetent. He had vision changes, tinnitus, smell changes, balance, tracking, memory loss, attention and focus problems. He couldn't sustain a logical thought process or adapt to changing cognitive environments. He had flashbacks and nightmares of the accident and aftermath, and multiple surgeries made his condition worse. Dr. Ricci testified that the pre-existing depression had no impact upon his treatment or evaluation. He witnessed seizures in his office on two occasions, the second of which was stopped with injection of Valium by Claimant's wife. His initial diagnosis was post traumatic stress disorder (PTSD) which he believed was superimposed on other neurologic and personality issues. He noted prior findings of PTSD which he indicated is difficult to treat because it is permanent, so the goal is to achieve remission. According to Dr. Ricci, PTSD can be rekindled by another traumatic event such as the December 30, 2006 accident. He also diagnosed adjustment disorder due to denial of his disability. He testified that Claimant's treatment has been successful and he had managed to reach a state of semi-independence as a result. For future care he expects Claimant will need continued medication management and possible psychological intervention if he has a regression in his recovery.

69. Dr. Ricci disagreed with Dr. Fall and Dr. Moe that factitious disorder was an

appropriate diagnosis because Claimant was not acting volitionally. He agreed with Dr. Moe that Claimant had suffered a mild TBI, but did not find any benefit in the report because Dr. Moe was not adding any new information. He agreed with Dr. Strom that Claimant's nonepileptic seizures were a result of conversion disorder which is a non-volitional physical manifestation of seizures due to a psychological condition. He noted PTSD is a triggering factor for conversion disorder. He agreed that there is no such thing as a mild TBI because the injury can affect people differently and result in severe symptomology. He believed Dr. Moe's conclusion that the tremor was intentional was incorrect based upon the Holmes tremor diagnosis and successful treatment.

70. Ryan Sanchez, Claimant's son, testified that he was 15 or 16 years old at the time that his father was injured. Prior to the injury Mr. Sanchez described his father as being an avid reader and very outgoing socially. Claimant was described as very fit and active. He liked doing hobbies and outside doing work around the house. Mr. Sanchez never saw balance problems prior to the work injury.

71. According to Ryan Sanchez, the family drove to Nebraska following the accident. He described seeing his father on a breathing tube with a severely swollen face. When his father regained consciousness, he noticed more erratic, aggressive, irritable and impulsive behavior. Claimant stopped reading and exercising. He would have minor seizures due to auditory stimuli. Claimant had difficulty moving around and when he got over stimulated, he would become very aggressive or would shut down. He had memory and balance problems, pain complaints in his back, dry mouth and headaches. Claimant had insomnia and the family would take shifts to monitor him at night. Mr. Sanchez witnessed seizures on multiple occasions and described tonic/clonic movements. Other seizures were described as absence events. Botox has improved his headaches until it starts wearing off. On good days Mr. Sanchez noted that Claimant could pass as normal for a period of time, but on bad days he will lie in bed most of the day and does very little. Claimant's connections with his family have suffered and he described his father as losing most everything due to personality changes. Per Mr. Sanchez, Claimant can walk without his walking stick for short periods of time, but his balance deteriorates as the day goes on.

72. Christine Helton testified that she first met Claimant as one of his nurses in 2012. She generally spent Monday, Tuesday and Wednesday with him for 12 to 18 hours a day. She described him being difficult, demanding and obstinate when she first met him and described witnessing tonic/clonic seizures during the day and heavy nighttime seizures right after he fell to sleep in 2012 into 2013. With night seizures he would sometimes lose control of his bowel and urinary functions and she would clean him and change the sheets while he continued sleeping. In 2012 and 2013 she saw an average of three medium seizures and a violent seizure as he would go into deeper REM sleep. She described Claimant as determined to get better and noted that he would push himself in activities. When he became overly tired he had more difficulty with his walk, gait and instability, and his hands would shake. She had to monitor activities such as gardening to make sure he didn't get too hot. He had difficulty with his own finances which necessitated setting up a reminder system. She did see short term memory

deficits. Botox helped with headaches but wore off over time and his headache complaints increased as it wore off. The nurses helped him organize and take his medications. She would get behind him to prevent him from falling, especially on stairs, and when he got tired, she would see him have more difficulty communicating and interacting.

73. Regarding improvement, Ms. Helton noted that Claimant's walk became more steady in about the middle of 2014 and when nursing was discontinued he was almost entirely independent with his activities of daily living (ADL's). She has seen improvement in his balance and impulsiveness and noted he can walk without his staff and appear normal to the casual observer at times. She noted reduction in his seizures in the last part of 2014 through 2015, including a significant reduction in seizures while he slept. The nursing staff worked with him to gain independence by showing him how to use a calendar, sort and dispense his own medicine, as well as walk and shower safely. He is usually better between the hours of 9:00 a.m. to 2:00 p.m. and after that she generally sees his gait become worse, he stumbles, is more forgetful and has increased pain in the neck.

74. Claimant testified briefly on his own behalf and indicated that his current therapy regarding nonepileptic seizures was to help him learn how to recognize triggers and better control his seizures which he identified as pain, sickness such as the flu, fatigue, significant stress and overdoing his activities. Lack of sleep resulted in inability to function. He gave credit to his physicians and support system for his improvement and keeping him out of a nursing home. Finally, he testified to receiving bills from providers which identify him as the obligor and are related to his worker's compensation claim. (Index, Ex. 12.) He was asked to identify a record on cross examination and the ALJ was able to observe difficulty reading as he placed a blank sheet of paper below every line to keep from losing his place and the longer he read the document, a noticeable shake of his extremities was observed.

75. Stephen Moe, M.D., testified by deposition on March 24, 2017, as a retained psychiatric expert for Respondents. He had not seen the Claimant since his report in 2011. He testified consistent with his original report with unchanged opinions. Under cross examination he agreed that Claimant had confusion and likely did not trust him. He confirmed that it takes significant force to cause the type of fractures sustained by Claimant but was unsure about a brain injury from a coup-countercoup mechanism. He agreed that white and gray matter have different densities and would travel at different speeds from the same impact which could cause diffuse axonal shearing. According to ALJ Stuber's December 30, 2011 order, Dr. Moe previously testified that the MRI of Claimant's brain only demonstrated "chronic hypertensive white matter changes" suggesting that Claimant did not have axonal shearing caused by his MVA. Nonetheless, Dr. Moe testified during his deposition that a coup-countercoup injury can damage the connections responsible for smooth movement of extremities, tremors can develop as a result of trauma and he had observed Claimant's hands begin to shake when they were lifted off of his lap.

76. During his March 24, 2017 deposition, Dr. More admitted that conversion disorder is usually precipitated by a stressful or traumatic event and can be associated with seizures. He testified at the previous hearing that Claimant probably suffered from factious disorder "because he was intentionally adopting the illness role due to emotional needs"; although he conceded that Claimant could be suffering from a "subconscious conversion disorder." He agreed PTSD symptoms can go into remission.

77. With regard to the brain, Dr. Moe agreed that the frontal lobes are responsible for functions such as mood, personality, adjustment, interpersonal behaviors, attention, foresight, inhibition and inappropriate behavior. He also agreed that brain trauma can affect any function of the brain with symptoms including excessive or disturbed sleep, inattention, difficulty concentrating, impaired memory, faulty judgment, depression, irritability, emotional outbursts, tinnitus, vision problems, inability to multi-task, slowed thinking, balance, dizziness and is associated with headaches. He believed Claimant had extremely limited interpersonal skills and lacked the ability to assess his own behavior. He described Claimant as regressed and childish, noted that he would ramble without making a point and was angry and refused to accept that he could not be fixed which Dr. Moe believed reflected genuine distress concerning his condition. Regarding depression, he admitted that brain trauma can make preexisting depression worse.

78. During the prior hearing before ALJ Stuber, Dr. Moe testified that Dr. Strom had "grossly erroneous history and was incorrect in diagnosing epilepsy." During his March 24, 2017 deposition, Dr. Moe confessed that he was not an epileptologist and that he did not know that Dr. Strom had access to the entire EEG record and Dr. Phillips did not. He also conceded that he was unaware that Dr. Strom and Dr. Foltz had seen sharp waves on EEG. He agreed that patients can have both epileptic and nonepileptic seizures, and that it is not unusual for individuals to have delayed onset of seizures, up to years, after a traumatic injury. He didn't know that seizures had decreased in frequency and severity over the last five years or that the sleep disturbance had improved. He admitted he did not know how much improvement Claimant had over that period. He was not aware of any records indicating Respondents had any concerns about Claimant in the year before his injury. Finally, he agreed that each time a person has a concussion; there is the risk of more severe results from subsequent concussions contrary to Dr. Fall.

79. At hearing, Michael Fitzgibbons, MPA, CRC, CDMS, testified as a vocational expert. He testified that he found Claimant difficult to interview because he had a hard time presenting information in a chronological fashion and had difficulty staying on point. According to Mr. Fitzgibbons, Claimant tried to cooperate but had difficulty responding to questions and seemed confused. He had a splint in his mouth which made it difficult for him to speak. Mr. Sanchez did poorly on academic testing with a 7.5 grade equivalency in word reading and 4.3 grade equivalency in math. He was unable to do all of the academic testing due to Claimant's difficulty seeing words even with glasses on. His effort was valid. He discussed the July 2005 work injury and indicated those

records didn't mention any impairment or work restrictions which caused him to conclude that it had no effect upon Claimant's ability to work. Indeed, based upon the evidence presented the ALJ finds that Claimant returned to full duty work after the 2005 work related incident.

80. Mr. Fitzgibbons testified that Claimant would soon be 63 years of age and that workers in that category are least likely to be hired and most likely to be unemployed and the obvious mental difficulties; seizures and physical limitations would make Claimant incapable of obtaining and maintaining gainful employment. Other factors which influenced his opinion included lack of transportation since Claimant cannot drive and that he hasn't worked since 2006.

81. Katie Montoya, MS, QRC, testified consistent with her report as a vocational expert. The substance of her testimony was that if Claimant's physicians are credited, Claimant is permanently and totally disabled. On the other hand, if the DIME opinion and Respondents retained experts were credited, then Claimant would only have 12% cervical impairment and no restrictions leading Ms. Montoya to conclude that Claimant would be capable of earning wages. She agreed with the conclusion that this is a medical case, not a vocational case.

82. Respondents obtained surveillance video tape of Claimant's activities during February and March 2016. Review of the video tape reveals Claimant to walk, sit, and bend all without the use of an assistive device, i.e. his walking stick. On one occasion Claimant is observed to run awkwardly for 3-5 strides. While Claimant walks for extended periods, the ALJ finds that his gait pattern slow and mildly guarded, especially during video obtained in February. The ALJ finds the video tape inconsistent with Claimant's endorsed balance problems. Nonetheless, the video tape does not provide insight into Claimant's cognitive capabilities or psychological symptoms and is therefore of limited value in determining whether Claimant is capable of earning any wage in the same of other employment.

83. Based upon the evidence presented, the ALJ finds that Dr. Fall erred in concluding that Claimant's neck was the only work-related condition associated with Claimant's December 30, 2006 work accident and that there was no need for medical restrictions or further treatment related to the work injury. The ALJ finds that Dr. Fall also clearly erred when she opined that Claimant's non-epileptiform seizures and possible conversion or factitious disorder are not work-related diagnoses and that there was no permanent impairment for a traumatic brain injury. While Dr. Fall has strong feelings about the cause of Claimant's cognitive dissonance and psychological symptoms as well as his need for treatment, the foundation for her opinions rests upon an abbreviated review of the medical records generated in this case. As presented, the evidence persuades the ALJ that Dr. Fall's opinions regarding causality and impairment have been overcome.

84. The ALJ credits the opinions of Dr. Higginbotham, Dr. Strom, Dr. Mann and Dr. Ricci to find that Claimant's December 2006 MVA probably resulted in a coup-counter

coup injury causing axonal shearing sufficient to render Claimant mildly to moderately brain injured. Based upon the evidence presented the ALJ is also persuaded that a traumatic brain injury and a rekindling of Claimant's prior PTSD resulting in the manifestation of a separate psychological condition, i.e. a factitious and/or conversion disorder best explains the enormity of his ongoing symptoms, especially his profound psychological dysfunction. Dr. Goldman stated it best when he opined that Claimant's work injury "unmasked" Claimant's poor coping mechanisms resulting in the development of psychogenic seizures. The opinions of Dr. Fall, Dr. Moe, Dr. Roth, Dr. Phillips and Greg Thwaites are simply not persuasive when the evidence is considered as a whole. In crediting the opinions of Claimant's treating physicians, the ALJ finds that Claimant, per the persuasive testimony of Michael Fitzgibbons is currently unable to earn a wage in the same or any other employment.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law, and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the voluminous record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Clam Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. Moreover, the ALJ may accept all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion). As found here, the opinions of Drs. Higginbotham, Ricci, Strom, Walsh and Mann are supported by the totality of the record evidence submitted for consideration. Conversely, the opinions expressed by Dr. Fall, Dr. Roth, Dr. Phillips, Dr. Moe and Dr. Thwaites are not convincing when the entire record is considered. Accordingly, the ALJ concludes that the opinions of Claimant's treating physicians are more persuasive than those of Respondents retained experts and Dr. Fall, who relied principally upon those opinions.

Overcoming the DIME as to Causation and Permanent Medical Impairment

C. A DIME physician's findings of causation, MMI and whole person impairment are binding on the parties unless overcome by "clear and convincing evidence." *Section 8-42-107(8)(b)(III), C.R.S.*; *Qual-Med v. Industrial Claim Appears Office*, 961 P.2d 590 (Colo. App. 1998); *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinion concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995) In other words, to overcome a DIME physician's opinion regarding the cause of a particular component of a claimant's overall medical impairment, MMI or the degree of whole person impairment, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be "unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc.*, W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appears Office, supra.*

D. In this case the evidence presented persuades the ALJ that Dr. Fall failed to adhere to the responsibilities that she endorsed were important when completing a Division sponsored IME. The ALJ finds Dr. Fall's suggestion that five hours of review were all that were necessary to reach a fair, impartial and unbiased opinion in this case dubious given that the record evidence is in excess of 2,000 pages. Indeed, testimony from other physicians, including treating providers, a prior DIME physician and other retained experts, who reviewed Claimant's records indicated a time investment ranging from 100 hours by Dr. Jacobs, in 2011, 20 hours by Dr. Higginbotham who is intimately familiar with the Claimant having seen/evaluated Claimant in excess of 100 times, and 40 hours for an incomplete records review by Dr. Roth. Based upon her testimony and the DIME report itself, the ALJ concludes that Dr. Fall simply "flipped" through medical records and relied upon the Respondent IME's to reach what she defends is an independent and unbiased opinion. While she agreed that voluminous records do not diminish the DIME's responsibilities, she failed to review even a minority of Claimant's treating physician's reports. Rather, she relied heavily upon a clearly limited record review of Dr. Roth, which he admitted did not include treating physician records prior to 2014 and was based upon prior Respondent IME's from the 2011 litigation, and the report from Dr. Jacobs from 2011. She was not aware of multiple diagnoses from multiple providers finding traumatic brain injury with severe symptoms such as neurogenic bladder, syncope related to dysfunctional blood pressure, sleep dysfunction, and multiple seizures observed by multiple physicians. She did not recognize the improvement Claimant has made in the last five years, and did not rate tinnitus because she thought it was a preexisting condition, which it was not, nor could she identify a record indicating it was. She disregarded the findings and specialties of multiple physicians at the University of Colorado Hospital including Dr. Tsai, a neurologist with specialty in sleep disorders, and Dr. Kluger, a neurologist with a specialty in movement disorders who diagnosed Holmes tremor and successfully treated it and Claimant's headaches with Botox. She disregarded Dr. Strom and failed to consider the fact that

Dr. Strom had a complete EEG record and thus better evidence concerning Claimant's seizure activity, even though she had a prior deposition of Dr. Strom from 2011. Moreover, she indicated Claimant never had epilepsy, but was unfamiliar with what signs epileptologists look for on EEG and did not know that two separate neurologists had documented residual effects of epileptiform discharges on EEGs.

E. Considering Dr. Fall's deposition testimony along with the medical opinions of Dr. Higginbotham, Dr. Ricci and Dr. Strom and comparing them to the entire record evidence submitted, the ALJ concludes that Dr. Fall's opinions concerning the cause of Claimant's cognitive and psychological conditions as well as her opinion concerning impairment are based upon a truncated records review and thus represent an incomplete understanding of the case. Contrary to Dr. Fall's suggestion, pre-existing mental weakness and individual hypersensitivity do not result in forfeiture of compensation. *Ice v. Industrial Commission of Colorado,* 120 Colo. 144, 207 P.2d 963 (1949); *Peterson v. ENT Federal Credit Union*, 827 P.2d 621 (Colo.App. 1992). A claimant may be compensated if his or her employment "aggravates, accelerates, or "combines with" a pre-existing infirmity or disease "to produce the disability and/or need for treatment for which workers' compensation is sought". *H & H Warehouse v. Vicory*, 805 P.2d 1167, 1169 (Colo. App. 1990). Even temporary aggravations of pre-existing conditions may be compensable. *Eisnack v. Industrial Commission*, 633 P.2d 502 (Colo. App. 1981). As found here, Claimant's traumatic MVA, more probably than not, resulted in a mild to moderate TBI which combined with (rekindled) Claimant's preexisting PTSD to in the words of Dr. Goldman, "unmask" poor psychological coping skills, resulting in psychogenic seizures and other dysfunctional behavior. Because the ALJ concludes that Dr. Fall's opinions concerning the cause of Claimant's cognitive and psychological conditions/impairment are based upon an incomplete understaning of the interplay betweeen those conditions in this case, the ALJ finds/concludes that her opinions are mistaken and highly probably incorrect. Accordingly, Respondents have presented clear and convincing evidence to overcome Dr. Fall's opinions concerning causation and impairment.

F. Where the ALJ determines that the DIME physician's opinion has been overcome, the question of the claimant's correct medical impairment rating then becomes a question of fact for the ALJ. The only limitation is that the ALJ's findings must be supported by the record and consistent with the AMA Guides and other rating protocols. Thus, once the ALJ determines that the DIME's opinion has been overcome in any respect, the ALJ is free to calculate the claimant's impairment rating based upon the preponderance of the evidence. *Garlets v. Memorial Hospital,* W.C. No. 4-336-566 (September 5, 2001). In this case, the ALJ adopts Dr. Higginbotham's recently revised 47% whole person impairment rating. Based upon the evidence presented, the ALJ finds and concludes that Dr. Higginbotham accurately assessed and rated all pathologies causally related to this claim.

Permanent Total Disability

G. Under the applicable law, Claimant is permanently and totally disabled if he is

unable to "earn any wages in the same or other employment." Section 8-40-201(16.5)(a), C.R.S. The term "any wages" means more than zero wages. *See Lobb v. Industrial Claim Appeals Office,* 948 P.2d 115 (Colo. App. 1997); *McKinney v. Industrial Claim Appeals Office,* 894 P.2d 42 (Colo. App. 1995). In *McKinney*, the Court held that the ability to earn wages in "any" amount is sufficient to disqualify a Claimant from receiving permanent total disability benefits. If wages can be earned in some modified, sedentary or part-time employment, a Claimant is not permanently and totally disabled for the purpose of the statute. See also *Christie v. Coors Transportation*, 933 P.2d 1330 (Colorado 1997).

H. Moreover, there is no requirement that Respondents must locate a specific job for a claimant to overcome a prima facie showing of permanent total disability. *Hennenberg v. Value-Rite Drugs, Inc.*, W.C. 4-148-050 (September 26, 1995); *Rencehausen v. City and County of Denver*, W.C. No. 4-110-764 (November 23, 1993); *Black v. City of La Junta Housing Authority*, W.C. No. 4-210-925 (December 1998); *Beavers v. Liberty Mutual Fire Ins. Co.*, W.C. No. 4-163-718 (January 13, 1996), aff'd., *Beavers v. Liberty Mutual Fire Ins. Co.*, (Colo. App. No. 96 CA0275, September 5, 1996)(not selected for publication); *Gomez v. Mei Regis*, W.C. No. 4-199-007 (September 21, 1998). To the contrary, a claimant fails to prove permanent total disability if the evidence establishes that it is more probable than not, that he/she is capable of earning wages. *Duran v. MG Concrete Inc.*, W.C. No. 4-222-069 (September 17, 1998). As long as a Claimant can perform any job, even part time, he/she is not permanently totally disabled. *Vigil v. Chet's Market*, W.C. No. 4-110-565 (February 9, 1995).

I. To prove permanent total disability, a claimant is not required to establish that an industrial injury is the sole cause of his/her inability to earn wages. However, the claimant must demonstrate that the industrial injury is a "significant causative factor" in his/her permanent total disability. *Seifried v. Industrial Commission,* 736 P.2d 1262 (Colo. App. 1986). It is not sufficient that an industrial injury create some disability that ultimately contributes to permanent total disability. To the contrary, *Seifried* requires the claimant to prove a direct causal relationship between the precipitating event and the disability for which the claimant seeks benefits. *Lindner Chevrolet v. Industrial Claim Appeals Office,* 914 P.2d 496 (Colo. App. 1995), *rev 'd on other grounds; Askew v. Industrial Claim Appeals Office,* 927 P.2d 1333 (Colo. 1996). If a claimant's permanent total disability is the result of an independent, intervening, nonindustrial condition, then the industrial injury may not be a significant causative factor. *Post Printing and Publishing Co. v. Erickson,* 94 Colo. 382, 30 P.2d 327 (1934); *Heggar v. Watts-Hardy Dairy,* 685 P.2d 235 (Colo. App. 1984); *but see, Varra v. Micro Motion*, W.C. No. 3-980-567 (Industrial Claim Appeals Office, May 27, 1994)(timing of the onset of the nonindustrial disability is not dispositive) and *Buster v. Walt Witt*, W.C. Nos. 3-962-930 & 3-975-719 (ICAO, March 27, 1992)(permanent total disability award for combination of industrial injury and subsequent symptoms of preexisting latent congenital condition). As found here, Claimant's industrial injury is a significant causative factor in his inability to earn a wage. The ALJ concludes that Claimant's permanent total disability flows directly from his December 30, 2006 work related TBI which combined with his pre-

existing but asymptomatic PTSD to “unmask” maladaptive coping strategies resulting in either a work related factious or conversion disorder. Based upon the medical record evidence, the ALJ concludes that the combined effect of the cognitive deficits caused directly by Claimant’s TBI and the psychiatric and behavioral components caused by Claimant’s rekindled (aggravated) PTSD render Claimant unable to earn any wages in the same or other employment.

J. In concluding that Claimant has proven that he is permanently totally disabled (PTD), the ALJ has considered a wide range of factors including age, work experience and training, education, Claimant’s physical condition and mental abilities and the availability of work that he can perform. *Weld County School District v. Bymer*, 955 P.2d 550 (1998). As noted, Claimant is approaching 63 years of age. He has obvious mental difficulties, seizures, whether epileptiform or not and physical limitations which, if credited make him incapable of obtaining and maintaining gainful employment. Even Ms. Montoya, Respondents retained vocational expert, agrees that if the opinions of Claimant’s treating physicians are accepted, Claimant is PTD. As found, the ALJ specifically credits the opinions of Dr. Higginbotham, Dr. Ricci and Dr. Strom in concluding that Claimant is PTD.

Maintenance Medical Benefits

K. In *Milco Construction v. Cowan,* 860 P.2d 539 (Colo. App. 1992), the Court of Appeals established a two-step procedure for awarding ongoing medical benefits under *Grover v. Industrial Commission,* 759 P.2d 705 (Colo. 1988). The court stated that an ALJ must first determine whether there is substantial evidence in the record to show the reasonable necessity for future medical treatment. If the claimant reaches this threshold, the court stated that the ALJ should enter "a general order, similar to that described in *Grover*."

L. Nevertheless, *Grover* provided, “[B]efore an order for future medical benefits may be entered there must be substantial evidence in the record to support a determination that future medical treatment will be reasonably necessary to relieve the injured worker from the effects of the work-related injury or occupational disease.” While claimant does not have to prove the need for a specific medical benefit at this time, and respondents remain free to contest the reasonable necessity of any future care, claimant must prove the probable need for some treatment after MMI due to the work injury. *Milco Construction v. Cowan*, *supra*. Claimant has made such a showing in this case. Here, the persuasive evidence establishes that Claimant continues to suffer from the effects of neuro-cognitive symptoms which would likely be ameliorated by additional neuropsychological counseling and medication. ALJ Stuber reached a similar conclusion following hearing when he noted that while the treatment of psychogenic seizures was “very difficult and not terribly successful”, the record evidence demonstrates that the correct protocol is to provide psychotherapy, as provided by Dr. Ricci. Accordingly, ALJ Stuber denied Respondents’ proposed plan of terminating all treatment based upon the absence of any neurologic or subconscious psychogenic component to Claimant’s condition as unpersuasive.

Disfigurement

M. In *Arkin v. Industrial Commission*, 145 Colo. 463, 358 P.2d 879 (1961), the Court held that the term "disfigurement", as used in the statute, contemplates that there be an "observable impairment of the natural person." In this case, Claimant asserts that his photophobia regularly necessitates wearing sunglasses indoors which he claims is disfiguring. He also claims that his poor balance and need to use an assistive device constitutes disfigurement. Finally he claims that he wears a dental splint making communication difficulties obvious, and has tremor with activities such as reading or shaking a person's hand. Consequently, Claimant argues that his disfigurement falls within the category of cases involving disfiguring movements primarily. Having listened to Claimant's testimony and having viewed the video tape and observed Claimant's movements in and around the Courtroom, the ALJ is not persuaded that Claimant has any credible observable impairment of his natural person. While he wore sunglasses at hearing and used a walking stick, he did not need the same during the time when he was videotaped. Moreover, the ALJ was able to discern Claimant's testimony without difficulty and the ALJ did not observe any tremor affecting his hands during hearing. While Claimant obviously believes that his injury has caused multiple areas of disfigurement, the ALJ concludes that this belief, more probably than not, is also rooted in and explained by Claimant's maladaptive psychiatric condition which has probably resulted in the development of psychogenic seizures. Consequently, the ALJ declines to award any additional compensation for Claimant's perceived, but unfounded disfigurement.

ORDER

It is therefore ordered that:

1. Respondents' request to set aside Dr. Fall's DIME opinions regarding causation and permanent impairment is GRANTED. The 12% whole person impairment assigned by Dr. Fall is set aside and replaced by the 47% impairment rating assigned by Dr. Higginbotham on February 7, 2017.

2. Claimant has proven that he is Permanently Totally Disabled (PTD).

3. Respondents shall provide all reasonable necessary and related treatment to cure and relieve the Claimant from the effects of his December 30, 2006 work-related injury. Respondents remain free to challenge any future request for treatment on the grounds that it is not reasonable, unnecessary or unrelated to Claimant's industrial injury.

4. Claimant request for disfigurement benefits is denied and dismissed.

5. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 1, 2017

Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that the June 1, 2016 cataract surgery performed by Howard Amiel, M.D. was causally related to his February 25, 2016 work injury.

2. Whether Claimant has established by a preponderance of the evidence an entitlement to an award for disfigurement.

FINDINGS OF FACT

1. Claimant is employed by Employer as a second step gas fitter apprentice. Claimant has been employed by Employer for approximately three years.

2. On February 25, 2016 Claimant was so employed and was assigned to install a large rotary gas meter at a location that was surrounded by fencing. Claimant and a co-worker had to dismantle and remove a section of fencing.

3. While removing the fencing, Claimant was crouched down and an eight foot long, round, galvanized steel pole fell striking Claimant on the right side of his face. The blow caused a laceration above Claimant's right eyebrow and an abrasion on the right side of Claimant's nose.

4. Claimant was bleeding profusely, and was transported by his coworker to an urgent care center operated by the University of Colorado.

5. At the urgent care center, Claimant was evaluated by Mark Loeb, M.D. Claimant reported that a fence post fell and hit him above the right eye and caused a laceration. Dr. Loeb also noted a small scrape/abrasion on the right side of Claimant's nose, right nasal ala that did not need treatment. Dr. Loeb closed the laceration above Claimant's right eyebrow with six interrupted sutures. Dr. Loeb noted the plan to return in about five days to see James Rafferty, M.D. for suture removal. *See* Exhibits 1, E.

6. As a result of the injury, Claimant has a scar above his right eyebrow that measures between ½ of an inch to ¾ of an inch in length. The scar, at the time of hearing, remained white, red, and discolored from Claimant's normal skin tone despite adequate time for healing.

7. On March 1, 2016 Claimant was evaluated by Janet Gelman, P.A. PA Gelman removed Claimant's sutures and noted slight gaping so placed steri strips. PA Gelman recommended Claimant return in one week for follow up with Dr. Rafferty. *See* Exhibits 1, E.

8. On March 10, 2016 Claimant was evaluated by James Rafferty, M.D. Claimant reported that he was struck in the right side of his face with a fence post. Claimant reported doing very well and having no problems with his laceration. Claimant reported, however, that he had developed some visual acuity issues and visual blurring recently and that he had an appointment with his optometrist for further evaluation later in the week. Claimant reported that he was ready for discharge for the facial laceration. Dr. Rafferty assessed a ¾ inch laceration of the face due to work related trauma. Dr. Rafferty opined that Claimant was at maximum medical improvement with no permanent impairment, no need for maintenance care, and that Claimant was clear for full duty work. *See* Exhibits 1, E.

9. On April 2, 2016 Claimant was evaluated by Susan Miller, O.D. Dr. Miller found that Claimant had visually significant cataracts and referred Claimant to Howard Amiel, M.D. (ophthalmologist) for surgery evaluation, noting the reason for referral was for cataract with a history of trauma in February of 2016. *See* Exhibits 2, F.

10. On April 14, 2016 Claimant was evaluated by Tom Cruse, O.D. Claimant reported that approximately six weeks prior, he was hit on the right eyebrow and saw flashes after this happened and a big floater central in his right eye. Claimant reported blurred vision and altered depth perception in his right eye and difficulty reading in both eyes. Dr. Cruse found on examination that Claimant had a posterior subcapsular cataract at 2+ in the right eye, and a posterior subcapsular cataract at trace in the left eye. Dr. Cruse diagnosed posterior subcapsular polar age-related cataracts, bilaterally. Dr. Cruse noted the treatment plan of cataract surgery with Dr. Amiel. *See* Exhibits 3, H.

11. On April 26, 2016 Claimant returned to Dr. Rafferty for evaluation. Dr. Rafferty noted that following the last visit Claimant had been diagnosed with a right eye cataract and that surgery had been recommended. Claimant reported that he was advised to report to Dr. Rafferty for further evaluation because of a belief that the cataract might be related to the February 25, 2016 work injury. Dr. Rafferty assessed ¾ inch laceration of the face, resolved and bilateral cataracts right greater than left. Dr. Rafferty opined that the cataracts were possibly work related. Dr. Rafferty noted that even though traumatic cataracts are uncommon, trauma to the face or eye can result in cataracts. Dr. Rafferty noted that he did not know the amount of force that must be applied to the face before one could develop a cataract from the force and Dr. Rafferty recommended an opinion from an ophthalmologist if causation was being questioned. *See* Exhibits 1, E.

12. Dr. Rafferty noted that the aging process can contribute to cataracts, but that Claimant was a relatively young man at the age of 56. Dr. Rafferty noted no history of diabetes, chronic steroid use, or disease of the eye. Dr. Rafferty noted that UV radiation can play a role in cataracts, but that it could not be quantified. Dr. Rafferty noted that the temporal relationship between the event that occurred on February 25, 2016 and the onset of Claimant's visual blurring increases the likelihood that Claimant's

cataract was work related. Dr. Rafferty provided a work restriction of no commercial driving due to monocular vision. *See* Exhibits 1, E.

13. On June 1, 2016 Claimant underwent cataract surgery performed by Dr. Amiel. Dr. Amiel provided a surgical report but did not provide a causation analysis. The operative report indicates that Claimant presented with a progressive decrease of vision in the right eye with a visually significant cataract and that surgery was recommended. *See* Exhibits 4, G.

14. Claimant proceeded with the cataract surgery under his private health insurance but is requesting reimbursement of expenses for the surgery under workers' compensation.

15. On June 9, 2016 Claimant was evaluated by Dr. Rafferty. Claimant reported that the cataract surgery went very well and that his vision was much improved and essentially back to normal. Dr. Rafferty opined that the right eye cataract was work related since facial trauma can cause cataracts, Claimant had no known non-occupational risk factors for cataract development, and there was a strong temporal relationship between the work related event on February 25, 2016 and the development of the right eye cataract. *See* Exhibit 1.

16. On June 21, 2016 Claimant was evaluated by Dr. Rafferty. Claimant reported that he was discharged from care with his ophthalmologist and that he had no pain or problems with his eye or vision. Dr. Rafferty continued his opinion that the right eye cataract was work related. Dr. Rafferty placed Claimant at MMI that day, opined that there was no need for maintenance care, opined that Claimant had no permanent impairment, and opined that Claimant could perform full duty work. *See* Exhibits 1, E.

17. On June 30, 2016 Dr. Cruse issued a letter indicating that six weeks prior to Claimant's April 14, 2016 examination, Claimant was hit on the right brow with a metal object while on a work site. Dr. Cruse noted that Claimant presented with a posterior capsular cataract that warranted cataract surgery with Dr. Amiel. Dr. Cruse opined that a posterior capsular cataract in a patient of Claimant's age was most likely due to the trauma Claimant sustained on the work site. *See* Exhibit 3.

18. On August 22, 2016 Kenneth Kauvar, M.D. (ophthalmologist) performed a medical records review. Dr. Kauvar noted that Claimant had a laceration on his face due to blunt trauma, but not on his eyelid or eye. Dr. Kauvar noted that Claimant had posterior subcapsular cataracts in both eyes, with the right slightly worse than the left and that the degree of difference between Claimant's cataracts in each eye was typical for age related subcapsular cataracts. Dr. Kauvar noted that it would be unusual for the two to be the same since usually one eye progresses faster than the other eye. Dr. Kauvar noted that although Claimant was only 56 years old, Claimant was in the normal age range for age related cataracts to develop. Dr. Kauvar opined that trauma to an eye can cause the development of a cataract, however, the trauma needed to be a severe direct blow to the eye and would be expected to have noted eye changes such

as intraocular bleeding, a torn iris, a retinal tear, a corneal abrasion, a corneal laceration, increased intraocular pressure, or other findings. Dr. Kauvar opined that none of these types of findings were noted in Claimant at the time of injury or in later examinations. *See* Exhibits 5, D.

19. Dr. Kauvar noted that Claimant's only right eye changes were a posterior subcapsular cataract that was also noted in Claimant's other eye even though Claimant had no trauma to the left side of his face or to his left eye. Dr. Kauvar opined that it was as likely as not that Claimant's trauma to the right face did not cause or aggravate beyond its normal progression the development of the cataract in Claimant's right eye. Dr. Kauvar opined that the need for cataract surgery was not solely related to the workers' compensation claim. *See* Exhibits 5, D.

20. On December 12, 2016 Glen Gunderson, O.D. issued a letter. Dr. Gunderson indicated that he had known Claimant for more than five years and personally vouched for Claimant's moral character and integrity. Dr. Gunderson also noted that he had recently retired from general optometry practice after 42 years and had diagnosed many cataracts resulting from eye or orbital trauma. Dr. Gunderson opined that in most all cases, the formation of cataract occurring in one eye was attributable to trauma resulting in uveitis and reduced vision. Dr. Gunderson noted that Claimant reported that the right eye vision started to deteriorate within two weeks following a work related forcible blow to the right temporal area. Dr. Gunderson opined that unless another cause for intraocular inflammation or disease was documented, monocular cataract formation in a young man would be attributed to trauma. *See* Exhibit 6.

21. On January 30, 2017 Claimant underwent an independent medical examination performed by Chester Roe, M.D. (ophthalmologist). Dr. Roe, in error, did not digitally record the examination. A re-examination was performed by Dr. Roe on February 21, 2017 and was recorded. Dr. Roe issued his report on February 28, 2017.

22. Claimant reported to Dr. Roe that an eight foot long galvanized fence pole struck him on the right brow causing a laceration and that he was knocked over when it happened. Claimant reported that his vision started to get blurry in the right eye 7-10 days after the injury and that he had surgery and no longer has any problems with his right eye. Dr. Roe reviewed medical records and performed an eye examination. Dr. Roe opined that it was medically probable that Claimant's right eye cataract was not caused by the February 25, 2016 on-the-job forehead laceration injury. *See* Exhibits 13, A.

23. Dr. Roe opined that Dr. Rafferty was the least qualified physician from an eye standpoint to make a judgment regarding eye injury causation, that the optometrists were the next most qualified, but that the most qualified to comment on causation of cataract etiology and surgery would be the operating ophthalmologist Dr. Amiel, the record reviewing ophthalmologist Dr. Kauvar, and himself as an ophthalmologist. Dr. Roe opined that it was significantly less than 50% likely that the on-the-job injury caused

Claimant's right cataract. Despite the correlation in time soon after the laceration/injury, Dr. Roe opined that the forehead laceration did not cause right cataract progression and Dr. Roe noted that Claimant had the same type of cataract in the left eye and that the trauma/laceration to "near" the right eye, though it caused a laceration, was not significant to the right eye itself. *See* Exhibits 5, D.

24. Claimant testified at hearing that prior to his work related injury he had no vision problems or issues and had never sought vision treatment. Claimant testified that shortly after his work injury, he had blurry vision and a floater in his right eye that was not present before the injury. Claimant reported that he underwent cataract surgery because he wanted to be able to drive a commercial vehicle again and that not having a commercial driver's license would jeopardize his job. Claimant testified that three weeks after the cataract surgery, he was back to normal and full duty work and that his vision was back to where it was prior to the work injury. Claimant is credible and persuasive.

25. Dr. Roe testified at hearing consistent with his report. Dr. Roe opined that Claimant was in the normal age range to develop cataracts, and that by a persons 60's, nearly everyone has trace cataracts. Dr. Roe noted the range from trace to 4+ and that Claimant had trace in the left eye and 2+ in the right eye. Dr. Roe opined that often trauma related cataracts are anterior but can be posterior. Dr. Roe opined that the timing was coincidental only because Claimant had no trauma to the eye itself in the work injury and that trauma related cataracts tend to happen with direct and severe trauma to the eye. Dr. Roe noted that Claimant's injury was not severe like in other trauma related cataracts. Dr. Roe opined that Claimant's left eye will most likely continue to progress and require surgery as well in Claimant's lifetime.

26. Dr. Roe indicated that he did not know exactly where the rest of the pole that struck Claimant was. He also opined that in 10-30% of cases, a person can develop posterior subcapsular cataracts and go from no symptoms to the symptoms Clamant had in a period of two weeks. Dr. Roe noted that the average age for cataract surgery in the United States was 69 and that only 10-15% of the patients he operated on were under the age of 60.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Cataract Surgery

Respondents are required to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. *See* § 8-42-101(1)(a), C.R.S. Claimant must establish by a preponderance of the evidence that the conditions for which he seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. *See* § 8-41-301(1)(c), C.R.S. Claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant has met his burden to establish by a preponderance of the evidence a causal relationship between his February 25, 2016 work injury and his cataract surgery. The opinions of the authorized treating provider Dr. Rafferty and of optometrist Dr. Cruse are found credible and persuasive. Their opinions are further consistent with the

opinions of both ophthalmologists who acknowledge that trauma can cause cataracts. Although Dr. Cruse is an optometrist and not an ophthalmologist and does not perform cataract surgery, he is well qualified to diagnose and opine on the causation of cataracts.

As found above, Claimant was not just struck on face as it has been characterized at different points. Claimant had a laceration above his right eyebrow that required six sutures and he also had an abrasion on the right side of his nose. Claimant was struck both above his right eyebrow and on the right side of his nose with significant enough force to cause a laceration and abrasion. The positioning of the blow, striking both above his right eyebrow and on the right side of his nose necessarily involves his right eye area. Claimant's testimony is credible that he had no prior symptoms or problems with his vision and that he had never before sought treatment for vision problems. Claimant, prior to the injury, had no work restrictions and had the ability to drive a commercial vehicle. The opinion of Dr. Rafferty that the injury was work related was based on three things: that facial trauma can cause cataracts, that Claimant had no other non-occupational risk factors for cataract development, and that there was a strong temporal relationship between the work injury and the onset of cataract symptoms. Dr. Cruse, similarly opined that the development of a posterior capsular cataract in a patient of Claimant's age was most likely due to the trauma Claimant sustained on the work site. These opinions are persuasive.

Dr. Kauvar characterized the injury as just a laceration on the face, not on the eyelid or eye. However, as found above Claimant had not only a laceration just above his right eyebrow, he also had an abrasion on the right side of his nose. Dr. Kauvar's opinions are based, in part, on his belief that there was no trauma or direct blow to the eye. Similarly, Dr. Roe opined that the timing was coincidental only because Claimant had no trauma to the eye itself in the work injury and that a trauma related cataract tends to happen with direct and severe trauma to the eye. The opinions of Dr. Roe and Kauvar are not found as credible and persuasive as the credible persuasive opinions of Dr. Cruse, Dr. Rafferty, and the credible testimony of Claimant.

The ALJ finds after weighing all the evidence that Claimant has established more likely than not that he sustained trauma to his right eye significant enough to cause his right eye cataract and the need for surgery to cure and relieve the right eye cataract. Claimant is credible and persuasive and the ALJ does not agree that the symptoms Claimant experienced shortly after his work injury where he was struck and had a laceration above his right eyebrow and abrasion on the right side of his nose were merely coincidental. Rather, the ALJ finds persuasive that the trauma caused the need for cataract surgery and treatment to the right eye. Although Claimant has a trace cataract in the left eye, at the time of the work injury he had no symptoms in either his right or left eye and had not required treatment. Following the injury and the trauma to his right eye area, Claimant had 2+ cataract in the right eye and trace cataract in the left eye and he first began having symptoms in his right eye. Claimant has established that the trauma from the work injury more likely than not caused his symptoms and need for treatment of the right eye cataract.

Disfigurement

As found above, as a result of his February 25, 2016 work injury, Claimant has visible disfigurement to the body. The disfigurement includes one scar above Claimant's right eyebrow that measures between ½ of an inch and ¾ of an inch in length and remains white, red, and discolored from Claimant's normal skin tone despite adequate time for healing. Claimant has therefore established that he has sustained serious permanent disfigurement to areas of his body normally exposed to public view, and that he is entitled to additional compensation. *See* § 8-42-108(1), C.R.S.

ORDER

It is therefore ordered that:

1. Claimant has established by a preponderance of the evidence that the June 1, 2016 cataract surgery performed by Howard Amiel, M.D. is causally related to his February 25, 2016 work injury.

2. Claimant has established by a preponderance of the evidence an entitlement to an award for disfigurement. Insurer shall pay Claimant $400.00 for the disfigurement outlined above. Insurer shall be given credit for any amount previously paid for disfigurement in connection with this claim.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 4-881-225-06

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER GRANTING SUMMARY JUDGMENT IN FAVOR OF THE RESPONDENTS

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer/Respondents.

A hearing on the merits in the above-referenced matter is scheduled for July 27, 2017, in Denver, Colorado, on the issue of Re-Opening. On May 23, 2017, the Respondents filed a " Motion for Summary Judgment, "alleging, *inter alia,* that Claimant's claim was closed by operation of law; and, that a case that has never been determined to be compensable cannot be reopened. Attached to the Respondents' Motion were Exhibits A through I. On May 31, 2017, the Claimant filed his "Response to Respondents' Motion for Summary Judgment." Attachment to the Claimant's Objection was Exhibit 1 [the Pre-Hearing Order of Pre-Hearing Administrative Law Judge (PALJ) John H. Sandberg, dated march 29, 2017. The Response does not clearly allege that a genuine issue of disputed material fact exists, other than a "worsening of condition" in a case that has never been determined to be compensable. Moreover, the Response contains legal argument concerning why a fully contested case should be re-opened when the alleged compensable injury has worsened.

The matter was assigned to Edwin L. Felter, Jr., Administrative Law Judge (ALJ) for decision on the Respondent's Motion for Summary Judgment and the Claimant's Objection. Both matters were deemed submitted for decision on June 1, 2017.

Respondents' Exhibits A through I were attached to the Motion for Summary Judgment. Claimant's Exhibit 1 was attached to the Response.

ISSUES FOR SUMMARY JUDGMENT

The issues to be determined by this decision concern whether there are genuine issues of disputed material fact concerning

The Respondents bear the burden of proof, by a preponderance of the evidence of establishing that there is no genuine issue of disputed material fact concerning the above-mentioned issues and that they are entitled to summary judgment as a matter of law.

FINDINGS OF FACT

Based on the undisputed evidence contained in the file, pleadings and exhibits, the ALJ makes the following Findings of Fact:

1. This matter arises out of an alleged work-related injury that occurred on or about January 18, 2012.

2. The Claimant filed a timely Claimant's Workers' Compensation Claim with the Division of Workers' Compensation (DOWC) within the Two-Year limitation prescribed by the Workers' Compensation Act.

3. The Respondents denied liability and compensability of the claim and filed and served a Notice of Contest with Colorado Division of Workers' Compensation on March 15, 2012 (Exhibit A, attached to the Motion).

4. On September 21, 2012, Respondents filed and served a Petition to Close Claim for Failure to Prosecute, pursuant to Colorado Workers' Compensation Rules of Procedure (WCRP) Rule 7-1(C), 7 CCR 1101-3 (Exhibit B, attached to Motion).

5. On October 9, 2012, the Director of the Colorado Division of Workers' Compensation (DOWC) entered an Order to Show Cause requiring the Claimant to tell the DOWC what recent effort had been made to pursue his workers' compensation claim. The Order to Show Cause was served on Claimant and notified him that a response was required to be filed within 30 days of the date of the certificate of mailing or the claim would be automatically closed. The Order also indicated that "if your case is closed after 30 days, you have the right to petition to reopen your case as set for [sic] in § 8-43-303, C.R.S." (Exhibit C, attached to Motion).

6. The Claimant never responded to the October 9, 2012 Order to Show Cause entered by the DOWC Director. The Claimant never filed a Petition to Review the Order. Therefore, pursuant to the terms of the Order, the Claimant's claim was deemed automatically closed.

7. The Claimant took no further action on his claim and no activity on the claim occurred for over two years until November 25, 2014 when counsel for Claimant entered his appearance with the DOWC.

8. The Claimant filed an Application for Hearing on December 1, 2014. The issues endorsed for hearing included: compensability, temporary disability benefits, medical benefits, and average weekly wage (AWW). This hearing was never set (Exhibit D, attached to Motion).

9. The Claimant filed a second Application for Hearing, dated September 14, 2015. The same issues of compensability, temporary disability benefits, medical benefits, and AWW were endorsed for hearing (Exhibit D, attached to Motion).

10. The parties appeared by and through their counsel on February 3, 2016 in the Office of Administrative Courts (OAC) before ALJ Laura Broniak. At the hearing, the September 14, 2015 Application for Hearing was stricken without prejudice because the claim was closed pursuant to the October 9, 2012 Order to Show Cause. .

11. The Claimant subsequently filed a Petition to Re-open on June 1, 2016. The basis for the Petition to Re-open was a "change of medical condition." Attached to the Petition was a medical report from William H. Miller III, M.D., dated February 12, 2015 (Exhibit E, attached to Motion).

12. The Claimant filed a third Application for Hearing on June 22, 2016; and, in addition to the issues of compensability, temporary disability benefits, medical benefits, and AWW, the issue of "Petition to Re-Open" was also endorsed. A hearing was never set (Exhibit F, attached to Motion).

13. The Claimant filed additional Applications for Hearings on November 19, 2016 and February 22, 2017 endorsing the issues of compensability, temporary disability benefits, medical benefits, and AWW. The issue of Petition to Re-open, however, was not endorsed (Exhibit G, attached to Motion).

14. A pre-hearing conference was held on March 27, 2017, before PALJ) John H. Sandberg. Respondents moved to strike the Claimant's February 22, 2017, Application for Hearing and dismiss the claim with prejudice. The PALJ correctly determined that the issues of compensability, temporary benefits, medical benefits, and WW were not ripe for adjudication because the claim was closed pursuant to the October 9, 2012, Order to Show Cause entered by the Director of the DOWC. The

February 22, 2017, Application for Hearing was stricken. The PALJ declined to dismiss the claim with prejudice because a Petition to Re-open would (or could) present issues of fact to be resolved by a merits judge at the OAC (Exhibit H, attached to the Motion).

15. On April 5, 2017, the Claimant filed another Application for Hearing endorsing only the issue of "Petition to Re-Open Claim." A hearing has been set with the OAC and it is currently scheduled to commence on July 27, 2017 on the issue of Claimant's Petition to Re-open (Exhibit I, attached to Motion).

16. Although raising an interesting legal argument, the Claimant's Response to the Motion for Summary Judgment fails to persuasively allege that the Motion should be denied because there is a genuine issue of disputed material fact.

Ultimate Facts

17. The ALJ infers and finds that there is no "changed condition," as a basis for re-opening until and unless "compensability" has been determined by admission or determination by an ALJ. The question arises "re-opening what?"

18. There has been no **award** of any sort as of the present time.

19. The Respondents have proven, by a preponderance of the evidence that there is no genuine, disputed issue of material fact; and, that they are entitled to summary judgment.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Summary Judgment

a. Pursuant to Office of Administrative Courts Rules of Procedure (OACP) Rule 17, 1 CCR 1101-3, "any party may file a motion for summary judgment seeking resolution of any endorsed issue for hearing." Summary judgment may be sought in a workers' compensation proceeding. *See Fera v. Indus. Claim Appeals Office,* 169 P.3d 231, 232 (Colo. App. 2007). The OAC Rule allows a party to support its Motion with affidavits, transcripts of testimony, medical reports, or employer records. A motion for summary judgment may be supported by pleadings, depositions, answers to interrogatories, and admissions on file. C.R.C.P. 56; *See also Nova v. Indus. Claim Appeals Office*, 754 P.2d 800 (Colo. App. 1988) [C.R.C.P. and C.R.E. apply insofar as they are not inconsistent with the procedural or statutory provisions of the Act]. As found, Exhibits A through I were attached to the Respondent's Motion, consisting of

pleadings and other official documents. Exhibit 1 was attached to the Claimant's Response (PALJ Sandberg's Pre-hearing order), however, the Response fails to set forth alleged facts illustrating that there are genuine issues of disputed material fact.

b. Pursuant to Office of Administrative Courts (OACRP), Rule 17, 1 CCR 104-1, summary judgment is appropriate when there are no disputed issues of material fact and the moving party is entitled to judgment as a matter of law. As found, the Claimant's Response presents a legal argument for re-opening a matter where "compensability" has not yet been determined, but it fails to set forth alleged facts illustrating that a genuine issue of disputed material fact exists.

Re-Opening

c. Section 8-43-303 (1), C.R.S., provides: "At any time within six years after the date of injury…an administrative law judge may…review and reopen any **award** (emphasis supplied)." § 8-43-303 (2 (a) provides that a matter may be re-opened at any time within two years after the date of the last…benefits become due and payable. As found, there has never been an **award** of any benefits because "compensability" remains a contested issue. *See Heinicke v. Indus. Claim Appeals Office*, 197 P.3d 220 (Colo. App. 2008); *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186, 189 (Colo App. 2002).

d. The purpose of the "change of condition" ground for re-opening is to allow for equitable adjustments to **awards** of benefits if conditions change over time. *Ward v. Ward*, 928 P.2d 739 (Colo. App. 1996)[*citing to Mascitelli v. Giuliano & Sons Coal Co.,* 157 Colo. 240, 402 P.2d 192 (1965)]. A change in condition refers to a "change in the condition of the original **compensable** injury or to a change in claimant's physical or mental condition which can be causally connected to the original compensable injury." *Jarosinski v. Indus. Claim Appeals Office,* 62 P.3d 1082, 1083 (Colo. App. 2002). The "change in condition" ground, therefore, refers to "a change in the condition of the original compensable injury or to a change in claimant's physical or mental condition which **can be causally connected to the original compensable injury** (emphasis supplied)." *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186, 189 (Colo. App. 2002); *Chavez v. Indus. Comm'n*, 714 P.2d 1328, 1330 (Colo.App.1985). A "change of condition" for purposes of the re-opening statute does not apply to changes in the economic circumstances of a claimant. Rather, a "change in condition" refers to a change in claimant's "physical or mental condition resulting from the **compensable** (emphasis supplied) injury and not a change in economic conditions[.]" *Lucero v. Climax Moybdenum Co.,* 732 P.2d 642, 648 (Colo. 1987).

e. Adopting the position taken in *Larson's Workers' Compensation Law*, 8 Larson's Workers' Compensation Law § 131.03(2)(a)(2001), the Colorado Court of Appeals held that the original finding of causation cannot be challenged in re-opening or post-re-opening proceedings. *City and County of Denver, Indus. Claim Appeals Office*, 58 P.3d 1162, 1164 (Colo. App. 2002). In fact, the court in *City and County of Denver* specifically quoted Larson's indicating "reopening based on a change of condition does

not permit re-litigation of every potential issue…neither party can raise original issues such as work-connection, employee or employer status, *occurrence of a compensable accident*, and degree of disability at the time of the first award [emphasis added]. *Id.* In the present case, as found, the Claimant filed a Petition to Re-Open a denied claim based on a change of medical condition on June 1, 2016. Claimant attached a medical report from Dr. Miller that purportedly supports the Petition to Re-open resulting from a change of medical condition. The denied claim was previously closed by the Director of the DOWC in his Order to Show Cause dated October 9, 2012. The Claimant is now attempting to obtain an order re-opening a closed claim that was never found or admitted to be compensable in the first place.

f. In order for the Claimant to re-open his claim pursuant to §8-43-303, C.R.S. based on a change of condition, it must be established that Claimant previously sustained a compensable injury. As found, the Respondents never admitted liability for benefits or filed any admission. Rather, a Notice of Contest was filed and it is undisputed that the underlying compensability of the claim has always been denied by the Respondents and never found compensable.

Genuine Issue of Disputed Material Fact

g. Summary judgment is appropriate when the pleadings show that there is no genuine issue as to any material fact and that the moving party is entitled to judgment as a matter of law. C.R.C.P. 56(c); *Churchey v. Adolph Coors Co.*, 759 P.2d 1336 (Colo. 1988). This rule allows the parties to pierce the formal allegation of the pleadings and save the time and expense connected with trial when, as a matter of law, based on undisputed facts, one party could not prevail. See *Drake v. Tyner*, 914 P.2d 519 (Colo. Ct. App. 1996). As found, there are **no** genuine issues of disputed material fact concerning whether there has been an **award** of benefits.

h. Once the moving party shows specific facts probative of a right to judgment, it becomes necessary for the non-moving party to set forth facts showing that there is a genuine issue for hearing. *See Miller v. Van Newkirk*, 628 P.2d 143 (Colo. App. 1980). As found, the Claimant's Response to Respondents' Motion for Summary Judgment fails to show specific facts that there are genuine disputed issues of material fact.

Limitations/ Housekeeping Mechanisms of the Law

i. While the operation of statutes, rules and orders of the Director of the DOWC may seem unfair in their implementation, the law needs "housekeeping" devices to end cases once and for all when there has been no meaningful action over a protracted period of time. As found, the Claimant repeatedly failed to prosecute his claim to the point that rules for dismissal were invoked by the Respondents and the Director of the DOWC ultimately entered a "Show Cause Order," the terms of which

provided for dismissal if good cause was not shown within 30-days. As found, on September 21, 2012, Respondents filed and served a Petition to Close Claim for Failure to Prosecute, pursuant to Colorado Workers' Compensation Rules of Procedure (WCRP) Rule 7-1(C), 7 CCR 1101-3 (Exhibit B, attached to Motion). On October 9, 2012, the Director of the DOWC entered an Order to Show Cause requiring the Claimant to tell the DOWC what recent effort had been made to pursue his workers' compensation claim. The Order to Show Cause was served on Claimant and notified him that a response was required to be filed within 30 days of the date of the certificate of mailing or the claim would be automatically closed. The Order also indicated that "if your case is closed after 30 days, you have the right to petition to reopen your case as set for [sic] in § 8-43-303, C.R.S." (Exhibit C, attached to Motion). Thereafter, the Claimant never responded to the October 9, 2012 Order to Show Cause entered by the DOWC Director. The Claimant never filed a Petition to Review the Order. Therefore, pursuant to the terms of the Order, the Claimant's claim was deemed automatically closed. The Claimant took no further action on his claim and no activity on the claim occurred for over two years until November 25, 2014 when counsel for Claimant entered his appearance with the DOWC. In the same manner that a "statute of limitations" is designed to bring closure and finality on stale claims, so are the rules and the DOWC Director's Order to Show Cause, the consequences of not doing so in a timely fashion are a dismissal of the claim. As the late U.S. Supreme Court Justice Oliver Wendell Holmes, Jr., advised a litigant, "a statute of limitations has nothing to do with justice or fairness, it is a housekeeping mechanism of the law and this is a court of law, not a court of justice." Expressed another way, "Let be finale of seem" ("The Emperor of Ice Cream," *Collected Poems of Wallace Stevens*).

Burden of Proof

j. The burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P. 2d 535 (Colo. App. 1992). That burden is "preponderance of the evidence." A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). As found, the Respondents have satisfied their burden of proof that there is **no** genuine issue of disputed material fact.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Respondent's Motion for Summary Judgment is hereby granted.

B. The presently set hearing of July 27, 2017, is hereby vacated.

DATED this_____day of June 2017.

_____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203**.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. (as amended, SB 09-070). For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

CERTIFICATE OF SERVICE

I hereby certify that I have sent true and correct copies of the foregoing **Full Findings of Fact, Conclusions of Law and Order Granting Summary Judgment in Favor of Respondents** on this_____day of June 2017, electronically in PDF format, addressed to:

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that she suffered a compensable work injury on or about March 1, 2015.

II. Has Claimant shown, by a preponderance of the evidence, that she is entitled to medical benefits as a result of a compensable work injury occurring on or about March 1, 2015.

STIPULATIONS

At the outset of the hearing, the parties stipulated that Temporary Total Disability was not an issue for hearing, and that the issue of Average Weekly Wage would be held in abeyance, pending the outcome of this hearing.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following Findings of Fact:

1. Claimant's husband, and de jure employer, was deemed disabled following a lumbar fusion surgery, which occurred in late January 2015. At hearing, Claimant cited a number of unspecified reasons for her husband's total incapacity. Claimant started working full-time as a caretaker for her husband on February 1, 2015 through a government assisted program.

2. On March 1, 2015, Claimant alleges she suffered a work injury in the course and scope of her employment. Claimant testified "On March 1st, I was helping [my husband] out of bed and our hands slipped apart and he fell back on the back and I fell backwards into the entertainment center."

3. Claimant stated she immediately "had stingers," which were "throughout the whole right side of my body from my neck down to my toes." Claimant reported there were not only "stingers," but, "stabbing pain and stiffness and I couldn't really move for a little while."

4. At hearing, Claimant initially testified that she went to Dr. Johnson "within a couple of days" after her alleged injury on March 1, 2015.

5. Despite Claimant's statement that she sought treatment from Dr. Johnson a couple of days after the alleged injury, the record contains no medical evidence that Claimant sought medical attention on the date of injury, or the days following injury.

6. Claimant later testified that in fact, she did not seek treatment until she saw Dr. Pak on October 19, 2015.

7. Over three and a half months after Claimant suffered this alleged injury, she applied for Social Security Disability Benefits (SSDI). On July 7, 2015, the Social Security Administration (SSA) issued a Disability Determination and Transmittal. (Ex. V, p. 266) The SSA denied Claimant's request for benefits and stated, "clmnt alleges she became disabled on 4/12/2012, however, clmnt has been working as a home health care nurse and earned $20,743.19 in 2013 and works this year (2015) 28 hours per week and earns $2000.00 per month." (Ex. V, p. 270)

8. Claimant's June 21, 2015 application for SSDI benefits makes no mention of a March 1, 2015 injury. (Ex. V)

9. Claimant testified at hearing that she also received unemployment benefits in 2014.

10. After Claimant was denied SSDI benefits, a First Report of Injury was then completed on October 6, 2015. (Ex. A)

11. On October 19, 2015, Claimant sought treatment for the first time for her alleged March 1, 2015 work injury. She met with Dr. John Pak who reported Claimant stated, "she was lifting [her husband] out of bed and she felt a shock of pain going through shoulder." (Ex O, p. 171) Claimant's report to Dr. Pak of how her injury initially occurred did not include a report that she fell backward into an entertainment center.

12. Claimant's complaints to Dr. Pak on October 19, 2015 were limited to the right shoulder. Dr. Pak assessed Claimant with "shoulder pain," bursitis of the shoulder and scapulalgia. Dr. Pak administered a corticosteroid injection to the right shoulder. He referred Claimant for an x-ray and to begin physical therapy. (Ex. O, pp. 171-173)

13. The x-ray of the right shoulder requested by Dr. Pak was performed. It revealed type II acromion, but was otherwise normal. (Ex. O, p. 173)

14. Claimant also underwent a cervical spine x-ray which demonstrated multilevel degenerative disc changes and arthritis. (Ex. O, p. 176)

15. On November 17, 2015, (now over eight months after her alleged injury), Claimant began reporting left shoulder pain. (Ex. O, p. 178)

16. On March 4, 2016, Claimant underwent a surgical evaluation with Dr. Joseph Ilig. After examining Claimant and her medical records, he opined "Patient has nonspecific radiating right arm pain infrequently with primarily right paraspinal and upper sternocleidomastoid soreness. Her examination is benign." (Ex. S, p.

233) Dr. Ilig found “no indication for neurosurgical intervention given the benign appearance of her MRI with minimal degenerative changes.” Claimant sought a refill of her oxycodone prescription from Dr. Ilig during the consultation, but Dr. Ilig declined Claimant’s request, since Claimant was not a surgical candidate. (Ex. S, p. 233) Though Dr. Ilig found Claimant was not a surgical candidate, he did want to rule out any radiculitis in the upper extremities “albeit unlikely.” He referred Claimant for EMG studies. (Ex. S, p. 233)

17. Claimant underwent the EMG testing with Dr. Gregory Ales on April 4, 2016. The results were normal other than chronic reinnervation in the left triceps muscle. (Ex. S, p. 238)

18. After Dr. Ilig reviewed Claimant’s EMG results and again opining the Claimant is not a surgical candidate, he referred Claimant to Dr. Scott Ross for a physiatric consultation. When Dr. Ross examined Claimant, she indicated her right shoulder issues had resolved, but Claimant indicated she “has been still left with left-sided neck pain that radiates into the shoulder blade and into the trapezie." Dr. Ross recommended a left-sided medial branch block. She was also able to receive a prescription for oxycodone. (Ex. T, pp.242, 243)

19. Claimant did not miss work following her alleged injury and continued to earn full wages as demonstrated by her wage earnings. (Exs. H & I)

20. Respondents retained Dr. Robert Messenbaugh to perform an Independent Medical Examination (IME). After examining Claimant and her medical records, Dr. Messenbaugh concluded in his report:

> “It is my opinion that Ms. Dizmang sustained no injury to her cervical spine, right shoulder, low back, or left elbow as a result of any events of March 1, 2015. I simply find no proof or documentation that Ms. Dizmang sustained any injuries from March 1, 2015 other than the fact that she says that she has sustained injuries.” (Ex. U, p. 258)

21. Dr. Messenbaugh was deposed on September 27, 2016. (Ex. J) He testified at the deposition consistent with the opinions contained in his report, but did further elaborate on a variety of issues.

22. Claimant failed to seek medical treatment for seven and a half months after the alleged injury. Dr. Messenbaugh testified that he believes injured workers generally seek treatment shortly after an acute injury. “That’s certainly my experience. And absolutely that would be what I would do and what I think any reasonable person, particularly under the circumstances of a Workers’ compensation accident, would have done and would have experienced issues and been concerned sufficiently to have sought medical evaluation and medical treatment.” (*Deposition Transcript of Dr. Robert Messenbaugh* (hereinafter Depo. T) 7:25-8:6)

23. Dr. Messenbaugh also noted the inconsistent pain complaints provided by Claimant throughout her treatment history. After Claimant initially saw Dr. Pak for only right shoulder issues on October 19, 2016, Claimant reported to her physical therapist she had neck pain. Dr. Messenbaugh opined this "would be inconsistent, in my opinion with her having sustained a neck injury on March 1, 2015." (Depo. T. 14:2-4) He elaborated, stating, "I think you would have [neck] symptoms immediately. I mean, even with a day or whatever they had arisen, again, I would have expected someone to report such an event. That was not reported." (Depo. T. 19-23)

24. Despite Claimant's inconsistent neck pain complaints, Dr. Messenbaugh still analyzed Claimant's MRI imaging of the cervical spine. He stated that those images "are those of degenerative change, not of an acute accident, traumatic change, or alteration in the pathology." (Depo. T. 18:8-14)

25. Dr. Messenbaugh also addressed Claimant's complaints of radiating pain down her right arm. " [The EMG results] were normal, failing to show any evidence of any pathology involving her cervical spine nerve roots. Those go into her hand included, and these were normal…..Her complaints are subjective. The EMG is the objective evidence to demonstrate there was no actual injury to the cervical nerve roots." (Depo. T. 19:13-23)

26. In the IME report, Claimant "reported that she had injured her low back on March 1, 2015, yet in her medical records I do not find objective evidence or for that matter subjective indications that she had injured her lower back on March 1, 2015." (Ex. U, p. 257)

27. The medical records following Claimant's alleged injury do not mention low back pain. Claimant has, however, reported prior issues with her low back. Claimant complained of "back pain leg pain – all over" on December 27, 2010 while seeking treatment in Farmington, N.M. (Ex. K, p.146)

28. A July 14, 2014 note indicated Claimant "admits to long-term low back pain without radiculopathy. Also complaining of knee and ankle pain bilaterally again with longtime symptoms." (Ex. U, p. 152)

29. Claimant's low back pain complaints prior to injury were apparently sufficient to warrant an x-ray of the lumbar spine on July 14, 2014. (R. Ex. M)

30. By the time Claimant was examined by Dr. Messenbaugh in August 2016, Claimant's pain complaints from her eighteen month old alleged injury had expanded to include "pain in the right side of her body from her neck to her toes and also her left arm. She stated that she had itching all the time, that she couldn't remember things, and that she had difficulty in grasping with her fingers and that they felt weak." (Depo. T. 25:21-26:10)

31. Dr. Messenbaugh found Claimant's history of varying and increasing pain complaints throughout the body concerning. "My concerns also are that her symptoms seem to be ever expanding, changing, going from – Dr. Pak says from shoulder and then to neck. And here we are beyond seven and a half months after a reported event of March '15 and then she later has complaints of the opposite left shoulder. And then she has complaints of low back at a later date. It all just seems to be highly inconsistent. "(Depo. T. 29:11-18)

32. Claimant has demonstrated inconsistent complaints throughout her treatment for her alleged work injuries. On her first visit, (over seven and a half months after the alleged injury) Claimant only complained of right shoulder pain. As her treatment progressed, her reported symptoms increased. She then began complaining of left extremity pain, neck pain, and low back pain. Claimant also complained of skin irritation and insomnia. Medical treating providers conducted a variety of tests, none of which demonstrated any acute injury. As such, the only evidence to support Claimant's report of injury on March 1, 2015 is Claimant's own reports. This ALJ is persuaded by the opinions of Dr. Messenbaugh who found these types of pain complaints are inconsistent with an injury on March 1, 2015.

33. The ALJ finds the contemporaneous medical records, and Dr. Messenbaugh's opinions, more persuasive than the testimony of Claimant. Claimant's failure to seek treatment for an acute injury for seven and a half months raises serious concerns with Claimant's credibility. This ALJ is persuaded by the testimony of Dr. Messenbaugh who found Claimant's failure to seek treatment to be unreasonable and inconsistent with an acute injury which occurred on March 1, 2015.

34. The ALJ finds Claimant's credibility is further compromised by documentation demonstrating she is regularly seeking a variety of benefits. These include receipt of unemployment benefits in 2014, an application for SSDI benefits in 2015 (and prior to her seeking treatment for the alleged March 1, 2015 injury), and her ongoing receipt of income as her husband's paid caretaker with no apparent supervision or oversight.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to Assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A Claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

B. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law, and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Clam Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Compensability

D. In order to recover benefits a claimant must prove that she sustained a compensable injury. A compensable injury is one which arises out of and in the course of employment. Section 8-41-301(1)(b), C.R.S. The "arising out of" test is one of causation. It requires that the injury have its origins in an employee's work-related functions. *Finn v. Indus. Comm'n,* 165 Colo. 106, 437 P.2d 542 (1968). It is the claimant's burden to prove by a preponderance of the evidence that there is a direct causal relationship between the employment and the injuries. *Ramsdell v. Horn,* 781 P.2d 150 (Colo. App. 1989).

E. Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.*, 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner*,12 P.3d at 846.

F. Based on Claimant's failure to seek medical treatment for seven and a half months, her inconsistency in reporting her alleged symptoms, the lack of objective findings to support her allegation that she suffered any injury on March 1, 2015, and Dr. Messenbaugh's credible testimony finding there is no objective evidence that a work injury occurred, this ALJ finds Claimant failed to sustain her burden of proving, by a preponderance of the evidence, that she sustained a compensable work injury.

Medical Benefits

G. Respondents are only liable for medical treatment that is reasonably necessary to cure and alleviate the effects of the occupational disease. Section 8-42-101(1)(a). The question of whether medical treatment is reasonable and necessary is one of fact for determination by the ALJ. *Kroupa v. ICAO*, 53 P.3d 1192, 1197 (Colo. App. 2002). The Claimant bears the burden of proof to establish the right to specific medical benefits. *Wal-Mart Stores, Inc.*, 989 P.2d 251, 252 (Colo. App. 1999). Claimant failed to prove, by a preponderance of the evidence, that she suffered a compensable injury and is, therefore, not entitled to any medical benefits.

ORDER

It is therefore ordered that:

1. Claimant does not have a compensable claim. Her request for medical benefits is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 5, 2017

Colorado Springs, Colorado 80906

ISSUES

- Whether Claimant's hearing loss and tinnitus is causally related to his industrial injury.

- Whether Claimant's need for hearing aids is reasonable, necessary, and related to Claimant's industrial injury.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant is presently a 53-year-old male who worked for Employer as a lab technician. Claimant's job involved cleaning and repairing high end mineral specimens.

2. On December 9, 2015, Claimant sustained an admitted work injury. Claimant was changing the oil for a large vacuum chamber when he hit his head on a piece of metal. (Exhibits (Ex.) 1 and 2.) Claimant testified that within a few days of hitting his head that he had a constant, high pitch ringing in his ears, left worse than right. He described an immediate hearing loss, because he could not hear his roommate speaking to him and he often had to ask his roommate to repeat himself.

3. On December 9, 2015—the date of injury—Claimant was treated at Colorado Internal Medicine by Dr. Goldsmith. Dr. Goldsmith's report indicates Claimant hit his left forehead, causing swelling and a bruise above the left side of his forehead. Claimant reported feeling mildly dizzy and off balance. Claimant denied headache or muscle weakness. Dr. Goldsmith's exam revealed a 2.5 cm contusion above the left forehead. However, his exam also revealed Claimant's hearing was intact to conversational voice in both ears. Dr. Goldsmith's report does not indicate Claimant complained of ringing in the ears or tinnitus. (Ex. F at 15-16.)

4. On December 17, 2015, Claimant returned to Colorado Internal Medicine. He was seen by Mario Capocelli, PA-C. The report from this appointment indicates Claimant stated that he was dizzy, feeling off, and had headaches. PA-C Capocelli reported Claimant's hearing was intact to conversational voice in both ears. (Ex. F at 17-18.)

5. On January 5, 2016, Claimant returned to Colorado Internal Medicine for a third time. Dr. Goldsmith also reported Claimant's hearing was intact to conversational voice in both ears; he reported no ringing in Claimant's ears, and an otoscopic exam revealed the tympanic membrane appearance was within normal limits. (Ex. F at 20-

21.) Following this examination, Claimant was referred to neurologist, Dr. Pamela Kinder.

6. Claimant's first evaluation with Dr. Kinder occurred on January 19, 2016. Claimant testified that when he first saw Dr. Kinder his main concern was migraines, speech, and other issues. Claimant testified that he was not concerned with his hearing loss or the ringing in his ears.

7. Dr. Kinder's January 19, 2016, report indicates Claimant had no hearing loss and no ringing in his ears. (Ex. G at 26.) Dr. Kinder also wrote that Claimant's hearing was intact to voice. (Ex. G at 27.)

8. The first report of Claimant having ringing in his ears did not occur until January 27, 2016, when Claimant presented for physical therapy. (Ex. 7 at 112.) This is approximately 49 days after Claimant hit his head. There is no report of hearing loss.

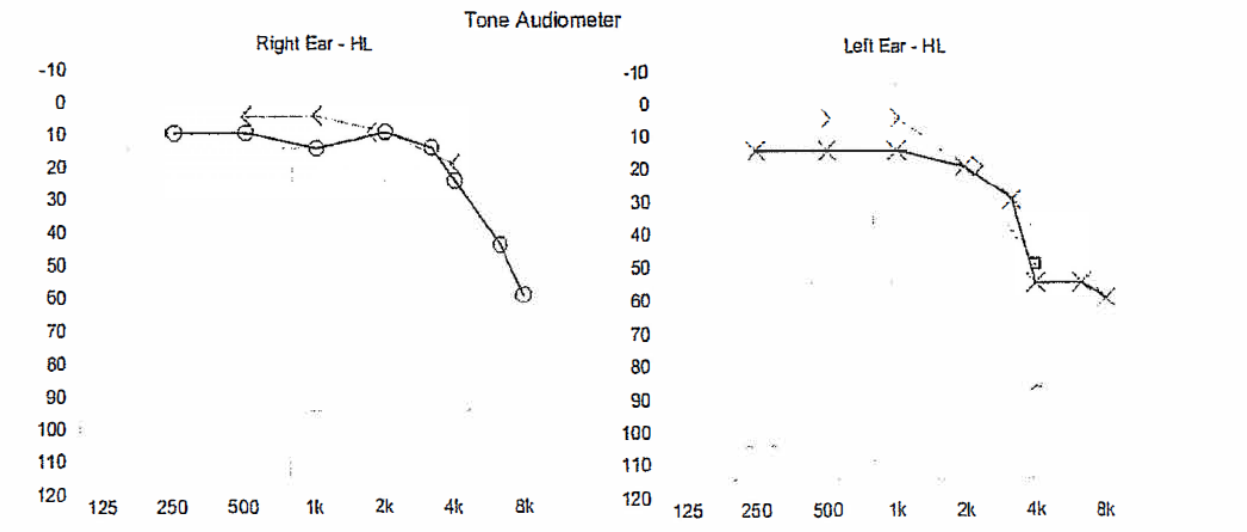
9. On February 9, 2016, Claimant returned to Dr. Kinder. At this appointment, Claimant complained of having a high-pitched whistling noise in his left ear.

10. Claimant continued receiving various treatments directed towards his postconcussional syndrome.

11. Dr. Kinder referred Claimant to Rocky Mountain ENT and Associates to evaluate Claimant's hearing and tinnitus.

12. On September 8, 2016, Claimant underwent a hearing test at Rocky Mountain ENT. The Hearing test involved an audiogram, tympanogram, and speech recognition. Claimant testified that he was referred to Rocky Mountain ENT Associates by Dr. Kinder. Dr. Scott Sharp and audiologist Dr. Amy Umansky are physicians at Rocky Mountain ENT.

a. The audiogram involves a series of sounds played at different frequencies. The evaluator charts the ability of the patient to hear sounds at different intensities and frequencies. Test results are documented on a graph with the vertical axis showing the intensity of sound—softer sounds (-10 decibels) are at the top of the axis and louder sounds (120 decibels) at the bottom of the axis. The Y-axis or horizontal axis, documents frequency or pitch of the sound measured in hertz—lower sounds towards the right of each graph measured starting at 125 hertz, and higher pitch sounds up to 8000 hertz. Claimant's audiogram test results were:



(Ex. I at 51.)

b. Claimant's speech recognition scores were noted to be at 20 decibels, the same on the right and left. (Ex. I at 51.)

c. Claimant's word recognition scores were 96% on the right ear, and 100% for the left ear. (Ex. I at 51.)

d. Claimant had a type A Tympanogram indicating no damage to the ear drum, or fluid being present in the ear.

13. The results listed on the Rocky Mountain ENT hearing test for both the right and left ears were normal sloping to moderate sensioneural hearing loss with excellent word recognition and type A Tympanogram. (Ex. I at 51.)

14. Dr. Sharp reviewed the hearing test results and recommended "amplification and a hearing aid consult because of bilateral hearing loss." (Ex. I at 53.)

15. On September 8, 2016, Dr. Umansky requested authorization from Respondents for a hearing aid consult for: (1) asymmetrical sensorineural *hearing loss of both ears*; and (2) tinnitus, *bilateral*.

16. On September 16, 2016, Respondents denied Dr. Umansky's request for a hearing aid consult and treatment related to binaural hearing loss and tinnitus. (Ex. I at 54.)

17. On September 28, 2016, Dr. Sharp wrote a letter "to whom it may concern." The letter stated Claimant had an audiogram that showed normal sloping to moderate sensorineural hearing loss bilaterally with excellent word recognition, and that "there was a strong chance that the injury contributed in some ways to his [Claimant's] issues and symptoms." (Ex. I at 55.)

18. On December 5, 2016, Dr. Alan Lipkin evaluated Claimant. Dr. Lipkin is board certified in the field of Otolaryngology and is Colorado Division of Workers Compensation Level II accredited. (Ex. K and L.)

19. Dr. Lipkin performed similar hearing tests to those done by Rocky Mountain ENT, with similar results. Dr. Lipkin's report concluded that Claimant,

> has bilateral symmetrical high frequency sensorineural hearing loss of a configuration that is commonly seen in the non-injured population. It cannot be said, to a reasonable degree of medical probability, that his injury caused his hearing loss. Hearing aids were recommended elsewhere – I would not generally recommend hearing aids for this type of high frequency hearing loss, which is at frequencies above those in speech. Hearing aids are not necessitated by his injury.

(Ex. L at 99.)

20. On December 6, 2016, Dr. Kinder reported that she believed Claimant was at maximum medical improvement for the work injury. She reported that in addition to headaches and memory loss that Claimant had left sided tinnitus and hearing loss. (Ex. H at 39.) Because Dr. Kinder is not Level II accredited she referred Claimant to Dr. L. Barton Goldman for determination of permanent impairment.

21. In a report dated January 17, 2017, Dr. L. Barton Goldman reviewed the reports and hearing tests from Dr. Sharp and Dr. Lipkin's office. Dr. Goldman concluded that the audiometric data was similar, but that Dr. Lipkin's interpretation of the data is more medically probable. When considering Claimant's impairment for the work injury, Dr. Goldman wrote,

> Per our level II accreditation curriculum and The Guides to the Evaluation of Permanent Impairment, third edition revised, of the American Medical Association, in the absence of clearly post concussive hearing loss on audiometry, it is not medially probable to provide an impairment rating for tinnitus.

(Ex. J at 62.) Within the same report, Dr. Goldman opined that only two conditions were work-related injury:

> (1) status post-concussion with post concussive syndrome, primarily manifested with post-traumatic headaches; and (2) anxiety disorder, pre-existing and aggravated possible sleep dysfunction and deconditioning.

(Ex. J at 63 and 71.)

22. According to the Department of Labor, Division of Workers Compensation

Impairment Rating Tips, Updated January 2011,

> **Tinnitus**: … Tinnitus impairment can only be provided when a hearing loss and impairment is documented.

23. Because Dr. Goldman determined Claimant has not sustained a post-concussive hearing loss, he determined Claimant could not have sustained occupationally related tinnitus.

24. On January 20, 2017, Dr. Goldman evaluated Claimant. According to Dr. Goldman, Claimant "believes Dr. Lipkin gave him the same feedback pretty much that Dr. Sharp had provided, indicating that the patient's audiometric findings might be due to age." (Ex. J at 68.)

25. On March 15, 2017, Dr. Kinder agreed with Dr. Goldman that Claimant had not sustained hearing loss related to this work injury. (Ex. H at 46-48.)

26. At hearing, Dr. Sharp testified. Dr. Sharp was accepted as an expert in ear, nose, and throat surgery. Dr. Sharp testified that Claimant has normal sloping high frequency sensioneural hearing loss. Dr. Sharp explained that tinnitus is highly correlated to the frequency of a person's hearing loss. (Hearing Tr. 8:40:10 – 8:40:50.)

27. Dr. Sharp testified that Claimant may have a condition known as Presbycusis, or age-related hearing loss. Presbycusis occurs when a person has hearing loss at higher frequencies.

28. Dr. Sharp testified that in 7% to 12% of persons afflicted with tinnitus the cause of the tinnitus is a head injury or whiplash. This ALJ finds that accepting Dr. Sharp's testimony that the cause in 7% to 12% of persons afflicted with tinnitus have the condition because of a head injury or whiplash, then the inverse of Dr. Sharp's testimony is also true: that the cause of 88% to 93% of persons with tinnitus have the condition from causes unrelated to a head injury or whiplash.

29. Dr. Sharp also testified that Claimant does not have a conductive element to his hearing loss. Dr. Sharp explained that a conductive element to hearing loss would involve a broken ear bone, ear wax, or a broken ear drum. A conductive hearing loss could be caused by trauma. Dr. Sharp testified that Claimant's work injury was due to trauma—a head strike—and that there was no conductive element to Claimant's hearing loss.

30. Dr. Sharp explained the audiogram, he explained that speech frequencies are between 500 and 2000 hertz, at an intensity of 0 to 25 decibels. Claimant's right and left ear hearing was normal at the speech frequencies; Claimant's hearing loss occurs at frequencies higher than those in speech.

31. Dr. Sharp testified that high frequency hearing loss is commonly seen in

persons over the age of 50, and that high frequency hearing loss is the associated pattern that is seen in age related hearing loss.

32. Dr. Sharp also testified that tinnitus is related to hearing loss. Dr. Sharp testified as to the relationship between hearing loss and tinnitus. Dr. Sharp testified that:

> [T]here is very strong correlation between hearing loss pattern and what the tinnitus pattern is. For example, as we start to lose our hearing in the high frequencies or somebody loses their hearing in the high frequencies, it is most common for them to develop high-frequency ringing. And what's thought to be happening there is because the brain in not getting normal sound input at that frequency level, the brain will actually create a sound to fill that in, and that's where the ringing can come from.

33. This ALJ credits that portion of Dr. Sharp's testimony which indicates there is a strong relationship between hearing loss causing tinnitus.

34. Dr. Sharp also testified that hearing aids can help alleviate the effects of tinnitus. Dr. Sharp testified that because high frequency hearing loss can result in high frequency tinnitus, increasing the high frequency levels through the use of a hearing aid can bring the lost frequencies back to a normal range and thereby improve the tinnitus. In other words, replacing the lost frequencies, which are thought to be the cause of the tinnitus, through the use of a hearing aid can alleviate the tinnitus.

35. When asked about the cause of Claimant's hearing loss, and therefore the most likely cause of Claimant's tinnitus, Dr. Sharp did not provide a cogent answer. He deferred at one point to the neurologist for a neurological reason for the hearing loss. He then went on to testify that 7-12% of people with tinnitus have a history of a closed head injury or whiplash type injury and Claimant had both. However, as stated above, Dr. Sharp also testified that Claimant's hearing loss was consistent with someone who had age related high frequency hearing loss and hearing loss is associated with causing tinnitus. He also testified that Claimant's tinnitus could be caused by a combination of factors, such as Claimant's hearing loss and his closed head injury. Then, Dr. Sharp concluded that the there was a "strong chance that the injury contributed in some way to the symptoms he presented to my office with."

36. This ALJ does not credit Dr. Sharp's opinion that the injury contributed to Claimant's hearing loss and tinnitus. As stated above, Dr. Sharp could not provide a clear and credible opinion as to the cause of Claimant's hearing loss and tinnitus.

37. Dr. Lipkin also testified at hearing. Dr. Lipkin was qualified as an expert in otolaryngology, with a specialty in ear, nose, and throat, and a concentration in hearing loss. Dr. Lipkin is Level II accredited pursuant to the W.C.R.P. Dr. Lipkin explained there are different types of hearing loss: conductive and neural. He also explained that

hearing loss can occur at different frequencies and can impact a person's ability to discriminate words. Dr. Lipkin testified that he has treated thousands of patients with tinnitus and high frequency sensioneural hearing loss.

38. Dr. Lipkin explained that tinnitus is a perception of a noise inside a person's ear or head, and that tinnitus can be either objective or subjective. Dr. Lipkin testified that objective tinnitus, is a dangerous condition and occurs when a physician can hear ringing in a person's head with the use of stethoscope, an example of this condition would be a brain aneurism. On the other hand, Dr. Lipkin testified that subjective tinnitus is more common, and occurs when a patient hears a noise in their ears that others cannot hear. Dr. Lipkin explained it is common for persons with high frequency sensioneural hearing loss to have tinnitus, and that high frequency hearing loss occurs without any type of specific injury. Dr. Lipkin testified that Claimant has subjective tinnitus.

39. Dr. Lipkin agreed with Dr. Sharp that Claimant has high frequency sensioneural hearing loss. Dr. Lipkin explained that high frequency hearing loss is a hearing loss that is commonly seen in the general population for persons over the age of 40, especially those over the age of 50. Dr. Lipkin explained that Claimant's speech recognition, his ability to discriminate words and his tympanogram result was normal.

40. Dr. Lipkin explained that if you took a random sampling of 52-year-old persons, high frequency sensioneural hearing loss would be a common pattern of hearing loss within those persons, and those persons would have no history of injury.

41. Dr. Lipkin testified that he would not recommend hearing aids for Clamant because the audiograms by both his office and Dr. Sharp's office show that Claimant can understand conversation in speech frequencies and that claimant can word discriminate. Claimant's right ear word recognition score was at 96%; left ear word recognition score was 100%. As a result, Dr. Lipkin concluded, hearing aids are not medically necessary.

42. Dr. Lipkin also explained that persons with post concussive hearing loss can have different types of hearing loss including a sudden loss of all hearing that could be associated with a serious injury such as a skull fracture. In general, however, he would anticipate that a person who sustained a post-concussive hearing loss, their audiogram show a flat, across the board, hearing loss as opposed to the sloping hearing loss seen on Claimant's audiogram.

43. Dr. Lipkin testified that to a reasonable degree of medical probability that Claimant's hearing loss and tinnitus is not the result of December 9, 2015 work injury.

44. The ALJ has weighed the evidence and finds the opinions of Dr. Lipkin to be persuasive, and credits his testimony over the testimony of Dr. Sharp. This ALJ finds Dr. Lipkin's, opinions, credentials and expertise to be very convincing.

45. The ALJ finds persuasive Dr. Lipkin's opinion that Claimant has a normal sloping high frequency sensioneural hearing loss that is commonly seen in the general population for persons over the age of 40. Dr. Lipkin explained that Claimant has a subjective form of tinnitus and Dr. Sharp offered that 88% to 93% of all persons with tinnitus have the condition without any type of head injury or whiplash. The ALJ also finds Dr. Goldman and Dr. Kinder's opinion that claimant did not sustain a work-related hearing loss persuasive.

46. The audiogram and word recognition tests from both Dr. Lipkin and Dr. Sharp's office were similar. Both office's tests show that Claimant has normal hearing within the speech frequencies with word recognition scores at 96% for the right ear and 100% for the left ear. Dr. Lipkin explained that hearing aids are supposed to help a person understand things better, but Claimant already has excellent speech discrimination, so there is no medical necessity to amplify Claimant's ability to understand others.

47. The ALJ finds that Claimant's hearing loss was not caused by his work accident.

48. The ALJ finds that Claimant's hearing loss is age-related.

49. The ALJ finds that Claimant's age-related hearing loss is the most likely cause of his tinnitus.

50. The ALJ has considered all evidence contrary to the opinions of Dr. Lipkin, Dr. Kinder, and Dr. Goldman—including, but not limited to Claimant's statements of subjective worsening of his hearing and tinnitus. The ALJ has determined that all evidence contrary to the opinions of Dr. Lipkin, Dr. Kinder, and Dr. Goldman's are less persuasive and are not credited.

CONCLUSIONS OF LAW

General Provisions

The purpose of the Workers' Compensation Act of Colorado, C.R.S. § 8-40-101, et seq., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. See C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark,* 592 P.2d 792 (Colo. 1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the ALJ. *University Park Care Center v. ICAO*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record

may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the ALJ considers, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008).

Medical Benefits

Respondents are required to provide medical benefits that are reasonably necessary to cure or relieve the effects of the industrial injury. C.R.S. § 8-42-101(1) (2016); *Snyder v. ICAO*, 942 P.2d 1337 (Colo. App. 1997). The question of whether the need for treatment is causally-related to an industrial injury is one of fact. *Wal-Mart Stores, Inc. v. Industrial Claims Office*, 989 P.2d 251 (Colo. App. 1999).

The issue for the ALJ's determination is whether Claimant has proven by a preponderance of the evidence that his hearing loss and tinnitus are causally related to his work injury, and if so, whether the hearing aids recommended by Dr. Sharp constitute treatment which is reasonably necessary and causally related to the work injury. Claimant has failed to meet this burden.

The ALJ finds that the totality of the evidence demonstrates it is more likely than not that Claimant's hearing loss and tinnitus is not related to his work injury, because (1) there was a significant delay in his reporting of symptoms; and (2) the opinions of Dr. Lipikin, the ATP Dr. Kinder, and Dr. Goldman are authoritative and convincing.

First, immediately following his work injury, Claimant sought treatment with his personal providers at Colorado Internal Medicine Center—he saw them on three occasions for the work injury December 9 and 17, 2015; and January 5, 2016. Claimant did not report any hearing loss or tinnitus. Claimant was then referred to Dr. Kinder, and Dr. Kinder's initial report of January 19, 2016, did not indicate any report of hearing loss or tinnitus.

Next, Claimant underwent comprehensive hearing tests at Rocky Mountain ENT (similar tests and results were performed by Dr. Lipkin's office). Hearing tests included an audiogram, word recognition, and a tympanogram. Audiogram test results showed that claimant had normal hearing within the speech frequencies (250 to 2000 hertz), and difficulty hearing in both the right and left ear for higher pitch (higher frequency) sounds. The audiogram recorded that Claimant required a greater intensity sound (higher decibels) to hear higher pitch/frequencies (sounds with a pitch of 4000 hertz or more) in both the left and right ear. On the audiogram, Claimant's ability to hear higher pitches required a higher intensity sound, and thus resulted in a downward sloping curve. However, Claimant's speech recognition scores were good and nearly equal for right and left ear. Claimant alleges left worse than right hearing loss, yet word recognition

scores was slightly better on the left ear: 100% score; versus a 96% score on the right ear.

Dr. Lipkin and Dr. Sharp agreed Claimant's hearing loss was of a sensiorneural high frequency nature. The hearing loss on audiogram was described as "normal sloping," and the diagnosis was considered the same for the right and left ear. Dr. Lipkin persuasively explained Claimant's high frequency sensioneural hearing loss is commonly seen in the general population for persons over the age of 40, let alone persons for persons over the age of 50. Claimant is 52 years old, and Claimant's hearing loss would be common in a general sampling of 52 year old persons randomly selected off the street. Further, if Claimant had sustained a post-concussive hearing loss, Dr. Lipkin explained that Claimant's hearing loss on audiogram would not be only high frequency in nature and charted on the audiogram downward sloping, but he would expect the audiogram chart to show a more flat-lined hearing loss.

Both Dr. Lipkin and Dr. Sharp agree that tinnitus is a symptom of high frequency sensioneural hearing loss. Dr. Lipkin's authoritative opinion that Claimant's hearing loss is unrelated to claimant's work injury is shared by both Dr. Goldman and the ATP, Dr. Kinder. Dr. Goldman additionally pointed out that for tinnitus to be considered an impairment under the AMA Guides and DOWC Rating Tips an injured worker must have a clear post concussive hearing loss on audiogram, which Dr. Lipkin indicated Claimant did not have.

Therefore, while Claimant sustained a compensable injury, a preponderance of the evidence does not support Claimant's hearing loss and tinnitus as work related injuries or conditions. *Snyder,* 942 P.2d 1337. Claimant has failed to sustain his burden of proof. *See* C.R.S. § 8-40-102(1).

ORDER

Based upon the preceding Findings of Fact and Conclusions of Law, Respondents request that the ALJ enter the following order:

1. Claimant's hearing loss and tinnitus is not causally related to his industrial accident.

2. Claimant's request for medical benefits in the form of hearing aids is denied and dismissed.

3. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: 6-6-17

Glen B. Goldman
Administrative Law Judge
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Whether Claimant has established by a preponderance of the evidence that he sustained a compensable industrial injury as the result of incidents that occurred on March 5, 2014 and March 11, 2014.

- Whether Claimant's claim is barred by the statute of limitations pursuant to C.R.S. 8-43-103(2).

- Whether Claimant's lumbar surgery performed by Dr. Rauzzino on October 6, 2016 and October 7, 2016, was authorized, reasonably necessary, and related to the March 2014 work incidents.

- Whether Respondents are liable for Claimant's surgery pursuant to 8-42-101(6).

- Whether Dr. Dawn Baker and Dr. Michael Rauzzino are authorized treating physicians.

- Whether Claimant has established by a preponderance of the evidence that he is entitled to TTD benefits for the requested time frame of October 6, 2016 – March 31, 2017.

- Average Weekly Wage.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant is 67 years of age. His date of birth is October 2, 1949.

2. Claimant testified that he is 5'11" and weighs approximately 220 lbs.

3. Claimant alleges he suffered a work related injury on March 5, 2014 and March 11, 2014 to his right knee and back.

4. Claimant's preexisting conditions, symptoms, and treatment are as follows:

- In 1984, Claimant had a severe disc herniation with sciatica. Claimant underwent a laminectomy. Claimant's 1984 back injury, which resulted in surgery, caused symptoms which waxed and waned.

- During August of 2001, Claimant was involved in an accident in which he was hit by a van and thrown 12 feet. Due to the accident, Claimant had back pain with associated bilateral leg pain.

- On August 28, 2001, Claimant underwent an MRI of his lumbar spine due to his low back pain and bilateral leg pain. The MRI showed the prior right laminectomy and disc surgery at the L5-S1 level as well as granulation tissue around the right S1 nerve root proximally.

- On September 24, 2001, Claimant presented to Littleton Internal Medicine. Claimant complained of left knee pain and right foot numbness. Claimant returned on October 29, 2001, and complained of bilateral knee pain and indicated he could not kneel.

- On December 6, 2002, Claimant returned again to Littleton Internal Medicine and complained of bilateral knee pain.

- On September 30, 2003, Claimant presented to Littleton Internal Medicine and complained of right hip and lower back pain which he had had for the last 2 weeks.

- On December 1, 2006, Claimant presented to Dr. Tameira Hollander due to falling on his left knee. Claimant complained of fleeting pains in both knees prior to his fall. Dr. Hollander thought the knee pain was due to arthritis.

- On April 16, 2010, Claimant presented to Dr. Joseph Ladika for chronic sciatica, which Claimant had had for over 20 years. Claimant complained of chronic right sided calf atrophy and numbness in the middle two toes as well as some new pain in the ball of his foot. On May 26, 2010, Claimant returned to Dr. Ladika and complained of new right toe pain.

- On May 24, 2012, Claimant returned to Dr. Ladika due to lower back pain. Claimant complained of low back pain on the right side for 7-8 days. The pain was severe enough to interfere with his sleep. Claimant had left sided back pain which radiated down the left side of his leg to his hamstring and to his to knee. Claimant also had unremitting back pain on the right side.

- On July 24, 2013, Claimant was evaluated by Dr. Ladika and complained of bilateral knee pain. He complained of knee pain on a daily basis including pain with climbing stairs which caused him to become unstable due to pain. Claimant also complained of swelling in his right knee.

- On or about February 5, 2014, Claimant injured his right knee. The symptoms continued for about three weeks. Due to the injury, Claimant had to rest his right knee and ice his right knee. These symptoms continued until approximately February 26, 2014.

5. Before March 5, 2014, Claimant had complained of daily bilateral knee pain. Claimant had also complained of back pain with symptoms that radiated bilaterally.

6. Claimant was hired as a Service Advisor with Respondent Employer, Denver Automotive Group dba Empire, in July 2012. [Respondents' Exhibit AA, p. 411]

7. Upon hire, Claimant was provided with various written employment policies. This included "Policies Concerning Work-Related Accidents, Injuries or Illnesses." [Exh. AA, pp.417-418] This information identified the Employer's designated medical providers. The policy clearly states: "If an unauthorized medical provider treats an employee, the employee will be responsible for payment of said treatment." [Exh. AA, p. 417] On July 10,2012, Claimant signed a document acknowledging receipt: "…I UNDERSTAND THAT MY EMPLOYER HAS DESIGNATED CERTAIN MEDICAL PROVIDERS AS THE PRIMARY PROVIDER FOR ALL WORK-RELATED ACCIDENTS/INJURIES/ILLNESS. I UNDERSTAND THAT IF I DO NOT RECEIVE MY MEDICAL CARE FROM THE AUTHORIZED MEDICAL PROVIDERS, I WILL BE HELD FINANCIALLY RESPONSIBLE FOR THE COST OF THAT CARE." [Exh. AA, p. 418]

8. On February 5, 2014, just one month before the incident at work, Claimant injured his right knee. [Exh. J, p. 28] The nature and extent of this injury is not clear. However, the medical records establish Claimant had symptoms for about three weeks. [Exh. J, p. 28] The medical records also indicate Claimant had to rest his knee and ice his knee. [Exh. J, p. 28] The ALJ infers from this medical report that Claimant also had swelling in his right knee during this time. This ALJ finds that Claimant's right knee symptoms of pain and swelling continued up through about February 26, 2014.

9. Claimant testified that on the morning of March 5, 2014, he was removing snow from the service drive at the dealership. He slipped on some oil that was mixed in with the snow. Claimant did not fall, but described hyperextending his right knee. The incident was reported to the Employer that day, and Claimant was provided with a choice of designated medical providers. Claimant elected to go to Union Medical, which was one of the provider choices. [Exh. AA, p. 417]

10. Claimant was initially evaluated by Erin Lay, PA-C at Union Medical on March 6, 2014. [Resp. Exh. J, pp. 28-30] The following history was noted: "Patient states that yesterday, he was mopping the floor of the service department when his left foot slipped in a puddle of oil. Patient states that he did not fall, but rather landed on his right foot with his right knee hyperextended. Patient states that he developed knee pain and swelling…Patient describes the knee pain as a constant aching, rated at about a

3/10…Pain also localized in low back. Patient with history of chronic low back pain stemming from lumbar spine laminectomy in 1984. Patient states current discomfort slightly above baseline…Patient states that approximately one month ago, he had a similar injury to his right knee…." [Exh. J, p. 28] Ms. Lay ordered x-rays of Claimant's right knee and lumbar spine; provided Claimant with crutches and a neoprene sleeve for his knee; and prescribed medication. Temporary work restrictions were imposed.

11. Claimant underwent an IME with Dr. Ridings on March 23, 2017. During the IME, Claimant denied hurting his right knee one month before the March 5, 2014 incident at work. Claimant also denied that he had pain for three weeks after hurting his knee in February of 2014. Claimant's contention that he did not injure his knee one month before the incident at work and did not have symptoms for three weeks is not found to be credible.

12. Claimant completed a medical history questionnaire at his initial appointment with Union Medical. [Exh. J, pp. 25-26] He indicated that he had a prior back injury with a laminectomy in 1984. He reported having bilateral numbness or tingling in his "R & L feet x yrs." Claimant was noted to be a smoker, and had smoked a ½ pack of cigarettes per day for 40 years.

13. On March 6, 2014, the employer completed a Workers' Compensation First Report of Injury. There is, however, no credible evidence that it was filed with the Division.

14. Claimant testified that he missed two days of work due to the March 5, 2014 incident. Because there was no testimony or evidence presented to the contrary, this ALJ credits Claimant's testimony regarding the time he missed from work.

15. During a follow-up appointment on March 10, 2014, Erin Lay, PA-C reported: "Patient underwent an x-ray of the right knee which showed patellofemoral osteoarthritis and possible osteochondral lesion. X-ray of the lumbar spine showed chronic degenerative changes including mild retrolisthesis of L1 on L2 and L2 on L3. Also noted was moderately severe to severe disc height loss at L5-S1…as well as schlerotic facet arthrosis present at multiple levels…" [Exh. J, p. 31] Ms. Lay went on to comment: "Patient does state that with use of crutches, he has soreness in the right hip area, localized in the groin. Patient has a history of degenerative joint disease that flares occasionally following a motor vehicle accident several years ago…Patient states that his low back pain has returned to baseline…" Ms. Lay referred Claimant for an MRI of his right knee and x-rays of the lumbar spine with flexion and extension views. [Exh. J, pp. 35-36]

16. On March 11, 2014, Claimant was descending some stairs at work while using his crutches and lost his balance and missed the last 3 steps. Claimant did not fall, but landed hard on both feet. The incident did not cause much back pain that day. Claimant worked the remainder of the day.

17. Claimant returned to Union Medical the following day, March 12, 2014. The report from that date provides: "Since his previous evaluation here, patient states that he has developed acute low back pain. Patient states that he was descending stairs yesterday on his crutches when he missed the last 3 steps. Patient states he landed on his feet, but since then has had increased severe low back pain…localized in his low back radiating out to the right and left. He denies pain in the right and left lower extremity." [Exh. J, p. 37] Ms. Lay referred Claimant to St. Anthony's emergency department for pain control.

18. The Emergency Department report from St. Anthony's dated March 12, 2014 reflects: "Patient states that yesterday he was descending stairs at his home on crutches when he lost his balance on the crutches and landed hard on his bilateral feet on a lower step. Patient reports that he reinjured his lower back in the incident yesterday. Patient did not fall or sustain any direct trauma to the back… Patient denies leg weakness, leg paralysis, or leg paresthesias. He denies bowel or bladder dysfunction. Patient reports he was evaluated at his Workers Compensation Clinic this morning and they referred him to the ER for further evaluation and pain control…" [Exh. K, p. 76] Claimant was given a prescription for pain medication. The emergency room provider noted: "I did offer the patient pain management here in the ER, however the patient reports that he needs to drive home to Centennial…He would prefer to drive home and take medication when he gets home." [Exh. K, p. 78] The report further states: "…My suspicion for serious pathology is low…There is no indication for emergent MRI…The patient has a normal neurologic exam…The patient will be treated conservatively for a suspected musculoskeletal origin of back pain…" [p. 78]

19. The incident on March 11, 2014 did not cause Claimant to suffer from any leg weakness, leg paralysis, or leg paresthesias. Claimant's neurological examination was normal. The diagnosis at that time was most likely a muscle strain of his lower back. The incident of March 11, 2014 did not aggravate or accelerate Claimant's underlying back condition.

20. Claimant testified that he missed two days of work due to the March 11, 2014 incident. Because there was no testimony or evidence presented to the contrary, this ALJ credits Claimant's testimony regarding the time he missed from work.

21. Claimant underwent an IME with Dr. Ridings on March 23, 2017, and explained the March 11, 2014 incident while using crutches. Claimant alleged that instead of just missing a few steps, he actually jumped 12 feet horizontally and landed 5 feet below where he began. Such story, according to Dr. Ridings, was unbelievable. This ALJ does not credit Claimant's version of events regarding the March 11, 2014 incident on crutches as described to Dr. Ridings. Instead, this ALJ credits Dr. Ridings' opinion that Claimant's revised story about jumping 12 feet horizontally and landing 5 feet below his take off point is not credible.

22. A report dated March 18, 2014 from Union Medical states: "Pain diagram reviewed, 4/10 … localized in the low back and right knee…Patient underwent MRI of

right knee which showed severe patellofemoral arthrosis with prominent subchondral cystic change in the lateral trochlea. Preserved menisci and ligamentous structures were seen as well a tiny joint effusion. Patient underwent flexion and extension x-rays of lumbar spine which showed no alignment abnormality, but advanced chronic degenerative disc disease and facet arthropathy at L5-S1…." [Exh. J, p. 45] Claimant was referred for physical therapy and for instruction on home exercise. Diagnoses included: Right knee strain, right knee DJD, low back strain, low back DDD. [Exh. J, p. 46]

23. Claimant was seen by Dr. Frederick Paz at Union Medical on April 8, 2014. [Exh. J, pp. 54-57] Dr. Paz noted: "Patient reports pre-existing conditions including 'periodically' with back pain and right knee with the 'typical arthritis' symptoms. History of laminectomy in the 1980s with history of sciatica. Prior history of numbness in the right foot." [p. 54] Dr. Paz referred Claimant to Dr. Horan for an orthopedic consult of his right knee. He referred Claimant to Dr. Shih for a physiatry consult regarding his low back. At an appointment on April 18, 2014, Dr. Paz referred Claimant to Dr. Reilly for a pain management consultation and to Gib Beaver for biofeedback. [Exh. J, pp. 58, 60]

24. Claimant was evaluated by Dr. Franklin Shih on April 14, 2014. [Resp. Exh. L] Dr. Shih noted the following history from Claimant: "Jaydee indicates that he had had a back injury several years ago with back and right lower extremity complaints. He had surgery for that… He did have what sounds like an impairment at that time. He does note some ongoing intermittent back discomfort and numbness in the right foot. Post that he did have some permanent restrictions and ongoing limitations associated with that…" Under the "Assessment" section of his report, Dr. Shih states: "1. Status post reported work injury with increase in low back symptomatology, predominant mechanical presentation, multifactorial degenerative changes noted on radiographic studies. 2. Right knee pain, DJD noted on radiographic studies." [Exh. L, p. 82] Dr. Shih discussed potential treatment options for Claimant's back, such as pool therapy, physical therapy, and acupuncture. They discussed it was also possible that with improvement of his altered gait from his knee, Claimant's back pain may likewise improve. Dr. Shih did not say one way or another if these various treatment modalities would be related to the work incident(s). On his M164 form accompanying the April 14th narrative, Dr. Shih did not respond to the question of whether Claimant's objective findings were consistent with the alleged mechanism of injury. [p. 84]

25. In the April 14, 2014 report, Dr. Shih commented: "Jaydee did discuss significant frustration with work. I think it may be useful to have him seen by a psychologist and biofeedback to help him deal with other factors that can be playing back into his pain complaints." [Exh. L, p. 83]

26. Regarding a follow up appointment, Dr. Shih stated: "4 m for pt. to call to schedule." [Exh. L, p. 84] Claimant made no attempt to follow up with Dr. Shih. He did not return to Dr. Shih after the initial April 14, 2014 appointment.

27. Dr. Steven Horan (orthopedist) evaluated Claimant's right knee on April 16, 2014. [Resp. Exh. M] He reviewed the radiographs, which showed severe degenerative joint disease in the patellofemoral compartment. [Exh. M, p. 93] Treatment options were discussed, and Claimant opted to proceed with an injection. At no time does Dr. Horan suggest that Claimant's right knee condition was work-related.

28. Claimant returned to Union Medical again on May 9, 2014: "Since his previous evaluation, patient states that his condition has improved. Pain diagram reviewed, 3/10 on VAS localized in the lower back and right knee. Patient attributes benefit to twice weekly physical therapy, which he has restarted. Patient states he is also compliant with his home exercise plan. He is awaiting receipt of TENS Unit through physical therapy… Patient is working, remaining within his restrictions with no problem… Patient will follow up with Dr. Horan as scheduled. Will follow up with Dr. Shih as scheduled. Patient declines referral to Dr. Reilly for pain management consultation of Gib Beaver for biofeedback consultation at this time…" [Exh. H, p. 63]

29. Claimant returned to Dr. Horan on May 28, 2014: "He says the injection given in his right knee may have helped a lot. He says he is about 40% better than he was when I saw him, but he is not excited about receiving another injection…ASSESSMENT: Degenerative joint disease, pain improved with physical therapy and previous injection." [Exh. M, p. 99] Under the section of his report captioned "PLAN," Dr. Horan states: "At this time, the patient wants to hold off on any injection, and I am fine with that. He thinks physical therapy is the way to go, and I am also fine with that." [p. 93] Again, there is no indication by Dr. Horan that he is attributing the severe DJD in the knee to a work injury. On the M164 form dated May 28th, Dr. Horan does not list anything in the section for "Work Related Medical Diagnosis." Under "Treatment Plan," he wrote: "DOING OK …DJD…DOES NOT WANT TO REPEAT INJECTIONS." [p. 101]

30. In a report dated June 6, 2014, Erin Lay, PA-C, at Union Medical states: "Patient presents today verbalizing his wish to transfer his care to a facility that is closer to his home… This office will assist with this…" [Exh. J, p. 71] The pain diagram completed by Claimant on June 6, 2014 indicates a pain level of **2/10**. [p. 72]

31. Clamant testified at hearing that the reason he wanted a change of physician was to be closer to a facility by his new job.

32. Claimant voluntarily resigned his employment with Respondent Employer on June 9, 2014 to accept another job. [Exh. AA, p. 426] He began working full-time as a Service Adviser for a different dealership (Suss Buick GMC) on or about June 17, 2014. [Resp. Exh. BB]

33. On July 31, 2014, the claims representative from the Insurer sent a letter to Union Medical: "This letter is to notify Union Medical that Mr. Fehrer has used his One-Time Change of Physician request to Concentra. Effective July 30, 2014, Union Medical is no longer an authorized treating provider for Mr. Jaydee Fehrer…" [Exh. J, p.

74(a)]

34. Claimant was evaluated on August 8, 2014 by Hanna Bodkin, PA-C, at a Concentra facility on Iliff Avenue in Aurora. [Resp. Exh. O, pp. 170-173] Assessment included a lumbar sprain and right knee sprain. A referral was made for physical therapy. Claimant was released to regular duty, with a projected MMI date of November 8, 2014.

35. It should be noted that when Claimant was seen at Concentra in August 2014, he had been working at his new job for several weeks. According to the August 8th report, Claimant's pain had increased since going to work for Suss Buick GMC. The PA-C from Concentra noted: "Standing and walking on feet all day makes back worse. At end of day he is in the most pain. Pain in back is constant 6/10. Right knee constant 4/10. Patient has had MRI of right knee (arthritis), lumbar x-ray negative.

36. A M164 form from Concentra dated August 8, 2014 indicates that Claimant had a return appointment scheduled for August 22, 2014. [Exh. O, p. 173] Claimant no-showed for that appointment. When Claimant did not reschedule, the claims representative from the Insurer scheduled a demand appointment for November 5, 2014. [Exh. O, p. 173(a)] Claimant did not attend the November 5th demand appointment. He eventually returned to Concentra on November 18, 2014 and was seen by Dr. Jennifer Huldin. Dr. Huldin reported: "…had MRI that showed arthritis, was treated with PT that he has not been seen for since August, he is not interested in surgery for the arthritis, has just adjusted his life so he does not need to kneel, doing regular work, no restrictions." Although Dr. Huldin did not specifically mention Claimant's back in her narrative report, she presumably considered that condition because the diagnoses listed on the "Physician Work Status Activity Report" include: "Lumbar Strain, Osteoarthrosis, and Knee/leg sprain." [p. 176] Dr. Huldin placed Claimant at MMI on November 18, 2014, with no permanent impairment. [p. 175] Claimant was released to regular duty with no permanent restrictions. [p. 175] The M164 form from Dr. Huldin indicates that no maintenance care was required. [Exh. O, p. 177]

37. At hearing, Claimant testified that he did not attempt to follow up with his authorized treating physicians because he preferred to see his own doctors. Claimant's primary care physicians are New West Physicians/Arapahoe Internal Medicine. Claimant has treated with both Dr. Joseph Ladika and Dr. Dawn Baker with this group over the years. [Resp. Exh. S, T] Therefore, Claimant intentionally sought unauthorized treatment with Dr. Ladika and Dr. Baker.

38. Between November 18, 2014 and February 21, 2016, Claimant did not seek any treatment directed towards his low back or right knee. During this time, Dr. Baker, Claimant's personal physician, evaluated Claimant multiple times for various non-work related medical conditions.

39. On February 22, 2016 (more than 15 months after being placed at MMI by Concentra), Claimant saw Dr. Baker for complaints of left ankle pain, joint pain in the knee, leg weakness, and lower back pain. [Resp. Exh. T, pp. 232-234] Dr. Baker's assessment included knee pain "likely due to degenerative arthritis and strain," low back pain with right leg numbness, right third and fourth toe pain and left ankle pain "possibly arthritis v. tendonitis." [p. 232] The following history is provided in Dr. Baker's February 22, 2016 report: "He reports that his R knee pain that is moderate has been ongoing x 2 years. Lately the pain has been constant and worsened in severity. Has noticed intermittent swelling on and off the past few weeks. No injury that he recalls. He has been on his feet a lot at work…5 days ago he was walking at work when he felt severe pain in his R lateral hip/low back radiating past the knee…That evening he did have some pain radiating across the low back w/ bending…He had recurrence of mild back pain this morning – mild pain radiating across the back… No injury of the back. He had been doing some moderately heavy lifting prior to the start of the pain 5 days ago." [Exh. T, p. 233] It is significant to note that at this point, Claimant had been working for his new employer (Suss) for over 1 ½ years.

40. Claimant did not require any medical treatment for his back since being placed at MMI on November 18, 2014 until he engaged in heavy lifting in February of 2016.

41. Dr. Baker injected Claimant's right knee on February 29, 2016. Claimant's low back pain with right leg weakness was noted to be improving. Dr. Baker commented that prolonged standing caused back and leg pain.

42. In a report dated March 14, 2016, Dr. Baker states: "Patient is here for worsening of chronic low back pain over the past 3 days…Pt reports LBP with radiation into the groin on the right side that is going into the medial thigh for the past 48 hours associated with leg weakness again." [Exh. T, p. 242]

43. In a report dated March 28, 2016, Dr. Baker stated: "He has decided to go through Workmen's Comp." [p. 244] Claimant reported that he had fallen in the garage at home while getting out of his car. He was experiencing right wrist pain, shoulder pain, and neck pain. The right knee and back were noted to be moderate to severely painful. [p. 248]

44. Claimant filed a Worker's Claim for Compensation on April 7, 2016. The WC Claim is date stamped received by the Division on April 7, 2016. [Resp. Exh. B] Along with his claim form, Claimant sent a letter to the Division: "I could not take the pain I was in from my Low Back and lower joints, I went to my General Doctor…When I called Heather Hawkins 2 weeks after March 4th 2016, claims representative with Pinnacol Assurance about my condition, Heather Hawkins told me there was a statue of limitations, which I was past 2 weeks. I asked Ms. Hawkins if there was someone I could talk to, she gave me your phone number. She said I could apply to reopen…" [Exh. B, p. 3]

45. The Insurer filed a Notice of Contest on April 21, 2016, referencing the statute of limitations. [Resp. Exh. C] The standard advisement information was included with the Notice of Contest. [Exh. C, pp. 5-6]

46. Dr. Baker referred Claimant to Dr. Solsberg, who performed a translaminar L4-5 and L5-S1 epidural steroid injection on May 9, 2016. [Resp. Exh. U] Dr. Solsberg mentioned Claimant's history of a prior laminectomy and noted scars from the prior surgery. [Exh. U, p. 315]

47. On June 6, 2016, Dr. Baker commented that Claimant was to call Dr. Tim Lehman at Panorama for his knee pain. With respect to Claimant's back pain, Dr. Baker stated: "See neurosurgeon for a surgery consult. I recommend Dr. Rauzzino or Dr. Guiot." [Exh. T, p. 254] The June 6th report reflects: "He did have a complete weakness/giving out of R leg about 2 weeks ago when he dropped his can and bent over to pick it up…Reports he saw a PA that came into his job that thought she would be able to help him. She told him that he needed surgery…" [p. 255] At this point, Claimant would have been working for Suss for approximately 2 years**.** On July 11, 2016, Claimant conveyed to Dr. Baker that he "would like a handicap sticker." [p. 265]

48. In June of 2016, Claimant was transported by ambulance to Littleton Adventist Hospital, where he was diagnosed with viral meningitis. [Resp. Exh. V, W] CT scans were performed of the head and brain. At the time of his discharge on June 20, 2016, Claimant was instructed to follow up with Infectious Disease in 1 week. [Exh. W, p. 343] Claimant subsequently returned to the emergency department on August 1, 2016 with ongoing symptoms related to the meningitis. The E.R. report mentions: "Pt takes oxycodone for chronic back pain. States was scheduled for a back CT today but has to cancel. States his back pain is at baseline, denies any change. Reports chronic leg numbness but no focal weakness. Reports hx of laminectomy in 1984. No recent trauma." [p. 347]

49. On August 22, 2016, Dr. Baker reported that Claimant was experiencing depression due to his recent health problems (meningitis). She recommended counseling. [Exh. T, pp. 279-280]

50. Claimant was evaluated by Dr. Rauzzino at Front Range Spine & Neuro-Surgery on July 25, 2016. [Resp. Exh. X] The referring physician is listed as Dr. Dawn Baker. Claimant's primary insurance is listed Blue Cross/Blue Shield, which is his health insurance. [Exh. X, pp. 354, 363] Dr. Rauzzino noted the following under the Assessment section of his report: "This is a pleasant 66-year-old male with primarily L5-S1 significant disc space collapse from prior laminectomy with bilateral foraminal stenosis of the L5 nerve root." [p. 356] In his discussion of the diagnostic studies, Dr. Rauzzino states: "MRI of the lumbar spine from Health Images on 03/16/16 shows bilateral foraminal narrowing at L5-S1 with postoperative changes secondary to laminectomy. There is significant disc space collapse. He also has degenerative changes of his lumbar spine that are most significant at L2-3 with type 1 Modic changes." [p. 356]

51. Respondents arranged for Claimant to be evaluated by Dr. Albert Hattem on August 17, 2016 for purposes of an IME. [Resp. Exh. Y] Dr. Hattem completed a comprehensive medical records review in conjunction with his examination. Claimant suggested to Dr. Hattem that he had not been able to return for medical treatment between August and November 2014 because of his new job (with Suss). He told Dr. Hattem that he "was also very dissatisfied with Pinnacol" during this time. [Exh. Y, p. 376] Claimant said that he did not return for any further care for his low back and right knee after November 2014 "because he did not want to miss any work." [p. 376] The ALJ notes Claimant did seek treatment with Dr. Baker on his own after November 2014, with no apparent concerns about missing work for those appointments.

52. Dr. Hattem opined that the low back and right knee symptoms that Claimant reported at the time of his evaluation were not causally related to the March 2014 work incident(s). He cited multiple reasons in support of his opinion. [Exh. Y, pp. 385-386] He explained the fairly minor mechanism of injury in March 2014 would not likely cause chronic pain for more than 2 years. He noted that Claimant had a preexisting history of low back pain including surgery. On May 24, 2012, less than two years prior to the current injury, he complained to Dr. Ladika of low back pain for one week with radiation down the left side to the knee. Claimant had also reported a history of preexisting chronic low back pain to Erin Lay, PA-C at Union Medical on March 6, 2014, and to Dr. Shih on April 14, 2014. Claimant also reported a preexisting history of bilateral knee arthritic pain. Dr. Hattem noted that the lumbar MRI and right knee MRI demonstrated only degenerative changes. Claimant has smoked for more than 40 years. Dr. Hattem indicated that there is a positive correlation between cigarette smoking and knee osteoarthritis. Claimant is also obese, with a BMI of 40.6. Dr. Hattem stated there is a positive correlation between obesity and low back pain. Dr. Hattem also pointed out that when Claimant saw Dr. Huldin in November 2014, he reported that he had been doing his regular work without restrictions. His gait was normal and his right knee exam was essentially normal. Dr. Huldin, therefore, released Claimant to full duty, the capacity in which he had already been working, and released him from care. Therefore, Dr. Hattem agreed that Claimant reached MMI in November of 2014 due to both minor work related accidents of March 5, 2014 and March 11, 2014 and the need for treatment after November of 2014 was not related to either of the minor accidents that occurred on March 5, 2014 and March 11, 2014. This ALJ credits Dr. Hattem's opinions and finds that Claimant's need for medical treatment after November 18, 2014 is not related to the industrial accident of March 5, 2014 or March 11, 2014.

53. Claimant underwent lumbar surgery with Dr. Rauzzino on October 6, 2016. [Exh. X, pp.357-359] The preoperative and postoperative diagnosis was documented as: "L5-S1 degenerative disc disease with stenosis, instability, and severe disk space collapse with foraminal stenosis." [p. 357] The records reflect that Dr. Rauzzino performed an additional procedure on October 7, 2016. [pp. 360-362] At the time of his surgery, Claimant was working full time for Suss.

54. During a post-op appointment on November 3, 2016, Dr. Rauzzino reported: "He is about 4 weeks status post anterior and posterior lumbar fusion surgery. Overall, he is doing much better and has about 20% improvement… He sometimes will get pain going down the back of his legs. He still has numbness on the bottom of his feet." Per this report, Claimant continued to smoke ½ pack of cigarettes a day. The insurance provider information listed at the top of the November 3rd report is "**CO BLUE SHIELD**." [Exh. X, p. 364] Dr. Rauzzino recommended that Claimant continue with his home physical therapy exercises. In a follow-up report dated December 28, 2016, Dr. Rauzzino indicated that Clamant could return to work in about 3 weeks. [p. 366]

55. Claimant filed an Application for Hearing on December 21, 2016, more than two months after undergoing surgery with Dr. Rauzzino through his private insurance. [Resp. Exh. F] The issues endorsed were compensability, medical benefits (authorized provider; reasonably necessary), AWW, and TTD/TPD from March 6, 2014 and ongoing. [*Note: Claimant's counsel subsequently clarified at hearing that they were seeking TTD benefits from October 6, 2016- March 31, 2017. March 31st was the date that Claimant's counsel estimated Claimant returned to work following surgery*.] Respondents filed their Response to Application on January 20, 2017. [Resp. Exh. G]

56. In addition to his post-operative follow ups with Dr. Rauzzino, Claimant continued to see his primary care physician (Dr. Baker). A report dated December 29, 2016 from Dr. Baker says: "Improved status post lumbar surgery. Continued low back pain is now moderate. Weakness is improving significantly…Continue Physical Therapy… Will extend FMLA paperwork to January 25th." [Exh. T, p. 304]

57. A report dated January 20, 2017 from Dr. Baker reflects: "Improved status post lumbar surgery…Continue daily back and leg stretches… He states he has had headache for the past week. He is under a lot of stress with his daughter… He has been feeling mildly anxious and mildly depressed…he would like to see a therapist." [Exh. T, pp. 307-308] A report dated February 17, 2017 from Dr. Baker indicates that she planned to coordinate a sleep study. [p. 312]

58. Dr. William Miller performed an IME on January 19, 2017 at the request of Claimant's counsel. Dr. Miller provided a somewhat cursory discussion of his review of the medical records. He "estimated" an impairment rating for Claimant's lumbar spine, which included a Table 53 rating for the surgery with Dr. Rauzzino. On page 5 of his report, Dr. Miller offered his "rebuttal" to the IME opinion of Dr. Hattem. Dr. Miller suggested that "Mr. Fehrer is deemed 'to be determined' in regards to MMI for his right knee, despite the clear MMI determination by the designated provider (Concentra) on November 18, 2014. Dr. Miller also opined that Claimant is not at MMI for his "untreated mental health issues." It is not apparent from Dr. Miller's report if he was aware of the references in the medical records to stressors in Claimant's personal life involving family members. This ALJ does not find Dr. Miller's report to be persuasive regarding the issues before the Court.

59. Claimant returned to Dr. Rauzzino on March 1, 2017: "…here today for follow-up about 5 months status post anterior/posterior lumbar fusion. He notes about 75% improvement but continues to have some aching in his lower back…He feels improvement and is ready to get back to work, although he is quite concerned at this time because his brother is in hospice…He will return to work next week…" [Exh. X, p. 367]

60. Claimant was evaluated by Dr. Eric Ridings on March 23, 2017 at the Request of Respondents. [Resp. Exh. Z] Like Dr. Hattem, Dr. Ridings performed a comprehensive records review in conjunction with his evaluation of Claimant. Dr. Ridings commented in the course of his report: "Dr. Rauzzino's notes clearly relate the patient's need for surgery to his longstanding degenerative changes at L5-S1, having had a laminectomy/discectomy at that level more than 30 years earlier." [Exh. Z, p. 407] Dr. Ridings indicated that on physical examination, Claimant's knees were equivalent in appearance. He did not discern any swelling of the right knee despite Claimant's contention that it was swollen. There was no ligamentous laxity at either knee on examination, nor was there any crepitus. [p. 409] Dr. Ridings concluded: "It is my opinion within a reasonable degree of medical probability that Mr. Fehrer was appropriately placed at maximum medical improvement November 18, 2014, and remained at MMI for his work injury subsequently. The patient developed new complaints of radiating, radicular-type paresthesias down the bilateral lower extremities many months after this case, which was a year after he stopped working for the employer under this claim…The mechanism of injury in the initial incident only 'slightly' increased his low back pain above baseline even the next day when he was evaluated initially, and at most the mechanism of injury would be expected to have caused a lumbar strain, if that. I agree with the lack of an impairment rating for the lumbar spine when he was placed at MMI…As discussed above, the objective diagnosis for the patient's ongoing right knee pain is patellofemoral syndrome. This was not caused, aggravated, or accelerated by the patient's work injury. It is unclear what anatomic injury the patient had to his knee in the original injury, which was described as a knee hyperextension, which would not have involved the patellofemoral joint…" [p. 409] In the closing paragraph of his report, Dr. Ridings reiterates: "The patient's symptoms are unrelated to his work injury and should continue to receive care outside the workers' compensation system. He does not require any further evaluation, treatment, or maintenance care under workers' compensation." [Exh. Z, p. 410] This ALJ credits Dr. Ridings' opinion that Claimant's need for medical treatment after November 18, 2014 is not related to the March 5, 2014 or March 11, 2014 work accident.

61. Dr. Hattem testified at hearing. He is Level II accredited and was offered and accepted as an expert in the area of occupational medicine. Dr. Hattem confirmed that he had been provided with a copy of Respondents' hearing exhibits prior to hearing, and had reviewed those records – including records for dates of service subsequent to his IME. Dr. Hattem confirmed that he had been provided with a copy of Claimant's IME report from Dr. William Miller on April 17, 2017 (the day before hearing) and had an opportunity to review that report. Dr. Hattem testified in further detail regarding his medical opinions, including that Claimant was properly placed at MMI on November 18,

2014 by the designated provider; that Claimant's lumbar surgery with Dr. Rauzzino in October 2016 was reasonably necessary but was not related to the March 2014 claim; and that his IME opinion was supported by the opinion of Dr. Ridings. Dr. Hattem testified that the IME report from Dr. Miller had not caused him to change his medical opinions in any way. This ALJ credits Dr. Hattem's opinions that Claimant's need for medical treatment after November 18, 2014 is not related to his industrial accident of March 5, 2014 or March 11, 2014.

62. Claimant testified at hearing regarding the extent of his knee and back pain before March 5, 2014. Claimant minimized his prior knee and back symptoms. Claimant's testimony regarding the extent of his symptoms before the March 5, 2014 accident is not found to be credible. However, this ALJ finds that the incidents of March 5, 2014 and March 11, 2014 did increase Claimant's right knee pain and back pain and necessitated the need for medical treatment. Therefore, this ALJ finds that Claimant suffered a compensable injury to his right knee on March 5, 2014 and low back on March 11, 2014.

63. This ALJ also finds that the each compensable injury was minor and that the need for medical treatment after November 18, 2014, the date Claimant was placed at MMI, is not related to the incident of March 5, 2014 or March 11, 2014.

64. To the extent that conflicts exist in this case in the medical opinions of various physicians, those conflicts are resolved in favor of the opinions of Dr. Hattem, Dr. Ridings, and Dr. Huldin. The medical analysis and IME opinion of Dr. Miller is not found to be persuasive.

68. At the time of the accident, Claimant was earning $6,500.00 per month, which equates to an average weekly wage of $1,500.00.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Principles

Claimant must prove causation to a reasonable probability. Lay testimony alone may be sufficient to prove causation. However, where expert testimony is presented on the issue of causation it is for the ALJ to determine the weight and credibility to be assigned such evidence. *Rockwell International v. Turnbull,* 802 P.2d 1182 (Colo. App. 1990).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and

actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

Compensability

Claimant was required to prove by a preponderance of the evidence that at the time of the injury he was performing service arising out of and in the course of the employment, and that the alleged injury was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). The question of whether the claimant met the burden of proof to establish a compensable injury is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

At the hearing, Respondents' counsel did not dispute the fact that Claimant suffered an injury on March 5, 2014 or March 11, 2014. Respondents' counsel did, however, dispute the extent of the injuries sustained on March 5, and March 11, 2014.

On the other hand, Respondents did dispute compensability in their post hearing position statement.

This ALJ finds that Claimant suffered a compensable injury to his right knee on March 5, 2014 which necessitated the need for medical treatment. Although this injury was minor, Claimant was provided medical treatment which included crutches. Then, on March 11, 2014, Claimant lost his balance while going down some stairs while using his crutches and landed hard on his feet. This incident, which relates to the March 5, 2014 incident, also caused a compensable injury, although minor, to Claimant's low back and necessitated the need for medical treatment.

The March 11, 2014 incident arose out of the original March 5, 2014 incident. Therefore, the March 11, 2014 incident is not a separate claim.

Statute of Limitations

Section 8-43-103(2), C.R.S. 2014, provides that the right to workers' compensation benefits is barred unless a formal claim is filed within two years after the

injury. Section § 8-43-103(2) further provides that this statute of limitations shall not begin to run against the claim of the injured employee in cases in which the employer has been given notice of an injury and fails, neglects, or refuses to report said injury to the division as required by the provisions of the Workers' Compensation Act, until the required report has been filed with the Division.

The employer's statutory duty to report the injury to the Division refers to the reporting requirements established by § 8-43-101(1), C.R.S., and § 8-43-103(1), C.R.S. *City of Englewood v. Industrial Claim Appeals Office,* 954 P.2d 640 (Colo. App. 1998). Section 8-43-101(1) requires that an employer report to the Division within ten days after notice of an injury that results in "lost time from work … in excess of three shifts or three calendar days." The duty to report a lost-time injury to the Division arises even if the employer initially reported a no-lost-time injury to its insurer. *City of Englewood v. Industrial Claim Appeals Office, supra*.

In this case, Claimant suffered a work related injury on March 5, 2014. Claimant does not dispute the date of his claim. Therefore, Claimant was required to file a claim by March 5, 2016. Claimant filed a claim for compensation on April 7, 2016, approximately 33 days after the 2 year statute of limitations ran.

However, the statute of limitations is tolled if the Employer has notice of the injury and fails to report the lost time injury to the Division. In this case, the Employer had notice of the injury and Claimant missed more than 3 days from work. Therefore, pursuant to Section 8-43-101(1), the Employer was required to report the injury to the Division. The Employer did complete an Employer's First Report of Injury. Respondents and Claimant both tendered an Employer's First Report of Injury to the Court. However, neither party submitted any evidence that it was actually filed with the Division. See *Finkenbinder v. Jefferson County Government,* W.C. No. 4-661-714 (ICAO July 13, 2006)(The mere submission of an Employer's First Report of Injury to the ALJ was insufficient to establish that it was actually filed with the Division.) Therefore, there is insufficient evidence to establish that Employer gave proper notice to the Division. Thus, the statute of limitations is tolled and Claimant's claim for compensation was timely.

Medical Benefits

The threshold medical benefit issue before this ALJ is whether the back surgery performed by Dr. Rauzzino on October 6, 2016 and October 7, 2016 is casually related to Claimant's work accident of March 5, 2014 or March 11, 2014.

Claimant is required to prove by a preponderance of the evidence that the conditions for which he seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S. A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory*, 805

P.2d 1167 (Colo. App. 1990). The question of whether Claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000).

Claimant has failed to establish that the back surgery performed by Dr. Rauzzino was related to his industrial injury. First, Claimant suffered a very minor injury to his low back. Second, Claimant did not have any back problems for which he sought medical treatment after he was placed at MMI on November 18, 2014 until February 22, 2016. Then, on February 22, 2016, Claimant presented to his personal physician and complained of back pain due to heavy lifting 5 days earlier. Third, Claimant's treating surgeon, Dr. Rauzzino, related the severe degenerative changes at the L5-S1 level, for which surgery was performed, to Claimant's discectomy 30 years earlier.

In addition, as set forth by Dr. Ridings in his IME, after Claimant was placed at MMI on November 18, 2014, Claimant developed new complaints in February or March of 2016, of radiating, radicular type paresthesias down both lower extremities. According to Dr. Ridings, Claimant had not had any such complaints earlier in his course of treatment as documented in the medical records.

Dr. Ridings went on to state that it is well within a reasonable degree of medical probability that Claimant's back pain and radicular complaints in 2016, for which Claimant underwent surgery, were not related to his work injury given that the radiating symptoms did not begin for a couple of years after the work accident.

Dr. Ridings also indicated in his report that the incident that occurred on March 11, 2014 was a minor event. Claimant essentially missed a few steps while coming down a staircase on crutches without falling. Claimant, however, described the March 11, 2014 incident to Dr. Ridings quite differently. Claimant alleged that instead of just missing a few steps, he actually jumped 12 feet horizontally and landed 5 feet below where he began. Such story, according to Dr. Ridings, was unbelievable. This ALJ does not credit Claimant's version of events regarding the March 11, 2014 incident as described to Dr. Ridings.

This ALJ finds Dr. Ridings' opinions credible and persuasive. This ALJ concludes that Claimant has failed to establish by a preponderance of the evidence that his worsening of condition and need for medical treatment after November 18, 2014 is related to his industrial accident. Therefore, the surgery performed by Dr. Rauzzino is not related to Claimant's industrial accident.

Authorized Provider – Reimbursement Pursuant to 8-42-101(6)

Claimant's attorney conceded at hearing that Dr. Rauzzino is not authorized. He also conceded in his position statement that Claimant's PCP, Dr. Baker, is not authorized. Therefore, Dr. Rauzzino and Dr. Baker are not authorized.

Claimant, however, is requesting the Insurer be ordered to reimburse Claimant's personal insurer for the cost of surgery pursuant to 8-42-101(6). Claimant is also asking to be reimbursed for any out of pocket expenses he has incurred for his back surgery pursuant to the same statute.

Because this ALJ has concluded that the need for medical treatment and the surgery is not related to Claimant's industrial accident, the issue of reimbursement pursuant to 8-42-101(6) is moot.

Reasonable and Necessary

Because the need for back surgery is not related to Claimant's industrial injury, whether the surgery provided by Dr. Rauzzino was reasonable and necessary is moot.

Temporary Total Disability Benefits.

To prove entitlement to TTD benefits, claimant must prove that the industrial injury caused his disability. *See* El Paso County Department of Social Services v. Donn, 865 P.2d 877 (Colo.App.1993).

In this case, Claimant is seeking temporary disability benefits from October 6, 2016 to March 31, 2017 due to the time he missed from work after his condition worsened and he underwent back surgery. Because Claimant's worsening of condition and need for back surgery is not related to his industrial injury, he is not entitled to temporary disability benefits.

Average Weekly Wage

Section 8-42-102(2), C.R.S., requires the ALJ to calculate the claimant's AWW based on the earnings at the time of injury as measured by the claimant's monthly, weekly, daily, hourly or other earnings. This section establishes the so-called "default" method for calculating the AWW. However, if for any reason the ALJ determines the default method will not fairly calculate the AWW § 8-42-102(3), C.R.S., affords the ALJ discretion to determine the AWW in such other manner as will fairly determine the wage. Section 8-42-102(3) establishes the so-called "discretionary exception." *Benchmark/Elite, Inc. v. Simpson,* 232 P.3d 777 (Colo. 2010); *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp., supra.*

As found, Claimant was earning $6,500 per month at the time of his injury. Therefore, Claimant's average weekly wage is $1,500.00 per week.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant has established by a preponderance of the evidence that he sustained a compensable industrial injury to his right knee and low back as a result of the incidents that occurred on March 5, 2014 and March 11, 2014.

2. Claimant's claim is not barred by the statute of limitations.

3. Claimant's request for medical benefits is denied and dismissed. Claimant's need for medical treatment after November 18, 2014 is not related to his industrial accident.

4. Claimant's claim for temporary total disability benefits is denied and dismissed.

5. Claimant's average weekly wage is $1,500.00.

6. Dr. Baker and Dr. Rauzzino are not authorized providers.

7. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: 6-6-17

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Whether claimant has proven by a preponderance of the evidence that the left shoulder magnetic resonance image ("MRI") recommended by Dr. Jeffrey Krebs is reasonable medical treatment necessary to cure and relieve claimant from the effects of the admitted June 23, 2016 work injury.

- Whether claimant has proven by a preponderance of the evidence that dental treatment for claimant's #30 tooth, as recommended by Dr. Connor Rivers and Dr. Dorsha Boisen, is reasonable medical treatment necessary to cure and relieve claimant from the effects of the admitted June 23, 2016 work injury.

FINDINGS OF FACT

1. Claimant began his employment with employer on May 15, 2016 as a truck driver. Claimant's job duties included delivering freight to customers. Claimant suffered an admitted work injury on June 23, 2016. Claimant testified that the injury occurred while he was unloading hard wood flooring for a customer. The customer wanted the flooring unloaded by hand. To unload by hand, claimant stood in his work truck and handed bundles of the flooring to an employee of the customer.

2. Claimant testified that during this unloading process his right small finger got caught in one of the bands holding the hardwood flooring together. While claimant was attempting to remove his finger, the person assisting him pulled the flooring. Claimant testified that this caused him to twist to the left and fall backwards into the truck injuring his back, left shoulder, right knee, and abdomen. Claimant also testified that while falling he bit down and cracked his #30 tooth and a filling "fell out" of that tooth. The body parts at issue in this order are claimant's left shoulder and #30 tooth.

3. Claimant timely reported the incident to employer on June 24, 2016. Claimant first treated at Mountain Peaks Urgent Care on July 1, 2016. On that date claimant was seen by Elizabeth Singleton, PA-C. Claimant reported to Ms. Singleton that he was injured when he "was twisting and lifting" and felt a pop in this lower back. Ms. Singleton recorded claimant's complaints as pain in his low back with radiating pain down his right leg and into his right knee. In the July 1, 2016 medical record there is no indication that claimant was having left shoulder symptoms or issues with his teeth. Claimant testified that he told Ms. Singleton that he had pain in his tooth and left shoulder and he does not know why Ms. Singleton did not record those complaints in her report.

4. Thereafter, employer instructed claimant to see Dr. David Olson with Pavilion Family Medicine. Claimant first treated with Dr. Olson on August 15, 2016. On that date claimant reported to Dr. Olson that he was unloading pallets of material when his hand got caught in the strap and he "jarred his left shoulder", twisted his back and his right knee gave out. Claimant also reported to Dr. Olson that while he was falling he "bit down hard" and "knocked out a filling on tooth #31[*sic*]".[1]

5. On October 5, 2016, Dr. Brian Mathwich reviewed requests for authorization for treatment of claimant's left shoulder treatment and dental treatment. Dr. Mathwich opined that claimant's left shoulder and tooth were not injured during the June 23, 2016 work injury. In support of this opinion, Dr. Mathwich noted that claimant did not report any left shoulder or tooth issues to his medical providers until six weeks after the reported injury. Based upon Dr. Mathwich's opinions respondents denied authorization for left shoulder treatment and dental treatment.

6. On September 21, 2016 claimant requested a change of physician to Dr. Jeffrey Krebs. Claimant first saw Dr. Krebs on November 3, 2016. Claimant reported to Dr. Krebs that he was injured when he fell over while unloading freight. The symptoms claimant reported to Dr. Krebs were a broken tooth, left shoulder pain, lower center back discomfort, a hernia, and injury to his right knee. On that date, Dr. Krebs opined that claimant may have a torn rotator cuff in his left shoulder. Dr. Krebs recommended a magnetic resonance ("MRI") image of claimant's left shoulder.

7. Although claimant initially mentioned his broken tooth to Dr. Krebs on November 3, 2016, Dr. Krebs did not examine claimant's mouth on that date. Dr. Krebs authored an addendum to the November 3, 2016 medical record in which he stated that claimant's mouth was not examined because of the focus on other injured body parts. Claimant returned to Dr. Krebs on November 17, 2016. On that date, Dr. Krebs recorded that claimant had a "fractured off molar" on the right lower side and referred claimant to Black Canyon Dental for consultation.

8. Claimant was seen by Dr. Connor Rivers at Black Canyon Dental on December 2, 2016. Dr. Rivers noted that claimant's #30 tooth was fractured and opined that the tooth was "non-restorable". Dr. Rivers recommended treatment that included extracting the tooth followed by a bone graft and implant. Dr. Rivers noted that in his opinion the decay in claimant's #30 tooth was present prior to claimant's injury but it was "possible that the fall did cause the tooth to fracture further".

9. Claimant testified that Dr. Rivers referred him to oral surgeon Dr. Dorsha Boisen for consultation. Claimant was seen by Dr. Boisen on March 29, 2017. Dr. Boisen recorded that claimant's #30 tooth was fractured and "non-restorable". Dr. Boisen recommended extracting the tooth, graft the ridge with "bottled bone product", and implant a new tooth.

[1] Claimant testified that it is his right second molar (#30 tooth) that is in need of treatment and not his #31 tooth.

10. Respondents sent claimant for an independent medical examination ("IME") with Dr. John Raschbacher on February 21, 2017. Dr. Raschbacher reviewed claimant's medical records, obtained a medical history, and performed a physical examination of claimant in connection with the IME. Following the IME, Dr. Raschbacher issued a report in which he opined that claimant's left shoulder pain and #30 tooth injury are not related to the June 23, 2016 work injury. In support of his opinion, Dr. Raschbacher pointed to claimant's different descriptions of the June 23, 2016 event. Dr. Raschbacher also opined that claimant failed to report any issues with his tooth or his left shoulder until well after the incident. With regard to claimant's tooth, Dr. Raschbacher noted that during the IME he observed that claimant has a corresponding broken molar on the left side, mirroring the broken #30 tooth.

11. Dr. Raschbacher testified at hearing and confirmed his opinion that claimant's left shoulder pain and broken tooth are not related to the work injury. Dr. Raschbacher testified that claimant had prior issues with his #30 tooth as indicated by the dental records. Dr. Raschbacher also testified that it is his opinion that claimant's subjective complaints are out of sync with the objective medical findings. Dr. Raschbacher testified that it is his opinion that claimant was inconsistent in the description of the injury he reported to his various medical providers.

12. On cross examination claimant testified that he was "not exactly consistent" in describing the June 23, 2016 injury to his medical providers.

13. Claimant's dental records indicate that on October 8, 2015 claimant was seen by Dr. Stacey Laiminger at Community Dental. On that date, claimant told Dr. Laiminger that he was ready to address his dental issues. In that same record, it is noted that claimant needed crowns on tooth #19 and tooth #30.

14. Claimant returned to Community Dental on October 11, 2016 for "a restorative appointment" for the #30 tooth and was seen by Dr. Bob Johnson. A medical record from that date indicates that claimant's condition had "no changes" since his appointment one year prior. Dr. Johnson noted that claimant's tooth #30 had "deep caries at the level of furcation" and recommended extraction. The dental record does not include any indication that claimant's #30 tooth was cracked or broken. Nor is there any mention of claimant's June 2016 fall at work.

15. With regard to claimant's left shoulder, the ALJ credits the medical records and the opinion of Dr. Raschbacher over the contrary opinion of Dr. Krebs and finds that claimant has failed to show that it is more likely than not that his left shoulder symptoms are related to his fall at work on June 23, 2016. The ALJ finds that it is more likely that if claimant had experienced pain in his left shoulder he would not have waited six weeks to report it to his medical providers. The ALJ credits Dr. Raschbacher's opinion and finds that claimant has also failed to demonstrate that it is more likely than not that the recommended left shoulder MRI is reasonable medical treatment necessary to cure and relieve claimant from the effects of the work injury.

16. With regard to claimant's #30 tooth, the ALJ credits the medical records and the opinion of Dr. Raschbacher over the contrary opinion of Dr. Rivers and finds that claimant has failed to demonstrate that it is more likely than not that his #30 tooth was injured on June 23, 2016. The ALJ finds that it is more likely that if claimant had experienced pain in his #30 tooth on June 23, 2016, he would have made mention of it to his medical providers and not wait six weeks to report a cracked or broken tooth.

17. The ALJ further notes that well before the work injury claimant was having issues with his #30 tooth and intended to have it crowned when he was seen at Community Dental on October 8, 2015. There is insufficient persuasive evidence in the record to support a finding that the June 23, 2016 work injury caused claimant's now broken tooth. In addition, the ALJ finds that the June 23, 2016 fall at work did not aggravate, accelerate, or combine with the pre-existing decayed condition of claimant's #30 tooth to necessitate medical treatment.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., (2015). A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2015).

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment.

See H & H Warehouse v. Vicory, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with" a preexisting disease or infirmity to produce disability or need for treatment. *See H & H Warehouse v. Vicory, supra.*

5. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

6. As found, claimant has failed to demonstrate by a preponderance of the evidence that his left shoulder symptoms are related to his fall at work on June 23, 2016. Therefore, the recommended left shoulder MRI is not reasonable medical treatment necessary to cure and relieve claimant from the effects of the work injury. As found, the medical records and the opinion of Dr. Raschbacher are credible and persuasive on this issue.

7. As found, claimant has failed to demonstrate by a preponderance of the evidence that the damage to his #30 tooth is related to the June 23, 2016 work injury. As found, the June 23, 2016 work injury did not aggravate, accelerate, or combine with the pre-existing decayed condition of claimant's #30 tooth to necessitate medical treatment. As found, claimant has failed to demonstrate by a preponderance of the evidence that the dental treatment recommended by Dr. Rivers is reasonable and necessary to cure and relieve claimant from the effects of the work injury. As found, the medical records and the opinion of Dr. Raschbacher are credible and persuasive on this issue.

ORDER

It is therefore ordered that:

1. Claimant's request for treatment for his left shoulder, and specifically a left shoulder MRI, is denied and dismissed.

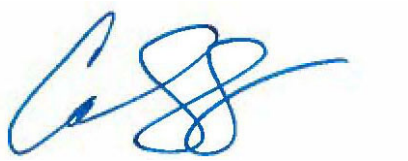
2. Claimant's request for dental treatment for his #30 tooth is denied and dismissed.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That

you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 7, 2017



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

- Whether Claimant is entitled to a general award of maintenance medical treatment.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. This is an admitted claim.

2. Claimant was involved in a work related accident on October 17, 2012.

3. Claimant injured his neck.

4. Claimant was diagnosed as suffering from cervical stenosis, cervicalgia, and cervical radiculopathy.

5. Claimant failed to respond to conservative treatment measures including, but not limited to, physical therapy, anti-inflammatories, and epidural steroid injections.

6. Claimant came under the care of Dr. Bryan Castro, a surgeon. Since Claimant's condition did not improve, Dr. Castro recommended surgery in the form of a spinal fusion.

7. Dr. Castro was deposed on April 21, 2017 regarding the reasonable and necessary medical treatment Claimant would require after his spinal fusion. Dr. Castro testified regarding his treatment protocol for spinal fusion patients, which included Claimant.

8. Dr. Castro testified that Claimant's post surgical treatment would include follow up medical evaluations, including x-rays, at specified intervals, to determine the status of Claimant's medical condition and fusion. The post surgical intervals for Dr. Castro to evaluate Claimant and take x-rays were six weeks, three months, six months, and 12 months.

9. Dr. Castro also testified that if a case closes before the one year period, the Claimant should be provided maintenance medical treatment, consistent with his treatment protocols, in the form of follow up medical appointment(s) and x-rays,

so he can evaluate the Claimant's medical condition and determine the status of the spinal fusion.

10. On August 27, 2015, Dr. Castro performed a two-level spinal fusion on Claimant's cervical spine at C5-C7.

11. On September 11, 2015, Claimant returned to Dr. Castro for his first post surgical evaluation. Cervical spine AP and lateral x-rays were taken and showed postoperative changes of the anterior cervical discectomy and fusion at C5-C7 with instrumentation in good position and well fixed.

12. On October 9, 2015, Claimant returned to Dr. Castro. Claimant was approximately 6 weeks out from his surgery. Cervical spine AP and lateral x-rays were performed and highlighted postoperative changes of anterior cervical discectomy and fusion at C5-C7. According to Dr. Castro's report, the instrumentation was in good position and well fixed. There was also evidence of some good early bony fusion present. The medical report also indicates that the x-rays look great and that Claimant will be seen in 6 weeks for his 3 month postoperative appointment.

13. On November 20, 2015, Claimant returned to Dr. Castro for his three month post surgical evaluation. Claimant complained of pain in his neck and shoulders. He also complained of having trouble holding onto a water bottle with his left hand due to weakness. His right arm symptoms, however, were getting better. It was noted that Claimant did have right arm symptoms for 2 ½ years prior to his surgery. Claimant was advised to follow up with Dr. Danahey, his primary workers' compensation provider. Claimant was also advised to follow up with Dr. Castro in another 3 months for another postoperative visit. Therefore, Claimant's next scheduled appointment with Dr. Castro should have been around February 27, 2016.

14. On January 12, 2016, Claimant was evaluated by Dr. Burris, instead of Dr. Danahey. Dr. Burris indicated Claimant had been released by his treating surgeon, Dr. Castro. However, Dr. Castro testified that he had not released Claimant from his care at that time because Claimant still needed to follow up with him to evaluate Claimant's spinal fusion.

15. Dr. Burris testified at hearing. Dr. Burris stated that he is familiar with Dr. Castro's treatment protocols for his spinal fusion patients, which included Claimant. Dr. Burris testified that any release by Dr. Castro, would be subject to the Claimant following up with Dr. Castro and being evaluated and having x-rays taken at specific intervals. Dr. Burris acknowledged that Dr. Castro's post surgical intervals were to occur at approximately two weeks, six weeks, three months, six months, and twelve months. Dr. Burris also testified that the follow up evaluations and x-rays required by Dr. Castro appear reasonable and necessary.

16. Claimant did not return to Dr. Castro around February 27, 2016, which would have been approximately six months after surgery.

17. On March 8, 2016, Dr. Castro issued a report indicating that he had not seen Claimant since November 20, 2015.

18. On April 5, 2016, Dr. Burris placed Claimant at MMI. Although Dr. Burris knew Claimant still had to follow up with Dr. Castro to be evaluated and have x-rays taken, Dr. Burris indicated in his April 5, 2016 medical report that Claimant did not need any maintenance medical treatment. Dr. Burris also restated that Dr. Castro had released Claimant from his care. However, as testified to by Dr. Castro, he had not released Claimant from his care as of April 5, 2016. In fact, Dr. Castro has never released Claimant from his care.

19. Claimant had surgery on August 27, 2015 and was placed at MMI April 5, 2016, which is 7 months and 9 days after his surgery.

20. At the time Claimant was placed at MMI, Dr. Castro had not released Claimant from his care. At the time Claimant was placed at MMI, Dr. Castro still wanted Claimant to follow up with him to have his six month and 12 month follow up evaluation and x-rays of his cervical spine to determine the status of Claimant's fusion and to determine whether any additional treatment was reasonable and necessary.

21. Dr. Castro testified that even if a patient is completely asymptomatic, he wants to see his patients for at least one year for x-rays to monitor the fusion process. Dr. Castro testified that even if Claimant was not experiencing symptoms does not mean he may not have been experiencing problems with his fusion. By way of example, Dr. Castro indicated as a smoker, Claimant may have had a relapse which could result in the fusion not "taking," which further supports maintenance treatment. Dr. Castro also opined that maintenance medical benefits, including evaluations and x-rays, were reasonable and necessary for Claimant.

22. The opinions of Dr. Castro are found credible and persuasive.

23. At the time Claimant was placed at MMI, he still needed maintenance medical treatment to evaluate his underlying condition. Therefore, maintenance medical treatment was reasonable and necessary at the time Claimant was placed at MMI.

24. To date, Claimant has not had his six month or one year post surgical evaluation(s) and x-rays, with Dr. Castro, in order for Dr. Castro to determine the status of Claimant's fusion.

25. Claimant testified at hearing that he is having additional symptoms and would like to follow up with Dr. Castro to determine the status of his spinal fusion.

26. Claimant attempted to schedule an appointment with Dr. Castro for maintenance medical treatment. However, the Insurer would not authorize the appointment.

27. Claimant's testimony is found to be credible and persuasive.

28. On November 8, 2016, Respondents filed a final admission of liability and denied maintenance medical treatment.

29. At the time Claimant was placed at MMI, Claimant needed maintenance medical treatment in the form of medical evaluations and x-rays to relieve him from the effects of the industrial injury or to prevent further deterioration of his condition.

30. Claimant currently needs maintenance medical treatment in the form of an evaluation by Dr. Castro and x-rays to determine the status of his neck condition and fusion.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

Section 8-42-101(1), C.R.S., requires the employer or insurer to provide medical benefits which are reasonable and necessary to cure and relieve the industrial injury. See *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). However, this obligation terminates at maximum medical improvement, and after that point, Claimant may obtain future medical benefits only to maintain maximum medical improvement or to prevent a deterioration of his condition. *See Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988).

Claimant is entitled to *Grover*-type medical benefits where there is substantial evidence in the record to support a determination that future medical treatment will be reasonable and necessary "to relieve a claimant from the effects of an [industrial] injury" or prevent further deterioration of the claimant's condition. *Stollmeyer v. Industrial Claim Appeals Office*, 916 P.2d 609, 611 (Colo. App. 1995); *Milco Construction v. Cowan*, 860 P.2d 539 (Colo. App. 1992).

Moreover, an award for *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that Claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 992 P.2d 701 (Colo. App. 1999).

Claimant must prove entitlement to *Grover* medical benefits by a preponderance of the evidence. *Lerner v. Wal-Mart Stores, Inc.,* 865 P.2d 915 (Colo. App. 1993). In establishing entitlement to *Grover*-type benefits, Claimant is not required to prove that a "particular" or "specific course of treatment" is anticipated. *See Stollmeyer v. Industrial Claim Appeals Office, supra*. Furthermore, there is no distinction between "active treatment" and "diagnostic procedures." *See Brock v. Jack Brach and Sons Trucking*, W.C. No. 3-107-451, December 15, 1995; *Atwood v. Western Slope*

Industries, W.C. No. 3-069-135, November 28, 1994 (medical monitoring compensable). To the contrary, the court has held that once Claimant establishes a need for future medical treatment, "such medical treatment irrespective of its nature, must be looked upon as treatment designed to relieve the effects of the injury or prevent deterioration of the claimant's present condition." *See Milco Construction v. Cowan*, 860 P.2d 542.

In this case, at the time Claimant was placed at MMI, it had only been 7 months since his surgery. Therefore, according to Dr. Castro, Claimant needed specific medical treatment, post MMI, to evaluate and determine the status of his fusion. As testified to by Dr. Castro, at the time Claimant was placed at MMI, Claimant needed to have, at a minimum, his one year post surgical evaluation by Dr. Castro and x-rays to determine the status of his fusion.

In addition, Dr. Burris also testified that the need for Claimant to have a follow up appointment and x-rays with Dr. Castro, after Claimant was placed at MMI, was reasonable and necessary.

Therefore, this ALJ concludes that at the time Claimant was placed at MMI he required maintenance medical treatment.

Respondents argue that an evaluation and x-rays do not meet the definition of maintenance medical treatment. This ALJ has considered such argument and rejects such argument. The post MMI treatment, in the form of an evaluation, and x-rays, is reasonable and necessary medical treatment which is intended to relieve Claimant from the effects of his injury or prevent further deterioration of Claimant's condition. Thus, this ALJ concludes that Claimant has proven by a preponderance of the evidence his entitlement to maintenance medical treatment after MMI.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant is entitled to maintenance medical treatment.

2. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For

statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: 6-7-17

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Whether Respondents met their burden of proof to establish Claimant willfully violated a safety rule adopted by Employer, allowing a 50% reduction of his indemnity benefits.

FINDINGS OF FACT

1. Claimant began work for Employer in February, 2015. He was employed as a drywall finisher.

2. On February 18, 2015, Claimant signed an acknowledgement of receipt of the Employee Handbook. [1] This acknowledgement was written in English.

3. The Employee Handbook set forth Employer's safety policy. More particularly, Section 503 is entitled Safety/Hazcom Program. That section provided in pertinent part:

> "To assist in providing a safe and healthful work environment for employees, customers and visitors, RMD has established a workplace safety/hazcom program. This program is a top priority for RMD and exists to insure our employees complete their work assignment safely. We have a ZERO tolerance policy for safety violations. Disciplinary actions up to and including termination will occur for all safety violations. The safety manager has responsibility for implementing, administering, monitoring, evaluating and modifying the safety program to insure its effectiveness. The success of this program depends on the support of management, and the awareness and compliance of all employees. ...
>
> New employees receive an initial safety orientation upon hire. Field employees and supervisors receive monthly workplace safety training. The training covers potential safety and health hazards, and safe work practices and procedures to eliminate injuries and behaviors that lead to injury.
>
> Each employee is expected to obey all safety rules and exercise caution in all work activities. Upon entering the work area **each time**, employees are required to identify, record, correct and report any unsafe condition to their supervisor. RMD's on-site safety checklist is provided on all job sites to help meet these requirements. All unsafe work areas or conditions must be corrected before work begins. Employees who violate safety standards, who cause hazardous or

[1] Exhibit H.

dangerous situations, or fail to report or, where appropriate, remedy such situations, may be subject to disciplinary action up to and including termination of employment."

4. Claimant's new hire orientation checklist (in Spanish) was admitted into evidence. Claimant initialed and dated this document on February 18, 2015. This form confirmed Claimant received a copy of the Employer's Safety and Hazard Communication Program. (Both English and Spanish versions of this booklet were admitted at hearing).[2]

5. The Safety and Hazard Communication Program set forth requirements with regard to safety on the job. These were:

"A. Survey the job site to identify any potentially hazardous conditions and report them to your supervisor immediately.
...

D. Clear the work area of debris before you start and maintain this condition while working, especially if you are using benches, ladders, scaffold or stilts.
…

H. Report any unsafe condition to your supervisor immediately. Never take chances.

Awareness

A. It is the responsibility of each employee to be aware of:
…

2). The conditions of the work area and the potential risks associated therewith.

B. Report all unsafe workers, activities and conditions to your supervisor immediately".

6. Employer had written safety policies in force at the time Claimant was injured.

7. Claimant participated in safety meetings while working for Employer. More particularly, he attended safety meetings on March 27, 2015, October 30, 2015, and September 25, 2016. The subject of the October 30, 2015 meeting was Stilt Safety and Fall Protection. Claimant completed a quiz after that training and answered all of the questions correctly.

[2] Exhibit G.

8. Dustin Matson testified at hearing. He works as the safety manager for Employer, a position he has held for three years. In that capacity, he worked with the safety committee to develop safety policies and procedures for enforcing those policies. Mr. Matson noted safety is discussed as part of Employer's new hire orientation. As part of the process, keeping the job sites clean is discussed, as the drywall business is a messy industry. Mr. Matson testified there was a safety checklist on every job site. Employees are to do a safety walk in the house before they start work and if a hazard is seen, all employees have the authority to stop work at the site, until the hazard is reported and/or corrected. Employer's safety booklet discussed putting drywall scraps in the center of the room. Mr. Matson stated Claimant would have been aware of these policies. Mr. Matson stated Employer conducts regular safety meetings and employees are quizzed about what is discussed. The meetings are conducted in Spanish and English. Mr. Matson testified he also conducts unannounced job site visits to insure safety rules are followed.

9. Maximino Preciado[3] testified at hearing. He has worked for Employer for twenty-two years. He knew Claimant through work, although did not work with him directly. He worked that day at the house where Claimant was injured, arriving around 8 a.m. The house was dirty with scrap on the floor, but he was able to do his job which was installing corner bead. Claimant arrived around 11 a.m. and Mr. Preciado finished his work, leaving the job site.

10. Mr. Preciado said stilts were not supposed to be used unless the floor was completely clean. This was company policy. He watched videos and the company continually reminded them of that rule. Mr. Preciado said he asked Claimant if he was going to work because of the condition of the house. Mr. Preciado admitted he had never not worked in the house because it was in that condition. On cross-examination, Mr. Preciado admitted using stilts on two or three occasions when the floors had not been completely scrapped. This included the house where Claimant was injured. The ALJ notes Mr. Preciado's testimony supported the finding that employees had previously violated this safety rule with no consequences.

11. Hermanagildo Segovia testified on behalf of Respondents. He has worked as a drywall finisher for 4 1/2 years. This is the same job as Claimant and he wears stilts. Mr. Segovia confirmed there were safety rules concerning stilts; specifically, the work area had to be clean while wearing stilts. Stilts were also not to be worn on stairs. Mr. Segovia testified he had worked in houses that were not cleaned. If possible, he would try to work on the scaffold in the garage. However, he testified that he has worn stilts in the areas which are dirty. However, he said he doesn't always wear stilts in the areas where it is dirty.

12. Michael Herrera testified on behalf of Respondents. He has worked for Employer for ten years as a supervisor. Claimant reported directly to him and he would

[3] Mr. Preciado prepared a written statement in Spanish (undated), which was admitted at hearing, along with a translation. The statement corroborated Mr. Preciado's testimony. He also said Claimant asked when the scrappers were going to come and also told him he needed to get some hours.

act as an interpreter on occasion because he spoke Spanish. This included safety meetings. Mr. Herrera testified the safety rules concerning wearing stilts required that you not walk on stairs and not in areas where there was debris or other trip and fall hazards. Claimant would have been aware of these rules. Mr. Herrera confirmed that his work crew has worked in houses that had not been scrapped. Mr. Herrera said what should be done in that situation is doing the work that is low, which does not require stilts. He said they always direct the employees to work as carefully as possible.

13. Mr. Herrera had not written any employee up for violating safety rules, but has verbally instructed employees. The ALJ concluded from this testimony that Employer acquiesced in a violations of the safety policy. He has told employees to first complete the work that does not require stilts. He further testified that there would never be a backlash for an employee who refused to work in unsafe conditions. He confirmed that employees are paid on a piece-rate basis, when they complete the house. The ALJ inferred this created an incentive to complete the jobs as expeditiously as possible.

14. Claimant testified he received the Employee Handbook and copies of the policies concerning use of stilts. He also confirmed his attendance at the safety meeting when wearing stilts had been discussed. The ALJ finds Claimant was advised of the policy which required him to work in an area clear of debris while wearing stilts.

15. On February 20, 2016 (Saturday), Claimant was working at a house located at 15416 W. 49th Drive. Claimant testified the house was dirty when he got there. Claimant testified that, in his experience with working for Employer, he would very often see other employees working on stilts on jobsites that had yet to be scrapped. He called his supervisor, Mike (Herrera), as he wanted to know when they were going to come to clean the house. (In his report of injury, he noted that he tried to call Mr. Herrera at 10:51 a.m.)

16. Claimant testified that he completed the low work, as he had been trained. He tried to call Mr. Herrera again, but there was no answer. It was at this point in time he began using the stilts in the areas that had not been scrapped. There was a lot of scrap and he was not thinking of cleaning everything. He testified that he exercised caution as he had been told. The ALJ found Claimant to be a credible witness. Claimant fell over debris while he was on the stilts and was injured.

17. Claimant testified that he did not think about violating a safety rule when he began working on the stilts. He felt it was normal and he just began working. As a finisher, Claimant said they would go ahead and do their job. This was the same for Herman. The ALJ infers from this testimony Claimant did not volitionally or intentionally violate the rule concerning using stilts when debris was on the floor.

18. Ismael Herrera Martinez testified as a witness for Claimant. He explained that he worked for Employer for approximately four years under the direct supervision of Michael Herrera. He was aware of the safety rule against wearing stilts in a house that had not been scrapped. Mr. Martinez testified that if a job site was not scrapped, he

would contact Mr. Herrera, who would then instruct him to wait for the people who cleaned the house. Sometimes the cleaners would take two or three hours. Sometimes they would not come until the next day. When the latter situation occurred, they would do their work, most of which required stilts. He had worked in houses that were not scrapped. He said sometimes employees were afraid to call the supervisor about the house not being clean, as they wouldn't get more work.

19. Mr. Matson completed a safety audit the day after Claimant was injured. There was no safety checklist present at the house. He inspected the house and noted the presence of hazards including electrical cord and construction material. Mr. Matson described the condition of the house as "atrocious". The house was unsafe to use stilts. He also met with Claimant at the time the report of injury was completed. Mr. Matson testified Claimant agreed that the injury could have been prevented had he made the decision not to use the stilts. Mr. Matson testified that he had not had an employee make a decision to work in a house like this. He had had not reprimanded an employee for not moving debris to the middle of the room.

20. There was no evidence of action taken by Mr. Matson to discipline employee(s) for the failure to post the safety checklist on the jobsite where Claimant was injured. The ALJ noted this was an example of Employer not enforcing a safety policy.

21. An Employer's First Report of Injury was completed on February 22, 2016. It specified Claimant was injured while wearing stilts in a home with drywall debris and tripping hazards everywhere. Claimant received an Employee Warning/Suspension Notice on February 22, 2016 for the failure to follow company policy.[4]

22. Ismael Herrera was not disciplined by Employer for a violation of the safety policies- using stilts where there was debris on the floor. The ALJ noted this was an example of Employer not enforcing a safety policy.

23. Photographs of the accident site were admitted at hearing.[5] These were part of the audit report prepared by Mr. Matson. These depicted pieces of drywall scrap, cord, as well as drywall mud on the floor in the room where Claimant fell.

24. On March 11, 2016, a General Admission of Liability ("GAL") was filed on behalf of Respondents, admitting for wage and medical benefits. That GAL took a 50% penalty on Claimant's TTD benefits for a safety rule violation.

25. A revised GAL was filed on April 15, 2016, admitting for temporary partial disability benefits. A 50% penalty was taken on those benefits for a safety rule violation.

[4] Exhibit A.

[5] Exhibits E and F.

26. The ALJ finds Respondents failed to prove Claimant willfully violated a safety rule.

27. Evidence and inferences inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1),C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). In the case at bench, the credibility of Claimant, as well as Employers was determinative of the question whether there was a willful violation of a safety rule.

Willful Violation of a Safety Rule

Section 8-42-112(1)(b), C.R.S. governs the imposition of a penalty for a violation of a safety rule. That section provides for a 50 percent reduction in Claimant's compensation when Respondents prove "the injury is caused by the employee's willful failure to obey any reasonable rule adopted by the employer for the safety of the employee". The question of whether the Respondents met their burden and proved a willful safety rule violation by a preponderance of the evidence is generally one of fact for determination by the ALJ. *Lori's Family Dining, Inc. v. Industrial Claim Appeals Office,* 907 P.2d 715, 719 (Colo. App. 1995).

In *Lori's Family Dining*, Claimant was engaged in horseplay with co-employees, which escalated to an altercation. Claimant was injured when he fell and broke his arm. The employer prohibited horseplay and had warned employees against such conduct.

Employer's policies required three written warnings before termination. The ALJ declined to impose a 50% penalty for a safety rule violation on the grounds that employer had not enforced safety rule, which was affirmed by the Industrial Claim Appeals Office. The Colorado Court of Appeals considered whether the denial of the penalty was appropriate under those circumstances. Justice Hume noted the most frequent ground for rejecting a penalty for violation of a safety rule was the "lack of enforcement of the rule or policy by an employer with knowledge of and acquiescence in its violation". *Lori's Family Dining, Inc. v. Industrial Claim Appeals Office,* 907 P.2d at 719.

As a starting point, the ALJ first concluded Employer had a written safety policy in force at the time Claimant was injured. (Finding of Fact 6). This policy was expressed in the Employee handbook, as well as Employer's Safety and Hazard Communication Program. (Findings of Fact 3, 5). The specific policy at issue was the Safety and Hazard Communication Program, which required employees to: "Clear the work area of debris before you start and maintain this condition while working, especially if you are using benches, ladders, scaffold or stilts". (Finding of Fact 5).

As determined in Findings of Fact 2-4, 6-8, Employer took many steps to insure its new employees were informed of the policies and the safety rules were reinforced throughout their employment. Claimant's testimony confirmed that he was aware of Employer's safety rules. The ALJ concluded that Claimant received both the Employee Handbook and the safety policies. He also participated in safety meetings in which the subject of safety practices while using stilts were discussed. Therefore, Respondents proved there was a safety rule which was communicated to employees, including Claimant. That does not end the inquiry, however. The ALJ next considered whether Employer enforced the subject safety policy.

Second, there was evidence that Employer had not enforced the safety rule. First, there was direct evidence in the form of witness testimony (Mr. Preciado, Mr. Segovia, and Mr. Martinez-Herrera), which established employees worked on jobsites with rooms that had debris on the floor, in violation of the policy. (Findings of Fact 10-12, 22). Claimant's testimony also corroborated this fact. (Finding of Fact 15).

Moreover, Mr. Herrera, who was in a supervisory position, confirmed the fact that employees had worked using stilts on jobsites where there was debris on the floor and he had not disciplined any employee for a violation of the company policy. (Finding of Fact 13).

No contrary evidence was introduced to refute this. Mr. Matson also testified that company policy required a safety checklist to be present at the jobsite. In fact, no such checklist present at the location where Claimant was injured. This was further evidence of the lack of enforcement of safety rules by Employer. Thus, while the facts before the ALJ established that while Employer had an established policy, which was communicated to employees, the Employer acquiesced in the violations of the policy. This fits within *Lori's Family Dining, Inc. v. Industrial Claim Appeals Office, supra*, and its

progeny. Under these circumstances, Respondents were not entitled to reduce Claimant's benefits for violation of the safety rule.

Additional support for the conclusion that Respondents were not entitled to a reduction of benefits was found in the determination by the ALJ that Claimant did not willfully violate the safety rule. Respondents were required to show Claimant's conduct was willful, that is; he knew the rule, then intentionally did what the rule prohibited. *Bennett Props. Co. v. Indus. Comm'n*, 165 Colo. 135, 140, 437 P.2d 548, 551 (1968). On this element, Respondents failed to meet their burden. As used in this statute, the word "willful" means "with deliberate intent", *City of Las Animas v. Maupin*, 804 P.2d 285, 286 (Colo. App. 1990) [citation omitted], or "the intentional doing of something either with the knowledge that it is likely to result in serious injury, or with a wanton and reckless disregard of its probable consequences." *Johnson v. Denver Tramway Corp.*, 115 Colo. 214, 222, 171 P.2d 410, 414 (1946) (emphasis omitted)[quoting 1 William R. Schneider, *The Law of Workmen's Compensation* § 282, at 876 (2d ed. 1932)].

The evidence admitted at hearing led the ALJ to conclude that Respondents failed to establish a willful violation of the safety rule. (Finding of Fact 26). Respondents correctly noted that Colorado law does not require them to prove Claimant had the rule in mind and decided to violate it to establish a willful violation of a safety rule. *Bennett Props. Co. v. Indus. Comm'n*, *supra,*165 Colo. 135; *Scott Triplett, v. Evergreen Builders, Inc, and St. Paul Fire and Marine Ins. Co.,* W. C. No. 4-576-463. (ICAO May 11, 2004). However, Respondents were required to show that Claimant's conduct in violating the safety rule was intentional, which requires a deliberate decision on the part of Claimant. *Scott Triplett, v. Evergreen Builders, Inc, and St. Paul Fire and Marine Ins. Co.* That was not what the evidence showed in the case at bench.

Claimant's testimony supported this finding when he testified that he was not focused on the safety rule when he used the stilts in the area where there were drywall pieces and other debris on the job site. He was simply focusing on completing the tasks, which was persuasive to the ALJ. (Finding of Fact 17). Claimant's testimony was credible and also buttressed by the fact that he had violated the safety rule on other occasions, with the goal of getting the job done. In addition, Claimant testified he tried to call Mr. Herrera when he saw the condition of the jobsite. Thus, he tried to comply with one part of the policy, which was to advise his supervisor of the unsafe condition of the workplace. These facts led the ALJ to conclude Claimant was simply trying to finish the job that day and not intentionally violating the safety rule. He was not performing his job duties with the knowledge that it was likely to result in serious injury or with reckless disregard of the consequences. Under these circumstances, imposition of a penalty for a violation of a safety rule was not warranted.

ORDER

IT IS ORDERED:

1. Respondents have failed to prove Claimant willfully violated a safety rule. Claimant is entitled to receive 100% of his indemnity benefits.

2. Respondents shall pay 100% of Claimant's indemnity benefits.

3. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that he suffered a compensable lower back injury during the course and scope of his employment with Employer on November 28, 2016.

2. Whether Claimant has proven by a preponderance of the evidence that he is entitled to receive reasonable, necessary and related medical treatment from both Midtown Occupational Health Services and Kaiser Permanente for his industrial injury.

STIPULATION

The parties agreed that Claimant earned an Average Weekly Wage (AWW) of $1,234.00.

FINDINGS OF FACT

1. Claimant worked for Employer as a Truck Driver. His job duties involved delivering, loading and unloading freight to commercial and residential establishments. Claimant testified that on November 28, 2016 he was delivering a crate to a painting company known as Preferred Painting. The crate was approximately 10-12 feet long, two feet wide and weighed about 1200 pounds.

2. Claimant explained that he used a pallet jack to move the crate to the back of his trailer. As he was pulling the crate backwards he tripped on a small step near the end of his trailer. Claimant fell approximately five feet off the trailer onto concrete and landed on his back. He remarked that he immediately developed pain above his tailbone area. Although he remained on the ground for a while, he was able to get up with some assistance. Claimant did not immediately seek medical treatment.

3. Jose Olivas testified at the hearing in this matter and corroborated Claimant's account of the November 28, 2016 incident. Mr. Olivas explained that he resides in Juarez, Mexico and was visiting relatives in the Denver, Colorado Metropolitan area in November 2016. He noted that his brother-in-law worked for Preferred Painting and they were visiting the business on November 28, 2016. While Mr. Olivas was in the parking lot, he noticed Claimant using a pallet jack to unload merchandise from a truck. Claimant tripped as he was walking backwards, fell to the ground and landed on his back. Mr. Olivas assisted Claimant after the incident. Claimant subsequently completed his merchandise delivery to Preferred Painting.

4. Claimant's pain subsequently intensified so that it was primarily located in his lower back area. On December 6, 2016 he completed a First Report of Injury with Employer. Claimant specified that while he was unloading a crate from his trailer he hit

a step on the side of the tailgate, lost his balance and fell to the ground. He reported a lower back strain, a headache and neck pain. Claimant chose to receive medical treatment through Midtown Occupational Health Services.

5. On December 6, 2016 Claimant visited Authorized Treating Physician (ATP) Lon Noel, M.D. at Midtown Occupational Health Services. Claimant recounted that on November 28, 2016 he tripped and fell while pulling a crate off the back of his delivery trailer. He fell approximately five feet and landed on his back. Claimant reported that his lower back pain had intensified since the incident and he was experiencing "pins and needles" feelings in the fingertips of both hands. He remarked that he did not suffer a head injury or loss of consciousness during the incident. Dr. Noel commented that Claimant's cervical spine x-rays revealed minimal osteoarthritis but were otherwise unremarkable. He diagnosed Claimant with a cervical strain and a lumbosacral contusion/strain. Dr. Noel recommended massage therapy, physical therapy, a home exercise program and Ibuprofen as needed.

6. On December 23, 2016 Claimant returned to Dr. Noel for an examination. Claimant reported that he was experiencing back spasms, tightness and pain across his lower back area. He was performing full duty employment but became uncomfortable by the end of each shift. Dr. Noel continued to diagnose Claimant with a cervical strain and a lumbosacral contusion/strain with improvement. He expected that Claimant would reach or approach Maximum Medical Improvement (MMI) by January 2, 2017. Claimant subsequently underwent physical therapy approximately two times each week through Midtown Occupational Health Services.

7. On December 28, 2016 Respondents filed a Notice of Contest challenging Claimant's claim for Workers' Compensation benefits. Although Claimant had scheduled a number of physical therapy appointments they were cancelled by Midtown Occupational Health Services.

8. Claimant subsequently obtained medical treatment for his lower back condition through personal medical provider Kaiser Permanente. On January 16, 2017 Claimant explained to Isaac D. Pierre, M.D. that he had fallen off a truck and landed on his back approximately six weeks earlier while delivering a crate. Dr. Pierre remarked that x-rays revealed a "possible acute compression fracture." Claimant subsequently underwent physical therapy with Kaiser Permanente for his lower back symptoms.

9. On March 29, 2017 Kaiser physicians referred Claimant for an MRI of his lower back area. The MRI revealed a compression fracture at T12 and a superior and plate compression fracture at L2.

10. On April 3, 2017 the parties conducted the pre-hearing evidentiary deposition of Lon Noel, M.D. Claimant visited Dr. Noel's office on December 6, 2016 with lower back symptoms. Claimant reported that on November 28, 2016 he had fallen approximately five feet onto the ground after he tripped while unloading a crate from his work trailer. He specifically landed on the lower part of his back slightly above his tailbone. Dr. Noel remarked that Claimant's delayed reporting of the accident raised a

"red flag" as the whether the incident occurred. Claimant also completed his regular job duties from the date of the incident until he visited Dr. Noel for treatment. Nevertheless, Dr. Noel determined that, based on Claimant's history and physical examination, his lower back symptoms were probably caused by the November 28, 2016 fall.

11. Dr. Noel explained that Claimant also visited him for an evaluation on December 23, 2016. Claimant had continued to work his normal job duties prior to the visit. His symptoms had improved and he only required medical maintenance care. Dr. Noel acknowledged that Claimant had probably reached MMI by the time of the December 23, 2016 examination. However, Dr. Noel also recognized that by December 23, 2016 Claimant's physical findings warranted additional medical treatment. Claimant did not return to Dr. Noel for further medical care.

12. Claimant has demonstrated that it is more probably true than not that he suffered a compensable lower back injury during the course and scope of his employment with Employer on November 28, 2016. Claimant credibly explained that on November 28, 2016 he was delivering a crate to a painting company known as Preferred Painting. Claimant explained that he used a pallet jack to move the crate to the back of his trailer. As he was pulling the crate backwards he tripped on a small step near the end of his trailer. Claimant fell approximately five feet off the trailer onto concrete and landed on his back. He suffered pain in his upper tailbone and lower back area. Mr. Olivas credibly corroborated Claimant's account of the accident. While Mr. Olivas was in the Preferred Painting parking lot, he noticed Claimant using a pallet jack to unload merchandise from a truck. Claimant tripped as he was walking backwards, fell to the ground and landed on his back. Mr. Olivas assisted Claimant after the incident.

13. Claimant's description of the accident in the medical records also supports his testimony that he suffered a compensable industrial injury on November 28, 2016. Claimant consistently maintained that on November 28, 2016 he had fallen approximately five feet onto the ground after he tripped while unloading a crate from his work trailer. He specifically landed on the lower part of his back slightly above his tailbone. In contrast to Claimant's consistent account, Dr. Noel expressed concerns about whether the November 28, 2016 incident actually occurred based on Claimant's delayed reporting and continued work activities after the incident. Nevertheless, Dr. Noel acknowledged that, based on Claimant's history and physical examination, his lower back symptoms were probably caused by the November 28, 2016 fall. Accordingly, Claimant's employment activities on November 28, 2016 aggravated, accelerated, or combined with his pre-existing condition to produce a need for medical treatment.

14. Claimant has proven that it is more probably true than not that he is entitled to receive reasonable, necessary and related medical treatment from Midtown Occupational Health Services. . On December 6, 2016 Claimant completed a First Report of Injury with Employer. He chose to receive medical treatment through Midtown Occupational Health Services. Claimant obtained medical treatment in the form of diagnostic procedures and physical therapy. Claimant's treatment was reasonable,

necessary and related to his November 28, 2016 industrial injury. Accordingly, Respondent is financially responsible for Claimant's authorized medical treatment through Midtown Occupational Health Services.

15. Claimant has failed to prove that it is more probably true than not that he is entitled to receive reasonable, necessary and related medical treatment from Kaiser Permanente. On December 28, 2016 Respondent filed a Notice of Contest challenging Claimant's claim for Workers' Compensation benefits. Although Claimant had scheduled a number of physical therapy appointments they were cancelled by Midtown Occupational Health Services. Claimant subsequently obtained medical treatment for his lower back condition through personal medical provider Kaiser Permanente. He underwent physical therapy and an MRI for his lower back symptoms. The MRI revealed a compression fracture at T12 and a superior and plate compression fracture at L2.

16. The record creates a reasonable inference that Midtown Occupational Health Services cancelled Claimant's scheduled physical therapy visits because Respondent had filed a Notice of Contest challenging Claimant's claim for Workers' Compensation benefits. However, it is speculative to infer that Insurer had notice of whether Midtown Occupational Health Services refused to treat Claimant. Furthermore, the record is also devoid of evidence about whether Insurer "forthwith" designated a physician who was willing to treat Claimant. Therefore, Claimant's treatment from personal medical provider Kaiser Permanente was not authorized. Accordingly, Respondent is not financially responsible for Claimant's medical treatment for his November 28, 2016 industrial lower back injury through personal medical provider Kaiser Permanente.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Compensability

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAP, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the “logical and recurrent consequence” of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, Oct. 27, 2008), simply because a claimant’s symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that “correlation is not causation,” and merely because a coincidental correlation exists between the claimant’s work and his symptoms does not mean there is a causal connection between the claimant’s injury and work activities.

7. As found, Claimant has demonstrated by a preponderance of the evidence that he suffered a compensable lower back injury during the course and scope of his employment with Employer on November 28, 2016. Claimant credibly explained that on November 28, 2016 he was delivering a crate to a painting company known as Preferred Painting. Claimant explained that he used a pallet jack to move the crate to the back of his trailer. As he was pulling the crate backwards he tripped on a small step

near the end of his trailer. Claimant fell approximately five feet off the trailer onto concrete and landed on his back. He suffered pain in his upper tailbone and lower back area. Mr. Olivas credibly corroborated Claimant's account of the accident. While Mr. Olivas was in the Preferred Painting parking lot, he noticed Claimant using a pallet jack to unload merchandise from a truck. Claimant tripped as he was walking backwards, fell to the ground and landed on his back. Mr. Olivas assisted Claimant after the incident.

8. As found, Claimant's description of the accident in the medical records also supports his testimony that he suffered a compensable industrial injury on November 28, 2016. Claimant consistently maintained that on November 28, 2016 he had fallen approximately five feet onto the ground after he tripped while unloading a crate from his work trailer. He specifically landed on the lower part of his back slightly above his tailbone. In contrast to Claimant's consistent account, Dr. Noel expressed concerns about whether the November 28, 2016 incident actually occurred based on Claimant's delayed reporting and continued work activities after the incident. Nevertheless, Dr. Noel acknowledged that, based on Claimant's history and physical examination, his lower back symptoms were probably caused by the November 28, 2016 fall. Accordingly, Claimant's employment activities on November 28, 2016 aggravated, accelerated, or combined with his pre-existing condition to produce a need for medical treatment.

Medical Benefits

9. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAP, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAP, Nov. 13, 2000).

10. Authorization to provide medical treatment refers to a medical provider's legal authority to treat the claimant with the expectation that the insurer will compensate the provider. *Bunch v. Industrial Claim Appeals Office,* 148 P.3d 381, 383 (Colo. App. 2006); *One Hour Cleaners v. Industrial Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). Authorized providers include those to whom the employer directly refers the claimant and those to whom an ATP refers the claimant in the normal progression of authorized treatment. *Town of Ignacio v. Industrial Claim Appeals Office,* 70 P.3d 513 (Colo. App. 2002); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). Whether an ATP has made a referral in the normal progression of authorized treatment is a question of fact for the ALJ. *Suetrack USA v. Industrial Claim Appeals Office,* 902 P.2d 854 (Colo. App. 1995).

11. Section 8-43-404(5)(a)(I)(A), C.R.S. permits an employer or insurer to select the treating physician in the first instance. *Yeck v. Indus. Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999). However, §8-43-404(5), C.R.S. implicitly contemplates that the respondent will designate a physician who is willing to provide treatment. *See Ruybal v. University Health Sciences Center*, 768 P.2d 1259, 1260 (Colo. App. 1988). If the employer fails to timely tender the services of a physician, the right of selection passes to the claimant and the selected physician becomes an ATP. *See Rogers v. Industrial Claim Appeals Office*, 746 P.2d 565 (Colo. App. 1987); *Garrett v. McNelly Construction Company, Inc.*, W.C. No. 4-734-158 (ICAP, Sept. 3, 2008). Whether the ATP refused to treat the claimant for non-medical reasons, whether the insurer received notice of the refusal to treat and whether the insurer "forthwith" designated a physician who was willing to treat the claimant are questions of fact for resolution by the ALJ. *Garrett v. McNelly Construction Company, Inc.*, W.C. No. 4-734-158 (ICAP, Sept. 3, 2008); *see Ruybal*, 768 P.2d at 1260.

12. As found, Claimant has proven by a preponderance of the evidence that he is entitled to receive reasonable, necessary and related medical treatment from Midtown Occupational Health Services. . On December 6, 2016 Claimant completed a First Report of Injury with Employer. He chose to receive medical treatment through Midtown Occupational Health Services. Claimant obtained medical treatment in the form of diagnostic procedures and physical therapy. Claimant's treatment was reasonable, necessary and related to his November 28, 2016 industrial injury. Accordingly, Respondent is financially responsible for Claimant's authorized medical treatment through Midtown Occupational Health Services.

13. As found, Claimant has failed to prove by a preponderance of the evidence that he is entitled to receive reasonable, necessary and related medical treatment from Kaiser Permanente. On December 28, 2016 Respondent filed a Notice of Contest challenging Claimant's claim for Workers' Compensation benefits. Although Claimant had scheduled a number of physical therapy appointments they were cancelled by Midtown Occupational Health Services. Claimant subsequently obtained medical treatment for his lower back condition through personal medical provider Kaiser Permanente. He underwent physical therapy and an MRI for his lower back symptoms. The MRI revealed a compression fracture at T12 and a superior and plate compression fracture at L2.

14. As found, the record creates a reasonable inference that Midtown Occupational Health Services cancelled Claimant's scheduled physical therapy visits because Respondent had filed a Notice of Contest challenging Claimant's claim for Workers' Compensation benefits. However, it is speculative to infer that Insurer had notice of whether Midtown Occupational Health Services refused to treat Claimant. Furthermore, the record is also devoid of evidence about whether Insurer "forthwith" designated a physician who was willing to treat Claimant. Therefore, Claimant's treatment from personal medical provider Kaiser Permanente was not authorized. Accordingly, Respondent is not financially responsible for Claimant's medical treatment for his November 28, 2016 industrial lower back injury through personal medical provider Kaiser Permanente.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant suffered a compensable lower back injury during the course and scope of his employment with Employer on November 28, 2016.

2. Respondent is financially responsible for Claimant's authorized, reasonable and necessary medical treatment from Midtown Occupational Health Services.

3. Respondent is not financially responsible for Claimant's medical care for his November 28, 2016 industrial lower back injury through personal medical provider Kaiser Permanente.

4. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: June 7, 2017.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-017-418-01

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer/Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on March 9, 2017 and May 9, 2017, in Denver, Colorado. The hearing was digitally recorded (reference: 3/9/17, Courtroom 1, beginning at 1:30 PM and ending at 5:00 PM; and, 5/9/17, Courtroom 1, beginning at 8:30 AM, and ending at 11:00 AM).

Claimant's Exhibits through 15 were admitted into evidence, without objection. Respondents' Exhibits A through N were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ established a post-hearing briefing schedule: Claimant's opening brief was filed, electronically, on May 26, 2017. Respondents' answer brief was filed, electronically, on June 5, 2017. No timely reply brief was filed. The matter was deemed submitted for decision on June 8, 2017.

ISSUES

The issues to be determined by this decision concern whether the Claimant suffered a compensable occupational disease of hypersensitivity pneumonitis (HP), with

a date of last injurious exposure of November 9, 2015. If compensable, the parties stipulated to several matters as found herein below.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. At the commencement of the hearing, the parties stipulated and the ALJ finds that the Claimant's average weekly wage (AWW) is $1,286.64, if the case is compensable.

2. The parties further stipulated and the ALJ finds, if the case is compensable, that the Claimant is entitled to temporary total disability (TTD) benefits from December 30, 2015, until terminated by law, subject to an offset for unemployment insurance (UI) benefits received.

3. The parties also stipulated and the ALJ finds, if compensable, that the authorized treating physicians (ATPs) in this case are the doctors at Platte Valley Medical Center, Platte Valley Internal Medicine, National Jewish Health, and Aviation and Occupational Medicine.

4. Additionally, the parties stipulated and the ALJ finds that there was a roof leak near the Claimant's work area, which was abated between September and October 7, 2015.

Hypersensitivity Pneumonitis

5. The Employer is a small Commerce City, Colorado, business that sells, rents, and repairs golf carts. The Claimant is a 58-year-old man who worked for the Employer as a golf cart mechanic from March 31, 2014, until November 7, 2015.

6. The Claimant worked as a mechanic for the Employer and had been working for approximately a year and a half when he suffered the onset of a respiratory condition which made it impossible for him to continue work.

7. On November 4, 2015, the Claimant became suddenly and acutely ill. On November 7, 2015, he stopped working for the Employer in anticipation of non-industrial shoulder surgery. The Claimant, however, was not cleared for surgery because he was exhibiting hemoptysis (bloody cough), and was being treated for bronchopneumonia. When his respiratory symptoms did not resolve, he was referred to National Jewish

Health. He last worked for the Employer on November 9, 2015, however, he claims work-related temporary disability from December 30, 2015, as stipulated and found herein above, because that was the date that National Jewish restricted him from returning to work.

8. The Claimant has a history of respiratory problems. He has been treated for chronic sinusitis, hyperlipidemia, and bronchitis (Respondents' Exhibit E, bates stamp 8, 10). He also has a history of having an acute upper respiratory infection and cough, for which he was successfully treated with 50 mg dosage of prednisone (Respondents' Exhibit G, bates stamp 63 – 67). The present claim is based on an alleged work-related aggravation/acceleration of his pre-existing predisposition to respiratory problems.

9. The medical records establish that the Claimant had seen his family doctor, James Meyer, M.D., on December 26, 2015, who stated that the Claimant had symptoms of increased mucous, fever and cough (Respondents' Exhibit E, bates stamp 24). The Claimant was referred to National Jewish Hospital and he was seen there for the first time by Anthony Gerber, M.D., on December 18, 2015. Dr. Gerber initiated a course of prednisone.

10. The testimony of lay witnesses, as well as the medical records establish that the Claimant suffered an acute onset of apparent sinusitis and bronchitis in November 2015. This had been preceded by a history of coughing. Based on the totality of the evidence, the ALJ infers and finds that the Claimant's hypersensitivity pneumonitis (HP) had been latent for a period of time, contrary to the opinion of the Respondents' Independent Medical Examiner (IME), Jeffrey Schwartz, M.D., who stated the opinion that HP would require a sudden and immediate onset that was not demonstrated by the Claimant. Dr. Schwartz's opinion is contrary to the observations of the Court of Appeals in *Union Carbide Corp. v. Indus. Claim Appeals Office,* 128 P.3d 319 (Colo. App. 2005), the applicability of which is discussed herein below.

11. The Claimant was treated at Platte Valley Medical Center on November 11, 2015, with a history of hemoptysis (blood stained sputum) which had been intermittent in the past, but had become frequent. *Id*., bates stamp 27. The Claimant was sent for a CT scan which showed "ground-glass appearing soft nodular areas in both the left upper and right upper lobe." *Id.* Up to that date, the Claimant was on antibiotics for bronchitis. Dr. Meyer noted that the Claimant had potential exposures which included welding and woodwork. *Id*., bates stamp 24.

12. When Dr. Gerber saw the Claimant on December 18, 2015, he was of the opinion that the Claimant presented with classic hypersensitivity pneumonitis (HP). According to Dr. Gerber, this was supported by the traditional features of the disease, including hypoxemia, shortness of breath, and head cheese appearance on his CAT scan with mosaic profusion and centrilobulr nodules.

13. Dr. Gerber's opinion was:

ASSESSMENT PLAN:

> However, I think that the weight of the evidence is still strongly suggestive of hypersensitivity pneumonitis. In particular given the myriad of potential exposures that are possible at the patient's workplace. The patient is actually rather ill. The oxygen saturations are low, but do recover with oxygen, so I do not think he needs to be acutely admitted. I do think he needs therapy with immunosuppression and complete avoidance of potential exposure to whatever is precipitating this disorder. Given the workplace exposures, that is the chief culprit and I have advised the patient to stay home from work and have written a note outlining that plan, which he can provide to his employer.

(Claimant's Exhibit 9, bates stamp 129)

14. On December 24, 2015, Evans Fernandez, M.D., at National Jewish noted that the Claimant had undergone a high resolution CT pattern highly suggestive of HP (Claimant's Exhibit 9).

15. Dr. Fernandez took a history from the Claimant which described the Claimant's home and work environments. At work, the Claimant is exposed to painting and cleaning solvents, as well as cutting, welding and grinding. Also, the Claimant was exposed to dirt and mud on golf carts. Dr. Fernandez noted that the Claimant had no mold, mildew, or water damage exposure at home. Dr. Fernandez was of the opinion that based on the Claimant's CT scan and his occupational exposures the Claimant had "*subacute HP*" (Respondents' Exhibit I, bates stamp 121).

16. Dr. Fernandez agreed that the Claimant should continue his prednisone regime. Dr. Fernandez stated that HP commonly stems from an exposure which is associated with multiple different antigens as opposed to isolated ones. *Id.*, bates stamp 114.

17. Ultimately, the Claimant was referred to Annyce Mayer, M.D., a pulmonologist at National Jewish, who saw the Claimant on January 7, 2016, for an occupational/environmental consultation. *Id.,* bates stamp 98. She became the Claimant's authorized treating physician (ATP).

18. Dr. Mayer noted that the Claimant described usual exposure to debris on covered golf carts arriving from a variety of locations. This included stock shows, carried hay and dirt. These were variably wet before they were driven into his work place. Thus, according to Dr. Mayer, there were likely organic antigens from this,

although difficult to conceptually quantify. *Id.,* bates stamp 104. ATP Dr. Mayer was of the opinion that the Claimant should not return to work and scheduled a follow-up appointment for him at National Jewish.

19. During the course of treatment at National Jewish from December 8, 2015 through early 2016, the Claimant underwent several CT examinations (Claimant's Exhibit 7).

. 20. In her report, ATP Dr. Mayer described the nature of the Claimant's work surroundings (Claimant's Exhibit 10, bates stamp 154). She was of the opinion that the Claimant's job included exposure to various antigens. Her assessment was:

> ASSESSMENT:
>
> 1. Hypersensitivity pneumonitis, work-related in my opinion on a medical probably basis due to organic antigen in the workplace, with consistent symptoms, physiologic findings, and radiographic imaging, confirmed in my opinion by dramatic improvement and clinical resolution following course of immunosuppressive therapy and removal from exposure. There was organic antigen exposure, not only from the grass and debris covered golf carts that became wet when driving in through the wash area and water on the floors, but in addition to mold exposure due to leaking roof and onset of symptoms after roof repair that caused water to come down into the dry wall and ceiling beams with musty smell that lasted for weeks and the mold was never remediated.
>
> 2. Rhinitis, with ongoing symptoms induced by chemical smells.
>
> 3. Hypercholesterolemia.
>
> 4. Prednisone0induced weight gain.

Id., bates stamp 155.

21. In her report of August 29, 2016, ATP Dr. Mayer established that the Claimant was at maximum medical improvement (MMI), with an impairment rating. She recommended that the Claimant avoid future exposure to reactive chemicals known to cause HP. *Id.*, bates stamp 156.

The Claimant's Testimony

22. The Claimant testified that he had been given a release to return to work with restrictions by ATP Dr. Mayer which he presented to the Employer's witness, Misty. Kemmit, on February 11, 2016 (Claimant's Exhibit 15). Kemmit denied receiving this.

The Claimant's testimony, however, was credible, and the ALJ finds that he provided this release to Kemmit, asking her to place this in his Employee file. He also testified that he was told that he had been replaced and therefore was no longer eligible to return to work. The ALJ infers and finds that Kermit was mistaken in her denial and, therefore, her denial is lacking in credibility.

23. The parties agreed that there had been flooding in May 2015 at the Employer's shop. The Employer's witness, Misty Kemmit, testified that the leakage did not affect the shop/work area where the Claimant works. Kermit's office is not in the shop. The Claimant credibly testified that the leaking from the roof also occurred in the shop/work area and had also occurred several times while the roof was being repaired. The ALJ finds the Claimant more credible than Kemmit in this regard.

24. Kemmit testified that the Employer's roof was repaired in September and October 2015, and that the roof repair was complete on October 7, 2015. When Industrial Hygienist Gifford inspected the shop, the roof had been repaired for several months. Kemmit explained that she was never informed that there was mold that required remediation, and no mold remediation was performed at the Employer's shop. Kemmit stated that in November 2015, she was ill, and that other employees showed symptoms of being sick. She did not further explain how she and others were ill in November 2015. The ALJ infers and finds that her testimony in this regard fits into Dr. Schwartz's opinion concerning alleged "community-based pneumonia." The ALJ further finds that her testimony is Insufficient to support Dr. Schwartz's speculative opinion. Indeed, the totality of Kermit's testimony categorically contradicts the Claimant's testimony and supports every aspect of the Respondents' theory, without missing a beat. For this reason, the ALJ finds the Claimant's testimony more credible than Kermit's testimony.

Respondents' Independent Medical Examiner (IME), Jeffrey Schwartz, M.D.

25. The Respondents introduced the testimony of pulmonary expert Dr. Schwartz. Dr. Schwartz disagreed with both the diagnosis made of HP by National Jewish and its treatment there. He was of the opinion that there had not been adequate and competent evaluation to allow the rendering of the diagnosis of HP. His opinion is contrary to, and conflicts, with the opinions of three physicians at National Jewish.

26. Dr. Schwartz disagreed with the doctors at National Jewish concerning their diagnostic procedure. Dr. Schwartz initially was of the opinion that the Claimant should have undergone a broncoalviolar lavage (BAL) to establish the presence of antigens. Contrary to IME Dr. Schwartz's opinion, ATP Dr. Mayer credibly testified that the BAL was not appropriate because the Claimant had been started on prednisone initially by Dr. Gerber in December 2015. Once a Prednisone regime has commenced a BAL will not provide diagnostic clarity. Dr. Schwartz eventually agreed with this.

27. Dr. Schwartz claimed that none of the doctors at National Jewish appear to have reviewed the Claimant's medical records. In an entirely inappropriate analogy, Dr. Schwartz criticized the doctors at National Jewish by describing their results as akin

to Denmark's Hans Christian Anderson's *The Emperor's New Clothes*. Such a figure of speech raises the question concerning which doctors have the Emperor's new clothes—Dr. Schwartz or the doctors at national Jewish (in fact, the Emperor had no clothes but wanted his subjects to believe that he did). Dr. Schwartz's comment is surprising in light of the past medical history found in the records contained in the Respondents' own exhibits (*See* Respondents' Exhibit I, bates stamp 89 to 166, specifically 189 to 192, 118 to 122, 124 to 132, 151, 152 and 156 to 160).

28. Dr. Schwartz was also critical of the fact that a diagnosis was made without returning the Claimant to the workplace (presumably as an experiment to see if the Claimant would get sick again or not). Such an experiment would be in violation of the Claimant's ATP'S restrictions. The evidence is that the Claimant was not permitted to return to the workplace at the end of December 2015, and could not have done so because he was terminated by the Employer. Thereafter, Dr. Schwartz also asserted that the doctors at National Jewish were not "appropriately circumspect in their failure to acknowledge that the Claimant has organic exposures which are common to millions of American workers" (Respondents' Exhibit N, bates stamp 217).

29. Although Dr. Schwartz recognized that the Claimant is presently without a respiratory disease condition, he rendered no opinion on whether treatment rendered by National Jewish created this status. He asserts that the Claimant's etiology arose from an infectious source, specifically a community acquired pneumonia. Dr. Schwartz did not specify the source of this alleged "community-based peumonitis," such as the streets of Denver, the workplace, etc. e implied that co-workers may have been sick as Kemmit indicated. The Claimant's medical providers at National Jewish disagree with Dr. Schwartz. Further, when Dr. Schwartz speculated about how this community acquired infection occurred, he speculated it was "**possibly (emphasis added)** related to a "sick family member" that accompanied him at doctor appointments. There was no persuasive evidence to this effect. *Id*.

30. Dr. Schwartz also criticized ATP Dr. Mayer for not ordering a "standard evaluation of his workplace," (Respondents' Exhibit N, bates stamp 218). The Claimant , however, did not have access to the workplace, the Employer was represented by counsel and ATP Dr. Mayer had no authority to gain access to the premises. Despite this fact, Dr. Schwartz speculated, without an evidentiary basis, what ATP Dr. Mayer would have found at the workplace had she performed an evaluation.

31. The ALJ infers and finds that a great part of IME Dr. Schwartz's testimony can be characterized as an attempt to thoroughly discredit National Jewish Hospital and the three doctors there who tested and treated the Claimant. Dr. Schwartz's opinion concerning alleged "community-based pneumonitis" is speculation without any foundation. Indeed, Dr. Schwartz's characterization of National Jewish and the three doctors who treated the Claimant is an insult to National Jewish, without any firm basis in logic or medicine. The ALJ finds that Dr. Schwartz's ultimate opinions are lacking in credibility.

32. According to Dr. Schwartz, the Claimant did not meet the required symptoms of HP, and instead contracted community acquired pneumonia (CAP). The Respondent relied on the testimony of Jeffrey Schwartz, M.D., to attempt to refute the testimony of Dr. Mayer and Dr. Fernandez. Dr. Schwartz concluded that HP would require a sudden and immediate onset that was not demonstrated by the Claimant, and the doctors at National Jewish had erred by proceeding to treatment rather than completing further diagnostic steps. Dr. Schwartz stated the opinion that the CAP was non-occupational, and could have been contracted by family members or others in the community. Additionally, Dr. Schwartz stated that the Claimant's worsening condition after leaving work is not consistent with HP, but rather CAP. The ALJ finds Dr. Schwatrz's opinion in this regard to be speculative and lacking in credibility.

33. There is no persuasive evidence of anyone else in the Claimant's family being sick or having CAP. The Respondent offers some evidence that other members of the Employer's organization were out sick at the same time the Claimant left work, but this evidence is speculative and there is no evidence of these employees seeking treatment or any medical records establishing illness at that time. The Claimant's failure to show improvement once leaving work is not dispositive of HP. The Court of Appeals observed in *Union Carbide Corp. v. Indus. Claim Appeals office,* 128 P.3d 319 (Colo. App. 2005) that occupational diseases can produce symptoms remote from the last exposure. Thus, the Respondents have failed to establish the existence of a non-industrial cause of the Claimant's disease, in the face of Claimant's prima facie showing.

Joseph D. Gifford, Industrial Hygienist

34. Gifford testified as an environmental hygiene expert. His opinion relied on his site visit which did not evidence antigen presence. He also relied on the information he received from the Employer that rain water leakage damage had not affected the Claimant's work area. He also testified that when he visited the Employer's site **one year** after the Claimant's diagnosis of HP, the golf carts coming in were clean, with the exception of a slight covering of dust, after they had been driven from a graveled area outside of the shop. He did not see the golf carts with grass, dirt, hay and other antigens as described by the Claimant to ATP Dr. Mayer. The ALJ finds that the opinion of Industrial Hygienist Gifford, formed on the basis of a worksite evaluation one year after the Claimant's last injurious exposure to antigens at the worksite, not relevant to the date of last injurious exposure because the circumstances were different one year earlier, *e.g.,* there was a leaky roof which had been fixed months before Gifford's inspection of the worksite and he did not observe the same traffic and circumstances involving golf carts that existed one year earlier. There is no persuasive evidence that conditions at the Employer's workplace remained unchanged for a year. It would be a fallacious assumption that conditions remained unchanged. Consequently, the ALJ discounts Gifford's opinions

Occupational Disease of Hypersensitivity Peneumonitis

35. The Claimant sustained the occupational disease of hypersensitivity pneumonitis, which amounts to an aggravation/acceleration of his pre-existing, underlying respiratory problems and prevent him from returning to his former workplace. The ALJ finds that Dr. Schwartz's theory of alleged "community-based pneumonia" is speculative and any support for it by Kermit's testimony that she and others were sick in November 2015 is a weak foundation without any linking nexus to Dr. Schwartz's theory. The ALJ further finds that the Claimant's hypersensitive pneumonitis directly resulted from his employment and the conditions under which his work was performed, and can be seen to have followed as a natural incident of his work and as a result of the exposure occasioned by the nature of his employment, and can be fairly traced to his employment as a proximate cause and which did not come from a hazard to which he would have been equally exposed outside of his employment. There was no persuasive evidence of an exposure anywhere other than the Claimant's workplace. Indeed, the Claimant had **no** exposure to mold, mildew, or water damage at his home. Therefore, there was no "peculiar risk" that the Claimant faced hazards outside of his employment with the Employer that equaled his exposure at work.

Last Injurious Exposure

36. The Claimant's date of last injurious exposure was November 9, 2015, during fiscal year (FY) 2015/2016

Average Weekly Wage (AWW)

37. As stipulated and found, the Claimant's AWW is $1,286.64, which yields a TTD benefit rate of $857.75 per week, or $122.54 per day, which is less than the statutory cap for FY 2015/2016, the period during which the Claimant's last injurious exposure occurred..

Temporary Total Disability

38. The Claimant's ATP declared him to be at maximum medical improvement as of August 29, 2016. As stipulated and found, the Claimant was temporarily and totally disabled from December 30, 2015 through August 28, 2016, both dates inclusive, a total of 243 days..Aggregate past due TTD benefits for this period equal $29, 777.22, however, 100% of the UI benefits from March 26, 2016 through August 28, 2016, both dates inclusive, a total of 156 days, are subject to offset, in the aggregate amount of $12, 301.71, for net, past due TTD benefits of $17, 475.51.

Unemployment Insurance (UI) Benefits

39. The Claimant filed for, and received, UI benefits in the amount of $552.00 a week, beginning March 26, 2016 through September 11, 2016, both dates inclusive, a total of 169 days (Claimant's Exhibit 13)., as referenced herein above in Finding No. 36.

Ultimate Findings

40. The ALJ finds the testimony of ATP Dr. Mayer, as well as the reports from the doctors at National Jewish Hospital, to be credible and rejects the opinion of Dr. Schwartz that the Claimant does not suffer HP as lacking in credibility. Also, as found, the Claimant's testimony was persuasive and credible. Also, it was more credible than the testimony of Misty Kermit.

41. Between conflicting medical opinions, the ALJ makes a rational choice, based on substantial evidence, to accept the opinions of the physicians at National Jewish and to reject the IME opinion of Dr. Schwartz.

42. The Claimant has proven, by a preponderance of the evidence that he sustained the occupational disease of hypersensitivity pneumonitis, which amounted to an aggravation/acceleration of his underlying predisposition to respiratory problems, and his last injurious exposure was on his last day of work, November 9, 2015.

43. As stipulated and found, the authorized treating physicians (ATPs) in this case are the doctors at Platte Valley Medical Center, Platte Valley Internal Medicine, National Jewish Health, and Aviation and Occupational Medicine. Further, in light of the determination that the Claimant has sustained a compensable occupational disease, these authorized medical providers care and treatment was causally related to the Claimant's compensable hypersensitivity pneumonitis and reasonably necessary to cure and relieve the effects thereof.

44. As stipulated and found, the Claimant's AWW is $1,286.64, which yields a TTD benefit rate of $857.75 per week, or $122.54 per day, which is less than the statutory cap for FY 2015/2016, the period during which the Claimant's last injurious exposure occurred..

45. As further stipulated and found, the Claimant was temporarily and totally disabled from December 30, 2015 through August 28, 2016, both dates inclusive, a total of 243 days.. Aggregate past due TTD benefits for this period equal $29, 777.22, however, 100% of the UI benefits from March 26, 2016 through August 28, 2016, both dates inclusive, a total of 156 days, in the aggregate amount of $12, 301.71, are subject to offset, for net, past due TTD benefits of $17, 475.51.

46. As found, the Claimant received UI benefits in the amount of $552.00 a week, beginning March 26, 2016 through August 28, 2016, both dates inclusive, a total of 156 days, in the aggregate amount of $12, 301.71.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the testimony of ATP Dr. Mayer, as well as the reports from the doctors at National Jewish Hospital, was more credible than the opinion of Dr. Schwartz-- that the Claimant does not suffer HP. Also, as found, the Claimant's testimony was persuasive and credible. It was more credible than the testimony of Misty Kermit.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005).

Also see Martinez v. Indus. Claim Appeals Office, 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting medical opinions, the ALJ made a rational choice, based on substantial evidence, to accept the opinions of the physicians at National Jewish and to reject the IME opinion of Dr. Schwartz.

Occupational Disease

c. An "occupational disease" means a disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment. § 8-40-201 (14), C.R.S. *See City of Colorado Springs v. Indus. Claim Appeals Office,* 89 P. 3d 504 (Colo. App. 2004). As found, Claimant has proven an occupational disease with a date of last injurious exposure of November 9, 2015. As found herein above, Dr. Schwartz stated the opinion that HP would require a sudden and immediate onset that was not demonstrated by the Claimant. The Court of Appeals in *Union Carbide Corp. v. Indus. Claim Appeals Office,* 128 P.3d 319 (Colo. App. 2005), stated that an occupational disease **typically** can involve long latency periods, and can produce symptoms remote from the last hazardous exposure. In *Union Carbide,* the claimant died of silicosis or pneumoconiosis caused by exposure to radioactive materials. Nonetheless, the observation concerning long latency periods is still *aprpos* to the facts in the present case insofar as it tends to refute Dr. Schwartz's opinion concerning "sudden onset."

Average Weekly Wage (AWW)

d. . An AWW calculation is designed to compensate for **total** temporary wage loss. *Pizza Hut v. Indus. Claim Appeals Office,* 18 P. 3d 867 (Colo. App. 2001). *See* § 8-42-102, C.R.S. As stipulated and found, the Claimant's AWW is $1,286.64, which yields a TTD benefit rate of $857.75 per week, or $122.54 per day, which is less than the statutory cap for FY 2015/2016, the period during which the Claimant's last injurious exposure occurred.

Temporary Total Disability (TTD)

e. To establish entitlement to temporary disability benefits, a claimant must prove that the industrial injury has caused a "disability," and that he has suffered a wage loss that, "to some degree," is the result of the industrial disability. § 8-42-103(1), C.R.S; *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). When a temporarily disabled employee loses his employment for other reasons which are not his responsibility, the causal relationship between the industrial injury and the wage loss necessarily continues. Disability from employment is established when the injured employee is unable to perform the usual job effectively or properly. *Jefferson Co. Schools v. Headrick*, 734 P.2d 659 (Colo. App.1986). This is true because the employee's restrictions presumably impair his opportunity to obtain employment at pre-injury wage levels. *Kiernan v. Roadway Package System*, W.C. No. 4-443-973 [Indus. Claim Appeals Office (ICAO), December 18, 2000]. Once the prerequisites for TTD are met (*e.g.,* no release to return to full duty, MMI has not been reached, a temporary wage loss is occurring in modified employment or modified employment is no longer made available, and there is no actual return to work), TPD and TTD benefits are designed to compensate for temporary wage loss. TTD benefits are designed to compensate for a 100% temporary wage loss. *See Eastman Kodak Co. v. Industrial Commission,* 725 P. 2d 107 (Colo. App. 1986); *City of Aurora v. Dortch,* 799 P. 2d 461 (Colo. App. 1990). As stipulated and found, the Claimant was temporarily and totally disabled from December 30, 2015 through August 28, 2016, both dates inclusive, a total of 243 days.. Aggregate past due TTD benefits for this period equal $29, 777.22, however, 100% of the UI benefits from March 26, 2016 through August 28, 2016, both dates inclusive, a total of 156 days, in the aggregate amount of $12, 301.71, are subject to offset, for net, past due TTD benefits of $17, 475.51.

Unemployment Insurance (UI) Offset

f. Section 8-42-103 (1)(f), C.R.S., provides for a 100% offset for UI benefits received. As found, the Claimant received UI benefits in the amount of $552.00 a week, beginning March 26, 2016 through August 28, 2016, both dates inclusive, a total of 156 days, in the aggregate amount of $12, 301.71.

Burden of Proof

g. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). Also, the burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P.2d 535 (Colo. App. 1992). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products,*

Inc., W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained his burden with respect to the compensability of the occupational disease of hypersensitivity pneumonitis; medical benefits; AWW; and TTD. The respondents have sustained their burden with respect to the UI offset.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Respondents shall pay the costs of all authorized medical care and treatment for the Claimant's compensable occupational disease of hypersensitivity pneumonitis, subject to the Division of Workers' Compensation Medical Fee Schedule.

B. Respondents shall pay the Claimant temporary total disability benefits of $857.75 per week, or $122.54 per day, less the 100% Unemployment Insurance benefit Offset, from December 30, 2015 through August 28, 2016, both dates inclusive, a total of 243 days. Aggregate past due TTD benefits for this period equal $29, 777.22, however, 100% of the UI benefits from March 26, 2016 through August 28, 2016, both dates inclusive, a total of 156 days, in the aggregate amount of $12, 301.71, are subject to offset, for net, past due TTD benefits of $17, 475.51, which are payable retroactively and forthwith.

C. Respondents shall pay the Claimant statutory interest at the rate of eight percent (8%) per annum on all amounts of indemnity benefits due and not paid when due.

D. Any and all issues not determined herein are reserved for future decision.

DATED this_____day of June 2017.

_____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

ISSUE

I. Has Respondent, by clear and convincing evidence, overcome the DIME opinion of Dr. Jenks on the issue of MMI and relatedness of Claimant's lower back condition to the admitted work injury of August 21, 2015.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following Findings of Fact:

1. Employer operates a hog farm in southern Colorado. Claimant worked for Employer for approximately seven years, performing various tasks, including cleaning the facilities. Claimant suffered a work-related injury to his right knee on August 21, 2015 when he fell while "spraying the "barn storm" in a crate used to house one the hogs. Claimant stepped with his left knee over into the crate. His left leg slipped and he came down hard on his right knee against the top edge of the crate." (Respondents' Exhibit (R. Ex.) C, p. 008)

2. Claimant first sought treatment for his work injury on August 24, 2015 with Dr. Terrence Lakin, D.O. and Terry Schwarz, PA-C, at Southern Colorado Clinic. Claimant was diagnosed with a right knee contusion, or right knee sprain. (R. Ex. C, p. 008)

3. Claimant returned to Southern Colorado Clinic on August 26, 2015. Claimant's pain complaints focused on the right knee. No mention of low back pain was mentioned by Claimant. Examination of Claimant's spine was noted to be "nontender, moves about without difficulty." (R. Ex. C, pp. 0011-0012)

4. Claimant again returned to Southern Colorado Clinic on September 10, 2015; September 28, 2015; October 5, 2015; October 6, 2015; October 20, 2015; and October 27, 2015; for treatment of his right knee injury. On none of these dates do the records show that Claimant complained to any medical provider of back pain. (R. Ex. C) During the October 27, 2015 examination at Southern Colorado Clinic, Claimant's spine was again examined. The spine examination demonstrated "no tenderness lumbar." (R. Ex. C, p. 0039)

5. Claimant had also been attending physical therapy, all focused on his right knee injury. Claimant met with Kent Madsen at Physical Therapy Plus, Inc. on September 22, 2015; September 29, 2015; October 6, 2015; October 8, 2015; October 13, 2015; October 15, 2015; October 22, 2015; October 26, 2015; and

October 29, 2015. Claimant made no low back complaints during any of these 9 physical therapy sessions. (R. Ex. F)

6. On October 13, 2015, Dr. Davis conducted an initial orthopedic evaluation. Dr. Davis examined Claimant's back and noted Claimant "*denies* back pain." (R. Ex. E, p. 0088) Dr. Davis further noted the state of Claimant's low back and stated in his notes, "Bilateral hips with symmetrical nontender range of motion. Lumbosacral spine is nontender with negative straight leg raise bilateral lower extremities." (R. Ex. E, bates 89)

7. Dr. Davis also noted on this date that Claimant "understands and speaks partial English. Translator used for assistance today" (R. Ex. E, p. 089)

8. Claimant again denied back pain during an October 30, 2015 examination with Dr. Davis. The right knee was still the sole complaint. (R. Ex. E, p. 0093)

9. After nearly three months of treatment for his August 21, 2015 work injury and 20 meetings with treating providers with no mention of low back pain (or outright denial of back pain), Claimant first complained of low back pain at a physical therapy appointment. On Claimant's November 10, 2015, Claimant's physical therapist, Kent Madsen, notes "Chief Complaint: right sided low back pain greater than right knee pain." (R. Ex. F, p. 059)

10. At Claimant's November 16, 2015 visit to Dr. Terrence Lakin at Southern Colorado Clinic, he complained of "back pain." (R. Ex. C, p. 048) Claimant was diagnosed with possible sacroiliac joint dysfunction. (Id)

11. Despite pain complaints at his November 16, 2015 appointment with Dr. Lakin, Claimant did not indicate his low back hurt on the pain diagram he completed. (R. Ex. C, p. 50)

12. In a note from a December 22, 2015 note from Southern Colorado Clinic, Claimant's wallet was discussed. It was described as a "large wallet at least ½" thick in right back pocket. Ttp in right SI and paraspinal lumbars." (R. Ex. C, p.0058) Also on December 22, 2015, Dr. Lakin advised Claimant of his opinions as to whether his low back issues are related to his August 21, 2015. Dr. Lakin stated:

> "Any further evaluation of his lumbar for his present claim would not be reasonable. They may certain pursue care with her [sic] primary care provider and/or continue on with physical therapy or chiropractic care outside of the Worker's Comp. system. Or they have methods of pursuing appeal's for lumbar care, but my opinion at this time because it does it does not reach my level of causality to support that appeal. " (R. Ex C, p.0059)

During the December 22, 2015 visit, Dr. Lakin also advised Claimant to eliminate having a large wallet in his back pocket. (R. Ex. C, p. 59)

13. A February 22, 2016 note from Southern Colorado Clinic indicates Claimant's low back was still painful, but Claimant "understands that it's not covered by WC." (R. Ex. C, p. 0 67)

14. Dr. Lakin placed Claimant at maximum medical improvement for his August 21, 2015 work injury on February 26, 2016. Dr. Lakin assigned no permanent impairment. (R. Ex. C, p. 0078)

15. Respondents filed a Final Admission of Liability (FAL) consistent with Dr. Lakin's report on March 1, 2016. (R. Ex. A) This FAL admitted to no permanent impairment.

16. Claimant timely objected to Respondents' Final Admission of Liability and Applied for a Division IME. Dr. Jeffrey Jenks was named as the physician to conduct the examination.

17. Claimant testified that, in the interim, he was able to perform his duties with Employer until July, 2016, at which time his back pain would not allow him to continue working.

18. Dr. Jenks conducted the Division IME on September 20, 2016. (R. Ex. I) In his two-page report, Dr. Jenks found Claimant was not at maximum medical improvement for his lower back and required further treatment for an L5-S1 disc extrusion, which had been noted in an MRI. He also found Claimant is at maximum medical improvement for his knee condition and found Claimant suffered no permanent impairment for the knee injury.

19. Dr. Jenks' DIME report does not outline Claimant's medical history, other than to note "negative otherwise".

20. Dr. Jenks' DIME report does not include any oral history from Claimant himself detailing his lower back complaints.

21. Dr. Jenks' DIME report makes no independent findings as to why *he* believes the medical history supports a finding that Claimant's low back issues are causally related to his August 21, 2015 work injury.

22. Dr. Jenks' license to practice medicine in Colorado was summarily suspended on January 12, 2017. (R. Ex. B) The Board of Medical Examiners stated, "The Panel has objective and reasonable grounds to believe and finds that Respondent (Dr. Jenks) deliberately and willfully violated the Medical Practice Act and/or the public health, safety, or welfare imperatively requires emergency action." (R. Ex. B) It was further noted that "Respondent [Dr. Jenks] has a physical or mental illness that renders Respondent unsafe to practice in the absence of treatment and monitoring, and that Respondent is noncompliant with treatment recommendations and monitoring" (Id). The nature and timing of this suspension is confirmed with Claimant's own Exhibit 5.

23. No further information on this suspension, or the particular reasons there for, exists in the record herein. One might reasonably infer (and the ALJ does so infer) that whatever issues Dr. Jenks was experiencing did not occur overnight. The possibility cannot be entirely discounted that Dr. Jenks personal issues might have overlapped with the time period encompassing his DIME examination.

24. After Dr. Jenks issued his report finding Claimant was not at maximum medical improvement, Respondents filed an Application for Hearing to overcome his opinions.

25. At the hearing on April 27, 2017, Claimant testified on his own behalf through an interpreter. Claimant testified that when he first went to Southern Colorado Clinic, he went with a secretary from the employer. Claimant testified he did complete a pain diagram on the date of injury, but the secretary told him to not indicate his back was hurting. Claimant also testified he told Mr. Schwartz, the physician assistant who examined him, that his low back hurt and asked to circle the low back on his pain diagram. Claimant testified Mr. Schwartz also told him he could not circle the low back on his pain diagram.

26. Claimant testified that at numerous subsequent visits to Southern Colorado Clinic, he continued to complain of low back pain, but was rebuffed by medical professionals in his efforts to be allowed to document it via pain diagrams, or be examined for it.

27. Claimant also testified that he complained of low back pain to Dr. Davis. Dr. Davis' report dated 10-13-15 indicates that Claimant "denies back pain" (R. Ex E, p. 88)

28. At the request of Claimant, Dr. Castrejon performed an IME, and issued a report finding Claimant’s low back condition to be related to his August 2015 work injury. This IME was performed prior to the DIME of Dr. Jenks. (C. Ex. 4)

29. Dr. Castrejon’s report does not include an analysis of the first two months of treatment for this work injury. Dr. Castrejon indicated he did not review any medical records prior to October 2015. (*Deposition Transcript of Dr. Miguel Castrejon*.) The reasons for this are unclear from the record.

30. Dr. Castrejon’s report indicated he believes Claimant’s mechanism of injury is consistent with the pathology indicated on the May 2016 MRI. Dr. Castrejon also testified he has not reviewed any MRIs prior to August 2015, nor is he aware of Claimant's medical history prior to the injury.

31. Respondents retained Dr. Eric Ridings, an expert in physical medicine and rehabilitation, to perform a Respondent's Independent Medical Examination (RIME).

32. After examining Claimant and the relevant medical records, Dr. Ridings issued a report, which found:

> "the Division examiner was clearly in error in determining that the patient was not at MMI because of a need to treat his lumbar spine complaints….the patient did not report any injury to his low back for the first two months of his claim…..in his very brief Division IME report, Dr. Jenks provided no reasoning to overrule the opinion of the treating physician on this point. The entirety of [Dr. Jenks'] lumbosacral examination beyond noting a normal neurologic exam was noting a normal neurologic exam was that the patient told him that he had pain on palpation and with range of motion. Given that I find Mr. Hernandez to have minimal credibility, this is entirely insufficient to establish an intellectual basis to include the lumbar spine under this claim. No objective abnormalities of the lumbar spine or lower extremities were documented." (R. Ex. J, p. 0128)

33. Dr. Ridings' report noted Claimant demonstrated five out of five Waddell's signs on examination. At hearing, Dr. Ridings explained "if one had three out of five Waddell's signs, as they've come to be called, or, obviously, more than three, there is a – anticipated that there is some non-physiologic overlay or contribution to the severity of the patient's low back pain complaints."

34. On examination, Dr. Ridings noted Claimant's radiculopathy complaints and his difficulty determining the source of the complaints based on his analysis of Claimant's records. At hearing, Dr. Ridings elaborated on his confusion regarding Claimant's complaints. "We know that additionally because of the lumbar MRI scan, which while they do show a disc herniation at L5-S1 and disc protrusion at L4-5, neither of those were in contact with the nerve root. Also, the patient had a lumbar epidural steroid injection, which didn't help him. So if there were some swelling that maybe might be less well visualized on the MRI that nevertheless was compressing nerve roots, you would expect that to have been diminished temporarily by the epidural, and that didn't happen. There was no response."

35. Dr. Ridings testified at hearing about how important a review of contemporaneous medical records is to formulating a causation opinion. "In my opinion it is quite important. The early medical records are created at a time close to – typically, close to the injury in question, when the – the patient would have the best recollection and be able to give the most thorough history, I would think, or the most accurate history of what had happened to him or her." An analysis of the medical records early in Claimant's treatment was not conducted by Dr. Castrejon while formulating his opinions regarding the low back.

36. Dr. Riding's report specifically addressed Claimant's statement that he complained of low back pain to his treating physicians since August 2015, yet

failed to document his complaints and refused to allow him to indicate low back pain on his pain diagrams. “Well, I mean, I – I certainly have never done that. I don’t know why an occupational medicine clinic would do that anyways, because it's not in their self-interest. The more body parts you have to treat – and you’re getting fee for service in workers’ compensation – the more money you would stand to make in future visits and procedures…..One would hope that anyone who entered the medical field as a physician would have, as his or her primary goal, the treatment of patients who present to you in distress in one way or another.” Dr. Ridings also stated, “A provider wouldn’t say we can’t write down that this part of your body was injured when you said it was injured, you know, three days ago. I – I don’t – that doesn’t make any sense whatsoever.”

37. With regard to Claimant’s allegation that treating providers forced him to throw out a pain diagram indicating he suffered from low back pain, Dr. Ridings stated he had never heard of an instance where this occurred and stated, “No, and that would not be legal. That would be destruction of a medical record, and you’re not allowed to do that.”

38. Claimant’s assertion that the treating providers at Southern Colorado Clinic, Dr. Davis, and his physical therapist all ignored his low back pain complaints for the two months is otherwise unsubstantiated in the medical records and entirely contrary to common medical practices. The ALJ does not find Claimant's assertion of these events to be credible.

39. On cross examination, Claimant ultimately testified that he made low back complaints to each of his four treating providers at each visit during the two months following injury. These alleged complaints for over 20 visits are documented nowhere in the contemporaneous medical records.

40. The contemporaneous medical records admitted into evidence reflect a more likely series of events, to wit: Claimant did not complain of low back pain, nor did he have low back pain prior to November 2015. Dr. Ridings agreed at hearing and stated, “For multiple reasons, as outlined in my discussion section and in bracketed comments throughout the report, I thought it was more likely that the medical records were accurate. And we’ve gone over some of those discrepancies – and there are a few more that we did not go over – that caused me to be of the opinion that [Claimant] was not a credible medical historian.”

41. This ALJ finds the opinions of Claimant’s treating provider, the medical records in evidence, and Dr. Ridings’ opinions to be more persuasive-by clear and convincing evidence-than the opinions of Drs. Castrejon and Jenks on the issue of relatedness of any lower back injuries to Claimant's work injury.

42. This ALJ finds Dr. Jenks’ report and findings regarding MMI and the relatedness of Claimant’s low back condition highly probable to be in error. Claimant is at maximum medical improvement for the only compensable body part in this claim, to wit: the right knee condition, with no permanent impairment.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1).* Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The ALJ, as the fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990) Moreover, the ALJ may accept all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion).

C. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Overcoming the DIME Opinion of Dr. Jenks Regarding Relatedness and MMI

D. A DIME physician's findings of causation, MMI and impairment are binding on the parties unless overcome by "clear and convincing evidence." Section 8-42-107(8)(b)(III), C.R.S.; *Qual-Med v. Industrial Claim Appears Office*, 961 P.2d 590 (Colo. App. 1998); *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinion concerning MMI is incorrect. *Metro Moving and*

Storage Co. v. Gussert, 914 P.2d 411 (Colo. App. 1995) In other words, to overcome a DIME physician's opinion regarding MMI, permanency or the cause of a particular component of a claimant's medical condition, the party challenging the DIME must demonstrate that the physicians determinations in these regards are highly probably incorrect and this evidence must be "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo. App. 2002). *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appears Office, supra.*

E. "Maximum medical improvement" is defined in Section 8-40-201(11.5), C.R.S. as:

> A point in time when any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition. The requirement for future medical maintenance which will not significantly improve the condition or the possibility of improvement or deterioration resulting from the passage of time shall not affect a finding of maximum medical improvement. The possibility of improvement or deterioration resulting from the passage of time alone shall not affect a finding of maximum medical improvement.

F. In resolving the question of whether the DIME physician's opinions have been overcome, the ALJ may consider a variety of factors including whether the DIME physician properly applied the AMA Guides and other rating protocols. *See Metro Moving and Storage Co. v Gussert,* 914 P.2d 411 (Colo. App. 1995); *Wackenhut Corp. v. Indus. Claim Appeals Office*, 17 P.3d 2002 (Colo. App. 2000); *Aldabbas v. Ultramar Diamond Shamrock*, W.C. No. 4-574-397 (ICAO August 18, 2004). The ALJ should also consider all of the DIME physician's written and oral testimony, if provided. *Lambert and Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998).

G. There are several serious problems with the underlying manner in which Dr. Jenks formed his opinions on the relation of Claimant's back complaints to the admitted injury:

> 1. His review of Claimant's medical history was cursory, at best. Instead of reading the MRI report from 5-7-16, Dr. Jenks simply relies upon the IME conclusions of Dr. Castrejon in interpreting the results. As was noted by Dr. Ridings (but not by Dr. Castrejon or Jenks), "no nerve root sheath displacement was noted" by the radiologist. Thus there was no objective evidence for radiculopathy at the time of the MRI report, nor is there evidence of same at this time.
>
> 2. Without further analysis, Dr. Jenks simply states that Claimant's lumbar complaints beginning in November, 2015, were "attributed to him doing more bending at the waist while working due to his ongoing right knee pain." The

report is entirely unclear who made this attribution, but it is not due to Dr. Jenks independent analysis. *There is no analysis.* As again noted by Dr. Ridings, the right knee sprain originally suffered by Claimant had largely healed by the time Claimant began to complain of back issues. Dr. Jenks did not address the findings of the original ATP provider (no reference to the ATP exists at all in the DIME report, except for referencing his MMI date), who also declined to find Claimant's back complaints to be related to the original work injury.

3. Dr. Jenks appears to have relied upon Claimant's oral history of the injury and symptoms. Once again, as noted by Dr. Ridings, Claimant is not a reliable historian. Claimant failed to report back pain for almost three months after the injury, but now states that he did so, only to be ignored or rebuffed by a series of medical providers. Dr. Jenks' DIME does not indicate that a detailed oral history of Claimant's symptoms was taken at all.

4. Of greatest significance is that Claimant's own theory of relatedness of his work injury to his back problem is wholly inconsistent with the theory being posited by Dr. Jenks' DIME. Dr. Jenks (in cursory fashion), attributes the disc extrusion to Claimant bending at the waist while favoring his injured right knee. This, of necessity, would have developed over time, which might otherwise explain the delay in Claimant experiencing symptoms in this back. However, *Claimant's own sworn testimony undercuts this.* Claimant insists that he experienced back pain at the instant he fell, and at every medical visit in the weeks and months following. If Claimant is now to be believed, then Dr. Jenks is plainly wrong on causation and relatedness.

H. Lastly, one cannot view the unfortunate circumstances surrounding Dr. Jenks in a total vacuum. While insufficient on a stand-alone basis to overcome a DIME opinion, these circumstances (undetailed as they are) do constitute a possible explanation for the deficiencies in Dr. Jenks' DIME report.

I. The ALJ concludes that the DIME by Dr. Jenks has now been overcome by clear and convincing evidence on the issue of the relatedness of Claimant's back complaints to the original admitted claim for his right knee. While Claimant might well benefit from further treatment for his lumbar spine, he was properly placed at MMI for his industrial accident by Dr. Lakin.

J. The ALJ finds that the opinions of his ATP, and those of Dr. Ridings, are more persuasive than those of Dr. Jenks, Dr. Castrejon, and the Claimant himself. The ALJ concludes that Claimant's back complaints are not related to his industrial injury, and further finds that he is at MMI for his right knee, which comprises the compensable injury in this case.

ORDER

It is therefore ordered that:

1. By clear and convincing evidence, it is highly probable that the DIME opinion of Dr. Jenks is incorrect. Respondent has met its burden.

2. Claimant was properly placed at maximum medical improvement on February 26, 2016 by his authorized treatment provider for the injury to his right knee.

3. Claimant's claim for Workers Compensation benefits for his lower back is denied and dismissed.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 8, 2017

ISSUES

1. Whether Respondents have established by a preponderance of the evidence that medical maintenance benefits should be terminated and that further medical maintenance treatment is no longer reasonable, necessary, or related to Claimant's October 1, 1999 work injury.

PRELIMINARY MATTERS

The hearing commenced at 1:30 p.m. and self-represented Claimant was not present. The ALJ noted that Claimant would be given 15 minutes and that if he had not arrived by 1:45, the hearing would go back on record. At 1:45 the record was continued. Claimant was still not present. The ALJ found proper notice of hearing and that in addition to the notice of hearing, several other orders in the case had been sent to Claimant, Claimant had appeared at a recent pre-hearing conference, and that Claimant had proper notice of the date and time of the proceeding.

After notice was found to be proper, Respondents counsel indicated that he had a phone number for Claimant and offered to call Claimant to try to figure out where Claimant was and if he was on his way. The ALJ agreed and went off record. At 1:53 the ALJ went back on record and Respondent counsel indicated a voice message had been left for self-represented Claimant and that he had not received a return call during the short recess. The proceeding began without Claimant present as notice was proper.

During Respondents opening statement, self-represented Claimant called Respondents counsel. Claimant was placed on speaker phone in the courtroom. Claimant did not provide a persuasive explanation as to why he was not present. The ALJ again indicated the notice and the history of the claim including Claimant's presence at a recent pre-hearing conference. The ALJ allowed Claimant to appear by phone for the remainder of the proceeding.

The ALJ also inquired as to whether Claimant wished to retain counsel. Claimant indicated a past attempt, but that he would rather just continue with the hearing. After confirming Claimant's intent to be self-represented, the proceeding continued. Respondent counsel started over with his opening statement. Self-represented Claimant participated in the remainder of the proceeding by phone.

FINDINGS OF FACT

1. Claimant sustained an admitted work related injury on October 1, 1999 while employed by Employer as a truck driver.

2. On that date, Claimant missed a step while in the front portion of a semi-trailer and fell backward injuring his neck, mid back, and lower back.

3. Claimant underwent two cervical surgeries prior to being placed at maximum medical improvement, a cervical laminectomy from C3-C6 on March 3, 2000 and also an anterior cervical discectomy of C3-4 and C4-5 with anterior plate fixation and allograft fusion on July 9, 2001.

4. Claimant had a C5-6 fusion that pre-existed the October 1, 1999 work injury. His prior fusion was noted to be stable during the course of treatment for the October 1, 1999 work injury.

5. On September 17, 2002 Claimant was placed at maximum medical improvement. In June of 2003, Claimant had removal of spinal hardware from his left neck. Claimant has not had any further cervical surgeries since June of 2003.

6. On April 22, 2003 Respondents filed a final admission of liability. Respondents admitted for authorized reasonable and necessary medical care related to the injury. *See* Exhibit A.

7. On August 6, 2003 Claimant reached a settlement with Respondents in regard to this injury. The settlement provided that all claims for compensation and benefits under the Act, except for medical benefits, were resolved by a lump sum payment. The settlement provided that Claimant's entitlement to authorized, reasonable, and necessary medical care causally related to the industrial injury was to continue. *See* Exhibit B.

8. On November 28, 2016 Claimant underwent an Independent Medical Evaluation performed by Carlos Cebrian, M.D. Claimant reported that after his injury and that through the years he was managed primarily with medications including opioids and muscle relaxers. Claimant reported an incident on August 8, 2011 where he was working (not for Employer) and unloading a truck when a block of ice hit him on the head, "knocked him silly," and made his neck hurt. Claimant also reported in November of 2015 that he had an episode where he could not keep his legs still and they were jerking and that he received an injection. Claimant reported that he had been told he had bone spurs in his lumbar spine that needed to be removed and that he had bad arthritis throughout his back. *See* Exhibit C.

9. Claimant reported that he had been on heavy pain medications but that since he started seeing Dr. Simon in Kansas City he had been taking primarily tramadol and muscle relaxers and that if he does not need them, he will not take them. He reported that he sees Dr. Simon every three months for pain management. Claimant reported that his primary problems were neck pain and low back pain. Claimant's medications were listed as: voltaren gel four to five times per day on his shoulders and upper back; baclofen four times per day; soma three times per day; tizanidine three

times per day; tramadol 50 mg two to three times per day; tramadol 200 mg as needed; and pravastatin. *See* Exhibit C.

10. Dr. Cebrian reviewed medical records and performed a physical examination. Dr. Cebrian opined that Claimant was properly placed maximum medical improvement on September 17, 2002. Dr. Cebrian opined that the claim related conditions included a cervical strain with aggravation of cervical disc degeneration and a transverse process fracture at L1. *See* Exhibit C.

11. Dr. Cebrian opined that Claimant had a longstanding history of lumbar spine pain due to degenerative disc disease and that Claimant's claim-related lumbar spine injury was a transverse process fracture at L1 that had long since stabilized. Dr. Cebrian noted that Claimant's increased pain complaints in the lumbar spine started in 2006 and opined that the ongoing lumbar pain complaints were not related to the transverse process fracture at L1 that Claimant sustained in the work injury. Dr. Cebrian noted that a lower extremity EMG performed in April of 2014 revealed chronic L5-S1 radiculopathy bilaterally with no neuropathy and that a lumbar MRI performed in November of 2015 revealed a mild right sided neural foraminal narrowing at L5-S1 due to moderate facet joint arthrosis and minimal posterior end plate spurring and a thickening and/or clumping of the transiting nerve roots at the level of L5 through the sacrum. Dr. Cebrian opined that in the 17 years since the work injury, Claimant had aged from 49 to 66 and that aging and the passage of time had an effect on lumbar disc pathology. Dr. Cebrian opined that any ongoing lumbar spine complaints were not proximately related to the L1 transverse process fracture Claimant suffered in October of 1999. *See* Exhibit C.

12. Dr. Cebrian also opined that Claimant's ongoing cervical spine complaints were not related to the October 1, 1999 claim. Dr. Cebrian noted that Claimant had a pre-existing C5-6 fusion and a pre-existing history of cervical spine disease. Dr. Cebrian opined that medical evaluations demonstrated improvement in Claimant's cervical spine condition with the last documented cervical MRI in August of 2011 no longer showing any spinal cord signal abnormality including contusions or myelomalacia when early MRIs had shown some spinal cord contusion or myelomalacia. Dr. Cebrian also noted that the passage of 17 years from the original injury and the aging from 49 to 66 had an effect on cervical disc pathology due to the natural history of cervical discs and not due to the work injury. In addition to the pre-existing cervical history and fusion, Dr. Cebrian also pointed out two intervening events including an August 8, 2011 event where Claimant was hit on the head with a block of ice and required treatment and a November 2015 event where Claimant was seen in the emergency room with an acute onset of neck and back pain with difficulty walking. Dr. Cebrian opined that neither intervening event was causally related to the October 1, 1999 work injury. *See* Exhibit C.

13. Dr. Cebrian noted that Claimant had been able to own a trucking company and occasionally drive an 18-wheeler for several years which exposed him to different and varied physical tasks. He opined that Claimant's ongoing cervical and lumbar spine

complaints and need for treatment were no longer causally related to the October 1, 1999 claim and that no additional treatment should be provided under the claim. *See* Exhibit C.

14. Dr. Cebrian opined that even if it were determined that the ongoing complaints were causally related to the October 1, 1999 injury, the continuation of medications was not medically reasonable or necessary. *See* Exhibit C.

15. Dr. Cebrian opined that voltaren gel was FDA approved for acute pain due to minor strains, pains, and contusions and for relief from pain due to osteoarthritis of the joints amenable to topical treatment such as the hands or knees. Dr. Cebrian opined that long term use was not indicated for cervical or lumbar degenerative disc disease and that the gel should be discontinued under the October 1, 1999 claim. *See* Exhibit C.

16. Dr. Cebrian noted that Claimant was taking three different muscle relaxers including Baclofen, Soma, and Tizanidine. Dr. Cebrian noted that the medical treatment guidelines in Colorado do not recommend chronic use of any muscle relaxer. Dr. Cebrian opined that muscle relaxers were most useful for acute musculoskeletal injuries or exacerbation of injuries. Dr. Cebrian opined that muscle relaxers should be reserved for acute use or for exacerbation of conditions and that the goal in treatment should not be to use them on a chronic basis and that regular daily stretching and the use of a theracane would help decrease muscle spasms. Dr. Cebrian recommended discontinuing the muscle relaxers under the claim under the supervision of a physician over a period of 30 days. *See* Exhibit C.

17. Dr. Cebrian opined that Tramadol had a side effect of causing impaired alertness and should be used with caution in combination with other sedating medications and opined that Claimant could choose to continue with Tramadol outside of the workers' compensation system. *See* Exhibit C.

18. Dr. Cebrian testified at hearing consistent with his report. Dr. Cebrian opined that the injury Claimant sustained in October of 1999 was an L1 fracture and a cervical spine strain and aggravation of Claimant's prior cervical fusion. Dr. Cebrian opined that the need for any further medical treatment was not related to the October 1999 work injury and that the medications Claimant was still taking were not related to the work injury and also were not reasonable or necessary. Dr. Cebrian opined that Claimant's L1 fracture had healed and that the cervical spine was aggravated but that Claimant improved and that the area of problems now were different areas and levels than what Claimant had at the time of the injury in 1999.

19. Claimant testified at hearing that the initial problems of tight muscles and a stiff neck had not changed since his work injury and that he understands that the problems will never change. Claimant reported that his symptoms come and go and that he uses creams and medications when needed along with heating pads and hot showers. Claimant indicated that he did not care if workers' compensation paid for his

medications as long as social security disability would cover them. Claimant did not identify how the continued medications are related to his October 1, 1999 work injury. Claimant did not identify or explain how the October 1, 1999 work injury changed the symptoms in his cervical spine or how treatment for the injury changed any of his symptoms.

20. Respondents credibly pointed to objective evidence showing healing of and improvement in the work related injuries and Dr. Cebrian is found persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo.App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo.App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo.App. 2000).

Maintenance Medical Benefits

The respondents are liable to provide such medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury." *See* § 8-42-101(1)(a), C.R.S. The need for medical treatment may extend beyond the point of maximum medical improvement where claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of his condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609 (Colo. App. 1995).

It is well settled that where the respondents file a final admission admitting for maintenance medical benefits pursuant to *Grover v. Industrial Commission, supra,* the respondents are not precluded from later contesting their liability for a particular treatment. *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). If the respondents contest liability for a particular medical benefit, Claimant must prove that the contested treatment is reasonably necessary to treat the industrial injury and is related to that injury. *Ford v. Regional Transportation District,* W.C. No. 4-309-217 (ICAO February 12, 2009).

Where, however, the respondents attempt to modify an issue that previously has been determined by an admission, they bear the burden of proof for such a modification. *See* § 8-43-201(1), C.R.S.; *Salisbury v. Prowers County School District*, W.C. No. 4-702-144 (ICAO June 5, 2013). Where the effect of the respondents' argument is to terminate previously admitted maintenance medical treatment, respondents bear the burden of proof to prove that such treatment is not reasonable, necessary, or related. *Id*; *Dunn v. St. Mary Corwin Hospital*, W.C. No. 4-754-838-01, (ICAO October 1, 2013).

Respondents have challenged the ongoing maintenance treatment that Claimant is receiving under the claim as not being reasonable, necessary, and causally related to the October 1, 1999 work injury. As found above, the only ongoing maintenance treatments are continued medications including muscle relaxers, anti-inflammatory medications, and pain medications. Respondents are seeking to terminate the previously admitted maintenance medical benefits admitted by both a final admission of liability and in a settlement agreement. Respondents thus bear the burden of proof to prove that further treatment is not reasonable, necessary, or related to Claimant's October 1, 1999 injury.

Respondents have met their burden by a preponderance of the evidence to establish, more likely than not, that continued maintenance treatment is not reasonable, necessary, or causally related to Claimant's October 1, 1999 work injury. The opinions of Dr. Cebrian are found credible and persuasive. As found above, in the work injury, Claimant sustained an L1 fracture which has long since healed. Dr. Cebrian is found credible and persuasive that the L1 fracture requires no further maintenance treatment.

Further, Claimant's problems in the lower back that exist now are in areas unrelated to the L1 fracture and no further maintenance treatment is needed for the L1 fracture. Additionally, Dr. Cebrian is found credible and persuasive that the ongoing medications and treatment to the cervical spine is not reasonable, necessary, or related to the October 1, 1999 work injury. As Dr. Cebrian noted, prior to the work injury Claimant had significant pre-existing cervical spine problems including degeneration and a cervical spine fusion at C5-6. MRI evaluations showed that after the work related injury there was some spinal cord contusion or myelomalacia but more recent MRIs and one completed in August of 2011 no longer show any spinal cord signal abnormality including contusion or myelomalacia. Additionally, Claimant over the past 17 years has aged from 49 to 66 where a natural history of cervical disc pathology in someone with a pre-existing fusion and pre-existing degenerative disc disease would be expected to naturally progress. Claimant also sustained two intervening events including an August 8, 2011 event where he was hit on the head with a block of ice and required treatment. Dr. Cebrian's conclusions after a review of the total medical evidence are persuasive that further treatment is not causally related to the October 1, 1999 work injury. Respondents have met their burden.

Dr. Cebrian is further found credible and persuasive that continued short term maintenance is necessary to taper Claimant off the muscle relaxers, under the supervision of a physician for a period of 30 days. Claimant's dependence on muscle relaxers began as a result of the work related injury and he has been prescribed muscle relaxers under the claim for many years. Although Respondents have met their burden and are no longer responsible for medical maintenance treatment, they are ordered to provide short term maintenance treatment to taper Claimant off muscle relaxers.

ORDER

It is therefore ordered that:

1. Respondents have met their burden to establish that further medical maintenance treatment is not reasonable, necessary, or related to Claimant's October 1, 1999 work injury.

2. Respondents shall be liable for the cost of tapering Claimant off muscle relaxers under the supervision of a physician for a period of 30 days as recommended by Dr. Cebrian.

3. If Claimant chooses to continue to take muscle relaxers due to other non-claim related conditions, Respondents shall not be liable for the cost of tapering Claimant off muscle relaxers and shall be allowed to terminate all maintenance medical treatment.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 8, 2017

/s/ Michelle E. Jones

_____

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUES

The issues determined by this decision involve Claimant's entitlement to additional maintenance medical treatment benefits. The specific questions answered are:

I. Whether Claimant has proven by the preponderance of the evidence that her ongoing need for lumbar ESI injections, SI joint injections, and/or Flector patches as recommended/prescribed by Dr. Timothy Sandell is related to Claimant's admitted industrial injury and if so;

II. Whether such treatment modalities are reasonable and necessary.

PROCEDURAL MATTERS

At the outset of the hearing, the parties agreed that the Colorado workers' compensation medical fee schedule applied to any medical benefit awarded. The ALJ approved the stipulation.

FINDINGS OF FACT

Based upon the evidence presented, including the post hearing evidentiary deposition testimony of Dr. Sandell and Dr. Larson, the ALJ enters the following findings of fact:

1. Claimant was working for Employer on November 22, 2014 when she slipped and fell while pulling a rack of rolls from the freezer landing on her back and buttocks. Claimant had another slip and fall within the course and scope of her employment with Employer on January 30, 2016. This claim was consolidated with the November 22, 2014 claim for all purposes by Order of ALJ Donald E. Walsh dated June 14, 2016.

2. Claimant was first seen by Physician Assistant (PA), Jocelyn Cavender on November 22, 2014 at which time Claimant was experiencing back pain bilaterally, in the sacroiliac region right more than left with pain radiating to the right buttock and right thigh. Claimant was also experiencing paresthesia. Physical examination revealed, in part, tenderness in the right paraspinal and right sciatic notch. X-rays taken on this day were unremarkable. Ms. Gallegos was prescribed medication and physical therapy.

3. Claimant was next seen by PA Cavender on November 26, 2014 with continued complaints of back and tailbone pain with tingling and numbness down her right

leg. PA Cavender diagnosed Claimant with coccyx contusion, acute back pain, radiculopathy, and sacroiliac strain. PA Cavender prescribed medication and a donut cushion.

4. On December 19, 2014, Claimant was seen by Dr. Walter Larimore with continued complaints of low back pain with numbness and burning in her right leg. Dr. Larimore performed a physical examination which revealed tenderness in the lumbar spine, bilateral paraspinals, and right and left sciatic notch. Palpation revealed bilateral muscle spasm. Dr. Larimore's diagnoses were acute back pain, coccyx contusion, radiculopathy, sacroiliac strain, spasm of lumbar paraspinous muscle, and lumbar strain. Dr. Larimore continued with the medication previously prescribed and ordered physical therapy.

5. Claimant was re-evaluated by Dr. Daniel Peterson on January 16, 2015. On this date Claimant was still having low back pain with continued numbness/tingling down the right leg to the foot. Dr. Peterson performed a physical examination and noted tenderness in the SI joint right greater than left, positive pain in right SI joint with pressure on ASIS, as well as pain with SI joint compression. Dr. Peterson diagnosed lumbar strain, sacroiliac strain, and radiculopathy. Dr. Peterson referred Claimant to Dr. Blau and Dr. Jenks for consideration of a SI injection or an epidural steroid injection (ESI).

6. Dr. Eric Ridings evaluated Claimant at Respondents request on April 27, 2015. During his independent medical examination (IME) Claimant reported that her worst pain was over the sacrum bilaterally with radiation to the right buttock and down the posterior right lower extremity with associated tingling in the right leg. Claimant was also experiencing pain at the right lumbosacral junction with sitting. Physical examination revealed significant pain over the sacrum, right worse than left. Dr. Ridings also noted tenderness throughout the lumbar spine and in the bilateral paraspinals with the most severe pain over the sacrum and right buttock. Dr. Ridings opined that the mechanics of the injury, i.e. falling backwards and landing on her sacral/buttock region and low back could cause a sacral or coccygeal fracture, SI joint dysfunction, disc herniation and/or lumbosacral strain. Dr. Ridings opined that Claimant sustained a lumbosacral strain and likely a L4-5 disc herniation to the right with impingement upon the L5 nerve root. Dr. Ridings recommended that Claimant have an evaluation by a physiatrist. He also felt that a lumbar ESI may be indicated.

7. On June 11, 2015, Claimant was seen by physiatrist Dr. Timothy Sandell. During this evaluation, Claimant reported to ongoing pain in the right buttock and sacral region with radiation anteriorly into the groin and posteriorly down the leg to the mid calf. Claimant also told Dr. Sandell that she was having some numbness in the buttock and down the back of her leg. Dr. Sandell noted that a lumbar MRI scan of May 29, 2015, showed mild to moderate bilateral neural foraminal narrowing at L4-5 secondary to a circumferential disc bulge and facet joint arthritis. Physical examination revealed focal tenderness in the right sciatic notch

as well as in the right SI joint with more mild diffuse tenderness in the gluteal muscles. Dr. Sandell noted decreased range of motion with active flexion and extension and a positive right straight leg raise test. Dr. Sandell diagnosed low back pain with right lower extremity symptoms. He also suspected a right L5 radiculopathy and felt there was a possible right sacroilitis. Dr. Sandell recommended an ESI and, depending upon Claimant's response to an SI joint injection, consideration of an EMG.

8. On June 23, 2015, Claimant presented to Dr. Michael Rauzzino for a neurosurgical evaluation. Dr. Rauzzino's physical examination revealed "exquisite tenderness over the right SI joint." In addition, it was noted that Claimant had pain with compression and distraction of her pelvis. Dr. Rauzzino's assessment was status post work related accident on November 22, 2014, after a slip and fall with a right SI joint strain and lumbar spondylosis at L4-L5. Dr. Rauzzino opined that Claimant had a right SI joint strain and felt this was her pain generator. Dr. Rauzzino referred Claimant for a right SI joint injection as well as a formal course of physical therapy to start after the injection.

9. On August 10, 2015, Claimant had a L4-5 ESI. Claimant returned to Dr. Sandell on September 11, 2015, and told him that she was doing better. Although she was having much less leg pain, she was still having episodes of leg weakness with a pressure type pain and more focal pain in the low back and coccyx area. Dr. Sandell specifically noted that in regard to her radicular pain, Claimant was approximately 80% better. Dr. Sandell's impression at that time was right L-5 radiculopathy improved and possible sacroilitis, right greater than left. Dr. Sandell noted that while Claimant did well with the ESI he suspected Claimant may be having more musculoskeletal pain and SI joint involvement. He therefore recommended bilateral SI joint injections.

10. On November 23, 2015, Claimant returned to Dr. Sandell having undergone an ESI on November 9, 2015. On this date, Claimant reported a reduction in leg pain but continued right low back/SI joint discomfort and occasional groin pain. Dr. Sandell specifically noted that Claimant's radicular pain was 85% better. Physical examination was positive for ASSI/SI mobility techniques of inferior rotation and compression. Claimant also had a positive Gaenslen's sign. Dr. Sandell's impression was low back pain with right L5 radicular symptoms that have responded well to the recent ESI but highly suggestive of right sacroilitis given today's evaluation. Dr. Sandell recommended a right SI joint injection.

11. On December 14, 2015, Claimant underwent a right SI joint injection. In a follow up visit on December 28, 2015, Claimant told Dr. Sandell's PA-C Jamie Case that she noticed a reduction in her pain although she is not completely pain free. Physical examination revealed continued tenderness with palpation of the right SI joint but normal tone in the lumbar paraspinals and gluteal muscles. The impression reached was low back pain with history of right L-3 radicular symptoms which responded well to ESIs done in November 2015, and right sacroilitis to a mild degree also responding to the December 2015 SI injection.

During this encounter Claimant also advised PA-C Case that she did not want to continue with oral medications. As a result, Claimant given an option of using Flector patches.

12. On February 8, 2016, Claimant experienced a flare up of her back hip/pelvis pain after a fall she suffered at work on January 30, 2016. She presented to PA-C Case where she gave a history of increased pain after having a slip and fall at work. Physical examination revealed tenderness with even light palpation of the right SI joint with referred pain to the right groin. The treatment plan for Claimant at that visit was to continue with Flector patches and undergo a right SI joint injection and a right L4-5 ESI.

13. In a letter to Insurer dated February 19, 2016, Dr. Sandell wrote that Claimant had suffered a flare up in hip and back pain since her recent fall and that the hip pain does wrap around the right hip consistent with the L3 dermatome, i.e. she has had a flare in the L3 radicular pain. In addition, this letter makes clear that Claimant is actively engaged in a physical therapy program and had had 80%-90% reduction in her pain from prior ESIs.

14. Claimant underwent a right SI joint injection on February 29, 2016, which provided 80% reduction of her pain according to Dr. Sandell's office note of March 14, 2016. This same note revealed that the Flector patches were providing benefit to Claimant. Consequently, her prescription was renewed.

15. Claimant was seen by PA-C Case on October 25, 2016. On this date of visit, Claimant reported a recurrence of pain down the right lower extremity, mostly in the L3-4 distribution. Physical examination was positive for a "jumping/ducking" response with palpation of the SI joints, right greater than left and tenderness with palpation in the lumbar paraspinals and gluteal muscles. It was also noted that Claimant lumbosacral range of motion with flexion and extension with flexion was guarded and caused increased low back pain across the waist. It was recommended that Claimant undergo a repeat lumbar ESI.

16. Claimant underwent a Division Independent Medical Examination (DIME) with Dr. Jeffrey Jenks on October 27, 2016. Dr. Jenks' report indicates that Claimant exhibited "monumental" amounts of pain behavior during the physical examination. Dr. Jenks' impression was severe low back and right leg pain with very marked symptom magnification and multiple Waddell's signs. He noted that her MRI was essentially for her age and that her lumbrosacral range of motion measurements were completely invalid. Consequently, Dr. Jenks opined that Claimant had no permanent impairment or need for permanent work restrictions. Dr. Jenks' report is silent as to maintenance medical care.

17. Claimant last saw Dr. Sandell on December 8, 2016. Following this encounter, Dr. Sandell noted that Claimant had a history of good response to three previous epidural injections with the last occurring December 2015. He also noted that Claimant had had a more recent SI joint injection that had provided some benefit.

He continued to opine that Claimant would benefit from ESI on a maintenance basis given Claimant's response to prior ESIs.

18. Claimant was evaluated by Dr. Wallace Larson on April 12, 2016, and March 8, 2017, at the request of Respondents.

19. Dr. Larson's April 12, 2016, report reflects his understanding that Claimant had been getting "injections in the sacroiliac joint" on the right side which took away apparently 80% of the pain. Claimant told Dr. Larson that she was having a variety of problems including back pain and coccygeal area pain radiating to the right buttock. Physical examination revealed in part, tenderness to the entire thoracic and lumbar spine as well as in the right area of the buttocks. Claimant was also reporting pain with attempted lumbar spine range of motion. The range of motion testing was discontinued due to Claimant becoming tearful and reporting severe pain. Dr. Larson's report does not outline any specific testing for SI joint dysfunction. As part of his evaluation, Dr. Larson also reviewed the medical records from Concentra, Dr. Ridings, and Dr. Sandell. Ultimately Dr. Larson opined that Claimant had marked pain behavior, needed no further care, and was at MMI without impairment.

20. Dr. Larson's report of March 8, 2017, indicates that physical examination revealed diffuse tenderness of the right cervical, thoracic and lumbar spine. Attempts to obtain valid range of motion measurements failed and it was noted that Claimant had jerking motion when she bent over. Straight leg raise on the right was limited to 20 degrees with reports of right posterior thigh pain and limited to 45 degrees on the left side with hamstring tightness. Following additional records review, Dr. Larson reiterated his opinion that Claimant did not have ratable impairment as a consequence of her industrial injury. In concluding as much, Dr. Larson noted: "The patient has not had any identified specific injuries. She has had pain out of proportion to any physical findings and pain not explained by physical examination. Additionally, her stated disability is inconsistent with the activity seen on surveillance video." Regarding Claimant's need for maintenance medical treatment, Dr. Larson noted: The patient has multiple nonphysiologic signs and symptoms. Interventional for (sic) other treatments are not appropriate ways of addressing these nonphysiologic symptoms."

21. Claimant testified that the SI joint injections and the ESIs provided 80% to 85% relief and allowed her to function both at work and in her daily activities. She also testified that the Flector patches prescribed by Dr. Sandell help ameliorate her pain symptoms. Claimant testified that she continued to work at Employer up until approximately October, 2016, at which time she was placed on a leave of absence. Claimant testified that she continues to have low back pain radiating down the right leg which she tries to control through the use of Flector patches.

22. Dr. Sandell testified as an expert in the field of physical medicine and rehabilitation Dr. Sandell testified that he has been treating Claimant for

approximately two years for right sided low back pain which radiates down her right leg. Dr. Sandell said that at Claimant's first visit on June 11, 2015, physical examination revealed tenderness in the low back, the SI notch, tenderness around the SI joint and a positive straight leg raise test on the right. Dr. Sandell testified that tenderness of the sciatic notch and a positive straight leg raise test may be indicative of irritation of the sciatic nerve on one of the nerves going to the sciatic nerve. Dr. Sandell further testified that SI provocation maneuvers including Patrick's test and Gaenslen's sign were positive indicating there was an SI joint problem. Dr. Sandell went on to testify that he initially recommended the ESI both as a diagnostic tool as well as a therapeutic tool and that while the first ESI relieved Claimant's leg pain by 80 percent she still continued to have pain in a focal spot in the low back and therefore felt that there may be some SI joint involvement contributing to her symptom complex. Dr. Sandell explained that an SI joint injection was eventually done on December 14, 2015, which resulted in good reduction in her pain. Dr. Sandell also testified that Claimant's pain is multifactorial probably coming from both the L4-5 level of the lumbar spine and her SI joint. In terms of the Flector patches, Dr. Sandell testified that Claimant receives relief from their use and should use them as needed to help relieve pain. Dr. Sandell testified that the Flector patches are basically a NSAID which delivers the medication through the skin. Dr. Sandell ultimately opined in his deposition that the ESI, the SI joint injections, and the Flector patches are reasonable and necessary to alleviate Claimant's symptoms related to her work injury.

23. Upon cross examination, Dr. Sandell admitted that he did not strictly follow the treatment guidelines in that he did not have Claimant keep a pain diary or perform any functional testing thirty minutes past injection. However, Dr. Sandell went on to explain that in his opinion, it is hard to objectively measure one's pain and that since Claimant received 80 to 85 percent relief from the injections they are still reasonable and necessary. In addition, Dr. Sandell testified that the treatment guidelines are only guidelines and that the treating physician must still use his or her best clinical judgment in formulating a treatment plan. He also testified that Claimant has had conservative care for her work related injuries which did not provide much relief. Therefore, he felt that the SI joint injections and the ESI's are reasonable and necessary to provide pain relief and otherwise alleviate the ongoing effects of Claimants work injuries. Finally, Dr. Sandell testified that in his evaluation and in his review of the notes, he did not think that Claimant exhibited any pain behaviors except during the October 25, 2016 appointment when she had a "ducking and jumping" response to palpation of the SI joint.

24. Dr. Wallace Larson testified by deposition as an expert in orthopedic surgery. Dr. Larson testified consistent with his April 12, 2016, and March 8, 2017, reports. Dr. Larson testified that when he examined Claimant it was not possible to complete range of motion measurements due to her non-anatomical findings and pain behaviors. Dr. Larson further testified that Claimant is not in need of

maintenance care for her work injuries. Specifically he opined that she did not need injections or Flector patches. Dr. Larson explained that in his opinion Dr. Sandell's reports are not consistent with the medical treatment guidelines in that these reports do not establish a diagnosis of sciatica or something close to sciatica and do not establish functional goals or measuring outcomes in terms of performance. Dr. Larson opined that Claimant's statements that she got 80 to 85 percent improvement and was able to be more functional are not an adequate basis to consider further injections. Dr. Larson also testified that Flector patches are not appropriate or medically indicated on the grounds that there is no specific anatomic diagnosis and Claimant has multiple non-anatomic findings.

25. Upon cross examination Dr. Larson agreed that the mechanism of injury as described by Claimant could cause an injury to her low back including her SI joint. Dr. Larson also testified that when he does a physical examination he notes in his report the tests he did and whether they are positive or negative but admitted that none of the standard tests to determine if there is a potential SI joint problem were in his report. Dr. Larson also agreed that Dr. Rauzzino's diagnosis of Claimant's condition as a SI joint strain could be a specific diagnosis. Dr. Larson also agreed that SI joint problems can cause pain for months and even years and that at times SI joint problems require injections. Dr. Larson agreed that the guidelines state that the DOWC Guidelines are not to be used to limit post maximum medical improvement care and that reasonable doctors can have reasonable differences of opinion as to a diagnosis and treatment plan.

26. Based upon the totality of the evidence presented, the ALJ finds the opinions expressed by Dr. Jenks and Dr. Larson credible and persuasive.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law, and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the voluminous record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Clam Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

B. In determining credibility, the ALJ should consider the witness' manner and

demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. Here, Claimant's subjective symptoms form the basis for her contention that she is entitled to maintenance medical benefits. However, the evidence presented persuades the ALJ that Claimant's subjective reports of her symptoms are not, as both Dr. Jenks and Dr. Larson found, credible or related to anatomic, objective findings. As Dr. Larson testified, Claimant had general, diffuse, wide-ranging, non-specific, and non-anatomic symptoms at both appointments that were unchanged. Moreover, Claimant demonstrated bizarre, non-anatomic jerking movements during the March 8, 2017 examination that could not be explained based on any injury or diagnosis. Additionally, substantial pain behaviors were documented during the April 12, 2016, IME where Claimant was noted to be, "a poor historian, where she was noted to move very slowly especially to the supine position. The demonstrated pain behavior also included jerking back and forth on attempted range of motion testing of the lumbar spine. There were exaggerated responses on palpation of multiple areas including the thoracic and lumbar spine as well as the right shoulder and right elbow." Based upon the record evidence and his examination, Dr. Larson concluded Claimant, "[had] misrepresented her abilities and [had] not been honest at the time of examination." In determining credibility the ALJ may accept all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion). Based upon the evidence presented, the ALJ credits the opinions of Dr. Jenks in addition to the testimony of Dr. Larson to conclude that Claimant is not a reliable medical historian. Claimant's testimony concerning her subjective symptoms is substantially eroded by the lack of objective findings and the bizarre pain behaviors demonstrated during physical examination with both Dr. Jenks and Dr. Larson.

Maintenance Medical Benefits

C. In *Milco Construction v. Cowan,* 860 P.2d 539 (Colo. App. 1992), the Court of Appeals established a two-step procedure for awarding ongoing medical benefits under *Grover v. Industrial Commission,* 759 P.2d 705 (Colo. 1988). The court stated that an ALJ must first determine whether there is substantial evidence in the record to show the reasonable necessity for future medical treatment. If the claimant reaches this threshold, the court stated that the ALJ should enter "a general order, similar to that described in *Grover*."

D. Nevertheless, *Grover* provided, "[B]efore an order for future medical benefits maybe entered there must be substantial evidence in the record to support a determination that future medical treatment will be reasonably necessary to relieve the injured worker from the effects of the work-related injury or occupational disease." While claimant does not have to prove the need for a specific medical benefit at this time, and respondents remain free to contest the reasonable necessity of any future care, claimant must prove the probable need for some treatment after MMI due to the work injury. *Milco Construction v. Cowan*, *supra*.

E. In this case, Claimant asserts that she has proven by a preponderance of the evidence that her subjective symptoms she now experiences entitles her to an award of maintenance medical benefits to maintain maximum medical improvement (MMI). The undersigned ALJ is not persuaded. Claimant attained MMI for her injury covered by this claim on June 7, 2016, as found by Albert Hattem, M.D. Claimant does not challenge her MMI status or the opinion from the DIME provider, Jeffrey Jenks, M.D. that Dr. Hattem's MMI determination is correct. Importantly, Claimant testified at hearing she is now experiencing the same symptoms, in the same body parts, in the same intensity, as she was when she reached MMI. This, despite the fact that she has not received maintenance medical benefits for, as she testified at hearing, several months. This consistency is confirmed by Dr. Larson's findings that claimant's range of motion testing revealed very similar range of motion between claimant's first appointment with him on April 12, 2016, and March 8, 2017. He wrote in his report of March 8, 2017, that she reported that her symptoms were the same at that appointment as they had been when he saw claimant in 2016. Based upon the evidence presented, the ALJ is persuaded that these level, consistent symptoms over time without the need for maintenance care demonstrate that no ongoing treatment is required to maintain Claimant at MMI.

F. Dr. Larson addressed the DOWC's medical treatment guidelines for the treatment of low back pain during his testimony, and explained that in order to provide medical treatment, and specifically the injections claimant now seeks, one needs to have the subjective symptoms be correlated with anatomic and objective findings. According to Dr. Larson, it is not appropriate to provide injections and medication simply because Claimant subjectively claims to have improvement with non-anatomic and non-physiologic symptoms. Dr. Larson's opinions, findings and conclusions are buttressed by those made by Jeffrey Jenks, M.D. in the Division IME report claimant does not dispute. As noted above, Dr. Jenks' impression was, "[V]ery marked symptom magnification and multiple Waddell's signs" in a Claimant whose MRI was normal for her age. Without objective findings on multiple examinations and with exaggerated, but unchanged symptoms since MMI in a claimant who has not been asked to keep a pain diary or perform functional testing after injection, the ALJ concludes that performing additional injections is not reasonable or necessary.

ORDER

It is therefore ordered that:

1. Claimant's request for additional maintenance medical treatment benefits, including additional injection therapy and Flector patch prescriptions is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 8, 2017

Colorado Springs, CO 80906

ISSUES

1. Did Claimant prove by a preponderance of the evidence that she suffered a compensable injury on May 6, 2016?

2. If Claimant's injury is compensable, was the treatment she received between May 7 2016 and June 27, 2016 reasonable, necessary, related and authorized?

3. If Claimant's injury is compensable, does the ALJ have jurisdiction to adjudicate medical benefits after June 27, 2016?

STIPULATIONS

The parties agreed to reserve AWW, temporary disability benefits, and defenses to temporary disability benefits, including whether Claimant is responsible for termination of her employment.

FINDINGS OF FACT

1. Claimant worked a general merchandise clerk at Employer's Store #43 in Pueblo. On May 6, 2016 she was working as a cashier because the store was short-staffed.

2. Claimant felt pain in her back when she reached down to move a heavy item on the lower shelf a shopping cart to reach the UPC code. She could not take a break for several hours because the store was so busy. When she got her break, she went upstairs to the employee lounge and took a Tylenol. She then returned to work and finished her shift.

3. Claimant did not report the incident or her symptoms to anyone at the store that day. She assumed she had suffered a strain that would resolve quickly.

4. After her shift, Claimant went home, took a bath, and went to bed because her back was hurting. She awoke at 3:00 AM "in excruciating pain." She called the store, but no one answered. She called again at 4:02 AM and spoke to one of the night crew supervisors. She told him she was going to the emergency room because she was having severe back pain. Shortly thereafter, she spoke with her supervisor Josh Olson, and told him she was going to the emergency room. Claimant told Mr. Olson she hurt her back at work the day before.

5. Claimant went to the Parkview Medical Center ER the morning of May 7, complaining of "achy, sharp, and spasming" low back pain. The ER report states: "she has intermittently had some back soreness related to a relatively new job at a grocery

store. She states that in general this soreness has improved with time and the more she works the better she does. Yesterday at work, she did an unusual job for her at the checking stand at the grocery store. This involves a lot of twisting motion. Denies fall [or other] acute traumatic episode." She had tenderness to palpation of the bilateral SI areas and the lumbar paraspinal musculature. The ER physician (Dr. Krier) did not think x-rays or a CT scan would likely provide useful information, and advised Claimant "most patients with this condition improve with time and pain control along with eventual strengthening and PT." Dr. Krier suggested an MRI might be warranted if Claimant's symptoms did not improve. Claimant was given injections and oral medications which helped her pain. She was discharged with prescriptions for Percocet, Valium, ibuprofen and Lidoderm patches, and advised to follow up with her primary care provider. She was also taken off work until May 11, 2016.

6. After she left the ER, Claimant spoke with Mr. Olson by telephone and explained she would follow up with her personal physician the following Monday. Mr. Olson did not refer Claimant to a designated provider, nor did he pass the information on to higher-level managers at the store.

7. Claimant saw PA Todd Knauf at Summit Medical Clinic on May 10, 2016 in follow up from the ER visit. She told PA Knauf she had been to the ER on Saturday (May 6) for back pain. The treatment note contains no coherent history, and little useful information. There is no mention of any incident at work.

8. Claimant had lumbar x-rays on May 11, 2016 at Parkwest Imaging Center which showed mild degenerative changes but no acute bony abnormality.

9. On May 17, 2016 PA Knauf authored a letter stating Claimant "will need to stay off work until May 30th due to an injury to her back."

10. Claimant followed up with PA Knauf regarding her back pain on May 23, 2016. She reported 6/10 pain in the low back, radiating to the right groin and right side. She said the pain in her right leg felt like "a pinched nerve" and "her right leg sometimes feels kinda numb." PA Knauf referred Claimant for a lumbar MRI.

11. Claimant underwent a lumbar MRI on June 10, 2016 at Parkwest. At L2-3 there was a minimal broad-based posterior disk bulge and mild left neural foraminal stenosis. At L5-S1 there was a small broad-based left posterolateral disc herniation or bulge which abuts and minimally displaces the left S1 nerve root posteriorly, without definite root compression. The MRI also showed diffuse degenerative disc disease.

12. On June 16, 2016 PA Knauf wrote a letter stating Claimant "has a herniated disc and until further notice she is unable to return to work."

13. After learning the results of the MRI, Claimant decided she was no longer willing to pursue medical treatment through Medicaid. She went to the store on June 23 and completed injury-related paperwork with Scott Anger, the assistant store manager. Claimant filled out an Associate Work Related Injury/Illness Report and described the injury as "was lifting, twisting and turning, I think around 2:00 PM. Had problems even

sitting for breaks. Not sure if it was large bag of dog food on bottom of cart or Morton salt." Claimant also stated "I told Josh Olson of my condition as soon as I was released from [the] E.R. that I was at work the day before on May 6th that I was sore and uncomfortable most of the day. [I] thought that I pulled a muscle at work. Came home and took a bath, went to bed and woke up and extreme pain. Informed him I would follow up with [my] regular doctor on Monday and get back with them."

14. Arnold Decesaro was the manager of Store #43 at the time of Claimant's injury. He transferred to a different store shortly after the date of injury. On June 23 Mr. Decesaro since an email to Mr. Anger stating "[Claimant] told me she had back issues. She never told me she had hurt her back at work. When I was working at [store] #43, I told Sue Foster to send [Claimant] an AWAL letter because she never returned my call. [Claimant] told me that it was a pulled muscle."

15. Mr. Anger completed a Questionable Claim form stating "[Claimant] told the mgr at the time she had back issues and she never told him she hurt her back at work." The manager Mr. Anger referenced on the form was Ms. Decesaro.

16. Mr. Anger gave Claimant a list of four designated providers on June 23, from which Claimant chose CCOM.

17. Claimant saw Theresa Kuhn, NP at CCOM on June 27, 2016. Under "PATIENT DESCRIPTION OF INJURY" NP Kuhn's report states: "pt. states – cashiering turned a bag of dog [food] and felt pain in lower back." The "HISTORY OF PRESENT ILLNESS" section of the report contains some contradictory information regarding the bag of dog food: "on May 6, 2016 she was assigned to work as a cashier standing at the grocery store, something that was not her usual job task, and she said that she developed back pain afterward. She does not recall any specific injury during the day when she was working. She did say that she had to lift a 50-pound bag of dog food during the shift but did not have any significant pain and was able to continue her day without problem. She reports the next day her 'back was killing her' . . . ."

18. In reconciling the conflicting information in NP Kuhn's report, the ALJ finds it more likely that Claimant associated the onset of her back pain with turning the bag of dog food, because she had done so in her written injury report the day before. It is not plausible that Claimant would tell Employer her pain started after moving a bag of dog food or salt but directly contradict herself the next day at CCOM.

19. NP Kuhn opined it was "difficult to pinpoint this as being work-related as she did not have a specific event that contributed to her back pain." She released Claimant from treatment at MMI with no impairment and no work restrictions. Dr. Daniel Olson's signature is affixed to the bottom of the accompanying WC 164 form.

20. At the hearing Claimant's counsel agreed that, for purposes of this decision, the June 27, 2016 report from CCOM constitutes a determination of MMI by an ATP.

21. Claimant returned to PA Knauf and was referred to Dr. Benjamin Massey for lumbar epidural steroid injections.

22. Claimant saw Dr. Massey on July 26, 2016. She told Dr. Massey "on 05/06/2016 when she was bending over at King Soopers to flip a box and check it out she had the onset of pain in the back radiating into the right lower extremity that was bad enough to where she apparently had to go to the emergency room and ever since then she has had intermittent problems with pain."

23. Dr. Castrejon performed an Independent Medical Examination (IME) at Claimant's request on October 26, 2016. Claimant told Dr. Castrejon she did not recall a specific event, but she was performing repetitive bending, stooping and rotational motions, "and at one point was flipping bags of dog food on the bottom of a cart to scan when the symptoms worsened." Dr. Castrejon considered Claimant "a reliable historian." Dr. Castrejon opined "in all medical probability the activities described on May 6, 2016 resulted in a straining injury to the lumbar spine and the MRI changes that were seen at L5-S1." Dr. Castrejon opined Claimant is not at MMI and requires additional evaluation and treatment, including consultation with a spine surgeon.

24. Dr. Henry Roth performed an IME at Respondent's request on December 13, 2016. Claimant gave Dr. Roth a substantially similar history to what she told Dr. Castrejon. She indicated she needed to scan a UPC code on a 50-pound bag of dog food on the underside of the shopping cart. She described bending over, twisting and flipping the bag to expose the UPC code. She stated she felt a pulling sensation in the center of her lower back at that time. Based solely on his review of medical records, Dr. Roth opined that Claimant's low back problems were not caused by her work on May 6, 2016. He stated "the medical documentation indicates no specific injury or event associated with" her symptoms. But, Dr. Roth also noted Claimant "provides a different history [at the IME]. She is now very definite that the onset of discomfort occurred of the specific time, in relation to specific materials handling at work." Dr. Roth opined,

> [Claimant's] spinal anatomy identified by MRI is incidental and unrelated to [her] claim. However, her back pain, per her history, had its onset at a specific time at work and in relationship to a specific work activity. **PER THE HISTORY PROVIDED BY [CLAIMANT], EVALUATION AND TREATMENT UNDER WORKERS' COMPENSATION IS REASONABLE AND APPROPRIATE.**" (Bold, capitals in original).

25. Dr. Roth stated he was "not in any position to debate or reconcile the discrepancy between the reviewed medical documentation and [Claimant's] history of the present illness," but added "I did find [Claimant] to be genuine and sincere."

26. Dr. Roth opined Claimant is not at MMI, although he was skeptical she would receive significant benefit from further treatment.

27. Dr. Roth testified at hearing and Dr. Castrejon testified in a post-hearing deposition. Both testified consistently with the opinions expressed in their reports.

28. Although Claimant has a prior history of low back pain, her condition clearly worsened on May 6, 2016. There is no record of Claimant seeking any treatment for back pain for at least 3 ½ years before the injury at work.

29. Claimant has proven by a preponderance of the evidence that she suffered a compensable low back injury on May 6, 2016.

30. Medical treatment Claimant received between May 7, 2016 and June 27, 2016 was reasonable, necessary, and causally related to her compensable injury.

31. The treatment Claimant received at the Parkview ER resulted from a bona fide emergency.

32. Claimant's direct supervisor had sufficient knowledge as of May 7, 2016 to lead a reasonably conscientious manager to believe Claimant might have sustained a compensable injury.

33. Employer did not tender medical treatment when it first received notice of the injury, and the right of selection passed to Claimant.

34. Summit Medical Clinic and PA Knauf are authorized providers.

35. CCOM and Dr. Olson are authorized providers.

36. The ALJ lacks jurisdiction to adjudicate medical benefits after June 27, 2016, because Claimant was placed at MMI by an authorized treating physician.

CONCLUSIONS OF LAW

A. Claimant's low back injury is compensable

To receive compensation or medical benefits, a claimant must prove she is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). The "course of employment" requirement is satisfied if the injury occurred within the time and place limits of the employment relationship and during an activity that had some connection with the employee's job-related functions. *Wild West Radio, Inc. v. Industrial Claim Appeals Office*, 905 P.2d 6 (Colo. App. 1995). An injury "arises out of" employment when it had its origin in an employee's work related functions and is sufficiently related to those functions to be considered part of the employment. *City of Brighton v. Rodriguez*, 318 P.3d 496 (Colo. 2014). There is no presumption that an injury which occurs at work "arises out of" the employment. *Finn v. Industrial Commission*, 437 P.2d 542 (Colo. 1968).

The claimant must prove that an injury proximately caused the condition for which benefits are sought. Section 8-41-301(1)(c); *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim*

Appeals Office, 942 P.2d 1337 (Colo. App. 1997). For an injury to be compensable, there must be a "sufficient nexus" between the employment and the injury. *In re Question Submitted by the U.S. Court of Appeals*, 759 P.2d 17 (Colo. 1988). The claimant must prove entitlement to benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case are not interpreted liberally in favor of either claimants or respondents. Section 8-43-201.

A claimant is not required to identify the precise moment of injury, as long as she proves that the injury was caused by her work. *Hubbard v. City Market*, W.C. No. 4-934-698-01 (ICAO, November 21, 2014). Although an injury must "be traceable to a definite cause, time and place," this can be established by showing a "causal connection between the type of work, the date the pain began, and the place of employment." *Martin Marietta Corporation v. Faulk*, 407 P.2d 348, 349 (Colo. 1965).

The fact that a claimant suffers from a pre-existing condition does not disqualify a claim for compensation if work-related activities aggravate, accelerate, or combine with the pre-existing condition to produce disability or a need for medical treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Pain is a typical symptom from the aggravation of a pre-existing condition, and the claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by the employment-related activities and not the underlying pre-existing condition. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949).

The mere fact that a claimant experiences symptoms at work does not necessarily mean the employment aggravated or accelerated the pre-existing condition. *Cotts v. Exempla*, W.C. No. 4-606-563 (ICAO, August 18, 2005). Rather, when a claimant experiences symptoms at work, the ALJ must determine whether the subsequent need for treatment was caused by an industrial aggravation of a preexisting condition or was due to the natural progression of the condition. *Melendez v. Weld County School District #6*, W.C. No. 4-775-869 (ICAO, October 2, 2009).

As found, Claimant proved by a preponderance of the evidence she injured her back work on May 6, 2016. Although there are some discrepancies in the record regarding the description of the injury, the totality of evidence demonstrates that Claimant's back pain was triggered by her work activities. Claimant has consistently attributed the onset of symptoms to her work on May 6. Every statement in the evidentiary record that came directly from Claimant relates the onset of back pain to moving heavy items on the bottom of a cart while cashiering. The conflicting histories in medical records were provided by providers summarizing what she said. On balance, the descriptions of the onset of symptoms in the medical are sufficiently consistent with Claimant's direct statements to support the conclusion that her symptoms are causally related to her work. Dr. Roth agrees that the history Claimant provided supports a determination that she sustained a compensable injury. Having credited Claimant's version of events, it follows Claimant proved a compensable injury.

B. Emergency treatment at Parkview ER was authorized

As a general rule, an employer is only liable for "authorized" medical treatment. *Bunch v. Industrial Claim Appeals Office*, 148 P.3d 381 (Colo. App. 2006). Authorization refers to a physician's legal right to treat the claimant at the respondents' expense. *Mason Jar Restaurant v. Industrial Claim Appeals Office*, 862 P.2d 1026 (Colo. App. 1993). Treatment received on an emergency basis is deemed authorized without regard to whether the claimant had prior approval from the employer or a referral. *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990); *see also* WCRP 8-2. The emergency exception is not necessarily limited to life-threatening situations, and whether a "bona fide emergency" existed is a question of fact for the ALJ to be determined based on the circumstances of the particular case. *Hoffman v. Wal-Mart Stores*, W.C. No. 4-774-720 (ICAO, January 12, 2010).

As found, Claimant's treatment at the Parkview ER on May 7 resulted from a bona fide emergency. Claimant awoke at 3:00 AM with severe and debilitating back pain. Given the early hour, it was reasonable for Claimant to seek treatment at the emergency room.

C. Summit Medical Clinic and PA Knauf are authorized

Section 8-43-404(5)(a)(I)(A) gives the employer the right to select an authorized treating physician "in the first instance." If the employer does not designate a treating physician "forthwith" upon receiving notice of the injury the right of selection passes to the claimant. *Rogers v. Industrial Claim Appeals Office*, 746 P.2d 565, 567 (Colo. App. 1987). The employer's obligation to tender medical treatment is triggered by "some knowledge of accompanying facts connecting the injury or illness with the employment and indicating to a reasonably conscientious manager that the case might involve a potential compensation claim." *Jones v. Adolph Coors Co*., 689 P.2d 681, 684 (Colo. App. 1984).

Claimant testified that she told her direct supervisor, Josh Olson, on May 7, 2016 she had injured her back at work the previous day. Respondent presented no direct testimony to contradict Claimant's testimony. Mr. Olson did not testify, and neither Mr. Anger nor Mr. Decesaro has firsthand knowledge of the conversations between Claimant and Mr. Olson. Therefore, the ALJ has credited Claimant's testimony in finding that she verbally notified Mr. Olson of her injury on May 7.

Claimant's notice to Mr. Olson was sufficient to trigger Employer's duty to offer medical treatment. *See e.g*., § 8-43-102(1.5)(a) (notice of injury can be given to "employee's foreman, superintendent, manager," or "other person in charge"); *Frank v. Industrial Commission*, 43 P.2d 158 (Colo. 1935); *Ferris v. King Soopers, Inc.*, W.C. No. 3-884-707 & 3-895-561 (ICAO, April 5, 1990); *Zanini v. King Soopers*, W.C. No. 3-870-72 & 3-887-766 (ICAO, December 4, 1989).

Employer did not offer medical treatment until June 23, 2016. As a result, the right of selection passed to Claimant, and she chose to receive treatment from her

primary care providers. PA-C Knauf and Summit Medical Clinic were authorized as of Claimant's May 10, 2016 appointment.

D. CCOM and Dr. Olson are authorized

Claimant may, and often do, have multiple ATPs. *Popke v. Industrial Claim Appeals Office*, 944 P.2d 677 (Colo. App. 1997). *Portillo v. Shoco Oil-Samhill-Oil*, W.C. No. 4-942-783-01 (ICAO, May 1, 2017). Aside from the initial "selection" as provided in § 8-43-404(5)(a), a physician may become authorized if the "employer has expressly or impliedly conveyed to the employee the impression" that the physician is authorized. *Bestway v. Industrial Claim Appeals Office*, 984 P.2d 680 (Colo. App. 1999).

Employer gave Claimant a list of designated providers on June 23, 2016, and she chose to seek treatment from CCOM. Therefore, CCOM was added to the chain of ATPs by virtue of Employer's referral.

E. The ALJ lacks jurisdiction to adjudicate medical benefits after June 27, 2016

Dr. Olson placed Claimant at MMI at her initial visit on June 27, 2016. Any ATP may place a claimant at MMI, and the ALJ does not have jurisdiction to question that determination absent a DIME, even if other ATPs disagree the claimant is at MMI. Section 8-42-107(8)(a); *Town of Ignacio v. Industrial Claim Appeals Office*, 70 P.3d 513 (Colo. App. 2002).

Once there has been a determination of MMI by an ATP, the ALJ has no jurisdiction to award additional medical benefits intended to cure the injury without a DIME. *McCormick v. Exempla Healthcare*, W.C. No. 4-594-683 (ICAO, January 27, 2006); *Cass v. Mesa County Valley School District*, W.C. No. 4-629-629 (ICAO, August 26, 2005). Therefore, this Order does not address Claimant's entitlement to medical treatment after June 27, 2016.

ORDER

It is therefore ordered that:

1. Claimant's claim for a low back injury on May 6, 2016 is compensable.

2. Respondent shall pay for the May 7, 2016 treatment at Parkview ER.

3. Respondent shall pay for treatment Claimant received between May 10, 2016 and June 27, 2016 from Summit Medical Clinic, Parkwest Imaging and CCOM.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after

mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at http://www.colorado.gov/dpa/oac/forms-WC.htm.

Office of Administrative Courts

ISSUES

- Whether Respondents overcame the opinion of the DIME physician on MMI and permanent medical impairment.
- Whether Claimant's hip condition was causally related to the accident.
- If Respondents sustained their burden of proof, what, if any, was Claimant's permanent medical impairment?
- Is the proposed medical treatment for Claimant's hip reasonable, necessary and related to her injury?

FINDINGS OF FACT

1. Claimant was working for Employer in Colorado as a civil engineer.

2. There was no evidence in the record which showed Claimant had a history of injuries to her cervical or lumbosacral spine, or her lower extremities.[1] There was no evidence Claimant treated for symptoms in any of these areas before October 23, 2012.

3. Claimant suffered an admitted industrial injury on October 23, 2012 when she was injured in a motor vehicle accident ("MVA") while working for Employer. Claimant was sitting in the passenger seat when the vehicle in which she was riding was rear-ended. The airbags deployed.

4. Claimant testified that she does not fully remember the details of the accident. Claimant recalled crawling out of the driver's side of the vehicle, but did not remember riding to or checking into the hospital. Claimant testified that she remembered waking up during the MRI, but does not remember any conversations with hospital staff.

5. Claimant was treated at Littleton Adventist Hospital. The intake report noted Claimant did not recall the accident, she just remembered seeing taillights and then being pushed back by an airbag. A CT scan of the patient's head, neck, and facial bones was done. The report also noted there was a concern given Claimant's headache and left-sided neck pain, so a CT angiogram was obtained. Claimant was evaluated by Andrew Knaut, M.D., Ph.D., whose diagnosis was: 1) Motor vehicle accident; 2) concussion, and 3) left inferior orbital wall fracture. The ALJ notes Claimant had no complaints of lower extremity pain at the emergency department.

[1] Treatment records for Claimant from 2008 were admitted. These contained a pain diagram for the low back. However, there was no evidence in these documents of a diagnosis or treatment Claimant received for her low back.

6. Following her injury, Claimant returned home to New Mexico. Claimant testified that upon returning to New Mexico she was most concerned about the persistent numbness on the left side of her face and constant headaches. She was worried about these symptoms. The ALJ credited Claimant's testimony that these symptoms were her main focus at this point in time. Claimant also stated her physical activities were limited.

7. Claimant testified she experienced in pain in her thigh a couple of weeks later, which was sometime around Thanksgiving. She could not cross her legs. When she increased her activities, this caused an increase in symptoms in her legs and lower back. Claimant said she had never experienced symptoms in her thighs/hips before the accident.

8. On November 30, 2012, Claimant was evaluated by Mark Berger, M.D. at New Mexico Neurology. At that time, she was complaining of headaches, although these were improving. She also reported neck pain since the accident, as well as left facial numbness. Dr. Berger's neurological examination was normal. His impression was: headaches following trauma on October 23, 2012, which were most compatible with post-traumatic headaches. Dr. Berger noted there was no evidence for other neurological processes causing the head pain, based upon the CT scan. Dr. Berger also diagnosed neck pain and left facial numbness, which was not improving. He wanted to proceed with a somatosensory evoked potential study of the trigeminal nerves to evaluate the function of the trigeminal nerve. He opined her neck pain was musculoskeletal in origin due to the cervical strain and prescribed physical therapy ("PT"). For the left orbital fracture, he stated an ENT evaluation was required. The ALJ notes Claimant made no reference to hip or thigh pain during this evaluation.

9. Medical records from MD Urgent Care in New Mexico were admitted at hearing. On February 28, 2013, Claimant was evaluated at that facility and she reported having moderate pain in both thighs since Thanksgiving. In the history section, it was noted Claimant was running 4-5 days /week, but she had no pain with running or at rest. Stretching was not helping. Normal hip range of motion ("ROM") was noted at this evaluation. Claimant's adductor muscles were noted to be very tight. X-rays were taken of Claimant's right and left femur, but no abnormalities were noted. Claimant was advised to obtain an orthopedic evaluation. Claimant was also to begin an exercise program, received independent exercise instruction, and range of motion/stretching.

10. Claimant returned to MD Urgent Care on March 20, 2013, complaining of neck pain and headaches, of two days duration. Claimant was given a prescription, as well as written instructions and discharged.

11. On March 21, 2013, Claimant was evaluated by orthopedic surgeon Paul Legant, M.D. Claimant identified the problem as pain on the inside of both thighs. The ALJ notes Claimant left blank whether the symptoms were related to an auto accident, but in the subject of history section, Dr. Legant noted she had been in a car accident around Halloween and had experienced symptoms since Thanksgiving. Claimant described the symptoms as sometimes dull, sometimes sharp in nature, with the biggest

problem when she attempted to cross her legs. Dr. Legant noted there was no pain with internal or external rotation of her hips, as well as no edema nor erythmia. She had full and equal range of motion for both lower extremities. Dr. Legant's assessment was bilateral thigh pain-etiology unknown. He referred Claimant to a neurologist.

12. On May 7, 2013, Claimant was evaluated by John Campa, III, M.D. Her chief complaint was intermittent, sharp shooting pain to the bilateral proximal thigh region. Claimant reported the symptoms began spontaneously, initially in the left thigh and then occurring in the right thigh in January 2013. These have been worsening over time. Claimant's history of a MVA and endometriosis was noted, along with her diabetes. In her pain diagram, Claimant indicated she felt pain over C6, C7, T8 and L2. On examination, Dr. Campa noted muscle spasm in Claimant's cervical spine and shoulders, as well as the thoraco/lumbar spine. In the section entitled etiology, Dr. Campa noted the following needed to be considered: bilateral, position/stretch related medial, proximal thigh pain, likely related to bilateral obturator nerve compression/entrapment the level of pelvic brim, secondary to recurrent endometrial implants. This opinion was persuasive to the ALJ. He also opined the following needed to be ruled out: C5-6 spinal segmental lesion, mid T spine spinal segmental lesion, lumbosacral spinal segmental lesion, right thyroid lobe lesion; identify polyneuropathy likely diabetic in origin. Dr. Campa performed extensive electrodiagnostic testing in each of those areas.

13. Claimant moved to South Dakota and treated at the Creekside Medical Clinic. Claimant was evaluated on June 14, 2013 by Stephen Sachs, PA-C reporting worsening, limited ROM to both hips and occasional pain to medial thighs. On examination, her hips were noted to have limited external rotation and slightly decreased internal rotation due to pain along the medial thighs. X-rays were negative. The diagnosis of backache was added. There was no record treatment Claimant received at this facility.

14. Claimant began treating with Stuart Johnson, D.C. on July 12, 2013. Dr. Johnson recorded that, after the motor vehicle accident on Thanksgiving, Claimant couldn't cross her left leg over the right and had sharp pains over the left medial thigh. He further recorded that, the air bag deployed and hit her, jarring her, which may have aggravated her lower back, as well as her neck and thigh. She advised that a prior MRI of the low back was negative. Chiropractor Johnson treated Claimant's cervical and lumbar spine on 45 occasions from July 12, 2013 through January 21, 2014. The records indicated Claimant subjectively reported symptom relief.

15. Claimant returned to PA-C Sachs September 23, 2013, however, this appointment was concerned with issues related to type one diabetes mellitus, ketoacidosis and abnormal electrolytes. On December 2, 2013, Claimant was evaluated by Jana Doorman, PA-C. She was complaining of persistent low back pain, bilateral hip pain and medial thigh pain, which she said was present since the October 23, 2012 accident. PA-C Doorman felt the bilateral hip pain, with medial thigh pain and low back pain was related to an SI joint radiculopathy.

16. Claimant then moved to Alabama and received chiropractic manipulation from Amanda Holland D.C. for cervical, thoracic and lumbar complaints from February 5, 2014 through August 25, 2014. She received a total of 35 treatments, which provided temporary symptomatic relief.

17. Claimant was examined by John Johnson, M.D. (neurosurgeon) on March 18, 2014. On this date, Claimant had problems moving her hips, crossing her legs, but denied constant back pain, describing it as intermittent. Claimant described a sharp pain in to her buttock and into her hip, and some pain in the anterior medial thigh with radiation. Upon examination, the doctor recorded she was unable to cross her hips left over right or right over left. Dr. Johnson reviewed the prior lumbar MRI scan dated June 18, 2013, noting there was no evidence of a disc herniation, stenosis or neural foraminal narrowing. His impression was: bilateral hip pain with decreased range of motion and low back pain. Dr Johnson corresponded with chiropractor Amanda Holland indicating that he could not explain Claimant's symptoms. However, he noted that she is an insulin-dependent diabetic and Claimant thought she was having avascular necrosis of her hips. Therefore, he recommended securing an MRI of the pelvis to rule out avascular necrosis of the hips. He noted that he encouraged her to seek out a PCP and possibly consider a rheumatology evaluation, as he did not see any structural abnormality.

18. On April 26, 2014, an MRI of the Claimant's pelvis was done. The impression of James Mann, M.D., the attending radiologist, was: no evidence of a recent stress or traumatic fracture. There is no evidence of osteonecrosis in either femoral head. The articular cartilage was grossly unremarkable. No definite acetabular labral tear identified. If clinical concern for labral pathology, consider MR arthrogram of the symptomatic hip for further evaluation.

19. After reviewing the MRI of the pelvis, Dr. Johnson issued a follow-up report dated May 6, 2014, wherein he stated that he had reviewed the MRI, and that is was fairly unrevealing, specifically that there was no evidence of avascular necrosis of the hips. He found nothing of a surgical nature.

20. On July 21, 2014, a Worker's Claim for Compensation was filed on behalf of Claimant. In the Worker's Claim, it was alleged Claimant's low back and lower extremities, neck/upper back and face were injured in the accident.

21. A General Admission of Liability ("GAL") was filed on behalf of Respondents on August 26, 2014. The GAL admitted for medical benefits.

22. On October 8, 2014, Peter Quintero, M.D., a neurologist, examined Claimant at the request of Respondents. Claimant was continuing to complain of sharp inner thigh pain with certain activities such as crossing the legs. She also reported complaints of low back pain 3/10, neck and mild mid-back pain, as well as headaches. Clamant did not specifically report hip pain. Dr. Quintero's accident related diagnoses were: cervical strain injury with secondary myofascial pain syndrome; thoracic strain injury with secondary myofascial pain syndrome; lumbosacral strain injury with

secondary myofascial pain syndrome; left orbital fracture-resolved; muscular contraction headaches; and concussion-resolved. These diagnoses led the ALJ to conclude Claimant injured these areas of her body. Dr. Quintero opined that due to the delayed nature of Claimant's reported inner thigh pain and the mechanism of injury, he could not relate these symptoms to the motor vehicle accident. Dr. Quintero thought it was most likely Claimant sustained strain injuries to these areas of her body, but would have had a good prognosis for a full recovery. Dr. Quintero believed Claimant suffered an injury to her gracillis muscles. The most common cause of injury to the gracillis muscles or adductors was a sports injury, such as running. The mechanics of a motor vehicle accident would not explain injury to this muscle group. The ALJ credited this opinion.

23. Dr. Quintero opined that Claimant likely sustained myofascial strains to her spine and that she had attained MMI from those strains, without resultant impairment. Dr. Quintero was at a loss to explain why she would be continuing to report pain some two years after the motor vehicle accident. Although Dr. Quintero described full ROM in Claimant's back and spine, there was no evidence Dr. Quintero performed ROM testing with dual inclinometers as part of his evaluation.

24. In January, 2015, Claimant was evaluated by Carol Krause, M.D. in North Dakota. She had cervical and lumbosacral pain, as well as pain in both thighs. Dr. Krause opined that her current symptoms were related to the MVA. Claimant was given treatment suggestions and was to continue treating with the chiropractor, Dr. Ness.

25. On May 28, 2015, Claimant underwent a DOWC IME ("DIME") with Christopher Ryan, M.D. At that time, Claimant was complaining of pain in her hips which was present when she crossed her legs. Dr. Ryan noted she had been running about 10 miles per week, but then slowed down considerably. Despite slowing her running, she developed symptoms in her left proximal thigh. She also had pain in the cervical-occipital junction, as well as low back pain. On examination, Claimant had moderate rigidity involving her cervical region, as well as limitations in her range of motion. Dr. Ryan performed ROM testing using dual inclinometers, as required by the *AMA Guides*[2]. In the lumbar spine, she had an oblique pelvis, with slightly elevated posterior/superior iliac spine on the left and hypomobile left sacroiliac joint. Dr. Ryan noted Claimant had fairly normal range of motion in flexion and extension of her hips, with slight limitation. Abduction was normal, but adduction was only to neutral bilaterally. He also performed ROM measurements on Claimant's lumbar spine.
Dr. Ryan noted Claimant did not have significant pain behaviors. The ALJ notes these ratings met validity criteria, as found by Dr. Ryan.

26. Dr. Ryan's diagnostic impressions included: cervical-occipital dysfunction, lumbopelvic dysfunction both of which were secondary to the vehicle accident. He also described Claimant's intrinsic hip pathology as uncharacterized. The ALJ inferred Dr. Ryan had a question regarding the causation of the hip symptoms. Dr. Ryan assigned 13% to Claimant's cervical spine, which included a Table 53 specific disorder, as well as loss of range of motion. He assigned a 10 % whole person impairment to Claimant's

[2] AMA Guides to the Evaluation of Permanent Impairment (3rd Ed. Rev.)

lumbar spine including both of those components. Dr. Ryan assigned a 25% right lower extremity rating and a 25% left lower extremity rating, which converted to a 19% whole person rating. These ratings were valid and done pursuant to the *AMA Guides*. The ALJ was persuaded that Claimant sustained a permanent medical impairment to the4 cervical and lumbar spine.

27. Dr. Ryan opined Claimant was not at MMI, as he felt Claimant's overall condition, including the impairment ratings could be improved. He recommended an MR arthrogram of Claimant's hips bilaterally, both of which should be evaluated by an orthopedist. He believed Claimant's impairment rating could be improved upon with further treatment, including manual therapy.

28. On October 15, 2015, Dr. Quintero issued an Addendum Report after reviewing Dr. Ryan's DIME report and the records from Dr. Krause. He disagreed with Dr. Ryan attributing not only the thigh pain to the industrial injury, but also the mid-back and low back pain, again due to the documented delay in reporting of these symptoms, as evidenced by the medical reports. Dr. Quintero opined that only the headaches and neck pain are logically related to the industrial motor vehicle accident.

29. On November 12, 2015, Claimant was evaluated by Keith Anderson, D.O., FAAPMR. Her two complaints were the fact that she could not adduct her legs because a pain in the adductor muscles, along with pain in the cervical and lumbar spine, without radicular symptoms. It was noted Claimant had seen multiple doctors, had received PT and chiropractic care. The latter helped for short periods of time. Dr. Anderson evaluated Claimant's spine and noted she did not have gross scoliosis, but tenderness was noted in her cervical spine. She had pain with deep palpation in the lumbar paraspinals. He opined Claimant had myofascial pain from the motor vehicle accident and recommended pool therapy, as well as a good exercise program and avoiding medications.

30. On November 20, 2015, Dr. Anderson responded to questions posed by Respondents' counsel. More particularly, Dr. Anderson stated:

> Question: What is your diagnosis of this claimant's current condition?
>
> Answer: Status post work related injury (1) fractured left inferior orbital wall (2) myofascial pain affecting the cervical and lumbar area with bilateral adductor pain.
>
> Question: What if any of these diagnosis are related to October 23, 2012 motor vehicle accident?
>
> Answer: Both are related to her motor vehicle accident.

31. Dr. Anderson concluded Claimant was at MMI. The ALJ noted Dr. Anderson did not provide his analysis as to why the bilateral adductor pain was causally

related to the MVA, including addressing the evaluation done by Dr. Ryan. The ALJ was persuaded that Claimant was at MMI at the time she was evaluated by Dr. Anderson based upon the totality of the medical evidence.[3]

32. The records admitted at hearing documented Claimant had received extensive treatment as of November 12, 2015. This included chiropractic treatment with Dr. Johnson from July 12, 2013 through January 21, 2014. [Exhibit 12]. She also received PT from October 24, 2013 through January 14, 2014. [Exhibit 11]. Claimant also received treatment with Dr. Holland from February 5, 2014 through August 25, 2014. [Exhibit 14]. Claimant also received chiropractic manipulation and therapy with Dr. Ness from July 30, 2015 through September 24, 2015. [Exhibit 16]. When she was evaluated by various physicians, including orthopedic surgeons, she was instructed as to home exercises. Based upon this evidence, the ALJ concluded Claimant was at MMI as of November 12, 2015.

33. Claimant was evaluated by Lawrence Lesnak, M.D. on January 25, 2016. Claimant reported her current symptoms were constant neck, midline low lumbar pain and bilateral proximal medial thigh pains with certain movements of her thighs, again reporting an inability to cross her legs. Upon examination of the spine, full thoracic range of motion was noted and Claimant was able to forward flex her chin to her chest with no symptoms whatsoever. However, during cervical spine range of motion testing, he believed Claimant self-limited her forward flexion to only 40 degrees due to complaints of moderate proximal posterior neck pain. Claimant achieved full range of motion in all other planes. Hip range of motion was full for both hip joints. He found generalized tenderness over the cervical paraspinal musculature and suboccipital regions bilaterally, without trigger points or muscle spasms. The ALJ notes there was no evidence Dr. Lesnak performed a complete evaluation of Claimant's cervical and lumbar impairment pursuant to the *AMA Guides.*

34. Claimant also returned to Dr. Ryan for a follow-up DIME on January 25, 2016. He reviewed supplemental reports from Drs. Quintero and Anderson. On examination, Claimant was uncomfortable, which Dr. Ryan attributed to travel. She had restrictions in her cervical spine, both on flexion and extension. In the lumbopelvic region, she had an elevation of the left posterior/superior iliac spine, compared to the right and the depression of the left anterior/superior fine compared to the left. She also had minimal motion in the left SI joint. Claimant complained pain in her groin when Faber testing was performed. Dr. Ryan noted his impressions remained the same as when he first saw Claimant. She had cervical-occipital dysfunction, as well as lumbo-pelvic dysfunction; both of which he thought most medically probable these were the results of the MVA. Claimant had what Dr. Ryan described as undiagnosed hip pathology, which he believed was an intrinsic injury to her hip joints, possibly a labral tear. He agreed with the radiologist's recommendation of an MR arthrogram. Dr. Ryan also opined Claimant should have ongoing follow-up with a manual therapist. Finally he

[3] The ALJ notes Dr. Anderson opined Claimant was at MMI as of one year after her accident-November 23, 2013. However, the medical evidence documented Claimant received extensive treatment after that time.

recommended a prescription for a topical preparation for her neck-PLO gel containing ketoprofen, ketamine, gabapentin and cyclobenzaprine. He did not believe Claimant was at MMI.

35. Claimant was evaluated on April 12, 2016 by H. Alexander Cobb, M.D. He evaluated her for bilateral hip pain, which she reported developed two weeks after the motor vehicle accident. The ALJ notes this report of history was inaccurate, as well as the fact that the vehicle which Claimant was riding hit another car. X-rays taken of Claimant's pelvis and both hips showed no dysplastic features in either hip or pelvis. Dr. Cobb's impression was a potential labral tear in both the left and right hips. He ordered an MRI arthrogram. The ALJ notes Dr. Cobb indicated the labral tears were non-traumatic, which raised the question of whether the MVA caused same.

36. Claimant underwent an MRI and arthrogram of the left and right hips on May 4, 2016. The procedure was performed by Raymond Armstrong, M.D., whose impression was: negative arthrogram left hip. The MRI films were also read by Dr. Armstrong, who noted a tear at the superior acetabular labrum of the left hip. He also noted an anterior right acetabular labral tear, but no evidence of occult right hip fracture or osteonecrosis. No femoral acetabular impingement was noted. Dr. Armstrong's impression was superior/inferior left acetabular labrum tear; complex, left adnexal cyst. His impression was the same for the right hip. These were the latest medical records admitted at hearing.

37. Claimant testified she continues to have pain in her inner thighs and cannot cross her legs. She also has low back and neck pain. She described this as an ache.

38. Dr. Lesnak, who is board certified in Physical Medicine and Rehabilitation and Osteopathic Medicine testified at hearing. He is Level II accredited pursuant to the WCRP. Dr. Lesnak testified consistently with his IME report. He concluded Claimant did not have lower extremity pain complaints at the Littleton Hospital. Dr. Lesnak noted Claimant’s hip and thigh complaints took some time to develop. Dr. Lesnak acknowledged that the most recent MRI of the hips showed small labral tears in the exact position on both sides. However, he pointed out that Claimant did not always have symptoms of hip pathology. When he examined her on January 25, 2016, she had no symptoms of hip pathology, but did complain of inner thigh pains. Dr. Lesnak did not believe Claimant’s thigh symptoms were related to the accident. The delay in onset caused him to question the relatedness of this condition. He stated Claimant did not require further treatment. He testified Dr. Ryan was in error regarding the cause of Claimant’s hip and thigh pain. He opined Claimant was at MMI and sustained no permanent impairment. He opined Dr. Ryan had erred in his conclusions regarding the need for treatment.

39. Dr. Lesnak also disagreed with Dr. Ryan’s opinion that Claimant suffered permanent pathology of the cervical spine that is causally related to the

industrial injury. Dr. Lesnak stated Claimant became symptom free with respect to her cervical spine symptoms in February/March 2013, as documented by the MD Urgent Care notes. However, the ALJ noted Claimant continued to report symptoms to her providers, which extended through 2015. Dr. Lesnak opined Dr. Ryan committed clear error in rating Claimant's cervical spine, as per the *AMA Guides*, because there was no ratable pathology and no Table 53, diagnosis. If there was no Table 53 rating, Dr. Lesnak stated it was not permissible pursuant to Level II Accredited training to provide a range of motion rating. This was why he believed Dr. Ryan's 13% rating was in error. Dr. Lesnak offered a similar opinion concerning Claimant's lumbar spine. He testified no rating warranted for this area of Claimant's body under the *AMA Guides*. The ALJ was not persuaded by Dr. Lesnak's testimony regarding whether Claimant sustained an injury to her cervical and lumbar spine and whether she had a permanent medical impairment. The ALJ concluded Claimant met the criteria for a permanent medical impairment.

40. Dr. Quintero testified as an expert at hearing. He is a board certified neurologist. Dr. Quintero opined that Claimant's inner thigh pain was not related to the industrial motor vehicle accident. Dr. Quintero also noted when she was examined by Dr. Berger on November 30, 2012, although she reported new neck pain, she did not mention inner thigh pain, back or hip pain. Dr. Quintero said the etiology of Claimant's inner thigh pain was mechanical, in that it was not constant. Based on the location of her pain, he believed it followed the distribution of the gracillis muscle, especially since the symptoms consistent with aggravation of this muscle group are problems with crossing of the legs. Dr. Quintero testified that in fact, running without adequate stretching is the most common cause of injury to the gracillis muscle.

41. Dr. Ryan, who is board certified in Physical Medicine and Rehabilitation and Osteopathic Medicine, testified at hearing. He is Level II accredited pursuant to the WCRP. He testified regarding both of his examinations of Claimant. Dr. Ryan testified consistently with the findings made during both of his evaluations of Claimant. Dr. Ryan testified Claimant required additional treatment, which was the basis for his finding that Claimant was not at MMI. However, the ALJ was not persuaded by his testimony on this subject. He testified the ratings he performed with regard to the cervical and lumbar spine were done pursuant to the *AMA Guides.* The ratings were performed in accordance with the training Level II accredited physicians receive. The ALJ credited Dr. Ryan's findings with regard to Claimant's cervical and lumbar spine.

42. Based upon the totality of the evidence, the ALJ finds Respondents overcame Dr. Ryan's opinion as to whether Claimant was at MMI.

43. Claimant was at MMI as of November 12, 2015, when she was examined by Dr. Anderson.

44. The ALJ concluded Respondents overcame Dr. Ryan's opinion regarding the cause of her thigh and hip pain. Her pain complaints were not related to the injuries she sustained on October 23, 2012.

45. Claimant did not prove she was entitled to additional medical benefits in the form of treatment for her hips and thighs.

46. The evidence admitted at hearing documented an injury to and treatment for Claimant's cervical spine. Claimant sustained a permanent medical impairment to her cervical spine as a result of her industrial injury. The ALJ concluded Claimant sustained 13% rating to her cervical spine based upon the findings of Dr. Ryan.

47. The evidence in the record documented an injury to and treatment for Claimant's lumbar spine. Claimant sustained a permanent medical impairment to her lumbar spine as a result of her industrial injury. The ALJ concluded Claimant sustained 15% rating to her lumbar spine based upon the findings of Dr. Ryan.

48. Evidence and inferences inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), §§ 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S. Generally, the Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. § 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). In this case, the credibility of Claimant, as well as the various health care providers who testified as experts, bore directly on the issue of overcoming the DIME.

Legal Standard for Overcoming the DIME

In resolving the issues, the ALJ notes the question of whether Respondents overcame Dr. Ryan's opinion is governed by §§ 8-42-107(8)(b)(III) and (c), C.R.S. *Peregoy v. Indus. Claim Apps. Office*, 87 P.3d 261, 263 (Colo. App. 2004). These sections provide that the finding of a DIME physician selected through the Division of Workers' Compensation shall only be overcome by clear and convincing evidence. A DIME physician's findings of MMI, causation, and impairment are binding on the parties unless overcome by "clear and convincing evidence". § 8-42-107(8)(b)(III), C.R.S.; *Leprino Foods Co. v. Indus. Claim Appeals Office*, 134 16 P.3d 475, 482-83 (Colo. App. 2005); *accord Martinez v. Indus. Claim Appeals Office*, 176 P.3d 826, 827 (Colo. App. 2007).

Clear and convincing evidence is highly probable and free from serious or substantial doubt, and the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert,* 914 P.2d 411 (Colo. App. 1995). The mere difference of medical opinions does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAO July 19, 2004); see *Shultz v. Anheuser Busch, Inc.*, W.C. No. 4-380-560 (ICAO Nov. 17, 2000).

The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Indus. Claim Apps. Office*, 961 P.2d 590 (Colo. App. 1998). Since the DIME physician is required to identify and evaluate all losses and restrictions that result from the industrial injury as part of the diagnostic assessment process, the DIME physician's opinion regarding causation of those losses and restrictions is subject to the same enhanced burden of proof. *Id*. As noted below, the ALJ was persuaded by the evidence presented that Dr. Ryan's' opinions were incorrect. Therefore, Respondents met their burden of proof with regard to the issue of MMI and whether Claimant's hip and thigh pain were related to the industrial injury.

Causation

There was a significant question regarding the cause of Claimant's pain complaints in her thighs, as well as both hips, as documented by the extensive medical evidence and expert opinions admitted at hearing. There was a divergence of opinions by the physicians as to the cause of these symptoms. The ALJ concluded Dr. Ryan's analysis was not complete as to the cause of Claimant thigh pain and his opinion was overcome. First, Dr. Ryan did not fully analyze the findings made by Dr. Campa, who attributed the thigh complaints to Claimant's endometriosis. (Finding of Fact 12). Dr. Campa performed extensive testing to support his conclusions. Dr. Campa's opinion on the subject was persuasive to the ALJ.

Second, Dr. Quintero also raised Claimant's running as a potential cause for the pain complaints in her thighs. (Finding of Fact 22). Claimant's symptoms did not arise

for more than two months after the MVA, during which time she was running. Dr. Ryan's first DIME report also noted pain complaints after Claimant was running and there was at least some indication that Claimant continued to run. Additional support for this conclusion came in the form of Dr. Cobb's opinion, who noted Claimant's hip pain was non-traumatic.

Based on the evidence, the ALJ was persuaded that Claimant's running could have been a factor in these pain complaints. Dr. Ryan, although he noted Claimant had reduced her running, did not provide a cogent explanation as to why Claimant's hip and thigh symptoms occurred. Dr. Ryan did not directly address the opinions of Dr. Quintero on this subject, nor did he discuss the delay in onset of these symptoms. He also appeared to summarily conclude the lower extremity symptoms were related to the MVA, without a great deal of analysis. Furthermore, Dr. Ryan did not provide an explanation as to the delay in onset of hip symptoms. This gave rise to doubts about his opinions on causation and led the ALJ to conclude that his conclusions were not supported by the evidence. Therefore, Respondents met their burden on this issue.

MMI

Dr. Ryan's conclusions regarding MMI were also overcome in this case. In particular, his treatment recommendations were essentially the same between the two DIME reports. However, Dr. Ryan did not provide an explication as to why, after the extensive PT and chiropractic treatment Claimant received, that further manual therapy was in order. Also, his use of the phrase "maintaining her condition" in the first report led the ALJ to question whether this was pre-versus post-MMI treatment.[4] In addition, after the follow-up DIME with Dr. Ryan, Claimant underwent an MRI and arthrogram on both hips, which was one of the reasons Dr. Ryan concluded she was not at MMI.

Dr. Ryan's testimony at the hearing did not dispel the questions concerning MMI. (Finding of Fact 41). Therefore the ALJ concluded Respondents met their burden and introduced sufficient evidence to overcome Dr. Ryan's conclusion regarding MMI.

The ALJ concluded Claimant was at MMI as of the November 12, 2015 appointment with Dr. Anderson. (Finding of Fact 43). This conclusion is based on the fact that Claimant had extensive treatment for the cervical and lumbar spine, including PT and chiropractic therapies. (Findings of Fact 14, 16, 24, and 32). There was no evidence in the record that Claimant required additional treatment to cure and relieve the effects of her injuries to the cervical and lumbar spine. Accordingly, she was at MMI for those conditions. Given the ALJ's conclusion that the Claimant's hip and thigh condition were not related to the industrial injury, the question whether she was at MMI for those conditions is moot.

Impairment

The evidence led the ALJ to conclude Claimant injured her cervical and lumbar spine in the subject MVA. As found, Claimant complained of pain in her neck, starting

[4] Exhibit 4, p. 16.

with her treatment in the immediate aftermath of the accident. This started with the Littleton Hospital E.D. (Finding of Fact 5). Claimant's complaints of pain in the cervical spine were consistent throughout her treatment over the next couple of years. Drs. Berger and Campa diagnosed Claimant with cervical pain and opined she required treatment. (Findings of Fact 8 and 12).

Claimant's symptoms were documented when she required treatment while living in South Dakota and Alabama. Multiple physicians documented cervical symptoms, noting objective evidence of those symptoms. Claimant required treatment for these symptoms. These symptoms continued to the end of 2015, when Claimant was examined by Dr. Anderson. (Findings of Fact 29-30). Claimant continued to experience symptoms in this area of her body, which she testified to at hearing. The ALJ was persuaded Claimant met the criteria under the *AMA Guides* for an impairment rating to her cervical spine. More particularly, she had in excess of six months of pain/rigidity in her cervical spine which qualified her to receive a rating, pursuant to Table 53 II (B).

Likewise, Claimant had pain in her lumbar spine, which was reflected in the medical records admitted at hearing. The ALJ credited the opinions of those physicians, who opined these symptoms were related to the motor vehicle accident. There was objective evidence of injuries to these areas of the body in these records, which led the ALJ to conclude Claimant was entitled to an impairment rating for both the cervical and lumbar spine. (Findings of Fact 46-47). In this regard, Dr. Ryan's opinion regarding Claimant's medical him impairment was persuasive to the ALJ. He performed an evaluation of both the cervical and lumbar spine and the ALJ has adopted those impairment ratings.

In coming to this conclusion, the ALJ considered Respondents' argument that Claimant had, at most, a minor injury and no impairment to the cervical or lumbar spine. Respondents asserted no lesion was noted at the emergency department on the days of the accident. Respondents relied upon to the IME reports, as well the testimony of Dr. Lesnak. They also cited Dr. Quintero's reports and testimony. The ALJ concluded Dr. Quintero's accident related diagnoses provided factual support for the conclusion that Claimant injured these areas of her body. (Finding of Fact 22). Although Dr. Quintero testified he did not believe Claimant sustained a permanent medical impairment, there was no evidence before the Court that he performed an evaluation of permanent impairment (including ROM testing) pursuant to the *AMA Guides*. (Findings of Fact 22-23).

As found, Dr. Lesnak's testimony regarding Claimant's cervical and lumbar spine was erroneous in that he noted Claimant did not initially have symptoms to her spine. Dr. Lesnak also testified that Claimant's cervical symptoms had essentially resolved by February-March 2013. This was contradicted by the medical records admitted at hearing, and the ALJ credited the opinions of Claimant's ATPs concerning symptoms in the neck and low back. In addition, the fact there was no lesion was noted on the CT scan the day of the accident does not preclude a permanent impairment, particularly

where the evidence showed Claimant had symptoms and required treatment for an extended period of time. The ALJ did not find his testimony persuasive.

As found, these doctors documented symptoms and treatment for Claimant's cervical and lumbar spine over the course of many months. The medical records admitted at hearing document symptoms and objective findings made by Claimant's ATPs for more than two years after the accident. (See Findings of Fact 8, 10, 12, 13-17, 19, 24). Claimant also credibly testified that these symptoms continued for this period of time.

Accordingly, there was sufficient evidence to support the rating assigned by Dr. Ryan to Claimant's cervical and lumbar spine. In this regard, the ALJ concluded the ratings done by Dr. Ryan were correct and comported with the *AMA Guides*, specifically Table 53 II (B). Claimant met the criteria for a permanency rating for pain and rigidity in both the cervical and lumbar spine. Dr. Ryan's report and testimony were the most persuasive on this subject. Based upon the plethora of records documenting these symptoms, Dr. Lesnak's analysis regarding a potential injury to these areas of the body was exiguous, to say the least.

The ALJ concluded Claimant sustained a permanent medical impairment to her cervical and lumbar spine and is entitled to benefits for that impairment. Dr. Ryan's rating was valid and prepared pursuant to the AMA Guides. (Finding of Fact 25). Claimant is entitled to receive PPD benefits based upon that rating.

ORDER

IT IS ORDERED:

1. Respondents shall pay PPD benefits to Claimant, based upon the 13% rating to her cervical spine.

2. Respondents shall pay PPD benefits to Claimant, based upon the 15% rating to her lumbar spine.

3. Claimant's request for additional medical benefits to treat her hips or thighs is denied and dismissed.

4. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty

(20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Denver, CO 80203

ISSUES

The following issues were raised for consideration at hearing:

1. Whether Claimant established by a preponderance of the evidence that his left knee condition is related to the July 2, 2015, work injury; and

2. Whether Claimant established by a preponderance of the evidence that the recommendation for left knee meniscectomy is reasonably necessary and related medical treatment.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

1. The parties stipulate and agree that Dr. Lindberg's testimony was not properly recorded at hearing and thus a transcript of his testimony was not prepared. Respondents' Exhibit R is offered in lieu of a transcript of Dr. James Lindberg's live testimony at hearing.

2. Claimant is a 59-year-old fireplace installer who worked for Employer. On July 2, 2015, Claimant injured himself at work when he fell approximately 4 feet off of a ladder to a cement floor while installing a fireplace.

3. Claimant reported to University of Colorado Health Emergency Room on July 2, 2015, complaining of left shoulder pain and left knee pain. All x-rays were negative for acute fracture but did show significant glenohumeral joint arthrosis.

4. Claimant returned to work on July 6, 2015, and was placed on light-duty. Claimant's light-duty job assignment required him to drive to and inspect up to 16 different sites per day. Claimant admitted that during his initial return to work in July 2015, that he would sometimes use a company vehicle that was a stick shift in order to complete these tasks. Claimant continued this light-duty assignment until his shoulder surgery on March 4, 2016.

5. Upon return examination on July 8, 2015, with Dr. Jeffrey Winkler, Claimant complained of continued shoulder pain and indicated his knee was feeling better than during the previous examination, but definitely still in pain. Examination of Claimant's left knee revealed no effusion, full range of motion, negative varus/valgus, negative Lachmans and limping gait

6. During Claimant's fourth physical therapy session on July 29, 2015, he reported 0/10 pain in his left knee with some noted pain while descending stairs, standing on uneven surfaces, or kneeling. Examination of Claimant's left knee revealed full range of motion and negative findings during anterior drawer testing, varus testing, valgus testing and Lachman testing. Claimant was recommended to continue a home exercise program for his left knee.

7. Claimant returned for evaluation with his primary provider at Concentra on August 26, 2015. Physical examination of Claimant's left knee again revealed full range of motion with negative findings during anterior drawer testing, varus testing, valgus testing, and Lachman testing.

8. On October 16, 2015, Claimant reported to Concentra for evaluation and reported complete resolution of pain in his left knee without any associated symptoms. Notes indicated that Claimant reported 0/10 pain and "reports no exacerbating factors."

9. Claimant presented for physical therapy treatment on November 24, 2015, reporting 0/10 pain in his left knee. Due to Claimant's lack of left knee complaints, during Claimant's second round of physical therapy, he required 16 sessions of physical therapy directed at his shoulder.

10. On December 31, 2015, Claimant returned for his final round of physical therapy at Concentra. Claimant reported 0/10 pain in his knee without any noted tenderness to palpation. Claimant tested negative for: anterior draw sign, varus test, valgus test, Lachman test, and apprehension test. His left knee joint mobility was "normal and pain free," with full range of motion and pain free movement in all plains. Claimant was noted to have met 100% of his goals related to recovery of his left knee.

11. Claimant followed up with Dr. Pineiro on January 6, 2016. Examination of Claimant's left knee revealed no deformities or tenderness to touch. Claimant had full range of motion and normal strength was noted in his left knee.

12. Claimant was recommended to undergo left total shoulder arthroplasty which was completed by Dr. Grey on March 4, 2016. Claimant began a third round of physical therapy for his shoulder on March 15, 2016. Claimant did not mention his left knee in any of the 33 subsequent physical therapy sessions.

13. Claimant followed up with Dr. Pineiro on May 9, 2016, for full evaluation. Claimant indicated that his shoulder was felling better with physical therapy and did not mention his left knee. Dr. Pineiro placed Claimant on restrictions regarding his left shoulder and was silent regarding Claimant's left knee. Claimant was released to light duty and he returned to modified duty on May 24, 2016.

14. Chris Tenan credibly testified to Claimant's light-duty activities.

Claimant's light-duty position required him to watch training videos and also clean approximately 50 fireplaces that were spread out over a 3,000 square foot facility. According to Mr. Tenan, cleaning the fireplaces required Claimant to get on his knees or flex at the knees as some of the fireplaces were located close to the ground. Mr. Tenan testified that Claimant was able to complete this light-duty task for 3 months 40 hour per week without once mentioning any left knee complaints.

15. Upon physical examination with Dr. Pineiro on June 15, 2016, Claimant reported that he was back to light-duty and tolerating it well. During that examination, Claimant indicated that he was not in any pain regarding his left shoulder and no mention is made of Claimant's left knee. Claimant was recommended to complete his physical therapy at which point, Claimant would be given an impairment rating.

16. On August 11, 2016, Claimant was laid-off from his position at Employer as there was no longer a position open for him. Claimant testified that he had no other job lined up, that he has not worked since being laid off and that he continues to receive a bi-weekly check from Respondents.

17. Claimant returned for an evaluation with Dr. Pineiro on September 2, 2016. At this appointment, Claimant claimed to have not been very active since his surgery 6 months prior and that about a month ago he started to notice left knee pain that radiated into his foot. During testimony, Claimant denied that his work activity had been increased during the fall of 2016 and actually testified that his work activity was lessening at that time. Dr. Pinero opined that Claimant was at MMI for his left shoulder, but the doctor ordered an MRI of the left knee because of Claimant's complaints of increased left knee pain.

18. MRI results taken on September 13, 2016, demonstrated a complex tear of the posterior horn and body of the medial meniscus with a partial tear/high-grade sprain of Claimant's ACL. Claimant also had degenerative changes most prominent in the patellofemoral compartment. Marrow edema was found posteriorly within the lateral tibial plateau. The radiologist noted that the marrow edema found on the MRI results "may be from a recent injury."

19. Claimant was examined by Dr. Martin from the Orthopaedic & Spine Center of the Rockies on October 17, 2016. Claimant reported that he had continuous and persistent pain and a numb feeling almost like "an explosion of discomfort that is intermittent with twisting or stepping down." He also noted getting in and out of his truck caused him pain. Physical examination of Claimant's left knee now revealed limited range of motion due to pain, significant positive Lachman's findings, positive pivot shift on the left, medial joint line tenderness and positive McMurray's test. Dr. Martin requested surgery as a result of his review of the MRI findings from September 13, 2016.

20. On October 28, 2016, Claimant returned for examination with Dr. Pineiro. Dr. Pineiro thought Claimant's knee injury was a result of the "contusion" from his work-

injury and that Claimant's knee was overlooked in the process. Dr. Pineiro noted that instead of a full review of all of Claimant's medical records, her opinions and conclusions were based on Claimant's subjective description of the mechanism of injury and pain history.

21. Dr. Hattem conducted a review of the requested surgery on October 13, 2016, and recommended that the procedure be denied as Claimant's knee condition was unrelated to his work injury. Dr. Hattem reasoned Claimant's left knee strain had fully resolved as Claimant reported resolution of knee pain and test results were negative for injury. Likewise, for multiple months following the injury, Claimant never complained of knee pain. Furthermore, the left knee MRI taken on September 13, 2016, demonstrated edema which was suggestive of a recent injury. Dr. Hattem opined that an intervening injury had taken place and thus, the surgery was unrelated to Claimant's work-injury.

22. Dr. Hattem credibly testified that Claimant's current left knee complaints were unrelated to his initial work injury for a number of reasons. Prior to testifying, Dr. Hattem reviewed all medical records submitted as exhibit by Respondents. Dr. Hattem testified that had the initial injury caused the pathology seen in the September 13, 2016, MRI of Claimant's left knee, he would have reported knee complaints to his providers upon his return to work in May 2016. Instead, Dr. Hattem noted Claimant had returned to work for almost four months prior to complaining to a provider about his knee, despite several full examinations and opportunities via pain diagrams. He likewise discounted Dr. Pineiro's explanation of shoulder pain masking Claimant's knee pain as the medical records demonstrated Claimant to be in very little pain following his shoulder surgery.

23. Dr. Hattem testified that any injury to Claimant's knee that was a result of the July 2, 2015, injury, had fully resolved by November or December of 2015 as Claimant received conservative treatment and noted complete resolution of his pain. It was Dr. Hattem's expert opinion that had the injury on July 2, 2015, caused the pathology seen on the September 13, 2016, MRI, Claimant would have experienced continuous pain and that activities of daily living would have caused Claimant to experience symptoms.

24. Dr. James Lindberg completed an IME of Claimant on February 28, 2017, where he reviewed all of Claimant's medical records, including the MRI imaging taken on September 13, 2016. Dr. Lindberg is a Board certified orthopedic surgeon who recently retired from the practice of surgery. He currently performs orthopedic consultations. Dr. Lindberg was qualified at hearing as an expert in orthopedic surgery. He credibly testified that something had recently happened to Claimant's knee to cause the findings upon his examination.

25. Dr. Lindberg noted numerous doctors who failed to note any instability in Claimant's left knee after the initial injury. However, upon presentation at Dr. Martin's office in September of 2016 and during the IME evaluation in February 2017, Claimant complained of massive instability and test results found instability at a level not before

seen during Claimant's multiple and extensive physical examinations. Dr. Lindberg also noted Claimant's changing presentation with his providers when he complained of posterior knee pain on September 2, 2016, only to complain of anterior knee pain on October 15, 2016 and then both anterior and posterior pain on November 11, 2016.

26. Dr. Lindberg also credibly testified that the MRI findings on the September 13, 2016, were new and that medical records confirmed this opinion for a number of reasons. First, Dr. Lindberg agreed with the radiologist that there were findings of edema in Claimant's left knee which were indicative of a new ACL injury. Second, Dr. Lindberg pointed to numerous negative findings during multiple prior examinations of the valgus test, the Vargas test, the Lachman's test and that Claimant was now testing positive for those findings. It was Dr. Lindberg's opinion that there was no medical explanation which could account for the new findings, other than an intervening injury.

27. Dr. Lindberg agreed with Dr. Hattem in his opinion that a lack of pain complaints for a period of nine months indicated that the MRI findings were not caused by the July 2, 2015, injury. Dr. Lindberg opined that the type of tear that Claimant had would not have resolved with the level of inactivity Claimant described to him. It was Dr. Lindberg's opinion that had Claimant had the meniscus tear since July 2, 2015, any and all activities of daily living requiring the use of his left knee would have caused Claimant symptoms/pain. Dr. Lindberg opined that no level of inactivity, short of being completely bed-ridden, would have allowed Claimant to remain asymptomatic for nine months had Claimant had the pathology seen on the September 13, 2016, MRI since July 2, 2015.

28. Dr. Lindberg also disagreed with the opinions of Dr. Pineiro and Dr. Martin that Claimant's shoulder pain caused him to not mention his knee pain. Dr. Lindberg noted that his review showed Claimant had done remarkably well after his shoulder replacement surgery and that there were no indications Claimant could not identify knee pain at the same time his shoulder was hurting. He also agreed that Claimant was most likely at MMI in December 2015 as all of his symptoms had resolved with conservative treatment and that had Claimant had significant pathology all along, his symptoms would not have subsided with physical therapy.

29. Furthermore, Dr. Lindberg noted that the proposed surgery by Dr. Martin would not be reasonable or necessary as it would likely cause increased instability in Claimant's knee. It was his opinion that addressing the meniscus without also operating on the ACL would only cause further problems in Claimant's knee and that it was his recommendation that no surgery be performed.

30. The opinions of Drs. Albert Hattem and James Lindberg are more credible and persuasive than the opinions of Drs. Rosalind Pinero and Dale R. Martin.

31. Claimant's current left knee condition is not causally related to the July 2, 2015, work injury.

32. Accordingly, Claimant's claim for medical treatment of the left knee

condition, the left knee meniscectomy as recommended by Dr. Martin, is not reasonably necessary and related medical treatment.

CONCLUSIONS OF LAW

Based on the foregoing Findings of Fact, the ALJ reaches the following Conclusions of Law:

1. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). A Workers' Compensation case is decided on its merits. Section 8-43-201. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

3. To sustain a finding in a claimant's favor, the claimant must do more than put the mind of the trier of fact in a state of equilibrium. If the evidence presented weighs evenly on both sides, the finder of fact must resolve the question against the party having the burden of proof. *People v. Taylor*, 618 P.2d 1127 (Colo. 1980). *See also, Charnes v. Robinson*, 772 P.2d 62 (Colo. 1989). Proof by a preponderance of the evidence requires a claimant to establish that the existence of a contested fact is more probable than its nonexistence. *See Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 (ICAO March 20, 2002).

4. The respondents are liable for medical treatment that is reasonably necessary to cure and/or relieve an injured worker from the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. An admission of liability does not amount to an admission that all subsequent medical treatment is causally related to the industrial injury or that all subsequent treatment is reasonably necessary. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). Respondent retains the right to challenge the cause of the need for continuing treatment and the reasonable necessity of specific

treatment. *Hanna v. Print Expediters, Inc*., 77 P.3d 863 (Colo. App. 2003). The claimant must prove a causal nexus between the claimed disability and need for medical treatment and the work related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). The question of whether the claimant has met the burden to establish the requisite causal connection and whether the medical treatment sought is reasonably necessary is one of fact for the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *Putnam v. Putnam & Associates*, W.C. No. 4-120-307 (August 14, 2003).

5. The overwhelming weight of the credible evidence shows Claimant failed to prove that the incident on July 2, 2015, caused the need for the recommended surgery by Dr. Martin. Claimant contends that he was so inactive and in so much pain from his shoulder, that he was unable to notice his knee pain for a period of nine months. This explanation is not persuasive.

6. Claimant made conflicting report to medical professionals about his alleged increased activities around July of 2016. And, then during testimony, Claimant testified that his activity level at that time was actually decreasing.

7. The experts that have fully reviewed this claim, Drs. Lindberg and Hattem, credibly opined that if Claimant had the condition that was seen on the September 13, 2016, MRI throughout the entirety of his claim, Claimant would not have had a period of nine months where he felt no pain and had no associated left knee symptoms. The experts opined that no amount of inactivity, short of being bed-ridden would have allowed Claimant to be asymptomatic for nine months. Dr. Lindberg conclusively testified that with the derangement seen on the September 13, 2016, MRI, Claimant would have noticed aggravation of his condition conducting regular activities of daily living. Claimant attended 49 appointments between December 31, 2015, and September 2, 2016, without mentioning left knee symptoms.

8. The evidence showed Claimant to be active during his return to work. Upon his return after surgery, Claimant started cleaning fireplaces in Employers' 3,000 square foot facility on May 24, 2016. To perform these duties Claimant had to kneel and flex his knees. If claimant had a significant meniscus tear as a result of the July 2, 2015, fall, he would have certainly reported pain in his knee at that time and had plenty of opportunities to do so via pain diagrams and physical examinations. However, the medical records are completely devoid of any left knee complaints for at least 3 months after he had been completing this work and while working 40 hours per week.

9. Evidence further established that Claimant was very active when he returned to work four days after the initial injury. Had the July 2, 2015, injury caused the significant meniscus pathology later seen on MRI imaging, he would not have reported continued and progressive improvement of his knee symptoms. Dr. Lindberg credibly testified that the meniscus injury seen on the September 13, 2016, MRI would not get better with physical therapy, yet, records reflect that Claimant continued to get better.

10. The court believes Dr. Lindberg's testimony that something else happened to Claimant's left knee after the initial work injury. It was clear to him that Claimant's knee had changed since the date of injury and that this was confirmed by the multiple objective findings. Dr. Lindberg opined that there was conclusive evidence that something else had happened to Claimant's knee as it made no medical sense that Claimant would be asymptomatic for nine months and then suddenly appear with significant and different findings upon examination.

11. Conservative treatment cured Claimant of the effects of the injury at the end of December 2015 and no further diagnostic testing or treatment was needed. Had Claimant only injured his left shoulder, he would have been placed at MMI and released without impairment. However, only because Claimant had left knee complaints, did his claim stay open.

12. Dr. Martin's opinion that the chronic ACL tear and medical meniscus tear was caused at the time of injury, 16 months prior was not found to be credible or persuasive. Dr. Martin recommended Claimant undergo a meniscectomy of his left knee. However, Dr. Lindberg credibly testified that had Claimant had the left knee injury on July 2, 2015, that was seen in the MRI taken on September 13, 2016, none of the tests conducted on prior examinations would have been negative. Instead, Dr. Lindberg points to examinations where Claimant tested negative for Lachman with absolutely no mention of instability for at least 12 months. Had Claimant had an ACL injury from the beginning, Claimant would have had positive findings during multiple objective tests.

13. Based on the testimony and the medical records, Claimant failed to meet his burden to establish by a preponderance of the evidence that his left knee condition is related to the July 2, 2015, work injury. Likewise, Claimant failed to establish by a preponderance of the evidence that the recommendation for left knee meniscectomy is reasonably necessary and related medical treatment.

ORDER

It is therefore ordered that:

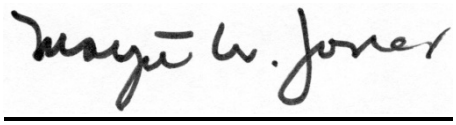
1. Claimant claim for the left knee injury is denied and dismissed.

All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For

statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 9, 2017



Margot W. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Whether Claimant established by a preponderance of the evidence that his claim is compensable.

- Whether Claimant established by a preponderance of the evidence that the medical treatment he received was reasonably needed and provided by an authorized treating physician.

- Whether Claimant established by a preponderance of the evidence entitlement to temporary total disability compensation.

- Whether Respondents established by a preponderance of the evidence that Claimant was responsible for the termination of his employment.

FINDINGS OF FACT

1. Claimant began employment as a nightshift stocker in July of 2016. Prior to that time, Claimant had been a stay-at-home father, taking care of his children and his girlfriend's children. He testified that he took the job with Employer on the night shift so that he could be available to watch his children during the day when his girlfriend was at work. Claimant's typical shift was 10:00 p.m. to 6:00 a.m.

2. Claimant testified that he was performing his usual stocking duties on the evening of October 17 or the early morning of October 18, when he was setting down a case of soup cans and felt pain in his right forearm. He claims that there was a large lump on the outside of his forearm, near his elbow. Claimant testified that he massaged the "lump" until it receded and told his supervisor, "Kenny," that he was having pain in his forearm. Kenny told Claimant that he could leave work and go to the emergency room.

3. Claimant did not go to the hospital on the morning of October 18 but left work early for home. He testified that he applied ice to the area.

4. Claimant was not scheduled to work on the following day, but returned to work on October 20 for his usual shift and resumed his regular duties.

5. Claimant testified that on October 28, 2016, he was using a pallet jack to move a pallet of paper products and bottled water. He testified that the forks on the jack abruptly fell, stopping the pallet and jerking his right arm. He testified that the action aggravated his right forearm where he had had pain on the evening of October 17 or early morning of October 18, 2016.

6. Claimant testified that he told his supervisor, Josh, about the October 28, 2016 incident, and was told he could go home. He testified that he also discussed his situation with another supervisor, Justin Anderson. He told Justin Anderson that he was a hemophiliac and preferred treating with his specialist, Dr. Wang, to treating with a workers' compensation doctor because he thought his injury might be related to his

hemophilia. Claimant returned to his personal physician for blood disorder treatments. Claimant testified that he was given "factor VIII" shots for his complications from hemophilia and that he had previously received those types of injections.

7. Claimant testified that he brought the doctor's note releasing him from work and provided it to Assistant Store Manager, Anna Sherrod. She filled out Employer's First Report of Accident and referred Claimant to the workers' compensation medical provider, Dr. Prok.

8. Claimant admitted at hearing that he still does not have a diagnosis of what caused the pain in his forearm, despite seeing his personal blood disorder doctors and the workers' compensation doctor.

9. Claimant testified that Ms. Sherrod called him and told him that he was going to be given day shift light duty work within his restrictions. Claimant inquired why he would have to work on the day shift, instead of his usual night shift. Ms. Sherrod informed him that a manager had to be present when injured employees return to work with restrictions. Claimant protested and indicated that he could not work days. Ms. Sherrod told him that he was on the schedule to start the following Monday at 9:00 a.m. Claimant testified that he called in at 9:00 a.m. on Monday morning and told them that he would not be coming in. He did not return to work. After several missed shifts, Employer terminated Claimant.

10. An undated written statement by one of the Claimant's supervisors, Justin Anderson, summarizes the circumstances of Claimant's alleged injuries. The statement noted that Claimant did have pain in his arm and was told to leave work and go to a hospital by his night crew foreman, "Kenny." Claimant did not go to a hospital or see a doctor but returned to work after a regularly scheduled day off. The written statement confirms that there was an incident of pain reported which appears to be the October 28, 2016 alleged incident with the forklift. Mr. Anderson indicates that he instructed Claimant how to report an on-the-job injury. Mr. Anderson related that Claimant told him that he had a special condition and wanted to be seen by his own doctor who specializes in blood disorders. According to the written statement, Claimant declined to file a report of an on-the-job injury because he thought "his arm may be related to his pre-existing condition and needed his specialist to check it out."

11. Ms. Sherrod testified by telephone at the hearing. She confirmed that she was Employer's HR representative and assistant manager at the store. She testified that she was made aware of Claimant having an incident of pain in his forearm on two different occasions. Ms. Sherrod indicated that she filled out the Employer's First Report of Accident and sent it off to the Sedgwick CMS, the workers' compensation third-party administrator for the Employer. Ms. Sherrod confirmed that she did not decide whether or not Claimant's condition was work-related, and that such a decision was for Sedgwick CMS's to make.

12. Ms. Sherrod testified that she told Claimant she could arrange for light duty work within the physical restrictions assigned by his treating physicians. Claimant

protested that he did not want to work the day shift because it conflicted with his childcare schedule. Ms. Sherrod told him that he had to work on a shift where a manager could monitor his work within his physical restrictions. She told him that he would be placed on the day shift and could report the following Monday morning at 9:00 a.m. Ms. Sherrod testified that Claimant called on Monday at 9:00 a.m. and said he would not be returning to his employment.

13. The record contains documents regarding Respondent's investigation into Claimant's alleged injury and the forms which Ms. Sherrod sent to Sedgwick CMS. Employer's records included a October 4, 2016 written warning for failing to show up or call when he was going to miss a shift. This exhibit also contains a termination form dated December 5, 2016, terminating the Claimant for failing to return to work for scheduled shifts.

14. Employer provided answers to specific questions for Sedgwick CMS as part of the reporting of the alleged incident indicating that Employers' personnel questioned the validity of the claim and indicated that Claimant had indicated to his supervisor that he thought the problem was not work-related but rather was related to a pre-existing condition that was acting up.

15. Dr. Mark Paz, who conducted a Respondents-sponsored IME, testified at hearing and his narrative report was also entered into evidence. Dr. Paz is a medical doctor licensed to practice in the State of Colorado, specializing in internal medicine and occupational medicine. Dr. Paz is Level II certified. Dr. Paz performed the Independent Medical Evaluation on March 22, 2017 and reviewed all medical records, which are set forth in his narrative report April 7, 2017.

16. Dr. Paz took a detailed history from Claimant about how the alleged injuries occurred. He also reviewed Claimant's employment records. Dr. Paz testified that Claimant claimed that on October 18, 2016, he lifted a case of soup cans, set them down, and experienced pain in his right arm. Claimant explained that he developed a "bulge" in his proximal right forearm and had pain.

17. Claimant described an incident on October 28, 2016, which occurred while he was using a pallet jack. Claimant demonstrated for Dr. Paz how he was pulling the pallet jack with its handle when the pallet jack unexpectedly lowered a few inches and jerked his right forearm, causing pain and swelling in the immediate area. Claimant also demonstrated his movements while testifying at hearing.

18. Based upon Claimant's description and demonstration of how both incidents occurred, Dr. Paz opined there was no mechanism of injury to cause an injury to the proximal forearm below the elbow. He explained that the flexor and extensor muscles in the forearm have specific flexion and extension functions while performing certain actions. Based upon Claimant's demonstration, Dr. Paz opined, within a reasonable degree of medical probability, that the claimed area of musculature would not have been injured or even utilized when Claimant moved the case of soup or pulled the palette jack. Dr. Paz testified that neither Claimant's medical records nor his

description set forth a mechanism of injury that would explain his subjective symptoms. He further opined that there had been inadequate diagnostic testing.

19. Dr. Paz testified that on March 22, 2017, when he examined Claimant, Claimant had no objective indication of injury and could have returned to his pre-injury employment without restriction of activity.

20. Dr. Paz opined that Claimant did not have a workers' compensation injury. He explained that according to the Level II physicians' accreditation curriculum, the mechanism-of-injury must correlate with both a medical diagnosis and findings. Dr. Paz testified that the two incidents described on October 18 and October 28 do not correlate with a mechanism of injury to the right forearm extensor muscle. He testified that that history is inconsistent with the proximal extensor compartment swelling and subjective complaints of pain. He also noted inconsistency in the exposure descriptions in the medical records. Dr. Paz opined that the physical mechanics of lifting a case of soup cans or pulling a pallet were not congruent with a right forearm inter-muscular bleed. Dr. Paz did not believe that the bulge could have been explained on the basis of an injury or hemophilia in the absence of direct trauma to the extensor muscle of the right upper extremity. He further stated, in both his testimony and his narrative report, that no medical treatment was necessary or reasonable for a work-related incident.

21. The ALJ finds Dr. Paz' opinions to be credible and persuasive.. Dr. Paz opined Claimant's right arm pain and injury claims are not supported by objective findings on physical examination or in the medical records. He also noted that the physical examination history was inconsistent with Claimant's reported functional limitations. Finally, Dr. Paz noted that Claimant reported that he had been wearing a splint and keeping his right upper extremity immobilized. However, on examined there was no disuse atrophy and the right upper extremity was, in fact, larger in circumference than his left. The lack of atrophy and larger circumference of the right forearm indicated that the right upper extremity was being used and had not been immobilized.

CONCLUSIONS OF LAW

The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to

a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAP, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been either an injury or an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

An industrial injury has to both occur in the "course of employment" and must also "arise out of" employment duties. The latter deals with a causal connection between the employment and the injury. *General Cable Co. v. Industrial Claims*

Appeals Office, 878 P.2d 118 (Colo. App. 1994). The mere happening of an injury on-the-job does not satisfy both requirements of compensability. *Morrison v. Industrial Claims Appeals Panel,* 760 P.2d 654 (Colo. App. 1988).

As found, Claimant failed to demonstrate, by a preponderance of the evidence, that he suffered a disabling injury to his right forearm arising out of his employment with Employer. According to the written statement of his supervisor, Claimant himself declined to make a report of a work-related injury because he thought that his pre-existing blood disorder might be the explanation for the pain he was experiencing. He did not report a work-related injury, on October 18, 2016 and, according to the written statement of his supervisor, Justin Anderson, Claimant was uncertain as to whether his forearm pain was related to a work-related incident after the October 28, 2016 pallet jack incident. The medical evidence also does not support a disabling work-related injury. Claimant admitted in his testimony that he does not have a firm diagnosis of his subjective pain complaints, after having been treated by his blood disorder physicians and the designated workers' compensation physician.

As found, Dr. Paz's opinions are found to be credible and persuasive regarding the lack of a mechanism-of-injury. Dr. Paz' testimony that the symptoms and the location of swelling on the Claimant's forearm cannot be explained by the movements of lifting and setting down a case of soup or pulling a pallet jack, based upon the muscles involved in the flexion and extension functions while performing these tasks. Dr. Paz credibly explained that the mechanism-of-injury has to be consistent with the diagnosis and objective findings. There is no specific work-related diagnosis of Claimant's condition found in the medical records, according to Dr. Paz's credible testimony at hearing.

As found, Claimant's pain sensation after performing duties at his employment, does not necessarily compel a conclusion that a work-related injury has occurred. The medical records show prior complaints of pain in 2015 where Claimant sought treatment for his blood disorder physicians. Those records reveal that Claimant had complaints of pain which he could not correlate with any specific trauma or mechanism of injury. He eventually theorized that performing some sanding maneuvers may have started the complaints of pain back in 2015. Similarly, in these incidents, Claimant appears to have been uncertain of what was causing his pain, compelling him to go to his own blood disorder physicians for initial treatment and evaluation.

Section 8-42-105(4), C.R.S., provides:

> In cases where it is determined that a temporarily disabled employee is responsible for termination of employment, the resulting wage loss shall not be attributable to the on-the-job injury.

It is undisputed that Employer offered Claimant employment within his restrictions and scheduled him for light duty employment. Claimant failed to report for the scheduled light duty employment, and after several missed shifts Employer

eventually terminated Claimant, pursuant to Employer's policies. The ALJ acknowledges that Claimant may have had child care issues if he worked the day shift. However, balancing the factors involved, Claimant was responsible for his own termination. The question of whether the claimant acted volitionally or exercised a degree of control over the circumstances of the termination is ordinarily one of fact for the ALJ. *Knepfler v. Kenton Manor*, W.C. No. 4-557-781 (March 17, 2004). Employer offered employment within Claimant's physical restrictions and Claimant declined to accept that offer and remain off work. Under these circumstances, temporary disability benefits should not be awarded.

In addition to all of these factors, Claimant's credibility is questionable. Although he claims to have immobilized his arm before his independent medical examination, physical findings were that the arm had not been immobilized as claimed. The Claimant also made documented statements to his supervisors that he was unsure if he had been injured and that his symptoms of pain might be related to his blood disorder.

As found, Claimant has failed to demonstrate that his employment activities on either October 18 or 28, 2016 caused a work related injury.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant did not sustain a compensable work related injury on October 18 or 28, 2016.

2. Claimant's claim is denied and dismissed.

3. Issues not expressly decided herein are reserved to the parties for future determination.

4. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 12, 2017

Denver, CO 80203

ISSUES

- Whether claimant has proven by a preponderance of the evidence that he suffered a compensable injury on August 2, 2016 arising out of and in the course and scope of his employment with employer.

- If claimant has proven a compensable injury, whether claimant has proven by a preponderance of the evidence that the left shoulder surgery performed Dr. Harris on December 15, 2016 was reasonable medical treatment necessary to cure and relieve claimant from the effects of the August 2, 2016 work injury.

FINDINGS OF FACT

1. Claimant works for employer as an electrician. Claimant testified that on August 2, 2016 he injured his left shoulder while he was installing light fixtures. Claimant further testified that the injury occurred when he was lifting a light fixture above his head for installation and felt a pop and pain in his left shoulder. Claimant testified that because of the pain he was unable to lift his left arm.

2. Claimant testified that he has had prior issues with his left shoulder. Claimant testified that many years ago he slipped on ice and injured his left shoulder. Claimant testified that he was able to continue working following that incident.

3. The medical records indicate that in March 2014 claimant had another fall resulting in a left shoulder injury. On March 4, 2014, claimant sought treatment with Dr. Michael Vargas because of pain he was having in his left shoulder. At that time, Dr. Vargas ordered x-rays of claimant's left shoulder which showed probable degeneration of the supraspinatus tendon with chronic cortical changes at the greater tuberosity.

4. On March 12, 2014, claimant was seen by Dr. Robert Derkash who diagnosed left shoulder impingement with rotator cuff tear. Dr. Derkash opined that the rotator cuff tear was "significant" and discussed with claimant the possibility of surgery. Claimant chose not to pursue surgery at that time. Claimant testified that following the March 2014 injury he was able to return to full duty work.

5. Claimant testified that the pain he experienced on August 2, 2016 was different from his two prior left shoulder issues. Claimant described that the difference was that on August 2, 2016, he felt a pop followed by pain and the inability to lift his left arm.

6. Claimant reported the August 2, 2016 incident to employer on that same date. The following day, August 3, 2016, claimant notified employer that he believed that he needed to see a doctor. Employer referred claimant to Dr. Dennis Eicher.

7. Claimant first treated with Dr. Eicher on August 5, 2016. Claimant reported to Dr. Eicher that he had felt left shoulder pain and discomfort since August 3, 2016. Claimant also told Dr. Eicher that he had "been doing a lot of overhead work and then he started getting pain and discomfort". Dr. Eicher diagnosed left shoulder impingement and referred claimant to physical therapy. On August 5, 2016, claimant began physical therapy with Emily VanGorp, DPT with Personal Rehabilitation Center.

8. On September 22, 2016, claimant returned to Dr. Eicher and reported that he was still having left shoulder pain in the 4 out of 10, and 6 out of 10 levels. On that date, Dr. Eicher ordered a magnetic resonance image ("MRI") of claimant's left shoulder and referred claimant to Dr. Derkash with Grand River Primary Care for an orthopedic consultation.

9. On September 30, 2016, an MRI of claimant's left shoulder showed full thickness tears of the supraspinatus and infraspinatus tendons and medial retraction of the supraspinatus tendon.

10. On October 4, 2016, claimant was seen by Dr. Frank Kopich who also practices at Grand River Primary Care. Claimant reported to Dr. Kopich that at the time of the injury he "felt an acute episode of pain". Dr. Kopich opined that claimant had an acute exacerbation of a chronic rotator cuff tear, but that the tear was likely "unrepairable". Dr. Kopich referred claimant to Dr. Norman Harris for a second opinion.

11. On November 18, 2016, claimant was seen by Dr. Harris. Claimant reported to Dr. Harris that he injured his left shoulder when he was doing some overhead work and felt a pop in his shoulder followed by pain and weakness. Dr. Harris opined that the muscle atrophy of the supraspinatus tendon, as identified on the MRI, indicated an "acute or chronic" injury to claimant's rotator cuff. Dr. Harris recommended claimant undergo rotator cuff repair surgery.

12. On December 15, 2016, Dr. Harris performed a left shoulder arthroscopy with arthroscopic subacromial decompression and partial repair of claimant's left rotator cuff. Claimant testified that his left shoulder is better since he underwent surgery.

13. On December 19, 2016, Dr. Christopher Issacs performed a physician advisor review and opined that claimant's left shoulder complaints are the result of a chronic condition. In support of this opinion, Dr. Issacs pointed to the MRI results that showed significant muscle atrophy and significant fatty infiltration of the muscles. Dr. Issacs opined that these findings are indicative of a "long-standing and not an acute injury" that "likely predated the work injury". Respondents denied claimant's claim and have denied authorization for the recommended left shoulder surgery.

14. At the request of respondents, Dr. Wallace Larson performed a review of claimant's medical records. Dr. Larson authored a report dated April 4, 2017 in which he opined that claimant's left shoulder complaints are the result of a preexisting condition that is unrelated to claimant's occupational exposure. Dr. Larson further opined that this preexisting condition was not aggravated or accelerated by claimant's work related activities in August 2016.

15. Dr. Larson testified by deposition and confirmed his opinion that claimant's left shoulder injury is not work related, but instead the result of a preexisting condition. Dr. Larson testified that the findings on the MRI show a chronic condition. In support of his opinion, Dr. Larson pointed to the muscle atrophy and fatty infiltration noted on the MRI results and opined that such findings will typically take a number of months to occur. In addition, Dr. Larson indicated that the retraction of the rotator cuff is typically seen as a chronic tear.

16. The ALJ credits the medical records and the opinion of Dr. Kopich over the contrary opinions of Drs. Issacs and Larson and finds that claimant suffered an acute injury that exacerbated his preexisting left shoulder condition.

17. The ALJ credits claimant's testimony and finds that although he had two prior injuries to his left shoulder, he was able to perform all of his job duties following those injuries. It was only after the August 2, 2016 work injury that claimant experienced pain and the inability to lift his left arm. The ALJ finds that claimant has demonstrated that it is more likely than not that while working overhead on August 2, 2016, he aggravated or accelerated a preexisting condition in his left shoulder resulting in the need for medical treatment.

18. The ALJ credits the claimant's testimony and finds that his shoulder has improved since the December 2016 surgery. The ALJ credits the opinion of Dr. Harris over the contrary opinion of Dr. Larson and finds that claimant has demonstrated that it is more likely than not that the surgery performed by Dr. Harris on December 15, 2016 was reasonable medical treatment necessary to cure and relieve claimant from the effects of the August 2, 2016 work injury.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., (2015). A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2015).

3. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with "a preexisting disease or infirmity to produce disability or need for treatment." *See H & H Warehouse v. Vicory, supra.* Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

4. As found, claimant has demonstrated by a preponderance of the evidence that he suffered a compensable injury on August 2, 2016 arising out of and in the course and scope of his employment with employer. As found, claimant's testimony and the opinion of Dr. Kopich are credible and persuasive.

5. As found, claimant has demonstrated by a preponderance of the evidence that the left shoulder surgery performed by Dr. Harris on December 15, 2016 was reasonable medical treatment necessary to cure and relieve claimant from the effects of the August 2, 2016 work injury. As found, claimant's testimony and the opinion of Dr. Harris are credible and persuasive.

ORDER

It is therefore ordered that:

1. Claimant has established by a preponderance of the evidence that he sustained a compensable injury on August 2, 2016.

2. Respondents shall pay for claimant's left shoulder surgery performed by Dr. Harris on December 15, 2016.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Whether claimant has demonstrated by a preponderance of the evidence that the right shoulder surgery recommended by Dr. Peter Millett is reasonable medical treatment necessary to cure and relieve claimant from the effects of the admitted February 14, 2014 work injury.

FINDINGS OF FACT

1. Claimant suffered an admitted injury to his right shoulder on February 14, 2014. Claimant testified that the injury occurred when he attempted to move a large boulder from the road. Claimant testified that while attempting to push the boulder he felt a popping in his right shoulder.

2. Claimant timely reported the February 14, 2014 injury to employer. Employer sent claimant for medical treatment at La Plata Family Medicine. Claimant treated at La Plata Family Medicine on February 24, 2014 and was seen by his authorized treating physician ("ATP") Dr. Brad Lyons. During this workers' compensation claim Dr. Lyons has prescribed pain medications for claimant and referred him to physical therapy. Since first treating with Dr. Lyons claimant has attended over 100 physical therapy appointments.

3. Dr. Lyons referred claimant to Dr. Gareth Hammond for a surgical consultation. Claimant was first seen by Dr. Hammond on March 19, 2014. At that time Dr. Hammond opined that claimant had a possible shoulder sprain or a partial injury to his supraspinatus and biceps tendon. Dr. Hammond ordered a magnetic resonance image ("MRI") of claimant's right shoulder. The MRI was taken on April 11, 2014 and showed a "questionable" tear along the posterior and superior labrum.

4. On April 24, 2014, Dr. Hammond administered a glenohumeral joint injection. On April 29, 2014, claimant reported to Dr. Hammond that the injection did not provide any pain relief.

5. Thereafter, Dr. Hammond recommended claimant undergo surgery. On May 27, 2014, Dr. Hammond performed a right shoulder arthroscopy with superior labrum tear from anterior to posterior ("SLAP") repair.

6. Following the May 2014 surgery claimant continued to have right shoulder pain.

7. On August 6, 2014, Dr. Hammond administered an injection in claimant's bicipital groove area. Claimant reported to Dr. Hammond on August 18, 2014 that the injection was "minimally helpful".

8. Dr. Hammond ordered another MRI of claimant's right shoulder which was done on August 25, 2014, and showed the surgical changes from the May 27, 2014 SLAP repair as well as tendinosis of the biceps tendon.

9. On September 29, 2014, Dr. Hammond opined that claimant had residual bicipital tenosynovitis following the SLAP repair. At that time, Dr. Hammond recommended tenodesis of the biceps, but determined that that procedure should not be performed until at least six months after the May 2014 surgery.

10. On January 9, 2015, claimant was seen by Dr. Kane Anderson for a second opinion regarding his right shoulder. Dr. Anderson opined that claimant could benefit from a revision right shoulder arthroscopy with biceps tenotomy or tenodesis. As between pursuing biceps tenotomy versus tenodesis, Dr. Anderson indicated a preference for tenodesis.

11. On June 29, 2015, Dr. Hammond performed a subpectoral biceps tenodesis, debridement of the glenohumeral joint, and subacrominal bursectomy and decompression.

12. In a medical record dated July 6, 2014, Dr. Hammond recorded that during surgery he determined that claimant had full thickness cartilage lesions on the glenoid, the ovoid, and the humeral head. In that same medical record, Dr. Hammond noted that claimant's biceps was "diseased" and during surgery was relocated to a subpectoral area.

13. Following the June 2015 surgery, claimant continued to have right shoulder pain.

14. Dr. Hammond referred claimant to Dr. Peter Millett for further consultation. Claimant was first seen by Dr. Millett on January 19, 2016. Dr. Millett ordered an MRI of claimant's right shoulder. On January 21, 2016 an MRI showed moderate rotator cuff tenidonosis and chondral thinning along the superior medial to lateral aspect of the humeral head. Based upon these MRI results Dr. Millett recommended further surgery.

15. On February 17, 2016, Dr. Millett performed a right revision subacrominal decompression and partial acromioplasty with glenohumeral debridement, joint aspiration and deep tissue biopsies.

16. The tissue biopsies taken during the February 17, 2016 surgery were positive for Propionibacterium acnes ("P. acnes") bacteria. Upon learning of the infection, Dr. Millett referred claimant to infectious disease specialist Dr. Jennifer Rupp. Dr. Rupp immediately began treating the P. Acnes infection with antibiotics.

17. Following the February 2016 surgery claimant continued to have right shoulder pain.

18. On May 17, 2016, Dr. Millett recommended that claimant undergo another surgery. Specifically, Dr. Millett has recommended a right shoulder arthroscopy with subcoracoid decompression, debridement, and evaluation of the subscapularis for possible subscapularis repair.

19. Dr. Millett testified by deposition in this matter and stated his opinion that claimant's right shoulder symptoms are related to the February 14, 2014 work injury and related surgeries. Dr. Millett testified that it is his opinion that claimant could benefit from the recommended surgery both in addressing the arthritis in claimant's right shoulder and determining whether the infection has been eradicated. Dr. Millett also testified that the proposed surgery can give claimant some pain relief and functional improvement which would prevent the need for further surgery.

20. Respondent sent claimant for an independent medical examination ("IME") with Dr. Scott Primack on July 6, 2016. In connection with the IME, Dr. Primack reviewed claimant's medical records, obtained a medical history, and performed a physical examination of claimant. Dr. Primack issued a report in which he summarized his findings and opined that a fourth right shoulder surgery would not be useful to claimant. Dr. Primack recommended claimant undergo electromyography and nerve conduction studies ("EMG/NCS") and focus on pain management.

21. On September 14, 2016, Dr. James Santos performed an EMG/NCS of claimant's right hand, arm, and shoulder. Dr. Santos determined that it was a normal electrophysiologic examination.

22. Claimant attended a second IME with Dr. Primack on March 13, 2017. In his second IME report Dr. Primack reiterated his opinion that the surgery recommended by Dr. Millett was not reasonable in treating claimant's right shoulder symptoms. In that March 2007 report Dr. Primack opined that claimant would not do well with any type of surgical intervention. Dr. Primack noted that claimant has had over 100 physical therapy appointments without any improvement in his condition. In addition, Dr. Primack pointed to claimant's diagnoses of depression and anxiety as indicators that claimant's pain indicators may be more psychologically relevant. Based upon Dr. Primack's IME reports respondent denied authorization for the surgery recommended by Dr. Millett.

23. Dr. Primack testified by deposition in this matter and confirmed his opinions as outlined in his two IME reports. Dr. Primack continues to opine that the fourth surgery that has been recommended by Dr. Millett is neither reasonable nor necessary to treat claimant's right shoulder symptoms. Dr. Primack noted that the shoulder has already been debrided and decompressed, so to perform that same procedure again would be unnecessary. Dr. Primack also testified that it is his opinion that claimant suffers from psychosocial issues that would impact his ability to fully recover from surgery.

24. Claimant testified that since his February 14, 2014 injury he has continued to have pain in the front of his right shoulder. The medical records corroborate claimant's testimony in this regard as he has consistently complained of pain in the anterior of his right shoulder. Claimant also testified that his right shoulder pain is like "pins and needles" and "always aches".

25. The ALJ credits the medical records, claimant's testimony, and the opinion of Dr. Millett over the contrary opinion of Dr. Primack and finds that claimant has shown that it is more likely than not that the recommended surgery is reasonable medical treatment necessary to cure and relieve claimant from the effects of the work injury. The ALJ is not persuaded by Dr. Primack's opinion that claimant's mental health diagnoses make the surgery unreasonable.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., (2013). A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2013).

3. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with" a preexisting disease or infirmity to produce disability or need for treatment. *See H & H Warehouse v. Vicory, supra.*

4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

5. As found, claimant has proven by a preponderance of the evidence that the right shoulder arthroscopy with subcoracoid decompression, debridement, and evaluation of the subscapularis for possible subscapularis repair as recommended by Dr. Millett is reasonable medical treatment necessary to cure and relieve claimant from the effects of the work injury.

ORDER

It is therefore ordered that:

1. Respondent shall pay for the right shoulder surgery recommended by Dr. Millett, pursuant to the Colorado Medical Fee Schedule.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 4-900-412-09

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Self-Insured Respondent.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on May 10, 2017, in Denver, Colorado. The hearing was digitally recorded (reference: 5/10/17, Courtroom 1, beginning at 8:30 AM, and ending at 9:30 AM).

Claimant's Exhibits 1 through 2 were admitted into evidence, without objection. Respondents' Exhibits A through G were admitted into evidence, without objection. The evidentiary depositions of Mark S. Failinger, M.D.,was taken on May 1, 2017, and a written transcript thereof was filed; and, the evidentiary deposition of Linda S. Mitchell, M.D., was taken on May 16, 2017, and a written transcript thereof was filed.

At the conclusion of the hearing, the ALJ established a post-hearing briefing schedule: Claimant's opening brief was filed on May 31, 2017. Respondent's answer brief was filed on June 5, 2017. No timely reply brief was filed and the matter was deemed submitted for decision on June 8, 2017.

ISSUES

The issues to be determined by this decision concern the Claimant's request for a conversion of scheduled extremity ratings, admitted in the Final Admission of Liability (FAL), which were based on the Division Independent Medical Examiner's (DIME's)

ratings, to a whole person rating. This matter involves an occupational disease of both upper extremities from repetitive activities at work; and, bodily disfigurement.

When accepting the four corners of the DIME's opinions, the Claimant's burden of proof for a conversion is by a preponderance of the evidence. Also, the burden for a disfigurement award is preponderant evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant has been employed by the Employer as a stock clerk for over thirty-five years. His job involves unloading delivery trucks, stocking product in coolers and on shelves, reorganizing shelves, and cleaning. Much of his job involves repetitive lifting to heights that are at shoulder level or above.

2. The latest amended Final Admission of liability (FAL), dated December 1, 2016, admits for 11% of the left upper extremity (LUE) AND 15% of the right upper extremity (RUE), pursuant to the ratings of Division independent medical Examiner (DIME) Jonathan Bloch, D.O.

3. In March 2008, the Claimant went to his primary health care physician (PCP) at Foothills Family Medicine with complaints of right shoulder pain for approximately one year. He indicated that he had pressure under his shoulder blade. He did not report any specific injury or incident that led to the shoulder pain.

4. The Claimant was seen by Mitchell Seemann, M.D., a shoulder surgeon at Panorama Orthopedics, on April 14, 2008. The Claimant reported similar problems to Dr. Seemann as had been reported to his PCP; ongoing shoulder pain of about one year located around the scapula. The Claimant told Dr. Seemann that his pain was aggravated by lifting, pushing, pulling and reaching. Dr. Seemann diagnosed the Claimant with subscapular bursitis and said that his symptoms were "most likely related to continued repetitive motion." Dr. Seemann referred the Claimant for physical therapy.

5. On January 26, 2012, the Claimant returned to Panorama Orthopedics with right shoulder complaints over the last several years and was evaluated by Eric Stahl, M.D., another shoulder surgeon. The Claimant again reported that his right shoulder would hurt while lifting, reaching, and with overhead activities. The Claimant still worked for the Employer doing the repetitive lifting associated with his job at that time. Dr. Stahl diagnosed the Claimant with a suspected rotator cuff tear and referred

the Claimant for an MRI (magnetic resonance imaging). The MRI was performed on February 17, 2012 and it confirmed Dr. Stahl's suspicions. Dr. Stahl recommended surgery to repair the torn rotator cuff.

6. In September 2012, the Claimant began having left shoulder problems at work while lifting cases of milk. Thereafter, he reported a work-related occupational disease involving both shoulders. The Respondent denied the claim on October 11, 2012. The Respondent obtained an independent medical examination (IME) from Linda Mitchell, M.D. Dr. Mitchell attributed the Claimant's chronic shoulder problems to age related degeneration and stated the opinion that his thirty-plus years of repetitive lifting at his job with the Employer did not significantly contribute to the condition. The matter proceeded to hearing in front of ALJ Michael Harr on May 7, 2013. ALJ Harr found Dr. Mitchell's opinions unpersuasive and credited the opinions of multiple treating physicians. ALJ Harr entered his Specific Findings of Fact, Conclusions of Law and Order on June 25, 2013, finding that Claimant had a compensable occupational disease (OD) involving both shoulders.

The Occupational Disease

7. Christian Updike, M.D., at Health One Occupational Medicine and Rehabilitation was assigned as the Claimant's authorized treating physician (ATP). Dr. Updike referred the Claimant to orthopedic surgeon Mark S.Failinger, M.D. Dr. Failinger performed surgery on the Claimant's right shoulder on January 21, 2014 to repair tears involving the infraspinatus and supraspinatus rotator cuff muscles. Dr. Failinger also addressed a torn labrum during the procedure and performed a subacromial decompression and release of the coracoacromial ligament to address impingement.

8. The Claimant remained off work for ten days following the January 21, 2014 surgery and then returned to work with the Employer. Claimant participated in post-surgical physical therapy between February 2014 and July 2014. Claimant was also followed by Dr. Updike and Dr. Failinger during this time.

9. A repeat MRI was performed on the Claimant's left shoulder in October 2014. The MRI was interpreted as showing a intrasubstance tear of the supraspinatus muscle without evidence of a full thickness tear. Dr. Failinger was of the opinion that the Claimant's left shoulder did not require surgery. Dr. Updike placed the Claimant at maximum medical improvement (MMI), effective December 1, 2014, and assigned a 9% rating for Claimant's left shoulder (LUE) and a 4% rating for Claimant's right shoulder (RUE). Dr. Updike also assigned permanent work restrictions of no repetitive lifting over twenty-five pounds and no lifting of any kind over forty pounds.

Posture of the Present Dispute/DIME by Jonathan Bloch, D.O.

10. Respondent filed a Final Admission of Liability (FAL) on December 11, 2014 consistent with Dr. Updike's opinions.

11. The Claimant objected to the FAL and requested a DIME. Dr. Bloch was assigned as the DIME physician. Prior to Dr. Bloch's evaluation, the Claimant obtained a second surgical opinion of his left shoulder from Mitchell Seemann, M.D., on March 20, 2015. Dr. Seemann recommended proceeding with left shoulder surgery to repair the partial tear because the Claimant's left shoulder symptoms had not responded to conservative care and the symptoms were significant enough to cause him to be on limited duty at work.

12. Dr. Bloch performed the DIME on April 10, 2015, and was of the opinion that Claimant was not at MMI for his left shoulder. The claim was subsequently reopened.

13. Dr. Seemann performed surgery on Claimant's left shoulder on February 5, 2016. Dr. Seemann repaired the supraspinatus tear and also recessed the coracoacromial ligament and performed a subacromial decompression. The Clamant remained off work for six weeks and three days following the second surgery and then returned to a clerk position with the Employer. The Claimant again participated in post-surgical physical therapy and was again followed by Dr. Updike.

14. Dr. Updike placed the Claimant back at MMI, effective September 15, 2016. Dr. Updike deferred to the previously assigned 4% RUE rating, assigned at the time of the first MMI determination. Dr. Updike repeated the impairment evaluation for Claimant's left shoulder and assigned a 6% LUE rating. Dr. Updike indicated that the Claimant was "essentially" performing his "customary duties" at work, and therefore, did not assign any permanent work restrictions.

15. Dr. Bloch performed a follow up DIME evaluation on October 17, 2016. The Claimant reported to Dr. Bloch ongoing shoulder symptoms with increased use of his shoulders. The Claimant also reported occasional numbness in his arms. Dr. Bloch repeated his impairment evaluation and assigned a 15% RUE rating for Claimant's right shoulder and an 11% LUE rating for Claimant's left shoulder. As required by the American Medical Association *Guides to the Evaluation of Permanent Impairment,* 3rd. Ed., Rev., Dr. Bloch mechanically converted that the extremity ratings into a 15% whole person rating. Dr. Bloch expressed no opinion as to whether a whole person rating or an extremity rating was more appropriate. Dr. Bloch found that the Claimant reached MMI on September 8, 2016.

The Claimant's Testimony

16. The Claimant testified at hearing that he has returned to work for the Employer, but he is not in the dairy clerk position he was in prior to the admitted onset of the occupational disease. In his current role, the Claimant is doing less lifting overall and little to no overhead lifting. He continues to have symptoms in his shoulders and across his upper back and into his neck. The Claimant described the symptoms as tightness, pain and spasm. Claimant stated that he will occasionally have headaches. He will also occasionally have numbness that extends down his arms. Claimant indicated that his ongoing symptoms increase with increased use of his shoulders; which is usually in connection with his work for the Employer. His increased symptoms will interfere with his sleep. He has not been able to return to all of the personal extracurricular activities he participated in prior to this claim.

17. The Claimant testified that he has symptoms in his shoulders, across his upper back and the top of his shoulders, and into his neck, and that his symptoms interfere with his sleep. The Claimant's testimony, however, is not consistent with the medical records. The Claimant attended at least 48 physical therapy visits for his right shoulder between February and July 21, 2014, and an additional 25 physical therapy visits for his left shoulder in 2016 (Claimant's Exhibit 17). There is no persuasive evidence that the Claimant ever complained of pain into his neck or trouble with sleeping in the 73 physical therapy visits.

18. Contrary to the Claimant's testimony, on May 13, 2015, Dr. Failinger documented that the Claimant's discomfort did not interfere with his sleep, and that the Claimant had full painless arc of cervical range of motion in al
Planes (Respondent's Exhibit F, pp. 45-46). Dr. Failinger testified that he actually palpated the Claimant's periscapular muscles and the rhomboid muscles and found no tenderness and no pain (Failinger Depo, pp. 79:ln.11; 81, ln.16). In all of Dr. Updilke's records, there is no persuasive evidence that the Claimant ever complained of pain into his neck or trouble sleeping to Dr. Updike (Claimant's Exhibit 16).

Evidentiary Depositions

19. Deposition testimony from Dr. Failinger was submitted post-hearing. Dr. Failinger was asked to review his operative report and Dr. Seemann's operative report and discuss the structures involved in Claimant's two surgeries. Dr. Failinger stated that the infraspinatus and supraspinatus tears in Claimant's right shoulder were located at the greater tuberosity. Dr. Failinger explained that the greater tuberosity is the location on the top of the humerus where the rotator cuff muscles attach. Dr. Failinger indicated that the infraspinatus and supraspinatus tendons come together at the greater

tuberosity and that Claimant had torn these tendons away from the bone and that the tendons were retracting up and away from the humerus towards the glenoid. Dr. Failinger further explained that the infraspinatus and supraspinatus muscles run from the top of the humerus either across the top of the shoulder (supraspinatus) or across the upper back (infraspinatus) and attach the scapula. Dr. Failinger testified that the supraspinatus tear in Claimant's left shoulder was also at the greater tuberosity and that the supraspinatus in Claimant's left shoulder was also retracting up and away from the humerus towards the glenoid.

20. Dr. Failinger explained that the labrum is a piece of cartilage attached to the glenoid and that the glenoid is the part of the scapula that joins with the humerus to form the glenohumeral joint. Dr. Failinger testified that the coracoacromial ligament attaches between the acromion and coracoid process and is medial to the glenohumeral joint (on the torso). Dr. Failinger explained that the coracoacromial ligament is released or recessed to create more space between the acromion and the rotator cuff muscles to prevent "impingement," a condition where the acromion rubs on the rotator cuff muscles leading to damage. Dr. Failinger explained that a subacromial decompression involves shaving down bone on the underside of the acromion to also create more space between the rotator cuff muscles and the acromion to prevent impingement.

21. Dr. Failinger indicated that it is not uncommon for patients with shoulder conditions similar to the Claimant's, and surgeries like those Claimant had performed, to have ongoing symptoms. Dr. Failinger indicated that the symptoms described by the Claimant – pain across the top of the shoulders and upper back, tightness in the upper back, shoulders and neck, and headaches, are common. Dr. Failinger did **not** render any explicit opinions concerning the situs of functional impairment.

22. Dr. Failinger testified that both he and Dr. Seeman performed surgery to parts of the Claimant's body which were not on the arm. Dr. Failinger testified, however, that those parts of the surgery which he performed to the areas of the Claimant's body not on the arm did not impair the Claimant's function:

Q: Okay. So my point, though, is that when you – or my question is, when you debrided it, did you change the function of the labrum at all?
A: No, I didn't really -- minimally. The things that are degenerative are worthless, so we just cleaned up what was needed to make it look prettier, but really didn't change structurally anything.
Q: So when you were done with the debridement, functionally the labrum was going to -- it was going to function the same way as it did beforehand, maybe even a little better, right?
A: Yeah. The thought is -- the idea is if you clean up the edges, you helpfully arrest or slow up the degenerative process. A pair of jeans, you know it's fraying. You clean the edges and maybe it won't start ripping quicker -- that's the thought -- and cause symptoms in the future.

[Failinger Depo, p. 61:lns.3-19].

Q: So functionally, would releasing that coracoacromial ligament affect [Claimant's] function at all?
A: Not in the short term.
Q: And what do you mean -- what do you consider "short term"?
A: In the next few years. Probably a couple of few years at least, is the hope.
Q: And what might happen in the long term?
A: Well, if he continues to have this tendon tear larger and larger, what happens is the humeral head doesn't have a rotator cuff to keep it down, so it starts to rise up, and it rises up and starts to bang up underneath the acromion there. And if there's nothing in the front, the subscapularis holding it, it can actually come out -- start coming out toward the front, and that coracoacromial ligament, if it wasn't functioning, would no longer help keep it in that area right below the acromion.
Q: That's a possibility, correct?
A: That's a possibility, yes.
Q: And you have no information right now that is actually occurring, correct?
A: Correct.
Q: And you have no information that that will occur in the future?
A: Correct.
Q: And you said that he had a small hook anteriorly, and that's on the acromion, right?
A: Correct.
Q: And then you flattened that out, which means, again, you just -- well, I guess it wouldn't be debriding it -- it would be to -- well, what would you call it? Is it debriding or . . .
A: Yeah. I mean, it's -- we don't generally use that term. That's a good point. What else would you use? Well, us cutting bone obvious -- cutting off bone is what you're really doing, making a little more so-called space in that area.
Q: And that wouldn't change the function of acromion at all?
A: No, not at all.

[Failinger Depo, pp. 66-67].

In addition, Dr. Failinger's repair of the right rotator cuff entailed anchoring the supraspinatus and infraspinatus tendons to the humerus (the arm bone) by use of anchors driving into the humerus at the greater tubercle:

Q: So when you place those anchors, you're actually drilling into the bone?
A: Correct.
Q: Into the humeral -- or into the humerus at the greater tubercle?
A: Yes.

23. The ALJ infers and finds that Dr. Failinger's opinions do not support a situs of functional impairment going into the trunk of the Claimant's body. Moreover, they support a situs of functional impairment in both upper extremities.

Second IME by Dr. Mitchell

24. At the request of the Respondent, Dr. Mitchell performed a second IME on March 6, 2017. Dr. Mitchell's report was admitted into evidence, as was Dr. Mitchell's post-hearing deposition testimony. Dr. Mitchell documented that the Claimant complained of ongoing complaints involving his shoulders and that the aching in his left shoulder "radiates towards the neck." Dr. Mitchell documented that she found tightness in Claimant's levators bilaterally and his left scalenes on physical exam. During her testimony, Dr. Mitchell explained that the levators and scalenes are muscles that run along either side of the neck. Dr. Mitchell testified that the tightness in Claimant's scalenes and levators is likely referred symptoms from Claimant's shoulders. Dr. Mitchell agreed that the Claimant's ongoing shoulder complaints are typical for someone with injuries and surgeries like Claimant's. Dr. Mitchell's testimony regarding the location of the infraspinatus and supraspinatus muscles, the acromion, the labrum, and the coracoacromial ligament was consistent with Dr. Failinger's testimony. Dr. Mitchell testified that she did not believe Claimant's impairment should be awarded as a whole person award because Claimant's complaints were "very minimal, limited to the shoulder, and … they don't affect any of his activities." Dr. Mitchell's opinion is inconsistent with the Claimant's testimony, but consistent with DIME Dr. Bloch not placing any permanent restrictions on the Claimant, "…he is functioning well and safely in his job without limitations."

Bodily Disfigurement

25. Claimant has surgical scars on both shoulders from the two surgeries performed during this claim by Dr. Failinger and Dr. Seemann. The scars on the right shoulder consist of three small white scars from the arthroscopic portals and a white line running down the front of Claimant's shoulder. The scars on the left shoulder consist of three small white scars from the arthroscopic portals. The scars are plainly visible to public view.

Ultimate Findings

26. The Claimant's testimony concerning problems sleeping and pain going through his neck is inconsistent with the aggregate medical records. There is no convincing support for pain and problems going into the Claimant's neck or his problems sleeping. Consequently, the ALJ does not find the Claimant's testimony in this regard credible. The only credible evidence concerning restricted job duties is the

Claimant's testimony as to how his job has changed. The Claimant would have the ALJ infer that the doctors who did not give him restrictions had his present job duties in mind. The doctors, however, were aware of his pre-injury job duties and none of them qualified their opinions concerning "no restrictions." Further, the ALJ infers and finds the deposition testimony of Dr. Failinger does not support a situs of functional impairment beyond the upper extremities, and Dr. Failinger's testimony is highly persuasive and credible. Also, the DIME opinion of Dr. Bloch, which is credible and persuasive, does not support a situs of functional impairment beyond the upper extremities.

27. Between conflicting opinions, the ALJ makes a rational choice, based on substantial evidence, to accept the opinions of Dr. Failinger and Dr. Bloch and to reject any opinions to the contrary.

28. Accepting the four corners of DIME Dr. Bloch's opinions, especially because he does **not** opine that a whole person rating is more appropriate than his extremity ratings, plus the finding herein above that Dr. Bloch's opinions do not support a plausible inference that the situs of functional impairment transcends the upper extremities, the ALJ finds that it is more likely than not that the situs of the Claimant's functional impairment is in both upper extremities. Therefore, the Claimant has failed to prove, by a preponderance of the evidence that a conversion to a whole person rating is warranted.

29. Claimant has surgical scars on both shoulders from the two surgeries performed during this claim by Dr. Failinger and Dr. Seemann. The scars on the right shoulder consist of three small white scars from the arthroscopic portals and a white line running down the front of Claimant's shoulder. The scars on the left shoulder consist of three small white scars from the arthroscopic portals. The scars are plainly visible to public view.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines

the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the Claimant's testimony concerning problems sleeping and pain going through his neck is inconsistent with the aggregate medical records. There is no convincing support for pain and problems going into the Claimant's neck or his problems sleeping. Consequently, the ALJ does not find the Claimant's testimony in this regard credible. The only credible evidence concerning restricted job duties is the Claimant's testimony as to how his job has changed. The Claimant would have the ALJ infer that the doctors who did not give him restrictions had his present job duties in mind. The doctors, however, were aware of his pre-injury job duties and none of them qualified their opinions concerning "no restrictions." Further, the ALJ infers and finds the deposition testimony of Dr. Failinger does not support a situs of functional impairment beyond the upper extremities, and Dr. Failinger's testimony is highly persuasive and credible. Also, the DIME opinion of Dr. Bloch, which is credible and persuasive, does not support a situs of functional impairment beyond the upper extremities.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial**

evidence which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting opinions, the ALJ made a rational choice, based on substantial evidence, to accept the opinions of Dr. Failinger and Dr. Bloch and to reject any opinions to the contrary.

Conversion from Extremity to Whole Person Rating

c. It is well-established that the question of whether a claimant sustained a "loss of an arm at the shoulder" within the meaning of § 8-42-107 (2) (a), C.R.S., or a whole person medical impairment compensable under § 8-42-107 (8) (c), C.R.S. is one of fact for determination by the ALJ. *Delaney v. Indus. Claim Appeals Office,* 30 P.3d 691 (Colo. App. 2000). In resolving this question, the ALJ must determine the site of a claimant's "functional impairment," and the site of the functional impairment is not necessarily the site of the physical injury itself. *Langston v. Rocky Mountain Healthcare Corp.,* 937 P.2d 883 (Colo. App. 1996); *Strauch v. PSL Swedish Healthcare System,* 917 P.2d 366 (Colo. App. 1996). Further, pain and discomfort which limit a claimant's ability to use a portion of her body may be considered "functional impairment" for purposes of determining whether an injury is on or off the schedule. *Also see, Fresquez v. Montrose School District RE-1J,* W.C. No. 4-969-602-01 [Indus. Claim Appeals Office (ICAO), April 14, 2017]. For a conversion, the party seeking it must accept the four corners of an ATP's or DIME'S opinion letter. The standard of proof is then "preponderance of the evidence." As found, accepting the four corners of DIME Dr. Bloch's opinions, especially because he does **not** opine that a whole person rating is more appropriate than his extremity ratings, plus the finding herein above that Dr. Bloch's opinions do not support a plausible inference that the situs of functional impairment transcends the upper extremities, the ALJ finds that it is more likely than not that the situs of the Claimant's functional impairment is in both upper extremities. Therefore, the Claimant has failed to prove, by a preponderance of the evidence that a conversion to a whole person rating is warranted.

Bodily Disfigurement

d. Section 8-42-108(1), C.R.S., provides that if an employee is seriously, permanently disfigured about the head, face, or parts of the body normally exposed to public view, in addition to all other compensation benefits provided...the director may allow compensation not to exceed four thousand dollars to the employee who suffers such disfigurement. The limitation on disfigurement awards are adjusted every July 1st by the percentage adjustment made by the director to the state average weekly wage. § 8-42-108(3), C.R.S. (2016). Disfigurement benefits are awarded for the observable

consequences of an industrial injury. *Arkin v. Indus. Comm'n*, 145 Colo. 463. 358 P.2d 879 (1961). As found, the Claimant has surgical scars on both shoulders from the two surgeries performed during this claim by Dr. Failinger and Dr. Seemann, and the scars are plainly visible to public view. The scars on the right shoulder consist of three small white scars from the arthroscopic portals and a white line running down the front of Claimant's shoulder. The scars on the left shoulder consist of three small white scars from the arthroscopic portals. The scars are plainly visible to public view.

Burden of Proof

e. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing entitlement to benefits beyond those admitted. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has failed to sustain his burden with respect to the conversion to whole person. The Claimant has sustained his burden with respect to bodily disfigurement.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Any and all claims for a conversion from scheduled ratings to whole person ratings are hereby denied and dismissed.

B. The latest, amended Final Admission of Liability, dated December 1, 2016, is hereby approved and adopted as if fully restated herein.

C. For and account of the Claimant's bodily disfigurement as herein above described, the Respondent shall pay the Claimant, in one lump sum, in addition to other benefits due and payable, the sum of $2,500.00

DATED this_____day of June 2017.

_____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

ISSUES

I. Whether Claimant has produced clear and convincing evidence to overcome the permanent impairment rating assigned by DIME physician Lloyd Thurston, D.O.

II. Whether claimant has proven by a preponderance of the evidence that she is entitled to maintenance medical treatment after being placed at maximum medical improvement ("MMI").

FINDINGS OF FACT

1. Employer, a temporary staffing agency, placed Claimant on an assignment cleaning office buildings. Claimant sustained an admitted industrial injury to her lower back on November 13, 2015 while lifting a bucket of mop water.

2. Claimant initially treated at the emergency room at St. Mary's Medical Center. On November 13, 2015, Claimant reported feeling a pop and pain radiating down both legs. Maria Green Kallman, PA-C, noted limited range of motion in Claimant's back and negative straight leg raise findings. PA-C Kallman diagnosed lumbar strain/sprain. An x-ray demonstrated no acute fracture or vertebral body malalignment. PA-C Kallman prescribed Vicodin and Flexeril.

3. Claimant subsequently treated with Theodore Sofish, M.D. at Grand Valley Occupational Medicine. Dr. Sofish first evaluated Claimant on November 16, 2015. Dr. Sofish noted Claimant had a slight antalgic gait and pain to the low lumbar sacral area bilaterally. Dr. Sofish noted forward flexion of 30 degrees and dorsiflex to neutral. Dr. Sofish further noted Claimant was able to toe heel and squat on a limited basis. Dr. Sofish assessed Claimant with a work-related lumbar sprain.

4. Dr. Sofish reevaluated Claimant on November 20, 2015. Claimant presented with an antalgic gait. Dr. Sofish noted forward flexion of 20 degrees and dorsiflex to neutral. Dr. Sofish prescribed Percocet and recommended Claimant begin physical therapy.

5. Claimant returned to Dr. Sofish for a follow-up evaluation on November 25, 2015. Claimant reported pain at a 9/10 in severity in the low lumbar area and down her left leg. Dr. Sofish noted an antalgic gait, "very limited range of motion of the lumbar spine in all planes," paresthesias, and pain to the left thigh. Dr. Sofish assessed lumbar sprain and probable left radiculopathy. In December 4, 2015 medical notes, Dr. Sofish ordered an MRI.

6. On December 7, 2015, Claimant underwent an MRI of the lumbar spine. The MRI demonstrated loss of water content, mild facet hypertrophy, a small central disc

protrusion minimally asymmetric to the left at L4-L5, and a small right paracentral disc protrusion at L5-S1 just abutting the traversing nerve root.

7. Dr. Sofish reevaluated Claimant on December 15, 2015. Claimant reported pain at a 7/10 in severity in her left thoracic lumbar paraspinal musculature, right flank, and lumbar sacral area, with pain in the buttocks and down the left thigh. Dr. Sofish noted an antalgic gait and "very limited" toe heel squat and dorsi flexion. Dr. Sofish noted that the December 7, 2015 MRI revealed small herniations at L4 and L5. Dr. Sofish assessed thoracic lumbar sprain and degenerative disc disease of the lumbosacral spine. Dr. Sofish recommended Claimant continue physical therapy and taking prescribed medications.

8. Claimant returned to Dr. Sofish for a follow-up evaluation on December 22, 2015. Claimant reported pain at a 7/10 in severity in the thoracic lumbar area and left leg. Dr. Sofish noted an antalgic gait with forward flexion at 20 degrees and dorsiflex to neutral. Dr. Sofish assessed thoracic lumbar sprain, left leg radiculopathy and left patellar tendinitis. Dr. Sofish referred Claimant to physiatrist Dr. Price. Dr. Sofish commented, "She seems to have gotten worse than better over the past few weeks," and remarked that he was at a loss to explain why.

9. Claimant continued to treat with Dr. Sofish, reporting pain at a 8-10/10 in severity. Dr. Sofish continued to note limited range of motion. Claimant presented with her own cane, crutches, and back brace at different evaluations. As Claimant had not improved, Dr. Sofish referred Claimant to Dr. Mistry for a neurological evaluation.

10. Ellen Price, D.O. evaluated Claimant on January 26, 2016. Dr. Price noted Claimant had only attended two physical therapy sessions because it was too painful. Claimant reported experiencing intermittent left leg pain. Dr. Price noted that Claimant presented with a cane. Claimant reported pain in her midback, low back, and left leg at a 90/100 in severity. Dr. Price noted Claimant had some pain presentations and 3/5 Waddell signs. On examination, Dr. Price noted decreased sensation in the left leg and decreased breakaway strength in the left dorsiflexor and hamstring. Dr. Price further noted flexion of 20 degrees and extension ofabout 10 degrees. Dr. Price assessed low back pain, small disc protrusions at L5-5 and L5-S1, history of somatization of pain, history of lumbar myofascial pain, and history of pain disorder. Dr. Price referred Claimant to Dr. Cohen for pain management. Dr. Price also recommended Claimant attend additional physical therapy sessions, undergo acupuncture, and receive three epidural injections from Dr. Lewis.

11. Dilaawar Mistry, M.D. evaluated Claimant on January 27, 2016. On examination, Dr. Mistry noted trunk flexion of 45 degrees, and positive seated straight leg raise findings. Dr. Mistry noted that the hip exam and special range of motion tests were limited "due to apprehension due to guarding and due to pain." Dr. Mistry assessed lumbar disc herniation with radiculopathy. Dr. Mistry recommended Claimant attend a surgical consultation with neurosurgeon Robert Replogle, M.D.

12. Dr. Replogle evaluated Claimant on February 2, 2016. Claimant presented with an antalgic gait, using a cane. Dr. Replogle noted Claimant was unable to walk on heels and toes without difficulty. Dr. Replogle further noted normal range of motion in Claimant's back and decreased range of motion in Claimant's left hip. Dr. Replogle remarked that the December 7, 2015 MRI showed no evidence of nerve root impingement. Dr. Replogle commented that Claimant's "lumbar spine really does not seem to be the source of the majority of her symptoms," and opined that Claimant's symptoms were more consistent with pathology of the left hip.

13. Dr. Price reevaluated Claimant on February 9, 2016. Claimant reported pain at a 9/10 in severity. On examination, Dr. Price noted myofascial trigger points in the lumbar spine and at the sacroiliac joints, with evidence of Waddell signs. Dr. Price noted Claimant had no pain with the seated straight leg raise to 90 degrees, but pain in the supine position and with the FABER maneuver. Dr. Price assessed a history of low back pain, history of myofascial pain, history of pain disorder, somatization, and two small central disk protrusions at L5-5 and L5-S1. Dr. Price performed acupuncture on Claimant and recommended physical therapy, including pool therapy.

14. Claimant saw Todd Ousley, PA-C on February 17, 2016. Claimant presented with a left-sided antalgic gait and cane. PA-C Ousley noted positive straight leg test findings and limited lumbar range of motion in all directions secondary to pain. PA-C Ousley remarked, "She is only able to extend to about neutral position and is unwilling to really demonstrate much in the way of forward flexion other than about 10 degrees." PA-C Ousley noted that February 17, 2016 x-rays evidenced mild loss of disk height at the L4-5 and L5-S1 levels, and that the MRI of Claimant's lumbar spine revealed mild broad based disk protrusion at L4-5 and primarily right-sided disk protrusion at L5-S1. PA-C Ousley assessed L4-5 and L5-S1 disk degeneration with disk displacement and left leg radiculopathy. PA-C Ousley noted that Claimant's "pain and symptoms do assume (*sic*) a bit out of proportion to her imaging findings." PA-C Ousley recommended Claimant undergo a left-sided transforaminal epidural steroid injection.

15. Claimant returned to Dr. Price for a follow-up evaluation on February 22, 2016. Dr. Price noted that acupuncture was not helping Claimant and that three sessions of physical therapy seemed to make Claimant worse. Claimant presented with an antalgic gait. Dr. Price noted 4/5 Waddell signs, negative seated straight leg raise findings, and positive straight leg raise findings in the supine position. Dr. Price further noted there was no evidence of radiculopathy. Dr. Price remarked, "It is very difficult to evaluate her because of kinesophobia." Dr. Price further remarked, "I am concerned she has a pain disorder." Dr. Price performed additional acupuncture on Claimant with electrical stimulation.

16. On March 3, 2016, Claimant received a left-sided L5-5 and L5-S1 transforaminal epidural steroid injection, administered by Kirk Clifford, M.D. Dr. Clifford opined that Claimant's low back was not the source of her pain, and that Claimant's issue was not a "primary back problem or internal issue with the back."

17. Claimant underwent electrodiagnostic (EMG) testing on March 7, 2016. Robert Frazho, M.D. noted that Claimant's electrodiagnostic testing was normal, stating, "There is no electrodiagnostic evidence of lower extremity radiculopathy, lumbosacral plexopathy, peroneal mononeuropathy, or periperhal neuropathy." Dr. Frazho further noted Claimant's MRI revealed minimal findings, including a small central disk protrusion at L4-5, and small right paracentral disk protrusion at L5-S1, with no significant displacement.

18. Dr. Sofish reevaluated Claimant on March 11, 2016. Claimant presented with a limp, back brace, and cane. Claimant reported pain at a 9/10 in severity in her thoracic lumbar spine, left thigh, and leg. Dr. Sofish noted that an MRI of Claimant's left hip and EMG of left leg were negative. Dr. Sofish further noted positive piriformis signs on the left thigh.

19. Dr. Price reevaluated Claimant on March 17, 2016. Dr. Price noted that eight sessions of physical therapy made Claimant worse. Claimant reported that "everything hurt." Dr. Price noted 4/5 Waddell signs and "lots of pain behaviors." Dr. Price further noted, "She moves very gingerly around the room, but she has 90 degrees of straight leg raising in the seated position, 20 degrees supine." Dr. Price assessed history of low back pain with evidence of a "very small" disk protrusion at L4-5, severe somatization, pain disorder, and severe depression. Dr. Price performed a laser treatment on Claimant. Dr. Price recommended Claimant wean off the opioids and opined that Claimant could be at maximum medical improvement (MMI) in about 4 to 6 weeks.

20. On March 18, 2016, Claimant attended a psychological consultation with Joel Cohen, Ph.D. Dr. Cohen noted Claimant presented with moderate to severe pain behavior. Dr. Cohen further noted Claimant was sedentary and not doing any exercise at home. Dr. Cohen remarked that Claimant manifested "substantial indications for a disability mindset which is going to limit response to treatment and limit efforts at reactivation." Dr. Cohen assessed behavioral chronic pain syndrome, somatic symptom disorder, and adjustment reaction with depressed mood. Dr. Cohen remarked, "Her depression is not atypical in the chronic pain population but in her case and couple with the guarding and bracing behavior is limiting her response to physical treatment and augmenting her perception of pain and her perception of pain related disability." Dr. Cohen recommended Claimant adhere to a structured exercise program, take antidepressants, and attend at least 8 sessions of psychotherapy and biofeedback.

21. Claimant attended multiple subsequent psychotherapy sessions with Dr. Cohen, who referred to Claimant as being "substantially preoccupied somatically." On April 29, 2016, Dr. Cohen noted there were "significant somatoform elements to her presentation coupled with avoidant pain behaviors in the form of guarding and bracing and a clearly established disability mindset." Dr. Cohen opined that Claimant was a poor candidate for any major interventions.

22. Raymond Sohn, D.O. evaluated Claimant on April 7, 2016. Claimant presented with an antalgic gait and a cane. Dr. Sohn noted limited range of motion in the lumbar spine due to pain, positive lumbar facet loading on both sides, positive straight leg

raising on both sides, and negative Waddell's signs. Dr. Sohn further noted that internal rotation of Claimant's femur resulted in deep buttocks pain. Dr. Sohn diagnosed radiculopathy in the lumbosacral region, intervertebral disc disorders with radiculopathy in the lumbosacral region, and lesion of the sciatic nerve. Dr. Sohn opined that Claimant's "pain may be secondary to bilateral piriformis syndrome, but given her back pain and MRI findings, I suspect that there is still a back component to her pain." Dr. Sohn recommended that Claimant receive bilateral piriformis injections and possibly an epidural steroid injection. Claimant reci

23. Dr. Price reevaluated Claimant on April 13, 2016. Claimant reported having no response from the epidural steroid injections. Claimant reported pain at an 8/10 in severity. On examination, Dr. Price noted tenderness in both sacroiliac joints and in the piriformis, and pain with the FABER maneuver. Dr. Price noted that the pain started at 90 degrees in the seated position and about 30 degrees in the supine position. Dr. Price noted Claimant had pain behaviors. Dr. Price included possible piriformis syndrome and sacroilitis with her prior assessments of Claimant. Dr. Price recommended that Claimant undergo a piriformis injection, continue counseling, and continue taking Cymablta. Dr. Price remarked,

> I am not sure if anything will really help her. I do not think surgery is an option for her. She does need to continue doing her exercise. She will follow up again in about a month. Hopefully, we will be able to determine an impairment rating at that time.

24. On April 21, 2016, Claimant received a left piriformis injection, administered by William James, M.D.

25. Claimant returned to Dr. Price for a follow-up evaluation on April 27, 2016. Claimant reported that the epidural steroid injections and piriformis injection did not help. Claimant reported experiencing constant pain at a 9/10 in severity. Claimant reported she was unable to do a lot of activities and could only walk for 15 minutes without sitting down. Dr. Price noted pain behaviors and 4/5 Waddell signs. Dr. Price noted Claimant was unable to do the FABER maneuvers bilaterally. Dr. Price further noted Claimant had no pain with straight leg raising to 90 degrees in seated position, but pain to about 40 degrees bilaterally in the supine position. Dr. Price recommended that Claimant undergo transforaminal injections, continue counseling with Dr. Cohen, and stay on Cymbalta. Dr. Price opined that Claimant was close to MMI.

26. Claimant returned to Dr. Mistry for a follow-up evaluation on May 4, 2016. Regarding the April 12, 2016 left piriformis injection, Dr. Mistry noted Claimant "had analgesia for ~ 3 hours followed by recurrent sciatica."

27. Dr. Price reevaluated Claimant on May 11, 2016. Dr. Price noted that continued physical therapy sessions worsened Claimant's pain and remarked, "She states in fact just about everything makes her pain worse." Claimant reported pain at an 8/10 in severity in both legs, and that her left leg was entirely numb. Dr. Price remarked that Claimant "has a lot of somatic complaints and a lot of pain behaviors." On examination,

Dr. Price noted pain with straight leg raising at 90 degrees and 20 degrees bilaterally in the supine position. Dr. Price recommended Claimant undergo one additional epidural steroid injection and then be placed at MMI if the injection did not help.

28. Dr. Sofish conducted a follow-up evaluation of Claimant on June 13, 2016. Claimant reported pain at a 9/10 in severity. Claimant presented with an antalgic gait. On examination, Dr. Sofish noted 45 degree forward flexion and dorsiflex to neutral. Dr. Sofish also noted Claimant was able to toe heel and squat on a limited basis due to pain. Dr. Sofish further noted that a repeat MRI demonstrated stable degenerative disc disease and L4-5 and L5-S1, and stable appearance of the right paracentral disc protrusion at L4-5 causing right lateral recess stenosis and posterior displacement of the traversing right-sided S1 nerve root. Dr. Sofish noted that Claimant seemed improved compared to previous presentations but there remained "a great deal of pain behavior."

29. On June 21, 2016, Dr. Price reevaluated Claimant and placed Claimant at MMI. Claimant reported experiencing constant pain at a 10/10 in severity. Dr. Price noted 3/5 positive Waddell signs with axial loading and pseudorotation. Dr. Price noted the following dual inclinometer measurements: "Lumbar flexion was 22 degrees. Lumbar extension was 10. Tightest straight leg raising was 40. Left lateral bending was 19 and right was 20." Dr. Price noted that the range of motion measurements were found to be valid. Dr. Price assigned a 20% total combined whole person impairment rating. Dr. Price assigned a 7% impairment for the two small disc protrusions under Table 53 (II)(C) of the American Medical Association Guides to the Evaluation of Permanent Impairment, Third Edition, Revised (the "AMA Guides"), and a 14% impairment rating for range of motion loss. Dr. Price remarked, "I do not think that there is much more we can really do for her. She may still benefit from an epidural at some time in the future. She may need to continue on the Cymbalta; however, it is not really helping her much."

30. Dr. Sofish reevaluated Claimant on July 18, 2016. Claimant reported pain at a 9/10 in severity. Dr. Sofish noted forward flexion to 45 degrees and dorsiflexion to neutral. Dr. Sofish noted Claimant was able to toe and heel with mild difficulty and unable to squat. Dr. Sofish noted Claimant had not improved and agreed Claimant was at MMI. Dr Sofish noted that he agreed with Dr. Price's disability evaluation. Dr. Sofish opined that Claimant "may need continued Mobic and Cymbalta as well as psychological counseling with Dr. Cohen."

31. On October 12, 2016, Lloyd Thurston, M.D. conducted a Division Independent Medical Examination (DIME) of Claimant. Dr. Thurston issued a DIME report on October 20, 2016. Claimant reported that her pain was between a 4-7 out of 10 in severity. Dr. Thurston noted Claimant had a "peculiar" antalgic gait. Dr. Thurston noted that the seated straight leg raise was negative to 90 degrees on the right hip, 60 degrees of flexion on the left hip with no radicular symptoms and "subjective complaints" of low back and hip pain. Dr. Thurston noted Claimant did not demonstrate a positive straight leg raising sign of the left leg. Dr. Thurston noted FABERE maneuver of the left hip resulted in a complaint of pain. Dr. Thurston remarked, "Her lumbar range of motion measurements was (*sic*) extremely limited even after warm-up. Her range of motion

measurements were consistent during warm-up, with distraction, and during the exam with the Acumar dual digital inclinometers. They are significantly lower than those obtained by Dr. Price on 6/21/2016." Dr. Thurston further remarked, "She was unable or unwilling to extend her spine beyond neutral making facet loading impossible." Dr. Thurston noted that strength testing of both lower extremities demonstrated nonphysiologic findings. Dr. Thurston further noted 3/5 positive Waddell signs.

32. Dr. Thurston noted Claimant's medical records evidenced symptom magnification, indicating Claimant's subjective complaints were not consistent with objective findings. Dr. Thurston opined that the significant pain reported by Claimant could not be confirmed or quantified. Dr. Thurston noted that Claimant's pain levels remained excessive and essentially unchanged since the injury, which Dr. Thurston opined was not physiologic. Dr. Thurston further noted that Claimant had not improved with multiple appropriate modalities of treatment.

33. Dr. Thurston included in his DIME report the following section from the sixth edition of the AMA Guides, titled Rating without Objective Findings:

> "The examiner must base impairment rating on objective factors to the fullest extent possible. Patient subjectivity during the examination process itself may potentially contribute to the inconsistency of examination findings and test results; for example a patient may self-limit during the assessment of range of motion to exert submaximal effort on manual strength testing because of pain and/or apprehension. Such 'symptom magnification' (the display of exaggerated pain behavior and self-inhibition of effort out of proportion to the observable pathology), when detected, should be appropriately discounted by the examiner without impugning the patient for being unmotivated or malingering. When such findings clearly appear to conflict with what is expected according to established medical principles, they must not be used to justify an impairment rating.

34. Dr. Thurston also referred to the Malingering Guidelines from the American Psychiatric Association and opined that Claimant satisfied at least two of the four criteria for malingering. Dr. Thurston opined, within a reasonable degree of medical probability, that "[Claimant's presentation is consistent with the formal guidelines for the assessment of malingering. Those guidelines consequently mandate that a strong suspicion of malingering should be adopted for this examinee."

35. Dr. Thurston further opined that, within a reasonable degree of medical probability, a permanent impairment rating, restrictions, and additional maintenance treatment for Claimant's low back were not indicated or appropriate. Dr. Thurston noted that his opinion was based on Claimant's "mechanism of injury, the lack of objective findings, lack of significant abnormality on imaging and diagnostic studies, and the fact her subjective complaints are out of proportion to the mechanism of injury." Dr. Thurston opined that the MRI did not demonstrate significant underlying pathology which would explain Claimant's symptoms. Dr. Thurston opined that the degenerative

disc disease in L4-5 and L5-S1is pre-existing, age-related, and not the source of Claimant's pain. Dr. Thurston stated,

> Her range of motion is moot because she does not have underlying pathology (the fact that she has degenerative spondylosis and complains bitterly of pain does not mean she meets the criteria for impairment rating). It is my medical opinion her condition is properly represented by II.A. of table 53.

36. Respondents filed a Final Admission of Liability (FAL) on November 7, 2016, denied liability for medical treatment and/or medications after MMI.

37. On February 13, 2017, Elizabeth Bisgard, M.D., M.P.H., conducted an Independent Medical Examination (IME) at the request of Respondents. Dr. Bisgard issued an IME report dated February 21, 2017. Claimant reported pain at 6 or 7/10 in severity. On examination, Dr. Bisgard noted minimal forward flexion of the lumbar spine with no extension, minimal right side bending, and no left side bending. Dr. Bisgard noted seated straight leg raise at 90 degrees and pain with supine straight leg raise at 20 degrees. Dr. Bisgard noted Claimant was able to heel walk and unable to toe walk, and that Claimant presented with a pronounced antalgic gait favoring her right leg. Dr. Bisgard noted that there were nonphysiologic neurologic symptoms to palpation on the anterior superior iliac spine and midflank area. Dr. Bisgard further noted positive Waddell's signs and remarked that Claimant pain was out of proportion to her examination. Dr. Bisgard diagnosed lumbar strain with unexplained ongoing pain and nonphysiologic findings. Dr. Bisgard agreed with Dr. Thurston's assessment that an impairment rating, activity restrictions, and maintenance care are not appropriate. Dr. Bisgard remarked,

> [Dr. Thurston] provided a thorough and detailed explanation as to why [Claimant] does not qualify for an Impairment Rating under the AMA Guides. There is no medical explanation for her pain; it is out of portion to her exam and diagnostic studies. Her responses to various treatments defies logic or medical explanation. Dr. Thurston did not err in his opinion or methodology. He appropriately pointed out concerns regarding malingering and somatoform disorder; I share his concerns based on my own findings.

38. Dr. Bisgard testified at hearing as an expert in occupational medicine. Dr. Bisgard is board certified in occupational medicine and is Level II accredited by the Division of Workers' Compensation. Dr. Bisgard testified consistent with her IME report. Dr. Bisgard opined that Claimant did not sustain any permanent impairment. Dr. Bisgard acknowledged there were objective findings on the MRIs of small disc protrusions and mild facet hypertrophy, but opined that the findings were normal, age-related wear and tear. Referring to Table 53(II)(B), Dr. Bisgard acknowledged that Claimant sustained a medically documented injury with six months of pain and degenerative changes; however, Dr. Bisgard testified that meeting such criteria did not in and of itself qualify Claimant for an automatic impairment rating. Dr. Bisgard testified

that examiners are required to consider the mechanism of injury, pathology, objective criteria and subjective criteria, which all must match. Dr. Bisgard testified that, per the Colorado Division of Workers' Compensation Medical Treatment Guidelines, ("MTG") objective findings are required to support MRI findings. Dr. Bisgard opined that there were no objective findings establishing that the MRI findings were anything other than age-related wear and tear. Dr. Bisgard testified that there was no medical explanation for Claimant's pain behaviors and failure to improve, and that her pain behaviors were out of proportion to the objective findings.

39. Dr. Bisgard testified that there was a strong possibility of malingering in Claimant's case. Dr. Bisgard acknowledged that there is a difference between somatoform disorder and malingering, and that illness behavior does not preclude the existence of an actual defined injury.

40. Dr. Bisgard further testified that it is important to consider the AMA Guides and the MTG in conjunction with each other. Dr. Bisgard testified that, per the MTG, it is necessary to establish a Table 53 diagnosis before considering range of motion. Upon establishing a Table 53 diagnosis, examiners are required to perform inclinometer measurements for range of motion. Dr. Bisgard testified that the Division of Workers' Compensation suggests performing two sets of measurements, but that there are situations in which examiners are not required to perform two sets, such as when the range of motion is nonphysiologic or there are extreme pain behaviors. Dr. Bisgard testified that and examiner should give an explanation if he or she does not perform a second set of measurements. Dr. Bisgard testified that Dr. Thurston did not perform two sets of measurements and that she did not take any range of motion measurements because Claimant did not qualify for a Table 53 diagnosis.

41. Dr. Price testified by deposition on March 6, 2017. Dr. Price testified as an expert in physical medicine and rehabilitation. Dr. Price is Level II accredited by the Colorado Division of Workers' Compensation and is board certified in physical medicine and rehabilitation. Dr. Price testified that she reviewed Dr. Thurston's DIME report and Dr. Bisgard's IME report. Dr. Price testified that the disk protrusion constitutes a medical explanation for Claimant's pain, and that the MRI findings were objective evidence of a disk protrusion. Dr. Price testified that a "protrusion is more like a herniation," and is not just a disk bulge.

42. Dr. Price testified that she assigned a 7% impairment rating under Table 53 (II)(C) because of Claimant's disc protrusions, and a 14% impairment rating for range of motion. Dr. Price testified that you are entitled to a Table 53 rating for a lumbar sprain/strain, and that Table 53(II)(B) can be used for sacroiliac joint pain and severe muscle spasms.

43. Dr. Price opined that the disk protrusion caused some permanent problems for Claimant. Dr. Price disagreed with Dr. Thurston's conclusion that the MRI findings were age-related, opining that you do not generally find disk protrusions in a 41-year old.

44. Dr. Price testified that Dr. Thurston was required to do two sets of range of motion measurements and, if found to be invalid, bring Claimant back for a repeat test. Dr. Price testified that she disagreed with Dr. Thurston's diagnosis of malingering and explained the difference between malingering and somatization. Dr. Thurston testified that somatization did not mean an impairment rating was not warranted.

45. Claimant testified that she continues to experience constant pain in her lower back, hips and left leg, at a 6 or 7/10 in severity. Claimant testified that she can sit for approximately 30 minutes, stand for 15 minutes, walk for 20 minutes, and lift approximately five pounds. Claimant testified that she cannot bend her back completely. Claimant testified that she drives and has a handicap sticker. Claimant testified that she can no longer mop or sweep, but can do other light chores. Claimant testified that she returned to work for Employer in August 2016 and was assigned to hold a sign outside of the office. Claimant testified that she was subsequently let go by Employer.

46. The ALJ credits the testimony and opinions of Drs. Thurston and Bisgard over the contrary testimony and opinion of Dr. Price.

47. Claimant failed to overcome Dr. Thurston's DIME opinion on impairment by clear and convincing evidence.

48. Claimant failed to prove that she is entitled to post-MMI maintenance medical benefits by a preponderance of the evidence.

49. Evidence and inferences contrary to these findings were not credible and persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, Section 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1), C.R.S. Generally, the claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary

to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968).

Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado*, 717 P.2d 1000 (Colo. App. 1986).

The ALJ's resolution of issues will be affirmed if supported by substantial evidence in the record. Section 8-43-301(8), C.R.S.; *City and County of Denver School District 1 v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). Substantial evidence is that quantum of probative evidence, which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

Overcoming the DIME Physician's Opinion on Permanent Impairment

A DIME physician must apply the AMA Guides when determining the claimant's medical impairment rating. Section 8-42-101(3.7), C.R.S.; Section 8-42-107(8)(c), C.R.S. The finding of a DIME physician concerning the claimant's medical impairment rating shall be overcome only by clear and convincing evidence. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

In *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000), the court noted that under the AMA Guides the "evaluation or rating of impairment is an assessment of data collected during a clinical evaluation and the comparison of those data to the criteria contained in the Guides." Consistent with this concept the Industrial Claim Appeals Office has upheld a DIME physician's impairment rating that excluded "valid" range of motion deficits from an impairment rating based on

the determination that the range of motion deficits did not correlate with clinical observations and data. *Adams v. Manpower,* W.C. No. 4-389-466 (I.C.A.O. August 2, 2005); *Garcia v. Merry Maids,* W.C. No. 4-493-324 (I.C.A.O. August 12, 2002).

Ultimately, the questions of whether the DIME physician properly applied the AMA Guides, and whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office, supra*. Not every deviation from the rating protocols of the AMA Guides requires the ALJ to conclude that the DIME physician's rating has been overcome as a matter of law. Rather, deviation from the AMA Guides constitutes evidence that the ALJ may consider in determining whether the DIME physician's rating has been overcome. *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117 (Colo. App. 2003); *Logan v. Durango Mountain Resort,* W.C. No. 4-679-289 (ICAO April 3, 2009). Moreover, a mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. *See Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO March 22, 2000).

As found, Claimant failed to overcome the DIME physician's impairment rating by clear and convincing evidence. Dr. Thurston determined Claimant sustained a zero percent impairment rating based on his review of medical records, objective tests, and his own physical examination of Claimant. Dr. Thurston opined tthere was no significant underlying pathology, and that the MRI findings were age-related, pre-existing and not the source of Claimant's pain. Dr. Thurston performed range of motion measurements, but explained that he considered such measurements moot because there was no underlying pathology. Dr. Thurston considered Claimant's somatization and possible malingering in his analysis of permanent impairment. Although Dr. Thurston cited to the sixth edition of the AMA Guides when discussing malingering, Dr. Thurston ultimately referred to Table 53 (II)(A) when finding that no permanent impairment rating was warranted. Dr. Price's disagreement with Dr. Thurston's impairment rating represents a mere difference of opinion, which is insufficient to overcome the DIME. Dr. Thurston's opinion is shared by Dr. Bisgard and supported by the medical records. Claimant has failed to produce unmistakable evidence free from serious or substantial doubt that Dr. Thurston's zero percent impairment rating was incorrect.

Medical Maintenance Benefits

The need for medical treatment may extend beyond the point of maximum medical improvement where claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of his condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609 (Colo. App. 1995). An award for *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 992 P.2d 701 (Colo. App. 1999). The claimant must prove entitlement to *Grover* medical benefits by a preponderance of the evidence. *Lerner v. Wal-Mart Stores, Inc.,* 865 P.2d 915 (Colo. App. 1993). An award of *Grover* medical benefits

should be general in nature. *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003).

As found, Claimant failed to establish by a preponderance of the evidence that she is entitled to medical maintenance benefits. As noted throughout Claimant's medical records, Claimant underwent various modalities of treatments, including physical therapy, medications, and injections, all of which were ineffective. Drs. Thurston and Bisgard credibly opined additional maintenance medical care is not indicated or appropriate for Claimant.

ORDER

It is therefore ordered that:

I. Claimant failed to overcome the DIME physician's 0% impairment rating by clear and convincing evidence.

II. Claimant failed to establish an entitlement to post-MMI maintenance medical benefits by a preponderance of the evidence.

III. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 12, 2017

Denver, CO 80203

ISSUES

- Whether claimant has proven by a preponderance of the evidence that she sustained an occupational disease or injury to her right shoulder arising out of an in the course and scope of her employment with employer.

- If claimant has proven a compensable injury, whether claimant has proven by a preponderance of the evidence that the medical treatment she received from Grand River Health Medical Clinic (Mark Quinn, PA-C), Dr. Robert Adams, and Dr. Bruce Lippman was authorized medical treatment.

- If claimant has proven a compensable injury, whether claimant has proven by a preponderance of the evidence that the medical treatment she received from Grand River Health Medical Clinic (Mark Quinn, PA-C), Dr. Robert Adams, and Dr. Bruce Lippman was reasonable and necessary to cure and relieve claimant from the effects of the work injury.

- If claimant has proven a compensable injury, whether claimant has proven by a preponderance of the evidence that employer failed to provide a designated provider list to claimant that complies with Section 8-43-404(5)(a)(I)(A), C.R.S., and as a result, the choice of physician passed to claimant.

- If claimant has proven a compensable injury, whether claimant has proven by a preponderance of the evidence that she is entitled to Temporary Partial Disability ("TPD") benefits beginning December 1, 2016 and ongoing.

- If claimant has proven a compensable injury, what is claimant's average weekly wage ("AWW")?

- If claimant has proven a compensable injury, whether respondent has proven by a preponderance of the evidence that penalties should be assessed pursuant to Section 8-43-102(1)(A), C.R.S. for claimant's failure to timely report the injury.

FINDINGS OF FACT

1. Claimant has worked for employer since April 2013 and began working in the floral department in February 2016. Claimant's job duties in the floral department include breaking down loads of cut flowers and live plants. The cut flowers come in buckets of water that must be lifted out of boxes and placed in the cut flower cooler. In addition, the water must be refreshed in these buckets.

2. Claimant testified that live plants also arrive in boxes that must be unloaded. The plants are the placed on display shelves and hung from "A-frames". In the summer claimant is also responsible for stocking live plants in an outdoor green house. At all times claimant is tasked with watering all live plants.

3. Claimant testified that watering is typically done on Tuesdays and Sundays. On a watering day claimant may spend up to three hours of her eight hour shift watering these plants. Watering duties increase during the summer when the greenhouse is used and at Christmas time when employer receives large orders of poinsettias. Claimant testified that she used a watering wand with a trigger to water plants that were on shelving above shoulder height. Claimant estimates that of her assigned watering duties 40 to 45 percent is done above shoulder height.

4. Claimant testified that in late summer 2016 she noticed pain in her right shoulder when she performed overhead work, such as the overhead watering. Claimant did not initially seek medical treatment because she thought she could "work through it".

5. On December 1, 2016, claimant reported to employer that she believed she had injured her right shoulder. Claimant testified that she made a report at that time because her shoulder was not getting better and she felt that she needed medical treatment.

6. On December 1, 2016, employer provided claimant with a Designated Medical Providers List that included four medical providers claimant could see for treatment. The list included Grand River Occupational Health Services located at 201 Sipprelle Drive in Parachute, Colorado; Grand River Health Medical Clinic located at 501 Airport Road in Rifle, Colorado; Dr. Laurie Marbas with Grand River Health Clinic in Rifle, also located at 501 Airport Road in Rifle, Colorado; and Dr. Scott Rollins located at 58128 Highway 330 in Collbran, Colorado.

7. On December 1, 2016, claimant signed the Designated Medical Providers List that indicated that she would seek treatment at Grand River Health Medical Clinic.

8. On December 8, 2016, claimant was seen by Mark Quinn, PA-C at Grand River Health Medical Clinic. Claimant reported to Mr. Quinn that she had experienced progressively worsening right shoulder pain over the last year. Mr. Quinn diagnosed rotator cuff tendonitis and restricted claimant from lifting, pushing, pulling, or carrying over 20 pounds. Mr. Quinn also referred claimant to physical therapy for a consultation.

9. On February 22, 2017, claimant requested a one time change of physician from Mr. Quinn "c/o Deborah Brown MD" to Dr. Bruce Lippman, Sr. Respondent denied claimant's change of physician because Dr. Lippman was not included on the Designated Medical Providers List.

10. On February 28, 2017, claimant submitted another one time change of physician. In this notice, claimant indicated that she would be changing from Mr. Quinn "c/o Deborah Brown MD" to Dr. Laurie Marbas.

11. Dr. Marbas testified at hearing that in December 2016 she had moved from the Rifle, Colorado area to Boca Raton, Florida. Respondents did not authorize any treatment with Dr. Marbas because she was practicing in Florida at the time claimant submitted the notice of change of physician.

12. On March 1, 2017, claimant sought treatment with Dr. Robert Adams. Claimant testified that she wanted to see an orthopedic surgeon to address her right shoulder issues because Mr. Quinn was not a doctor. Claimant testified that she was not referred to Dr. Adams, but found his contact information in the yellow pages.

13. At her first appointment with Dr. Adams claimant reported that she started having anterior shoulder pain during the summer and that she is "more active" in the summer. Dr. Adams diagnosed right shoulder biceps tendonitis and ordered a magnetic resonance image ("MRI") of claimant's right shoulder.

14. On March 8, 2017, an MRI of claimant's right shoulder showed a partial thickness tear of the infraspinatus tendon, fluid in the bicipital tendon sheath, fluid in the subacromial/subdeltoid bursa, and moderate degenerative changes in the AC joint.

15. Following the March 8, 2017 MRI, Dr. Adams opined that claimant had "obvious biceps tendonitis" and recommended ice, anti-inflammatory medication, and rest.

16. Claimant did not return to Mr. Quinn or Dr. Adams for treatment. Instead, on April 14, 2017, claimant sought treatment with Dr. Lippman. Claimant testified that she went to see Dr. Lippman because he has treated her children in the past. On April 14, 2017, Dr. Lippman restricted claimant from work for three weeks. At that time, Dr. Lippman opined that claimant had tendonitis in her right shoulder. Claimant testified that she has not returned to work since April 14, 2017.

17. Claimant testified that between December 1, 2016 and April 14, 2017 she missed "a few" days of work because of right shoulder pain. Claimant testified that she would call employer and notify them that she would not be at work because her shoulder was causing her pain.

18. On April 19, 2017, respondent sent claimant for an independent medical examination ("IME") with Dr. Tashof Bernton. Dr. Bernton reviewed claimant's medical records, obtained a medical history, and performed a physical examination of claimant in connection with the IME. Following the IME, Dr. Bernton issued a report in which he opined that that claimant did not suffer an acute injury to her right shoulder. Dr. Bernton also opined claimant's right shoulder symptoms were not work related.

19. Dr. Bernton testified by deposition in this matter and confirmed his opinion that claimant's right shoulder symptoms were not the result of an acute injury and were not caused by claimant's work duties. Dr. Bernton testified that claimant has biciptial tendonitis and a biceps tendon tear. Dr. Bernton explained that a biceps tendon tear can occur either acutely or on a degenerative basis. Dr. Bernton testified that based upon his review of the medical records and claimant's description of her work duties it is his opinion that claimant's biceps tendon tear occurred on a degenerative basis. Dr. Bernton also testified that a biceps tendon tear is not a noted diagnosis in the repetitive motion section of the Colorado Workers' Compensation Treatment Guidelines.

20. Claimant testified that in December 2016 her hours varied and she was paid $12.75 per hour. Based upon the payroll records entered into evidence the claimant was paid on a weekly basis with pay periods ending on a Saturday. Claimant's wages during the eight weeks prior to her report of injury on December 1, 2016 totaled $3,078.53. The ALJ calculates claimant's average weekly wage ("AWW") to be $384.82.

21. The ALJ credits the medical records and the opinion of Dr. Bernton and finds that claimant did not suffer an acute injury to her right shoulder. The ALJ further credits the opinion of Dr. Bernton and finds that claimant's work activities did not cause an occupational disease or repetitive motion disorder of her right shoulder. Although, claimant testified that 40 to 50 percent of her watering duties were done overhead, claimant also performed other job duties that did not include overhead work. The ALJ is not persuaded that the overhead watering performed by claimant caused an occupational injury to claimant's right shoulder. The ALJ credits the opinion of Dr. Bernton and finds that claimant's right shoulder biceps tendon tear occurred on a degenerative basis.

22. The ALJ finds that claimant has failed to demonstrate that it is more likely that not that she suffered an occupational disease or industrial injury that arose out of and in the course and scope of her employment. The ALJ also finds that claimant has failed to demonstrate that it is more likely than not that her work activities aggravated, accelerated, or combined with a preexisting condition.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2015).

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with "a preexisting disease or infirmity to produce disability or need for treatment." *See H & H Warehouse v. Vicory, supra.*

5. The test for distinguishing between an accidental injury and occupational disease is whether the injury can be traced to a particular time, place, and cause. *Campbell v. IBM Corporation*, 867 P.2d 77 (Colo. App. 1993). "Occupational disease" is defined by Section 8-40-201(14), C.R.S. as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

6. As found, claimant has failed to demonstrate by a preponderance of the evidence that she sustained an occupational disease or injury to her right shoulder arising out of and in the course and scope of her employment with employer. As found, the medical records and Dr. Bernton's opinions are credible and persuasive.

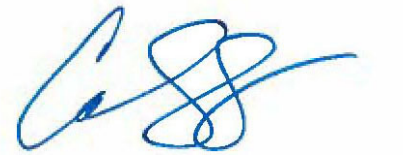
ORDER

It is therefore ordered that:

1. Claimant's claim for benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Dated: June 14, 2017



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts

Grand Junction, Colorado 81501

ISSUES

- Did Claimant prove by a preponderance of the evidence that his right trigger finger condition is a compensable component of the admitted August 7, 2015 work injury?

- If Claimant has proven that his right trigger finger condition is a compensable component of the admitted injury, did Claimant prove by a preponderance of the evidence that he is no longer at MMI?

FINDINGS OF FACT

1. Claimant testified that he never had symptoms in his right trigger finger before his industrial injury. There was no evidence in the record documenting any treatment for his right hand or trigger finger before August 7, 2015.

2. On August 7, 2015, Claimant sustained an admitted industrial injury while working for Employer. Claimant was working as a service technician and hurt his right shoulder while doing an alignment. He was using a wrench and separating two parts when he hurt his shoulder. Claimant testified his pain gradually increased after the injury.

3. Claimant first sought treatment on August 10, 2015 and was evaluated at Ann Marie Latch, PA-C at Urgent Care. Shoulder pain was noted on motion and the diagnosis was: shoulder sprain.

4. Claimant was evaluated on August 12, 2015 by Theodore Villavicencio, M.D. at Concentra, the ATP for Employer. At that time, he had pain in the right upper, posterior shoulder. On examination, restricted range of motion ("ROM") was noted. Dr. Villavicencio's assessment was right shoulder strain and he referred Claimant for physical therapy ("PT"). Claimant's work restrictions were: no lifting no greater than 30 pounds.

5. Claimant returned to Dr. Villavicencio on August 26, 2015. Claimant complained of continuing pain in the right shoulder. On examination positive Neer and speed tests were noted. Dr. Villavicencio's assessment remained the same, as did Claimant's work restrictions. Dr. Villavicencio referred Claimant for an MR arthrogram.

6. On September 4, 2015, Dr. Villavicencio evaluated Claimant, who complained of persistent pain in the lateral shoulder area, which was worse with activities. Dr. Villavicencio's assessment was right shoulder strain/sprain. Claimant's

PT was to continue. Claimant was referred to Joel Gonzales, M.D. for an orthopedic evaluation.

7. Claimant's PT records were admitted at hearing. Claimant received 14 PT sessions at Concentra physical therapy from August 12, 2015 through September 21, 2015.[1] The PT was overseen by Joshua Simon, PT. These treatments were focused on Claimant's right shoulder.

8. On September 16, 2015, Claimant underwent an MRI. The MRI showed a tear of the labrum, ossified loose body, full thickness chondral defect on the posterior surface of the glenoid. Claimant's right shoulder also had moderate arthritis.

9. The ALJ notes in the initial evaluations of Claimant by Dr. Villavicencio and Dr. Gonzales, no complaints referable to the right hand were documented.

10. On September 24, 2015, Claimant was evaluated by Dr. Gonzalez, who noted slight stiffness with range of motion in his right shoulder. Forward flexion was limited to 160° and external rotation was limited to 60°. Claimant had pain and weakness with resisted speed and Yergason testing. He also had positive Neer and Hawkins impingement maneuvers. Dr. Gonzalez' impression was: right shoulder underlying ostoarthritis about the glenohumeral joint; right shoulder loose body; degeneration of the labrum, associated with his shoulder arthritis; new rotator cuff tear and weakness on exam. Dr. Gonzalez discussed surgery with Claimant.

11. On September 30, 2015, Claimant underwent an arthroscopic debridement and arthroscopic subacromial decompression in the right shoulder, which was performed by Dr. Gonzales. The pre- and post-operative diagnoses were the same: rotator cuff tear and degenerative joint disease with outlet impingement, right shoulder. He was followed by Dr. Gonzalez, who ordered physical therapy as part of his post-operative course of treatment.

12. Following his surgery, Claimant began PT at Panther physical therapy on October 8, 2015.[2] The treatment included therapeutic exercises in activity, neuromuscular rehabilitation, manual therapy and patient education. Claimant received physical therapy for the next seven months through March 2016.

13. Dr. Villavicencio followed Claimant after his surgery, starting on October 20, 2015. Claimant's work restrictions were continued. These remained in place after the October 27, November 11 and December 17, 2015 appointments.

14. Claimant testified he injured right hand/trigger finger in February 2016 while doing PT at Panther Physical Therapy. He was using the battle ropes, which were 12-15 feet long. He also used the kettle bells. He said when he woke up the next day,

[1] Exhibit I.

[2] Exhibit K.

he could not straighten his finger. There was no reference to a trigger finger issue in the medical records before February 2016.

15. The ALJ reviewed Claimant's extensive physical therapy records to determine when he complained of right trigger finger symptoms. The PT treatments from October 8, 2015 through February 1, 2016 were focused on Claimant's shoulder. There were no notations related to trigger finger symptoms. There were references in the PT records to symptoms attributable to various activities. For example, on November 16, 2015, Claimant reported that he overdid it raking leaves, feeling symptoms in his shoulder.[3] Those symptoms lasted until November 23, 2015. Claimant also experienced increased symptoms on December 23, 2015 while putting up cabinets.[4] On December 30, 2015, Claimant reported symptoms while unloading wood.[5] On January 20, 2016, Claimant had symptoms which he attributed to chipping ice.[6] Also, on January 29, 2016, Claimant had a strained feeling in his shoulder due to his sleeping position.[7]

16. Claimant initially downplayed these symptoms on cross-examination. When the specific records were referenced, Claimant testified he participated in the foregoing activities. He also admitted these required use of his right hand.

17. The first reference to his trigger finger was they were February 1, 2016. In particular, DPT Kueser documented that Claimant reported soreness into shoulder blade and deltoid, along with occasional trigger finger on right hand. The note did not identify what caused these symptoms. More particularly, there was no reference attributing the trigger finger symptoms to the rope exercises. Ms. Kueser did not state that the PT caused those symptoms. There was no reference to any treatment he received for the trigger finger. The same complaint was reported in the Panther PT records on February 3, 2016. However, no trigger finger symptoms were described in the February 8, 2016 note. On February 10 2016, Claimant noted his shoulder was OK and he had occasional trigger finger symptoms. He thought this might be related to shoulder positioning.

18. Dr. Villavicencio examined Claimant on February 11, 2016. At that time, persistent pain in the lateral shoulder area, as well as right upper extremity paresthesias was noted. In addition, Claimant noted two weeks ago he had a sudden onset of right middle trigger finger symptoms. Dr. Villavicencio's assessment was S/P rotator cuff repair; right shoulder strain. The ALJ notes Dr. Villavicencio made no diagnosis related to the trigger finger, nor was any treatment recommended.

[3] Exhibit K, pp. 213-214.

[4] Exhibit K, pp. 234-235.

[5] Exhibit K, pp. 236-237.

[6] Exhibit K, pp. 246-247.

[7] Exhibit K, pp. 252-253.

19. In the February 15, 2016 Panther PT record, Claimant was said to be unsure why the trigger finger occurred. On February 17, 2016, Claimant noted 70-75% improvement in the shoulder, however, Claimant's biggest concerns were bilateral hand swelling and trigger finger symptoms that seemed to come on with certain positions. In her assessment, DPT Kueser noted Claimant's hand/finger symptoms were non-provokable during clinic tasks but a large concern for patient.[8] Claimant was advised to address this with the doctor at an upcoming appointment. The ALJ notes this raises an issue whether the trigger finger symptoms were primarily subjective complaints, as opposed to being based on objective findings. Also, there was no explanation provided why Claimant experienced swelling in both hands.

20. On February 23, 2016, Claimant returned to Dr. Gonzalez. Dr. Gonzalez noted Claimant developed triggering in his long right finger after doing a rope exercise in physical therapy. The problem went away after he stopped doing the exercise. Dr. Gonzalez noted this problem would be monitored. In the follow-up evaluation done by Dr. Gonzalez on March 15, 2016, no trigger finger symptoms were noted.

21. On February 24, 2016, following his medical appointment, Claimant told DPT Kueser they would keep an eye on the trigger finger as he may need an injection. He continued to participate in PT treatments.

22. Claimant returned to Dr. Villavicencio on February 25, 2016. The sudden onset of right middle trigger finger symptoms one month ago while doing a new exercise in physical therapy was noted. Dr. Villavicencio recorded the PT notes were not available. Claimant had no past problems with trigger finger, no surgeries of the hand/wrist. On examination, Dr. Villavicencio noted triggering of right middle finger at the A1 area. There was no specific diagnosis related to the trigger finger made as part of Dr. Villavicencio's assessment. The evaluations performed at March 29, 2016 and April 26, 2016 had the same assessment and findings by Dr. Villavicencio. No treatment for Claimant's trigger finger was recommended.

23. There were no further references to trigger finger symptoms in the balance of the Panther PT records. This included Claimant's treatment sessions on February 26 and 29; March 2, 9, 11, 16, 23 and 25, 2016.[9] Claimant received physical therapy at Panther Physical Therapy through March 25, 2016. He received a total 51 PT sessions at this facility. The discharge summary was prepared by DPT Kueser.

24. Claimant returned Concentra for physical therapy on April 12, 2016. He was evaluated by Brea Salvin, who noted a history of trigger finger recently ("a few months ago"); this symptom was noted to come and go. Claimant's PT plan included therapeutic exercises such as stretching, strengthening to address the impairments of range of motion and muscle performance. Other therapeutic activities included lifting,

[8] Exhibit K, p. 264.

[9] Exhibit K, pp. 270-289.

pushing, pulling, carrying, gripping to address the ability to perform the identified essential functions. Manual therapy such as joint and mobilization was to be provided.

25. Claimant underwent physical therapy on April 15, 19, 22 and 25, 2016 at Concentra. There were no references to trigger finger symptoms in those notes. In addition, Claimant's grip strength was tested by a dynamometer at each session. The ALJ inferred Claimant would have reported trigger finger symptoms during this treatment, if he had been experiencing same.

26. Claimant was evaluated on May 9, 2016 by Dr. Villavicencio. At that time, he reported he was still dealing with trigger finger on the right-hand. Dr. Villavicencio once again noted the PT notes were not available to review. Dr. Villavicencio's assessment was: right shoulder strain; S/P rotator cuff repair; and trigger finger of the right hand. He referred Claimant to a hand specialist, Dr. Clinkscales to evaluate and treat the trigger finger.

27. On September 13, 2016, a Final Admission of Liability ("FAL") was filed on behalf of Respondents. The FAL was based upon Dr. Villavicencio's finding Claimant reached MMI as of July 13, 2016. Dr. Villavicencio assigned a 6% whole person medical impairment rating. The FAL admitted for reasonable and necessary post-MMI medical treatment by an ATP.

28. Claimant underwent an independent medical examination on October 21, 2016, which was performed by F. Mark Paz, M.D. at the request of Respondents. At the time of the evaluation, Claimant recorded that the pain in his right hand was 3/10 to 6/10. Claimant said he could not grip firmly, his middle finger got caught, which then popped loose with stabbing pain. On examination, Dr. Paz noted tenderness with clicking at the palmar surface of the right third metacarpal during active flexion and extension. Slight tenderness to palpation was noted in the same region at the location of the third MCP joint.

29. Dr. Paz' assessment was: right shoulder degenerative joint disease; right shoulder rotator cuff degenerative tear; right shoulder loose-body; right-hand trigger finger; right upper extremity paresthesias. Dr. Paz opined that it was not medically probable that the right-hand trigger finger was causally related to the August 7, 2015. Most trigger finger conditions had no specific etiology and were classified as idiopathic. Dr. Paz‘analysis was based upon an evaluation of the State of Colorado, Cumulative Trauma Conditions, Medical Treatment Guidelines, Rule 17, Exhibit 5 . He opined there was no strong or good evidence regarding cumulative exposure associated with Claimant's development of trigger finger.

30. There was no evidence in the record that Claimant objected to the FAL, including requesting a Division of Workers’ Compensation Independent Medical Examination. (“DIME”) on the question of MMI.

31. Claimant testified that he has not received any treatment for the trigger finger. He also was currently working full duty with no restrictions and has been able to perform the duties required at his employment.

32. Dr. Paz testified at hearing as an expert in internal medicine, with a focus on occupational injuries. He is also Level II accredited pursuant to the WCRP. Dr. Paz noted he first examined Claimant on October 21, 2016 and reviewed his findings and opinions. Dr. Paz testified that a trigger finger was a stenosis of the flex or tendon up on the palmar surface a band there are two tendons in the finger, one of which is deep and one is superficial. The deep one goes to the end of the finger and the deeper one penetrates, flexes, and pulls the proximal portion of the finger. Dr. Paz described the anatomy of the finger, when the tendon contracts, it flexes the finger.

33. Dr. Paz testified that most trigger fingers were allopathic; meaning there was no explanation for them. Dr. Paz stated that he did not believe Claimant's trigger finger was caused by PT.[10] Dr. Paz analyzed whether repetitive activities could have caused Claimant's trigger finger. He noted Claimant's physical therapy sessions lasted 45 minutes three times a week. Dr. Paz testified that this would not meet the requirement for a compensable repetitive exposure under the Medical Treatment Guidelines. Dr. Paz credibly testified that it was more medically probable that Claimant's remodeling which consisted of carrying dry wall and cabinets, using a knife to cut dry wall, and using a drill to screw in the dry wall would cause a trigger finger condition as opposed 45-minute physical therapy sessions. Dr. Paz also noted that Claimant did not have trigger finger complaints when he was undergoing work-hardening, which was physically more demanding than PT. The ALJ credited Dr. Paz' testimony that the trigger finger symptoms were not caused by Claimant's PT.

34. Claimant testified he continues to have problems with his trigger finger. It bothers him every day.

35. Claimant failed to prove that his right trigger finger was a compensable injury.

36. Claimant failed to establish he was no longer at MMI with regard to his shoulder.

37. Claimant is entitled to post-MMI medical benefits, as admitted in the FAL.

38. Evidence and inferences inconsistent with these findings were not persuasive.

[10] Hearing Transcript, p. 64:14-17.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1),C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). In the case at bench, the credibility of Claimant, as well as Dr. Paz was determinative on the compensability issue.

Compensability of Trigger Finger

The legal standard applicable to the compensability issue is found in § 8-41-301(1)(c), C.R.S., which provides as a condition for the recovery of workers' compensation benefits the injury must be "proximately caused by an injury or occupational disease arising out of and in the course of the employment". *Loofbourrow v. Industrial Claim Appeals Office*, 321 P.3d 548 (Colo. App. 2011), *aff'd Harman-Bergstedt, Inc. v. Loofbourrow*, 320 P.3d 327 (Colo. 2014).

A "compensable" injury is one which is disabling and entitles the Claimant to compensation in the form of disability benefits. *Id*.; *Romero v. Industrial Commission*, 632 P.2d 1052 (Colo. App. 1981). Conversely, no benefits flow to the victim of an industrial accident unless the accident results in a compensable "injury". Id.; § 8-41-301, C.R.S. The question of whether Claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant asserted he injured his trigger finger while participating in physical therapy to rehabilitate his shoulder. Claimant argued that since this injury occurred while he was receiving treatment, it was compensable. Claimant correctly noted that

such injuries are compensable. The ALJ notes such an injury under the quasi-course of employment doctrine.

In Colorado, the quasi-course of employment doctrine has been applied to certain activities of Claimant following a compensable injury. *Employers Fire Insurance Co. v. Lumbermens Mutual Casualty Co*., 964 P. 2d 591 (Colo. App. 1998). This doctrine has been the basis for expanding what is considered compensable, beyond what would ordinarily be the time and space limits of employment, when it occurs after an industrial injury. The rationale articulated by Colorado courts is that but for the compensable injury, Clamant would not have undertaken those activities. The trip to the physician's office became part of the employment contract. *Excel Corp. v. Indus. Claim Appeals Office,* 860 P.2d 1393, 1394 (Colo. App. 1993). Since the employer is required to provide medical treatment after an industrial injury, liability for injuries sustained while travelling to an appointment to treat for the injuries is compensable because these activities would not have been undertaken but for the compensable injury. *Price Mine Service, Inc. v. Industrial Claim Appeals Office*, 64 P.3d 936, 938 (Colo. App. 2003).

Accordingly, the quasi-course of employment doctrine has been extended to injuries sustained by Claimants while traveling to and from treatment provided by an authorized provider under various factual scenarios*. Excel Corp. v. Indus. Claim Appeals Office, supra,* 860 P.2d at 1394-1395. [Claimant's slip and fall while leaving physical therapy was deemed compensable as part of the quasi-course of employment doctrine. The activity of going to the medical appointment was considered "an implied part of the employment contract", since Claimant would not have been going to the doctor but for the compensable injury.]*; Price Mine Service, Inc. v. Industrial Claim Appeals Office*, *supra* 64 P.3d at 938. [The injuries sustained by Claimant in an MVA after authorized medical treatment was compensable as part of the original injury and the insurer on the risk was liable under quasi-course of employment doctrine. The Court specifically held under this doctrine "the second injury was not an intervening event which would relieve the employer of liability".]; *Turner v. Industrial Claims Appeals Office*, 111 P.3d 534 (Colo. App. 2004) [Claimant's injuries from MVA after a vocational evaluation appointment were found compensable, despite the fact Claimant had stopped for lunch after the appointment].

However, Claimant was still required to prove that it was his activities while participating in physical therapy that caused the injury. *Loofbourrow v. Industrial Claim Appeals Office*, *supra,* 321 P.3d at 553. As found, the ALJ was not persuaded that such activities were the cause of the trigger finger symptoms.

As a starting point, there was evidence in the record that Claimant developed trigger finger symptoms in February 2016. Claimant's ATPs (Dr. Gonzalez and Dr. Villavicencio) documented the presence of symptoms. In addition, there was a record of trigger finger symptoms in the PT records. (Findings of Fact 17, 19, 21, and 24).

However, Claimant failed to meet his burden of proof that using the ropes while undergoing PT caused the trigger finger. The ALJ's rationale was twofold. First, the

mere presence of trigger finger symptoms did not establish Claimant's PT exercises as the cause. As found, Claimant's trigger finger symptoms were periodic. He also testified that when he experienced pain, he stopped using the ropes. Yet his report of symptoms continued over the next few PT visits and then not at all. Claimant also participated in extensive activity (i.e. removing cabinets, stacking wood and hanging drywall), which were potential causes of trigger finger symptoms. The ALJ found Claimant did not proffer evidence that explained why the symptoms continued after he ceased doing the rope exercises. Under these facts it was equally likely that his remodeling activities were the cause of the trigger finger.

Second, there was no expert medical opinion presented by Claimant (within a reasonable degree of medical probability) that established PT as the cause of his trigger finger. Neither ATP clearly enunciated such an opinion. Therefore, there was an absence of expert testimony which supported Claimant's argument on causation.

By contrast, Dr. Paz testified the etiology of a trigger finger is idiopathic or can be the result of repetitive activities. As found, the Dr. Paz' testimony regarding the cause of Claimant's trigger finger symptoms was persuasive to the ALJ. (Finding of Fact 33). Claimant's trigger finger symptoms were not consistent. In addition, Claimant has returned to work full duty and no evidence of continued symptoms (as reflected in the medical records) was introduced.

Based upon the totality of evidence in the record, the ALJ concluded Claimant failed to prove his trigger finger symptoms are compensable.

MMI

Claimant did not present evidence that he was no longer at MMI with regard to his right shoulder. Moreover, he did not request a DIME on this question. (Finding of Fact 30). An ATP makes the initial finding of MMI, and assigns an impairment rating if appropriate. If a party wishes to challenge the ATP's MMI determination, the impairment rating, or both, the party must request a DIME in accordance with the procedures established in § 8-42-107.2, C.R.S. 2004. § 8-42-107(8)(b)(II), C.R.S. 2004; § 8-42-107(8)(c), C.R.S. 2004; *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186, 190 (Colo. App. 2002). Without a request for DIME in the record, the ALJ determined he remains at MMI for his right shoulder. (Finding of Fact 36).

In light of the ALJ's conclusion that Claimant's trigger finger was not compensable, the question whether he was at MMI for this condition was moot.

ORDER

It is therefore ordered that:

1. Claimant's claim for benefits for a right trigger finger is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

W.C. No. 4-996-945-03

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER DENYING SUMMARY JUDGMENT IN FAVOR OF THE RESPONDENTS ON STATUTE OF LIMITATIONS AND GRANTING SUMMARY JUDGMENT IN FAVOR OF RESPONDENTS ON SANCTIONS

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer/Respondents.

No hearing on the merits in the above-referenced matter has yet been scheduled. On May 15, 2017, the Claimant filed an Application for Hearing on several issues, including compensability, medical benefits and penalties versus the Respondents for alleged violation of § 8-43-203, C.R.S. and Rule 5-2 (D) of the Workers' Compensation Rules of Procedure (WCRP), 7 CCR 1101-3. On May 24, 2017, the Respondents filed a Motion for Summary Judgment, with attached exhibits A through C and 7. On June 12, 2017, the Claimant filed an Objection to Respondents' Motion for Summary Judgment and Claimant's Motion for Sanctions, with attached exhibits including the Claimant's Affidavit.

The matter was assigned to Edwin L. Felter, Jr., Administrative Law Judge (ALJ) for decision on the Respondent's Motion for Summary Judgment and the Claimant's Objection. Both matters were deemed submitted for decision on June 12, 2017.

Respondents' Exhibits A through C and 7 were attached to the Motion for Summary Judgment. Unmarked exhibits, including the Claimant's Affidavit, were attached to the Claimant's Objection.

ISSUES FOR SUMMARY JUDGMENT

The issues to be determined by this decision concern whether there are genuine issues of disputed material fact concerning whether the Claimant filed her Workers' Claim for Compensation beyond the Two-Year Statute of Limitations; whether the Claimant had a reasonable excuse which would extend the Statute of Limitations to three years; and, whether there is a genuine issue of disputed material fact concerning the Claimant's request for sanctions against the Respondents.

The Respondents bear the burden of proof, by a preponderance of the evidence of establishing that there is no genuine issue of disputed material fact concerning the Two-Year Statute of Limitations. The Claimant bears the burden, by preponderant evidence of establishing that there is a genuine issue of disputed material fact concerning whether there is a reasonable excuse which would extend the Statute to three years. Also, the Claimant bears the burden on her Motion for Sanctions.

FINDINGS OF FACT

Based on the undisputed evidence contained in the file, pleadings and exhibits, the ALJ makes the following Findings of Fact:

Preliminary Findings/Posture

1. . On May 15, 2017, the Claimant filed an Application for Hearing on several issues, including compensability, medical benefits and penalties versus the Respondents for alleged violation of § 8-43-203, C.R.S. and Rule 5-2 (D) of the Workers' Compensation Rules of Procedure (WCRP), 7 CCR 1101-3. No hearing is presently set.

2. Respondents allege that summary judgment is appropriate because there is no genuine issue of disputed material fact that the Claimant sustained a right knee injury, while working at home, on June 7, 2013 and did not file a Workers' Claim for Compensation until October 20, 2015, more than two years after the alleged injury. Claimant allegedly slipped on an ice cube while getting a drink of water.

3. The Claimant's Affidavit, attached to the Objection, reveals that the Claimant reported her right-knee injury at home, after logging into her work computer, to her supervisor, Denitrice Medina, who was located in Connecticut. The Employer's First Report was not filed until December 23, 2015.

4. The Respondents did not pay Claimant's medical bills or otherwise admit liability by their actions.

5. Respondents filed a Notice of Contest, dated January 8, 2016.

6. The Claimant filed an Application for Hearing on January 23, 2016. The hearing was scheduled for March 22, 2016, but the parties agreed to vacate the hearing to schedule a settlement conference.

7. The settlement conference was scheduled for April 29, 2016, but was cancelled at the request of Claimant's counsel.

8. The Claimant filed her first Application for Hearing on October 19, 2016, endorsing the issues of compensability, medical benefits, and penalties against the Respondents as herein above described.

9. The hearing was set for February 1, 2017, however, during a pre-hearing conference on January 10, 2017, the parties agreed to continue the hearing and it was cancelled.

10. The present Application for Hearing was filed on May 15, 2017.

Findings/Statute of Limitations

11. The ALJ finds that there is no genuine issue of disputed material fact concerning the fact that the Claimant filed her Worker's Claim for Compensation more than two years after her alleged injury.

12. Attached to the Claimant's Objection to Motion for Summary Judgment is the Claimant's Affidavit, which lays out the facts of her June 7, 2013, right knee injury and, by implication, reveals that the Claimant was oblivious about a workers' compensation claim.

13. In the Objection, Claimant through counsel asserts that she did not become aware of the nature, seriousness and probable compensable character of her injury until she saw a lawyer on or about October 20, 2015, at which time she filed a Workers' Claim for Compensation.

Claimant's Motion for Sanctions

14. The Claimant's Objection is replete with scurrilous accusations against Respondents' counsel, and insulting adjectival characterizations of the Respondents'

pleadings, which have no place in our system of jurisprudence. This use of invective does nothing to resolve the merits of the Motion for Summary Judgment. Indeed, the invective creates an unwarranted distraction that lessens the overall credibility of the Objection. Nonetheless, the Objection reveals that there are genuine issues of disputed material fact, *i.e:,* (1) was the two-year statute tolled until the Employer's First Report was filed; and, (2) was the two-year statute extended to three-years by virtue of the fact that the Claimant allegedly, as a reasonable person, did not recognize the nature, seriousness and probable compensable nature of her right knee injury until October 20, 2015.

15. Claimant, through counsel, in the Motion for Sanctions implies that the Motion for Summary judgment was filed "for an improper purpose, such as to harass or cause unnecessary delay." This implication is without foundation, frivolous and wholly without merit. Allegations or implications in reckless disregard of the actual facts have no place in our system of jurisprudence.

16. The ALJ finds that there is no genuine issue of disputed material fact concerning the Claimant's Motion for Sanctions; and, in light of the resolution of the Motion for Summary Judgment, the ALJ finds that the Motion for sanctions borders on the frivolous and is without merit.

Ultimate Findings

17. The totality of the pleadings and evidence establishes, by preponderant evidence that there are genuine issues of disputed material fact concerning whether or not there was a tolling of the statute of limitations, which can only be resolved in an evidentiary hearing.

18. There is no genuine issue of disputed material fact that the Claimant's Motion for Sanctions lacks merit. Therefore, summary judgment in favor of the Respondents on this issue is appropriate.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Summary Judgment

a. Pursuant to Office of Administrative Courts Rules of Procedure (OACP) Rule 17, 1 CCR 1101-3, "any party may file a motion for summary judgment seeking resolution of any endorsed issue for hearing." Summary judgment may be sought in a workers' compensation proceeding. *See Fera v. Indus. Claim Appeals Office,* 169 P.3d

231, 232 (Colo. App. 2007). The OAC Rule allows a party to support its Motion with affidavits, transcripts of testimony, medical reports, or employer records. A motion for summary judgment may be supported by pleadings, depositions, answers to interrogatories, and admissions on file. C.R.C.P. 56; *See also Nova v. Indus. Claim Appeals Office*, 754 P.2d 800 (Colo. App. 1988) [C.R.C.P. and C.R.E. apply insofar as they are not inconsistent with the procedural or statutory provisions of the Act]. As found, there were appropriate attachments to the Motion for Summary Judgment and to the Claimant's Objection. The Objection sets forth alleged facts illustrating that there are genuine issues of disputed material fact *i.e:,* (1) was the two-year statute tolled until the Employer's First Report was filed; and, (2) was the two-year statute extended to three-years by virtue of the fact that the Claimant allegedly, as a reasonable person, did not recognize the nature, seriousness and probable compensable nature of her right knee injury until October 20, 2015.

.

b. Pursuant to Office of Administrative Courts (OACRP), Rule 17, 1 CCR 104-1, summary judgment is appropriate when there are no disputed issues of material fact and the moving party is entitled to judgment as a matter of law. As found, there are genuine issues of disputed material fact concerning the tolling of the statute of limitations. There are no genuine issues of disputed material fact that the Claimant's Motion for sanctions is without merit.

Tolling of Statute of Limitations

c. The statute of limitations does not begin to run until the Employer files a First Report of Injury. *Halliburton Services v. Miller,* 720 P.2d 571 (Colo. 1986); *City of Englewood v. Indus. Claim Appeals Office,* 954 P.2d 640 (Colo. App. 1998). As found, the First Report of Injury was dated December 23, 2015, despite the Employer being aware of the Claimant's right knee injury as of June 7, 2013. The Workers' Claim for Compensation was filed on October 20, 2015 Genuine issues of disputed material fact exist concerning the tolling of the statute, which surrounds the First Report of Injury.

d. The workers' compensation statute of limitations begins to run when an injured worker, as a reasonable person, recognizes the nature, seriousness and probable compensable nature of the injury, *City of Boulder v. Payne,* 162 Colo. 345, 426 P.2d 194 (1967). When a worker recognizes the compensable nature of the injury is a fact question, which must be resolved as the result of an evidentiary hearing. *Richmond v. Indus. Comm'n,* 33 Colo. App. 21, 513 P.2d 1088 (1973).

Claimant's Motion for Sanctions

e. In the Motion for Sanctions, Claimant's counsel refers to Rule 11, C.R.C.P., which stands for the general proposition that a motion for summary judgment must be well grounded in fact. In fact, Rule 11 deals with the signing of pleadings. Rule 56, C.R.C.P., deals with summary judgment. The Colorado Rules of Civil Procedure

apply in workers' compensation cases insofar as they are not inconsistent with workers' compensation rules of procedure. *Nova v. Indus. Claim Appeals office,* 754 P.2d 800 (Colo. App. 1988). In the present case, as found, Claimant, implies that the Motion for Summary judgment was filed "for an improper purpose, such as to harass or cause unnecessary delay." This implication is without foundation, frivolous and wholly without merit. Allegations or implications in reckless disregard of the actual facts have no place in our system of jurisprudence. Indeed, counsel should put the motion in front of a mirror to determine which party should be the subject of sanctions. As further found, there is no genuine issue of disputed material fact concerning the Claimant's Motion for Sanctions; and, in light of the resolution of the Motion for Summary Judgment, the Motion for Sanctions borders on the frivolous and is without merit.

Genuine Issues of Disputed Material Fact

f. Summary judgment is appropriate when the pleadings show that there is no genuine issue as to any material fact and that the moving party is entitled to judgment as a matter of law. C.R.C.P. 56(c); *Churchey v. Adolph Coors Co.*, 759 P.2d 1336 (Colo. 1988). This rule allows the parties to pierce the formal allegation of the pleadings and save the time and expense connected with trial when, as a matter of law, based on undisputed facts, one party could not prevail. See *Drake v. Tyner*, 914 P.2d 519 (Colo. Ct. App. 1996). As found, there are genuine issues of disputed material fact concerning the tolling of the statute of limitations.

g. Once the moving party shows specific facts probative of a right to judgment, it becomes necessary for the non-moving party to set forth facts showing that there is a genuine issue for hearing. *See Miller v. Van Newkirk*, 628 P.2d 143 (Colo. App. 1980). As found, the Claimant's Objection to Respondents' Motion for Summary Judgment shows specific facts that there are genuine disputed issues of material fact.

Burden of Proof

h. The burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P. 2d 535 (Colo. App. 1992). That burden is "preponderance of the evidence." A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). As found, the Respondents have failed to satisfy their burden of proof that there is **no** genuine issue of disputed material fact concerning the statute of limitations. The totality of the evidence establishes that there is no genuine issue of disputed material fact concerning the Claimant's Motion for Sanctions and it should be denied and dismissed.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Respondent's Motion for Summary Judgment is hereby denied and dismissed.

B. The Claimant's Motion for Sanctions is hereby denied and dismissed.

C. The Claimant may set the above-captioned matter for hearing on the issues designated in his latest Application for Hearing.

D. Any and all issues not determined herein are reserved for future decision.

DATED this_____day of June 2017.

_____
EDWIN L. FELTER, JR.
Administrative Law Judge

This decision of the administrative law judge does not grant or deny a benefit or a penalty and may not be subject to a Petition to Review. Parties should refer to § 8-43-301(2), C.R.S., and other applicable law regarding Petitions to Review. If a Petition to Review is filed, *see* Rule 26, OACRP, for further information regarding the procedure to be followed.

ISSUES

- Whether Claimant established by a preponderance of the evidence that he suffered a compensable work injury.
- Whether Claimant established by a preponderance of the evidence entitlement to medical benefits.
- Whether Claimant established by a preponderance of the evidence entitlement to temporary total disability benefits from August 26, 2016 through ongoing.
- Whether Respondent's established by a preponderance of the evidence that Claimant was at fault for his termination.
- Claimant's average weekly wage (AWW).

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant began working for Employer in June 2016 as a bore machine operator which involved tasks associated with building underground tunnels.

2. Claimant is a high school graduate and has attended some college courses. He can read and write in English and indicated on medical forms that English is his preferred language.

3. On August 25, 2016, at approximately 11:00 a.m., Claimant was standing on rails which were chained to an excavator. Though it was variously described, the ALJ finds that as the excavator began pulling, the chains snapped causing the rails to drop back down to the ground. The rails were approximately six inches from the ground. When the rails dropped, Claimant also dropped approximately six inches, landing on his feet.

4. Claimant's shift on the date of the alleged incident began at approximately 7:00 a.m. Although Claimant testified that he felt immediate pain in his back and hip, he worked his regular 10-hour shift. He did not report the incident or being injured from the incident.

5. Claimant testified that his foreman, Easer Lopez, witnessed the incident and laughed at him. Mr. Lopez, however, testified by phone and through the interpreter that he did not witness the incident and was on the far side of the job site when Claimant alleges it occurred. Mr. Lopez also testified that he would not laugh at an

employee, including Claimant, who had a work accident. The ALJ finds the testimony of Mr. Lopez to be more credible and persuasive than that of Claimant for reasons discussed more fully below.

6. According to Claimant, the pain in his low back worsened later in the day and continued to worsen during the night. Claimant claims he informed Mr. Lopez on Friday, August 26th that he was hurting from the day before. Mr. Lopez, though, testified that Claimant worked his regular shift on Friday, August 26th and did not appear to be injured. At the end of his shift on Friday, Claimant told Mr. Lopez his back hurt but Claimant said nothing about his pain being related to a work incident or injury. Notwithstanding, Mr. Lopez offered to send Claimant to Employer's designated medical provider. Claimant declined medical care.

7. Employer has a policy that all employees who are going to be absent or late to work must call-in and advise the Employer by 7:00 a.m. on the day of the anticipated absence or tardiness.

8. On Monday, August 29, 2017 at 11:14 a.m. Claimant sought medical treatment at the Medical Center of Aurora (MCA) complaining of thoracic and lumbar pain from a "fall" at work. On exam, Claimant had full lumbar and cervical range of motion and normal thoracic and lumbar spine X-rays. Claimant was diagnosed with a thoracic and lumbar spine strain and released to modified work with restrictions for "that day."

9. Claimant did not call into work by 7:00 a.m. on August 29 to tell Employer that he would be late. Rather, Raul Cardenas, Employer's superintendant, called Claimant on August 29th when Claimant failed to report for work. Claimant did not answer. Later in the day, Claimant texted Mr. Cardenas that he was going to see a doctor.

10. Consequently, Employer gave Claimant an unexcused absence. Claimant had two previous unexcused absences, one on June 20, 2016 and the other on August 20, 2016 when he was in jail. Claimant admitted to one prior unexcused absence but testified that his mother had called Employer to report him absent by 7:00 a.m. on June 20, 2016, so that absence should have been excused. Mr. Cardenas testified that he recalled Claimant's mother calling in that day, but she did not call to report him absent. Instead, she was looking for Claimant to see if he had reported to work because she did not know his whereabouts.

11. On August 29, 2016, Employer gave Claimant a written warning/disciplinary report documenting Claimant's unexcused absences for June 20, 2016 and August 20 and 29, 2016.

12. After his August 29 visit to AMC, Claimant submitted the paperwork from his visit to Employer. Having learned that Claimant was claiming a work injury, Employer sent Claimant to its designated medical provider, Concentra. Per Employer's written policy, Claimant underwent a mandatory drug test that all employees must take

after reporting an alleged work accident. Claimant admitted to using cocaine on Saturday, August 27, 2016. On September 1, 2016, Claimant's test results were confirmed as positive for cocaine.

13. Pursuant to Employer's no tolerance drug policy, testing positive in a post-accident drug screen for the presence of controlled substances is grounds for immediate discharge from employment. A positive test alone, regardless of when the illegal substance was used, results in immediate discharge.

14. Claimant was aware of both Employer's no tolerance drug policy and the attendance policy. Donna Hale, Employer's Human Resource Director, testified that she provided the written policy to Claimant during his employment orientation. Claimant testified that he was not aware that illegal drug use when he was not working was prohibited. During his orientation, Claimant was able to ask questions. He asked an unrelated question re mileage, but did not ask about Employer's no tolerance drug or attendance policies. Mr. Cardenas testified that it was also common knowledge amongst the employees that Employer's drug policy was one of no tolerance.

15. On September 6, 2016, Employer terminated Claimant's employment because he both tested positive for cocaine and had three unexcused absences on June 20 and August 20 and 29, 2016. Ms. Hale testified that Employer would have terminated Claimant for either reason independently. The ALJ finds that Claimant was responsible for his termination on September 6, 2016.

16. Employer paid Claimant his final wages on September 2, 2016, for the period ending on August 28, 2016, the last day Claimant actually worked. Although Employer offered modified duty to Claimant, Claimant refused to return to work and acknowledged in writing that he decided to take unpaid leave on September 1 and 2, 2016. The ALJ finds that Claimant did not suffer a work-related wage loss from the date of the alleged injury through the date of termination.

17. On September 1, 2016, Claimant sought care at Concentra where his medical provider diagnosed a thoracic myofascial strain and a lumbosacral strain based upon history and mechanism of injury "obtained directly from the patient." Despite having tested positive for cocaine two days earlier, Claimant reported that he did not use drugs.

18. Claimant began physical therapy on September 7, 2016, complaining of low back and left buttock pain, but by his third visit on September 15, 2016, the physical therapist documented that Claimant reported he "was almost back to normal and wanted to stay and get released from care." The physical therapist noted that Claimant "has been non-compliant with physical therapy visits." Physical therapy notes provide that Claimant:

- Had missed three or four by his seventh scheduled visit and had "multiple reschedules and 'lates'."

- Was non compliant with his home exercise program; and

- His lack of progress and compliance led to Claimant's further physical therapy being "put on hold."

19. By September 23, 2016, the physical therapist documented Claimant reporting "that his back is feeling much better and that he has most of the motion back in it," and that "his back feels almost 100% better."

20. On September 23, 2016 Claimant's Concentra provider evaluated Claimant and documented Claimant had full lumbar range of motion with no spasm and his lumbar spine was non-tender. Claimant complained of pain with a click in his left hip. On September 30, 2016, Dr. Draper from Concentra reported that Claimant's left hip MRI revealed an anterior labral tear.

21. On October 17, 2016, John Schwappach, M.D., a hip surgeon, evaluated Claimant and suggested arthroscopic repair of the labral injury. Dr. Schwappach documented that Claimant was standing on rails at work when the rails uncoupled and Claimant was "thrown in the air landing on his left side." The ALJ finds Dr. Schwappach misapprehended Claimant's actual mechanism of injury.

22. On October 25, 2016, Insurer filed a notice of contest while continuing to pay for Claimant's medical care with his authorized treating physicians. Claimant did not specify what medical benefits he was seeking at hearing other than hip surgery; however, Dr. Schwappach did not submit a request for prior authorization, thus the ALJ may not order authorization for hip surgery.

23. On December 2, 2012, Concentra assigned Claimant work restrictions of:

- lifting up to 10 pounds occasionally,

- pushing/pulling 20 pounds occasionally,

- sitting 80% of the time,

- no squatting,

- no kneeling,

- no climbing ladders,

- may not work at heights, ground work only,

- and no driving a company vehicle.

24. Claimant testified that he worked on cars prior to his injury, but could no longer do so because he was unable to bend over. According to Claimant, the injury affected his everyday life. Claimant testified that his pain and restrictions rendered him

unable to work, work on cars, play sports, play with his kids in the back yard or at a park.

25. On December 5, 2016 Respondents recorded four hours of video surveillance. The videotape shows Claimant walking outdoors, working on his SUV, and repeatedly bending at the waist. Claimant squats, gets up from squatting to standing without apparent difficulty, kneels on his left knee with his right leg extended, and reaches under his vehicle. Claimant is shown getting under his SUV on his back with his right hip flexed and maintaining that position before standing. While working on his vehicle, Claimant is squatting, kneeling, bending, lying on his back with his hip flexed, and moving into and out of these positions without apparent difficulty or distress. He was videotaped lifting and carrying a bumper off his SUV and flexing at the waist to 90 degrees or greater without apparent difficulty. Claimant also climbed onto the tailgate of his SUV and knelt, squatted and bent multiple times throughout the 4 hour surveillance tape. In contrast to his presentation at medical appointments, Claimant did not limp at any point during the four hour period of time.

26. On December 9, 2016, Concentra assigned work restrictions of "no squatting and/or kneeling, may lift up to 10 pounds occasionally (up to 3 hours per day), may push/pull up to 20 pounds occasionally, and may not drive a company vehicle due to functional limitations."

27. On December 30, 2016, treating physiatrist Scott J. Primack, D.O., reported that during his examination on that day, Claimant went from stand to sit and from sit to stand in "somewhat of a guarded fashion," and that surgery was recommended because Claimant was experiencing ongoing left hip discomfort.

28. On January 10, 2017, Dr. Primack reported that Claimant underwent a urine drug test and tested positive for cocaine, and negative for opiates even though Dr. Primack had prescribed 80 Vicodin tablets during the previous thirty days. That same day, Claimant reported that he had not used cocaine since August 2016. Dr. Primack stopped prescribing all narcotics as Claimant was "clearly noncompliant," using cocaine with his prescribed opioid medication.

29. Also on January 10, 2017, Dr. Cohen saw Claimant for a psychological consultation. Claimant reported having a fourth DUI conviction for which he was awaiting sentencing. Claimant also reported to Drs. Cohen and Gray a history of cocaine and methamphetamine abuse. Dr. Cohen remarked that Claimant "was not an ideal candidate for routine narcotic management based on his significant history."

30. On February 13, 2017 Claimant underwent an IME with Elisabeth Bisgard, M.D. Claimant told Dr. Bisgard he was unable to sit or stand for one hour, after which he had to alternate positions due to hip pain. He could walk for 2 hours, after which he had to alternate his position due to hip pain. Claimant also reported that he "always walks with a limp." Dr. Bisgard reviewed the surveillance video in its entirety and reported that Claimant was more functional on video than he had related to her and to his treating physicians.

31. Dr. Bisgard noted that Claimant answered "No" to an interrogatory that asked whether Claimant had ever pled guilty or been convicted of a crime other than a traffic violation. However, Claimant told Dr. Bisgard that he had spent five years in prison. Later, Dr. Bisgard received records from one of Claimant's previous employers which included a copy of a criminal background check that employer had conducted before hiring Claimant. The records noted Claimant's guilty pleas to charges of "felony theft from a person" and "misdemeanor drinking." And Claimant's convictions for DUIs, drinking and driving after revocation of his license, and drinking in a vehicle.

32. Dr. Bisgard is the only physician who conducted a causality determination required by Level II Accreditation teachings. In addition to the surveillance, Dr. Bisgard reviewed all of Claimant's medical records and Claimant's signed answers to interrogatories. She was present at hearing for the testimony of Claimant and Employer's witnesses. Dr. Bisgard opined that Claimant did not sustain any work injury. Dr. Bisgard based her opinion on the following criteria:

- Claimant's testimony was inconsistent with that all Employer witnesses.
- Claimant's mechanism was inconsistent with his labral tear.
- The surveillance recording directly contradicted Claimant's testimony regarding his level of functioning and his statements to his treating physicians about his abilities.
- Claimant's normal clinical examinations and normal lumbar and thoracic range of motion immediately after the alleged injury.
- Claimant's different reports regarding mechanism of injury and his late reporting of hip pain.

Dr. Bisgard concluded and opined that more likely than not, Claimant was not injured at work, even assuming an incident as described by Claimant had occurred. The labral tear, according to Dr. Bisgard, was not consistent with Claimant's reported mechanism of injury and was not work-related.

33. Alternatively, Dr. Bisgard opined that at most, and giving Claimant the benefit of the doubt (which Dr. Bisgard did not do), Claimant would have had a mild thoracic-lumbar strain for which he reached MMI on September 20, 2016 when his symptoms resolved for his back issues, with no impairment and no need for medical maintenance care. Dr. Bisgard explained that she selected this MMI date because it was in between September 15, 2016, the third PT visit where Claimant stated he "was almost back to normal and wanted to stay and get released from care" and September 23, 2016, when the physical therapist documented Claimant's report "that his back is feeling much better and that he has most of the motion back in it" and that "his back feels almost 100% better."

34. Dr. Bisgard also noted that Claimant had a non-work related inguinal hernia. She opined that given Claimant's admitted illegal drug use the day after the alleged injury (and before he sought treatment), and the records that Claimant used illegal drugs, including cocaine and meth, on other occasions as well, raised the question of whether Claimant actually sustained an injury at work or at an event outside of work between the night of August 26 and August 29, 2016, or some other time.

35. It appears from his record that Dr. Schwappach, who found the labral tear work related, was under the false impression that Claimant had fallen directly onto his left side. His October 17, 2016 note provides that Claimant "was thrown in the air landing on his left side."

36. On March 7, 2017, Claimant underwent an IME with J. Stephen Gray, M.D. Dr. Gray is the only physician who assessed "possible left direct or inguinal hernia" as related to the alleged work injury, a contention Claimant himself has not made. According to Dr. Gray, given the "violent nature of the industrial accident", even if the hernia and/or the left hip labral tear were pre-existing, the violent work injury would have exacerbated if not permanently aggravated these conditions. The ALJ finds that Dr. Gray misapprehended the actual mechanism of injury by relying on Claimant's exaggerated report.

37. Dr. Gray did not view the surveillance video or address it in his report, and he appears to have "cut and pasted" a large part of Dr. Bisgard's IME report into his own. Dr. Gray reported that Claimant was on narcotics for pain for the first 2-3 weeks post alleged injury, which may have masked his left hip pain. However, the records document that Claimant was given 6 tablets of Norco and the next documented prescription is not until November 8, 2016, over two months post-alleged injury. Dr. Gray also seems to be unaware that Claimant's authorized treating physician opined that Claimant did not have a work injury of any kind and that Claimant's supervisors denied witnessing the purported incident. The ALJ rejects Dr. Gray's opinion because Dr. Gray did not review all of Claimant's medical records or view any of the surveillance. Dr. Gray's understanding of Claimant's pain medication usage is also incorrect.

38. On March 10, 2017 Dr. Primack, having read Dr. Bisgard's report and reviewed Claimant's file, opined that Claimant had not sustained a work related injury. And even if he had, Claimant reached MMI on September 20, 2016 without impairment. Dr. Primack wrote, "I'm still quite concerned regarding [Claimant's] drug abuse. This clearly confounds the entire medical treatment."

39. Based on the totality of the evidence, the ALJ finds Claimant NOT credible.

40. Based on the totality of the evidence, the ALJ finds Claimant did not meet his burden of establishing by a preponderance of the evidence that he suffered a compensable work injury.

41. Based on the totality of the evidence, the ALJ finds Claimant did not meet his burden of establishing by a preponderance of the evidence entitlement to medical benefits.

42. Based on the totality of the evidence, the ALJ finds Claimant did not meet his burden of establishing by a preponderance of the evidence entitlement to temporary total disability benefits.

43. Based on the totality of the evidence, the ALJ finds Respondents met their burden of establishing by a preponderance of the evidence that Claimant was at fault for his termination.

44. Because the ALJ has found Claimant did not meet his burden of establishing by a preponderance of the evidence entitlement to temporary total disability benefits, the ALJ need not reach the remaining issue of Claimant's AWW.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado (Act), is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. In general, a claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved. The ALJ need not address every piece of evidence or every inference that might lead to conflicting conclusions. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P. 3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance* Co. *v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1) (c) C.R.S. Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v.*

Industrial Claim Appeals Office, 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

Claimant failed to meet his burden of proving a work injury. As found, the ALJ is persuaded by the testimony of Mr. Lopez and Mr. Cardenas that they did not witness the alleged work incident. Rather, they observed Claimant working his regular shift for hours after the alleged 11:00 a.m. incident on Thursday and all day Friday. The ALJ rejects Claimant's testimony as not credible. Claimant testified that he was unable to work on cars and had limited ability to bend and kneel but 4 hours of surveillance was submitted showing Claimant repeatedly bending, kneeling, lifting and engage in other activity while he worked on his SUV. The timing of the surveillance, December 5, 2016, was right after Concentra reiterated Claimant's work restrictions of limit lifting to 10 pounds occasionally, push/pull 20 pounds occasionally, should be sitting 80% of the time, no squatting, no kneeling, no climbing ladders, may not work at heights, ground work only and no driving a company vehicle. Moreover, Claimant has a potential inguinal hernia that no provider (except Claimant's IME, Dr. Gray), has opined is work-related. Even Claimant himself has not alleged this hernia is work-related. The ALJ is persuaded by Dr. Bisgard's Level II causality determination that considering the totality of the evidence, including Claimant's illicit drug use, Claimant's injuries cannot be correlated to the alleged work incident. Dr. Primack, after considering the entire picture when it was made available to him, agreed with Dr. Bisgard and opined that he too did not believe Claimant sustained a work injury of any kind. Consequently, Claimant's workers' compensation claim is denied and dismissed.

Because the ALJ has found and concluded that Claimant did not suffer a work injury, and based on the totality of the evidence, Claimant is not entitled to receive medical or compensatory benefits. Additionally, when a temporarily disabled Claimant is responsible for termination of his employment, the resulting wage loss may not be attributed to the work injury. *See* § 8-42-103 (1) (g), §8-42-105 (4), C.R.S. An employee is responsible for termination if the employee precipitated the employment termination by a volitional act which an employee would reasonably expect to result in the loss of employment. *Patchek v. Colorado Department of Public Safety*, W.C. No. 4-432-301 (ICAO, 2001). The determination of Claimant's responsibility for the termination of employment is not related to the concept of culpability, but requires only a "volitional act," or the exercise of some control in light of the totality of the circumstances. *Padilla v. Digital Equipment Corporation*, 902 P.2d 414 (Colo. App. 1994), *opinion after remand*, 908 P.2d 1185 (Colo. App. 1995). As found, Claimant was responsible for his termination on September 6, 2016 for the positive cocaine test and the 3 unexcused absences. Claimant did not suffer a work-related wage loss from the date of the alleged injury through the date of termination. Claimant's claim for TTD and/or TPD benefits is denied and dismissed. Claimant's claim for temporary total disability benefits is denied and dismissed.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's workers' compensation claim is denied and dismissed.

2. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 15, 2017

/s/ Kimberly Turnbow
Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-741-639-06

ISSUES

- Whether Respondents have overcome by clear and convincing evidence the DIME's determination that Claimant sustained bilateral carpal tunnel syndrome ("CTS") and resulting chronic regional pain syndrome ("CRPS") as a result of her November 10, 2006 work injury.

- Whether Respondents have overcome by clear and convincing evidence the DIME's impairment rating.

- Whether Respondents have overcome by clear and convincing evidence the DIME's date of MMI.

- Whether Claimant has proven by a preponderance of the evidence that she is entitled to ongoing maintenance medical benefits.

STIPULATIONS

- The parties stipulated that the average weekly wage is $725.00.

- The parties stipulated that the following issues are held in abeyance and reserved for future determination: temporary total and temporary partial disability benefits, permanent total disability benefits, benefits cap, offsets, and overpayment.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant sustained an admitted industrial injury when she fell at work on November 10, 2006.

2. On November 11, 2006, Wayne Draper, M.D., examined Claimant at Boulder Community Hospital (BCH). Claimant's "chief complaint" was pain in both hands for 1 day. Claimant gave a history that on the previous day she tripped and fell forward bracing herself with both hands. She reported pain in both hands with the right worse than the left. There was also "slight discomfort in the muscles of the left neck." There was "tingling" in the left middle finger with "minimal discomfort at the base of the left thumb." The note, which was written by a nurse, states Claimant reported "having carpal tunnel previously." On examination there was "slight tenderness noted to palpation over the palmer aspect at the base of the left thumb." The right hand was "swollen and ecchymotic over the 4th and 5th metacarpal areas dorsally." X-rays revealed a fracture of the proximal phalanx of the right 5th finger. The diagnoses included

- Fracture, proximal phalanx right 5th finger;
- Contusion of the right hand;
- Contusion of the left hand; and
- Left trapezius strain.

3. On November 20, 2006, Claimant saw a physical therapist at BCH who diagnosed left shoulder strain. Claimant reported problems of decreased strength in the left shoulder, tenderness in the left biceps tendon, and numbness in the left middle finger.

4. On February 26, 2007, Justin Green, M.D. examined Claimant. Claimant gave a history of "severe night time dysthesia affecting the left arm." She dated the "onset to following a fall where she hyperextended her wrists on 11-10-07" [sic]. On physical examination Dr. Green noted a "positive left carpal Tinel's sign." He performed EMG studies which revealed "absent median sensory responses, a markedly prolonged median motor distal latency, and prolonged median F-wave." Dr. Green assessed the electrodiagnostic results as evidence of moderate, median mononeuropathy at the left wrist (carpal tunnel syndrome), without denervation. There was no evidence of left upper extremity radiculopathy.

5. On May 2, 2007, Claimant returned to Dr. Green. Claimant reported "moderately severe, diffuse, dysthetic left arm pain that radiated up or down from her shoulder to her hand. She reported lesser complaints of similar paresthesia affecting the right hand. Dr. Green noted that examination of Claimant's upper extremities did not reveal clear sudomotor changes and there was no significant color change. There were equivocal Adson's signs for non-specific paresthesia bilaterally. Claimant also had a positive left carpal Tinel's sign and an "absent" right carpal Tinel's sign. There were negative Phalen's signs. Dr. Green assessed moderate left CTS, rule out right CTS and a history of bilateral wrist extension injuries. Dr. Green wrote Claimant had a "consistent mechanism of injury that may have led to traumatic carpal tunnel syndromes (TCRPS)." Dr. Green recommended EMG/nerve conduction studies for the right upper extremity and repeat studies of the left extremity to rule out a worsening condition.

6. On May 16, 2007, Dr. Green performed additional EMG studies of Claimant's right and left upper extremities. As a result he assessed electrodiagnostic evidence of a "moderate, median neuropathy at the right wrist (CTS), without denervation" and continued nerve conduction study evidence to suggest the presence of a moderate, median, mononeuropathy at the left wrist (CTS)."

7. On June 12, 2007 Kelley Wear-Maggitti, M.D. performed a left carpal tunnel release surgery and noted the presence of inflammation of the median nerve with "scarring and adhesions."

8. On June 19, 2007, Dr. Wear-Maggitti reported Claimant had no complaints and was very satisfied by the results of the left carpal tunnel release surgery. Claimant expressed a desire to undergo a right carpal tunnel release surgery.

9. On October 9, 2007 Dr. Wear-Maggitti performed a right carpal tunnel release surgery. The operative report notes there was a "significant amount of scar tissue encompassing the median nerve" and a neurolysis was performed to release the nerve from the scar tissue.

10. On November 20, 2007, Claimant reported to Dr. Wear-Maggitti that she was having a lot of pain in her right palm, a lot of numbness up her right arm, and problems with trigger fingers.

11. On February 6, 2008, Dr. Green noted Claimant was reporting increased dysthesia to light touch over the palm and distal right forearm and numbness over the tips of her fingers. Dr. Green noted "mild allodynia" to light stroking over the volar aspect of the right palm and distal forearm without swelling or pseudomotor changes. Dr. Green noted that Claimant's third EMG testing evidenced continued median mononeuropathy at the right wrist and that Claimant tolerated the test poorly because it caused her pain. Dr. Green assessed delayed recovery from right carpal tunnel release surgery and "rule out possible complex regional pain syndrome affecting the right hand and arm." Dr. Green referred Claimant for a triple phase bone scan and stated he would refer her for a stellate ganglion block if the test was normal.

12. On February 14, 2008, Claimant underwent a three phase bone scan of her distal forearms through her hands. The radiologist reported that the flow and blood pool images were normal. However, there was asymmetric slightly more prominent periarticular uptake about multiple right finger joints suggestive of chronic regional pain syndrome (CRPS).

13. On March 31, 2008, Melody Denham, M.D., examined Claimant on referral from Dr. Green. Dr. Denham noted Claimant had undergone a right-sided carpal tunnel release and had "had a complicated course since." Claimant reported experiencing pain in the right hand and wrist with "some extension up toward the elbow and shoulder." On examination Dr. Denham noted "some obvious atrophic changes" of the right hand and "marked allodynia over the area of the" surgical scar. Dr. Denham noted compromised range of motion of the right hand and wrist, and markedly decreased motor strength involving her fingers. Dr. Denham reviewed the triple phase bone scan results and noted "asymmetric uptake with a particular increased uptake in the right hand consistent with" CRPS. Dr. Denham assessed CRPS of the right upper extremity and recommended a stellate ganglion block (SGB).

14. Between March 31, 2008 and May 27, 2008, Dr. Denham performed four SGB's. On May 27, 2008 the doctor wrote Claimant had "undergone prior stellate ganglion blocks which have seemed to have given her temporal benefit."

However, Dr. Denham wrote it was "unclear at this juncture whether or not she has had protracted benefits, as her condition continues to be quite severe." Dr. Denham opined that if Claimant did not receive protracted benefit from the May 27 SGB, it might be necessary to consider other treatment options.

15. On June 9, 2008, Dr. Green noted Claimant had undergone four SGB's and stated that her "pain most recently dropped from 9/10 to 4/10." He recorded a diagnosis of CRPS of the right upper extremity and noted there had been "discussion concerning possible spinal cord stimulation."

16. On September 3, 2008, Dr. Green noted that with "the abnormal bone scan in February, I feel this is reasonable support for the presence of [CRS] in this case."

17. Dr. Floyd Ring, who is an expert in pain management, performed a record review for Respondents on October 3, 2008 to determine if Claimant was a candidate for an SCS. He found that Claimant had a work-related injury resulting in CTS. Dr. Ring stated that the bone scan and response to blocks "indicate a likelihood of CRPS, which is addressed in the [Medical Treatment] guidelines." He recommended delay in SCS placement until psychologist Dr. DiSorbio felt Claimant was ready for the procedure.

18. On January 12, 2009, Dr. Denham noted Claimant was reporting symptoms in both hands and in her feet.

19. On February 12, 2009, Bradley Vilims, M.D. examined Claimant and assessed CRPS type II "beginning in the right upper extremity, but mirroring to the left and now with symptoms consistent with extension into the lower extremities." Dr. Vilims diagnosed bilateral upper extremity CRPS and a positive bone scan with the "characteristic pulling (sic.) and changes on a triple phase that is consistent with her current diagnosis." Dr. Vilims indicated he would "begin the process for a cervical spinal cord stimulator trial."

20. On April 3, 2009, Dr. Vilims performed a procedure described as installation of a percutaneous spinal cord stimulator and intracanal cervical nerve root stimulator. The procedure initially provided good relief but Claimant reported developing severe pain and ultimately the trial was terminated.

21. On May 21, 2009, Gianacarlo Barolat, M.D. examined Claimant. Dr. Barolat noted Claimant's history of reflex sympathetic dystrophy (RSD) that began on the right and "traveled to her left upper extremity, then approximately three months ago spread to the lower extremities." Dr. Barolat noted Claimant gave a history of her "legs giving out" and that it had occurred three times over the prior week. Dr. Barolat assessed CRPS.

22. Prior to approving the spinal cord stimulator implantation, Respondents hired Dr. Vaughn Cohan to evaluate Claimant's case. He stated that Claimant began to exhibit signs and symptoms of bilateral CTS one month after her accident. Dr. Cohan noted that, following her CTS surgeries, Claimant developed CRPS in her

upper extremity and lower extremities. Dr. Cohan concluded that Claimant's previous treatment had been medically necessary. He agreed with Dr. Baralat's recommendation to proceed with the SCS implantation and concluded the procedure was appropriate. He based his opinions on evidence-based medicine guidelines to a reasonable degree of clinical certainty.

23. Prior to approving the spinal cord stimulator implantation, Respondents also hired Dr. Floyd Ring, an expert in pain management, to perform a record review to determine if Claimant was a candidate for a SCS. Dr. Ring found that Claimant had a work-related injury resulting in CTS. Dr. Ring opined that the bone scan and response to blocks "indicate a likelihood of CRPS, which is addressed in the [Medical Treatment] guidelines." He recommended delay in SCS placement until psychologist Dr. DiSorbio felt Claimant was ready for the procedure.

24. On July 29, 2009, Claimant came under the care of Jeffrey Kesten, M.D. Dr. Kesten is board certified in physical medicine and rehabilitation, pain medicine, and addiction medicine. He is level II accredited. Dr. Kesten examined Claimant and noted "her right hand is hypopigmented" compared to her left hand. There was no evidence of bilateral upper extremity hair and/or nail abnormalities, temperature abnormalities, muscle atrophy, or sudomotor changes. Dr. Kesten diagnosed bilateral shoulder upper extremity pain, a history of bilateral hand contusions, a right fifth proximal versus middle phalanx fracture, bilateral carpal tunnel syndrome, bilateral upper extremity CRPS II, and worsening of premorbid depression.

25. On August 10, 2009 Dr. Kesten noted similar findings to those he reported on July 29, 2009.

26. On August 11, 2009, Dr. Barolat performed a procedure described as the implantation of "two cervical spinal cord stimulation leads." This was for a diagnosis of RSD of the upper and lower extremities. A permanent stimulator was implanted on August 18, 2011. While Claimant initially did well, she ultimately suffered an infection and on September 18, 2009, the stimulator was removed.

ATP MMI and IMPAIRMENT RATING

27. On October 4, 2010, Dr. Kesten authored a report in which he "deemed" Claimant to have reached maximum medical improvement (MMI). He opined she had sustained a whole person impairment of 50% based on her CRPS. He explained that "per" the Division of Workers' Compensation (DOWC) he used the American Medical Association Guides to the Evaluation of Permanent Impairment, Third Edition (Revised) (AMA Guides) p. 109 Table 1 (for spinal cord and brain impairment values) to rate the CRPS.

28. On October 25, 2010, Dr. Kesten authored a report in which he stated Claimant remained at MMI. However, Dr. Kesten noted that he asked Claimant about her "recent lower extremity pain and balance problems." Claimant reported that she fell "quite frequently." She also reported that she fell and injured her right shoulder "in approximately September 2010" and was experiencing severe and persistent shoulder pain. Dr. Kesten wrote that considering the October 19, 2010 MRI findings he was going to refer Claimant to Thomas Mann, M.D., for a surgical consultation. This referral is inconsistent with a finding of MMI.

29. On December 8, 2010, Dr. Mann performed surgery on Claimant's right shoulder to repair a "large rotator cuff tear." The operative report notes Claimant had a long history of upper extremity and shoulder pain and suffered a "more recent fall and trauma that increased her pain and disability."

30. On February 8, 2011, Dr. Kesten noted that he received an inquiry from Insurer's adjuster asking whether he placed Claimant at MMI on October 10, 2004, and if so, requesting an impairment rating. The adjuster also asked whether Dr. Kesten had "rescinded" MMI. In this note Dr. Kesten stated that Claimant was deemed to be at MMI on October 4, 2010 with a 50% whole person impairment rating. He also noted that Claimant had undergone right shoulder surgery with Dr. Mann and was instructed to continue her "enrollment in a course of postoperative … physical therapy at Avista Therapy Center."

31. At a prior hearing on this claim ("the -04 hearing") Respondents conceded that they received Dr. Kesten's February 28, 2011 report on August 15, 2011.

32. On October 25, 2011, Dr. Kesten signed a Physician's Report of Worker's Compensation Injury (WC164) indicating Claimant reached MMI on October 4, 2010 with a 50% impairment rating.

33. On January 17, 2012, Dr. Kesten issued a report in which he determined Claimant had a 26 % upper extremity impairment rating for the right upper extremity. He stated that this rating converts to 16 % whole person impairment. He combined this rating with the prior 50% impairment rating for CRPS resulting in an "updated 58% whole person impairment rating" as of January 17, 2012.

DR. CEBRIAN'S PURPORTED DIME

34. In October 2010, Sandra O'Brien, Insurer's adjuster assigned to this claim considered obtaining a Respondents sponsored independent medical examination (RIME) from Dr. Carlos Cebrian or Dr. Jutta Worwag. However, Claimant advised Ms. O'Brien that she had been placed at MMI and the anticipated RIME did not take place.

35. In February 2012, Evelyn Bonham became Insurer's adjuster on this claim. Ms. Bonham received Dr. Kesten's January 17, 2012 report on April 18, 2012 and disagreed with his 58% whole person impairment rating. Ms. Bonham wrote in her adjuster's notes that she did not believe Dr. Kesten's rating should be

accepted and that she believed a DIME should be requested. She also indicated that she believed it was necessary to obtain a RIME to have another report to send to the DIME.

36. On April 24, 2013, Ms Bonham noted in the file that she contacted "Vickie at Exam Works" and requested an IME, "preferably with Dr. Cebrian."

37. On April 25, 2012, Ms. Bonham filed an N&P with the DOWC. The N&P indicated disagreement with Dr. Kesten's reports of January 17, 2012 and April 12, 2012 and proposed Dr. Allison Fall or Dr. Cebrian conduct the DIME.

38. In May 2012, Insurer attempted to schedule a DIME purporting that Dr. Worwag was the agreed upon DIME. When the DIME could not be scheduled with Dr. Worwag, Ms. Bonham scheduled the DIME with Dr. Cebrian and filed an amended application.

39. On June 27, 2012 Dr. Cebrian performed the purported DIME and on July 14, 2012 issued his report. Dr. Cebrian opined that Claimant's "claim-related" diagnoses are right fifth finger non-displaced fracture, contusion of the left and right hands, and left trapezius strain. Dr. Cebrian opined Claimant reached MMI for these conditions on October 4, 2010.

40. In his report Dr. Cebrian opined Claimant's left-sided CTS was not causally related to the November 10, 2006 industrial injury. In support of this conclusion Dr. Cebrian explained

    - That although Claimant had "some initial complaints" of tingling in the fourth and fifth fingers of the left hand, these were not "documented again until" February 9, 2007.

    - That although the February 26, 2007 EMG revealed moderate median nerve compression, all of Claimant's symptoms were in the "ulnar distribution."

    - Claimant's left median nerve compression was "incidental" to the injury and there "was not a physiological correlation between subjective complaints and the objective findings."

41. In his report Dr. Cebrian opined Claimant's right CTS was not related to the November 10, 2006 industrial injury. He explained that Claimant did not complain of right-sided paresthesias until May 2007. Dr. Cebrian opined there "was not a physiological or temporal correlation between the subjective complaints and the objective findings."

42. Dr. Cebrian suggested that the CTS documented in the EMG's could be due to another cause, i.e., age, sex, diabetes, recent pregnancy, arthritis or pre-existing hypothyroidism. However, Dr. Gellrick and Dr. Kesten testified that two arthritis tests after the injury ruled out arthritis; there was no documentation of CTS

secondary to Claimant's hypothyroidism either prior or subsequent to her work injury; the EMG's did not find the injury to the nerve that one would see as a result of hypothyroidism; and none of the other possible causes had changed between the date of injury and the EMG. Dr. Cebrian did no causation analysis to support his hypothesis and he could not document a specific cause that had intervened or changed between the date of the work injury and the EMG in support of his claim that the CTS developed from something other than the fall at work. Dr Cebrian admitted that no treating doctor attributed Claimant's CTS to any of Dr. Cebrian's possible causes.

43. In his report Dr. Cebrian opined Claimant does not have CRPS within the meaning of the AMA Guides Rule 17, Exhibit 7 (d) for the following reasons:

    - the February 14, 2008 triple phase bone scan was "suggestive of CRPS but the findings were minimal."

    - the "multiple stellate ganglion blocks were performed without protracted relief."

    - because "there was no protracted relief with the sympathetic blocks and there was not more than one positive diagnostic test" it was not medically probable that Claimant met the "diagnostic criteria for a diagnosis of CRPS."

    Based on the determination that Claimant did not meet the criteria for a diagnosis of CRPS, Dr. Cebrian opined Claimant was not entitled to a rating for this condition under the AMA Guides.

44. In his report Dr. Cebrian opined Claimant injured her right shoulder when she fell sometime in "June 2010." He opined there was no information in the record that this fall was the result of an injury-related condition. He further stated that no tests were done to establish that Claimant has CRPS in the lower extremities. He opined the falls that led to Claimant's right shoulder condition were not related to the November 2006 industrial injury.

45. Dr. Cebrian opined that Claimant has permanent impairment secondary to the placement and removal of the spinal cord stimulator "as she has persistent pain from the procedure." Dr. Cebrian opined this condition entitled Claimant to a 4% whole person impairment rating under Table 53IIB of the AMA Guides.

46. Dr. Cebrian disagreed with Dr. Kesten's recommendation for a second orthopedic consultation with respect to Claimant's right shoulder. He explained Claimant does not want this procedure and in any event the likelihood of improving function as a result of another rotator cuff repair is minimal. Dr. Cebrian opined Claimant's medications were compromising her ability to function, negatively affecting her condition, and contributing to her depression.

He recommended discontinuation of medications over the next six months under the supervision of a physician.

47. Dr. Kesten has treated Claimant for the past seven years. He reviewed Claimant's medical records from 1996 through the date of hearing, including both of Dr. Pitzer's reports, Dr. Cebrian's report, transcripts of the hearing before ALJ Cain, the depositions of Drs. Pitzer and Cebrian and Insurer's adjuster, his prior testimony, Claimant's deposition, Dr. Gelrick's report, and her deposition testimony.

48. Dr. Kesten disagreed with Dr. Cebrian's opinion that Claimant did not develop left and right-sided TCTS as a result of the November 10, 2006 industrial injury. With regard to the left-sided TCTS Dr. Kesten found there was a "physiologic correlation as well as a consistent mechanism of injury in which the symptoms presented in a temporal fashion." Dr. Kesten disagreed with Dr. Cebrian's statement that after "some initial complaints" of tingling in the fourth and fifth fingers of the left hand, these symptoms were not "documented again until" February 9, 2007. Dr. Kesten noted that on November 11, 2006 Claimant reported some tingling in the left middle finger. The ALJ finds Dr. Cebrian's focus on this one symptom to be more a reflection of his bias toward Respondents than an indication that this symptom was somehow more significant than any other.

49. Dr. Kesten disagreed with Dr. Cebrian that the November 11, 2006 examination indicated an ulnar nerve injury. Dr. Kesten explained that on November 11 no sensory nerve deficits were noted in either the median or the ulnar nerve distributions. Dr. Kesten opined that from the date of the injury through February 9, 2007 Claimant reported symptoms that constituted "warning signs" of TCTS including numbness and tingling of the third through the fifth fingers, swelling and tenderness over the thenar eminence, and proximal radiating symptoms into the arm. Based on the totality of the evidence, the ALJ finds this opinion of Dr. Kesten to be more reliable and persuasive than that of Dr. Cebrian.

50. Dr. Kesten disagreed with Dr. Cebrian's opinion that the left-sided median nerve compression findings on electrodiagnostic testing were "incidental" because Claimant's symptoms were in the ulnar nerve distribution and the subjective complaints were inconsistent with the objective findings. Dr. Kesten stated that CTS symptoms may appear in any and all fingers and can appear proximally or "up the arm" from the carpal tunnel. Dr. Kesten also noted that the nerve conduction studies performed by Dr. Green on February 26, 2007 evaluated the ulnar nerve and it was normal. Based on the totality of the evidence, the ALJ finds this opinion of Dr. Kesten to be more reliable and persuasive than that of Dr. Cebrian.

51. Dr. Kesten also disagreed with Dr. Cebrian's view that the right-sided CTS was not related to the industrial injury. Dr. Kesten explained that the mechanism of injury involved hyperextension of the right wrist and that Claimant demonstrated swelling and ecchymosis on November 11, 2006 when she was seen at BCH.

Dr. Kesten testified he agreed with Dr. Green's May 2, 2007 statement that Claimant has a "consistent mechanism of injury that may have led to traumatic carpal tunnel syndromes." Based on the totality of the evidence, the ALJ finds this opinion of Dr. Kesten and the causation analysis of Dr. Green to be more reliable and persuasive than that of Dr. Cebrian.

52. Dr. Kesten testified in the -04 hearing that he disagreed with Dr. Cebrian's opinion that Claimant does not have CRPS. Dr. Kesten explained that, contrary to Dr. Cebrian's assertions, Claimant meets the diagnostic criteria for a diagnosis of CRPS under the current version of the Medical Treatment Guidelines (MTG) for Complex Regional Pain Syndrome/Reflex Sympathetic Dystrophy. Dr. Kesten explained that the MTG make a distinction between "clinical CRPS" and "confirmed CRPS." He stated that under the MTG, clinical CRPS may be treated with less invasive procedures while confirmed CRPS may be treated with invasive or complex treatment. In any event, Dr. Kesten disagreed with Dr. Cebrian's opinion that Claimant has not had two "positive" tests sufficient to diagnose confirmed CRPS. He explained that in his opinion the findings on the triple phase bone scan were not "minimal" as suggested by Dr. Cebrian. He further opined Claimant exhibited positive responses to the SGB's performed by Dr. Denham and that nothing in the MTG requires that the relief from SGB's be "protracted" in order to constitute a positive diagnostic test. Based on the totality of the evidence, the ALJ finds this opinion of Dr. Kesten to be more reliable and persuasive than that of Dr. Cebrian.

53. Dr. Kesten opined in the -04 hearing that Claimant's CRPS probably "traveled" from her upper extremities to the lower extremities. He stated that this phenomenon is documented in the literature and is "thought to be a reflection of the centralization of this pathological process." Dr. Kesten opined that the traveling of the CRPS to the lower extremities likely compromised Claimant's lower extremity function causing her to experience numerous falls, including the fall that led to shoulder injury and surgery performed by Dr. Mann. Based on the totality of the evidence, the ALJ finds this opinion of Dr. Kesten to be reliable and persuasive.

54. Dr. Kesten testified in the -04 hearing that after he initially placed Claimant at MMI in October 2010 he continued to treat her. He further stated that after initially placing her at MMI he referred her for treatment to Dr. Mann for evaluation and treatment of her shoulder. Dr. Kesten explained that in January 2012 he issued a second impairment rating taking into account the shoulder injury and rating her for a "fairly complex" full thickness tear of the rotator cuff.

55. In the -04 hearing, ALJ Cain determined

    - Dr. Kesten did not place the claimant at MMI until at least January 17, 2012, when he issued the impairment rating for the right shoulder.

- Claimant never "agreed" with Ms. Bonham to allow Dr. Cebrian to act as the DIME physician.

- Insurer considered Dr. Cebrian to be a desirable DIME candidate because he would render opinions favorable to the insurer's views on issues including impairment and MMI.

- no valid DIME has been conducted and filed with DOWC.

See Cain Order dated December 1, 2014.

56. Respondents petitioned for review of the order. The petition was denied because the Cain Order was not a final order subject to review.

57. Dr. Kesten continued treating Claimant. Claimant also was treated at Holistic Family Practice. April 20, 2015, and July 27, 2015 notes continue to reflect Claimant's CRPS symptoms and diagnosis.

DR. PITZER RIME

58. Dr. Pitzer reviewed Claimant's medical records through the time of Dr. Cebrian's report. In his December 5, 2012 report, Dr. Pitzer agreed with Dr. Cebrian that Claimant's CTS was not related to her work injury. He reasoned

- No research studies related CTS to hand or wrist bruising;

- Claimant's CTS studies showed moderate CTS which he opined was more consistent with prolonged compression;

- Claimant's pain developed and increased with her CT release surgery.

59. At Respondents' request Dr. Pitzer performed a second records review and opined that it was more probable that Claimant's CTS was attributable to predisposing factors than to her work injury. He opined that Claimant's CTS and CRPS were not related to her work injury. Respondents deposed Dr. Pitzer on June 4, 2014. He testified that

- Claimant was not exposed to any work related risk factors for CTS.

- Claimant had predisposing factors including obesity and hypothyroidism.

- Moderate to severe mirror-image bilateral CTS such as Claimant's typically relates to predisposing risk factors versus trauma.

60. Dr. Pitzer did not examine Claimant and based his opinions solely on his incomplete records review. He was unsure whether he reviewed the actual EMG studies or relied on the report, and he did not review the records for physiological abnormalities.

61. For the past ten years approximately thirty-five percent of Dr. Pitzer's testimony has been for Respondents' counsel's firm. Ninety-six percent of Dr. Pitzer's testimony has been favorable to respondents.

62. While Dr. Pitzer is highly credentialed, his testimony was couched in terms of what "typically" occurs, he was unfamiliar with aspects of Claimant's physical examination findings, and his opinions were more about typical CTS and less about Claimant's case. For example, Dr. Pitzer stated that "most" nerve root trauma gets better with time, and "most" chronic compression neuropathies get worse over time. Based on that typical scenario, he opined that Claimant's EMG's were consistent with chronic carpal tunnel syndrome since they did not show improvement over time. DIME Dr. Gellrick testified that Dr. Pitzer's opinion is contrary to the MTG for CTS which recognize fluctuation in symptoms and on EMG tests.

63. Based on the totality of the evidence the ALJ is not persuaded by Dr. Pitzer's opinions.

DR. GELLRICK DIME

64. Dr. Gellrick was ultimately selected as the DIME. She physically examined Claimant on July 24, 2015. Dr. Gellrick also performed a thorough, extensive and detailed record review. In her report dated August 7, 2015, Dr. Gellrick assigned October 4, 2010 as the MMI date.

65. Dr. Gellrick agreed with the opinions of Drs. Kesten and Green that Claimant's CTS was caused by and related to her work injury. Dr. Gellrick agreed with the same doctors that Claimant went on to develop CRPS based on the results from her triple-phase bone scan, her reaction to the stellate ganglion blocks, and her clinical diagnosis.

66. Dr. Gellrick agreed with the opinion of Dr. Floyd Ring, who performed two record reviews for Respondents, that Claimant had CRPS and that the spinal cord stimulator and related surgeries were reasonably necessary to treat Claimant's condition.

67. Dr. Gellrick disagreed with Dr. Kesten's opinion that Claimant had CRPS in her lower extremities because the diagnosis was not supported by diagnostic testing and no physical examination had been performed.

68. Dr. Gellrick rated Claimant's impairment at 46% whole person – 45% physical impairment for CRPS, plus 1% psychiatric impairment for worsened depression.

69. Based on the totality of the evidence, the ALJ finds these opinions of Dr. Gellrick to be credible and persuasive.

CLAIMANT'S TESTIMONY

70. Claimant testified both by deposition dated October 7, 2014, and at hearing. Respondents' counsel called Claimant as their first witness and attempted to impeach her credibility with questions about the BCH intake form, a notation in one of Dr. Yee's records, the 2004 FCE related to her back injury, and surveillance video taken of Claimant. The ALJ finds Claimant's testimony to be credible for the following reasons:

- The BCH intake form that mentions "she does report having carpal tunnel previously" was dictated by someone other than Dr. Draper and it does not appear that Dr. Draper reviewed or signed the note. The notation is contrary to the numerous medical records which contain no mention of a carpel tunnel diagnosis or treatment prior to Claimant's work injury. The notation is also contradicted by Claimant's ability to perform the job duties she was assigned and her other recreational activities. The ALJ finds this notation to be unreliable and not persuasive evidence either that Claimant had carpel tunnel prior to her work injury or that Claimant was not consistent in her reporting.

- Dr. Yee treated Claimant in August 2003 for an unrelated back injury. His note from that visit states that Claimant "has had episodic left upper extremity and numbness in her forearm and hand." However, Claimant had no upper extremity weakness and the neurologic examination of Claimant's upper extremities revealed no motor or sensory deficits. The ALJ finds Dr. Yee's notation, when taken in context, is not persuasive evidence either that Claimant had carpel tunnel prior to her work injury or that Claimant was not consistent in her reporting.

- Claimant underwent a functional capacity evaluation (FCE) in 2004 related to her back injury. Part of the FCE involved a "hand function sort." While it was unclear during much of the hearing whether Claimant actually performed the activities mentioned, the ALJ finds that the activities were not performed. Rather, it seems Claimant was given a one-page form listing sixty-two activities and was asked to rate on a scale of 1 - 5 what she perceived her ability to do the activity was. One being "able" and five being "unable." While Respondents made much of Claimant's rating as 3 (restricted) such activities as "picking up small coins," and "sorting a deck of cards;" Claimant rated as 1 such activities as "use fork and knife," "cut a coupon," "pick out a paper clip," and "peel a potato." The one page form did not attach visual cues used during the sort. The ALJ finds the hand function sort to be unreliable and not persuasive evidence either that Claimant had carpel tunnel prior to her work injury or that Claimant was not consistent in her reporting.

71. Respondents showed video surveillance they had taken of Claimant which showed her entering and exiting her car, carrying a water bottle and light bag,

and drinking coffee among other things, in an apparent attempt to discredit Claimant's limitations. However, Claimant testified that she was able to do the activities shown and more because her right arm is not paralyzed. She explained that she has difficulty with fine hand movements such as writing and balancing a fork in her right hand. She further testified that her hands are shaky and that she is unable to make pottery as she had before the injury. Because she cannot raise her right arm, she has her hair washed at a salon. Both Drs. Kesten and Gelrick testified that they were not surprised that Claimant was able to perform the activities shown on the video and that the activities were within Claimant's medical abilities.

72. Drs. Gelrick, Kesten, Pitzer, and Cebrian all acknowledged that Claimant had not been diagnosed with or treated for CTS.

73. The ALJ attributes any inconsistencies in Claimant's testimony to Respondents' counsel's manner of questioning, the complexity and duration both of her treatment and of this litigation, and the passage of time. The ALJ finds Claimant to be credible.

74. Based on the totality of the evidence, the ALJ finds that Respondents have not met their burden of proving by clear and convincing evidence that Dr. Gellrick was incorrect in determining that Claimant sustained bilateral CTS and resulting CRPS as a result of her November 10, 2006 work injury.

75. Based on the totality of the evidence, the ALJ finds that Respondents have not met their burden of proving by clear and convincing evidence that Dr. Gellrick was incorrect in determining Claimant's impairment rating.

76. Based on the totality of the evidence, the ALJ finds that Respondents have not met their burden of proving by clear and convincing evidence that Dr. Gellrick was incorrect by assigning October 4, 2010 as the MMI date.

77. Based on the totality of the evidence, the ALJ finds that Respondents have not met their burden of proving by a preponderance of the evidence that Claimant is not entitled to ongoing maintenance medical benefits.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the

motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936).

It is in the ALJ's sole prerogative to assess the credibility of the witnesses and the probative value of the evidence to determine whether the claimant has met her burden of proof. *Dover Elevator Co. v. Indus. Claim Appeals Office*, 961 P.2d 1141 (Colo. App. 1998). It is within an ALJ's purview to assess the relative weight and credibility of various opinions. *See Kraft v. Medlogic Global Corp., et al.*, W.C. No. 4-412-711 (ICAO, Mar. 15, 2001) (citing *Rockwell Internat'l v. Turnbull*, 802 P.2d 1182 (Colo. App. 1990)). Additionally, if an individual expert's opinion contains contradictions or is subject to multiple interpretations, the ALJ may resolve the conflict by crediting only a portion of the opinion, or discrediting the opinion in its entirety. *See Kraft*, W.C. No. 4-412-711; *Johnson v. Indus. Claim Appeals Office,* 973 P.2d 624 (Colo. App. 1997).

A Division IME's findings of MMI, causation, and impairment are binding on the parties unless overcome by "clear and convincing evidence." § 8-42-107(8)(b)(III), C.R.S.; *Peregoy v. Indus. Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates it is "highly probable" that the Division IME physician's rating is incorrect. *Qual-Med, Inc. v. Indus. Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); *see also Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAO, Nov. 17, 2000).

Whether or not a party overcomes the Division IME is a question of fact for determination by the ALJ. § 8-43-301(8), C.R.S.; *Wackenhurt Corp. v. Indus. Claim Appeals Office*, 17 P.3d 202 (Colo. App. 2000); *Aldabbas v. Ultramar Diamond Shamrock*, W.C. No. 4-574-397 (ICAO, Aug. 18, 2004).

As a matter of law Dr. Gellrick's opinions on the issues of causation, MMI, and impairment are binding unless overcome by clear and convincing evidence. While Respondents offered the opinions of Drs. Cebrian and Pitzer for that purpose, the ALJ specifically found that their opinions were biased, based on limited information, and not persuasive. Additionally, Dr. Gellrick's opinions were supported by the opinions and findings of Drs. Kesten, Ring, Vilims, Cohan, Draper, Denham, Wear-Magitti, and Green.

A Claimant has the right to maintenance medical treatment that is reasonably necessary to relieve the effects of the industrial injury or prevent future deterioration of the claimant's work-related condition. *Grover v. Industrial Commission,* 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995).

If the evidence in a particular case establishes that, but for a particular course of medical treatment, a claimant's condition can reasonably be expected to deteriorate, so that she will suffer a greater disability than she has sustained thus far, such medical treatment, irrespective of its nature, must be looked upon as treatment designed to relieve the effects of the injury or prevent deterioration of the claimant's present condition. *Milco Construction v. Cowan*, P.2d 539, 542 (Colo. App. 1992).

The ALJ credits the opinions of Drs. Gelrick and Kester regarding maintenance medical care. Dr. Kesten testified that Claimant's current treatment for her CRPS includes medication; hand and wrist brace/splint; home biofeedback, a paraffin unit; ColdPac; TENS unit; attending modified yoga; and using treadmill at Orange Theory.

Dr. Gellrick agreed with Dr. Kesten's maintenance medical care, including home treatment and use of opioids, and she agreed that stopping Claimant's medications would worsen Claimant's symptoms.

Dr. Gellrick testified that Claimant should try to do home exercises, yoga, and walk her dogs or walk in the gym since those activities increase her function. Dr. Kesten testified that if Claimant did not go to yoga, walk on a treadmill, and follow Dr. Kesten's multimodal treatment plan, then Claimant's functioning would decline. Dr. Kesten's recommended care is reasonable, and necessary to relieve the effects of the industrial injury and prevent deterioration of Claimant's condition.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. As a result of Claimant's November 10, 2006 admitted injury, she developed CTS the treatment for which caused Claimant to develop CRPS in her upper extremities.

2. Claimant reached MMI on 10/4/10 with a whole person impairment of 45% for CRPS and a 1% psychological impairment due to worsened depression.

3. Claimant's stipulated AWW is $725, which results in a TTD amount of $483.33.

4. Respondents shall pay Claimant PPD to the statutory cap based upon the 45% whole person and 1% psychological impairments at the TTD rate of $483.33, less any TTD, TPD, and SSDI offsets.

5. Claimant requires ongoing maintenance medical care to relieve her from the effects of the injury. Dr. Kesten's treatment, as outlined in his testimony, is reasonably necessary and related to her admitted work injury and shall continue.

6. Insurer shall pay claimant interest at the rate of 8% per annum on compensation benefits not paid when due.

7. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-003-400-05

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insure /Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on May 18, 2017 and June 5, 2017, in Denver, Colorado. The hearing was digitally recorded (reference: 5/18/17, Courtroom 1, beginning at 8:30 AM, and ending at 12:00 PM; and 6/5/17, Courtroom 1, beginning at 1:30 PM, and ending at 3:00 PM).

Claimant's Exhibits through 11 were admitted into evidence, without objection. Respondents' Exhibits A through L were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Claimant, which was filed, electronically, on June 12, 2017. No timely objections were filed and the matter was deemed submitted for decision on June 16, 2017. After a consideration of the proposed decision, the ALJ has modified it and hereby issues the following decision.

ISSUES

The sole issue to be determined by this decision concerns whether or not the Claimant is permanently and totally disabled (PTD); and, post maximum medical improvement maintenance medical benefits.

The Claimant bears the burden of proof, by a preponderance of the evidence on both issues.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant is currently seventy-one years of age (date of birth, September 3, 1945). She did not complete high school, however, she received a GED certificate later in life.

2. The Claimant began working for Respondent the Employer on December 1, 1999, and she performed a variety of tasks but was primarily a van driver for patients. Her job duties included helping disabled patient onto the van and occasionally lifting up to 75 lbs.

3. Ultimately, the Respondents filed an amended Final Admission of Liability (FAL), dated January 5, 2017, admitting liability for 14% whole person permanent partial disability (PPD), pursuant to the opinion of Stephen. D. Lindenbaum, M.D., the Division Independent Medical Examiner (DIME) [Exhibit 4]. Respondents admitted for an average weekly wage (AWW) of $542.94.

The Injury

4. The Claimant suffered an admitted low back injury on January 4, 2016, when she slipped on ice and twisted her lower back. She was referred for medical treatment with Dean Prok, M.D. and then she was referred to Nicholas K. Olsen, D.O.

5. The Claimant continued working thereafter until she was terminated on January 14, 2016, for alleged attendance violations. The Claimant currently receives $969.90 per month for Social Security retirement benefits, which are not subject to offset.

6. The Claimant was first placed at maximum medical improvement (MMI) with a zero impairment and thereafter underwent a DIME with Dr. Lindenbaum on December 9, 2016.

7. DIME Dr. Lindenbaum gave the Claimant a 14% whole person permanent medical impairment which was admitted by the Respondents as herein above found. The undisputed MMI date is July 11, 2016. *Id*., bates stamp 12.

8. In his report, dated December 9, 2016, DIME Dr. Lindenbaum stated the opinion that the Claimant has injury- related permanent functional restrictions impacting her ability to function in the work place. He was of the opinion that the Claimant might be able to perform sedentary work, but only if it did not involve any "significant lifting, bending, or stooping. She would not be able to drive a car based on the fact that she is having a lot of issues with her mentation" [Claimant's Exhibit 3. bates stamp 15]. The ALJ finds that it is important to separate the Claimant's physical limitations from her mental limitations. The evidence, in fact, established that the Claimant can drive on a limited basis, however, Dr. Lindenbaum's physical restrictions would prevent the Claimant from performing her pre-injury job duties, in addition to driving

9. The totality of the medical records establishes that the Claimant had a variety of pre-existing medical problems. These problems have been treated at Kaiser and have included right and left hand pain and weakness in August 2011 [Respondents' Exhibit E, bates stamp 132); right hand pain, weakness, numbness and tingling, accompanied by itching on October 20, 2011, [*Id*., bates stamp 136]; hyperventilation with leg and arm numbness on January 17, 2012 [*Id*., bates stamp 138); and, left leg pain accompanied by ringing in her ears, April 28, 2015 [*Id*., bates stamp 141].

10. Despite the Claimant's prior medical problems, she continued to work full duty and was considered to be an "extremely valuable employee" by the Employer one and a half months prior to her injury [Claimant's Exhibit 11, bates stamp 211]. Thus, approximately seven weeks prior to her January 4, 2016, admitted injury, the Claimant received a performance evaluation on November 12, 2015. According to the summary of the evaluation she was reported by the Employer to be "an extremely valuable employee to [the Employer]" Id. [While recent occupational mistakes and attendance problems were listed in the evaluation, the Claimant's most recent concerns were said to revolve around personal matters outside of her job. *Id*.] At that time, according to the Claimant, she was able to perform all of the essential functions of her job, despite occasional pain. The ALJ infers and finds that it would be speculative as to when, if ever, the Claimant could not perform her job because of "recent occupational mistakes" and "attendance problems." It is not speculative but firmly established that Dr. Lindenbaum's physical restrictions, which the ALJ finds more credible than all other opinions to the contrary, would prevent the Claimant from performing her pre-injury job.

11. Authorized Treating Physicians (ATPs) Dr. Pork and Dr. Olsen stated that the Claimant has no restrictions related to her January 4, 2016 injury. For the reasons stated herein below, the ALJ does not find these opinions in this regard credible. It is more likely than not that DIME Dr. Lindenbaum's physical restrictions are more credible. The testimony of Dr. Jacobs is that any restrictions that the Claimant has are the result of pre-existing conditions. For the reasons stated herein below, the ALJ finds Dr. Jacobs' opinions lacking in credibility. Their explanations are heavily premised on the

Claimant's "mentation" problems. The ALJ rejects their opinions in favor of DIME Dr. Lindenbaum's opinion, which outweighs their opinions by preponderant evidence.

12. The DIME's opinion on causation, degree of permanent medical impairment, and MMI has been accepted by the Respondents. It has not been sought to be overcome. DIME Dr. Lindenbaum is of the opinion that the Claimant's work related injury has caused a work related permanent medical impairment of 14% whole person, and that the Claimant requires physical restrictions, in addition to any problems that may relate to her mental status. The ALJ finds the opinion of DIME Dr. Lindenbaum concerning the Claimant's restrictions highly persuasive and credible; and, the ALJ soundly rejects the opinions of Dr. Olsen, Dr. Prok and Alexander Jacobs, M.D.

The Claimant's Statements/Functional Capacity Evaluation (FCE)

13. The ALJ finds the Claimant's testimony persuasive and credible. In observing the Claimant at hearing, the ALJ did not see any unusual behavior. Her testimony did not seem to support the "dementia" opinion of Respondents' independent Medical Examiner (IME), Alexander Jacobs, M.D.

14. Over the years of treatment at Kaiser Permanente, the Claimant has occasionally stated that she looked forward to retiring. Regardless of these statements, she did not act on this possibility and continued to work despite her prior physical problems. Indeed, the ALJ takes administrative notice of the fact that someone who is 70 years of age, with a GED and no further education, may look forward to retirement. This alone does not prove an ulterior motive to gain a PTD award, or that retirement is imminent.

15. The Claimant underwent an FCE with. Kristine Couch OTR (occupational therapist) on March 29, 2017. Couch established that the Claimant is limited to sedentary work. According to Couch's work simulation program, the Claimant was non-competitive for reach, crouching/squatting reach, kneeling to standing and back reach, standing position reach, stooping displacement reach, and upper level reach [Claimant's Exhibit 8, bates stamp 150, 151]. Additionally, Couch stated that the Claimant's left foot was noted to catch when stepping forward after she was asked to perform indoor walking tests. *Id*., bates stamp 154. Finally, the Claimant's knuckle to shoulder lifting was limited to 15 lbs. and shoulder to overhead 5 lbs. with lifting and carrying limited to 10 lbs. *Id*., bates stamp 156. Couch evaluated the validity of the Claimant's effort which demonstrated consistency in 19 of 20 tests. *Id*., bates stamp 154, 200]. Couch did not evaluate the Claimant's "mentation" problems –only her physical limitations.

Respondents' Independent Medical Examination (IME) by Alexander Jacobs, M.D.

16. On the Respondents' behalf, Dr. Jacobs performed an IME on the Claimant on or about April 3, 2017. In a 58-page report, Dr. Jacobs concluded that "neither the back pain nor the cervical symptoms are related to the on-the-job injury **in any way, shape or form** (emphasis supplied). As the poet said, "methinks the he protesteth too much." Based on this characterization, the ALJ infers that Dr. Jacobs has indicated an investment in an outcome of non-causal relatedness. Indeed, his opinion in this regard is contrary to the DIME physician's causal opinion, and Dr. Jacobs' opinion does not make it highly probable, unmistakable and free from serious and substantial doubt that DIME Dr. Lindenbaum was wrong in his causal opinion. Dr. Jacobs also testified at the hearing. He is board certified in Internal Medicine and Geriatrics. Without adequately explaining the basis of his opinion, he stated that the Claimant's "cognitive difficulties are related to some type of dementia." He speculates that this may be related to "Alzheimer's or multi-infarct dementia." Dr. Jacobs does not give a firm diagnosis in this regard nor does he make any appropriate referrals for the Claimant's alleged "dementia." He further states that this is "not in any way, shape or form related to her January 4, 2016 slip and 'non-fall"—an interesting choice of words. Lastly, Dr. Jacobs states the opinion that any work restrictions the Claimant has are "due to her non-injury diagnosis." He had no recommendations for treatment for work-related conditions.

17. The ALJ infers and finds that Dr. Jacobs has categorically rendered opinions that: (1) the Claimant never suffered a compensable injury on January 4, 2016 as admitted and which resulted in 14% whole person PPD; (2) most of the Claimant's problems are attributable to alleged "dementia," although Dr. Jacobs did not do a full work up to firm up a diagnosis of 'dementia" or "Alzheimer's," and none of the Claimant's restrictions are attributable to her work injury "in any way, shape, or form." Indeed, in his testimony at hear, Dr. Jacobs mixed medical opinions with legal conclusion, *e.g."* "the work injury did not "aggravate or accelerate" the Claimant's condition. From an overall standpoint, the ALJ infers and finds that Dr. Jacobs became an effective advocate for the Respondents' theory of the case, thus, his credibility was compromised. Indeed, the ALJ finds that Dr. Jacobs' opinions, categorically, are lacking in credibility and, therefore, are rejected.

Vocational Evaluation of John Macurak

18. The Claimant was evaluated by vocational expert John Macurak at the request of the Claimant. Macurak issued several reports and testified at the hearing [Claimant's Exhibit 9]. His most recent report was completed on April 25, 2017, after he reviewed the FCE performed by Kristine Couch. Macurak was of the opinion that the Claimant was unable to earn any wages in the same or other employment as a result of her January 4, 2016, injury, given the extent of her physical limitations, the work

restrictions assigned, her advanced age, and her limited education [*Id*., bates stamp 189]. Macurak noted that the Claimant had limited computer skills (online banking only) and her limited education and advanced age precluded her from earning wages in unknown employment. The ALJ finds Macurak's opinion highly persuasive and credible; and, it outweighs the vocational opinions of Respondents' IME Dr. Jacobs and Respondents' Vocational Evaluator, Katie Montoya.

Vocational Evaluation of Katie Montoya.

19. The Claimant was evaluated by Katie Montoya at the request of the Respondents. Montoya agreed that the Claimant is limited to a sedentary work capacity. There was no persuasive evidence that the Claimant had ever worked in sedentary work, or had transferrable skills to work in sedentary work. Montoya conceded that the Claimant's pre-injury job is characterized as "heavy" work. Montoya's opinion, however, was that the Claimant is employable, based on the opinions of Dr. Olsen, Dr. Prok and Dr. Jacobs who attribute the Claimant's current limitations to pre-existing, non-injury related, restrictions. As found, herein above, these doctors' opinions have been determined to lack credibility. Montoya testified that she did **not** rely on the restrictions given by DIME Dr. Lindenbaum or the limitations arising from Kristine Couch's FCE, although she was aware of both. The ALJ finds that Montoya's reliance on the opinions of Dr. Prok, Dr. Olsen and Dr. Jacobs was misplaced and for this reason, her ultimate opinion, like a house of cards, collapses. Indeed, Montoya did **no** labor market surveys to see if there was any sedentary work that the Claimant could do. The ALJ rejects the opinion of Katie. Montoya as unpersuasive and lacking in overall credibility.

Permanent Total Disability

19. The Claimant is unable to earn any wages in the same or other employment in her commutable labor market. The "full responsibility rule," applicable to claims for permanent total disability benefits, provides that the industrial injury need not be the sole cause of a claimant's permanent total disability. Under the rule, when an "employer hires an employee who, by reason of a pre-existing condition or by reason of a prior injury, is to some extent disabled, he takes the person with such handicap," and the employer should be liable for a "full award of benefits" if a subsequent industrial injury combines with the pre-existing disability to produce permanent total disability. As found, the Claimant was able to perform the full range of her job duties before the admitted injury of January 4, 2016. Afterwards, DIME Dr. Lindenbaum gave her physical restrictions whereby she could not perform her pre-injury job duties. She has not worked since she was terminated from employment on January 14, 2016, 10-days after her admitted injury, nor has she earned any wages or been capable of earning any wages.

20. Considering the Claimant's "human factors," including her age of 70; her work history and/or lack of any significant work history; her general physical condition; her education (a GED with no special training); her mental ability, prior training and experience, and the availability of work that she could perform. There is no persuasive evidence of any work the Claimant could perform. There is no persuasive evidence that employment exists or is available in the Claimant's competitive job market, which the Claimant can perform on a reasonably sustainable basis. As found, the Claimant has proven that she is incapable of earning wages in the competitive labor market, on a reasonably sustainable basis, and there is no work reasonably available to her, and this inability is attributable to the admitted injury of January 4, 2016. She could do her job until then and she could not to it afterwards. The Respondents imply that a confluence of the Claimant's pre-existing conditions, including Dr. Jacobs' alleged opinion of "dementia," coincidentally, ripened whereby the Claimant could not work after her admitted injury. This argument is not well taken by the ALJ.

Maintenance Medical Care and Treatment After MMI

21. Any maintenance medical care and treatment to maintain the Claimant at MMI (after July 11, 2016) and prevent a deterioration of her physical condition is causally related to the admitted injury of January 4, 2016 and reasonably necessary. Also, if at the hands of previously authorized medical providers, it is authorized.

Ultimate Findings

22. The ALJ finds that the Claimant's testimony was straight-forward and credible. The permanent medical impairment and physical restrictions, as found herein above, of DIME Dr. Lindenbaum are persuasive and credible. Based on the totality of the evidence, the ultimate opinions of Dr. Prok and Dr. Olsen are lacking in credibility. The ultimate opinions of Dr. Jacobs are significantly lacking in credibility. The vocational opinions, for the reasons found herein above, of John Macurak are more persuasive and credible than the vocational opinions of Katie Montoya.

23. Between conflicting opinions, the ALJ makes a rational choice, based on substantial evidence, to accept the vocational opinion of John Macurak, and to reject the vocational opinion of Katie Montoya. Also, the ALJ makes a rational choice to accept DIME Dr. Lindenbaum's opinions, and to reject the opinions of Dr. Jacobs, Dr. Prok, and Dr. Olsen.

24. The Claimant has proven, by a preponderance of the evidence that she is permanently and totally disabled on account of her admitted injury, and that she is unable to earn any wages in the same or other employment in her competitive labor market, on a reasonably sustainable basis. Regardless of the fact that the Claimant's admitted injury is not the sole cause of her permanent total disability, the admitted injury

is “the straw that broke the camel’s back.” The ALJ finds that the admitted injury was, indeed, a significant causative factor in the Claimant’s PTD.

25. The Claimant has proven, by preponderant evidence to entitlement to post-MMI maintenance medical benefits for her physical injuries, after July 11, 2016, to maintain her at MMI and to prevent a deterioration of her condition

26. It has been admitted that the Claimant’s AWW is $542.94, 2/3rds of which is $361.96 (the weekly PTD rate), or $51.71 per day.

27. On the date of the Claimant’s admitted injury, January 4, 2016, she was 70 years old. Her federal Social Security benefits were retirement benefits, not disability benefits, and are, therefore, not subject to offset.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered “to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence.” *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness’ testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness’ testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness’ special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad

discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the Claimant's testimony was credible and DIME Dr. Lindenbaum's opinions concerning the Claimant's physical restrictions were credible. The opinions of Dr. Jacobs, Dr. Prok, and Dr. Olsen were lacking in credibility as herein above found. As further found, the vocational opinuions of John Macurak were more credible and persuasive than the vocational opinions of Katie Montoya, which in and of themselves, are dispositive of the PTD issue.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting opinions, the ALJ made a rational choice, based on substantial evidence, to accept the vocational opinion of John Macurak, and to reject the vocational opinion of Katie Montoya. Also, the ALJ made a rational choice to accept DIME Dr. Lindenbaum's opinions, and to reject the opinions of Dr. Jacobs, Dr. Prok, and Dr. Olsen.

Permanent Total Disability

c. An employee is permanently and totally disabled if she/he is unable to earn any wages in the same or other employment. § 8-40-201(16.5) (a) C.R.S. The "full responsibility rule," applicable to claims for permanent total disability benefits, provides that the industrial injury need not be the sole cause of a claimant's permanent total disability. Under the rule, when an "employer hires an employee who, by reason of a pre-existing condition or by reason of a prior injury, is to some extent disabled, he takes the person with such handicap," and the employer is liable for a "full award of benefits" if a subsequent industrial injury combines with the pre-existing disability to produce permanent total disability. See *United Airlines, Inc. v. Indus. Claim Appeals*

Office, 993 P.2d 1152, 1154-1155 (Colo. 2000). The only exception to the established rule is where the industrial injury is not a significant causative factor in a claimant's disability. See *Seifried v. Indus. Comm'n,* 736 P.2d 1262 (Colo. App. 1986) [the claimant suffered from several pre-existing ailments, and the treating physician opined that the claimant had reached maximum medical improvement, and concluded that the claimant remained disabled because of non-occupational factors—in *Siefried,* the pre-existing factors contributed 95% to the PTD and the industrial injury only 5%].; *Lindner Chevrolet v. Indus. Claim Appeals Office,* 914 P.2d 496 (Colo. App. 1995). *See also Holly Nursing Care Center v. Indus. Claim Appeals Office,* 992 P.2d 701 (Colo. App. 1999). In the present case, as found, the Claimant's admitted physical injuries which resulted in 14% permanent medical impairment, **significantly** contributed to her PTD. Consequently, *Siefried* is inapplicable to the facts in the present case.

d. In determining whether a claimant is permanently and totally disabled, an ALJ may consider a claimant's "human factors," including the claimant's age, work history, general physical condition, education, mental ability, prior training and experience*,* and the availability of work that the claimant could perform. *Weld County School District RE-12 v. Bymer,* 955 P.2d 550 (Colo. 1998*); Joslin's Dry Goods Co. v. Indus. Claim Appeals Office,* 21 P.3d 866 (Colo. App. 2001). The term "any wages" means more than zero wages. *See Lobb v. Indus. Claim Appeals Office,* 948 P.2d 115 (Colo. App. 1997); *McKinney v. Indus. Claim Appeals Office,* 894 P.2d 42 (Colo. App. 1995). The critical test is whether employment exists that is reasonably available to a claimant under his or her particular circumstances. *Weld County School Dist. Re-12 v. Bymer*, *supra*. This means whether employment is available in the competitive job market, which a claimant can perform on a reasonably sustainable basis. *See Joslins Dry Goods Company v. Indus. Claim Appeals Office,* 21 P.3d 866 (Colo. App. 2001). As found, the Claimant has proven that she is incapable of earning wages in the competitive labor market, on a reasonably sustainable basis, and there is no work reasonably available to her. Permanent total disability does not need to be proven by medical evidence. *See Baldwin Construction, Inc. v. Indus. Claim Appeals Office,* 937 P.2d 895 (Colo. App. 1997). *Calvert v. Roadway Express, Inc.,* W.C. No. 4-355-715 [Indus. Claim Appeals Office (ICAO), November 27, 2002]; *In re Claim of Randy Blocker v. Express Personnel,* W.C. No. 4-622-069-04 (ICAO, July 1, 2013). As further found, the Claimant's "human factors," including her age of 70; her work history and/or lack of any significant work history; her general physical condition; her education (a GED with no special training); her mental ability; prior training and experience;*,* and, the lack of persuasive evidence about the availability of work that she could perform support the conclusion that she is permanently and totally disabled.. There is no persuasive evidence of any work the Claimant could perform. There is no persuasive evidence that employment exists or is available in the Claimant's competitive job market, which the Claimant can perform on a reasonably sustainable basis. As found, the Claimant has proven that she is incapable of earning wages in the competitive labor market, on a reasonably sustainable basis, and there is no work reasonably available to her, and this inability is attributable to the admitted injury of January 4, 2016. She could do her job

until then and she could not to it afterwards. The Respondents imply that a confluence of the Claimant's pre-existing conditions, including Dr. Jacobs' alleged opinion of "dementia," coincidentally, ripened whereby the Claimant could not work after her admitted injury. This argument is rejected.

e. Under § 8-40-201(16,5)(a), C.R.S., the overall objective is to determine whether, in view of all these human factors and vocational factors, employment is "reasonably available to a claimant under his or her particular circumstances." *Weld County Sch. Dist. RE-12 v. Bymer, supra* at 558. Also see *Joslin's Dry Goods Co. v. Industrial Claim Appeals Office*, 21 P. 3d 866 (Colo. App. 2001). This requires a determination of whether employment is available in the competitive job market which the Claimant can perform on a reasonably sustainable basis. Here such employment is not available to the Claimant and the Respondents have failed to show that it is. Rather, the Claimant has proven that she is not capable of earning wages in the same or other employment.

Post-MMI Maintenance Medical Benefits

f. An employee is entitled to continuing medical benefits after MMI if reasonably necessary to relieve the employee from the effects of an industrial injury. *See Grover v. Indus. Comm'n of Colorado*, 759 P.2d 705 (Colo. 1988). The record must contain substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve a claimant from the effects of an injury or to prevent further deterioration of his condition. *Stollmeyer v. Indus. Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995); *Grover v. Indus. Comm'n, supra*. Such evidence may take the form of a prescription or recommendation for a course of medical treatment necessary to relieve a claimant from the effects of the injury or to prevent further deterioration. *Stollmeyer v. Indus. Claim Appeals Office, supra*. An injured worker is ordinarily entitled to a general award of future medical benefits, subject to an employer's right to contest causal relatedness and reasonable necessity. *See Hanna v. Print Expediters,* 77 P.3d 863 (Colo. App. 2003). Treatment to **improve** a claimant's condition does **not** fall under the purview of *Grover* benefits. *Shalinbarger v. Colorado Kenworth, Inc.,* W.C. No. 4-364-466 [Indus. Claim Appeals Office (ICAO), March 12, 2001]. As found, Claimant is entitled to maintenance medical care, which is reasonably necessary to address the admitted physical injury

Social Security Retirement Benefits

g. Section 8-42-103 (1) (c)(I), C.R.S., provides for an offset of one-half of Federal Social Security Disability benefits. If the Claimant is receiving straight retirement benefits on her own account, there is no offset. If she is receiving Survivor's benefits there may be an offset allowable.

Burden of Proof

h. The injured worker has the burden of proof, by a preponderance of the evidence, of entitlement to benefits beyond those admitted. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained her burden on the issue of permanent total disability.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Respondents shall pay the costs of all authorized, causally related and reasonably necessary medical care and treatment for the Claimant's admitted physical injuries to maintain her at maximum medical improvement and to prevent a deterioration of her condition, subject to the Division of Workers' Compensation Medical Fee Schedule.

B. The Respondents hall pay the Claimant permanent total disability benefits of $361.96 per week, or $51.71 per day from July 11, 2016 for the rest of the Claimant's natural life. The period between the maximum medical improvement date of July 11, 2016 and the last session of the hearing , June 5, 2017, both dates inclusive, is 330 days. Past due permanent total disability benefits equal $17,064.30, however, Respondents may take a credit for all permanent partial disability benefits paid pursuant to the latest Final Admission of Liability, dated January 5, 2017. Further, beyond the credit period, Respondents shall continue to pay the Claimant permanent total disability benefits of $361.96 per week for the rest of the Claimant's natural life.

C. If the Claimant is receiving Federal Social Security Retirement benefits, pursuant to her own account, there shall be no offset. If she is receiving Survivor's benefits, considering the fact that she has been receiving Social Security benefits after

her retirement age, there could be an offset equaling the differential between her retirement benefits on her own account and survivors' benefits.

D. Respondents shall pay the Claimant interest at the rate of eight percent (8%) per annum on all indemnity benefits due and not paid when due.

E. Any and all issues not determined herein are reserved for future decision.

DATED this_____day of June 2017.

_____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

ISSUES

- Whether Claimant established by a preponderance of the evidence that he suffered a compensable work injury.
- Whether Claimant established by a preponderance of the evidence entitlement to medical benefits.
- Whether Claimant established by a preponderance of the evidence entitlement to temporary total disability benefits from August 26, 2016 through ongoing.
- Whether Respondent's established by a preponderance of the evidence that Claimant was at fault for his termination.
- Claimant's average weekly wage (AWW).

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant began working for Employer in June 2016 as a bore machine operator which involved tasks associated with building underground tunnels.

2. Claimant is a high school graduate and has attended some college courses. He can read and write in English and indicated on medical forms that English is his preferred language.

3. On August 25, 2016, at approximately 11:00 a.m., Claimant was standing on rails which were chained to an excavator. Though it was variously described, the ALJ finds that as the excavator began pulling, the chains snapped causing the rails to drop back down to the ground. The rails were approximately six inches from the ground. When the rails dropped, Claimant also dropped approximately six inches, landing on his feet.

4. Claimant's shift on the date of the alleged incident began at approximately 7:00 a.m. Although Claimant testified that he felt immediate pain in his back and hip, he worked his regular 10-hour shift. He did not report the incident or being injured from the incident.

5. Claimant testified that his foreman, Easer Lopez, witnessed the incident and laughed at him. Mr. Lopez, however, testified by phone and through the interpreter that he did not witness the incident and was on the far side of the job site when Claimant alleges it occurred. Mr. Lopez also testified that he would not laugh at an

employee, including Claimant, who had a work accident. The ALJ finds the testimony of Mr. Lopez to be more credible and persuasive than that of Claimant for reasons discussed more fully below.

6. According to Claimant, the pain in his low back worsened later in the day and continued to worsen during the night. Claimant claims he informed Mr. Lopez on Friday, August 26th that he was hurting from the day before. Mr. Lopez, though, testified that Claimant worked his regular shift on Friday, August 26th and did not appear to be injured. At the end of his shift on Friday, Claimant told Mr. Lopez his back hurt but Claimant said nothing about his pain being related to a work incident or injury. Notwithstanding, Mr. Lopez offered to send Claimant to Employer's designated medical provider. Claimant declined medical care.

7. Employer has a policy that all employees who are going to be absent or late to work must call-in and advise the Employer by 7:00 a.m. on the day of the anticipated absence or tardiness.

8. On Monday, August 29, 2017 at 11:14 a.m. Claimant sought medical treatment at the Medical Center of Aurora (MCA) complaining of thoracic and lumbar pain from a "fall" at work. On exam, Claimant had full lumbar and cervical range of motion and normal thoracic and lumbar spine X-rays. Claimant was diagnosed with a thoracic and lumbar spine strain and released to modified work with restrictions for "that day."

9. Claimant did not call into work by 7:00 a.m. on August 29 to tell Employer that he would be late. Rather, Raul Cardenas, Employer's superintendant, called Claimant on August 29th when Claimant failed to report for work. Claimant did not answer. Later in the day, Claimant texted Mr. Cardenas that he was going to see a doctor.

10. Consequently, Employer gave Claimant an unexcused absence. Claimant had two previous unexcused absences, one on June 20, 2016 and the other on August 20, 2016 when he was in jail. Claimant admitted to one prior unexcused absence but testified that his mother had called Employer to report him absent by 7:00 a.m. on June 20, 2016, so that absence should have been excused. Mr. Cardenas testified that he recalled Claimant's mother calling in that day, but she did not call to report him absent. Instead, she was looking for Claimant to see if he had reported to work because she did not know his whereabouts.

11. On August 29, 2016, Employer gave Claimant a written warning/disciplinary report documenting Claimant's unexcused absences for June 20, 2016 and August 20 and 29, 2016.

12. After his August 29 visit to AMC, Claimant submitted the paperwork from his visit to Employer. Having learned that Claimant was claiming a work injury, Employer sent Claimant to its designated medical provider, Concentra. Per Employer's written policy, Claimant underwent a mandatory drug test that all employees must take

after reporting an alleged work accident. Claimant admitted to using cocaine on Saturday, August 27, 2016. On September 1, 2016, Claimant's test results were confirmed as positive for cocaine.

13. Pursuant to Employer's no tolerance drug policy, testing positive in a post-accident drug screen for the presence of controlled substances is grounds for immediate discharge from employment. A positive test alone, regardless of when the illegal substance was used, results in immediate discharge.

14. Claimant was aware of both Employer's no tolerance drug policy and the attendance policy. Donna Hale, Employer's Human Resource Director, testified that she provided the written policy to Claimant during his employment orientation. Claimant testified that he was not aware that illegal drug use when he was not working was prohibited. During his orientation, Claimant was able to ask questions. He asked an unrelated question re mileage, but did not ask about Employer's no tolerance drug or attendance policies. Mr. Cardenas testified that it was also common knowledge amongst the employees that Employer's drug policy was one of no tolerance.

15. On September 6, 2016, Employer terminated Claimant's employment because he both tested positive for cocaine and had three unexcused absences on June 20 and August 20 and 29, 2016. Ms. Hale testified that Employer would have terminated Claimant for either reason independently. The ALJ finds that Claimant was responsible for his termination on September 6, 2016.

16. Employer paid Claimant his final wages on September 2, 2016, for the period ending on August 28, 2016, the last day Claimant actually worked. Although Employer offered modified duty to Claimant, Claimant refused to return to work and acknowledged in writing that he decided to take unpaid leave on September 1 and 2, 2016. The ALJ finds that Claimant did not suffer a work-related wage loss from the date of the alleged injury through the date of termination.

17. On September 1, 2016, Claimant sought care at Concentra where his medical provider diagnosed a thoracic myofascial strain and a lumbosacral strain based upon history and mechanism of injury "obtained directly from the patient." Despite having tested positive for cocaine two days earlier, Claimant reported that he did not use drugs.

18. Claimant began physical therapy on September 7, 2016, complaining of low back and left buttock pain, but by his third visit on September 15, 2016, the physical therapist documented that Claimant reported he "was almost back to normal and wanted to stay and get released from care." The physical therapist noted that Claimant "has been non-compliant with physical therapy visits." Physical therapy notes provide that Claimant:

- Had missed three or four by his seventh scheduled visit and had "multiple reschedules and 'lates'."

- Was non compliant with his home exercise program; and

- His lack of progress and compliance led to Claimant's further physical therapy being "put on hold."

19. By September 23, 2016, the physical therapist documented Claimant reporting "that his back is feeling much better and that he has most of the motion back in it," and that "his back feels almost 100% better."

20. On September 23, 2016 Claimant's Concentra provider evaluated Claimant and documented Claimant had full lumbar range of motion with no spasm and his lumbar spine was non-tender. Claimant complained of pain with a click in his left hip. On September 30, 2016, Dr. Draper from Concentra reported that Claimant's left hip MRI revealed an anterior labral tear.

21. On October 17, 2016, John Schwappach, M.D., a hip surgeon, evaluated Claimant and suggested arthroscopic repair of the labral injury. Dr. Schwappach documented that Claimant was standing on rails at work when the rails uncoupled and Claimant was "thrown in the air landing on his left side." The ALJ finds Dr. Schwappach misapprehended Claimant's actual mechanism of injury.

22. On October 25, 2016, Insurer filed a notice of contest while continuing to pay for Claimant's medical care with his authorized treating physicians. Claimant did not specify what medical benefits he was seeking at hearing other than hip surgery; however, Dr. Schwappach did not submit a request for prior authorization, thus the ALJ may not order authorization for hip surgery.

23. On December 2, 2012, Concentra assigned Claimant work restrictions of:

- lifting up to 10 pounds occasionally,

- pushing/pulling 20 pounds occasionally,

- sitting 80% of the time,

- no squatting,

- no kneeling,

- no climbing ladders,

- may not work at heights, ground work only,

- and no driving a company vehicle.

24. Claimant testified that he worked on cars prior to his injury, but could no longer do so because he was unable to bend over. According to Claimant, the injury affected his everyday life. Claimant testified that his pain and restrictions rendered him

unable to work, work on cars, play sports, play with his kids in the back yard or at a park.

25. On December 5, 2016 Respondents recorded four hours of video surveillance. The videotape shows Claimant walking outdoors, working on his SUV, and repeatedly bending at the waist. Claimant squats, gets up from squatting to standing without apparent difficulty, kneels on his left knee with his right leg extended, and reaches under his vehicle. Claimant is shown getting under his SUV on his back with his right hip flexed and maintaining that position before standing. While working on his vehicle, Claimant is squatting, kneeling, bending, lying on his back with his hip flexed, and moving into and out of these positions without apparent difficulty or distress. He was videotaped lifting and carrying a bumper off his SUV and flexing at the waist to 90 degrees or greater without apparent difficulty. Claimant also climbed onto the tailgate of his SUV and knelt, squatted and bent multiple times throughout the 4 hour surveillance tape. In contrast to his presentation at medical appointments, Claimant did not limp at any point during the four hour period of time.

26. On December 9, 2016, Concentra assigned work restrictions of "no squatting and/or kneeling, may lift up to 10 pounds occasionally (up to 3 hours per day), may push/pull up to 20 pounds occasionally, and may not drive a company vehicle due to functional limitations."

27. On December 30, 2016, treating physiatrist Scott J. Primack, D.O., reported that during his examination on that day, Claimant went from stand to sit and from sit to stand in "somewhat of a guarded fashion," and that surgery was recommended because Claimant was experiencing ongoing left hip discomfort.

28. On January 10, 2017, Dr. Primack reported that Claimant underwent a urine drug test and tested positive for cocaine, and negative for opiates even though Dr. Primack had prescribed 80 Vicodin tablets during the previous thirty days. That same day, Claimant reported that he had not used cocaine since August 2016. Dr. Primack stopped prescribing all narcotics as Claimant was "clearly noncompliant," using cocaine with his prescribed opioid medication.

29. Also on January 10, 2017, Dr. Cohen saw Claimant for a psychological consultation. Claimant reported having a fourth DUI conviction for which he was awaiting sentencing. Claimant also reported to Drs. Cohen and Gray a history of cocaine and methamphetamine abuse. Dr. Cohen remarked that Claimant "was not an ideal candidate for routine narcotic management based on his significant history."

30. On February 13, 2017 Claimant underwent an IME with Elisabeth Bisgard, M.D. Claimant told Dr. Bisgard he was unable to sit or stand for one hour, after which he had to alternate positions due to hip pain. He could walk for 2 hours, after which he had to alternate his position due to hip pain. Claimant also reported that he "always walks with a limp." Dr. Bisgard reviewed the surveillance video in its entirety and reported that Claimant was more functional on video than he had related to her and to his treating physicians.

31. Dr. Bisgard noted that Claimant answered "No" to an interrogatory that asked whether Claimant had ever pled guilty or been convicted of a crime other than a traffic violation. However, Claimant told Dr. Bisgard that he had spent five years in prison. Later, Dr. Bisgard received records from one of Claimant's previous employers which included a copy of a criminal background check that employer had conducted before hiring Claimant. The records noted Claimant's guilty pleas to charges of "felony theft from a person" and "misdemeanor drinking." And Claimant's convictions for DUIs, drinking and driving after revocation of his license, and drinking in a vehicle.

32. Dr. Bisgard is the only physician who conducted a causality determination required by Level II Accreditation teachings. In addition to the surveillance, Dr. Bisgard reviewed all of Claimant's medical records and Claimant's signed answers to interrogatories. She was present at hearing for the testimony of Claimant and Employer's witnesses. Dr. Bisgard opined that Claimant did not sustain any work injury. Dr. Bisgard based her opinion on the following criteria:

- Claimant's testimony was inconsistent with that all Employer witnesses.
- Claimant's mechanism was inconsistent with his labral tear.
- The surveillance recording directly contradicted Claimant's testimony regarding his level of functioning and his statements to his treating physicians about his abilities.
- Claimant's normal clinical examinations and normal lumbar and thoracic range of motion immediately after the alleged injury.
- Claimant's different reports regarding mechanism of injury and his late reporting of hip pain.

Dr. Bisgard concluded and opined that more likely than not, Claimant was not injured at work, even assuming an incident as described by Claimant had occurred. The labral tear, according to Dr. Bisgard, was not consistent with Claimant's reported mechanism of injury and was not work-related.

33. Alternatively, Dr. Bisgard opined that at most, and giving Claimant the benefit of the doubt (which Dr. Bisgard did not do), Claimant would have had a mild thoracic-lumbar strain for which he reached MMI on September 20, 2016 when his symptoms resolved for his back issues, with no impairment and no need for medical maintenance care. Dr. Bisgard explained that she selected this MMI date because it was in between September 15, 2016, the third PT visit where Claimant stated he "was almost back to normal and wanted to stay and get released from care" and September 23, 2016, when the physical therapist documented Claimant's report "that his back is feeling much better and that he has most of the motion back in it" and that "his back feels almost 100% better."

34. Dr. Bisgard also noted that Claimant had a non-work related inguinal hernia. She opined that given Claimant's admitted illegal drug use the day after the alleged injury (and before he sought treatment), and the records that Claimant used illegal drugs, including cocaine and meth, on other occasions as well, raised the question of whether Claimant actually sustained an injury at work or at an event outside of work between the night of August 26 and August 29, 2016, or some other time.

35. It appears from his record that Dr. Schwappach, who found the labral tear work related, was under the false impression that Claimant had fallen directly onto his left side. His October 17, 2016 note provides that Claimant "was thrown in the air landing on his left side."

36. On March 7, 2017, Claimant underwent an IME with J. Stephen Gray, M.D. Dr. Gray is the only physician who assessed "possible left direct or inguinal hernia" as related to the alleged work injury, a contention Claimant himself has not made. According to Dr. Gray, given the "violent nature of the industrial accident", even if the hernia and/or the left hip labral tear were pre-existing, the violent work injury would have exacerbated if not permanently aggravated these conditions. The ALJ finds that Dr. Gray misapprehended the actual mechanism of injury by relying on Claimant's exaggerated report.

37. Dr. Gray did not view the surveillance video or address it in his report, and he appears to have "cut and pasted" a large part of Dr. Bisgard's IME report into his own. Dr. Gray reported that Claimant was on narcotics for pain for the first 2-3 weeks post alleged injury, which may have masked his left hip pain. However, the records document that Claimant was given 6 tablets of Norco and the next documented prescription is not until November 8, 2016, over two months post-alleged injury. Dr. Gray also seems to be unaware that Claimant's authorized treating physician opined that Claimant did not have a work injury of any kind and that Claimant's supervisors denied witnessing the purported incident. The ALJ rejects Dr. Gray's opinion because Dr. Gray did not review all of Claimant's medical records or view any of the surveillance. Dr. Gray's understanding of Claimant's pain medication usage is also incorrect.

38. On March 10, 2017 Dr. Primack, having read Dr. Bisgard's report and reviewed Claimant's file, opined that Claimant had not sustained a work related injury. And even if he had, Claimant reached MMI on September 20, 2016 without impairment. Dr. Primack wrote, "I'm still quite concerned regarding [Claimant's] drug abuse. This clearly confounds the entire medical treatment."

39. Based on the totality of the evidence, the ALJ finds Claimant NOT credible.

40. Based on the totality of the evidence, the ALJ finds Claimant did not meet his burden of establishing by a preponderance of the evidence that he suffered a compensable work injury.

41. Based on the totality of the evidence, the ALJ finds Claimant did not meet his burden of establishing by a preponderance of the evidence entitlement to medical benefits.

42. Based on the totality of the evidence, the ALJ finds Claimant did not meet his burden of establishing by a preponderance of the evidence entitlement to temporary total disability benefits.

43. Based on the totality of the evidence, the ALJ finds Respondents met their burden of establishing by a preponderance of the evidence that Claimant was at fault for his termination.

44. Because the ALJ has found Claimant did not meet his burden of establishing by a preponderance of the evidence entitlement to temporary total disability benefits, the ALJ need not reach the remaining issue of Claimant's AWW.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado (Act), is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. In general, a claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved. The ALJ need not address every piece of evidence or every inference that might lead to conflicting conclusions. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P. 3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance* Co. *v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1) (c) C.R.S. Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v.*

Industrial Claim Appeals Office, 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

Claimant failed to meet his burden of proving a work injury. As found, the ALJ is persuaded by the testimony of Mr. Lopez and Mr. Cardenas that they did not witness the alleged work incident. Rather, they observed Claimant working his regular shift for hours after the alleged 11:00 a.m. incident on Thursday and all day Friday. The ALJ rejects Claimant's testimony as not credible. Claimant testified that he was unable to work on cars and had limited ability to bend and kneel but 4 hours of surveillance was submitted showing Claimant repeatedly bending, kneeling, lifting and engage in other activity while he worked on his SUV. The timing of the surveillance, December 5, 2016, was right after Concentra reiterated Claimant's work restrictions of limit lifting to 10 pounds occasionally, push/pull 20 pounds occasionally, should be sitting 80% of the time, no squatting, no kneeling, no climbing ladders, may not work at heights, ground work only and no driving a company vehicle. Moreover, Claimant has a potential inguinal hernia that no provider (except Claimant's IME, Dr. Gray), has opined is work-related. Even Claimant himself has not alleged this hernia is work-related. The ALJ is persuaded by Dr. Bisgard's Level II causality determination that considering the totality of the evidence, including Claimant's illicit drug use, Claimant's injuries cannot be correlated to the alleged work incident. Dr. Primack, after considering the entire picture when it was made available to him, agreed with Dr. Bisgard and opined that he too did not believe Claimant sustained a work injury of any kind. Consequently, Claimant's workers' compensation claim is denied and dismissed.

Because the ALJ has found and concluded that Claimant did not suffer a work injury, and based on the totality of the evidence, Claimant is not entitled to receive medical or compensatory benefits. Additionally, when a temporarily disabled Claimant is responsible for termination of his employment, the resulting wage loss may not be attributed to the work injury. *See* § 8-42-103 (1) (g), §8-42-105 (4), C.R.S. An employee is responsible for termination if the employee precipitated the employment termination by a volitional act which an employee would reasonably expect to result in the loss of employment. *Patchek v. Colorado Department of Public Safety*, W.C. No. 4-432-301 (ICAO, 2001). The determination of Claimant's responsibility for the termination of employment is not related to the concept of culpability, but requires only a "volitional act," or the exercise of some control in light of the totality of the circumstances. *Padilla v. Digital Equipment Corporation*, 902 P.2d 414 (Colo. App. 1994), *opinion after remand*, 908 P.2d 1185 (Colo. App. 1995). As found, Claimant was responsible for his termination on September 6, 2016 for the positive cocaine test and the 3 unexcused absences. Claimant did not suffer a work-related wage loss from the date of the alleged injury through the date of termination. Claimant's claim for TTD and/or TPD benefits is denied and dismissed. Claimant's claim for temporary total disability benefits is denied and dismissed.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's workers' compensation claim is denied and dismissed.

2. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 15, 2017

/s/ Kimberly Turnbow
Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

The following issues were raised for consideration at hearing:

a. Whether Claimant's failure to accept Respondents' offer of modified employment provided grounds to terminate Claimant's temporary disability benefits under Section 8-42-105(4)(b)(II)(C); and

b. Whether the Prehearing Conference Order of June 24, 2016, barring indemnity benefits from June 9, 2016, through August 9, 2016, is affirmed.

FINDINGS OF FACT

Having considered the evidence presented at hearing, the following Findings of Fact are reached.

1. Claimant is a female who was 61 years old at the time of her work related injury on September 25, 2014. Claimant was the assistant manager at a maternity clothing store. Claimant injured her right shoulder and neck on September 25, 2014, while holding a shelf and then moving a ladder at her work. This is an admitted claim.

2. Claimant has been off work since the date of the injury. Claimant received temporary total disability benefits (TTD) from October 1, 2014, through June 1, 2016, temporary partial disability benefits (TPD) from June 2, 2016, through June 8, 2016, and TPD from August 9, 2016, and ongoing. Claimant's admitted average weekly wage is $714.00 and the TTD rate was $476.00.

3. On September 27, 2014, Claimant was seen at the Emergency Department of St. Anthony Hospital. Her chief complaint was right arm pain and shoulder pain. Claimant was diagnosed with ulnar neuropathy at the elbow, trapezius muscle pain, right shoulder sprain and shoulder contusion. Claimant was instructed to follow-up with an orthopedic surgeon. Claimant's right arm was placed in a sling and Claimant was restricted from use of the right upper extremity.

4. Claimant first treated with Dr. Michael Horner for her work injury on March 16, 2015. During the course of her treatment for both her neck and shoulder with Dr. Horner, he provided Claimant with prescriptions, provided referrals and requests for other treatment, performed several injections on Claimant, directed Claimant's care, signed off on Claimant's work restrictions and made determinations as to Claimant's maximum medical improvement (MMI) status.

5. Dr. Horner was Claimant's attending physician for his admitted work injury. Claimant treated with Dr. Horner from March 2015 through April 2016. Claimant testified that she had botox injections from Drs. Horner and James T. Johnson. And, that in June 2016, Dr. Johnson imposed a one pound lifting restriction

6. On May 3, 2016, and May 13, 2016, Respondents sent Claimant what Respondents' purport to be a return to work offer containing a signed Certificate of Service that included, among other things, an offer of modified employment, a detailed job description with job duties, statement of Claimant's hourly wage, a statement of Claimant's hourly work schedule with an example weekly time sheet, and a signed statement from Dr. Horner, Claimant's attending physician, confirming the listed modified employment is within Claimant's physical restrictions. The Employer signed an agreement with the Insurer to pay Claimant's wages in the modified duty position.

7. Claimant was offered modified employment with the charity, Metro Care Ring, a hunger relief agency. The written offer of modified employment advised Claimant that her offsite modified duty work schedule was for 32.5 hours per week paid to Claimant at the rate of $17.10 per hour. Claimant was advised in the offer letter that this offsite modified duty assignment is temporary in nature and not a permanent assignment. The modified duty offer advised Claimant that there would be a site supervisor who was employed by Metro Care Ring and who would be aware of Claimant's restrictions. The letter emphasized that Claimant was responsible for working within her restrictions, not the site supervisor. Claimant was advised that while she worked at the Metro Care Ring she remained an employee of Employer and failure to return to work in this modified duty position would result in unilateral termination of TTD benefits, as provided in "Rule 6 modified duty job offer."

8. Finally, Claimant was advised that a return to work specialist who would not be onsite at the Metro Care Ring employed by the Insurer would be assigned to coordinate the light duty temporary assignment. The offer of modified employment was approved by Dr. Horner for a position at the Metro Care Ring described as greeting participants, signing in participants for hunger relief, creating permanent files, scheduling appointments, answering phones and designating referral for other needs.

9. On May 18, 2016, Claimant attended an orientation for the light duty temporary assignment at the Metro Care Ring. Claimant credibly testified at hearing that, at the orientation, Claimant was informed that her duties at Metro Care Ring in the modified duty position would require her to stock shelves with food items, assist participants to access food items from the shelves, assist participants in carrying their food items to their vehicles, load participants' vehicles and unload trucks. Claimant was scheduled to begin work on June 2, 2016. Claimant's start date was rescheduled. On June 9,

2016, Claimant again did not appear for the modified duty assignment, nor did Claimant

10. Claimant start date was rescheduled in June 2016 and Claimant never appeared for work in the modified duty position. Claimant credibly testified at hearing that she had many reservations about the modified duty offer at the Metro Care Ring. Claimant credibly explained that she was given information at her orientation that indicated her work duties would exceed her work restrictions and therefore Claimant did not appear for work.

11. The ALJ finds that Respondents did not make a bona fide offer of modified employment within the meaning of Section 8-42-105(4). This finding is premised on Claimant's credible and persuasive testimony that her assigned job duties exceeded her restrictions. Thus, the ALJ finds that Claimant's refusal to perform modified job duties outside of her restrictions is reasonable. It is found that it was impracticable within the meaning of Section 8-42-105(4) for Claimant to accept the offer of modified employment when the duties described at her orientation were outside her work restriction and deviated from the Respondents' proposed offer of modified employment. Furthermore, Respondents did not identify, and the ALJ is unaware of any provision of the Act, that permits Respondents to comply with the provision of Section 8-42-105(4), C.R.S. by arranging employment for Claimant with a charity and premising the unilateral termination of indemnity benefits on Claimant's failure to perform the assigned job at the charity.

12. Respondents' moved to compel Claimant's attendance at a June 9, 2016, independent medical examination (IME) with Dr. Allison Fall. Following a May 23, 2016, prehearing conference, a May 23, 2016, prehearing order was entered by Prehearing Administrative Law Judge (PALJ) John Sandberg granting Respondents' motion to compel. The May 23, 2016, prehearing order states that, at the prehearing conference, Respondents represented that Claimant missed previously scheduled IME appointments and the Respondents had incurred cancellation fees and no show fees. The order compelling attendance at Dr. Fall's IME references Respondents' allegation of previously missed medical appointments as providing grounds for the order compelling attendance.

13. Then, on June 24, 2016, another prehearing conference was held with the parties in this matter before PALJ Jeffrey Goldstein. Respondents represented at the prehearing conference that Claimant did not attend the IME appointment with Dr. Fall on June 9, 2016. The IME with Dr. Fall was rescheduled to August 9, 2016. After hearing the arguments of the parties, PALJ Goldstein concluded that Claimant's indemnity benefits were terminated from June 9, 2016, through August 8, 2016, for failure to appear at the IME appointment with Dr. Fall.

14. In reaching the conclusion that Claimant's indemnity benefits should be terminated, PALJ Goldstein noted that PALJ Sandburg entered the order compelling Claimant's attendance at the June 9, 2016, IME appointment and, in the order compelling attendance, ALJ Sandberg noted that Respondents had represented that Claimant failed to appear for other medical appointments. Then, PALJ Goldstein, concluded that Claimant was served with notice of the June 9, 2016, IME with Dr. Fall and had been ordered to attend. PALJ Goldstein further found that even if the order was not served on Claimant by her attorney, the PALJ Goldstein found that Claimant "refused" to attend the ordered IME appointment. PALJ barred Claimant's receipt of indemnity benefits between the dates of the two appointments, June 9, 2016, to August 9, 2016, as a sanction for failing to appear at the June 9, 2016, IME with Dr. Fall.

15. Claimant credibly testified that she did not refuse to attend the appointment with Dr. Fall on June 9, 2016. She testified that she advised her attorney of a scheduling conflict with the June 9 appointment, she further asked him to advise Respondents of her unavailability for the June 9 medical appointment and request a rescheduled appointment. Claimant testified that she was unaware her attorney failed to follow through with her instructions.

16. As found, the ALJ does not find that Claimant refused to attend the IME appointment on June 9, 2016. Claimant credibly explained that she had another medical appointment for an unrelated condition on June 9 and that was her reason for missing the appointment with Dr. Fall. Furthermore, the ALJ does not have evidence that Claimant missed other prior medical appointments and that Respondents incurred cancellation fees for her failure to appear.

17. Since the evidence did not support the conclusion that Claimant refused to attend the medical appointment with Dr. Fall, there is no basis to terminate TTD from June 9, 2016 to August 9, 2016. Therefore, the order of the PALJ is reversed.

CONCLUSIONS OF LAW

Having entered the foregoing Findings of Fact, the following Conclusions of Law are entered

1. The purpose of the Workers' Compensation Act of Colorado (Act), §§8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads

the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

The Offer of Modified Employment

2. Section 8-42-105(3)(d)(I), C.R.S., authorizes the termination of TTD benefits when "the attending physician" gives the claimant a "written release to return to modified employment, such employment is offered in writing, and the employee fails to begin such employment." Because the respondents seek to terminate benefits under this section, they have the burden of proof to establish the factual predicates for application of the statute. *Witherspoon v. Metropolitan Club of Denver*, W.C. No. 4-509-612 (I.C.A.O. December 16, 2004), citing *Colorado Compensation Insurance Authority v. Industrial Claim Appeals Office,* 18 P.3d 790 (Colo. App. 2000).

3. There may be more than one "the attending physician." *Popke v. Industrial Claim Appeals Office, supra*. If there is a conflict between the attending physicians concerning whether or not the claimant is able to perform modified employment the ALJ may resolve the conflict as a matter of fact. *See Bestway Concrete v. Industrial Claim Appeals Office,* 984 P.2d 680 (Colo. App. 1999); *Burns v. Robinson Dairy, Inc.,* 911 P.2d 661 (Colo. App. 1995) (concerning physician's release to regular employment). As found, Dr. Horner is the attending physician in this case and he approved Respondents' offer of modified employment at the Metro Care Ring as regards the duties assigned to Claimant in her position at the Metro Care Ring.

4. Claimant contends that Respondents did not have authority to offer modified employment at a separate location not owned and operated by Employer. Furthermore, it is Claimant's contention that her failure to accept the offer of modified employment at a location not owned and operated by the Employer to perform duties outside of her work restrictions did not provide Respondents with a basis to terminate TTD. Respondents contend that its offer of modified employment at the Metro Care Ring complied with the Act in all relevant respects.

5. The Industrial Claim Appeals Office (ICAO) has held that under a proper interpretation of the statute the employment offered to the claimant must be "reasonably available under an objective standard." *Simington v. Assured Transportation & Delivery,* W.C. No. 4-318-208 (I.C.A.O. March 19, 1998). Whether the offered employment was reasonably available under an objective standard is one of fact for determination by the ALJ. *Simington v. Assured Transportation & Delivery,* supra. The statute currently codified at Section 8-42-105(3)(d)(I), provides for termination of temporary disability benefits if the attending physician gives the employee a "written release to return to modified

employment, such employment is offered to the employee in writing, and the employee fails to begin such employment." In a series of decisions, commencing with *Ragan v. Temp Force*, W.C. No. 4-216-579 (June 7, 1996), ICAO has held that Section 8-42-105(3)(d) does not authorize termination of temporary disability benefits when an employer offers work which the claimant cannot, as a practical matter, accept. *See also, Simington v. Assured Transportation, and* Delivery, *supra*; *Belanger v. Keystone Resorts, Inc*., W.C. No. 4-250-114 (October 9, 1997). These decisions hold that the legal test is whether the offered employment is "reasonably available to the claimant under an objective standard." Determination of this issue is one of fact for the ALJ. *Ragan v. Temp Force, supra*.

6. Based on Claimant's credible and persuasive testimony, it is concluded that as a practical matter Claimant could not perform the duties of the position because the duties exceeded Claimant's work restrictions. Failure to appear for work for the modified duty position under these circumstances did not provide a basis to terminate TTD.

7. Furthermore, the ALJ can find no authority for the Respondents' offer of "temporary transitional employment" to Claimant. Claimant's TTD benefits cannot be terminated for Claimant's refusal to work a modified duty position at a charitable organization which is not the Employer in this matter and at a location which is not the Employer's physical business location. Without providing statutory or regulatory authority for Respondents' offer of temporary transitional employment, Respondents argue that the temporary transitional employment was a great fit for Claimant and an effective method of paying indemnity benefits to injured workers.

8. It is concluded that as a practical matter the Metro Care Ring modified employment was not reasonably available to the Claimant. The Act does not provide for indemnity benefits to be paid to an injured worker through the creation of temporary transitional employment opportunities. Claimant was under no obligation to accept modified duty employment with an employer who was not a party to this proceeding and at a location different from the business location of the Employer in this matter. Respondents do not have authority under the Act to terminate indemnity payments or temporary transitional employment payments to Claimant when Claimant did not appear for the position at Metro Care Ring.

PALJ's Order Terminating TTD from June 9, 2016 to August 9, 2016

9. As found, it is concluded that Claimant credibly testified that she did not refuse to comply with the PALJ's order compelling her appearance at the June 9, 2016, IME appointment with Dr. Fall. Claimant credibly and persuasively testified that she had another doctor's appointment on June 9, 2016, told her attorney about the conflict and requested that he inform Respondents of Claimant's need for a rescheduled June 9 appointment with Dr. Fall. The evidence established that Claimant's attorney did not pass along Claimant's message to Respondents.

10. These events, as established by Claimant's credible testimony, did constitute a refusal to comply the PALJ's order compelling her appearance at the June 9, 2016, IME with Dr. Fall. Since Claimant's conduct missing the June 9, 2016 , appointment with Dr. Fall was shown to be a reasonable action absent any disregard or contempt for the PALJ and Respondents, it does not provide grounds to terminate Claimant's indemnity benefits from June 9, 2016, to August 9, 2016.

ORDER

It is therefore ordered that:

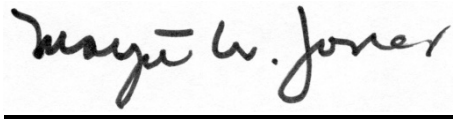
1. Respondents shall be liable to Claimant for TTD from June 2, 2016, and ongoing until terminated by law.

2. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: _June 15, 2017



Margot W. Jones, Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 4-999-925-03

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer/Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on June 13, 2017, in Denver, Colorado. The hearing was digitally recorded (reference: 6/13/17, Courtroom 1, beginning at 8:30 AM, and ending at 11:45 AM).

Claimant's Exhibits 1 through 10 were admitted into evidence, without objection, with the exception of Exhibit 6, which was rejected because it was illegible. Respondents' Exhibits A through F were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a portion of a proposed decision, concerning temporary total disability (TTD) benefits to counsel for the Claimant to be filed, electronically, and a portion of a proposed decision concerning "responsibility for termination" to counsel for the Respondents. After the referral, the ALJ decided to prepare the decision himself without the benefit of portions of the proposed decision. Therefore, the following decision is hereby issued.

ISSUES

The issues to be determined by this decision concern TTD benefits from August 10, 2015 and continuing; and, "responsibility for termination," specifically "job abandonment.

The Claimant bears the burden of proof on the issue of TTD, by a preponderance of the evidence. The Respondents bear the burden on the issue of job abandonment, by preponderant evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant (date-of-birth, April 19, 1979) worked as a manager of one of the Employer's restaurants in August 2015. She had been a store manager for 1 21/2 years.

2. On August 10, 2015, the Claimant sustained an admitted injury to her low back

3. The Respondents filed a General Admission of Liability (GAL), dated December 2, 2016, limited to medical benefits only but admitting for an average weekly wage (AWW) of $769.05, which yields a TTD rate of $512.69 per week, or $73.24 per day.

Temporary Total Disability (TTD)

4. The Claimant first saw James J. Williams, M.D., at the Clinica Colorado on August 11, 2015. Dr. Williams became the Claimant's authorized treating physician (ATP).

5. After the August 11, 2015, visit, Dr. Williams took the Claimant on and off work, by continuously extended the time off work. A review of Dr. Williams' notes reveal that he kept extending the time off work until February 15, 2016 (Respondents' Exhibit E), when he released the Claimant to full duty (Respondents' Exhibit E, bates stamp 057).

6. Claimant timely reported the work-related nature of her injury to Leticia (Lety) Garcia, who was the Claimant's supervisor. Garcia advised the Claimant to take the time she needed to recover. Thereafter, the Claimant would check-in with Garcia by text message (Respondents' Exhibit F) and Garcia told her to take the time she needed.

7. The ALJ infers and finds that Garcia approached the Claimant's admitted work injury in a humane, tolerant and management-effective way, up until it became obvious that the Claimant was not returning to work after her ATP, Dr. Williams, released her to return to work on February b15, 2016, without restrictions.

8. In a text message of October 4, 2015, from the Claimant to Garcia, the Claimant attached a note from Dr. Williams, which took the Claimant off work until August 19, 2015 (Respondents' Exhibit F, bates stamp 66). This was the last note of Dr. Williams' that Garcia received from the Claimant.

9. At one point, the Claimant told Garcia that she wanted to work at one of Manuel's stores (Manuel supervised stores other than the stores that Garcia supervised), but the Claimant never followed through with this desire. Garcia told the Claimant that she would have to talk to Manuel about working at one of his stores.

10. The Claimant admitted that she had answered interrogatories, under oath, that she was seeking TTD benefits from August 10, 2015 through February 15, 2016; and, from December 22, 2016 and continuing.

11. Despite having been released to return to work by her ATP, Dr. Williams, without restrictions, effective February 15, 2016, the Claimant has not worked since the original injury date nor has she earned an wages since that time.

Kristin Mason, M.D.

12. The Claimant came under the care and treatment of Dr. Mason on December 22, 2016. Dr. Mason took the Claimant off work at that time and has not yet released the Claimant to return to work.

Job Abandonment

13. In a written statement, dated January 26, 2016 (Respondents' Exhibit D, bates stamp 40), Lety Garcia indicated that the Claimant said she was returning to work in two months, but the Claimant never did so. Garcia never heard from the Claimant, or anyone else, that the Claimant was going to work for Manuel. Garcia did not thereafter hear from the Claimant. Consequently, Garcia assumed that the Claimant had abandoned her job.

14. The Claimant testified that she still considered herself an employee of the Employer.

15. The ALJ infers and finds that the Claimant, by her actions and inactions, voluntarily abandoned her job within two months or less from the date of Garcia's January 26, 2016 note (Respondents' Exhibit D, bates stamp 40). The ALJ infers and finds that a reasonable person should know that a long pattern of inaction and not communicating with the Employer about returning to work after an unqualified release to return to work by the ATP, as of February 15, 2016, would lead to termination from employment on the basis of job abandonment.

Ultimate Findings

16. The ALJ finds the testimony of Lety Garcia highly persuasive and credible. The Claimant's reasons for not returning to work do not add up and are, therefore, lacking in credibility.

17. Between conflicting testimonies, the ALJ makes a rational choice, based on substantial evidence, to accept the testimony of Lety Garcia and to reject any evidence to the contrary.

18. The Claimant has proven, by a preponderance of the evidence that she was temporarily and totally disabled from August 10, 2015, through February 14, 2016, both dates inclusive, a total of 189 days.

19. The Respondents have proven, by preponderant evidence that the Claimant was responsible for her termination, by virtue of voluntary and willful job abandonment , effective February 15, 2016, that a reasonable person would know or reasonably should know would lead to termination from employment. The ALJ finds a volitional act on the Claimant's part and/ or the exercise of a degree of control by the Claimant over the circumstances leading to termination. She should have returned to work on February 15, 2016, when her ATP, Dr. Williams, released her to return to work without restrictions. At a minimum, she should have let her Employer know that she was returning to work after the unqualified release to return to work.

20. Although the Claimant has proven that she has been temporarily and totally disabled since December 22, 2016, she is not entitled to TTD benefits because of her voluntary and willful job abandonment, effective February 15, 2016.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, *See, Annotation, Comment: Credibility of Witness Giving Un-contradicted Testimony as Matter for Court or Jury,* 62 ALR 2d 1179, maintaining that the fact finder is not free to disregard un-contradicted testimony. As found, the testimony of Lety Garcia was highly persuasive and credible. The Claimant's reasons for not returning to work do not add up and are, therefore, lacking in credibility.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App.

2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting testimonies, the ALJ made a rational choice, based on substantial evidence, to accept the testimony of Lety Garcia and to reject any evidence to the contrary.

Temporary Total Disability

c. To establish entitlement to temporary disability benefits, the Claimant must prove that the industrial injury has caused a "disability," and that she has suffered a wage loss that, "to some degree," is the result of the industrial disability. § 8-42-103(1), C.R.S; *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Disability from employment is established when the injured employee is unable to perform the usual job effectively or properly. *Jefferson Co. Schools v. Headrick*, 734 P.2d 659 (Colo. App.1986). This is true because the employee's restrictions presumably impair her opportunity to obtain employment at pre-injury wage levels. *Kiernan v. Roadway Package System*, W.C. No. 4-443-973 (ICAO, December 18, 2000). Claimant's termination in this case, effective February 15, 2016, was her fault because she, as a reasonable person, knew or should have known that failure to return to work or communicate with her Employer after her ATP released her to return to work without restrictions would result in her termination from employment,. There is no statutory requirement that a claimant must present medical opinion evidence from of an attending physician to establish her physical disability. See *Lymburn v. Symbois Logic*, 952 P.2d 831 (Colo. App. 1997). Rather, a claimant's testimony alone is sufficient to establish a temporary "disability." *Id*. As found, the Claimant was temporarily and totally disabled from August 10, 2015, through February 14, 2016, both dates inclusive, a total of 189 days. As further found, although she has been temporarily and totally disabled since December 22, 2016, she is not entitled to TTD benefits for this period since she was responsible for her termination by virtue of a voluntary and willful job abandonment, effective February 15 2016.

d. Once the prerequisites for TTD are met (*e.g.,* no release to return to full duty, MMI has not been reached, a temporary wage loss is occurring, modified

employment is not made available, and there is no actual return to work), TTD benefits are designed to compensate for a 100% temporary wage loss. *See Eastman Kodak Co. v. Industrial Commission,* 725 P. 2d 107 (Colo. App. 1986); *City of Aurora v. Dortch,* 799 P. 2d 461 (Colo. App. 1990). As found, the Claimant was temporarily and totally disabled from August 10, 2015, through February 14, 2016, both dates inclusive, a total of 189 days. Although she has been temporarily and totally disabled since December 22, 2016, she is not entitled to TTD benefits for this period since she was responsible for her termination by virtue of a voluntary and willful job abandonment, effective February 15 2016.

Responsibility for Termination

e. Section 8-42-105 (4), C.R.S., provides that an employee responsible for her own termination is not entitled to temporary disability benefits. This statutory provision has been interpreted to mean that "responsibility for termination" must be through a volitional act on the part of the terminated employee. *Colorado Springs Disposal v. Indus. Claim Appeals Office,* 58 P. 3d 1061 (Colo. App. 2002). A finding of fault requires a volitional act or the exercise of a degree of control by a claimant over the circumstances leading to termination. *Gilmore v. Indus. Claim Appeals Office,* 187 P.3d 1129, 1132 (Colo. App. 2008); *Apex Transport, Inc. v. Indus. Claim Appeals Office,* **2014 COA 25.** In determining whether a claimant is responsible, the ALJ may be required to evaluate competing factual theories concerning the actual reason or reasons for the termination. *See Rodriguez v. BMC West*, W.C. No. 4-538-788 [Indus. Claim Appeals Office (ICAO), June 25, 2003]. The Supreme Court has determined that the "responsibility for termination" defense is not absolute and is vitiated when a worsening of condition occurs. *Anderson v. Longmont Toyota,* 102 P. 3d 323 (Colo. 2004). As found, there was a volitional act on the Claimant's part and/ or the exercise of a degree of control by the Claimant over the circumstances leading to termination. She should have returned to work on February 15, 2016, when her ATP, Dr. Williams, released her to return to work without restrictions. At a minimum, she should have let her Employer know that she was returning to work after the unqualified release to return to work.

Burden of Proof

f. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). Also, the burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P.2d 535 (Colo. App. 1992). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979).

People v. M.A., 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has proven TTD from August 10, 2015, through February 14, 2016, both dates inclusive, a total of 189 days. The Respondents have proven "responsibility for termination," effective February 15, 2016. In light of this, although the Claimant has been temporarily and totally disabled since December 22, 2016, she is not entitled to TTD benefits from December 22, 2016 onward.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Respondents shall pay the Claimant temporary total disability benefits from August 10, 2015, through February 14, 2015, both dates inclusive, a total of 189 days, at the rate of $512.69 per week, or $73.24 per day, in the aggregate amount of $13,842.76, which is payable retroactively and forthwith.

B. Any and all claims for temporary disability benefits from February 15, 2016 and continuing are hereby denied and dismissed.

C. Respondents shall pay the Claimant statutory interest at the rate of eight percent (8%) per annum on all amounts of indemnity benefits due and not paid when due.

D. Any and all issues not determined herein are reserved for future decision.

DATED this_____day of June 2017.

_____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

FINDINGS OF FACT

1. The *pro se* Claimant filed an Application for Hearing contesting Respondents' Final Admission of Liability with regard to maintenance medical benefits.

2. The record reflects [Exhibit "D"] that there was a prehearing conference at which Prehearing Administrative Law Judge (PALJ); John Steninger issued an Order compelling discovery, specifically requiring the Claimant to answer Respondents' Interrogatories and Requests for Production of Documents.

3. A hearing was held on May 3, 2017 in Colorado Springs, Colorado during which this ALJ presided. At the commencement of the May 3, 2017 hearing, Respondents moved to dismiss the case for Claimant's failure to provide the requested discovery compelled by PALJ Steninger. Claimant argued that he was confused about the Interrogatories, the Requests for Production of Documents and the Order issued by Judge Steninger. Claimant thought the interrogatories constituted the questions that would be asked at the time of the hearing. Despite the PALJ Steninger's clear Order, the undersigned ALJ elected grant Claimant an extension of time of up to 45 days to fully respond to Respondents' Interrogatories and Requests for Production of Documents and proceed to hearing.

4. The new hearing of June 8, 2017 was scheduled by Claimant and Respondents' counsel with the Office of Administrative Courts in Colorado Springs on May 3, 2017.

5. At the May 3, 2017 hearing, the undersigned ALJ gave detailed instructions to Claimant regarding his obligations to provide adequate Responses to the Interrogatories and Requests for Production of Documents. The undersigned also warned Claimant that his failure to fully answer the Interrogatories and Requests for Production of Documents would probably invoke sanctions, including the sanction of dismissal of his claim, with prejudice. Claimant was given a chance to clarify any questions he had regarding the requested discovery with Respondents' counsel and to use the Courtroom for as long as necessary to assure his understanding of what was being asked of him.

6. At the June 8, 2017 hearing, Respondents' counsel represented to the ALJ that no responses had been provided to the Interrogatories and Requests for Production of Documents and that there had been no further contact from Claimant since the May 3, 2017 hearing. Claimant has not been absolved of the duty to respond to Respondents' discovery and the OAC file is devoid of any request of Claimant for

further extensions of time of other relief concerning his obligation to answer the propounded discovery and provide requested documents.

7. The June 8, 2017 hearing was properly noticed by the Office of Administrative Courts.

8. Claimant, having been advised of his obligations to provide written responses to Respondents' Interrogatories and the consequences of not responding to the discovery, has willfully and knowingly failed to provide discovery responses and is in violation of PALJ Steninger's Order compelling discovery and this ALJ's Order compelling the same. Respondents renewed their motion to dismiss the Claimant's claim, with prejudice, for a violation of the Division of Workers' Compensation and Office of Administrative Courts Orders.

9. The ALJ finds that the Claimant has been given adequate opportunities to respond to Respondents' discovery and two extensions of time to provide written responses. The Claimant has failed to comply with the outstanding Orders regarding discovery and was fully advised of the consequences of failing to respond to written Order of the Division of Workers' Compensation and verbal advisements from this ALJ provided during the May 3, 2017 hearing which was continued to June 8, 2017.

CONCLUSIONS OF LAW

A. The ALJ concludes that the Claimant's failure to comply with his discovery obligations and the Orders of the Division of Workers' Compensation and Office of Administrative Courts constitutes a substantial disregard of responsibility to provide discovery under those Orders. W.C.R.P. 9 and C.R.S., §8-43-207(1)(e). The ALJ, therefore, concludes that the appropriate sanction is dismissal of the claim, with prejudice.

B. W.C.R.P. 9-1(E) provides that:

> if any party fails to comply with the provisions of this rule and any action governed by it, the administrative law judge may impose sanctions upon such party pursuant to statute and rule.

C. Claimant's discovery violations are "willful" in that Claimant exhibited "a flagrant disregard of discovery obligations." *Reed v. Industrial Claims Appeals Office,* 13 P.3d 810, 813 (Colo. App. 2000). W.C.R.P. 9-1(G) also provides that the failure to comply with an Order to Compel shall be presumed willful.

D. Whether to impose sanctions and the nature of the sanctions to be imposed are matters within the fact finders' discretion. *Shafer Commercial Seating, Inc. v. Industrial Claim Appeals Office,* 85 P.3d 619 (Colo. App. 2003). The ALJ is given flexibility in choosing the appropriate sanction.

E. In concluding that dismissal of the claim, with prejudice, is an appropriate sanction for Claimant's flagrant disregard of both the verbal advisements of the undersigned ALJ and the written Order of PALJ Steninger compelling discovery, the ALJ finds the case of *John I. Powderly, III v. City of Golden,* W.C. No. 4-936-681-02 (2015), instructive. In *Powderly*, the claimant failed to comply with discovery orders of the Division of Workers' Compensation and subsequent Orders compelling discovery by the merits ALJ at the Office of Administrative Courts. In that case, the Claimant did provide inadequate responses and, after several chances to provide adequate responses, his claims were dismissed with prejudice. Here, there has no attempt by the Claimant to comply with the Orders compelling discovery by both the PALJ and the undersigned ALJ assigned to this case. As noted in *Sheid v. Hewlett Packard*, 826 P.2d 396 (Colo. App. 1991), "[a] court is justified in imposing a sanction which terminates litigation at the discovery phase if a party's disobedience of discovery orders is intentional or deliberate or if the party's conduct manifests either a flagrant disregard of discovery obligations or constitutes a substantial deviation from reasonable care in complying with discovery obligations." *Sheid v. Hewlett Packard*, 826 P.2d at 399. Here, as in *Powderly*, Claimant has had multiple opportunities to comply with the discovery orders issued by both the Division of Workers Compensation and the Office of Administrative Courts and yet, he has chosen to willfully disregard those orders. Moreover, without explanation Claimant failed to appear for his hearing on the date he set with the assistance of court clerk. Based upon the totality of the circumstances, the willfulness of the violation of the Orders and the flagrant disregard of discovery obligations, the ALJ concludes that the appropriate sanction is dismissal of the claim, with prejudice.

ORDER

IT IS, THEREFORE, ORDERED:

1. Claimant's claim for further benefits under the Colorado Workers' Compensation Act are hereby denied and dismissed.

DATED: June 20, 2017

/s/ Richard M. Lamphere

You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that she suffers from a worsened condition causally related to her January 4, 2011 work related injury to allow a reopening of the claim.

2. If Claimant has established a worsening of condition, whether Claimant has established an entitlement to temporary total disability benefits from September 8, 2016 through January 8, 2017 and from January 24, 2017 and ongoing.

3. If Claimant has established a worsening of condition, whether Claimant is entitled to an additional cervical MRI and additional referral to a physiatrist under the claim.

FINDINGS OF FACT

1. Claimant was employed by Employer as an administrative technician on January 4, 2011.

2. On January 4, 2011 Claimant sustained a fall when she slipped and fell on ice while holding groceries for a breakfast meeting and attempting to reach out to use her key badge to enter the building.

3. Claimant testified that she had scrapes on her knees and right arm and hand and believes that her right extremity took the brunt of the fall.

4. Claimant reported the injury and was referred for medical treatment.

5. After initial conservative treatment, Claimant underwent a right shoulder arthroscopic subacromial decompression and distal clavicle resection on August 4, 2011.

6. Claimant's authorized treating provider, Greg Smith, D.O. placed Claimant at maximum medical improvement (MMI) on June 26, 2012 and provided a 6% scheduled impairment rating for the right upper extremity.

7. On August 13, 2012 Respondents filed a final admission of liability (FAL) consistent with Dr. Smith's opinions on MMI and impairment. *See* Exhibit 1.

8. Claimant objected and requested a division independent medical examination (DIME).

9. On November 30, 2012 Claimant underwent a DIME performed by Kristen Mason, M.D. Dr. Mason concluded that Claimant was not at MMI and recommended that Claimant undergo evaluation of the cervical spine and an EMG study due to concern for cervical radiculopathy. Dr. Mason also wanted to rule out infection. *See* Exhibit U.

10. Following the DIME, Claimant returned to Dr. Smith who ordered an EMG and a cervical MRI. Dr. Smith also referred Claimant to orthopedic surgeon Craig Davis, M.D.

11. On December 20, 2012 Claimant underwent a cervical MRI interpreted by Eduardo Seda, M.D. Dr. Seda provided the impression of mild degenerative disc changes. *See* Exhibits HH, G.

12. On January 25, 2013 Claimant was evaluated by George Schakaraschwili, M.D. Claimant reported occasional numbness down the extensor forearm into the hand affecting mainly the last three fingers and some tingling in her hands at night. Claimant reported some neck pain, with aching from the base of the skull along the right upper trapezius to the shoulder, aching pain in the upper arm, and numbness in the lateral arm and hand with pain at a 5/10 up to an 8/10. Dr. Schakaraschwili performed electro diagnostic studies that were normal with no electrophysiologic evidence of a right cervical radiculopathy or peripheral nerve entrapment in the right upper extremity. *See* Exhibit AA.

13. On March 4, 2013, Claimant was evaluated by Dr. Davis. Dr. Davis performed a physical examination and noted full range of motion of the right shoulder but pain with resisted forward elevation. Dr. Davis found positive Hawkins and neer impingement tests and tenderness over the biceps tendon and around the trapezial area. Dr. Davis assessed: possible residual bicep tendinitis following the shoulder injury and shoulder acromioplasty. Dr. Davis recommended a subacromial and/or intra-articular injection to help localize the site of the pain and opined that if Claimant received significant relief from one or both of the injections, it would be reasonable to consider a biceps tenotomy surgery. *See* Exhibit X.

14. On March 18, 2013 Claimant was evaluated by Dr. Davis. Claimant reported no benefit from her last injection and that she felt like it made her shoulder a little worse. Claimant reported continued pain over the anterior and lateral shoulder area, worse when reaching to the side or overhead. Dr. Davis noted that he did not have the impression that surgery would help Claimant, but that he was concerned about the level of Claimant's pain. *See* Exhibit X.

15. On April 30, 2013 Claimant was evaluated by Dr. Davis. He noted that Claimant was ready to proceed with arthroscopic evaluation with biceps tenotomy. Dr. Davis noted that he would reassess the acromioplasty and look at the rotator cuff and treat any pathology he encountered as appropriate. He noted that hopefully, the surgery would be helpful for Claimant. *See* Exhibit X.

16. On September 10, 2013 Claimant was evaluated by Dr. Davis. Dr. Davis noted that Claimant had finally decided that, despite the uncertainties, she would like to proceed with arthroscopic evaluation of her right shoulder with biceps tenotomy. Dr. Davis noted that Claimant had continued pain in a variety of areas around her shoulder, but somewhat more anterior than posterior. Dr. Davis again discussed risks, benefits, and uncertainties and noted the plan for a simple arthroscopic evaluation with biceps tenotomy. *See* Exhibit X.

17. On October 21, 2013 Claimant underwent a right shoulder partial synovectomy and biceps tenotomy and debridement and subacromial debridement performed by Dr. Davis. Following this second surgery, Claimant underwent physical therapy and massage therapy. *See* Exhibit X.

18. On February 25, 2014 Claimant was evaluated by Dr. Davis. Dr. Davis noted that Claimant was four months postop and reporting that she felt much better than she did before surgery. Dr. Davis found continued slightly decreased strength against resistance in forward elevation and abduction of the right shoulder and some cramping in the biceps which was not uncommon following biceps tenotomy. Dr. Davis released Claimant to occupational medicine and noted Claimant was approaching MMI. *See* Exhibit X.

19. On April 22, 2014 Claimant underwent a functional abilities evaluation (FAE) performed by BTe Technologies. Claimant reported pain levels at a 7/10. Claimant reported increased symptoms with taking off shirts overhead, fastening/unfastening her bra, increased right upper arm cramping while showering, increased symptoms lifting/pouring a gallon of milk, increased right upper extremity symptoms with peeling potatoes, vacuuming, washing windows/mirrors, spasms of right upper arm while loading the dishwasher, right arm cramping with long driving and at times needing to stop/stretch her right arm and shoulder. On right shoulder range of motion testing, Claimant was noted to have the greatest symptom aggravation with internal and external rotation with 39% of normal and 56% of normal respectively. Claimant displayed a normal hand grip strength on the left at 46.9 pounds average force and a hand grip strength on the right of 23.6 pounds average force which was significantly below the considered normal range of 54.2 to 77.4 pounds. *See* Exhibit 10.

20. On April 28, 2014 Claimant was evaluated by Dr. Smith. Dr. Smith assessed status post surgical repair of the right shoulder with re-inflammation and partial tearing and status post right shoulder repair by Dr. Davis on October 21, 2013. Dr. Smith opined that Claimant was at MMI. Dr. Smith performed an impairment rating. Dr. Smith opined that Claimant had a 9% upper extremity impairment. Dr. Smith recommended maintenance care that included Naprosyn twice a day for three years, follow up with Dr. Davis four times per year for three years for any injections needed, and follow up with him five times per year for two years. Dr. Smith also recommended 10 massage therapies per year for the next three years. *See* Exhibit 6.

21. On May 20, 2014 Claimant returned to Dr. Mason for a follow-up DIME. Dr. Mason noted that she previously was concerned about the possibility of cervical radiculopathy and wanted Claimant to have infection ruled out. Claimant reported that she had the additional workup and had a subsequent surgery and that she had generally decreased shoulder pain but sometimes swelling and spasm and that she continued to have some neck pain as well. Claimant reported occasional right upper extremity numbness with massage therapy being the most helpful treatment. Dr. Mason noted a positive history of past depression. Claimant reported generally still having some difficulty sleeping but that it was somewhat better. Dr. Mason reviewed medical records and performed a physical examination. Dr. Mason found right biceps tendon deep reflexes decreased, mild deformity of the right biceps, and very, very minimal weakness of the biceps and deltoids, tenderness over the sternoclavicular area, tenderness over the bicipital area, and reduced range of motion. Dr. Mason opined that Claimant had quite a bit of myofascial banding and tightness in the parascapular and paraspinal muscles in the cervical spine with reduced cervical range of motion with Claimant consistently tighter and more tender on the right side, particularly in the trapezius area. *See* Exhibits U, 8.

22. Dr. Mason opined that Claimant reached MMI on April 24, 2014. Dr. Mason opined that Claimant had some significant cervical myofascial pain as a result of the injury without a specific table 53 diagnosis and opined that she could rate the loss of cervical range of motion without a table 53 diagnosis if it was felt that there was significance to the deficit, which she felt there was. Dr. Mason thus rated the cervical spine impairment at 6% whole person and the right upper extremity impairment at 19% upper extremity. Dr. Mason agreed with Dr. Smith's outline for maintenance care except that she recommended massage once per month and recommended an ergonomic evaluation of the current job site to make sure Claimant did not experience any unnecessary exacerbation. *See* Exhibits U, 8.

23. On July 3, 2014 Respondents filed a FAL consistent with Dr. Mason's May 20, 2014 follow-up DIME. *See* Exhibit 2.

24. On December 5, 2014 Claimant was evaluated by Dr. Smith for her first maintenance visit. Claimant reported taking Naprosyn twice a day had been helping and beneficial. Claimant reported that she was working. Dr. Smith noted on examination that Claimant still had some mild pain against forced resistance above 90 to 100 degrees and decreased range of motion in internal and external rotation. He noted muscle strength was limited on the right side against forced resistance. Dr. Smith found good muscle tone in the trapezius, biceps, and deltoid, although he noted diminished strength. Dr. Smith noted some pain along the cervical spine especially from the right side radiating out laterally to the AC joint and to the situs of the deltoid on the right shoulder. Dr. Smith recommended Claimant continue with massage and with lifting restrictions and that she follow up again in two to three months. *See* Exhibit 6.

25. On March 4, 2015 Claimant was evaluated by Dr. Smith. Claimant reported that she was working as much as she could but having more difficulty than she

had previously. Claimant reported having trouble sleeping with her greatest amount of pain concentrated in the right shoulder region and at the nape of the neck radiating down into the triceps and biceps with a pain level of 5/10. On examination, Dr. Smith noted pain at the subscapular muscle with inflammation and that lifting 90 to 100 degrees elicited pain. Dr. Smith found minimal crepitance, more in the triceps and the biceps itself. Dr. Smith recommended Claimant continue with massage and with lifting restrictions and that she follow up in two to three months. *See* Exhibit 6.

26. On May 29, 2015 Claimant was evaluated by Dr. Smith. Claimant reported that her main pain was that her right arm was sore and that she was now having pain in the bicipital region again. Claimant reported that she was working some light duty but having some difficulty, getting irritated, and feeling somewhat depressed. Claimant reported being tired and down quite a bit especially with the pain in her right arm and her hand and that she felt like she was not getting any better. Claimant reported feeling good for a couple of days and then that the pain may return. Claimant reported on a good day the pain was up to a 5/10 but that it may jump to an 8/10. Claimant reported going to massage once per week and that if she missed a week she was worse. Dr. Smith noted on examination some ropiness in the medial side of her right arm with pain in the biceps insertion site. Dr. Smith noted his concern included Claimant's lack of strength in the right arm with some mild pain radiating up into the nape of her neck and felt it was due to lack of usage. Dr. Smith recommended Claimant get back in the pool for swimming and opined that two to three days of pool therapy would do well for Claimant. Dr. Smith provided Viibryd, an anti-depressant, and continued Claimant's lifting restrictions. Dr. Smith recommended Claimant see Dr. Hawkins for psychological management to see if that helped. *See* Exhibit 6.

27. On July 2, 2015 Claimant was evaluated by Dr. Smith. Claimant reported her chief complaint was still her right shoulder. Claimant reported pain along the ulnar nerve that started under her biceps and went down over the elbow and along the ulnar nerve into her hand. Claimant reported that during the morning, the pain woke her up. Claimant reported not wanting to be on any antidepressants including the Viibryd and that she would prefer to forego the Viibryd if at all possible. Claimant reported taking Vitamin D. Claimant was having difficulty at work with one of her supervisors, had recently received a low mark, and reported that the new supervisor liked to micromanage and was causing stress. Claimant reported that she was going to massage once per week which was beneficial and that she was no longer using the Naproxen unless she had a very bad day. On examination, Dr. Smith found mild carpal tunnel syndrome, and pain on flexion and extension of the right shoulder above 120 degrees. Dr. Smith found muscle spasms in the trapezius and the capitus that was most likely stress related and opined that Claimant was under so much stress that it was causing part of the problem. Dr. Smith assessed increased stress causing some pain with somatic dysfunction. He maintained her work restrictions and recommended she continue the anti-depressant Viibryd but noted that it was up to her. *See* Exhibit 6.

28. On July 17, 2015 Claimant was evaluated by Dr. Davis. Dr. Davis noted he had last seen Claimant in February when he released her following shoulder

debridement and biceps tenotomy and that at the time he released Claimant she was still having a variety of myofascial complaints around her shoulder, although she was getting better. Claimant reported that since February, she continued to have achy pain in her shoulder as well as intermittent cramping of the biceps and that recently she also had been getting tingling in her fingers which was worse at night particularly when lying on the right side. Dr. Davis performed a physical examination and found full range of motion in the shoulder with excellent strength but with some pain with resisted motions and slightly positive impingement signs. Dr. Davis noted that Claimant's right biceps was distally retracted as expected following biceps tenotomy surgery. Dr. Davis found full range of motion of the elbow, wrist, and hand but that the median nerve compression test was positive at the wrist. Dr. Davis provided the impression of: persistent myofascial pain of the right upper extremity following shoulder debridement and biceps tenotomy and some symptoms of early carpal tunnel syndrome. Dr. Davis provided an injection into Claimant's right carpal tunnel. Dr. Davis noted that Claimant seemed to have a lot of myofacial pain in the entire right upper extremity and opined that he was not sure he had much more to add to Claimant's care. Dr. Davis prescribed Vicodin. *See* Exhibits X, 9.

29. On July 30, 2015 Claimant underwent a second FAE performed by BTe Technologies. The overall impressions indicate that Claimant's overall functional capacity and tolerances had declined since the original evaluation in April of 2014. It was noted that Claimant was tearful on several occasions during the testing when discussing limitations and functional status. Claimant reported her lowest pain in the last 30 days at a 6/10 and her highest at a 10/10. Claimant again reported limitations with activities of daily living. On grip strength testing, Claimant had an average force of 37.8 pounds for the left hand which was below the normal range and lower than her prior FAE. Claimant also had an average force of 17.1 pounds for the right hand which was significantly below the normal range and lower than her prior FAE. *See* Exhibit 10.

30. On August 12, 2015 Claimant was evaluated by Dr. Smith. Claimant reported that she was working but only lifting five pounds. Claimant reported having both Vicodin and Naprosyn if she needed it but that she tried not to take it very often. Claimant reported significant pain in her shoulder at an 8/10. Claimant reported that if she touched it in certain areas it almost seemed like a paralysis over the radial nerve for a short period of time and then it released itself. Claimant reported that Dr. Davis felt there was nothing left to do. On examination, Dr. Smith found that Claimant's radial nerve was in spasm. The Phalens test for carpal tunnel was positive. Dr. Smith noted that Claimant's primary care physician might have Claimant do some injections, but that it would not be in Claimant's surgical site. Dr. Smith noted adequate muscle strength but above chest height that Claimant began to have pain. Dr. Smith found no pure radiculopathy or neuropathy unless there was compression of the nerve and found Claimant to have good vascular flow throughout. Dr. Smith continued to assess increased stress causing some pain with somatic dysfunction and noted that Claimant was okay on her medications and would continue working within her restrictions. Dr. Smith noted that Claimant would follow up in three to four weeks at which time he anticipated doing an impairment rating. *See* Exhibit 6.

31. On September 9, 2015 Claimant was evaluated by Dr. Smith. Dr. Smith noted that Claimant had essentially plateaued and that she was not getting better or worse and was ready to be discharged. Dr. Smith noted that Claimant was working. Claimant reported continued weakness in her right hand along with pain in her shoulder and that she was doing well on Lodine medication. Dr. Smith performed an impairment rating and opined that it was at 11% upper extremity impairment without taking her neck into account. Dr. Smith noted that he discussed the case with Claimant's lawyer and that there may be some discussion regarding Claimant's neck but that the neck was not taken into account. Dr. Smith continued to assess increased stress causing some pain with somatic dysfunction. Dr. Smith refilled her Lodine, noted he would follow up with Claimant on an as needed basis, and recommended maintenance with Dr. Davis (including injections, and possible surgical intervention if needed), massage therapy for two years, a one year gym membership, and follow up with him for two years for medication adjustments. *See* Exhibit 6.

32. On November 20, 2015 Claimant was evaluated by Jonathan Bloch, D.O. Claimant reported intolerable diffuse pain radiating throughout the entire right arm from the shoulder to the fingers that was vague. Claimant reported ongoing pain and weakness and that she was now starting to drop things. Dr. Bloch noted that she had a normal EMG in 2013. Dr. Bloch found on examination that Claimant's arm was diffusely tender especially around the wrist region. Dr. Bloch found a little bit of thenar trophy bilaterally as well as mild osteoarthritic deformities. Otherwise, his examination was not remarkable. *See* Exhibit 6.

33. Dr. Bloch opined that Claimant was still at MMI, that there was no change in disposition from MMI except for Claimant's increased subjective pain. Dr. Bloch noted that an EMG would be ordered to see if there was carpal tunnel or cubital tunnel and that should the EMG be unremarkable, Claimant would certainly remain at MMI. For the shoulder, Dr. Bloch noted that it was possible that Claimant was having some myofascial irritations but that Claimant was having that prior to MMI which is the purpose of an impairment rating and permanent work restrictions and that it did not denote any sort of a change from MMI or reason to reopen the case. Dr. Bloch opined that Claimant was still at MMI. Dr. Bloch noted that if the EMG was positive, Claimant might need to open another case for carpal tunnel syndrome but noted that he did not see any cumulative trauma risk for carpal tunnel syndrome per the guidelines. *See* Exhibit 6.

34. On December 1, 2015 Claimant was evaluated by Dr. Davis. Claimant reported no improvement in her right hand following the carpal tunnel injection performed in July. Claimant reported that she thought her arm was getting steadily worse and reported diffuse pain involving her neck, trapezial area, upper back, upper chest and radiation down the upper arm, forearm, and hand involving multiple digits. Claimant reported getting weak without much numbness or tingling. Claimant reported that she was working but having difficulty because she couldn't use her hand. Dr. Davis noted that electrodiagnostic testing had been ordered but was not done yet. On

examination, Dr. Davis found supple range of motion of the shoulder, elbow, wrist, and hand with smooth range of motion and good strength in all muscle groups. Dr. Davis noted that Claimant had pain with resisted motions in just about all directions and tenderness diffusely in the shoulder girdle. Dr. Davis noted subjectively that Claimant's grip was extremely weak compared to the opposite side and that Claimant had some weakness of finger abduction strength. Dr. Davis provided the impression of: diffuse myofascial pain of the entire right upper extremity not well localized to one area. Dr. Davis doubted that the electrodiagnostic testing would show much, but agreed with doing the testing. Dr. Davis noted that it might be worth seeing a rheumatologist outside of the workers' compensation system. Dr. Davis opined that Claimant did not have any sort of surgical problem and released Claimant back to Dr. Smith. Dr. Davis noted that if the nerve study showed something definitive he would be happy to see Claimant again. *See* Exhibits X, 9.

35. On December 22, 2015 Claimant was evaluated by Robert Kawasaki, M.D. Claimant reported that she had pain in her right biceps area since an October 2013 surgery with some shooting pain into her right forearm and entire right hand. Claimant reported difficulty gripping items due to pain in wrists and weakness. Claimant reported some pain with wrist rotation and diffuse wrist pain maximally at the ulnar styloid region. Claimant reported pain in the right shoulder girdle region, pain and burning sensations at the biceps, and aching throbbing sensations throughout her right forearm, wrist and hand. Claimant reported pain levels with a lowest level of 8/10 and highest of 9/10. Dr. Kawasaki performed a physical examination and also conducted an EMG/NCV study. On examination he found some tenderness to palpation in the right posterior cervical musculature into the shoulder girdle and trapezial region and pectoral and interscapular areas, mild limitation with cervical flexion, cervical rotation toward the right and left, and increased pain at the end range of cervical extension. He found tenderness to palpation over the acromioclavicular joint and along the anterior right shoulder region, diffuse tenderness to palpation along the proximal extensor forearm, diffuse tenderness through the wrist along the ulnar styloid, some limitation of wrist motion with flexion, extension, and radial deviation and ulnar deviation. Dr. Kawasaki found positive carpal tunnel compression signs with pain, numbness, and tingling into Claimant's hand and positive tinel's testing at the carpal tunnel region. *See* Exhibits Z, 12.

36. Dr. Kawasaki opined that the EMG/NCV testing was a normal study and that there was no evidence of right cervical radiculopathy, brachial plexopathy, or compression neuropathy. Dr. Kawasaki opined that there was not much more to offer Claimant treatment wise. *See* Exhibits Z, 12.

37. On October 3, 2016 Claimant was evaluated by Dr. Davis. Dr. Davis noted that he had performed a biceps tenotomy in 2014 and that Claimant got a bit better but always had some persistent pain and spasm of the biceps muscle and that he last saw Claimant about a year ago when Claimant had developed some numbness in her hand. Claimant reported that over the last year, she developed gradual loss of the use of her hand with severe pain extending from her neck all the way down her arm with

spasm of the biceps muscle and weakness of the hand and severe pain in all four extremities. Claimant reported that she had been diagnosed by her primary care physician with fibromyalgia. Dr. Davis performed a physical examination and provided the impression of diffuse right upper extremity pain not improved despite extensive treatment both conservative and surgical. Dr. Davis opined that further surgical intervention was not likely to be beneficial. Dr. Davis opined that Claimant had pain in all four extremities which was reminiscent of fibromyalgia and that it would be reasonable to be evaluated by a rheumatologist under private insurance. Dr. Davis released Claimant from his care. *See* Exhibit X.

38. On November 8, 2016 a letter was sent to Robert Broghammer, M.D. from Insurer. The letter noted that Dr. Smith had retired and that Claimant had elected Dr. Broghammer as her new authorized treating physician. The letter asked Dr. Broghammer to indicate which, if any, of Claimant's current diagnoses were related to the original injury; what sorts of treatment, if any, were recommended; and whether the treatment recommendations were considered to be maintenance care. *See* Exhibit V.

39. On November 16, 2016 Dr. Broghammer performed a medical records review and issued a report. Dr. Broghammer opined that Claimant had undergone appropriate treatment and he agreed with the permanent impairment rating assigned by DIME physician Dr. Mason. He assessed Claimant with: remote history of right shoulder scope with acromioplast, distal clavicle excision, and subacromial decompression; remote history of biceps tenotomy; and idiopathic ongoing right upper extremity pain of unclear etiology. Dr. Broghammer opined that Claimant's ongoing subjective complaints of pain and paresthesias regarding the right upper extremity were not related to Claimant's injury. Dr. Broghammer opined that the ongoing subjective symptom complex was not related to the remote injury but was due to other factors unrelated including, but not limited to, psychosocial factors and somatic dysfunction. Dr. Broghammer noted the completely normal workup following the surgeries including a normal cervical MRI and two normal nerve conduction studies. Dr. Broghammer opined that no further treatment was necessary, recommended, or warranted under the auspices of the workers' compensation system. Dr. Broghammer opined that no further treatment was necessary, recommended, or warranted given Claimant's failure to respond to any treatment thus far and given her ongoing and increasing complaints. Dr. Broghammer opined that no further maintenance care was necessary, recommended, or warranted and that there was nothing further to treat. *See* Exhibit V.

40. On December 6, 2016 Claimant visited Dr. Davis to discuss a couple of issues. Claimant reported that her symptoms had not changed. Dr. Davis recommended that Claimant see a physiatrist and specifically recommended Dr. Ogin for pain management and Dr. Bray for rheumatology. Dr. Davis agreed with Claimant that holistic modalities including acupuncture, reflexology, and chiropractic treatment may be of some benefit. Claimant asked about further imaging but Dr. Davis opined that additional imaging was not likely to be of benefit to Claimant. *See* Exhibit 9.

41. On January 4, 2017 Claimant filed a petition to reopen the claim based on worsening and change of condition. Claimant attached Dr. Smith's September 9, 2015 report to the petition. Claimant alleges that her work related condition began worsening in May of 2015 and is requesting her claim be reopened. *See* Exhibit 4.

42. On February 28, 2017 Claimant underwent an independent medical evaluation performed by John Raschbacher, M.D. Claimant reported taking cymbalta and nortriptyline for the past four months. Claimant reported that due to her increased pain levels she had been diagnosed by her primary care physician with fibromyalgia. Claimant reported that she was losing the use of her right upper extremity, got spasms and cramping, and was always in pain. Claimant reported that her pain level was daily at an 8/10. Claimant reported past anxiety and depression for which she underwent treatment. Dr. Raschbacher reviewed medical records and performed a physical examination. Dr. Raschbacher assessed: history of slip and fall with persistent right upper extremity pain complaints. Dr. Raschbacher noted that two days after the reported fall in 2011, Claimant had full range of motion of the right shoulder, 5/5 strength in the right upper extremity, and no outward visible sign of trauma. *See* Exhibit T.

43. Dr. Raschbacher noted that Claimant had been found to be at MMI on multiple occasions by Dr. Smith, although on the third occasion that Dr. Smith found her at MMI it was not clear that the previous MMI was ever rescinded and that it was confusing and not well defined by Dr. Smith. Dr. Raschbacher noted that at the follow up DIME, Dr. Mason opined that Claimant was at MMI as of April 24, 2014. *See* Exhibit T.

44. Dr. Raschbacher agreed with the MMI date of April 24, 2014. Dr. Raschbacher opined that Claimant had not had a change in condition based on an objective basis. Dr. Raschbacher opined that Claimant's subjective complaints were vastly out of proportion to the paucity of objective findings. Dr. Raschbacher noted the great deal of treatment with Claimant's reports of functional abilities that were deteriorated. Dr. Raschbacher opined that any further treatment was not likely to produce changes in Claimant's subjective complaints or reports of functional abilities. Dr. Raschbacher opined that Claimant's reported inability to tolerate a sedentary position did not make much sense medically. *See* Exhibit T.

45. Dr. Raschbacher testified at hearing consistent with his report. Dr. Raschbacher noted that when Claimant was injured in January of 2011 she had no swelling, no lacerations, no bruising, full range of motion at the right shoulder, and no signs of outward trauma. He noted that during surgery, a surgeon went into Claimant's shoulder with a scope and looked/probed and noted no rotator cuff tear at all. Dr. Raschbacher opined that after extensive treatment and after Claimant reached MMI in April of 2014 there was nothing objective to support a worsening. Dr. Raschbacher opined that only Claimant's subjective reports indicate worsening. Dr. Raschbacher opined that there was no objective basis for Claimant's symptoms and that the symptoms she reported did not medically make sense.

46. Dr. Raschbacher noted that Claimant had an unremarkable cervical MRI and two normal EMGs. Dr. Raschbacher noted that Claimant had been diagnosed with fibromyalgia with is a chronic pain condition with spontaneous onset and opined that the fibromyalgia was not caused by surgery or trauma and was not related to Claimant's January, 2011 work injury. Dr. Raschbacher opined that any further treatment was not likely to improve Claimant's condition.

47. Claimant also testified at hearing. Claimant reported that after being placed at MMI in April of 2014, she was still having severe pain and started losing feeling in her right extremity and feeling pain in her forearm and hand that ached and that she believed seemed to be stemming from the clavicle and shoulder. Claimant testified that she saw Dr. Smith because she was having trouble sleeping and because her right arm was getting numb. Claimant testified that she was worse now compared to April of 2014 and that her ability now was less. Claimant testified that she was diagnosed with fibromyalgia and depression and was not sure if the conditions were considered work related by the doctors.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo.App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo.App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is

subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo.App. 2000).

Reopening and Change of Condition

Section 8-43-303(1), C.R.S., provides that an award may be reopened on the ground of change in condition. The claimant shoulders the burden of proving her condition has changed and her entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S.; *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Osborne v. Industrial Commission*, 725 P.2d 63 (Colo. App. 1986). A change in condition refers either to change in the condition of the original compensable injury or to a change in the claimant's physical or mental condition that can be causally related to the original injury. *Heinicke v. Industrial Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008); *Chavez v. Industrial Commission,* 714 P.2d 1328 (Colo. App. 1985). The question of whether the claimant met the burden of proof to establish a causal relationship between the industrial injury and the worsened condition is one of fact for determination by the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *City of Durango v. Dunagan, supra.* Reopening is warranted if the claimant proves that additional medical treatment or disability benefits are warranted. *Richards v. Industrial Claim Appeals Office,* 996 P.2d 756 (Colo. App. 2000); *Dorman v. B & W Construction Co.,* 765 P.2d 1033 (Colo. App. 1988).

Claimant has failed to meet her burden to establish that her condition has changed sufficient to reopen her claim. Claimant has failed to establish, more likely than not, that there was a change in the condition of her original compensable injury or a change in her physical or mental condition causally related to the January 4, 2011 injury.

As found above, in April of 2014 when Claimant was placed at MMI she reported pain at a 7/10 level, difficulties in many of her activities of daily living, and difficulty sleeping. Claimant was prescribed and was taking Naproxen a non steroid anti-inflammatory. Claimant was noted to have mild deformity in her biceps, had undergone a bicep tenotomy, and Claimant’s cervical spine was rated due to the significant deficit found by DIME physician Dr. Mason. During the period of time Claimant is alleging worsening of her condition, and beginning in May of 2015, Claimant had continued pain that she reported was at a 5/10 and jumped sometimes to 8/10. Claimant had continued deformity noted as “ropiness” in her biceps by Dr. Smith which was consistent with the surgery of bicep tenotomy. In July of 2015 Claimant was noted to no longer be taking Naproxen like she had been taking in April of 2014 when she was placed at MMI.

In July and August of 2015 Dr. Davis noted that Claimant had continued symptoms and persistent pain and did not note any new work related symptoms.

Claimant argues that she had increased pain and symptoms to justify reopening her claim. Claimant points to records from Dr. Smith during May-August of 2015 as well as to the second FAE performed in July of 2015. Claimant argues that her increased subjective reports of pain combined with noted ropiness of her bicep, spasm in the median and ulnar nerve, decreased strength and range of motion in her right upper extremity, diminished FAE ability, and recommendations during this time for psychological counseling and use of Viibryd along with the recommendations for an examination with a physiatrist and EMG studies support her contention that she worsened during this period of time. This is not found persuasive. The ropiness of the bicep is found to be consistent with the tenotomy procedure she underwent prior to this period of time and also consistent with the noted deformity found by the DIME physician at MMI. The spasm of the median and ulnar nerve have not been shown to be causally related to the work injury. Rather, during this time, many physicians noted symptoms and concern for possible carpal tunnel and there has been insufficient evidence to establish that any median or ulnar nerve spasm are causally related to the January 2011 work injury. Claimant also points to the diminished strength, range of motion, and capacity shown by the updated FAE. However, as found above, the FAE documented decreased measurements in both the injured right upper extremity and in the non injured left upper extremity. Although Claimant measured worse during the period of time she alleges a work related worsening, she was also worse all over and not just on her injured right upper extremity. Claimant was having pain and increased symptoms in many body parts during this period of time and has not established that her reduced capacity is, more likely than not, due to the work injury versus non work related conditions affecting the rest of her body.

In addition, during this period of time, Claimant was diagnosed with fibromyalgia and reported to her primary care provider that she had diffuse pain particularly in her back but also in her arms and legs and was found to have diffuse tenderness over the back, arms, and hips. Her providers at Kaiser did not relate the fibromyalgia or the significant pain in several areas of her body to the January 2011 work injury. Additionally, although it was recommended during this time that Claimant undergo additional EMG testing and see a physiatrist, a physiatrist had opined that he had nothing to offer Claimant and EMG testing was normal. The recommendation for psychological counseling and the use of Viibryd, an anti-depressant, also has not been shown to be causally related to the fall Claimant sustained in January of 2011. Claimant has a history of non-work related depression that pre-existed the January, 2011 work injury and there is insufficient evidence to link depression, need for psychological counseling, or the Viibryd to a worsening of her work related condition. Rather, Claimant's depression and/or need for anti-depressants is just as likely related to non injury factors as it is to the January 2011 work injury.

Even if Claimant subjectively has increased pain, Claimant has failed to establish that the increased pain is causally related to her January, 2011 work injury. Rather, the medical records establish that other factors and conditions including possible

neuropathy, possible carpal tunnel, fibromyalgia, depression, and/or somatoform may be playing a role in the subjective reports of increased pain. Claimant has not established that any of these conditions, more likely than not, are related to the fall she sustained in January of 2011. Claimant has been evaluated by multiple medical providers who have not been able to find any objective basis for her continued extensive symptoms. Dr. Davis noted during the period of alleged worsening that Claimant had persistent pain in her right upper extremity and noted only new early symptoms of carpal tunnel. Dr. Davis recommended evaluation by a rheumatologist outside of workers' compensation. Dr. Smith similarly noted radial nerve in spasm, Phalens test for carpal tunnel positive, and also recommended evaluation outside of workers' compensation by a primary care provider for possible carpal tunnel injections noting that it was not at the work related surgical site. The opinions of Dr. Davis and Dr. Smith note non work related conditions contributing to Claimant's subjective reports during this period of alleged worsening. The opinions of Dr. Bloch, Dr. Kawasaki, Dr. Broghammer, and Dr. Raschbacher are found credible and persuasive. Claimant has failed to meet her burden to reopen her claim and has failed to establish a worsening of her work related condition.

Claimant's requests for TTD are denied and dismissed. Similarly, her request for an additional cervical MRI and an additional referral to a physiatrist is denied and dismissed. Claimant has no work related worsening. Additionally, Claimant has already had a normal cervical MRI and has been evaluated by a physiatrist indicating no further treatment recommendations. The specific treatment Claimant is requesting has been undergone and there is no work related worsening established to support additional and repeat testing related to the work injury.

ORDER

It is therefore ordered that:

1. Claimant has failed to meet her burden to show a worsening of condition. Her petition to reopen is denied and dismissed.

2. Claimant's request for TTD benefits, cervical MRI, and referral to a physiatrist are denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to

the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-023-315-01

ISSUES

- Whether Claimant established by a preponderance of the evidence that she sustained a compensable injury on June 27, 2016 arising out of and in the course and scope of employment.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant is a 51 year old woman. Employer hired Claimant on December 8, 2015 to work as a full-time associate.

2. Claimant alleges that she sustained an injury to her right shoulder and neck on June 27, 2016, two hours into her shift which began at 8:00 a.m. During testimony, and in her medical records, Claimant alleges she lifted a tray above her head when she felt a pull in her right shoulder and experienced an onset of pain in her neck and right shoulder. Claimant completed her scheduled shift.

3. Respondents denied Claimant's claim.

4. Claimant sustained a prior admitted workplace injury to her right upper extremity on May 5, 2016 (W.C. No. 5-015-194). Claimant initially treated for that injury at Denver Health and complained of pain in her right hand, right forearm, right upper arm, and right shoulder. She initially reported that the injury occurred at home and that there was no mechanism of injury. Claimant later alleged that the injury occurred at work while she was taping cardboard boxes. Insurer admitted liability for Claimant's right hand and wrist injuries, but denied liability for the shoulder. Claimant was placed at MMI on November 4, 2016 for the May 5 claim.

5. In her initial report of the June 27, 2016 incident, which Claimant filed on August 9, 2016, she alleges that she was lifting a "box of sugar" which weighed "15 lbs." At hearing, Claimant testified that the "tray" she was lifting jointly with a co-worker weighed "40 pounds." At the time of the alleged June 27, 2016 incident, Claimant was under work restrictions which limited her lifting to 15 pounds.

6. Claimant filed for a Division IME on the May 5, 2016 injury. In her January 6, 2017 application, Claimant listed the body components for the DIME doctor to evaluate, including "neck pain" and "right shoulder." Claimant included a description of various shoulder injuries which doctors diagnosed during treatment but determined were not work related.

7. On the evening of the alleged June 27 injury, Claimant treated at Denver Health for unrelated symptoms. Her treatment providers diagnosed her condition and discharged her with antibiotics. Claimant did not report an alleged work injury or did Claimant report shoulder or neck pain.

8. At the time of the alleged June 27, 2016 incident, Dr. Bryan Counts was actively treating Claimant for the May 5 admitted injury. At a July 6, 2016 appointment Claimant reported that a prior injection had worsened her symptoms. Claimant complained of pain up to her neck. Records of the visit do not mention any new incident at work.

9. On July 15, 2016 Claimant treated with Dr. Alireza Alijana. Claimant reported radiating pain from her right thumb into her shoulder and neck area, and having "discomfort at work," but was "managing through it." She also reported having functional limitations at home. Again, records of the visit do not mention any new incident at work.

10. On July 22, 2016 Claimant returned to Dr. Counts complaining of pain up to her neck and in her trapezius. She denied frequently extending her neck at work. She reported "mostly sweeping" while on modified duty. Despite her account of her then-present history, again there is no mention of the alleged June 27, 2016 incident. In this report Dr. Counts opined "there may be a cervical component to the right upper extremity pain, but there is no work relatedness to her neck." Dr. Counts opined there was a work related component (with respect to the May 5 admitted claim) to her "shoulder and thumb."

11. A July 27, 2016 MRI of Claimant's right shoulder revealed a full thickness tear of the distal fibers of the supraspinatus tendon. The reading radiologist also noted moderate degenerative changes of the acromioclavicular joint.

12. On August 2, 2016, Claimant told Jonathan Bloch, M.D. that her shoulder pain developed after starting occupational therapy for her wrist. Dr. Block took Claimant's history which did not include the alleged June 27, 2016 work incident. Dr. Block opined "it is not probable the rotator cuff tear happened as a result of the injury of this [May 5] claim."

13. On February 15, 2017 Allison Fall, M.D. evaluated Claimant for a Respondents sponsored independent medical examination. Dr. Fall found no objective evidence of a work incident that occurred on June 27, 2016 that would cause, aggravate, or accelerate a shoulder or neck condition. She noted that Claimant did not report her alleged injury to any of her providers at Concentra and she did not mention an injury to her shoulder when she treated in the emergency room on the alleged date of injury for an unrelated problem.

14. Dr. Fall noted that Claimant complained of right shoulder soreness prior to June 27, 2016. Claimant's family practice reports also identify prior right shoulder and neck

symptoms. Dr. Fall noted Claimant's shoulder examination was unremarkable with no signs of impingement or instability and good range of motion.

15. Claimant told Dr. Fall that she suffers from right carpal tunnel syndrome.

16. Dr. Fall noted a possibility Claimant's shoulder complaints were related to her pre-existing, non-work related, untreated right carpal tunnel syndrome. During her testimony, Dr. Fall strengthened this analysis stating that all of Claimant's current symptoms most likely correlate to the carpal tunnel finding/diagnosis.

17. Dr. Fall opined that there was no injury producing event that occurred on June 27, 2016, meaning that there was not a separate injury or an aggravation of an injury from May 5, 2016.

18. Dr. Fall testified that even if the incident in question occurred exactly as Claimant indicated, it would not have caused Claimant's alleged injuries. Dr. Fall opined that whether Claimant was lifting a 15 pound bag of sugar or co-lifting a 40 pound tray, insufficient forces were present to cause, aggravate or accelerate any rotator cuff condition. Dr. Fall opined that to a reasonable degree of medical probability the incident as alleged by Claimant was insufficient to cause, aggravate, or accelerate any rotator cuff pathology. Dr. Fall opined that to a reasonable degree of medical probably the incident as alleged was insufficient to cause, aggravate, or accelerate any neck pathology.

19. Claimant provided no persuasive medical testimony, either by written report or hearing testimony, which opined the June 27, 2016 alleged incident caused, aggravated, or accelerated any neck or right shoulder condition.

20. The ALJ finds that Claimant has failed to sustain her burden of proof to establish a compensable injury to her right shoulder and neck on June 27, 2016.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. A Claimant in a workers' compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the findings above as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline,* 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2005).

With regard to compensability, section 8-43-201 provides, "A claimant in a workers' compensation claim shall have the burden of proving entitlement to benefits by a preponderance of the evidence." A claimant always carries the initial burden of proof in a workers' compensation case." *DiCamillo v. Gosney & Sons, Inc.*, W.C. No. 4-328-945 (ICAO, May 21, 1998).

The question of whether Claimant has met her burden of proof to establish a compensable injury is one of fact for determination by the judge. See *Faulkner v. ICAO*, 12 P.3d 844 (Colo. App. 2000).

A claimant must prove by a preponderance of the evidence that her injury arose out of the course and scope of her employment. Section 8-41-301(1)(b), C.R.S.; see *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). An injury "arises out of and in the course of" employment when the origins of the injury are sufficiently related to the conditions and circumstances under which the employee usually performs his or her job functions to be considered part of the employee's services to the employer. *General Cable Co. v. Industrial Claim Appeals Office,* 878 P.2d 118 (Colo. App. 1994).

Merely feeling pain at work in and of itself is not "compensable." See *Miranda v. Best Western Rio Grande Inn,* W.C. No. 4-663-169 (ICAO, April 11, 2007). "An incident which merely elicits pain symptoms caused by a preexisting condition does not compel a finding that the Claimant has sustained a compensable injury." *See also F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App 1995).

Dr. Fall credibly testified that even if the incident occurred as alleged by Claimant, it would not have caused the alleged injury. Dr. Fall opined the most medically likely cause of Claimant's right shoulder and neck complaints is Claimant's pre-existing, non work related, carpal tunnel syndrome.

Dr. Fall opined that if Claimant's pain generator is the rotator cuff tear present on imaging studies, the alleged mechanism of injury as testified to by Claimant is insufficient to cause, aggravate, or accelerate said tear. Dr. Fall testified there is no objective evidence to support any injury to Claimant's neck arising out of the alleged incident of June 27, 2016. As Dr. Fall testified, there is no objective evidence that any

incident that may have occurred at work on June 27, 2016 caused, aggravated, or accelerated any condition in claimant's shoulder or neck.

Claimant presented no persuasive medical testimony which contradicted Dr. Fall's credible and persuasive testimony.

The ALJ finds that Claimant has failed to sustain her burden of proof to establish a compensable injury to her right shoulder and neck on June 27, 2016.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim for workers' compensation benefits arising out of the alleged June 27, 2016 injury is hereby denied and dismissed.

2. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Whether Claimant established by a preponderance of the evidence that she sustained a compensable injury on June 27, 2016 arising out of and in the course and scope of employment.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant is a 51 year old woman. Employer hired Claimant on December 8, 2015 to work as a full-time associate.

2. Claimant alleges that she sustained an injury to her right shoulder and neck on June 27, 2016, two hours into her shift which began at 8:00 a.m. During testimony, and in her medical records, Claimant alleges she lifted a tray above her head when she felt a pull in her right shoulder and experienced an onset of pain in her neck and right shoulder. Claimant completed her scheduled shift.

3. Respondents denied Claimant's claim.

4. Claimant sustained a prior admitted workplace injury to her right upper extremity on May 5, 2016 (W.C. No. 5-015-194). Claimant initially treated for that injury at Denver Health and complained of pain in her right hand, right forearm, right upper arm, and right shoulder. She initially reported that the injury occurred at home and that there was no mechanism of injury. Claimant later alleged that the injury occurred at work while she was taping cardboard boxes. Insurer admitted liability for Claimant's right hand and wrist injuries, but denied liability for the shoulder. Claimant was placed at MMI on November 4, 2016 for the May 5 claim.

5. In her initial report of the June 27, 2016 incident, which Claimant filed on August 9, 2016, she alleges that she was lifting a "box of sugar" which weighed "15 lbs." At hearing, Claimant testified that the "tray" she was lifting jointly with a co-worker weighed "40 pounds." At the time of the alleged June 27, 2016 incident, Claimant was under work restrictions which limited her lifting to 15 pounds.

6. Claimant filed for a Division IME on the May 5, 2016 injury. In her January 6, 2017 application, Claimant listed the body components for the DIME doctor to evaluate, including "neck pain" and "right shoulder." Claimant included a description of various shoulder injuries which doctors diagnosed during treatment but determined were not work related.

7. On the evening of the alleged June 27 injury, Claimant treated at Denver Health for unrelated symptoms. Her treatment providers diagnosed her condition and discharged her with antibiotics. Claimant did not report an alleged work injury or did Claimant report shoulder or neck pain.

8. At the time of the alleged June 27, 2016 incident, Dr. Bryan Counts was actively treating Claimant for the May 5 admitted injury. At a July 6, 2016 appointment Claimant reported that a prior injection had worsened her symptoms. Claimant complained of pain up to her neck. Records of the visit do not mention any new incident at work.

9. On July 15, 2016 Claimant treated with Dr. Alireza Alijana. Claimant reported radiating pain from her right thumb into her shoulder and neck area, and having "discomfort at work," but was "managing through it." She also reported having functional limitations at home. Again, records of the visit do not mention any new incident at work.

10. On July 22, 2016 Claimant returned to Dr. Counts complaining of pain up to her neck and in her trapezius. She denied frequently extending her neck at work. She reported "mostly sweeping" while on modified duty. Despite her account of her then-present history, again there is no mention of the alleged June 27, 2016 incident. In this report Dr. Counts opined "there may be a cervical component to the right upper extremity pain, but there is no work relatedness to her neck." Dr. Counts opined there was a work related component (with respect to the May 5 admitted claim) to her "shoulder and thumb."

11. A July 27, 2016 MRI of Claimant's right shoulder revealed a full thickness tear of the distal fibers of the supraspinatus tendon. The reading radiologist also noted moderate degenerative changes of the acromioclavicular joint.

12. On August 2, 2016, Claimant told Jonathan Bloch, M.D. that her shoulder pain developed after starting occupational therapy for her wrist. Dr. Block took Claimant's history which did not include the alleged June 27, 2016 work incident. Dr. Block opined "it is not probable the rotator cuff tear happened as a result of the injury of this [May 5] claim."

13. On February 15, 2017 Allison Fall, M.D. evaluated Claimant for a Respondents sponsored independent medical examination. Dr. Fall found no objective evidence of a work incident that occurred on June 27, 2016 that would cause, aggravate, or accelerate a shoulder or neck condition. She noted that Claimant did not report her alleged injury to any of her providers at Concentra and she did not mention an injury to her shoulder when she treated in the emergency room on the alleged date of injury for an unrelated problem.

14. Dr. Fall noted that Claimant complained of right shoulder soreness prior to June 27, 2016. Claimant's family practice reports also identify prior right shoulder and neck

symptoms. Dr. Fall noted Claimant's shoulder examination was unremarkable with no signs of impingement or instability and good range of motion.

15. Claimant told Dr. Fall that she suffers from right carpal tunnel syndrome.

16. Dr. Fall noted a possibility Claimant's shoulder complaints were related to her pre-existing, non-work related, untreated right carpal tunnel syndrome. During her testimony, Dr. Fall strengthened this analysis stating that all of Claimant's current symptoms most likely correlate to the carpal tunnel finding/diagnosis.

17. Dr. Fall opined that there was no injury producing event that occurred on June 27, 2016, meaning that there was not a separate injury or an aggravation of an injury from May 5, 2016.

18. Dr. Fall testified that even if the incident in question occurred exactly as Claimant indicated, it would not have caused Claimant's alleged injuries. Dr. Fall opined that whether Claimant was lifting a 15 pound bag of sugar or co-lifting a 40 pound tray, insufficient forces were present to cause, aggravate or accelerate any rotator cuff condition. Dr. Fall opined that to a reasonable degree of medical probability the incident as alleged by Claimant was insufficient to cause, aggravate, or accelerate any rotator cuff pathology. Dr. Fall opined that to a reasonable degree of medical probably the incident as alleged was insufficient to cause, aggravate, or accelerate any neck pathology.

19. Claimant provided no persuasive medical testimony, either by written report or hearing testimony, which opined the June 27, 2016 alleged incident caused, aggravated, or accelerated any neck or right shoulder condition.

20. The ALJ finds that Claimant has failed to sustain her burden of proof to establish a compensable injury to her right shoulder and neck on June 27, 2016.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. A Claimant in a workers' compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the findings above as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline,* 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2005).

With regard to compensability, section 8-43-201 provides, "A claimant in a workers' compensation claim shall have the burden of proving entitlement to benefits by a preponderance of the evidence." A claimant always carries the initial burden of proof in a workers' compensation case." *DiCamillo v. Gosney & Sons, Inc.*, W.C. No. 4-328-945 (ICAO, May 21, 1998).

The question of whether Claimant has met her burden of proof to establish a compensable injury is one of fact for determination by the judge. See *Faulkner v. ICAO*, 12 P.3d 844 (Colo. App. 2000).

A claimant must prove by a preponderance of the evidence that her injury arose out of the course and scope of her employment. Section 8-41-301(1)(b), C.R.S.; see *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). An injury "arises out of and in the course of" employment when the origins of the injury are sufficiently related to the conditions and circumstances under which the employee usually performs his or her job functions to be considered part of the employee's services to the employer. *General Cable Co. v. Industrial Claim Appeals Office,* 878 P.2d 118 (Colo. App. 1994).

Merely feeling pain at work in and of itself is not "compensable." See *Miranda v. Best Western Rio Grande Inn,* W.C. No. 4-663-169 (ICAO, April 11, 2007). "An incident which merely elicits pain symptoms caused by a preexisting condition does not compel a finding that the Claimant has sustained a compensable injury." *See also F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App 1995).

Dr. Fall credibly testified that even if the incident occurred as alleged by Claimant, it would not have caused the alleged injury. Dr. Fall opined the most medically likely cause of Claimant's right shoulder and neck complaints is Claimant's pre-existing, non work related, carpal tunnel syndrome.

Dr. Fall opined that if Claimant's pain generator is the rotator cuff tear present on imaging studies, the alleged mechanism of injury as testified to by Claimant is insufficient to cause, aggravate, or accelerate said tear. Dr. Fall testified there is no objective evidence to support any injury to Claimant's neck arising out of the alleged incident of June 27, 2016. As Dr. Fall testified, there is no objective evidence that any

incident that may have occurred at work on June 27, 2016 caused, aggravated, or accelerated any condition in claimant's shoulder or neck.

Claimant presented no persuasive medical testimony which contradicted Dr. Fall's credible and persuasive testimony.

The ALJ finds that Claimant has failed to sustain her burden of proof to establish a compensable injury to her right shoulder and neck on June 27, 2016.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim for workers' compensation benefits arising out of the alleged June 27, 2016 injury is hereby denied and dismissed.

2. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Did Claimant overcome the DIME regarding MMI and/or impairment by clear and convincing evidence?

2. Did Claimant prove entitlement to a general award of medical benefits after MMI?

3. Did Claimant prove that Depakote prescribed by Dr. Adams and a home health care referral by Dr. Goodell are reasonable and necessary post-MMI treatment?

4. Did Respondents prove an overpayment by a preponderance of the evidence?

STIPULATIONS

The parties bifurcated and reserved the issue of permanent total disability.

FINDINGS OF FACT

1. Claimant worked for Employer as a roughneck on an oil rig. On February 14, 2014, he injured his neck and back in a slip-and-fall accident. He was exiting a bus when he slipped on ice and fell backward, landing on his back. His head was cushioned by snow on the ground, and Claimant did not lose consciousness.

2. Claimant continued to work in various capacities over the next few weeks but was eventually was terminated due to conflicts with his supervisor. Claimant has not worked since March 2014.

3. Claimant first received medical treatment at the San Rafael Hospital on March 14, 2014. He reported neck and back pain, with numbness and tingling in all four extremities. Physical examination was relatively unremarkable except for some soft tissue tenderness. The ER physician opined Claimant's pain was "most likely musculoskeletal." He prescribed Percocet and Flexeril and recommended that Claimant follow-up with his primary care provider.

4. Claimant returned to the ER on March 24, 2016 due to pain. A cervical CT scan showed multilevel degenerative changes and evidence of a prior C5-6 fusion Claimant underwent in approximately 1996. A lumbar CT revealed mild degenerative changes. There was no evidence of any acute injury to either his neck or back. The ER physician opined Claimant's symptoms were likely due to cervical and lumbar strains with associated muscle spasms.

5. The next day, Claimant saw his personal physician, Dr. David Serafini, who ultimately became the primary ATP. Claimant demonstrated difficulty rising from a chair and walked with an antalgic gait. His lumbar flexion was "markedly limited." Dr. Serafini noted weakness in the lower extremities, but he was "unable to determine if decreased strength is secondary to pain or neurological injury." Dr. Serafini ordered cervical and lumbar MRIs and placed Claimant "off work."

6. The MRIs were performed on May 1, 2014. The cervical MRI showed degenerative changes but no acute pathology. The most significant finding was moderate central stenosis and severe left foraminal stenosis at C4-5. There were no apparent problems related to the old C5-6 fusion. The lumbar MRI revealed "mild" multilevel degenerative changes.

7. After receiving the MRI reports, Dr. Serafini referred Claimant to physical therapy. He noted that the "diffuse" weakness in Claimant's lower extremities "appears to be secondary to pain" rather than a neurological problem.

8. Claimant participated in therapy for a few months with no significant benefit. In fact, the PT made Claimant's symptoms worse.

9. Dr. Serafini ordered repeat MRIs on June 17, 2014, which showed findings consistent with the May 2014 imaging.

10. Claimant had a surgical consultation with Dr. Ali Murad on July 9, 2014. Sensory and reflex examinations were normal. Dr. Murad noted Claimant was "not compliant with formal motor testing. Appears to have good muscle bulk in his extremities, moves all extremities equally, reports that any real motor strength testing causes significant pain." He opined that Claimant demonstrated "a non-anatomical neurologic examination, lack of effort on motor testing, [and] pain behavior." Dr. Murad opined that Claimant's radicular symptoms were "in a nondermatomal pattern." Dr. Murad further opined,

> While he has a disc bulge and moderate stenosis at C4-5 (above the previous C5-6 fusion), his symptoms affect multiple dermatomes in the upper and lower extremities. Most of his pain is axial. Lumbar spine MRI does not show any significant pathology. His pain is completely out of proportion to any findings on MRI. He was adamant that the disc bulge is responsible for the symptoms as "it was not present before the fall." I explained to him that disc bulges are very common and are not responsible for the [ ] symptoms. . . . At this point unfortunately there is no structural pathology in his cervical or lumbar spine which would alleviate his pain symptoms. If his symptoms were limited to radiculopathy in C5 distribution and/or myelopathy, then surgery could be considered. This was very frustrating for him. At one point he started to cry. I recommend nonsurgical treatment.

11. On September 30, 2014, Dr. Serafini noted Claimant's wife had recently committed suicide. He had taken on more housekeeping responsibility, which he found "difficult." His neck had almost no range of motion. Dr. Serafini wanted to "exhaust physical evaluation prior to considering emotional causes." He also opined "even if his condition is eventually thought to be psychosomatic, he remains disabled at this time and incapable of returning to his prior employment."

12. Claimant had a second surgical opinion with Dr. Sana Bhatti in January 2015. He reported pain affecting his neck, bilateral shoulders and arms, low back, buttocks, and bilateral lower extremities. He described the pain as "constant" at a level of 8-9/10. His pain was aggravated by routine movements, and relieved by "nothing." He complained of numbness and tingling in the first three digits of his right hand, and the first three toes of his feet. He reported generalized weakness and inability to walk very far despite using a cane. He felt the symptoms were "worsening with time." Examination of the neck revealed significant tenderness to palpation and significantly decreased range of motion "to where he does not move his neck at all."' His back was also tender. Dr. Bhatti could not evaluate motor function "due to significant pain." Dr. Bhatti opined "the etiology of his symptoms is unclear" and asked Claimant to bring the MRI scans so he could review them personally.

13. After reviewing the MRI scans, Dr. Bhatti concluded that "I think these are incidental findings and are not related to [his] symptoms. I feel that we do not have a surgical option." Dr. Bhatti recommended a referral to "pain management."

14. Dr. Serafini apparently left private practice in early 2015, and Dr. Goodell became the primary ATP. Dr. Goodell put Claimant at MMI on July 15, 2015, and referred him to Dr. Douglas McFarland for an impairment rating.

15. Claimant saw Dr. McFarland on August 13, 2015. At the appointment, he reported 9/10 neck pain which prevented him from turning his head to either side. Claimant reported tingling, burning, and numbness in the fingers of both hands. His low back pain level was 6/10. Claimant denied depression and stated his mental status at actually improved since he had stopped taking oxycodone and Valium. Dr. McFarland reviewed Claimant's prior history of a cervical fusion in 1996 and a lumbar spine injury in 2001. Dr. McFarland noted Claimant received impairment ratings for the prior injuries, which combined to 26% whole person.

16. On physical examination, Claimant held his head "rigidly with very little neck movement." He had tenderness of the cervical and lumbar musculature. Sensation was intact in his fingers and feet. Dr. McFarland noted that cervical ROM measurements were "remarkable for the very restricted motion that was shown," although they were internally consistent over three trials. Lumbar ROM was also significantly limited but met internal consistency requirements. Dr. McFarland noted that "the restricted motion of his cervical spine appears out of proportion to the findings on the MRI and there may be a need for further investigation to determine if the measurements are valid." Nevertheless, he utilized the ROM measurements as the basis for the rating. Dr. McFarland calculated an overall 54% whole person impairment

rating, from which he apportioned the prior 26%, resulting in an overall rating of 28%. Dr. McFarland opined, "although there are probably psychological factors affecting [Claimant's] impairment I do not believe that all of this impairment can be attributed to psychological factors. . . . I do not have a reliable means of determining the degree to which psychological factors are affecting this impairment."

17. Dr. McFarland recommended maintenance care including home exercise and medications. At the time of the evaluation, Claimant was taking naproxen and tizanidine, although Dr. McFarland noted other medications might be needed in the future. He also thought it might be useful to obtain a formal psychological evaluation. The expected duration of maintenance care "will likely be for his lifetime."

18. Respondents timely filed a Notice and Proposal for a DIME after receiving Dr. McFarland's rating. Since Respondents requested a DIME, they continue to pay ongoing Temporary Total Disability (TTD) benefits at the weekly rate of $866.36.

19. Dr. Hua Chen saw Claimant for a DIME at Respondents' request on December 31, 2015. Dr. Chen noted that Claimant demonstrated "no movement in [his] neck at all." His lumbar ROM was also very limited. Claimant complained of pain in response to "light palpation" of his neck and back, but Dr. Chen appreciated no spasm or stiffness of the musculature. Claimant had symmetrical but give-way weakness in his distal arms and hands. Sensation was normal to touch and pinprick in the arms, but he had "inconsistent" sensation deficits in both feet.

20. Dr. Chen diagnosed cervical and lumbar strains as a result of the February 2014 injury, with persistent pain and "no response to treatment." Dr. Chen compared a cervical MRI from 2007 to the MRIs from the 2014 injury and stated,

> I do not see new structural damage to his cervical spine from the 2/15/2014 injury. This is the same conclusion from two neurosurgeon's evaluations. I cannot explain why his symptoms of pain and loss of neck mobility are still present after 20 months of minor injury and significantly [more] severe than the original injury which required surgery. I would agree with the previous conclusions from neurosurgeons and Dr. Fall that his symptoms are over reactive.

21. Dr. Chen agreed Claimant reached MMI by July 15, 2015 "after he had evaluations and no response to treatment." She signed a 4% cervical rating and 5% lumbar rating under Table 53 II.B. Cervical ROM measurements were internally consistent but extremely limited. Based on the applicable tables in the *AMA Guides*, the cervical ROM measurements equated to 30% whole person. Lumbar flexion was invalid due to inconsistencies in the SLR protocol. The remaining lumbar measurements were internally consistent and equated to 18% whole person.

22. Dr. Chen did not give Claimant any ROM-based impairment because she believed the measurements were "non-physiological." Therefore, Claimant's final

combined rating was 9% whole person. Dr. Chen further opined Claimant required no maintenance treatment.

23. The DIME Unit notified Dr. Chen she had to offer Claimant the opportunity for a second set of measurements before she could invalidate ROM impairment.

24. Claimant went for repeat ROM measurements on February 15, 2016. His cervical ROM was even more limited than the first time, equating to a 32% whole person rating. His lumbar ROM was slightly increased, but flexion was again invalid. Dr. Chen stated, "again both cervical and lumbar range of motion is extremely limited to [sic] I cannot explain physiologically. He would not actively participate [in] any movement in [his] cervical spine and he had severely limited movement in [his] lower back because of ongoing severe pain. . . . Therefore I will keep my original assessment about his cervical and lumbar conditions."

25. Respondents filed a Final Admission of Liability (FAL) on April 15, 2016 based on Dr. Chen's DIME report. The FAL admitted $59,036.25 in TTD benefits to July 14, 2015, and $21,831.85 of PPD benefits from July 15, 2015 through May 24, 2016. Claimant's PPD award was limited by the applicable statutory cap of $80,868.10.

26. Respondents paid $89,605.47 in TTD benefits from March 25, 2014 through March 17, 2016. Based on the applicable statutory cap, Claimant was overpaid $8,737.37 ($89,605.47 – $80,868.10 = $8,737.37).

27. Claimant has received sporadic treatment since being put at MMI. When he saw Dr. McFarland, he had apparently weaned himself from medications "cold turkey." But in January 2016 Dr. Goodell prescribed narcotic pain medication, a muscle relaxer, and referred Claimant to Dr. Tyler for pain management. Claimant never saw Dr. Tyler, although the reason is not clear from the record. In April 2016, Dr. Goodell offered Claimant a psychology referral to help his pain, but Claimant was "not inclined at this time."

28. Claimant started treating with Dr. Lawrence Adams, a neurologist, in September 2016. Dr. Adams opined Claimant's neck pain was likely musculoskeletal in nature, and "probably represents a torticollis, I'm uncertain as to whether it is a true cervical dystonia." After reviewing x-rays and confirming there was no structural pathology, Dr. Adams prescribed baclofen and later recommended Botox injections.

29. Claimant had Botox injections with Dr. Gregory Ales in September 2016. Initially, he reported no benefit "at all," but he later indicated he "felt a little better" and "can move his neck a little better." Based on the lack of significant response, Dr. Ales did not recommend further Botox treatment.

30. Claimant saw Dr. Adams on February 27, 2017, who noted Claimant could not move his head or neck. Dr. Adams stated that the tightening of Claimant's neck, upper shoulders and upper chest "frankly appears almost voluntary, with distraction, [it] seems to disappear." Dr. Adams recommended a trial of Depakote and propranolol.

31. On March 15, 2017, Claimant told PA-C Christen Kutz he had "some reduction in pain" with the Depakote, and the propranolol was "modestly helpful." Since the Depakote has been somewhat helpful, PA-C Kutz recommended increasing the dose. She also referred Claimant to Amy Alsum, a psychotherapist at Colorado Sport & Spine, for biofeedback and relaxation training.

32. Dr. Fall performed several IMEs and Rule 16 reviews at Respondents' request. She first examined Claimant on December 18, 2014. Dr. Fall noted that Claimant exhibited "severe pain behaviors" which made the physical examination "quite difficult." Claimant demonstrated virtually no cervical or lumbar range of motion. He had 4/5 positive Waddell signs, including overreaction, superficial tenderness to palpation, pain with axial compression, and pain with superficial rotation. He said he could not squat or perform toe raises. Dr. Fall opined his reported sensory changes in the upper and lower extremities were "non-dermatomal." Examination of the musculature revealed no hypertonicity, spasm, or trigger points. Dr. Fall diagnosed neck and back pain out of proportion to objective findings. She also provided a "rule out" diagnosis of somatoform disorder, which she deferred to a psychiatrist. Dr. Fall opined "the most likely factor playing a role in his ongoing complaints is likely psychosomatic, especially given the suicide of his wife." She thought Claimant was at MMI and required no additional treatment on a work-related basis.

33. Dr. Fall examined Claimant again in August 2016. He told her "nothing has changed" since the previous IME. He was still having severe neck, back and extremity symptoms. He also described a "constant headache" which caused him to "lose focus of vision." Dr. Fall opined that the severely restricted cervical ROM measured by Dr. McFarland was "obviously not the true functional range of motion of the cervical spine, which has a one-level fusion and no spasm." Dr. Fall agreed that Dr. Chen appropriately declined to assign ROM impairment because she concluded the measurements were "non-physiological." Dr. Fall opined that Dr. Chen's rating was consistent with the *AMA Guides* and the Level II Accreditation training. Specifically, Dr. Fall opined "in her role as a DIME physician, it was appropriate to utilize her clinical judgment and not utilize the range of motion she measured if she did not find that it was probably his true functional range of motion." Dr. Fall would not have given any rating, but opined it was within Dr. Chen's discretion to assign Table 53 ratings for chronic musculoskeletal pain. She said her disagreement with Dr. Chen on that point was "merely a difference of opinion." Dr. Fall further opined that Claimant required no work restrictions and there was no indication for maintenance care.

34. Claimant saw Dr. Rook for an IME at his counsel's request on August 31, 2016. Claimant reported ongoing severe neck pain and upper extremity symptoms. He also complained of low back pain which was increased by weight-bearing and prolonged sitting. Claimant denied depression and said he was primarily "frustrated" by his lack of improvement and his perceived lack of treatment. On physical examination, Dr. Rook noted Claimant "appeared reasonably comfortable during the history portion of today's evaluation except for the fact that he was unable to move his neck more than a few degrees and any direction." Neurological examination was basically normal. Palpation of the cervical musculature demonstrated "increased muscle tone," but Dr.

Rook did not specifically document spasm. Dr. Rook disagreed with Dr. Chen's determination that Claimant is at MMI, primarily due to the recommendation for a psychological evaluation. Dr. Rook opined it was "by definition" inconsistent for Dr. Chen put Claimant at MMI while simultaneously recommending a psychological evaluation. Dr. Rook also disagreed with Dr. Chen's decision not to include a rating for cervical and lumbar ROM deficits. Dr. Rook noted that Claimant's ROM measurements were sufficiently reproducible on three trials so as to be valid per the *AMA Guides*.

35. Dr. Rook performed a follow-up a record review on April 18, 2017. He opined that the diagnosis of cervical dystonia suggested by Dr. Adams was consistent with a diagnosis of cervical myofascial pain syndrome. Dr. Rook agreed it was reasonable to try Botox, but the injections "did not provide enough pain relief or functional improvement for me to recommend it as a long-term maintenance treatment option." Dr. Rook was "skeptical" whether Claimant would respond positively to dry needling. Dr. Adams had recently recommended a trail of Depakote, which Dr. Rook opined "is a relatively inexpensive medication which might help with his chronic pain as well as his extremity symptoms."

36. Dr. Fall testified at hearing and Dr. Rook testified in a pre-hearing deposition. Their testimony was consistent with the opinions expressed in their respective IME reports. Regarding Dr. Goodell's referral for home health services, Dr. Rook opined "it's not something I would necessarily recommend. You would have to ask Dr. Goodell why he did." Dr. Fall opined that home health services are not reasonable, necessary, or related to Claimant's industrial injury.

37. Dr. Fall persuasively testified that Dr. Chen's decision not to include any ROM-based impairment was within her discretion under the *AMA Guides* and the Level II accreditation training. She opined that the DIME's clinical judgment "trumps everything." If the physician determines there is insufficient objective and anatomical support for a Claimant's demonstrated ROM, the DIME has discretion not to rate it.

38. The opinions of Drs. Goodell, McFarland, Chen and Fall that Claimant reached MMI on July 15, 2015 are credible and persuasive.

39. The ALJ credits Dr. Fall's opinion that Dr. Chen's rating is consistent with the *AMA Guides* and Level II training.

40. The opinions of Drs. Goodell, McFarland, Adams and Rook that Claimant requires ongoing maintenance treatment are credible and persuasive.

41. The opinions of Dr. Adams and Dr. Rook that Depakote is a reasonable treatment option are credible and persuasive.

42. Dr. Goodell's referral for home health care services is not supported by the evidence of record.

43. Claimant failed to overcome the DIME regarding MMI or impairment.

44. Claimant proved by a preponderance of the evidence he requires ongoing medical treatment after MMI to relieve the effects of his injury and prevent deterioration of his condition.

45. Claimant proved that Depakote is reasonable and necessary treatment after MMI.

46. Claimant failed to prove that Dr. Goodell's referral for home health services is reasonable and necessary.

47. Respondents proved an overpayment of $8,737.37.

CONCLUSIONS OF LAW

A. General standards for overcoming a DIME

The DIME's determinations regarding MMI and whole person impairment are binding unless overcome by clear and convincing evidence. Section 8-42-107(8)(b) and (c), C.R.S.; *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). "Clear and convincing evidence means evidence which is stronger than a mere 'preponderance;' it is evidence that is highly probable and free from serious or substantial doubt." *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). Therefore, the party challenging a DIME's conclusions must demonstrate it is "highly probable" that the MMI and impairment findings are incorrect. *Qual-Med*, 961 P.2d at 592. A party meets this burden if the evidence contradicting the DIME physician is "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App. 2002).

It is well established held that "mere differences of medical opinion" do not constitute clear and convincing evidence that the DIME's determination is incorrect. *E.g., Gutierrez v. Startek USA, Inc*., W.C. No. 4-842-550-01 (ICAO March 18, 2016); *Javalera v. Monte Vista Head Start, Inc.*, W.C. No. 4-532-166 (ICAO July 19, 2004); *see also Gonzales v. Browning-Ferris Industries of Colorado*, W.C. No. 4-350-356 (ICAO March 22, 2000).

B. Claimant did not overcome the DIME regarding MMI

"Maximum Medical Improvement" (MMI) is defined as the point when any medically determinable physical or mental impairment as a result of the industrial injury has become stable and when no further treatment is reasonably expected to improve the condition. Section 8-40-201(11.5). A finding of MMI is premature if there is a course of treatment that has "a reasonable prospect of success" and the claimant is willing to submit to the treatment. *Reynolds v. Industrial Claim Appeals Office*, 794 P.2d 1080, 1081-82 (Colo. App. 1990). Additionally, a finding that a claimant is not at MMI may rest solely upon recommendations for further diagnostic evaluation if such procedures have a reasonable prospect of diagnosing or defining the claimant's condition to suggest a

course of further treatment. *E.g., Soto v. Corrections Corp*., W.C. No. 4-813-582 (ICAO, October 27, 2011).

Although a recommendation for further diagnostic testing can be a sufficient basis for finding a claimant not at MMI, the ALJ is not aware of any case law which *precludes* a DIME from declaring MMI *merely because* she thinks some further evaluation is appropriate.

Claimant did not prove by clear and convincing evidence that a psychological evaluation has a "reasonable prospect" of diagnosing or defining his condition and suggesting further treatment reasonably expected to improve his situation. Based on the evidence presented, the ALJ finds it unlikely that any information provided by a psychological evaluation would change the course of Claimant's medical condition. Moreover, it is questionable whether Claimant would even submit to a psychological evaluation because he has told more than one physician he is not interested in pursuing mental health treatment. If a claimant declines the only treatment with a reasonable prospect for improving his condition, the claimant is at MMI as a matter of law. *MGM Supply Co. v. Industrial Claim Appeals Office*, 72 P.3d 1001 (Colo. App. 2002).

Dr. Goodell, Dr. McFarland, Dr. Chen, and Dr. Fall all agree that Claimant reached MMI on July 15, 2015. Dr. Rook is the only physician who disagrees with that assessment. The ALJ is persuaded by the convergence of opinion from four treating and examining providers that Claimant is at MMI. Dr. Fall persuasively opined that a psychological evaluation and an EMG as recommended by Dr. Rook could be performed as "maintenance" treatment after MMI. In his deposition, Dr. Rook conceded that a psychological evaluation could be performed as maintenance care. Based on the totality of evidence presented, the ALJ concludes Claimant has not overcome MMI by clear and convincing evidence.

C. Claimant did not overcome the DIME regarding impairment

As found, Claimant failed to overcome the DIME's impairment rating by clear and convincing evidence. Dr. Chen appropriately declined to include ROM deficits in her rating because she believed there were "nonphysiologic." Section 8-42-101(3.7) provides that "a physician shall not render a medical impairment rating based on chronic pain without anatomic or physiologic correlation. Anatomic correlation must be based on objective findings." The DOWC Impairment Rating Tips also state that a DIME may find ROM measurements invalid "for physiologic reasons." Dr. Chen was within her discretion to disqualify the ROM components of the rating she determined were nonphysiologic. *Oldenberg v. First Group America*, W.C. No. 4-640-886 (ICAO, September 3, 2008).

The ALJ notes that the measurements Dr. Chen obtained at the first DIME appointment correspond to a 30% whole person rating. The measurements from the follow-up appointment were even worse, and would result in the highest possible rating (32%) for cervical ROM loss. But Dr. Chen found no anatomic and physiologic basis for such severe ROM deficits. The abnormalities in Claimant's cervical spine imaging do

not reasonably explain Claimant's ROM measurements. Nor did Dr. Chen appreciate any muscle spasm or stiffness on direct palpation of the cervical musculature to objectively substantiate severe soft tissue impairment. Dr. Chen's exam findings are similar to those of Dr. Goodell, Dr. McFarland, and Dr. Fall, who also found no muscle spasm.

Similar reasoning applies to Dr. Chen's rejection of the lumbar ROM measurements. While Claimant's lumbar ROM measurements were not as extreme as the cervical deficits, they were substantially more limited than one would expect from a "strain" type injury. Claimant's lumbar imaging is relatively benign, with only mild degenerative changes which most likely predated the injury.

Admittedly, Dr. McFarland assigned a rating based on largely similar ROM measurements. But he also noted that the cervical ROM measurements were "out of proportion" to the MRI findings, and "further investigation" may be warranted "to determine if the measurements are valid." Even though Dr. McFarland was willing to incorporate the measurements into his rating, that does not mean that Dr. Chen was obliged to do so. The ALJ is not persuaded by Dr. Rook's opinion that Dr. Chen had to assign a ROM rating simply because the measurements met the reproducibility criteria. Whether to give Claimant a ROM-based rating appears to be an issue about which reasonable physicians can disagree. Claimant has merely proven a "difference of opinion," which does not rise to the level of clear and convincing evidence.

D. Medical benefits after MMI

Respondents are liable for medical treatment from authorized providers that is reasonably necessary to cure or relieve the employee from the effects of the injury. Section 8-42-101; *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). The need for medical treatment may extend beyond MMI if the claimant needs further treatment to relieve the effects of the injury or prevent deterioration of their physical condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). If the claimant establishes the probability of a need for future treatment, he is entitled to a general award of medical benefits after MMI, subject to the employer's right to dispute compensability, reasonableness, or necessity of any particular treatment. *Hanna v. Print Expediters Inc*., 77 P.3d 863 (Colo. App. 2003). If the respondents challenge a request for specific post-MMI medical treatment, the claimant must prove entitlement to the medical benefit(s) at issue by a preponderance of the evidence. *Ford v. Regional Transportation District*, W.C. No. 4-309-217 (ICAO, February 12, 2009).

The DIME's opinion regarding medical treatment after MMI is not entitled to any special weight, but is simply another medical opinion for the ALJ to consider when evaluating the preponderance of the evidence. *See Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Story v. Industrial Claim Appeals Office*, 910 P.2d 80 (Colo. App. 1995). The fact that a claimant failed to overcome a DIME regarding MMI does not preclude an award of post-MMI medical benefits under the preponderance standard. *Martinez v. K-Mart Corporation*, W.C. No. 4-164-054 (ICAO Sept. 19, 2005).

As found, Claimant proved that he needs ongoing medical treatment to relieve the effects of his injury and prevent deterioration of his condition. Claimant suffers from chronic injury-related neck and back pain that is at least partially relieved by medication. There is no persuasive indication that Claimant abuses his medications. Claimant lives a relatively restricted lifestyle due to his pain but he would likely be even less functional without the benefit of medication. The ALJ is not persuaded by Dr. Fall's opinion that none of Claimant's ongoing symptoms are causally related to his injury. Based on the evidence presented, the ALJ concludes Claimant is entitled to a general award of medical benefits after MMI.

Claimant also proved that Depakote is reasonable and necessary maintenance treatment. Dr. Rook persuasively opined that Depakote has a reasonable chance reducing Claimant's symptoms, at a relatively low cost to Respondents. Although Depakote is primarily an anti-seizure medication, in this case it is being prescribed for an accepted off label use of pain control. Claimant appears to have had some benefit from a limited trial of Depakote, and it is reasonable to try increasing dosages is recommended by Dr. Adams. The medication can certainly be discontinued if it provides no long-term or substantial benefit.

Claimant failed to prove that the "home health referral" made by Dr. Goodell is a reasonable and necessary treatment for his industrial injury. Based on the evidence presented, it is not clear what the recommendation would entail. Dr. Goodell did not elaborate or provide any justification for the request, and its purpose is not readily apparent from the face of the referral. The ALJ does not find Claimant's testimony to be a persuasive substitute for an explanation from the prescribing physician. Dr. Fall opined home health services are not reasonable and necessary, and even Dr. Rook opined "it's not something I would necessarily recommend."

E. Overpayment

Section 8-40-201(15.5) defines an overpayment as "money received by a claimant that exceeds the amount that should have been paid, or which the claimant was not entitled to receive, or which results in duplicate benefits because of offsets." The Respondents must prove their entitlement to an overpayment by a preponderance of the evidence. *City and County of Denver v. Industrial Claim Appeals Office*, 58 P.3d 1162 (Colo. App. 2002).

Even if temporary disability benefits were properly payable when the claimant received them, they can subsequently create an overpayment if they extended beyond the MMI date ultimately determined by a DIME. Section 8-40-201(15.5); *Moreno v. Sysco Corporation*, W.C. No. 4-917-763-02 (ICAO, June 24, 2016).

As found, Respondents proved that Claimant received an overpayment of TTD benefits in the amount of $8,737.37. By the time they filed the FAL, Respondents had paid $89,605.47 in TTD benefits. Claimant's indemnity benefits were "capped" at $80,868.10 because his rating is less than 26%. Based on the applicable statutory cap, Claimant was overpaid $8,737.37 ($89,605.47 – $80,868.10 = $8,737.37).

ORDER

It is therefore ordered that:

1. Claimant's request to overcome the DIME's MMI date of July 15, 2015 is denied and dismissed.

2. Claimant's request to overcome the DIME's 9% whole person impairment rating is denied and dismissed.

3. Respondent shall pay for reasonable, necessary, related, and authorized medical benefits after MMI to relieve the effects of Claimant's injury and prevent deterioration of his condition, including Depakote.

4. Claimant's request for home health services requested by Dr. Goodell is denied and dismissed.

5. Respondents may claim an overpayment of $8,737.37.

6. Any issues not determined herein, or otherwise closed by operation of law, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Office of Administrative Courts

ISSUES

I. Whether Claimant has established, by a preponderance of evidence, that her November 7, 2011 claim should be reopened due to a mistake.

II. If there was a mistake, and the claim should be reopened, whether Claimant has demonstrated, by a preponderance of the evidence, that she sustained a compensable injury to her bilateral shoulders, neck, and back on November 7, 2011 in addition to her admitted upper extremity injuries.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following Findings of Fact:

Treatment During Relevant Time Period

1. Claimant slipped and fell at work on November 7, 2011, injuring multiple body parts. (Ex. 6, p. 48). Claimant reported the injury to Employer the same day. The First Report of Injury states "multiple [body] parts" were involved and "multiple injuries" were sustained. Those injuries and body parts were then identified however, only as "both knees, left foot, etc". Claimant worked for employer, N-Link Corporation, from November 2009 through July 31, 2015. Her job title was digital training manager and her job duties consisted of setting up computers in classrooms, signing up soldiers for training and submission of reports.

2. Claimant testified at hearing that her foot became caught on a sidewalk, causing her to fall to the ground. She fell forward and to the left. Her knees struck the ground first, and then her hands, but her hands then slipped out from underneath her, causing the left side of her body to strike the ground. Claimant recalled at hearing experiencing pain "all over [her] body" after the fall, with the primary symptoms coming from the knees, left hip, and both hands. She testified that her upper extremities were the main focus of her pain complaints at the time; however, she recalled beginning to experience upper arm/shoulder, neck, and back pain after the incident.

3. Claimant testified that she assumed a claim was filed with the Insurer after the incident occurred; however, she was never contacted by anybody from the insurer after the first report of injury was filed. Ms. Beatriz Diaz, the current adjuster for this claim, testified at hearing, and confirmed that nobody from the Insurer contacted Claimant until January of 2013.

4. Claimant was seen on November 7, 2011, at Fort Carson Army facility. She complained of pain only in her wrists and left knee. X-rays taken of those body parts were normal. There were no complaints of neck, shoulders, or back. (Exhibit GA; pp. 23A-23 G).

5. Claimant was not represented by an attorney from the time of the November 7, 2011 fall until January of 2015. At no point during this time did Claimant receive a designated provider list from either the Employer or the Insurer. As a result, Claimant sought treatment from Evans Army Community Hospital ("Evans ACH"), as she was not familiar with the Workers Compensation process.

6. A December 5, 2011 note from Evans ACH indicates that Claimant was reporting progressive right hand numbness in pain over the past month. An EMG was requested to better assess the condition. (Ex. 9, p. 75). She was diagnosed with carpal tunnel syndrome by Dr. Karl Brewer by January 17, 2012. In the "Vitals" note written by a Ms. Balinda Block, it states Claimant was having left lower back pain. Dr. Brewer also documented at this appointment that Claimant had recent onset of abdominal pain and "left posterior lower back" pain. Dr. Brewer concluded Claimant had bilateral carpal tunnel syndrome which had failed to resolve with splinting. A steroid injection was then considered.

7. On August 10, 2012, Claimant was seen by Dr. Barbara Hainsworth with a complaint of left shoulder pain, which developed *"last night".* There's no mention of the fall of November 7, 2011 (Exhibit K; pp. 36-41).

8. On September 21, 2012, Claimant was seen for chronic low back pain. It was noted that her back pain occurred when standing, cooking, doing chores, and bending to help her daughter. She was trying to walk for exercise, but the back pain became worse, with pain extending down to her left leg. There was no mention of a November 7, 2011, accident as the cause of her back pain complaints (Exhibit L; pp. 44-45).

9. Claimant now asserts increasing pain in her neck following this fall on November 7, 2011. However, she was evaluated on January 30, 2012, by Dr. White and her neck revealed full range of motion without limitation (Exhibit J; pp. 31-35). On December 3, 2012, Claimant was again evaluated by Dr. White and it was noted she had full range of motion without limitation of her neck and a negative Spurling's exam. (Exhibit N; pp. 49-52)

10. Claimant eventually underwent a bilateral carpal tunnel release with Dr. Chance Henderson at Evans ACH on February 8, 2013. (Ex. 9, p. 118). The August 10, 2012 note from another physician from Evans ACH, Barbara Hainsworth, documents that Claimant "has *developed* left shoulder pain."

11. The medical report mentions chronic back pain for the past 21 years. Claimant explained at hearing that she did have some degree of back "aches" prior to the fall at work, but Claimant now states that the pain became more severe after the

November 7, 2011 fall to the point where it began affecting her ability to function. Recalling the September 21, 2012 note specifically, Claimant testified that she disagreed that she had back pain for the past twenty-one years after her pregnancy. She explained that the pain prior to the fall was basic “achiness” and “tightness” that could be alleviated with stretching and did not restrict her from performing any activities.

12. In a note from another physician at Evans ACH, Dr. Mark Blackley, it was documented on December 11, 2012 that Claimant continued to have severe bilateral wrist pain, but was now also having “some posterior neck pain” at this time. (Ex. 9, p. 111).

13. A second 'First Report of Injury' for Claimant’s November 7, 2011 injury was filed on January 14, 2013. (Ex. 6, p. 50). Insurer's Adjuster, Beatriz Diaz, testified that it was after the filing of this second first report of injury in January of 2013 that somebody from the Insurer first reached out to contact Claimant. A general admission of liability was then filed, accepting liability for the injuries to both hands.

14. Claimant established contact with Ms. Diaz after the February 2013 surgery. She was informed by Ms. Diaz that if she wanted to receive compensation for lost wages, she would need to treat with a workers’ compensation doctor, at which time Ms. Diaz sent Claimant to Dr. Gregg Martyak for treatment. Dr. Martyak was only treating Claimant for her hands and wrists, but not her shoulders, neck, or back.

15. Dr. Martyak opined as of December 31, 2013, that Claimant would likely need a left cubital tunnel release and a revision carpal tunnel release. (Ex. 8, p. 58). On January 27, 2014, Dr. Martyak performed a left revision median nerve neuroplasty at the wrist and a left ulnar nerve neuroplasty at the elbow. *Id.* at 59.

16. Claimant continued treating at Evans ACH for her other conditions that had not yet been accepted as part of her claim. On March 17, 2014, Claimant presented to Dr. Robert Cowan at Evans ACH complaining of bilateral shoulder pain, with pain at the base of the left side of her neck, which was documented as “Pain started after a fall in 2011.” (Ex. 9, p. 123). Her right shoulder pain radiated toward her ear and to the right collarbone area and the left shoulder pain radiated to the base of the left neck. She noted that the pain had started after fall in 2011 and was now 10/10. (Exhibit T; pp. 78-81). This is the first mention of shoulder pain related to the fall in November 7, 2011, a period of almost three years.

17. On May 20, 2014, Claimant was referred to Dr. Bissell for chronic low back pain. She also complained of neck, mid back, and bilateral upper limb pain. He noted that claimant had fallen in November 2011. His diagnosis was status post bilateral carpal tunnel release, cubital tunnel release, chronic low back pain, widespread soft tissue pain syndrome with nonrestorative sleep, cognitive dysfunction and possible fibromyalgia. Her neck and shoulders had full range of motion. Symptoms were noted to be nonspecific and widespread (Exhibit U; p. 86).

18. On June 24, 2014, MRIs were taken of Claimant's lumbar spine (mild degenerative changes), right shoulder (no atrophy of the muscle bellies of the rotator cuff and no tears) and neck (mild degenerative changes). (Exhibit W; pp. 89-91).

19. On July 10, 2014, Dr. Cowan noted that Claimant was reporting shoulder pain caused by a fall on her outstretched hands in November of 2011. (Ex. 9, p. 126). Dr. Cowan concluded that Claimant's shoulder injuries were more likely a result of repetitive stress from work. He also felt Claimant's lower back pain was a repetitive stress injury, and not from the November 2011 fall.

20. On August 14, 2014, Claimant was seen in physical therapy by Stephen Burchfield. Claimant had bilateral clavicular joint inflammation present for one month after a heavy workout at the gym. (Exhibit Z; p. 99).

21. On August 25, 2014, Claimant filed a Worker's Claim for Compensation with CNA for neck, shoulder, and back problems, listing a date of injury of July 10, 2014. Claimant indicated that she was forced to file a new claim. Ms. Diaz testified that based on Dr. Cowan's record of July 10, 2014, the request to file a new claim was based on information from the physician. Furthermore, Claimant filed a Worker's Claim for Compensation with the Division of Worker's Compensation on February 12, 2015, and specifically noted repetitive motion injury to her left wrist, right wrist, and left and right arms. Claimant does not identify any neck or low back issues. (Exhibit GGG: p. 265).

22. X-rays were taken on September 10, 2014, of the left shoulder which showed mild AC joint arthrosis without other abnormality. (Exhibit BB; p. 101).

23. On September 23, 2014, Dr. Bissell performed bilateral L2 through S1 medial branch blocks. (Exhibit CC; pp. 102-103). An intake form of October 22, 2014, shows widespread body pain (Exhibit Y; p. 94).

24. On December 8, 2014, Dr. Bissell injected claimant's right shoulder and on February 8, 2015, he performed an injection of her left shoulder. Dr. Bissell indicated by March 23, 2015, the shoulder conditions he was treating were at MMI with no impairment. (Exhibit DD; pp. 104-105).

25. On March 17, 2015, Claimant was seen by Dr. Bissell for knee complaints and he noted widespread body pain, much of which was due to fibromyalgia. With regard to her low back condition, he did not plan on repeating her lumbar medial branch blocks due to her negative response to the diagnostic injection. He also did not plan to repeat injections to her shoulders. (Exhibit GG; pp. 118-119).

26. On March 23, 2015, Dr. Simon Blau provided ratings for Claimant's elbows and wrists. Dr. Blau provided claimant with a 15% left upper extremity impairment and a 3% right upper extremity impairment. Dr. Blau performed an evaluation of her cervical spine (within normal limits, good range of motion, non-tender to palpation, negative Spurling tests); Upper extremities (no obvious deformities; full range of motion, muscle strength 5/5); and low back (no obvious deformities, non-tender

to palpation, good range of motion, negative straight leg raises). (Exhibit HH; pp. 120-122).

Claimant's Earlier Medical History

27. Claimant has a history of mental or psychological issues. On December 2, 2008, Claimant complained of electrical type shocks from her head down to her feet, numbness on the left side, anxiety, and depression. MRIs of the brain and cervical cord were normal. Dr. Karl Brewer opined that his only explanation would be somatization of anxiety and depression (Exhibit D; pp. 11-13).

28. Claimant also has a history of neck and back complaints. Her low back pain began 21 years prior to 2011, after a pregnancy. Her neck pain began 12 years prior to the date of injury as a result of motor vehicle accident. As of May 25, 2011, claimant was seen in physical therapy for neck, shoulder, and low back pain (Exhibit F; p. 19) (Exhibit L; p. 44).

Testimony Regarding the Claims Process

29. Claimant testified that she contacted Ms. Diaz about her shoulder, neck, and back complaints that she was having at this time which she then attributed to her fall in November of 2011. According to Claimant, Ms. Diaz instructed her to go back to her PCP for additional testing and then call her back. Claimant also testified that she did not experience any other falls in 2011.

30. Claimant testified that she contacted Ms. Diaz again after the additional testing with Dr. Cowan. She said it was Ms. Diaz's suggestion to open a new claim based on the July 10, 2014 note from Dr. Cowan suggesting repetitive stress injuries, and using July 10, 2014 as the date of the injury for the claim for her bilateral shoulders. Claimant ended up filling out a second claim for workers' compensation benefits based on Ms. Diaz's instruction. The First Report of Injury, completed on August 19, 2014, reports injuries to multiple body parts due to repetitive stress. (Ex. 7, p. 51). The handwritten report notes injuries to the neck, shoulder, and back due to repetitive stress. Claimant testified that she had disagreed with her conditions being attributed to repetitive stress, but followed the instruction of Ms. Diaz in filing the claim in this manner.

31. On direct examination, Ms. Diaz testified that Claimant never reported to her that she alleged to have injured her shoulders, neck, and lower back in the November 2011 fall. It was her testimony that she knew nothing about the shoulders, neck, and back, until after the July 10, 2014 claim was already opened, assigned to a different adjuster, and then transferred to her per Claimant's request. Ms. Diaz was specifically asked if she ever instructed Claimant to file a repetitive stress injury claim for the shoulder. She answered, "No, I did not."

32. Ms. Diaz testified that she did email Claimant throughout the claim and confirmed her email address to be Beatriz.Diaz@cna.com. Ms. Diaz was asked about an email dated August 12, 2014 from her email address to the email address of

Claimant that read, “If you feel that these issues with your neck and back are related to a work injury, yes, you’ll need to file a separate claim for these body parts.” Ms. Diaz did not specifically recall that email, as she does not keep her emails for that length of time; however, she conceded, “but I guess I did.”

33. Ms. Diaz said that she emailed Claimant on July 8, 2014, asking about medical records related to the shoulder injuries. Ms. Diaz conceded that she emailed Claimant on May 12, 2014, indicating she would be reviewing the claim to determine if the bilateral shoulders would be an accepted part of the November 11, 2014 claim. Ms. Diaz did not know why these emails were not reflected in the claim notes in her system.

34. Claimant testified that after filing the July 10, 2014 claim, she was again not provided with a designated provider list from either the insurance carrier or the employer. Claimant ended up receiving treatment from Dr. John Bissell for her shoulders, neck, and back through a referral from Dr. Cowan when Respondents failed to provide Claimant with a workers’ compensation physician. Claimant testified that Dr. Bissell began treating Claimant for her back and then also for her shoulders, but never got around to treating her neck. Claimant only stopped treating with Dr. Bissell after she began receiving bills from Dr. Bissell that were not being paid for by Respondents.

35. *Claimant testified that the mistake was not that Dr. Polanco placed her at MMI in 2011. It was not a mistake that Dr. Polanco did not include or rated the neck, shoulder or back.* The mistake, she said, was that those body parts were mistakenly placed under the 2014 claim.

36. A General Admission of Liability was filed on March 20, 2015 for the July 10, 2014 claim. (Ex. 4). Ms. Diaz testified that Respondents accepted liability for Claimant’s bilateral shoulder injuries as part of the July 10, 2014 claim.

Expert Medical Opinions

37. Dr. Martyak placed Claimant at MMI for her bilateral extremity injuries, the accepted injuries under the November 2011 claim, on October 8, 2014. (Ex. 8, p. 69). Dr. Shimon Blau performed the impairment rating for these injuries. (Ex. 12).

38. Claimant subsequently sought a Division Independent Medical Examination (DIME) with Dr. Frank Polanco for the November 2011 claim. The DIME took place on August 24, 2015. (Ex. 13). Dr. Polanco noted at the outset of his report that a second claim was opened in July of 2014 for her back, shoulders, and neck pain. Under the heading, “Current Complaints,” Dr. Polanco only documented those complaints related to the upper extremities. Dr. Polanco affirmed MMI for the bilateral upper extremities and provided impairment ratings for the upper extremities.

39. Respondents filed a Final Admission of Liability on October 14, 2015 for the November 2011 claim after the DIME with Dr. Polanco was concluded. (Ex. 3). Claimant did not object to this final admission to challenge the opinions of Dr. Polanco.

40. Respondents sent a letter to Dr. Bissell on July 1, 2016. In his response, he acknowledges that he had been treating Claimant for her bilateral shoulder conditions as part of the July 10, 2014 claim. He also indicated Claimant was at MMI for the shoulders as of March 23, 2015 with a 0% impairment rating. (Ex. 11, pp. 194-95).

41. Claimant, disagreeing with both MMI and the lack of the impairment rating, then sought a DIME for the July 10, 2014 claim. This was performed by Dr. Caroline Gellrick on November 1, 2016. (Ex. 16). Dr. Gellrick noted, "The patient is symptomatic for headaches, neck pain, midback pain, low back pain, arms, legs dating back to 2011." Claimant reported to Dr. Gellrick that she attributed all of her symptoms to the fall in 2011, and that the July 2014 claim was only opened as a result of the request by Ms. Diaz. Dr. Gellrick then diagnosed Claimant with a bilateral shoulder strain with evidence of positive impingement and a partial rotator cuff tear of the left shoulder, all attributable to the November 2011 fall.

42. Dr. Gellrick opined that Claimant's condition did not meet the criteria for cumulative trauma. (Ex. 16, p. 267). However, "What [Claimant] does meet with a very clear history is falling down on the job site in 2011 injuring the hands, forearms, and both shoulders." She explained that, for a partial rotator cuff tear to occur in that fashion, it usually presents in the form of trauma, such as the fall in 2011 that caused force to jolt up the arms to the shoulders. Dr. Gellrick concluded, "There is no claim that references July 10, 2014." She did provide Claimant with impairment ratings of 8% scheduled for each shoulder, but as a result of the November 2011 claim.

43. It was only after Dr. Gellrick opined that Claimant's conditions were related to the November 7, 2011 fall that an application for hearing was filed to reopen the November 2011 claim based on the bilateral shoulders, neck, and back, erroneously being filed as part of a July 10, 2014 claim. Dr. Gellrick and Claimant agree that this was done in error. (Ex. 1).

44. Dr. Eric Ridings was retained by Respondents to perform an independent medical examination of Claimant. Dr. Ridings opined in his July 11, 2016 report that Claimant did not have any bilateral shoulder condition. Claimant complained of pain in her entire lumbar region, left lower extremity numbness, left shoulder and left neck pain. She also had pain in the left knee and left hip with zero improvement since the date of onset. Her diagram showed diffuse and widespread pain. (Respondents' Exhibit PP; Bate Stamp 146-169).After reviewing her records, it was Dr. Ridings' opinion that claimant's condition was most consistent with fibromyalgia, which is not an occupational condition. This was on top of her bipolar disorder, obsessive-compulsive disorder and anxiety. He noted that regarding upper extremities, particularly shoulders, he did not believe this condition was related to her work. He further stated that her shoulders, neck, mid/low back complaints were most likely contributed to fibromyalgia, or entirely due to fibromyalgia, without any occupational relationship. (Respondents' Exhibit RR; Bate Stamp 146-168).

45. Dr. Ridings was asked to review the medical records and Dr. Gellrick's report and did so on April 3, 2017. He testified that following the accident of November 2011, there were no complaints in the medical records of claimant's shoulders, neck or low back. He noted significant pre-existing conditions and complaints for her low back, her neck and shoulders. Claimant had pre-existing complaints which could not be explained by physical testing or clinical examination and were determined to be somatization. Specifically, one-year post injury in September 2012, claimant had complaints of low back problems as related to exercise, there is no mention of a fall. He indicated the x-rays taken in 2012 were normal for her age. He also agreed with Dr. Bissell that claimant's diagnosis was consistent with fibromyalgia. This is supported by records from Evans Army Hospital in January and February 2017, which notes a long history of fibromyalgia. Dr. Ridings' examination and the pain diagrams were consistent with fibromyalgia, noting 15 of 18 tender points, which is a criterion for diagnosing fibromyalgia.

46. Dr. Ridings issued a subsequent report on April 3, 2017 after issuance of Dr. Gellrick's DIME report. (Ex. 14, pp. 232-40). Dr. Ridings agreed with Dr. Gellrick that falling on outstretched arms "could" cause a rotator cuff tear; however, he felt the November 2011 fall did not do that in this case based on a lack of medical documentation. He did not feel that any of Claimant's shoulder, neck, or back symptoms were related to the November 2011 fall. Dr. Ridings testified by deposition on May 1, 2017 consistently with the information detailed in his multiple reports.

47. Dr. Jack Rook performed an IME of Claimant on July 21, 2016. (Ex. 15, pp. 241-254). Claimant reported to Dr. Rook the same history of events, that she did have some degree of neck and back aches and pains prior to November of 2011, but it was the fall that caused a marked increase in her symptoms. Dr. Rook diagnosed Claimant has having chronic myofascial neck pain, chronic myofascial low back pain with facet mediated pain and left SI joint dysfunction, and chronic pain of both shoulders with impingement of the right shoulder and rotator cuff tearing of the left shoulder. Dr. Rook also agreed that there was no legitimate July 10, 2014 claim, and noted that the medical records for Claimant are simply not well documented. Dr. Rook notes the fact that Claimant was naïve to the workers' compensation system originally and was not assigned an occupational medicine doctor to manage her case. (Ex. 15, p. 253).

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the

necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). While mistakes were plainly made by Insurer in processing Claimant's original injuries, the ALJ is not persuaded that she was instructed, effectively against her will, to characterize her injuries as repetitive, if they were not. The ALJ finds the Claimant to be an unreliable medical historian.

Reopening of the November 7, 2011 Claim

D. Section 8-43-303(1), C.R.S. provides that "at any time within six years after the date of injury, the director or an administrative law judge may, after notice to all parties, review and reopen any award on the ground of fraud, an overpayment, an error, a mistake, or a change in condition…" *Standard Metals Corp. v. Gallegos*, 781 P.2d 142 (Colo. App. 1989). The party seeking to reopen bears the burden of proof to establish grounds for reopening. *See Garcia v. Qualtek Manufacturing*, W.C. No. 4-391-294 (ICAO August 13, 2004). When a party seeks to reopen based on a mistake the ALJ must determine "whether a mistake was made, and if so, whether it was the type of mistake which justifies reopening." *Travelers Ins. Co. v. Indus. Comm'n*, 646 P.2d 399, 400 (Colo. App. 1981). An ALJ has broad discretionary authority to determine if a workers' compensation claimant has met her burden of proof in support of reopening a closed claim. *Kilpatrick v. Industrial Claims Appeals Office*, 356 P.3d 1008 (Colo. App. 2015) (rehearing denied July 30, 2015). When evaluating whether a mistake justifies reopening, the ALJ may consider whether the mistake could have been rectified or avoided by the timely exercise of a party's rights prior to closure of the claim. Indus.

Comm'n v. Cutshall, 164 Colo. 240, 433 P.2d 765 (1967); Klosterman v. Indus. Comm'n, 694 P.2d 873 (Colo. App. 1984).

E. Pursuant to § 8-43-201(1), C.R.S., the party attempting to modify an issue that previously has been determined by an order or admission of liability bears the burden of proof. *Section 8-43-201(1), C.R.S.*; *Dunn v. St. Mary Corwin Hospital*, W.C. No. 4-754-838 (Oct. 1, 2013); *see also Salisbury v. Prowers County School District*, W.C. No. 4-702-144 (June 5, 2012); *Barker v. Poudre School District*, W.C. No. 4-750-735 (July 8, 2011). Section 8-43-201(1), C.R.S. was added to the 8-43-201 in 2009 and provides, in pertinent part:

> …a party seeking to modify an issue determined by a general or final admission, a summary order, or a full order shall bear the burden of proof for any such modification. (2) The amendments made to subsection (1) of this section by Senate Bill 09-168, enacted in 2009, are declared to be procedural and were intended to and shall apply to all workers' compensation claims, regardless of the date the claim was filed.

F. The principal aim of the 2009 amendment to § 8-43-201(1), C.R.S. was to reverse the effect of *Pacesetter Corp. v. Collett*, 33 P.3d 1230 (Colo. App. 2001). That decision held that while the respondents could move to withdraw a previously filed admission of liability, the respondents were not actually assessed the burden of proof to justify that withdrawal. The amendment to § 8-43-201(1), C.R.S. placed that burden on the respondents and made such a withdrawal the procedural equivalent of a reopening. In this case, Claimant is seeking to modify an issue determined by the October 14, 2015 Final Admission of Liability for W.C. Number 4-913-733-02. Therefore, the burden is on Claimant to determine that she did sustain compensable injuries to her shoulders, neck, and back, as a result of the November 7, 2011 fall. The ALJ concludes that Claimant has not met her burden of proof to establish a compensable injury to her bilateral shoulders, neck, and lower back as a result of the November 7, 2011 fall.

G. Claimant has failed to meet her burden of proving that there was a mistake that her neck, shoulders, and mid/low back were related to the fall of November 7, 2011. The records don't support a causal connection between the incident of November 7, 2011, and claimant's neck, shoulder, and mid/low back complaints. In addition, Claimant has significant pre-existing conditions to include pre-existing chronic back, neck pain and shoulder problems. The ALJ is persuaded that claimant has a non-work-related condition, fibromyalgia. Dr. Ridings and Dr. Bissell opined this condition accounts for her widespread and diffuse pain complaints as noted on multiple providers' pain diagrams.

H. Claimant has also not shown justifiable mistake, which would warrant reopening. If the mistake is simply the extent of Claimant's injury (what body parts are related to the 2011 claim rather than related to 2014 claim), Claimant should have challenged the DIME at the time Respondents' filed the final admission of liability. *See Justiniano v. ICAO*, 2016 COA 83.

I. Dr. Ridings' testimony is persuasive that there was no mistake on the part of Dr. Polanco and Dr. Polanco was correct in determining claimant had reached maximum

medical improvement and correctly rated and included those body parts related to the November 7, 2011 injury. *Claimant even testified to this effect.* The DIME physician reviewed pertinent medical records produced both before and after MMI, and up to the date of the DIME appointment on August 24, 2015.

J. In addition, Claimant reported to Dr. Cowan in March 2014, that her shoulders and back conditions were related to the 2011 fall. It was the doctor - not the adjuster - who disputed the relatedness of the body parts to the 2011 and the 2014 case. Claimant apparently believed, and had the necessary information to dispute the DIME's determination of MMI and rated body parts as of the date of the respondents' FAL. Accordingly, a mistake of fact is not sufficient to justify reopening, where it *could have been corrected* prior to closure of the claim. The relevant medical facts were known to Claimant at the time of closure. No new medical facts have come to light which would justify a reopening, and that would excuse Claimant from failing to contest the Final Admission at the time it was filed. Dr. Ridings noted that nothing had materially changed regarding causation between the DIME with Dr. Polanco and the DIME with Dr. Gellrick.

K. Claimant has failed to show, by a preponderance of the evidence, that there was a mistake which would justify reopening of her claim. She has also failed to show, by a preponderance of the evidence, a causal connection between her fall in November of 2011, and the injuries to additional body parts she now complains of.

ORDER

It is therefore ordered that:

1. Claimant's petition to reopen her November 7, 2011 is denied and dismissed.

2. Claimant's claim for medical benefits to treat her shoulders, neck, and lower back under her November 7, 2011 claim is denied and dismissed.

3. Claimant's claim for medical reimbursement for treatment for her shoulders, neck and lower back alleged to be connected to her November 7, 2011 claim is denied and dismissed.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or

service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-003-400-05

CORRECTED FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insure /Respondents.

No further hearings have been held in the above-captioned matter. On June 23, 2017, Respondents filed an "unopposed Motion for Corrected Full Findings of Fact, Conclusions of Law and Order." The decision mailed on June 16, 2017, is hereby corrected.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on May 18, 2017 and June 5, 2017, in Denver, Colorado. The hearing was digitally recorded (reference: 5/18/17, Courtroom 1, beginning at 8:30 AM, and ending at 12:00 PM; and 6/5/17, Courtroom 1, beginning at 1:30 PM, and ending at 3:00 PM).

Claimant's Exhibits through 11 were admitted into evidence, without objection. Respondents' Exhibits A through L were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Claimant, which was filed, electronically, on June 12, 2017. No timely objections were filed and the matter was deemed submitted for decision on June 16, 2017. After a consideration of the proposed decision, the ALJ has modified it and hereby issues the following decision.

ISSUES

The issues to be determined by this decision concern whether or not the Claimant is permanently and totally disabled (PTD); and, post maximum medical improvement (MMI) maintenance medical benefits.

The Claimant bears the burden of proof, by a preponderance of the evidence on both issues.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant is currently seventy-one years of age (date of birth, September 3, 1945). She did not complete high school, however, she received a GED certificate later in life.

2. The Claimant began working for Respondent the Employer on December 1, 1999, and she performed a variety of tasks but was primarily a van driver for patients. Her job duties included helping disabled patient onto the van and occasionally lifting up to 75 lbs.

3. Ultimately, the Respondents filed an amended Final Admission of Liability (FAL), dated January 5, 2017, admitting liability for 14% whole person permanent partial disability (PPD), pursuant to the opinion of Stephen. D. Lindenbaum, M.D., the Division Independent Medical Examiner (DIME) [Exhibit 4]. Respondents admitted for an average weekly wage (AWW) of $542.94.

The Injury

4. The Claimant suffered an admitted low back injury on January 4, 2016, when she slipped on ice and twisted her lower back. She was referred for medical treatment with Dean Prok, M.D. and then she was referred to Nicholas K. Olsen, D.O.

5. The Claimant continued working thereafter until she was terminated on January 14, 2016, for alleged attendance violations. The Claimant currently receives $969.90 per month for Social Security retirement benefits, which are not subject to offset.

6. The Claimant was first placed at maximum medical improvement (MMI) with a zero impairment and thereafter underwent a DIME with Dr. Lindenbaum on December 9, 2016.

7. DIME Dr. Lindenbaum gave the Claimant a 14% whole person permanent medical impairment which was admitted by the Respondents as herein above found. The undisputed MMI date is July 11, 2016. *Id*., bates stamp 12.

8. In his report, dated December 9, 2016, DIME Dr. Lindenbaum stated the opinion that the Claimant has injury- related permanent functional restrictions impacting her ability to function in the work place. He was of the opinion that the Claimant might be able to perform sedentary work, but only if it did not involve any "significant lifting, bending, or stooping. She would not be able to drive a car based on the fact that she is having a lot of issues with her mentation" [Claimant's Exhibit 3. bates stamp 15]. The ALJ finds that it is important to separate the Claimant's physical limitations from her mental limitations. The evidence, in fact, established that the Claimant can drive on a limited basis, however, Dr. Lindenbaum's physical restrictions would prevent the Claimant from performing her pre-injury job duties, in addition to driving

9. The totality of the medical records establishes that the Claimant had a variety of pre-existing medical problems. These problems have been treated at Kaiser and have included right and left hand pain and weakness in August 2011 [Respondents' Exhibit E, bates stamp 132); right hand pain, weakness, numbness and tingling, accompanied by itching on October 20, 2011, [*Id*., bates stamp 136]; hyperventilation with leg and arm numbness on January 17, 2012 [*Id*., bates stamp 138); and, left leg pain accompanied by ringing in her ears, April 28, 2015 [*Id*., bates stamp 141].

10. Despite the Claimant's prior medical problems, she continued to work full duty and was considered to be an "extremely valuable employee" by the Employer one and a half months prior to her injury [Claimant's Exhibit 11, bates stamp 211]. Thus, approximately seven weeks prior to her January 4, 2016, admitted injury, the Claimant received a performance evaluation on November 12, 2015. According to the summary of the evaluation she was reported by the Employer to be "an extremely valuable employee to [the Employer]" Id. [While recent occupational mistakes and attendance problems were listed in the evaluation, the Claimant's most recent concerns were said to revolve around personal matters outside of her job. *Id*.] At that time, according to the Claimant, she was able to perform all of the essential functions of her job, despite occasional pain. The ALJ infers and finds that it would be speculative as to when, if ever, the Claimant could not perform her job because of "recent occupational mistakes" and "attendance problems." It is not speculative but firmly established that Dr. Lindenbaum's physical restrictions, which the ALJ finds more credible than all other opinions to the contrary, would prevent the Claimant from performing her pre-injury job.

11. Authorized Treating Physicians (ATPs) Dr. Pork and Dr. Olsen stated that the Claimant has no restrictions related to her January 4, 2016 injury. For the reasons stated herein below, the ALJ does not find these opinions in this regard credible. It is more likely than not that DIME Dr. Lindenbaum's physical restrictions are more credible. The testimony of Dr. Jacobs is that any restrictions that the Claimant has are the result of pre-existing conditions. For the reasons stated herein below, the ALJ finds Dr. Jacobs' opinions lacking in credibility. Their explanations are heavily premised on the Claimant's "mentation" problems. The ALJ rejects their opinions in favor of DIME Dr. Lindenbaum's opinion, which outweighs their opinions by preponderant evidence.

12. The DIME's opinion on causation, degree of permanent medical impairment, and MMI has been accepted by the Respondents. It has not been sought to be overcome. DIME Dr. Lindenbaum is of the opinion that the Claimant's work related injury has caused a work related permanent medical impairment of 14% whole person, and that the Claimant requires physical restrictions, in addition to any problems that may relate to her mental status. The ALJ finds the opinion of DIME Dr. Lindenbaum concerning the Claimant's restrictions highly persuasive and credible; and, the ALJ soundly rejects the opinions of Dr. Olsen, Dr. Prok and Alexander Jacobs, M.D.

The Claimant's Statements/Functional Capacity Evaluation (FCE)

13. The ALJ finds the Claimant's testimony persuasive and credible. In observing the Claimant at hearing, the ALJ did not see any unusual behavior. Her testimony did not seem to support the "dementia" opinion of Respondents' independent Medical Examiner (IME), Alexander Jacobs, M.D.

14. Over the years of treatment at Kaiser Permanente, the Claimant has occasionally stated that she looked forward to retiring. Regardless of these statements, she did not act on this possibility and continued to work despite her prior physical problems. Indeed, the ALJ takes administrative notice of the fact that someone who is 70 years of age, with a GED and no further education, may look forward to retirement. This alone does not prove an ulterior motive to gain a PTD award, or that retirement is imminent.

15. The Claimant underwent an FCE with. Kristine Couch OTR (occupational therapist) on March 29, 2017. Couch established that the Claimant is limited to sedentary work. According to Couch's work simulation program, the Claimant was non-competitive for reach, crouching/squatting reach, kneeling to standing and back reach, standing position reach, stooping displacement reach, and upper level reach [Claimant's Exhibit 8, bates stamp 150, 151]. Additionally, Couch stated that the Claimant's left foot was noted to catch when stepping forward after she was asked to perform indoor walking tests. *Id*., bates stamp 154. Finally, the Claimant's knuckle to shoulder lifting was limited to 15 lbs. and shoulder to overhead 5 lbs. with lifting and carrying limited to 10 lbs. *Id*., bates stamp 156. Couch evaluated the validity of the

Claimant's effort which demonstrated consistency in 19 of 20 tests. *Id*., bates stamp 154, 200]. Couch did not evaluate the Claimant's "mentation" problems –only her physical limitations.

Respondents' Independent Medical Examination (IME) by Alexander Jacobs, M.D.

16. On the Respondents' behalf, Dr. Jacobs performed an IME on the Claimant on or about April 3, 2017. In a 58-page report, Dr. Jacobs concluded that "neither the back pain nor the cervical symptoms are related to the on-the-job injury **in any way, shape or form** (emphasis supplied). As the poet said, "methinks the he protesteth too much." Based on this characterization, the ALJ infers that Dr. Jacobs has indicated an investment in an outcome of non-causal relatedness. Indeed, his opinion in this regard is contrary to the DIME physician's causal opinion, and Dr. Jacobs' opinion does not make it highly probable, unmistakable and free from serious and substantial doubt that DIME Dr. Lindenbaum was wrong in his causal opinion. Dr. Jacobs also testified at the hearing. He is board certified in Internal Medicine and Geriatrics. Without adequately explaining the basis of his opinion, he stated that the Claimant's "cognitive difficulties are related to some type of dementia." He speculates that this may be related to "Alzheimer's or multi-infarct dementia." Dr. Jacobs does not give a firm diagnosis in this regard nor does he make any appropriate referrals for the Claimant's alleged "dementia." He further states that this is "not in any way, shape or form related to her January 4, 2016 slip and 'non-fall"—an interesting choice of words. Lastly, Dr. Jacobs states the opinion that any work restrictions the Claimant has are "due to her non-injury diagnosis." He had no recommendations for treatment for work-related conditions.

17. The ALJ infers and finds that Dr. Jacobs has categorically rendered opinions that: (1) the Claimant never suffered a compensable injury on January 4, 2016 as admitted and which resulted in 14% whole person PPD; (2) most of the Claimant's problems are attributable to alleged "dementia," although Dr. Jacobs did not do a full work up to firm up a diagnosis of 'dementia" or "Alzheimer's," and none of the Claimant's restrictions are attributable to her work injury "in any way, shape, or form." Indeed, in his testimony at hear, Dr. Jacobs mixed medical opinions with legal conclusion, *e.g."* "the work injury did not "aggravate or accelerate" the Claimant's condition. From an overall standpoint, the ALJ infers and finds that Dr. Jacobs became an effective advocate for the Respondents' theory of the case, thus, his credibility was compromised. Indeed, the ALJ finds that Dr. Jacobs' opinions, categorically, are lacking in credibility and, therefore, are rejected.

Vocational Evaluation of John Macurak

18. The Claimant was evaluated by vocational expert John Macurak at the request of the Claimant. Macurak issued several reports and testified at the hearing [Claimant's Exhibit 9]. His most recent report was completed on April 25, 2017, after he reviewed the FCE performed by Kristine Couch. Macurak was of the opinion that the Claimant was unable to earn any wages in the same or other employment as a result of her January 4, 2016, injury, given the extent of her physical limitations, the work restrictions assigned, her advanced age, and her limited education [*Id*., bates stamp 189]. Macurak noted that the Claimant had limited computer skills (online banking only) and her limited education and advanced age precluded her from earning wages in unknown employment. The ALJ finds Macurak's opinion highly persuasive and credible; and, it outweighs the vocational opinions of Respondents' IME Dr. Jacobs and Respondents' Vocational Evaluator, Katie Montoya.

Vocational Evaluation of Katie Montoya.

19. The Claimant was evaluated by Katie Montoya at the request of the Respondents. Montoya agreed that the Claimant is limited to a sedentary work capacity. There was no persuasive evidence that the Claimant had ever worked in sedentary work, or had transferrable skills to work in sedentary work. Montoya conceded that the Claimant's pre-injury job is characterized as "heavy" work. Montoya's opinion, however, was that the Claimant is employable, based on the opinions of Dr. Olsen, Dr. Prok and Dr. Jacobs who attribute the Claimant's current limitations to pre-existing, non-injury related, restrictions. As found, herein above, these doctors' opinions have been determined to lack credibility. Montoya testified that she did **not** rely on the restrictions given by DIME Dr. Lindenbaum or the limitations arising from Kristine Couch's FCE, although she was aware of both. The ALJ finds that Montoya's reliance on the opinions of Dr. Prok, Dr. Olsen and Dr. Jacobs was misplaced and for this reason, her ultimate opinion, like a house of cards, collapses. Indeed, Montoya did **no** labor market surveys to see if there was any sedentary work that the Claimant could do. The ALJ rejects the opinion of Katie. Montoya as unpersuasive, and lacking in overall credibility.

Permanent Total Disability

20. The Claimant is unable to earn any wages in the same or other employment in her commutable labor market. The "full responsibility rule," applicable to claims for permanent total disability benefits, provides that the industrial injury need not be the sole cause of a claimant's permanent total disability. Under the rule, when an "employer hires an employee who, by reason of a pre-existing condition or by reason of a prior injury, is to some extent disabled, he takes the person with such handicap," and the employer should be liable for a "full award of benefits" if a subsequent industrial injury combines with the pre-existing disability to produce permanent total disability. As

found, the Claimant was able to perform the full range of her job duties before the admitted injury of January 4, 2016. Afterwards, DIME Dr. Lindenbaum gave her physical restrictions whereby she could not perform her pre-injury job duties. She has not worked since she was terminated from employment on January 14, 2016, 10-days after her admitted injury, nor has she earned any wages or been capable of earning any wages.

21. Considering the Claimant's "human factors," including her age of 70; her work history and/or lack of any significant work history; her general physical condition; her education (a GED with no special training); her mental ability, prior training and experience, and the availability of work that she could perform. There is no persuasive evidence of any work the Claimant could perform. There is no persuasive evidence that employment exists or is available in the Claimant's competitive job market, which the Claimant can perform on a reasonably sustainable basis. As found, the Claimant has proven that she is incapable of earning wages in the competitive labor market, on a reasonably sustainable basis, and there is no work reasonably available to her, and this inability is attributable to the admitted injury of January 4, 2016. She could do her job until then and she could not to it afterwards. The Respondents imply that a confluence of the Claimant's pre-existing conditions, including Dr. Jacobs' alleged opinion of "dementia," coincidentally, ripened whereby the Claimant could not work after her admitted injury. This argument is not well taken by the ALJ.

Medical Care and Treatment

22. Any maintenance medical care and treatment to maintain the Claimant at MMI (after July 11, 2016) and prevent a deterioration of her physical condition is causally related to the admitted injury of January 4, 2016 and reasonably necessary. Also, if at the hands of previously authorized medical providers, it is authorized.

Ultimate Findings

23. The ALJ finds that the Claimant's testimony was straight-forward and credible. The permanent medical impairment and physical restrictions, as found herein above, of DIME Dr. Lindenbaum are persuasive and credible. Based on the totality of the evidence, the ultimate opinions of Dr. Prok and Dr. Olsen are lacking in credibility. The ultimate opinions of Dr. Jacobs are significantly lacking in credibility. The vocational opinions, for the reasons found herein above, of John Macurak are more persuasive and credible than the vocational opinions of Katie Montoya.

24. Between conflicting opinions, the ALJ makes a rational choice, based on substantial evidence, to accept the vocational opinion of John Macurak, and to reject the vocational opinion of Katie Montoya. Also, the ALJ makes a rational choice to accept DIME Dr. Lindenbaum's opinions, and to reject the opinions of Dr. Jacobs, Dr. Prok, and Dr. Olsen.

25. The Claimant has proven, by a preponderance of the evidence that she is permanently and totally disabled on account of her admitted injury, and that she is unable to earn any wages in the same or other employment in her competitive labor market, on a reasonably sustainable basis. Regardless of the fact that the Claimant's admitted injury is not the sole cause of her permanent total disability, the admitted injury is "the straw that broke the camel's back." The ALJ finds that the admitted injury was, indeed, a significant causative factor in the Claimant's PTD.

26. The Claimant has proven, by preponderant evidence to entitlement to post-MMI maintenance medical benefits for her physical injuries, after July 11, 2016, to maintain her at MMI and to prevent a deterioration of her condition

27. It has been admitted that the Claimant's AWW is $542.94, 2/3rds of which is $361.96 (the weekly PTD rate), or $51.71 per day.

28. On the date of the Claimant's admitted injury, January 4, 2016, she was 70 years old. Her federal Social Security benefits were retirement benefits, not disability benefits. She never received any Social Security **disability benefits.**

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions

(this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the Claimant's testimony was credible and DIME Dr. Lindenbaum's opinions concerning the Claimant's physical restrictions were credible. The opinions of Dr. Jacobs, Dr. Prok, and Dr. Olsen were lacking in credibility as herein above found. As further found, the vocational opinuions of John Macurak were more credible and persuasive than the vocational opinions of Katie Montoya, which in and of themselves, are dispositive of the PTD issue.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting opinions, the ALJ made a rational choice, based on substantial evidence, to accept the vocational opinion of John Macurak, and to reject the vocational opinion of Katie Montoya. Also, the ALJ made a rational choice to accept DIME Dr. Lindenbaum's opinions, and to reject the opinions of Dr. Jacobs, Dr. Prok, and Dr. Olsen.

Permanent Total Disability

c. An employee is permanently and totally disabled if she/he is unable to earn any wages in the same or other employment. § 8-40-201(16.5) (a) C.R.S. The "full responsibility rule," applicable to claims for permanent total disability benefits, provides that the industrial injury need not be the sole cause of a claimant's permanent total disability. Under the rule, when an "employer hires an employee who, by reason of a pre-existing condition or by reason of a prior injury, is to some extent disabled, he takes the person with such handicap," and the employer is liable for a "full award of benefits" if a subsequent industrial injury combines with the pre-existing disability to produce permanent total disability. See *United Airlines, Inc. v. Indus. Claim Appeals Office,* 993 P.2d 1152, 1154-1155 (Colo. 2000). The only exception to the established rule is where the industrial injury is not a significant causative factor in a claimant's disability. See *Seifried v. Indus. Comm'n,* 736 P.2d 1262 (Colo. App. 1986) [the claimant suffered from several pre-existing ailments, and the treating physician opined that the claimant had reached maximum medical improvement, and concluded that the claimant remained disabled because of non-occupational factors—in *Siefried,* the pre-existing factors contributed 95% to the PTD and the industrial injury only 5%].; *Lindner Chevrolet v. Indus. Claim Appeals Office,* 914 P.2d 496 (Colo. App. 1995). *See also Holly Nursing Care Center v. Indus. Claim Appeals Office,* 992 P.2d 701 (Colo. App. 1999). In the present case, as found, the Claimant's admitted physical injuries which resulted in 14% permanent medical impairment, **significantly** contributed to her PTD. Consequently, *Siefried* is inapplicable to the facts in the present case.

d. In determining whether a claimant is permanently and totally disabled, an ALJ may consider a claimant's "human factors," including the claimant's age, work history, general physical condition, education, mental ability, prior training and experience, and the availability of work that the claimant could perform. *Weld County School District RE-12 v. Bymer,* 955 P.2d 550 (Colo. 1998*); Joslin's Dry Goods Co. v. Indus. Claim Appeals Office,* 21 P.3d 866 (Colo. App. 2001). The term "any wages" means more than zero wages. *See Lobb v. Indus. Claim Appeals Office,* 948 P.2d 115 (Colo. App. 1997); *McKinney v. Indus. Claim Appeals Office,* 894 P.2d 42 (Colo. App. 1995). The critical test is whether employment exists that is reasonably available to a claimant under his or her particular circumstances. *Weld County School Dist. Re-12 v. Bymer*, *supra*. This means whether employment is available in the competitive job market, which a claimant can perform on a reasonably sustainable basis. *See Joslins Dry Goods Company v. Indus. Claim Appeals Office,* 21 P.3d 866 (Colo. App. 2001). As found, the Claimant has proven that she is incapable of earning wages in the competitive labor market, on a reasonably sustainable basis, and there is no work reasonably available to her. Permanent total disability does not need to be proven by medical evidence. *See Baldwin Construction, Inc. v. Indus. Claim Appeals Office,* 937 P.2d 895 (Colo. App. 1997). *Calvert v. Roadway Express, Inc.,* W.C. No. 4-355-715 [Indus. Claim Appeals Office (ICAO), November 27, 2002]; *In re Claim of Randy Blocker*

v. Express Personnel, W.C. No. 4-622-069-04 (ICAO, July 1, 2013). As further found, the Claimant's "human factors," including her age of 70; her work history and/or lack of any significant work history; her general physical condition; her education (a GED with no special training); her mental ability; prior training and experience;, and, the lack of persuasive evidence about the availability of work that she could perform support the conclusion that she is permanently and totally disabled.. There is no persuasive evidence of any work the Claimant could perform. There is no persuasive evidence that employment exists or is available in the Claimant's competitive job market, which the Claimant can perform on a reasonably sustainable basis. As found, the Claimant has proven that she is incapable of earning wages in the competitive labor market, on a reasonably sustainable basis, and there is no work reasonably available to her, and this inability is attributable to the admitted injury of January 4, 2016. She could do her job until then and she could not to it afterwards. The Respondents imply that a confluence of the Claimant's pre-existing conditions, including Dr. Jacobs' alleged opinion of "dementia," coincidentally, ripened whereby the Claimant could not work after her admitted injury. This argument is rejected.

e. Under § 8-40-201(16,5)(a), C.R.S., the overall objective is to determine whether, in view of all these human factors and vocational factors, employment is "reasonably available to a claimant under his or her particular circumstances." *Weld County Sch. Dist. RE-12 v. Bymer, supra* at 558. Also see *Joslin's Dry Goods Co. v. Industrial Claim Appeals Office*, 21 P. 3d 866 (Colo. App. 2001). This requires a determination of whether employment is available in the competitive job market which the Claimant can perform on a reasonably sustainable basis. Here such employment is not available to the Claimant and the Respondents have failed to show that it is. Rather, the Claimant has proven that she is not capable of earning wages in the same or other employment.

Post-MMI Maintenance Medical Benefits

f. An employee is entitled to continuing medical benefits after MMI if reasonably necessary to relieve the employee from the effects of an industrial injury. *See Grover v. Indus. Comm'n of Colorado*, 759 P.2d 705 (Colo. 1988). The record must contain substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve a claimant from the effects of an injury or to prevent further deterioration of his condition. *Stollmeyer v. Indus. Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995); *Grover v. Indus. Comm'n, supra*. Such evidence may take the form of a prescription or recommendation for a course of medical treatment necessary to relieve a claimant from the effects of the injury or to prevent further deterioration. *Stollmeyer v. Indus. Claim Appeals Office, supra*. An injured worker is ordinarily entitled to a general award of future medical benefits, subject to an employer's right to contest causal relatedness and reasonable necessity. *See Hanna v. Print Expediters,* 77 P.3d 863 (Colo. App. 2003). Treatment to **improve** a claimant's condition does **not** fall under the purview of *Grover* benefits. *Shalinbarger v. Colorado*

Kenworth, Inc., W.C. No. 4-364-466 [Indus. Claim Appeals Office (ICAO), March 12, 2001]. As found, Claimant is entitled to maintenance medical care, which is reasonably necessary to address the admitted physical injury

Social Security Retirement Benefits

g. Section 8-42-103 (1) (c)(I), C.R.S., provides for an offset of one-half of Federal Social Security Disability benefits. Subsection (c)((I) begins"…where it is determined that periodic **disability** (emphasis supplied) benefits granted by the federal "Old-Age Survivors, and **Disability** (emphasis supplied) Insurance Amendments…." The Subsection provides for an offset of one-half of the Federal benefits. In the Respondents "Motion" for a corrected decision, the Respondents cite *Zerba v. Dillon Companies,* 292 P.l3d 1051, **2012 COA 78,** wherein Division 5 of the Court of Appeals determined that Social Security Retirement benefits (although having nothing to do with **disability**) were subject to the 50% offset. The Court distinguished military pension benefits on the basis that the employer had nothing to do with the military pension. Interestingly, the Employer herein had nothing to do with the Claimant's Social Security Retirement benefits. Underlying the Federal social security offset is the rationale that "double payments" for disability were not appropriate. The ALJ herein is bound to follow legal precedent even if he believes the rationale underlying the precedent is wrong. As found, in this case, the Claimant never received social security **disability** benefits –only **retirement** benefits, which she would have received regardless of her work-related injury –in the same way she would have received an annuity that she funded herself – the difference being that the Federal government and not the Employer paid into the retirement benefits. Judges are under an obligation to follow precedent except in the rarest of circdumstances. *See In Re Kline,* No. 151 (Cal. Comm'n on Jud. Performance, August 19, 1999); *Morrow v. Hood Comm'ns, Inc.,* 59 Cal,. App. 4th 924, 926-27 (Kline, dissenting). Nonetheless, lawyers and judges are under an obligation to criticize what they believe to be wrong decisions. As Abraham Lincoln commented on the *Dred Scott* opinion:

> We believe, as much as Judge Douglas, (perhaps more) in obedience to, and respect for the judicial department of government. We think its decisions on Constitutional questions, when fully settled, should control, not only the particular cases decided, but the general policy of the country, subject to be disturbed only by amendments of the Constitution as provided in the instrument itself. More than this would be revolution. But we think the *Dred Scott* decision is **erroneous** (emphasis supplied). We know the court that made it, has often over-ruled its own decisions, and we shall do what we can to have it to over-rule this. We offer no resistance to it.

The ALJ herein does not presume to step into Mr. Lincoln's shoes, however, he would implore the appellate courts to re-examine the opinion in *Zerba v. Dillon Companies*. Nonetheless, under *Zerba's* interpretation of § 8-42-103 (1)(c)(I), C.R.S., the Respondents are entitled to offset one-half of the Claimant's Social Security **Retirement** benefits.

Burden of Proof

h. The injured worker has the burden of proof, by a preponderance of the evidence, of entitlement to benefits beyond those admitted. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained her burden on the issue of permanent total disability.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Respondents shall pay the costs of all authorized, causally related and reasonably necessary medical care and treatment for the Claimant's admitted physical injuries to maintain her at maximum medical improvement and to prevent a deterioration of her condition, subject to the Division of Workers' Compensation Medical Fee Schedule.

B. The Respondents hall pay the Claimant permanent total disability benefits of $361.96 per week, or $51.71 per day from July 11, 2016 for the rest of the Claimant's natural life. The period between the maximum medical improvement date of July 11, 2016 and the last session of the hearing , June 5, 2017, both dates inclusive, is 330 days. Past due permanent total disability benefits equal $17,064.30, however, Respondents may take a credit for all permanent partial disability benefits paid pursuant to the latest Final Admission of Liability, dated January 5, 2017. Further, beyond the credit period, Respondents shall continue to pay the Claimant permanent total disability benefits of $361.96 per week for the rest of the Claimant's natural life.

C. **Under the holding in *Zerba v. Dillon Companies,* 292 P.3d 1051 (Colo. App. Div.5 2012), 2012 COA 78,** the Respondents are entitled to offset one-half of the Claimant's federal Social Security **Retirement** benefits unless and until *Zerba* is over-ruled.

D. Respondents shall pay the Claimant interest at the rate of eight percent (8%) per annum on all indemnity benefits due and not paid when due.

E. Any and all issues not determined herein are reserved for future decision.

DATED this_____day of June 2017.

_____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

ISSUES

1. Whether Claimant has produced clear and convincing evidence to overcome the Division Independent Medical Examination (DIME) opinion of Timothy O. Hall, M.D. that she suffered a 0% permanent impairment rating for her June 18, 2015 admitted lower back injury.

2. Whether Claimant has established by a preponderance of the evidence that she is entitled to receive reasonable, necessary and related medical maintenance benefits designed to relieve the effects of her June 18, 2015 lower back injury or prevent further deterioration of her condition pursuant to *Grover v. Industrial Comm'n.,* 759 P.2d 705 (Colo. 1988).

FINDINGS OF FACT

1. Claimant worked for Employer as a Housekeeper. On June 18, 2015 she was lifting a heavy recycle bag full of cans when she developed lower back pain.

2. Claimant chose to receive medical treatment through Concentra Medical Centers. She underwent conservative care that included injections, physical therapy, diagnostic assessments and massage therapy.

3. On August 7, 2013 Claimant suffered a lower back injury in W.C. No. 4-926-344. On March 21, 2014 John Aschberger, M.D. assigned Claimant a 12% whole person impairment rating for her August 7, 2013 lower back injury. The rating consisted of 5% pursuant to Table 53 of the *AMA Guides for the Evaluation of Permanent Impairment Third Edition (Revised) (AMA Guides*) and 7% for range of motion deficits. Claimant settled W.C. No. 4-926-344 on a full and final basis for $28,400.00.

4. On January 18, 2016 Claimant obtained medical treatment for her June 18, 2015 lower back injury from Authorized Treating Physician (ATP) Albert Hattem, M.D. In reviewing Claimant's prior medical history, Dr. Hattem remarked that Claimant had suffered an industrial lower back injury on August 7, 2013. Claimant had undergone a course of conservative treatment including physical therapy, osteopathic manipulation and a lumbar epidural injection. She received a 12% whole person impairment rating consisting of 5% for a Table 53 diagnosis and 7% for range of motion deficits. Upon physical examination Claimant exhibited significant pain behaviors. Dr. Hattem specifically noted that Claimant "winc[ed] and withdr[ew] with slight palpation of the lumbar spine." He remarked that when he instructed Claimant to "forward flex" she "barely moved at all." Claimant's lack of mobility was inconsistent with her relatively normal lumbar MRI. In fact, the lumbar MRI had revealed "only degenerative disc changes at L5-S1 with left S1 root sleeve deformity that [did] not correspond to [her]

right thigh pain." Dr. Hattem commented that Claimant was approaching Maximum Medical Improvement (MMI).

5. On May 9, 2016 Claimant returned to Dr. Hattem for an evaluation. She reported persistent, unchanged lower back pain associated with periodic bilateral leg pain that she rated at a pain level of 9/10. Dr. Hattem remarked that he did not know why Claimant had not returned for an evaluation since her last visit four months earlier. Although she had obtained medication refills she had not scheduled any return appointments. On physical examination, Dr. Hattem noted that "significant pain behaviors [were] evident." He specifically explained that "[w]hen her lumbar spine is only mildly palpated, she winces and withdraws. When instructed to flex, extend or lateral bend her spine, she barely moves more than a few degrees in any plane. Nonphysiologic signs are present."

6. Dr. Hattem noted that Claimant's lumbar MRI had revealed only degenerative disc changes at L5-S1 with left S1 nerve root deformity that did not correspond to her right thigh pain. Moreover, an EMG/nerve conduction study had been normal. Claimant also underwent treatment and diagnostic testing with Dr. Sacha. Dr. Sacha had observed "multiple red flags in [Claimant's] presentation." Finally, Dr. Sacha administered a right L5-S1 transforaminal epidural spinal nerve block that did not provide relief. Dr. Hattem determined that Claimant had reached MMI. He summarized that Claimant's condition had stabilized, an MRI did not demonstrate a surgical lesion and her pain behaviors "support[ed] the conclusion that ongoing physical interventions" would not be beneficial.

7. Dr. Hattem relied on the *AMA Guides* in assigning Claimant a 0% whole person impairment rating for her June 18, 2015 lower back injury. Initially, he assigned Claimant a 5% whole person impairment rating for her lumbar spine based on Table 53 of the *AMA Guides* "for six months of medically documented pain with none to minimal degenerative changes on structural tests." However, he did not assign a rating for abnormal lumbar range of motion because he did not consider Claimant's demonstrated range of motion to be valid. Dr. Hattem specifically explained that when he instructed Claimant to "flex, extend, or lateral bend her lumbar spine, she barely moved more than a few degrees in any plane. This is not consistent with a relatively normal lumbar MRI. Her demonstrated motion is likely self-limited." He thus assigned Claimant a 5% permanent impairment rating for her June 18, 2015 lower back injury.

8. However, Dr. Hattem also considered apportionment pursuant to the *AMA Guides*. On March 21, 2014 Dr. Aschberger had assigned Claimant a 12% whole person impairment rating for her August 7, 2013 lower back injury in W.C. No. 4-926-344. The rating consisted of 5% pursuant to Table 53 and 7% for range of motion deficits. Dr. Hattem thus subtracted Claimant's 5% impairment rating as a result of her August 7, 2013 industrial lower back injury from her 5% rating for her present June 18, 2015 lower back injury. Accordingly, Dr. Hattem assigned Claimant a 0% permanent impairment rating for her June 18, 2015 lower back injury.

9. Dr. Hattem remarked that Claimant would require medical maintenance care. However, he did not detail specific treatment other than a refill of Claimant's Tramadol prescription. Dr. Hattem noted that the medication "may be refilled for an additional three months."

10. On June 7, 2016 Respondents filed a Final Admission of Liability (FAL) consistent with Dr. Hattem's May 9, 2016 date of MMI and 0% permanent impairment rating. Respondents also acknowledged that Claimant was entitled to receive medical maintenance benefits for her June 18, 2015 lower back injury.

11. Claimant objected to the FAL and sought a Division Independent Medical Examination (DIME). On October 21, 2016 Claimant underwent the DIME with Timothy O. Hall, M.D. Claimant testified that at no time during the impairment evaluation did Dr. Hall ask her to bend forward or side-to-side. She also remarked that she never moved from her chair during the evaluation. Dr. Hall did not examine her but only asked questions.

12. Dr. Hall reviewed Claimant's history of medical treatment and considered her impairment rating for her August 7, 2013 injury. Dr. Hall recorded that Claimant reported more lower back pain than leg pain and pointed to the belt line. He detailed that Claimant "report[ed] it has always been the right leg that hurts. She really can't think of anything that makes the pain better. Just about everything makes it worse, from the sitting, standing, walking or bending." On examination, Dr. Hall also found considerable pain behaviors and noted that Claimant was difficult to examine. He commented that Claimant was able to get on and off the exam table on her own, but "when attempting range of motion, her movements were minimal … She had essentially no extension, maybe 10 degrees of flexion and perhaps 5 degrees of side bending on each side." Dr. Hall determined that, "due to excessive pain behaviors, [Claimant's] range of motion calculation does not meet validity criteria. I cannot give her a reasonable impairment rating for range of motion." Dr. Hall also remarked that Claimant desired additional therapy, but judging from the treatment notes, he doubted that more therapy would impact her condition. He thus did not recommend medical maintenance treatment in the form of physical therapy.

13. The DIME Unit of the Division of Workers' Compensation received Dr. Hall's report and sent him and the parties an "Incomplete Notice – IME Report" on November 9, 2016 along with a letter. The letter pointed out that if a physician chooses to invalidate range of motion, even for reasons other than straight leg raise validity, the *AMA Guides*, Colorado Division of Workers' Compensation *Impairment Rating Tips* (*Impairment Rating Tips*) and Level II curriculum require two visits on two different days for repeat range of motion testing. The DIME Unit also advised Dr. Hall to:

> Keep in mind that you also have the option of accepting invalidated range of motion from other medical reports in lieu of bringing the claimant back for repeat measurements if they were completed in compliance with the *AMA Guides, 3rd Edition, Rev*. If this is the route you chose, it would be helpful to document this in your report. Please review and clarify…

14. On December 12, 2016 Dr. Hall responded to the DIME Unit explaining why he did not provide a rating for range of motion deficits. He detailed that

> I did not do a rating regarding range of motion impairment. Range of motion could not be accomplished in that [Claimant] simply did not move when asked to perform flexion, extension, and side bending. This is inconsistent with her activities of sitting in the chair and getting up and out of the chair, and getting off and on the exam table. She reported pain that kept her from any motion of her lumbar spine.

In specifically responding to the DIME Unit's inquiry regarding invalidation of range of motion measurements, Dr. Hall remarked that Dr. Hattem's range of motion determinations were identical, and inquired whether the use of Dr. Hattem's findings would constitute compliance with the two required measurements. Dr. Hall commented that "[i]f this explanation is sufficient, let me now. If not, I will have her back in." He summarized that "[t]he circumstance is not truly a validity issue. This is an issue of what could be considered exaggerated pain behaviors, making any attempt at objective measurements impossible."

15. The record is devoid of any evidence from the DIME Unit directing additional correspondence from Dr. Hall. Instead, the DIME Unit issued a notice that the DIME report had satisfied minimal completion standards.

16. On January 3, 2017 Insurer filed a FAL consistent with Dr. Hall's determination that Claimant reached MMI on May 9, 2016 with a 0% permanent impairment rating. Respondents also denied medical maintenance benefits for Claimant.

17. Claimant acknowledged that in the period between May 9, 3016 when she reached MMI and her DIME with Dr. Hall on October 21, 2016 she did not visit ATP Dr. Hattem seeking pain medication or treatment. Furthermore, even after the DIME Claimant did not seek additional medical maintenance care from Dr. Hattem. Instead, Claimant explained that she received some physical therapy from Kaiser Permanente for her back.

18. Claimant contends that it is highly probable and free from serious or substantial doubt that Dr. Hall did not follow the procedures outlined by the *AMA Guides,* the Level II Curriculum and the *Impairment Rating Tips* regarding the evaluation of range of motion deficits. She specifically asserts that Dr. Hall erred by not performing range of motion measurements using an inclinometer and by failing to bring her back for another appointment to take measurements.

19. Claimant has failed to produce clear and convincing evidence to overcome Dr. Hall's DIME that she suffered a 0% permanent impairment rating for her June 18, 2015 admitted lower back injury. First, the record reveals that Dr. Hall sufficiently complied with the *AMA Guides,* the Level II Curriculum and the *Impairment Rating Tips*

regarding the evaluation of range of motion deficits. In responding to the DIME Unit's inquiry regarding invalidation of range of motion measurements, Dr. Hall remarked that Dr. Hattem's range of motion determinations were identical and inquired whether the use of Dr. Hattem's findings would constitute compliance with the two required measurements. Dr. Hall commented that "[i]f this explanation is sufficient, let me know. If not, I will have her back in." The record is devoid of any evidence from the DIME Unit directing additional follow-up from Dr. Hall. Instead, the DIME Unit issued a notice that the DIME report had met their minimal completion standards. By adopting ATP Dr. Hattem's invalidated range of motion measurements Dr. Hall sufficiently complied with the recommendations *AMA Guides,* the Level II Curriculum and the *Impairment Rating Tips*.

20. Second, Dr. Hall's technical deviation from the *AMA Guides* does not mandate that his 0% permanent impairment rating was incorrect. Instead, Dr. Hall's deviance from the *AMA Guides,* the Level II Curriculum and the *Impairment Rating Tips* in failing to perform range of motion measurements using an inclinometer and recall Claimant for a second visit was warranted based on Claimant's failure to participate in her range of motion evaluation. As Dr. Hall explained in his correspondence to the DIME Unit he did not perform a rating regarding range of motion impairment. He specifically noted that "[r]ange of motion could not be accomplished in that [Claimant] simply did not move when asked to perform flexion, extension, and side bending. This is inconsistent with her activities of sitting in the chair and getting up and out of the chair, and getting off and on the exam table. He summarized that "[t]he circumstance is not truly a validity issue. This is an issue of what could be considered exaggerated pain behaviors, making any attempt at objective measurements impossible." Dr. Hall's failure to strictly adhere to the *AMA Guides,* the Level II Curriculum and the *Impairment Rating Tips* when assessing Claimant's range of motion deficits does not constitute unmistakable evidence free from serious or substantial doubt to overcome his opinion that Claimant suffered a 0% permanent impairment rating for her June 18, 2015 admitted lower back injury.

21. Claimant has failed to establish by a preponderance of the evidence that she is entitled to receive reasonable, necessary and related medical maintenance benefits designed to relieve the effects of her June 18, 2015 lower back injury or prevent further deterioration of her condition. Initially, ATP Dr. Hattem remarked that Claimant would require medical maintenance care. However, he did not detail specific treatment other than a refill of Claimant's Tramadol prescription. Dr. Hattem limited Claimant's Tramadol refills to "an additional three months." Moreover, on the date Claimant reached MMI Dr. Hall commented that Claimant's condition had stabilized, an MRI did not demonstrate a surgical lesion and her pain behaviors "support[ed] the conclusion that ongoing physical interventions" would not be beneficial. Dr. Hall also remarked that Claimant desired additional therapy, but judging from the treatment notes, he doubted that more therapy would impact her condition. He thus did not recommend medical maintenance treatment in the form of physical therapy. Finally, Claimant acknowledged that during the period between May 9, 3016 when she reached MMI and her DIME with Dr. Hall on October 21, 2016 she did not visit ATP Dr. Hattem seeking pain medication or treatment. Furthermore, even after the DIME Claimant did

not seek additional medical maintenance care from Dr. Hattem. Instead, Claimant explained that she received some physical therapy from Kaiser Permanente for her back. Accordingly, Claimant's request for medical maintenance benefits for her June 18, 2015 lower back injury is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Overcoming the DIME

4. In ascertaining a DIME physician's opinion, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998). A DIME physician's determination regarding MMI and permanent impairment consists of his initial report and any subsequent opinions. *In Re Dazzio,* W.C. No. 4-660-149 (ICAP, June 30, 2008); *see Andrade v. Industrial Claim Appeals Office,* 121 P.3d 328 (Colo. App. 2005).

5. A DIME physician is required to rate a claimant's impairment in accordance with the *AMA Guides for the Evaluation of Permanent Impairment Third Edition (Revised) (AMA Guides*). §8-42-107(8)(c), C.R.S.; *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117, 1118 (Colo. App. 2003). However, deviations from the *AMA Guides* do not mandate that the DIME physician's impairment rating was incorrect. *In Re Gurrola,* W.C. No. 4-631-447 (ICAP, Nov. 13, 2006). Instead, the ALJ may

consider a technical deviation from the *AMA Guides* in determining the weight to be accorded the DIME physician's findings. *Id.* Whether the DIME physician properly applied the *AMA Guides* to determine an impairment rating is generally a question of fact for the ALJ. *In Re Goffinett,* W.C. No. 4-677-750 (ICAP, Apr. 16, 2008).

. 6. A DIME physician's findings of MMI, causation, and impairment are binding on the parties unless overcome by "clear and convincing evidence." §8-42-107(8)(b)(III), C.R.S.; *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAP, July 19, 2004); *see Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAP, Nov. 17, 2000).

7. The Colorado Division of Workers' Compensation *Impairment Rating Tips* (*Impairment Rating Tips*) provide general recommendations for physicians when assigning permanent impairment ratings. In specifically addressing the invalidation of spinal range of motion measurements, the *Impairment Rating Tips* provide that

> claimants must have two visits. Two sets of three measurements must be taken on each visit (12 measurements total). When a physician performing a Division IME finds range of motion measurements invalid (due to SLR check or for physiologic reasons) such physician may fulfill this requirement by accepting invalidated measurements from other reports in lieu of bringing the claimant back for a second set of measurements. The physician must, however, report his/her own initial sets of measurements

See Desk Aid #11, Spinal Rating 10.

8. As found, Claimant contends that it is highly probable and free from serious or substantial doubt that Dr. Hall did not follow the procedures outlined by the *AMA Guides,* the Level II Curriculum and the *Impairment Rating Tips* regarding the evaluation of range of motion deficits. She specifically asserts that Dr. Hall erred by not performing range of motion measurements using an inclinometer and by failing to bring her back for another appointment to take measurements.

9. As found, Claimant has failed to produce clear and convincing evidence to overcome Dr. Hall's DIME that she suffered a 0% permanent impairment rating for her June 18, 2015 admitted lower back injury. First, the record reveals that Dr. Hall sufficiently complied with the *AMA Guides,* the Level II Curriculum and the *Impairment Rating Tips* regarding the evaluation of range of motion deficits. In responding to the

DIME Unit's inquiry regarding invalidation of range of motion measurements, Dr. Hall remarked that Dr. Hattem's range of motion determinations were identical and inquired whether the use of Dr. Hattem's findings would constitute compliance with the two required measurements. Dr. Hall commented that "[i]f this explanation is sufficient, let me know. If not, I will have her back in." The record is devoid of any evidence from the DIME Unit directing additional follow-up from Dr. Hall. Instead, the DIME Unit issued a notice that the DIME report had met their minimal completion standards. By adopting ATP Dr. Hattem's invalidated range of motion measurements Dr. Hall sufficiently complied with the recommendations *AMA Guides,* the Level II Curriculum and the *Impairment Rating Tips*.

10. As found, second, Dr. Hall's technical deviation from the *AMA Guides* does not mandate that his 0% permanent impairment rating was incorrect. Instead, Dr. Hall's deviance from the *AMA Guides,* the Level II Curriculum and the *Impairment Rating Tips* in failing to perform range of motion measurements using an inclinometer and recall Claimant for a second visit was warranted based on Claimant's failure to participate in her range of motion evaluation. As Dr. Hall explained in his correspondence to the DIME Unit he did not perform a rating regarding range of motion impairment. He specifically noted that "[r]ange of motion could not be accomplished in that [Claimant] simply did not move when asked to perform flexion, extension, and side bending. This is inconsistent with her activities of sitting in the chair and getting up and out of the chair, and getting off and on the exam table. He summarized that "[t]he circumstance is not truly a validity issue. This is an issue of what could be considered exaggerated pain behaviors, making any attempt at objective measurements impossible." Dr. Hall's failure to strictly adhere to the *AMA Guides,* the Level II Curriculum and the *Impairment Rating Tips* when assessing Claimant's range of motion deficits does not constitute unmistakable evidence free from serious or substantial doubt to overcome his opinion that Claimant suffered a 0% permanent impairment rating for her June 18, 2015 admitted lower back injury.

Medical Maintenance Benefits

11. To prove entitlement to medical maintenance benefits, a claimant must present substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve the effects of the industrial injury or prevent further deterioration of his condition. *Grover v. Industrial Comm'n.,* 759 P.2d 705, 710-13 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609, 611 (Colo. App. 1995). Once a claimant establishes the probable need for future medical treatment he "is entitled to a general award of future medical benefits, subject to the employer's right to contest compensability, reasonableness, or necessity." *Hanna v. Print Expediters, Inc.*, 77 P.3d 863, 866 (Colo. App. 2003); *see Karathanasis v. Chilis Grill & Bar,* W.C. No. 4-461-989 (ICAP, Aug. 8, 2003). Whether a claimant has presented substantial evidence justifying an award of *Grover* medical benefits is one of fact for determination by the Judge. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 919 P.2d 701, 704 (Colo. App. 1999).

12. As found, Claimant has failed to establish by a preponderance of the evidence that she is entitled to receive reasonable, necessary and related medical maintenance benefits designed to relieve the effects of her June 18, 2015 lower back injury or prevent further deterioration of her condition. Initially, ATP Dr. Hattem remarked that Claimant would require medical maintenance care. However, he did not detail specific treatment other than a refill of Claimant's Tramadol prescription. Dr. Hattem limited Claimant's Tramadol refills to "an additional three months." Moreover, on the date Claimant reached MMI Dr. Hall commented that Claimant's condition had stabilized, an MRI did not demonstrate a surgical lesion and her pain behaviors "support[ed] the conclusion that ongoing physical interventions" would not be beneficial. Dr. Hall also remarked that Claimant desired additional therapy, but judging from the treatment notes, he doubted that more therapy would impact her condition. He thus did not recommend medical maintenance treatment in the form of physical therapy. Finally, Claimant acknowledged that during the period between May 9, 3016 when she reached MMI and her DIME with Dr. Hall on October 21, 2016 she did not visit ATP Dr. Hattem seeking pain medication or treatment. Furthermore, even after the DIME Claimant did not seek additional medical maintenance care from Dr. Hattem. Instead, Claimant explained that she received some physical therapy from Kaiser Permanente for her back. Accordingly, Claimant's request for medical maintenance benefits for her June 18, 2015 lower back injury is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

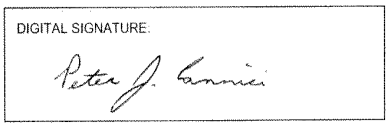
1. Claimant reached MMI on May 9, 2016 with a 0% permanent impairment rating for her June 18, 2015 lower back injury.

2. Claimant's request for medical maintenance benefits for her June 18, 2015 lower back injury is denied and dismissed.

3. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: June 23, 2017.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
633 17th Street Suite 1300
Denver, CO 80202

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-991-178-03

ISSUES

- Whether Claimant established by a preponderance of the evidence that the spinal cord untethering surgical procedure recommended by Scott P. Falci, M.D. is reasonably necessary and related to Claimant's July 23, 2015 industrial injury?

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant was injured on July 23, 2015 in the course and scope of her employment as assistant produce manager for Employer. On that date, Claimant was pulling a pallet jack loaded to six feet with heavy bags of potatoes. Somebody from behind the pallet began pushing and control of the pallet was lost. As Claimant tried to slow the moving pallet, she turned to face the pallet and was thrown into some double doors. The pallet wheel caught her left shoe, forcing her to fall backwards to the concrete floor on her back and left hip. As a consequence of the industrial accident, Claimant suffered an admitted injury to her low back.

2. Claimant received temporary total disability benefits between August 10, 2015 and January 15, 2016. She returned to reduced hours at work on or about January 16, 2016, at which time she received temporary partial disability benefits. Claimant is currently working part-time for Employer with her same job title but with duties within her restrictions.

3. Claimant initially received conservative care for her back injury, including physical therapy, three injections, and medications.

4. By October 2015, Claimant began experiencing left leg weakness, which increased with activity. She also began experiencing urinary incontinence.

5. Claimant sought treatment from an incontinence specialist, Jamie L. VanOveren, D.O , at the Urology Clinic in Steamboat Springs and Craig. Claimant was seen on December 14, 2015; April 6, 2016; April 11, 2016; May 9, 2016; May 16, 2016, and November 14, 2016. At her last visit, Dr. VanOveren assessed "Bladder hypertonicity" and "Urge and stress incontinence."

6. On October 17, 2015 Claimant underwent an MRI which was interpreted to show that the "conus medullaris [spinal cord] is normal in position just inferior to the L1-2 disk space. The conus is intrinsically normal without evidence of compression of the lower thoracic cord or conus."

7. On April 7, 2016, Claimant treated with Dianne Wetterstein, PAC who noted that Claimant had three injections with Dr. Gronseth, had constant pain in her very low back, and still had urinary incontinence.

8. On May 6, 2016 Claimant treated with William Choi, M.D., who noted that Claimant had been experiencing significant symptoms following a work place injury in July of 2015, including low back pain. Dr. Choi recommended possible surgical intervention for L5-S1, specifically a wide point compression and stabilization procedure to address Claimant's arthropathy and hypertrophy at L5-S1.

9. Sometime before August 2, 2016, Lloyd W. Mobley III, M.D. performed a chart review and concluded: "After reviewing the attached documents, it appears that [Claimant] suffers from low back pain and progressive left leg weakness. . . . . The initial lumbar MRI did not appear to have evidence of a tethered cord. However, [Claimant] has progressive symptoms of leg weakness without any objective cause. It would be reasonable to proceed with initial objective testing."

10. On September 26, 2016, nurse practitioner Maureen A. Preston noted Claimant "has no bladder sensation"; that she is frequently incontinent, especially during the night while she is sleeping; and that she uses a cane as needed.

11. On September 28, 2016, Claimant underwent a neurosurgical consultation with Scott P. Falci, M.D., chief neurosurgical consult at Craig Rehabilitation Hospital. Among other things, Dr. Falci noted the following factors, all of which he considered to be consistent with a low lying tethered spinal cord:

- Claimant believed her legs had become weaker and noted a decreased ability to walk the distances she used to be able to walk;
- Claimant noted increasing difficulty with her bladder;
- Claimant could not be upright and active for long periods of time because her back pain was so severe;
- MR imaging demonstrated a low-lying conus at the mid L2 body level;
- There was no significant central canal stenosis;
- Claimant walked in a stooped over position and found it more difficult to stand in an upright position without exacerbating her low back and gluteal region pain;
- Claimant was more comfortable in a stooped position either standing, sitting, or "curled up somewhat lying down."

12. Dr. Falci recommended an EMG test of Claimant's lower extremities, and a CT scan of her lumbar spine.

13. On September 27, 2016 Claimant underwent a lumbar spine MRI which was read as showing "the tip of the conus medullaris is normal in position and configuration at the L2 level." The MRI also revealed that Claimant had multilevel facet

arthropathy most notable at the L5-S1 level, but apparent through L2-L3. No significant central canal stenosis, significant forminal narrowing, or clear neural impingement were identified.

14. On October 21, 2016 Claimant underwent a left lower extremity EMG which was interpreted as "normal."

15. Also on October 21, 2016 Claimant underwent a lumbar spine CT scan which showed no acute lumbar spine abnormality, but "severe bilateral L5-S1 facet arthropathy."

16. On November 16, 2016 Claimant returned to Dr. Falci. Dr. Falci noted that Claimant's sister believed that Claimant's condition had clearly been progressive; that is, she was progressively losing strength in the lower extremities, unrelated to back pain. In addition, prior to her injury Claimant was able to lift heavy pallets at work and was very physically activity. In contrast, after injury Claimant had difficulty sitting in one position for a period of time, getting out of a chair, taking a shower, or walking, and she had to use her upper extremities to aid in lifting her legs because of weakness after repetitive movement. Dr. Falci attributed these symptoms to Claimant's low-lying conus. He recommended a surgical procedure that involved transection of her filum.

17. On January 3, 2017 Respondents' expert, Stephen H. Shogan, M.D. performed a record review and opined that the procedure recommended by Dr. Falci was of very questionable medical necessity; that a definite progressive deterioration of Claimant's condition is not well documented in her medical records; that Claimant had a normal EMG of the lower extremities; that Claimant's urodynamic evaluation would make a diagnosis of a tethered spinal cord a less likely etiology to her symptoms; and that an L2 location to the conus is not considered outside of normal limits.

18. Dr. Shogan subsequently examined Claimant. In a report dated February 3, 2017, Dr. Shogan stated that he made no objective findings on neurologic testing; that Claimant is currently suffering from a possible fracture of the sacrum, causing pain in the area and associated musculoskeletal pain in the surrounding musculature, and she may be suffering from sacral nerve root dysfunction (possible due to a contusion) which has resulted in urinary incontinence. However, Respondents presented no persuasive evidence to support Dr. Shogun's alternate theories.

19. Dr. Shogun opined that Claimant's left leg weakness and urinary incontinence are related to her work-related injury of July 23, 2015; that he does not believe that Claimant has a tethered spinal cord; that a spinal cord

untethering procedure will not relieve her symptoms; and that he believes that an evaluation by a physical medicine specialist and a comprehensive program of rehabilitation could result in Claimant's restrictions being gradually lifted. However, he did not persuasively explain how additional conservative treatments would help when they had not in the past. Neither did he persuasively address how the passage of additional time would not cause Claimant to experience progressive symptoms.

20. Respondents denied authorization for the recommended surgery.

21. On April 24, 2017, Dr. Falci credibly testified at deposition to the following:

- He is a board certified neurosurgeon who has served as Craig Hospital's chief neurosurgical consultant for twenty-five years.
- The surgery he recommended is a procedure which is used on patients who have progressive loss of function related to their spinal cord both being stretched and sitting lower in the spinal canal than the normal.
- The procedure involved simply cutting the filum, basically fibrous connective tissue, which takes traction off the spinal cord and hopefully stops the progressive loss of function, and allows some recovery.
- Spinal cords do not run the whole length of the spinal column, sometimes ending between the T12-L1 vertebra or even between the L1-L2 vertebra.
- When the end of the spinal cord sits lower than the second lumbar vertebra, it is called a low lying conus medullaris, meaning the tip of the spinal cord sits a little lower than normal.
- A low lying medullaris is associated with progressive symptoms of loss of leg, bowel, and bladder function.

22. Dr. Falci reviewed the September 27, 2016 MRI films and located the tip of the conus at the mid L2 vertebral body level, which based on his clinical experience he considered low-lying. He persuasively explained that a normal EMG does not mean a low-lying conus in not present. Dr. Falci disagreed with Dr. Shogan's opinion that a L2 location of the conus is not considered outside of normal limits. He has seen spinal cords at the mid-body of L2 correlating to loss of function and that, with section; the symptoms were "improving or resting." He saw no structural abnormalities which could cause Claimant's progressive symptoms.

23. Dr. Falci explained that function is lost when the fibrous band [filum] which connects the tip of the spinal cord to the sacrum is short because the spinal cord is minimally but constantly being stretched. The nerve cells, which travel up and down the spinal cord, do not fire as well when stretched. When the filum is cut, the spinal cord, typically, retracts and moves up the spinal column because it is no longer being stretched.

24. The risk of untreated low lying conus is progressive loss of lower extremity, bowel and bladder function. Dr. Falci considered Claimant's report of not feeling her bladder filling and wetting herself to be "substantial," "significant," and "urgent." He does not recommend L5-S1 decompression fusion as offered by Dr. Choi at this time because that procedure is unlikely to alleviate Claimant's urinary incontinence.

25. Dr. Shogan opined that Claimant's condition had not shown a definite progressive deterioration. Dr. Falci, however, found that on physical examination, Claimant had shown multiple levels of leg weakness, and had a urodynamic evaluation of her bladder which confirmed a neurogenic bladder.

26. Dr. Falci opined that Claimant's fall at work further stretched her spinal cord, causing the progression of her symptoms.

27. Dr. Falci opined that the section of Claimant's filum is reasonably necessary to cure or alleviate the symptoms caused by Claimant's work-related fall.

28. Dr. Falci opined that all of the proper diagnostics and conservative therapy modalities have been done, and that no further diagnostics were necessary prior to his recommended surgery.

29. In his deposition taken on April 27, 2017, Dr. Shogan reiterated the opinions expressed in his two reports. He acknowledged that he did not review the actual MRI films in this case and but saw and relied upon the radiologist's report. He was unable to identify any specific treatises or seminar materials to support his opinion that a "classical clinical progression" is required before performing an untethering procedure.

30. The ALJ finds the opinions of Dr. Falci to be more credible and persuasive than those of Dr. Shogun.

31. Claimant credibly testified that the care she has received to date, including medications designed to reduce her urinary incontinence symptoms, has not helped.

She credibly testified that she does not feel her bladder filling, she wears an adult diaper, she wets the bed at night, she often wakes up several times at night to void, she must go the bathroom once an hour while working to avoid accidents, and she has to keep a change of clothes with her in case of accident. She credibly testified that she uses an increasing amount of incontinence supplies. Claimant's testimony is corroborated by Dr. VanOveren's November 14, 2016 report.

32. Claimant credibly testified that she continues to suffer from low back pain and increasing weakness in her left leg despite conservative care. She testified that she now uses a cane outside of work and relies on carts for balance at work. She testified that Employer will not allow her to use a cane at work. Claimant credibly testified that her left leg weakness is increasing over time.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado (C.R.S. sections 8-40-101, *et seq.)*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1).

The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents, and a workers' compensation claim shall be decided on its merits. § 8-43-201.

Assessing weight, credibility, and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Ctr. v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

The ALJ finds and concludes that Claimant has met her burden to prove, by a preponderance of the evidence, that Dr. Falci's recommended operative procedure involving a section of her filum (untethering procedure) is reasonably necessary and is related to the admitted industrial accident. In reaching this conclusion, this ALJ is persuaded by the following:

Both neurosurgeons in this case, Drs. Falci and Shogan, agree that Claimant's urinary incontinence and left leg weakness are caused by her fall at work. Therefore, relatedness of these conditions has been established by preponderance of the evidence.

Dr. Falci and Shogan disagree whether Claimant's urinary incontinence is progressing. The ALJ finds credible Claimant's testimony of that she is using more pads, and finds that this fact is an objective measure of the progressive nature of her condition. The ALJ recognizes that feelings of urinary urgency, reports of bathroom visits, and increased usage of pads may be viewed as "subjective complaints," but given the nature of the condition, the ALJ finds it reasonable to accept Claimant's subjective complaints as a basis for accepting Dr. Falci's opinion that the urinary incontinence problem is progressing.

Dr. Falci and Shogan disagree whether Claimant's left leg weakness is progressing. Dr. Shogan could not ascertain any neurologic deficit when he evaluated Claimant, and Claimant's EMG was normal. Nevertheless, Dr. Falci found neurologic deficits upon his exam. In addition, Claimant testified credibly that she has had to increase her use of a cane, she cannot walk as far as she used to walk, and she must rely more heavily on carts at work. The ALJ finds and concludes that the preponderance of evidence supports a conclusion that Claimant's left leg weakness is progressing.

Dr. Falci, MRI radiologists, and Dr. Shogan disagree whether Claimant has a low-lying conus. Dr. Shogan agrees with the interpreting radiologist for the September 27, 2016 MRI that the conus is in a normal position. However, Dr. Shogan, who believes in the importance of reviewing actual films before

performing any surgical procedure, did not review the actual films in this case. Furthermore, Dr. Shogan could not cite any literature which supported his opinion that a conus located at L2 was normal. Dr. Falci, who has served 25 years as the chief neurosurgical consult at Craig Hospital, has reviewed the actual MRI film in this case. Furthermore, Dr. Falci has clinical experience with other patients with coni at the L2 location who experienced similar urinary incontinence and lower extremity weakness problems and who received relief after section of the filum. Therefore, the ALJ finds the opinion of Dr. Falci that Claimant has a low-lying conus to more credible and persuasive than the opinion of Dr. Shogan and the interpretation of the radiologist.

Dr. Shogan did not disagree that a low-lying conus can cause urinary incontinence or leg weakness. Instead, he denied that Claimant has a low-lying conus. His alternative explanation for Claimant's conditions is that she probably has suffered a contusion of the spinal nerves. No other medical provider in this case has offered this same explanation, and Dr. Shogan did not explain why contusion of the spinal nerves would explain Claimant's symptoms as completely and clearly as Dr. Falci did by explaining why a stretched spinal cord causes disrupted nerve function. Dr. Shogan did not provide a persuasive alternative explanation for Claimant's incontinence or left leg weakness, and Dr. Falci provided a credible explanation for Claimant's symptoms. The ALJ finds credible and persuasive Dr. Falci's theory that a stretched spinal cord suffered in her fall at work in conjunction with Claimant's low-lying conus explains why Claimant suffers from urinary incontinence and left leg weakness.

The ALJ is concerned about the possibility of continuing progressive worsening of the urinary incontinence and left leg weakness conditions, and possible right leg weakness and even bowel incontinence as described by Dr. Falci. This ALJ finds and concludes that all reasonable conservative treatment and diagnostics have been exhausted, and is that Claimant's conditions are significant and require urgent care. The ALJ notes that Claimant's description of her urinary incontinence was credible and compelling.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents shall pay for a repeat neurosurgical consultation with Dr. Falci and, if he offers a spinal untethering surgery, Respondents shall pay for all reasonable and related pre-operative, operative, and post-operative expenses, according to the Colorado Fee Schedule, that are related to such surgery.

2. All other issues are reserved.

3. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Whether Claimant established by a preponderance of the evidence that the proposed right ulnar nerve transposition and ring finger trigger finger release with excision of cyst along the flexor sheath in the right palm requested by authorized treating physician Craig A. Davis M.D., is reasonable and necessary as well as related to Claimant's admitted industrial injury.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant's suffered an admitted industrial injury on August 2, 2013 while working as a window washer for Employer. Prior to his injury, Claimant had worked for the Employer for nineteen (19) years and at the time of hearing has now worked for the Employer for twenty-three (23) years. On August 2, 2013 Claimant was travelling in an employee shuttle bus when the driver stopped suddenly, slamming on the brakes. He was holding onto a bar with his right arm and upon impact braced himself with his left arm. His body was moved forward as a result of the vehicle stopping.

2. Claimant described the force as "dramatic" and he almost fell to the ground. Another passenger fell into him and Claimant testified that his body created a "net" when this person fell into him, however, he did not fall to the ground. Claimant felt pain in his back, neck and shoulder, as well as hand tingling and numbness.

3. Claimant testified that before the injury he did not have symptoms or pain in the digits of either his right or left hand and did not require any medical treatment for his right or left hands.

4. Claimant credibly testified that ever since the accident he has had numbness and tingling in both extremities.

5. Claimant was evaluated by authorized treating physician ("ATP") Kristin Mason, M.D., on October 17, 2013, who noted that Claimant was complaining of neck pain and bilateral upper extremity numbness and tingling. Mr. Zarate reported that he would awaken with his hands numb involving all fingers. A positive Tinel's sign was noted over the median nerves at the wrists and ulnar nerves at the elbows. Dr. Mason's assessment was cervical strain with some findings of C6 radiculopathy, as well as bilateral upper extremity paresthesias. She recommended MRIs of the neck and

shoulder as well as electrodiagnostic studies. *See* Claimant's Submission Tab 3, Bate Stamp ("BS") 11, paragraph 6.

6. Mr. Zarate saw Dr. Mason in a follow-up on January 13, 2014 and her assessment was cervical strain with mild C6 radiculitis, bilateral median nerve dysfunction (likely acute), thoracic strain and rotator cuff tear. He underwent shoulder surgery on his left shoulder on January 21, 2014, which was performed by ATP Armodios Hatzidakis, M.D. *See* Claimant's Submission Tab 3, BS 11, paragraph 10.

7. On February 3, 2014, Dr. Mason examined the Claimant after the surgery. He continued to have mild left-sided sensory issues which were unchanged. Dr. Mason saw Claimant on May 5, 2014 at which time he complained of pain and tingling in his hands, particularly bothersome at night. Median nerve sensory loss persisted. He was referred to ATP Thomas Mordick, II, M.D. *See* Claimant's Submission Tab 3, BS 11, paragraph 11.

8. Claimant was evaluated by Dr. Mordick, on May 13, 2014. Claimant complained of numbness and tingling mostly in the long, ring and small fingers on the right hand. He said at times his entire hand goes numb. Dr. Mordick noted that EMG studies showed carpal tunnel syndrome ("CTS"), with the sensory latencies prolonged right (5.2) and minimally prolonged left. Diminished sensation in the median and ulnar nerve distribution was noted upon examination. Dr. Mordick felt that the symptoms would "seem to be more consistent" with Claimant's cervical root compression diagnosis. Claimant was scheduled to have an injection and if the symptoms improved, they would monitor. If the symptoms did not, they would consider CTS release. Dr. Mordick also noted that given the nature of his employment as a window cleaner with heavy manual tasks, this would be appropriately treated as a work-related injury. *See* Claimant's Submission Tab 3, BS 12, paragraph 12.

9. On June 3, 2014, Claimant returned to Dr. Mordick after the neck injection. On physical examination, Dr. Mordick noted continued diminished sensation in the median ulnar nerve distribution right compared to left. Dr. Mordick's assessment was CTS and possible neck cervical root compression. Claimant wished to proceed with the carpal tunnel release on the right. *See* Claimant's Submission Tab 3, BS 12, paragraph 13.

10. On July 2, 2014, Claimant underwent a right carpal tunnel release that was performed by Dr. Mordick. He was examined by Dr. Mason on July 7, 2014 and some improvement in his numbness was reported by Claimant, who was also to begin therapy. *See* Claimant's Submission Tab 3, BS 12, paragraph 14.

11. On October 28, 2015, Claimant underwent surgery for left carpal tunnel release and right index finger and ring finger injections. *See* Claimant's Submission Tab 8, BS 45.

12. On June 27, 2016, Claimant was evaluated by Respondents' retained physician In Sok Yi, M.D., who gave the opinion that:

> For his trigger fingers and bilateral index finger and ring finger, the right side has been treated surgically. I do not believe that this is related to his accident on 08/02/2013. These also developed after the accident. The trigger finger symptoms on the right side did not present itself until 08/25/2014 on his visit to Dr. Mason. This is about a year after is injury. Trigger fingers are very common which I feel that he may have developed on his own, especially since he was not working his regular job within the recent time around the onset.

See Claimant's Submission Tab 8, BS 48.

13. On August 22, 2016, Dr. Mason noted:

> He was having some triggering with the ring finger. Dr. Mordick encouraged him to get more aggressive with range of motion. It is doing somewhat better. He does still have some residual edema in the areas of the incisions. He has been back at work since 6/30/16. Apparently, Dr. Yi on the IME felt that his trigger fingers were not claim related. I do not have a copy of that report, that is the patient's report, but did anticipate that he would need ongoing OMT. . . We do have a SAMMS conference scheduled next week.

See Claimant's Submission Tab 6, BS 30.

14. On August 29, 2016 following a SAMMS conference Dr. Mason noted:

> We discussed the outcome of an IME with Dr. Y[i] who felt the patient's trigger fingers were unrelated to the injury. **I was asked my opinion regarding causation and I indicated that I had seen trigger fingers develop post carpal tunnel release in multiple patients and that seemed to be fellow travelers with that and that Dr. Mordick apparently felt so as well.** In any case, he has already had the surgery and will be finishing up his therapy here in the next month.
>
> * * *
>
> **We discussed the fact that the patient does have ulnar neuropathies at both elbows, but at this point does not**

> **wish to follow through with more surgery so that situation will just be monitored**.

See Claimant's Submission Tab 6, BS 32 (Emphasis added).

15. On September 19, 2016, Dr. Mason evaluated Claimant and noted:

> He saw Dr. Mordick who did some injections into the trigger fingers. They hurt more for a few days but are now doing better. He still notes some flexion deformity of digit four and the right. . . He does have some symptoms into his right hand from the ulnar neuropathy but is not certain whether he wants to go forward with surgery at this time or not. He does get numbness particularly in the morning and has not really noticed any lack of coordination but does occasionally drop things from the hand.
>
> * * *
>
> ASSESSMENT
>
> Status post bilateral carpal tunnel release with development of trigger fingers on the right, now status post release of those 06/15/16.
>
> * * *
>
> We did discuss what recovery from ulnar decompression would look like – probably a 3-4 month recover – somewhere in between a rotator cuff repair and a carpal tunnel release.

See Claimant's Submission Tab 6, BS 33.

16. On October 17, 2017, Claimant again treated with Dr. Mason who noted on her physical exam:

> He continues to lack full extension of digit four on the right hand. He does now have recurrent nodular growth in the area of the flexor tendon sheath in the palmar crease and that area is quite sensitive between the nodule and the MCP joint. No triggering currently.
>
> * * *

> I am going to refer him back to Dr. Davis for a second opinion regarding the recurrence of the nodule in his hand. I am not sure whether this would respond to further therapy and/or injection. It is possible that some of the contracture is on the basis of his ulnar neuropathy I am just not sure.

See Claimant's Submission Tab 6, BS 34.

17. On November 4, 2016 Claimant was evaluated at Colorado Orthopedic Consultants by Timothy Abbott, physician's assistant ("PA") for ATP Craig Davis, M.D., who issued the following assessment:

> Problem #1: Stiffness and tenderness following trigger finger release.
>
> He was advised that waiting a little bit for repeat injection seems reasonable. The next step after that could be repeat surgery, flexor tenosynovectomy, but he may have the same problems with scar tissue formation. Therefore, he agrees to wait about 6 weeks and follow up with Dr. Davis to discuss injection.
>
> * * *
>
> Problem #2: Bilateral cubital tunnel syndrome
>
> When he follows up with Dr. Davis he will try to bring his nerve studies with him and we can go over his options at that time.
>
> * * *
>
> Problem: Trigger Finger
>
> Assessed: 11/04/2016
>
> Patient is following up from a second opinion possible bilateral ulnar neuropathy and bilateral trigger fingers. Since his last visit he return to Dr. Mordick for trigger finger release of the right index and the ring fingers. He apparently developed some scar tissue after surgery and subsequently had injection into the flexor tendon sheaths which helped significantly. Stiffness and pain in the index finger completely resolved. However he has continued stiffness and some tenderness along the ring finger flexor tendon sheath. Pain improved significantly in the ring finger however. Dr. Mordick recommended waiting a couple of months and trying a repeat injection.

> He continues to have fairly constant numbness and tingling in the bilateral ulnar 2 digits, right greater than left.

See Claimant's Submission Tab 7, BS 40.

18. On November 17, 2016, Claimant returned to Dr. Mason who noted:

> He did see Dr. Davis who recommends follow-up in six weeks with injection into the fourth palmar trigger finger. His index finger on the right continues to do well. He resumed maintenance OMT on 11/10 and that is going well. They did some trigger point injections. He is not anxious to consider more surgery on his hand. He is hoping that the injection will be helpful. Dr. Davis also gave him some Meloxicam.
>
> PHYSICAL EXAM: He still has a nodular growth in the area of the flexor tendon sheath at the palmar crease of the fourth finger and is tender there and at the MCP joint. It is not exactly triggering. He has free movement of the index finger with no pain or nodule. He has some trigger points in the trapezius on the left.
>
> * * *
>
> Status post bilateral carpal tunnel release with the development of right trigger fingers, now status post release of index and ring fingers 06/15/16 with scar tissue causing ongoing pain for the ring finger.

See Claimant's Submission Tab 6, BS 35.

19. On December 22, 2016, Claimant again evaluated with Dr. Mason who noted:

> Dr. Davis had contacted me earlier this week. **He thinks he has a cyst on his fourth finger flexor tendon and is recommending surgery to remove that because the patient is still having pain in the area. He is also recommending an ulnar transposition on the right because of ulnar neuropathy at the elbow. . . Unfortunately, I believe on the very first EMG the ulnar nerve was not studied because the focus was the carpal tunnels and cervical radiculopathy on the left.**
>
> * * *
>
> **He continues to have a nodular growth in the area of the flexor tendon sheath at the palmar crease of the fourth finger with tenderness and pain at that area. Positive**

> **Tinel's at the right elbow**, and ulnar distribution sensory loss. So far, not really much in the way of weakness.
>
> * * *
>
> Status post bilateral carpal tunnel release with the development of right trigger fingers, now status post release of index and ring trigger fingers with cystic development on the ring finger that remains symptomatic.
>
> * * *
>
> Dr. Davis has made a surgical recommendation with authorization pending. I will plan to follow up with the patient in four weeks.

See Claimant's Submission Tab 6, BS 36 (Emphasis added).

20. On January 17, 2017, Dr. Davis appealed the denial of his request for surgery on Claimant dated December 27, 2016 noting:

> First of all, the request for surgery on the **left side was in erro**r. We are actually requesting authorization for surgery on the **right side including right ulnar nerve transposition and ring finger trigger finger release with excision of cyst along the flexor sheath in the right palm.**

See Respondents' Submission Tab C, BS 13 (Emphasis added).

21. On December 30, 2016 after Dr. Davis' original request for surgery was denied, Claimant filed an Application for Hearing. *See* Claimant's Submission Tab 1, BS 1-5.

22. On February 24, 2017 Respondents' filed a timely Response to Claimant's Application. *See* Claimant's Submission Tab 2, BS 6-7.

23. On March 28, 2017, Respondents' expert In Sok Yi did a record review opining that:

> I have reviewed his records that were provided and I have also reviewed Dr. Davis' last request on January 17, 2017, where he requested a right cubital tunnel release with transposition with ring finger trigger release. At this point, I have also reviewed my previous IME which I felt at that time after reviewing his records that both his carpal tunnel syndrome and cubital tunnel syndrome are related to this injury sustained on 08/02/13. However, at this point I still feel that his trigger finger on the right is not related to his

> accident given the fact that the injury occurred on 08/02/2013 and his first documented symptoms were not presented until 09/29/215 when he was examined by Dr. Mordick. **Given the fact that his symptoms did not present themselves until two years after the initial incident, I do not feel that this is related to his accident.**

See Claimant's Submission Tab 9, BS 49 (Emphasis added).

24. Dr. Yi concluded that Claimant's carpal tunnel and cubital tunnel syndrome are related. Dr. Yi's conclusions, however, regarding the trigger finger are based on the inaccurate statement that Claimant did not have symptoms until two years after the initial accident and, therefore, he believed the request by Dr. Davis for surgery was not related to the admitted industrial injury.

25. The medical records reflect, however, that Claimant has consistently complained of bilateral numbness in his hands and fingers, as reflected in the medical records and determined by a previous Administrative Law Judge. *See* Claimant's Submission 3, BS 11, paragraph 6.

26. Claimant credibly testified that his bilateral upper extremity numbness and tingling went away in the thumb, index finger and middle finger following his carpal tunnel surgeries, but has remained in both the ring and index fingers of both hands. The symptoms Claimant complains of have been present and consistent ever since Claimant's admitted industrial injury.

27. Claimant testified at hearing that he wanted the right ulnar nerve transposition and ring finger trigger release with excision of cyst along the flexor sheath of the right palm.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General

A. The purpose of the Workers' Compensation Act of Colorado (Act), §8-40-101, *et seq.,* C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. Section 8-43-201(1). Generally, the Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after

considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979).

B. A Workers' Compensation case is decided on its merits. Section 8-43-201. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

C. The ALJs resolution of issues will be affirmed if supported by substantial evidence in the record. Section 8-43-301(8), C.R.S. 2007; *City and County of Denver School District 1 v. Industrial Commission,* 682 P.2d 513 (Colo. App. 1984). Substantial evidence is that quantum of probative evidence, which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert,* 914 P.2d 411 (Colo. App. 1995).

Medical Benefits

D. Respondents are liable to provide such medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury." Section 8-42-101(1)(a), C.R.S. *Colorado Compensation Insurance Authority v. Nofio,* 886 P.2d 714 (Colo. 1994). The determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ. See generally *Parker v. Iowa Tanklines, Inc.,* W.C. No. 4-517-537 (May 31, 2006); *Chacon v. J.W. Gibson Well Service Company, W.* C. No. 4-445-060 (February 22, 2002).

E. In this case, the issue is whether the proposed treatment is reasonable and necessary, as well as related to the injury. The ALJ evaluated both the mechanism of Claimant's injury, his symptoms, the opinions of his treating physicians, along the medical opinions of Respondents' experts. Each of the proposed courses of treatment is reviewed, *infra.*

F. Respondents contend that the surgery recommended by Dr. Davis is not necessary or related because the symptoms did not develop immediately following the injury. This is in fact not the case as the symptoms have been present since Claimant’s injury.

G. Additionally Dr. Davis and Dr. Mason confirmed the progression of Claimant’s symptoms from the date of injury and are consistent with the care now being recommended by Dr. Davis.

H. There is objective evidence that Claimant had no symptoms in either extremity prior to his admitted industrial injury.

I. Respondents are liable if the employment-related activities aggravate, accelerate or combine with a pre-existing condition to cause a need for medical treatment. Section 8-41-301(1)(c), C.R.S.; *Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). In this case, the evidence leads the ALJ to conclude that while Claimant may have had an underlying asymptomatic condition, it was the admitted industrial injury of August 2, 2013 that caused his symptoms and the need for treatment.

J. The ALJ concludes Claimant has satisfied his burden with regard to the need for right ulnar nerve transposition and ring finger trigger release with the excision of cyst along the flexor sheath in the right palm, as requested by Dr. Davis and the proposed surgeries are reasonable, necessary and causally related.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

a. Respondent shall pay the cost, pursuant to the Colorado Medical Fee Schedule, of the right ulnar nerve transposition and ring finger trigger release with the excision of cyst along the flexor sheath in the right palm, requested by Dr. Davis and concurred in by Dr. Mason.

b. The right ulnar nerve transposition and ring finger trigger release with the excision of cyst along the flexor sheath in the right palm is found to be reasonable and necessary.

c. Insurer shall authorize the proposed right ulnar nerve transposition and ring finger trigger release with the excision of cyst along the flexor sheath in the right palm for the right upper extremity.

d. Any issues not determined in this decision are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That

you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Did Claimant prove she suffered a compensable injury on June 12, 2015?

If the claim is compensable, the ALJ will address the following additional issues:

2. Is Claimant entitled to medical benefits?

3. Is Claimant entitled to TTD benefits from December 17, 2016 to April 24, 2017?

4. Should Claimant's TTD benefits be reduced due to "late reporting"?

5. Was Claimant responsible for the termination of her employment?

FINDINGS OF FACT

1. Claimant worked for Employer as a waitress. Her claim involves an alleged injury on June 12, 2015. Claimant testified she injured her right shoulder and burned her leg while helping a coworker remove a large pan of meat from a hot oven. Claimant testified the pan tipped and boiling water poured on her leg. She yelled out in pain and "jerked" her right shoulder.

2. Claimant did not immediately seek treatment for the injury. The closest contemporary medical record is dated two months later when Claimant saw FNP Virginia Gillispie at Pueblo Community Health Center. Claimant's primary physical complaints related to her knees, but she also reported "increased pain of R shoulder w/o injury." Physical examination of the shoulder was normal, and Claimant had full "pain-free range of motion." Claimant was diagnosed with "pain in multiple joints" and prescribed meloxicam to use as needed.

3. Claimant returned to Nurse Gillispie on October 2, 2015 and reported the meloxicam did not help her shoulder pain. The report notes that Claimant works as a waitress and "tries to carry all heavy items w/ L arm instead." She had tenderness of the right shoulder, but no atrophy, crepitus or asymmetry. Shoulder range of motion was full but painful. Claimant declined a referral to physical therapy. Nurse Gillispie recommended discontinuing the meloxicam and prescribed sulindac and lidocaine patches.

4. On January 22, 2016, Claimant reported her right shoulder pain occurred "occasionally" and was "worsening." The report further states "Context: there is no injury." Nurse Gillispie prescribed tramadol and referred Claimant for physical therapy.

5. Claimant had an initial PT evaluation on January 25, 2016. The history is described as "R chronic shoulder pain. Patient is unsure of any mechanism of injury."

The report notes Claimant "worked with a roofing company 2 years ago and then was involved in the care of her mother requiring transferring. Currently her husband had back surgery so she helps him transfer also. Patient currently works as a waitress using L arm for her tray." The ALJ infers that the therapist was investigating the potential etiology of the shoulder problems, but there is no mention of an incident with a pan of meat. Claimant also completed an intake form which included the question "is this a work-related injury?" to which she answered "no."

6. Nurse Gillispie's February 4, 2016 report states Claimant had an appointment for an orthopedic evaluation that evening, but the ALJ was not given any report from an orthopedist on or around that date.

7. Claimant next saw Nurse Gillispie on July 25, 2016. Her shoulder pain was worse because she "just returned from a camping trip in South Dakota. The weather was fairly cold [and the] patient was sleeping on an air mattress on the ground. Does not recall any trauma to the area. Remotely approximately 20 years ago patient did get some glass in the shoulder from [a] candlestick which was surgically removed." There was still no mention of any work-related injury.

8. On July 29 Claimant reported her shoulder pain "may have flared after camping trip and short staffing at work; no acute trauma." Physical examination showed positive impingement sign and decreased range of motion. Nurse Gillispie recommended an injection.

9. Nurse Gillispie's September 22, 2016 report states "Context: there is an injury. Trauma type: direct blow, occurred doing recreational activities, 23 years ago on 09/22/1993." Claimant also stated she "had blunt trauma to R shoulder involving FB (glass) lodged into tissue, 25 stitches required. This occurred in her 20s." Claimant's urine drug screen was negative for tramadol she had been prescribed but was positive for oxycodone. Claimant told Nurse Gillispie she ran out of tramadol "early" and "tried her boyfriend's Percocet." Nurse Gillispie counseled Claimant against taking other people's medications, ordered an MRI and referred her for an orthopedic evaluation.

10. Claimant had the right shoulder MRI on October 11, 2016. The history described in the radiologist's report is "fell on right shoulder." The MRI showed multiple rotator cuff tears and severe tendinopathy. There was also a degenerative labral tear and severe AC joint arthritis.

11. Claimant saw Dr. Mark Porter for an orthopedic evaluation on November 14, 2016. Dr. Porter's report contains the first reference to a work-related cause for Claimant's shoulder problem: "she believes her symptoms began when she was lifting heavy cookware at work." Dr. Porter diagnosed a "nontraumatic" rotator cuff tear. He gave Claimant a cortisone injection, which provided immediate pain relief.

12. Claimant filed a Workers' Claim for Compensation on November 28, 2016.

13. On December 16, 2016, Claimant followed up with Dr. Porter's partner, Dr. Richard Likes. The cortisone injection had worn off, and she was interested in surgery.

She told Dr. Likes she hurt the shoulder at work lifting a heavy pot full of hot water. Dr. Likes thought surgery was appropriate given Claimant's long-standing symptoms and the failure of conservative treatment.

14. Claimant had arthroscopic shoulder surgery on January 12, 2017. There were multiple tears, including a diffuse tear of the biceps tendon, a partial tear of the subscapularis, degenerative labral tears, and a full-thickness tear of the supraspinatus. Dr. Likes noted extensive supraspinatus tendinopathy, with diffuse fraying and a "chronically degenerative appearance."

15. At hearing, Claimant identified the co-worker involved in the alleged incident as Rosalinda Montoya. Claimant testified she pulled up her pant leg and showed the burned area to Ms. Montoya. She testified her pants were loose, which enabled her to pull the leg all the way up to expose her thigh. She testified she also told the restaurant owner, Paul Cordova, Jr. about the incident and showed him the burn. She testified Mr. Cordova Jr. "just looked at it and walked away" without saying anything. Claimant testified she told Paul Cordova Sr. about the incident approximately two weeks later and he "did not say a word."

16. At hearing, Claimant demonstrated an area of discoloration on her right thigh she alleges is a burn scar from the incident. The area was not obviously or unmistakably a burn scar, and could have resulted from something else.

17. Ms. Montoya, Paul Cordova Sr., and Mr. Cordova Jr. testified at hearing. Each witness disputed Claimant's description of events. Ms. Montoya does not recall Claimant spilling hot water on her leg or exclaiming in pain. Mr. Cordova Jr. does not recall Claimant reporting any injury to her leg or shoulder in June 2015. Mr. Cordova Sr. does not recall Claimant telling him about the injury.

18. Claimant failed to prove by a preponderance of the evidence that she suffered a compensable injury on June 12, 2015.

CONCLUSIONS OF LAW

To receive compensation or medical benefits, Claimant must prove that she is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1), C.R.S.; *see, Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). Claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997), *cert. denied* September 15, 1997. The claimant must prove entitlement to benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The

facts in a workers' compensation case are not interpreted liberally, in favor of either claimant or respondents. Section 8-43-201.

As found, Claimant failed to prove that she suffered a compensable injury on June 12, 2015. Claimant's testimony regarding the alleged incident is directly refuted by multiple witnesses. Ms. Montoya does not recall any incident or Claimant burning her leg. Mr. Cordova Jr. does not recall Claimant reporting any injury in June 2015. Mr. Cordova Sr. does not recall the alleged conversation approximately two weeks later. Nor do the medical records substantiate Claimant's claim. Claimant did not seek medical treatment for her shoulder until more than two months after the alleged incident. When she sought treatment, she did not mention a work-related injury and even denied a traumatic origin on at least one occasion. Notably, the records document the shoulder injury Claimant suffered in the early 90s, so she clearly discussed the etiology of her problems with providers. The first documentation of the alleged incident is in November 2016, almost a year and a half after the claimed date of injury. At the time, despite Claimant's reporting an incident at work, Dr. Porter diagnosed a "nontraumatic" rotator cuff tear.

Claimant suffered from internal derangement of her shoulder, but the pathology most likely reflected long-standing degenerative changes that could have become symptomatic at any time without injury.

ORDER

It is therefore ordered that:

Claimant's claim for workers' compensation benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 27, 2017

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-016-151-01

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on June 20, 2017, in Denver, Colorado. The hearing was digitally recorded (reference: 6/20/17, Courtroom 1, beginning at 8:30 AM, and ending at 10:00 AM).

Claimant's Exhibits 1 through 9 were admitted into evidence, without objection, with the exception of Exhibit 2 whereby the Respondents' objection was sustained in part and Exhibit 2 was only admitted for the limited purpose of showing a timely reporting of an alleged work-related injury. Respondents' Exhibits A through F were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Claimant. The proposed decision was filed, electronically, on June 25, 2017. On June 27, 2017, the Respondents filed an objection concerning the referral to John Burris,M.D. On the same date, the Claimant did not object to the Respondents' objection. After a consideration of the proposed decision and the objection thereto, the ALJ has modified the proposal and hereby issues the following decision.

ISSUES

The issues to be determined by this decision concern compensability and medical benefits.

The Claimant bears the burden of proof, by a preponderance of the evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

1. The Claimant is a service technician for the Employer. He has worked for the Employer for approximately 17 years.

2. On April 7, 2016, the Claimant was running cord during a service call and as he stood up he experienced a drastic increase in pain in his back that required him to lay down on the floor of the customer's house.

3. The Claimant was wearing his tool belt over his shoulder at the time of the injury.

4. The Claimant reported the injury around 2:00 PM on April 7, 2016 to Darren Carnegie. Carnegie was the Claimant's supervisor on April 7. 2016.

5. The Claimant again reported his injury on April 8, 2016 to his supervisor Michael Samsel. Claimant emailed Samsel and stated "I was working on a phone jack for DSL moving cords behind a stand in the process of bending up and down I felt a severe pain in my back. The pain didn't go away but, rather got worse as the day went along" (Claimant's Exhibit 2, p. 2).

6. The Respondents filed a Notice of Contest on June 15, 2016 (Claimant's Exhibit 1, p. 1).

Medical

7. Following his reported injury, the Respondents directed the Claimant to Concentra for medical treatment. Carrie J. Burns, M.D., was first assigned as Claimant's authorized treating provider (ATP).

8. The Claimant was initially evaluated by Dr. Burns on April 8, 2016 whereby she assigned work restrictions as well as prescribed physical therapy and

medications (Claimant's Exhibit 3, pp. 3-5). The Claimant did not previously have any work restrictions.

9. Dr. Burns M164 work sheet, issued on April 16, 2016, confirms that the Claimant's condition is work related (Claimant's Exhibit 3, p. 8). Dr. Burns continued to assign work restrictions to the Claimant as well as prescribe physical therapy (PT) and medications.

10. On April 21, 2016, the Claimant was prescribed chiropractic treatment (Claimant's Exhibit 3, p. 14).

11. On April 28, 2016, the Claimant began chiropractic treatment with Dr. Richard Mobus, D.C (Claimant's Exhibit 5, pp. 48-49).

12. By May 6, 2016, the Claimant continued to receive work restrictions and complain of symptoms in his lower back (Claimant's Exhibit 3, pp. 21-22). On May 19, 2016, the Claimant was referred for a surgical consultation with Michael Rauzzino, M.D (Claimant's Exhibit 3, p. 25).

13. On May 31, 2016, the Claimant was evaluated by Dr. Rauzzino who stated, "this is a very nice gentleman with low back injury at work" (Claimant's Exhibit 4, p. 45). In his corresponding report Dr. Razzing states, "There is no simple easy surgery one would do to give a more (*sic*) rate of success at this point and be best served by further conservative care. I have recommended that he see Dr. Shimon Blau for consideration of SI joint injection versus epidura." (Claimant's Exhibit 4, p. 45).

14. On June 14, 2016, the Claimant received a right SI injection as performed by Shimon Blau, M.D (Claimant's Exhibit 6, p. 53). Dr. Blau's report states Claimant "had a work related injury which occurred on 4/7/16 while working for Century Link. He was bending down and squatting while working with some wire, and when he stood up, he felt sudden right –sided lower back pain (Claimant's Exhibit 6, p. 53).

15. The subsequent Concentra record states that Claimant had no relief from the injection of June 14, 2016 and massage therapy was then prescribed (*See* Claimant's Exhibit 3, p. 39).

16. The Claimant was again evaluated by Dr. Blau on July 12, 2016. In his corresponding report Dr. Blau recommended right L4-5 and L5-S1 injections (Claimant's Exhibit 6, p. 58).

17. Concentra, the authorized provider, referred the Claimant to John Burris, M.D. On August 9, 2016, the Claimant was evaluated by Dr. Burris. Dr. Burris was another ATP, associated with Concentra for delayed recovery matters.. In his corresponding report, Dr. Burris states that Claimant "works for CenturyLink and was at

a customer's home moving objects about when he stood up from a kneeling position developing the acute onset of low back pain" (Claimant's Exhibit 7, p. 63). Dr. Burris further states "we are awaiting the upcoming facet injections for diagnostic clarify. Further recommendations will come after the results of the upcoming injection" (Claimant's Exhibit 7, p.64). Dr. Burris continued to assign work restrictions for the Claimant.

18. In his report of August 10, 2016, Dr. Blau reiterated his recommendation for the right L4-5 and L5-S1 facet injections and stated "I would hold off on placing him at MMI (maximum medical improvement) until after we see how he does following the facet injection." (Claimant's Exhibit 6, p. 60). The Claimant received the recommended injections on August 23, 2016.

19. Dr. Blau's report of September 14, 2016 states that the facet injections "helped for the first couple of days but then the pain returned" (Claimant's Exhibit 6, p. 61). Dr. Blau then recommended right L3-4, L4-5, L5-S1 medial branch block (Claimant's Exhibit 6, p. 62).

20. The Claimant returned to Dr. Burris on October 25, 2016. On that date, Dr. Burris placed the Claimant at MMI without any permanent restrictions or impairment (Claimant's Exhibit 7, p. 65). Dr. Burris recommended post-MMI maintenance treatment in the form of "6 sessions of massage therapy over the next 3 months on an as-needed basis" (Claimant's Exhibit 7, p. 66). The Claimant had been assigned work restrictions from April 8, 2016 to the October 25, 2016 MMI appointment with Dr.Burris.

21. The Claimant was again evaluated by Dr. Burris on April 25, 2016. Dr. Burris' corresponding report stated that the Claimant "remains at MMI with no impairment" (Claimant's Exhibit 7, p. 69).

22. The Claimant attended approximately 11 sessions of PT from April 8, 2016 to the October 25, 2016 finding of MMI.

23. The Respondents authorized all of Claimant's recommended treatment despite the filing of the Notice of Contest, neither admitting or denying liability.

24. The Claimant timely sought medical treatment at Concentra after which he treated with Dr. Burns, Dr. Blau, Dr. Richard Morbus, D.C. Dr. Rauzzino, and Dr. Burris. The medical records from each of the Claimant's ATPs consistently corroborate the Claimant's mechanism of injury. Furthermore, the medical providers issued treatment recommendations which they attributed to Claimant's April 7, 2016 mechanism of injury.

25. Although the Claimant's medical records from 2009 to December 2015 sporadically reference complaints of low back pain (*See* Respondents' Exhibit C), however, over that time period the Claimant received none to minimal treatment related to his lower back. Further, in that time period the Claimant did not receive any work restrictions.

26. The Claimant credibly testified that his symptoms drastically increased following the April 7, 2016. Claimant's testimony is corroborated by the medical records, which demonstrate a drastic increase in treatment following his April 7, 2016 event. The Claimant's prior medical records from 2009 to April 7, 2016 demonstrate no active treatment or work restrictions despite periodic references of low back symptoms.

Ultimate Findings

27. The Claimant's testimony regarding the mechanism of injury is credible. The Claimant timely notified a supervisory individual with the Employer of his injury on April 7, 2016 and in an email he authored on April 8, 2016 (Claimant's Exhibit 2). The medical records following the Claimant's date of injury corroborate the Claimant's testimony concerning the mechanism of injury. The Claimant's testimony was persuasive and credible.

28. The ALJ infers and finds that the event of April 7, 2016 constituted a compensable aggravation and acceleration of the Claimant's underlying back condition. Therefore, the Claimant sustained a compensable lower back injury on April 7, 2016 arising out of the course and scope of his employment.

29. Following his April 7, 2016 injury, the Claimant was directed to Concentra, which is the Respondents authorized medical provider. Further, all the subsequent referrals were within the appropriate chain of authorized referrals. Therefore, all of the Claimant's medical care and treatment was authorized, causally related and reasonably necessary to cure and relieve the effects of the April 7, 2016 compensable injury.

30. As found, the ALJ credits the medical record in demonstrating the compensability of Claimant's April 7, 2016 injury. All of Claimant's medical providers prescribed treatment and work restrictions based on the Claimant's reported mechanism of injury. During the course of treatment, all of the Claimant's treating providers prescribed treatment and work restrictions that they attributed directly to the Claimant's April 7, 2016 industrial injury.

31. All of the Claimant's medical care and treatment for his low back injury of April 7, 2016, was authorized, within the chain of authorized referrals, causally related, and reasonably necessary to cure and relieve the effects of the injury.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, medical opinion supporting a compensable aggravation/acceleration of the Claimant's pre-existing low back condition is, essentially, undisputed. *See Annotation, Comment: Credibility of Witness Giving Un-contradicted Testimony as Matter for Court or Jury,* 62 ALR 2d 1179, maintaining that the fact finder is not free to disregard un-contradicted testimony. As further found, the Claimant's testimony was credible, and corroborated by the medical record.

Compensability

b. A compensable injury is one that arises out of and in the course of employment. Section 8-41-301(1) (b), C.R.S. The "arising out of" test is one of causation. If an industrial injury aggravates or accelerates a pre-existing condition, the resulting disability and need for treatment is a compensable consequence of the industrial injury. Thus, a claimant's personal susceptibility or predisposition to injury does not disqualify the claimant from receiving benefits. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). An injured worker has a compensable new injury **if the employment-related activities aggravate, accelerate, or combine with the pre-existing condition to cause a need for medical treatment or produce the disability for which benefits are sought.** § 8-41-301(1) (c), C.R.S. *See Merriman v. Indus. Comm'n,* 120 Colo. 400, 210 P.2d 448 (1949); *Anderson v. Brinkoff,* 859 P.2d 819 (Colo. 1993); *National Health Laboratories v. Indus. Claim Appeals Office,* 844 P.2d 1259 (Colo. App. 1992); *Snyder v. Indus. Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). An injury resulting from the concurrence of a pre-existing condition and a hazard of employment is compensable. *H & H Warehouse v. Vicory*, *supra*. *Duncan v. Indus. Claims App. Office*, 107 P.3d 999 (Colo. App. 2004). Even where the direct cause of an accident is the employee's pre-existing disease or condition, the resulting disability is compensable where the conditions or circumstances of employment have contributed to the injuries sustained by the employee. *Ramsdell v. Horn*, 781 P.2d 150 (Colo.App. 1989). *Also see* § 8-41-301(1) (c), C.R.S; *Parra v. Ideal Concrete,* W.C. No. 4-179-455 [Indus. Claim Appeals Office (ICAO), April 8, 1998]; *Witt v. James J. Keil Jr.,* W.C. No. 4-225-334 (ICAO, April 7, 1998). As found, the event of April 7, 2016 aggravated and accelerated the Claimant's pre-existing degenerative back condition and, thus, was a compensable event.

Medical

c. To be a compensable benefit, medical care and treatment must be causally related to an industrial injury or occupational disease. *Dependable Cleaners v. Vasquez,* 883 P. 2d 583 (Colo. App. 1994). As found, Claimant's medical treatment is causally related to the aggravation of his back condition on February 28, 2005. Also, medical treatment must be reasonably necessary to cure and relieve the effects of the industrial occupational disease. § 8-42-101 (1) (a), C.R.S. *Morey Mercantile v. Flynt,* 97 Colo. 163, 47 P. 2d 864 (1935); *Sims v. Indus. Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). As found, all of the Claimant's medical care and treatment for his low back injury of April 7, 2016, was authorized, within the chain of authorized referrals, causally related, and reasonably necessary to cure and relieve the effects of the injury.

Burden of Proof

d. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained his burden with respect to compensability and medical benefits.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Respondents shall pay the costs of Claimant's medical care and treatment attributable to the compensable injury of April 7, 2016, subject to the Division of Workers' Compensation Medical Fee Schedule.

B. Any and all issues not determined herein are reserved for future decision,

DATED this_____day of June 2017.

ISSUES

I. Whether Claimant has shown, by a preponderance of the evidence, that she sustained a work injury on or about October 1, 2014, which arose out of, and occurred in the course of, her employment as a police officer.

II. If Claimant suffered a compensable injury, as noted above, has she shown, by a preponderance of the evidence, that she is entitled to medical benefits, including right shoulder surgery which was performed on December 1, 2014.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following Findings of Fact:

1. Claimant was hired as a police officer by City of Colorado Springs Police Department ("CSPD") in 1992. She worked initially as a patrol officer and later as a detective, first in property crimes, then in homicide. She was a sworn employee.

2. In December of 2013, CSPD announced the "roll out" of a mandatory Physical Abilities Test (PAT) for all sworn employees. (Ex 1; Ex A). The stated goal of this program was "to improve employee wellness and to ensure officer safety." (Ex. 1 p. 20). Employer's stated policy was "…to encourage physical fitness for our employees as a means of promoting personal wellness and officer safety. Sworn police officers have a duty to the public to maintain an acceptable level of general health and physical fitness regardless of age, rank or duty assignment. Such fitness provides long-term health benefits while being beneficial to the day-to-day effectiveness and readiness of the Colorado Springs Police Department. Additionally, such fitness levels help officers meet the stress and rigors of a challenging job." Employer's policy further included; "All sworn officers of the Colorado Springs Police Department *will maintain satisfactory health and physical fitness in order to minimize lost time and to perform their duties effectively.* The City of Colorado Springs *offers* a wellness program designed to increase employee productivity and morale while decreasing absenteeism. A number of incentives are offered to encourage employees to participate. Participation in this city program is *voluntary*…" (Ex 1, p. 15)(emphasis added).

3. The PAT had four parts; (1) Sit-ups, (2) Push-ups, (3) Illinois agility, and (4) Beep test. A scoring mechanism was in place for each part of the test. (Ex. 1, p. 8, 9; Ex A). CSPD explained, "…To successfully pass the fitness test, an officer must score a minimum of 20 points during the 4 exercises. With that in mind, officers must score at least 1 point on each exercise. This scoring system allows an officer to have a

lower score on one or more tests but still be able to pass the battery of tests by scoring higher in the remaining exercises…" (Ex. 1, p. 9).

4. Any officer who failed the PAT would have to retake it within prescribed amounts of time. Failure to pass the PAT would lead to disciplinary measures including termination of employment. A plain reading of the memo would lead the reader to conclude that failure to eventually pass the PAT would inevitably result in termination as a sworn officer. During the allowable 'grace period' to pass, promotional opportunities were restricted (Ex 1., p. 18).

5. CSPD partnered with Penrose-St. Francis Hospital to provide a variety of health and fitness resources to assist its officers in passing the PAT test. Programs offered by Penrose-St. Francis included personal training with certified personal trainers; access to gyms located at Penrose Hospital and St. Francis Medical Center; access to fitness classes; and wellness coaching. (Ex 1, p. 11). Also offered was participation in "Club OS…an online, confidential fitness platform that allows you to easily schedule a variety of activities including: group fitness classes, gym orientations and personal training as well as interact with fitness experts and obtain nutrition and exercise guidance."

6. CSPD made these resources available to Claimant at no cost to her. If Claimant were confident of a passing score come test time, no physical training of any sort would be required. Anything short of total confidence in a passing score would necessitate some sort of workout regimen to prepare for the PAT. Claimant's utilization of the specific resources offered by CSPD was voluntary. Obtaining a level of fitness sufficient to pass the PAT was not.

7. After learning of the details of the PAT, Claimant was not confident she could pass the push-up portion of the test because she lacked upper body strength. She was also concerned about the portion of the test that involved running, due to the fact she had a partial knee replacement the year before.

8. Claimant hoped to take the PAT in the last quarter of 2014, in order to allow herself plenty of time to prepare for the test. As part of her preparation and training, Claimant worked out with other officers early in the morning before her shift started. In the basement of the police operations center they lifted weights, practiced sit-ups and push-ups, and did circuit training. They set up a beep test and an agility test on the roof of the police parking garage. Claimant and other officers engaged in this training approximately three days per week. Claimant's shift was 7:00 a.m. to 4:00 p.m. If her physical training sessions extended past 7:00 a.m., she would work late in order to make up for it. There was no penalty attached to appearing after the standard shift time began, so long as Claimant was working out to prepare for the PAT.

9. Additionally, Claimant availed herself of Employer's partnership with Penrose-St. Francis. She participated in the offered exercise classes, worked out in their gym, and utilized the services of a personal trainer named Erin, at no cost to

Claimant. Her goal was to increase her shoulder strength so she could pass the push-up portion of the mandatory PAT.

10. Claimant was not paid for the time she spent training and preparing for Employer's mandatory PAT. She began this training and preparation approximately 2-3 months prior to her injury on October 1, 2014. Claimant was performing push-ups on a regular basis during this time, and she had no pain, problems, or difficulty with her right shoulder. The record is unclear if the appropriate physical form for performing pushups was used in the weeks leading up to Claimant's injury, as she was practicing them with fellow officers only. Claimant had only worked with the personal trainer (who could presumably more closely monitor safe pushup form) on one or two prior occasions before she was hurt. The record is unclear if proper physical form was discussed or noted on those date(s).

11. According to the deposition testimony of Dr. Nicholas Olsen, MD., if a person goes 'too low' (described as placing one's elbows past 90 degrees) during pushups, then.

> ..They don't actually touch the floor down, or they're going too low. You simply put the arm in a hyperextended position and it can strain more likely your labrum and your anterior capsule but can *also irritate the rotator cuff* and *cause tendonosis specifically in the supraspinatus* or infraspinatus and possibly bursitis. (Olsen Depo, p.23. lines 18-24)(emphasis added).

12. Claimant presented at Penrose-St. Francis on October 1, 2014 for a training session with Erin. Erin wanted to assess how many push-ups Claimant could do. Claimant warmed up on a treadmill for 10-15 minutes. She then got into position to perform push-ups. While performing the first push-up, Claimant testified that her right shoulder "popped" and she experienced immediate pain.

13. Erin attended to Claimant and told her she probably should not do anything else. Claimant did not work out further that day. Claimant went to work and told other detectives that she had injured her shoulder. Claimant filled out an accident report on November 3, 2014. The report indicates Claimant's injury happened at 7:15 a.m. (Ex 1, p. 6).

14. Claimant testified she would not have been working out and training with other officers and with her personal trainer if not for Employer's mandatory PAT. Claimant testified she would not have been doing a push-up with the personal trainer on October 1, 2014 were it not for Employer's mandatory PAT. Apart from the one push-up on October 1, 2014, Claimant is aware of nothing else that could have injured her right shoulder. Claimant was unaware of any other injury to her shoulder prior to this date. Nothing had been symptomatic previously.

15. Claimant saw Dr. Geoffrey Doner on October 23, 2014 (Ex D, p. 40). At that time, Claimant stated that while she was doing a pushup, she felt a pop in her right

shoulder. Dr. Doner did not appear to perform any kind of causality analysis as to whether a single pushup would have caused a rotator cuff tear. Indeed, nowhere in Dr. Doner's reports is there any kind of determination made by him that the single pushup caused a rotator cuff tear. The ALJ finds that it is not necessarily surprising that Dr. Doner would not make that kind of causality analysis, as he was not acting as Claimant's ATP.

16. Claimant continued working until she underwent right shoulder surgery on December 1, 2014. Dr. Geoffrey Doner performed right shoulder rotator cuff repair with subacromial decompression and distal clavicle excision. (Ex 5. pp. 63, 64). Claimant returned to light duty work in the homicide department on December 16, 2014. The light duty work was to expire on July 28, 2015, but Claimant was granted an extension until October 28, 2015. (Ex. 1., p. 5).

17. Claimant would have had to take and pass the PAT in order to return to regular duty. Claimant did not take the PAT because she remained unable to perform push-ups. She retired effective October 23, 2015. (Ex 1, p. 4). Claimant was then hired by Employer as Civilian Criminal Investigator effective October 26, 2015, and she continues to work in that position.

18. Sergeant Charles Rabideau was Claimant's direct supervisor in the homicide unit. Sergeant Rabideau has been employed with the Police Department for 27 years, and has known Claimant for over 20 years. He described Claimant as an excellent detective who never demonstrated any performance problems.

19. Sergeant Rabideau testified Claimant reported the injury to him shortly after it occurred, and gave him the accident report she filled out. The form is dated 11-3-14, some 33 days after the injury. (Ex 1, pg. 6). He gave the report to then-Lieutenant Adrian Vasquez. Vasquez later returned the report form to Sergeant Rabideau and told him Claimant's injury was "not a covered injury." Sergeant Rabideau returned the form, and relayed Vasquez' information, to Claimant. Claimant then sought treatment through her own private medical insurance.

20. Sergeant Rabideau credibly testified the Employer benefits from having a physically fit police force. He explained that; "…there's many benefits, not only to the individual employee and their health and welfare, not only as active police officers to – to be as physically fit as they possibly can be for their lifestyle – being healthy going into retirement, being healthy during their careers. And then, ultimately – and probably, in my personal opinion, the highest priority – is their safety on the streets when they're working as officers."

21. Given the fact that their employment could be terminated for failure to pass the PAT, Sergeant Rabideau confirmed that police officers are highly motivated to be successful in the PAT. The ALJ finds Sergeant Rabideau's testimony credible and persuasive.

22. Dr. Nicholas Olsen performed an independent medical evaluation of Claimant on March 7, 2017 (Ex C). Following his examination, Dr. Olsen, in his report, opined that it was 'medically impossible' that Claimant performing a single pushup would result in a 90% tear of her rotator cuff-which was the degree of tear noted by Dr. Doner during the original surgery.

23. Dr. Olsen, in his April 26, 2017 deposition, provided further explanation as to his opinion that a single pushup would not have caused a 90% rotator cuff tear. Specifically, Dr. Olsen noted that the typical trauma that would cause a rotator cuff tear is a fall on the shoulder (Olsen Depo. p. 6). Dr. Olsen explained that the act of a pushup, whether performed correctly or incorrectly, puts no specific stress on the rotator cuff (Olsen Depo. p. 7). Although the rotator cuff is engaged in the act of stabilization, the rotator cuff, he opines, is not put in a position to be injured. Consequently, he opined would be medically impossible for a single pushup to cause a massive tear such as what Claimant had in October 2014.

24. Dr. Olsen went on to testify that the rotator cuff is exposed to an injury when someone falls and lands directly on it. Such a fall creates a high energy, high traumatic force that is applied across the shoulder joint. This high energy has to be absorbed some place and, in the case of the fall, it typically tears the rotator cuff. However, in performing a pushup, there are no high energy forces, whether the pushup is performed with correct or incorrect mechanisms. As such, a pushup would not create a high energy force that would cause a massive tear that Claimant had in October 2014 (Olsen Depo., p. 9). However, in earlier testimony, Dr. Olsen that while a fall is the most common mechanism of injury for a torn rotator cuff,

> …And one can also get a rotator cuff for idiopathic reasons, simply degeneration over time; and *the rotator cuff tears on its own* without any trauma. (Olsen depo, p 6. lines 5-9)(emphasis added).

25. In his deposition, Dr. Olsen was also asked whether this one pushup would be considered the “straw that broke the camel’s back” (Olsen Depo. pp. 12-13). In response, Dr. Olsen stated the following:

> Well, the history tells us that Ms. Adelbush denied any pain leading up to October 1, 2014. She denied any difficulty. She did not report going to see a physical therapist or doctor. She said she was simply, you know, was limited to doing 12 pushups, not because of pain, because that was the most she could do; and, at the suggestion of her coworker or supervisor, went to work with a trainer, and had no pain the day that she went in to the training episode. No pain with warming up, which tells me that she had a healthy rotator cuff up until she did that first pushup, per her history; and then all of the sudden there is this massive rotator cuff tear which just doesn’t make any sense. It is medically impossible.

26. Dr. Olsen was then asked the following questions for which he gave the following response:

> Q. If someone has a 70-80% rotator cuff tear – this was a 90%, let's just say that it goes up to 70-80%, is that person going to be able to not have any problems or any limits in functioning with that kind of tear?
>
> A. No. You fully expect them to be symptomatic. You anticipate that that person may complain for months leading up to that, and through the training, doing those activities; and the reason, you know, for the tear, there would be a declining function over a period of time.

27. Claimant later saw Dr. Ronald Hollis on October 7, 2016 (Ex. E, pp. 55-57). At that time, Claimant reported that, while walking her dog, her dog pulled on her arm with the leash, which resulted in excruciating pain in her right shoulder. Claimant had a repeat MRI which showed a complete tear of her rotator cuff (Ex. E p. 49). As a result, Dr. Hollis performed a total shoulder replacement on October 27, 2016 (Ex. E, pp. 46-48). Dr. Olsen testified that the October 2016 dog leash incident caused a repeat rotator cuff tear (Olsen Depo. pp. 14-15). Claimant's October 27, 2016 surgery (total shoulder replacement) was caused by the October 2016 dog leash incident.

28. The ALJ credits Claimant's testimony as being credible and consistent with the evidence presented at hearing, regarding her participation in the Penrose St. Francis program, the PAT, and her motivation to participate. The ALJ further credits Claimant's testimony, and finds her credible, regarding all medical history given to her medical providers, and the symptoms she now describes. The ALJ is not convinced that Claimant's injuries as described are medically impossible, or that Claimant is somehow concealing a separate injury to her shoulder from a fall occurring on some other occasion.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008).

D. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

E. Further, courts are to be "mindful that the Workmen's Compensation Act is to be liberally construed to effectuate its humanitarian purpose of assisting injured workers." *James v. Irrigation Motor and Pump Co.*, 503 P.2d 1025 (Colo 1972).

Compensability

F. In order to be compensable under the Workers' Compensation Act, an injury must arise out of and in the course of the employee's employment. C.R.S. §8-41-301(1). An activity arises out of and in the course of employment when it is sufficiently interrelated to the conditions and circumstances under which the employee generally performs his job functions that the activity may reasonably be characterized as an incident of employment, although the activity itself is not a strict employment requirement and does not confer an express benefit on the employer. *City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985).

G. Prior to 1996, Colorado courts had not determined whether injuries sustained by an employee who is engaged in off-duty exercise that is mandated or

encouraged by an employer are compensable. In *Price v. Industrial Claim Appeals Office*, 919 P.2d 207 (Colo. 1996), the Supreme Court did so and held that in order to determine whether an injury suffered by an employee while engaging in an exercise program is compensable, a court should look to the following factors;

(1) whether the injury occurred during working hours;
(2) whether the injury occurred on the employer's premises;
(3) whether the employer initiated the employee's exercise program;
(4) whether the employer exerted any control or direction over the employee's exercise program; and
(5) whether the employer stood to benefit from the employee's exercise program.

H. The Court noted greater weight should be given to factors (1) and (2) "because these indicia of time and place of injury are particularly strong indicators of whether an injury arose out of and in the course of the employee's employment." *Price*, supra, at 210, 211. An injured worker is not required to prove each of the 5 factors of the *Price* test, as they are not conjunctive requirements. *Wackenhut v. Industrial Claim Appeals Office*, 975 P.2d 1131, 1134 (Colo. App. 1997).

I. The ALJ now considers each of the *Price* factors (especially as compared with Jeannine Eltrich) with respect to the facts of this case;

(1) Claimant's injury occurred at 7:15 a.m. Claimant's normal shift started at 7:00 a.m., and ended at 4:00 p.m. Claimant testified she was allowed to make up the time, with no penalty, if her exercise activities extended into her normal shift. Thus, while the injury occurred during standard "working hours" Claimant was not paid for the time she spent exercising. Her "work hours" were thus flexible, and could vary, at least somewhat, by the day. *The ALJ finds this injury did not occur during working hours.*

(2) The injury did not occur on Employer's premise, but rather at Penrose-St. Francis; a facility that Employer 'partnered' with and made available to Claimant specifically for working out in preparation for the PAT. Employer encouraged Claimant to utilize the facilities at Penrose-St. Francis to prepare for the PAT. Employer provided a personal trainer for Claimant to use at the facility. Claimant utilized the facility and the trainer free of charge. Despite the usage of the term 'partnership' by CSPD in its memo, however, a *legal partnership* was not contemplated to the degree which would imply common ownership, control, or even influence over Penrose St. Francis' facilities by CSPD. Rather, the 'partnership' herein was simply of the nature commonly seen in ad hoc joint marketing and promotional efforts between unrelated entities. Examples would include a radio station 'partnering' with a promoter to publicize a concert, or a sports team 'partnering' with certain sports-related product brands. Thus, while the specific location where Claimant was injured was plainly encouraged by CSPD, it cannot be inferred that Penrose St. Francis' facilities were under the

control of CSPD, much less its ownership. *Thus, the ALJ finds that this injury did not occur on employer's premises.*

(3) While participation in the training to prepare for the PAT was voluntary, Employer initiated the training by making the following available to Claimant at no cost and encouraging her participation; personal training with certified personal trainers; access to gyms located at Penrose-St. Francis; access to Penrose-St. Francis fitness classes; and wellness coaching. *The ALJ finds that the employer initiated the Claimant's exercise program.*

(4) While accommodations were even made to Claimant's work schedule to facilitate working out at Penrose St. Francis' facilities, there is no evidence in the record to support a claim that CSPD exerted *control or direction* over Claimant's exercise program. While the rubric for passing the fitness test was plainly spelled out in the CSPD memos, Claimant was free, in preparing for the PAT, to tailor the time, frequency, scope, intensity, and focus of her training program at Penrose St. Francis. She was free to focus exclusively on pushups, or obtain a barely passing score (of a "1"), then focus on making up the points on other aspects of the PAT. Once confident of a cumulative passing grade, Claimant would have been free to continue her usage of the facilities, even with an eye towards a healthy retirement. *The ALJ finds that CSPD did not exercise significant control or direction over Claimant's exercise program.*

(5) As confirmed by Sergeant Rabideau's testimony, Employer stood to benefit from having Claimant in good physical condition. As confirmed by Employer's written policies, having its officers physically fit helped them to minimize lost time and to perform their duties effectively. As noted, Employer's wellness program was "designed to increase employee productivity and morale while decreasing absenteeism." While Claimant would obviously benefit from being physically fit, Employer did too. *The ALJ finds that the employer stood to benefit from the employee's exercise program.*

J. As noted per *Wackenhut*, supra, Claimant is not required to prove each of the 5 *Price* factors. As noted, however, if factors (1) and (2) are not met, the strength of factors (3), (4), and (5) must be able to overcome the absence of the former. Factor (4) already goes to CSPD.

K. As noted in *Price* [and applied to Eltrich, looking at factor (3)], the Northglenn Police Department also *initiated* the exercise program at issue. As further noted in Price [also applied to Eltrich, looking at factor (5)], the Northglenn Police *stood to benefit* from Claimant's participation in the exercise program. However, as was noted further, fitness was already a qualification for being a police officer; thus a favorable finding of factor (5) was simply accorded little weight, compared with all the others. While Claimant herein is entirely credible and sympathetic, the facts of her case are not sufficiently distinguishable from those of Jeanne Eltrich to lead to a different result.

Taken as a whole, the factors in *Price*, as applied to Claimant herein, do not support a compensable injury.

Policy Considerations cited by Respondent

L. Respondents go further in asking the ALJ to consider the negative effects of an adverse ruling, thus resulting in a "flood of new claims" for other litigants. Given the plain directive of *Price* (still binding precedent, and specific to police exercise programs), such policy analysis is not necessary, beyond weighing the five enumerated factors. The ALJ declines to so engage. The dictates in *Price* are sufficient to determine this matter.

Dual Purpose Doctrine

M. Similarly, if the factors in *Price* cannot be met, Claimant seeks to bypass *Price* altogether, citing older cases (some from other jurisdictions) involving a "Dual Purpose". While 'Dual Purpose' remains generally viable, *Price* and its similar line of cases implicitly address those policy considerations, and with great specificity as applied to matters of off-duty police exercise. Factor (5) already addresses this specific point, and *Price* states it is but one of five factors in the analysis, and less powerful than (1) and (2). Price is still binding law on the case at issue, and the ALJ declines to deviate there from.

Medical Benefits

N. Because the claim is not compensable under *Price* and related cases, the medical causation issue, and the need for treatment, need not be addressed.

ORDER

It is therefore ordered that:

1. Claimants request for Workers Compensation benefits is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Whether Respondents have proven, by a preponderance of the evidence, that Claimant was responsible for the termination of his employment on December 20, 2016 precluding his entitlement to temporary total disability (TTD) benefits after this date.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant sustained an admitted compensable on the job injury while working in the course and scope as an electrician for Employer on November 28, 2016. Specifically, Claimant sustained electrical injuries to his head, brain and shoulder when he was exposed to 12,000 volts of electrical current while working on a high voltage switch at Evans Arm Hospital.

2. Claimant lost consciousness and could not be separated from the electrical current for approximately one minute. He sustained third degree burns to his scalp and shoulder. He also suffered from an intercranial bleed (epidural hematoma) and a subsequent MERSA infection as a complication of the skin grafting necessary to treat the severe burns estimated to cover 1.5 – 2.0 % of Claimant's total body surface area (TBSA).

3. Claimant was transported to Memorial Hospital Emergency Room (ER) for trauma workup. Although he was conscious upon arrival to the ER, Claimant was confused and complaining of pain in his head and shoulder. Claimant was subsequently airlifted to the University of Colorado Health Center for higher level burn care and as noted his hospital course was complicated by the discovery of an epidural hematoma "associated with some short term memory loss, balance challenges, and [headaches] HA's".

4. Upon being transferred to the University of Colorado Health Center on November 28, 2016, a urinalysis (UA) was completed which revealed the presence of cannabinoids.

5. Insurer became aware of Claimant's positive drug test in early December 2016. An email message from Marchelle L. Robinson to Bill Tuten, Employer's Safety Manager dated December 7, 2016 notes that Claimant's drug screen was positive for marijuana. Ms. Robinson inquired of Mr. Tuten as to whether Employer had a "written employment policy against drug use." Mr. Tuten responded in the affirmative, sending Ms. Robinson copies of the New Hire Employment Policies and Rules initialed by

Claimant, excerpts from Employer's Employee Handbook and Employer's Drug and Alcohol Policy.

6. In a December 9, 2016 medical report authored by Dr. Zachary Wilson, Claimant reported that he used illicit drugs, including marijuana.

7. On December 19, 2016, Ms. Robinson sent an email to Mr. Tuten confirming that Employer had a written policy regarding the use of drugs and that Claimant's UA of November 28, 2016 was an indication that Claimant had violated Employer's policy. Douglas Berwick, Employer's President responded by indicating that Ms. Robinson's conclusion was "correct."

8. Employer terminated Claimant's employment on December 20, 2016 for a violation of their substance abuse policy.

9. Insurer filed a General Admission of Liability on December 20, 2016 taking a 50% reduction in TTD benefits for violation of safety policy. The propriety of the safety rule violation is not before the ALJ. Rather, the only issue before the ALJ is whether Respondents have proven, by a preponderance of the evidence, that Claimant was responsible for the termination of his employment on December 20, 2016 precluding entitlement to further temporary total disability (TTD) benefits after this date.

10. A post accident, post termination UA was performed on December 26, 2016. Claimant's sample tested positive for marijuana. As it relates to the question before the ALJ, this test result carries little probative value as the test was performed after Claimant had been terminated.

11. On February 13, 2017, Respondents though their attorney, filed a Petition to Modify, Terminate or Suspend Compensation (Petition) requesting that Claimant's ongoing TTD benefits be terminated in accordance with C.R.S. § 8-42-105(4) and § 8-42-103(1)(g). Claimant objected to Respondents' Petition and the matter was set to proceed to hearing on Respondents' Expedited Application for Hearing filed March 14, 2017.

12. Claimant was evaluated by Dr. Cynthia Lund on April 19, 2017. During this appointment Claimant reported that he used marijuana "daily."

13. Review of the employment records submitted reveals that Employer has a written policy that it "practices a drug-free workplace" and that "compliance with the [drug-free workplace] is a mandatory condition of employment." In their drug-free workplace policy Employer specifically establishes that it does not recognize Colorado's Amendment 64 with regards to marijuana use.

14. Employer's Safety Handbook provides that "[d]rug and alcohol testing shall adhere to the Drug and Alcohol Testing Program Policy between the I.B.E.W. Local Union #113 and the Southern Colorado Chapter of N.E.C.A." Based upon the evidence

presented, the ALJ finds that Employer adopted the drug testing policies/protocols of the Union as set forth in the Collective Bargaining Agreement (CBA).

15. Douglas Berwick testified that because Employer is a Federal contractor frequently performing work on federal installations, Employer follows federal standards rather than the state standards regarding the use of controlled substances. Because marijuana is considered a banned controlled substance by Federal policy, Mr. Berwick testified that Employer can terminate employees who are using marijuana even if they have a medical marijuana card authorizing state use.

16. Mr. Berwick testified that Employer's drug policy is "zero-tolerance" because they are a federal contractor and safety is of paramount importance. He explained that Employer uses this approach because, in their line of work, employees have to have full mental capacity when working with dangerous electrical current. He testified that employees are informed of this policy upon hiring and that the company participates in random pre and post-work accident drug testing. Mr. Berwick also testified that, it makes no difference regarding the amount of controlled substance that is found in an employee's system or whether the controlled substance was ingested voluntarily or unknowingly (although he indicated that in an involuntary situation, i.e. someone being drugged unwittingly, an employee could challenge the termination). If an employee tests positive for any controlled substance, including marijuana, the presence alone will suffice to initiate disciplinary action according to Mr. Berwick.

17. Mr. Berwick also testified that Employer's zero-tolerance policy is a "24 hour policy" and applies to off-hour consumption of illegal substances. Again, he testified that this policy was adopted because of the dangers associated with working with high voltage electricity. In regard to off-hour consumption Employer's drug policy provides: "[t]he use of illegal drugs, abuse of legal prescription medications, or alcohol prior to working hours is prohibited. Failure to comply will result in appropriate disciplinary actions up to and including termination." Finally, Mr. Berwick testified that it is standard Employer policy to conduct post accident drug testing, as was the case here.

18. The aforementioned policies as contained in Employer's Employment Policies and Rules were initialed by Claimant. Moreover, Claimant acknowledged that he received and understood the company policies and work rules by signing the document on March 15, 2016. The copy signed by Claimant is maintained in his personnel file.

19. Bill Tuten testified that Employer's policies apply independently of union policies. According to Mr. Tuten, the Union, which is an independent entity that electricians can join, drafted their own policies regarding the use of controlled substances. He testified that portions of the union's policies were incorporated into Employer's policies, but that the employer had not adopted all of the union's policies. As noted at paragraph No. 14 above, Employer specifically adopted by reference into their safety handbook that drug and alcohol testing would adhere to the testing policy established by the Union and N.E.C.A, (National Electrical Contractors Association).

20. Mr. Tuten testified that, regardless of how the drug test was conducted and whether or not it complied with the Union policies, the employer was permitted to terminate an employee with a positive drug test because "it's still our company's policy that [employees] be drug-free." Mr. Tuten clarified his testimony to indicate that Employer was permitted to terminate an employee under the provisions of its policies and safety rules even if there was not strict adherence to the Union workplace policies. He testified if Claimant wanted to challenge the termination, then he could bring that challenge to the Union.

21. The ALJ finds from the testimony and review of the admitted hearing exhibits that the drug testing in this case was not performed according to the policies and procedures adopted by Employer as set forth in the CBA with the Union. Based upon the evidence presented, there is no indication that the testing was performed by a certified laboratory as provided for by the Employer/Union agreement. Rather, the testing was performed at the hospital shortly after Claimant was airlifted to the University of Colorado Health Center for admission into the burn unit. The evidence presented persuades the ALJ that Claimant did not consent to testing of his urine for forsensic purposes. Rather, the testing was likely completed as part of Claimant's routine treatment for his electrical injuries. Moreover, after a "positive" drug test result has been documented, the agreement between Employer and the Union sets forth certain steps to be followed regarding preservation and retesting of the original sample by a certified laboratory of the employee's choosing and at his/her expense. While Claimant's medical condition likely prevented his request for retesting within 72 hours as set forth in the Employer/Union agreement, he argues the procedures for retesting were nonetheless not followed, seemingly in an effort to raise questions regarding the validity of his testing result vis-à-vis his termination.[1] On one hand Claimant argues that according to Section 7(c) of the collective bargaining agreement no adverse employment action can be taken unless the appropriate testing procedures set forth in the CBA are followed. On the other hand, Claimant recognizes that the question for determination is whether he performed a "volitional act", specifically the use of marijuana which resulted in his termination. In this regard, Claimant argues that the evidence presented as to how the ingestion of the controlled substance occurred, as shown by a positive drug test result, is speculative and therefore amounts to conjecture. Because Respondents did not follow the adopted testing procedures set forth in the CBA and based upon the assertion that the evidence regarding how the ingestion of a controlled substance occurred is speculative, Claimant argues that Respondents have failed to prove by a preponderance of the evidence that Claimant is responsible for the termination of his employment. The ALJ is not persuaded.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

[1] As noted, the propriety of Respondents' imposition of a safety rule violation penalty for producing a positive drug test result is not before the ALJ.

General Legal Principals

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with § 8-43-215, C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, *84 P.3d 1023 (Colo. 2004).* This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, 5 P.3d 385 (Colo. App. 2000).*

C. Assessing the weight, credibility and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo.App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence presented. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo.App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo.App. 2002). In this case, the ALJ credits the testimony of Mr. Berwick and Mr. Tuten regarding the independent nature of Employer's zero tolerance substance abuse policy and its application to the claimant as credible and persuasive. Nonetheless, the question of whether Claimant performed a volitional act which resulted in his termination must be addressed.

Termination for Cause & Claimant's Entitlement to Ongoing TTD

D. As Claimant's injury was after July 1, 1999, sections 8-42-105(4) and 8-42-103(1)(g), C.R.S. apply regarding his continued entitlement to TTD benefits. These identical provisions state, "In cases where it is determined that a temporarily disabled employee is responsible for termination of employment, the resulting wage loss shall not be attributable to the on-the-job injury." Sections 105(4) and 103(1)(g) bar reinstatement

of TTD benefits when, after the work injury, claimant causes his/her wage loss through his/her own responsibility for the loss of employment. *Colorado Springs Disposal d/b/a Bestway Disposal v. Industrial Claim Appeals Office*, 58 P.3d 1061 (Colo. App. 2002). Simply put, if a claimant is responsible for his/her termination of employment, the wage loss which is the consequence of claimant's actions, shall not be attributable to the on-the-job injury. *Anderson v. Longmont Toyota, Inc.,* W.C. No. 4-465-839 (ICAO February 13, 2002). Respondents shoulder the burden of proving by a preponderance of the evidence that Claimant was responsible for her termination. *Colorado Compensation Insurance Authority v. Industrial Claim Appeals Office,* 20 P. 3d 1209 (Colo.App. 2000).

E. The concept of "responsibility" is similar to the concept of "fault" under the previous version of the statute. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). "Fault" requires a volitional act or the exercise of some control by a claimant over the circumstances leading to the termination." *Gilmore v. Indus. Claim Appeals Office*, 187 P.3d 1129, 1132 (Colo. App. 2008)(citing *Padilla v. Digital Equipment Corp.*, 902 P.2d 414, 416 (Colo. App. 1994). This is a factual determination for the ALJ. *Padilla*, 902 P.2d at 416. An employee is "responsible" if the employee precipitated the employment termination by a committing a volitional act that an employee would reasonably expect to result in the loss of employment. *Patchek v. Colorado Department of Public Safety*, W.C. No. 4-432-301 (September 27, 2001). "Fault" does not require "willful intent" on the part of the Claimant. *Richards v. Winter Park Recreational Association*, 919 P.2d 933 (Colo.App. 1996)(unemployment insurance); *Harrison v. Dunmire Property Management, Inc.,* W.C. no. 4-676-410 (ICAO, April 9, 2008).

F. Despite legalization of marijuana in Colorado, the Colorado courts have reiterated that an employer may terminate an employee for drug use. *See, e.g., Coats v. Dish Network, LLC*, 350 P.3d 849 (Colo. 2015); *Bolerjack v. Water Edge Pond Service*, W.C. 4-905-434 (I.C.A.O. 2014). In the seminal case of *Coats*, the Colorado Supreme Court considered a wrongful termination action where an employee was terminated after a random drug test came back positive for marijuana. In that case, the employer terminated the employee under their zero-tolerance policy. The employee argued that he was licensed by Colorado to use medical marijuana and that his use was off-premises. The Colorado Supreme Court found the termination was lawful because even state-licensed marijuana use was not lawful activity as it related to the employment. *Bolerjack*, an I.C.A.O. case, on the other hand, applies this exact reasoning to the termination of TTD post-termination of employment in the workers' compensation context. As found here, Employer has a strict drug-free policy that specifically prohibited off-hours drug use, including marijuana. Also, as found, a violation of this employer policy could result in termination of employment. Claimant initialed and signed off on these guiding principles and no evidence was presented that Claimant did not comprehend these policies. Based upon the evidence presented, the ALJ concludes that Claimant, more probably than not, was aware that use of marijuana was prohibited and that use of the same could result in the termination of his employment as an electrician for Employer.

G. To the extent that Claimant asserts that failure to follow the drug testing

protocols set forth in the CBA precludes a determination that he was responsible for his termination, since Section 7(c) of the protocols that no adverse employment action can be taken unless the appropriate testing procedures set forth in the CBA are followed, the ALJ is not persuaded. See generally, *Keil v. Industrial Claim Appeals Office*, 847 P.2d 235 (Colo.App. 1993)(employer's failure to follow its established discipline procedures did not prohibit a determination that an employee was responsible for termination). To the contrary, as noted in *Keil*, the dispositive issue in all cases is whether the employee performed a volitional act or otherwise exercised a degree of control over the circumstances resulting in discharge.

H. To the extent that Claimant suggests that he may have ingested/inhaled marijuana involuntarily and that there is not a "scintilla" of evidence in the record supporting a conclusion that he engaged in a voluntary act that was responsible for his positive cannabis test result, the ALJ is equally unconvinced. In addition to his positive test result, the record evidence contains affirmative statements made by the Claimant shortly after the accident where he conceded that he uses illicit drugs, including marijuana. Additional statements against interest were made by Claimant after his termination indicating that he used marijuana daily. These statements coupled with two positive test results for marijuana support a reasonable inference that Claimant's use of marijuana was volitional and deliberate.

I. Considering the entire evidentiary record, the ALJ concludes that Claimant exercised a degree of control over the circumstances resulting in his termination by volitionally choosing to use marijuana in direct contravention of Employers drug policy. The ALJ concludes that any employee would reasonably expect such actions could likely result in the loss of employment given the policies Claimant acknowledged and accepted when he began his employment with Employer. Because his termination was not compelled by the natural consequence of the work injury, Claimant is "responsible" for his job separation and his claim for TTD benefits is permanently barred. *Blair v. Art C. Klein Construction Inc., supra.; Longmont Toyota, Inc.*, *supra*.

ORDER

It is therefore ordered that:

1. Respondents have proven by a preponderance of the evidence that Claimant is responsible for the termination of his employment with Berwick Electric Company. For this reason his claim for TTD benefits is barred and the same is hereby denied and dismissed. The Petition to Modify, Terminate or Suspend Benefits is hereby GRANTED.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service;

otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 27, 2017

ISSUE

Whether Claimant has produced clear and convincing evidence to overcome the Division Independent Medical Examination (DIME) opinion of Gregory Reichhardt, M.D. that he reached Maximum Medical Improvement (MMI) on April 7, 2016 and suffered a 5% neurologic impairment and a 3% psychological impairment as a result of his August 25, 2015 admitted industrial injuries.

FINDINGS OF FACT

1. Claimant worked for Employer as the driver of an "impact truck" at a freeway construction sites. The impact truck Claimant operated is also referred to as a truck-mounted impact attenuator, crash cushion or crash attenuator. The vehicle consists of a flatbed semi with an attachment at the rear of the truck that lowers to the pavement. When the trailer attachment is deployed a safe zone in front of the impact truck is created for highway workers on the road. The trailer is also an energy directing and absorbing structure. The design of the vehicle Claimant operated prevents vehicles from entering areas where workers are on the ground. As Claimant explained, the trailer essentially becomes a portable "guardrail" that catches the colliding vehicle in an energy absorbing structure.

2. On August 25, 2015 Claimant deployed his impact truck on I-70 to create a safety zone for road construction on the highway. A Dodge Ram pickup truck traveling at highway speeds between 60 and 80 mph collided with the rear of Claimant's impact truck. As designed, the trailer protected workers on the ground and absorbed the impact of the truck striking the crash attenuator. Claimant noted that his chest struck the steering wheel and his head hit a glass panel behind the driver's seat. He remarked that he suffered a brief loss of consciousness as a result of the impact.

3. Claimant was transported by ambulance to St. Anthony Hospital after the accident with complaints of a headache, pain in the left chest musculature and left upper quadrant pain. He was diagnosed with the following: (1) a concussion; (2) blunt chest trauma; and (3) blunt abdominal trauma. After multiple CT scans and other diagnostic tests Claimant was discharged on August 26, 2015.

4. Claimant subsequently received medical treatment through HealthOne Occupational Medicine and Rehabilitation. He initially received treatment from Brandon Schreiber, PA-C but on October 22, 2015 visited Authorized Treating Physician (ATP) Matthew R. Lugliani, M.D. for an initial evaluation. Dr. Lugliani diagnosed Claimant with a traumatic brain injury, visual disturbances, a liver laceration and a lumbar strain. He prescribed medications and referred Claimant for pain management treatment and

physical therapy. Dr. Lugliani permitted Claimant to return to modified work in the form of seated duty.

5. On December 18, 2015 Claimant visited Barry A. Ogin, M.D. for a pain management evaluation. Dr. Ogin reviewed Claimant's brain MRI taken on December 4, 2015. He noted the development of chronic, small vessel ischemic disease in Claimant's brain but no evidence of acute trauma

6. After receiving additional conservative medical treatment, including extensive neurological testing, Claimant returned to Dr. Lugliani for an evaluation on April 7, 2016. Dr. Lugliani reported that Claimant had resumed full duty employment without complications and was not taking any medications. He assessed Claimant with a traumatic brain injury, depression and hypertension. Dr. Lugliani noted that Claimant's subjective complaints were minimal, his objective complaints were benign and he could work full duty with no restrictions. He concluded that Claimant had reached Maximum Medical Improvement (MMI) with no permanent impairment. Dr. Lugliani recommended a six month follow-up examination with Dr. Ogin if Claimant experienced any flare-ups in his condition.

7. Claimant challenged Dr. Lugliani's MMI and impairment determinations through a Division Independent Medical Examination (DIME). On August 19, 2016 Claimant underwent a DIME with Gregory Reichhardt, M.D. Claimant reported continuing headaches, depression and anxiety. Dr. Reichhardt noted that Claimant had suffered pre-existing depression and anxiety and was taking antidepressant medication at the time of his industrial injuries. Dr. Reichhardt commented that Claimant was tolerating full-time, regular duty employment.

8. Dr. Reichhardt determined that Claimant suffered a traumatic brain injury and an aggravation of his pre-existing anxiety and depression as a result of the August 25, 2015 accident. He agreed with Dr. Lugliani that Claimant had reached MMI on April 7, 2016. Dr. Reichhardt commented that Claimant's pain and anxiety interfered with his sleep. He also noted that Claimant's social functioning had decreased because of increased levels of irritability. Dr. Reichhardt remarked that Claimant warranted a functional score of 1.5 or a 3% psychological, whole person impairment. In rating Claimant's traumatic brain injury, Dr. Reichhardt relied on the *AMA Guides for the Evaluation of Permanent Impairment Third Edition (Revised) (AMA Guides*). He specifically considered Table 1, page 109 of the *AMA Guides* in rating Claimant for episodic neurologic disorders and assigned a 5% whole person impairment. Combining Claimant's 3% psychological impairment with his 5% neurologic impairment yields a total 8% whole person rating as a result of the August 25, 2015 accident. Finally, Dr. Reichhardt concluded that Claimant warranted medical maintenance benefits in the form of medication management for his headaches. He also recommended eight visits with a psychologist and six visits with a physician or neurologist.

9. On March 29, 2017 Claimant underwent an independent medical examination with Lynn Parry, M.D. After reviewing Claimant's medical records, Dr. Parry concluded that Claimant had not reached MMI. She noted that Claimant had

suffered a post-traumatic stress reaction based on his reports to Drs. Lugliani and Ogin. Dr. Parry explained that Claimant's stress reaction had not been addressed. Moreover, although Dr. Reichhardt had remarked that Claimant's condition had worsened since MMI, he exercised judgment to include his recommendations as medical maintenance treatment. However, Dr. Parry commented that Dr. Reichhardt's medical maintenance recommendations had not been completed. She diagnosed Claimant with the following: (1) a mild traumatic brain injury/post-concussive syndrome; (2) post-concussive headaches/migraines; (3) post-traumatic stress disorder; and (4) mood liability secondary to the traumatic brain injury. Dr. Parry assigned Claimant a 20% whole person impairment rating for his emotional liability under Table 1 of the *AMA Guides*. She commented that she rated Claimant's emotional liability under Table 1 "rather than combining an additional mental impairment with his impairment secondary to his brain injury."

10. Dr. Parry testified at the hearing in this matter. She maintained that Claimant had not reached MMI and warranted a 20% permanent impairment rating for his August 5, 2015 industrial injuries. Dr. Parry explained that Claimant's condition had worsened since his DIME with Dr. Reichhardt. He suffered a traumatic brain injury on August 25, 2015 that caused a wide range of cognitive and emotional difficulties. She noted that the industrial accident exacerbated Claimant's pre-existing anxiety condition. Dr. Parry explained that Claimant specifically suffers from post-traumatic stress disorder and impulse control issues that did not exist prior to the August 25, 2015 accident.

11. Dr. Parry detailed that Dr. Reichhardt rated Claimant for both psychological and neurological impairments. Dr. Reichhardt assigned Claimant a total 8% whole person impairment rating. However, she explained that she would have assigned Claimant a single 20% whole person impairment rating for his emotional liability. Dr. Parry acknowledged that the *AMA Guides* permit a great deal of flexibility in assigning psychological impairments and Dr. Reichhardt's rating was not incorrect. She simply would have rated Claimant differently pursuant to the *AMA Guides*. Finally, Dr. Parry explained that Claimant requires medical maintenance treatment in the form of medications and psychological counseling as a result of the August 25, 2015 accident.

12. Claimant has failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Reichhardt that he reached MMI on April 7, 2016 and suffered a 5% neurologic impairment and a 3% psychological impairment as a result of his August 25, 2015 admitted industrial injuries. On August 25, 2015 Claimant was injured when a pickup truck traveling at highway speeds between 60 and 80 mph collided with the rear of his impact truck. Claimant commented that his chest struck the steering wheel and his head hit a glass panel behind the driver's seat. He remarked that he suffered a brief loss of consciousness as a result of the impact. ATP Dr. Lugliani diagnosed Claimant with a traumatic brain injury, visual disturbances, a liver laceration and a lumbar strain. He prescribed medications and referred Claimant for pain management treatment and physical therapy. After receiving additional conservative medical treatment, including extensive neurological testing, Dr. Lugliani reported that Claimant had resumed full duty employment without complications and was not taking any medications. Dr. Lugliani noted that Claimant's subjective complaints were minimal, his objective complaints were

benign and he could work full duty with no restrictions. He concluded that Claimant had reached MMI on April 7, 2016 with no permanent impairment.

13. On August 19, 2016 DIME Dr. Reichhardt determined that Claimant suffered a traumatic brain injury and an aggravation of his pre-existing anxiety and depression as a result of the August 25, 2015 accident. He agreed with Dr. Lugliani that Claimant had reached MMI on April 7, 2016. Dr. Reichhardt remarked that Claimant warranted a functional score of 1.5 or a 3% psychological, whole person impairment. He specifically considered Table 1, page 109 of the *AMA Guides* in rating Claimant for episodic neurologic disorders and assigned a 5% whole person impairment. Combining Claimant's 3% psychological impairment with his 5% neurologic impairment yields a total 8% whole person rating as a result of the August 25, 2015 accident.
