A. The purpose of the Workers' Compensation Act of Colorado (Act), §§8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits, including medical benefits, by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

C The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

D. The claimant has the burden of proving entitlement to benefits, including medical benefits, by a preponderance of the evidence. Section 8-43-201, C.R.S; *City of Boulder v. Streeb,* 706 P.2d 786 (Colo. 1985).

E. Where the claimant's entitlement to benefits is disputed, the claimant has the burden to prove a causal relationship between a work-related injury or disease and the condition for which benefits or compensation is sought. *Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo.App. 1997). Whether the claimant sustained her burden of proof is a factual question for resolution by the ALJ. *City of Durango v. Dunagan,* 939 P.2d 496 (Colo.App. 1997).

F. Here, as found, Claimant failed to meet her burden of proving that the medical treatment she received for her left shoulder injury was authorized, or related to the admitted work injury.

G. To obtain indemnity benefits, a claimant must prove, by a preponderance of the evidence, that the industrial injury caused a disability lasting more than three work shifts, she left work as a result of the disability, and the disability resulted in an actual wage loss. *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 639 (Colo. App. 1997). Here, as found, the claimant failed to meet her burden of proving entitlement to indemnity benefits in the form of TTD or PPD.

H. Section 8-42-107.2(2)(b), C.R.S. provides, in relevant part:

(b) If any party disputes a finding or determination of the authorized treating physician, such party shall request the selection of an IME. The requesting party shall notify all other parties in writing of the request, on a form prescribed by the division by rule . . . . Unless such notice and proposal are given within thirty days after the date of mailing of the final admission of liability or the date of mailing or delivery of the disputed finding or determination, as applicable pursuant to paragraph (a) of this subsection (2), the authorized treating physician's findings and determinations shall be binding on all parties and on the division.

I. Sections 8-43-203(2)(b)(II)(A) and 8-43-203(2)(d) provide, in pertinent part:

(II) An admission of liability for final payment of compensation shall include a statement that this is the final admission by the workers' compensation insurance carrier in the case, that the claimant may contest this admission if the claimant feels entitled to more compensation, ... and notice to the claimant that the case will be automatically closed as to the issues admitted in the final admission if the claimant does not ... contest the final admission in writing and request a hearing on any disputed issues that are ripe for hearing....

(d) Once a case is closed pursuant to this subsection (2), the issues closed may only be reopened pursuant to section 8-43-303.

J. Claimant does not seek to reopen on the basis of a *worsening* of her left shoulder condition, nor was sufficient evidence presented that her left shoulder condition had worsened at any time since being placed at MMI by her ATP.

K. Rather, Claimant basis for reopening can best be characterized as an *error or mistake* by her ATP in placing her at MMI, and in opining that her left shoulder injuries were not work related. In reality, Claimant simply disagrees with her ATP. The ALJ finds that there is *no evidence* in support of her claim of an error or mistake by her ATP on the issues of *MMI, causation, or work-*

relatedness. No factual or legal basis for a reopening has been shown by competent evidence.

L. While not necessary in light of the previous Conclusion, the ALJ further finds that Claimant failed to avail herself of the appropriate procedural right to challenge her ATP's conclusions, to wit: requesting a Division Independent Medical Examination. Nothing stood in Claimant's way from requesting a DIME in a timely fashion. No evidence came to light at some later point that was not at her disposal when she disagreed with her ATP's conclusions. Nor would the overall circumstances of this case warrant a reopening, even if such an error or mistake were found to have occurred.

M. The provisions concerning the final admission of liability are part of a statutory scheme to promote, encourage, and ensure prompt payment of compensation to an injured worker without the necessity of a formal administrative determination in cases not presenting a legitimate controversy. *HLJ Management Group, Inc. v. Kim,* 804 P.2d 250 (Colo.App.1990).

N. The right to workers' compensation benefits, including medical payments, arises only when an injured employee initially establishes, by a preponderance of the evidence, that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. § 8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844, 846 (Colo.App.2000). In the instant claim, it is undisputed that the ATP, Dr. Walter Larimore, determined that the claimant reached MMI from her industrial injuries on June 15, 2015. Dr. Larimore determined that the injuries caused by the January 23, 2007 accident included only the diagnosed left cubital tunnel and left lateral epicondylitis, and not the left shoulder rotator cuff tear and other findings.

O. It is undisputed that the Respondent Insurer filed a Final Admission of Liability consistent with Dr. Larimore’s opinions on MMI, permanent physical impairment and medical treatment post-MMI. The claimant avers that she was experiencing shoulder symptoms from the date of injury and ongoing. The records reflect the claimant received some treatment for her shoulder complaints within the Workers’ Compensation System. The claimant testified that on June 15, 2015, she did not believe she was at MMI and believed she needed treatment for her shoulder injuries. However, it is undisputed that the claimant did not object to the June 29, 2015, Final Admission of Liability and request a Division IME, disputing Dr. Larimore’s causation determinations.

P. The claimant attempts to frame the issues as those of “compensability” and medical benefits. Contrary to the claimant’s arguments, the existence of a compensable injury is not in question. Indeed, Respondents admitted, in the Final Admission of Liability, that claimant sustained a compensable injury on September 15, 2014, from which she reached MMI on June 15, 2015, with no

impairment, no restrictions and no need for medical treatment to maintain MMI.

Q. Section 8-42-107(8)(c), C.R.S. specifies that, once a claimant reaches MMI, the treating physician "shall determine a medical impairment rating" in accordance with the *AMA Guides*. Thus, the treating physician makes the initial determination of MMI and the degree of impairment. *Colorado AFL-CIO v. Donlon,* 914 P.2d 396 (Colo.App.1995). If the rating is disputed, either party may request a Division IME, and the IME physician's rating is binding unless overcome by clear and convincing evidence.

R. When a Division IME has been requested, a hearing may not take place until the finding of the DIME physician is filed with the Division. *See Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590 (Colo.App.1998). This statutory IME process was instituted to reduce litigation over MMI and the degree of impairment. *Colorado AFL-CIO v. Donlon, supra*.

S. Whether a particular component of the claimant's overall medical impairment was caused by the industrial injury is an inherent part of the rating process under the AMA Guides. *See Askew v. Industrial Claim Appeals Office,* 927 P.2d 1333 (Colo.1996) (a rating of overall medical impairment necessarily includes consideration of apportionment of the impairment to other causes). Indeed, the AMA Guides specifically require the treating physician to determine the cause or causes of the claimant's overall impairment. *See AMA Guides* Ch. 2.2.

T. The original finding of causation of the claimant's shoulder injuries has already been determined by the ATP. No credible evidence has been presented in rebuttal.

U. Similarly, the issues of TTD, PPD, medical benefits and "medical reimbursement" must be measured from claimant's condition when the claim was closed, as established in the original proceeding, and to her current condition. The ATP addressed the original causation issues by his diagnosis at MMI. That resolution is no longer open to question. *See e.g., City & County of Denver v. Indus. Claim Appeals Office of State*, 58 P.3d 1162, 1164 (Colo. Ct. App. 2002).

V. The claimant's request to reopen her claim to address compensability of the alleged shoulder condition, for medical benefits, TTD, PPD, MMI, and "medical reimbursement" as related to her shoulder disease is denied and dismissed. Claimant has presented no persuasive evidence in support of her request to reopen.

ORDER

It is therefore Ordered that:

1. The claimant's request that her claim be reopened is denied and dismissed.

2. The claimant's request for an Order determining she suffered a left shoulder torn rotator cuff in the course and scope of her employment with the Respondent Employer is denied and dismissed.

3. The claimant's request that she be awarded TTD from August 9, 2015 through November 17, 2015, is denied and dismissed.

4. The claimant's request for an unspecified award of PPD is denied and dismissed.

5. The claimant's request for a new determination that she was not at MMI on June 15, 2015, is denied and dismissed.

6. The claimant's request for an award of medical benefits and "medical reimbursement" in an unspecified amount is denied and dismissed.

7. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 11, 2017

Colorado Springs, Colorado 80906

ISSUES

1. Did Claimant prove by a preponderance of the evidence he suffered a compensable work-related hernia on February 17, 2015 (W.C. No. 4-989-495)?

2. If the hernia is compensable, did Claimant prove that the medical treatment he received for the hernia was authorized, reasonable, necessary, and related to the compensable injury?

3. Did Claimant prove by a preponderance of the evidence he suffered a compensable occupational disease in the form of hearing loss and tinnitus (W.C. No. 4-983-642-04)?

4. If Claimant's hearing problems are compensable, did Claimant prove entitlement to medical benefits related to his hearing loss?

5. Did Claimant prove entitlement to TTD benefits for any period between March 22, 2015 and September 3, 2015?

STIPULATIONS

Any periods of TTD benefits are payable at the rate of $881.65 per week.

FINDINGS OF FACT

1. Claimant worked as a heavy equipment operator for Employer. Claimant worked on the Pueblo Levee project from October 2014 until March 21, 2015.

2. Claimant typically worked 10 hours per day, six days per week.

3. Near the end of his shift on February 17, 2015, Claimant was using the bucket of an excavator to move a fuel tank. In so doing, the fuel line became pinched. Claimant tried to move the tank by hand and felt a painful "pop" in his belly. Claimant finished his shift and went home.

4. That evening, Claimant saw a bulge in his belly while looking in the mirror. He pressed on the bulge and it felt "spongy." He also showed the bulge to his wife.

5. Claimant reported the injury to his supervisor, William Callaway, the next day when he got to work. Mr. Callaway completed an incident report stating Claimant "moved [the] tank by hand and felt a pop in his belly." Mr. Callaway offered to send Claimant to a doctor, but Claimant declined the offer and signed a voluntary waiver of medical treatment. The form also stated, "If I want to be seen by a doctor in the future

regarding this condition, I can, upon request, receive the treatment." A handwritten notation on the form described the condition as "slight pain and bump by belly button."

6. The information available to Mr. Callaway on February 18 would not lead a reasonably conscientious manager to believe Claimant required any medical treatment relating to the incident.

7. Claimant continued working his regular job without limitation until March 21, 2015, when he resigned due to non-injury-related illness and to take another job in California.

8. W.C. No. 4-983-642-04 is an occupational disease claim for bilateral tinnitus and hearing loss. Claimant alleges he suffered hearing damage from operating a John Deere 290 with a broken rear window for several weeks. Claimant testified he began operating the JD 290 "at the end of January" 2015. He testified that the front and rear windshields were broken when he started operating the machine. He testified that the front windshield was temporarily repaired with a piece of plexiglass, but the rear glass remained broken for "a minimum" of four weeks, and probably "closer to six weeks." Claimant testified the engine is directly behind the cab, so he was continuously exposed to loud engine noise. Claimant testified he noticed problems with his hearing "within the first couple of hours" of operating the machine. At no time did Claimant use the available hearing protection. Claimant mentioned nothing about hearing problems to anyone while he worked for Employer. Claimant testified he complained about the broken window to his supervisors on numerous occasions and eventually told Mike Hiltz he would quit if the window were not repaired that day. Claimant testified he documented the broken rear window on his Heavy Equipment Daily Inspection forms "every day." Based on Claimant's alleged timeline, one would expect the broken rear window to be noted on daily inspection reports at least in the last week of January and likely well into February 2015.

9. Employer used two JD 290s on the Pueblo Levee project. One machine had a concrete breaker attachment; the other machine had a bucket. The breaker attachment was not interchangeable between the two machines due to the specific hydraulic plumbing required. The breaker machine is the one alleged to have had the broken window.

10. On March 25, 2015, Claimant saw his family physician, Dr. Roland Sanchez, for bilateral tinnitus. He told Dr. Sanchez he did not recall when the symptoms began.

11. Claimant treated with Dr. Sanchez for abdominal pain and nausea on several occasions in late March and April 2015. Dr. Sanchez's reports do not mention a hernia. Physical examinations of Claimant's abdomen on March 25, April 6, and April 14 were reportedly normal.

12. Claimant saw an audiologist, Dr. Kathleen Romero, on April 22, 2015. He reported "a bilateral decrease in hearing for the past 3-4 months, following a long-term

noise exposure at work." He also reported tinnitus. Testing revealed mild to moderate sensorineural hearing loss bilaterally. Dr. Romero recommended a trial of hearing aids.

13. On April 28, 2015, Dr. Sanchez completed a work status form in conjunction with Claimant's claim for unemployment insurance (UI) benefits. He indicated Claimant could work with no restrictions.

14. Claimant was admitted to Presbyterian Hospital on May 22, 2015 with complaints of nausea, abnormal weight gain and rectal bleeding.[1] There was no mention of an umbilical hernia on exam.

15. Claimant first sought medical treatment specifically related to his hernia on June 24, 2015 with a surgeon, Dr. Kashif Malik. Claimant reported a bulge near his umbilicus that had been "growing" for three months. He stated the bulge was not painful. Physical examination revealed an incarcerated umbilical hernia. Claimant told Dr. Malik he was interested in surgery, but wanted to complete his workup for tinnitus first. Dr. Malik stated "the hernia is not bothering him that much, so we can safely watch it for now until he finishes the other workup."

16. The physical examination and attempted reduction by Dr. Malik caused the hernia to become painful. Claimant returned to Dr. Malik on July 22, 2015 and explained that "he got it with lifting a heavy gas tank at work. He heard a pop, and since then he has noticed a lump and has pain at the region." Because of his ongoing pain, Claimant wished to move forward with surgery. Dr. Malik indicated he would schedule Claimant for an open hernia repair with mesh.

17. Claimant called Employer shortly after his July 22 appointment with Dr. Malik to notify them he needed hernia surgery. Claimant spoke with Employer's safety and health director, Brian Looby. Mr. Looby told Claimant he would file paperwork with Respondent-Insurer and "somebody would be contacting him." Claimant told Mr. Looby he needed "emergency" hernia surgery. Mr. Looby told Claimant if he needed emergency surgery, "that would be at the discretion of his surgeon." Mr. Looby did not refer Claimant to a physician or clinic during or after that telephone conversation.

18. As of the July 2015 telephone conversation, Mr. Looby had information that would lead a reasonably conscientious manager to believe Claimant needed medical treatment related to his February 2015 industrial injury.

19. Within a few days after the telephone conversation, Mr. Looby received copies of forms relating to Claimant's hernia and hearing loss claims. In response to the hearing loss claim, Mr. Looby conducted noise level tests of the equipment Claimant had used. Mr. Looby's tests showed 85 dB outside the machine.

20. Claimant had another hearing evaluation with Dr. Raymond Matteucci on July 1, 2015. Testing revealed neurosensory hearing loss in both ears.

[1] The parties did not submit the hospital records into evidence, but the hospital visit was documented in the report of Respondents' IME, Dr. Ramaswamy.

21. On July 31, 2015, Dr. Romero authored a letter stating "since being exposed to loud noise for a period of time he has bilateral tinnitus and a sensorineural hearing loss in both ears. This type of hearing loss is commonly seen with noise exposure and is generally permanent." She opined the hearing loss would affect Claimant's basic communication abilities, particularly in noisy environments. She recommended bilateral hearing aids on a lifetime basis.

22. Claimant underwent hernia surgery with Dr. Malik on August 3, 2015.

23. On August 5, 2015, Dr. Malik authored a report stating as a result of surgery Claimant had work restrictions of no bending, twisting or lifting greater than 20 pounds and no strenuous activity for at least 2-4 weeks after surgery.

24. Claimant returned to work on September 4, 2015 as a heavy equipment operator for a different employer.

25. Dr. Annu Ramaswamy performed a record review for Respondents on December 21, 2015. Dr. Ramaswamy opined neither the umbilical hernia nor the hearing loss/tinnitus were work-related.

26. William Calloway, the Pueblo Levee project superintendent, testified at the February 17, 2017 hearing. He testified that the front and rear windshields on the JD 290 with the breaker attachment were broken by concrete. He testified they replaced the windshield with plexiglass immediately as a temporary fix and requested permanent repairs from the home office. Mr. Calloway recalled Claimant complained about the broken rear window in one safety meeting. Mr. Calloway estimated the windows were replaced within 7-10 days after he learned they were broken. He was confident the rear window was not broken for 4-6 weeks. He did not recall Claimant stating he was having problems with his hearing due to the noise. Mr. Callaway testified hearing protection was readily available to employees on the project.

27. Claimant's coworker, Dallan Hackett, testified at hearing. Mr. Hackett was operating the JD 290 with the breaker attachment when the front and rear windows were damaged by a flying piece of concrete. He estimated the incident occurred in "the beginning to middle of January 2015." Mr. Hackett testified that the front window was replaced with plexiglass within two days. He testified it took "a month or maybe a little longer" to replace the rear window. Based on that timeline, one would expect the broken rear window would be noted on at least some daily inspection reports between January 15 and January 31, and likely well into February.

28. Michael Atwood, a project manager on the Pueblo Levee project, testified at the hearing. He completed his testimony in a post-hearing evidentiary deposition on March 14, 2017. At the hearing, the ALJ asked Mr. Atwood to produce all of the Heavy Equipment Daily Inspection forms he could find. At his deposition, Mr. Atwood produced approximately 62 forms dated between December 10, 2014 and March 21, 2015 relating to several pieces of equipment Claimant operated on the project. The forms regarding the JD 290G with the breaker attachment showed:

Date	Equipment	Defect Noted?	Operator	Hours
1/19/2015	JD 290G Breaker	No	Co-worker	15.3
1/21/2015	JD 290G Breaker	No	Co-worker	9.6
1/22/2015	JD 290G Breaker	No	Co-worker	9
1/23/2015	JD 290G Breaker	No	Co-worker	10.9
1/24/2015	JD 290G Breaker	No	Co-worker	11.1
1/25/2015	JD 290G Breaker	No	Co-worker	5.9
1/28/2015	JD 290G Breaker	No	Claimant	10.9
1/29/2015	JD 290G Breaker	No	Claimant	10.7
1/30/2015	JD 290G Breaker	No	Claimant	11.5
1/31/2015	JD 290G Breaker	No	Claimant	10
2/2/2015	JD 290G Breaker	No	Claimant	10.6
2/3/2015	JD 290G Breaker	No	Claimant	8.2
2/4/2015	JD 290G Breaker	No	Claimant	9.1
2/5/2015	JD 290G Breaker	No	Co-worker	8
2/6/2015	JD 290G Breaker	No	Co-worker	7.1
2/5/2015	JD 350G LC	No	Claimant	9.8
2/6/2015	JD 350G LC	No	Claimant	6.6
2/7/2015	CAT 349	No	Claimant	8
2/7/2015	JD 350G LC	No	Claimant	7.4
2/9/2015	JD 350G LC	No	Claimant	11.1
2/11/2015	JD 350G LC	No	Claimant	11.6
2/12/2015	JD 350G LC	No	Claimant	11.7
2/13/2015	JD 350G LC	No	Claimant	7.7
2/14/2015	JD 350G LC	No	Claimant	8
2/17/2015	JD 350G LC	No	Claimant	11.3
2/18/2015	JD 350G LC	No	Claimant	10.7
2/19/2015	JD 350G LC	No	Claimant	8.9
2/19/2015	JD 350G LC	No	Claimant	9.5
2/21/2015	JD 350G LC	No	Claimant	9
3/5/2015	JD 350G LC	No	Claimant	9.9
3/6/2015	JD 350G LC	No	Claimant	10.6
3/7/2015	JD 350G LC	No	Claimant	7.3
3/21/2015	JD 350G LC	No	Claimant	5.2

29. Mr. Atwood also produced a Daily Construction Report dated January 14, 2015. The report documents “JD 290 new windshield installed.” Mr. Atwood found no other reports referencing issues with either JD 290 used on the project.

30. Claimant has proven by a preponderance of the evidence he sustained a compensable hernia injury on February 17, 2015.

31. The surgery performed by Dr. Malik on August 3, 2015 was reasonable, necessary and causally related to Claimant's February 17, 2015 accident.

32. Dr. Malik was an authorized treating physician when he performed the surgery.

33. Claimant was not disabled when he voluntarily resigned on March 21, 2015.

34. Claimant failed to prove by a preponderance of the evidence he was disabled before August 3, 2015.

35. Claimant failed to prove entitlement to TTD from March 22, 2015 through August 2, 2015.

36. Claimant was disabled from all work activity as a result of surgery on August 3, 2015 through September 3, 2015.

37. Claimant proved entitlement to TTD benefits from August 3, 2015 through September 3, 2015.

38. Claimant received $4,025 in unemployment insurance (UI) benefits between April 5, 2015 and July 12, 2015. There was no overlap between periods of UI benefits and Claimant's period of temporary disability.

39. Claimant has failed to prove that his hearing loss and tinnitus are causally related to his employment.

CONCLUSIONS OF LAW

A. Compensability standards

To receive compensation or medical benefits, a claimant must prove that he is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1), C.R.S.; *see, Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). The claimant must prove entitlement to benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case are not interpreted liberally, in favor of either claimant or respondents. Section 8-43-201.

The respondents are liable for medical treatment which is reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a); *Snyder v.*

Industrial Claim Appeals Office, 942 P .2d 1337 (Colo. App. 1997); *Country Squire Kennels v. Tarshis*, 899 P. 2d 362 (Colo. App. 1995). Where a claimant's entitlement to medical benefits is disputed, the claimant must prove that an injury directly and proximately caused the condition for which he seeks treatment. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, *supra*.

The Workers' Compensation Act recognizes a distinction between an "accident" and an "injury." The term "accident" refers to an "unexpected, unusual, or undesigned occurrence," whereas an "injury" is the physical trauma caused by the accident. Section 8-40-201(1). In other words, an "accident" is the cause, and an "injury" is the result. *City of Boulder v. Payne*, 426 P.2d 194 (Colo. 1967). Workers' compensation benefits are only payable if an accident results in a compensable "injury." The mere fact that an incident occurred at work and caused symptoms does not necessarily establish a compensable injury. Rather, a compensable injury is one that requires medical treatment or causes a disability. *E.g., Montgomery v. HSS, Inc*., W.C. No. 4-989-682-01 (ICAO Aug. 17, 2016).

The Act imposes additional requirements for liability of an occupational disease beyond the "arising out of" and "course and scope" requirements. A compensable occupational disease must meet each element of the four-part test mandated by § 8-40-201(14), which defines an occupational disease as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

The equally exposing stimulus requirement effectuates the "peculiar risk" test and requires that the hazards associated with the employment be more prevalent in the workplace than in everyday life or other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819 (Colo. 1993). In other words, the claimant "must be exposed by his or her employment to the risk causing the disease in a measurably greater degree and in a substantially different manner than are persons in employment generally." *Id.* at 824. The hazard of employment need not be the sole cause of the disease, but must cause, intensify, or aggravate the condition "to some reasonable degree." *Id*.

B. Claimant's hernia is compensable

As found, Claimant proved by a preponderance of evidence he suffered a compensable hernia on February 17, 2015. The physical exertion associated with moving the heavy fuel tank was sufficient to injure Claimant's abdominal wall. Claimant felt a painful pop while moving the fuel tank, and observed a "bump by [his] belly button" that evening. Thereafter, he was minimally symptomatic for several months. The hernia

progressively worsened, and was evident when Dr. Malik examined Claimant on June 24, 2015. Palpation of the hernia caused it to become very painful, and surgery was required to repair it.

Admittedly, the ALJ is somewhat puzzled by the normal physical examinations in March, April, and May 2015, and the negative ultrasound in June. But the ALJ is most persuaded by the fact that the incarcerated umbilical hernia Dr. Malik appreciated in June 2015 was in the same location as the small bulge Claimant observed near his belly button shortly after his injury. Considering all the evidence, the ALJ infers Claimant likely tore his abdominal wall when moving the fuel tank on February 17. He probably did not have an incarcerated hernia immediately. Rather, the "spongy" bulge he observed later that evening probably reflected local swelling and inflammation and/or a minor protrusion of abdominal fat. The abdominal wall defect probably enlarged over the next few months due to routine activities of daily living. This is consistent with Claimant's report to Dr. Malik that the hernia had been "growing" for several months. The defect may not have shown up on physical examination in March, April, and May 2015 because it was too small to be detected by an examination while Claimant was reclining on his back. It is also possible that Dr. Sanchez's records are inaccurate due to careless use of the electronic medical record template.[2] In any event, by mid-June 2015, the hernia had become too obvious to miss, and Claimant actively sought treatment for it.

The injury in February 2015 left Claimant's abdominal wall in a weakened state, which eventually progressed to an incarcerated hernia that required surgery. There is no persuasive evidence of any intervening cause sufficient to sever the causal connection to the original incident. Therefore, the ALJ concludes that the incarcerated hernia resulted from the natural progression of the February 17, 2015 injury.

C. Dr. Malik was authorized by August 3, 2015

Under § 8-43-404(5)(a), the employer has the right to choose the treating physician in the first instance. The employer's duty to designate a physician is triggered by the receipt of information that would lead a reasonably conscientious manager to believe that a compensable claim might be involved. *Bunch v. Industrial Claim Appeals Office*, 148 P.3d 381 (Colo. App. 2006). The employer must tender medical treatment "forthwith, " or the right of selection passes to the claimant. *Rogers v. Industrial Claim Appeals Office*, 746 P.2d 565 (Colo. App. 1987).

In light of Claimant's explicit waiver of medical treatment, the information available to Employer on February 18, 2015 would not lead a reasonably conscientious manager to believe that Claimant had suffered a compensable injury are required medical treatment. The waiver form advised Claimant he could receive medical treatment "upon request." Claimant did not mention his hernia again before his resignation, or at any time before July 2015.

[2] Dr. Sanchez's EMRs appear to be based on the type of template that pre-fills fields as normal unless the provider affirmatively changes the template.

Claimant informed Mr. Looby he needed hernia surgery on or shortly after July 22, 2015. At that point, it was incumbent upon Mr. Looby to refer Claimant for medical treatment if Employer wished to preserve its right to choose the treating physician. It makes no difference that Claimant was not in Colorado at that time. *Ries v. Subway of Cherry Creek*, W.C. No. 4-674-408 (ICAO, January 12, 2011). Mr. Looby told Claimant that Insurer "would be contacting him," but that did not occur. Consequently, the right of selection passed to Claimant. The August 3, 2015 surgery and all subsequent treatment provided by Dr. Malik are authorized.

D. Dr. Malik's treatment was reasonable, necessary and related

The respondents are liable for medical treatment which is reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a); *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997); *Country Squire Kennels v. Tarshis*, 899 P. 2d 362 (Colo. App. 1995). Where the respondents dispute a claimant's entitlement to medical benefits, the claimant must prove that an injury directly and proximately caused the condition for which he seeks benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). The claimant must also prove that the requested treatment is reasonable and necessary. Section 8-42-101(1)(a).

As found, the August 3, 2015 hernia surgery performed by Dr. Malik was reasonable, necessary and causally related to the February 17, 2015 accident.

E. Entitlement to TTD benefits

A claimant is entitled to TTD benefits if the injury causes a disability, the disability causes the claimant to leave work, and the claimant misses more than three regular working days. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The claimant must establish a causal connection between a work-related injury and the subsequent wage loss to obtain TTD benefits. *Id*. The term disability connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage-earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). Impairment of earning capacity may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

After his injury on February 17, 2015, Claimant continued to work his regular job without limitation for over a month. Claimant voluntarily terminated his employment on March 21, 2015 for reasons unrelated to his injury. Claimant was not "disabled" by the effects of the injury when he stopped working. Moreover, Claimant was responsible for the termination of his employment. See sections 8-42-103(1)(g). These facts are fatal to Claimant's request to commence TTD benefits on March 22, 2015.

To establish entitlement to TTD benefits, Claimant must prove that his condition worsened and caused a wage loss after his resignation. *Anderson v. Longmont Toyota,*

Inc. 102 P.3d 323 (Colo. 2004); *Loza v. Ken's Welding*, 4-712-246 (ICAO, January 7, 2009).

Claimant's testimony that he was primarily "lying on the couch" due to hernia pain starting in April 2015 is not persuasive. There is no documentation of hernia-related limitations or restrictions in the medical records from April through July 2015. In fact, on April 28, 2015 Dr. Sanchez opined Claimant was able to work without restrictions. There are no records to corroborate Claimant's testimony that he went to the emergency room "two or three times because of the pain." When Claimant saw Dr. Malik on June 24, 2015, he decided to delay surgery because the hernia was "not bothering him that much." Claimant was able to work and actively seeking work between April and July 2015, as evidenced by his receipt of unemployment benefits.[3] Claimant failed to prove that he was disabled prior to surgery.

As found, Claimant's condition worsened and caused a wage loss commencing August 3, 2015. Dr. Malik gave Claimant restrictions after surgery that would have prevented him from performing his preinjury work. Although the mere imposition of restrictions does not automatically prove that a claimant's condition has worsened, the ALJ is persuaded that the surgery reasonably required some period of convalescence during which Claimant could not have performed any work. Claimant returned to work quickly after he recovered from surgery, and the ALJ is persuaded he would have returned to work sooner but for the surgery.

Once commenced, TTD benefits continue until one of the terminating events enumerated in § 8-42-105(3). Claimant returned to work on September 4, 2015, thereby terminating his entitlement to TTD benefits under § 8-42-105(3)(b).

F. Claimant's hearing loss and tinnitus are not compensable

As found, Claimant has failed to prove that his bilateral hearing loss and tinnitus are causally related to his employment. Claimant's assertion that he operated a piece of equipment with a broken rear windshield for 4-6 weeks is not supported by other persuasive evidence. Claimant testified the piece of equipment in question was the JD 290 breaker, and Mr. Hackett confirmed the windows became damaged while he was using the machine to break concrete. But the daily equipment inspection reports show Claimant only operated the JD 290 breaker from January 28 through February 4, 2015, at which time he switched over to the JD 350G Excavator. It appears Claimant primarily operated the JD 350G until he resigned on March 21, 2015.

Claimant also testified he documented the broken windshield on his daily inspection forms "every day." But the inspection reports do not corroborate Claimant's testimony. The ALJ could not find a single notation regarding a window defect on any daily inspection report completed by Claimant or his co-workers—much less a multi-week period where it was documented "every day." Although Employer's Daily Construction Report dated January 14, 2015 documents a new windshield was installed

[3] Under § 8-73-107(1)(c)(I) and (g)(I), an individual claiming UI benefits must be "able to work" and "actively seeking work."

on the JD 290, that was well before the time Claimant alleged he was operating the machine with the broken rear window.

Everyone agrees the rear window of the JD 290 was broken for some period, but the dispute involves *how long* it was broken. Claimant has not presented persuasive evidence to support his allegation that the window was broken for 4-6 weeks. Rather, the ALJ credits Mr. Callaway's testimony that the window repaired within 7-10 days after he learned of it.

As for the medical opinion evidence, the ALJ credits Dr. Lipkin's opinion that Claimant's work-related noise exposure was insufficient to cause hearing loss. The ALJ also credits Dr. Lipkin's opinion that Claimant's relatively flat pattern of hearing loss is not typically seen with noise exposure. The ALJ is not persuaded by Dr. Romero's opinion because it was based on the incorrect assumption that Claimant experienced "long-term" noise exposure at work.

Based on the totality of evidence presented, the ALJ concludes Claimant's hearing loss and tinnitus are not causally related to his work for Employer.

ORDER

It is therefore ordered that:

1. Claimant's hernia claim under W.C. No. 4-989-495 is compensable.

2. Insurer shall pay for reasonable and necessary treatment for Claimant's hernia provided by Dr. Malik after July 22, 2015, including the August 3, 2015 surgery and associated charges.

3. Insurer shall pay Claimant TTD benefits at the maximum applicable rate of $881.65 from August 3, 2015 through September 3, 2015.

4. Insurer is not entitled to an offset for unemployment benefits.

5. The insurer shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

6. Claimant's claim under W.C. No. 4-983-642 for hearing loss and tinnitus is denied and dismissed.

7. All matters not determined herein relating to W.C. No. 4-989-495 are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the

certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 11, 2017

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

1. Did Claimant prove by a preponderance of the evidence he suffered a compensable work-related hernia on February 17, 2015 (W.C. No. 4-989-495)?

2. If the hernia is compensable, did Claimant prove that the medical treatment he received for the hernia was authorized, reasonable, necessary, and related to the compensable injury?

3. Did Claimant prove by a preponderance of the evidence he suffered a compensable occupational disease in the form of hearing loss and tinnitus (W.C. No. 4-983-642-04)?

4. If Claimant's hearing problems are compensable, did Claimant prove entitlement to medical benefits related to his hearing loss?

5. Did Claimant prove entitlement to TTD benefits for any period between March 22, 2015 and September 3, 2015?

STIPULATIONS

Any periods of TTD benefits are payable at the rate of $881.65 per week.

FINDINGS OF FACT

1. Claimant worked as a heavy equipment operator for Employer. Claimant worked on the Pueblo Levee project from October 2014 until March 21, 2015.

2. Claimant typically worked 10 hours per day, six days per week.

3. Near the end of his shift on February 17, 2015, Claimant was using the bucket of an excavator to move a fuel tank. In so doing, the fuel line became pinched. Claimant tried to move the tank by hand and felt a painful "pop" in his belly. Claimant finished his shift and went home.

4. That evening, Claimant saw a bulge in his belly while looking in the mirror. He pressed on the bulge and it felt "spongy." He also showed the bulge to his wife.

5. Claimant reported the injury to his supervisor, William Callaway, the next day when he got to work. Mr. Callaway completed an incident report stating Claimant "moved [the] tank by hand and felt a pop in his belly." Mr. Callaway offered to send Claimant to a doctor, but Claimant declined the offer and signed a voluntary waiver of medical treatment. The form also stated, "If I want to be seen by a doctor in the future

regarding this condition, I can, upon request, receive the treatment." A handwritten notation on the form described the condition as "slight pain and bump by belly button."

6. The information available to Mr. Callaway on February 18 would not lead a reasonably conscientious manager to believe Claimant required any medical treatment relating to the incident.

7. Claimant continued working his regular job without limitation until March 21, 2015, when he resigned due to non-injury-related illness and to take another job in California.

8. W.C. No. 4-983-642-04 is an occupational disease claim for bilateral tinnitus and hearing loss. Claimant alleges he suffered hearing damage from operating a John Deere 290 with a broken rear window for several weeks. Claimant testified he began operating the JD 290 "at the end of January" 2015. He testified that the front and rear windshields were broken when he started operating the machine. He testified that the front windshield was temporarily repaired with a piece of plexiglass, but the rear glass remained broken for "a minimum" of four weeks, and probably "closer to six weeks." Claimant testified the engine is directly behind the cab, so he was continuously exposed to loud engine noise. Claimant testified he noticed problems with his hearing "within the first couple of hours" of operating the machine. At no time did Claimant use the available hearing protection. Claimant mentioned nothing about hearing problems to anyone while he worked for Employer. Claimant testified he complained about the broken window to his supervisors on numerous occasions and eventually told Mike Hiltz he would quit if the window were not repaired that day. Claimant testified he documented the broken rear window on his Heavy Equipment Daily Inspection forms "every day." Based on Claimant's alleged timeline, one would expect the broken rear window to be noted on daily inspection reports at least in the last week of January and likely well into February 2015.

9. Employer used two JD 290s on the Pueblo Levee project. One machine had a concrete breaker attachment; the other machine had a bucket. The breaker attachment was not interchangeable between the two machines due to the specific hydraulic plumbing required. The breaker machine is the one alleged to have had the broken window.

10. On March 25, 2015, Claimant saw his family physician, Dr. Roland Sanchez, for bilateral tinnitus. He told Dr. Sanchez he did not recall when the symptoms began.

11. Claimant treated with Dr. Sanchez for abdominal pain and nausea on several occasions in late March and April 2015. Dr. Sanchez's reports do not mention a hernia. Physical examinations of Claimant's abdomen on March 25, April 6, and April 14 were reportedly normal.

12. Claimant saw an audiologist, Dr. Kathleen Romero, on April 22, 2015. He reported "a bilateral decrease in hearing for the past 3-4 months, following a long-term

noise exposure at work." He also reported tinnitus. Testing revealed mild to moderate sensorineural hearing loss bilaterally. Dr. Romero recommended a trial of hearing aids.

13. On April 28, 2015, Dr. Sanchez completed a work status form in conjunction with Claimant's claim for unemployment insurance (UI) benefits. He indicated Claimant could work with no restrictions.

14. Claimant was admitted to Presbyterian Hospital on May 22, 2015 with complaints of nausea, abnormal weight gain and rectal bleeding.[1] There was no mention of an umbilical hernia on exam.

15. Claimant first sought medical treatment specifically related to his hernia on June 24, 2015 with a surgeon, Dr. Kashif Malik. Claimant reported a bulge near his umbilicus that had been "growing" for three months. He stated the bulge was not painful. Physical examination revealed an incarcerated umbilical hernia. Claimant told Dr. Malik he was interested in surgery, but wanted to complete his workup for tinnitus first. Dr. Malik stated "the hernia is not bothering him that much, so we can safely watch it for now until he finishes the other workup."

16. The physical examination and attempted reduction by Dr. Malik caused the hernia to become painful. Claimant returned to Dr. Malik on July 22, 2015 and explained that "he got it with lifting a heavy gas tank at work. He heard a pop, and since then he has noticed a lump and has pain at the region." Because of his ongoing pain, Claimant wished to move forward with surgery. Dr. Malik indicated he would schedule Claimant for an open hernia repair with mesh.

17. Claimant called Employer shortly after his July 22 appointment with Dr. Malik to notify them he needed hernia surgery. Claimant spoke with Employer's safety and health director, Brian Looby. Mr. Looby told Claimant he would file paperwork with Respondent-Insurer and "somebody would be contacting him." Claimant told Mr. Looby he needed "emergency" hernia surgery. Mr. Looby told Claimant if he needed emergency surgery, "that would be at the discretion of his surgeon." Mr. Looby did not refer Claimant to a physician or clinic during or after that telephone conversation.

18. As of the July 2015 telephone conversation, Mr. Looby had information that would lead a reasonably conscientious manager to believe Claimant needed medical treatment related to his February 2015 industrial injury.

19. Within a few days after the telephone conversation, Mr. Looby received copies of forms relating to Claimant's hernia and hearing loss claims. In response to the hearing loss claim, Mr. Looby conducted noise level tests of the equipment Claimant had used. Mr. Looby's tests showed 85 dB outside the machine.

20. Claimant had another hearing evaluation with Dr. Raymond Matteucci on July 1, 2015. Testing revealed neurosensory hearing loss in both ears.

[1] The parties did not submit the hospital records into evidence, but the hospital visit was documented in the report of Respondents' IME, Dr. Ramaswamy.

21. On July 31, 2015, Dr. Romero authored a letter stating "since being exposed to loud noise for a period of time he has bilateral tinnitus and a sensorineural hearing loss in both ears. This type of hearing loss is commonly seen with noise exposure and is generally permanent." She opined the hearing loss would affect Claimant's basic communication abilities, particularly in noisy environments. She recommended bilateral hearing aids on a lifetime basis.

22. Claimant underwent hernia surgery with Dr. Malik on August 3, 2015.

23. On August 5, 2015, Dr. Malik authored a report stating as a result of surgery Claimant had work restrictions of no bending, twisting or lifting greater than 20 pounds and no strenuous activity for at least 2-4 weeks after surgery.

24. Claimant returned to work on September 4, 2015 as a heavy equipment operator for a different employer.

25. Dr. Annu Ramaswamy performed a record review for Respondents on December 21, 2015. Dr. Ramaswamy opined neither the umbilical hernia nor the hearing loss/tinnitus were work-related.

26. William Calloway, the Pueblo Levee project superintendent, testified at the February 17, 2017 hearing. He testified that the front and rear windshields on the JD 290 with the breaker attachment were broken by concrete. He testified they replaced the windshield with plexiglass immediately as a temporary fix and requested permanent repairs from the home office. Mr. Calloway recalled Claimant complained about the broken rear window in one safety meeting. Mr. Calloway estimated the windows were replaced within 7-10 days after he learned they were broken. He was confident the rear window was not broken for 4-6 weeks. He did not recall Claimant stating he was having problems with his hearing due to the noise. Mr. Callaway testified hearing protection was readily available to employees on the project.

27. Claimant's coworker, Dallan Hackett, testified at hearing. Mr. Hackett was operating the JD 290 with the breaker attachment when the front and rear windows were damaged by a flying piece of concrete. He estimated the incident occurred in "the beginning to middle of January 2015." Mr. Hackett testified that the front window was replaced with plexiglass within two days. He testified it took "a month or maybe a little longer" to replace the rear window. Based on that timeline, one would expect the broken rear window would be noted on at least some daily inspection reports between January 15 and January 31, and likely well into February.

28. Michael Atwood, a project manager on the Pueblo Levee project, testified at the hearing. He completed his testimony in a post-hearing evidentiary deposition on March 14, 2017. At the hearing, the ALJ asked Mr. Atwood to produce all of the Heavy Equipment Daily Inspection forms he could find. At his deposition, Mr. Atwood produced approximately 62 forms dated between December 10, 2014 and March 21, 2015 relating to several pieces of equipment Claimant operated on the project. The forms regarding the JD 290G with the breaker attachment showed:

Date	Equipment	Defect Noted?	Operator	Hours
1/19/2015	JD 290G Breaker	No	Co-worker	15.3
1/21/2015	JD 290G Breaker	No	Co-worker	9.6
1/22/2015	JD 290G Breaker	No	Co-worker	9
1/23/2015	JD 290G Breaker	No	Co-worker	10.9
1/24/2015	JD 290G Breaker	No	Co-worker	11.1
1/25/2015	JD 290G Breaker	No	Co-worker	5.9
1/28/2015	JD 290G Breaker	No	Claimant	10.9
1/29/2015	JD 290G Breaker	No	Claimant	10.7
1/30/2015	JD 290G Breaker	No	Claimant	11.5
1/31/2015	JD 290G Breaker	No	Claimant	10
2/2/2015	JD 290G Breaker	No	Claimant	10.6
2/3/2015	JD 290G Breaker	No	Claimant	8.2
2/4/2015	JD 290G Breaker	No	Claimant	9.1
2/5/2015	JD 290G Breaker	No	Co-worker	8
2/6/2015	JD 290G Breaker	No	Co-worker	7.1
2/5/2015	JD 350G LC	No	Claimant	9.8
2/6/2015	JD 350G LC	No	Claimant	6.6
2/7/2015	CAT 349	No	Claimant	8
2/7/2015	JD 350G LC	No	Claimant	7.4
2/9/2015	JD 350G LC	No	Claimant	11.1
2/11/2015	JD 350G LC	No	Claimant	11.6
2/12/2015	JD 350G LC	No	Claimant	11.7
2/13/2015	JD 350G LC	No	Claimant	7.7
2/14/2015	JD 350G LC	No	Claimant	8
2/17/2015	JD 350G LC	No	Claimant	11.3
2/18/2015	JD 350G LC	No	Claimant	10.7
2/19/2015	JD 350G LC	No	Claimant	8.9
2/19/2015	JD 350G LC	No	Claimant	9.5
2/21/2015	JD 350G LC	No	Claimant	9
3/5/2015	JD 350G LC	No	Claimant	9.9
3/6/2015	JD 350G LC	No	Claimant	10.6
3/7/2015	JD 350G LC	No	Claimant	7.3
3/21/2015	JD 350G LC	No	Claimant	5.2

29. Mr. Atwood also produced a Daily Construction Report dated January 14, 2015. The report documents “JD 290 new windshield installed.” Mr. Atwood found no other reports referencing issues with either JD 290 used on the project.

30. Claimant has proven by a preponderance of the evidence he sustained a compensable hernia injury on February 17, 2015.

31. The surgery performed by Dr. Malik on August 3, 2015 was reasonable, necessary and causally related to Claimant's February 17, 2015 accident.

32. Dr. Malik was an authorized treating physician when he performed the surgery.

33. Claimant was not disabled when he voluntarily resigned on March 21, 2015.

34. Claimant failed to prove by a preponderance of the evidence he was disabled before August 3, 2015.

35. Claimant failed to prove entitlement to TTD from March 22, 2015 through August 2, 2015.

36. Claimant was disabled from all work activity as a result of surgery on August 3, 2015 through September 3, 2015.

37. Claimant proved entitlement to TTD benefits from August 3, 2015 through September 3, 2015.

38. Claimant received $4,025 in unemployment insurance (UI) benefits between April 5, 2015 and July 12, 2015. There was no overlap between periods of UI benefits and Claimant's period of temporary disability.

39. Claimant has failed to prove that his hearing loss and tinnitus are causally related to his employment.

CONCLUSIONS OF LAW

A. Compensability standards

To receive compensation or medical benefits, a claimant must prove that he is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1), C.R.S.; *see, Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). The claimant must prove entitlement to benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case are not interpreted liberally, in favor of either claimant or respondents. Section 8-43-201.

The respondents are liable for medical treatment which is reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a); *Snyder v.*

Industrial Claim Appeals Office, 942 P .2d 1337 (Colo. App. 1997); *Country Squire Kennels v. Tarshis*, 899 P. 2d 362 (Colo. App. 1995). Where a claimant's entitlement to medical benefits is disputed, the claimant must prove that an injury directly and proximately caused the condition for which he seeks treatment. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, *supra*.

The Workers' Compensation Act recognizes a distinction between an "accident" and an "injury." The term "accident" refers to an "unexpected, unusual, or undesigned occurrence," whereas an "injury" is the physical trauma caused by the accident. Section 8-40-201(1). In other words, an "accident" is the cause, and an "injury" is the result. *City of Boulder v. Payne*, 426 P.2d 194 (Colo. 1967). Workers' compensation benefits are only payable if an accident results in a compensable "injury." The mere fact that an incident occurred at work and caused symptoms does not necessarily establish a compensable injury. Rather, a compensable injury is one that requires medical treatment or causes a disability. *E.g., Montgomery v. HSS, Inc*., W.C. No. 4-989-682-01 (ICAO Aug. 17, 2016).

The Act imposes additional requirements for liability of an occupational disease beyond the "arising out of" and "course and scope" requirements. A compensable occupational disease must meet each element of the four-part test mandated by § 8-40-201(14), which defines an occupational disease as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

The equally exposing stimulus requirement effectuates the "peculiar risk" test and requires that the hazards associated with the employment be more prevalent in the workplace than in everyday life or other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819 (Colo. 1993). In other words, the claimant "must be exposed by his or her employment to the risk causing the disease in a measurably greater degree and in a substantially different manner than are persons in employment generally." *Id.* at 824. The hazard of employment need not be the sole cause of the disease, but must cause, intensify, or aggravate the condition "to some reasonable degree." *Id*.

B. Claimant's hernia is compensable

As found, Claimant proved by a preponderance of evidence he suffered a compensable hernia on February 17, 2015. The physical exertion associated with moving the heavy fuel tank was sufficient to injure Claimant's abdominal wall. Claimant felt a painful pop while moving the fuel tank, and observed a "bump by [his] belly button" that evening. Thereafter, he was minimally symptomatic for several months. The hernia

progressively worsened, and was evident when Dr. Malik examined Claimant on June 24, 2015. Palpation of the hernia caused it to become very painful, and surgery was required to repair it.

Admittedly, the ALJ is somewhat puzzled by the normal physical examinations in March, April, and May 2015, and the negative ultrasound in June. But the ALJ is most persuaded by the fact that the incarcerated umbilical hernia Dr. Malik appreciated in June 2015 was in the same location as the small bulge Claimant observed near his belly button shortly after his injury. Considering all the evidence, the ALJ infers Claimant likely tore his abdominal wall when moving the fuel tank on February 17. He probably did not have an incarcerated hernia immediately. Rather, the "spongy" bulge he observed later that evening probably reflected local swelling and inflammation and/or a minor protrusion of abdominal fat. The abdominal wall defect probably enlarged over the next few months due to routine activities of daily living. This is consistent with Claimant's report to Dr. Malik that the hernia had been "growing" for several months. The defect may not have shown up on physical examination in March, April, and May 2015 because it was too small to be detected by an examination while Claimant was reclining on his back. It is also possible that Dr. Sanchez's records are inaccurate due to careless use of the electronic medical record template.[2] In any event, by mid-June 2015, the hernia had become too obvious to miss, and Claimant actively sought treatment for it.

The injury in February 2015 left Claimant's abdominal wall in a weakened state, which eventually progressed to an incarcerated hernia that required surgery. There is no persuasive evidence of any intervening cause sufficient to sever the causal connection to the original incident. Therefore, the ALJ concludes that the incarcerated hernia resulted from the natural progression of the February 17, 2015 injury.

C. Dr. Malik was authorized by August 3, 2015

Under § 8-43-404(5)(a), the employer has the right to choose the treating physician in the first instance. The employer's duty to designate a physician is triggered by the receipt of information that would lead a reasonably conscientious manager to believe that a compensable claim might be involved. *Bunch v. Industrial Claim Appeals Office*, 148 P.3d 381 (Colo. App. 2006). The employer must tender medical treatment "forthwith, " or the right of selection passes to the claimant. *Rogers v. Industrial Claim Appeals Office*, 746 P.2d 565 (Colo. App. 1987).

In light of Claimant's explicit waiver of medical treatment, the information available to Employer on February 18, 2015 would not lead a reasonably conscientious manager to believe that Claimant had suffered a compensable injury are required medical treatment. The waiver form advised Claimant he could receive medical treatment "upon request." Claimant did not mention his hernia again before his resignation, or at any time before July 2015.

[2] Dr. Sanchez's EMRs appear to be based on the type of template that pre-fills fields as normal unless the provider affirmatively changes the template.

Claimant informed Mr. Looby he needed hernia surgery on or shortly after July 22, 2015. At that point, it was incumbent upon Mr. Looby to refer Claimant for medical treatment if Employer wished to preserve its right to choose the treating physician. It makes no difference that Claimant was not in Colorado at that time. *Ries v. Subway of Cherry Creek*, W.C. No. 4-674-408 (ICAO, January 12, 2011). Mr. Looby told Claimant that Insurer "would be contacting him," but that did not occur. Consequently, the right of selection passed to Claimant. The August 3, 2015 surgery and all subsequent treatment provided by Dr. Malik are authorized.

D. Dr. Malik's treatment was reasonable, necessary and related

The respondents are liable for medical treatment which is reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a); *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997); *Country Squire Kennels v. Tarshis*, 899 P. 2d 362 (Colo. App. 1995). Where the respondents dispute a claimant's entitlement to medical benefits, the claimant must prove that an injury directly and proximately caused the condition for which he seeks benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). The claimant must also prove that the requested treatment is reasonable and necessary. Section 8-42-101(1)(a).

As found, the August 3, 2015 hernia surgery performed by Dr. Malik was reasonable, necessary and causally related to the February 17, 2015 accident.

E. Entitlement to TTD benefits

A claimant is entitled to TTD benefits if the injury causes a disability, the disability causes the claimant to leave work, and the claimant misses more than three regular working days. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The claimant must establish a causal connection between a work-related injury and the subsequent wage loss to obtain TTD benefits. *Id*. The term disability connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage-earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). Impairment of earning capacity may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

After his injury on February 17, 2015, Claimant continued to work his regular job without limitation for over a month. Claimant voluntarily terminated his employment on March 21, 2015 for reasons unrelated to his injury. Claimant was not "disabled" by the effects of the injury when he stopped working. Moreover, Claimant was responsible for the termination of his employment. See sections 8-42-103(1)(g). These facts are fatal to Claimant's request to commence TTD benefits on March 22, 2015.

To establish entitlement to TTD benefits, Claimant must prove that his condition worsened and caused a wage loss after his resignation. *Anderson v. Longmont Toyota,*

Inc. 102 P.3d 323 (Colo. 2004); *Loza v. Ken's Welding*, 4-712-246 (ICAO, January 7, 2009).

Claimant's testimony that he was primarily "lying on the couch" due to hernia pain starting in April 2015 is not persuasive. There is no documentation of hernia-related limitations or restrictions in the medical records from April through July 2015. In fact, on April 28, 2015 Dr. Sanchez opined Claimant was able to work without restrictions. There are no records to corroborate Claimant's testimony that he went to the emergency room "two or three times because of the pain." When Claimant saw Dr. Malik on June 24, 2015, he decided to delay surgery because the hernia was "not bothering him that much." Claimant was able to work and actively seeking work between April and July 2015, as evidenced by his receipt of unemployment benefits.[3] Claimant failed to prove that he was disabled prior to surgery.

As found, Claimant's condition worsened and caused a wage loss commencing August 3, 2015. Dr. Malik gave Claimant restrictions after surgery that would have prevented him from performing his preinjury work. Although the mere imposition of restrictions does not automatically prove that a claimant's condition has worsened, the ALJ is persuaded that the surgery reasonably required some period of convalescence during which Claimant could not have performed any work. Claimant returned to work quickly after he recovered from surgery, and the ALJ is persuaded he would have returned to work sooner but for the surgery.

Once commenced, TTD benefits continue until one of the terminating events enumerated in § 8-42-105(3). Claimant returned to work on September 4, 2015, thereby terminating his entitlement to TTD benefits under § 8-42-105(3)(b).

F. Claimant's hearing loss and tinnitus are not compensable

As found, Claimant has failed to prove that his bilateral hearing loss and tinnitus are causally related to his employment. Claimant's assertion that he operated a piece of equipment with a broken rear windshield for 4-6 weeks is not supported by other persuasive evidence. Claimant testified the piece of equipment in question was the JD 290 breaker, and Mr. Hackett confirmed the windows became damaged while he was using the machine to break concrete. But the daily equipment inspection reports show Claimant only operated the JD 290 breaker from January 28 through February 4, 2015, at which time he switched over to the JD 350G Excavator. It appears Claimant primarily operated the JD 350G until he resigned on March 21, 2015.

Claimant also testified he documented the broken windshield on his daily inspection forms "every day." But the inspection reports do not corroborate Claimant's testimony. The ALJ could not find a single notation regarding a window defect on any daily inspection report completed by Claimant or his co-workers—much less a multi-week period where it was documented "every day." Although Employer's Daily Construction Report dated January 14, 2015 documents a new windshield was installed

[3] Under § 8-73-107(1)(c)(I) and (g)(I), an individual claiming UI benefits must be "able to work" and "actively seeking work."

on the JD 290, that was well before the time Claimant alleged he was operating the machine with the broken rear window.

Everyone agrees the rear window of the JD 290 was broken for some period, but the dispute involves *how long* it was broken. Claimant has not presented persuasive evidence to support his allegation that the window was broken for 4-6 weeks. Rather, the ALJ credits Mr. Callaway's testimony that the window repaired within 7-10 days after he learned of it.

As for the medical opinion evidence, the ALJ credits Dr. Lipkin's opinion that Claimant's work-related noise exposure was insufficient to cause hearing loss. The ALJ also credits Dr. Lipkin's opinion that Claimant's relatively flat pattern of hearing loss is not typically seen with noise exposure. The ALJ is not persuaded by Dr. Romero's opinion because it was based on the incorrect assumption that Claimant experienced "long-term" noise exposure at work.

Based on the totality of evidence presented, the ALJ concludes Claimant's hearing loss and tinnitus are not causally related to his work for Employer.

ORDER

It is therefore ordered that:

1. Claimant's hernia claim under W.C. No. 4-989-495 is compensable.

2. Insurer shall pay for reasonable and necessary treatment for Claimant's hernia provided by Dr. Malik after July 22, 2015, including the August 3, 2015 surgery and associated charges.

3. Insurer shall pay Claimant TTD benefits at the maximum applicable rate of $881.65 from August 3, 2015 through September 3, 2015.

4. Insurer is not entitled to an offset for unemployment benefits.

5. The insurer shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

6. Claimant's claim under W.C. No. 4-983-642 for hearing loss and tinnitus is denied and dismissed.

7. All matters not determined herein relating to W.C. No. 4-989-495 are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the

certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 11, 2017

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

The issues considered by this Supplemental Order are:

1. Whether Respondents complied with Section 8-42-104(5)(a), C.R.S. and W.C.R.P. 5-11(2) by filing an Amended Final Admission of Liability (FAL) for an apportioned rating and attaching to the Amended FAL an award or settlement for the previous injury to the same body part.; and

2. If Respondents failed to comply with Section 8-42-104(5), C.R.S. and W.C.R.P. 5-11(2), can Respondents apportion Claimant's impairment rating.

FINDINGS OF FACT

1. Claimant worked for the Employer as a package car driver. On October 20, 2014, Claimant sustained an admitted industrial injury to her right knee. On the date of injury, Claimant bent down to pick up a box and heard a pop in her right knee.

2. Claimant has a pre-existing history of right knee pain complaints. On June 16, 2008, Claimant injured her right knee while at work with Employer by squatting down to pick up a box. Claimant underwent an MRI, which revealed a medial meniscus tear and chondromalacia. Claimant underwent an arthroscopic chondroplasty to repair the torn meniscus. Claimant was placed at maximum medical improvement (MMI) on October 16, 2008. Claimant was provided with a 15% scheduled impairment rating for the right lower extremity.

3. On October 20, 2014, Claimant underwent her first evaluation with Dr. Ogrodnick at Exempla. Dr. Ogrodnick noted that referring to her 2008 claim, "that was partially successful but painful popping continued." This medical record is contrary to Claimant's in court testimony that she was symptom free following the 2008 surgery.

4. Claimant underwent a surgical procedure on her right knee on December 16, 2014. Claimant had conservative post-operative care and was placed at MMI on June 26, 2015. Claimant was released to full duties at work and was provided with no impairment. Claimant reported 95% improvement and reported no pain. Claimant stated that her knees are tired after work. The physical examination of the right knee revealed full range of motion. Claimant ambulated without a limp and could perform a full deep knee bend without discomfort.

5. Respondents filed a FAL on July 1, 2015. Claimant objected to the FAL and filed a Notice and Proposal to Select a Division independent medical examination (DIME) on July 31, 2015. Dr. Justin Green was selected as the DIME physician and Claimant underwent the DIME on February 10, 2016.

6. When Claimant presented to Dr. Green, she reported ongoing right knee pain. Dr. Green agreed with the MMI date of June 26, 2016. Dr. Green assigned Claimant a 10% scheduled impairment rating for arthritis and a 5% scheduled rating for a posterior horn medial meniscectomy impairment pursuant to Table 40 of the *American Medical Association Guides to the Evaluation of Permanent Impairment,* Third Edition (ed. rev.) (*AMA Guides*). Claimant was also provided with a 9% scheduled rating for range of motion impairment. Dr. Green assigned an unapportioned scheduled impairment rating for Claimant's right lower extremity of 23%

7. Dr. Green addressed apportionment in his DIME report. In the February 10, 2016, DIME report Dr. Green opined that Claimant should receive an apportioned 9% scheduled rating for the right lower extremity for loss of range of motion following apportionment.

8. On March 7, 2016, Respondent filed an Amended FAL admitting liability for the apportioned impairment rating of 9% scheduled impairment. Respondents attached to the Amended FAL Dr. Green's February 10, 2016, DIME report. Respondents did not attach to the Amended FAL an award or settlement for the 2008 claim.

9. Claimant filed an Application for Hearing on April 6, 2016, to overcome the DIME's opinion as to MMI, Permanent Partial Disability (PPD) benefits, and disfigurement. This hearing followed.

CONCLUSIONS OF LAW

1. The purpose of the Act, Section 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979) The facts in a workers' compensation case shall not be interpreted liberally in favor of either the rights of the injured worker or the rights of the employer and a worker's compensation case shall be decided on its merits. Section 8-43-201, C.R.S.

2. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every

piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

3. In this case, Respondents contend that they are entitled to apportion Claimant's impairment rating. Claimant argues that Respondents have forfeited their right to apportion Claimant's impairment rating because Respondents filed an Amended FAL, only attaching to the Amended FAL the DIME report and not an award or settlement as provided by Section 8-43-104(5)(a), C.R.S.

4. Section 8–42–104(5)(a), C.R.S. states that "the permanent medical impairment rating applicable to the previous injury to the same body part, established by an award or settlement, shall be deduced from the permanent medical impairment rating for the subsequent injury to the same body part." And, W.C.R.P., Rule 5-11(2), further clarifies the requirements of the statute stating that "[i]f a permanent impairment rating is reduced on an admission based on a prior work related injury a copy of the previous award or settlement shall be attached to the admission and must establish that the award or settlement was for the same body part. …"

5. In this case, Respondents had the burden of proof to establish the grounds for apportionment. *Absolute Employment Services, Inc. v. Industrial Claim Appeals Office*, 997 P.2d 1229 (Colo. App. 1999); *Cowin & Company v. Medina,* 860 P.2d 535 (Colo. App. 1992). Respondents offered into evidence Exhibit F, the Amended FAL filed on March 7, 2016. This exhibit did not contain an attachment. Claimant offered into evidence Exhibit 7, which is the Amended FAL with an attachment. The attachment is Dr. Green's February 10, 2016, DIME report.

6. Respondents do not contest that the DIME report was attached to the March 7, 2016, Amended FAL. Respondents contend that W.C.R.P., Rule 5-11(2), is a Division of Workers' Compensation (Division) procedural rule addressing a filing requirement. Respondents argue that the Division's acceptance of the Amended FAL is proof that the Division found the Amended FAL in compliance with its rules.

7. To the contrary, it is concluded that Section 8-42-104(5)(a), C.R.S. is a provision of the Act and not a filing procedure codified in a rule by the Division. The Judge finds no authority to ignore the provisions of the Act. It is concluded that Section 8-42-104(5)(a) is unambiguous and requires a respondent seeking to apportion liability for an injury to the same body part to do so by attaching to the admission a copy of an award or settlement for a prior work injury to the same body part.

8. Since Respondents did not attach an award or settlement to the Amended FAL, the Respondents did not sustain their burden of proof to establish compliance with Section 8-42-104(5), C.R.S. and W.C.R.P. Rule 5-11(2). Since Respondents did not comply with the Act and rule regarding apportionment, Respondents failed to sustain its burden to establish entitlement to the 9% apportioned impairment rating.

ORDER

It is therefore ordered that:

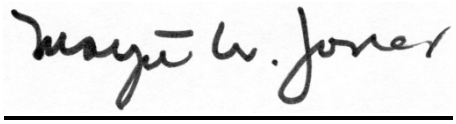
Respondents shall be liable to Claimant for benefits under the Act based on a 23% scheduled impairment

The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: _May 12, 2017___



MARGOT W. JONES
ADMINISTRATIVE LAW JUDGE
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

The issue addressed by this decision involves Claimant's entitlement to additional medical benefits. The specific question presented is:

I. Whether Claimant has proven, by a preponderance of the evidence, that the L1-S1 fusion procedure requested by Dr. Stanton is reasonable, necessary and related to Claimant's August 4, 2015, admitted industrial injury.

FINDINGS OF FACT

Based upon the evidence presented, including the post hearing evidentiary deposition testimony of Drs. Stanton, Rauzzino and Janssen, the ALJ enters the following findings of fact:

1. Employer is engaged in the business of the installation of commercial HVAC units. Claimant works on the mechanical side of the business. He worked as a pipefitter/welder for employer for approximately 19 years. Claimant's job duties included, among other things obtaining pipes and parts from the warehouse, cutting pipe, welding, climbing ladders, crawling, lifting, working in tight spaces, and other tasks as necessary for the installation of the commercial HVAC units.

2. Claimant sustained an admitted injury to his lumbar spine on August 4, 2015. He stated that he was working in a tight space pushing a pipe upward when he twisted and developed pain in his low back. Based upon his testimony and the content of the record evidence, the ALJ finds Claimant's job to be physically demanding.

3. Claimant worked the remainder of the day on August 4, 2015. On the morning of August 5, 2015, he was in severe pain so presented to Dr. Steve Castle at the Memorial Health System Occupational Health Clinic.

4. Treatment for the August 4, 2015, injury has been prolonged and varied. Claimant has participated in chiropractic treatment and physical therapy. He has also received trigger point injections, medial branch and facet blocks and radiofrequency ablation. Claimant has not yet been placed at maximum medical improvement and continues to receive medical treatment from Dr. Castle and his referrals.

5. Claimant has a history of low back pain and injury to the lumbar spine prior to August 4, 2015. In 2003 he complained of back prompting imaging of the

thoracic and lumbar spine.[1] In 2004 he was involved in a car accident causing severe pain leading to additional imaging. In March 2014, he suffered a work related injury to his low back while he was assisting coworkers move a heavy air conditioning unit which would lead to substantial treatment and additional imaging.

6. As noted, Claimant was treated for his 2014, work injury by Dr. Castle. He also ordered an MRI of the lumbar spine which was completed on March 20, 2014 and demonstrated multilevel degenerative disc and endplate changes, foraminal narrowing and mild to moderate recess and central stenosis at multiple spinal segments.

7. As part of his treatment for his August 4, 2015 work injury, Claimant underwent yet another MRI scan of the lumbar spine on August 12, 2015. This MRI demonstrated moderate degenerative changes of the L1-2 down to L4-5 disc spaces along with loss of lumbar lordosis with mild dextroconvex curvature with the apex of L2-3, which was felt to be suggestive of muscle spasm.

8. Dr. Castle referred Claimant to Dr. Paul Stanton for a surgical consultation. Dr. Stanton evaluated Claimant on December 1, 2015. In his December 1, 2015 report, Dr. Stanton notes that Claimant presented with a "chief complaint of middle and low back pain with pain radiating posteriorly to the ankle on the left leg and numbness through the right thigh." According to Dr. Stanton's report, Claimant's symptoms "originally started approximately 1 year ago, but in the last 4 months have become increasingly more severe." Dr. Stanton assessed "degenerative scoliosis due to asymmetrical collapse of the disk space" as well as "degenerative disk disease throughout [the] lumbar spine."

9. Claimant returned to Dr. Stanton on December 22, 2015 for follow-up. Dr. Stanton noted that Claimant would be a "candidate for lumbar fusion likely L1 through L5 which would realign his spine, improve his scoliosis, foraminal stenosis, and leg pain."

10. On May 18, 2016, Dr. Stanton requested authorization to proceed with a XLIF procedure spanning L1-2, L2-3, L3-4, and L4-5 (a four level fusion) followed by posterior segmental instrumentation and osteotomy for realignment and correction.

11. Respondents denied the request and referred the matter to Dr. Michael Janssen for review in accordance with W.C.R.P. Rule 16. Dr. Janssen issued a written advisory opinion dated May 19, 2016 wherein Dr. Janssen opined that Claimant's MRI's dated March 20, 2014 and August 12, 2015 demonstrated "flatback deformity, a lumbar kyphotic deformity, multilevel degenerative disc disease with facet arthropathy, disc reabsorptive syndrome, and collapse spanning L1-2, L2-3, L3-4, and L4-5." In recommending that the requested surgery be denied, Dr. Janssen noted that Claimant's

[1] An MRI of the lumbar spine obtained June 20, 2003 demonstrated "posterior disc bulging at L4-5, L3-4, and L1-2 with indentation of the thecal sac at these levels, but without signs of herniation of the nucleus pulposus." It also revealed "straightening" of the lumbar lordosis. The MRI of the thoracic spine of the same date was interpreted as demonstrating "age-related degenerative findings" and "posturing of the thoracic curvature which may reflect underlying muscle spasm."

advanced degenerative disease and flatback deformity may be related to a previous IDET procedure as well as Claimant's genetics. Dr. Janssen concluded that Claimant's need for "deformity surgery" was unrelated to Claimant's August 4, 2015 work related injury.

12. At the request of respondents, Dr. Michael Rauzzino conducted an independent medical examination (IME) of Claimant on October 4, 2016. Dr. Rauzzino reviewed claimant's medical records, obtained his personal history and performed his own physical examination of Claimant as part of the IME.

13. Dr. Rauzzino diagnosed Claimant with a lumbar strain consistent with the mechanism of injury described by claimant. He also found claimant to have multi-level lumbar degenerative disk disease, a small amount of lumbar scoliosis and kyphosis, as well as chronic degenerative changes without an acute structural injury to the spine. According to Dr. Rauzzino, these conditions were not work related.

14. Dr. Rauzzino reviewed and compared the MRI scans taken in March 2014 associated with Claimant's 2014 work injury and the MRI scan taken in August 2015 linked to the current claim. He noted that both scans demonstrate a deformed spine but that there was no change in the spinal anatomy between the two scans. Dr. Janssen had reached a similar opinion when he reviewed the MRIs as part of his May 19, 2016 advisory opinion noting as follows: "The key is that there was no interval change between the anatomical studies of the MRI of March 2014 and August 2015."

15. As noted, Dr. Stanton, Dr. Janssen and Dr. Rauzzino all testified via post hearing deposition regarding the question of whether the proposed L1-L5 fusion surgery is reasonable, necessary and related to Claimant's August 4, 2015 industrial injury.

16. Dr. Stanton is an orthopedic surgeon who completed a one year fellowship at The Center for Spine Disorders in La Jolla, California which focused on spinal deformity surgery. He is not Level II accredited in Workers' Compensation nor does he have working knowledge of the Division of Worker's Compensation Medical Treatment Guidelines.

17. Dr. Stanton testified that Claimant's scoliosis and flatback syndrome are long-standing, chronic conditions. According to Dr. Stanton, Claimant's degenerative disc disease and flatback deformity were pre-existing degenerative processes and not caused by his work. Rather, the question according to Dr. Stanton is whether Claimant's pre-existing makeup along with the activity he performed at work caused him to have pain. In answer to this question, Dr. Stanton testified:

> "Likely it's a combination of those two things, a pre-existing degenerative condition exacerbated by some activity, whether it's a trauma or a work injury or what have you, but there's no way to predict that 100 percent of patients that have scoliosis go on to have surgery. In fact, it's a small percent of them that actually end up having to have deformity surgery.")

18. Dr. Stanton went on to explain that the injury Claimant "sustained did not change the overall structural integrity of the spine or change its shape. What it likely did was cause a dynamic movement in the joints in the back of the spine, and that movement caused an escalation of symptoms.

19. During cross examination, Dr. Stanton reiterated his opinion testifying as follows: "I think all I'm saying is that [Claimant] has a pre-existing condition of spine deformity, which is, again, as we've said several times, largely genetic in nature, but it can have some outside contributory causes. He had an incident which he, believably to me, says he had an increase in pain after that incident, so I think that is relevant. I am not saying his work injury caused an acute deformity in his spine."

20. The ALJ infers and finds from Dr. Stanton's testimony that he believes that Claimant suffered a work related aggravation of a pre-existing condition.

21. Dr. Stanton agreed that Claimant's need for the four level fusion is not 100% work related, although he testified that he is not qualified to stratify or apportion the need for the surgery between Claimant's non-work related, long standing, chronic spinal deformity and Claimant's employment. Rather he testified that it was not his job to determine whether a surgery is reasonable, necessary or related to a work injury and whether it should be covered as part of the workers' compensation claim.

22. Dr. Janssen, a fellowship trained orthopedic surgeon with board certifications in both orthopedic surgery and spinal surgery testified that he reviewed Claimant's medical records, including the MRI scans taken in March 2014 for claimant's 2014 work injury and the MRI scan taken in August 2015 in this current claim. He noted that both scans demonstrate a deformed spine but that there was no interval change in the spinal anatomy between the two scans.

23. Dr. Janssen noted that the surgery requested by Dr. Stanton was for the purpose of correction of a flatback deformity. He opined that the spinal deformity is due to multilevel degenerative disk disease and not related to or exacerbated by, Claimant's employment. Therefore, he opined that while the proposed surgery could be considered reasonable, it was not related to the Claimant's August 4, 2015 work injury and should be denied.

24. In support of his opinion that Claimant's need for surgery was unrelated to his August 4, 2015 work injury, Dr. Janssen noted that Claimant had long standing chronic back pain and had been seeing providers for the same for an "extensive" period of time. He noted that Claimant's situation did not present as a case of an "asymptomatic condition [becoming] symptomatic nor is it a case involving an acceleration of a preexisting condition by symptom caused by interval occupation. The ALJ finds support for both opinions in the medical records submitted for review. The records submitted support the fact that Claimant has complained of low back pain since at least 2002 with MRI evidence of loss of his lumbar curve since that time. According

to Dr. Janssen, Claimant's symptoms, which Dr. Stanton proposed surgery to abate, are the consequence of the natural progression of Claimant's "chronic pathology due to the deformity and unfortunate spine disease that he has."

25. Based upon his testimony, the ALJ finds that Dr. Janssen questions the necessity of performing the proposed surgery whether it is considered work related or not. According to Dr. Janssen, the "primary indications for doing this type of major surgery is a progression of the deformity. It's not due to pain." Per Dr. Janssen, if a patient has progression of the deformity then it may be reasonable to this type of surgery to prevent the spine from further progression and the spine becoming like the "Leaning Tower of Pisa." As found above, Dr. Janssen noted Claimant's 2014 and 2015 MRI's fail to demonstrate interval progression of the Claimant's spinal deformity.

26. Dr. Rauzzino, a Level II Accredited, board certified neurosurgeon and the chief of neurosurgery at Skyridge Hospital testified that the surgery proposed by Dr. Stanton is not reasonable, necessary, or related to the work injury.

27. Dr. Rauzzino disagrees with Dr. Stanton and Dr. Janssen that Claimant has flatback deformity. Nonetheless, he testified:

> . . . if you accept that he does have a flat back deformity due to chronic degenerative changes of his lumbar spine, the act of pushing a pipe overhead is not what leads him to have this large corrective surgery.
>
> What leads him to have a long corrective deformity surgery is the, quote, flat back which is something that occurred over time

28. Claimant testified that Dr. Stanton's reason for recommending the surgery is to address his pain and function. Dr. Rauzzino testified that if the purpose for the surgery proposed by Dr. Stanton is to address Claimant's pain there will likely be a very poor outcome.

29. Dr. Rauzzino testified that the surgery proposed by Dr. Stanton will not relieve claimant's pain or improve his functional status. He further testified that the surgery proposed by Dr. Stanton has a much more likely chance of making Claimant's situation worse than what it is currently. Moreover, he testified that a four level fusion is outside the recommendations of the Medical Treatment Guidelines, which recommend, at most, a two level fusion.

30. The Medical Treatment Guidelines require that a pain generator be specifically identified before a surgical fusion is performed. According to both Dr. Janssen and Dr. Rauzzino, Dr. Stanton failed to identify a specific pain generator.

31. Based upon the evidence presented in this case, the ALJ finds the opinions of Dr. Janssen and Dr. Rauzzino credible and more persuasive than the contrary opinions of Dr. Stanton. The ALJ credits the opinions of Dr. Janssen and Dr.

Rauzzino to find that Claimant has failed to establish that his need for surgery as recommended/requested by Dr. Stanton is related to his August 4, 2015 industrial injury.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1), C.R.S.* In this case, Claimant must prove his entitlement to benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. *Section 8-43-201(1), C.R.S.* Rather, a workers' compensation claim is to be decided on its merits. *Id.*

B. In deciding whether Claimant has met his burden of proof, the ALJ is empowered: "To resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to testimony, and draw plausible inferences from the evidence." *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert medical opinion is a matter within the fact finding authority of the ALJ. *Cordova v. Indus. Claim Appeals Office, supra.* The ALJ should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke*, 139 Colo. 305, 338 P.2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See § 8-43-210, C.R.S.; One Hour Cleaners v. Indus. Claim Appeals Office*, 914 P.2d 501 (Colo. Ap. 1995). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968). As found here, the opinions of Drs. Janssen and Rauzzino are credible and more persuasive than those expressed by Dr. Stanton.

C. The Judge's factual findings concern only evidence that is dispositive of

the issues involved; the Judge need not address every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. See Magnetic Engineering, Inc. v. ICAO, 5 P.3d 385 (Colo. App. 2000).

Dr. Stanton's Proposed Surgery

D. Once a claimant has established the compensable nature of his/her work injury, he/she is entitled to a general award of medical benefits and respondents are liable to provide all reasonable and necessary and related medical care to cure and relieve the effects of the work injury. Section 8-42-101, C.R.S.; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). However, a claimant is only entitled to such benefits as long as the industrial injury is the proximate cause of his/her need for medical treatment. *Merriman v. Indus. Comm'n*, 210 P.2d 448 (Colo. 1949); *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970)*;* § 8-41-301(1)(c), C.R.S. Ongoing benefits may be denied if the current and ongoing need for medical treatment or disability is not proximately caused by an injury arising out of and in the course of the employment. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997). In other words, the mere occurrence of a compensable injury does not require an ALJ to find that all subsequent medical treatment and physical disability was caused by the industrial injury. To the contrary, the range of compensable consequences of an industrial injury is limited to those which flow proximately and naturally from the injury. *Standard Metals Corp. v. Ball*, *supra*.

E. Where the relatedness, reasonableness, or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc*., W.C. No. 4-117-758 (ICAO April 7, 2003). As found here, Claimant has failed to establish a causal relationship between his low back condition and his August 4, 2015 work injury. Rather, the evidence presented persuades the ALJ that Claimant's pain is emanating from the natural progression of his pre-existing degenerative disc disease and flat back deformity.

F. A pre-existing condition "does not disqualify a claimant from receiving workers compensation benefits." *Duncan v. Indus. Claims Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004). To the contrary, a claimant may be compensated if his or her employment "aggravates, accelerates, or "combines with" a pre-existing infirmity or disease "to produce the disability and/or need for treatment for which workers' compensation is sought". *H & H Warehouse v. Vicory*, 805 P.2d 1167, 1169 (Colo. App. 1990). Even temporary aggravations of pre-existing conditions may be compensable. *Eisnack v. Industrial Commission*, 633 P.2d 502 (Colo. App. 1981). Pain is a typical symptom from the aggravation of a pre-existing condition. Thus, a claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by the employment–related activities and not the underlying pre-existing condition. *See Merriman v. Industrial Commission*, 120 Colo. 400, 210 P.2d 488 (1940).

G. While pain may represent a symptom from the aggravation of a pre-existing condition, the fact that Claimant may have experienced an onset of pain while performing job duties does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of the natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (August 18, 2005). As found in this case, the totality of the evidence presented persuades the ALJ that Claimant's current symptoms and need for treatment, including surgery as requested by Dr. Stanton is causally related to his long standing degenerative disc disease and flat back deformity that is likely driven by genetic predisposition and which has been progression for years. While the ALJ is convinced that Claimant's need for surgery is reasonable and may well be necessary given his current symptoms (despite the contrary testimony of Dr. Janssen and Dr. Rauzzino), the ALJ is not persuaded that the need for surgery is related to Claimant's August 4, 2015 work injury, either as a consequence of an acute trauma or an industrially based aggravation of a pre-existing condition. In so concluding, the undersigned ALJ rejects Dr. Stanton's contrary opinions as unpursuasive.

ORDER

It is therefore ordered that:

1. Claimant has failed to carry his burden to prove that his need for spinal deformity surgery, as recommended/requested by Dr. Stanton, is causally related to his August 4, 2015 work injury. Consequently, Claimant's request for medical benefits, specifically L1-L5 lumbar spinal fusion surgery is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

DATED: May 12, 2017

/s/ Richard M. Lamphere
Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That

you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Did Claimant suffer a compensable industrial injury on January 14, 2016 while working for Employer?
- Is Claimant entitled to TTD benefits from March and continuing?
- If compensable, was Claimant's medical treatment reasonable, necessary and related to his injury?

FINDINGS OF FACT

1. Claimant was employed as electrical lineman by Employer.

2. Claimant's prior medical history was significant in that he previously suffered an industrial injury on June 28, 2012. Medical records for that injury were admitted at hearing. Claimant injured both shoulders and his neck when he was in a basket being lifted by a crane, which then tipped over and caused him to fall. There were several references in the medical records that Claimant suffered an injury the next day when he fell on his outstretched arms.

3. Medical records related to Claimant's right shoulder were admitted at hearing. In a review of these records, the ALJ concluded that Claimant had symptoms in his right shoulder resulting from the prior injury for which he required treatment. Evidence of this treatment was admitted at hearing. For example, on October 8, 2012, ATP Lloyd Thurston, M.D. noted Claimant's primary problem was left shoulder pain for which surgery was scheduled on October 10, 2012. Dr. Thurston was to see Claimant for re-evaluation of the right shoulder in one week. Dr. Thurston suspected right shoulder sprain/strain and wanted Claimant to begin physical therapy ("PT") the right shoulder.[1]

4. On April 8, 2013, Dr. Thurston concluded Claimant was at MMI and released him without restrictions. Dr. Thurston determined Claimant sustained a 11% scheduled impairment, which converted to a 7% whole person impairment.[2]

5. On October 7, 2013, Claimant underwent a Division IME on the 2012 claim. This examination was performed by Mindy Gehrs, M.D, who noted that the body

[1] This note was summarized by Dr. Gehrs in her October 7, 2013 DIME report.

[2] *Id.*

parts to be evaluated were: left shoulder, right shoulder, cervical spine and right arm.[3] Claimant reported that he had intermittent right shoulder pain. He specifically reported that his right shoulder "grinds and cracks more than the left arm". Dr. Gehrs noted right shoulder pain was referenced in the initial Workwell notes, which was to be addressed later and was not. On examination, Dr. Gehrs found normal range of motion ("ROM") in Claimant's right shoulder. No significant tenderness was noted on the paracervical muscles, upper trapezius or periscapular muscles. Dr. Gehr's assessment was: left shoulder rotator cuff tear, status post repair; right shoulder impingement versus rotator cuff tendinosis; and cervicalgia. She did not believe Claimant had a right shoulder rotator cuff tear. Dr. Gehrs concluded that Claimant was not at MMI for his right shoulder and neck. She opined Claimant's right shoulder symptoms could be addressed with therapy and possibly injections. Dr. Gehrs completed an impairment rating for Claimant's left shoulder only. She assigned an 11% scheduled impairment to this extremity.

6. On January 17, 2014, Claimant presented to Workwell, and was seen by Tom Dickey, PA-C. Claimant's complaints were of right shoulder pain and right-sided neck pain. Claimant reported that his right shoulder pain went down his arm and his left shoulder pain worsened. Dr. Gehrs' DIME report was reviewed. PA-C Dickey's assessment was: disc disorder with myelopathy; impingement syndrome in his right shoulder; rotator cuff tear, left shoulder. Claimant was placed on restricted duty of: any overhead lifting of greater than 50 lbs had to be done with both hands.

7. On February 10, 2014, Claimant was evaluated again by PA-C Dickey, who noted an orthopedic exam was to be scheduled for the right shoulder. He was next seen on April 4, 2014, at which time PA-C Dickey noted Claimant's main concern was the left shoulder, although he had received PT for the right shoulder. The physical therapy notes admitted at hearing documented bilateral shoulder pain.

8. On April 29, 2014, Claimant underwent an MRI on his right shoulder. The films were read by Samuel Fuller, M.D., whose impression was: moderate grade articular surface and intrasubstance partial tearing involving the midportion of the supraspinatus tendon just proximal to the insertion. There was no evidence of a full-thickness rotator cuff tear. Dr. Fuller opined that the findings related to the AC joint and acromion would likely predispose Claimant to subacromial impingement of the rotator cuff. The ALJ notes the MRI constituted objective evidence of a tear present in Claimant's right shoulder.

9. On May 20, 2014, Claimant was examined by Robert Dupper, M.D. Dr. Dupper noted Claimant had full ROM in the right shoulder, but pain at the edges. He had tenderness to palpation of the joint itself, as well as tenderness over the edge of the acromion. Claimant had a negative Neer sign, but mildly positive Hawkins sign. Dr. Dupper's assessment was disc disorder with myelopathy; impingement syndrome, shoulder (presumably right shoulder); rotator cuff tear, shoulder, left-at MMI, S/P surgery. Dr. Dupper noted the cause of Claimant's symptoms was related to work

[3] This was confirmed by the Application for a DIME. Exhibit L.

activities. Claimant was referred to CROM for additional treatment for the right shoulder.

10. On June 2, 2014, Claimant was examined by Rebekah Martin, M.D. at CROM, who was board-certified in Physical Medicine and Rehabilitation. At that time, Claimant was noted to have bilateral shoulder discomfort, with subjective weakness on the left, but more symptomatic on the right. On examination, Claimant had limitations to abduction, causing impingement. Impingement signs were positive for the right shoulder. Dr. Martin's impression was: right shoulder pain with a known articular surface partial supraspinatus tear, with overlying impingement syndrome; left shoulder rotator cuff pathology, now status post rotator cuff surgery done by Dr. Pazic. The left shoulder had residual weakness and range of motion impairment; cervical spine pain of somewhat unclear ideology. The patient recently underwent an MRI. With regard to Claimant's right shoulder, Dr. Martin stated he was an excellent candidate for regenerative medicine. She wanted to pursue PRP initially to see if this would accelerate localized healing, as well as decreased localized pain. Dr. Martin opined this would be a way to avoid surgery. The ALJ notes there was nothing in the record which showed Claimant underwent this treatment.

11. On June 27, 2014, Claimant underwent an independent medical evaluation, which was performed by Mark Steinmetz, MD. Dr. Steinmetz considered various aspects of the June 28, 2012 injury, including the DIME performed by Dr. Gehrs. Claimant complained of aching in his right shoulder joint, over the upper shoulder and near the acromion. Claimant also reported tingling in his right hand. On examination, Dr. Steinmetz noted Claimant's neck was tender all along the spinous processes, with decreased are ROM with rotation on the left. Claimant's right shoulder was tender over the acromion area and there were equivocal impingement findings. ROM of the right shoulder was good, with no crepitus, atrophy or allydonia noted. Dr. Steinmetz' assessment was: incomplete and inconsistent history, including which raised the issue of potential aggravation of neck and right shoulder problems by motorcycle riding; “woefully” incomplete, inaccurate, and misleading history, record review, physical; findings and, therefore invalid conclusions from DIME report; probably 1 or 2 incidences at work involving either lifting, pushing, or falling on his outstretched left arm and resulting in a left shoulder strain or rotator cuff tear; current neck pain , tingling in hands which was not causally related to the June 281 20112 injury. Dr. Steinmetz opined Claimant was entitled to a medical impairment rating for his left shoulder, finding he reached MMI on April 8, 2013. Dr. Steinmetz believed the 11% extremity rating (which converted to a 7% whole person rating) was the correct measure of Claimant’s impairment.

12. On August 6, 2014, David Beard, M.D. examined Claimant, who was complaining of right shoulder pain. He found a mildly positive Hawkins and negative Neer impingement sign. The proximal biceps tendon was nontender. Dr. Bear’s assessment was right shoulder partial-thickness rotator cuff tear, with rotator cuff tendinitis; right shoulder mild AC joint osteoarthritis. Dr. Beard recommended continued conservative management with cuff rehab. Two other options would be a subacromial steroid injections or arthroscopic debridement of the rotator cuff partial thickness

tearing. Dr. Beard advised Claimant he would continue to have problems with his shoulder in his work as a lineman.

13. Claimant returned to Dr. Dupper on September 14, 2015, at which time he noted his right shoulder was bothering him more than the left shoulder. The pain had increased with work activities, since he had been doing more active and overhead work. Claimant said the pain woke him up at night. Tenderness was noted by Dr. Dupper over the biceps tendon and supraspinatus area. Claimant had difficulty reaching across his body and touching his left shoulder with his right hand, as well as a positive Hawkins test and positive empty can test. Dr. Dupper issued work restrictions and recommended Claimant's case be reopened, with the MRI repeated.

14. On October 30, 2015, Claimant was evaluated by Dr. Dupper at which time he reported pain in his right shoulder. He maintained that this injury happened at the time of his fall in June 2012. Dr. Dupper noted Claimant's ability to work was being affected by the shoulder pain, loss of range of motion, and strength.

15. In summary, the ALJ concluded there were a substantial number of records which documented treatment Claimant received for his injured right shoulder before 2016. He continued to have symptoms referable to the right shoulder through 2015. There was no indication in the record that any ATP placed him at MMI for the right shoulder injury.

16. Mr. Grossman testified by way of evidentiary deposition which was taken on August 5, 2016. He worked with Claimant at Employer. He was working on January 14, 2016, doing cleanup. Specifically, they were picking up pieces of equipment called travelers, which was basically a large dolly that weighed 60 to 70 pounds. He and Claimant would pick up the travelers, lift these up over their heads and throw them into a basket on the back of a flatbed truck. Mr. Grossman testified they had been doing this task for an hour or two when Claimant lifted a traveler over his head and said he was in pain. Claimant was not able to continue to do the job for the rest of the day. The testimony of Mr. Grossman corroborated Claimant's version of events on January 14, 2016.

17. In January 2016, Claimant testified he was working for Employer as a lineman. He had worked about one (1) month before his injury. Claimant testified he was injured on January 14, 2016 while loading 70-80 pound travelers onto a trailer. More particularly, Claimant testified he picked the traveler up, pushed it over his head and handed it to a co-worker (Jeremy Grossman) on a trailer. Claimant testified he reported the injury to the foreman, Michael Moore. The ALJ concluded Claimant was performing the job duties as described on this day, as no contrary evidence was introduced at hearing.

18. On February 17, 2016, Dr. Beard evaluated Claimant.[4] In the patient questionnaire form, Claimant noted the accident was caused by twisting/strenuous

[4] Dr. Beard previously treated Claimant, however, only one of those records was admitted at hearing. [Exhibit D, p.31-32.]

movement. Dr. Beard noted Claimant was at work on January 14 when he was lifting 60 lbs and had a sudden onset of shoulder pain associated with a pop. Active range of motion revealed forward flexion of 80°, active abduction of 70°, and external rotation of 60°. Dr. Beard found weakness for resisted supraspinatus testing, a positive Hawkins and negative Neer impingement sign. X-rays revealed no fracture, subluxation or dislocation. Dr. Beard diagnosed probable right rotator cuff tear. He ordered an MRI.

19. On February 19, 2016, an MRI was done on Claimant's right shoulder. The radiologist's impression was: moderate supraspinatus tendinosis, with bursal surface scuffing; no rotator cuff tear was detected; early infraspinatus and subscapularis tendinosis; moderate impingement anatomy, as described; moderate arthrosis at the acromioclavicular joint.

20. Claimant returned to Dr. Beard on March 1, 2016. Dr. Beard reviewed the MRI, which showed some AC arthrosis, but no significant inferior spur formation. Claimant had a small, full-thickness tear in the anterior leading edge of the supraspinatus tendon without significant retraction. Dr. Beard's assessment was: right shoulder full-thickness rotator cuff tear; right shoulder acromial clavicular arthrosis. He recommended proceeding with a right shoulder arthroscopy with acromioplasty and mini open cuff repair. The ALJ noted that this description in the records of a full-thickness right rotator tear was not explained by Dr. Beard, as it did not mirror the MRI report.

21. Claimant underwent surgery on March 11, 2016. Dr. Beard performed the right shoulder arthroscopy with arthroscopic acromioplasty and right shoulder mini open rotator cuff repair.[5] Claimant paid for the procedure due to Respondents' denial of the claim. Claimant testified he has not worked since his surgery.

22. On May 12, 2016, Claimant was examined by Jorge Klajnbart, M.D., at Respondents' request. This was after Claimant underwent surgery on his right shoulder and Dr. Klajnbart did not have the surgical records. Dr. Klajnbart noted the radiographic interpretations almost 2 years apart were almost identical between the April 29, 2014 and February 19, 2016 MRIs. He opined Claimant sustained a soft tissue injury where he felt a pop in his right shoulder on January 14, 2016. The pop sensation could have been some previous scar tissue from his pre-existing tendinopathy and/or the type III curved acromion snapping over the bursal inflamed tissue from this repetitive activity. This type of soft tissue injury to include the rotator cuff tendon injury was typically self-limiting in nature requiring a level of activity modification, rest, medications, and manual medicine in the form of physical therapy and/or osteopathic manipulation or chiropractic treatment. Dr. Klajnbart opined with a high degree of medical probability that the original origin of the right shoulder injury occurred on June 29, 2012 when he put both arms out to stop a fall and sustained a greater left than right shoulder injury.

23. On June 27, 2016, Dr. Klajnbart issued a supplemental report in which he noted a comparison of the MRI of April 29, 2014 and MRI from February 19, 2016

---

[5] Exhibit 9, p. 67-70.

demonstrated no evidence of an acute injury on Janury14, 2016. No rotator cuff tear was noted. Dr. Klajnbart noted Claimant had treatment for the right shoulder after the June 28, 2012 injury for three years.

24. At hearing, Dr. Klajnbart testified as an expert in orthopedic surgery, the specialty in which he is board-certified. He is Level II accredited pursuant to the WCRP. Dr. Klajnbart noted Claimant did not indicate he had an acute right shoulder injury when at that time he examined him. Claimant said he was evaluated for right shoulder problems after the injury. Dr. Klajnbart noted Claimant had objective evidence of biceps tendinitis and impingement in the right shoulder. This was seen in the examination on September 14, 2015 (Dr. Dupper). Claimant reported tenderness and had positive Hawkins and empty can tests. The conclusion was that this was a chronic recurring condition and led to a recommendation that an MRI be repeated. Dr. Klajnbart stated that the restrictions in Claimant's right shoulder ROM could be due to several causes, including inflammatory changes of the tendons, tearing of the tendons, patient motivation and/or adhesive capsulitis. Dr. Klajnbart noted Dr. Martin had also recorded right shoulder pain with known articular surface, partial supraspinatus tear with overlying impingement syndrome. This led to a recommendation of regenerative medicine. Dr. Klajnbart opined Claimant was a surgical candidate before the January 2016 injury, although he agreed it was not formally recommended.

25. Dr. Klajnbart also testified regarding the radiological evidence concerning the right shoulder. He testified that there were no significant or objective changes, as shown by the MRIs. The 2016 MRI did not show evidence of an acute injury of the right shoulder. He explained that if someone has an acute injury, oftentimes one will see bony contusion or an increase in the fluid signal. In this case, those indicators of an acute injury were not there. Dr. Klajnbart testified Claimant's surgery was not due to the January 14, 2016 event. What Claimant would have been able to do would have been far different than he described, as he had a retracted rotator cuff when surgery was performed. Dr. Klajnbart also conceded Dr. Beard identified a full-thickness rotator cuff tear. No physician had identified a full-thickness rotator cuff tear before that. Dr. Klajnbart noted the tear could have advanced sometime between 2014 and 2016 when Claimant was complaining of right shoulder symptoms. The ALJ credited Dr. Klajnbart's testimony regarding objective evidence of injury and on causation.

26. Claimant failed to prove that the incident on January 24, 2016 aggravated or accelerated the condition of his right shoulder.

27. Evidence and inferences inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), §§ 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S. Generally, the Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. § 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). In this case, the credibility of Claimant, as well as the various health care providers, bore directly on the issue of compensability.

Compensability

The legal standard applicable to the compensability issue under these circumstances is found in § 8-41-301(1)(c), C.R.S., which provides that as a condition for the recovery of workers' compensation benefits, the injury must be "proximately caused by an injury or occupational disease arising out of and in the course of the employment". *Loofbourrow v. Industrial Claim Appeals Office*, 321 P.3d 548 (Colo. App. 2011), *aff'd Harman-Bergstedt, Inc. v. Loofbourrow*, 320 P.3d 327 (Colo. 2014).

A pre-existing condition "does not disqualify a Claimant from receiving workers' compensation benefits". *Duncan v. ICAO*, 107 P.3d 999, 1001 (Colo. App. 2004). Further, if a pre-existing condition is stable but is aggravated by an occupational injury, the resulting occupational injury is still compensable because the incident caused the dormant condition to become disabling. *Siegfried v. Industrial Commission*, 736 P.2d 1262, 1263 (Colo. App. 1986). Thus, if an industrial injury aggravates, accelerates, or combines with a pre-existing condition so as to produce disability and need for treatment, the claim is compensable. *H & H Warehouse v. Vicory,* 805 P.2d 1167

(Colo. App. 1990). In determining whether Claimant met his burden of proof, the ALJ evaluated the medical records admitted at hearing and considered Claimant's credibility. While the evidence established Claimant was working injury on January 14, 2016 and sustained an injury to his shoulder, this was, at most, a soft tissue injury. The ALJ determined he failed to prove an aggravation or acceleration of the underlying condition of his right arm/shoulder.

As found, Claimant sustained a right shoulder injury in 2012, for which he required treatment. The medical records admitted at hearing documented the rather extensive treatment he received for said injury. The ALJ found Claimant had several evaluations and required treatment for the right shoulder condition. (Findings of Fact 3-13). Claimant required diagnostic testing, including an MRI. (Finding of Fact 8). Claimant's symptoms extended at least until October 2015. (Finding of Fact 13). The treatment records admitted at hearing led the ALJ to conclude that 2012 injury to the right shoulder was significant to the point that it required treatment up to three months before the injury which was the subject of the hearing. Claimant's testimony did not dispel this conclusion.

In this regard, Claimant's credibility concerning the 2012 injury was hurt by inconsistencies between his hearing testimony and the medical records. In his testimony at hearing, Claimant tried to minimize the impact of his right shoulder symptoms, describing it as "some pain". There were several times in the records related to the 2012 injury when Claimant told his treating physicians his right shoulder pain was worse than the left. (Findings of Fact 10, 12). His testimony also diverged from his discovery responses, wherein the latter, he described the pain in his shoulders as "chronic pain". The DIME physician, Dr. Gehrs, concluded Claimant was not at MMI for the right shoulder, which was evidence of the unresolved nature of that condition. Claimant's symptoms led at least one physician to suggest a repeat MRI of the right shoulder. (Finding of Fact 12). In short, Claimant had chronic symptoms in the right shoulder, which continued almost unabated until January 2016.

The inquiry then turned to the events of January 14, 2016. As determined in Findings of Fact 15-16, Claimant's testimony (which was corroborated by Mr. Grossman) established the fact that he experienced pain in his right shoulder that day. He was performing a task for Employer and no contrary evidence was introduced to refute this. Thus, the evidence established Claimant suffered an injury that day while working for Employer. This does not end the inquiry, however. Given his preexisting condition, the ALJ next considered whether this injury met the legal requirements for compensability under the Colorado Workers' Compensation Act.

Stated another way, liability in this case turned on the question of whether Claimant proved he suffered an acute injury that aggravated or accelerated the underlying condition of his right shoulder. The ALJ determined he did not satisfy his burden of proof. The ALJ's reasoning was twofold. First, the objective medical evidence supported the conclusion that the January 14, 2016 incident did not aggravate and/or accelerate the Claimant's right shoulder. A comparison of the two MRIs revealed

the condition of Claimant's shoulder, specifically the supraspinatus tendon, was essentially the same:

April 29, 2014: "moderate grade articular surface and intrasubstance partial tearing involving the mid-portion of the supraspinatus tendon just proximal to the insertion".

February 19, 2016: "moderate supraspinatus tendinosis, with bursal surface scuffing; no rotator cuff tear was detected".

In coming to this conclusion, the ALJ specifically looked at whether there was the presence of a full thickness tear, as argued by Claimant. The MRI reports were the most probative evidence on this issue. No full thickness tear was identified by either radiologist; the first found a partial tear at the insertion of the supraspinatus tendon and the second concluded there was no rotator cuff tear. Dr. Beard's records did not discuss or explain how he then concluded there was a rotator cuff tear. In fact, there was no evidence admitted to amplify Dr. Beard's opinion on this subject. In the absence of evidence which provided more information as to how Dr. Beard came to this conclusion, the ALJ is unable to conclude the January 14, 2106 event caused a full-thickness rotator cuff tear. On this basis, the ALJ concluded the MRI findings were very similar, which was also in accord with Dr. Klajnbart's testimony.

Second, the ALJ credited the testimony of Dr. Klajnbart, who testified there was no evidence of an acute injury. Dr. Klajnbart based this opinion on the MRIs done in 2014 and 2016. (Finding of Fact 25). Accordingly, based upon the evidence before the ALJ, Claimant suffered, at most, a soft tissue injury to his, which was a temporary aggravation. The ALJ determined Claimant did not meet his burden of proof to establish that the January 14, 2016 injury combined with or accelerated the underlying condition of his shoulder to create a disability. (Finding of Fact 26). Therefore, the claim is properly dismissed.

TTD and Medical Benefits

In light the ruling on the issue of compensability, Claimant's request for medical and TTD benefits is denied and dismissed.

ORDER

IT IS ORDERED:

1. Claimant's claim for benefits under WC 5-006-696 is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or

service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Whether claimant has proven by a preponderance of the evidence that pursuant to Section 8-42-101(1)(b), C.R.S. he is entitled to replacement prosthetic devices consisting of 1) a right transradial cable operated prosthesis with a terminal device; and 2) a right transradial electric prosthesis/myoelectric hand.

FINDINGS OF FACT

1. Claimant suffered an admitted injury to his right arm on November 14, 2007. The injury occurred when claimant's right hand was pulled into the planer he was operating while employed at employer's lumber mill. Subsequently, claimant's right hand was amputated above the wrist. During his workers' compensation claim, claimant's authorized treating physician ("ATP") was Dr. Richard McLaughlin. Claimant also treated with Dr. Mitchell Copeland and Dr. Ellen Price.

2. Dr. McLaughlin placed claimant at maximum medical improvement ("MMI") on March 16, 2009 and assigned a permanent impairment rating of 55% whole person. In 2009, claimant received a right transradial cable operated prosthesis with a terminal device ("cable operated")[1]. This cable operated prosthesis is operated by claimant moving his right shoulder to open and close the terminal device.

3. Claimant testified that prior to the work injury, he was right hand dominant. Since the injury claimant has learned to use his left hand and with the use of the right cable operated prosthesis he is able to engage in activities of daily living.

4. Claimant testified that the lumber mill closed down and he is now retired. Claimant's hobbies include hunting, training his bird dog, and wood working. With his current cable operated prosthesis claimant is able to engage in these activities.

5. Claimant testified that his right residual limb has continued to atrophy since he was fitted for his prosthesis in 2009. As a result, claimant's current cable operated prosthesis slides and slips off of his arm, causing discomfort and skin abrasions. Claimant testified that he must wear a number of socks on his residual limb to make up for the atrophy that has occurred, but even with those added layers the prosthesis still slips.

6. Claimant has requested authorization for a new cable operated prosthesis. In addition, claimant has requested authorization for a right transradial electric prosthesis/myoelectric hand ("myoelectic"). A myoelectric prosthesis fits more snuggly

[1] In the records entered into evidence and in witness testimony the terms "cable operated", "body operated", and "body powered" are used interchangeably to describe and identify the nature of claimant's current prosthesis.

to an individual's residual limb and is operated by the individual's use of the flexor and extensor muscles of their forearm.

7. Claimant testified that it is his understanding that the myoelectric prosthesis would provide him with the ability to engage in fine motor movement, allowing him to hold a plate of food, or a drinking glass. In addition, claimant understands that the myoelectric prosthesis would cause less strain on his right shoulder.

8. On May 3, 2016, claimant returned to Dr. McLaughlin. On that date, Dr. McLaughlin recommended a new right upper extremity prosthesis with a terminal device and a myoelectric arm or hand. Dr. McLaughlin noted that claimant needs the new prostheses because the mass of his right forearm had decreased. Dr. McLaughlin referred claimant to Dr. Price for a consultation regarding prostheses.

9. On May 12, 2016, claimant was seen by Dr. Price who opined that claimant needed a new "body powered" prosthesis with a terminal device. Dr. Price also recommended a myoelectric arm or hand so that claimant could perform fine motor activities. On that same date, Dr. Price requested authorization from insurer for both a body powered prosthesis and a myoelectric prosthesis.

10. On September 27, 2016, claimant returned to Dr. Copeland. At that time, Dr. Copeland noted that claimant's right forearm had shrunk. Dr. Copeland opined that claimant was in need of a new right arm prosthesis and that his need was related to the 2007 work injury.

11. Brian Karsten, Board Certified Prosthetist, testified at hearing in this matter regarding the different prostheses requested by claimant. Mr. Karsten is very familiar with claimant's prosthesis because he fabricated it in 2009 and has performed repairs on it since that time. Mr. Karsten testified that given the age of claimant's current prosthesis, it is in poor condition and in need of replacement.

12. Mr. Karsten testified that a cable operated prosthesis is water resistant, dust resistant, and durable. Mr. Karsten testified that for an active male like claimant he recommends a cable operated prosthesis. Mr. Karsten also testified that atrophy to claimant's right residual limb is a normal progression following an amputation.

13. Mr. Karsten testified that in addition to the cable operated prosthesis, he recommends that claimant obtain a myoelectric prosthesis because the myoelectric prosthesis would allow claimant to engage in more fine motor activities. Mr. Karsten admitted that the myoelectric prosthesis is not as durable or "rugged" as the cable operated prosthesis. On cross examination Mr. Karsten testified that if claimant can only have one replacement prosthesis, the cable operated option would provide claimant with the most function.

14. Respondents sent claimant for an independent medical examination ("IME") with Dr. Scott Primack on February 3, 2017. Dr. Primack reviewed claimant's medical records, obtained a history from claimant and performed a physical examination of claimant and claimant's current prosthesis. Following the IME, Dr. Primack issued a report in which he opined that claimant needs a new prosthesis for his right arm and the need for that new prosthesis is related to claimant's November 14, 2007 work injury.

15. Dr. Primack noted in his report that claimant was able to continue working for employer until the lumber mill was closed due to "downsizing". Dr. Primack also opined that a hook/pincer terminal device would be adequate given claimant's high demand and rugged use of his current prosthesis. In Dr. Primack's opinion a myoelectric prosthesis would not provide claimant with improved function and is therefore not necessary.

16. Dr. Primack testified by deposition in this matter and confirmed his opinion that claimant needs a new prosthesis because of the atrophy to his residual limb. Dr. Primack also testified that claimant is a good candidate for a body powered prosthesis and is highly functional with his body powered prosthesis. Dr. Primack indicated that it is his opinion that a myoelectric prosthesis would not increase claimant's function.

17. The ALJ credits the opinions of Drs. McLaughlin, Price, Copeland, and Primack and finds that claimant has experienced an anatomical change to his residual limb that is related to claimant's November 14, 2007 work injury. The ALJ also finds that claimant has demonstrated that it is more likely than not that because of this anatomical change he needs a new prosthesis.

18. The ALJ credits the testimony of Mr. Karsten and claimant and the opinions of Drs. McLaughlin, Price, Copeland, and Primack and finds that claimant has demonstrated that it is more likely than not that a new cable operated prosthesis would improve the function of claimant's right arm.

19. With regard to the myoelectric prosthesis, the ALJ credits the opinion of Dr. Primack over the contrary opinion of Dr. Price and finds that claimant has failed to demonstrate that it is more likely than not that a myoelectric prosthesis would further improve his function beyond the function he will achieve with a cable operated prosthesis.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not

interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., (2007). A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S., *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Section 8-42-101(1)(b), C.R.S., addresses respondents' obligation with regard to prosthetic devices. In this matter, claimant's injury occurred on November 14, 2007, so it is the 2007 version of Section 8-42-101(1)(b), C.R.S., that is applicable with regard to claimant's work injury. In 2007, Section 8-42-101(1)(b), C.R.S. provided, in part:

> "The employee may petition the division for a replacement of any artificial member, . . . or other external prosthetic device . . . upon grounds that the employee has undergone an anatomical change since the previous device was furnished, and that the anatomical change is directly related to and caused by the injury, and that the replacement is necessary to improve the function of each member or part of the body so affected or to relieve pain or discomfort."

5. Statutes are construed to further the intent to render the entire statute effective and to reach a just and reasonable result. Section 2-4-201(1)(b) and (c), C.R.S. Unless subject to a technical or particular meaning, words and phrases in a statute are to be given their plain and ordinary meanings, and phrases should be read in context and construed according to the rules of grammar and common usage. Section 2-4-101, C.R.S.; *Weld County School District RE-12 v. Bymer,* 955 P.2d 550 (Colo. 1998). However, statutory language should not be construed in a manner which produces an absurd result. *Humane Society of the Pikes Peak Region v. Industrial Claim Appeals Office,* 26 P.3d 546 (Colo. App. 2001).

6. In the current case, claimant is requesting two replacement prostheses. Respondents argue that the 2007 version of Section 8-42-101(1)(b), C.R.S. provides for "a replacement" in the singular and not the plural "replacements". The ALJ finds respondents' argument to be persuasive. Under the clear meaning of the statute "a replacement of any artificial member" indicates the singular, not multiple replacements.

Therefore, the ALJ concludes that pursuant to the 2007 version of Section 8-42-101(1)(b), C.R.S., claimant may receive only one replacement prosthesis at this time.

7. The ALJ's ruling on this matter should not be interpreted to mean that the claimant is allowed only one prosthesis for all time. The 2007 version of Section 8-42-101(1)(b), C.R.S. clearly indicates that a new prosthesis may be requested when an anatomical change has occurred "since the previous device was furnished". Therefore, the ALJ concludes that although the 2007 version of the statute allows claimant only one prosthesis at a time, should he undergo further anatomical changes, he would not be precluded from requesting a new prosthesis in the future.

8. As found, claimant has demonstrated by a preponderance of the evidence that he has undergone an anatomical change to his right residual limb that was caused by the work injury. In addition, claimant has demonstrated by a preponderance of the evidence that this anatomical change necessitates a replacement prosthesis. As found, the testimony of claimant and Mr. Karsten and the opinions of Drs. McLaughlin, Price, Copeland, and Primack are credible and persuasive.

9. As found, pursuant to the 2007 version of the statute, claimant may receive a single replacement prosthesis, but not multiple prostheses at this time. As found, claimant has demonstrated by a preponderance of the evidence that a new transradial cable operated prosthesis with a terminal device will improve function of claimant's right arm. As found, the testimony of claimant and Mr. Karsten and the opinions of Drs. McLaughlin, Price, Copeland, and Primack are credible and persuasive on this issue.

10. As found, claimant has failed to demonstrate by a preponderance of the evidence that a myoelectric prosthesis would further improve the function of claimant's right arm beyond the function he will achieve with a cable operated prosthesis. As found, the opinion of Dr. Primack is credible and persuasive on this issue.

ORDER

It is therefore ordered that:

1. Respondents shall pay for a right transradial cable operated prosthesis with a terminal device.

2. Claimant's claim for a right transraidal electric prosthesis/myoelectic hand is denied and dismissed.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as

long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 15, 2017

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

1. Did Claimant prove by a preponderance of the evidence that he suffered a compensable injury on July 26, 2016 (W.C. No. 5-021-592-01) or August 22, 2016 (W.C. No. 5-024-949-01)?

2. If Claimant proved a compensable injury, is Claimant entitled to medical treatment to cure and relieve the effects of the injury?

3. If Claimant has a compensable injury, did Respondents prove entitlement to a reduction in compensation based on a willful violation of a safety rule?

STIPULATIONS

1. The parties stipulated to an average weekly wage of $725.98.

2. If either claim is compensable, Claimant is entitled to TTD benefits commencing August 23, 2016.

FINDINGS OF FACT

1. Claimant has worked as a merchandise receiving technician in Employer's distribution warehouse since July 2013. His duties include unloading cartons or pallets from trucks and moving merchandise within the warehouse. The job is physically demanding, requiring frequent lifting of up to 50 pounds, and greater weight occasionally. Claimant works the overnight shift from 6:00 PM to 6:00 AM, three days per week.

2. The incident that forms the basis for W.C. 5-021-592-01 occurred during the shift that started on the evening of July 25, 2016. While unloading a trailer, Claimant moved a heavy box that was approximately at shoulder height. Claimant estimated the box weighed 100 pounds. Claimant noticed "some discomfort" and "a little bit of numbing pain" in the middle of his low back, but continued working. He assumed he had just temporarily overexerted his muscles.

3. During his first break at 8:30 PM, Claimant applied an ice pack to his back and took Aleve. Claimant continued working until approximately 3:00 AM, by which time the pain had become "unbearable." A coworker helped him to his vehicle because he had difficulty walking.

4. Claimant went to the Parkview Medical Center ER early in the morning on July 26. He reported a history of "intermittent lower back pain" which worsened "last night" due to "lifting and twisting" at work. Claimant told the ER physician "typically, he can take an Aleve with good pain control, but that did not seem to help this time." The

physician noted pain in the lower lumbar area with some radiation to the bilateral lower extremities depending on his position. Straight leg raise testing was mildly positive at 70°. A lumbar CT showed a disc protrusion at L5. Claimant was prescribed a course of steroids, pain medication, and muscle relaxers.

5. On July 28, 2016, Claimant saw Employer's on-site nurse regarding the episode. He reported that his lower back "was hurting with sharp pains while working normal job functions, moving boxes onto the ART line by lifting and setting the boxes down. . . . He informed me that this is a recurring past injury that is not work-related and he is always wearing a back brace while working, which he was in this case. He denied on-site care at our facility [ ] and was going to seek outside medical help on his own." Claimant was "feeling much better at this time," and declined medical treatment at Respondent's expense. Claimant stated, "he will be following up with his PCP and VA MD for further care."

6. Claimant subsequently returned to work for Employer, performing regular duties and working regular shifts.

7. On the night of August 21, 2016, Claimant worked on "depalletization," which involves placing items onto a conveyor to be sent to the outbound section for loading onto trailers. Claimant completed his full 12-hour shift without difficulty, went home and went to bed. When he awoke at 4:00 PM to get ready for work, he was in such severe pain he had difficulty getting out of bed and standing up. He went to work and told his supervisor he could not work and needed medical attention. Employer's on-site nurse gave Claimant a list of occupational medicine clinics, from which he chose Emergicare.

8. Claimant saw Dr. Agnes Flaum at Emergicare on August 23, 2016. He stated he "threw his lower back out" moving heavy items from pallets to a conveyor. He reported 8/10 pain in his low back with numbness in his right thigh. The physical examination was essentially normal, with only tenderness noted to the L4 and L5 spinous processes. Sensory examination, range of motion, gait, and posture were reported as normal. Claimant was diagnosed with a soft tissue strain and given injections and pain medications. Dr. Flaum imposed work restrictions of no lifting greater than 5 pounds.

9. Claimant returned to Emergicare on August 30, 2016. He reported ongoing low back pain and numbness in the right leg. Dr. Flaum added a diagnosis of sciatica and referred Claimant for an MRI.

10. Claimant underwent thoracic and lumbar MRIs on September 14, 2016. The thoracic MRI showed "minimal" multilevel degenerative changes. The lumbar MRI showed a left paracentral disc protrusion at L5-S1 that approaches and may abut the descending left S1 nerve root. There was mild foraminal narrowing, but no central stenosis.

11. Claimant saw Dr. Douglas Bradley at Emergicare on September 15, 2016. He reported 5/10 pain, numbness in the right leg, weakness, persistent aching and intermittent muscle spasm. Dr. Bradley referred Claimant to Dr. Roger Sung for a surgical evaluation. He also liberalized Claimant's lifting restriction to 25 pounds.

12. On September 27, 2016, Respondent's claims adjuster notified Emergicare that Claimant's claims were denied and no further treatment would be authorized. As a result, Claimant did not see Dr. Sung or return to Emergicare.

13. Claimant has a lengthy history of low back pain, dating to approximately 1992 during his service in the U.S. Army. Claimant experienced episodic flares of low back pain, which he typically treated with pain relievers such as Tylenol, Ibuprofen, Percocet or Darvocet. Claimant retired in 2011 after 22 years of active-duty service. His discharge medical records document he had received treatment related to low back pain and muscle strains. Claimant stated on his DD FORM 2897 that he intended to seek VA disability benefits for conditions including his "lower back." Claimant received a 10% disability rating for service-connected back pain.

14. There are numerous references in the medical records to prior episodes of low back pain. The following list of encounters is illustrative but not exhaustive:

Date	**Provider**	**Note**
28-Apr-1992	PT	2 month history of LBP. L thigh to knee pain w/ numbness
8-Sep-1992	PT	c/o LBP x 8 months due to fall down 150ft embankment.
23-Oct-1992	PT	F/U mechanical LBP
16-Jun-1994	Evans	low back pain last night after lifting boxes
25-Jun-2003	Blanchfield ACH	LPB x 5 days, moving bed around and back started hurting. Spasm on exam. DX lumbar strain
30-Jun-2005	121st GH	Low back pain after doing PT yesterday. DX strain
4-Jul-2006	DDEAMC	Moving, lifting a box of dishes, felt severe pain to L hip and L low back. Appeared in "obvious pain." DX strain
29-Jan-2007	Ft. Gordon	woke up in AM with LBP. DX lumbar strain
26-Mar-2007	Eisenhower AMC	Patient has had lower back pain for about a year. He thinks maybe moving and lifting of boxes may have caused it. He bent over a few days later and the pain started and took him to his knees. SLR + on the R.
25-May-2007	Eisenhower AMC	Receiving chiropractic treatment for chronic low back pain, L4-L5 DDD.
22-Oct-2010	Ft. Gordon	low back pain and muscle spasm, given profile 24 hrs off work
19-Feb-2013	Parkview ER	LBP aggravated last Thursday after lifting a box at work. c/o acute/chronic LBP w/ radiation down into R buttock/leg, tingling in foot. Pain level 9, extreme pain transferring from wheelchair to stretcher.

18-Jan-2015	Parkview ER	Long history of low back pain since being in the military. Has been controlling it conservatively; however a little over a week ago he slipped on ice and fell, landing on his tailbone with immediate onset of low back pain radiating to the right. DX acute on chronic back pain exacerbated by a fall. X-rays showed moderate L4-5 and severe L5-S1 DDD.
5-Oct-2015	McCreight	New patient, lower back pain "going on for 22 years."
18-Oct-2015	Parkview ER	Low back and R leg pain started gradually while doing yardwork.
19-Mar-2016	Parkview ER	LBP 5 days ago was helping a friend do some roofing.

15. Claimant's chronic back pain routinely flares with heavy activity, light activity or no activity.

16. Although Claimant maintained his job with Employer before July 2016, his chronic back pain periodically interfered with his ability to perform his regular duties. Claimant testified "usually, I can work the whole entire shift, no problem — all three days, all three nights. Next week, I'll go in, and I might not be able to work Saturday, or I might not be able to work that Monday shift."

17. Dr. Lawrence Lesnak performed an Independent Medical Examination (IME) at Respondent's request on December 16, 2016. Besides examining and interviewing Claimant, Dr. Lesnak performed an extensive review of Claimant's preinjury medical records. Dr. Lesnak noted Claimant was "quite hesitant" to reveal information regarding prior treatment or injuries during his military service. Dr. Lesnak opined Claimant has suffered from chronic low back pain, buttock pain, hip pain, and leg symptoms for more than 20 years. Claimant told Dr. Lesnak he had no specific medical evaluations or treatment for "many years" before July 2016, which Dr. Lesnak noted was inconsistent with medical records showing treatment at the ER for back pain as recently as March 2016. Dr. Lesnak opined that the September 2016 MRI showed no new or acute pathology caused by Claimant's work activities in July or August 2016. Dr. Lesnak opined Claimant's work activities did not cause, aggravate or accelerate Claimant's chronic pre-existing condition.

18. Dr. Michael Dallenbach performed an IME on December 21, 2016 at Claimant's request. Dr. Dallenbach had a relatively small sampling of medical records to review, primarily dated after Claimant's July 2016 claimed alleged injury. The only preinjury document Dr. Dallenbach reviewed was a May 16, 2012 VA rating decision. Dr. Dallenbach opined that Claimant aggravated his chronic low back pain as a result of his work activities on July 26, 2016 and August 22, 2016. Dr. Dallenbach opined that there was "no evidence" Claimant had "any" impairment or functional limitations before July 26, 2016. Dr. Dallenbach was most impressed by the fact that Claimant maintained a physically demanding job with Employer for three years. Dr. Dallenbach opined Claimant had a well-defined mechanism of injury and his ongoing symptoms were directly related to his work activities in July and August 2016.

19. After the hearing, Dr. Dallenbach had an opportunity to review medical records regarding Claimant's pre-existing condition and treatment. Dr. Dallenbach testified the additional documentation did not change his opinions regarding causation. He testified the additional records support his opinions.

20. There is no persuasive evidence of any structural change to Claimant's spine or other new objective abnormality caused by the July or August work incidents.

21. Claimant described his prior episodes of back pain as "seldom" and "intermittent." Claimant testified he had never felt pain in his low back like the pain and discomfort he experienced on July 26, 2016. Claimant testified his pain had never gotten as bad as 85/100 before July 2016. He testified his worst pain before July 2016 was "maybe 50" out of 100. Claimant did not recall if he ever had numbness in his legs before July 26, 2016. Claimant denied that he had back pain before July 26, 2016 so severe that he needed medical care simply upon waking. Claimant testified that his episodes of back pain during his military service were brought on exclusively by "extensive labor, hard work" or "combat-related" activities. None of these assertions is persuasive.

22. The symptoms Claimant has experienced since July 26, 2016 are substantially the same as those he experienced on a chronic basis for his alleged injury.

23. Dr. Lesnak's opinions are credible and persuasive.

24. Claimant did not prove by a preponderance of the evidence that his work activities in July or August 2016 caused, aggravated, or accelerated his underlying pre-existing condition. Claimant's need for medical treatment and disability since July 2016 reflect the natural progression of Claimant's pre-existing condition.

CONCLUSIONS OF LAW

To receive compensation or medical benefits, a claimant must prove that he is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). The claimant must prove that an injury proximately caused the condition for which benefits are sought. Section 8-41-301(1)(c); *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997), *cert. denied* September 15, 1997. For an injury to be compensable under the Act, there must be a "sufficient nexus" between the employment and the injury. *In re Question Submitted by the U.S. Court of Appeals*, 759 P.2d 17 (Colo. 1988). The claimant must prove entitlement to benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case are not interpreted liberally in favor of either claimants or respondents. Section 8-43-201, C.R.S.

The fact that a claimant suffers from a pre-existing condition does not disqualify a claim for compensation. If a claimant's work aggravates, accelerates, or combines with a preexisting condition to produce disability or a need for treatment, the claim is compensable. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Pain is a typical symptom from the aggravation of a pre-existing condition, and the claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by the employment-related activities and not the underlying pre-existing condition. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949).

But the mere fact that a claimant experiences symptoms at work does not necessarily mean the employment aggravated or accelerated the pre-existing condition. *Cotts v. Exempla*, W.C. No. 4-606-563 (ICAO, August 18, 2005). Rather, when a claimant experiences symptoms at work, the ALJ must determine whether the subsequent need for treatment was caused by an industrial aggravation of a preexisting condition or was due to the natural progression of the condition. *Melendez v. Weld County School District #6*, W.C. No. 4-775-869 (ICAO, October 2, 2009).

As found, Claimant failed to prove by a preponderance of the evidence that he suffered a compensable injury on July 26, 2016 or August 22, 2016. Based on the totality of evidence presented, the ALJ concludes Claimant's work activities were not the proximate cause of his symptoms or his inability to work on or after July 26, 2016. Rather, the persuasive evidence shows that Claimant's symptoms reflect the natural progression of his pre-existing condition, unaffected by his work activities on either July 26, 2016 or August 22, 2016. The mere fact that Claimant's symptoms arose after performing job functions does not prove a causal relationship. The ALJ concludes Claimant suffered no new injury, but merely experienced continuing symptoms from his chronic pre-existing condition. Claimant appeared to recognize this because he told Employer's on-site nurse on July 28 he did not expect Employer to provide medical treatment since this was a "recurring" nonwork-related problem.

The ALJ finds Dr. Lesnak's opinions to be credible and persuasive. Dr. Lesnak's opinions support a finding that Claimant did not sustain a work-related injury on July 26, 2016 or August 22, 2016, nor did he suffer a compensable aggravation of his pre-existing condition. Dr. Lesnak's opinions are consistent with the medical records which document a long-standing pre-existing condition that has been symptomatic for decades.

Based on the totality of evidence presented, the ALJ concludes Claimant failed to prove he suffered a compensable injury on either July 26, 2016 or August 22, 2016.

ORDER

It is therefore ordered that:

1. Claimant's claims for compensation in W.C. No. 5-021-592 and W.C. No. 5-024-949 are denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 15, 2017

Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

I. Whether Claimant established by a preponderance of the evidence that he is entitled to conversion of his scheduled upper extremity impairment rating to a whole person impairment rating.

FINDINGS OF FACT

1. Claimant has worked for Employer for approximately 37.5 years in various capacities, including as delivery driver for the last 33 years.

2. Claimant sustained an admitted industrial injury to his left shoulder on June 13, 2013. Claimant incurred the injury while grabbing a door strap for balance in an attempt to prevent from falling off of his delivery truck.

3. Claimant initially treated with James Rafferty, D.O., who first evaluated Claimant on June 17, 2013. Dr. Rafferty initially diagnosed shoulder strain and impingement with a possible rotator cuff tear. Dr. Rafferty noted Claimant's pain was in the anterolateral and superior shoulder.

4. Claimant underwent an MRI of his left shoulder on July 13, 2013. The MRI revealed the following:

> (1) Circumferential labral detachment with tearing into the posterior superior labral substance. Associated high-grade 3x4 mm chondral fissure and delamination in the anterior inferior glenoid. 15 mm wide full-thickness sharply marginated chondral defect in the superior humeral head. Associated synovitis and small joint effusion with capsular thickening and edema. (2) Mild diffuse tendinosis and areas of fraying through the rotator cuff, without rotator cuff tear. (3) Mild narrowing of acromion outlet without bursitis.

5. Dr. Rajesh Bazaz conducted orthopedic evaluations of Claimant on July 26, 2013 and August 5, 2013. Dr. Bazaz opined Claimant's pain was mostly likely coming from the subacromial space. Dr. Bazaz performed a subacromial corticosteroid injection. Dr. Bazaz opined Claimant did not have significant rotator cuff pathology and noted Claimant had residual stiffness/adhesive capsulitis of the shoulder.

6. Thomas J. Noonan, M.D. evaluated Claimant on multiple occasions, beginning August 2, 2013. Dr. Noonan noted loss of motion and mild signs of impingement. Dr. Noonan gave an impression of left shoulder pain, adhesive capsulitis, impingement, mild glenohumeral chondral degenerative change, and degenerative SLAP tear. Dr. Noonan performed two glenohumeral joint injections to Claimant's left shoulder.

7. Dr. Rafferty placed Claimant at maximum medical improvement ("MMI") on January 4, 2014. Dr. Rafferty assigned a 4% impairment rating of the left upper extremity.

8. Claimant returned to Dr. Noonan for a reevaluation on January 10, 2014. Dr. Noonan discussed future treatment options for Claimant, including conservative care, injections, and surgery.

9. On November 25, 2014, Eric O. Ridings, M.D. conducted an Independent Medical Examination ("IME") at the request of Respondents. Respondents specifically requested Dr. Ridings provide an opinion on whether Claimant's 4% left shoulder impairment rating should be a scheduled rating or a whole person rating. On examination, Dr. Ridings noted tenderness through the left side of Claimant's neck across the left shoulder elevators and over the upper interscapular muscles, with pain at the anterior shoulder. Dr. Ridings noted Claimant's range of motion measured less than it did at MMI, and was limited by pain. Dr. Ridings opined that the situs of Claimant's injury is at and distal to the glenohumeral joint. Dr. Ridings remarked, "While he does have some mild impingement in the shoulder (with the location of supraspinatus impingement underneath the acromion, distal to the glenohumeral joint), the patient's primary injury is an aggravation of his preexisting degenerative changes in the glenohumeral joint, with findings of grade 3 chondromalacia and labral tearing as well as some adhesive capsulitis." Dr. Ridings noted that Claimant's symptoms, course, and response to diagnostic and therapeutic injections were all consistent with the situs of injury being in the glenohumeral joint. Dr. Ridings assigned a 4% scheduled impairment rating of the left upper extremity.

10. On January 6, 2015, Bennett I. Machanic, M.D. conducted a Division Independent Medical Examination ("DIME") of Claimant. Claimant complained of pain, stiffness, popping, tingling and weaknesses in his left shoulder. On examination, Dr. Machanic noted "excellent" strength proximally and distally in Claimant's left upper extremity, with no weakness of the shoulder girdle or more distally. Dr. Machanic remarked that Claimant had good range of motion, with the limitations, and that there was no distinct crepitus on range of motion over the shoulder. Dr. Machanic opined Claimant reached maximum medical improvement on January 10, 2014. Dr. Machanic gave Claimant a 12% scheduled impairment rating for loss of range of motion, consistent with a 7% whole person impairment rating.

11. Dr. Bazaz reevaluated Claimant on April 3, 2015. Dr. Bazaz opined that there was "some level of difficulty" in both the subacromial space and the glenohumeral joint because Claimant had improved with injections to those areas.

12. On July 9, 2015, Dr. Ridings conducted a second IME of Claimant at the request of Respondents for the purpose of determining if authorization for left shoulder arthroscopic surgery should be provided. Claimant reported that his symptoms decreased by 90% for two to three months after receiving the intraarticular injections from Dr. Noonan. Claimant reported decreased strength at the left shoulder and some numbness and tingling about the left shoulder and neck, worsened with shoulder use,

including raising his shoulder beyond 90 degrees and rolling onto the left shoulder at night. On examination, Dr. Ridings noted tenderness across the superior and upper posterior shoulder where the neck meets the shoulder and extending over the lateral left shoulder. Dr. Ridings noted positive impingement tests and empty can testing. Dr. Ridings further noted range of motion findings were consistent with adhesive capsulitis. Dr. Ridings opined arthroscopic surgery would be reasonable, necessary and work-related.

13. Dr. Bazaz reevaluated Claimant on September 18, 2015. Dr. Bazaz noted that there was a question as to whether Claimant's lost motion was due to adhesive capsulitis or rather a glenohumeral joint issue. Dr. Bazaz noted there was no obvious rotator cuff or biceps tendon pathology. Dr. Bazaz did not recommend further treatment until a new MRI was obtained.

14. Claimant underwent a repeat MRI on October 12, 2015. The MRI revealed the following:

> (1) Interval progression of the glenohumeral joint osteoarthritis which is now severe. There is a small effusion with synovitis. There is circumferential glenoid labral pathology which includes chronic tearing of the superior, anterior, and inferior labrum. (2) Moderate supraspinatus and infraspinatus tendinosis with articular surface tendon fraying; no discrete tear. (3) Minimal subcapularis tendinosis; no tear. (4) Mild to moderate acromioclavicular joint osteoarthritis.

15. Claimant returned to Dr. Bazaz for a follow-up evaluation on October 19, 2015. Claimant reported soreness in his left shoulder, pain on the front of the shoulder and the top of the shoulder, and lost motion compared to the contralateral side. Dr. Bazaz reviewed the October 12, 2015 MRI and noted, in part, that there was no evidence of partial-thickness or full-thickness rotator cuff pathology and that "chondral irregularity affects the glenoid more than the humeral head." Dr. Bazaz gave an impression of left shoulder arthritis and trauma. Dr. Bazaz opined Claimant's loss of motion was due to glenohumeral joint osteoarthrosis and not adhesive capsulitis.

16. Dr. Noonan reevaluated Claimant on November 5, 2015. Claimant reported generalized pain, weakness and tingling. Claimant reported that reaching overhead and behind his back caused his symptoms to worsen. Dr. Noonan reviewed the October 12, 2015 MRI and noted degenerative changes. On examination, Dr. Noonan noted limited motion. Dr. Noonan impressed left shoulder pain, moderately severe glenohumeral degenerative changes, adhesive capsulitis, impingement, and degenerative labral tearing. Dr. Noonan discussed treatment options including repeat glenohumeral injection, arthroscopic debridement and shoulder replacement.

17. Claimant underwent conservative treatment with Tanya Michelle Kern, M.D. at Stapleton Family Sports March 25, 2016, 2016 to September 12, 2016. Dr. Kern assessed adhesive capsulitis of the left shoulder, impingement syndrome of the left shoulder, and osteoarthritis of the left glenohumeral joint.

18. Dr. Bazaz testified by deposition on August 19, 2016. Dr. Bazaz testified as an expert in orthopedics. Dr. Bazaz is board certified in orthopedic surgery and is Level II accredited by the Colorado Division of Workers' Compensation. Dr. Bazaz testified that Claimant was diagnosed with osteoarthritis, impingement, and adhesive capsulitis. Dr. Bazaz explained that Claimant was diagnosed with adhesive capsulitis in an attempt to explain Claimant's loss of motion, but that he now is not convinced Claimant has adhesive capsulitis. Dr. Bazaz opined that Claimant's arthritis, which progressed from 2013 to 2015, is enough to explain Claimant's loss of motion. Dr. Bazaz testified that Claimant has arthritis to the ball and socket joint, and that the 2013 MRI demonstrated most of the cartilage wear was on the ball part of Claimant's shoulder. Dr. Bazaz testified that Claimant's arthritis is Claimant's biggest issue, followed by impingement and then adhesive capsulitis.

19. On November 9, 2016, Dr. Machanic conducted a follow-up DIME. On examination, Dr. Machanic noted that there were no sensory, motor or reflex abnormalities of the left upper extremity. Dr. Machanic noted Claimant had continuing loss of range of motion and inconstant crepitance on range of motion. Dr. Machanic placed Claimant at MMI as of March 22, 2016. Dr. Machanic noted Claimant had exhausted conservative options and that surgical measures were not considered an option at that time. Dr. Machanic assigned a 16% permanent impairment rating, consistent with a 10% whole person impairment rating.

20. On December 2, 2016, Respondents filed an Amended FAL admitting for a 16% scheduled impairment rating.

21. Claimant testified at hearing. Claimant testified that he did not have surgery on his shoulder. Claimant testified he worked full-duty for basically the entire claim, with no changes in his job duties. Claimant testified that he has complete use of his left arm, but is impeded by his left shoulder. Claimant explained that he uses his left arm, knees and core to lift certain items. Claimant testified that his left shoulder aches and, at times, he experiences a stabbing sensation in the top and front of the left shoulder. Claimant testified he cannot use his left shoulder when lifting objects above his head. Claimant testified he now sleeps for shorter periods of time, and wakes up daily with an aching, and sometimes stabbing, sensation in his left shoulder.

22. Claimant completed a pain diagram at hearing. Claimant indicated on the pain diagram that he experiences pain and aching, as well as a burning sensation and pins and needles sensation in the front, top and back of his left shoulder.

23. At hearing, Claimant demonstrated how his movement is limited when using his left shoulder to reach behind his back and across his body. Claimant testified that when he reaches across his midriff he experiences pain and tightness in his back and over the top of his left shoulder. Claimant testified he is unable to reach behind his back using the left shoulder. Claimant testified he did not experience issues with his left shoulder or left arm prior to the work injury.

24. Claimant's testimony is found credible and persuasive.

25. Dr. Swarsen testified at hearing on behalf of Claimant. Dr. Swarsen testified as an expert in occupational medicine. Dr. Swarsen did not physically examine Claimant or issue a report regarding his review of Claimant's records. Dr. Swarsen testified that the components of the rotator cuff are part of the shoulder and that the humeral head is part of the humerus, which is below the shoulder joint. Dr. Swarsen explained that the glenohumeral joint is the "demarcating line" of the shoulder and the arm. Dr. Swarsen described the subacromial space as a buffer below the acromion of the scapula, above the glenohumeral joint in front of the scapula. Dr. Swarsen testified that the majority of subacromial space is above the shoulder joint and is a part of the shoulder girdle. Dr. Swarsen agreed with Dr. Bazaz that, from a surgical perspective, Claimant did not have any significant rotator cuff pathology and that, more likely than not, the primary source of Claimant's ongoing symptoms is Claimant's osteoarthritis. Dr. Swarsen testified that Claimant has some osteoarthritis on the humeral head, but explained that the osteoarthritis is on both the glenoid side and the humeral side in Claimant's shoulder. Dr. Swarsen testified that the structures impacted by Claimant's work injury are all a part of Claimant's left shoulder girdle, and that the "major portion of all the pathology and injury is above the arm." Dr. Swarsen opined, within a reasonable degree of medical probability, that the site of Claimant's functional impairment is above the shoulder. Dr. Swarsen testified that the areas Claimant identified in the pain diagram completed at hearing are above the glenohumeral joint, including pain in the scapular region. Dr. Swarsen testified that the functional limitations Claimant described are consistent with the type of injury Claimant sustained. Dr. Swarsen further testified that Dr. Machanic's follow-up DIME was consistent with the American Medical Association's Guides to the Evaluation of Permanent Impairment, Third Edition (*Revised*) ("AMA Guides"). Dr. Swarsen opined that it is appropriate to convert Claimant's scheduled impairment rating to a whole person impairment rating because the affected structures are located above the glenohumeral joint.

26. Dr. Swarsen's testimony is found credible and persuasive.

27. As a result of the June 13, 2013 work injury, Claimant sustained functional impairment to his left shoulder that extends beyond his left arm.

28. Claimant has proven by a preponderance of the evidence that he is entitled to conversion of his 16% scheduled left shoulder impairment rating to a 10% whole person impairment rating.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, Section 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1), C.R.S. Generally, the claimant

shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. V. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's resolution of issues will be affirmed if supported by substantial evidence in the record. Section 8-43-301(8), C.R.S.; *City and County of Denver School District 1 v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). Substantial evidence is that quantum of probative evidence, which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

Conversion of Medical Impairment Rating

Section 8-42-107(1)(a), C.R.S., provides that when an injury results in permanent medical impairment and the "injury" is enumerated in the schedule set forth in subsection (2) of the statute, "the employee shall be limited to the medical impairment benefits as specified in subsection (2)." If the claimant sustains an injury not found on the schedule, Section 8-42-107(1)(b), C.R.S. provides the claimant shall "be limited to medical impairment benefits as specified in subsection (8)," or whole person medical impairment benefits. As used in these statutes the term "injury" refers to the part or parts of the body that sustained the ultimate loss, not necessarily the situs of the injury itself. Thus, the term "injury" refers to the part or parts of the body that have been functionally disabled or impaired. *Warthen v. Industrial Claim Appeals Office,* 100 P.3d 581 (Colo. App. 2004); *Strauch v. PSL Swedish Healthcare System*, 917 P.2d 366 (Colo. App. 1996). Under this test the ALJ is required to determine the situs of the

functional impairment, not the situs of the initial harm, in deciding whether the loss is one listed on the schedule of disabilities. *Strauch v. PSL Swedish Healthcare System, supra.* Under the "situs of the functional impairment" test there is no requirement that the functional impairment take any particular form. Therefore, pain and discomfort that limit the claimant's ability to use a portion of the body may constitute functional impairment. *Agliaze v. Colorado Cab Co.,* W.C. 4-705-940 (ICAO April 29, 2009); *Johnson-Wood v. City of Colorado Springs,* W.C. 4-536-198 (ICAO June 20, 2005); *Vargas v. Excel Corp.,* W.C. 4-551-161 (ICAO April 21, 2005). The ALJ may also consider whether the injury has affected physiological structures beyond the arm at the shoulder. *Brown v. City of Aurora,* W.C. 4-452-408 (ICAO October 9, 2002).

Section 8-42-107(2)(a), C.R.S. provides for scheduled compensation based on "loss of an arm at the shoulder." The claimant bears the burden of proof by a preponderance of the evidence to establish functional impairment beyond the arm at the shoulder and the consequent right to permanent partial disability benefits awarded under Section 8-42-107(8)(c), C.R.S. Whether the claimant met the burden of proof presents an issue of fact for determination by the ALJ. *Delaney v. Industrial Claim Appeals Office,* 30 P.3d 691 (Colo. App. 2001); *Johnson-Wood v. City of Colorado Springs, supra.*

"Functional impairment" is distinct from physical (medical) impairment under the AMA Guides and as noted, the site of functional impairment is not necessarily the site of the injury itself. The site of functional impairment is that part of the body which has been impaired or disabled. *Strauch, supra.* Physical impairment relates to an individual's health status as assessed by medical means. On the other hand, disability or functional impairment pertains to a person's ability to meet personal, social, or occupational demands, and is assessed by non-medical means. Consequently, physical impairment may or may not cause "functional impairment" or disability. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office*, 984 P.2d 656, 658 (Colo. App. 1998). Physical impairment becomes a disability only when the medical condition limits the claimant's capacity to meet the demands of life's activities. *Lambert & Sons, Inc., supra.* Symptoms of pain do not automatically rise to the level of a functional impairment. To the contrary, there must be evidence that such pain limits or interferes with a claimant's ability to use a portion of his body to be considered a functional impairment. *See Mader v. Popejoy Construction Co., Inc.,* W.C. No. 4-198-489 (August 9, 1996). Thus, in order to determine whether permanent disability should be compensated as physical impairment on the schedule or as functional impairment as a whole person, the issue is not whether Claimant has pain, but whether the injury and the associated pain caused thereby has impacted part of Claimant's body which limits his "capacity to meet personal, social and occupational demands." *Askew v. Industrial Claim Appeals Office*, 927 P.2d 1333 (Colo. 1996); *Bernal v. CMHIP*, W.C. No. 4-956-645 (October 5, 2015).

As found, Claimant has established by a preponderance of the evidence that his scheduled 16% left upper extremity impairment rating should be converted to a 10% whole person rating. Claimant demonstrated he suffers functional impairment beyond the left arm at the shoulder as a result of the June 13, 2013 work injury. Claimant

credibly testified as to limitations in his range of motion, an inability to lift items overhead, and pain in the front, top and back of his shoulder, including pain due to sleeping. Dr. Swarsen credibly and persuasively opined that the situs of functional impairment is above the shoulder. Accordingly, Claimant is entitled to a 10% whole person impairment rating for his June 13, 2013 work injury.

ORDER

It is therefore ordered that:

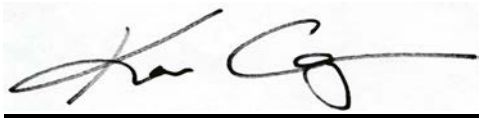
1. Claimant has established by a preponderance of the evidence that he is entitled to entitled to conversion of his 16% scheduled upper extremity impairment rating to a 10% whole person impairment rating. Respondents shall pay Claimant permanent partial disability benefits based upon a whole person conversion of the upper extremity rating. Respondents shall be given credit for permanent partial disability benefits previously paid.

2. The Insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 16, 2017



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

The issue presented involves Claimant's entitlement to additional medical benefits. The specific question is:

I. Whether Claimant's request for authorization of a trial of DRG spinal cord stimulation is reasonable and necessary medical treatment to cure and relieve Claimant from the effects of her April 18, 2012 work injury.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. On April 18, 2012, Claimant injured her left ankle in the course and scope of her employment. Liability for the injury was admitted and Claimant undertook what would become a protracted course of treatment involving multiple modalities and providers. Ultimately doctors diagnosed Complex Regional Pain Syndrome (CRPS) involving the left leg raising the issue of whether Claimant would benefit from spinal cord stimulation.

2. On April 24, 2013, Dr. Cathy McCranie recommended that Claimant avoid spinal cord stimulation "if at all possible."

3. Given persistent and intractable leg pain, a request for a trial of spinal cord stimulation was made and on August 1, 2013, Dr. Christopher Malinky performed a percutaneous spinal cord stimulation trial.

4. The trial caused increased pain and by the sixth day, Claimant requested termination of further stimulation. On September 12, 2013, Dr. Matthew Young noted Claimant would not proceed with placement of a permanent spinal stimulator; therefore, he felt that "other options for her complex regional pain syndrome" should be explored.

5. On November 15, 2013, Dr. Robert Kleinman performed a psychiatric evaluation. He noted Claimant had a history of situational depression following events in 2004, 2007, 2008, and 2010. MMPI 2 test results indicated that Claimant had a pattern of misrepresenting herself and that physical complaints might be manifestations of somatization. Dr. Kleinman noted Claimant presented with mild depression and anxiety. Dr. Kleinman diagnosed adjustment disorder with depressed mood, R/O major depression, recurrent, mild, R/O pain disorder associated with psychological factors and a medical condition. Dr. Kleinman did <u>not</u> consider Claimant a good candidate for a spinal cord stimulator. (Exhibit G) (emphasis added)

6. On June 24, 2015, Dr. Mark Meyer reported that Claimant had reached maximum medical improvement (MMI).

7. On August 10, 2015, Dr. Lawrence Lesnak performed a computerized outcome assessment, the goal of which was to identify "potential psychological factors that may be influencing [Claimant's] symptoms and recovery from her previous occupational injury." Multiple subtests were completed that when read together placed Claimant in the "distressed depressive" category for psychosocial functioning and suggested significant psychosocial factors that included an extremely disabled viewpoint of her ability to perform any type of functional activities; results that were inconsistent with her clinical exam.

8. On September 9, 2015, Dr. Young conceded he was not an expert in complex regional pain syndrome and would welcome the "expertise" of Dr. Mark Meyer regarding treatment recommendations.

9. On October 22, 2015, Dr. Timothy Hall, Claimant's independent medical examiner, concluded Claimant had reached maximum medical improvement. Dr. Hall recommended maintenance treatment that included medications, physiatry consultation, warm pool therapy, and counseling. He did not recommend further spinal cord stimulation.

10. Dr. Frank Polanco performed a Division IME on December 17, concluding that Claimant was not at MMI. Dr. Polanco recommended Claimant discontinue Ambien, wean/taper from Methadone, attend 2-3 visits with a physical therapist to develop a home/gym exercise program, join a gym for 3 months, participate in yoga for 3 months, and participate in psychological counseling to address current ideation and weaning from counseling. Dr. Polanco did not include a recommendation for spinal cord stimulation or placement of a spinal cord stimulator.

11. Claimant returned to Dr. Meyer for the treatment recommended by Dr. Polanco. Claimant participated in physical therapy but declined additional psychological counseling. On February 10, 2016, Dr. Meyer noted Claimant "stopped seeing her therapist last month because of a conflict." On March 29, 2016, Dr. Young reported: "Regarding counseling, she has been through counseling for over 3 years now and has had minimal efficacy with that. At this point neither she, nor myself, believe counseling is going to be substantially beneficial for her depression."

12. Dr. Young referred Claimant back to Dr. Christopher Malinky for a follow-up examination and treatment consultation. Dr. Malinky evaluated Claimant on July 21, 2016. Following his examination, Dr. Malinky prepared a report documenting a history of chronic anxiety and depression, noting further that Claimant had mental health treatment with a "completely resolved" response. Dr. Malinky also documented that previous treatment included nerve stimulation therapy which made Claimant "worse." He noted Claimant appeared in no apparent acute or chronic distress. Finally he noted

that physical therapy was not helpful in the past, and that Claimant had been on narcotics chronically and was hospitalized due to over sedation last fall. Dr. Malinky referred Claimant to Amy Alsum, MSW, LCSW for a psychological examination to determine if Claimant is an appropriate candidate for dorsal root ganglion (DRG) spinal cord stimulation.

13. On August 11, 2016, Ms. Alsum, LCSW performed an evaluation regarding the patient's candidacy for the additional spinal cord stimulation trial. Ms. Alsum noted that Claimant went through severe anxiety and depression for two years following her accident and that Claimant treated with Dr. McCormick who diagnosed PTSD. Claimant reported she has a better perspective and has learned to cope with her pain on a day-to-day basis. "A few months ago, she and Dr. McCormick mutually decided that she had completed her work in counseling." According to Ms. Alsum, Claimant previously participated in a spinal cord stimulator trial in 2013, with a Boston Scientific spinal cord stimulator. Ms. Alsum documented that the "trial was unsuccessful because [Claimant] continued to feel more pain as the days went. By the 6th day she asked to remove it." Claimant reportedly felt more mentally prepared for stimulation as she understood "much more about living with chronic pain." She also expressed an understanding that the DRG hardware was "specifically made for people with CRPS." According to Ms. Alsum's note, Claimant had done additional research noting that studies had documented patients may experience up to a 50% reduction in pain but she felt the procedure would be worth it if she enjoyed a 30% reduction. Claimant identified her goals for undergoing spinal cord stimulation as: 1). Decreasing her pain levels. 2). Decreasing her dependence on narcotic medication. 3). Returning to work in some capacity.

14. Ms. Alsum administered the Beck depression inventory and scored Claimant in the mild range of depression. Ms. Alsum also administered the Beck anxiety inventory and scored Claimant in the mild range of anxiety. Ms. Alsum administered the PHQ SADS and scored Claimant in the mild range for somatic symptom severity. Based upon her examination/testing, Ms. Alsum concluded that Claimant was a good candidate for the DRG spinal cord stimulator trial. In her opinion, Claimant had an excellent understanding of the procedure and full confidence in her medical providers. Moreover, she felt that Claimant had realistic expectations for the outcome of the spinal cord stimulator.

15. On August 19, 2016, Respondents denied authorization of the spinal cord stimulator and filed an Application for Hearing on the issue of reasonable, necessary, and related medical care.

16. On October 6, 2016, Dr. Malinky noted a DRG spinal cord stimulator trial is the next treatment for Claimant's condition which was chronic and would not improve without another intervention.

17. On January 19, 2017, physical therapy notes indicated Claimant showed

progress with decreased stiffness and motion, decreased pain, and improved strength and endurance.

18. On September 6, 2016, Suzanne Kenneally, Psy.D. performed an independent psychological assessment, administered tests, and prepared a report. Dr. Kenneally did not consider Claimant a good surgical candidate. Dr. Kenneally based her opinion on her review of multiple prior psychological and psychiatric evaluations and test results that indicated longstanding depression. Claimant's MMPI indicated the presence of depression and somatization and a clear indication of the translation of psychological distress into physical symptomatology. There was good consistency between the MMPI and Claimant's MBMD profile. Claimant's pain sensitivity scale on the MBMD was extremely elevated to a degree indicative of catastrophizing physical symptomatology and pain. The MBMD profile indicated Claimant was unlikely to maintain functional gains following the surgery. These objective psychological test results were consistent with Claimant's prior testing and predictive of failure of the spinal cord stimulation trial previously.

19. In her report, Dr. Kenneally pointed out that on November 14, 2013, Dr. Kleinman administered MMPI-2 testing that indicated elevations in the somatoform scale and depression scale in a pattern that indicated translation of psychological distress into physical symptoms. Dr. Kleinman concluded Claimant was not a good candidate for a spinal cord stimulator. As found above, Claimant proceeded with a trial of stimulation and it failed to reduce the symptoms associated with her CRPS. Rather, it increased Claimant's pain resulting in her request to terminate the trial.

20. Dr. Kenneally also pointed out that Dr. Kaplan administered the MBMD and concluded that Claimant presented with a Pain Disorder with Psychological Factors. The test data indicated significant elevations in the MBMD scales of pain sensitivity, pessimism, marked catastrophizing, and poor adjustment to pain treatment. Despite that, Dr. Kaplan cleared Claimant for spinal cord stimulator surgery that ultimately failed. Dr. McCormick treated Claimant and referenced ongoing depression. Current psychological testing indicated the presence of persistent depressive disorder; although results reflected a modest decline.

21. Dr. Kenneally noted that Ms. Alsum did not perform objective psychological testing and did not discuss Claimant's long-standing depression or somatic symptom disorder, yet concluded that she was a good candidate for spinal cord stimulator surgery. Given the level of elevation seen on testing, Dr. Kenneally recommended a psychiatric medication evaluation because current medications did not appear to be ineffective. Subset testing (Millon Behavioral Medicine Diagnostic) indicated that, at best, Claimant was a fair surgical candidate; however, there were indications that she would have difficulty with compliance and motivation and be unlikely to maintain any functional gains post-surgery. This is the same conclusion arrived at previously by Dr. Kleinman following his evaluation of Claimant in November 2013, after which, Claimant proceeded with the spinal cord stimulator (SCS) trial, which failed. In light of Claimant's previously failed SCS and the consistency between Claimant's prior

testing results and those obtained during her September 6, 2016, independent psychological examination, Dr. Kenneally opined that Claimant would not be a good surgical candidate until her depressive and somatic physiological difficulties resolved.

22. Claimant testified at hearing. Her symptoms reportedly vary from day to day. She admitted she performs activities of daily living; some with difficulty or with modification, but she is able to do them. Claimant testified she does not have trouble coping with chronic pain. She stated that pool therapy alleviates her symptoms, helps her symptoms go away on a temporary basis, and helps strengthen muscle. She testified that she is getting stronger. She agreed with the January 19, 2017, physical therapy note that she had progressed and had decreased stiffness, increased motion, decreased pain, and improved endurance. Claimant testified that she changed medications and has since stopped falling. She testified that her weight has improved, her depression has improved, and her mood is better. According to Claimant, she wants spinal stimulation because she wants her life back, she wants to work again, and she wants to be pain free. Claimant testified that she previously participated in a spinal cord stimulator trial in 2013 but that trial was unsuccessful because she continued to feel more pain as the days went on and by the 6th day she asked the doctor to remove the stimulator. Claimant testified that she feels more mentally prepared for the stimulator now.

23. Dr. Christopher Malinky testified by deposition. Dr. Malinky performed a spinal cord stimulator trial in 2013. Even though Dr. Malinky reported in July 2016, that the previous nerve stimulation therapy resulted in a worse response, he testified that he did not proceed with a permanent implant in 2013, because workers' compensation denied the implant. This is inconsistent with the record evidence and Claimant's testimony that stimulation was increasing her pain and that she did not want to proceed with implantation of a permanent stimulator. Nonetheless, Dr. Malinky testified that he recommended another spinal cord stimulator trial and this time wants to use a DRG stimulator. Dr. Malinky considered Claimant a good candidate for the DRG procedure because she has CRPS of the lower extremity and because she has more friends and family to support her this time. Dr. Malinky admitted that he did not ask Claimant to prepare a pain diagram since 2013; he did not have an indication of the duration or circumstances during which the pain occurred, worsened, or got better; he did not know which activities aggravated or exacerbated or ameliorated or had no effect on her pain levels; he only reviewed medical records from Ms. Alsum and from Dr. Kaplan, and he did not perform a chronologic review of the medical records of other providers; he did not know the extent of medical treatment to date including how much physical therapy, medication, or other treatment Claimant received; he was not aware of her history of current medications; he was not aware of her psychosocial functioning including symptoms of depression or anxiety; finally, he was not aware of her ability to perform activities of daily living or of her overall functional abilities. Dr. Malinky testified that he discussed treatment expectations with Claimant and that most people fall between 50 and 70 percent pain relief. Dr. Malinky acknowledged that the patient should be sent for a standard psychological evaluation by a licensed psychologist or a social worker before a spinal cord stimulator trial occurs. In this case, he referred Claimant to Ms. Alsum, a

social worker. He did not know if specific psychometric testing was recommended or if it was performed. Dr. Malinky testified that the spinal cord stimulator was reasonable and necessary, but he admitted his response was based on a lack of information regarding psychological evaluations.

24. The evidence presented persuades the ALJ that Dr. Malinky based his opinions regarding additional spinal stimulation on an incomplete understanding of Claimant's current medical condition. Consequently, the ALJ finds his opinions regarding the reasonableness and necessity of additional spinal cord stimulation unconvincing.

25. Dr. Suzanne Kenneally, Psy.D. testified at hearing. Dr. Kenneally is an expert in clinical psychology and neuro psychology. Dr. Kenneally reiterated her written opinion that Claimant is not a good candidate for a spinal cord stimulator. Dr. Kenneally based her opinion on multiple factors. According to Dr. Kenneally, the majority of spinal cord stimulator candidates report intolerable pain levels of 8 -10 on a scale of 10 but, in this case, Claimant reported pain levels of 3-6. Moreover, Dr. Kenneally testified that the majority of spinal cord stimulator candidates use extensive medications including narcotics, but in this case, Claimant reduced her medications. Also, Claimant confirmed she continues to improve without the stimulator, and that she is in less pain and presents with more function. Dr. Kenneally testified that the best predictor of future behavior is past behavior, and in this case, it is important to note that the 2013 spinal cord stimulator trial failed because Claimant reported increased pain. Dr. Kenneally pointed out that Claimant testified she thought the 2013 stimulator failed due to lack of social support, but improved social support is not an appropriate psychological reason to proceed with the spinal cord stimulator. Dr. Kenneally referred to test results that identified a clear indication of translation of psychological distress into physical symptomatology and longstanding depression.

26. Dr. Kenneally pointed out that Dr. Malinky relied on a report from Amy Alsum LCSW, but Ms. Alsum is a Social Worker and is not properly credentialed or trained to perform a psychological exam to determine if Claimant is an appropriate candidate for DRG stimulation trial. Dr. Kenneally referenced the Colorado Medical Treatment Guidelines that a psychologist with a PhD, PsyD, EdD credentials, or a physician with Psychiatric MD/DO credentials perform the initial comprehensive evaluation and that Psychometric tests should be administered by psychologists with a PhD, PsyD, or EdD, or health professional working under the supervision of a doctorate level psychologist. Dr. Kenneally pointed out that Ms. Alsum is a Licensed Clinical Social Worker and used a simple screening test, The Beck Depression Inventory® (BDI) that is designed to indicate if further in depth testing is appropriate as the basis for determining whether Claimant was an appropriate candidate for SCS. According to Dr. Kenneally, the BDI is not an appropriate test for determining whether Claimant is a candidate for spinal cord stimulation. In addition, the Beck depression inventory scored Claimant in the mild range of depression, and the Beck anxiety inventory scored Claimant in the mild range of anxiety. Nevertheless, Ms. Alsum concluded that Claimant is a good candidate for the spinal cord stimulator trial.

27. Based upon the evidence presented, the ALJ finds Dr. Kenneally properly credentialed to perform the necessary evaluation to determine Claimant's candidacy for SCS. The record evidence also supports that she performed the appropriate comprehensive evaluation and the test results did not support proceeding with the spinal cord stimulator. Dr. Kenneally testified that the test results indicated the presence of depression and somatization, and the sensitivity scale was extremely elevated and was indicative of catastrophizing of physical symptomatology and pain. Dr. Kenneally testified that only one element of one test indicated that, at best, Claimant was a fair surgical candidate; however, the other elements of her testing indicated that Claimant remained a poor candidate due to concerns about compliance and motivation and the ability to maintain any functional gains post-surgery. Dr. Kenneally pointed out that her conclusions were the same conclusions arrived at by Dr. Kleinman following his evaluation of Claimant in November 2013, at which time Claimant proceeded with the spinal cord stimulator trial that failed. Finally, Dr. Kenneally did not consider Claimant's expectations realistic because she testified at hearing that she wants her life back and wants to be pain free.

28. Conversely, the evidence presented persuades the ALJ that Ms. Alsum is not credentialed to perform the comprehensive evaluation contemplated by the Medical Treatment Guidelines.

29. The ALJ finds the opinions of Dr. Kenneally more persuasive than the contrary opinions of Ms. Alsum.

30. Claimant failed to meet her burden and prove that an additional trial of spinal cord stimulation is reasonable or necessary as contemplated by the Medical Treatment Guidelines.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

A. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1), C.R.S.* Claimant must prove that she is a covered employee who suffered an injury arising out of and in the course of employment. *Section 8-41-301(1), C.R.S.; See, Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). Claimant must prove that an injury directly and proximately caused the condition for which benefits are sought, including medical treatment *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997), *cert. denied* September 15, 1997. Claimant must prove entitlement to benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact,

after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16.

C. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968). In this case, the evidence presented persuades the ALJ that Dr. Malinky's opinions are based upon an incomplete understanding of Claimant's current medical situation and the limited knowledge imparted to him by a clinician who is not properly credentialed to determine whether Claimant current presents as a viable candidate for spinal cord stimulation. Moreover, he testified that he did not consider the first stimulator trial a failure despite the fact that Claimant asked him to remove the device due to increasing pain. Accordingly, the ALJ places little weight in his opinions.

D. In accordance with *Section 8-43-215, C.R.S.,* this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000)

E. A claimant is entitled to medical benefits that are reasonably necessary to cure or relieve the effects of the industrial injury. *See* § 8-42-101(1), C.R.S. 2003; *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). The question of whether the need for treatment is causally related to an industrial injury is one of fact. *Walmart Stores, Inc. v. Industrial Claims Office, supra*. Similarly, the question of whether medical treatment is reasonable and necessary to cure or relieve the effects of an industrial injury is one of fact. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). Where the relatedness, reasonableness, or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc*., W.C. No. 4-117-758 (ICAO April 7, 2003).

F. The Medical Treatment Guidelines (Guidelines) are regarded as the

accepted professional standards for care under the Workers' Compensation Act. *Hernandez v. University of Colorado Hospital*, W.C. No. 4-714-372 (January 11, 2008); see also *Rook v. Industrial Claim Appeals Office*, 111 P.3d 549 (Colo. App. 2005). The Medical Treatment Guidelines, Rule 17-2(A), W.C.R.P. provide: All health care providers shall use the Guidelines adopted by the Division. In spite of this direction, it is generally acknowledged that the Guidelines are not sacrosanct and may be deviated from under appropriate circumstances. *See*, Section 8-43-201(3) (C.R.S. 2014). Nonetheless, they carry substantial weight. The ALJ may also appropriately consider the Medical Treatment Guidelines as an evidentiary tool. *Logiudice v. Siemans Westinghouse,* W.C. 4-665-873 (ICAO January 25, 2011). The Guidelines have been accepted in the assessment and treatment of complex regional pain syndrome. The Medical Treatment Guidelines (MTGs) for Complex Regional Pain Syndrome are found in WCRP 17, Exhibit 7. Pertinent portions include:

F. DIAGNOSTIC CRITERIA AND PROCEDURES

11. PERSONALITY/PSYCHOLOGICAL/PSYCHOSOCIAL EVALUATION FOR PAIN MANAGEMENT

. . . Psychometric testing is a valuable component of a consultation to assist the physician in making a more effective treatment plan. There is good evidence (that such testing) can have significant ability to predict medical treatment outcome. Pre-procedure psychiatric/psychological evaluation must be done prior to diagnostic confirmatory testing for a spinal cord stimulation procedure. In many instances, psychological testing has validity comparable to that of commonly used medical tests. All patients who are diagnosed as having CRPS should be referred for a psychosocial evaluation, as well as concomitant interdisciplinary rehabilitation treatment. Even in cases where no diagnosable mental condition is present, these evaluations can identify social, cultural, coping and other variables that may be influencing the patient's recovery process and may be amenable to various treatments including behavioral therapy. As pain is understood to be a biopsychosocial phenomenon, these evaluations should be regarded as an integral part of the assessment of CRPS.

i. Qualifications: a) A psychologist with a PhD, PsyD, EdD credentials, or a physician with Psychiatric MD/DO credentials may perform the initial comprehensive evaluations. It is preferable that these professionals have experience in diagnosing and treating CRPS in injured workers. b) Psychometric tests should be administered by psychologists with a PhD, PsyD, or EdD, or health professionals working under the supervision of a doctorate level psychologist. (emphasis added)

ii. Clinical Evaluation: All CRPS patients should have a clinical evaluation that addresses the following areas: history of Injury; nature of injury; psychosocial circumstances of the injury; current symptomatic complaints; extent of medical corroboration; treatment received and results; compliance with treatment; coping strategies used, including perceived

locus of control, catastrophizing, and risk aversion; perception of medical system and employer; history of response to prescription medications; nature of injury; medical history; psychiatric history; history of alcohol or substance abuse; activities of daily living; previous injuries, including disability, impairment, and compensation; childhood history, including abuse/neglect; educational history; family history, including disability; marital history and other significant adulthood activities and events; legal history, including criminal and civil litigation; employment history; military duty; signs of pre-injury psychological dysfunction; current and past interpersonal relations, support, living situation; financial history; mental status exam including cognition, affect, mood, orientation, thinking, and perception; assessment of any danger posed to self or others; psychological test results, if performed; current psychiatric diagnosis consistent with the standards of the American Psychiatric Association's Diagnostic and Statistical Manual of Mental Disorders; pre-existing psychiatric conditions; causality (to address medically probable cause and effect, distinguishing pre-existing psychological symptoms, traits and vulnerabilities from current symptoms).

Tests of Psychological Functioning: Psychometric testing is a valuable component of a consultation to assist the physician in making a more effective treatment plan. Psychometric testing is useful in the assessment of mental conditions, pain conditions, cognitive functioning, treatment planning, vocational planning, and evaluation of treatment effectiveness. While there is no general agreement as to which psychometric tests should be specifically recommended for psychological evaluations of CRPS conditions, standardized tests are preferred over those which are not for assessing diagnosis. Examples of frequently used psychometric tests performed include, but not limited to the following:

i. Comprehensive Inventories for Medical Patients: b) Millon TM Behavioral Medical Diagnostic (MBMD TM):

ii. Comprehensive Psychological Inventories: b) Minnesota Multiphasic Personality Inventory®, 2nd Edition (MMPI-2®). c) Minnesota Multiphasic Personality Inventory®, 2nd Edition Revised Form (MMPI-2®).

v. Brief Specialized Psychiatric Screening Measures: a) Beck Depression Inventory® (BDI). What it measures - Depression. Benefits - Can identify patients needing referral for further assessment and treatment for depression and anxiety, as well as identify patients prone to somatization. Repeated administrations can track progress in treatment for depression, anxiety, and somatic preoccupation. Requires a professional evaluation to verify diagnosis.

H. THERAPEUTIC PROCEDURES – OPERATIVE: When considering operative intervention in CRPS management, the treating physician must carefully consider

the inherent risk and benefit of the procedure. All operative intervention should be based on a positive correlation with clinical findings, the clinical course, and diagnostic tests. A comprehensive assessment of these factors should have led to a specific diagnosis with positive identification of the pathologic condition. Operative treatment is indicated when the natural history of surgically treated lesions is better than the natural history for non-operatively treated lesions. Surgical procedures are seldom meant to be curative and would be employed in conjunction with other treatment modalities for maximum functional benefit. Functional benefit should be objectively measured and includes the following: a. Return-to-work or maintaining work status. b. Fewer restrictions at work or performing activities of daily living. c. Decrease in usage of medications prescribed for the work-related injury. d. Measurable functional gains, such as increased range of motion or a documented increase in strength.

1. NEUROSTIMULATION

a. Description: Spinal cord stimulation (SCS) is the delivery of low-voltage electrical stimulation to the spinal cord or peripheral nerves to inhibit or block the sensation of pain. The system uses implanted electrical leads and a battery powered implanted pulse generator. Some evidence shows that SCS is superior to re-operation and conventional medical management for severely disabled patients who have failed conventional treatment and have Complex Regional Pain Complex Regional Pain Syndrome 97 Syndrome (CRPS I). These findings may persist at three years of follow-up in patients who had an excellent initial response and who are highly motivated. It is particularly important that patients meet all of the indications before a permanent neurostimulator is placed because some literature has shown that workers' compensation patients are less likely to gain significant relief than other patients.

While there is no evidence demonstrating effectiveness for use of SCS with for CRPS II, it is generally accepted that SCS can be used for patients who have this condition. SCS may be most effective in patients with CRPS I or II who have not achieved relief with oral medications, rehabilitation therapy, or therapeutic nerve blocks, and in whom the pain has persisted for longer than 6 months.

c. Surgical Indications: Patients with established CRPS I or II with persistent functionally limiting pain who have failed conservative therapy including active and/or passive therapy, pre-stimulator trial psychiatric evaluation and treatment, medication management, and therapeutic injections. Prior authorization is required. Habituation to opioid analgesics in the absence of a history of addictive behavior does not preclude the use of SCS. Patients with severe psychiatric disorders, and issues of secondary gain are not candidates for the procedure. Approximately, one third to one half of patients who qualify for SCS can expect a substantial reduction in pain relief; however, it may not influence allodynia, and hypesthesia. Patients'

expectations need to be realistic, and therefore, patients should understand that the SCS intervention is not a cure for their pain but rather a masking of their symptomatology which might regress over time. There appears to be a likely benefit of up to 3 years. Patients must meet the following criteria in order to be considered for neurostimulation:

i. Confirmed CRPS I or II who have significant functional limitations from neuropathic pain involving the hand or foot after greater than 6 months of conventional management

ii. A comprehensive psychiatric or psychological evaluation prior to the stimulator trial has been performed. This evaluation should include a standardized detailed personality inventory with validity scales (such as MMPI-2, MMPI-2-RF, or PAI); pain inventory with validity measures (for example, BHI 2, MBMD); clinical interview and complete review of the medical records. (emphasis added) Before proceeding to a spinal stimulator trial the evaluation should find the following:

- No indication of falsifying information, or of invalid response on testing; and

- No primary psychiatric risk factors or "red flags" (e.g. psychosis, active suicidality, or addiction), severe depression. (Note that tolerance and dependence to opioid analgesics are not addictive behaviors and do not preclude implantation); and

- A level of secondary risk factors or "yellow flags" (e.g. moderate depression, job dissatisfaction, dysfunctional pain cognitions) judged to be below the threshold for compromising the patient's ability to benefit from neurostimulation; and

- The patient is cognitively capable of understanding and operating the neurostimulation control device; and

- The patient is cognitively capable of understanding and appreciating the risks and benefits of the procedure; and

- The patient has demonstrated a history of motivation in and adherence to prescribed treatments.

The psychologist or psychiatrist performing these evaluations should not be an employee of the physician performing the implantation. This evaluation must be completed, with favorable findings, before the trial is scheduled. (emphasis added)

ii. All reasonable surgical and non-surgical treatment has been exhausted;

G. As provided for under § 8-43-201(3), the ALJ has "[considered] the medical treatment guidelines adopted under § 8-42-101(3) in determining whether certain medical treatment is reasonable, necessary, and related to an industrial injury or occupational disease." In keeping with the MTGs, the ALJ concludes that Dr. Malinky's recommendation/request for additional spinal cord stimulation is premature and currently outside the MTG's, which the ALJ finds no reason to deviate from based on the evidence presented in this case. As noted, the Colorado Medical Treatment Guidelines ("MTG") set forth very specific and extensive guidelines regarding the evaluation of CRPS patients and the use of spinal cord stimulators. Based upon the evidence presented, the ALJ is persuaded that Dr. Malinky failed to comply with the MTG's.

H. The MTG's note that all CRPS patients should undergo a clinical evaluation that addresses many areas. Dr. Malinky was not aware of many of the items he should have, but did not, address. Dr. Malinky admitted that he did not ask Claimant to prepare a pain diagram since 2013; he did not have an indication of the duration or circumstances during which the pain occurred, worsened, or got better; he did not know which activities aggravated or exacerbated or ameliorated or had no effect on her pain levels; he only reviewed medical records from Ms. Alsum and from Dr. Kaplan and he did not perform a chronologic review of the medical records of other providers; he did not know the extent of medical treatment to date including how much physical therapy, medication, or other treatment Claimant received; he was not aware of her history of current medications; he was not aware of her psychosocial functioning including symptoms of depression or anxiety; he was not aware of her ability to perform activities of daily living or of her overall functional abilities. He did not know if specific psychometric testing was recommended or if it was performed.

I. Furthermore, as the MTG's provide, prior to a spinal cord stimulator trial, a comprehensive psychiatric or psychological evaluation by a qualified psychologist with a PhD, PsyD, EdD credentials, or a physician with Psychiatric MD/DO credentials. This evaluation must be completed, with favorable findings, before the trial is scheduled. This evaluation should include a standardized detailed personality inventory with validity scales (such as MMPI-2, MMPI-2-RF, or PAI); pain inventory with validity measures (for example, BHI 2, MBMD); clinical interview and complete review of the medical records. In this case, Dr. Malinky relied on the opinion of Ms. Alsum, whom the ALJ finds is not credentialed to complete the necessary evaluation without the supervision/direction of a doctoral level psychologist. Moreover, Dr. Malinky admittedly did not review all of the medical records. Dr. Malinky testified that the spinal cord stimulator was reasonable and necessary, but he admitted his response was based on a lack of information regarding psychological evaluations.

J. In this case, the ALJ credits the opinions of Dr. Kenneally to find/conclude

that Claimant is currently not a good candidate for the spinal cord stimulator, and Dr. Malinky's recommended surgery is not reasonable or necessary. Dr. Kenneally, Psy.D. preformed an independent psychological assessment, administered tests, and prepared a report. Dr. Kenneally, is properly credentialed and performed the appropriate comprehensive evaluation. Dr. Kenneally based her opinion on her clinical evaluation, her review of multiple prior psychological and psychiatric evaluations, on prior test results that indicated longstanding depression, and on recent test results that indicated the presence of depression and somatization; all of which Dr. Malinky failed to do. According to Dr. Kenneally, there was a good consistency between the MMPI results that indicated the presence of depression and somatization and a clear indication of the translation of psychological distress into physical symptomatology, and the MBMD results that were extremely elevated to a degree indicative of catastrophizing of physical symptomatology and pain and indicated Claimant was unlikely to maintain functional gains following the surgery. Medical records reflect a diagnosis of depression and treatment for depression, and current psychological testing indicated the presence of persistent depressive disorder; although results reflected a modest decline. Dr. Kenneally testified that the best predictor of future behavior is past behavior, and in this case, it is important to note that the 2013 spinal cord stimulator trial failed. According to Dr. Kenneally, the objective psychological test results were consistent with Claimant's failure of a spinal cord stimulator previously and there is no reason to expect a different outcome this time. Also, according to Dr. Kenneally, Claimant is not a good spinal cord stimulator candidate because: the majority of spinal cord stimulator candidates report intolerable pain levels of 8 -10 on a scale of 10, but in this case, Claimant reported pain levels of 3-6; the majority of spinal cord stimulator candidates use extensive medications including narcotics, but in this case, Claimant reduced her medications; and Claimant confirmed she continues to improve without the stimulator and she is in less pain and presents with more function. Dr. Kenneally pointed out that Claimant testified she thought the 2013 stimulator failed due to lack of social support, but improved social support is not an appropriate psychological reason to proceed with the spinal cord stimulator. Dr. Kenneally opined that Dr. Malinky should not rely on Ms. Alsum's report because Ms. Alsum, as a social worker, is not properly credentialed or trained to perform a psychological exam to determine if Claimant is an appropriate candidate for the SCS trail. Finally, Dr. Kenneally did not consider Claimant's expectations realistic because she testified at hearing that she wants her life back and wants to be pain free which is unlikely as provided for by the MTG's.

ORDER

It is therefore ordered that:

1. Claimant's request for authorization of a trial of DRG spinal cord stimulation is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St.,

4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 17, 2017

Colorado Springs, CO 80906

ISSUES

- Whether Claimant's need for heart surgery is casually related to her industrial injury of January 11, 2016, when she slipped and fell on ice at work and cracked a tooth.

- Whether Claimant's heart surgery was reasonable, necessary, and authorized.

- Whether Claimant's request for a change of physician from Dr. Kirk Nelson to Dr. Bennett Machanic should be granted.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. In 2008, prior to her work injury, Claimant developed meningitis and endocarditis which affected her mitral heart valve. This resulted in Claimant having her mitral heart valve replaced with a porcine heart valve in 2008. Due to having an artificial heart valve, Claimant takes antibiotics, prophylactically, before undergoing any dental treatment. This is to prevent Claimant from getting an infection which might lodge in her porcine heart valve.

2. Prior to her work related accident of January 11, 2016, Claimant experienced recurrent heart problems.

3. On March 6, 2015, Claimant presented to Dr. Timothy Colander with complaints of chest pain that began two days ago. Due to Claimant's medical history and current complaints, Dr. Colander referred Claimant to the emergency room.

4. On March 8, 2015, Claimant was evaluated by Dr. Ira Cohen. Dr. Cohen noted that Claimant had a porcine heart valve with a normal life expectancy of 10-15 years. He stated that the valve was at about 70-80% of its expected life. He specifically noted that the life expectancy of the valve tends to be shorter in younger patients, like Claimant, "especially when in the mitral valve position," as was Claimant's. Claimant underwent an echocardiogram which was abnormal. Based on his evaluation of Claimant, he recommended at least yearly echocardiograms to monitor her condition.

5. On March 26, 2015, Claimant presented to Dr. Matthew Lewis with continuing complaints of chest pain which began three weeks ago. Dr. Lewis' report indicated that the prior workup included an echocardiogram which was abnormal and showed mitral regurgitation and aortic stenosis. Dr. Lewis' indicated that he would fill out disability paperwork forms to allow Claimant to be out of work for

the following month to allow Claimant to be evaluated by various specialists and to recover from her chest pain. Therefore, as of March 26, 2015, Claimant's heart valve was not operating normally and was showing signs of wear and tear.

6. On April, 16, 2015, Claimant returned to Dr. Lewis. His assessment was that Claimant was recovering from her chest pain, but that she should have annual echocardiograms to check the status of her heart.

7. On January 11, 2016, Claimant was injured at work when she slipped on some ice and fell and hit her head. According to the medical records, Claimant landed face down. After the fall, she apparently got up, was dazed and confused and was found wandering around the parking lot by a co-worker. She was taken to the emergency room. Her initial complaints were facial and right shoulder pain. She denied loss of consciousness. It was noted that she had an abrasion on the right side of her face. A CT scan was performed on her face/head. It did not show any fractures. Claimant was ultimately released from the emergency room the same day.

8. Respondents admitted liability for Claimant's slip and fall.

9. On January 13, 2016, Claimant was seen at Concentra. The assessment at that time was: a.) Fall from slipping on ice, b.) Neck pain, c.) Parasthesia of the right arm, d.) Right shoulder injury, e.) Right elbow pain, f) Pain in right hand, g) Photosensitivity, h) Dizziness, and, i) Postconcussion syndrome.

10. On January 22, 2016, Claimant was reevaluated at Concentra. The assessment remained basically the same.

11. On January 30, 2016, Claimant went to Jamie Marquez, D.D.S. to have a tooth evaluated because a filling came out. The notes from the visit indicated Claimant's filling came out about a week ago. The notes indicated Claimant did not have any pain but her tooth was sensitive. Dr. Marquez noted a fractured tooth and recommended a crown. The notes specifically state Claimant took antibiotics (clindamycin) prior to the appointment. Dr. Marquez did not note any type of abscess or infection.

12. Claimant and Respondents agree that the tooth fracture is due to the fall.

13. On February 12, 2016, Claimant returned to Dr. Marquez. The notes from this appointment indicate Claimant took antibiotics prior to the appointment. The notes also indicate the tooth was prepped for a crown and Claimant was provided a temporary crown. Dr. Marquez did not note any abscess or infection of the tooth.

14. On February 26, 2016, Claimant returned to Concentra. At this time her complaints included neck pain, back pain, and headaches. She complained of having difficulty sleeping at night. She also complained of both arms going numb

when she lies down. She did not, however, have any tooth pain. She also did not have any signs or symptoms of a fever or infection.

15. On or about March 11, 2016, Claimant came under the care of Dr. David Orgel of U.S. Health Works Medical Group ("U.S. Health Works"). Her chief complaints at that time were headaches, neck pain, vertigo, bilateral upper extremity numbness and some neurocognitive changes. Dr. Orgel's report indicated Claimant had two MRIs of her head. The first MRI was done on 2/10/16. This MRI showed no acute intracranial abnormalities, but there was some evidence that Claimant might have multiple sclerosis. Therefore, another MRI was ordered, with and without contrast. The second MRI was done on 2/29/16 and did not suggest multiple sclerosis, but instead suggested nonspecific white matter changes, probably the sequelae of ischemic small vessel disease. Claimant also underwent an MRI of her right shoulder which showed a bone bruise of the humeral head. There is no mention of Claimant having any type of tooth pain, abscess, or infection. The report from this visit specifically states that Claimant was afebrile and did not have a fever.

16. Dr. Orgel stated the following in his assessment:

> I think at this point, the MRI shows probably ischemic vascular disease from her history of status post valve replacement with perhaps some embolic disease resulting from that but certainly no evidence of multiple sclerosis. This may be contributing to her presentation, but otherwise with the picture of her cheek and the MRI of her shoulder, she clearly had significant trauma to her head and neck and shoulder and I agree with Dr. Hammerberg that this clearly relates to some head trauma sequelae of that, the extent of which is still being determined.

17. On March 17, 2016, Claimant was evaluated by Dr. Sander Orent of U.S. Health Works. Claimant was evaluated for numerous pain complaints. She also indicated that she broke a tooth during the fall. However, Claimant did not complain of any tooth pain. The report specifically states that Claimant did not have a fever. Dr. Orent's assessment at that time was: a) Traumatic carpal tunnel, bilateral, b) Shoulder impingement, right, c) Cervical neck aches, and d) Post-concussive syndrome with vestibular concussion and what looks like an exotropia of the right eye and significant vestibular dysfunction. Dr. Orent went on to say that "[T]his was a very significant mechanism of injury event. She did show me a picture of the abrasion on her cheekbone as well and there was indeed loss of consciousness."

18. On April 5, 2016, Claimant returned to Dr. Orent. Claimant's condition remained unchanged. Among other recommendations, Dr. Orent commented that Claimant needed to get her cracked tooth fixed.

19. On April 6, 2016, Claimant presented to North Suburban Medical Center with a cough, shortness of breath, and a "rice crispy sound in her breathing." The possible diagnosis at that time was community acquired pneumonia and sepsis in the setting of immunocompromised host status. Therefore, she was started on vancomycin. It does not appear that any blood work was performed to confirm Claimant had sepsis.

20. On April 11, 2016, Claimant underwent right and left heart catheterization. She was felt to have critical mitral stenosis.

21. On April 13, 2016, Claimant presented to the emergency department at Rose Hospital and was evaluated by Dr. Michael Schwartz. Dr. Schwartz diagnosed Claimant as suffering from acute hypoxic respiratory failure secondary to cardiogenic pulmonary edema from critical mitral stenosis. Blood cultures were negative for bacterial infection and the MRSA surveillance screen was negative.

22. On April 13, 2016, while in the hospital, Claimant was also evaluated by Dr. Jason Sperling, a heart surgeon. He discussed performing heart surgery on Claimant and replacing her porcine heart valve with a mechanical valve. He also stated that a recent CT scan showed Claimant's aorta was substantially calcified and that clamping during surgery could be challenging and that her stroke risk would be higher.

23. On April 15, 2016, Dr. Sperling performed heart surgery on Claimant. The indication for surgery was "re-do valve replacement based on the diagnosis of bioprosthetic mitral valve degeneration." Dr. Sperling also noted that Claimant's "blood cultures have been negative." The post operative diagnosis was "acute decompensated heart failure and subacute bioprosthetic mitral valve regurgitation, severe, and remote endocarditis." Dr. Sperling noted that the valve itself had a hole in one of the leaflets. It was also noted the valve had vegetation which was removed as well. During the surgery, Dr. Sperling had to cross clamp Claimant's aorta. There was no evidence the heart valve was infected.

24. On April 15, 2016, the heart valve was sent to pathology. The pathology report did not suggest any infection.

25. On April 20, 2016, Claimant underwent another surgery to have a pacemaker installed.

26. On May 24, 2016, Claimant returned to Dr. Orent. Dr. Orent stated that he believed the need for heart surgery was related to Claimant's fall and cracked tooth. Dr. Orent stated:

> In thinking about the causality here what has happened according to the Infectious Disease Specialist is that when Loree fell and broke her upper teeth, she introduced bacteria into the blood stream that then adhered to the porcine valve and created vegetations that created heart failure and the

> necessity for surgical replacement of heart valve. She also had to have a pacemaker put in place. I do think that this is directly causal. The reason is of course being the fact than when she fell someone with a valve replacement, who introduces bacteria into the blood stream, will in fact develop either SBE or ABE and that is what has happened here.

27. This ALJ does not credit Dr. Orent's opinion regarding causation. This ALJ credits the opinion of Dr. Olsovsky, which is set forth later in this opinion, over Dr. Orent's.

28. On May 26, 2016, Claimant was evaluated by Dr. Kristin Thanavaro of Colorado Heart and Vascular. Her assessment and impression was "Endocarditis of mitral valve" with "culture negative endocarditis of previous valve replacement."

29. On June 28, 2016, Claimant returned to Dr. Orent. At that time, her complaints remained unchanged. Dr. Orent went on to state that there was still much that had to be done and addressed. That included the pain she is having in her neck, the lightheadedness and dizziness, the inability to read and the diplopia, the chronic fatigue, the migraine headaches, post traumatic, and the cardiac events.

30. Dr. Orent retired from U.S. Health Works. Thereafter, Claimant's care was transferred to Dr. Nelson of U.S. Health Works.

31. On August 15, 2016, Dr. Sanidas performed an IME on behalf of the Respondents. At this time, Dr. Sanidas was also employed by U.S. Health Works. Dr. Sanidas evaluated a number of issues, including the relatedness of Claimant's heart surgery to her initial fall and cracked tooth. He also rendered an opinion regarding the extent of Claimant's injuries and whether she had reached MMI.

32. Dr. Sanidas reviewed Dr. Orent's statement regarding causation. Dr. Sanidas determined the cracked tooth was not the cause of Claimant's need for heart surgery. He determined the valve merely wore out. Dr. Sanidas stated:

> I have reviewed the issues surrounding the valve replacement surgery and have read the operative report. There is no mention that the vegetations on the valve were causing infection. Per the surgeon's operative note, preoperative and postoperative treatment, and diagnosis, it was stated that there was a hole in the porcine valve which had some vegetation around it, which is not unusual and subsequently the valve breaks down. The surgeon did not find any form of infection which caused the valve to be replaced. The main problem was that the valve was worn out – sometimes they only last perhaps 10-15 years. The patient also has mitral regurgitation, which was the problem.

> This means that the valve was regurgitating the blood as it passed through the valve and it shot back. The surgeon stated clearly that the valve was worn out. Consequently, I conclude that there is no connection between Ms. Shillinger's injury and cracked tooth on Jnuary 11, 2016, with her heart problems and surgery following the injury.
>
> As a matter of fact, the infectious disease specialist did not find any infection in Ms. Shillinger's bloodstream. The bloodstream culture before surgery was negative, as noted by the heart surgeon. Again, the patient took antibiotics to prevent infection before her dental visit.
>
> Comment: This is a very important point, which I have to conclude Dr. Orent was not aware of or did not have this documentation. The fact that the blood cultures were negative shows that the cracked tooth had nothing to do with causing an infection, as there was none. The valve was replaced because it was worn out, and it was also causing regurgitation. The replacement had nothing to do with any infection or subacute bacterial endocarditis.

33. This ALJ credits Dr. Sanidas' opinion. Claimant did not have an infection at the time she underwent heart surgery. Moreover, the heart surgeon did not note that the heart valve showed any signs of infection. As set forth by Dr. Sanidas, the heart surgeon specifically stated in his operative report that she underwent surgery based on the diagnosis of bioprosthetic mitral valve degeneration with negative blood cultures.

34. On October 12, 2016, Claimant was evaluated by Dr. Kirk Nelson, of U.S. Health Works. Dr. Nelson was now working for the same group, U.S. Health Works, as Respondents' IME physician, Dr. Sanidas. According to Dr. Nelson, Claimant's assessment remained the same. However, Dr. Nelson referred Claimant to Dr. Machanic, a neurologist, for evaluation and treatment of her headaches and general neurologic condition.

35. As set forth in the October 12, 2016 report from Dr. Nelson, an issue arose about Claimant undergoing additional diagnostic blood work. Dr. Orgel, who is also at U.S. Health Works, wanted to perform some blood work to look for non-work-related causes to explain Claimant's worsening neurological symptoms. Either Dr. Orgel or Dr. Nelson arranged to have the blood work done in an expedited manner by having blood drawn while Claimant was at another clinic while getting physical therapy. Dr. Orgel thought there might be nutritional deficits which were causing her neurological symptoms. Claimant did not think Dr. Orgel's explanation for doing the additional blood work in such a manner made sense and she cancelled her consent for the additional blood work. This incident caused Claimant to also lose trust in her providers at U.S. Health Works.

36. Claimant testified that Dr. Nelson felt he did not have all of Claimant's medical records and that was impacting his treatment of her. Claimant believed Dr. Nelson's belief that he was missing prior medical records was due to the IME performed by Dr. Sanidas, who was in the same office. This incident caused Claimant to think there was a conflict of interest between her physicians at U.S. Health Works and caused her to lose trust in Dr. Nelson and her providers at U.S. Health Works.

37. At some point, Claimant started recording her medical appointments with Dr. Nelson. Claimant testified that she started recording her appointments with Dr. Nelson so she would remember what was discussed. Claimant alleged that her head injury impairs her ability to remember things that are discussed during her doctor appointments. Regardless of her testimony, this ALJ finds that Claimant started recording her appointments with Dr. Nelson, in part, because she did not trust him.

38. On December 14, 2016, Dr. Nelson became aware of Claimant recording their visits when Claimant dropped her purse at this visit and her recorder fell out of her purse. Dr. Nelson stated:

> The patient dropped her purse on the way out of the exam room and a tape recorder fell out. Apparently, the patient has been secretly taping her visits. If the patient in fact has a significant level of distrust, this will interfere with our ability to help her to recover in the future. We will ask that she inform us if she is going to record the visit.

39. As of December 14, 2016, Dr. Nelson stated that if Claimant has a significant level of distrust, then that will interfere with his ability to help Claimant recover.

40. As of December 14, 2016, Claimant had a significant level of distrust of her physicians at U.S. Health Works, which includes Dr. Nelson.

41. On January 23, 2017, Dr. Machanic issued a report setting forth his opinion regarding the cause of Claimant's heart surgery. Dr. Machanic stated that:

> I would conclude that at the time of the patient's injury … she did injure her tooth. She did suffer a dental infection, which was treated with antibiotics, but it is clear that she subsequently, developed sepsis causing pneumonia and her endocarditis, and this, of course, required the life-saving intervention of replacement of her previously placed porcine mitral valve.

42. This ALJ does not credit Dr. Machanic's opinion. At the time Claimant was treating for her cracked tooth, she was taking antibiotics. Plus, the dentist treating Claimant never mentioned Claimant's tooth became infected. This ALJ also credits Dr. Osolvsky's opinion over Dr. Machanics.

43. Dr. Machanic also testified at hearing. At hearing, Dr. Machanic came up with a new theory that allegedly supported his earlier opinion. Dr. Machanic testified that he reviewed Claimant's pre- and post-surgical brain MRIs. He testified that the second MRI showed the presence scattered multiple areas of small strokes surrounded by bleeding. He said these are classic for emboli – blood clots - that occur from a distance and end up in the brain. In other words, his opinion was that these emboli formed in the heart due to the infection and traveled to the brain. This ALJ, however, does not find Dr. Machanic's opinion to be persuasive in light of the heart surgeon's statements. Dr. Sperling, Claimant's heart surgeon, specifically stated that he was concerned about clamping Claimant's aorta due to the plaque that could be dislodged and cause a stroke. In addition, Dr. Olsovsky testified at hearing that clamping the aorta could have caused the emboli to lodge in the brain and show up on the post-surgical MRI. Therefore, This ALJ finds that the emboli demonstrated on the post-surgical MRI and discussed by Dr. Machanic were caused by the clamping of the aorta during the heart surgery and were not caused by an alleged infection which lodged in Claimant's heart valve.

44. Dr. Hutcherson performed an IME on August 23, 2016. Dr. Hutcherson noted that sinus tachycardia was noted throughout the patient's history and follow ups starting after October of 2014 and it was not treated. Dr. Hutcherson stated that the decision to not treat that condition could have resulted in more strain, stress, and wear on the prosthetic mitral valve. This ALJ credits this portion of Dr. Hutcherson's opinion. This ALJ finds that Claimant's sinus tachycardia increased the wear and tear on Claimant's porcine heart valve and shortened its life expectancy.

45. Dr. Hutcherson also determined that Claimant suffered an infection due to the fall and cracked tooth which resulted in congestive heart failure, pneumonia, and endocarditis which led to the need to replace Claimant's heart valve. This ALJ does not credit this portion of Dr. Hutherson's opinion. This ALJ does not find that Claimant suffered an infection due to her cracked tooth.

46. Dr. Hutcherson issued another report on September 7, 2016. In his report, he reiterated his opinion that Claimant's porcine valve failed due to an infection. As set forth above, this portion of Dr. Hutcherson's opinion is not found to be persuasive by this ALJ.

47. On January 18, 2017, Dr. Mary Olsovsky performed an IME on behalf of Respondents. She opined that the need for heart surgery was not caused by the fall and cracked tooth. Dr. Olsovsky stated that:

> The dental procedures that she underwent did not involve gingival manipulation. Not all dental procedures are associated with the introduction of bacteria into the bloodstream. Only those that traumatize the tissue to an advanced degree are likely to have this outcome. Those are the only procedures for which antibiotic prophylaxis is

> recommended. The procedures that she underwent are not expected to have resulted in trauma to the tissues any more than routine dental maintenance such as brushing and flossing.
>
> Even though the procedures were not high risk and did not require antibiotic prophylaxis by AMA Guidelines, she nonetheless received antibiotic prophylaxis. It is certainly understandable to err on the side of caution, and the patient may not be sure what exactly the dentist has planned. So, having been premedicated, her risk of developing bactermia is further diminished.

48. This ALJ finds Dr. Olsovsky's opinion to be credible. Claimant's dental procedure was not the type that was expected to introduce bacteria into Claimant's bloodstream any more than routine brushing or flossing and prophylactic antibiotics were not necessary. Regardless, Claimant took antibiotics prophylactically and the antibiotics further diminished the risk of any infection from the cracked tooth or dental work.

49. Dr. Olsovsky also stated that the Claimant's presentation was not consistent with that of bacterial endocarditis. According to Dr. Olsovsky, the Claimant had no sequelae that are typical for bacterial endocarditis but rather had a presentation of typical mechanical failure of a mitral valve. Dr. Olsovsky went on to state that the diagnosis of bacterial endocarditis can be difficult to make. Therefore, there is a list of specific criteria that is used to make the diagnosis. These criteria are known as the "Duke Criteria." As set forth in her report, there are two major criteria and five minor criteria. The diagnosis of bacterial endocarditis would be supported if the Claimant met both of the major criteria or one of the major criteria and three minor criteria, or no major criteria and five minor criteria. According to Dr. Olsovsky, Claimant did not meet either of the two major criteria. She went on to state that Claimant only met two of the minor criteria. Therefore, Dr. Olsovsky concluded that she would rate the Claimant's chance of bacterial endocarditis as low. The ALJ finds this evidence to be persuasive in establishing that Claimant did not have bacterial endocarditis.

50. Dr. Olsovsky went on to state that the Claimant's presentation is consistent with that of a mechanical failure, which often presents with symptoms of left-sided heart failure and pulmonary edema over the course of one or two days in a fairly rapidly accelerating pattern. The presentation of bacterial endocarditis can be indolent and usually involves a longer period of time of feeling poorly. The ALJ credits this evidence as establishing that Claimant's heart valve had a mechanical failure which was not related to any type of infection.

51. Dr. Olsovsky also stated that:

> There is previous echocardiographic evidence demonstrating early deterioration of the 8 –year-old bioprosthetic mitral valve. This valve is generally quoted as having a life expectancy of 10 to 15 years. However, it is known that this is likely to be shorter in women and younger patients, and in the mitral valve position. The echocardiogram that she had a year prior to the accident demonstrated deterioration of this valve, with some regurgitation that was perivalvular and was estimated to be moderate. The echocardiogram also showed sclerosis of the native aortic valve, described as moderate-to-severe calcification with reduced mobility resulting in mild-to-moderate stenosis.

52. The ALJ credits this testimony and finds that Claimant's heart valve was nearing the end of its shortened life expectancy due to claimant's age, gender, and position of the valve and was showing signs of wearing out in 2015.

53. Dr. Olsovsky went on to state that the surgical findings also demonstrated that the need for surgery was not due to an infection caused by the broken tooth. Dr. Olsovsky stated:

> The surgical findings upon replacement of the aortic valve describe a bioprosthetic valve that is mechanically destroyed, with deterioration and a hole in the leaflet. There is no overt evidence of bacterial infection. Neither was there a description in the operative report of abscess or infection of the tissues surrounding the valve. The vegetation was described, but this term, even though it sounds consistent with living microorganisms, really describes a mass of other foreign material. Pathologic evaluation showed a foreign material but not a clear infection. There was certainly no description of the typical oscillating sort of mass that is seen with infection.
>
> In summary, it is my opinion that there is more than 50% medical certainty to conclude that the patient's dental work did not result in bacteremia, and therefore an even smaller possibility that the mitral valve replacement was due to bacterial endocarditis. In other words, based on a reasonable degree of medical probability, the patient's need for heart valve replacement surgery was caused by non-work related matters, and was not caused or related to her work-related accident of January 11, 2016, or any medical/dental treatment related thereto.

54. This ALJ credits Dr. Olsovsky's opinions and finds them to be persuasive. This ALJ is persuaded by the fact that there is no credible and persuasive evidence that Claimant's tooth got infected. The records from the dentist do not establish that Claimant's tooth got infected. In addition, there is no credible and persuasive evidence that the dental work caused disruption of the Claimant's gum tissue and somehow seeded the Claimant's blood stream with bacteria which then lodged in her heart valve. As set forth by Dr. Olsovsky, Claimant took prophylactic antibiotics before each dental visit. This ALJ is also persuaded by the fact that the heart surgeon specifically stated that the blood cultures were negative and made no mention that the valve looked like it was damaged by an infection.

55. This ALJ also credits Dr. Olsovsky's opinion that the valve started to show signs of wearing out in 2015 when Claimant underwent an echocardiogram which was abnormal as it related to the mitral valve.

56. This ALJ finds that Claimant's heart valve did not get infected.

57. This ALJ finds that Claimant's cracked tooth had absolutely nothing to do with the need for heart surgery.

58. This ALJ finds that Claimant's mitral heart valve had a mechanical failure due to its age - it merely wore out.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

Medical Benefits

i. Relatedness of Heart Surgery

In order to impose liability for medical treatment, the need for treatment must be proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(b), C.R.S. A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). The determination of whether the claimant proved causation is one of fact for the ALJ. *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000).

In this case, Claimant has not proven by a preponderance of the evidence that the need for heart surgery was proximately caused by the January 11, 2016 work injury which resulted in a cracked tooth. This ALJ credited the opinions of Dr. Olsovsky. Dr. Osolvsky's report and testimony established that the most likely cause of Claimant's need for heart surgery was the natural deterioration of the porcine heart valve. The normal life expectancy of a porcine heart valve is 10-15 years. Claimant had the original porcine valve installed around 2008, making it approximately 8 years old at the time it failed. However, according to Dr. Osolvsky, the life expectancy is less for younger patients, women, and for valves in the mitral position. It must be noted, that Dr. Cohen, a treating physician, also stated that Claimant's heart valve has a shorter life expectancy in younger patients and when it's in the mitral position. In this Case, Claimant meets all of the criteria for a shortened life expectancy of the porcine heart valve.

Moreover, Dr. Olsovsky opined that Claimant's heart valve was showing signs of wearing out in 2015 and such opinion was supported by the evidence. Claimant underwent an echocardiogram in 2015. Dr. Lewis' report indicated the 2015 echocardiogram was abnormal and showed mitral regurgitation and aortic stenosis.

The ALJ also credits the opinion of Dr. Olsovsky that Claimant's rapid deterioration is consistent with the mechanical failure of a heart valve and not failure due to an infection.

In addition, this ALJ finds persuasive the fact that Claimant's cracked tooth was not infected combined with the fact that the Claimant's blood cultures came back negative for a bacterial infection at the time of her heart surgery. In addition, according

to Dr. Olsovsky, Claimant did not have bacterial endocarditis when measured by the Duke Criteria.

Dr. Machanic, who testified on behalf of Claimant, indicated that the MRI scans in this case, which were taken pre- and post-heart surgery, demonstrated that Claimant had an infection and the infection caused emboli to lodge in her brain. At first blush, this argument seems to have some merit. However, Dr. Olsovsky credibly testified that the post surgical brain MRI findings could have been caused when the heart surgeon clamped Claimant's aorta which caused the debris or plaque to be dislodged and then settle in Claimant's brain. This testimony is again consistent with the report of Claimant's treating heart surgeon, Dr. Sperling, who said the likelihood of a stroke was increased if he had to clamp her aorta during the surgery because the plaque contained in the aorta could become dislodged. During the surgery, Dr. Sperling did have to clamp her aorta. This ALJ found that the clamping of the aorta cased the emboli which were found on the post surgical MRI of Claimants brain.

Therefore, this ALJ concludes that Claimant has failed to establish by a preponderance of the evidence that her need for heart surgery was causally related to her work accident and cracked tooth.

Because the need for surgery is not related to her industrial accident, the issue of whether the surgery is reasonable, necessary, and authorized is moot.

ii. Change of Physician

Upon a proper showing to the division, the employee may procure its permission at any time to have a physician of the employee's selection attend said employee. Section 8-43-404(5)(a)(VI), C.R.S. Because the statute does not contain a specific definition of a "proper showing," the ALJ has broad discretionary authority to determine whether the circumstances justify a change of physician. *Loza v. Ken's Welding,* WC 4-712-246 (ICAO January 7, 2009). Claimant may procure a change of physician where he/she has reasonably developed a mistrust of the treating physician. *See Carson v. Wal-Mart,* W.C. No. 3-964-07 (ICAO April 12, 1993). The ALJ may consider whether the employee and physician were unable to communicate such that the physician's treatment failed to prove effective in relieving the employee from the effects of his/her injury. *See Merrill v. Mulberry Inn, Inc.*, W.C. No. 3-949-781 (ICAO November 1995). But, where an employee has been receiving adequate medical treatment, courts need not allow a change in physician. *See Greenwalt-Beltmain v. Department of Regulatory Agencies*, W.C. No. 3-896-932 (ICAO December 5, 1995) (ICAO affirmed ALJ's refusal to order a change of physician when the ALJ found claimant receiving proper medical care); *Zimmerman v. United Parcel Service*, W.C. No. 4-018-264 (ICAO August 23, 1995) (ICAO affirmed ALJ's refusal to order a change of physician where physician could provide additional reasonable and necessary medical care claimant might require); and *Guynn v. Penkhus Motor Co.*, W.C. No. 3-851-012 (ICAO June 6, 1989)

(ICAO affirmed ALJ's denial of change of physician where ALJ found claimant failed to prove inadequate treatment provided by claimant's authorized treating physician).

In this case, Claimant has developed a significant level of mistrust of her treating physician, Dr. Nelson, who works at U.S. Health Works. Claimant was being treated by Dr. Orgel and Dr. Orent, of U.S. Healthworks. Then, Respondents retained a physician associated with U.S. Health Works, Dr. Sanidas, to perform an IME. Dr. Sanidas issued an opinion that was contrary to Claimant's position. Claimant's mistrust began to emerge upon Respondents having Dr. Sanidas, who works for the same medical group as her treating physicians, question the cause of Claimant's heart condition and the extent of her injuries. According to Claimant's testimony, Dr. Nelson at some point indicated he did not have all of her medical records. It appeared this knowledge about a lack of prior medical records came about due to Dr. Sanidas' IME being performed in the same medical group, i.e., U.S. Health Works.

Claimant also began to lose trust in the physicians at U.S. Health Works when they wanted to order blood work to look for non-work-related causes of her neurological conditions. Although finding the actual cause of Claimant's neurological problems is not problematic, the manner in which it was done contributed to Claimant's mistrust of her physicians at U.S. Health Works. As found, they requested the blood work to be done while Claimant was attending physical therapy at another facility.

Most importantly, Dr. Nelson specifically stated in his December 14, 2016 report that if the Claimant "has a significant level of distrust, this will interfere with our ability to help her to recover in the future." That statement was made after Dr. Nelson learned Claimant was secretly recording their appointments. Therefore, this ALJ concludes that Dr. Nelson's statement combined with Claimant's level of distrust establishes that a change of physician is appropriate in order to help Claimant recover in a timely manner. Claimant has proven she is entitled to a change of physician.

This ALJ has considered Respondents' arguments regarding the complexity of this case and that getting a new provider might complicate and extend Claimant's treatment. Claimant has requested Dr. Machanic, a neurologist, to become her authorized treating physician. However, Dr. Machanic is already an authorized provider, via a referral from Dr. Nelson. (Although the referral was probably limited to neurological issues, he is still an authorized provider.) Dr. Machanic previously evaluated Claimant on October 25, 2016. As set forth in his detailed report, Dr. Machanic evaluated Claimant for her neurological issues and made numerous treatment recommendations. Thus, he is familiar with Claimant's case and need for treatment and having him treat Claimant should not complicate or extend Claimant's treatment. In addition, Dr. Machanic stated in his report that he would be willing to become involved in Claimant's care.

Therefore, this ALJ concludes that Claimant has met her burden to change physicians to Dr. Machanic. Claimant's request to change physicians from Dr. Nelson to Dr. Machanic is granted.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's need for heart surgery is not casually related to her industrial injury of January 11, 2016, when she slipped and fell on ice at work and cracked a tooth.

2. Claimant's request for a change of physician from Dr. Nelson to Dr. Machanic is granted.

3. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: 5-16-17

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Respondents have overcome by clear and convincing evidence the opinion of the Division Independent Medical Examination (DIME) physician regarding Claimant's permanent impairment rating.

2. Whether Claimant's permanent partial disability (PPD) rating should be calculated based on a scheduled impairment or based on whole person impairment.

3. Whether Claimant has established by a preponderance of the evidence an entitlement to disfigurement benefits.

FINDINGS OF FACT

1. Claimant is employed by Employer as a plant operator.

2. On December 5, 2015 while so employed, Claimant fractured his collar bone when he slipped and fell on ice at work.

3. Claimant was evaluated that day at North Suburban Medical Center Emergency Department. Claimant reported pain in his right shoulder with no neck pain or other pain or loss of consciousness. Tenderness was noted over Claimant's trapezius with limited range of motion with adduction, abduction and external rotation. An x-ray of the right shoulder showed a comminuted and displaced fracture of the distal clavicle. Claimant was discharged home with instructions to follow up. *See* Exhibit 4.

4. On December 7, 2015 Claimant was evaluated at Concentra by Kathryn Bird, D.O. Claimant reported slipping on some ice at work and falling backwards landing on his back. Claimant reported sharp pain at 10/10 that was worse with moving. Dr. Bird assessed fracture of clavicle, right, closed and referred Claimant to an orthopedic specialist. *See* Exhibit 5.

5. On December 8, 2015 Claimant was evaluated by orthopedic specialist Rudy Kovachevich, M.D. Dr. Kovachevich noted that Claimant slipped on ice and landed forcibly onto his right shoulder and scapular region and that Claimant had immediate pain in the anterior lateral chest shoulder. Dr. Kovachevich reviewed ER radiographs that showed evidence of a comminuted and displaced distal clavicle fracture. Claimant reported considerable persistent pain on the anterior lateral aspect of the arm and shoulder region exacerbated with any attempts at arm motion. Dr. Kovachevich noted that it was a significant injury, required surgical intervention, and would not heal with conservative non operative management. Dr. Kovachevich

recommended surgery be performed that week and requested surgical assistance due to the complicated nature of the injury. *See* Exhibit 6.

6. On Dec 11, 2015 Claimant underwent surgery performed by Rudy Kovachevich, M.D. The indications for the procedure noted that Claimant fell on ice at work and sustained a right comminuted distal clavicle fracture and right acromioclavicular dislocation with coracoclavicular ligament tear. The surgery performed was: open reduction, internal fixation of the right comminuted distal clavicle fracture; open reduction and fixation of the right acromioclavicular joint with fixation of the coracoacromial ligaments; and fluoroscopy, right shoulder. *See* Exhibits 8, C.

7. On December 22, 2015 and on March 21, 2016 Claimant underwent x-rays of his right shoulder that showed metal plate and approximately eight screws running from Claimant's shoulder along his clavicle to his neck. *See* Exhibit 11.

8. On January 19, 2016 Claimant was evaluated by Dr. Kovachevich. Dr. Kovachevich noted Claimant was doing well overall and continuing to make progress with therapy. Dr. Kovachevich reviewed x-rays that showed evidence of a stable configuration in good alignment with internal bone formation and no evidence of hardware failure or loosening. *See* Exhibit 11.

9. Between January and March of 2016, Claimant continued to be evaluated at Concentra. Dr. Bird noted that Claimant was doing well with low pain levels reported and recommended Claimant continue with physical therapy. *See* Exhibits 12, 14.

10. On April 4, 2016 Claimant was evaluated by Kathryn Bird, D.O. Claimant reported that his right shoulder was doing well, that he was not having pain, and that he was not taking medications. Claimant circled zero on the pain scale chart. Claimant was noted to be continuing to improve in physical therapy. Dr. Bird recommended that Claimant continued physical therapy and provided a referral for physical therapy two times per week for four weeks. Dr. Bird opined that Claimant could return to full duty work and she anticipated that he would reach maximum medical improvement on May 30, 2016. *See* Exhibits 16, D.

11. On April 25, 2016 Claimant was evaluated by Dr. Bird. Claimant reported again that he was not having any pain and was doing better. Claimant circled zero on the pain scale chart. Claimant reported he was not taking any pain medication and that in physical therapy he could lift 40-50 pounds. Claimant also reported that his shoulder surgeon, Dr. Kovachevich thought that Claimant could return to regular activity. Dr. Bird found full range of motion of the right shoulder on examination. Dr. Bird recommended continuing with physical therapy to ensure strengthening. *See* Exhibits 18, E.

12. On May 12, 2016 Claimant was evaluated by physical therapist (PT) Sarah Peck. Claimant reported doing well and that he felt like he had improved significantly. It was noted that Claimant was being discharged from therapy services as he had achieved the anticipated goals or expected outcomes. The therapist noted for

follow up plans that Claimant was independent with home exercise programs and self care instructions and that he could continue with the program on his own. PT Peck noted that Claimant would still have some limitations with active range of motion of the shoulder and with joint mobility due to the type of repair. *See* Exhibit F.

13. On June 7, 2016 Claimant was evaluated by Dr. Kovachevich. Dr. Kovachevich opined that overall Claimant was doing excellent and continued to make progress in regards to his right arm use and function. It was noted that Claimant had no residual pain and was using his arm for most activities. Dr. Kovachevich noted good range of motion on examination with range of motion nearly symmetrical to the contralateral side with active forward elevation and external rotation. Dr. Kovachevich noted some tight internal rotation, as expected. Dr. Kovachevich opined that Claimant could return to all activities as tolerated with no formal restrictions and discharged Claimant from his care. Dr. Kovachevich opined that Claimant was at maximum medical improvement. *See* Exhibits 19, G.

14. On June 16, 2016 Claimant was evaluated by Jenifer Hammond, M.D. Claimant again reported that he was having no pain. Dr. Hammond noted that Claimant was requesting release from care. Dr. Hammond performed a physical examination and found full range of motion with the only exception noted as painful internal rotation. Dr. Hammond assessed closed fracture of the right clavicle and opined that Claimant had reached MMI. Dr. Hammond released Claimant from care. Dr. Hammond opined that Claimant could perform full duty work with no restrictions and opined that Claimant sustained no permanent impairment. *See* Exhibits 20, H.

15. On June 23, 2016, Respondents filed a Final Admission of Liability (FAL) consistent with Dr. Hammond's June 16, 2016 report. Respondents noted MMI was reached on June 16, 2016 and that there was no impairment as a result of the work injury. *See* Exhibits 2, K.

16. Claimant objected to the final admission of liability and requested a Division Independent Medical Evaluation (DIME).

17. On November 9, 2016 Claimant underwent a DIME performed by Anjmun Sharma, M.D. Claimant reported a slip and fall and distal clavicle fracture. Dr. Sharma reviewed the medical records and performed a physical examination. Dr. Sharma opined that the claim was fairly straightforward with a fall, distal clavicle fracture requiring surgery, and an open reduction internal fixation also involving an AC joint separation reduction. Dr. Sharma opined that, overall, there was a lack of range of motion in the right shoulder and that he believed there was some permanent impairment. Dr. Sharma opined that Claimant had good range of motion with no anterior or posterior shift, strength of 5+ in all planes, no weakness, and no atrophy. Dr. Sharma opined that Dr. Kovachevich had done a commendable job. Dr. Sharma agreed that Claimant reached MMI on June 6, 2016. Dr. Sharma did not recommend any permanent work restrictions and opined that Claimant had done very well and that Claimant's shoulder was very stable. *See* Exhibits 21, B.

18. Dr. Sharma opined that range of motion measurements using the shoulder were most appropriate as the clavicle could not necessarily be measured but was part of the shoulder apparatus. Dr. Sharma measured range of motion as: flexion- 153 degrees, extension – 27 degrees, adduction – 29 degrees, abduction – 154 degrees, internal rotation – 39 degrees, and external rotation – 57 degrees. Dr. Sharma opined that the range of motion impairment for Claimant was 8% under the AMA Guides. Dr. Sharma also opined that Claimant met criteria for a specific disorder of the shoulder, particularly due to the surgery involving the clavicle. Dr. Sharma noted that Claimant did not have a distal clavicle resection nor did Claimant have a subacromial decompression which were the two known and well met criteria documented in the AMA Guides. However, he opined that more importantly, Claimant sustained pathology and trauma to his shoulder and that as a result it would be prudent to assign Claimant an impairment that took into account the clavicular injury. Dr. Sharma opined that the clavicle had a direct effect on the range of motion of the shoulder and that therefore, he was assigning 10% impairment for specific disorder of the shoulder due to the clavicle fracture open reduction internal fixation. Dr. Sharma combined the rating to be 17% upper extremity and then converted the rating to a final whole person impairment rating of 10%. *See* Exhibits 21, B.

19. On December 6, 2016 Respondents applied for hearing on the issue of permanent partial disability benefits and to overcome the DIME. *See* Exhibit L.

20. On February 10, 2017 Claimant underwent an independent medical evaluation (IME) performed by Barry Ogin, M.D. Claimant reported falling on the ice at work and landing on his posterior shoulder and upper back. Dr. Ogin reviewed medical records including the DIME report. Claimant reported that he had continued to do fairly well and work full duty but that he had some notable limitations and compensated in certain ways. Claimant reported that he could not reach all the way up or all the way across his body and that he needed to use two hands to put on his seat belt and had trouble taking off his shirt. Claimant reported some discomfort with prolonged use of his right arm and that his current pain level was a 3/10. Claimant reported that his least pain was a 2/10. Dr. Ogin performed a physical examination and noted reduced shoulder range of motion on the right side particularly true with internal rotation, flexion, and abduction. With a goniometer, range of motion was noted to be flexion – 135 degrees, extension – 35 degrees, abduction – 125 degrees, adduction – 20 degrees, internal rotation – 20 degrees, and external rotation- 50 degrees. *See* Exhibit A.

21. Dr. Ogin noted that of concern, Claimant's range of motion actually seemed worse at the IME than it did at the time of the DIME in November as well as at the time of his discharge from his orthopedic specialist. Dr. Ogin noted that while Claimant had a relatively good recovery regarding the AC joint separation and clavicle fracture, Claimant continued to have significant capsular tightness. Dr. Ogin suspected that the prolonged immobilization around the time of surgery led to capsular tightness and that while Claimant had some significant improvements in range of motion while engaged in active therapy, it had declined some since Claimant's therapy was

discontinued. Dr. Ogin opined that as a result of this decline, Claimant has had to alter how he does basic activities such as putting on a seatbelt or a shirt. Dr. Ogin opined that due to the range of motion deficit an impairment rating for the right shoulder was appropriate. Dr. Ogin opined that no additional impairment was indicated per the medical treatment guidelines for the clavicle fracture itself which was adequately healed and in adequate alignment. Dr. Ogin found a total upper extremity impairment rating of 12% for the range of motion deficits and noted that it was slightly worse than when Claimant was evaluated by Dr. Sharma in November. Dr. Ogin opined that Claimant needed to aggressively start working on range of motion on an independent basis and that the decreased range of motion may be a reflection of guarding the right arm and utilizing it less. *See* Exhibit A.

22. Dr. Ogin noted that DIME physician, Dr. Sharma, had offered Claimant an additional 10% impairment for the clavicle fracture. Dr. Ogin opined that offering an impairment for both range of motion deficit and the clavicle fracture itself was duplicative in nature. Dr. Ogin opined that the AMA Guides did not allow for any additional impairment for the clavicle fracture as the functional deficit from the fracture was incorporated into the range of motion impairment. *See* Exhibit A.

23. Dr. Ogin also opined that the injury was to the right shoulder with the pain localized to the right shoulder and that the range of motion deficit was also limited to the right shoulder. Dr. Ogin opined that there was no cervical pain or decreased cervical range of motion. Dr. Ogin opined that the impairment for the right shoulder should remain a scheduled impairment and should not convert to whole person impairment. Dr. Ogin opined that overall Claimant had an excellent reduction and correction of the comminuted fracture and had done very well clinically. *See* Exhibit A.

24. On February 21, 2017 Claimant underwent an IME performed by John Hughes, M.D. Claimant reported that he was injured when he slipped on ice at work, fell backwards, and struck his right shoulder. Dr. Hughes reviewed medical records, and performed a physical examination. Dr. Hughes noted that the right shoulder surgery and x-rays after surgery showed rather extensive clavicular hardware that appeared to be in good location. On physical examination, Dr. Hughes noted tenderness over the right medial scapular border, a prominent 10.6 cm surgical scar with a prominent exostosis just superior to the scar over the anterior aspect of the right shoulder, and smooth but limited active range of motion in the right shoulder. Dr. Hughes measured: flexion – 98 degrees; extension – 48 degrees; abduction – 102 degrees; adduction – 0 degrees; external rotation – 41 degrees; and internal rotation – 25 degrees. *See* Exhibit 22.

25. Dr. Hughes agreed with Dr. Ogin's concerns about adhesive capsulitis and was concerned with progressive losses in Claimant's active range of motion in the right shoulder. Dr. Hughes questioned MMI as the adhesive capsulitis appeared to represent a worsening of Claimant's injury and he recommended hand surgical reevaluation and follow up imaging to assess for progressive capsulitis. Dr. Hughes agreed with Dr. Sharma's decision to assign specific disorder impairment for complex surgical treatment

in conjunction with the active range of motion losses. Dr. Hughes opined that the range of motion measurements alone did not adequately rate the extent of Claimant's impairment, and agreed with Dr. Sharma that it was correct to combine the range of motion impairment with the specific disorder impairment. *See* Exhibit 22.

26. Dr. Hughes opined that the surgical treatment Claimant underwent involved structures extending beyond the region of the shoulder into the region of the anterior thorax and noted Claimant's continued right scapular dyskinesis and diffuse myofascial pain that extended into the thoracic region from Claimant's right arm. Dr. Hughes opined that merited assignment of permanent impairment in terms of the whole person rather than the upper extremity. Dr. Hughes calculated the impairment at 24% upper extremity including 16% for range of motion and 10% additional for the specific disorder impairment rating and Dr. Hughes converted the 24% upper extremity rating into a whole person rating of 14%. *See* Exhibit 22.

27. Dr. Ogin testified at hearing consistent with his IME report. Dr. Ogin opined that Dr. Sharma erred by awarding an additional 10% impairment due to the clavicle fracture and surgery. Dr. Ogin opined that the AMA Guides for shoulder impairment ratings, beyond range of motion ratings, are very limited with two exceptions that result in an additional rating. Dr. Ogin opined that the exceptions were distal clavicle resection or subacromial decompression and that Claimant did not have either procedure. Dr. Ogin agreed that doctors are allowed some discretion when rating permanent impairment, but that if they use discretion they need to justify their decision and that Dr. Sharma did not justify why an additional 10% was warranted in this case and Dr. Sharma did not cite to a section of the AMA Guides to support his decision to add an additional 10%.

28. Dr. Ogin agreed with the 8% rating provided by Dr. Sharma for range of motion loss and opined that was correct, but that the additional 10% was incorrect. Dr. Sharma opined that the AMA Guides do not provide any rating for clavicle fracture or surgery for the clavicle fracture because the surgery and functional impairment are addressed by the range of motion loss and the 8% rating here addressed it and the additional rating would be duplicative. Dr. Ogin went through the AMA Guides and explained why certain sections do not apply to this case including: no peripheral nervous system disorder, no vascular disorder, no bone or joint disorder, and no musculotendinous disorder. Dr. Ogin opined that Claimant did not have a musculoskeletal system defect where the severity of clinical findings did not correspond to the true extent of the musculoskeletal defect. Dr. Ogin provided an example of a rare situation like an irreparable rotator cuff tear where someone might have good range of motion but a severe tear. Dr. Ogin opined that if you use that section a provider usually states that the range of motion does not adequately reflect the severity of findings and explains why they gave a higher rating and noted that Dr. Sharma did not do. Further, Dr. Ogin opined that Claimant's case was not a rare case, but a very good case with a good outcome and that the range of motion adequately accounted for Claimant's resulting loss. Dr. Ogin opined that the impairment rating tips do not support the additional 10% given by Dr. Sharma and that the correct rating was 8% upper extremity

for the range of motion deficit. Dr. Ogin opined that there was no functional impairment in this case beyond the shoulder or shoulder activities.

29. Claimant testified credibly at hearing. Claimant indicated that his post operation recovery went well and that he had a plate and 8-12 pins/screws put in his right shoulder. Claimant testified that he was working with no restrictions. Claimant showed a scar on his right shoulder measuring approximately 4.5 inches in length that remained white, raised, and discolored from his normal skin tone. Claimant also showed a bump on his clavicle near where the metal plate attached to his right shoulder. Claimant showed his range of motion as slightly limited and testified credibly that he has trouble reaching, climbing a ladder, working with overhead valves, taking off his shirt, buckling his seatbelt, and that his hobbies are different now due to his limitations. Claimant testified credibly that with movement and overhead activities he has pain close to his neck.

30. The AMA Guides to the Evaluation of Permanent Impairment Third Edition (Revised) provide under Section 3.1j, Impairment Due to Other Disorders of the Upper Extremity under "Other Musculoskeletal System Defects" that in rare cases the severity of the clinical findings (e.g. loss of shoulder motion) does not correspond to the true extent of the musculoskeletal defect (e.g. severe and irreparable rotator cuff tear of the shoulder) as demonstrated with a variety of imaging techniques (e.g., MRI or surgical visualization). If the examiner feels that the measured anatomical impairment does not appropriately rate the severity of the patient's condition, an additional impairment can be given at discretion. *See* Exhibit 3.

31. The Division of Workers' Compensation Desk Aid #11- Impairment Rating Tips provides that not all persons with invasive procedures necessarily qualify for a numerical impairment rating and may have a zero percent rating. The tips provide that distal clavicular resection rating is 10% and that in general, for a subacromial arthroplasty if an additional rating is deemed appropriate because "…other factors have not adequately rated the extent of impairment," it should not exceed 10%. *See* Exhibits 3, M.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Whole Person versus Scheduled Impairment

Section 8-42-107(1)(a), C.R.S., provides that when an injury results in permanent medical impairment and the “injury” is enumerated in the schedule set forth in subsection (2) of the statute, “the employee shall be limited to the medical impairment benefits as specified in subsection (2).” If the claimant sustains an injury not found on the schedule § 8-42-107(1)(b), C.R.S., provides the claimant shall “be limited to medical impairment benefits as specified in subsection (8),” or whole person medical impairment benefits. As used in these statutes the term "injury" refers to the part or parts of the body that sustained the ultimate loss, not necessarily the situs of the injury itself. Thus, the term "injury" refers to the part or parts of the body that have been functionally disabled or impaired. *Warthen v. Industrial Claim Appeals Office,* 100 P.3d 581 (Colo. App. 2004); *Strauch v. PSL Swedish Healthcare System*, 917 P.2d 366 (Colo. App. 1996). Under this test the ALJ is required to determine the situs of the functional impairment, not the situs of the initial harm, in deciding whether the loss is one listed on the schedule of disabilities. *Strauch v. PSL Swedish Healthcare System, supra.* Pain and discomfort that limit the claimant's use of a portion of the body may constitute functional impairment. *Johnson-Wood v. City of Colorado Springs,* W.C. No. 4-536-198 (ICAO June 20, 2005); *Vargas v. Excel Corp.,* W.C. No. 4-551-161 (ICAO April 21, 2005). The ALJ may also consider whether the injury has affected physiological structures beyond the arm at the shoulder. *Brown v. City of Aurora,* W.C. No. 4-452-408 (ICAO October 9, 2002).

Section 8-42-107(2)(a), C.R.S., provides for scheduled compensation based on "loss of an arm at the shoulder." The claimant bears the burden of proof by a preponderance of the evidence to establish functional impairment beyond the arm at the shoulder and the consequent right to PPD benefits awarded under § 8-42-107(8)(c). Whether the claimant met the burden of proof presents an issue of fact for determination by the ALJ. *Delaney v. Industrial Claim Appeals Office,* 30 P.3d 691 (Colo. App. 2001); *Johnson-Wood v. City of Colorado Springs, supra.*

Claimant has established that he sustained functional impairment beyond the arm at the shoulder and the right to whole person impairment benefits. Here, not only did Claimant sustain a break in a physiologic structure beyond the arm at the shoulder, but he also has pain and discomfort in his clavicle and neck beyond the arm at the shoulder. This pain and discomfort limits the use of his right arm and shoulder and Claimant's limitations extend into structures beyond the arm at the shoulder. The opinion of Dr. Hughes is found credible and persuasive that Claimant is entitled to a whole person rating. Claimant has met his burden to show that the situs of functional impairment is beyond the arm at the shoulder and that a whole person rating is appropriate in this case.

Overcoming DIME on PPD Impairment Rating

A DIME physician must apply the AMA Guides when determining the claimant's medical impairment rating. *See* § 8-42-101(3.7), C.R.S.; §8-42-107(8)(c), C.R.S. The finding of a DIME physician concerning the claimant's medical impairment rating shall be overcome only by clear and convincing evidence. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

The questions of whether the DIME physician properly applied the AMA Guides, and ultimately whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000). A mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. *Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO March 22, 2000). Not every deviation from the rating protocols of the AMA Guides requires the ALJ to conclude that the DIME physician's rating has been overcome as a matter of law. Rather, deviation from the AMA Guides constitutes evidence that the ALJ may consider in determining whether the DIME physician's rating has been overcome. *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117 (Colo. App. 2003); *Logan v. Durango Mountain Resort,* W.C. No. 4-679-289 (ICAO April 3, 2009).

Respondents have failed to establish by clear and convincing evidence that the DIME physician's PPD rating in this case is incorrect. As found above, DIME physician

Dr. Sharma noted that an additional 10% rating was appropriate for the clavicle fracture and resultant surgery. The AMA Guides allow additional rating and provides examples of two instances including distal clavicle resection and subacromial decompression where an additional rating of 10% can be given. Including those two examples as types of injuries where an additional rating might be appropriate does not exclude the possibility of other conditions similarly being appropriate for an additional rating. Rather, the AMA Guides provide discretion to the rating physician to make that determination.

Here, at best, the Respondents have merely established a difference of opinion between Dr. Ogin and DIME physician Dr. Sharma that an additional rating is appropriate in Claimant's case. The language allowing the discretion indicates cases like Claimant's where the range of motion of the injured worker might be pretty good and thus might not capture or appropriately rate the severity of the underlying condition. If the rater believes this to be the case, the rater has discretion to give an additional rating. This is what DIME physician Dr. Sharma decided to do in Claimant's case. Claimant has very good range of motion, but had a significant injury with a significant surgery where a metal plate and approximately eight pins/screws were inserted. This procedure and alteration of his musculoskeletal system is arguably more invasive and more severe than a distal clavicle resection surgery (which is given as one example where the extra 10% rating would be appropriate). The AMA Guides essentially allow the rating physician to make a judgment call when the range of motion does not adequately reflect or rate the severity of the condition and allows the rater to provide extra rating. Dr. Sharma felt it appropriate in Claimant's case to do so.

Although Respondents also argue that Dr. Sharma should have justified or explained better his reason for doing so, the ALJ does not find this persuasive. Dr. Sharma expressly noted that Claimant did not have one of the two examples (distal clavicle resection, subacromial decompression) listed in the AMA Guides, but still noted that the extra rating was appropriate and that he was assigning the extra 10% impairment for specific disorder of the shoulder due to the clavicle fracture open reduction internal fixation. Although he does not expressly state that the clavicle fracture open reduction internal fixation is an invasive procedure that altered Claimant's musculoskeletal system justifying the extra rating, this is implied from his other comments explicitly noting Claimant does not have one of the two examples and that the rating was given for the surgery.

Dr. Hughes, as found above, agrees that Dr. Sharma correctly applied the AMA Guides and did not err. Dr. Hughes opined that in Claimant's case, the range of motion did not adequately rate the extent of Claimant's impairment. Dr. Hughes agreed that it was correct to combine range of motion losses with specific disorder impairment since Claimant's range of motion was good and did not adequately represent or rate the extent of Claimant's impairment. Dr. Ogin disagrees and believes that Claimant's range of motion measurements adequately rate the extent of Claimant's impairment. However, the AMA Guides provide discretion to the rating physician. Although Dr. Ogin disagrees with Dr. Sharma and with Dr. Hughes, Respondents have failed to establish

by clear and convincing evidence that Dr. Sharma is incorrect or that he erred when he provided an additional rating. Rather, Dr. Sharma has done what the AMA Guides and the Rating Tips contemplate and specifically allow. He provided an additional rating when he believed the range of motion alone did not adequately represent or rate the extent of Claimant's impairment. This is not found to be in error.

Disfigurement

Section 8-42-108(1), C.R.S provides that "if an employee is seriously, permanently disfigured about the head, face, or parts of the body normally exposed to public view…the director may allow compensation not to exceed four thousand dollars to the employee who suffers such disfigurement." As found above, as a result of his surgery and the implantation of a metal plate and pins/screws, Claimant has disfigurement that includes a 4.5 inch scar and a bump near his clavicle. The ALJ finds and concludes that Claimant has established an entitlement to a disfigurement award in the amount of $1,850.

ORDER

It is therefore ordered that:

1. Claimant has established that he is entitled to a whole person impairment rating and that the situs of his functional impairment is beyond the arm at the shoulder.

2. Respondents have failed to overcome the opinion of DIME physician Dr. Sharma by clear and convincing evidence. Claimant is entitled to a PPD impairment rating of 10% whole person.

3. Insurer shall pay Claimant $1,850 for the disfigurement outlined above. Insurer shall be given credit for any amount previously paid for disfigurement in connection with this claim.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures

to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 16, 2017,

/s/ Michelle E. Jones

Denver, CO 80203

ISSUES

I. Whether Respondents have shown, by a preponderance of the evidence, that Claimant was responsible for her own termination, thus terminating her Temporary Total Disability benefits, effective on her termination date.

II. Whether Claimant has shown, by a preponderance of the evidence, that Cymbalta is reasonably necessary to treat her admitted work injury.

III. Whether Claimant has shown, by a preponderance of the evidence, that Lyrica is reasonably necessary to treat her admitted work injury.

PROCEDURAL CONCLUSION

During the hearing, Claimant's counsel objected to the testimony of Dr. Ramaswamy on the issue of the reasonableness and necessity of the continued use of Lyrica to treat Claimant's work injury. That objection was sustained, as only Cymbalta was endorsed by Respondents on this issue, and Claimant was not prepared to address this issue at hearing.

The post hearing deposition of Dr. Bert Willman was then taken on April 13, 2017 by Claimant. During direct examination, questioning by Claimant actually focused more on the necessity for the continued usage of **Lyrica**, than on Cymbalta. At no point during this deposition was any attempt made to limit Lyrica questions for any purpose; rather Lyrica began as the focus of direct examination.

Taking the hearing record as a whole, the ALJ now finds that the reasonableness and necessity of Lyrica was tried by consent of all parties to the hearing.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following Findings of Fact:

1. Claimant was born on July 7, 1952, and is currently age 64. She has worked for Respondent Walmart for over 30 years in various non-management capacities.

2. Claimant sustained an admitted industrial injury on January 12, 2015. She fell in an icy Walmart parking lot arriving at work, badly injuring her left ankle. She received emergency treatment at Parkview Medical Center, including surgical implantation of a plate with screws.

3. The emergency room summary report for that date lists Cymbalta and Lyrica among Claimant's current medications. (Ex. A, p. 001).

4. On June 22, 2015, David C. Hopkins, PhD, noted that Claimant was on Cymbalta for a pre-existing diagnosis. (Ex. C, p. 0101)

5. On August 25, 2015, Dwight Caughfield, M.D., noted Claimant was already taking pregabalin (generic for Lyrica) and duloxetine (generic for Cymbalta) for her fibromyalgia. (Ex. D, p. 0103)

6. On October 6, 2015, the authorized treating physician ("ATP"), Terrence Lakin, D.O., noted that Claimant persisted with severe pain she stated was unbearable. He also noted she continued taking Lyrica and Cymbalta. (Ex. B, p. 026)

7. On October 19, 2015, Claimant underwent a second surgical procedure to this ankle by Dr. John Shank, for debridement of the area, and to remove the previously placed hardware. Claimant reported ongoing pain to her ankle, in spite of this surgery.

8. On December 9, 2015, Dr. Lakin, released Claimant to return to modified duty for two hours per day, sitting 90% of the two hours, occasionally standing 2–3 minutes at a time. (Ex. B, p. 043) Dr. Lakin explained to Claimant that returning to work with restrictions was therapeutic and just sitting at home worrying about her pain wasn't helping her recover. (Ex. B, p. 049)

9. On December 30, 2015, January 13, 2016, and February 3, 2016, Dr. Lakin again released Claimant to return to modified duty for two hours per day, sitting 90% of the two hours, occasionally standing 2–3 minutes at a time. (Ex. B, pp. 052, 061 and 069) On December 30, 2015, Dr. Lakin noted that Claimant complained of "an extensive list of reasons she can't return to work." He noted that the restrictions he had her on were no different to what she was doing at home, so she should be able to tolerate it without difficulty. He explained to Claimant that returning to work on the limited basis he had laid out was the only way she was going to improve at that point. (Ex. B, p. 057) On January 13, 2016, Dr. Lakin asked Claimant if she tried to go back to work as directed at the last visit. He pointed out to her that her restrictions were for 90% sit-down activities with 2–3 minute intervals of standing, and that she was probably more active at home than what she could be at work. Her response was, "I just hurt too much." (Ex. B, p. 067)

10. Dr. Lakin also left open the possibility of a left ankle fusion or replacement "if warranted in the next three years."

11. On February 4, 2016, personnel manager Sarah called Claimant and advised her Dr. Lakin had released her to modified duty and Employer could accommodate her restrictions. Sarah also advised Claimant of her schedule and that she needed to call if she was not going to come to work. Claimant told Sarah she couldn't stand and she was having a hard time and that Sarah could talk to her attorney. Sarah explained to Claimant that Dr. Lakin had released her to work for two hours in the fitting room and what she should be able to do. Sarah documented this telephone call

in a statement dated 02/04/2016. (Exhibit Q, page 0195) Sarah testified how Employer would go over an injured worker's restrictions with them, making sure both the worker and her supervisors were aware of her restrictions. These restrictions would include activities the worker said they couldn't do, even if the doctor said they could. Sarah testified that she never told Claimant she would be fired because it's not her place to relay anything like that. Sarah's call to Claimant was witnessed by assistant manager Meghan Ruse. (exhibit Q, page 0202)

12. On February 12, 2016, Sarah sent a certified letter to Claimant advising her that three work days of unreported absences were considered job abandonment and that her resignation was being processed. (Ex. Q, p. 0196) On February 22, 2016, Claimant was retroactively granted a leave of absence from September 14, 2015, through February 22, 2016. (Exhibit 1, page 000006) Claimant never came back to work after Sarah's telephone call. She continued to accrue absences/no calls/no shows after February 22, 2016. Claimant was terminated as of March 7, 2016. (Ex. Q, p. 0203)

13. Claimant testified to her opinion that the fitting room job she was offered was not a sit-down job. She also testified to her opinion that Employer would not have provided her with a stool. On cross-examination, Claimant acknowledged that a light-duty job is not the same as a regular job. She also acknowledged that when she went over paperwork for her previous light-duty job, she marked what duties she couldn't do and she was excused from those job duties.

14. Respondents submitted videos of Claimant shopping at another Walmart on January 25, 28, and 31, 2016, during the time Dr. Lakin was advising Claimant to return to modified work and Claimant was telling him she could not work. The videos show Claimant walking and standing without apparent limitation. (Ex. R, S and T) Sarah also testified she had seen Claimant shopping at Hobby Lobby in December, and she was walking without apparent difficulty without an assistive device. (Ex. Q, p. 0195)

15. On February 25, 2016, Claimant underwent a functional capacity evaluation on referral from Dr. Lakin. The FCE demonstrated that Claimant displayed a constant level sitting tolerance and a frequent level standing/walking tolerance of 30 minutes in any one hour time period. (Ex. 4, p. 000016)

16. On February 26, 2016, Dr. Lakin saw Claimant for an impairment rating. (Ex B, p. 077) Dr. Lakin noted that despite continued medication for her fibromyalgia including Lyrica and Cymbalta, Claimant continued to have significant pain. (Ex B, p. 078) Dr. Lakin provided Claimant with permanent restrictions based on the functional capacity evaluation: lifting/carrying to abilities between sedentary light and light; limited bending and lifting from below waist/knee level; constant level sitting tolerance; standing/walking tolerance 30 minutes in any one hour time period; limited/decreased ability to squat, kneel, crawl and stair use; no ladders. (Ex. B, p. 080)

17. Claimant testified Dr. Timms, a rheumatologist, had placed her on Cymbalta several years back, and that she continued to take it uninterruptedly until she quit Employer's insurance, about a year before the hearing. She was still on the

Cymbalta and Lyrica at the time she was let go by Employer. Dr. Timms, Claimant's primary care physician before her injury, had prescribed Cymbalta and Lyrica for her fibromyalgia. Even before her fall, Claimant had all-over body pain that she rated as 7 out of 10.

18. On June 14, 2016, Claimant's primary care physician, Kasey S. McCreight, M.D., noted Claimant was taking Lyrica 150 mg capsule twice a day and Cymbalta 60 mg capsule once a day. (Ex. F, p. 0115)

19. On July 13, 2016, Claimant was seen by Miguel Castrejon, M.D., for a Division IME. (Ex. G, p. 0122) Under present treatment program, Dr. Castrejon noted Claimant's medications included Lyrica 175 mg (sic) and Cymbalta 60 mg. (Ex. G, p. 0123) Under past medical history, Dr. Castrejon noted Claimant had been diagnosed with fibromyalgia and Sjögren's and was using Lyrica prior to this accident. (Ex. G, p. 0124)

20. In this same initial DIME report, Dr. Castrejon found Claimant to not be at MMI, and that she needed additional care and testing to be brought to MMI.

21. On August 29, 2016, Respondents filed a Petition to Terminate Compensation from February 12, 2016, and ongoing. The grounds for Respondents' petition were: "Claimant failed to call or report to work for seven consecutive scheduled days. She had been released to modified duty and work within her restrictions had been offered. TTD should be terminated and TPD reinstated." (Ex. M, p. 0178)

22. Claimant was first seen by Bertram Willman, M.D., on August 30, 2016 for her ongoing pain symptoms, after being referred by Dr. Shank. Under past, family and social history, Dr. Willman noted Claimant's current medications were Cymbalta (duloxetine 60 mg capsule) and Lyrica (pregabalin 75 mg capsule). (Ex. I, p. 0136)

23. Claimant began receiving Social Security retirement benefits in September 2015, having applied August 24, 2015. (Ex. P, p. 0187)

24. On September 27, 2016, Dr. Willman responded to a letter from the adjuster about the medical necessity of Cymbalta for Claimant's work injury. Dr. Willman's response was RSD of LLE (left lower extremity). (Ex. I, p. 0139).

25. On October 3, 2016, Annu Ramaswamy, M.D., prepared a Rule-16 response to the question of whether Cymbalta was reasonable and necessary for Claimant's work-related injury of January 12, 2016. (Ex. J, p. 0140) Dr. Ramaswamy noted in his discussion that it appeared Claimant was already utilizing Cymbalta and Lyrica for fibromyalgia, and that her pain levels since the injury had been quite high despite her use of Lyrica and Cymbalta. He opined that the continued use of Cymbalta would correlate more with treatment for the pre-existing fibromyalgia then a neuropathy diagnosis, given that Claimant had not noticed a significant clinical benefit from utilizing the Cymbalta. He therefore opined that the Cymbalta was not medically reasonable or related to the January 2015 work-related injury. (Ex. J, p. 0141)

26. Claimant was seen for an independent medical examination by Dr. Ramaswamy on December 2, 2016. (Ex. J, p. 0143) Claimant gave a history of fibromyalgia since 1995 and stated she pretty much notes total body pain at a constant level of 7/10. She stated she was placed on Lyrica for fibromyalgia in 2005, and it helped somewhat. She stated she had been taking Cymbalta for at least six months prior to the January 2015 injury, and it gave her some relief. (Ex. J, p. 0146)

27. Dr. Ramaswamy testified that Claimant was utilizing Lyrica and Cymbalta throughout 2015, but her neuropathic pain component was very high, 8/10, so he didn't see a therapeutic effect with that medication for that injury. Dr. Ramaswamy testified his opinion would not change based on Claimant's testimony she stopped taking Cymbalta the first quarter of 2016, because she was taking it throughout 2015 and she was experiencing significant neuropathic pain during that timeframe despite Cymbalta.

28. Dr. Willman testified that his practice was prescribing Vicodin, Tizanidine, and Lyrica, and Claimant's nurse practitioner in Pueblo was prescribing Cymbalta. (Depo trans p. 8, lines 1–13) Dr. Willman testified to his understanding that Claimant had been taking Lyrica for some time before her injury and continued to take it after the work injury. (Depo. trans. P. 25, lines 20–24) Asked why, if Claimant was taking Lyrica for years before her work injury, it suddenly became related to her work injury, Dr. Willman responded: "I have no idea. I honestly don't know. I don't know. I mean that's a good question, I guess, for workers' comp." (Depo. trans. p. 26, lines 20–22) He acknowledged that the Lyrica was treating Claimant's fibromyalgia before, and it's still treating her fibromyalgia. (Depo. trans. p. 26, line 25, to page 27, line 4.) He added that "the treatment for fibromyalgia is a combination of Cymbalta and Lyrica. Those are really considered great drugs for that." (Depo. trans. p. 27, lines 16–19)

29. Dr. Willman further testified, however, that Claimant's prescription for Lyrica (75 milligrams, one tablet three times a day) was for her ankle pain:

> Q. What exactly does the Lyrica do?
>
> A. What the Lyrica will do is cut down on the intensity, the severity, and the frequency of that burning pain that Barbara's experiencing in her left calf and left ankle. (Depo trans, p. 9, lines 9-15).

30. Dr. Willman further testified that the fact that Claimant may have been on Lyrica previously for an unrelated condition does not rule out the potential need for Lyrica as a result of this injury. (Depo trans., pp. 12, 13.)

31. Dr. Willman also stated that "treatment one is making sure she **stays** on neuropathic medicines--Cymbalta, Lyrica--or at least someone's prescribing for her" (Depo trans., p. 19, lines 8-11). He stated that Claimant has "significant neuropathic pain that's probably not going to go away" and that it is certainly "not unheard of" for a patient (such as Claimant) to be placed on both Cymbalta and Lyrica (Depo trans., p. 24, 25). He further clarified that Claimant is now "left with chronic neuropathic pain in

her ankle, not caused by RSD ("Reflex Sympathetic Dystrophy"), and not caused by spinal stenosis."

32. The ALJ finds that while Claimant may have called in to work as instructed for a period of time, it was not reasonable for her to assume she was being terminated based upon a phone call with someone who lacked the authority to terminate her. It was further unreasonable for Claimant to simply presume that Walmart would not provide her a stool to assist her in her modified duties, and therefore she need not attempt to return to work. The ALJ finds that Claimant, despite this unfortunate injury and the pain it has caused, simply lost her desire to work at Walmart any longer, no matter how reasonable the terms. Instead, she began receiving Social Security benefits, and stayed home.

33. The ALJ finds that Claimant was released to return to work with restrictions, and the employer offered Claimant work within her restrictions. Claimant chose not to return to work, and therefore Claimant was responsible for her termination. At all times pertinent, Employer's actions were reasonable. On February 12, 2016, Employer sent Claimant a letter advising her that her resignation was being processed. Claimant's last day at work was March 7, 2016.

34. The ALJ finds that despite Claimant taking Cymbalta and Lyrica before her work injury and continuing to take them after her work injury, that both drugs continue to be reasonable and necessary to alleviate the ongoing pain from this admitted injury to her ankle. The ALJ does not conclude that merely because Cymbalta and Lyrica are treating Claimant's pre-existing fibromyalgia, that they are not now also treating her work injury. The ALJ credits the professional opinion of her treating physician, Dr. Willman, more than that of the IME physician, Dr. Ramaswamy.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Generally

1. The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., C.R.S. , is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201(1); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337, 1339 (1997). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally: neither in favor of the rights of the claimant nor in favor of the rights of respondents, and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

2. Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P. 3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968); *Robinson v. Youth Track*, W.C. No. 4-649-298 (ICAO May 15, 2007).

Claimant's Responsibility for Termination

3. Sections 8-42-103(1)(g) and 8-42-105(4)(a), C.R.S., provide that "In cases where it is determined that the temporarily disabled employee is responsible for termination of employment, the resulting wage loss shall not be attributable to the on-the-job injury." The Colorado Court of Appeals has defined the issue of responsibility for termination as an issue of whether the claimant performed some volitional act or exercised a degree of control over the circumstances resulting in the termination. *Padilla v. Digital Equipment Corp.*, 902 P.2d 414 (Colo. App. 1995).

4. The procedures for the offer of modified employment specified in W.C.R.P. Rule 6-1(A) only apply when respondents seek to "terminate temporary disability benefits without a hearing ...." *McCloud v. Progressive Insurance*, W.C. No. 4-980-200-01 (ICAO Apr. 1, 2016); *Temple v. Kroll Government Services*, W.C. No. 4-761-187 (ICAO Oct. 14, 2009). When respondents seek to terminate benefits by applying for a hearing, the requirement to include in the offer of employment the duties, wages and hours, and a statement from the treating physician that the duties are within the claimant's physical restrictions, and the requirement to provide the claimant three business days from the receipt of the offer to start the job, as required by Rule 6-1, do not apply. *McCloud, supra.* Section 8-42-105(3)(d)(I), C.R.S., only requires that the physician provide a "written release to return to modified employment" and "such employment is offered to the employee in writing." The physician does not need to approve the actual modified job. *Barnett v. Wal-Mart Stores*, 4-769-486 (ICAO Oct. 27, 2010). *See McCloud, supra*.

5. Dr. Lakin released Claimant to return to modified duty and explained to her that returning to work with restrictions was therapeutic and the only way she was

going to improve at that point. Personnel manager Sarah called Claimant and advised her Dr. Lakin had released her to modified duty, Employer could accommodate her restrictions, she was scheduled to work, and she needed to call in if she was not going to work. Claimant did not even attempt to return to work and did not call in after Sarah's call. Claimant's opinion that the offered job was not a sit-down job is not a credible excuse for her failure to return to work, especially in light of her acknowledged previous experience with the light-duty process in which she was excused from job duties she said she couldn't do. The ALJ finds and concludes Claimant performed a volitional act and exercised a degree of control over the circumstances resulting in termination of her employment when she failed to return to the reasonably offered light-duty work. This occurred on March 7, 2016.

Reasonable and Necessary Medical Benefits

6. For a compensable injury, the respondents must provide all medical benefits that are reasonably necessary to cure and relieve the injury. C.R.S. § 8-42-101. The claimant has the burden of proving entitlement to specific medical benefits. *See* § 8-43-201(1), C.R.S; *Lutz v. Industrial Claim Appeals Office*, 24 P.3d 29, 31 (Colo. App. 2000). Whether the claimant sustained her burden of proof is a factual question for resolution by the ALJ. *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997).

7. Claimant has the burden of proving the prescriptions of Cymbalta and Lyrica remain reasonably necessary to cure and relieve the effects of her January 12, 2015 injury. Claimant was already taking both Cymbalta and Lyrica before her work injury for her fibromyalgia. However, Claimant suffered serious injuries to her left ankle while at work. Despite the fact that reasonable minds mind differ over the effectiveness of these drugs to treat her neuropathic pain- or her fibromyalgia- they present as the best alternative at the present time. ALJ finds that Cymbalta and Lyrica, as prescribed in dosages set by her ATPs, remain a reasonably necessary treatment for Claimant's work injury.

ORDER

It is therefore Ordered that:

1. Claimant was responsible for her own termination, effective March 7, 2016. Her Temporary Total Disability benefits terminated on that date, to be replaced with Temporary Partial Disability benefits at the rate of 75% of the applicable TTD rate until terminated by operation of law.

2. Respondents shall be entitled to a credit for any overpayment of TTD benefits.

3. Respondents will continue to supply Cymbalta to Claimant as recommended by her ATP.

4. Respondents will continue to supply Lyrica to Claimant as recommended by her ATP.

5. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Did Claimant prove by a preponderance of the evidence that his claim should be reopened for medical treatment after MMI?

2. Did Claimant prove that viscosupplementation injections administered by Dr. Purcell are reasonable, necessary, and related medical treatment after MMI?

FINDINGS OF FACT

1. Claimant worked for Employer as the Director of strategic planning. On July 24, 2015, he injured his right knee playing volleyball at a team-building event.

2. Claimant initially saw his primary care physician, and was then referred to Dr. Derek Purcell, an orthopedic surgeon. A right knee MRI on August 31, 2015 showed an ACL tear and a medial meniscus tear.

3. Claimant has a significant history of prior right knee injuries. He tore his ACL in 2007 while he was in the military. He had surgery and recovered well with minimal ongoing problems. He had another right knee injury and 2012, which did not require surgery. He wore a brace and improved with therapy. After the 2012 injury, he returned to full work with no restrictions

4. In October 2015, Employer referred Claimant to CCOM to serve as the primary ATP "gatekeeper."

5. Dr. Purcell performed surgery to repair the ACL and medial meniscus on November 2, 2015. Subsequently, Claimant completed physical therapy and was released to full duty on April 8, 2016.

6. Claimant saw Dr. George Johnson at CCOM on April 18, 2016 for evaluation of MMI and impairment. Claimant complained of infrequent mild pain but was not using any pain medication. He stated his pain was worse when he climbed steps. Physical examination revealed no swelling or effusion of the knee. Claimant could squat to 90° without pain. He had decreased range of motion, but no crepitus. The knee was stable with no laxity or pain. Dr. Johnson assigned a 20% lower extremity rating: 5% for the ACL, 5% for the medial meniscus and 11% for ROM. Dr. Johnson opined Claimant did not require any maintenance care.

7. When he was put at MMI, Claimant had two more post-surgical follow-up appointments scheduled with Dr. Purcell.

8. Respondents filed a Final Admission of Liability (FAL) on May 6, 2016 based on Dr. Johnson's report. The FAL stated "Respondents deny liability for post-MMI medical benefits as not reasonable or necessary per attached report from Dr. Johnson."

9. Claimant spoke with a claims adjuster for Insurer by telephone sometime after receiving the FAL. The adjuster who had been handling Claimant's case since the beginning was on vacation, and he spoke with a different adjuster who was covering the desk. Because of that conversation, Claimant thought that Respondents would cover medical treatment for his knee in the future regardless of the language on the FAL. Claimant did not object to the FAL, and the claim closed.

10. Claimant followed up with Dr. Purcell on June 7, 2016. He reported he was "doing well." Physical examination showed no effusion or other significant abnormality. Claimant was having patellofemoral symptoms due to quadriceps weakness. Dr. Purcell opined the symptoms should improve with time as Claimant continued to work on strengthening. The diagnosis was "status post right knee revision ACL reconstruction with tibialis anterior allograft, partial medial meniscectomy, hardware removal, 11/02/2015."

11. Claimant returned to Dr. Purcell on August 2, 2016. Dr. Purcell noted he was "doing well," but "unfortunately, he continues to have some patellofemoral pain." Physical examination revealed a "trace effusion." Dr. Purcell indicated claimant could start skating and progress to hockey over time. No specific follow-up was scheduled, but Dr. Purcell indicated Claimant could return "on an as-needed basis."

12. Claimant started skating again in mid-September 2016, and subsequently started playing hockey again. As a result of these activities, Claimant began having significant swelling and pain in the right knee.

13. Claimant saw Dr. Purcell again on November 17, 2016. He stated he had been participating in all sports but was having recurrent swelling. On physical examination he had a 1+ effusion. Dr. Purcell opined "[Claimant's] symptoms are most likely consistent with his patellofemoral articular cartilage disease, which [was] seen at the time of surgery." Due to lack of benefit from measures such as icing, NSAIDS, and activity modification, Dr. Purcell recommended viscosupplementation. Dr. Purcell's diagnosis was "right knee patellofemoral osteoarthritis."

14. Insurer paid for the June 7 and August 2, 2016 appointments with Dr. Purcell. Insurer denied the November 17 visit and subsequent treatments.

15. Claimant underwent a series of three viscosupplementation injections on January 10, January 17, and January 24, 2017, under his personal health insurance.

16. Claimant failed to prove that the viscosupplementation injections and appointments with Dr. Purcell on or after November 17, 2016 were causally related to his admitted industrial injury.

17. Claimant failed to prove a basis for reopening his claim.

CONCLUSIONS OF LAW

A. The issue of medical benefits after MMI is closed

Claimant conceded he received the FAL and did not object to it. Ordinarily, that would be sufficient to prove his claim is closed. But Claimant's testimony that the adjuster told him Insurer would cover future medical treatment, coupled with the payment of appointments with Dr. Purcell in June and August 2016, raises a question whether Respondents voluntarily reopened the claim or waived the defense of claim closure. Although Claimant did not explicitly raise this argument, the ALJ finds it was fairly implied by the evidence and arguments presented.

Payment of medical benefits after a claim has closed may or may not constitute a voluntary reopening and waiver of the closure defense, depending on the circumstances. For instance, an insurer may pay for medical evaluations or treatment simply to determine whether a claimant's condition has worsened sufficiently to justify reopening. *Arneson v. Kimzey Casing Service, Inc*., W.C. No. 4-201-940 (ICAO, June 6, 1986). Or the payment may be the result of a mistake. *Id*. The key question is whether the respondents' words or conduct unambiguously manifest intent to reopen the claim or waive its right to insist that Claimant prove a basis for reopening before providing additional benefits.

Waiver is the intentional relinquishment of a known right. *Johnson v. Industrial Commission*, 761 P.2d 1140 (Colo. 1988). A waiver may be explicit, such as when a party orally or in writing abandons an existing right or privilege. Or it may be implied, as when a party engages in conduct which manifests its intent to relinquish the right or privilege or acts inconsistently with its assertion. *Id.* The burden of proof is on the party asserting waiver. *Id*.

The ALJ finds Insurer's conduct was too ambiguous to establish a voluntary reopening or waiver. The fill-in adjuster Claimant spoke with was not even familiar with Claimant's file. Rather than rescinding or waiving the unequivocal denial of future medical stated in the FAL, the covering adjuster was probably explaining Claimant in general terms he would still have the opportunity to pursue further treatment by reopening his claim. Nor does the ALJ find that payment of the two office visits constituted a voluntary reopening. As noted in *Arneson*, there may be many reasons an insurer would cover treatment without agreeing to reopen. Insurer may have covered the June and August 2016 office visits to determine whether Claimant needed any further injury-related treatment. More likely, Insurer simply allowed Claimant to complete his postsurgical orthopedic appointments, with no intention of allowing treatment beyond that. Or the payments may have simply been a mistake on Insurer's part. In any event, the ALJ is unwilling to infer intent to reopen the claim from the evidence presented. The ALJ concludes Claimant did not present sufficient persuasive evidence to prove that Insurer intentionally relinquished its rights regarding reopening or waived the denial of future medical benefits reflected on the FAL. Therefore, the issue of medical benefits after MMI is closed.

B. Legal standards for reopening

Section 8-43-303 authorizes an ALJ to reopen any award on the grounds of error, mistake, or a change in condition. The reopening authority reflects a "strong legislative policy" that the goal of achieving a fair and just result overrides the interests of litigants in obtaining final resolution of their dispute. *Padilla v. Industrial Commission*, 696 P.2d 273, 278 (Colo. 1985). Thus, a "final" award means only that the matter has been concluded subject to reopening if warranted under the applicable statutory criteria. *Renz v. Larimer County School District Poudre R-1*, 924 P.2d 1177 (Colo. App. 1996). The authority to reopen a claim is permissive, and the decision whether to reopen a claim when the statutory criteria have been met is left to the ALJ's discretion. *Id*. The party requesting reopening bears the burden of proof on any issue sought to be reopened. Section 8-43-304(4).

In the reopening context, a change in condition refers "to a change in the condition of the original compensable injury or to a change in the claimant's physical or mental condition which can be causally connected to the original compensable injury." *Chavez v. Industrial Commission*, 741 P.2d 1328, 1330 (Colo. App. 1985). A "mistake" or "error" may refer to a mistake or law or of fact. *Ward v. Azotea Contractors*, 748 P.2d 338 (Colo. 1987). The ALJ has wide discretion to determine whether a mistake has occurred which justifies reopening a claim. *Osborne v. Industrial Commission*, 725 P.2d 63 (Colo. App. 1986).

Even if a claimant proves an error, mistake, or change in condition, he is not automatically entitled to have his claim reopened. Rather, reopening is only appropriate if additional benefits will be awarded. *Richards v. Industrial Claim Appeals Office*, 996 P.2d 756 (Colo. App. 2000).

C. Claimant did not prove the viscosupplementation injections are related to his admitted injury

Claimant's legal theory regarding reopening is not entirely clear, but his arguments and testimony suggest he is asserting a mistake and a change of condition. The ALJ has considered whether any of the statutory grounds for reopening are present. Ultimately, the ALJ concludes there is no basis to reopen the claim because Claimant did not prove the requested medical treatment is causally related to his admitted injury.

Claimant presented no persuasive evidence to prove a causal connection between the viscosupplementation injections and his admitted injury. There is no indication of any recurrent pathology regarding the ACL or meniscus, and Dr. Purcell opined Claimant's ongoing symptoms were related to patellofemoral osteoarthritis. The osteoarthritis most likely predated Claimant's industrial injury, and Claimant presented no persuasive evidence to prove that the injury aggravated, accelerated, or combined with the pre-existing condition to cause his current need for medical treatment. Neither Dr. Purcell nor Dr. Johnson opined the injury aggravated Claimant's preexisting osteoarthritis. Claimant's impairment rating was based on an ACL injury and meniscus

repair under Table 40, but no rating was given for arthritis. The ALJ acknowledges a claimant is not required to present expert opinion to establish medical causation, *Rockwell International v. Turnbull*, 802 P.2d 1182 (Colo. App. 1990), but the lack of opinion evidence is a factor the ALJ can consider when evaluating the totality of persuasive evidence.

The ALJ further notes that on November 17 Dr. Purcell changed the diagnosis on from an injury-related diagnosis to "right knee patellofemoral osteoarthritis." The ALJ infers from the change of diagnosis that Dr. Purcell did not believe treatment on or after November 17, 2016 represented a continuation of Claimant's injury, but instead reflected a different condition.

The crux of Claimant's argument is since he did not have chronic knee pain or swelling before his accident, the persistence of those symptoms proves the requisite causal connection. But the ALJ does not find the mere existence of a temporal relationship sufficient to prove that the injury aggravated the Claimant's pre-existing arthritis. Moreover, the evidence shows Claimant had no swelling or evidence of effusion at the time of MMI or on June 7, 2016. The swelling did not become significant until after Claimant returned to skating and playing ice hockey. Ultimately, the swelling is what prompted Claimant to pursue the viscosupplementation injections. Based on the evidence presented, the ALJ finds it more likely that Claimant's osteoarthritis was aggravated by his participation in sports or other vigorous activities, rather that the industrial injury.

Based on the totality of evidence presented, the ALJ concludes Claimant failed to prove by a preponderance of the evidence that medical treatment on or after November 17, 2016 was causally related to his industrial injury.

ORDER

It is therefore ordered that:

Claimant's request to reopen his claim additional for medical benefits after MMI is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 17, 2017

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

The issues to be determined by this decision are the following:

a) Whether Claimant established by a preponderance of the evidence that he suffered a compensable work related injury on January 5, 2016;

b) What is Claimant's average weekly wage (AWW); and

c) Whether Respondents established by a preponderance of the evidence that Claimant was responsible for his wage loss and therefore not entitled to an award of indemnity benefits.

STIPULATIONS

The parties reached the following stipulations:

a) Claimant's AWW includes the cost of continuing medical coverage in the amount of $119.59 per week, starting on August 1, 2016; and

b) Claimant was employed by Employer at $12-per hour, for 9-hours per day, 4-days per week.

FINDINGS OF FACT

1. Claimant is a 27-year-old day program counselor who worked for Employer starting in October 2015. Claimant's job duties included transportation of mentally handicapped individuals in Employer provided vehicles. On January 5, 2016, Claimant alleges he was assaulted as he transported an autistic individual that was also unable to speak. Claimant reported that the individual became agitated at the sound of a passing siren. The individual calmed down but became agitated again and allegedly struck Claimant in the head 3-5 times. Claimant alleges he worked the remainder of his shift without difficulty.

2. During examination at Concentra on January 6, 2016, Claimant reported he had been punched in the right side of his head and face approximately 3-4 times and had since had a terrible headache with vomiting. Claimant complained of headache, dizziness, memory loss, photophobia, slurred speech, confusion impaired balance and poor coordination. Physician Assistant (PA) Julia Balderson noted no external swelling of the head and that "there is no evidence of trauma." However, Claimant had tenderness to palpation on the *left* side of his head. CT scans were negative for acute

fracture or evidence of acute intracranial injury. Claimant was diagnosed with a closed head injury and was taken off of work until his follow-up appointment on January 7, 2016.

3. Claimant also went to an urgent care facility at Boulder Community Health on January 6, 2016. Upon evaluation, there was again no note of any objective/observable evidence of an acute head injury. Likewise, Claimant denied any back or neck pain.

4. Dr. Joseph Fillmore conducted a "Physician Advisor" review regarding compensability on January 27, 2016. Dr. Fillmore recommended denial of the claim pending further investigation due to a lack of evidence of acute trauma and Claimant's reported history of multiple head injuries.

5. Claimant had been released to restricted duty by the end of January 2016. On April 18, 2016, Claimant attended an examination with PA Balderson. Claimant reported that he was only working ½ shift of the 3 shifts he was cleared for and scheduled to work. Claimant stated that he "should not be working." Per Claimant's request, PA Balderson took him completely off of work due to his subjective presentation of worsening symptoms and complaints.

6. In a letter dated June 15, 2016, Dr. Tentori also questioned Claimant's subjective presentation without objective evidence of injury. As such, Dr. Tentori recommended Claimant return to work; limiting his work day to four hour shifts and then gradually increase his work hours. On June 23, 2016, Claimant was placed on restrictions that allowed him to work four hours per day in a dim, quiet environment and included no driving.

7. Video surveillance obtained in June, July, and November 2016, showed Claimant behaving inconsistent with his subjective complaints. On June 8, 2016, Claimant was observed eating in a restaurant, walking outside on a sunny day and driving his vehicle without the use of sunglasses or any outward signs of disability. On June 18, 2016, Claimant is again surveilled and observed driving and walking outside without the use of sunglasses and in no apparent distress. Around the same time in June 2016, Claimant was unable to complete his neurological examination with Dr. Paul M. Richards, a clinical neuro-psychologist, due to his alleged severe migraine symptoms. And, despite the surveillance video of Claimant operating his vehicle, during Claimant's initial evaluation with Dr. Kimberly Horiuchi on June 28, 2016, Claimant reported that he was not currently driving, as he gets overwhelmed very easily by too much stimulation.

8. On June 24, 2016, Claimant presented at SCL Community Hospital for emergency evaluation for recurrent headaches. The medical report reflects that this was Claimant's third emergency department visit within the month for headache and that Claimant had received 3 prescriptions for opiates per month, in March, April and May, and that these prescriptions all came from different providers.

9. Claimant underwent an IME with Dr. Raschbacher on September 2, 2016. Upon examination and review of medical records, Dr. Raschbacher opined that there was absolutely no evidence to substantiate a work-injury or Claimant's continued severe and subjective pain complaints. He noted that Claimant's ENT and neurological examinations were unremarkable. Claimant did not have objective substantiating factors and no outward sign of trauma. There was no objective indication of a trauma having occurred to Claimant's the head or elsewhere. The doctor also noted that Claimant complained of neck pain approximately 6 weeks after the alleged injury and that if Claimant's neck pain was a result of trauma, it would have manifested itself within 1-2 days after the alleged incident.

10. Dr. Raschbacher credibly testified during deposition to a complete lack of medical evidence or support to substantiate the severity and duration of Claimant's alleged symptoms. Dr. Raschbacher credibly concluded that the force generated by the autistic individual seated next to Claimant would have been insufficient to cause the issues complained of 13 months post-injury and if indeed the punches did cause the symptoms, one would have seen evidence of injury at the site of impact. He also reasoned that the longer Claimant continued to report severe symptoms, the less likely it was that those symptoms could be attributable to the alleged incident because with head injuries, the symptoms are worst at first and then resolve with time.

11. It was Dr. Raschbacher's opinion that the medical records supported the argument that Claimant's alleged symptoms on January 5, 2016, were not new and most likely related to a non-work-related cause. Claimant had been suffering for over 2 months from the exact type of symptoms he was complaining of on January 6, 2016, and had been to urgent care only three days prior to the alleged incident complaining of similar symptoms.

12. Dr. Raschbacher opined that all literature, including the Medical Treatment Guidelines, supported the conclusion that Claimant's symptoms should have resolved after 90 days and, at a minimum, would have decreased since the incident. Instead, Claimant's symptoms progressively worsened and he continued to complain of severe symptomology more than 200 days after the alleged incident.

13. On August 12, 2016, Claimant sought treatment at Jefferson County Health Services, where Claimant reported a January 5, 2016, incident involving a much more vicious assault than had been previously reported. Claimant reported he was struck nine times in the head and rendered unconscious.

14. Claimant testified at hearing providing a clear description of the incident and surrounding actions he took, but then claimed to have developed amnesia hours after the alleged January 5, 2016, incident. Claimant testified that he was able to drive home multiple individuals after the alleged assault without any difficulty and remembered conversations he had with co-workers on January 5, 2016.

15. Claimant's testimony at hearing initially denied experiencing symptoms of dizziness, headaches, vertigo, neck pain and back pain previously. Claimant explained his prior symptoms by claiming a prior ear infection, a respiratory infection, the flu, and pneumonia. Claimant testified that January 5, 2016, was a time of year that brought back his feelings of PTSD and flashbacks, which required hospitalization one year prior.

16. Claimant offered contradictory and unpersuasive testimony regarding his return to the Employer's facility after the alleged incident on January 5, 2016, and whether he remembered the events that occurred or not.

17. Claimant testified that he was cleared to work for 3 hours per shift but that he would rarely ever work that long due to his migraines and admitted that he would leave work if he even thought a migraine was starting to develop.

18. Claimant denied a prior history of alcoholism, drug abuse or addiction when examined by Dr. Raschbacher. However, during testimony, Claimant admitted having prior issues of alcohol abuse, marijuana use, and abuse of klonopin.

19. Dr. Healey testified that he completed an independent medical evaluation of Claimant on October 21, 2016. Dr. Healey's opinions were found to be less credible and persuasive than Dr. Raschbacher because Dr. Raschbacher had more information regarding Claimant's condition than did Dr. Healey.

20. Claimant's girlfriend testified at hearing. She testified that she dated Claimant since the beginning of December 2015, and that he had been sick the entire time they were dating. She testified that she had been to the hospital with Claimant at least 3 separate times prior to the alleged assault and that during these urgent care visits, Claimant was vomiting, complaining of dizziness, headaches, and vertigo.

21. Meredith Hicks credibly testified that she was the direct manager of Claimant during his employment at Employer and directed Claimant's accommodated employment. Ms. Hicks testified that, on the alleged date of injury, she did not observe any type of physical indications of a recent assault and that Claimant was acting consistent with his usual behavior. Ms. Hicks credibly testified that Claimant failed to give proper notice of his absences from work and following counseling regarding Employer's concern about Claimant's attendance, Claimant persisted in being absent and failing to communicate, which continued until his termination from employment.

22. Jeff Rodarti is the Program Coordinator at the Employer. Mr. Rodarti testified that he did not directly supervise Claimant, but Mr. Rodarti prepared a first report of injury involving Claimant's alleged January 5, 2016, injury. Mr. Rodarti testified that he directly interacted with Claimant on the date of injury and that he did not observe evidence of a physical assault.

23. Karen Kalis was the human resources officer for Employer. Ms. Kalis was employed by Employer for 21 years. She credibly testified that Claimant was habitually

absent from his scheduled shifts despite Employer's substantial attempts to accommodate Claimant's ongoing restrictions. Ms. Kalis testified that Employer used extraordinary efforts to bring Claimant back to full employment. Ms. Kalis testified that at least 10 employees of Employer were involved in accommodating and bringing Claimant back to work. However, their efforts were in vain.

24. Ms. Kalis credibly testified that the individual "consumer" who allegedly assaulted Claimant had no prior history of aggression toward any of Employer's staff. Ms. Kalis testified that Claimant was eventually separated from the company due to a variety of reasons. Ms. Kalis credibly testified that as a business, Employer expected all employees regardless of work-injury to attend work when scheduled and to complete the tasks asked of them and that Claimant fell short of this standard from the beginning of his employment.

CONCLUSIONS OF LAW

A. Compensability/Medical Benefits

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. A claimant must prove his entitlement to benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201(1), C.R.S. Rather, a workers' compensation claim is to be decided on its merits. *Id.*

2. In deciding whether Claimant has met his burden of proof, the ALJ is empowered: "To resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to testimony, and draw plausible inferences from the evidence." *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

3. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968).

4. A claimant's right to compensation initially hinges upon a determination that the claimant suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. Section 8-41-301, C.R.S. The phrases "arising out of" and "in the course of" are not synonymous and a claimant must meet both requirements for the injury to be compensable. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 20 (Colo. 1988). The latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d 379, 381 (Colo. 1991). An injury occurs "in the course of" employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co.,* 38 Colo. App. 48, 51, 552 P.2d 1033, 1036 (1976). The "arising out of" test is one of causation. It requires that the injury have its origins in an employee's work related functions, and be sufficiently related thereto so as to be considered part of the employee's service to the employer. *Horodyskyj v. Karanian*, 32 P.3d 470, 475 (Colo. 2001). It is Claimant's burden to establish causation by a preponderance of the evidence. *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000). There is no presumption that an injury which occurs in the course of employment arises out of the employment. *Finn v. Industrial Commission,* 165 Colo. 106, 437 P.2d 542 (1968).

5. Once a claimant has established the compensable nature of his work injury, he is entitled to a general award of medical benefits and respondents are liable to provide all reasonable and necessary and related medical care to cure and relieve the effects of the work injury. Section 8-42-101, C.R.S.; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). However, a claimant is only entitled to such benefits as long as the industrial injury is the proximate cause of his need for medical treatment. *Merriman v. Indus. Comm'n*, 210 P.2d 448 (Colo. 1949); *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970*);* Section 8-41-301(1)(c), C.R.S. Ongoing benefits may be denied if the current and ongoing need for medical treatment or disability is not proximately caused by an injury arising out of and in the course of the employment. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997). In other words, the mere occurrence of a compensable injury does not require an ALJ to find that all subsequent medical treatment and physical disability was caused by the industrial injury. To the contrary, the range of compensable consequences of an industrial injury is limited to those which flow proximately and naturally from the injury. *Standard Metals Corp. v. Ball*, *supra*.

B. Claimant failed to meet his burden to prove it more likely than not that he suffered from a compensable injury on January 5, 2016.

1. The only evidence of a January 5, 2016, injury is Claimant's subjective statement of an alleged assault which was uncorroborated by objective facts and evidence. As shown above, Claimant's testimony, description of the incident, and complaints of continued symptomology are not credible. Claimant misrepresented his

ability to drive to his provider when he stated that he was unable to drive due to being easily over stimulated, only to be observed driving his vehicle without sunglasses for long periods of time just days prior. Claimant exaggerated the January 5, 2016, incident to his mental health providers at Jefferson Center for Mental Health when he told them he had been struck in the head at least 9 times until he was rendered unconscious. Claimant withheld the truth in his reporting about his prior drug usage. Claimant was not truthful when he said he never missed a day of work without notifying the proper personnel and was not truthful when he said he never went home early without telling his supervisors. Further, Claimant was not truthful when he attempted to bolster his claim by alleging that the individual who assaulted him was known to be a violent consumer, when in fact the credible evidence established that the individual had no prior history of aggression.

2. Likewise, Claimant alleges that he suffers from severely debilitating conditions. Yet, every time Claimant was observed on surveillance, he appeared to be functioning without difficulty or the need for sunglasses. Claimant, his father and girlfriend testified that they went on vacation and went on mountain hikes without the need for sunglasses. However, upon presentation to his providers and at hearing, Claimant painted a different picture of himself as a severely disabled individual unable to work for even a hour at a time. Claimant testified that the surveillance happened to show him on "good days," however, if this was true, there would be medical visits documenting Claimant's "good days" as well. Instead, medical records reflect that Claimant complained of subjective complaints of pain at every medical visit attended.

3. Furthermore, there is a complete lack of any corroborating evidence which would support Claimant's claim of injury. MRI results were negative. CT results were negative. Multiple physical examinations were negative and instead of having tenderness on the right side of his head where he alleged being struck, Claimant alleged that he had tenderness on the left side of his head. Claimant denies ever having any tenderness or observable marks of injury on the right side of his face. No logical or medical explanation is offered for this claim.

4. Record evidence shows that Claimant moved to Colorado in July 2015 and began attending urgent care facilities with complaints of headache, vertigo, nausea, and dizziness. Claimant, his father and girlfriend, all claimed during testimony that Claimant had pneumonia for over 6-months in 2015 with resolution of all symptoms the day he alleges the assault took place with new onset of old symptoms all attributed to the assault. This testimony was not deemed credible.

5. Additionally, the credible and persuasive evidence established that Dr. Healey's opinions are based on a subjective description of an incident, without any corroborating evidence, placed within the context of a traumatic whiplash injury or degenerative cervical condition, neither of which conditions were established to exist here.

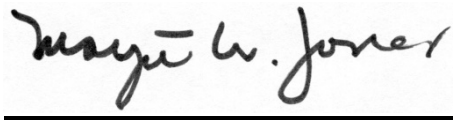
ORDER

It is therefore ordered that:

1. Claimant has failed to meet his burden to prove he suffered from a compensable injury on January 5, 2016. As such, his claim is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 17, 2017_



Margot W. Jones, Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Whether claimant is entitled to an award of penalties pursuant to Section 8-43-304, C.R.S. for Respondent's alleged violation of Section 8-42-107 (8)(b.5)(II), C.R.S. and WCRP 5-5(D)(1)(a), from April 11, 2015 through November 11, 2015.

STIPULATIONS

The parties stipulated at hearing that Respondent sent the February 26, 2015 letter to Meghan Mont, D.O. for the purpose of obtaining Dr. Mont's opinion on whether Claimant had reached maximum medical improvement ("MMI").

FINDINGS OF FACT

1. Claimant sustained an admitted industrial injury to his right knee on November 7, 2012 and underwent a partial medial meniscectomy of the right knee in January 2013, performed by Alexander K. Meininger, M.D. Dr. Meininger was an authorized treating physician ("ATP").

2. Claimant subsequently complained of left knee pain and underwent a partial medial meniscectomy performed by Meghan Mont, D.O. Claimant also complained of neck and back pain. Dr. Mont was an ATP.

3. In a report dated November 5, 2013, Dr. Meininger stated, "At this time I feel [Claimant] has plateaued in his recovery of the bilateral knee meniscal injuries." Dr. Meininger noted Claimant had an upcoming appointment with a specialist for his lumbar spine, and stated he "would await those results and/or a lumbar spinal MRI before declaring him at maximum medical improvement." On a WC164 form dated November 5, 2013, Dr. Meininger indicated he anticipated Claimant sustained a permanent impairment.

4. On February 3, 2014, John J. Raschbacher, M.D. conducted an Independent Medical Examination ("IME") at the request of Respondent. Dr. Raschbacher opined Claimant was at MMI for his right knee and that Claimant sustained a 6% lower extremity permanent impairment rating for the right knee. Dr. Raschbacher opined Claimant's left knee, neck and back conditions were not work-related.

5. On March 25, 2014, Respondent sent a letter to Dr. Mont requesting that Dr. Mont review Dr. Raschbacher's IME Report and provide an opinion on whether Claimant's left knee, back pain, and neck pain were causally related to Claimant's right knee industrial injury; whether Claimant had reached MMI for his right knee condition; and whether Claimant sustained any permanent impairment.

6. Dr. Mont responded on April 28, 2014. Dr. Mont indicated Claimant was under the care of Dr. Meininger for his orthopedic injuries and stated, "I think that if he has been cleared by Orthopedics, then an impairment rating for the right knee may be warranted. I am unable to determine his permanent impairment but I think the right knee may have some impairment." Dr. Mont further stated Claimant's back and neck pain could be related to Claimant's initial injury.

7. On May 5, 2014, Respondent filed an Application for Hearing on the issues of compensability, medical benefits, and causation regarding Claimant's left leg, back and neck conditions.

8. Claimant subsequently filed two additional claims alleging a low back injury n January 19, 2014 and a left knee injury on March 22, 2013.

9. ALJ Michelle E. Jones conducted a consolidated hearing on September 11, 2014 and issued a Findings of Fact, Conclusions of Law, and Order on January 22, 2015. ALJ Jones determined Claimant did not suffer a compensable left knee injury, a compensable low back injury, or a compensable neck injury as a consequence of the prior right knee injury. ALJ Jones further concluded Claimant did not sustain a compensable left knee injury on March 22, 2013 or a compensable low back injury on January 19, 2014. ALJ Jones denied and dismissed the claims. Claimant did not file a Petition to Review ALJ Jones' order.

10. On February 26, 2015, Respondent sent a letter to Dr. Mont asking Dr. Mont to indicate whether Claimant had reached MMI. Respondent enclosed a copy of ALJ Jones' order, noting ALJ Jones determined Respondent was not liable for treatment of Claimant's left knee, neck and back conditions. Respondent also included Dr. Meininger's November 5, 2013 report stating, "It appears that Mr. Harris may be at Maximum Medical Improvement for his right knee claim." The letter included a section stating, "[Claimant] is/is not at Maximum Medical Improvement." Dr. Mont was to check the appropriate response. The letter did not request Dr. Mont specify the date of MMI in the event she determined Claimant had reached MMI. The letter did also not make any reference to permanent impairment.

11. Dr. Mont responded to Respondent's letter on March 2, 2015. Dr. Mont marked that Claimant was at MMI. Dr. Mont did not specify a date of MMI or address permanent impairment in her response.

12. Respondent filed a Final Admission of Liability ("FAL") on March 31, 2015, admitting to an MMI date of February 3, 2014 and a 6% right lower extremity permanent impairment rating based on Dr. Raschbacher's February 3, 2014 IME Report.

13. Claimant filed an objection to the March 1, 2015 FAL on April 28, 2015.

14. Respondent sent a letter to Claimant's counsel on April 30, 2015 regarding the March 31, 2015 FAL. In the letter, Respondent referred to an April 7, 2015 e-mail from Claimant's counsel inquiring as to Respondent's basis for the March 31, 2015 FAL. As explanation for the basis of the March 31, 2015 FAL, Respondent's counsel stated:

- On February 26, 2015, I sent a letter to Dr. Mont requesting she provide her opinion on whether Claimant had reached Maximum Medical Improvement;

- On March 2, 2015, Dr. Mont responded to my letter indicating that Claimant was at Maximum Medical Improvement; Dr. Mont is not Level II accredited;

- Dr. Mont did not refer Claimant for an impairment rating within 20 days after the determination of MMI;

- W.C.R.P. 5-5(D)(1)(a) provides 'If the referral is not timely made, the insurer shall refer the claimant to a Level II accredited physician for a medical impairment rating within 40 days after the determination of MMI';

- Dr. Raschbacher already had provided an impairment rating, so Respondent relied upon that impairment rating pursuant to W.C.R.P 5-5(D)(1)(a).

Claimant had contended Respondent needed to send Claimant for a permanent impairment rating at the time of MMI, and alleged Dr. Raschbacher had a conflict of interest. Respondent offered to withdraw the March 31, 2015 FAL and return Claimant to Dr. Raschbacher for an updated impairment rating. Respondent's counsel stated if no response was received within 20 days, he would assume Claimant was proceeding with the procedures to request a Division Independent Medical Examination ("DIME").

15. Claimant filed an Application for Indigent Determination on May 15, 2015.

16. Respondent sent a follow-up letter to Claimant's counsel on May 26, 2015 noting that, since no response had been received from Claimant, Claimant was deemed to have chosen not to return to Dr. Raschbacher consistent with WCRP 5-5(D).

17. Claimant's counsel responded via e-mail on May 26, 2015, asserting Respondent was in a penalty situation by filing the March 31, 2015 FAL based on an impairment rating performed "long before" Claimant was placed at MMI, and by "failing to refer Claimant to a Level II provider within 40 days of the determination of MMI." Claimant's counsel stated he would speak to Claimant if Respondent wanted to negotiate a Level II provider to evaluate Claimant for permanent impairment.

18. In a May 27, 2015 e-mail, Respondent's counsel stated Respondent's intention was to proceed with scheduling a repeat examination with Dr. Raschbacher.

19. ALJ David P. Cain issued an order dated June 5, 2015 determining Claimant was indigent.

20. On June 11, 2015, Respondent scheduled an IME with Dr. Raschbacher for August 5, 2016, which was subsequently changed to July 6, 2015.

21. On June 25, 2015, Claimant filed an application for a Division Independent Medical Examination ("DIME").

22. In a June 30, 2015 e-mail, Claimant's counsel notified Respondent that Claimant was unable to attend the July 6, 2015 appointment with Dr. Raschbacher due to confusion over the amended date.

23. On July 8, 2015, Franklin Shih, M.D. was chosen to perform the DIME, which was scheduled for September 2, 2015.

24. On July 9, 2015, Respondent scheduled an IME with Frank Polanco, M.D., which was conducted on July 28, 2015. Dr. Polanco determined Claimant was at MMI as of November 5, 2013 and assigned a 15% permanent impairment rating.

25. In a letter dated August 17, 2015, Claimant cancelled the DIME appointment with Dr. Shih scheduled for September 2, 2015.

26. Claimant filed an Application for Hearing on August 26, 2015 endorsing, among other issues:

> Penalties from 4/11/15 and continuing pursuant to C.R.S. 8-43-304 and 8-43-305 for violation of C.R.S. 8-42-108(b.5)(II) and W.C.R.P. 5-5(D)(1)(a); Penalties from 3/31/15 and continuing pursuant to C.R.S. 8-43-304 and 8-43-305 for violation of W.C.R.P. 5-5(E)(1). More specifically, respondents failed to refer Claimant to a Level II provider after Claimant was placed at MMI by the ATP, Dr. Mont, on 3/2/15, then proceeded to file a FAL utilizing the schedule impairment rating calculated by respondents IME, Dr. Raschbacher on 2/3/14.

The hearing was set for February 2, 2016.

27. Respondent filed a FAL on October 20, 2015 admitting an MMI date of February 3, 2014 based on Dr. Rashbacher's February 3, 2014 IME, and a 15% permanent impairment rating based on Dr. Polanco's July 28, 2015 IME.

28. On November 11, 2015, Respondent filed a an Amended FAL, admitting to an MMI date of March 2, 2015 based on Dr. Mont's March 2, 2015 response, and a 15% permanent impairment rating based on Dr. Polanco's July 28, 2015 IME. Respondent stated, "Claimant placed at Maximum Medical Improvement by Dr. Mont on March 2, 2015. Dr. Mont not level II accredited so Respondent admits to a 15% lower extremity rating per Dr. Polanco's report dated July 28, 2015, pursuant to W.C.R.P. 5-5(D)(1)(a)."

29. On February 1, 2016, the parties filed a joint motion to withdraw the August 26, 2015 Application for Hearing and to re-file, preserving all issues and defenses. An order was issued granting the motion, vacating the February 2, 2016 hearing.

30. Claimant re-filed an Application for Hearing on February 4, 2016 endorsing, among other issues, penalties. The hearing was set for May 12, 2016.

31. Claimant subsequently filed an unopposed motion for continuance of the hearing set for May 12, 2016. An order dated May 11, 2016 granted the continuance and vacating the May 12, 2016 hearing.

32. On May 23, 2016, Claimant filed an unopposed motion to withdraw the February 4, 2016 Application for Hearing without prejudice. An order dated May 26, 2016 granted the motion to withdraw the application for hearing, preserving the issues.

33. On December 1, 2016, Claimant filed an Application for Hearing endorsing, among other issues, penalties.

34. Sharmie Jensen, Claims Adjuster for Sedgwick Claims Management, testified at hearing. Ms. Jensen testified she has worked as a claims adjuster for 14 years and has experience adjusting Colorado workers' compensation claims. Ms. Jensen testified she has worked on Respondent's account for 10 years, and on Claimant's claim for at least two years. Ms. Jensen testified Dr. Mont was an authorized treating physician and that Dr. Mont referred Claimant to Dr. Meininger for surgery. Ms. Jensen testified that there were no other authorized treating physicians in the chain of referral. Ms. Jensen testified Respondent sent Claimant to Dr. Raschbacher for an IME, and that Dr. Raschbacher was not an authorized treating physician. Ms. Jensen testified Dr. Mont was not Level II accredited and that she was aware a physician needs to be Level II accredited to issue a permanent impairment rating.

35. Ms. Jensen testified no authorized treating physician placed Claimant at MMI prior to March 2, 2015, although she could subjectively interpret language from Dr. Mont and Mr. Meininger as finding MMI. Ms. Jensen testified she filed the March 31, 2015 FAL because Dr. Mont agreed with Dr. Raschbacher's IME rating. When questioned as to why she believed Dr. Mont agreed with Dr. Raschbacher's IME permanent impairment rating, Ms. Jensen referred to Dr. Mont finding Claimant at MMI in her March 2, 2015 response. Ms. Jensen testified Ms. Jensen testified Respondent ultimately sent Claimant for an IME with Dr. Polanco because Claimant was disputing the FALs filed with Dr. Raschbacher's permanent impairment rating and Respondent wanted to resolve the issue. Ms. Jensen testified she did not refer Claimant to a Level II provider for purposes of evaluation permanent impairment within 40 days of March 2, 2015.

36. Respondent violated Section 8-43-304(1), C.R.S. by failing to refer Claimant to a Level II accredited physician within 40 days of the date MMI was determined.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, Section 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the

rights of respondents. Section 8-43-201(1), C.R.S. Generally, the claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

The ALJ's resolution of issues will be affirmed if supported by substantial evidence in the record. Section 8-43-301(8), C.R.S.; *City and County of Denver School District 1 v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). Substantial evidence is that quantum of probative evidence, which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

Penalties

Whether statutory penalties may be imposed under Section 8-43-304(1), C.R.S. involves a two-step analysis. The statute provides for the imposition of penalties of up to $1,000 per day where the insurer "violates any provision of article 40 to 47 of [title 8], or does any act prohibited thereby, or fails or refuses to perform any duty lawfully enjoined within the time prescribed by the director or the panel, for which no penalty has been specifically provided, or fails, neglects or refuses to obey any lawful order made by the director or panel…" Thus, the ALJ must first determine whether the insurer's conduct constitutes a violation of the Act, a rule, or an order. Second, the ALJ must determine whether any action or inaction constituting the violation was objectively unreasonable. The reasonableness of the insurer's action depends on whether it was based on a rational argument based in law or fact. *Jiminez v. Industrial Claim Appeals Office,* 107 P.3d 965 (Colo. App. 2003); *Gustafson v. Ampex Corp.,* W.C. No. 4-187-261 (I.C.A.O. August 2, 2006), *but see, Pioneers Hospital v. Industrial Claim Appeals Office*, 114 P.3d 97 (Colo. App. 2005) (standard is less rigorous standard of "unreasonableness"). However, there is no requirement that the insurer know that its actions were unreasonable. *Pueblo School District No. 70 v. Toth,* 924 P.2d 1094 (Colo. App. 1996).

The question of whether the insurer's conduct was objectively reasonable ordinarily presents a question of fact for the ALJ. *Pioneers Hospital v. Industrial Claim Appeals Office, supra*. A party establishes a prima facie showing of unreasonable conduct by proving that an insurer violated a rule of procedure. If the claimant makes such a prima facie showing the burden of persuasion shifts to the respondents to show their conduct was reasonable under the circumstances. *Pioneers Hospital v. Industrial Claim Appeals Office, supra, Human Resource Co. v. Industrial Claim Appeals Office,* 984 P.2d 1194 (Colo. App. 1999).

Although Claimant endorsed WCRP 5-5(E) violation as an issue on the December 1, 2016 Application for Hearing, both at hearing and in his position statement, Claimant specifically asked for penalties for Respondent's failure to comply with Section 8-42-107 (8)(b.5)(II), C.R.S. and WCRP 5-5(D)(I)(a). Claimant seeks a penalty for the time period from April 11, 2015 through November 11, 2015.

Section 8-42-107(8)(b.5) provides:

> "When an authorized treating physician providing primary care who is not accredited under the level II accreditation program pursuant to section 8-42-101 (3.5) makes a determination that an employee has reached maximum medical improvement, the following procedures shall apply:
>
> (II) If the employee is a state resident, such physician shall, within twenty days after the determination of maximum medical improvement, determine whether the employee has sustained any permanent impairment. *If the employee has sustained any permanent impairment*, such physician shall refer such employee to a level II accredited physician for a medical impairment rating … If the referral is not timely made by the authorized treating physician, the insurer or self-insured employer shall refer the employee to a level II accredited physician within forty days after the determination of maximum medical improvement."

WCRP 5-5(D) provides:

> For all injuries required to be filed with the Division with dates of injury on or after July 1, 1991:
>
> (1) Where the claimant is a state resident at the time of MMI:
>
> (a) When an authorized treating physician providing primary care is not Level II accredited and has determined the claimant has reached MMI *and has sustained any permanent impairment*, such physician shall, within 20 days after the determination of MMI, refer the claimant to a Level II accredited physician for a medical impairment rating. If the referral is not timely made, the insurer shall refer the

> claimant to a Level II accredited physician for a medical impairment rating within 40 days after the determination of MMI.

The ALJ concludes Claimant made a prima facie showing Respondent violated Section 8-42-107(8)(b.5)(II), C.R.S. and WCRP 5-5(D)(1)(a). It is undisputed Claimant was a state resident at the time of reaching MMI, and that Dr. Mont, the ATP placing Claimant at MMI, was not Level II accredited. The parties stipulated Respondent sent Dr. Mont the February 26, 2015 for the specific purpose of obtaining her opinion on MMI. Dr. Mont determined Claimant was at MMI in her March 2, 2015 response to Respondent's February 26, 2016 letter. Per Section 8-42-107(8)(b.5)(II), C.R.S., Dr. Mont was then required, within 20 days after her determination of MMI, to determine whether Claimant sustained any permanent impairment. Dr. Mont did not address permanent impairment in the March 2, 2015 response, nor was any evidence admitted at hearing indicating Dr. Mont did so subsequently. Dr. Mont did not refer Claimant to a Level II physician, nor was there evidence that Respondent requested such an evaluation. The ALJ concludes the prior IME conducted by Dr. Raschbacher did not constitute such a referral.

Respondent notes that Section 8-42-107 (8)(b.5)(II), C.R.S. and WCRP 5-5(D)(1)(a) require a respondent to refer a claimant to a Level II accredited provided only when an ATP determines a claimant has sustained a permanent impairment. Respondent contends that there is no credible evidence Dr. Mont, Dr. Meininger or any other ATP providing primary care opined Claimant sustained any permanent impairment and, as such, no violation of Section 8-42-107 (8)(b.5)(II) C.R.S. or WCRP 5-5(D)(1)(a) occurred.

The ALJ disagrees with this contention. In her April 28, 2014 letter, Dr. Mont indicated she believed Claimant's right knee may have some permanent impairment. Dr. Meininger also stated in the WC164 form dated November 3, 2015 that he anticipated permanent impairment. Furthermore, it is clear Respondent believed an ATP determined Claimant sustained a permanent impairment. Respondent admitted for a permanent impairment rating in the March 31, 2015 FAL. In justifying the basis for admitting to Dr. Raschbacher's permanent impairment rating, Respondent specifically referred to the requirements of WCRP 5-5(D)(1)(a), acknowledging Dr. Mont was not Level II accredited, that she failed to refer Claimant for an impairment rating within 20 days of determining MMI, and that the insurer was then required to refer Claimant to a Level II accredited provider for an impairment rating. Thus, Respondent's contention that no ATP determined Claimant sustained a permanent impairment is undermined by Respondent's own actions. Based on the March 2, 2015 date of MMI, Respondent was required to refer Claimant to a Level II provider by April 13, 2015.[1] Respondent did not refer Claimant to a Level II accredited provider for an impairment rating by April 13, 2015. Respondent's failure to refer Claimant to a Level II accredited provider by April 13, 2015 constitutes a violation of Section 8-42-107 (8)(b.5)(II), C.R.S. and WCRP 5-5(D)(1)(a).

[1] April 13, 2015 is the first business day after 40 days from March 2, 2015.

Respondent's conduct was not objectively reasonable. Respondent was aware Dr. Mont was not a Level II accredited physician. Despite contacting Dr. Mont for the specific purpose of obtaining her opinion on MMI to then file a FAL, Respondent failed to inquire as to Dr. Mont's opinion on permanent impairment. Ms. Jensen testified she filed the March 31, 2015 FAL because she believed Dr. Mont agreed with Dr. Raschbacher's impairment rating, indicating Respondent believed Dr. Mont determined there was a permanent impairment. Respondent attempted to circumvent the requirements of Section 8-72-407(8)(b.5)(II), C.R.S. and WCRP 5-5(D)(1)(a) by admitting to a permanent impairment rating provided by Respondent's IME provided over a year prior to Dr. Mont's determination of MMI. Respondent's actions were objectively unreasonable under the circumstances.

Respondent contends any penalty for the violation is limited to April 11, 2015 through June 11, 2015. Respondent was required to refer Claimant to a Level II accredited provider within 40 days of Dr. Mont's March 2, 2015 determination of MMI, making the deadline April 13, 2015 (the first business day after April 11, 2015). Respondent made a referral to Dr. Raschbacher, a Level II accredited provider, on June 11, 2015. 59 days elapsed between the deadline and Respondent's referral. Respondent's conduct was unreasonable, thereby subjecting Respondent to penalties. While Claimant was dissatisfied with the choice of the Level II accredited provider, the ALJ is persuaded the referral met the requirement of Section 8-42-107 (8)(b.5)(II), C.R.S. and WCRP 5-5(D)(1)(a). While Claimant contends Dr. Raschbacher had a conflict of interest, Claimant did not cite any case law establishing the referral to Dr. Raschbacher violated Section 8-42-107 (8)(b.5)(II), C.R.S. or WCRP 5-5(D)(1)(a).

Accordingly, it is concluded that Claimant is entitled to award of penalties under Section 8-43-304(1), C.R.S. Claimant is awarded $20.00 per day for each of the 59 days after April 13, 2015 for which Respondent failed to refer Claimant to a Level II accredited provider for a permanent impairment rating, or an amount of $1,180.00.

ORDER

It is therefore ordered that:

I. Claimant is awarded penalties under Section 8-43-304(1), C.R.S. for Respondent's failure to comply with Section 8-42-107(8)(b.5)(II), C.R.S. and WCRP 5-5(D)(1)(a). Respondent shall pay Claimant $1,180.00.

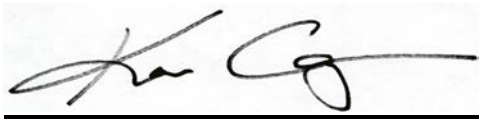
II. The insurer shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

III. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver,

CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 17, 2017



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Whether Respondents overcame the opinion of the DIME physician on MMI and permanent medical impairment.
- Whether Claimant's hip condition was causally related to the accident.
- If Respondents sustained their burden of proof, what, if any, was Claimant's permanent medical impairment?
- Is the proposed medical treatment for Claimant's hip reasonable, necessary and related to her injury?

FINDINGS OF FACT

1. Claimant was working for Employer in Colorado as a civil engineer.

2. There was no evidence in the record which showed Claimant had a history of injuries to her cervical or lumbosacral spine, or her lower extremities.[1] There was no evidence Claimant treated for symptoms in any of these areas before October 23, 2012.

3. Claimant suffered an admitted industrial injury on October 23, 2012 when she was injured in a motor vehicle accident ("MVA") while working for Employer. Claimant was sitting in the passenger seat when the vehicle in which she was riding was rear-ended. The airbags deployed.

4. Claimant testified that she does not fully remember the details of the accident. Claimant recalled crawling out of the driver's side of the vehicle, but did not remember riding to or checking into the hospital. Claimant testified that she remembered waking up during the MRI, but does not remember any conversations with hospital staff.

5. Claimant was treated at Littleton Adventist Hospital. The intake report noted Claimant did not recall the accident, she just remembered seeing taillights and then being pushed back by an airbag. A CT scan of the patient's head, neck, and facial bones was done. The report also noted there was a concern given Claimant's headache and left-sided neck pain, so a CT angiogram was obtained. Claimant was evaluated by Andrew Knaut, M.D., Ph.D., whose diagnosis was: 1) Motor vehicle

[1] Treatment records for Claimant from 2008 were admitted. These contained a pain diagram in the low back. However, there was no evidence in these documents of a diagnosis or treatment Claimant received for her low back.

accident; 2) concussion, and 3) left inferior orbital wall fracture. The ALJ notes Claimant had no complaints of lower extremity pain at the emergency department.

6. Following her injury, Claimant returned home to New Mexico. Claimant testified that upon returning to New Mexico she was most concerned about the persistent numbness on the left side of her face and constant headaches. She was worried about these symptoms. The ALJ credited this testimony that these symptoms were Claimant's main focus at this point in time. Claimant also stated her physical activities were limited.

7. Claimant testified she experienced in pain in her thigh a couple of weeks later, which was sometime around Thanksgiving. She could not cross her legs. When she increased her activities, this caused an increase in symptoms in her legs and lower back. Claimant said she had never experienced symptoms in her thighs/hips before the accident.

8. On November 30, 2012, Claimant was evaluated by Mark Berger, M.D. at New Mexico Neurology. At that time, she was complaining of headaches, although these were improving. She also reported neck pain since the accident, as well as left facial numbness. Dr. Berger's neurological examination was normal. His impression was: headaches following trauma on October 23, 2012, which were most compatible with post-traumatic headaches. Dr. Berger noted there was no evidence for other neurological processes causing the head pain, based upon the CT scan. Dr. Berger also diagnosed neck pain and left facial numbness, which was not improving. He wanted to proceed with a somatosensory evoked potential study of the trigeminal nerves to evaluate the function of the trigeminal nerve. He opined her neck pain was musculoskeletal in origin due to the cervical strain and prescribed physical therapy ("PT"). For the left orbital fracture, he stated an ENT evaluation was required. The ALJ notes Claimant made no reference to hip or thigh pain during this evaluation.

9. Medical records from MD Urgent Care in New Mexico were admitted at hearing. On February 28, 2013, Claimant was evaluated at that facility and she reported having moderate pain in both thighs since Thanksgiving. In the history section, it was noted Claimant was running 4-5 days /week, but she had no pain with running or at rest. Stretching was not helping. Normal hip range of motion ("ROM") was noted at this evaluation. Claimant's adductor muscles were noted to be very tight. X-rays were taken of Claimant's right and left femur, but no abnormalities were noted. Claimant was advised to obtain an orthopedic evaluation. Claimant was also to begin an exercise program, received independent exercise instruction, and range of motion/stretching.

10. Claimant returned to MD Urgent Care on March 20, 2013, complaining of neck pain and headaches, of two days duration. Claimant was given a prescription, as well as written instructions and discharged.

11. On March 21, 2013, Claimant was evaluated by orthopedic surgeon Paul Legant, M.D. Claimant identified the problem as pain on the inside of both thighs. The ALJ notes Claimant left blank whether the symptoms were related to an auto accident,

but in the subject of history section, Dr. Legant noted she had been in a car accident around Halloween and had experienced symptoms since Thanksgiving. Claimant described the symptoms as sometimes dull, sometimes sharp in nature, with the biggest problem when she attempted to cross her legs. Dr. Legant noted there was no pain with internal or external rotation of her hips, as well as no edema nor erythmia. She had full and equal range of motion for both lower extremities. Dr. Legant's assessment was bilateral thigh pain-etiology unknown. He referred Claimant to a neurologist.

12. On May 7, 2013, Claimant was evaluated by John Campa, III, M.D. Her chief complaint was intermittent, sharp shooting pain to the bilateral proximal thigh region. Claimant reported the symptoms began spontaneously, initially in the left thigh and then occurring in the right thigh in January 2013. These have been worsening over time. Claimant's history of a MVA and endometriosis was noted, along with her diabetes. In her pain diagram, Claimant indicated she felt pain over C6, C7, T8 and L2. On examination, Dr. Campa noted muscle spasm in Claimant's cervical spine and shoulders, as well as the thoraco/lumbar spine. In the section entitled etiology, Dr. Campa noted the following needed to be considered: bilateral, position/stretch related medial, proximal thigh pain, likely related to bilateral obturator nerve compression/entrapment the level of pelvic brim, secondary to recurrent endometrial implants. He also opined the following needed to be ruled out: C5-6 spinal segmental legion, mid T spine spinal segmental lesion, lumbosacral spinal segmental lesion, right thyroid lobe lesion; identify polyneuropathy likely diabetic in origin. Dr. Campa performed extensive electrodiagnostic testing in each of those areas.

13. Claimant moved to South Dakota and treated at the Creekside Medical Clinic. Claimant was evaluated on June 14, 2013 by Stephen Sachs, PA-C reporting worsening, limited ROM to both hips and occasional pain to medial thighs. On examination, her hips were noted to have limited external rotation and slightly decreased internal rotation due to pain along the medial thighs. X-rays were negative. The diagnosis of backache was added.

14. Claimant began treating with Stuart Johnson, D.C. on July 12, 2013. Dr. Johnson recorded that, after the motor vehicle accident on Thanksgiving, Claimant couldn't cross her left leg over the right and had sharp pains over the left medial thigh. He further recorded that, the air bag deployed and hit her, jarring her and may have aggravated her lower back, as well as her neck and thigh. She advised that a prior MRI of the low back was negative. Chiropractor Johnson treated Claimant's cervical and lumbar spine on 45 occasions from July 12, 2013 through January 21, 2014. The records indicated Claimant subjectively reported symptom relief.

15. Claimant returned to PA-C Sachs September 23, 2013, however, this appointment was concerned with issues related to type one diabetes mellitus, ketoacidosis and abnormal electrolytes. On December 2, 2013, Claimant was evaluated by Jana Doorman, PA-C. She was complaining of persistent low back pain, bilateral hip pain and medial thigh pain, which she said was present since the October 23, 2012 accident. PA-C Doorman felt the bilateral hip pain, with medial thigh pain and low back pain was related to an SI joint radiculopathy.

16. Claimant then moved to Alabama and received chiropractic manipulation from Amanda Holland D.C. for cervical, thoracic and lumbar complaints from February 5, 2014 through August 25, 2014. She received a total of 35 treatments, which provided temporary symptomatic relief.

17. Claimant was examined by John Johnson, M.D. (neurosurgeon) on March 18, 2014. On this date, Claimant had problems moving her hips, crossing her legs, but denied constant back pain, describing it as intermittent. Claimant described a sharp pain in to her buttock and into her hip, and some pain in the anterior medial thigh with radiation. Upon examination, the doctor recorded she was unable to cross her hips left over right or right over left. Dr. Johnson reviewed the prior lumbar MRI scan dated June 18, 2013, noting there was no evidence of a disc herniation, stenosis or neural foraminal narrowing. His impression was: bilateral hip pain with decreased range of motion and low back pain. Dr Johnson corresponded with chiropractor Amanda Holland indicating that he could not explain Claimant's symptoms. However, he noted that she is an insulin-dependent diabetic and Claimant thought she was having avascular necrosis of her hips. Therefore, he recommended securing an MRI of the pelvis to rule out avascular necrosis of the hips. He noted that he encouraged her to seek out a PCP and possibly consider a rheumatology evaluation, as he did not see any structural abnormality.

18. On April 26, 2014, an MRI of the Claimant's pelvis was done. The impression of James Mann, M.D., the attending radiologist, was: no evidence of a recent stress or traumatic fracture. There is no evidence of osteonecrosis in either femoral head. The articular cartilage was grossly unremarkable. No definite acetabular labral tear identified. If clinical concern for labral pathology, consider MR arthrogram of the symptomatic hip for further evaluation.

19. After reviewing the MRI of the pelvis, Dr. Johnson issued a follow-up report dated May 6, 2014, wherein he stated that he had reviewed the MRI, and that is was fairly unrevealing, specifically that there was no evidence of avascular necrosis of the hips. He found nothing of a surgical nature. On July 21, 2014, a Worker's Claim for Compensation was filed on behalf of Claimant. In the Worker's Claim, it was alleged Claimant's low back and lower extremities, neck/upper back and face were injured in the accident.

20. A General Admission of Liability ("GAL") was filed on behalf of Respondents on August 26, 2014. The GAL admitted for medical benefits.

21. On October 8, 2014, Peter Quintero, M.D., a neurologist, examined Claimant at the request of Respondents. Claimant was continuing to complain of sharp inner thigh pain with certain activities such as crossing the legs. She also reported complaints of low back pain 3/10, neck and mild mid-back pain, as well as headaches. Clamant did not specifically report hip pain. Dr. Quintero's accident related diagnoses were: cervical strain injury with secondary myofascial pain syndrome; thoracic strain injury with secondary myofascial pain syndrome; lumbosacral strain injury with

secondary myofascial pain syndrome; left orbital fracture-resolved; muscular contraction headaches; and concussion-resolved. These diagnoses led the ALJ to conclude Claimatn injured these areas of her body. Dr. Quintero opined that due to the delayed nature of Claimant's reported inner thigh pain and the mechanism of injury, he could not relate these symptoms to the motor vehicle accident. Dr. Quintero thought it was most likely Claimant sustained strain injuries to these areas of her body, but would have had a good prognosis for a full recovery. Dr. Quintero believed Claimant suffered an injury to her gracillis muscles. The most common cause of injury to the gracillis muscles or adductors was a sports injury, such as running. The mechanics of a motor vehicle accident would not explain injury to this muscle group. The ALJ credited this opinion.

22. Dr. Quintero opined that Claimant likely sustained myofascial strains to her spine and that she had attained MMI from those strains, without resultant impairment and that he was at a loss to explain why she would be continuing to report pain some two years after the motor vehicle accident. Although Dr. Quintero described full ROM in Claimant's back and spine, there was no evidence Dr. Quintero performed ROM testing with dual inclinometers as part of his evaluation.

23. In January, 2015, Claimant was evaluated by Carol Krause, M.D. in North Dakota. She had cervical and lumbosacral pain, as well as pain in both thighs. Dr. Krause opined that her current symptoms were related to the MVA. Claimant was given treatment suggestions and was to continue treating with the chiropractor, Dr. Ness.

24. On May 28, 2015, Claimant underwent a DOWC IME ("DIME") with Christopher Ryan, M.D. At that time, Claimant was complaining of pain in her hips which was present when she crossed her legs. Dr. Ryan noted she had been running about 10 miles per week, but then slowed down considerably. Despite slowing her running, she developed symptoms in her left proximal thigh. She also had pain in the cervical-occipital junction, as well as low back pain. On examination, Claimant had moderate rigidity involving her cervical region, as well as limitations in her range of motion. Dr. Ryan performed ROM testing using dual inclinometers, as required by the *AMA Guides*[2]. In the lumbar spine, she had an oblique pelvis, with slightly elevated posterior/superior iliac spine on the left and hypomobile left sacroiliac joint. Dr. Ryan noted Claimant had fairly normal range of motion in flexion and extension of her hips, with slight limitation. Abduction was normal, but adduction was only to neutral bilaterally. He also performed ROM measurements on Claimant's lumbar spine. Dr. Ryan noted Claimant did not have significant pain behaviors. The ALJ notes these ratings met validity criteria, as found by Dr. Ryan.

25. Dr. Ryan's diagnostic impressions included: cervical-occipital dysfunction, lumbopelvic dysfunction both of which were secondary to the vehicle accident. He also described Claimant's intrinsic hip pathology as uncharacterized. The ALJ inferred Dr. Ryan had a question regarding the causation of the hip symptoms. Dr. Ryan assigned 13% to Claimant's cervical spine, which included a Table 53 specific disorder, as well as loss of range of motion. He assigned a 10 % whole person impairment to Claimant's

[2] AMA Guides to the Evaluation of Permanent Impairment (3rd Ed. Rev.)

lumbar spine including both of those components. Dr. Ryan assigned a 25% right lower extremity rating and a 25% left lower extremity rating, which converted to a 19% whole person rating. These ratings were valid and done pursuant to the *AMA Guides*.

26. Dr. Ryan opined Claimant was not at MMI, as he felt Claimant's overall condition, including the impairment ratings could be improved. He recommended an MR arthrogram of Claimant's hips bilaterally, both of which should be evaluated by an orthopedist. He believed Claimant's impairment rating could be improved upon with further treatment, including manual therapy.

27. On October 15, 2015, Dr. Quintero issued an Addendum Report after reviewing Dr. Ryan's DIME report and the records from Dr. Krause. He disagreed with Dr. Ryan attributing not only the thigh pain to the industrial injury, but also the mid-back and low back pain, again due to the documented delay in reporting of these symptoms, as evidenced by the medical reports. Dr. Quintero opined that only the headaches and neck pain are logically related to the industrial motor vehicle accident.

28. On November 12, 2015, Claimant was evaluated by Keith Anderson, D.O., FAAPMR. Her two complaints were the fact that she could not adduct her legs because a pain in the adductor muscles, along with pain in the cervical and lumbar spine, without radicular symptoms. It was noted Claimant had seen multiple doctors, had received PT and chiropractic care. The latter helped for short periods of time. Dr. Anderson evaluated Claimant's spine and noted she did not have gross scoliosis, but tenderness was noted in her cervical spine. She had pain with deep palpation in the lumbar paraspinals. He opined Claimant had myofascial pain from the motor vehicle accident and recommended pool therapy, as well as a good exercise program and avoiding medications.

29. On November 20, 2015, Dr. Anderson responded to questions posed by Respondent's counsel. More particularly, Dr. Anderson stated:

> Question: What is your diagnosis of this claimant's current condition?
> Answer: Status post work related injury (1) fractured left inferior orbital wall (2) myofascial pain affecting the cervical and lumbar area with bilateral adductor pain.
>
> Question: What if any of these diagnosis are related to October 23, 2012 motor vehicle accident?
> Answer: Both are related to her motor vehicle accident.

30. Dr. Anderson concluded Claimant was at MMI. The ALJ noted Dr. Anderson did not provide his analysis as to why the bilateral adductor pain was causally related to the MVA, including addressing the evaluation done by Dr. Ryan.

31. Claimant was evaluated by Lawrence Lesnak, M.D. on January 25, 2016. Claimant reported her current symptoms were constant neck, midline low lumbar pain

and bilateral proximal medial thigh pains with certain movements of her thighs, again reporting an inability to cross her legs. Upon examination of the spine, full thoracic range of motion was noted and Claimant was able to forward flex her chin to her chest with no symptoms whatsoever. However, during cervical spine range of motion testing, he believed Claimant self-limited her forward flexion to only 40 degrees due to complaints of moderate proximal posterior neck pain. Claimant achieved full range of motion in all other planes. Hip range of motion was full for both hip joints. He found generalized tenderness over the cervical paraspinal musculature and suboccipital regions bilaterally, without trigger points or muscle spasms. The ALJ notes there was no evidence Dr. Lesnak performed a complete evaluation of Claimant's cervical and lumbar impairment pursuant to the *AMA Guides.*

32. Claimant also returned to Dr. Ryan for a follow-up DIME on January 25, 2016. He reviewed supplemental reports from Drs. Quintero and Anderson. On examination, Claimant was uncomfortable, which Dr. Ryan attributed to travel. She had restrictions in her cervical spine, both on flexion and extension. In the lumbopelvic region, she had an elevation of the left posterior/superior iliac spine, compared to the right and the depression of the left anterior/superior fine compared to the left. She also had minimal motion in the left SI joint. Claimant had pain in her groin when Faber testing was performed. Dr. Ryan noted his impressions remained the same as when he first saw Claimant. She had cervical-occipital dysfunction, as well as lumbo-pelvic dysfunction; both of which he thought most medically probable these were the results of the MVA. Claimant had what Dr. Ryan described as undiagnosed hip pathology, which he believed was an intrinsic injury to her hip joints, possibly a labral tear. He agreed with the radiologist's recommendation of an MR arthrogram. Dr. Ryan also opined Claimant should have ongoing follow-up with a manual therapist. Finally he recommended a prescription for a topical preparation for her neck-PLO gel containing ketoprofen, ketamine, gabapentin and cyclobenzaprine. He did not believe Claimant was at MMI.

33. Claimant was evaluated on April 12, 2016 by H. Alexander Cobb, M.D. He evaluated her for bilateral hip pain, which she reported developed two weeks after the motor vehicle accident. The ALJ notes this report of history was inaccurate, as well as the fact that the vehicle which Claimant was riding hit another car. X-rays taken of Claimant's pelvis and both hips showed no dysplastic features in either hip or pelvis. Dr. Cobb's impression was a potential labral tear in both the left and right hips. He ordered an MRI arthrogram. The ALJ notes Dr. Cobb indicated the labral tears were non-traumatic, which raises the question of whether the MVA caused same.

34. Claimant underwent an MRI and arthrogram of the left and right hips on May 4, 2016. The procedure was performed by Raymond Armstrong, M.D., whose impression was: negative arthrogram left hip. The MRI films were also read by Dr. Armstrong, who noted a tear at the superior acetabular labrum of the left hip. He also noted an anterior right acetabular labral tear, but no evidence of occult right hip fracture or osteonecrosis. No femoral acetabular impingement was noted. Dr. Armstrong's impression was superior/inferior left acetabular labrum tear; complex, left adnexal cyst.

His impression was the same for the right hip. These were the latest medical records admitted at hearing.

35. Claimant testified she continues to have pain in her inner thighs and cannot cross her legs. She also has low back and neck pain. She described this as an ache.

36. Dr. Lesnak, who is board certified in Physical Medicine and Rehabilitation and Osteopathic Medicine testified at hearing. He is Level II accredited pursuant to the WCRP. Dr. Lesnak testified consistently with his IME report. He concluded Claimant did not have lower extremity pain complaints at the Littleton Hospital. Dr. Lesnak noted Claimant's hip and thigh complaints took some time to develop. Dr. Lesnak acknowledged that the most recent MRI of the hips showed small labral tears in the exact position on both sides. However, he pointed out that Claimant did not always have symptoms of hip pathology. When he examined her on January 25, 2016, she had no symptoms of hip pathology, but did complain of inner thigh complaints. Dr. Lesnak did not believe Claimant's thigh symptoms were related to the accident. The delay in onset caused him to question the relatedness of this condition. He stated Claimant did not require further treatment. He testified Dr. Ryan was in error regarding the cause of Claimant's hip and thigh pain. He opined Claimant was at MMI and sustained no permanent impairment. He opined Dr. Ryan had erred in his conclusions regarding the need for treatment.

37. Dr. Lesnak also disagreed with Dr. Ryan's opinion that Claimant suffered permanent pathology of the cervical spine that is causally related to the industrial injury. Dr. Lesnak stated Claimant became symptom free with respect to her cervical spine symptoms in February/March 2013, as documented by the MD Urgent Care notes. However, the ALJ noted Claimant continued to report symptoms to her providers, which extended through 2015. Dr. Lesnak opined Dr. Ryan committed clear error in rating Claimant's cervical spine, as per the *AMA Guides*, because there was no ratable pathology and no Table 53, diagnosis. If there is no Table 53 rating, Dr. Lesnak stated it was not permissible pursuant to Level II Accredited training to provide a range of motion rating. This was why he believed Dr. Ryan's 13% rating was in error. Dr. Lesnak offered a similar opinion concerning Claimant's lumbar spine. He testified no rating warranted for this area of Claimant's body under the *AMA Guides*. The ALJ was not persuaded by Dr. Lesnak's testimony regarding whether Claimant sustained an injury to her cervical and lumbar spine and whether she had a permanent medical impairment. The ALJ concluded Claimant met the criteria for a permanent medical impairment.

38. Dr. Quintero testified as an expert at hearing. He is a board certified neurologist. Dr. Quintero opined that Claimant's inner thigh pain was not related to the industrial motor vehicle accident and also he noted when she was examined by Dr. Berger on November 30, 2012, although she reported new neck pain,
she did not mention this inner thigh pain, back or hip pain. Dr. Quintero said the etiology of Claimant's inner thigh pain is mechanical, in that it is not

constant. Based on the location of her pain, he believes it follows the distribution of the gracillis muscle, especially since the symptoms consistent with aggravation of this muscle group are problems with crossing of the legs. Dr. Quintero testified that in fact, running without adequate stretching is the most common cause of injury to the gracillis muscle.

39. Dr. Ryan, who is board certified in Physical Medicine and Rehabilitation and Osteopathic Medicine, testified at hearing. He is Level II accredited pursuant to the WCRP. He testified regarding both of his examinations of Claimant. Dr. Ryan testified consistently with the findings made of both of his evaluations of Claimant. Dr. Ryan testified Claimant required additional treatment, which was the basis for his finding that Claimant was not at MMI. However, the ALJ was not persuaded by his testimony on this subject. He testified the ratings he performed with regard to the cervical and lumbar spine were done pursuant to the *AMA Guides.* The ratings were performed in accordance with the training Level II accredited physicians receive. The ALJ credited Dr. Ryan's findings with regard to Claimant's cervical and lumbar spine.

40. Based upon the totality of the evidence, the ALJ finds Respondents overcame Dr. Ryan's opinion as to whether Claimant was at MMI.

41. The ALJ concluded Respondents overcame Dr. Ryan's opinion regarding the cause of her thigh and hip pain. Her pain complaints were not related to the injuries she sustained on October 23, 2012.

42. Claimant did not prove she was entitled to additional medical benefits in the form of treatment for her hips and thighs.

43. The evidence admitted at hearing documented an injury to and treatment for Claimant's cervical spine. Claimant sustained a permanent medical impairment to her cervical spine as a result of her industrial injury. The ALJ concluded Claimant sustained 13% rating to her cervical spine based upon the findings of Dr. Ryan.

44. The evidence in the record documented an injury to and treatment for Claimant's lumbar spine. Claimant sustained a permanent medical impairment to her lumbar spine as a result of her industrial injury. The ALJ concluded Claimant sustained 15% rating to her lumbar spine based upon the findings of Dr. Ryan.

45. Evidence and inferences inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), §§ 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical

benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S. Generally, the Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. § 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). In this case, the credibility of Claimant, as well as the various health care providers who testified as experts, bore directly on the issue of overcoming the DIME.

Legal Standard for Overcoming the DIME

In resolving the issues, the ALJ notes the question of whether Respondents overcame Dr. Ryan's opinion is governed by §§ 8-42-107(8)(b)(III) and (c), C.R.S. *Peregoy v. Indus. Claim Apps. Office*, 87 P.3d 261, 263 (Colo. App. 2004). These sections provide that the finding of a DIME physician selected through the Division of Workers' Compensation shall only be overcome by clear and convincing evidence. A DIME physician's findings of MMI, causation, and impairment are binding on the parties unless overcome by "clear and convincing evidence". § 8-42-107(8)(b)(III), C.R.S.; *Leprino Foods Co. v. Indus. Claim Appeals Office*, 134 16 P.3d 475, 482-83 (Colo. App. 2005); *accord Martinez v. Indus. Claim Appeals Office*, 176 P.3d 826, 827 (Colo. App. 2007).

Clear and convincing evidence is highly probable and free from serious or substantial doubt, and the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert,* 914 P.2d 411 (Colo. App. 1995). The mere difference of medical opinions does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAO July 19, 2004); see *Shultz v. Anheuser Busch, Inc.*, W.C. No. 4-380-560 (ICAO Nov. 17, 2000).

The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Indus. Claim Apps. Office*, 961 P.2d 590 (Colo. App. 1998). Since the DIME physician is required to identify and evaluate all losses and restrictions that result from the industrial injury as part of the diagnostic assessment process, the DIME physician's opinion regarding causation of those losses and restrictions is subject to the same enhanced burden of proof. *Id*. As noted below, Respondents met their burden of proof with regard to the issue of MMI and whether Claimant's hip and thigh pain were related to the industrial injury.

Causation

There was a significant question regarding the cause of Claimant's pain complaints in her thighs, as well as both hips, as documented by the extensive medical evidence and expert opinions admitted at hearing. There was a divergence of opinions by the physicians as to the cause of these symptoms. The ALJ concluded Dr. Ryan's analysis was not complete as to the cause of Claimant thigh pain and his opinion was overcome. First, Dr. Ryan did not fully analyze the findings made by Dr. Campa, who attributed the thigh complaints to Claimant's endometriosis. (Finding of Fact 12). Dr. Campa performed extensive testing to support his conclusions. Dr. Campa's opinion on the subject was persuasive to the ALJ.

Second, Dr. Quintero also raised Claimant's running as a potential cause for the pain complaints in her thighs. (Finding of Fact 21). Claimant's symptoms did not arise for more than two months after the MVA, during which time she was running. Dr. Ryan's first DIME report also noted pain complaints after Claimant was running and there was at least some indication that Claimant continued to run. Additional support for this conclusion came in the form of Dr. Cobb's opinion, who noted Claimant's hip pain was non-traumatic.

Based on the evidence, the ALJ was persuaded that Claimant's running could have been a factor in these pain complaints. Dr. Ryan, although he noted Claimant had reduced her running, did not provide a cogent explanation as to why Claimant's hip and thigh symptoms occurred. Dr. Ryan did not directly address the opinions of Dr. Quintero on this subject, nor did he discuss the delay in onset of these symptoms. He also appeared to summarily conclude the lower extremity symptoms were related to the MVA, without a great deal of analysis. Furthermore, Dr. Ryan did not provide an explanation as to the delay in onset of hip symptoms. This gave rise to doubts about his opinions on causation and led the ALJ to conclude that his conclusions were not supported by the evidence. Therefore, Respondents met their burden on this issue.

MMI

Dr. Ryan's conclusions regarding MMI were also overcome in this case. In particular, his treatment recommendations were essentially the same between the two DIME reports. However, Dr. Ryan did not provide an explication as to why, after the extensive PT and chiropractic treatment Claimant received, that further manual therapy

was in order. Also, his use of the phrase "maintaining her condition" in the first report led the ALJ to question whether this was pre-versus post-MMI treatment.[3] In addition, after the follow-up DIME with Dr. Ryan, Claimant underwent an MRI and arthrogram on both hips, which was one of the reasons Dr. Ryan concluded she was not at MMI.

Dr. Ryan's testimony at the hearing did not dispel the questions concerning MMI. (Finding of Fact 39). Therefore the ALJ concluded Respondents met their burden and introduced sufficient evidence to overcome Dr. Ryan's conclusion regarding MMI.

Impairment

The evidence led the ALJ to conclude Claimant injured her cervical and lumbar spine in the subject MVA. As found, Claimant complained of pain in her neck, starting with her treatment in the immediate aftermath of the accident. This started with the Littleton Hospital E.D. (Finding of Fact 5). Claimant's complaints of pain in the cervical spine were consistent throughout her treatment over the next couple of years. Drs. Berger and Campa diagnosed Claimant with cervical pain and opined she required treatment. (Findings of Fact 8 and 12).

Claimant's symptoms were documented when she required treatment while living in South Dakota and Alabama. Multiple physicians documented cervical symptoms, noting objective evidence of those symptoms. Claimant required for these symptoms. These symptoms continued to the end of 2015, when Claimant was examined by Dr. Anderson. (Findings of Fact 28-29). Claimant continued to experience symptoms in this area of her body, which she testified to at hearing. The ALJ was persuaded Claimant met the criteria under the *AMA Guides* for an impairment rating to her cervical spine. More particularly, she had in excess of six months of pain/rigidity in her cervical spine which qualified her to receive a rating, pursuant to Table 53 II (B).

Likewise, Claimant had pain in her lumbar spine, which was reflected in the medical records admitted at hearing. The ALJ credited the opinions of those physicians, who opined these symptoms were related to the motor vehicle accident. There was objective evidence of injuries to these areas of the body in these records, which led the ALJ to conclude Claimant was entitled to an impairment rating for both the cervical and lumbar spine. (Findings of Fact 43-44). In this regard, Dr. Ryan's opinion regarding Claimant's medical him impairment was persuasive to the ALJ. He performed an evaluation of both the cervical and lumbar spine and the ALJ has adopted those impairment ratings.

In coming to this conclusion, the ALJ considered Respondents' argument that Claimant had, at most, a minor injury and no impairment to the cervical or lumbar spine. Respondents asserted no lesion was noted at the emergency department on the days of the accident. Respondents relied upon to the IME reports, as well the testimony of Dr. Lesnak. They also cited Dr. Quintero's reports and testimony. The ALJ concluded Dr. Quintero's accident related diagnoses provided factual support for the conclusion

[3] Exhibit 4, p. 16.

that Claimant injured these areas of her body. (Finding of Fact 21). Although Dr. Quintero testified he did not believe Claimant sustained a permanent medical impairment, there was no evidence before the Court that he performed an evaluation of permanent impairment (including ROM testing) pursuant to the *AMA Guides*. (Findings of Fact 21-22).

As found, Dr. Lesnak's testimony regarding Claimant's cervical and lumbar spine was erroneous in that he noted Claimant did not initially have symptoms to her spine. Dr. Lesnak also testified that Claimant's cervical symptoms had essentially resolved by February-March 2013. This was contradicted by the medical records admitted at hearing, and the ALJ credited the opinions of Claimant's ATPs concerning symptoms in the neck and low back. In addition, the fact there was no lesion was noted on the CT scan the day of the accident does not preclude a permanent impairment, particularly where the evidence showed Claimant had symptoms and required treatment for an extended period of time. The ALJ did not find his testimony persuasive.

As found, these doctors documented symptoms and treatment for Claimant's cervical and lumbar spine over the course of many months. The medical records admitted at hearing document symptoms and objective findings made by Claimant's ATPs for more than two years after the accident. (See Findings of Fact 8, 10, 12, 13-17, 19, 23, 28-29).

Accordingly, there was sufficient evidence to warrant a rating to Claimant's cervical and lumbar spine. In this regard, the ALJ concluded the ratings done by Dr. Ryan were correct and comported with the *AMA Guides*, specifically Table 53 II (B). Dr. Ryan's report and testimony were the most persuasive on this subject. Based upon the plethora of records documenting these symptoms, Dr. Lesnak's analysis regarding a potential injury to these areas of the body was exiguous, to say the least.

The ALJ concluded Claimant sustained a permanent impairment to her cervical and lumbar spine and is entitled to benefits for that impairment. Dr. Ryan's rating was valid and prepared pursuant to the AMA Guides.

ORDER

IT IS ORDERED:

1. Respondents shall pay PPD benefits to Claimant, based upon the 13% rating to her cervical spine.

2. Respondents shall pay PPD benefits to Claimant, based upon the 15% rating to her lumbar spine.

3. Claimant's request for additional medical benefits to treat her hips or thighs is denied and dismissed.

4. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. ISSUES

The following issues were raised for consideration at hearing:

a. Whether Claimant suffered a compensable right shoulder injury on April 14, 2014, in the course and scope of employment for Employer; and

b. Whether the right shoulder surgery recommended by Dr. Failinger is reasonably necessary and related to the alleged April 14, 2014, injury.

FINDINGS OF FACT

Having considered the evidence presented at hearing, the ALJ makes the following Findings of Fact:

1. This matter comes forward on Claimant's application for hearing raising claims regarding the compensability of the right shoulder April 14, 2014, incident and the reasonableness and necessity of medical treatment for the right shoulder. It is found that Claimant sustained his burden of proof to establish that he suffered a work related injury to the right shoulder on April 14, 2014. However, Claimant failed to sustain his burden of proof to establish by a preponderance of the evidence that the current need for right shoulder surgery is related to the April 14, 2014, injury.

2. Claimant is a fifty-seven year old truck driver for Employer who alleged injuries to his right shoulder stemming from an April 14, 2014, incident. Claimant credibly testified that he injured his right shoulder while unloading a "double door" refrigerator from a truck with a co-worker. Claimant was lowering the refrigerator from the truck when the refrigerator and the dolly pulled. Claimant's co-worker step aside. Claimant, the dolly and refrigerator were pulled down from the truck and Claimant landed on top of the refrigerator.

3. Claimant requested medical treatment for his shoulder four months after the April 14, 2014, work incident. Claimant began treating at Concentra on August 6, 2014. He was attended by Dr. Kathryn Bird. He reported to Dr. Bird that the refrigerator pulled his arm downward. Dr. Bird observed that Claimant exhibited full range of motion. Dr. Bird diagnosed Claimant with shoulder impingement and referred Claimant for physical therapy. She did not provide work restrictions.

4. At Claimant's August 11, 2014, physical therapy appointment, Claimant reported that he experienced a moderate pain in his right shoulder at the end of his swing while playing golf. Claimant also reported experiencing pain when throwing a ball with his right hand. At that appointment, Dr. Bird noted that Claimant exhibited normal muscle strength and tone.

5. Claimant underwent five sessions of physical therapy. At his last session, he reported that he felt 90% improved. The records show that Claimant exhibited normal strength and was able to lift forty pounds with no problems.

6. On September 15, 2014, after Claimant had been released from physical therapy, Claimant returned to Dr. Bird. Claimant reported that his pain was only a one or two out of ten. Dr. Bird noted that Claimant exhibited normal muscle strength and tone, exhibited no tenderness in the right shoulder upon palpitation, and that Claimant had a full range of motion. She placed Claimant at maximum medical improvement (MMI) with no permanent impairment. She also opined that Claimant did not need any maintenance medical care or permanent work restrictions.

7. After being discharged, Claimant continued to work full duty, and even continued to play golf and softball. There are no records of complaints during the next year and a half, and Claimant did not see a doctor again until May 2016.

8. On May 5, 2016, Claimant returned to Dr. Bird complaining of two out of ten right shoulder pain. His complaints included new complaints of pain in the bicipital groove. He told Dr. Bird that his pain caused him difficulty when he played golf. Claimant reported experiencing an achiness with a popping sensation with external rotation. Claimant underwent a right shoulder MRI on May 13, 2016. The MRI showed a partial tear of the supraspinatus and infraspinatus, subluxation or dislocation of the bicep tendon, and acromioclavicular arthritis.

9. On May 26, 2016, Claimant saw Dr. Mark Failinger for an orthopedic evaluation. Dr. Failinger noted that Claimant's right shoulder was injured "three days ago" when helping a coworker lift a refrigerator. Dr. Failinger noted that Claimant underwent six weeks of physical therapy, which did not help at all. He stressed that Claimant did not have any new right shoulder injuries after 2014 and did not have any previous right shoulder injuries before the 2014 incident. He stated that Claimant's strength and range of motion was poor. Dr. Failinger opined that Claimant had a dislocated bicep tendon. He noted that this was evidenced by the fact that Claimant tore the transverse ligament, which causes the bicep tendon to pop out of the groove. He opined that the only option would be surgery. He noted that physical therapy "should not help" Claimant's right shoulder pain, and he

recommended Claimant undergo a biceps tenodesis. Dr. Failinger made no determinations regarding causation.

10. On November 3, 2016, Claimant underwent an independent medical examination (IME) with Dr. Allison Fall. Dr. Fall took Claimant's history, performed a physical examination, and reviewed Claimant's medical records.

11. Claimant told Dr. Fall that, on the date of the alleged injury, Claimant experienced what he described as a "little kink." Claimant reported that he had been able to perform his normal work following his release in 2014, and that he was still able to lift concrete. Claimant reported that his right shoulder symptoms worsened in April 2016, prompting him to seek medical treatment. Dr. Fall observed that it was impossible to determine the age of the MRI findings. She concluded that, based on the lack of documented symptoms between September 2014 and May 2016, it was unlikely that Claimant's need for right shoulder surgery was related to the alleged April 14, 2014, injury.

12. Claimant saw Dr. Michael Hewitt for a second surgical opinion on November 21, 2016. Dr. Hewitt reviewed Claimant's medical records and history. Dr. Hewitt opined that a traction injury would be foreseeable given Claimant's described mechanism of injury, and he therefore concluded that the MRI findings were causally related to the alleged April 14, 2014, injury. He recommended arthroscopic rotator cuff repair and biceps tenodesis.

13. Claimant testified regarding his alleged mechanism of injury, that he felt a "pop" in his shoulder at the time of the alleged injury. Claimant testified that he did not obtain treatment until four months after his alleged injury. He also testified that he did not have any missed time from work and that he obtained relief from physical therapy.

14. Claimant also testified at hearing regarding his involvement with golf. Specifically, he testified that he continued to regularly play golf from September 15, 2014 through May 5, 2016, and that he would play once or twice every two weeks. He stated that he was a right-handed golfer and that he would sometimes experience pain in his shoulder while playing golf.

15. Dr. Fall testified on behalf of Respondent at hearing. Dr. Fall testified regarding the bases for her opinions. Specifically, when asked about whether there was any significance for medical causation attributable to the fact that Claimant waited nearly four months after the alleged injury before pursuing treatment, Dr. Fall noted that such a history is more consistent with a minor strain. She opined that the treatment that Claimant underwent with Dr. Bird was appropriate for such a minor strain, additionally, noting that Claimant responded with very minimal treatment. Dr. Fall also attributed significance to the fact that Claimant did not pursue treatment for

more than a year and a half after being released in September 2014. Specifically, she felt that such a long period of time with no pursuit of treatment, no findings, and no documented complaints cast doubt on the causal relationship between Claimant's alleged April 14, 2014, injury and Claimant's new pain complaints in May 2016.

16. With regard to the alleged mechanism of injury, Dr. Fall testified that Claimant's subluxed biceps tendon could have resulted from anything ranging from acute trauma to overuse, and that biceps tendon dislocations are simply something that happens to men in their fifties. She clarified that an acute injury causing such a dislocation would be due to a traction mechanism of injury, where the arm is pulled backward. However, she noted that, if Claimant had in fact suffered an acute biceps tendon rupture on the date of the alleged injury, Claimant would have experienced immediate pain and bruising such that he would have needed immediate attention at a hospital. Claimant did not exhibit these symptoms, as Dr. Fall observed, and Claimant instead exhibited good strength, good range of motion and low pain levels during his short course of treatment prior to being released in September 2014, which would not be consistent with Claimant's later MRI findings. Furthermore, she noted, a biceps dislocation would have been observable upon physical examination, but there were no records of any such finding in Claimant's 2014 medical records. Thus, Dr. Fall ultimately opined that Claimant's need for surgery could not, within a reasonable degree of medical probability, be related back to the initial alleged injury.

CONCLUSIONS OF LAW

Having entered the foregoing Findings of Fact, the following Conclusions of Law are entered:

General Legal Principles

1. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201, C.R.S. Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission*

of Colorado v. Jones, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado*, 717 P.2d 1000 (Colo. App. 1986).

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). A Workers' Compensation case is decided on its merits. Section 8-43-201. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

The April 2014 work injury

3. The totality of the credible and persuasive evidence in the record established that Claimant suffered a minor muscle strain with impingement on April 14, 2014. The evidence established that Claimant was working in the course and scope of his employment for Employer when he suffered a minor shoulder strain while removing a large piece of heavy equipment from a truck. Claimant underwent a course of conservative treatment and was place at maximum medical improvement in September 2014 with no impairment or restrictions.

The relatedness of Claimant's 2016 need for right shoulder surgery

4. The evidence established that Claimant's right shoulder symptomalogy and MRI findings in 2016 are not causally related to the April 14, 2014 incident. Of significance in support of this conclusion is the fact that Claimant continued working full-duty without treatment or complaints following the April 2014 injury. Dr. Fall credibly testified that the 2016 biceps tendon rupture would have caused immediate pain and bruising such that Claimant would have needed immediate medical attention if the rupture was present in 2014. However, the evidence established that Claimant did not seek medical attention until four months after the 2014 injury and medical records reflect that Claimant exhibited good strength, good range of motion and low pain levels during his short course of treatment prior to being released in September 2014. Then, Claimant waited another 18 months before complaining of the ruptured bicep tendon.

5. Second, Dr. Fall credibly opined that Claimant was able to obtain relief for his shoulder symptoms through physical therapy in 2014 suggesting that his alleged symptoms in 2014 were not due to any biceps dislocation or rotator cuff tear. Thus, if Claimant's original alleged injury had been a torn biceps tendon and partial rotator cuff tear, Claimant would not have obtained relief from physical therapy as was the case following the 2014 injury.

6. Third, the mechanism of injury described by Claimant would not have been consistent with a torn biceps tendon or rotator cuff tear because Claimant's

testimony and all of the medical records recount an alleged mechanism of injury that involves Claimant being pulled forward onto the refrigerator. Based on this explanation, the mechanism of injury would not be a traction injury.

7. Fourth, the physical findings noted in Claimant's medical records in 2014 were not consistent with a biceps tendon rupture. Claimant's 2014 physical examinations revealed full range of motion and normal muscle strength and tone.

8. Last, Claimant's age and his continued regular participation in sports that involved his right shoulder made it unlikely that the biceps tendon dislocation and partially torn rotator cuff could be related to a remote minor muscle strain from April 14, 2014. Claimant's age and regular participation in sports involving the right shoulder, severs the causal connection to Claimant's 2016 right shoulder pain and MRI findings.

ORDER

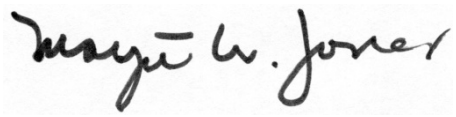
Based upon the foregoing Findings of Fact and Conclusions of Law, the ALJ hereby enters the following Order:

1. Respondent shall be liable for the April 14, 2014, right shoulder injury.

2. Claimant's 2016 claim for a right shoulder surgery is not reasonably necessary or related to the April 2014 work injury and is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 18, 2017



Margot W. Jones, Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that she sustained a work related injury to her bilateral upper extremities in the course and scope of her employment with Employer.

2. Whether Claimant has established by a preponderance of the evidence an entitlement to a general award of reasonable and necessary medical benefits to treat her bilateral upper extremities.

3. Whether Claimant has established by a preponderance of the evidence an entitlement to temporary total disability (TTD) benefits from July 8, 2016 and ongoing.

4. Determination of Claimant's average weekly wage.

FINDINGS OF FACT

1. Claimant worked for Employer as an asbestosis abatement technician. Claimant was hired on May 24, 2016 and worked for Employer for approximately 6.5 weeks and until July 8, 2016. During this period of time, Claimant underwent initial training and then was sent to job sites for work shifts. At job sites, Claimant worked approximately 20 total shifts. The shifts were generally close to 8 hours long, with occasional shifts shorter and longer than 8 hours, the shortest being 4.5 hours and the longest being 11.5 hours. *See* Exhibit D.

2. Claimant's assigned job duties included demolition, deconstruction, use of power tools, lifting of 50 pounds, cleaning, removing construction debris, cutting and scraping asbestos, moving equipment, and being able to sit/stand/walk for 8 to 12 hours per day.

3. Workers for Employer typically began projects by sealing off an area using scaffolding, plastic sheeting, and nail guns. They also moved mobile decontamination units into the site, set up portable showers, and set up air evacuation and filtration systems. Once an area was completely sealed off, workers began deconstruction and asbestos removal. The removal is varied with use of many different tools including sawzalls, circular saws, demolition saws, grinders, hand scrapers, screwdrivers, hammers, prybars, and saws. Workers use whatever tools are needed to break down and remove walls, flooring, ceilings, and to get the asbestos contaminated area down to the studs. Workers then pack all the construction debris into plastic, sealed bags which

are double bagged and taped off so that the asbestos containing material does not escape. Workers carry these bags out of the premises.

4. Typically, workers suit up into required protective gear and go into a containment area for approximately 4 hours. They then come out, take off their protective gear, shower, and take a break. When workers go back into the containment area, they must again suit up in protective gear. While in the containment area, the workers can take breaks, talk, and plan what area they are deconstructing and how to go about the process. Workers perform varied tasks inside the containment area depending on the day and where they are at in demolition.

5. During her first week of work, Claimant underwent a pre-employment physical, completed training in asbestos removal, and received certifications for asbestos abatement.

6. On June 2, 2016 Claimant was sent to her first job site which was located at Arapahoe High School. The project had already started when Claimant arrived and she began working with others on a team inside an already set up containment area.

7. At Arapahoe High School, a three story boiler room was being deconstructed. The area had significant metal structures, and sawzalls and grinders were used to cut the metal into smaller pieces for removal. Claimant was assigned to this project for approximately two weeks. Claimant reported during this project she used the sawzall and would use it for 1-3 hours and then would switch off and load the steel out and carry it to the load out area. Claimant reported that she could switch out tasks with others on her crew if her hands hurt. Claimant reported varied use of the sawzall, but that it required a lot of force and a lot of vibration. Claimant reported removing a lot of debris at that project site and that she spent 4 hours removing debris each day. Claimant reported that while using the sawzall she would take her finger off the trigger once a full cut was made to remove the cut piece, then would start again with her finger back on the trigger. Claimant also reported that she broke blades on the sawzall every ten minutes.

8. After the Arapahoe High School project, Claimant was assigned to work at Boulder Rehabilitation Center which was a project that lasted only one day and one work shift.

9. The next project Claimant worked on was at Cavalier Apartments in Boulder. Claimant assisted in setting up the containment area and had to reach, tape, and staple plastic sheeting. Claimant used a stapler and testified that it could take 2-4 hours to hang, tape, and staple the plastic sheeting in a particular area. Once containment was set up Claimant used a crowbar and hammer to take down dry wall, used a scraper while on her knees to remove tiles from the floors, and again assisted in double bagging, taping, and removing debris from the site.

10. Claimant testified that her upper extremities started bothering her two weeks after she started working for Employer, but that she powered through and thought her body was just getting used to construction work. Claimant testified that she continued to power through the pain until she was in tears and couldn't continue and that she then went to the emergency room.

11. On July 8, 2016 Claimant was evaluated at Denver Health Medical Center by Sarah Foss, PA-C. Claimant was diagnosed with carpal tunnel syndrome, unspecified, laterally. Claimant was provided with diclofenac medication and with splints. Claimant was advised to wear the splints for 2-4 weeks and to follow up with primary care. *See* Exhibit 1.

12. On July 11, 2016 Claimant provided Employer with a written statement that indicated she was injured at work and went to the emergency room on July 8 where she was diagnosed with carpal tunnel in both hands. Claimant reported that she started to feel numbness and a lot of pain in her hands a few days prior to going to the emergency room and woke up with major pain on July 8 so she called in to work and went to the emergency room. *See* Exhibit 2.

13. On July 11, 2016 Claimant was evaluated by Braden Reiter, D.O. Claimant reported that she woke up on July 8 and that both hands were bothering her with pain into both hands and into the forearms and numbness in her fingers. Claimant reported that at the emergency room of Denver Health she was diagnosed with carpal tunnel and given wrist splints and diclofenac. Claimant reported continued pain through the hands and that she was working through it, but that when she gets home and takes off her splints, she had increased pain and numbness. Claimant reported no prior injuries to her hands. Claimant denied thyroid disease and denied any aggravating home activities. Claimant reported no prior workers' compensation injuries. Claimant reported smoking half a pack of cigarettes per day. *See* Exhibit 5.

14. Dr. Reiter performed a physical examination and noted bilateral wrists with tenderness through the thenar eminence, radiating to the dorsum of the thumb and along the dorsal radial aspect of the wrist. Dr. Reiter found decreased range of motion of the wrist and positive Finkelstein's bilaterally. Dr. Reiter found grip strength of +4/5 in bilateral hands and diminished sensation in the thumb, index, middle, and ring fingers bilaterally. Dr. Reiter assessed bilateral wrist tenosynovitis. Dr. Reiter provided restrictions of no lifting, grasping, or twisting with hands. Dr. Reiter recommended Claimant continue to wear the thumb spica splints given to her in the emergency room and continue to the diclofenac. Dr. Reiter recommended icing her wrists 15-20 minutes every hour and referred Claimant to occupational therapy 2 times per week for 2-3 weeks. *See* Exhibit 5.

15. On July 12, 2016 Claimant underwent an occupational therapy initial evaluation performed by Christopher Luscia, OTR/L. Claimant reported that over the last week to week and a half she began noticing pain and numbness in her bilateral hands. Claimant reported now that she had numbness all day long. Claimant reported

that she began her current job of asbestos removal five weeks ago and that she had been in jail the two years prior and believed that due to some deconditioning, the job was too hard for her to start initially and created some of her discomfort. Claimant reported no previous medical history to her upper extremities and that prior to going to jail she had worked in the construction business. OTR Luscia performed therapeutic exercises including stretching and noted that due to the severity of pain and Claimant's tolerances, emphasis would be placed on resting and gentle stretching until the pain was more localized. *See* Exhibit 4.

16. Claimant attended occupational therapy on July 14, July 18, July 21, and July 28 with OTR Luscia. By the 28th, Claimant reported that her hands were less uncomfortable during the day, but still woke her up at night. OTR Luscia noted that Claimant had verbalized a slow decrease in symptoms and good replication of her home program and he continued to emphasize gentle stretching. *See* Exhibit 4.

17. On July 18, 2016 Claimant was evaluated by Dr. Reiter. Claimant reported continued pain and numbness in both hands and that it took several hours in the morning after waking for hands to come back from being numb. Dr. Reiter continued the assessment of bilateral wrist tenosynovitis and continued Claimant's work restrictions. Dr. Reiter referred Claimant for EMG/nerve conduction studies of the bilateral upper extremities. *See* Exhibit 5.

18. On July 25, 2016 Claimant was evaluated by Dr. Reiter. Claimant reported increasing pain in the left arm with pin-pricking tingling sensation through the arm and increased pain and numbness into the fingers. Claimant reported that in the right hand the numbness was improved some but that she still had pain in the right arm, hand, and wrist. On examination, Dr. Reiter noted good range of motion in both hands and wrists and decreased sensation in the median nerve distribution on the left hand and right hand, positive Tinel at the wrists bilaterally, and negative Finkelstein bilaterally. Dr. Reiter continued the assessment of bilateral wrist tenosynovitis and continued Claimant's work restrictions. *See* Exhibit 5.

19. On July 27, 2016 a Job Demands Analysis (JDA) was performed by Howard Fallik. Mr. Fallik noted that due to reported medical difficulties, Claimant was not currently working and that another employee performing the same tasks as Claimant performed prior to the onset of her injuries would be the subject. Mr. Fallik found no primary or secondary risk factors present. Mr. Fallik noted that Claimant's job duties included: 20-25% of position - using a crowbar and other tools to remove drywall in preparation for additional tasks involved with the mitigation process, sealing off work area using plastic sheeting and duct tape; 10-20% of position – positioning mobile decontamination unit or portable showers at entrance of work area, positioning portable air evaluation and filtration system inside the work area; 20-25% of position – cutting and scraping asbestos or pain from surfaces using a knife and scraper, shoveling asbestos or paint into plastic disposal bags, and sealing the bags using duct tape as well as loading bags into truck; 5-10% of position – cleaning work area of loose asbestos or paint using vacuum, nylon brushes, rags and dust pain; 5-10% of position

being performing daily equipment checks to ensure they are in proper and safe working condition; 3-5% of position – loading and unloading scrap materials and roll off boxes; and 3-5% of position- cleaning and maintaining tools. *See* Exhibits 3, A.

20. On August 2, 2016 Claimant was evaluated by Dr. Reiter. Claimant reported that her left hand continued to have pain and numbness in the hand and fingers and that she had some pain in the right hand and fingers. Claimant reported that occupational therapy helped for a short period of time but then the pain and numbness returns. On examination, Dr. Reiter noted decreased range of motion of the left wrist and of the right hand and wrist. Dr. Reiter noted diminished sensation in the fingers and hands and positive Tinel's and Phalen's at the right wrist. Dr. Reiter continued the assessment of bilateral wrist tenosynovitis and continued Claimant's work restrictions. Dr. Reiter referred Claimant for a hand specialist evaluation. *See* Exhibit 5.

21. On August 5, 2016 Claimant was evaluated by Eric Hammerberg, M.D. Dr. Hammerberg noted pain and numbness in both Claimant's hands and a clinical examination of bilateral upper extremities that showed intact strength, intact and symmetrical muscle stretch reflexes, decreased sensation to pin over the thumb, index, and long fingers of both hands, positive Tinel's signs over both median nerves at the wrist, and no radicular symptoms with neck movement. Dr. Hammerberg performed electro diagnostic studies of both upper extremities. In the motor conduction test, results outside the specified normal range were found in the left median nerve with reduced amplitude on wrist stimulation. In the sensory conduction test, results outside the specified normal range were found in the: right median digit II nerve with peak latency increased for wrist stimulation; left median digit II nerve with the peak latency increased for wrist stimulation; right median digit III nerve with the peak latency increased for wrist stimulation; left median digit III nerve with the peak latency increased for wrist stimulation; right median ulnar palm nerve with the peak latency increased for ulnar-median segment; and the left median ulnar palm nerve with the peak latency increased for ulnar-median segment. Dr. Hammerberg concluded that the findings were compatible with the clinical diagnosis of bilateral carpal tunnel syndrome and that there was no evidence of cervical radiculopathy. *See* Exhibit 6.

22. On August 9, 2016 a medical records review was performed by Jason Rovak, M.D. Dr. Rovak reviewed the medical chart and the JDA. Dr. Rovak opined that Claimant did not have any risk factors that would be consistent with the development of a cumulative trauma disorder and that she did not meet any primary risk factors including hand tool use, positional risk factors, or exposure risk factors. Dr. Rovak noted that the time studies for risk factors that include four hours of specific activities were all in the roughly one to one and a half hour range. Dr. Rovak opined that since Claimant did not appear to meet criteria for a cumulative trauma disorder, her symptoms would be considered unrelated to her employment. *See* Exhibit B.

23. On November 15, 2016 Claimant underwent an independent medical examination performed by Jonathan Sollender, M.D. Claimant reported that she woke up the morning of July 8 noticing pain in both hands into the forearms with numbness of

her fingers. Claimant reported that her symptoms began with her hands feeling tense and hard to move with numbness that went away and that it began a few weeks after she started to work and that she believed the initial symptoms would go away after she worked more. Dr. Sollender reviewed medical records, the JDA, and performed a physical examination. Claimant reported no other upper extremity injuries prior to this claim. Claimant reported numbness at times, mostly late at night, affecting the left hand more than the right. *See* Exhibit C.

24. Dr. Sollender provided the impression of: left wrist dequervain's tenosynovitis, left wrist TFCC strain, left carpal tunnel syndrome, and right forearm strain and opined that none of Claimant's conditions were work related. Dr. Sollender noted that Claimant had worked only a few short weeks before claiming this condition due to work. Dr. Sollender noted that while highly improbable, a cumulative trauma condition can arise after the first day of work. However, Dr. Sollender noted that the JDA showed work that was neither repetitive, forceful, or awkward and that the observation showed only 1.5 hours of exposure per day which was less than the minimum exposure of 4 hours required to qualify as cumulative trauma disorder. Dr. Sollender opined that the job Claimant performed was not the type which would naturally lead to the development of a cumulative trauma disorder. Dr. Sollender agreed with Dr. Rovak that Claimant's job did not meet the definition for it to lead to a cumulative trauma disorder and recommended denial of the claim based on the lack of work relatedness. *See* Exhibit C.

25. Some prior medical and social security records reference Claimant's bilateral upper extremities.

26. On March 14, 2010 Claimant was evaluated at St. Anthony Hospital Central. Claimant reported that she was assaulted the evening prior. Amongst other complaints, Claimant reported bilateral hand pain with no peripheral tingling, numbness, or weakness. Claimant's extremities were noted to be symmetrical with full range of motion. X-rays of the bilateral hands were performed and showed no evidence of acute osseous injury. The x-rays showed normal joint spaces and a possible old right 5^{th} metacarpal fracture. The diagnosis was assault with minor closed head injury, facial contusion, and bilateral hand contusions. *See* Exhibit G.

27. On April 15, 2014 Claimant was evaluated at Denver Health Medical Center where she walked in. Claimant reported vomiting, fever, and left hand numbness. *See* Exhibit F.

28. On May 5, 2014 Claimant completed a Supplemental Security Income Application. On the functional report, Claimant listed information about her abilities. Claimant reported that her illnesses, injuries, or conditions affected her lifting and using her hands and wrote that her hands got numb every night. Claimant also reported that her hands were numb a lot when she woke up most every morning. *See* Exhibit J.

29. On May 7, 2014 Claimant underwent an adult comprehensive psychiatric consultation performed by Kristi Helvig, Ph.D. It was noted that the evaluation was requested by Colorado Disability Determination Services to determine Claimant's present level of cognitive functioning and mental status. Claimant reported having severe PTSD and that it was hard to focus at her job. Claimant reported her past work included being a blackjack dealer at a casino for 6 years and that afterwards, she worked full time for her husband's construction company from 2000 until 2012, as well as a painter and foreman. Claimant reported that more recently, she had done several self-employed contracts for construction work until 2012. *See* Exhibit I.

30. When asked when she first began to have trouble working, Claimant reported when working for her husband. Claimant reported that due to either working as a blackjack dealer in the past or the current construction work, she would have trouble with her fingers going numb from time to time. Claimant reported that she had applied for work since 2012 but that when she was called in for interviews, she was too scared and did not go. *See* Exhibit I.

31. A determination was made by Social Security that Claimant's condition resulted in some limitations in her ability to perform work related activities but that it was not severe enough to keep her from working and that she was not disabled. See Exhibit J.

32. Dr. Sollender testified at hearing consistent with his report. Dr. Sollender opined that it was important to review both a JDA and Claimant's description of job duties and noted that a JDA will break down the duties that someone might report doing all day. Dr. Sollender opined that there were no primary or secondary risk factors present in Claimant's job even with a lowered threshold of 3 hours under newer guidelines. Dr. Sollender opined that the longest period for a risk factor was 1.5 hours and that Claimant was still 50% or less from any risk factors. Dr. Sollender opined that Claimant had a pattern of hand complaints over the years where she reported her hands being numb. Dr. Sollender noted that diabetes and thyroid issues can lead to carpal tunnel and that Claimant had a family history of both. Dr. Sollender opined that many activities could aggravate the carpal tunnel including dishes, tying shoes, etc.

33. Dr. Sollender testified that use of a sawzall for three hours would be a secondary risk factor, but that the use of vibratory tools requires six hours for it to be a primary risk factor. Dr. Sollender opined that if you used Claimant's description and not the JDA that it would be possible that Claimant had primary and secondary factors, but opined that the JDA and more objective evidence showed that Claimant was not accurate and that he would not use Claimant's description of jobs.

34. One of the owners of Employer's business, Bart McTaggart, testified at hearing. Mr. McTaggart was with the JDA evaluator and saw him observe multiple workers the day of the JDA and testified that multiple stages were going on with areas being prepped and areas being torn down. Mr. McTaggart testified that the tools used on the jobs varied depending on the job and that employees had a variety of tasks that

they performed. Mr. McTaggart testified that the job performed by his employees was not consistent in upper extremity use because the work was so varied and required multiple tasks and that one worker does not stay on one task for multiple hours. Mr. McTaggart testified that inside containment, workers have down time and will stop, talk, strategize on what they are doing, and get instructions. Mr. McTaggart testified that he reviewed the JDA and thought it was accurate.

35. Carmen Lawrence testified at hearing. Ms. Lawrence worked for Employer alongside Claimant and also lived with Claimant in a half-way house. Claimant told Ms. Lawrence that she was a preferred contractor and that she had carpal tunnel from being a contractor for years. Ms. Lawrence testified that it was very apparent at the half-way house that Claimant's wrists bothered her after performing chores. Ms. Lawrence opined that the JDA reflected the job that she and Claimant performed. Ms. Lawrence testified that the workers had down time inside containment, that they took breaks, and that they rotated jobs after getting tired. Ms. Lawrence testified that Claimant used the sawzall 3-4 times total while at the Arapahoe High School job.

36. Claimant testified at hearing. Claimant reported that at the first job at Arapahoe High School she cut with a sawzall which required a lot of force and vibration. She reported that she broke blades on the sawzall every 10 minutes and that she would perform tasks for four hours before changing out. She also reported that she would use the sawzall 1-3 hours and then would sometimes go to take steel to the load out area and that she could switch out if someone else's hands hurt. She reported removing waste at the load out and carrying it to the dumpster, bagging, and duct taping it. She reported spending four hours removing debris. At the apartment job she reported reaching and taping with constant up and down stretching to tape up the containment areas, using a crowbar and hammer to take down dry wall, and being on her knees with a scraper to remove floor tiles. Again, she reported bagging and taping the contaminated materials. Claimant disagreed with parts of the JDA and believed that it gave a basic layout but didn't accurately reflect her job. Claimant testified that she never had carpal tunnel prior to this job.

37. Claimant's testimony, overall, is not found credible or persuasive. The testimony of Ms. Lawrence and Mr. McTaggart is found credible and persuasive. The testimony of Dr. Sollender is found credible and persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A

preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

Claimant is required to prove by a preponderance of the evidence that the conditions for which she seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. *See* § 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO

August 18, 2005). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

An occupational disease is a disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment. *See* § 8-40-201(14), C.R.S. A claimant seeking benefits for an occupational disease must establish the existence of the disease and that it was directly and proximately caused by the claimant's employment duties or working conditions. *Wal-Mart Stores, Inc. v. Industrial Claims Office,* 989 P. 2d 251 (Colo. App. 1999); *Cowin & Co. v. Medina,* 860 P.2d 535 (Colo. App. 1992). In deciding whether the Claimant has met his burden of proof, the ALJ is empowered to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to testimony, and draw plausible inferences from the evidence. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002).

Claimant has failed to meet her burden of proof to establish that her bilateral upper extremity symptoms are directly and proximately caused by her employment duties or her working conditions. As found above, Claimant has a history of symptoms consistent with carpal tunnel including hand numbness. Approximately two years prior to working for Employer, Claimant reported that her hands got numb every night, were numb when she woke up most every morning, and that due to her past work as a blackjack dealer or in construction, she had trouble with her fingers going numb from time to time. The symptoms that Claimant believes are causally related to her employment with Employer are just as likely the result of the natural progression of her pre-existing condition.

Claimant has failed to establish that her employment caused, aggravated, or accelerated the condition. As found above, a JDA was performed by observing a worker with the same job duties as Claimant. The JDA concluded that Claimant's position does not meet the requirements under the medical treatment guidelines for any primary or secondary risk factors. The amount of time spent performing activities is not significant enough to cause bilateral carpal tunnel syndrome or to cause an aggravation or acceleration of bilateral carpal tunnel. The testimony of Mr. McTaggart and Ms. Lawrence that the JDA is an accurate representation of the job duties is found credible and persuasive.

Claimant's testimony is not found credible or persuasive. Claimant testified that she constantly used vibratory tools (sawzall) at the Arapahoe High School job. However, she also later testified that she would be on the sawzall for 1-3 hours, would cut a piece of metal with her finger on the trigger, take her finger off the trigger to kick or push out the piece of metal, then would go back on the trigger. She also testified that

she was breaking blades every 10 minutes which would necessarily require stopping to take out the broken blade and insert/attach a new blade. Although the Claimant is not credible in describing job duties that she claims she was performing "constantly", even assuming arguendo that she was assigned to a sawzall for 3 straight hours, there would be a significant amount of time where she would not be "on the trigger" when she pushed out the metal and changed out the broken blades. During this time, there would be no vibratory forces at play.

Claimant has failed to show that her Employment proximately caused her bilateral upper extremity condition. It is just as likely that Claimant's bilateral condition is the natural progression of a non-work related condition and Claimant has failed to establish a causal relationship to his employment or employment duties. Employment with Employer has not been shown to be the proximate cause and Claimant was equally exposed to hazards that would aggravate her pre-existing condition outside of work. The opinions of Dr. Rovak and Dr. Sollender that her condition is not work related are found credible and persuasive. The opinions of the doctors are consistent with the JDA, the testimony of Mr. McTaggart and Ms. Lawrence, and the Medical Treatment Guidelines. Claimant is not found credible or persuasive and although she reported never having had this type of problem before, the medical records suggest otherwise and point to similar problems for which Claimant sought treatment in 2014. Claimant has failed to meet her burden.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish by a preponderance of the evidence that she sustained a work related injury to her bilateral upper extremities in the course and scope of her employment with Employer.

2. As Claimant failed to meet her burden to establish a compensable injury, the remaining issues are not addressed. The claim is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 18, 2017

Denver, CO 80203

ISSUES

I. Whether Claimant established by a preponderance of the evidence that his scheduled upper extremity impairment should be converted to whole person impairment.

II. Whether Respondents have proven by clear and convincing evidence that the DIME physician Dr. Kenneth Finn, M.D., erred in providing impairment for the Claimant's distal clavicular resection.

Because a Division examiners impairment rating is only presumptive regarding whole person impairment and because the ALJ concludes that Claimant failed to prove by a preponderance of the evidence that he suffered a functional impairment beyond the shoulder, the ALJ also considers whether Claimant has proven by a preponderance of the evidence that the scheduled impairment rating given by Dr. Finn is accurate.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant works for Employer as a network technician. The job requires Claimant to carry and set up ladders to repair and install DSL and telephone lines. Included in Respondents' submission packet is a job analysis of Claimant's position as a network technician. The job analysis reflects the physical demands of this position fall into the medium/heavy duty category.

2. On May 20, 2015, Claimant injured his neck and left shoulder after he was broad sided by another driver while driving his bucket truck shortly after completing a job.

3. Claimant came under the care of Dr. Terrence Lakin, at the Southern Colorado Clinic. Due to persistent left shoulder pain, Dr. Lakin referred Claimant to Dr. Michael Simpson for a surgical evaluation. Dr. Simpson would go on to perform an arthroscopic rotator cuff repair and subacromial decompression along with a distal clavicle resection on September 3, 2015.

4. Claimant returned to unrestricted full duty work on March 17, 2016. Since this time, Claimant has continued to perform his usual job duties as a network technician without restriction. As noted, Claimant's job as a network technician is a medium to heavy duty job.

5. On June 10, 2016, Dr. Lakin placed Claimant at maximum medical improvement (MMI) with 15% whole person impairment for his cervical spine injury and 23% scheduled impairment for his left shoulder condition. Ten percent (10%) of the 23% scheduled impairment was assigned by Dr. Lakin for the distal clavicle resection. Claimant's 23% scheduled impairment converts to 9% whole person impairment. Dr. Lakin added the whole person impairments to arrive at a combined 23% whole person impairment for this neck and shoulder injuries.

6. Prior to reaching MMI, Claimant completed multiple pain diagrams depicting pain in the left cervical area which radiated up into the head and down the side of the neck into the trapezius. The diagrams also illustrate pain in the anterior part of his shoulder which was noted to radiate distally into the arm. At hearing, Claimant testified consistent with the pain diagrams that he completed for the several months prior to reaching MMI. Claimant confirmed that he attributes his headaches, as well as pain radiating down into his trapezius area to his neck injury. He also testified that he never reported that the pain in his trapezius was a consequence of his shoulder injury.

7. Respondents sought an opinion from Dr. Elizabeth Bisgard. Dr. Bisgard examined Claimant on August 29, 2016 and finalized a report outlining her opinions of September 2, 2016. Regarding Claimant's shoulder impairment which Dr. Bisgard admittedly incorrectly referenced initially as involving Claimant's right side, she opined:

> Dr. Lakin added 10% impairment for the distal clavicle resection. In the *AMA Guides to the Evaluation of Permanent Impairment, Third Edition (Revised*), page 52, Category 3.1-J, "Other Musculoskeletal System Defects," the Division allows the examiner to provide an additional 10% upper extremity rating for distal clavicular resection. However, the *Guides* define the additional rating as follows:
>
> *"In rare cases, the severity of the clinical findings (e.g., loss of shoulder motion) does not correspond to the true extent of the musculoskeletal defect (e.g., severe and irreparable rotator cuff tear of the shoulder), as demonstrated with a variety of imaging techniques (e.g., MRI or surgical visualization). If the examiner feels that measured anatomical impairment does not appropriately rate the severity of the patient's condition, an additional impairment can be given at discretion."*

8. Dr. Bisgard noted that the additional 10% impairment for distal clavicle resection was not given "automatically" and should be awarded as outlined in the Guides. In this case, Dr. Bisgard noted that Claimant had an excellent surgical outcome and had been returned to full duty with "minimal, if any functional limitations." Consequently, Dr. Bisgard opined that Dr. Lakin did not apply the Guides appropriately when he included an additional 10% for Claimant's distal clavicle resection. Dr. Bisgard

also opined that Clamant was entitled to a cervical impairment rating and that Dr. Lakin appropriately calculated the same.

9. Claimant underwent a Division Independent Medical Examination (DIME) with Dr. Kenneth Finn on November 11, 2016. With regards to Claimant's left neck pain, Dr. Finn documented the following:

> He has left-sided only neck pain, constant in nature, fluctuating severity, radiating to the shoulder and scapular region, and into the intrascapular region along the upper trapezial ridge. He notes increased neck pain with cervical extension, left more than right rotation, static positioning and driving activities.

10. With regards to Claimant's left shoulder, Dr. Finn documented that Claimant reported left anterior shoulder pain, constant in nature, fluctuating in severity and aggravated by overhead reaching and/or lifting. Dr. Finn agreed with Dr. Lakin's June 10, 2016 date of MMI. He also assigned separate impairment for the neck and shoulder injuries as follows: 12% whole person impairment for the neck and 16% scheduled impairment for the left shoulder. The 16% scheduled impairment assigned for Claimant's left shoulder converts to 10% whole person impairment. The impairments combine to equate to a 21% whole person rating.

11. As noted by Dr. Finn, 10% of the 16% scheduled rating represents impairment resulting from Claimant's distal clavicle resection. Dr. Finn felt Claimant was entitled to the additional 10% impairment for the distal clavicle resection given the ongoing symptoms associated with his left shoulder.

12. Dr. Finn testified via deposition on February 20, 2017. Dr. Finn testified that given the severity of Claimant's injury, i.e. a large rotator cuff tear coupled with the removal of bone and Claimant's ongoing symptoms and physically demanding job, he exercised his discretion to assign an additional 10% impairment for the distal clavicle resection. According to Dr. Finn, the additional impairment was warranted by the nature of Claimant's injury and the symptoms he continues to experience currently. Nonetheless, he agreed that having post surgical symptoms after injuries such as the one sustained by Claimant was not rare. He also acknowledged that Claimant has been released to return to work without restrictions to his heavy-duty job for some time

13. At hearing, Dr. Bisgard defined certain medical terms relevant to this claim. Specifically, Dr. Bisgard indicated that the term "distal" means "away from." The term "proximal" means "towards." Finally, the glenohumeral joint is the medical term for the actual shoulder joint where the long arm of the bone (humerus) sits into the socket (glenoid) and forms the actual shoulder joint. Given these anatomical definitions, Dr. Bisgard testified the areas that would be considered distal to the glenohumeral joint would be the arm, and areas considered proximal to the glenohumeral joint would be towards the neck, including the trapezius and the thoracic area.

14. As noted above, the medical experts agree that Claimant sustained two separate injuries as a consequence of his May 20, 2015 motor vehicle accident: one to his neck and one to his left shoulder. Dr. Bisgard testified that the diagnosis for Claimant's neck injury would be cervical facet arthrosis and the diagnosis for Claimant's shoulder injury includes a rotator cuff tear of the supraspinatus as well as some impingement.

15. Dr. Bisgard testified that the symptoms that Claimant reported to Dr. Finn for both his neck and left shoulder conditions were consistent with what Claimant told her. Dr. Bisgard also testified that Claimant's testimony at hearing regarding the location of his symptoms for both his neck and left shoulder were consistent with what he told her during her evaluation. Finally, Dr. Bisgard, after reviewing a May 16, 2016 pain diagram, indicated that Claimant's illustration concerning the location of his neck and left shoulder pain complaints were consistent with what he told her during her evaluation. As outlined above, Claimant has headaches as a result of this injury; however, Dr. Bisgard testified that Claimant's headaches were the result of his neck injury, and not his left shoulder injury. Claimant's pain diagrams support Dr. Bisgard's opinions.

16. Dr. Bisgard testified that to the extent that Claimant claims functional impairment as a consequence of his injuries, his left shoulder injury did not result in any kind of functional impairment that would be considered proximal to the glenohumeral joint. Dr. Bisgard explained as follows:

> Whatever proximal symptoms he has [are] a result of the cervical injury, not the left shoulder. Again, we have two distinct areas [the left shoulder, and the neck]. The symptoms proximal to the glenohumeral joint are a result of the neck injury and were appropriately rated under the neck injury.

17. As support that any functional impairment is secondary to Claimant's cervical spine condition and not his shoulder, Dr. Bisgard pointed to Claimant's continued need for medical treatment to address his neck condition, including the recommendation for a rhizotomy and additional trigger point injections. Finally, Dr. Bisgard testified that when a patient undergoes a distal clavicle resection the surgery is performed at the level of the glenohumeral joint and not proximal thereto. Dr. Bisgard located the level of the distal clavicle by diagramming its location on Respondents' Exhibit N.

18. Dr. Bisgard reiterated her opinion that Claimant had had an excellent outcome following his surgery and that his case did not present as rare, i.e. one where the clinical findings did not correspond to the true extent of the musculoskeletal defect warranting the additional impairment for the distal clavicle resection surgery. In response to Dr. Finn's justification for providing the additional 10% impairment rating, specifically Claimant's reports of ongoing limitations and symptoms, Dr. Bisgard noted that these were likely emanating from the neck, and not from the shoulder.

19. Dr. Bisgard indicated that the term "double dipping" refers to giving two

impairment ratings for essentially the same thing. Dr. Bisgard testified that in light of Claimant's cervical impairment converting the shoulder rating to a whole person rating would amount to double dipping. In reaching this opinion, Dr. Bisgard testified that converting something from a shoulder to a whole person, in this case, would be considered double-dipping because any symptoms Claimant is having proximal to the glenohumeral joint are coming from the neck.

20. The ALJ credits the opinions of Dr. Bisgard to find that Claimant's left shoulder impairment is limited to a scheduled disability award and that Dr. Finn erred when he assigned an additional 10% scheduled impairment for the distal clavicle resection.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. The purpose of the Workers' Compensation Act of Colorado (Act), Section 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law, and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Clam Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing the weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential*

Insurance Co. v. Cline, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968). As found here, the opinions of Dr. Bisgard are supported by the evidentiary record and are more persuasive than the contrary opinions of Dr. Finn.

Conversion

D. When a claimant's injury is listed on the schedule of disabilities, the award for that injury is limited to a scheduled disability award. *Section 8-42-107(1)(a), C.R.S*. However, a claimant may establish that his/her injury has resulted in "functional impairment" beyond the schedule enumerated in C.R.S. §8-42-107(2)(a); thus, entitling him/her to "conversion" of the scheduled impairment to impairment of the whole person. This is true because the term "injury" as used in § 8-42-107(1)(a)-(b), C.R.S., refers to the part or parts of the body which have been impaired or disabled, not the situs of the injury itself or the medical reason for the ultimate loss. *Walker v. Jim Fucco Motor Co,* 942 P.2d 1390 (Colo. App. 1997); *see also Strauch v. PSL Swedish Healthcare System,* 917 P.2d 366 (Colo. App. 1996). Thus, while ratings issued under the AMA Guides are relevant to determining the issue, they are not decisive as a matter of law. *Strauch v. PSL Swedish Healthcare System, supra*. Whether a claimant has sustained a scheduled injury within the meaning of § 8-42-107(2), C.R.S. or a whole person impairment compensable under § 8-42-107(8), C.R.S. is a factual question for the ALJ and depends upon the particular circumstances of the individual case. *Walker v. Jim Fucco Motor Co, supra*. In the case of a shoulder injury, the question is whether the claimant has sustained functional impairment beyond the arm at the shoulder.

E. "Functional impairment" is distinct from physical (medical) impairment under the AMA Guidelines and as noted above, the site of functional impairment is not necessarily the site of the injury itself. The site of functional impairment is that part of the body which has been impaired or *disabled*. *Strauch, supra*. Physical impairment relates to an individual's health status as assessed by medical means. On the other hand, disability or "functional impairment", pertains to a person's ability to meet personal, social, or occupational demands, and is assessed by non-medical means. Consequently, physical impairment may or may not cause "functional impairment" or disability. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office, 984 P.2d 656, 658 (Colo. App. 1998).* Physical impairment becomes a disability only when the medical condition limits the claimant's capacity to meet the demands of life's activities. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office, supra at 658.* Functional impairment need not take any particular form. *See Nichols v. LaFarge Construction, W.C. No. 4-743-367 (October 7,2009); Aligaze v. Colorado Cab Co., W.C. No. 4-705-940 (April 29, 2009); Martinez v. Albertson's LLC, W.C. No. 4-692-947 (June 30, 2008*). Accordingly, "referred pain from the primary situs of the industrial injury to another part of the body may establish proof of functional impairment to the whole person." *Hernandez v.*

Photronics, Inc., W.C. No. 4-390-943 (July 8, 2005). Nonetheless, symptoms of pain do not automatically rise to the level of a functional impairment. To the contrary, there must be evidence that such pain limits or interferes with Claimant's ability to use a portion of his body to be considered functional impairment. See *Mader v. Popejoy Construction Co., Inc.*, W.C. No. 4-198-489 (August 9, 1996), aff'd *Popejoy Construction Co., Inc.,* (Colo. App. No. 96CA1508, February 13, 1997)(not selected for publication)(claimant sustained functional impairment of the whole person where back pain impaired use of arm). In order to determine whether permanent disability should be compensated as physical impairment on the schedule or as functional impairment as a whole person, the issue is not whether the claimant has pain, but whether the injury has impacted part of the claimant's body which limits his "capacity to meet personal, social and occupational demands." *Askew v. Industrial Claim Appeals Office*, 927 P.2d 1333 (Colo. 1996). Consequently, the ALJ concludes that an injury to the structures which make up the shoulder may or may not result in functional impairment beyond the arm. See generally, *Walker v. Jim Fucco Motor Co, supra; Strauch v. PSL Swedish Healthcare System, supra; Langton v. Rocky Mountain Health Care Corp.,* 937 P.2d 883 (Colo. App. 1996)

F. Based upon the evidence presented, the ALJ finds that Claimant has failed to meet his burden to establish that he has sustained functional impairment beyond the arm at the shoulder warranting conversion of his scheduled impairment to impairment of the whole person. In this case, the record evidence (pain diagrams) supports that Claimant has consistently noted that, as a result of his left shoulder injury he has symptoms that begin in the anterior part of his shoulder and go down into his left arm. As it pertains to the left shoulder injury, the evidence presented persuades the ALJ that Claimant does not have any symptoms that would be considered proximal to the glenohumeral joint. Rather, crediting the opinion of Dr. Bisgard the ALJ concludes that to the extent that Claimant has symptoms proximal to the shoulder, those symptoms are emanating from his cervical injury, not his left shoulder and that conversion of the scheduled impairment associated with the shoulder injury to whole person impairment would result in a clear case of double dipping. Furthermore, the evidence presented establishes that Claimant has returned to full unrestricted duty in a medium to heavy duty job that requires transport and set up ladders and pull wire. While Claimant may have continued pain in areas of the body beyond the shoulder, i.e. the trapezius, mid and upper back, the totality of the evidence presented persuades the ALJ that these symptoms have not caused "functional impairment" or disability. Indeed, Claimant's functional capacity, as demonstrated, substantially erodes his claims that the injury has resulted in a decreased capacity to meet his personal, social or occupational demands. Based upon a totality of the evidence presented, the ALJ concludes that the situs of Claimant's functional impairment does not extend beyond the arm at the shoulder. Consequently, the ALJ concludes that Claimant has failed to carry his burden to establish that his shoulder injury has resulted in a functional loss that would support an award of permanent disability benefits as a whole person.

Claimant's Entitlement to the 10% Impairment for the Distal Clavicle Resection

G. As found, above, the AMA Guidelines, although allowing a rating physician discretion to provide an additional impairment rating for distal clavicle resection surgery, only provides for that additional impairment rating if, in rare cases, the range of motion impairment rating does not adequately address the extent of a patient's functional impairment. In this case, Claimant has had an excellent surgical outcome, even by Dr. Finn's account. He has returned to a heavy-duty job and has continued to perform that job. No physician has provided Claimant any permanent restrictions as a result of his shoulder injury. Respondents contend that this is not a rare case in which Claimant should be entitled to additional impairment rating for his shoulder injury. Based upon the evidence presented, the ALJ agrees. While Dr. Finn explained that Claimant continues to experience symptoms associated with his left shoulder injury, he conceded that reports of post surgical pain following rehabilitation and MMI is a common occurrence. Moreover, he conceded that Claimant did not have an irreparable rotator cuff tear. Rather he had a moderate injury to the shoulder. Based upon the evidence presented, the ALJ infers that Dr. Finn does not believe that Claimant's range of motion impairment accounted for true the "true" impairment associated with this injury because of ongoing pain complaints.

H. As noted above, the AMA Guides provide that in "rare cases, the severity of the clinical findings do not correspond to the true extent of the musculoskeletal defect." Claimant failed to establish such severity of findings in this case. Rather, the ALJ concludes that the evidence presented supports that Claimant's physically demanding job rather than the pathology he suffered as a consequence of his industrial injury is probably contributing to his ongoing pain complaints. Consequently, the ALJ concludes that the range of motion deficits recorded by Dr. Finn probably accurately reflect the impairment associated with Claimant's musculoskeletal defect, i.e. his rotator cuff tear. Based upon the evidence presented, the ALJ credits the opinions of Dr. Bisgard to find/conclude that Dr. Finn did not appropriately apply the relevant sections of the AMA Guides when he assigned additional impairment for Claimant's distal clavicle resection. Simply put, Dr. Finn assigned an additional 10% impairment for pain associated with continued heavy work after a moderate injury which responded well to surgical intervention. The ALJ concludes that Dr. Finn's decision to assign additional impairment was not in compliance with the "rare" circumstance contemplated by the AMA Guides a constitutes an abuse of his discretion.

ORDER

It is therefore ordered that:

1. Because Respondents are not contesting the cervical impairment provided by Dr. Finn (12%), Claimant is entitled to a PPD award based on a 12% impairment rating of the whole person.

2. Because Claimant has not proven by a preponderance of the evidence that he suffered any functional impairment beyond the shoulder, Claimant's left shoulder PPD award is limited a scheduled disability impairment rating. Regarding this award, Claimant has failed to prove, by a preponderance of the evidence presented, that he is

entitled to an additional 10% impairment for the distal clavicle resection surgery. Consequently, Claimant's scheduled impairment of the left shoulder is limited to 8% impairment for loss of range of motion.

3. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

STATE OF COLORADO OFFICE OF ADMINISTRATIVE COURTS 1525 Sherman Street, 4th Floor, Denver, CO 80203	
In the Matter of the Workers' Compensation Claim of: **LORENZO A. GALINDO ORNELAS,** Claimant, vs. **ROCKY MOUNTAIN DRYWALL,** Employer, and **PINNACOL ASSURANCE,** Insurer, Respondents.	▲ **COURT USE ONLY** ▲ **CASE NUMBER:** **WC 5-008-105-01**

SUMMARY ORDER

Hearing in this matter was held on September 1, 2016 in Courtroom 4 of the Office of Administrative Courts before Administrative Law Judge Timothy L. Nemechek. Claimant was present and represented by Aaron Kennedy, Esq. Respondents were represented by Alexandra V. Dietzgen, Esq. The proceedings were digitally recorded from 1:30 p.m. to 4:25 p.m.

Respondents' Exhibits A-R were admitted without objection. Claimant's Exhibits 1-8 were admitted without objection. The record remained open for post–hearing submissions. Claimant and Respondents submitted timely Position Statements. A hearing transcript was lodged with the Court on October 15, 2016.

The issue for determination was: (a) whether Respondents met their burden of proof to establish Claimant willfully violated a safety rule adopted by Employer, allowing a 50% reduction of his indemnity benefits.

1. Claimant began work for Employer in February, 2015. He was employed as a drywall finisher.

2. On February 18, 2015, Claimant signed an acknowledgement of receipt of the Employee Handbook. [1] This acknowledgement was written in English.

3. The Employee Handbook set forth Employer's safety policy. More particularly, Section 503 is entitled Safety/Hazcom Program. That section provided in pertinent part:

> "To assist in providing a safe and healthful work environment for employees, customers and visitors, RMD has established a workplace safety/hazcom program. This program is a top priority for RMD and exists to insure our employees complete their work assignment safely. We have a ZERO tolerance

[1] Exhibit H.

policy for safety violations. Disciplinary actions up to and including termination will occur for all safety violations. The safety manager has responsibility for implementing, administering, monitoring, evaluating and modifying the safety program to insure its effectiveness. The success of this program depends on the support of management, and the awareness and compliance of all employees.
...

New employees receive an initial safety orientation upon hire. Field employees and supervisors receive monthly workplace safety training. The training covers potential safety and health hazards, and safe work practices and procedures to eliminate injuries and behaviors that lead to injury.

Each employee is expected to obey all safety rules and exercise caution in all work activities. Upon entering the work area **each time**, employees are required to identify, record, correct and report any unsafe condition to their supervisor. RMD's on-site safety checklist is provided on all job sites to help meet these requirements. All unsafe work areas or conditions must be corrected before work begins. Employees who violate safety standards, who cause hazardous or dangerous situations, or fail to report or, where appropriate, remedy such situations, may be subject to disciplinary action up to and including termination of employment."

4. Claimant's new hire orientation checklist (in Spanish) was admitted into evidence. Claimant initialed and dated this document on February 18, 2015. This form confirmed Claimant received a copy of the Employer's Safety and Hazard Communication Program. (Both English and Spanish versions of this booklet were admitted at hearing).[2]

5. The Safety and Hazard Communication Program set forth requirements with regard to safety on the job. These were:

"A. Survey the job site to identify any potentially hazardous conditions and report them to your supervisor immediately.
...

D. Clear the work area of debris before you start and maintain this condition while working, especially if you are using benches, ladders, scaffold or stilts.
…

H. Report any unsafe condition to your supervisor immediately. Never take chances.

Awareness

[2] Exhibit G.

A. It is the responsibility of each employee to be aware of:

…

2). The conditions of the work area and the potential risks associated therewith.

B. Report all unsafe workers, activities and conditions to your supervisor immediately".

6. Claimant participated in safety meetings while working for Employer. More particularly, he attended safety meetings on March 27, 2015, October 30, 2015, and September 25, 2016. The subject of the October 30, 2015 meeting was Stilt Safety and Fall Protection. Claimant completed a quiz after that training and answered all of the questions correctly.

7. Dustin Matson testified at hearing. He works as the safety manager for Employer, a position he has held for three years. In that capacity, he worked with the safety committee to develop safety policies and procedures for enforcing those policies. Mr. Matson noted safety is discussed as part of Employer's new hire orientation. As part of the process, keeping the job sites clean is discussed, as the drywall business is a messy industry. Mr. Matson testified there was a safety checklist on every job site. Employees are to do a safety walk in the house before they start work and if a hazard is seen, all employees have the authority to stop work at the site, until the hazard is reported and/or corrected. Employer's safety booklet discussed putting drywall scraps in the center of the room. Mr. Matson stated Claimant would have been aware of these policies. Mr. Matson stated Employer conducts regular safety meetings and employees are quizzed about what is discussed. The meetings are conducted in Spanish and English. Mr. Matson testified he also conducts unannounced job site visits to insure safety rules are followed.

8. Maximino Preciado[3] testified at hearing. He has worked for Employer for twenty-two years. He knew Claimant through work, although did not work with him directly. He worked that day at the house where Claimant was injured, arriving around 8 a.m. The house was dirty with scrap on the floor, but he was able to do his job which was installing corner bead. Claimant arrived around 11 a.m. and Mr. Preciado finished his work, leaving the job site. Mr. Preciado said stilts were not supposed to be used unless the floor was completely clean. This was company policy. He watched videos and the company continually reminded them of that rule. Mr. Preciado said he asked Claimant if he was going to work because of the condition of the house. Mr. Preciado admitted he had never not worked in the house because it was in that condition. On cross-examination, Mr. Preciado admitted using stilts on two or three occasions when the floors had not been completely scrapped. This included the house where Claimant

[3] Mr. Preciado prepared a written statement in Spanish (undated), which was admitted at hearing, along with a translation. The statement corroborated Mr. Preciado's testimony. He also said Claimant asked when the scrappers were going to come and also told him he needed to get some hours.

was injured. The ALJ notes Mr. Preciado's testimony supported the finding that employees had previously violated this safety rule with no consequences.

9. Hermanagildo Segovia testified on behalf of Respondents. He has worked as a drywall finisher for 4 1/2 years. This is the same job as Claimant and he wears stilts. Mr. Segovia confirmed there were safety rules concerning stilts; specifically, the work area had to be clean while wearing stilts. Stilts were also not to be worn on stairs. Mr. Segovia testified he had worked in houses that were not cleaned. If possible, he would try to work on the scaffold in the garage. However, he testified that he has worn stilts in the areas which are dirty. However, he said he doesn't always wear stilts in the areas where it is dirty.

10. Michael Herrera testified on behalf of Respondents. He has worked for Employer for ten years as a supervisor. Claimant reported directly to him and he would act as an interpreter on occasion because he spoke Spanish. This included safety meetings. Mr. Herrera testified the safety rules concerning wearing stilts required that you not walk on stairs and not in areas where there was debris or other trip and fall hazards. Claimant would have been aware of these rules. Mr. Herrera confirmed that his work crew has worked in houses that had not been scrapped. This includes doing the work that is low, which does not require stilts. He said they always direct the employees to work as carefully as possible. Mr. Herrera had not written any employee up for violating safety rules, but has verbally instructed employees. The ALJ concluded from this testimony that Employer acquiesced in a violations of the safety policy. He has told employees to first complete the work that does not require stilts. He further testified that there would never be a backlash for an employee who refused to work in unsafe conditions. He confirmed that employees are paid on a piece-rate basis, when they complete the house.

11. Claimant testified he received the Employee Handbook and copies of the policies concerning use of stilts. He also confirmed his attendance at the safety meeting when wearing stilts had been discussed. The ALJ finds Claimant was advised of the policy which required him to work in an area clear of debris while wearing stilts.

12. On February 20, 2016 (Saturday), Claimant was working at a house located at 15416 W. 49th Drive. Claimant testified the house was dirty when he got there. Claimant testified that, in his experience with working for Employer, he would very often see other employees working on stilts on jobsites that had yet to be scrapped. He called his supervisor, Mike (Herrera), as he wanted to know when they were going to come to clean the house. In his report of injury, he noted that he tried to call Mr. Herrera at 10:51 a.m. Claimant testified that he completed the low work, as he had been trained. He tried to call Mr. Herrera again, but there was no answer. It was at this point in time he began using the stilts in the areas that had not been scrapped. There was a lot of scarp and he was not thinking of cleaning everything. He testified that he exercised caution as he had been told. Claimant fell while he was on the stilts and was injured.

13. Claimant testified that he did not think about violating a safety rule when

he began working on the stilts. He felt it was normal and he just began working. As a finisher, Claimant said they would go ahead and do their job. This was the same for Herman. The ALJ infers from this testimony Claimant did not volitionally or intentionally violate the rule concerning using stilts when debris was on the floor.

14. Ismael Herrera Martinez testified as a witness for Claimant. He explained that he worked for Employer for approximately four years under the direct supervision of Michael Herrera. He was aware of the safety rule against wearing stilts in a house that had not been scrapped. Mr. Martinez testified that if a job site was not scrapped, he would contact Mr. Herrera, who would then instruct him to wait for the people who cleaned the house. Sometimes the cleaners would take two or three hours. Sometimes they would not come until the next day. When the latter situation occurred, they would do their work, most of which required stilts. He had worked in houses that were not scrapped. He said sometimes employees were afraid to call the supervisor about the house not being clean, as they wouldn't get more work.

15. Mr. Matson completed a safety audit the day after Claimant was injured. There was no safety checklist present at the house. He inspected the house and noted the presence of hazards including electrical cord and construction material. Mr. Matson described the condition of the house as "atrocious". The house was unsafe to use stilts. He also met with Claimant at the time the report of injury was completed. Mr. Matson testified Claimant agreed that the injury could have been prevented had he made the decision not to use the stilts. Mr. Matson testified that he had not had an employee make a decision to work in a house like this. He had had not reprimanded an employee for moving debris to the middle of the room.

16. An Employer's First Report of Injury was completed on February 22, 2016. It specified Claimant was injured while wearing stilts in a home with drywall debris and tripping hazards everywhere. Claimant received an Employee Warning/Suspension Notice on February 22, 2016 for the failure to follow company policy.[4]

17. Photographs of the accident site were admitted at hearing.[5] These were part of the audit report prepared by Mr. Matson. These depicted pieces of drywall scrap, cord, as well as drywall mud on the floor in the room where Claimant fell.

18. On March 11, 2016, a General Admission of Liability ("GAL") was filed on behalf of Respondents, admitting for wage and medical benefits. That GAL took a 50% penalty on Claimant's TTD benefits for a safety rule violation.

19. A revised GAL was filed on April 15, 2016, admitting for temporary partial disability benefits. A 50% penalty was taken on those benefits for a safety rule violation.

[4] Exhibit A.

[5] Exhibits E and F.

20. The ALJ finds Respondents failed to prove Claimant willfully violated safety rule.

21. Section 8-42-112(1)(b), C.R.S. governs the imposition of a penalty for a violation of a safety rule. That section provides for a 50 percent reduction in Claimant's compensation when Respondents prove "the injury is caused by the employee's willful failure to obey any reasonable rule adopted by the employer for the safety of the employee". The question of whether the Respondents met their burden and proved a willful safety rule violation by a preponderance of the evidence is generally one of fact for determination by the ALJ. *Lori's Family Dining, Inc. v. Industrial Claim Appeals Office,* 907 P.2d 715, 719 (Colo. App. 1995).

22. In *Lori's Family Dining*, Claimant was engaged in horseplay with co-employees, which escalated to an altercation. Claimant was injured when he fell and broke his arm. The employer prohibited horseplay and had warned employees against such conduct. Employer's policies required three written warnings before termination. The ALJ declined to impose a 50% penalty for a safety rule violation on the grounds that employer had not enforced safety rule, which was affirmed by the Industrial Claim Appeals Office. The Colorado Court of Appeals considered whether the denial of the penalty was appropriate under those circumstances. Justice Hume noted the most frequent ground for rejecting a penalty for violation of a safety rule was the "lack of enforcement of the rule or policy by an employer with knowledge of and acquiescence in its violation". *Lori's Family Dining, Inc. v. Industrial Claim Appeals Office,* 907 P.2d at 719.

23. As a starting point, the ALJ concluded Employer had a written safety policy in force at the time Claimant was injured. This policy was expressed in the Employee handbook, as well as Employer's Safety and Hazard Communication Program. The specific policy at issue was the Safety and Hazard Communication Program, which required employees to: "Clear the work area of debris before you start and maintain this condition while working, especially if you are using benches, ladders, scaffold or stilts". Employer took many steps to insure its new employees were informed of the policy and the policy was reinforced throughout their employment. The ALJ concluded that Claimant received both the Employee Handbook and the safety policies. He also participated in safety meetings in which the subject of safety practices while using stilts were discussed. Therefore, Respondents proved there was a safety rule which was communicated to employees, including Claimant.

24. In the case at bench, there was evidence that Employer had not enforced the safety rule. First was direct evidence in the form of witness testimony (Mr. Preciado, Mr. Segovia, and Mr. Martinez-Herrera), which established employees worked on jobsites with rooms that had debris on the floor, in violation of the policy. Claimant's testimony also corroborated this fact.

25. Second, Mr. Herrera, who was in a supervisory position, confirmed this occurred and he had not disciplined any employee for a violation of the company policy.

No contrary evidence was introduced to refute this. Mr. Matson also testified that company policy required a safety checklist to be present at the jobsite. In fact, no such checklist present at the location where Claimant was injured. This was further evidence of the lack of enforcement of safety rules by Employer. Thus, while the facts before the ALJ established that while Employer had an established policy, which was communicated to employees, the Employer acquiesced in the violations of the policy. Under these circumstances, Respondents were not entitled to reduce Claimant's benefits for violation of the safety rule.

26. Additional support for the conclusion that Respondents were not entitled to a reduction of benefits was found in the determination by the ALJ that Claimant did not willfully violate the safety rule. Respondents were required to show Claimant's conduct was willful, that is he knew the rule, then intentionally did what the rule prohibited. *Bennett Props. Co. v. Indus. Comm'n*, 165 Colo. 135, 140, 437 P.2d 548, 551 (1968). On this element, Respondents failed to meet their burden. As used in this statute, the word "willful" means "with deliberate intent", *City of Las Animas v. Maupin*, 804 P.2d 285, 286 (Colo. App. 1990)[citation omitted], or "the intentional doing of something either with the knowledge that it is likely to result in serious injury, or with a wanton and reckless disregard of its probable consequences." *Johnson v. Denver Tramway Corp.*, 115 Colo. 214, 222, 171 P.2d 410, 414 (1946)(emphasis omitted)[quoting 1 William R. Schneider, *The Law of Workmen's Compensation* § 282, at 876 (2d ed. 1932)].

27. The evidence admitted at hearing led the ALJ to conclude that Respondents failed to establish a willful violation of the safety rule. Claimant's testimony was part of this conclusion when he testified that he was not thinking of the safety rule when he used the stilts in the area where there was drywall scrap. He was simply focusing on completing the tasks, which was persuasive to the ALJ. Claimant's testimony was credible and also buttressed by the fact that he had violated the safety rule on other occasions, with the goal of getting the job done. In addition, Claimant testified he tried to call Mr. Herrera when he saw the condition of the jobsite. Thus, he tried to comply with one part of the policy, which was to advise his supervisor of the unsafe condition of the workplace. Under these circumstances, imposition of a penalty for a violation of a safety rule was not warranted.

Order

IT IS ORDERED:

1. Respondents have failed to prove Claimant willfully violated a safety rule. Claimant is entitled to receive 100% of his indemnity benefits.

2. Respondents shall pay 100% of Claimant's indemnity benefits.

3. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

DATED: May 19, 2017

Timothy L. Nemechek
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

This decision is final and not subject to appeal unless a full order is requested. The Request shall be made at the Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203 within seven working days of the date of service of this Summary Order. Section 8-43-215 (1), C.R.S. Such a Request is a prerequisite to review under Section 8-43-301, C.R.S.

If a Request for Specific Findings of Fact and Conclusions of Law is made, counsel for Claimant or Respondents may submit proposed (Amended) Specific Findings of Fact, Conclusions of Law, and Order that substantially incorporates the above findings of fact and conclusions of law within five working days from the date of the Request. The proposed order must be submitted by e-mail in Word or Rich Text format to oac-dvr@state.co.us. The proposed order shall also be submitted to opposing counsel and unrepresented parties by e-mail, facsimile, or same day or next day delivery.

CERTIFICATE OF MAILING OR SERVICE

I hereby certify that I have served true and correct copies of the foregoing **SUMMARY ORDER** by depositing same in the U.S. Mail, or by e-mail addressed as follows:

Aaron Kennedy Esq.
McDivitt Law Firm, P.C.

Court Clerk

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that he suffered bilateral foot injuries during the course and scope of his employment with Employer on November 24, 2015.

2. Whether Claimant has proven by a preponderance of the evidence that he is entitled to receive reasonable, necessary and causally related medical benefits for his foot symptoms.

3. Whether Claimant has established by a preponderance of the evidence that he is entitled to receive Temporary Total Disability (TTD) benefits for the period December 1, 2015 through January 19, 2016.

STIPULATIONS

The parties agreed that Claimant earned an Average Weekly Wage (AWW) of $1022.80.

FINDINGS OF FACT

1. Claimant works for Employer as a Security Guard. His typical shift lasted from 6:00 a.m. until 2:00 p.m. Claimant explained that his job duties included patrolling the perimeter of a Federal Building located in Lakewood, Colorado. His schedule involved sitting at his desk inside for an hour performing office work and patrolling the perimeter of the building for an hour throughout his work shift.

2. On November 24, 2015 Claimant arrived for his shift at approximately 5:40 a.m. and began his first outside perimeter patrol at 7:00 a.m. Claimant was wearing a new pair of work boots that had been issued by Employer. He subsequently experienced tenderness and soreness in the fourth toe of his left foot.

3. On November 26, 2015 Claimant noticed black or purple discoloration and swelling of his fourth left toe and informed Employer of his injury. Employer directed Claimant to the Swedish Hospital Emergency Room in Denver, Colorado for treatment. Medical providers determined that he had suffered frostbite and an infection of the toe. They advised him to consult a specialist.

4. On December 1, 2015 Claimant visited Kirk Holmboe, D.O. Dr. Holmboe recounted that Claimant had previously suffered an episode of frostbite to the fourth toe of his left foot in 2006 when he was working a seasonal position for a different employer. The condition healed after a course of conservative treatment. Claimant subsequently suffered a recurrence of frostbite to the fourth toe on his left foot in 2009.

Although physicians considered toe amputation, surgery was not performed and the condition again healed through conservative treatment. Dr. Holmboe diagnosed Claimant with frostbite of the fourth toe on the left foot. Claimant considered a possible amputation of the toe because of the recurring nature of the problem.

5. On December 2, 2015 Claimant visited Stuart H. Myers, M.D. at Colorado Orthopedic Consultants for an examination. Dr. Myers remarked that Claimant had suffered frostbite on both feet. He commented that "[t]his issue has been present on and off for years" and the "flares are related to walking out of doors when it is cold at work." After discussing treatment options, Claimant elected to proceed with surgical amputation. Dr. Myers noted that amputation was reasonable because "the problem would almost certainly recur as it has been doing for years." Insurer denied the subsequent surgical request based on a lack of documentation that the procedure was reasonable, necessary and related to Claimant's work activities.

6. On December 23, 2015 Claimant again visited Dr. Holmboe for an evaluation. Dr. Holmboe explained that Claimant's work activities were one of a number of contributing factors that caused his frostbite. He specifically noted factors including cold temperatures, new work boots that may not have been warm enough and applied pressure to Claimant's toe, generally decreased blood flow and possible peripheral vascular disease.

7. On January 20, 2016 Claimant returned to Dr. Holmboe for an examination. Dr. Holmboe recounted that Claimant had been wearing thermal waterproof boots at work in cold temperatures without any problems. He also commented that Claimant had received peripheral vasodilator medication from his personal physician. Upon examination Claimant's wound on the fourth toe of his left foot was healing and three toes on his right foot were in the process of healing. Dr. Holmboe continued to diagnose Claimant with frostbite and released him to full duty employment.

8. On February 5, 2016 Claimant again visited Dr. Holmboe for an evaluation. Dr. Holmboe diagnosed Claimant with "apparent frostbite" of both feet and noted that his toes were healing. He advised Claimant that "there may be more to this than simply cold exposure and he might "have some other vascular issues even in addition to possible Raynaud's." Dr. Holmboe released Claimant at Maximum Medical Improvement (MMI) with no permanent impairment.

9. On February 17, 2016 Claimant underwent an independent medical examination with Michael R. Striplin, M.D. Dr. Striplin reviewed Claimant's medical history and conducted a physical examination. He recounted that Claimant worked as an armed Security Guard for Employer and was required to conduct an hourly outside perimeter patrol. On November 24, 2015 Claimant performed his routine patrols while wearing a new pair of work boots that had been issued by Employer. He noticed tenderness and soreness in his fourth left toe at some point during his shift and subsequently observed discoloration and swelling in the toe. Dr. Striplin remarked that Claimant exhibited symptoms in his left fourth toe and his right second, third and fourth

toes. In reviewing Claimant's medical records Dr. Striplin stated that Claimant had developed frostbite on the fourth toe of his left foot while working for a seasonal employer in 2005. Claimant was also diagnosed with Reynaud's phenomenon. Between 2005 and 2009 Claimant continued to suffer periodic discomfort and discoloration of the fourth toe on his left foot. In 2009 Claimant again suffered frostbite to the toe and subsequently experienced episodic discomfort and discoloration.

10. Dr. Striplin concluded that Claimant likely did not suffer frostbite to both feet while performing his job duties for Employer on November 24, 2015. He explained that the medical records reflect that Claimant has suffered from an unspecified peripheral vascular disease with recurring symptoms for more than a decade. Claimant has not received a specific diagnosis about the type of peripheral vascular disease and there can be a number of causes for the disorder. In addressing whether Claimant specifically suffered frostbite while performing his work activities on November 24, 2015 Dr. Striplin considered the outside temperatures for the date. He noted that on November 24, 2015 in Denver, Colorado between 5:53 a.m. and 2:53 p.m. the temperature ranged from a low of 37 degrees to a high of 63 degrees. Frostbite occurs as a result of the formation of ice crystals in the skin or subcutaneous tissues as a result of exposed skin when the air temperature is below freezing. Dr. Striplin reasoned that, because the air temperatures remained above freezing on November 24, 2015, Claimant likely did not suffer frostbite as a result of his work activities.

11. On December 28, 2016 Claimant visited Anne H. Hanson, M.D. of Advanced Dermatology for an evaluation. Claimant reported soreness, discoloration and infection of the left dorsal foot. The symptoms were darkening, swollen, painful, irregular, changing in color and mild in severity. Dr. Hanson remarked that the soreness, discoloration and infection had been present for 10 years. She explained that purple skin lesions on Claimant's toes began in 2006 and have increased in frequency and severity. Dr. Hanson determined that Claimant suffers from the tissue disorder of pernio. Chilblains or pernio is an abnormal vascular response that occurs when a predisposed individual suffers tissue damage caused by exposure to cold and humidity. The condition is often confused with frostbite and is characterized by redness, inflammation, blistering and ulceration of the affected extremities. Dr. Hanson commented that Claimant also suffered Reynaud's disorder prior to the development of skin lesions. She prescribed medications and sought confirmation of pernio through laboratory testing. Subsequent testing revealed that Claimant suffers pernio in his left foot.

12. Claimant testified at the hearing in this matter. He explained that, while working for Employer as a Security Guard, he rotated between staffing the security desk for one hour and patrolling the grounds outside the facility for one hour. On November 24, 2015 Claimant suffered right foot symptoms during his shift. Although Claimant acknowledged that he had previously suffered frostbite and lesions on his feet, he explained that his work activities on November 24, 2015 caused him to develop pernio on his left foot. Claimant was taken off work on December 1, 2015 and returned to full duty on January 19, 2016. He explained that during his time off work he developed

symptoms in his right foot that were similar to the symptoms he was experiencing in his left foot.

13. Dr. Striplin testified at the hearing in this matter. He maintained that Claimant's work activities on November 24, 2015 did not aggravate or accelerate his underlying peripheral vascular disease and cause a need for medical treatment. Dr. Striplin did not dispute the pernio diagnosis but determined that Claimant's work activities did not cause the disorder. He explained that pernio can be idiopathic or caused by an underlying tissue disorder. The condition is typically transient and does not cause the development of tissue necrosis. Dr. Striplin noted that, if an individual suffers repeated episodes of pernio, physicians should consider an underlying systemic disease.

14. Dr. Striplin testified that in order for an individual to suffer an aggravation of pernio he would have to be exposed to cold and damp, humid conditions. However, Claimant presented no evidence to suggest that he was exposed to damp, humid conditions on November 24, 2015. Dr. Striplin remarked that Claimant told him his socks were dry at the time of the injury. In fact, Claimant commented that he did not notice any symptoms until he was home on the night of November 24, 2015. Claimant's delayed development of symptoms reflects that his condition was also not related to his work activities for Employer. Finally, Dr. Striplin explained that the development of pernio symptoms in Claimant's right foot while he was not working suggests that he suffers from an underlying condition that may simply have become symptomatic on November 24, 2015.

15. Claimant has failed to demonstrate that it is more probably true than not that he suffered bilateral foot injuries during the course and scope of his employment with Employer on November 24, 2015. Claimant asserts that on November 24, 2015 he was performing his job duties as a Security Guard for Employer by conducting an hourly patrol of the perimeter of his building. On November 26, 2015 Claimant noticed black or purple discoloration and swelling of his fourth left toe and informed Employer of his injury. Although Claimant was initially diagnosed with frostbite, Dr. Hanson determined that Claimant suffers from the tissue disorder of pernio. Chilblains or pernio is an abnormal vascular response that occurs when a predisposed individual suffers tissue damage caused by exposure to cold and humidity. Claimant was taken off work on December 1, 2015 and placed back to full work duty on January 19, 2016. During his time off from work he developed symptoms in his right foot that were similar to the symptoms he was experiencing in his left foot. Although Claimant suffers from pernio, the medical records and persuasive testimony of Dr. Striplin reflect that his disorder was not caused, aggravated or accelerated by his work activities for Employer on November 24, 2015.

16. The medical records reflect that Claimant has suffered from an unspecified peripheral vascular disease with recurring symptoms for more than a decade. Claimant developed frostbite on the fourth toe of his left foot while working for a seasonal employer in 2005. Claimant was also diagnosed with Reynaud's phenomenon. Between 2005 and 2009 he continued to suffer periodic discomfort and

discoloration of the fourth toe on his left foot. In 2009 Claimant again suffered frostbite to the toe and subsequently experienced episodic discomfort and discoloration. As Dr. Hanson noted, Claimant's toe soreness, discoloration and infection had been present for 10 years. She explained that purple skin lesions on Claimant's toes began in 2006 and have increased in frequency and severity.

17. Dr. Striplin persuasively maintained that Claimant's work activities on November 24, 2015 did not aggravate or accelerate his underlying peripheral vascular disease and cause a need for medical treatment. Dr. Striplin did not dispute the pernio diagnosis but determined that Claimant's work activities did not cause the disorder. He explained that pernio can be idiopathic or caused by an underlying tissue disorder. The condition is typically transient and does not cause the development of tissue necrosis. Dr. Striplin noted that, if an individual suffers repeated episodes of pernio, physicians should consider an underlying systemic disease. For an individual to have an aggravation of pernio he would have to be exposed to cold and damp conditions. However, Claimant presented no evidence to suggest that he was exposed to cold or damp conditions on November 24, 2015. Dr. Striplin remarked that Claimant told him his socks were dry at the time of the injury. In fact, Claimant commented that he did not notice any symptoms until after he went home on the night of November 24, 2015. Although Claimant developed pernio symptoms subsequent to his work activities on November 24, 2015, he has failed to demonstrate that his condition was caused by his work activities. Because Claimant has suffered unspecified peripheral vascular disease with recurring symptoms for more than a decade, his underlying condition may simply have become symptomatic on November 24, 2015. Accordingly, Claimant's request for Workers' Compensation benefits is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAP, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

7. As found, Claimant has failed to demonstrate by a preponderance of the evidence that he suffered bilateral foot injuries during the course and scope of his employment with Employer on November 24, 2015. Claimant asserts that on November 24, 2015 he was performing his job duties as a Security Guard for Employer by conducting an hourly patrol of the perimeter of his building. On November 26, 2015 Claimant noticed black or purple discoloration and swelling of his fourth left toe and informed Employer of his injury. Although Claimant was initially diagnosed with frostbite, Dr. Hanson determined that Claimant suffers from the tissue disorder of

pernio. Chilblains or pernio is an abnormal vascular response that occurs when a predisposed individual suffers tissue damage caused by exposure to cold and humidity. Claimant was taken off work on December 1, 2015 and placed back to full work duty on January 19, 2016. During his time off from work he developed symptoms in his right foot that were similar to the symptoms he was experiencing in his left foot. Although Claimant suffers from pernio, the medical records and persuasive testimony of Dr. Striplin reflect that his disorder was not caused, aggravated or accelerated by his work activities for Employer on November 24, 2015.

8. As found, the medical records reflect that Claimant has suffered from an unspecified peripheral vascular disease with recurring symptoms for more than a decade. Claimant developed frostbite on the fourth toe of his left foot while working for a seasonal employer in 2005. Claimant was also diagnosed with Reynaud's phenomenon. Between 2005 and 2009 he continued to suffer periodic discomfort and discoloration of the fourth toe on his left foot. In 2009 Claimant again suffered frostbite to the toe and subsequently experienced episodic discomfort and discoloration. As Dr. Hanson noted, Claimant's toe soreness, discoloration and infection had been present for 10 years. She explained that purple skin lesions on Claimant's toes began in 2006 and have increased in frequency and severity.

9. As found, Dr. Striplin persuasively maintained that Claimant's work activities on November 24, 2015 did not aggravate or accelerate his underlying peripheral vascular disease and cause a need for medical treatment. Dr. Striplin did not dispute the pernio diagnosis but determined that Claimant's work activities did not cause the disorder. He explained that pernio can be idiopathic or caused by an underlying tissue disorder. The condition is typically transient and does not cause the development of tissue necrosis. Dr. Striplin noted that, if an individual suffers repeated episodes of pernio, physicians should consider an underlying systemic disease. For an individual to have an aggravation of pernio he would have to be exposed to cold and damp conditions. However, Claimant presented no evidence to suggest that he was exposed to cold or damp conditions on November 24, 2015. Dr. Striplin remarked that Claimant told him his socks were dry at the time of the injury. In fact, Claimant commented that he did not notice any symptoms until after he went home on the night of November 24, 2015. Although Claimant developed pernio symptoms subsequent to his work activities on November 24, 2015, he has failed to demonstrate that his condition was caused by his work activities. Because Claimant has suffered unspecified peripheral vascular disease with recurring symptoms for more than a decade, his underlying condition may simply have become symptomatic on November 24, 2015. Accordingly, Claimant's request for Workers' Compensation benefits is denied and dismissed.

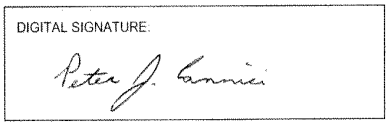
ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's request for Workers' Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: May 19, 2017.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
633 17th Street Suite 1300
Denver, CO 80202

ISSUES

- Whether claimant has overcome, by clear and convincing evidence, the findings of the Division-sponsored independent medical examination ("DIME") physician regarding maximum medical improvement ("MMI") and permanent impairment rating.

- If claimant has overcome the findings of the DIME physician, whether claimant has proven by a preponderance of the evidence that she is entitled to an award of permanent partial disability ("PPD") benefits.

FINDINGS OF FACT

1. Claimant is employed with employer as a licensed psychiatric technician. On June 14, 2015, claimant suffered an admitted injury to her upper back. Claimant testified that the injury occurred when she crawled under a table to reach an item. While claimant was under the table a client's forearm and elbow struck claimant's upper back and left shoulder. Claimant timely reported the injury to employer and she was sent for treatment at Work Partners as her authorized treating physician ("ATP").

2. Claimant testified that her symptoms from the June 14, 2015 work injury included extreme pain in her upper back and left arm, with numbness down her left arm and up into the left side of her neck and left ear.

3. Claimant began treating with Work Partners on June 17, 2015 and was seen by Daniel Meyer, PA, under the supervision of Dr. Craig Gustafson. Mr. Meyer diagnosed a contusion to claimant's interscapular region, and myofacial syndrome of her thoracic spine. Mr. Meyer referred claimant for six sessions of chiropractic treatment. In addition, claimant was instructed to take over the counter nonsteroidal anti-inflammatory drugs ("NSAIDS") and to alternate ice and heat. Mr. Meyer released claimant to return to full duty work with no work restrictions.

4. On July 25, 2015, claimant suffered an admitted injury to her low back. Claimant testified that the July 25, 2015 injury occurred when she was attempting to administer medication to a client who was having a seizure. During that process, claimant felt pain in her left hip and low back. Claimant timely reported the July 25, 2015 injury to employer and was sent back to Work Partners as her ATP for that new injury.

5. On July 28, 2015, claimant was first seen at Work Partners for the July 25, 2015 injury. She was seen by Erica Herrera, PA-C, under the supervision of Dr. Gustafson. On that date, claimant was placed on restricted duty with a 25 pound lifting restriction and limited bending and twisting. Following the July 25, 2015 injury

claimant's treatment included physical therapy and injections. Ms. Herrera also referred claimant to Colorado Injury and Pain Specialists.

6. On November 16, 2015, claimant was placed at maximum medical improvement ("MMI") for the June 14, 2015 work injury. At that time claimant had no work restrictions and no impairment rating.

7. Claimant testified that when she was placed at MMI in November 2015, she continued to have pain and numbness in her left arm and into her fingers and up her neck and the left side of her head. Claimant testified that she did not pursue additional treatment for her upper back and left arm pain because she believed that her case was closed.

8. On November 10, 2015, claimant was first seen at Colorado Injury and Pain Specialists by Dr. Scott Campbell. Claimant reported to Dr. Campbell that she had experienced mid-thoracic pain since June, but that pain had progressively improved. She also reported that since July she had hip and lower back pain with radicular pain that extended below her knee into her ankle. Dr. Campbell determined that claimant's pain was likely sacroiliac ("SI") joint pain and opined that a she could benefit from an SI injection.

9. On November 23, 2015, Dr. Campbell administered a left SI joint injection. On December 8, 2015, claimant reported to Dr. Campbell that she had five hours of good pain relief from the November 23, 2015 injection. Based upon claimant's response to that injection, Dr. Campbell determined that she would be a good candidate for another SI injection.

10. On December 14, 2015, Dr. Campbell administered another left SI joint injection. On December 29, 2015, claimant reported to Dr. Campbell that she continued to have relief from the December 14, 2015 injection.

11. On December 22, 2015, a magnetic resonance image ("MRI") of claimant's lumbar spine showed advanced facet arthrosis at the L4-5 and L5-S1 levels.

12. On January 1, 2015, claimant reported to Ms. Herrera that Dr. Campbell had recommended "burning some nerves". Ms. Herrera recorded that claimant did not wish to pursue radiofrequency ablation.

13. On January 26, 2016, claimant was seen by Elizabeth Crawford, CNP with Colorado Injury and Pain Specialists. At that time, claimant reported that the injections continued to provide her with pain relief. Ms. Crawford recommended medial branch blocks at the L4-5 and L5-S1 levels, which claimant declined.

14. On February 22, 2016, claimant was placed at maximum medical improvement ("MMI") for the July 25, 2015 work injury with no work restrictions and no permanent impairment rating. At that time, Ms. Herrera recommended that claimant continue with core and hip strengthening and refilled claimant's prescription for Lidocaine patches and a TENS unit for ongoing maintenance treatment.

15. On July 13, 2016, respondent filed a Final Admission of Liability ("FAL") for the June 14, 2015 work injury admitting for the MMI date of November 16, 2015 and no permanent impairment rating.

16. On July 13, 2016, respondent also filed a FAL for the July 25, 2015 work injury admitting for the MMI date of February 22, 2016 and no permanent impairment rating.

17. On July 20, 2016, claimant filed an Objection to FAL and Notice and Proposal to Select an Independent Medical Examiner ("IME") regarding the June 14, 2015, and an Objection to FAL and Notice and Proposal to Select an IME regarding the July 25, 2015 injury.

18. On July 29, 2016, claimant filed an Application for a Division Independent Medical Examination ("DIME") that addressed both the June 14, 2015 and July 25, 2015 injuries. On August 30, 2016, claimant filed an Amended Application for a DIME addressing both injuries. The body parts and conditions to be evaluated were listed in the Amended Application for a DIME as low back, mid back, sciatic pain with radicular symptoms, upper back, ribs, and shoulder.

19. On September 30, 2016, Dr. Thomas Moore performed a DIME. Dr. Moore reviewed claimant's medical records, obtained a medical history, and performed a physical examination of claimant in connection with the DIME. Dr. Moore issued a report in which he summarized his findings and opined that claimant had reached maximum medical improvement ("MMI") on November 16, 2015 for the June 14, 2015 injury; and on February 22, 2016 for the July 25, 2015 injury.

20. In his DIME report, Dr. Moore determined an impairment rating of 3% whole person for claimant's thoracic spine range of motion. For claimant's range of motion for her lumbar spine, Dr. Moore assigned an impairment rating of 2% whole person. This resulted in a total impairment rating of 5% whole person. In determining this impairment rating, Dr. Moore did not include any impairment rating from Table 53 of the AMA Guides.[1]

21. On October 13, 2016, the Division of Workers' Compensation ("the Division") sent an "incomplete notice" to Dr. Moore regarding his DIME report. Specifically, the Division noted that Dr. Moore included two MMI dates and had not identified any Table 53 diagnoses.

22. On October 19, 2016, Dr. Moore issued an addendum to his DIME report in which he determined that claimant had no Table 53 diagnosis and therefore did not have any permanent impairment rating for either work injury. In this addendum, Dr. Moore did not explain why claimant did not have a Table 53 diagnosis for either injury.

[1] *American Medical Association Guides to the Evaluation of Permanent Impairment*, Third Edition (Revised) in effect as of July 1, 1991.

23. On November 2, 2016, respondent filed a FAL regarding the June 14, 2015 work injury and admitting for the MMI date of November 16, 2015 and no impairment rating.

24. On January 11, 2017, Dr. Jeffery Krebs performed an independent medical examination ("IME") of claimant. Dr. Krebs reviewed claimant's medical records, obtained a medical history, and performed a physical examination of claimant. Following the IME, Dr. Krebs authored a report in which he opined that claimant had reached MMI with regard to the July 25, 2014 injury to her lumbar spine. Based upon range of motion measurements and a Table 53 II(B) diagnosis, Dr. Krebs assessed a permanent impairment rating of 11% whole person for claimant's lumbar spine.

25. Table 53 II(B) identifies impairment ratings for "Intervertebral disc or other soft-tissue lesions" that are "[u]noperated, with medically documented injury and a minimum of six months of medically documented pain and rigidity with or without muscle spasm associated with *none-to-minimal* degenerative changes on structural tests". (Emphasis in the original).

26. Dr. Krebs noted in his report that no studies had been taken of claimant's shoulder or thoracic spine. Therefore, he opined that he was not to assess an impairment rating on claimant's thoracic spine.

27. Claimant testified that she continues to have the same symptoms she had when she was placed at MMI in November 2015 and in February 2016. Claimant continues to use her Lidocaine patches, and treats her pain with ice, heat, massage therapy, and chiropractic therapy.

28. The ALJ notes that Dr. Moore first assessed an impairment rating of 5% whole person, and then later determined no impairment rating. However, Dr. Moore's addendum to the DIME report is silent as to why he believes that claimant does not have a Table 53 diagnosis.

29. The ALJ credits claimant's testimony and the medical records and finds that claimant has demonstrated that she has continued to have pain and receive treatment for at least six months following her injuries and after being placed at maximum medical improvement ("MMI").

30. The ALJ credits the medical records and the opinion of Dr. Krebs and finds that claimant has demonstrated that it is highly probable that she has a permanent impairment to her lumbar spine. The ALJ adopts Dr. Krebs' finding of a permanent impairment rating of 11% whole person related to claimant's lumbar spine.

31. The ALJ credits Dr. Moore's initial thoracic spine range of motion measurements and finds that claimant has a 3% whole person impairment for her thoracic spine. It has been established by the medical records that claimant has had six months of medical documented pain for her thoracic spine with "none-to-minimal degenerative changes". The ALJ finds that an impairment rating for claimant's thoracic spine can be assessed even in the absence of imaging as the Table 53 II(B) rating

includes none to minimal degenerative changes. The ALJ adds the 3% range of motion rating to a Table 53 rating of 2% whole person, resulting in a thoracic spine whole person rating of 5%. When this is added to the 11% impairment for claimant's lumbar spine it results in a total whole person rating of 15%.[2]

32. The ALJ finds that the difference in impairment ratings as assessed by Dr. Moore and Dr. Krebs constitute more than just a mere difference of medical opinion. Dr. Moore erred in not assessing a Table 53 impairment rating as it is clear that claimant has a Table 53 II(B) diagnosis (unoperated injury with at least six months of pain and treatment).

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., 2013. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S., *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2013).

3. Section 8-42-107(8)(b)(III) and (c), C.R.S. provides that the DIME physician's finding of MMI and permanent medical impairment is binding unless overcome by clear and convincing evidence. Clear and convincing evidence is highly probable and free from substantial doubt, and the party challenging the DIME physician's finding must produce evidence showing it is highly probable that the DIME physician is incorrect. *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). A fact or proposition has been proved by clear and convincing evidence if, considering all of the evidence, the trier-of-fact finds it to be highly probable and free

[2] Totals determined by referring to the combined values chart in the AMA Guides.

from substantial doubt. *Metro Moving & Storage, supra.* A mere difference of opinion between physicians fails to constitute error. See *Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-356 (March 22, 2000). The ALJ may consider a variety of factors in determining whether a DIME physician erred in his opinions including whether the DIME appropriately utilized the Medical Treatment Guidelines and the AMA Guides in his opinions.

4. When a DIME physician issues conflicting or ambiguous opinions concerning whether or not the claimant has reached MMI, the ALJ may resolve the inconsistency as a matter of fact so as to determine the DIME physician's true opinion. *Magnetic Eng'g, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

5. As found, Dr. Moore issued conflicting opinions when he first assessed a permanent impairment rating of 5% whole person with no mention of Table 53, then later retracted that impairment rating with no explanation as to why he found no Table 53 diagnosis. While the ALJ recognizes the general deference to a DIME physician's opinion regarding permanent impairment, here Dr. Moore erred in failing to include a Table 53 diagnosis for either claimant's lumbar injury or thoracic injury.

6. As found, claimant has overcome the opinion of the DIME physician by clear and convincing evidence that she has a permanent impairment to her lumbar spine and to her thoracic spine. As found, Dr. Krebs opinion, the medical records, and claimant's testimony are credible and persuasive.

7. As found, claimant has demonstrated by a preponderance of the evidence that the permanent impairment to her lumbar spine is 11% whole person. As found, the medical records and the opinion of Dr. Krebs are found to be credible and persuasive on this issue.

8. As found, claimant has demonstrated by a preponderance of the evidence that that she has a permanent impairment to her thoracic spine of 5%. As found, claimant's total impairment rating is 15% whole person.

ORDER

It is therefore ordered that:

1. Claimant has overcome the opinions of the DIME physician by clear and convincing evidence with regard to the issue of permanent impairment.

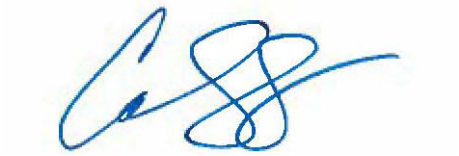
2. Respondent shall pay PPD benefits based upon a permanent impairment rating of 15% whole person.

3. Respondent shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 22, 2017



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

- Whether Claimant proved by a preponderance of the evidence that he suffered an occupational disease in the form of bilateral carpal tunnel syndrome.

STIPULATIONS

The parties stipulated that if it is found that Claimant's bilateral carpal tunnel syndrome is compensable, Dr. Davis is an authorized provider and the surgery recommended by Dr. Davis is reasonable and necessary.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant has worked for Employer as a truck driver for approximately 14 years. Claimant's job requires him to drive a semi-truck which carries approximately 24-28 pallets of groceries. In addition to driving the truck to its destination, Claimant is also required to unload the pallets off the truck at each grocery store.

2. Claimant credibly testified that when delivering groceries, and depending on his route, he can spend about 20% of each day driving and up to 80% of each day unloading the pallets from the truck.

3. Claimant testified at hearing that he uses a pallet jack to unload and move each pallet of groceries from the truck to a particular location in each grocery store. According to Claimant, he might have to move a pallet a short distance from the truck or almost up to a block.

4. Claimant's Exhibit 9 shows a picture of the pallet jack used by Claimant. As noted, the pallet jack has two handles upon which Claimant must grasp and turn by flexing and extending his wrist(s) to operate.

5. Claimant testified at hearing regarding the operation of the pallet jack. Claimant also demonstrated the hand movements necessary to operate the pallet jack. Claimant testified and demonstrated that using the pallet jack required him to grab the handles of the pallet jack and then flex and extend his wrists to direct the pallet jack towards its intended location. The motion used by Claimant is similar to the motion used to operate the accelerator on a motorcycle, except

Claimant has to flex and extend his wrist to make the pallet jack go forward and backward.

6. Claimant credibly testified that it takes approximately 10-20 minutes to unload and move each pallet to its intended destination at each store. Thus, Claimant is flexing and extending one or both of his wrists for approximately 10-20 minutes while unloading each pallet and moving it to its intended location with the pallet jack. Therefore, it takes on average 15 minutes to unload and move each pallet. Claimant unloads and moves between 24 and 28 pallets per day when driving. Consequently, Claimant can spend up to approximately 6 to 7 hours per day flexing and extending his wrists while using the pallet jack.

7. Claimant credibly testified that his symptoms occur mostly at work.

8. When Claimant is not delivering groceries, but merely moving trailers, i.e., switching, he does not use the pallet jack. The number of days per week Claimant spends switching trailers has varied since about 2013.

9. On August 3, 2010, Claimant presented to his personal physician at Kaiser complaining that both hands were getting tingly. Claimant stated that he gets the symptoms while driving his car. Claimant also stated that although he "does mouse a lot", such activity did not cause his symptoms.

10. On August 2, 2012, Claimant again presented to Kaiser due to hand numbness. Although Claimant stated that his symptoms would occur while scratching lottery tickets or using a mouse, he also stated that he is a truck driver and his job requires the use of a pallet jack, which required "lots of wrist turning." Therefore, by August of 2012, Claimant associated using the pallet jack with his wrist problems.

11. On March 16, 2015, Claimant returned to Kaiser due to bilateral hand numbness and tingling. The medical report indicated that Claimant is still driving a truck.

12. On May 26, 2015, Claimant underwent an EMG. The conclusion was severe bilateral median neuropathy.

13. On July 10, 2015, Claimant returned to Kaiser complaining of bilateral hand symptoms. Claimant was diagnosed as suffering from bilateral carpal tunnel syndrome. The medical report from this visit indicated that Claimant drives a truck.

14. On December 16, 2016, Claimant was evaluated by Dr. Kirk Holmboe. Dr. Holmboe obtained a detailed description of Claimant's job. Claimant described working approximately 50 hours per week. Claimant stated that his schedule at that time involved driving and delivering groceries 3 days per week and moving or "switching" trailers 2 days per week. Claimant also described using an electric pallet jack to unload the palletized groceries. Dr. Holbroe assessed Claimant as

suffering from bilateral carpal tunnel syndrome. To assist in determining causation Dr. Holmboe attempted to obtain a worksite evaluation.

15. On January 8, 2016, Claimant was again evaluated by Dr. Holmboe. He stated the Employer would not allow someone to ride with Claimant to perform a worksite evaluation. Therefore, a worksite evaluation could not be obtained. Dr. Holmboe again obtained Claimant's work history and job responsibilities. The history obtained by Dr. Holmboe indicated Claimant delivers groceries 3 nights per week. He went on to state that on the nights Claimant delivers groceries, he spends about 70% of his time, out of a 8-12 hour shift, moving pallets of groceries using a pallet jack. Dr. Holmboe also stated that the pallet jack is "steered and operated by handles which place the patient's wrist both in flexion and extension, and he uses both hands at various times to do this." According to the history obtained by Dr. Holbroe, Claimant was also required to "lift product that has come off the pallet, which does involve some heavier lifting." Dr. Holmboe went on to state that:

> Based on his description of the job and the fact that he is using these handles to control forward and backward movement of this Pallet Jack and steer with his hands greater than 4 hours per day, this would be a work-related condition, since using a computer mouse more than 4 hours a day constitutes enough to have this type of injury be work related.

16. This ALJ credits Dr. Holmboe's opinion that Claimant's bilateral carpal tunnel syndrome is work related.

17. On April 7, 2016, Claimant underwent an Independent Medical Examination ("IME") which was performed by Dr. Phillip Heyman. Dr. Heyman agreed Claimant had bilateral carpal tunnel syndrome and that surgery was reasonable and necessary. Dr. Heyman commented on causation. Dr. Heyman stated in his report that:

> The patient's job as he describes it is quite physical, I would not classify him as injured. There are many people who drive and unload trucks who do not have carpal tunnel syndrome. Furthermore, carpal tunnel syndrome frequently is present in this patient's age distribution irrespective of activity. If I would estimate a contribution of repetitive lifting to his current condition, I would say 10% but that is completely arbitrary.

18. This ALJ does not find Dr. Heyman's opinion regarding causation to be persuasive. First, Dr. Heyman said Claimant is not injured. He then says that carpal tunnel syndrome can be idiopathic and arbitrarily determines 10% of Claimant's condition was caused by Claimant's repetitive lifting at work. Second,

Dr. Heyman did not understand Claimant's job duties. Dr. Heyman stated that Claimant's repetitive lifting at work contributed to the development of his carpal tunnel syndrome. However, Claimant's job did not require a lot of repetitive lifting. As indicated by Claimant, and as set forth in Claimant's prior medical records, Claimant used a pallet jack to unload the trucks. Lastly, Dr. Heyman did not address how the use of the pallet jack might have caused Claimant's carpal tunnel syndrome. Consequently, because Dr. Heyman did not have a good understanding of Claimant's job duties and did not analyze Claimant's actual job duties his opinion was not persuasive.

19. On October 19, 2016, Dr. Wallace Larson performed an IME on behalf of Respondents. Claimant reported to Dr. Larson that using the pallet jack at work caused numbness, tingling, and swelling in his hands. According to the report, Claimant reported working approximately 10-14 hours per day, with driving making up approximately 3 hours per day and the rest spent unloading pallets with the pallet jack.

20. Dr. Larson analyzed the cause of Claimant's carpal tunnel syndrome by using the Medical Treatment Guidelines ("MTG"). Dr. Larson concluded that Claimant's job did not entail either a primary or secondary risk factor which is known to cause carpal tunnel syndrome. Therefore, he opined that Claimant's job did not cause his carpal tunnel syndrome.

21. However, Dr. Larson's opinion regarding the application of the MTG to the facts of this case is not clear. Dr. Larson appeared to state in his report that in order for Claimant's use of the pallet jack to be considered a primary risk factor under the MTG and the possible cause of Claimant's carpal tunnel syndrome, Claimant would have had to have used the pallet jack with his wrists flexed or extended for at least 6 hours per day and use more than 50% of his maximum force with task cycles of 30 seconds. Dr. Larson also appeared to state in his report that in order for the use of the pallet jack to be considered a secondary risk factor under the MTG, Claimant would have had to have used the pallet jack for more than 4 hours per day and use greater than 50% of his maximum force with task cycles of 30 seconds or less. Based on Claimant's testimony, this ALJ concludes that Claimant did use the pallet jack, with his wrists flexed, or extended, in excess of 4-6 hours per day when driving and delivering pallets of groceries. Thus, Dr. Larson did not evaluate Claimant's actual job duties in relation to the MTG.

22. Claimant credibly testified that while unloading trucks, he would spend up to 80% of his day using the pallet jack. The pallet jack required Claimant to flex and extend each wrist on a continuous basis while moving the pallet to its intended destination in the store. Although the exact force was not specifically articulated by Claimant, this ALJ infers that the force was sufficient enough, when combined with the flexing and extending of his wrist, to cause Claimant's bilateral carpal tunnel syndrome.

23. Claimant's use of the pallet jack caused his bilateral carpal tunnel syndrome.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The Claimant bears the burden to prove by a preponderance of the evidence that the hazards of the employment caused, intensified or aggravated the disease for which compensation is sought. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000); *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office,* 989 P.2d 251 (Colo. App. 1999). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The question of whether the Claimant has proven causation is one of fact for the ALJ. *Faulkner v. Industrial Claim Appeals Office, supra*. In this regard the mere occurrence of symptoms in the workplace does not require the conclusion that the conditions of the employment were the cause of the symptoms, or that such symptoms represent an aggravation of a preexisting condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (I.C.A.O. August 18, 2005). Once claimant makes such a showing, the burden shifts to respondents to establish both the existence of a non-industrial cause and the extent of its contribution to the occupational disease. *Cowin & Co. v. Medina*, 860 P.2d 535 (Colo. App. 1992).

The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

Claimant must prove causation to a reasonable probability. Lay testimony alone may be sufficient to prove causation. However, where expert testimony is presented on the issue of causation it is for the ALJ to determine the weight and credibility to be assigned such evidence. *Rockwell International v. Turnbull*, 802 P.2d 1182 (Colo. App. 1990).

The Colorado Department of Labor and Employment, Division of Workers' Compensation promulgates rules of procedure pertaining to many aspects of the workers' compensation process. Workers' Compensation Rules of Procedure, 7 CCR 1101-3. Rule 17 contains the Medical Treatment Guidelines ("MTG"). When evaluating this issue of causation the ALJ may consider the provisions of the MTG because they represent the accepted standards of practice in workers' compensation cases and were adopted pursuant to an express grant of statutory authority. However, the MTG are not dispositive of the issue of causation and the ALJ need not give them any more weight than he determines they are entitled to in light of the totality of the evidence. *See Cahill v. Patty Jewett Golf Course,* WC 4-729-518 (ICAO February 23, 2009); *Siminoe v. Worldwide Flight Services,* WC 4-535-290 (ICAO November 21, 2006).

Dr. Larson testified that pursuant to the MTG Claimant's job duties did not cause his bilateral carpal tunnel syndrome. Dr. Larson testified that Claimant's job duties did

not meet the primary or secondary risk factors which are known to cause carpal tunnel syndrome. Therefore, Dr. Larson concluded that Claimant's carpal tunnel syndrome was not caused by his job. This ALJ does not find Dr. Larson's opinion to be persuasive. This ALJ concludes that a strict application of the MTG is not appropriate to the specific facts of this case. Therefore, whether Claimant's job tasks met the primary or secondary risk factors as set forth in the MTG is not dispositive. As found by this ALJ, Claimant spent 6-7 hours per day operating the pallet jack and this required Claimant to flex and extend his wrists during that time and this caused his bilateral carpal tunnel syndrome.

This ALJ is aware that a strict application of the causation analysis set forth in the MTG could lead to the conclusion that Claimant's bilateral carpal tunnel syndrome was not caused by his work. However, this ALJ does not find the MTG to be dispositive regarding causation as applied to the facts of this case.

Dr. Holmboe is one of the few treating physicians who obtained an accurate job description from Claimant. After getting a proper job description from Claimant, Dr. Holmbroe stated: "Based on his description of the job and the fact that he is using these handles to control forward and backward movement of this Pallet Jack and steer with his hands greater than 4 hours per day, this would be a work-related condition …" This ALJ credits Dr. Holmboe's opinion that Claimant's bilateral carpal tunnel syndrome was caused by his work.

Claimant credibly testified that while unloading trucks, he would spend up to 80% of his day using the pallet jack. Depending on the day, Claimant could spend 6-7 hours using the pallet jack. Claimant's use of the pallet jack required him to flex and extend each wrist on a continuous basis while moving each pallet from the delivery truck to its intended destination in the grocery store. Claimant also credibly testified that his symptoms occurred mostly at work.

This ALJ concludes that Claimant's job activities of using the pallet jack did cause his bilateral carpal tunnel syndrome.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's bilateral carpal tunnel syndrome was caused by his work for the employer and is compensable.

2. Respondent shall provide medical benefits in the form of the surgery recommended by Dr. Davis to treat Claimant's bilateral carpal tunnel syndrome.

3. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: 5-22-17

_____
Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that she suffered a compensable industrial injury.

2. If compensable, whether Claimant has established by a preponderance of the evidence that the medical treatment by Greeley Medical Clinic, University of Colorado Health - Longmont Clinic, and their referrals was reasonably necessary, related and authorized.

3. If compensable, whether the December 2014 slip and fall incident or the May 2015 motor vehicle accident were intervening events which severed the causal relationship between the work injury and Claimant's symptoms and need for treatment.

4. If compensable, whether Claimant has established by a preponderance of the evidence that she is entitled to temporary total disability benefits ("TTD") from November 7, 2015 to March 14, 2016 and from April 4, 2016, ongoing.

5. Whether Respondents have established by a preponderance of the evidence that Claimant was responsible for the termination of her employment.

STIPULATIONS

1. Claimant initially selected Dr. Cathy Smith with Banner Occupational Medicine as her authorized treating physician.

2. Claimant was discharged by Dr. Smith on December 4, 2014.

3. After being discharged by Dr. Smith, Claimant then sought care at the Greeley Medical Clinic. The Greeley Medical Clinic referred Claimant to Dr. Sunil Jani at the University of Colorado Health – Longmont Clinic.

FINDINGS OF FACT

1. Claimant worked for Employer for approximately 18 years as a short rib trimmer. Claimant's job duties involved trimming fat from pieces of short rib. Per Employer's Physical Job Demands Summary for Claimant's position, the average time for cutting the meat product is 6.5 seconds with 9.5 seconds of rest. The summary states that the worker's elbow is flexed at a 40-60 degree angle, with neck flexion of 0-10 degrees and lateral flexion of 0-5 degrees. The summary notes that the weight of the meat product averages approximately 2.3 pounds.

2. The court viewed a video of Claimant performing her regular job duties on November 5, 2015. Claimant grabbed the meat product from the conveyor belt using a hook in her left hand and used a knife in her right hand to trim fat from the meat product. Claimant used a cutting motion away from the body with her knife. Claimant then tossed the meat product back onto the conveyor belt. The product on the conveyer is positioned just above waist level. Claimant testified that the activity seen on the video is the same activity she performed on September 30, 2014.

3. On Tuesday, September 30, 2014, Claimant testified that she felt a pull or tear in her right shoulder while performing her regular job duties. Claimant testified that the meat product was frozen and that her knife was dull despite sharpening the knife throughout her shift. Claimant testified that she was unable to work the remainder of her shift, and reported the incident to her supervisor. Claimant testified that nothing was done by Employer that day, and she subsequently returned to working her same job duties.

4. Myrna Rizo testified at hearing on behalf of Respondents. Ms. Rizo works for Employer as a Quality Assurance Superintendent. Ms. Rizo supervised Claimant. Ms. Rizo testified that Employer sharpens employee knives three times per day and also allows employees to sharpen their own knives. Ms. Rizo testified that Claimant always kept her knife sharp. Ms. Rizo testified that the frozen meat was difficult to cut and required a lot of strength. Ms. Rizo testified that frozen meat may be an issue is "not really" an issue on Tuesdays unless there was a three-day weekend.

5. On October 6, 2014, Employer sent Claimant to see a nurse at Employer's health facilities. Claimant reported pain in her right shoulder. Claimant reported that the meat was tough on the day of the incident and that she could not keep her knife sharp enough.

6. Employer provided Claimant a designated provider list with three medical providers. Claimant chose Banner Occupational Medicine. Claimant initialed and signed the designated providers' list on October 6, 2014.

7. Ken Frisbie, PA-C, with Banner Occupational Medicine, evaluated Claimant on October 14, 2014. Claimant reported an onset of pain in her right shoulder while trimming meat. PA-C Frisbie noted limited and painful active range of motion in the right shoulder and a painful negative empty can testing on the right. PA-C Frisbie diagnosed right shoulder pain, muscle spasm, and right hand strain. PA-C Frisbie released Claimant to work light duty and recommended physical therapy.

8. Cathy Smith, M.D., with Banner Occupational Medicine, evaluated Claimant on November 13, 2014. Claimant reported that she experienced a sudden onset of pain in her right shoulder while performing her work. Dr. Smith diagnosed right shoulder pain, muscle spasm, and right hand strain. Dr. Smith released Claimant to restricted duty. Dr. Smith remarked that she needed to review video of Claimant's job duties for further evaluation.

9. Dr. Smith reevaluated Claimant on December 4, 2014. Dr. Smith and Claimant reviewed a video of a worker performing Claimant's job duties. Regarding the use of the shoulder, Dr. Smith noted, "The strokes do slightly flex the right shoulder, but not more than 45 degrees rarely." Dr. Smith noted that the worker in the video threw the meat product onto an upper conveyor, which Claimant reported was no longer a part of the process. Dr. Smith noted that x-rays of Claimant's right shoulder revealed acromioclavicular joint degenerative changes. Dr. Smith diagnosed right shoulder pain, muscle spasm and right hand strain. Dr. Smith recommended Claimant return to regular duty. Dr. Smith opined that Claimant's right shoulder symptoms were not work-related. Dr. Smith remarked,

> At this point, the video does not correlate with her current complaints over the AC area and anterior shoulder since she never reaches more than 45 degrees from the body with the right arm and working time does not fall within the definition of repetitive or forceful. X-rays do show degenerative changes at the AC joint, which could be the cause of her current complaints.

Dr. Smith discharged Claimant and advised Claimant that further treatment for the right shoulder would need to be continued with her primary care physician.

10. Claimant was involved in a slip and fall accident in her bathtub in December 2014. Claimant testified that she went to the hospital because she hit the left side of her head when she fell.

11. After being discharged by Dr. Smith, Claimant sought treatment for her right shoulder with a primary care physician at Greeley Medical Clinic. Claimant was first evaluated on February 20, 2015 and diagnosed with shoulder pain.

12. Claimant was involved in a low-speed motor vehicle accident on May 18, 2015. A North Colorado Medical Center Ambulance Report of the same date notes Claimant complained of midline neck pain, midline thoracic back pain, and right shoulder pain. The report notes Claimant was wearing a seatbelt and that the airbags did not deploy. Claimant was seen in the North Colorado Medical Center following the motor vehicle accident. Claimant complained of right shoulder and neck/back pain. Claimant was diagnosed with a back sprain, cervical sprain, and contusion.

13. On June 16, 2015, Claimant returned to Greeley Medical Clinic for a follow-up evaluation and underwent x-rays of the right shoulder. The x-rays revealed mild acromioclavicular degenerative change. On examination, Joshua Snyder, M.D. noted positive impingement signs and a positive empty can test. Dr. Snyder diagnosed right shoulder impingement/rotator cuff tendonitis and recommended Claimant hold off on physical therapy.

14. On July 13, 2015, Gregory Denzel, D.O. with Greeley Medical Clinic evaluated Claimant in connection with the May 18, 2015 motor vehicle accident. Claimant

reported pain in the right side of collar bone and low back pain. Dr. Denzel assessed low back pain, thoracic strain, and injury of shoulder region.

15. Claimant underwent an MRI on July 30, 2015. Stanley Weinstein, M.D., gave the following impression:

> (1) Examination is limited by motion. Mild tendinosis of the distal supraspinatus, subcapularis and infraspinatus tendons with no high-grade rotator cuff tear identified. (2) Acromioclavicular joint morphology with proliferative change and inferior spurring likely causing impingement. (3) Mild tendinosis of the biceps tendon over its intra-articular course. (4) Vague diffuse low signal within the visualized bony skeleton on T1-weighted images can be seen with tobacco use. Other marrow infiltrative processes cannot be entirely excluded.

16. Claimant continued to treat with Greeley Medical Clinic. On October 13 2015, Christopher Ellis, PA-C, referred Claimant for a surgical consultation with Sunil Jani, M.D, with Orthopedics at Longmont Clinic.

17. Dr. Jani first evaluated Claimant on October 14, 2015. Dr. Jani noted Claimant presented for right shoulder pain that had been occurring for one year in connection with a work incident in September 2014. On examination, Dr. Jani noted a positive empty can test and positive signs for impingement. Dr. Jani assessed biceps tendonitis on the right, acromioclavicular joint arthritis, and bursitis of the right shoulder. Dr. Jani ordered a second MRI.

18. On November 4, 2015 Claimant underwent a second MRI and attended a follow-up evaluation with Dr. Jani. The MRI revealed partial tearing and tendinosis of supraspinatus, AC arthritis, and biceps tendinitis. Dr. Jani assessed incomplete tear of right rotator cuff, biceps tendonitis on the right, and arthritis of right acromioclavicular joint. Dr. Jani recommended surgery.

19. On November 11, 2015, Dr. Jani performed an arthroscopic right shoulder extensive debridement, subacromial decompression, distal clavicle excision with open biceps tenodesis. In the Operative Report, Dr. Jani noted the following post-operative diagnoses: right shoulder impingement/bursitis, partial rotator cuff tear, AC joint arthritis, biceps partial tear/tendinopathy, and labral tears.

20. On December 23, 2015, John S. Hughes, M.D. conducted an Independent Medical Examination ("IME") at the request of Claimant. Dr. Hughes issued an IME report of the same date. Dr. Hughes performed a medical records review and physically examined Claimant. Claimant reported that, on September 30, 2014, Employer was shorthanded and the meat was more frozen than usual, which required more exertion than normal. Claimant reported feeling a sudden onset of "something stuck" in her right shoulder, then right shoulder pain. Claimant reported having "very-little" pre-existing problems with her right shoulder, which Dr. Hughes noted was consistent with the medical record documentation he reviewed. Dr. Hughes noted that there was no

documentation of significant right shoulder pain or problems. Dr. Hughes assessed "Work-related right shoulder sprain/strain sustained on September 30, 2014, with development of partial rotator cuff tears and tendinopathy, as well as tendinopathy of the biceps long head tendon, partial labral tearing, and development of right shoulder impingement syndrome."

21. Dr. Hughes opined that Claimant suffered an occupational injury, rather than an occupational disease. Dr. Hughes noted Claimant's history was consistent with what PA-C Frisbie recorded in his October 14, 2014 report. Dr. Hughes opined that there were no alternate explanations for Claimant's right shoulder issues, noting Claimant did not have associated diabetic tendinopathy of the rotator cuff complex, and no significant past medical history of right shoulder problems. Dr. Hughes determined Claimant had not reached maximum medical improvement and further opined that Claimant's medical treatment had all been reasonable, necessary and related.

22. On January 4, 2016, Jeffrey A. Wunder, M.D. conducted an IME at the request of Respondents. Dr. Wunder conducted a medical records review and physically examined Claimant. Dr. Wunder also reviewed video of Claimant performing her job duties and Employer's Physical Job Demands Summary. Dr. Wunder noted that he did not observe any significant amount of abduction or external rotation of Claimant's right shoulder, with the exception of a few degrees. Claimant reported to Dr. Wunder that she had right shoulder pain since 1999. Claimant reported that conservative treatment calmed her symptoms but that the symptoms never resolved. Claimant reported that she took medications in order to work. Dr. Wunder gave an impression of chronic right shoulder pain related to underlying osteoarthritis/degenerative change and probable bilateral carpal tunnel syndrome not work-related to the September 30, 2014 incident.

23. Dr. Wunder opined that Claimant had an "industrial illness" and not an industrial injury, based on the longevity of Claimant's symptoms. Dr. Wunder opined, within a reasonable degree of medical probability, that Claimant did not have a work-related shoulder condition. Dr. Wunder noted Claimant's job required minimal use of her right shoulder, and did not require significant abduction or internal rotation, overhead activities, or use of her arm at a prolonged extended or overhead position. Dr. Wunder noted that Claimant's x-rays demonstrated degenerative osteoarthritis, and opined that the job activities observed in the video could not cause, exacerbate or result in the advanced degenerative change in Claimant's shoulder. Dr. Wunder opined Claimant had degenerative osteoarthritis of the right shoulder with no significant rotator cuff pathology. Dr. Wunder agreed with Dr. Smith that it was unlikely Claimant's job duties contributed to Claimant's symptoms. Dr. Wunder noted that protocols for cumulative trauma disorder for the right upper extremity contained in the Colorado Division of Workers' Compensation Medical Treatment Guidelines (the "Guidelines") emphasize force and position as primary risk factors, and opined that such risk factors were not present in Claimant's case. Dr. Wunder noted that the MRIs did not evidence an acute injury and the operative report did not evidence significant rotator cuff injury. Dr. Wunder concluded that "The only reasonable pain generator, therefore, would have been the degenerative disease in her AC joint and glenohumeral joint."

24. Dr. Wunder testified at hearing on behalf of Respondents. Dr. Wunder testified as an expert in physical medicine and rehabilitation. Dr. Wunder is board certified in physical medicine and rehabilitation and Level II accredited by the Colorado Division of Workers' Compensation. Dr. Wunder formerly served as the Medical Director at Employer's beef plant. Dr. Wunder testified consistent with his January 4, 2016 IME report. Dr. Wunder opined that, within a reasonable degree of medical probability, Claimant's shoulder condition is the result of cumulative trauma and is not work-related. Dr. Wunder disagreed with Dr. Hughes' contention that Claimant had no history of right shoulder issues, and disagreed that Claimant sustained an acute injury. Dr. Wunder testified that Claimant's use of her right shoulder on the job would not have resulted in cumulative trauma, as her shoulder primarily remained neutral when performing her job duties. Dr. Wunder testified that frozen meat product was not an issue after Mondays and that, even if the meat product was frozen, Claimant's job duties would not have resulted in injury to her shoulder. Dr. Wunder opined that the risk factors for AC joint problems, impingement, and rotator cuff pathology noted in the Guidelines were not present in Claimant's case. Dr. Wunder testified that there is no indication cumulative trauma disorder pre-disposes an individual to further cumulative trauma disorder.

25. Dr. Wunder testified that, based on Claimant's reported history, Claimant had a long history of shoulder issues. Dr. Wunder acknowledged he did not review any medical records substantiating Claimant's reported history. Dr. Wunder testified that the May 2015 blurred the causation of Claimant's shoulder pain.

26. Dr. Smith reviewed Dr. Hughes' December 23, 2015 IME report and authored a letter dated January 21, 2016. Dr. Smith disagreed with Dr. Hughes' opinion that Claimant suffered an acute sprain/strain to the right shoulder that then caused Claimant to develop a partial rotator cuff tear, tendinopathy, partial labral tear, and development of impingement syndrome. Dr. Smith referred to the Guidelines for determining work-related causality. Dr. Smith opined that Claimant's mechanism of injury and review of the video of work activities did not fall within the Guidelines for causality of AC joint sprain or strain, impingement, rotator cuff tears or labral tears.

27. Dr. Smith testified by deposition on August 10, 2016. Dr. Smith testified as an expert in occupational medicine. Dr. Smith is board certified in occupational medicine and Level II accredited by the Colorado Division of Workers' Compensation. Dr. Smith opined that, within a reasonable degree of medical probability, Claimant's right shoulder symptoms are not work-related. Dr. Smith testified that she initially evaluated Claimant based on Claimant's report of a sudden onset of pain, but that she subsequently analyzed Claimant's case as a cumulative trauma. Dr. Smith testified she agreed with Dr. Wunder's analysis regarding causation and his assessment of the cumulative trauma disorders under the Guidelines. Dr. Smith testified she agreed with the diagnoses set forth by Dr. Hughes in his December 23, 2015 report and Dr. Hughes' description of the November 2015 MRI findings. However, Dr. Smith testified that none of the Dr. Hughes' diagnoses would be causally related to Claimant's work activity when applied to the Guidelines. Dr. Smith testified that Claimant's job did not involve work above chest level, any repetitive reaching, or any heavy lifting over her head or above

chest level. Dr. Smith testified that the sharpness of the knife did not cause any tears or damage to Claimant's shoulder.

28. Dr. Smith testified that Claimant's history of right shoulder pain, as reported to Dr. Wunder, indicated Claimant had a degenerative problem as part of the aging process. Dr. Smith testified that it would be normal to see "these kind of degenerative changes" in a 51 year old. Dr. Smith opined that Claimant's job activities did not cause, accelerate or aggravate her preexisting shoulder condition. Dr. Smith testified that individuals can develop asymptomatic partial rotator cuff tears with age. Dr. Smith testified that repetitive motion should not cause damage to a rotator cuff. Dr. Smith testified that the surgery performed by Dr. Jani was warranted based on what was noted at the time of the arthroscopic evaluation.

29. Dr. Smith testified that the December 2014 slip and fall in the shower could have caused myofascial pain in Claimant's upper back and neck. Dr. Smith acknowledged there was no indication in the medical records that Claimant complained of right shoulder pain in the medical records from the slip and fall. Dr. Smith testified that, if Claimant fell on her right shoulder or if her arm was outstretched during the fall, such positions could result in shoulder injury. Dr. Smith testified that the medical records reflect Claimant complained of right shoulder, neck and back pain after the May 18, 2015 motor vehicle accident. Dr. Smith testified that the right shoulder pain could have been caused by the motor vehicle accident. Dr. Smith testified that the seatbelt, airbags, or an attempt by Claimant to steady herself on the dashboard could have caused injury to the right shoulder. Dr. Smith acknowledged there was nothing in the medical records indicating Claimant fell on her shoulder or onto an outstretched arm, or that she was hit with an airbag during the motor vehicle accident.

30. Claimant subsequently treated with Kristin Mason, M.D. with Rehabilitation Associates of Colorado, P.C. Dr. Mason first evaluated Claimant on June 9, 2016.

31. Dr. Mason conducted a medical records review and authored a letter dated January 18, 2017. Dr. Mason acknowledged Claimant had some underlying AC arthropathy and impingement; however, Dr. Mason opined that specific work activities exacerbated Claimant's condition, leading to the need for surgery. Dr. Mason remarked,

> While [Claimant] certainly had some degree of underlying degenerative change in her shoulder, she also has a very repetitive job and had some change in her working conditions, i.e., a dull knife and increased volume as well as more frozen meat that required increased force to be exerted and she became symptomatic.

32. Dr. Mason noted that, per the Guidelines, overhead work is a primary risk factor for shoulder injuries but not the only risk factor, "particularly in the presence of underlying anatomical predisposition." Dr. Mason noted Claimant had previous overuse type injuries to the same extremity and stated, "Generally speaking, if someone has repetitive or cumulative trauma disorder to one part of a limb, it is more likely that they

may also develop repetitive trauma to another part of the limb." Dr. Mason opined, "…it is likely that the cause of the injury was not the repetitive trauma but that the ongoing need for repetitious work may have prevented her from recovering from the acute event."

33. Claimant was off of work from November 8, 2015 through March 14, 2016 in connection with the right shoulder surgery.

34. Isabel Garcia testified at hearing on behalf of Respondents. Ms. Garcia has worked for Employer as a Human Resources Coordinator since 2008. Ms. Garcia testified that, following Claimant's November 2015 surgery, Claimant received 12 weeks of short-term disability payments at $280.00 per week. Claimant then took unpaid leave until returning to work on or around March 15, 2016. Ms. Garcia testified that, on or around April 5, 2016, Claimant informed Human Resources that she could no longer perform her job duties due to pain in her arm. Ms. Garcia testified that Claimant was informed that she needed to provide documentation from her physician to Employer within two weeks. Ms. Garcia testified Claimant failed to provide any documentation from her physician as requested by Ms. Garcia. Ms. Garcia testified that she attempted to call Claimant on at least three occasions, and did not receive any communication from Claimant. Ms. Garcia testified that Employer did not have any documentation substantiating the need for a leave of absence and discharged Claimant for violation of Employer's no-call, no-show policy. Ms. Garcia testified that the last documentation in Claimant's file is from March 14, 2016 showing no work restrictions.

35. Claimant testified that she last worked for Employer on April 4, 2016. Claimant testified she obtained a letter from Dr. Jani on April 4, 2016 regarding work restrictions and gave the letter to Human Resources. Claimant testified that she was informed she could not return to work with her restrictions. Claimant testified she did not receive any notice from Employer of her termination. Claimant testified she became aware of her termination when she received notification from her health insurance company that she no longer had health insurance coverage. Claimant testified that she did not receive any letters from Ms. Garcia.

36. Claimant's medical records include medical notes from an April 4, 2016 evaluation by Dr. Jani. Claimant reported worsening of her shoulder pain since returning to work. Dr. Jani documented that he gave Claimant a note outlining her work restrictions. Dr. Jani restricted Claimant from lifting, scraping, performing repetitive motions, using a knife, and operating heavy machinery.

37. Claimant's testimony is found credible and persuasive.

38. The ALJ credits the medical opinions of Drs. Hughes and Mason over the contradictory medical opinions of Drs. Wunder and Smith and finds Claimant suffered an acute industrial injury to her shoulder on September 30, 2014.

39. Claimant has established by a preponderance of the evidence that she sustained a compensable injury and is entitled to reasonably necessary and related medical benefits to cure or relieve the effects of the industrial injury.

40. Claimant has established by a preponderance of the evidence that the medical treatment Greeley Medical Clinic, Longmont Clinic, and their referrals was reasonably necessary, related and authorized.

41. The December 2014 and May 2015 motor vehicle accidents were not sufficient intervening events that severed the causal relationship between the work injury and Claimant's ongoing symptoms and need for treatment.

42. Respondents failed to establish by a preponderance of the evidence that Claimant was responsible for her termination.

43. Claimant established by a preponderance of the evidence that she is entitled to receive temporary total disability benefits from November 8, 2015 through March 14, 2016, and April 5, 2016 and ongoing.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, Section 8-40-101, *et seq.*, C.R.S. (the "Act"), is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1), C.R.S. Generally, the claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968).

Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado*, 717 P.2d 1000 (Colo. App. 1986).

The ALJ's resolution of issues will be affirmed if supported by substantial evidence in the record. Section 8-43-301(8), C.R.S.; *City and County of Denver School District 1 v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). Substantial evidence is that quantum of probative evidence, which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

Compensability

A claimant is required to prove by a preponderance of the evidence that at the time of the injury she was performing service arising out of and in the course of employment, and that the alleged injury was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). The question of whether the claimant met the burden of proof to establish a compensable injury is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

A claimant seeking benefits for an occupational disease must establish the existence of the disease and that it was directly and proximately caused by the claimant's employment or working conditions. *See, Cowin & Co. v. Medina*, 860 P.2d 535 (Colo. App. 1992). The test for distinguishing between an accidental injury and occupational disease is whether the injury can be traced to a particular time, place, and cause. *Campbell v. IBM Corporation*, 867 P.2d 77, 81 (Colo. App. 1993). "Occupational disease" is defined by Section 8-40-201(14), C.R.S. as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the

employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

When evaluating this issue of causation the ALJ may consider the provisions of the Guidelines because they represent the accepted standards of practice in workers' compensation cases and were adopted pursuant to an express grant of statutory authority. However, the Guidelines are not dispositive of the issue of causation and the ALJ need not give them any more weight than he determines they are entitled to in light of the totality of the evidence. *See Cahill v. Patty Jewett Golf Course,* WC 4-729-518 (ICAO February 23, 2009); *Siminoe v. Worldwide Flight Services,* WC 4-535-290 (ICAO November 21, 2006).

Claimant has proven by a preponderance of the evidence she suffered a compensable injury. Dr. Hughes and Mason credibly and persuasively opined that Claimant sustained an acute industrial injury on September 30, 2014. Claimant credibly testified that on that date, she felt a pull or tear in her right shoulder and an onset of pain. Claimant also credibly testified that the meat product was frozen that day and she was having difficulty maintaining a sharp knife. While Claimant had underlying degenerative conditions, the ALJ is persuaded the industrial injury combined with Claimant's underlying conditions, causing her symptoms and the need for medical treatment.

Reasonable, Necessary and Related Medical Treatment

A respondent is liable to provide such medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury." Section 8-42-101(1)(a), C.R.S. *Colorado Compensation Insurance Authority v. Nofio*, 886 P.2d 714 (Colo. 1994). The determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ. *See generally Parker v. Iowa Tanklines, Inc.*, W.C. No. 4-517-537 (May 31, 2006); *Chacon v. J.W. Gibson Well Service Company*, W. C. No. 4-445-060 (February 22, 2002).

As found, Claimant established that she sustained a compensable industrial injury. Accordingly, Claimant has established an entitlement to reasonably necessary and related medical treatment for her injury. Dr. Hughes credibly and persuasively opined that the treatment Claimant received was reasonable, necessary and related. As found, Claimant's medical treatment, including the right shoulder surgery performed by Dr. Jani and the resulting treatment, was reasonably necessary and related to the industrial injury.

Authorized Provider

Treatment is compensable under the Act where it is provided by an "authorized treating physician." *Kilwein v. Industrial Claim Appeals Office*, 198 P.3d 1274 (Colo. App. 2008); *Popke v. Industrial Claim Appeals Office,* 944 P.2d 677 (Colo. App. 1997).

Authorization to provide medical treatment refers to a medical provider's legal authority to provide medical treatment to a claimant with the expectation that the provider will be compensated by the insurer for providing treatment. *Bunch v. Industrial Claim Appeals Office,* 148 P.3d 381 (Colo. App. 2006); *One Hour Cleaners v. Industrial Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995).

Authorized providers include those medical providers to whom the claimant is directly referred by the employer, as well as providers to whom an authorized treating physician ("ATP") refers the claimant in the normal progression of authorized treatment. *Kilwein v. Industrial Claim Appeals Office*, 198 P.3d 1274 (Colo. App. 2008); *Town of Ignacio v. Industrial Claim Appeals Office,* 70 P.3d 513 (Colo. App. 2002); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). If an ATP refers a claimant to the claimant's personal physician based on the mistaken conclusion that a particular condition is not work related, the referral may be considered valid because the risk of mistake falls on the employer. *Cabela v. industrial Claim Appeals Office,* 198 P.3d 1277 (Colo. App. No. 07CA2528, November 13, 2008). Whether an ATP has made a referral in the normal progression of authorized treatment is normally a question of fact for the ALJ. *Suetrack USA v. Industrial Claim Appeals Office,* 902 P.2d 854 (Colo. App. 1995).

The parties stipulated that Claimant initially chose Dr. Smith as her ATP, that Dr. Smith discharged Claimant from her care on December 4, 2014, and that Claimant subsequently sought treatment at Greeley Medical Clinic. As found, Dr. Smith ceased treating Claimant based on her determination that Claimant's right shoulder condition was not work-related. Dr. Smith referred Claimant to her primary care physician for any further treatment of her right shoulder condition outside of the workers' compensation claim. Claimant subsequently sought treatment at Greeley Medical Clinic and was referred to treatment within that facility, as well as to Longmont Clinic and to Dr. Jani for surgery. As the initial ATP, Dr. Smith's referral to Claimant's primary care doctor effectively made Greeley Medical Clinic and any referrals from that provider "authorized" for the purposes of this claim. Respondents are, therefore responsible for all reasonable, necessary and related care provided by Greeley Medical Clinic, Longmont Clinic, and any other referrals made by those providers.

Temporary Total Disability Benefits

To prove entitlement to TTD benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S., requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a

complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). TTD benefits ordinarily continue until one of the occurrences listed in Section 8-42-105(3), C.R.S.; *City of Colorado Springs v. Industrial Claim Appeals Office, supra*. TTD benefits shall continue until the employee returns to regular or modified employment. *See* Section 8-42-105(3)(b), C.R.S.

As found, Claimant established by a preponderance of the evidence that her industrial injury caused a disability lasting longer than three work shifts. Claimant was off of work from November 8, 2015 through March 14, 2016 as a result of the right shoulder surgery. Claimant then returned to work from March 15, 2016 to April 4, 2016. Claimant has not worked for Employer since April 4, 2016.

Responsibility for Termination

Sections 8-42-105(4), C.R.S and 8-42-103(1)(g), C.R.S. (the "termination statutes") provide a claimant who is responsible for his termination from regular or modified employment is not entitled to TTD benefits absent a worsening of condition that reestablishes the causal connection between the industrial injury and wage loss. *In re of George,* W.C. No. 4-690-400 (ICAP July 20, 2006). The termination statutes provide that, in cases where an employee is responsible for his termination, the resulting wage loss is not attributable to the industrial injury. *In re of Davis*, W.C. No. 4-631-681 (ICAP Apr. 24, 2006). A claimant does not act "volitionally" or exercise control over the circumstances leading to his termination if the effects of the injury prevent him from performing her assigned duties and cause the termination. *In re of Eskridge,* W.C. No. 4-651-260 (ICAP Apr. 21, 2006). Therefore, to establish that Claimant was responsible for his termination, Respondents must demonstrate by a preponderance of the evidence that Claimant committed a volitional act, or exercised some control over his termination under the totality of the circumstances. *See Padilla v. Digital Equipment*, 902 P.2d 414, 416 (Colo. App. 1994). An employee is thus "responsible" if he precipitated the employment termination by a volitional act that he would reasonably expect to cause the loss of employment. *Patchek v. Dep't of Public Safety,* W.C. No. 4-432-301 (ICAP, Sept. 27, 2001).

Respondents failed to establish by a preponderance of the evidence that Claimant is responsible for her termination. The ALJ credits Claimant's testimony over the testimony of Isabel Garcia. Employer terminated Claimant because Employer deemed Claimant to be in violation of its no-call, no-show policy after not returning to work and allegedly failing to provide requested medical documentation. Claimant credibly testified she provided Employer an April 4, 2016 letter from Dr. Jani regarding work restrictions and was not made aware of her termination until she learned her health insurance had been cancelled. The ALJ is not persuaded that, under the totality of the circumstances, Claimant committed a volitional act or exercised some control over her termination. Accordingly, Claimant is entitled to TTD benefits beginning November 8, 2015 through March 14, 2016, and from April 5, 2016 and ongoing.

ORDER

It is therefore ordered that:

1. Claimant established by a preponderance of the evidence that she sustained a compensable industrial injury on September 30, 2014.

2. Claimant has established by a preponderance of the evidence that the medical treatment by Greeley Medical Clinic, University of Colorado Health - Longmont Clinic, and their referrals was reasonably necessary, related and authorized. Respondents shall pay the costs of all authorized, reasonably necessary and related treatment for Claimant's right shoulder injury, including the right shoulder surgery performed by Dr. Jani.

3. Respondents shall pay TTD benefits to the claimant for the period from November 8, 2015 through March 14, 2016 and from April 5, 2016 until terminated by law. The amounts of such TTD benefits are not determined at this time, pending determination of an average weekly wage and any applicable offsets.

4. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 22, 2017

Denver, CO 80203

ISSUES

1. Did Claimant prove by a preponderance of the evidence that she suffered a compensable injury to her right knee on December 1, 2016?

If Claimant's injury is compensable, the ALJ will address the following additional issues:

2. Was the treatment provided by Dr. Patterson reasonable, necessary, related, and authorized?

3. Did Claimant prove entitlement to TTD benefits?

4. Did Respondents prove Claimant was responsible for the termination of her employment?

FINDINGS OF FACT

1. Claimant worked for Employer as nursing home aide. Her general duties included assisting residents, cleaning, and carrying laundry. On December 1, 2016, Claimant was descending a flight of stairs at work when she felt a painful "pop" in her right knee. She grabbed the handrail, but did not fall.

2. The staircase is "L" shaped, and the pop occurred when Claimant stepped down onto the landing in the middle of the staircase. There was nothing unusual or defective about the stairs.

3. Although there is an elevator at the facility, the employees routinely use the stairs because they are quicker and more efficient than the relatively slow elevator.

4. After the injury, Claimant worked the remainder of her shift with pain. When she got home, she noted the knee was swollen.

5. Claimant called her supervisor, Maryanne Hammond, during the evening of December 2, and asked if she could see a doctor for the injury. Since it was after hours, Ms. Hammond instructed Claimant to go to the emergency room rather than Employer's regular provider, CCOM.

6. Claimant was evaluated by Marcia Coberly, NP at the St. Thomas More Emergency Room on December 3, 2016. She reported she felt her right knee "pop" while walking at work. She denied any direct injury, fall, or twisting of the knee. Claimant had been icing the knee and taking ibuprofen with no relief. Her pain was worse with weightbearing. On physical examination, there was no significant swelling or effusion. There was moderate tenderness above the patella. NP Coberly's differential diagnosis included a sprain, fracture, meniscus injury or soft tissue injury. She gave Claimant a

knee immobilizer brace, and advised her to increase the dose of ibuprofen. She instructed Claimant to follow up with Dr. Jacob Patterson, an orthopedist, if she was not better in 7 to 10 days. NP Coberly gave Claimant work restrictions of no prolonged standing, walking, or stair climbing, and no lifting more than 20 pounds for two weeks.

7. Claimant's husband, Mike Kevilus, took the work restrictions to Ms. Hammond at Employer's facility.

8. Claimant returned to work on December 5 and worked a full eight-hour shift under the restrictions. Claimant was not scheduled on December 6. Ms. Hammond excused Claimant from work on December 7 so she could attend her appointment with Dr. Patterson.

9. Claimant saw Dr. Patterson on December 7, 2016. She told Dr. Patterson her right knee popped while she was going down stairs at work. Physical examination of the knee revealed tenderness in the proximal gastroc muscle area, patellofemoral crepitus. and some quadriceps weakness. Dr. Patterson diagnosed a possible gastroc muscle injury, but also noted "she does have a significant knee derangement on exam. He recommended that Claimant use the elevator and avoid stairs for two weeks. He also limited Claimant to five-hour shifts. Claimant texted the restrictions to Ms. Hammond after the appointment.

10. Ms. Hammond spoke with a representative of Insurer by telephone on the morning of December 8. Ms. Hammond stated she had no reason to doubt Claimant's word that the injury happened at work. The insurance representative "thought" Insurer was planning to deny the claim, but would be calling Claimant later in the day.

11. Claimant was scheduled to work a shift starting at 2:00 PM on December 8, but she did not report to work. Claimant did not call in or otherwise notify Employer before her shift that she would not be reporting to work. Ms. Hammond texted Claimant at approximately 2:10 PM and asked if she was on her way. Claimant responded via text stating, "For someone who claims to be a Godly Christian woman you sure do know how to cheat and lie to your employees. Please have a nice day. Perhaps you will be kinder to others in the future who never did you any wrong and just tried to do the best job possible. Goodbye."

12. Employer has a strict "zero-tolerance" no call/no show attendance policy. Ms. Hammond referred to it is "no call, no show, no job." Claimant was aware of that policy when she failed to call in or report to work on December 8, 2016. Claimant was terminated effective December 8 in conformity with Employer's established policy.

13. Claimant went to the St. Thomas More ER again on January 11, 2017 complaining of significant pain. She was having difficulty weightbearing and was using a cane to ambulate. NP Coberly initially thought Claimant's symptoms might indicate a DVT, but an ultrasound of the right leg was negative for DVT. NP Coberly recommended physical therapy, but Claimant said she would wait until her January 16 appointment with Dr. Patterson before trying physical therapy.

14. Claimant returned to Dr. Patterson on January 16, 2017. She was limping, having significant discomfort, and did not feel she was improving. Dr. Patterson opined "I felt she might have a gastroc muscle injury on 1st visit, but she has not improved. Recommend [an] MRI scan."

15. Claimant had a right knee MRI on January 27, 2017. It showed moderate osteoarthritis of the patellofemoral and medial joint spaces, and a central free body. The ligaments and menisci were intact.

16. The pre-existing degenerative changes in Claimant's knee were asymptomatic prior to December 1, 2016.

17. Dr. Patterson gave Claimant two different work restriction forms, both of which are ostensibly dated December 7, 2016. Exhibit 2 states Claimant was restricted to five-hour shifts, no stairs, must use the elevator for two weeks. Exhibit 3 states claimant was to be "off work until reevaluated. 1-16-17." Based on the other evidence in the record, the ALJ finds that Ex. 2 was completed on December 7, 2016 and Ex. 3 was probably completed on January 16, 2017. The restrictions on Exhibit 2 match those outlined in Dr. Patterson's December 7 narrative report. Claimant testified that Dr. Patterson gave her restrictions at her first appointment, and took her off work at the next appointment because she was not improving. Claimant's next appointment after December 7 was January 16. The notation "1-16-17" on Exhibit 3 likely reflects the date the form was completed. Alternatively, Exhibit 3 was generated at an undocumented appointment between December 7 and January 16. In any event, it came into existence after Claimant had been terminated.

18. By the time Dr. Patterson took Claimant off work, she had already voluntarily abandoned her job.

19. Claimant testified Ms. Hammond refused to accommodate her restrictions because insurer had denied the claim. The ALJ does not find Claimant's testimony on this point to be credible or persuasive. Rather, the ALJ is persuaded that Employer was willing and able to accommodate Claimant's restrictions.

20. Dr. Patterson performed arthroscopic surgery on February 23, 2017. Intraoperative inspection showed grade 3 condylar injury on the medial femoral condyle, and grade 3 fissuring of the patella. Both areas were stabilized with the ArthroWand. The menisci and ligaments were intact. For unknown reasons, the operative report does not mention the loose body.

21. Claimant has continued to have significant problems with her knee after surgery.

22. Dr. Tashof Bernton performed an Independent Medical Examination (IME) at Respondents' request on March 20, 2017. Dr. Bernton opined Claimant's initial injury appears to be a cartilage loose body in the knee, possibly related to osteitis dissecans or degenerative arthritis. Dr. Bernton opined that both conditions are "of unknown etiology (idiopathic)." Dr. Bernton opined that the loose body was a "spontaneous"

occurrence, He further opined, “the precipitant for it is not known,” and the episode “could equally have occurred while walking on the level or even in a seated position or reclining.” Accordingly, Dr. Bernton opined that Claimant’s knee pathology was not causally related to her employment.

23. Dr. Bernton opined Claimant is not at MMI and requires further evaluation and treatment for her persistent knee symptomatology. Given his opinion that Claimant did not have a work-related injury, he opined further treatment should be pursued outside of the workers’ compensation claim.

24. Dr. Bernton testified at hearing consistent with his report. Dr. Bernton testified that the loose body seen on the MRI likely represents a piece of degenerated cartilage that broke away from the surface of the bone. Dr. Bernton testified the pop in Claimant’s knee followed by the immediate onset of pain and joint effusion indicates that the loose body became dislodged when claimant took the step she described on December 1, 2016. Specifically, he opined, “We know that the time that it occurred was when she was walking down the stairs. I think that’s reasonable from her symptoms.” He also stated, “There is no question she had sudden onset of pathology of the knee that resulted in problems.”

25. Dr. Bernton reiterated his opinion that Claimant’s injury was “spontaneous” and its cause is “unknown.” Dr. Bernton testified “the foreign body coming off can occur at rest, it can occur when walking . . . it can even occur while sleeping. It’s just something that happens. . . . It’s not precipitated by anything. It’s just a piece of the joint cartilage that falls off.”

26. The ALJ is persuaded by Dr. Bernton’s opinion that Claimant’s sudden onset of symptoms on December 1, 2016 was related to a piece of cartilage becoming dislodged as she descended the stairs. The ALJ is not persuaded by Dr. Bernton’s opinion that the precipitating cause of the loose body is unknown and unknowable.

27. The loose body was precipitated by the act of stepping down on a stair on December 1, 2016 while performing her work duties.

28. Claimant has proven by a preponderance of the evidence that she suffered a compensable injury to her right knee on December 1, 2016.

29. The St. Thomas More ER was authorized by virtue of the referral from Ms. Hammond on December 2, 2016. Dr. Pattison is authorized by referral from the ER.

30. The treatment Claimant has received from the ER and Dr. Patterson, including surgery, was reasonable, necessary, and causally related to Claimant’s compensable injury.

31. The ALJ is persuaded by Dr. Bernton’s opinion that Claimant requires additional evaluation and treatment related to her right knee.

32. Ms. Hammond’s testimony is credible and persuasive.

33. Respondents proved by a preponderance of the evidence that Claimant was responsible for the termination of her employment on December 8, 2016.

CONCLUSIONS OF LAW

A. Claimant's knee injury is compensable

To receive compensation or medical benefits, a claimant must prove she is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). The "course of employment" requirement is satisfied if the injury occurred within the time and place limits of the employment relationship and during an activity that had some connection with the employee's job-related functions. *Wild West Radio, Inc. v. Industrial Claim Appeals Office*, 905 P.2d 6 (Colo. App. 1995). An injury "arises out of" employment when it had its origin in an employee's work related functions and is sufficiently related to those functions to be considered part of the employment. *City of Brighton v. Rodriguez*, 318 P.3d 496 (Colo. 2014). There is no presumption that an injury which occurs at work "arises out of" the employment. *Finn v. Industrial Commission*, 437 P.2d 542 (Colo. 1968).

The claimant must prove that an injury proximately caused the condition for which benefits are sought. Section 8-41-301(1)(c); *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). For an injury to be compensable, there must be a "sufficient nexus" between the employment and the injury. *In re Question Submitted by the U.S. Court of Appeals*, 759 P.2d 17 (Colo. 1988). The claimant must prove entitlement to benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case are not interpreted liberally in favor of either claimants or respondents. Section 8-43-201.

The fact that a claimant suffers from a pre-existing condition does not disqualify a claim for compensation if work-related activities aggravate, accelerate, or combine with the pre-existing condition to produce disability or a need for medical treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). But if the injury is "precipitated by" a pre-existing condition that the claimant brings into the workplace, the injury is not compensable unless it was the result of a "special hazard." *Ramsdell v. Horn*, 781 P.2d 150 (Colo. App. 1989); *Gaskins v. Golden Automotive Group*, LLC, W.C. No. 4-374-591 (ICAO, August 6, 1999) (the injury was not compensable when a pre-existing condition because the claimant to stumble on concrete stairs because stairs were a ubiquitous condition).

A claimant is not required to show that their work activity is the sole cause of an injury, and an otherwise compensable work injury does not cease to arise out of employment merely because it is partially attributable to a pre-existing physical infirmity.

Rather, an injury which results from the concurrence of a pre-existing condition and a hazard of employment is compensable. Thus, even if the direct cause of an accident is the employee's pre-existing idiopathic disease or condition, the resulting disability is compensable if the conditions or circumstances of employment contributed to the accident or to the injuries sustained by the employee. *National Health Laboratories v. Industrial Claim Appeals Office*, 844 P.2d 1259 (Colo. App. 1982).

In this case, Claimant's knee injury clearly occurred "in the course of" her work. The dispositive question is whether the injury "arose out of" her employment.

Dr. Bernton argues the loose body could have become dislodged while Claimant was at any location performing any activity, or even at rest. The problem with that argument is the pathology did not develop at home or while Claimant was at rest. Rather, the injury was triggered by a specific step Claimant took while descending stairs in furtherance of her job duties. As such, the injury was "precipitated" by Claimant's work activity rather than the pre-existing condition. Claimant's knee was likely in a weakened state before the incident, which allowed it to become injured by the otherwise relatively innocuous activity of walking down the stairs. But an "employer must take the employee as it finds [her] so that the employer is responsible for any increased disability resulting to an employee from a pre-existing weakened condition." *Cowin & Co. v. Medina*, 860 P.2d 535, 538 (Colo. App.1992). The ALJ is persuaded that Claimant's pre-existing condition probably made her more susceptible to injury but the injury ultimately was caused by her work activity.

Respondents cite *Gutierrez v. Wal-Mart Stores*, W.C. No. 4-432-838 (ICAO, November 30, 2000) as support for their position that Claimant's knee injury did not arise out of her employment. But the ALJ finds *Gutierrez* to be distinguishable from Claimant's case. In *Gutierrez*, the claimant's pre-existing arthritis was symptomatic before the injury, and the pre-existing condition precipitated the injury. By contrast, Claimant's pre-existing degenerative arthritis was latent and asymptomatic before the incident at work on December 1, 2016, and became symptomatic as the direct result of stepping down a stair.

The ALJ finds Claimant's case more analogous to the situation in *Reinhard v. Pikes Peak Broadcasting Co*., W.C. No. 4-114-050 (ICAO, May 20, 1993). The claimant in *Reinhard* was walking down a flight of stairs to a room where his next job assignment was posted. As he turned the corner at the bottom of the stairs he felt a pop in his back. The injury was deemed compensable because it had its origin in the distinctly work-related activity of descending the stairs. The ICAO noted the mere fact that "the claimant's injury could have occurred from similar activities outside the scope of employment did not compel the ALJ to conclude that the claimant's injury was not compensable."

Since the ALJ has concluded that Claimant's injury was precipitated by her employment activities rather than by the pre-existing condition, the "special hazard" rules do not apply. Accordingly, it is immaterial whether the stairs were defective in any way or constituted a "ubiquitous condition."

B. Medical benefits

At the commencement of the hearing, Respondents' counsel indicated medical benefit issues would "fall into place" based on the determination of compensability. Respondents have raised no serious question regarding whether the treatment Claimant has received for her right knee was reasonable and necessary. The primary dispute is whether the treatment was proximately caused by a work-related injury. Having resolved the compensability question in Claimant's favor, it necessarily follows that the treatment she received for her right knee is reasonable and necessary.

C. Claimant was responsible for termination of her employment

A claimant is entitled to TTD benefits if the injury causes a disability, the disability causes the claimant to leave work, and the claimant misses more than three regular working days. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The claimant must establish a causal connection between a work-related injury and the subsequent wage loss to obtain TTD benefits. *Id*. The term disability connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). Impairment of earning capacity may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

Section 8-42-103(1)(g) provides that a claimant who might otherwise be considered temporarily disabled is not eligible for TTD benefits if he or she was "responsible for termination of employment." *Kerstiens v. All American Four Wheel Drive*, W.C. No. 4-865-825-04 (ICAO, August 1, 2013) ("the legislature intended that the termination from employment be a potential factor both in the threshold entitlement determination and in the termination of temporary total disability benefits once begun.").

The employer must prove by a preponderance of the evidence that a claimant was terminated for cause or was responsible for the separation from employment. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1132 (Colo. App. 2008).

To establish that a claimant was responsible for termination, the respondents must show the claimant performed a volitional act or otherwise exercised "some degree of control over the circumstances which led to the termination." *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 5 P.3d 1061, 1062 (Colo. App. 2002); *Padilla v. Digital Equipment Corp*., 902 P.2d 414 (Colo. App. 1995); *Velo v. Employment Solutions Personnel*, 988 P.2d 1139 (Colo. App. 1988). The mere fact that the employer discharged the claimant in accordance with its personnel rules does not automatically establish that the claimant acted volitionally or exercised control over the circumstances of the termination. *Gonzales v. Industrial Commission,* 740 P.2d 999 (Colo. App. 1987). The ALJ must consider the totality of the circumstances to determine whether the claimant was responsible for her termination. *Knepfler v. Kenton Manor*, W.C. No. 4-557-781 (March 17, 2004).

As found, Respondents proved by a preponderance of the evidence that Claimant was responsible for termination of her employment. The persuasive evidence shows that Claimant abandoned her job after she learned insurer had denied her claim. Claimant was upset because she assumed Ms. Hammond had sabotaged her claim. Ms. Hammond's credible and persuasive testimony shows her assumption was incorrect. Regardless, Claimant admitted she was aware of Employer's "no call, no show, no job" policy. The ALJ is not persuaded by Claimant's assertion that Employer was unwilling to accommodate her restrictions. Employer was willing to accommodate Claimant's restrictions and would have done so had Claimant not abandoned her job. Claimant failed to return to work of her own volition, and therefore was responsible for the termination of her employment within the meaning of § 8-42-103(1)(g). Accordingly, Claimant's request for TTD benefits commencing December 8, 2016 must be denied.

ORDER

It is therefore ordered that:

1. Claimant's claim for a right knee injury on December 1, 2016 is compensable.

2. Respondents shall pay for reasonable and necessary medical treatment to cure and relieve the effects of Claimant's right knee injury, including the treatment from St. Thomas More ER and Dr. Patterson.

3. Claimant's claim for TTD benefits commencing December 8, 2016 is denied and dismissed.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 23, 2017

Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

I. Whether Respondent's have shown, by clear and convincing evidence, that the DIME by Dr. Castrejon has been overcome; specifically the findings that Claimant is not at MMI for his admitted May 10, 2016 work injury, and that Claimant's need for surgery and ongoing treatment was causally related to this injury.

STIPULATION

The parties agreed that the issues of Temporary Total Disability and Temporary Partial Disability would be held in abeyance, pending the outcome of the above issues.

FINDINGS OF FACT

Based on the testimony and evidence presented at hearing, the undersigned ALJ enters the following Findings of Fact:

1. Claimant has worked as a detention deputy for the Pueblo County Sheriff's Office since January, 2015. Claimant sustained an admitted injury to his left wrist and hand on May 10, 2016 while in the course and scope of his employment as a deputy, while bringing an unruly inmate into compliance. During this struggle, Claimant fell onto his left hand, which was in a fist upon impact with the floor. His fist "rolled in", and his wrist absorbed much of the impact.

2. Claimant first received treatment for his injury on May 13, 2016 when he presented to Centura Centers for Occupational Medicine ("CCOM"). (Clmt. Ex. 5, pp. 16-22). On the intake form, Claimant explained that he sustained an injury occurred during a "use of force" against an inmate resulting in symptoms of wrist and hand pain, loss of strength, etc. He indicated that he was presently experiencing pain at a level 8 out of 10 at least 90% of the time. Physical examination of Claimant by Theresa Kuhn, N.P., documented limited range of motion of the left wrist, limited grip strength of the left wrist, and tenderness to palpation along the left distal ulna and radius, third fourth and fifth metacarpal bones of the left hand, and the left small finger. Nurse Kuhn further documented that although Claimant was able to finish his work on May 10, he was assigned different duties at work because of his inability to perform the duties of his job due to the wrist pain.

3. An x-ray of Claimant's wrist was taken on May 13, 2017. The x-ray revealed these findings:

> There is an old unhealed fracture of the scaphoid. There is partial collapse of the scaphoid with associated cystic changes. Mild fragmentation. There is mild degenerative change of the scapholunate articulation. Partial collapse of the proximal carpal row. These findings all appear chronic in nature. *A more acute **reinjury** is not excluded.* (emphasis added)

4. Nurse Kuhn stated in her report that "the patient reports that he is a boxer and has had *chronic* left wrist discomfort." (Clmt. Ex. 5, p. 22). Nevertheless, she indicated, "I believe that [Claimant] did sprain the wrist and he has an acute exacerbation of a pre-existing condition in regard to the wrist pain."

5. Claimant credibly testified at hearing that Nurse Kuhn's documentation of "*chronic* left wrist discomfort" was misleading and taken out of context. Claimant testified that he explained to Nurse Kuhn that he grew up being physically active and was involved in contact sports such as wrestling, boxing, and football. He was explaining his current pain to her in the context of his previous injuries and knowing the difference between the usual pain associated with those activities versus the kind of pain that is constant and does not go away. He also explained that he has had various injuries to his wrists in the past with those sports, along with many other body parts, but nothing he would have verbalized to the nurse practitioner would be called a *"chronic"* problem.

6. Claimant specifically, and credibly, denied having any daily wrist pain in the days and weeks leading up to May 10, 2016.

7. Nurse Kuhn provided Claimant with restrictions of no use of the left arm or hand after Claimant's initial visit with her. (Clmt. Ex. 5, p. 22). Claimant continued to have severe left wrist pain at his May 20, 2016 appointment with Nurse Kuhn. She referred him to an orthopedic surgeon, Dr. Karl Larsen, for further evaluation.

8. Claimant was first examined by Dr. Larsen on May 27, 2016. (Clmt. Ex. 6, pp. 69-71). Dr. Larsen stated in his report that the scaphoid non-union had clearly predated the work injury; however, Dr. Larsen did not comment at this time whether the work incident caused the dormant scaphoid non-union to become symptomatic. Dr. Larsen did document on his July 11, 2016 examination that Claimant "appears to have aggravated his scaphoid nonunion advanced collapse arthritis." He advised Claimant that, if he felt he did not have any significant problems with his wrist prior to the work injury, he should submit this to the workers' compensation insurance carrier to see if they would cover it.

9. Claimant followed up with CCOM on August 4, 2016, this time being examined by Dr. George Schwender. (Clmt. Ex. 5, pp. 59-60). He noted that Claimant underwent treatment, including occupational therapy, which only caused his symptoms to worsen. Claimant remained unable to perform his job duties and was formally restricted to no lifting or carrying more than 5 pounds with the left hand. Claimant was instructed to follow up with Dr. Larsen.

10. Dr. Larsen examined Claimant again on August 10, 2016. It was his opinion that all conservative options had been exhausted and it was time for surgery to correct the problem. (Clmt. Ex. 6, p. 76). Dr. Larsen sought prior authorization for this surgery from Respondents on August 16, 2016.

11. Respondents sent medical records to Dr. Jonathan Sollender to perform a records review regarding Claimant's injury and his need for surgery. (Clmt. Ex. 7, pp. 81-83). Dr. Sollender ultimately opined in his August 25, 2016 report, that Claimant's need for surgery was not work related. It was his opinion, based on Nurse Kuhn's note regarding "*chronic* left wrist discomfort," that Claimant had ongoing pain from his underlying condition that was present prior to the May 10, 2016 incident at work and that the surgery would not be related to the work incident.

12. Claimant returned to Dr. Schwender on September 1, 2016. Claimant informed Dr. Schwender that the surgery had been denied by Respondents and that he intended to pursue the surgery under his own insurance. (Clmt. Ex. 5, p. 61). Based on this information, Dr. Schwender then placed Claimant at MMI with no restrictions and no permanent impairment rating.

13. On September 7, 2016, Respondents filed a Final Admission of Liability, based upon Nurse Kuhn and Dr. Olson's opinion of September 1, 2016 that Claimant was at MMI, with no permanent impairment.

14. Claimant underwent surgery with Dr. Larsen on September 13, 2016. (Clmt. Ex. 8). Dr. Larsen performed excision of the terminal branch of the anterior and posterior interosseous nerves of the left wrist, a left radial styloid excision, and a left distal pole scaphoid excision. Claimant followed up with Dr. Larsen on September 26, 2016, and his condition was progressing well. (Clmt. Ex. 6, p. 78).

15. Claimant challenged the MMI determination and sought a Division Independent Medical Examination. This was performed by Dr. Miguel Castrejon on November 29, 2016. (Clmt. Ex. 9). Dr. Castrejon took a detailed history from Claimant, including discussion regarding Claimant's ability to perform his job before and after May 10, 2016. He documented that Claimant had a physically demanding job that required restraining inmates, physical training including obstacle courses, and even the lifting of inmates that could exceed 300 pounds. Dr. Castrejon further documented the fact that Claimant passed his physical examination prior to joining the Pueblo Sheriff's Office, which included physically demanding training exercises such as handcuffing, restraining, and take downs. Moreover, Claimant worked physically demanding jobs

prior to his employment with the Employer, including working on an oil rig and as a sand blaster for Vestas. Claimant reported to Dr. Castrejon that he had been able to perform all of these jobs with no limitations and did not require any treatment for his wrist that he could recall after a 2001 motorcycle accident that was treated with nothing more than a brace. After the work injury, Claimant could not even perform his physical therapy without increased pain, let alone perform the duties of his job that he was able to prior to May 10, 2016.

16. Dr. Castrejon's diagnosis of Claimant's condition was "left wrist contusion/sprain resulting in permanent aggravation of underlying previously asymptomatic degenerative condition." (Clmt. Ex. 9, p. 93). Dr. Castrejon provided a detailed causation analysis. Dr. Castrejon acknowledged that Claimant's scaphoid fracture likely occurred during the motorcycle accident in 2001. Despite having the fracture which pre-existed his employment with the Pueblo Sheriff, Dr. Castrejon reasoned that Claimant had been employed with the Pueblo Sheriff for approximately 16 months prior to the occurrence of the injury. Dr. Castrejon correctly pointed out, "At no time during the course of his pre-employment and post-employment activities is there documentation of left wrist/hand pain nor had he required medical attention or experienced a loss of worktime."

17. Dr. Castrejon noted Claimant's lack of functional loss of the wrist and its lack of an effect on his employment prior to May 10, 2016 in coming to his final conclusion that, "it is quite clear that the event of May 10, 2016 has resulted in a permanent aggravation of the claimant's pre-existing wrist condition. This condition has not returned to pre-injury level and has resulted in the need for surgical treatment."

18. Dr. Castrejon addressed Dr. Larsen's original May 27, 2016 opinion in his DIME report. (Clmt. Ex. 9, p. 94). Dr. Castrejon pointed out that Dr. Larsen correctly stated that the scaphoid fracture was pre-existing; however, Dr. Larsen initially failed to mention whether the work event aggravated the underlying condition. Dr. Castrejon then noted that Dr. Larsen did subsequently suggest, on July 11, 2016, that the May 10, 2016 event was indeed an aggravating factor.

19. Dr. Castrejon was clear in his conclusions and rationale. Dr. Castrejon correctly stated in his causation analysis that a condition does not need to be caused by work. Rather, "If the job performed by the claimant aggravates a pre-existing non work related condition and renders the condition more symptomatic and, in this case, more painful to the point where it interferes with the employee's work, the employee is entitled to medical care under the Colorado Workers' Compensation Act." (Clmt. Ex. 9, p. 95).

20. Dr. Sollender issued a subsequent report on February 14, 2017 after his review of Dr. Castrejon's DIME report. (Clmt. Ex. 7, pp. 84-86). Dr. Sollender argued that Dr. Castrejon failed to address Dr. Kuhn's note of prior "*chronic* wrist discomfort" in coming to his analysis. However, regardless of whether Claimant had periodic "discomfort" prior to the May 10, 2016 work incident, Dr. Castrejon was clearly of the

opinion that the work incident “render[ed] the condition more symptomatic.” (Clmt. Ex. 9, p. 95).

21. Dr. Sollender further argued that Dr. Castrejon never rationalized Dr. Larsen’s initial opinion that the condition was *chronic*. (Clmt. Ex. 7, p. 85). However, a reading of Dr. Castrejon’s causation analysis shows that Dr. Castrejon did in fact directly address this. (Clmt. Ex. 9, p. 94). Several times in his IME report, Dr. Sollender references, and emphasizes, the May 13, 2016 note from "Dr. (sic) Kuhn" (referencing *"chronic"*) in determining that Claimant’s condition was pre-existing and unrelated to his work activities. (Clmt. Ex. 7, p. 86). Dr. Sollender did not provide any commentary regarding Claimant’s significant increase in reported wrist symptoms after May 10, 2016 or the causation for increase in said symptoms.

22. Additional medical records pre-dating Claimant’s May 10, 2016 injury were obtained subsequent to the DIME, and subsequent to Dr. Sollender’s February 2017 records review. These are the medical records from Parkview Medical Center from 2010, and the DIME report from Dr. Timothy Sandell for Claimant’s unrelated May 24, 2014 left shoulder injury. (Resp. Exs. H, I).

23. The Parkview Medical Records document that Claimant went to the emergency room at Parkview on April 5, 2010. The stated complaints upon arrival were “HEADACHE, FACIAL PAIN, RT ANKLE PAIN.” (Resp. Ex. I, p. 111). The “primary impression” as indicated by the emergency room physician was a concussion. During Claimant’s course of treatment, an x-ray of his left wrist was performed. It documented the existence of the scaphoid fracture in the wrist. The fracture was “of unknown age.” It was suggested that an MRI “may be useful.”

24. Claimant testified at hearing that he did not remember the April 5, 2010 emergency room visit to Parkview. After reviewing some of the medical records at hearing, Claimant “briefly recall[ed]” having been seen at Parkview Hospital that day. He explained that he was at work for a previous employer when an angry customer came into his store and assaulted him, resulting in a fight between him and the customer. He testified that he went to the emergency room to get checked out because he had a lot of cuts and abrasions from the fight. When asked about whether his left wrist was injured, Claimant responded, “I don’t honestly specifically remember.” He testified that he had other body parts in considerable pain, such as his face that had a large lump on it from the fight. Claimant’s testimony is consistent with the records from Parkview that document his presenting complaints to be a headache, facial pain, and ankle pain, along with the primary diagnosis of a concussion.

25. Claimant testified that he did not seek additional treatment for his wrist after April 5, 2010 because he “didn’t have any real pain.” Claimant’s testimony is consistent with the lack of treatment notes for the left wrist between April 5, 2010 and May 10, 2016.

26. The DIME report from Dr. Sandell is dated September 23, 2015. (Resp. Ex. H, pp. 92-98). Claimant's primarily complaint at the time of this examination was his left shoulder pain. During the physical examination, it was noted that there was "some weakness" related to pain when he was checking supination, pronation, flexion, and extension of Claimant's left wrist with no focal muscle atrophy noted. There is no further documentation of Claimant's left wrist condition and it was not mentioned in Dr. Sandell's list of diagnoses.

27. Claimant testified at hearing that he did not specifically recall the DIME with Dr. Sandell from the previous claim. Claimant was asked about this record documenting "some weakness related to pain" on physical examination with provocative maneuvers of the wrist. As Claimant did not remember the examination itself, he similarly did not recall the left wrist examination. However, Claimant did testify that if his wrist pain at the time of the DIME with Dr. Sandell was comparable to his wrist pain after May 10, 2015, he definitely would have remembered the examination.

28. Dr. Sollender testified at hearing on behalf of Respondents. It was his opinion that Claimant's May 10, 2016 injury at work did not cause or accelerate Claimant's need for surgery on the wrist. Dr. Sollender supported his opinion by stating, "based on looking at the X-ray, it was clear to me that this was a chronic ongoing condition."

29. Dr. Sollender placed significant weight on Nurse Kuhn's note of "*chronic* wrist discomfort" and the newly reviewed DIME report of Dr. Sandell documenting "some weakness" in his testimony that was offered at hearing. Dr. Sollender was of the opinion that Dr. Castrejon erred in his opinion because Dr. Castrejon did not have Dr. Sandell's 2015 report or the Parkview records from 2010. Dr. Sollender clarified his opinion by pointing out that Claimant denied wrist symptoms after the motorcycle accident and up until the May 10, 2016 incident, and that the Parkview and Dr. Sandell records contradict Claimant's statements.

30. Dr. Sollender was asked about the significance of Claimant being able to continue performing his full duties at work prior to May 10, 2016 and if that impacted his analysis. Dr. Sollender stated that most people probably work with some degree of an ache or pain that they are not talking about and that Claimant was most likely just working through pain. The ALJ finds this analysis to be unpersuasive, in that it minimizes the significant pain Claimant has experienced since the moment his injury occurred.

31. Claimant testified that he began working for the Employer on January 5, 2015. Upon hire, Claimant was required to take an extensive physical examination that included, but not limited to, lifting a crate of weights above his head, pushing a weighted sled, range of motions tests on both of his wrists, and a series of push-ups. Claimant passed the pre-employment physical and no concerns about his physical were brought to his attention by the Employer. Claimant denied any significant wrist pain at that time. Claimant continued to work with the Employer from his date of hire in January of 2015

through the work injury on May 10, 2016 and denied any other injuries or altercations outside of work during that time period.

32. Claimant explained his job requires him to deal with violent offenders on a frequent basis and routinely requires the use of extreme physical force to accomplish the fundamental aspects of his employment. Claimant explained that he recalls at least 30 separate altercations while performing his job that required either physical restraint of grown men or actually engaging them in physical combat. Claimant stated that optimal conditions allow for him to simply take the violent inmate to the ground, restrain then, and handcuff them. Other events have involved Claimant being punched, kicked, thrown down, having his arm yanked on, etc. Claimant was never restricted from performing this physically demanding job due to his left wrist prior to May 10, 2016. After Claimant was first examined for his injury, he was given severely limiting restrictions of no lifting whatsoever with the left arm. Those restrictions were eventually changed to no lifting of more than five pounds. The ALJ finds Claimant to be sincere and credible in his descriptions of events, if an imperfect historian.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and

draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968). The ALJ finds Claimant to be sincere and credible.

Overcoming the DIME

D. A DIME physician's findings of causation, MMI and impairment are binding on the parties unless overcome by "clear and convincing evidence." Section 8-42-107(8)(b)(III), C.R.S.; *Qual-Med v. Industrial Claim Appears Office*, 961 P.2d 590 (Colo. App. 1998); *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinion is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995) In other words, to overcome a DIME physician's opinion regarding permanency or the cause of a particular component of a claimant's medical condition, the party challenging the DIME must demonstrate that the physicians determinations in these regards are highly probably incorrect and this evidence must be "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo. App. 2002). *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAO, Oct. 4, 2001).

E. The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appears Office, supra.* A mere difference of medical opinions is insufficient. *Medina-Weber v. Denver Public Schools* W.C. No. 4-782-625 (ICAO, May 24, 2010).

F. The ALJ concludes that the evidence presented demonstrates a mere difference of opinion between physicians and does not amount to evidence that leads the ALJ to conclude Dr. Castrejon's opinion was highly probably incorrect. The evidence presented at hearing by Respondents does not amount to evidence that unmistakably demonstrates that the incident on May 10, 2016 did not aggravate Claimant's underlying condition. Specifically, the ALJ finds that far too much emphasis was placed by the IME Doctor Sollender on the notes of Nurse Practitioner Kuhn, who characterized Claimant's left wrist complaints as being "chronic". The term "chronic" is a medical term of art, and one with which Claimant was not familiar, while he was - in physical distress - providing a brief medical history to Nurse Practitioner Kuhn. It is

doubtful he used the term "chronic" at all; rather, Nurse Kuhn was likely 'filling in blanks' which she felt were appropriate at that moment. The term "chronic" then became embedded in Claimant's medical records.

G. Claimant does not dispute that old scaphoid fracture and nonunion revealed on the May 13, 2016 x-ray pre-existed Claimant's May 10, 2016 work injury. This fracture likely occurred when Claimant was in a motorcycle accident many years prior. However, there is little evidence to suggest Claimant's left wrist condition was anything more than occasionally, and less severely, symptomatic prior to May 10, 2016. The Parkview records from 2010 document that Claimant presented to the emergency room after an assault with a primary diagnosis of a concussion. An x-ray of his left wrist was performed and it did reveal the fracture to be present at that time. Although the fracture was present, Claimant's complaints upon admission were a headache, facial pain, and right ankle pain. If ever the occasion existed to complain of severe pain to his left wrist, it was while he was being treated for this 2010 work injury. Instead, this left wrist fracture was discovered while Claimant was being treated for his multiple presenting complaints. Claimant testified credibly that he went to the emergency room in 2010 primarily for the wounds to his face and that he did not follow up for any treatment for the left wrist because he did not recall having any significant symptoms of the left wrist after this event.

H. The other medical record prior to May 10, 2016 that documents Claimant's prior left wrist condition is Dr. Sandell's September 23, 2015 DIME report. The report provides little information regarding the state of Claimant's left wrist at this time, aside from the fact that there was "some weakness" in the left wrist at that time during physical examination of the wrist. The primary complaint was an injured scapula, also on the left side. It is unsurprising that some pain going down this same arm would be reported. The physical examination included checking Claimant's left wrist supination, pronation, flexion, and extension.

I. Although Dr. Sollender relies on this report in support of his opinions, the ALJ finds that this report further support's the opinions of Dr. Castrejon. This report suggests that, as of September 23, 2015, Claimant's left wrist was, at most, mildly symptomatic and was not interfering with Claimant's functional abilities. As Claimant testified, if his left wrist condition as it existed after May 10, 2016 was present at the time of the September 23, 2015 examination, Dr. Sandell's report would certainly have documented more than "some weakness" of the left wrist upon physical examination.

J. Respondents' expert testified at the hearing that Claimant likely had some degree of symptoms to his left wrist prior to May 10, 2016, and because he was not asymptomatic, the surgery is not causally related to the work injury. The ALJ agrees that given Claimant's history and the findings on the x-ray, he may have had some varying degree of left wrist pain and varying range of motion loss prior to May 10, 2016. However, that does not address the central issue of whether the incident at work significantly *aggravated or accelerated* Claimant's need for treatment.

K. Nor does it address the fact that an individual's functional abilities must be taken into account when assessing whether a condition has been permanently aggravated. As Dr. Castrejon explained in his report, Claimant had no discernible loss of function or limitations of the left wrist prior to May 10, 2016 as evidenced by Claimant's ability to perform the full duties of his employment. Although Claimant's condition could have been treated surgically prior to May 10, 2016, there is no indication his condition warranted the invasive surgery due to his lack of symptoms and nearly full function. It was the work injury of May 10, 2016 that turned Claimant's relatively asymptomatic condition into a condition that had to be treated surgically.

L. "[I]f a disability were 95% attributable to a pre-existing, but stable condition, and 5% attributable to an occupational injury, the resulting disability is still compensable if the injury has caused the dormant condition to become disabling." *Seifried v. Industrial Com'n of State of Colo.*, 736 P.2d 1262, 1263 (Colo. App. 1986). However, an injury must be "significant" in that it must bear a direct causal relationship between the precipitating event and the resulting disability, *Colorado Fuel and Iron Corp. v. Industrial Commission*, 380 P 2d 28 (Colo. 1963). In this case, the injury from the fall onto his wrist that Claimant suffered was *significant.*

M. The ALJ finds that Claimant's old scaphoid fracture was a pre-existing, but otherwise stable, and largely asymptomatic, condition. This condition did not become disabling until May 10, 2016, and was a direct result of the significant, compensable work event. It is for this reason the ALJ concludes that Respondents have failed to meet their burden by clear and convincing evidence to establish Dr. Castrejon erred in his opinion that Claimant's need for surgery was causally related to the admitted injury.

ORDER

It is therefore Ordered that:

1. Respondents have not shown, by clear and convincing evidence, that the DIME of Dr. Castrejon has been overcome. Claimant is not yet at Maximum Medical Improvement. His left wrist injuries are related to the work injury of May 10, 2016.

2. Respondents are liable for all expenses related to the September 13, 2016 surgery performed by Dr. Larson, and any aftercare needed.

3. Respondents are liable for all reasonable, necessary, and related treatment to being Claimant to Maximum Medical Improvement.

4. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Did Respondents overcome the Division IME regarding the date of MMI and Impairment?
- Whether Dr. Peter Reusswig and Dr. Anton Zaryanov are authorized medical providers.
- Is Claimant is entitled to a change of physician, specifically to Dr. Peter Reusswig and Dr. Anton Zaryanov, if they are not authorized medical providers?
- Whether Claimant is entitled to temporary total disability benefits from May 26, 2016 to August 1, 2016

STIPULATIONS

1. The parties agreed to reserve the issue of maintenance medical treatment.

2. Claimant was not disputing that he reached MMI on August 1, 2016.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant started working for the employer on January 11, 2013 as a fabricator/ pipefitter.

2. Claimant's job required him to lift more than 20 pounds. It required him to lift and carry 51-75 pounds occasionally and 31 to 45 pounds frequently. It also required flexion and extension of his neck.

3. Prior to March 18, 2015, Claimant did not have any pain or symptoms regarding his neck.

4. On March 18, 2015, Claimant was attempting to tighten a chain vice onto a portable rotator. The rotator weighs approximately 800 pounds. While Claimant was jerking back on the bar to tighten the chain vice, the portable rotator moved or slipped and he felt a pop and a burning pain in his neck.

5. Although Respondent's denied liability for the claim, they provided medical treatment to Claimant up through July 23, 2015.

6. The matter proceeded to hearing before Administrative Law Judge Broniak on February 22, 2016. Judge Broniak issued an Order dated May 13, 2016 and found the claim compensable. Judge Broniak concluded that Claimant aggravated his pre-existing cervical spine condition while in the course and scope of his employment. She did not, however, determine any other issues.

7. Claimant testified at the first hearing that at the time of the injury, he believed his neck symptoms would go away and felt he could "tough it out." He also testified that he finished his shift the day he was injured but his neck continued to hurt through the remainder of his shift and through the night. At this time, Claimant did not have any radicular symptoms.

8. On March 19, 2015, Claimant still felt neck pain. Once he arrived at work, he reported the injury to his foreman. The employer asked him whether he wanted to see a doctor but he declined. Claimant thought that his neck would get better and wanted to continue working.

9. On March 19, 2015, Claimant signed a Designated Medical Provider form and selected "Midtown Occupational Health Services."

10. On March 20, 2015, (Friday) Claimant took the day off from work hoping he would feel better by Monday. He did not feel better on Monday and the Employer allowed him to work light duty. Claimant continued to decline medical treatment thinking if he took it easy for a couple of weeks, his symptoms would go away.

11. After two weeks of light duty, Claimant attempted to return to regular duty on April 8, 2015. Claimant was unable to return to full duty because of his neck pain so he requested medical care.

12. On April 8, 2015, Claimant went to Midtown Occupational Health Services where he was evaluated by Dr. Lawrence Cedillo. According to Dr. Cedillo's report, Claimant denied any prior neck injuries and stated that he has "neck problems secondary to trying to secure a chain vice onto non-fixed rotator weighing approximately 700-800 pounds, using a [sic] manual tools, and in the process, the rotator moved, and he experienced pain in regard to the neck at that time." Dr. Cedillo documented some range of motion limitations in Claimant's neck. Dr. Cedillo opined that Claimant likely had myofascial discomfort, mechanical in

nature, and "more likely than not related to date of injury occurring above as described through his present employer and thus work related."

13. Dr. Cedillo completed a form indicating Claimant was released to work without restrictions. However, as found by ALJ Broniak, Dr. Cedillo testified at the February 22, 2016 hearing that the Employer has a light duty work program and Dr. Cedillo trusts the Employer will provide light duty when necessary so he does not issue formal restrictions in any claim involving this Employer. Therefore, although Dr. Cedillo put in writing that Claimant did not have any work restrictions, Claimant did have work restrictions due to his injury and the restrictions were conveyed to his employer.

14. On April 13, 2015, Claimant returned to Dr. Cedillo complaining of increasing neck pain. Although Claimant did not have any radicular symptoms, Dr. Cedillo wanted to rule out a discogenic etiology for Claimant's pain. Therefore, Dr. Cedillo ordered an MRI.

15. On April 15, 2015, Claimant underwent an MRI. The MRI revealed mild spondylostenosis most notable at the C3-4 level, due to a leftward disc osteophyte complex and moderate left foraminal stenosis and rightward stenosis, most notable also at the C3-4 level. The MRI also revealed a C5-6 moderate left disc-osteophyte complex and foraminal stenosis.

16. On April 22, 2015, Claimant returned to Dr. Cedillo. He stated in his report that the MRI showed a right stenosis at the C3-4 and mild spondylostenosis at the C3-4 due to a left disk osteophyte complex and moderate left foraminal stenosis secondary to the same. Dr. Cedillo did not reference the C5-6 moderate left disc-osteophyte complex and foraminal stenosis as described in the MRI. Dr. Cedillo's assessment remained mainly the same, although he added Claimant's MRI was positive for preexisting degenerative changes. At this time, Claimant did not have any radicular symptoms into his upper extremities.

17. On May 6, 2015, Claimant returned to Dr. Cedillo. Claimant stated that the massage therapy caused numbness and tingling down his left upper extremity and into his forearm. Due to his upper extremity symptoms, Dr. Cedillo referred Claimant to Dr. Lesnak for an EMG/electrodiagnostic study.

18. On May 20, 2015, Claimant was evaluated by Dr. Lesnak. Claimant's complaints included constant neck pain with intermittent/frequent pain and tingling sensations throughout his left arm and hand. Claimant also complained of occasional and mild symptoms involving his right upper extremity. Dr. Lesnak performed an electrodiagnostic study of Claimant's left upper extremity. The study was normal. Dr. Lesnak stated that although the electrodiagnostic study showed no evidence of any type of neurologic abnormalities, Claimant had evidence of at least a left-sided cervical radiculitis, primarily involving the C6 or possibly C7 nerve roots. Therefore, Dr. Lesnak prescribed Claimant a Medrol Dosepak. Dr. Lesnak also prescribed Percocet for Claimant. Claimant did not,

however, tell Dr. Lesnak that he was already taking Percocet for a preexisting low back condition.

19. On May 22, 2015, Claimant saw Dr. Mark Flannigan, his personal physician, for his chronic preexisting low back pain. Claimant was prescribed Percocet for his back pain. The medical report dated May 22, 2015 also notes Claimant was prescribed Percocet by Dr. Flannigan on April 23, 2015.

20. On June 4, 2015, Claimant returned to Dr. Lesnak, complaining of progressing and worsening pain. Claimant's pain complaints included progressive left greater than right neck pain and persistent tingling sensations throughout his left upper extremity. Claimant also started to increase his pain medication usage. Although Claimant was instructed to take the Percocet 1-2 tablets at bedtime, Claimant was taking 2 tablets, twice daily. In addition to Dr. Lesnak prescribing Claimant Percocet, Dr. Flannigan was also prescribing Claimant Percocet. Dr. Lesnak was concerned about psychosocial issues due to Claimant's progressive symptoms despite treatment and the minimal findings seen on Claimant's exam and recent diagnostic testing. He was also concerned about Claimant taking more Percocet than what was prescribed.

21. On June 5, 2015, Claimant underwent a drug screen. The drug screen was negative for all substances, including opiates.

22. On June 18, 2015 surveillance video of Claimant shows Claimant leaving work. Claimant does not appear to be in any apparent distress. Claimant is moving fluidly and without any apparent problems with his neck. Claimant is also seen backing his truck out of a parking space and freely and fluidly moving his neck.

23. On June 18, 2015, Claimant returned to Dr. Cedillo. Claimant advised Dr. Cedillo that he has persistent discomfort on a constant basis and rated his pain at about a 4 to 9 out of 10.

24. On June 27, 2015, there is surveillance video of Claimant. The surveillance shows Claimant on a cell phone moving freely and fluidly and not in any apparent distress.

25. On June 30, 2015, Claimant was evaluated by Dr. Gentile for osteopathic manipulation and treatment. Claimant complained of pain with any movement of his head, left to right. This is inconsistent with the surveillance video obtained on June 18, 2015 and June 27, 2015. At this appointment, Claimant indicated that he recently had a firework explode in his right hand. Claimant was casted from his right hand to his elbow. The firework explosion apparently fractured Claimant's right wrist.

26. On July 9, 2015, Claimant returned to Dr. Cedilo. At this time, Claimant had a pinching sensation in his neck with twisting and turning. Claimant denied any pain, paresthesias, numbness, or tingling down the left upper extremity.

27. On July 23, 2015, Claimant returned to Dr. Cedillo. He placed Claimant at MMI without impairment and released Claimant to full duty without any restrictions. Dr. Cedillo also stated the following in his report:

> ASSESSMENT: Persistent complaint of cervical, upper trapezial discomfort with occasional numbness in left upper extremity. Previous plain film x-ray of 04/08/2015 negative and normal for acute bony abnormalities. MRI on 04/15/2015 positive for preexisting, no-work-related degenerative changes. EMG and nerve conduction study of left upper extremity on 05/20/15 negative and normal. Patient feels worse since last visit and since date of injury. All appears to be myofascial in nature, with lack of objective correlation to his subjective complaints as pertains to the injury of 03/19/2015. Thus, in my opinion he is at MMI.

28. Dr. Cedillo went on to state in his July 23, 2015 report that it was his opinion that Claimant's current subjective complaints were out of proportion to the objective findings and Claimant's current complaints were not work related. Therefore, Dr. Cedillo directed Claimant to follow up outside the workers' compensation system for further care as deemed necessary.

29. Dr. Cedillo testified at the February 22, 2016 hearing. Dr. Cedillo testified that on July 23, 2015, he determined Claimant did not suffer a work related injury. Therefore, on July 23, 2015 he placed Claimant at MMI, returned Claimant to full duty, and did not provide an impairment rating. Dr. Cedillo also testified that he recommended Claimant follow up outside the workers' compensation system with his private physician for further care as deemed necessary since he did not think the claim was work related.

30. On August 17, 2015, Claimant returned to his personal physician, Dr. Mark Flannigan, as directed by Dr. Cedillo. Claimant complained of back and neck pain. Dr. Flannigan suggested Claimant should see a spine specialist. He also suggested Claimant should see a chronic pain specialist if the spine specialist could not offer him any relief. Therefore, Dr. Flannigan referred Claimant for an orthopedic consultation for his neck with the Center for Spinal Disorders.

31. On August 26, 2015, Claimant was evaluated by Dr. Zaryanov, a spinal surgeon, at the Center for Spinal Disorders. His assessment was neck pain, cervical spondylosis with left upper extremity radiculopathy, and cervical degenerative disc disease. Dr. Zaryanov referred Claimant to Dr. Peter Reusswig, at Colorado Pain Management for treatment, including injections.

32. On October 1, 2015, Claimant was evaluated by Dr. Reusswig. Dr. Reusswig indicated Claimant was working full duty, without restrictions, as of 2.5 weeks ago, but was not doing his job well. Dr. Reusswig noted "some intermittent numbness in Claimant's left upper extremity in a C6,7 dermatome pattern" and recommended an epidural steroid injection.

33. On October 16, 2015, Dr. Reusswig performed an epidural steroid injection at the C7-T1 level with spread up to C5. Claimant's pain went from an 8 to a 5. Dr. Reusswig renewed Claimant's prescription for Percocet.

34. On October 19, 2015, Claimant was released to full duty, without restrictions, by Dr. Reuesswig's physician's assistant, Amanda Condon.

35. On November 2, 2015, Claimant returned to Dr. Zaryanov. Claimant continued to fail non-operative treatment. Dr. Zaryanov recommended repeat EMG of the left upper extremity due to Claimant's intermittent sensory changes and a repeat MRI.

36. On November 5, 2015, Claimant returned to Dr. Reusswig. Claimant stated he had no more pain in his left arm after the steroid injection. But, he still had significant left neck and shoulder pain which was aggravated by work as a pipefitter when Claimant wore a 15 pound headgear with sustained left head tilt and slight flexion.

37. On November 13, 2015, Dr. Reusswig performed left sided facet injections at the C4-5, 5-6, and 6-7 levels. These injections apparently reduced Claimant's pain down to a 5/10, roughly 40%. The notes indicate that although Claimant was prescribed 2 oxycodone per day, Claimant had taken up to 6. Claimant was advised and warned that using too much medication could lead to respiratory depression and death.

38. On November 13, 2015, Claimant underwent a repeat MRI of his cervical spine. The MRI demonstrated, among other things, a small left paracentral disc protrusion and endplate osteophyte at C5-6.

39. On November 17, 2015, Claimant was evaluated by Dr. Reusswig. He stated the MRI showed C3-4, C5-6 and possibly C6-7 disc herniations. He also stated Claimant increased his oxycodone on his own and against doctor's orders by going from 45mg to 120mg in a matter of two weeks. Dr. Reusswig did note that Claimant was continuing to work full duty.

40. Although Dr. Reuswigg stated the MRI showed possible C3-4, C5-6 and possibly C6-7 disc herniations, Dr. Rauzino, who performed an IME on behalf of Respondents disagreed.

41. On December 1, 2015, Claimant underwent repeat EMG and electrodiagnostic studies of his left upper extremity which were performed by Dr. Leimbach. This study showed findings most consistent with a mild C6 radiculopathy.

42. On December 8, 2015, Claimant was evaluated by Dr. Reusswig and he recommended additional cervical transforaminal injections at the C5-6 level.

43. On December 16, 2015, Claimant was evaluated by Dr. Zaryanov. He indicated Claimant received some relief from the injections. However, Dr. Zaryanov

indicated that Claimant may be a candidate for a C5-6 decompression followed by a total disc replacement versus a fusion.

44. On December 16, 2015 Dr. Cebrian performed an IME and issued a report dated January 14, 2016. Dr. Cebrian diagnosed Claimant as suffering from chronic pre-existing lumbar spine pain and chronic opioid dependence which was not claim related. He also opined that Claimant's neck condition and pain complaints were not causally related to Claimant's job activities.

45. On January 4, 2016, Claimant underwent injections by Dr. Reusswig at the C5-6 level. Claimant returned to Dr. Reusswig on January 6, 2016 and indicated the injections provided about a 50% reduction in pain. Claimant also stated that work continued to aggravate his neck pain. Claimant was instructed to follow up with Dr. Zaryanov.

46. On February 2, 2016, Claimant was evaluated by Dr. Zaryanov. He stated that Claimant continued to be miserable and was taking high doses of narcotics that were irritating his stomach. Dr. Zaryanov indicated Claimant has failed multiple non-operative modalities including multiple injections, physical therapy, and medications. He also indicated Claimant was unable to work. Therefore, Dr. Zaryanov recommended surgery. Although he recommended surgery, Dr. Zaryanov indicated that the surgery is not a good answer for Claimant's axial neck pain.

47. On February 4, 2016, Claimant returned to Dr. Reusswig. He indicated that the injections did not have any long term results. Claimant said his pain was back to baseline.

48. On March 3, 2016, Claimant returned to Dr. Reusswig's office and was evaluated by Joseph Shankland, P.A. Claimant was working and indicated that his neck pain continued to get worse.

49. During March of 2016, Claimant was laid off from his job.

50. On May 26, 2016, Claimant was provided work restrictions via Dr. Reuswigg's office. There restrictions were: limit lifting to 20 pounds, no flexion or extension of neck, (looking down or up) or constant lateral rotation (looking side to side), no pushing or pulling. The work restrictions issued on May 26, 2016 prevented Claimant from performing his regular job.

51. On June 23, 2016, Claimant returned to Dr. Reusswig's office and was evaluated by Jonathan Karsten, PA-C. Claimant complained of increased neck pain. Claimant also admitted to overusing his oxycodone. Claimant was 10 days early on his need for a refill. Claimant made reference to going to another doctor. PA-C Karsten, also made reference that some of Claimant's urinalyses were not showing the presence of oxycodone. PA-C Karsten indicated Claimant might need an evaluation by a psychologist to determine if Claimant was a good candidate for continued opiate therapy.

52. On July 1, 2016, Claimant returned to Dr. Reusswig. Claimant indicated he was laid off and his pain has been better. Dr. Reusswig discussed the negative urinalyses with Claimant and subjected Claimant to random pill counts to confirm proper narcotic usage.

53. On July 12, 2016, surveillance of Claimant shows Claimant walking around outside of a house fluidly and without any indication of any neck problems. Claimant is turning his neck side to side looking around without hesitation and in no apparent distress. Claimant is also seen moving a truck. Claimant appears to move his neck fluidly and is not in any distress.

54. On August 1, 2016, Claimant underwent an IME with Dr. John Hughes. Dr. Hughes diagnosed Claimant as suffering from a cervical sprain with left radicular symptomatology. He did not think Claimant was at MMI. Dr. Hughes thought that Claimant might be a surgical candidate. He provided Claimant a provisional impairment rating of 20%. The rating did not take into account any possible impairment stemming from any left cervical radiculopathy.

55. On August 1, 2016, Claimant returned to Dr. Reusswigg's Physician Assistant, Mr. Shankland. At this appointment, it was determined that that there would be no change in Claimant's medication regimen. Mr. Shankland also noted that Claimant appeared to be using the medication appropriately and without evidence of misuse or diversion. There was no mention of referring Claimant to a psychologist to determine if he was a good candidate for opiate treatment.

56. On August 29, 2016, Dr. Cebrian issued a supplemental report commenting on whether Claimant was appropriately placed at MMI on July 23, 2015. Dr. Cebrian's report provides that Claimant was appropriately placed at MMI on July 23, 2015. Dr. Cebrian stated in his report that, at most, Claimant sustained a strain with a temporary aggravation of his underlying cervical degenerative disc disease. According to Dr. Cebrian, Claimant had some mild and intermittent paresthesias that started two months after the incident and resolved by July 9, 2015. He also stated that Claimant had a negative EMG as found by Dr. Lesnak on May 20, 2015 and that the MRI findings on April 15, 2014 revealed degenerative changes with primary abnormality at C3-4. He also stated that Claimant's symptoms increased after being placed at MMI on July 23, 2015. Dr. Cebrian went on to state that after July 2015, there was objective evidence of changing pathology as Dr. Reusswig indicated that the new MRI revealed disc herniations at C3-4,C5-6 and C6-7, which were not seen previously. Additionally, the second EMG/NCS performed by Dr. Leimbach on December 1, 2015 revealed a C6 radiculopathy which was not previously present.

57. Dr. Cebrian testified consistently with his reports. In essence, Dr. Cebrian testified that Claimant had cervical spine pathology in late 2015, including changes to the MRI and new EMG findings that cannot be related to the March 19, 2015 injury as there was a significant temporal delay in the development of these new objective findings.

58. On August 30, 2016, Claimant was evaluated by Joseph Shankland, PA. Claimant indicated he was having difficulty finding work within his work restrictions.

59. On September 9, 2016, Dr. Cebrian issued a Supplemental Report after watching surveillance of Claimant dated July 11-12, 2016. Based on the surveillance, Dr. Cebrian reaffirmed his opinion that Claimant was appropriately placed at MMI on July 23, 2015.

60. On September 19, 2016, Dr. John Hughes issued a report on behalf of Claimant. In his report, he addressed the fact that Claimant's initial neurodiagnostics were "negative and normal" and then subsequent testing performed by Dr. Leimbach progressed to being positive and were most consistent with a mild left C6 radiculopathy. Dr. Hughes explained that it was his opinion that Claimant's left C6 nerve root was particularly vulnerable to a contusion-mechanism injury sustained as a result of a cervical spine sprain/strain injury. According to Dr. Hughes, the initial electrodiagnostic tests were done too early to detect the emerging radiculopathy, as suspected clinically, with symptoms of cervical spine pain with radiation into the left arm and associated left upper extremity symptoms of numbness and tingling. This ALJ credits the opinion of Dr. Hughes regarding his explanation for why Claimant's subsequent EMG/NCS showed a C6 radiculopathy compared to the initial test which was negative.

61. On October 3, 2016, Claimant underwent a Division IME which was performed by Dr. Stephen Gray. Dr. Gray's assessment of Claimant was:

> 1) Work related cervicothoracic strain, with:
>
> a. Imaging evidence of C5-6 disc protrusion with osteophyte,
>
> b. Clinincal evidence of left sided C6 cervical radiculopathy, and
>
> c. Imaging evidence of pre-existing right stenosis C3-4 and mild spondylostenosis C3-4 due to a left disc osteophyte complex and moderate left foraminal stenosis.

62. Dr. Gray provided Claimant with a 17% whole person impairment rating. Dr. Gray found Claimant had a 6% whole person impairment rating pursuant to table 53, IIC for Specific Disorders of the cervical spine due to cervical spine degenerative changes considered to be associated with Claimant's left upper extremity radiculopathy. Dr. Gray provided Claimant a 3% whole person impairment rating for the loss of function to Claimant's left upper extremity due to his left sided radiculopathy. Dr. Gray also provided Claimant an 8% impairment rating for the loss of range of motion to his cervical spine. (Although Dr. Gray indicated in his report that he was providing Claimant 8% for his lumbar spine,

Dr. Gray used the proper cervical range of motion worksheet for Claimant's cervical spine.)

63. Dr. Gray also determined Claimant reached MMI on August 1, 2016, which is the date Claimant underwent the IME with Dr. Hughes. Dr. Gray appears to have selected that date because it appeared active care had stopped and Claimant's condition did not have any significant changes since his IME with Dr. Hughes.

64. On October 3, 2016, the date of the Division IME, surveillance of Claimant was obtained. The surveillance shows claimant walking and using a cell phone. He is also seen driving. Claimant does not exhibit any pain behaviors regarding his neck.

65. On October 4, 2016, additional surveillance of Claimant was obtained. He is also seen driving and gets involved in a minor car accident. Claimant does not exhibit any pain behaviors regarding his neck. Claimant, however, seems to exhibit slightly less neck movement, overall, compared to the other motorist or police officer.

66. On February 7, 2017, Claimant underwent an IME with Dr. Michael Rauzzino. Dr. Rauzzino reviewed Claimant's medical records as well as the surveillance of Claimant. Dr. Rauzzino concluded that Claimant does not have clinical evidence of a C6 radiculopathy. He concluded that this is borne out not only by his examination, but by the examination of Dr. Zaryanov and the patient's other treating providers. According to Dr. Rauzzino, Claimant does not have neck pain that specifically radiates in a C6 distribution into his thumb and index finger. Claimant has some neck pain that radiates into his arm diffusely and it is the last two digits of his hand that are affected. Claimant also had normal motor and sensory examination by Dr. Rauzzino, Dr. Zaryanov, and by Dr. Gray. Dr. Rauzino concluded that there is no evidence of a C6 radiculopathy based on the Claimant's examination and reports of symptomatology. Therefore, Dr. Rauzzino concluded that Claimant does not have any left upper extremity impairment. Dr. Rauzino did state that if one was to give Claimant a Table 53 diagnosis, then that diagnosis and range of motion would be appropriate per workers' compensation, but there would not be impairment relatable to the left upper extremity. Dr. Rauzinno also discussed the apparent change in MRI findings between the first MRI of April 15, 2015 and the second MRI of November 13, 2015. Dr. Rauzino indicated that:

> I have reviewed the first MRI of the cervical spine done at Denver Integrated Imaging South and the follow up MRI done at Health Images later that year. Both studies suggest chronic degenerative changes without acute-structural injury to the cervical spine. The initial MRI dated 04/15/15 was remarkable for a left C5-6 disc-osteophyte complex with foraminal stenosis and at C3-C4 a broad-based disc-osteophyte complex with left foraminal stenosis. At the

> conclusion of the report, C5-C6 was not noted specifically. It appears that the treating providers ran with the dictated conclusion of the report which indicated disease at C3-C4 and did not note the pathology present at C5-C6. This is chronic degenerative change and not acute injury.

67. The ALJ finds that based on Dr. Rauzzino's opinion, there was little difference between the first MRI and the second MRI.

68. At hearing, Dr. Cebrian testified that Claimant is not entitled to an impairment rating. He also testified that Dr. Gray erred and misapplied the AMA Guides in providing Claimant a 3 percent impairment rating pursuant to Table 12 for a left upper extremity C6 radiculopathy. Dr. Cebrian testified that in order to assign impairment pursuant to Table 12, Claimant must have a specific diagnosis and objective pathology that correlates with the diagnosis. According to Dr. Cebrian, Dr. Gray documented in his examination that Claimant had a normal neurological examination of his left upper extremity because he had normal sensation and normal muscle strength. Therefore, according to Dr. Cebrian, Dr. Gray erred by assigning an impairment rating for a neurological impairment of the left upper extremity.

69. Respondents failed to overcome the opinion of the DIME physician, Dr. Gray.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Principles

The purpose of the Workers' Compensation Act of Colorado (Act), §§8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), *supra*.

The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimant nor in favor of the rights of respondents. Section 8-43-201, *supra*.

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). A workers' compensation case is decided on its merits. Section 8-43-201, *supra*. The Judge's factual findings concern only evidence

that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

Overcoming the Division IME

Maximum Medical Improvement

The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, supra*. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician's finding concerning MMI is incorrect. Where the evidence is subject to conflicting inferences a mere difference of opinion between qualified medical experts does not necessarily rise to the level of clear and convincing evidence. Rather it is the province of the ALJ to assess the weight to be assigned conflicting medical opinions on the issue of MMI. *Oates v. Vortex Industries,* WC 4-712-812 (ICAO November 21, 2008). The ultimate question of whether the party challenging the DIME physician's finding of MMI has overcome it by clear and convincing evidence is one of fact for the ALJ. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." Section 8-40-201(11.5), C.R.S. Similarly, a finding that additional diagnostic procedures offer a reasonable prospect for defining the claimant's condition or suggesting further treatment is inconsistent with a finding of MMI. *Patterson v. Comfort Dental East Aurora,* WC 4-874-745-01 (ICAO February 14, 2014); *Hatch v. John H. Garland Co.,* W.C. No. 4-638-712 (ICAO August 11, 2000).

In this case the Division Examiner, Dr. Gray, placed Claimant at MMI on August 1, 2016. As found, after Claimant was placed at MMI by Dr. Cedillo on July 23, 2015, Claimant started treating with Dr. Zaryanov, a surgeon, and Dr. Reusswig, a pain specialist. First, Claimant underwent a surgical evaluation by Dr. Zaryanov. Since Claimant was not thought to be a surgical candidate at that time, Dr. Zaryanov referred Claimant to Dr. Reusswig for injections. The injections were for diagnostic and therapeutic purposes. The injections continued until approximately January of 2016. Once the injections stopped, Dr. Reusswig and his Physician Assistants were managing Claimant's pain with narcotics. Claimant's narcotic treatment was difficult. There were signs of narcotic abuse. Claimant ran out of his narcotic medication on a number of occasions. In addition, some of Claimant's urinalyses' have been negative. Whether the

negative urinalysis' demonstrates Claimant used too much and ran out of medication early or was diverting his narcotics is unknown.

Regardless, on June 23, 2016, Dr. Reusswig's Physician Assistant was considering sending Claimant to a psychologist to determine whether Claimant was a good candidate for continued opiate treatment. Then, Claimant returned to Dr. Reusswigg's Physician Assistant, Mr. Shankland, for an evaluation on August 1, 2016. At that time, there was to be no change in Claimant's medication. Mr. Shankland also noted that Claimant appeared to be using the medication appropriately and without evidence of misuse or diversion. There was no mention of referring Claimant to a psychologist to determine if he was a good candidate for opiate treatment. Therefore, Claimant was receiving treatment that was intended to cure and relieve Claimant from the effects of his work accident up through August 1, 2016. Therefore, it was reasonable for Dr. Gray to determine Claimant reached MMI on August 1, 2016.

Respondents contend Claimant reached MMI on July 23, 2015 as found by Dr. Cedillo, Cebrian and Dr. Rauzinno. However, the evidence presented through these doctors is merely a difference of opinion regarding the date Claimant reached MMI. Their opinions do not constitute clear and convincing evidence demonstrating Dr. Gray is wrong about the date of MMI. Therefore, this ALJ concludes that Claimant reached MMI on August 1, 2016.

Impairment Rating

A DIME physician must apply the AMA Guides when determining the Claimant's medical impairment rating. Section 8-42-101(3.7), C.R.S.; §8-42-107(8)(c), C.R.S. The finding of a DIME physician concerning the Claimant's medical impairment rating shall be overcome only by clear and convincing evidence. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

As a matter of diagnosis the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office,* 78 P.3d 1150 (Colo. App. 2003). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590 (Colo. App. 1998). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000).

The questions of whether the DIME physician properly applied the AMA Guides, and ultimately whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office, supra*. The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000). A mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. *See Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO March 22, 2000).

In this case, Dr. Gray provided Claimant a 17% whole person impairment rating. The rating is comprised of three components. The first component is the Table 53 rating. Dr. Gray provided Claimant a 6% Table 53 IIC rating, for "Specific Disorders" due to Claimant's cervical spine injury with degenerative changes considered to be associated with the left upper extremity C6 radiculopathy. Respondents failed to present clear and convincing evidence demonstrating Dr. Gray erred by providing Claimant a 6% rating pursuant to Table 53 IIC. Even Dr. Rauzino, Respondent's IME, indicated that one could provide Claimant a rating pursuant to Table 53. The ALJ is aware that Dr. Cebrian is of the opinion that Claimant merely suffered a temporary aggravation of his preexisting condition and returned to baseline with no impairment on July 23, 2015 and that Claimant's current complaints and symptoms are not related to the industrial accident. This ALJ, however, does not find Dr. Cebrian's opinion to be persuasive. As found, Dr. Hughes provided a reasonable explanation as to why Claimant's initial EMG was negative and second EMG was positive. In addition, Dr. Rauzzino provided a reasonable explanation for why there appeared to be a difference between the first MRI and the second MRI. Therefore, Dr. Gray properly followed the AMA Guides in providing Claimant a 6% Table 53 IIC rating and the Respondents have failed to overcome this portion of his rating by clear and convincing evidence.

The second component of the impairment rating is range of motion. Dr. Gray provided Claimant an 8% rating for range of motion deficits. Again, even Dr. Rauzzino stated that if a Table 53 rating is provided, Claimant would be entitled to a rating for any decreased range of motion. The issue in this case regarding Claimant's range of motion is whether the rating accurately reflects Claimant's decreased range of motion when compared to the surveillance video of Claimant. The surveillance video, for the most part, shows Claimant moving his neck freely and fluidly without any indication of a neck problem. However, the surveillance of Claimant after the minor motor vehicle accident on October 4, 2016 does not show Claimant moving his neck as freely as the other motorist or police officer. In addition, there was no credible testimony offered at hearing, which rose to the level of clear and convincing evidence, indicating that the range of motion demonstrated by Claimant during the surveillance showed Claimant having more range of motion than what was measured and rated by Dr. Gray. There was testimony that Claimant had pain behaviors during various examinations and appeared different when being evaluated, but no one provided credible and persuasive

evidence which rose to the level of clear and convincing evidence that the video showed Claimant exceeding the range of motion measured by Dr. Gray.

The focus for this ALJ is whether Dr. Gray properly followed the AMA Guides in evaluating Claimant's range of motion. Although some measurements obtained by Dr. Gray were not valid, Dr. Gray ultimately got valid range of motion measurements as required by the AMA Guides. Therefore, Dr. Gray properly followed the AMA Guides in measuring Claimant's decreased range of motion and providing an 8% rating for Claimant's decreased range of motion. Thus, Respondents have failed to overcome this portion of Dr. Gray's rating by clear and convincing evidence.

The third component of the rating is the neurologic component for loss of sensation with or without pain regarding Claimant's left upper extremity due to any radiculopathy. In this case, Dr. Gray determined Claimant had a C6 radiculopathy causing decreased sensation with or without pain and was entitled to a 3% rating pursuant to Table 12 and Table 10 of the AMA Guides.

Dr. Rauzzino indicated in his report that Claimant is not entitled to a Table 12 and Table 10 rating because the Claimant "does not have neck pain that specifically radiates in a C6 distribution into his thumb and index finger. Dr. Cebrian provided a similar opinion.

The AMA Guides provide at page 41 the method that must be followed when providing an impairment rating for radiculopathy. The AMA Guides do not require the Claimant's radicular symptoms to follow a "specific" C6 distribution. The method provides:

> It is necessary for the physician to establish as accurately as possible the anatomic distribution of sensory and motor loss and verify that the distribution relates to a specific peripheral spinal nerve or nerves before determining the percentage of permanent impairment. The diagnosis is based firmly on the patient's signs and symptoms. The physician should take a complete history, do a thorough medical and neurological examination, and use appropriate laboratory aids to characterize the pain, discomfort, and loss of sensation occurring in the areas innervated by the affected nerve, and to determine the degree of muscle power and find motor control that has been lost.

As stated, the AMA guides do not require the examiner to determine the dermatomal pattern with exact specificity. The AMA Guides require the physician to determine "as accurately as possible the anatomic distribution of sensory and motor loss and verify that the distribution relates to a specific peripheral spinal nerve or nerves before determining the percentage of impairment." It seems that the AMA Guides recognize that not all injuries will follow a classic anatomical distribution and there is some discretion or judgment involved in determining whether to rate a decrease in sensation or pain due to radicular symptoms that radiate into an upper extremity.

In this case, it appears Dr. Gray relied on the information contained in Claimant's medical records and on his physical examination to conclude that Claimant has a ratable impairment under Table 10 and Table 12 of the AMA Guides. For example, Claimant complained of left upper extremity sensory symptoms that radiated into this left upper extremity. In addition, Dr. Lesnak determined Claimant had radicular symptoms that appeared to follow a C6 distribution. Dr. Reusswig also stated on October 1, 2015 the Claimant had some intermittent numbness in the left C6-7 dermatomes. In addition, the November 13, 2015 MRI demonstrated a small left paracentral disc protrusion and endplate osteophyte at the C5-6 level. Lastly, Claimant underwent an EMG on December 1, 2015 which was abnormal and was consistent with a mild C6 radiculopathy.

In this case, Dr. Gray determined Claimant had signs and symptoms of a C6 radiculopathy which were rateable, even though Claimant's sensory and strength findings were normal when he evaluated Claimant. There is merely a difference of opinion as to whether Claimant is entitled to the 3% rating for his left upper extremity symptoms under the AMA Guides. Respondents have also failed to overcome this portion of the impairment by clear and convincing evidence rating as well.

Therefore, Respondents have failed to overcome Dr. Gray's opinion by clear and convincing evidence.

Authorized Medical Providers

Authorized providers include those medical providers to whom Claimant is directly referred by the employer, as well as providers to whom an ATP refers Claimant in the normal progression of authorized treatment. *Kilwein v. Industrial Claim Appeals Office*, 198 P.3d 1274 (Colo. App. 2008); *Town of Ignacio v. Industrial Claim Appeals Office,* 70 P.3d 513 (Colo. App. 2002); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). If an ATP refers Claimant to Claimant's personal physician based on the mistaken conclusion that a particular condition is not work related, the referral may be considered valid because the risk of mistake falls on the employer. *Cabela v. industrial Claim Appeals Office,* 198 P.3d 1277 (Colo. App. No. 07CA2528, November 13, 2008). Whether an ATP has made a referral in the normal progression of authorized treatment is normally a question of fact for the ALJ. *Suetrack USA v. Industrial Claim Appeals Office,* 902 P.2d 854 (Colo. App. 1995).

This case is very similar to the facts in *Cabela*. In this Case, Dr. Cedillo referred Claimant to his personal physician under the mistaken belief that Claimant did not suffer a work related injury. After Dr. Cedillo referred Claimant to his personal physicican for his neck condition, Claimant went to his personal physician, Dr. Flannigan, for treatment of his neck condition. Thereafter, Dr. Flannigan referred Claimant to Dr. Zaryanov and Dr. Zaryanov referred Claimant to Dr. Reusswig. Then, Judge Broniak determined Claimant did suffer a work related injury to his cervical spine. Judge Broniak found that Claimant aggravated his pre-existing cervical spine condition. Therefore, Drs. Flannigan, Zaryanov and Dr. Reusswig are authorized providers.

However, the issue as to whether all of the treatment provided by Drs. Flannigan, Zaryanov, or Reusswig was reasonable, necessary, and related was not before this ALJ.

Change of Physician

Claimant requested a change of physician to Drs. Zaryanov and Dr. Reusswig. Because both doctors are authorized, this issue is moot.

Temporary Disability Benefits

To prove entitlement to TTD benefits, Claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S., requires Claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by Claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair Claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). TTD benefits ordinarily continue until one of the occurrences listed in § 8-42-105(3), C.R.S.; *City of Colorado Springs v. Industrial Claim Appeals Office, supra*.

The existence of disability presents a question of fact for the ALJ. There is no requirement that Claimant produce evidence of medical restrictions imposed by an ATP, or by any other physician. Rather, lay evidence alone may be sufficient to establish disability. *Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997).

In this case, Claimant was laid off from his employment in March of 2016. Then, on May 26, 2016, Claimant was provided work restrictions, through Dr. Reusswig, which precluded Claimant from lifting more than 20 pounds. The restrictions also precluded Claimant from doing activities which would require flexion and extension of his neck. Claimant's job duties required him to lift more than 20 pounds and also required flexion and extension of his neck. In addition, Claimant testified that his neck condition hindered his ability to perform his regular job. Therefore, Claimant's work restrictions precluded Claimant from performing his regular work duties during the time period at issue and contributed to his wage loss.

This ALJ is aware that a return to full duty by the attending physician can be a bar to temporary disability benefits. However, as found by Judge Broniak and this ALJ Dr. Cedillo did not release Claimant to full duty. Dr. Cedillo testified that even though he indicated in writing that Claimant was released to full duty, he conveyed restrictions to the employer and the employer abided by the restrictions. Therefore, this ALJ concludes that Dr. Cedillo did not release Claimant to full duty.

In addition, there may be more than one "the attending physician." *Popke v. Industrial Claim Appeals Office, supra*. If there is a conflict between the attending physicians concerning whether or not Claimant has been released to full duty, the ALJ may resolve the conflict as a matter of fact. *See Bestway Concrete v. Industrial Claim Appeals Office,* 984 P.2d 680 (Colo. App. 1999); *Burns v. Robinson Dairy, Inc.,* 911 P.2d 661 (Colo. App. 1995) (concerning physician's release to regular employment).

This ALJ concludes that Dr. Reusswig is one of the attending physicians. This ALJ also concludes that Dr. Reusswig issued new work restrictions on May 26, 2016, which was after Claimant was laid off. These new restrictions precluded Claimant from performing his regular job and contributed to his wage loss.

Therefore, Claimant is entitled to temporary disability benefits from May 26, 2016, the date new restrictions were issued, until he was placed at MMI on August 1, 2016.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents have failed to overcome the Division IME of Dr. Gray regarding MMI and Impairment.

2. Claimant reached MMI on August 1, 2016.

3. Claimant sustained a 17% whole person impairment rating of his cervical spine.

4. Drs. Zarryanov and Reusswig are authorized providers.

5. Claimant is entitled to TTD from May 26, 2016 to August 1, 2016, less any applicable offsets.

6. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor,

Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Denver, CO 80203

ISSUES

- Whether Claimant proved by a preponderance of the evidence that she sustained a functional impairment beyond the arm, at the shoulder, so as to justify conversion of the scheduled impairment rating to whole person impairment.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant is a licensed psychiatric technician. Claimant works with people who have developmental disabilities.

2. On August 30, 2015 the Claimant sustained a compensable injury to her left shoulder while performing work as an employee for Employer.

3. The Claimant credibly testified at hearing, that she had no left shoulder symptoms, pain complaints or work restrictions prior to her compensable injury of August 30, 2015. This testimony was consistent with the medical records.

4. On August 31, 2015, following her admitted industrial injury, the Claimant reported to authorized treating physician ("ATP") John P. Ogrodnick, M.D., at SCL Physicians – Wheat Ridge, who recorded a present history of illness as follows, which written history was consistent with the Claimant's testimony:

> This 35 year old female reports sitting at her desk yesterday when a resident at WRC came up behind her and started touching her. She use her feet to push off the counter and stand up. She had to push the adult male away from her and gained some distance by getting behind the counter. The resident then reached over and grabbed her lanier which is designed to break off and it did. Finally the resident threw a computer at her. Coworkers intervened and she stepped out of the facility. It was outside that she noticed a sharp left shoulder pain. She finished her shift and presented to Lutheran ER where shoulder x-rays were negative. She went home and took some Tylenol.

See Claimant's Submission Tab 5, Bate Stamp ("BS") 15-16.

5. The Claimant continued to treat with ATP Ogrodnick prior to surgery with ATP William J. Ciccone, M.D., on May 5, 2016.

6. Prior to the surgery the Claimant had consistent complaints of pain at 4/10 in her anterior left shoulder (see Tab 5, BS 24), pain with "left shoulder abduction" (see Tab 5, BS 28), and pain when waking is getting worse at night. See Claimant's Submission Tab 5, BS 30.

7. Prior to authorizing surgery, Respondent retained the services of Stephen D. Lindenbaum, M.D., to opine on whether the surgery requested by ATP Ciccone was appropriate and Respondent's retained expert Lindenbaum gave the opinion that:

> 1. What injuries if any did the claimant sustain in the accident in the injury of August 2015?
>
> The answer to that is I think she sustained an injury to her left shoulder that has presented as an impingement syndrome. This would involve damage to the tendons of the shoulder which has been documented both on a clinical exam as well as MRI**.**
>
> * * *
>
> 3. Is the proposed surgery reasonable, necessary, and related to the claimant's work injury of August 30, 2015?
>
> The answer to that question is yes. I think this patient has shown evidence of impingement which occurred based on the history from the incident of August 2015. It think the surgery is reasonable based on the fact the patient was having continued pain with activity of overhead or away from her body.

See Claimant's Submission Tab 7, BS 108 (Emphasis added).

8. On May 5, 2016 the Claimant underwent left shoulder surgery, which surgery included:

    1. Left shoulder impingement.
    2. Arthroscopic distal clavicle resection.

See Claimant's Submission Tab 6, BS 82.

9. The Claimant retained the services of Ronald Swarsen, M.D., who testified and colored in on Demonstrative Exhibit 12 what portions of the shoulder anatomy were addressed by the surgery which occurred on May 5, 2016.

10. Following the Claimant's surgery, her symptoms improved but remained in the left shoulder area, both posteriorly and anteriorly.

11. On May 18, 2016 the initial physical therapy reports from SCL Physicians – Wheat Ridge indicate that the Claimant had muscular tightness on her left shoulder in the pecs and at the area of incision. *See* Claimant's Submission Tab 8, BS 110.

12. On May 20, 2016 the physical therapist at SCL Physicians noted that the Claimant was "a little sore" and that she "attempted to sleep in bed and rolled over on it." *See* Claimant's Submission Tab 8, BS 113.

13. On May 24, 2016 the physical therapist at SCL Physicians noted that the only comfortable way for the Claimant to sleep was on her right side. *See* Claimant's Submission Tab 8, BS 114.

14. On May 31, 2016 following surgery with ATP Ciconne, the Claimant was still reporting having constant 4/10 left shoulder pain, mostly anterior. *See* Tab 5, BS 37.

15. On June 8, 2016 the Claimant reported to physical therapy complaining of stiffness in her left shoulder. *See* Claimant's Submission Tab 8, BS 116.

16. On June 21, 2016 ATP Ciconne requested 8 more therapy sessions and ATP Ogrodnick discussed with the Claimant "the potential adverse ramifications of permanent restrictions, including loss of employment." *See* Claimant's Submission Tab 5, BS 40. During the visit the Claimant described her pain as 3/10 "constant left anterior shoulder pain" and indicated that she now can "sleep on the left side as long as it is at a slight angle." *See* Claimant's Submission Tab 5, BS 37.

17. On August 25, 2016, at the direction of ATP Ogrodnick, the Claimant was evaluated by ATP Nirav R. Shah, M.D., for the ongoing pain in her left shoulder who noted:

> Antoinette is a new patient in the clinic today being seen for her left shoulder pain which began on 8/30/15 when she was grabbed on the shoulder and forcibly pushed down at work. She visits today as a referral from Dr. Ogrodnick.
>
> * * *

> The shoulder pain is characterized as a dull aching. The shoulder pain is described as being located in the proximal arm. The shoulder pain is aggravated by overhead activity and lifting. Relieving factors include physical therapy.
>
> * * *
>
> The patient is a 36 year old female who presents for a Recheck of Shoulder pain. The course has been recurrent. The shoulder pain is mild to moderate (4/10). The shoulder pain is characterized as a dull aching. The shoulder pain is described as being located in the proximal arm. The shoulder pain is aggravated by physical activity and any movement. Relieving factors include subacromial cortisone injection temporarily.

See Claimant's Submission Tab 9, BS 132 and136 (Emphasis added).

18. On September 22, 2016 ATP Shah noted:

> Antoinette returns to the office today for follow up on her left shoulder pain. She received a cortisone injection at her last visit on 9/8/16.
>
> The patient is a 36 year old female who presents for a Recheck of Shoulder pain. The course has been without change. The shoulder pain is mild to moderate (4/10). The shoulder pain is characterized as a dull aching. The shoulder pain is described as being located in the proximal arm and deep posterior. The shoulder pain is aggravated by any movement. Relieving factors include medications (cortisone injection x 1 day).
>
> * * *
>
> Exam and diagnosis was again discussed with the patient and her husband and all questions answered. Both cortisone injections provided some temporary relief of pain. Previous MRI was concerning for potential labral pathology. Options discussed. Recommend MRI arthrogram to evaluate further.

See Claimant's Submission Tab 9, BS 138-139 (Emphasis added).

19. On October 13, 2016 ATP Shah noted:

> The patient is a 36 year old female who presents for a Recheck of Shoulder pain. The course has been without change. The shoulder pain is mild to moderate. The shoulder pain is characterized as a sharp stabbing. The shoulder pain is described as being located in the deep posterior, deep anterior and left shoulder. The shoulder pain is aggravated physical activity and any movement. Relieving factors include rest and medication. Previous medication use has included Cortisone injections intra-articular and Cortisone injections extra-articular.

See Claimant's Submission Tab 9, BS 140 (Emphasis added).

20. On November 3, 2016 ATP Ogrodnick noted:

> Antoinette Garcia-Bates is a 36yr female who reports she has been back to full duty and her symptoms have not worsened. Somedays after her shift she is sore. The most challenging part of job is reaching up shelves to grab medications. She only needed three ibuprofens over past week. She would like to stay in full duty and make this her last visits to clinic.

See Claimant's Submission Tab 5, BS 59 (Emphasis added).

21. On November 3, 2016 ATP Ogrodnick assigned a 17% left upper extremity impairment rating which converted to a 10% whole person impairment rating.

22. On November 17, 2016 Respondent filed a Final Admission of Liability which accepted ATP Ogrodnick's impairment rating and denying maintenance medical care. *See* Claimant's Submission Tab 3, BS 4-11.

23. On December 6, 2016 the Claimant filed a Response to the Final Admission of Liability noting the Claimant:

> [H]ereby accepts the rating of permanent medical impairment stated in the Final Admission of Liability dated November 17, 2016, but maintains it is not an extremity impairment but rather a whole person impairment based upon the situs of functional impairment . . .

See Claimant's Submission Tab 4, BS 12.

24. At hearing Claimant contended that she was not challenging the impairment rating assigned by ATP Ogrodnick, but maintained the situs of functional impairment reflected it should be a whole person impairment rating.

25. At Claimant's request, Dr. Ronald Swarsen performed a medical records review and testified at hearing. Dr. Swarsen testified that the May 5, 2016 surgery consisted of an arthroscopic incision, a subacromial decompression and a distal clavicle resection. He also testified from the operative report found at Claimant's Submission Tab 6 BS 82, and highlighted the surgical procedures performed on Demonstrative Exhibit 12.

26. Dr. Swarsen stated the Claimant's current complaints of ongoing pain are consistent with the surgical procedures she underwent. Dr. Swarsen testified it is common for patients that have shoulder surgery, such as the Claimant, to develop pain in the shoulder joint and it is consistent with what the Claimant describes. Dr. Swarsen stated that pain is subjective but can affect function.

27. Dr. Swarsen also credibly testified and explained that the surgery which the Claimant underwent with ATP Ciccone "where to structures above the glenohumeral joint" where the bones of the arm join the torso.

28. Dr. Swarsen explained that all surgical repairs made to the Claimant's rotator cuff were proximal to the glenohumeral joint. The surgery also involved the clavicle. Dr. Swarsen believed, and the Judge agrees, that the shoulder is not part of the upper extremity, although one aspect of the functional impairment at the shoulder is measured by arm motion.

29. The Claimant credibly testified the pain limits her in performing various motions including overhead lifting, driving and dressing.

30. Based on the credible testimony of Dr. Swarsen and the Claimant, as well as the medical records, the Claimant's functional impairment extends beyond the arm at the shoulder.

31. The ALJ finds that pain and discomfort caused by the industrial injury and consequent surgery caused functional impairment of structures beyond Claimant's arm at the shoulder. This functional impairment manifests itself as pain and discomfort and it impairs the Claimant in performing various movements including overhead lifting.

32. The Claimant proved it is probably more true than not that she sustained functional impairment beyond the arm at the shoulder and is entitled to an award of permanent partial disability benefits based on ATP Ogrodnick's rating of 10% whole person. The Claimant stated that she experiences pain in the front anterior portion of the shoulder between the joint and the neck, in

the area on the front of her chest between the shoulder and the neck and in the area of the shoulder joint when she moves the arm in various planes.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

A. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

B. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice or interest. *See Prudential Insurance Co. v. Cline,* 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). A Workers' compensation case is decided on its merits. Section 8-43-201. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

C. Claimant argues that Dr. Ogrodnick's rating of 17 percent of the left upper extremity should be converted to its whole person equivalent of 10 percent. The ALJ agrees with this contention.

D. Section 8-42-107(1)(a), C.R.S., provides that when an injury results in permanent medical impairment and the "injury" is enumerated in the schedule set forth in subsection (2) of the statute, "the employee shall be limited to the medical impairment benefits as specified in subsection (2)." If Claimant sustains an injury not found on the schedule § 8-42-107(1)(b), C.R.S., provides Claimant shall "be limited to medical impairment benefits as

specified in subsection (8)," or whole person medical impairment benefits. As used in these statues, the term "injury' refers to the part of parts of the body that sustained the ultimate loss, not necessarily the situs of the injury itself. Thus, the term "injury" refers to the part or parts of the body that have been functionally disabled or impaired. *Warthen v. Industrial Claim Appeals Office,* 100 P.3d 581 (Colo. App. 2004); *Strauch v. PSL Swedish Healthcare System,* 917 P.2d 366 (Colo. App. 1996).

E. Under this test, the ALJ is required to determine the situs of the functional impairment, not the situs of the initial harm, in deciding whether the loss is one listed on the schedule of disabilities. *Strauch v. PSL Swedish Healthcare System, supra.* Pain and discomfort that limit the claimant's use of a portion of the body may constitute functional impairment. *Johnson-Wood v. City of Colorado Springs,* W.C. No. 4-536-198 (ICAO June 20, 2005); *Vargas v. Excel Corp.,* W.C. No. 4-551-161 (ICAO April 21, 2005). The ALJ may also consider whether the injury has affected physiological structures beyond the arm at the shoulder. *Brown v. City of Aurora,* W.C. No. 4-452-408 (ICAO October 9, 2002). Moreover, the AMA Guides' definitions of the "upper extremity" and the arm and torso do not dictate the "situs of the functional impairment." *Langton v. Rocky Mountain Health Care Corp.,* 927 P.2d 883 (Colo. App. 1996); *Lovett v. Big Lots,* W. C. No. 4-657-285 (ICAO November 16, 2007).

F. Section 8-42-107(2)(a), C.R.S., provides for scheduled compensation based on "loss of an arm at the shoulder." Claimant bears the burden of proof by a preponderance of the evidence to establish functional impairment beyond the arm at the shoulder and the consequent right to PPD benefits awarded under § 8-42-107(8)(c). Whether Claimant met the burden of proof presents an issue of fact for determination by the ALJ. *Delaney v. Industrial Claim Appeals Office,* 30 P.3d 691 (Colo. App. 2001), *Johnson-Wood v. City of Colorado Springs, supra.*

G. The ALJ concludes Claimant sustained functional impairment beyond the arm at the shoulder and is entitled to the converted 10 percent whole person impairment rating assigned by ATP Ogrodnick. Claimant has proven that she sustained injury to structures beyond the arm at the shoulder, and that these injuries have caused ongoing pain that impairs the function of parts of the shoulder located proximal to the arm at the shoulder. The impairment consists primarily of pain in the front and back of the shoulder that limits Claimant's ability to move the arm in various motions, including overhead lifting.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. It is therefore ordered the insurer shall pay permanent partial disability benefits based on upon a 10% whole person impairment rating.

2. Respondent shall pay to Claimant interest at the rate of 8% per annum on all amounts of compensation not paid when due.

3. Any issues not determined in this decision are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Dated: 5-23-17

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Did Claimant prove by a preponderance of the evidence that her condition has worsened warranting reopening under § 8-43-303(1), C.R.S.

- If Claimant proved a worsening of condition, was the surgery performed by ATP orthopedic surgeon (Brian White, M.D.) reasonable, necessary, and related?

- Whether the Claimant has shown that she is entitled to temporary disability from the date of filing of the Petition to Reopen on March 22, 2016, ongoing.

- Whether sanctions should be imposed against Claimant for spoliation of evidence.

PROCEDURAL STATUS

On May 4, 2017, Claimant filed a Motion for Corrected Order. Claimant requested the Findings of Fact, Conclusion of Law and Order be amended to include grant of the Petition to Reopen in the Order section. Respondents filed their Response, arguing that Corrected Order was not necessary. The Motion is granted, as the ALJ found Claimant's condition worsened..

FINDINGS OF FACT

1. Claimant suffered an admitted right hip injury on October 28, 2010 while working for Employer. A baggage cart pinned Claimant against a belt loader and she suffered injuries to her right hip and lower extremity.

2. Claimant has been treated by doctors at OccuMed Colorado ("Occumed") throughout the claim, including John J. Raschbacher, M.D., Greg Smith, D.O. and Jonathon Bloch, D.O.

3. Claimant received extensive treatment for the right hip injury, including four (4) surgeries. The first surgery was an arthroscopic labral repair, acetabuloplasty and femoral osteoplasty performed by Derek Johnson, M.D. on May 18, 2011.

4. On May 30, 2012, Claimant was initially evaluated by Brian White, M.D. On examination, she had significant pain with the anterior impingement maneuver on the right side. The x-rays showed evidence of reactive Cam morphology on the proximal femur. Dr. White's assessment was incomplete healing of labral repair, with

some residual impingement and potentially early avascular necrosis. The ALJ noted this was an indication that the avascular necrosis developed following the arthroscopy, suggesting a causal link. He postulated that Claimant's pain was coming from the incomplete healing of her labral repair. He referred Claimant to Cynthia Kelly, M.D.

5. On July 11, 2012, Claimant was re-evaluated by Dr. White, whose assessment was avascular necrosis, with failed previous hip arthroscopy and residual impingement. Dr. White noted Dr. Kelly would proceed with the avascular necrosis procedure, to be followed by the hip arthroscopy and femoracetabular osteoplasty and labral reconstruction.

6. The second procedure was a right femoral head decompression and attempted vascularized free fibula flap performed by Cynthia Kelly, M.D. on October 12, 2012. This procedure was done to address osteonecrosis of the right femoral head. This procedure could not be completed because the blood vessels were different sizes.

7. On January 24, 2013, Dr. White performed a third procedure, which was a revision-right hip arthrosopy, including acetabular rim trimming, labral reconstruction and injection of platelet rich plasma.

8. After her third surgery, Claimant underwent a course of physical therapy ("PT") and was followed by the physicians at Occumed. Dr. White evaluated Claimant at regular intervals.

9. On January 8, 2014, Dr. White evaluated Claimant for a follow up visit. On examination, he noted that Claimant's overall range of motion was good, but painful, particularly with both internal and external rotation. A review of the x-rays showed no evidence of progression of the avascular process, however, there was cloudiness to the femoral head. Dr. White's assessment was failed revision hip arthroscopy, as well as a vascular salvage procedure. Claimant was noted to have progressive pain. Dr. White did not think there was much to be done for Claimant, with the most efficient treatment being a total hip replacement. He described this procedure as sub optimal given her age. Claimant testified that they discussed the total hip replacement, but Dr. White didn't want her to have this procedure at age 30.

10. On April 20, 2015, Claimant was evaluated by Douglas Scott, M.D. At the time, she noted her right hip popped and was painful. She also had pain in her left hip because she favored her right hip. Dr. Scott prepared a comprehensive review of Claimant's treatment records. On examination, right hip flexion was limited by pain to 100° and right hip abduction was decreased compared to the left. Right hip adduction and extension were also decreased compared to the left, as was external rotation. Dr. Scott commented that in many respects Claimant appeared to have failed surgical treatment of her right hip condition. She had partly failed to respond to therapeutic measures and he opined she needed a full psychological assessment before proceeding with any type of further surgical procedures.

11. In Dr. Scott's opinion, Claimant's condition was probably stable and it was appropriate to consider whether she was at MMI. He recommended Claimant be referred to a 24 month Division IME to address MMI, ratable impairment, maintenance treatment, whether a total hip arthroplasty was reasonable and necessary; an evaluation of the ongoing prescription-pain medication and benzodiazepamines, as well as whether continued massage therapy was reasonable and necessary. The ALJ noted Dr. Scott, at least in this report, did not offer a definitive opinion regarding whether Claimant was at MMI or whether a total hip replacement, reasonable and necessary and related to the injury.

12. Dr. Scott issued an addendum report on May 23, 2015.[1] He opined Claimant had reached maximum medical improvement and her hip was stable. He believed she had probable permanent medical impairment of the right hip pursuant to the AMA Guides to the Evaluation of Permanent Impairment (3rd Ed. Rev.).

13. On July 7, 2015, Respondents filed a Final Admission of Liability ("FAL"), admitting Claimant had a 17% scheduled medical impairment related to her hip, as found by Dr. Bloch. However, no PPD benefits were paid, as Claimant received in excess of the $75,000.00 statutory cap. Respondents claimed an overpayment of $79,137.79 against future benefits.

14. The FAL admitted for maintenance medical benefits based upon the recommendations of Dr. Bloch. In his June 18, 2015 report[2], Dr. Bloch stated Claimant was to follow up with her surgeon as regularly scheduled, although there was no active management and really just post surgical follow-ups. Claimant was noted to continue to take reasonable amounts of narcotics and controlled benzodiazepine type substances which were to be managed by a pain management specialist.

15. Claimant returned to Dr. Smith, on September 11, 2015. She had a great deal of pain in her left hip, lumbar region and right calf, most likely due to antalgic gait. Her pain level was 6-7/10. Claimant had been experiencing these symptoms for two weeks. Dr. Smith's assessment was status post-hip reconstruction. He prescribed additional massage therapy twice a week for 4 to 6 weeks and plan to see Claimant in follow up in 3 to 4 weeks. Dr. Smith stated he did not know that he was not sure when Claimant would be at MMI, which led the ALJ to infer that he did not believe she was at MMI at the time of this appointment. On the WCM164 form, no notation was made about MMI.

16. Claimant returned to Occumed on October 5, 2015 and was evaluated by Kevin Page, PA-C. At that time, Claimant was noted to have an antalgic gait, but no detailed evaluation took place. PA-C Page thought Claimant was at MMI and should be under maintenance for pain management.

---

[1] As found infra, Dr. Scott testified he issued this supplemental report upon receipt of additional medical records. However, those documents were not in the record.

[2] Dr. Bloch referred to an addendum report from the physician who performed the DIME. However, that report was not introduced into evidence.

17. Claimant returned to Dr. Smith, on October 27, 2015 and the WCM164 noted she was at MMI, with a neurological evaluation, EMG and MRI of the right leg ordered.

18. On October 27, 2015 Claimant was evaluated by Dr. Bloch. Claimant reported ongoing pain. Dr. Bloch opined that her case required more workup including: an EMG of the right lower extremity, a repeat hip MRI for stability, a three-phase bone scan to make sure there was no CRPS, and a neuropsychological evaluation. Dr. Bloch noted he would be hard pressed to say that Claimant needed a hip replacement without any current imaging. Dr. Bloch opined that otherwise, Claimant was still at MMI and would have ongoing tests while at MMI, but should the tests show anything positive it could change the MMI status. Dr. Bloch requested referrals for Claimant to have neuropsychological testing, an MRI of her right hip, an EMG of her right leg, and massage therapy.[3]

19. On November 10, 2015 Claimant was evaluated by Dr. Bloch. Claimant reported not doing well and having increased pain. Dr. Bloch opined that Claimant was still at MMI, that he would refer Claimant for pain management, and noted that they had asked for an EMG, a repeat MRI, and a neuropsychiatric evaluation as testing post MMI to make sure that none of the findings would change Claimant's MMI status. The inference drawn from this report and the one from 10-27-15, is that Dr. Bloch questioned whether Claimant was still at MMI.

20. Evidence of Claimant's physical activity level in November 2015 was admitted at hearing. This evidence was in the form of video surveillance, which documented Claimant shopping at Costco and performing various tasks. Claimant also shoveled snow the next day. The ALJ notes this raised the question whether Claimant exaggerated her physical capabilities when she was being evaluated by physicians during this period of time. The ALJ also notes there was no evidence admitted hearing as to Claimant's exact physical restrictions during this time.

21. Claimant testified that she went to the emergency room because of pain in her hip a couple of days before the prior hearing (mid-December 2015),. Pain was radiating down the right side of her leg. Claimant testified the pain was much worse than in June 2015, when she was placed at MMI.

22. Claimant testified in the December 10, 2015 hearing before ALJ Jones that she wanted the hip replacement done to be able to stop taking pain pills and be more of a mom to her daughter.[4] Claimant also testified when the symptoms were bad, her foot would go numb, she would experience burning pins and needles and it felt like someone was taking an ice pick to her hip. She could not get comfortable.

[3] These medical benefits were denied by ALJ Jones' Findings of Fact, Conclusions of Law and Order, dated March 28, 2016-Claimant's Exhibit 7; Respondents' Exhibit A.

[4] Exhibit 13.

23. Claimant returned to Dr. White on December 23, 2015. She was described as getting progressively worse. Claimant had pain with range of motion of the hip, which did not move well. Dr. White noted nerve pain going down her distal fibula and leg. The ALJ found this was evidence of a worsening of Claimant's condition. Some narrowing was also noted on x-rays which were taken at that evaluation. Dr. White's assessment was failed revision hip arthroscopy, as well as core decompression. He stated the only option was a total hip replacement and discussed all the risks, benefits and alternatives of the surgery. The decision was made to proceed with the total hip replacement.

24. On March 22, 2016, Claimant filed a Petition to Reopen, as well as an Application for Hearing. The Petition to Reopen alleged a worsening of condition and attached the request for authorization of proposed right total hip arthroplasty.

25. Respondents scheduled a follow-up IME for June 28, 2016. Claimant failed to appear for this appointment.

26. Claimant testified she was out of town attending her daughter's graduation immediately before the appointment with Dr. Scott was set to take place. Claimant testified the letter was sent on the June 15, 2016 to her attorney's office and then sent to her the next day. The fax confirmation reflected the letter was faxed June 14, 2016. Claimant learned of the IME two hours after she was supposed to be there. Claimant testified she called her attorney's office to inquire what to do.

27. Under these facts, the ALJ determined Claimant did not engage in intentional conduct which led to her missing the appointment with Dr. Scott.

28. Claimant testified that prior to the hip replacement surgery, she was in a lot of pain. She had difficulty walking. The injection done by Dr. White provided relief, but her pain got worse after the injection began wearing off. Claimant decided to undergo the total hip replacement because her symptoms had gotten to a point that she could not tolerate.

29. On July 5, 2016, Dr. White performed a right hip total arthroplasty. In the indications for the surgery, he noted that after Claimant's initial hip arthroscopy, she developed avascular necrosis. An attempted joint salvage, with a combination of hip arthroscopy conversion to labral reconstruction, as well as cord compression was tried. A vascularized free fibula was tried, but the vessel size was not appropriate proximally for this and could not be completed. Even after these procedures, Claimant continued to have pain, although she had short-term relief from a steroid injection. The pre-operative and post-operative diagnosis was: right hip failed attempted salvage from a vascular necrosis and to hip arthroscopy, with continued hip pain, no other joint salvage solution. Claimant testified the surgery has provided her relief.

30. The ALJ credited the opinions of Dr. White, who has treated Claimant since 2012. Dr. White's records documented a worsening of Claimant's condition.

31. On August 12, 2016, letters were sent by counsel for Respondent-Insurer to Porter Hospital and ATI Physical Therapy denying liability for medical expenses from July 5-8, 2016.

32. There was no evidence in the record that Claimant was placed at MMI after the surgery.

33. On August 17, 2016, Dr. Scott reviewed additional medical records at the request of Respondents. The question posed to Dr. Scott was whether the July 5, 2016 right total hip replacement (arthroplasty) was reasonable, necessary and related to Claimant's October 28, 2010 work injury. Dr. Scott opined the July 5, 2016 right total hip arthroplasty (per the Colorado Medical Treatment Guidelines) was probably reasonable and necessary to treat Claimant's osteonecrosis of the right femur. If the osteonecrosis resulted from May 18, 2011 right hip arthroplasty and the procedure was performed to address her work injury related labral tear, then it was related to the work injury. Dr. Scott stated: if the osteonecrosis did not result from the May 18, 2011 right hip arthroplasty, it was not related to the work injury. The ALJ noted there was no evidence in the record that Claimant had a diagnosis of avascular necrosis prior to the 2011 arthroplasty. The arthroscopy caused the avascular necrosis. Based on the totality of the medical evidence, including Dr. Scott's opinion, the ALJ found the total hip arthroplasty was reasonable, necessary and related to Claimant's industrial injury.

34. Dr. Scott testified at hearing as an expert in occupational medicine. He is also Level II accredited pursuant to the WCRP. Dr. Scott stated he first examined Claimant on April 20, 2015 and issued a report. After receiving additional medical records, he opined that Claimant was at MMI, which was actually before Dr. Bloch concluded Claimant was at MMI.

35. Dr. Scott noted that since he was not able to examine Claimant on June 28, 2016, he could not determine whether there was actually a worsening of her condition. However, he reviewed the medical records and opined that there was nothing specific about March 22, 2016, which showed a worsening of Claimant's condition. This is because the doctors had previously discussed a total hip replacement with her. Dr. Scott concluded Claimant knew by the December 10, 2015 hearing that she needed a hip replacement. Dr. Scott also noted that she was taking medications, including Percocet and had continuing pain complaints and her hip. Dr. Scott characterized this process as osteoarthritis after Claimant developed avascular necrosis. Dr. Scott never testified that the avasular necrosis was not related to Claimant‘s industrial injury and the first surgical procedure. On cross-examination, Dr. Scott admitted he did not know whether Claimant had numbness and tingling down her leg\ prior to December 2015. The ALJ finds this was a new symptom.

36. Claimant's reported symptoms worsened over time, as documented by the medical records admitted at hearing.

37. Claimant's hip arthroplasty was reasonable, necessary and related to her industrial injury.

38. Claimant's hip arthroplasty was required to prevent a deterioration of her condition.

39. There was no evidence of increased work restrictions or wage loss tied to Claimant's worsening of condition. As of the date of hearing, Claimant has not worked for five years.

40. Evidence and inferences inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), §§ 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S. Generally, the Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. § 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). In this case, the credibility of Claimant, as well as the various health care providers, bore directly on the issue of reopening.

Reopening

Section 8-43-303(1), C.R.S. authorizes an ALJ to reopen any award within six years after the date of injury on a number of grounds, including error, mistake, or a change in condition. *Heinicke v. Industrial Claim Appeals Office*, 197 P.3d 220 (Colo. App. 2008); *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). A change in condition refers either "to a change in the condition of the original compensable injury or to a change in Claimant's physical or mental condition which can be causally connected to the original compensable injury". *Chavez v. Industrial Comm'n*, 714 P.2d 1328, 1330 (Colo. App. 1985).

The reopening authority granted ALJs by § 8-43-303, C.R.S. "is permissive, and whether to reopen a prior award when the statutory criteria have been met is left to the sound discretion of the ALJ". *Cordova v. Industrial Claim Appeals Office*, 55 P.3d at 189. The party seeking reopening bears "the burden of proof as to any issue sought to be reopened". § 8-43-303(4), C.R.S.

The medical evidence before the Court led to the conclusion that Claimant's symptoms worsened after MMI. As a starting point, the evidence established her 2011 hip arthroscopy did not resolve her symptoms. (Finding of Fact 3). Dr. White described this as "incomplete healing" of her labral repair. (Finding of Fact 4). The evidence also showed Claimant developed avascular necrosis a short time after the first surgery and required surgery performed by Dr. Kelly. (Findings of Fact 4-6). The ALJ concluded the avascular necrosis developed as a result of the injury and the initial surgery because of its proximity in time, the inferences drawn from the medical records and the lack of contrary evidence. (Finding of Fact 33).

Claimant then underwent two surgical procedures to try to resolve the avascular necrosis, which were not successful and her symptoms persisted. (Findings of Fact 3 and 6). Claimant underwent a further surgery, a revision right hip arthroscopy. (Finding of Fact 7). However, she continued to have right hip symptoms, which continued through the determination of MMI. Evidence of Claimant's worsening condition post-MMI was admitted at hearing. Dr. Smith noted worsening symptoms on September 11, 2015. (Finding of Fact 15). Additional evidence of increased came in the form of Dr. Bloch's evaluations on October 27, and November 10, 2015 wherein Dr. Bloch raised the issue of whether Claimant remained at MMI. (Findings of Fact 18-19).

As found, Claimant then returned to Dr. White, who noted worsening of symptoms, including radiating pain down the right leg. (Finding of Fact 23). He performed an injection, which provided symptom relief. Claimant experienced a recrudescence of the symptoms after the injection was performed. The ALJ credited Claimant's testimony that her pain was worsened, which necessitated a trip to the emergency room.

In coming to this conclusion, the ALJ considered Respondents' contention that the medical evidence of worsening was simply based on Claimant's subjective report of increased symptoms. Respondents urged the ALJ to find Claimant not to be credible as

a witness with regard to pain complaints, pointing to the video evidence before the Court. Respondents also cited the determination previously made by ALJ Jones with regard to Claimant's credibility.

The ALJ declines to reach the conclusion that because Claimant did not credibly report her symptoms, there was insufficient evidence of a worsening of condition. As noted above, physicians including Drs. Bloch, Smith, and White made treatment recommendations based upon Claimant's report of symptoms. In addition, there was objective evidence of avascular necrosis, which ATPs identified as a cause of Claimant's symptoms. This led to treatment these ATPS provided to Claimant. Ultimately this resulted in the surgical recommendation made by Dr. White. The conclusion to be drawn from the various doctors' recommendations is that they were concerned about a worsening of Claimant's condition. Furthermore, Claimant's testimony supports the conclusion that her condition had worsened. She had previously declined to undergo an arthroplasty, however, her symptoms reach the point that she opted for this procedure.

Therefore, based on the evidence before the ALJ, including the foregoing medical records and Claimant's testimony, Claimant met her burden of proof and established her condition worsened.

Medical Benefits

Whether Claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). In order to determine this question, the ALJ considered whether Claimant was no longer at MMI and, thus the total hip replacement was treatment to cure and relieve the effects of Claimant's industrial injury or whether this was post-MMI treatment to prevent deterioration of Claimant's condition. The ALJ determined this condition fell within the latter category. First, there was no evidence in the form of a report from an ATP which conclusively said Claimant was no longer at MMI.

Second, surgical procedures can be considered post-MMI treatment to prevent deterioration. As found, Claimant met her burden of proving the surgery was required to prevent a deterioration of her symptoms. As the Colorado Court of Appeals articulated in *Milco Construction v. Cowan*, 860 P.2d 539, 542 (Colo. App. 1992):

> "If the evidence in a particular case establishes that, but for a particular course of medical treatment, a claimant's condition can reasonably be expected to deteriorate, so that he will suffer a greater disability than he has sustained thus far, such medical treatment, irrespective of its nature, must be looked upon as treatment designed to relieve the effects of the injury, or to prevent deterioration of the Claimant's present condition. "

Milco Construction v. Cowa, supra, was followed by *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609, 611 (Colo. App. 1995), which reaffirmed the principle that a particular course of treatment can be ordered following MMI to prevent

deterioration of Claimant's condition. See also *Sanchez v. Lafarge Corporation,* 2004 WL 1944689 (ICAO August 27, 2004).

Here, substantial evidence supported the conclusion that the hip replacement was required to prevent the deterioration of Claimant's condition. As found, the surgical recommendation was made after Claimant had reached MMI, but Dr. White was not initially inclined to recommend the procedure and Claimant followed that recommendation. (Finding of Fact 23). Claimant's symptoms worsened as reflected the medical records, including a new symptom of radiating pain down the right leg. This culminated in Claimant undergoing the total hip arthroplasty.

The ALJ notes that Dr. Scott's testimony at hearing did not refute that the hip replacement surgery was reasonable and necessary. Dr. Scott also noted in his August 17, 2016 report that if the avascular necrosis resulted from May 18, 2011 right hip arthroplasty and the procedure was performed to address her work injury related labral tear; then it was related to the work injury. The ALJ concluded there was a causal relationship between the arthroscopy and Claimant's development of avascular necrosis. The medical evidence showed that Claimant underwent treatment, including surgeries, because of the failed labral repair.

She ultimately underwent the total hip arthroplasty because of her continued symptoms. Thus, the ALJ concluded the medical evidence admitted at hearing supported the conclusion the hip replacement was required to prevent further deterioration of Claimant's condition. Respondents are liable for said treatment.

Temporary Total Disability

Claimant alleges she is entitled to TTD benefits as a result of her worsened condition. In *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997), the Court held that in order to receive TTD benefits after reopening based on a change of condition, the Claimant must show increased restrictions that result in "greater impact on the Claimant's temporary work capacity than he had originally sustained as a result of the" industrial injury. 954 P.2d at 639-640.

The question of whether Claimant proved a worsened condition and whether this caused increased impairment of earning capacity presents a question of fact for the ALJ. *Giammarino v. Contemporary Services Corp.,* W.C. No. 4-546-027 (ICAO November 22, 2006). There is no requirement that Claimant produce evidence of medical restrictions imposed by an ATP, or by any other physician. Rather, lay evidence alone may be sufficient to establish disability. *Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997). However, the ALJ may consider whether the worsened condition has resulted in the imposition of additional medical restrictions. *Giammarino v. Contemporary Services Corp., supra.*

In the case at bench, the ALJ determined Claimant's condition had worsened and her testimony supported this conclusion. However, there was no evidence before the ALJ which documented Claimant's work restrictions had increased after MMI or when

the Petition to Reopen was filed. In fact, there was no evidence concerning post-MMI Claimant's restrictions in the record at all.[5] Even though Claimant was arguably restricted from work after the total hip replacement, she had not been working for five years. (Finding of Fact 38). Thus, there was no evidence which established a link between her latest surgery and a loss of wages. This lack of direct evidence of a wage loss attributable to the worsening of condition leads to the ALJ's conclusion Claimant is not entitled to wage benefits. Accordingly, the ALJ determined Claimant failed to establish an entitlement to TTD benefits as a result of the Petition to Reopen and/or worsening of condition.

Spoliation

Respondents seek sanctions for Claimant's alleged spoliation of evidence. More particularly, Respondents alleged Claimant's failure to attend the June 28, 2016 IME with Dr. Scott deprived them of the opportunity to examine Claimant before she had the total hip replacement. Respondents argued this constituted spoliation of evidence, as her condition was changed after the surgery. Response requested an adverse inference to be drawn from the claimed spoliation of evidence.

The Colorado Supreme Court articulated the legal standard for evaluating a claim of spoliation in *Aloi v. Union Pacific Railroad Corporation*, 129 P.3d 999 (2006). In that case, Plaintiff, who was a conductor, was injured when he tripped and fell while descending interior stairs on the locomotive. There was a loose rubber mat, which he identified as a tripping hazard on an engineering report. Plaintiff notified Defendant that a personal injury claim was going to be filed within one week of the accident and thus, Defendant knew a claim was going to be pursued. In the course of discovery, Plaintiff requested documents related to inspections and maintenance, however, Defendant failed to retain the relevant report, which was destroyed.

The trial court granted Plaintiff's request for an instruction to the jury that it could draw an adverse inference that the evidence contained in the missing documents was unfavorable to Defendant. The Colorado Supreme Court considered whether in order to receive the adverse instruction, the proponent had to demonstrate the evidence was destroyed in bad faith, as opposed to willfully. The Court held that it was not necessary for the trial court to make a finding that the evidence was destroyed in bad faith, rather a showing of willful conduct was required. 129 P.3d at 1003. See also W*estern Fire Truck v. Emergency One*, 134 P. 3d 570, 576 (Colo. App. 2006).

As determined in Findings of Fact 25-26, Respondents failed to make the requisite showing of willful or intentional conduct on the part of Claimant. Accordingly, the ALJ declined to draw an adverse inference against Claimant that the IME would have provided contrary evidence to the claim that her condition worsened.

[5] Dr. Bloch issued restrictions as of June 18, 2015.

ORDER

It is therefore ordered that:

1. Claimant's Petition to Reopen is GRANTED.

2. Respondents are liable for the treatment provided by Dr. White and Porter Hospital, including the total hip arthroplasty. These shall be paid pursuant to the Workers' Compensation Fee Schedule.

3. Respondents shall provide medical benefits to Claimant through authorized treating physicians until she is released from care. These medical benefits are to be provided as post-MMI maintenance benefits.

4. Claimant's request for TTD benefits is denied and dismissed.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-034-260-01

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer/Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on May 10, 2017, in Denver, Colorado. The hearing was digitally recorded (reference: 5/10/17, Courtroom 1, beginning at 1:30 PM, and ending at 4:00 PM).

Claimant's Exhibits 1 through were admitted into evidence, without objection. Respondents' Exhibits A through G were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ established a post-hearing briefing schedule. Claimant's opening brief was filed, electronically, on May 16, 2017. Respondents' answer brief was filed, electronically, on May 23, 2017. The Claimant waived the prerogative of filing of a reply brief. Consequently, the matter was submitted for decision on May 23, 2017. The ALJ hereby issues the following decision.

ISSUES

The issues to be determined by this decision concern compensability of a bilateral inguinal hernia, allegedly sustained in late October 2016; and, if compensable, medical benefits, average weekly wage (AWW), temporary total disability (TTD) benefits

from December 12, 2016 and continuing, and the Respondents' right to a 100% offset for unemployment insurance (UI) benefits.

The Claimant bears the burden of proof on all issues by a preponderance of the evidence. The Respondents bear the burden of proof on entitlement to the unemployment insurance (UI) benefit offset, which they have satisfied.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. At the commencement of the hearing, the parties stipulated, and the ALJ finds, if the claim is compensable, the period of temporary total disability (TTD) commenced on December 12, 2016 and is ongoing until terminated by law.

2. Also, if compensable, the parties stipulated, and the ALJ finds, that the Claimant's authorized treating provider (ATP) is Concentra and all those within the chain of referrals, including John Weaver, M.D., who performed the hernia repair surgery. Respondents' denied authorization of the surgery on the ground of "causal relatedness" because they were contesting compensability.

3. Prior to October of 2016, the Claimant had no ongoing symptoms or functional limitations in his bilateral inguinal groin area and he had worked, full duty, without restrictions since his date of hire by the Employer, as a roofer, on September 22, 2016 (Claimant's Exhibit Tab 4, bates stamp 10).

4. Before being hired by the Employer, the Claimant had previously been examined by another potential employer's physician in February of 2016 and was found to have no symptoms and/or hernias at that time, and he passed a "Functional Test" which included lifting 80 pounds, carrying 80 pounds 250 feet, lifting 65 pounds from 12 to 72 inches, lifting 80 pounds from 1 to 48 inches and lifting in excess of 125 pounds (Claimant's Exhibit 3, bates stamp 6-9).

5. The Claimant adamantly testified that on **October 18, 2016**, while working as a roofer for the Employer, he was carrying some light material when he tripped over several conduit pipes on a flat roof and felt a pull in his groin area. Employer time cards for the Claimant reflect that he worked at the City of Lonetree Municipal Building on October 16, 17, 19 and 20, 2016, but not on October 18, 2017 (Respondents' Exhibit E, p. 42B). Knowing what the timecards showed and did not show, the Claimant was still adamant that his injury occurred on October 18, 2016. The Claimant had no explanation for the discrepancy in the Employer's timecards. The ALJ infers and finds, under the circumstances, that Claimant would have to be mentally impaired to be adamant that the date of injury was October 18, 2016, he was lying with no reasonable

explanation for the discrepancy in the timecards, or he was **mistaken** about the actual date of the injury. Under the circumstances, the ALJ infers and finds that the Claimant was mistaken about the actual date of injury.

6. The Respondents argue that the above-mentioned discrepancy concerning the date of injury, along with a discrepancy concerning the date of the Claimant's emergency room (ER) visit, and his felony conviction for a Class 6 Felony within the last five years (a seller giving false information to a pawnbroker) [Respondents' Exhibit G—certified copy of conviction], that the Claimant's credibility has been undermined to the point that he has failed to prove that his inguinal hernia was work-related. All of the Respondents' arguments deal with collateral impeachment of credibility. The ALJ infers that the maxim, *falsus in uno, falsus in omnibus* (false in one thing, false in all) is appealing but simplistic and not always accurate. In the real world, one can lack credibility in some matters and be truthful in other matters. It is for the ALJ to sift through the credibility matters to make such determinations.

7. The ALJ finds that there are several anomalies in the Employer's time records (as more thoroughly found herein below), which confuse the matter of dates surrounding the alleged injury, when the Claimant worked, when the Claimant was terminated from employment, and when the Claimant first sought medical care

8. The Claimant stated that following his injury, he attempted to contact his Employer to obtain medical care and was unsuccessful until he reached out to the Employer's headquarters in Phoenix, Arizona, and eventually filled out an Employee's First Report of Injury (Claimant's Exhibit 5).

9. The Employer maintains that it was first notified of the Claimant's injury on November 8, 2016, when the Claimant filled out an "Employee Accident Report " (Respondents' Exhibit E, bates stamp 37-38). Steven Batt, who testified at hearing as the workers' compensation specialist for the Employer handling claims all over the nation for the Employer, filed the Employer's First Report of Injury with the State of Colorado on December 7, 2016. He maintained that the Employer was notified of the injury on October 18, 2016 and that the Employer was notified that: "EE [Claimant] not present at time of call. Caller alleges a month and ½ ago (from the December 7, 2016 date of the First Report of Injury) EE was picking up trash and moving materials when he tripped over some conduit pipes and landed on them causing a contusion to his left lower" (Claimant's Exhibit 5, bates stamp 1). The ALJ infers and finds that Batt's reference to an injury on October 18, 2016, confused the Claimant about the date of injury. There is no discrepancy in the Claimant's description of the mechanism of injury.

10. The Claimant's first and only evaluation for a hernia following his October of 2016 injury was at the ER of Denver Health and Hospitals (DHH) on November 10, 2016, where he was diagnosed with bilateral inguinal hernias. According to the Claimant, his Employer would not send him to a doctor *(*Claimant's Exhibit 8,bates stamp 17-32, specifically, bates stamp 31). The Claimant told Batt that he went to DHH on November 7—another anomaly concerning the dates.

11. the Claimant's payroll status change forms entered into evidence by the Employer, do not correspond with the Claimant's pay dates, for example the pay records reflect the Claimant worked the week of October 15, 2016 earning gross pay of $616 for 38.50 hours worked (Respondents' Exhibit E, bates stamp 42). Yet, those same payroll records indicate that the Claimant last worked on October 15, 2016 and had voluntarily resigned for "no call/no show" on that date, but was reinstated on October 20, 2016 (Respondents' Exhibit E, bates stamp 40). If the Claimant worked 38.50 hours the week of October 15, 2016, he worked on October 20, 2016. The Respondents' witness, Batt, offered no reasonable explanation for this discrepancy. Indeed, although Batts indicated that he designed the nationwide timekeeping system (he is in Phoenix, Arizona), the ALJ finds his overall testimony confusing and lacking in reliability. Indeed, the ALJ infers and finds that the payroll records received into evidence are not reliable.

. 12. The Employer's payroll status documents further reflect that on October 20, 2016 the Claimant was involuntarily terminated for "no call/no show" on October 26th, 27th and 28th which were dates after the Claimant's injury and after the Employer's form was filled out (Respondents' Exhibit E, bates stamp 39). This disconnect in the payroll records further buttresses the fact that the payroll records are **not** reliable.

The Injury

13. Despite the discrepancies in dates on both sides dates, the ALJ finds that in late October 2016 the Claimant sustained an injury to his bilateral groin area in the course and scope of employment for his Employer. On that day, he was stepping over a conduit pipe, tripped and felt a pull in his groin area. As the night progressed and time progressed over the ensuing days, his groin pain worsened.

14. The fact that the payroll records do not reflect pay on October 18, 2016, but reflect pay dates on the 19th and 20th of October is an unexplained anomaly that is not dispositive of whether the Claimant had an injury on the job. As found herein above from the Employer's own payroll status change forms dates recorded by the Employer are confusing and unreliable. For example, on one payroll date the Claimant's last day worked was October 15, 2016 and yet for that week he worked 38.5 hours, according to the Employer's payroll records The Claimant was terminated again on October 20, 2016, two days after his alleged injury of October 18, 2016 for a "no call/no show" -- six days later.

15. The Claimant's "Employee Accident Report" (Respondents' Exhibit E, as well as the Employer's First Report of Injury, are consistent in their description of the Claimant's injury, although neither document uses the same date of injury.

Average Weekly Wage (AWW)

16. The Claimant was hired by the Employer on September 22, 2016, on a verbal contract of hire, based on $16.00 an hour for a 40 hour week as a roofer. He was expected to be available to work 40 hours per week and some of the payroll records

corroborate work approximating 40 hours per week. The verbal contract of hire yields an AWW of $640, and the ALJ so finds (Claimant's Exhibit 4, bates stamp10). The Respondents argue that the Claimant's AWW should be based upon his actual earnings from the date of hire, but they did not propose an AWW. The ALJ finds that the fairest indicator of the Claimant's AWW should be based on the contract of hire and not on a mechanistic calculation, using wage records that reflect erratic and sporadic fluctuations, despite the fact that the Claimant was expected to be available to work 40 hours + per week. Consequently, the ALJ finds the Claimant's AWW is $640, which yields a TTD benefit of $426.66 per week, or $60.95 per day.

Medical

17. The Respondents' designated physicians all render the opinion that the Claimant's condition arose from work (For example, Claimant's Exhibit 9, bates stamp 39 -- authorized treating physician (ATP) Bryan D. Counts, M.D.; bates stamp 52 and ATP Jonathan Bloch, D.O). Their opinions are dependent on the history given them by the Claimant. The ATPs, however, were of the opinion that the mechanism of injury as described by the Claimant caused the bilateral inguinal hernias. Consequently, their opinions stand or fall on determinations concerning the Claimant's credibility concerning the job related event. Although, the Respondents maintain that the Claimant has not shown that ii is more likely than not that he sustained the bilateral inguinal hernia at work, they offer no other plausible explanation (of course, they are not required to do so—they can stand on the position of putting the Claimant on his proof)

18. The medical records clearly reveal that the Claimant had bilateral hernias which were repaired by ATP John S. Weaver, M.D., on January 11, 2017, after the surgery was denied by the Respondents, but approved by Medicaid (Claimant's Exhibit 10, bates stamp 65).

19. The Claimant's ATPs have placed him on work restrictions whereby he could not work in his pre-injury employment as a roofer. These restrictions continue as of the present time.

20. None of the Claimant's ATPS have placed him at maximum medical improvement (MMI) as of the present time.

21. The Claimant has not worked or earned wages since December 12, 2016.

Temporary Total Disability

22. As found herein above, at the commencement of the hearing, the parties stipulated, and the ALJ found, if the claim was compensable, the period of temporary total disability (TTD) commenced on December 12, 2016 and is ongoing until terminated by law.

Respondents' Independent Medical Examiner (IME), Lawrence Lesnak, D.O.

23. Dr. Lesnak, D.O. did not examine the Claimant but performed a medical records review and stated the opinion that the Claimant's injury could not have occurred the way the Claimant described it, as it did not involve forceful Valsalva maneuver, even

though Dr. Lesnak on cross examination at hearing testified that the body would tighten to prevent itself from falling from a trip. He explained the Valsalva Maneuver as a very forceful overhead motion--not tripping and falling, yet he conceded that it was possible that tripping and falling and attempting to catch oneself could cause the requisite amount of pressure on the groin to cause a hernia or hernias. Dr. Lesnak's opinions are contrary to the opinions of the Claimant's ATPs. The ALJ infers and finds that Dr. Lesnak's overall opinion does not rule out bilateral inguinal hernias, caused by the Claimant's mechanism of injury. The ALJ finds the opinions of the Claimant's ATPs, concerning the mechanism of injury, as described by the Claimant, as the cause of the Claimant's bilateral inguinal hernias, more persuasive and credible than Dr. Lesnak's ultimate opinion.

Credibility

24. According to the Claimant, he had no bilateral inguinal symptoms prior to October of 2016 and he has not worked since that time. His testimony is consistent with the medical records, which only reflect three previous hernia injuries, all of which had been surgically repaired and after which Claimant was cleared for heavy lifting by Lon Noel, M.D., on February 2, 2016 (Claimant's Exhibit 3, bates stamp 6-9). The Claimant verbally informed the headquarters of the Employer of his injury as testified to by Steven Batt, which resulted in the Employer filing an "Employer's First Report of Injury." The fact that the First Report of Injury, as well as the Claimant's "Employee Accident Report" contained different dates does not significantly detract from the fact that there is no other evidence presented as to how the Claimant developed his bilateral hernias other than his trip at work. The Respondents' expert, Dr. Lesnak only rendered the opinion that the trip did not cause the hernias, yet he left open the possibility in response to a question on cross-examination. He offered no other plausible explanation for the Claimant's bilateral inguinal hernias.

25. The medical records reflected that the Claimant required surgery after the incident of October 2016, had the surgery and that the surgery repaired the two bilateral inguinal hernias.

26. On November 8, 2016, after the Claimant's employment was terminated, he returned to the Employer to report an injury. In his handwriting, he indicated that he did not previously report this injury to his Employer. He also indicated that he had already gone to the doctor at DHH and was told he needed follow up. He adamantly testified that this document was filled out on November 8, 2016 and he equivocally testified that he looked at a calendar to fill in the date on this document (Respondents' Exhibit E, bates stamp: 38; Hearing. Transcript, p. 52, lines. 17-19: "I guess I looked at a calendar – before I signed it in their office. I do remember that. I remember that. I looked at a calendar specifically in the office at Progressive. That's where I got the date from"). The ALJ infers and finds that there is no adequate explanation for the anomaly in dates, but the Claimant knew what Batt was recording and, nonetheless, insisted that he had gone to DHH, despite the DHH record reflecting November 10, 2016. The ALJ infers and finds that the Claimant was mistaken on his dates.

27. Steven Batt testified that he was informed about the alleged injury via the "Employee Accident Report" on or about November 8, 2016 and that he knew this based on the receipt of the document via email (Hearing. Transcript, pp. 57-58, 59-60).

28. DHH records establish that the Claimant did not actually seek out any medical treatment until November 10, 2016, two days after he said that he had seen a doctor prior to November 8, 2016. He had informed the Employer in his handwriting that he had already seen a doctor as of November 8, 2016. (Respondents' Exhibit. B, bates stamp 4; and, Exhibit E, bates stamp 38). The Claimant knew of this discrepancy yet he said he had sought medical treatment as of November 8th. Again, he would have to have been mentally impaired, was lying, or he was mistaken on this point. The ALJ infers and finds that the Claimant was mistaken on this date.

29. The Claimant did not mention regarding his prior hernias. He stated that he had injured this exact part of the body twenty years ago, at age 16, while not mentioning the fact that he had undergone a surgical repair of his right hernia about one year prior to the reporting of the injury (Respondents' Exhibit. E, bates stamp 38; Exhibit D:, bates stamp 33; and, Hearing. Transcript p. 13, lines. 14-17). While this omission is troublesome, the fact remains that the Claimant had fully recovered from the right hernia repair and he was able to work full time at the heavy job of roofing, immediately prior to the incident of late October 2016.

30. The Claimant was convicted a sixth-degree felony, within the past five years, for knowingly providing false information to a pawnbroker regarding the sale of items on September 18, 2015. The Claimant was placed on a one year probation. While this felony conviction reflects on "honesty," and is relevant to that extent, it does not undermine the totality of the evidence that the Claimant was able to work, full duty as a roofer, until late October 2016, when he actually experienced a bilateral inguinal hernia. He gave a consistent history of the mechanism of his injury to all of his medical providers; and, the Respondents' argue, by implication, that the ALJ should infer that the Claimant was injured elsewhere, outside of work. There was no persuasive evidence, however, concerning any non-work related activities where the Claimant could have sustained bilateral inguinal hernias. Convicted felons cannot be deemed liars in all respects. Their testimony must be measured against consistencies on major points, *e.g.,* the mechanism of injury, against a backdrop of the totality of the evidence including medical evidence, and not on discrepancies on dates (which exist on both sides), and a felony conviction of furnishing false information to a pawnbroker.

31. The ALJ finds the part of the Claimant's testimony that he sustained the bilateral inguinal hernias in late October 2016, credible despite the anomalies and inconsistencies in his testimony. To find that he sustained the hernias elsewhere, in a non-work related activity, would border on speculation under the circumstances.

Unemployment Insurance (UI) Benefit Offset

32. The Claimant received UI benefits in the amount of $60 per week from January 29, 2017 (week ending February 4, 2017) through the week ending on April 1,

2017, which yields a net TTD benefit for this period of $$366.66 per week, or $52.38 per day.

Ultimate Findings

33. Despite the areas from which the Claimant's credibility is detracted, *e.g.,* his felony conviction for a crime implicating dishonesty and the discrepancies in the dates he gave for the injury and his first medical visit, plus his failure to mention a right hernia surgery to the Respondents a year before the date of injury, which as found, is not precise, the ALJ finds the core of his testimony concerning the mechanics of his **bilateral** hernias credible and establishing a work-related injury in late October 2016. Further, the Claimant's description of the mechanics of his injury has been consistent and credible, and it supports the work-related opinions of his ATPs. On the other hand, the ALJ finds Respondent's IME, Dr. Lesnak's, opinion lacking in credibility because he did not persuasively explain when the described mechanics of injury made it impossible for the Claimant to sustain bilateral inguinal hernias, yet he conceded on cross-examination that it was possible.

34. Between conflicting medical opinions, the ALJ accepts the opinions of the Claimant's ATPs, based on substantial evidence, and rejects the opinion of Respondents' IME Dr. Lesnak.

35. The medical records, coupled with the sectors of the Claimant's testimony, which have been found credible, with the exception on the discrepancy on dates (on both sides), establishes that he sustained work-related bilateral inguinal hernias in late October 2016. He has proven by a preponderance of the evidence that he sustained compensable, bilateral hernias in late October 2016. At the very least, his pre-existing disposition to hernias was aggravated and accelerated by the work-related event. He has proven that the medical care by the Claimant's ATPs was, and is, reasonably necessary to cure and relieve the effects of his injury, and causally related to his compensable, bilateral inguinal hernias.

36. The Claimant has proven by a preponderance of the evidence that he has earned no wages since he was placed on restrictions by the Employer's designated medical providers at Concentra on December 12, 2016. As stipulated and found herein above, he has been temporarily and totally disabled since December 12, 2016.

37. As found herein above, the Claimant's AWW is $640, which yields a weekly TTED rate $426.66, or $60.95 per day.

38. The Claimant has not yet been declared to be at MMI and he .has not been released to unrestricted work, nor has the Employer offered the Claimant a modified-duty job, thus, he has met all the prerequisites for an entitlement to TTD benefits.

39. Since his first ER visit on November 10, 2016 as found, it was stipulated and found that the Claimant's medical care at Concentra thereafter was authorized if the claim was compensable. Although Surgeon Dr. Weaver's surgery was denied on the basis that the Respondents were challenging causal relatedness and

compensability, Dr. Weaver was within the authorized chain of referrals from Concentra and now that the claim has been determined compensable, Dr. Weaver's bilateral hernia repair of January 11, 2017 was authorized, causally related, and reasonably necessary to cure and relieve the Claimant's condition

40. The Claimant has proven by a preponderance of the evidence that the ER visit at Denver Health on November 10, 2016 was an emergency situation.

41. The Claimant has proven by a preponderance of the evidence that the medical care rendered by the medical providers at Concentra Medical Center and their referral to John Weaver, M.D., at U.S. Medical Group is reasonably necessary and causally related to the bilateral inguinal hernias suffered in the course and scope of the Claimant's employment in late October 2016.

42. As found , the Claimant was a full-time roofer and the best indicator of the his temporary wage loss should be based on the contract for hire, thus, the Claimant's AWW is $640.

43. As found, the Claimant received UI benefits in the amount of $60 per week from January 29, 2017 (week ending February 4, 2017) through the week ending on April 1, 2017, which yields a net TTD benefit for this period of $366.66 per week, or $52.38 per day.

44. The Claimant is entitled to TTD benefits from December 12, 2016 and continuing at two-thirds of his AWW, which is $426.67 a week or $60.95 a day, from December 12, 2016 ongoing, subject to applicable offsets until terminated pursuant to statute is warranted, excluding the period from January 29, 2017 through April 1, 2017, both dates inclusive, a total of 63 days, during which time he is entitled to net TTD benefits of $368.66 per week, or $52.38 per day, in the aggregate subtotal amount of $3,299.34.

45. For the period from December 12, 2016 through January 28, 2017, both dates inclusive, a subtotal of 47 days, the Claimant is entitled to TTD benefits of $426.67 per week, or $60.95 per day, in the aggregate subtotal amount of $2,864.65. From April 2, 2017 through the hearing date of May 10, 2017, both dates inclusive, a total of 39 days, the Claimant is entitled to TTD benefits of $426.67 per week, or $60.95 per day, in the aggregate subtotal amount of $2,377.05. As of the hearing date, the Claimant is entitled to a grand total of past due TTD benefits in the amount of $8,541.04.

46. From May 11, 2017 and continuing until any of the conditions for the cessation of TTD benefits as prescribed by law occur, the Claimant is entitled to continuing TTD benefits of $426.67 per week.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning *v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, despite the areas from which the Claimant's credibility is detracted, *e.g.,* his felony conviction for a crime implicating dishonesty and the discrepancies in the dates (there are also discrepancies in the Employer's records, as found herein above) he provided for the date of injury and his first medical visit, plus his failure to mention a right hernia surgery a year before the date of injury to the Respondents, which as found herein above, is not precise, the ALJ found the core of the Claimant's testimony concerning the mechanics of his **bilateral** hernias credible and establishing a work-related injury in late October 2016. Further, the Claimant's description of the mechanics of the injury, as found, has been consistent and credible, and it supports the work-related opinions of his ATPs. On the other hand, as found, Respondent's IME, Dr. Lesnak's, opinion was lacking in credibility because he did not persuasively explain why the described mechanics of injury made it impossible for the

Claimant to sustain bilateral inguinal hernias, yet he conceded on cross-examination that it was possible.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting medical opinions, the ALJ accepted the opinions of the Claimant's ATPs, based on substantial evidence, and rejected the opinion of Respondents' IME Dr. Lesnak.

Compensability

c. A compensable injury is one that arises out of and in the course of employment. Section 8-41-301(1) (b), C.R.S. The "arising out of" test is one of causation. If an industrial injury aggravates or accelerates a preexisting condition, the resulting disability and need for treatment is a compensable consequence of the industrial injury. Thus, a claimant's personal susceptibility or predisposition to injury does not disqualify the claimant from receiving benefits. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). An injured worker has a compensable new injury **if the employment-related activities aggravate, accelerate, or combine with the pre-existing condition to cause a need for medical treatment or produce the disability for which benefits are sought.** § 8-41-301(1) (c), C.R.S. *See Merriman v. Indus. Comm'n,* 120 Colo. 400, 210 P.2d 448 (1949); *Anderson v. Brinkoff,* 859 P.2d 819 (Colo. 1993); *National Health Laboratories v. Indus. Claim Appeals Office,* 844 P.2d 1259 (Colo. App. 1992); *Snyder v. Indus. Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). An injury resulting from the concurrence of a preexisting condition and a hazard of employment is compensable. *H & H Warehouse v. Vicory*, *supra*. *Duncan v. Indus. Claims App. Office*, 107 P.3d 999 (Colo. App. 2004). Even where the direct cause of an accident is the employee's pre-existing disease or condition, the resulting disability is compensable where the conditions or circumstances of employment have contributed to the injuries sustained by the employee. *Ramsdell v. Horn*, 781 P.2d 150

(Colo.App. 1989). *Also see* § 8-41-301(1) (c), C.R.S; *Parra v. Ideal Concrete,* W.C. No. 4-179-455 [Indus. Claim Appeals Office (ICAO), April 8, 1998]; *Witt v. James J. Keil Jr.,* W.C. No. 4-225-334 (ICAO, April 7, 1998). As found, the medical records, coupled with the credible sectors of the Claimant's testimony, with the exception on the discrepancy on dates (on both sides), establishes that he sustained work-related bilateral inguinal hernias in late October 2016. He has proven by a preponderance of the evidence that he sustained compensable, bilateral hernias in late October 2016. At the very least, his pre-existing disposition to hernias was aggravated and accelerated by the work-related event

Medical

d. It has been stipulated and found that Concentra, and its referrals, was an authorized medical provider, however, the issues of reasonable necessity and causal relatedness needed to be resolved. To be a compensable benefit, medical care and treatment must be causally related to an industrial injury or occupational disease. *Dependable Cleaners v. Vasquez,* 883 P. 2d 583 (Colo. App. 1994). As found, Claimant's medical treatment is causally related to his compensable, bilateral inguinal hernias of late October 2016. Also, medical treatment must be reasonably necessary to cure and relieve the effects of the industrial occupational disease. § 8-42-101 (1) (a), C.R.S. *Morey Mercantile v. Flynt,* 97 Colo. 163, 47 P. 2d 864 (1935); *Sims v. Indus. Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). As found, the Claimant's medical care and treatment was and is reasonably necessary to cure and relieve the effects of his compensable injury.

Emergency Room Visit of November 10, 2016

e. A medical emergency allows an injured worker the right to obtain treatment without undergoing the delay inherent in notifying the employer and awaiting approval. However, once the emergency has ended, the employee must give notice to the employer of the need for continuing care. *Sims v. Indus. Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). As found, the Claimant attempted to reach the Employer for a medical referral, beginning in late October 2016 and did not get the referral until he was referred to Concentra on December 12, 2016. As found, the November 10, 2016 ER visit was of an emergent nature.

Average Weekly Wage

f. An AWW calculation is designed to compensate for **total** temporary wage loss. *Pizza Hut v. Indus. Claim Appeals Office,* 18 P. 3d 867 (Colo. App. 2001). *See* § 8-42-102, C.R.S. An ALJ has the discretion to determine a claimant's AWW, including the claimant's cost for COBRA insurance, based not only on the claimant's wage at the time of injury, but also on other relevant factors when the case's unique circumstances require, including a determination based on increased earnings and insurance costs at a subsequent employer. *Avalanche Industries, Inc. v. Clark,* 198 P.3d 589 (Colo. 2008). In the present case, as found, the fairest approximation of the Claimant's AWW was

based on the contract of hire, which was $16 an hour for a 40-hour week, equaling $640.

Temporary Total Disability and UI Offset

g. To establish entitlement to temporary disability benefits, a claimant must prove that the industrial injury has caused a "disability," and that he has suffered a wage loss that, "to some degree," is the result of the industrial disability. § 8-42-103(1), C.R.S; *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Disability from employment is established when the injured employee is unable to perform the usual job effectively or properly. *Jefferson Co. Schools v. Headrick*, 734 P.2d 659 (Colo. App.1986). This is true because the employee's restrictions presumably impair his opportunity to obtain employment at pre-injury wage levels. *Kiernan v. Roadway Package System*, W.C. No. 4-443-973 [Indus. Claim Appeals office (ICAO), December 18, 2000]. There is no statutory requirement that a claimant must present medical opinion evidence from of an attending physician to establish her physical disability. See *Lymburn v. Symbois Logic*, 952 P.2d 831 (Colo. App. 1997). Rather, the Claimant's testimony alone is sufficient to establish a temporary "disability." *Id*. Indeed, as stipulated and found, if the case was determined compensable, which it has been, the Claimant has been temporarily and totally disabled since December 12, 2016 and continuing.

h. Once the prerequisites for TTD are met (*e.g.,* no release to return to full duty, MMI has not been reached, a temporary wage loss is occurring, modified employment is not made available, and there is no actual return to work), TTD benefits are designed to compensate for a 100% temporary wage loss. *See Eastman Kodak Co. v. Indus. Comm'n,* 725 P. 2d 107 (Colo. App. 1986); *City of Aurora v. Dortch,* 799 P. 2d 461 (Colo. App. 1990). As found, it was stipulated and found, if the case was determined compensable, which it has been, the Claimant has been temporarily and totally disabled since December 12, 2016 and continuing.

i. Pursuant to § 8-42-103 (1) (f), C.R.S., the Respondents are entitled to a 100% offset for UI benefits. As found, the Claimant received UI benefits in the amount of $60 per week from January 29, 2017 (week ending February 4, 2017) through the week ending on April 1, 2017, which yields a net TTD benefit for this period of $366.66 per week, or $52.38 per day, after the 100% offset.

Burden of Proof

j. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer*

v. Indus. Claim Appeals.Office, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained his burden of proof on all issues.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Respondents shall pay the costs of all authorized, reasonably necessary and causally related medical care and treatment for the Claimant's bilateral inguinal hernias, including the surgery performed by John Weaver, M.D., subject to the Division of Workers' Compensation Medical Fee Schedule.

B. Respondents shall pay the Claimant temporary total disability benefits of $426.67 a week or $60.95 a day, from December 12, 2016 ongoing, subject to applicable offsets until terminated pursuant to statute is warranted, excluding the period from January 29, 2017 through April 1, 2017, both dates inclusive, a total of 63 days, during which time he is entitled to net TTD benefits of $368.66 per week, or $52.38 per day, in the aggregate subtotal amount of $3,299.34, which is payable retroactively and forthwith.

C. For the period from December 12, 2016 through January 28, 2017, both dates inclusive, a subtotal of 47 days, Respondents shall pay the Claimant temporary total disability benefits of $426.67 per week, or $60.95 per day, in the aggregate subtotal amount of $2,864.65, which is payable retroactively and forthwith.

D. From April 2, 2017 through the hearing date of May 10, 2017, both dates inclusive, a total of 39 days, Respondents shall pay the Claimant temporary total disability benefits of $426.67 per week, or $60.95 per day, in the aggregate subtotal amount of $2,377.05, which is payable retroactively and forthwith.

E. As of the hearing date, Respondents shall pay the Claimant a grand total of past due temporary total disability benefits in the amount of $8,541.04, which encompasses all of the amounts in paragraphs B, C, and D above.

F. From May 11, 2017 and continuing until any of the conditions for the cessation of temporary total disability benefits as prescribed by law occur,

Respondents shall continue to pay the Claimant temporary total disability benefits of $426.67 per week.

G. Respondents shall pay the Claimant statutory interest in the amount of eight percent (8%) per annum on all amounts of indemnity benefits due and not paid when due.

H. Any and all issues not determined herein are reserved for future decision.

DATED this_____day of May 2017.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-010-403-01

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer/Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on May 11, 2017, in Denver, Colorado. The hearing was digitally recorded (reference: 5/11/17, Courtroom 1, beginning at 1:30 PM, and ending at 5:00 PM).

Claimant's Exhibits 1 through 14 were admitted into evidence, without objection, Respondents' Exhibits A through J were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ established a post-hearing briefing schedule: Claimant's opening brief was filed on May 16, 2017. Respondents' answer brief was filed on May 19, 2017. No timely reply brief was filed. The matter was deemed submitted for decision on May 24, 2017.

ISSUES

The issues to be determined by this decision concern compensability of an incident of March 3, 2016, involving an alleged shock by the Claimant's headset; and, if compensable, medical benefits, average weekly wage (AWW), and temporary total disability (TTD) benefits from March 3, 2016 and continuing.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. At the commencement of the hearing, the parties stipulated, and the ALJ finds if the case is compensable the Claimant is entitled to medical and TTD benefits, however, since the ALJ determines as herein below found, the case is **not** compensable. Therefore, the stipulation and findings thereon is moot.

2. At the time of the alleged injury, the Claimant worked as a customer service representative in a call center for Otterbox, a client of the Employer (the Employer is a temporary staffing agency).

3. The Respondents denied liability for the Claimant's alleged injuries.

The Incident

4. On March 3, 2016, the Claimant alleges that she was on a call with a customer and wearing a wireless headset when she heard a "buzz" and felt an electrical "zap" from her headset. She alleges that she sustained a work related injury after she was "electrocuted" by her headset. Following the incident, the Claimant alleged a myriad of symptoms, including headaches, sensitivity to light and sound, slurred speech, chest pain, arm pain, and foot pain.

Testing of the Headset

5. The headset was examined by Jeffrey Sellon, P.E., CFEI, CVFI (a professional electrical engineer) and an exemplar headset was tested. Sellon authored a report wherein he concluded that the headset in question was not capable of delivering an electrical shock (Respondents' Exhibit I, pp.102-121).

6. Sellon examined both the actual wireless headset the Claimant had been wearing at the time of the incident and an exemplar headset, provided to him in order to complete destructive testing (the actual headset was necessarily destroyed it its testing). The exemplar headset was identical to the subject headset and base unit with the exception of an identification label sticker (Respondents' Exhibit I p. 103).

7. Sellon thoroughly tested both the actual headset worn by the Claimant and the exemplar headsets. He concluded the following: (1) the headset casing and soft

ear pad cushions were made on non-conductive plastic; (2) the headset was being worn at the time of the incident and not connected to the charging base, power supply, or telephone cable; (3) the battery in the headset was rated a low 3.7 volts which is only 12% of the "safe" voltage level of 30 for humans; (4) human skin has a relatively high resistance to the flow of electricity; (5) the headset assembly screws that were metal were imbedded in non-conductive plastic and no exposed metal parts on the headset could come in contact with human skin; ;6) without multiple faults within the headset, no circuit could be created to transmit a shock,(7) the headset worked immediately after the reported shock; (8) a short or fault within the headset would not have generated voltage higher than 3.7 vpc. Sellon's ultimate conclusion were the even if there were electrical faults within the subject headset, the conditions of electrical shock were not present from a 3.7 vpc battery(Respondents' Exhibit I pp.. 106-107).

8. The Claimant submitted no persuasive facts into evidence to challenge the chain of custody reflected in Sellon's Report. Indeed, a headset is not fungible matter where a "chain of custody" is important. The Claimant raised arguments concerning the chain of custody, for the first time, in her opening brief. Pictures of the headset tested were included in Sellon's Report (Respondents' Exhibit I, pp. 112 – 119). The Claimant did not testify that the pictured headset was different from the headset she was wearing at the time of the incident. The Claimant presented no persuasive evidence in rebuttal to Sellon's opinions.

The Claimant's Prior Head Injury

9. According to the Claimant, she sustained a prior injury head injury in March of 2011 when she hit her head against a boat following a dive in rough waters. According to the Claimant, her symptoms resolved within a few months. The Claimant's chiropractic records demonstrate that she was treating for a variety of symptoms subsequent to the boating injury between April 5, 2011 through April 8, 2013, a period of approximately two years (Respondents' Exhibit A pp. 2-16). Included in these symptoms and complaints were discussions of memory issues, headaches, depression, the feeling of spinning, phonophobia and photophobia (sound and light sensitivity).

10. At the hearing, the Claimant was allowed to wear sunglasses and a large hat to shield her from the light.

Medical Treatment Prior to the Incident in Question

11. The Claimant treated with Allison Gray, M.D. at Kaiser Permanente on September 23, 2015. This visit occurred approximately six months prior to the Claimant's alleged date of injury. Dr. Gray reported that the Claimant sustained a head injury in March of 2011. Following that injury, the Claimant suffered from headaches, nausea, photophobia, and phonophobia. Dr. Gray noted that the Claimant had difficulty with math skills following the 2011 injury and that it took a long time for the photophobia

and phonophobia to improve. According to Dr. Gray, “since March of 2011, she states that she has had difficulty with her memory.” The Claimant also reported difficulty with cognitive exercises. Dr. Gray assessed a mild cognitive impairment related to recent psychosocial stress and the mild traumatic brain injury she sustained in March of 2011 (Respondents’ Exhibit G, pp. 83, 84). The Claimant’s concerns expressed to Dr. Gray were sufficient for Dr. Gray to refer the Claimant for neuropsychological testing.

Aftermath of the March 3, 2016 Incident

12. When the Claimant presented to the hospital following the alleged “electrocution” incident on March 3, 2016, she told her treating providers that she was “shocked” by her wireless headset. She was referred to James Rafferty, D.O., who became her authorized treating physician (ATP) for her workers’ compensation claim. Dr. Rafferty treated the Claimant from March 3, 2016 through May 17, 2016. In his multiple reports, Dr. Rafferty states “although the temporal association between [Claimant’s] event at work and the onset of her symptoms supports work-relatedness, I do not yet have enough information to determine with any reasonable degree of certainty whether she had an exposure to an electrical current in the workplace” [Dr. Rafferty recommended that an evaluation be conducted with an expert familiar with electrical currents to determine whether an exposure occurred.(Respondents’ Exhibit C, p. 46).

13. Whereas Dr. Rafferty mentions the possibility of “electrostatic charges,” he states that those charges “cannot be quantified” and he does not make any statement concerning an opinion that the source of the Claimant’s injury is an electrostatic charge (Respondents’ Exhibit C, p. 46).

Claimant’s Independent Medical Examination (IME) by Bennett Machanic, M.D.

14. The Claimant was evaluated by Dr. Machanic on August 31, 2016. Dr. Machanic stated that “according to her history, her headset short circuited causing an electrical shock like sensation.” (Claimant’s Exhibit 11). At no point does Dr. Machanic undertake a causation analysis in his report and his conclusions and recommendations are predicated on the assumption that the Claimant sustained an electrical shock from her headset. Dr. Machanic’s opinions are based entirely on the history given to him by the Claimant. Consequently, his opinions are “no better” than the history given to him by the Claimant. Dr. Machanic noted “this raises questions again of the extent of the electrical type of process.” As found in Engineer Selon's opinions there was **no** injuring electrical process.

Neuropsycholgical Evaluation by Gregory Thwaites, Ph.D.

15. As part of the assessment of the March 3, 2016 incident, the Claimant underwent a neuropsychological analysis with Dr. Thwaites, on June 21, 2016

(Respondents' Exhibit D, pp. 57-67). Dr. Thwaites noted that the Claimant performed at near chance levels on a formal test of effort and motivation. Further, he noted that the Claimant's performance was well below the performance of patients with advanced dementia. He stated: "So in addition to her unusual presentation in interview and symptom reporting, her performance on a formal test of effort and motivation is rather impaired. Her profile of cognitive test results across measures is implausible and suggest a functional aspect to her presentation" (Respondents' Exhibit D, pp. 61-62).

Respondents' Independent Medical Examination (IME) by Eric O. Ridings, M.D.

16. At the Respondents' request, the Claimant was evaluated by Dr. Ridings on May 24, 2016 (Respondents' Exhibit H). Dr. Ridings was of the opinion that the Claimant did not sustain any injury from her wireless headset on March 3, 2016. "In my medical opinion, the patient's constellation of complaints cannot be taken at face value. There is no injury or disease process that can cause such a widespread and variable pattern of symptoms" (Respondents' Exhibit H, p. 99).

17. After Engineer Jeffrey L. Sellon and Dr. Ridings issued their reports, the Claimant alleged that she suffered from "acoustic shock disorder." While no testimony concerning "acoustic shock disorder" was offered at the hearing, to address these allegations, Dr. Ridings issued a supplemental report and noted that his search of the National Institute of Health sponsored US National Library of Medicine Database returned no articles on "Acoustic Shock Disorder." Dr. Ridings was of the opinion that it is not probable that "Acoustic Shock Disorder" is an actual medical condition. "Even in the unlikely event that such a condition exists, [Claimant] at no point in her course claimed injury from a sudden loud sound, but rather claimed that she felt an electrical shock shooting across her head. This is not consistent with the descriptions of 'acoustic shock injury' that I found" (Respondents' Exhibit H, p. 86).

18. There are no medical opinions in this case that the Claimant sustained an "acoustic shock" incident or sustained an electrostatic charge incident.

19. According to Dr. Ridings, the Claimant's symptoms did not make any medical sense given the alleged mechanism of injury. Dr. Ridings was asked to offer an explanation for the Claimant's alleged symptoms. He responded: "Psychiatric, that the patient is delusional, malingering, that the patient for reasons of secondary gain of whatever sort fabricated this entire history [The ALJ takes administrative notice of the fact that Division of Workers' Compensation (DOWC) Level 2 Accredited physicians may render psychiatric opinions and any objections thereto would go to weight]. Conceivably, the patient could have another psychological diagnosis such as severe anxiety with somatization to a marked degree. Beyond that…there just isn't a medical explanation for how physiologically, any of these complaints could happen the way she stated, much less all of them." Despite Dr. Ridings' extreme characterization of the Claimant's present condition, the ALJ finds his explanation credible.

20. According to Dr. Ridings, no objective test revealed any physical problem with the Claimant. He noted that the Claimant has no physical injury to her ears. MRI (magnetic resonance imaging) scans of her brain were normal. In the first three visits after her alleged injury, all of her testing was essentially normal. Dr. Ridings points out that the Claimant later alleged slurred speech, but that her initial treating providers did not note this in their records (*See* Respondents' Exhibits B and F).

21. According to Dr. Ridings, the Claimant had severe co-morbid conditions, including anxiety and a prior traumatic head injury. Dr. Ridings observed that the Claimant's symptoms and complaints following the March 3, 2016 incident were nearly identical to the symptoms following the 2011 head injury.

22. Dr. Ridings was the only medical provider who performed a causation analysis in this matter as outlined by the Level II training and accreditation course. He stated that the other medical providers in this matter appeared to predicate their opinions, to the extent any such causation opinions were expressed, on the Claimant's history that she received an electrical shock injury from her headset. Because Engineer Sellon concluded that an electrical shock was not possible, and because the Claimant's constellation of symptoms could not be explained by an electrical shock incident, Dr. Ridings concluded and that the Claimant's symptoms are not related to the headset incident.

23. Dr. Ridings testified that contrary to the Claimant's contentions, none of the Claimant's treating physicians rendered opinions in their reports that the Claimant's symptoms were work related. He noted that just because a physician orders a test, it should not be construed to imply that the physician believes that the symptoms are work related.

24. Dr. Ridings reviewed Dr. Machanic's report and stated that Dr. Machanic's report seemed to be premised on the idea that the Claimant had actually suffered an electrical injury to her head. Even so, when asked to break down Dr. Machanic's actual opinion during testimony, Dr. Ridings noted that there was "hemming and hawing" in the report and Dr. Ridings indicated that he would not give it much weight.

25. Dr. Ridings was of the opinion, to a reasonable degree of medical probability, that there was no "incident" on March 3, 2016 to explain the Claimant's present symptoms. He was of the opinion that the headset did not cause the Claimant's symptoms and complaints. He further rendered the opinion that the Claimant's pre-existing conditions were not aggravated or accelerated by the incident on March 3, 2016.

Analysis of the Evidence

26. The Claimant initially alleged that she was "electrocuted" by her headset. This is what she told all of her medical providers happened. Her medical providers provided treatment based upon the Claimant's history that she was electrocuted. The un-rebutted forensic evidence by Engineer Sellon establishes that this was not possible.

27. At hearing, the Claimant reported that the effects of her March of 2011 injury cleared up within a few months. In fact, the Claimant was treated at Kaiser for lingering effects of this injury in late 2015, for approximately two years. The Claimant testified that she has not been able to sit in the sun for any amount of time since the incident and that she has difficulty walking and with her balance – so much so that she uses a motorized cart when shopping at Wal-mart. She also testified that she has to wear a hat and sunglasses, even inside, due to sensitivity to light. As found herein above, the ALJ allowed her to wear sunglasses and a hat throughout the hearing. Dr. Ridings reviewed surveillance from April 5, 2016, approximately one month after the incident in question, which showed the Claimant walking through Wal-mart with ease (and without a hat) and walking outside in her yard, unassisted, without a hat. Dr. Ridings noted that she was able to carry her Wal-mart purchases in one hand and was able to walk without any difficulties with balance despite the extra weight on one side. This is inconsistent with the Claimant's testimony and her allegations to her physicians; and, it is inconsistent with her presentation at the hearing.

28. Dr. Ridings also noted in his report and during his hearing testimony that the Claimant's performance on physical evaluation displayed numerous inconsistencies and inorganic findings. Dr. Ridings stated that he agreed with Dr. Thwaites that there was a "functional" element to the Claimant's symptom presentation – meaning that the Claimant was potentially making up or exaggerating symptoms.

29. As found by Engineer Sellon, the headset in question did not cause any electrical injury to the Claimant (Respondents' Exhibit I, p. 107). It was not capable of doing so, according to Sellon. In her Position Statement, the Claimant alleges that the testing was done on an exemplar headset and cannot be relied upon. Sellon noted in his report that the exemplar was identical to the headset in question other than an identification label. He also evaluated the actual headset (Respondents' Exhibit I, p. 103). Further, Sellon noted "it is therefore reasonable to conclude that the conditions for electric shock were not present from the 3.7 V_{DC} battery located in the subject wireless headset even if there were electrical faults within the non-conductive headset" (Respondents' Exhibit. I, p. 107).

30. The Claimant alleges in her opening brief that Engineer Sellon's report was flawed, and that the flawed findings carried over to Dr. Ridings' reports. Claimant had no objections to the admissibility of Engineer Sellon's Report. The ALJ finds that the Claimant waived any objection to the admissibility of Sellon's Report. Although the

Claimant raised the idea of lack of a chain of custody, she did not pursue this argument. Indeed, as found herein above, Engineer Sellon tested the actual headset used by the Claimant, which was destroyed in the testing, and he tested an identical exemplar. The headsets tested were not fungible matter. Consequently, the "chain of custody" argument is a 'red herring" that is not relevant to an appropriate analysis of Sellon's testing.

31. The testimony of Grant Conquest, called on the Claimant's behalf, supports the reality of the Claimant's symptoms, according to Conquest, however, it adds nothing to a causal analysis of the Claimant's present condition. Claimant's attempt to qualify Conquest as an expert in electrical matters was rejected.

32. There is no persuasive physical evidence that the Claimant sustained any injury at all. Every test conducted in an attempt to explain her symptoms has been normal. According to Dr. Ridings, "it is my opinion within a reasonable degree of medical probability that any shock that a battery leaving no visible signs and no reproducible physical abnormalities could not account for the patient's symptoms" (Respondents' Exhibit H, p. 100]). The Claimant has failed to show that she would not have sustained any injury "but for" the use of the headset.

33. The mere fact that a claimant experiences symptoms while performing work does not require an inference that there has been an injury or an aggravation or acceleration of a preexisting condition, and the ALJ hereby declines to draw such an inference.

34. The Claimant argues that she may have sustained an injury as a result of an electrostatic charge. While Dr. Rafferty was of the opinion that the Claimant may have been exposed to an electrostatic charge, he did not diagnose the Claimant with an injury as a result of an electrostatic charge. No persuasive medical evidence of any kind was submitted to support an injury by electrostatic shock. According to Dr. Ridings, there was no evidence of any injury from electrostatic shock, "Acoustic Shock Disorder" or electrocution. Dr. Ridings specifically testified that to propose that the Claimant's alleged multi-faceted injuries were attributable to an electrostatic charge was "ridiculous."

Ultimate Findings

35. There are no persuasive medical opinions supporting the Claimant's claim for workers' compensation benefits. Her ATP, Dr. Rafferty, rendered an opinion concerning "possibilities," not probabilities. As found herein above, the Claimant's IME, Dr. Machanic, rendered an opinion based exclusively on the history given to him by the Claimant; and, his opinion is no better than the history given to him by the Claimant. The ALJ finds that the persuasive and credible medical opinion of Dr. Ridings on causal relatedness is thorough, in accord with the prescribed causal analysis methods of the

Division of Workers' Compensation Level 2 Training; and, it is, therefore highly persuasive and credible. The ALJ finds that the Claimant's testimony has major inconsistencies; and, the magnitude of her present, manifested symptoms neither add up nor do they make medical or engineering sense in relation to the "headset" incident. The ALJ, therefore, finds the Claimant's testimony lacking in credibility. As found herein above, the testimony of Grant Conquest adds nothing to the causal analysis of the Claimant's present condition.

36. Between any conflicting evidence, the ALJ makes a rational choice to accept the expert opinion of Dr. Ridings, which is dispositive, and to reject any opinions or evidence to the contrary.

37. The Claimant alleges in her opening brief that Engineer Sellon's Report was flawed, and that the flawed findings carried over to Dr. Ridings' reports. Sellon's Report was admitted into evidence without objection by the Claimant. Dr. Ridings was entitled to rely, in part, on Sellon's Report

38. The Claimant has failed to prove, by a preponderance of the evidence that she sustained compensable injuries arising out of the course and scope of her employment (the "headset" incident) on March 3, 2016.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or

inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, there are no persuasive medical opinions supporting the Claimant's claim for workers' compensation benefits. Her ATP, Dr. Rafferty, renders an opinion concerning "possibilities," not probabilities. As found herein above, the Claimant's IME, Dr. Machanic, rendered an opinion based exclusively on the history given to him by the Claimant. As further found, the persuasive and credible medical opinion of Dr. Ridings on causal relatedness is thorough, in accord with the prescribed causal analysis methods of the Division of Workers' Compensation Level 2 Training; and, it is, therefore highly persuasive and credible. Also, as found, the Claimant's testimony has major inconsistencies; and, the magnitude of her present, manifested symptoms neither add up nor do they make sense in relation to the "headset" incident. As found, the Claimant's testimony was lacking in credibility. Also as found, the testimony of Grant Conquest added nothing to the causal analysis of the Claimant's present condition.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between any conflicting

evidence, the ALJ made a rational choice to accept the expert opinion of Dr. Ridings, which is dispositive, and to reject any opinions or evidence to the contrary.

Evidentiary Matter/ Report of Engineer Sellon

c. As found, the Claimant alleges in her opening brief that Engineer Sellon's Report was flawed, and that the flawed findings carried over to Dr. Ridings' reports. As further found, Engineer Sellon's Report was admitted into evidence without objection by the Claimant. If the Claimant felt that the report was flawed, she should have raised these concerns before the report was admitted into evidence with no objection. Pursuant to the Industrial Claim Appeals Office's (ICAO's) decision in *Moore v. Gard'n-Wise Distributors, Inc.*, W.C. No. 4-677-680 (ICAO, January 3, 2008), it is incumbent on a party to object to evidence prior to its admission. If the party does not raise these issues at the time the evidence is introduced, the party waives any objection to the admissibility of evidence. Whether there is a complete chain of custody is a matter to be resolved by the court prior to admitting the evidence. *People v. Atencio,* 565 P.2d 921, 924 (Colo. 1977). As found, however, the "chain of custody" argument in the present case is a "red herring" and irrelevant.

Compensability

d. In order for an injury to be compensable under the Workers' Compensation Act, it must "arise out of" and "occur within the course and scope" of the employment. *Price v. Indus. Claim Appeals Office,* 919 P.2d 207, 210, 210 (Colo. 1996). An injury "arises out of' employment if it would not have occurred **but for** the fact that the conditions and obligations of employment placed the employee in a position that he or she was injured." *See City of Brighton v. Rodriguez,* 318 P.3d 496, **2014 CO 7** (creating somewhat of a presumption that an injury arises out of employment when an unexplained injury occurs during the course of employment. Thereupon, it is incumbent to show that non-work related factors caused the injury. Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any benefits are awarded. § 8-41-301 (1) (c), C.R.S. *See Faulkner v. Indus. Claim Appeals Office,* 24 P.3d 844 (Colo. App. 2000)*; Eller v. Indus. Claim Appeals Office*, 224 P.3d 397, 399 (Colo. App. 2009); *Cabela v. Indus. Claim Appeals Office,* 198 P.3d 1277, 1279 (Colo. App. 2008). The question of causation is generally one of fact for determination by an ALJ. *Faulkner* at 846; *Eller* at 399-400. The Claimant argues that something happened to the Claimant at work and, therefore, it was a compensable phenomenon under the holding in *Rodriguez.* The flaw in this argument is that the Claimant failed to prove that the "headset" injured her and that her present condition is attributed to the alleged incident of March 3, 2016. Therefore, as found, the Claimant did not sustain a compensable injury or an aggravation/acceleration of her pre-existing head injury of 2011 in the boating accident.

Burden of Proof

e. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-34 (ICAO, March 20, 2002). *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant failed to sustain her4 burden of proof on the issue of compensability.

ORDER

IT IS, THEREFORE, ORDERED THAT:

Any and all claims for workers' compensation benefits are hereby denied and dismissed.

DATED this_____day of May 2017.

_____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm.*

CERTIFICATE OF SERVICE

I hereby certify that I have sent true and correct copies of the foregoing **Full Findings of Fact, Conclusions of Law and Order** on this_____day of May 2017, electronically in PDF format, addressed to:

Division of Workers' Compensation

ISSUES

- Did Respondents sustain their burden to overcome the DIME physician's opinion on whether Claimant's bilateral shoulder condition was caused by the September 3, 2013 accident?

- Did Respondents sustain their burden to overcome the DIME physician's opinion on whether Claimant was at maximum medical improvement ("MMI") for bilateral shoulder injuries?

STIPULATION

Claimant's lower extremity injuries, including whether he was at MMI for those injuries, whether he sustained a permanent medical impairment, and disfigurement are not at issue for this hearing and are the subject of a previous Stipulation between the parties. This Stipulation was accepted and approved by the ALJ.

FINDINGS OF FACT

1. Claimant worked for Employer as a plating specialist. In this job, he applied nickel-based plating on tools. After that, the tools are placed in a vat with hot oil, which is part of the finishing process.

2. Prior to September 3, 2013, Claimant had not injured either his right or left shoulder. He had not treated for shoulder issues prior to his industrial injury. Medical records from Tarshis Gary, M.D. and Mark Fraley, M.D. at Express Care Plus were admitted into evidence. These physicians saw Claimant for routine illnesses and physicals from 1995-2015. A majority of these records were office notes and lab reports, containing the results of blood testing and the like.

3. Claimant has a diagnosis of type 2 diabetes, which has been controlled by insulin. The ALJ notes there were no references to shoulder pain or any treatment to Claimant's upper extremities (including both shoulders) in those records. No evidence of a prior traumatic injury to either shoulder was introduced into evidence.

4. Claimant sustained an admitted industrial injury on September 3, 2013, when he fell into a vat containing the hot finishing oil. Claimant testified he was standing on top of a tank, which had steam coming off the top. The surface was slippery and he lost his balance, falling into the vat. The temperature of the oil in the vat was 165°.

5. Claimant's supervisor, who was also present, pulled him out the vat. Claimant testified his hands were raised and supervisor bent down to help him get out of the vat. He though his supervisor grabbed his hands/arms or wrist, pulling him from the vat. He was not sure where exactly his boss grabbed him, but said it was not under his arms. He then fell onto a catwalk, which was three to four feet below the tank.

6. Claimant sustained second and third degree burns to his lower extremities. Claimant was taken by ambulance to Penrose St. Francis Hospital where he was initially treated for burns to the lower extremities.[1] Claimant was then transported to the University of Colorado Hospital-burn center ("UCH"). Claimant testified he was in excruciating pain. The medications Claimant was given at the hospital that day included Oxycodone, Dilaudid and Fetanyl. Extensive treatment records from the University of Colorado were admitted at hearing.[2]

7. On September 6, 2013, Claimant underwent skin grafts on both legs from bilateral anterior and lateral thigh sites. The surgery was performed by Michael Schurr. M.D., whose diagnosis was circumferential bilateral lower extremity deep second-degree burns between the knee and ankle. Dr. Schurr noted Claimant had 2nd and 3rd degree burns over 12% of his total body surface area. Claimant remained at the University of Colorado Hospital burn/trauma intensive care unit through September 19, 2013. During that time Claimant was administered heavy IV pain medication, including Fentanyl, and Oxycodone. Records from that hospital stay documented the fact Claimant was taking narcotic medications the entire time.[3] Claimant testified at hearing that he did not recall much from this period of time.

8. Claimant was released from the hospital on September 19, 2013, but was subsequently readmitted on September 24, 2013. Claimant was followed by Gordon Lindberg, M.D. Between September 19, 2013 and September 24, 2013 Claimant was sent home with Oxycodone and OxyContin. Dr. Lindberg noted that Claimant's pain was not controlled well.[4] Upon readmission there was suspicion that Claimant's bilateral lower extremity wounds were possibly infected, that there was skin graft failure and it was recommended that a portion of the skin grafts be redone. Due to his increased level of pain, Claimant was continued to take Oxycontin and Oxycodone. Claimant underwent surgery to revise the skin grafts on September 30, 2013, which was performed by Dr. Lindberg.

[1] Respondents Exhibit I.

[2] Claimant's submissions included 186 pages of records from that hospital. Respondents tendered 1214 pages from the University of Colorado which were admitted at hearing. These records show the treatment was focused on Claimant's lower extremities. However, the ALJ notes Claimant was continuously taking Oxycodone and Oxycontin throughout this period of time.

[3] Respondents' Exhibit H, pp.1075 – 1572.

[4] Claimant's Exhibit 2, page 50.

9. Claimant remained hospitalized through October 19, 2013. On his discharge, Claimant was taking Morphine, Oxycodone and Oxycontin. Claimant's pain medications were continued during the period he was discharged from UCH burn unit.

10. Claimant was again admitted to the University of Colorado on November 21, 2013 with painful left leg swelling which had worsened over the previous two days. Claimant was evaluated by Brandon Chapman, M.D., who diagnosed deep venous thrombosis. The burn floor admission notes indicate that Claimant remained on OxyContin and Oxycodone, Morphine and other medications. In the discharge summary, Dr. Lindberg and Yu Peng, M.D. noted Claimant was to continue on Morphine, Oxycontin and Oxycodone.[5]

11. By the end of December 2013, Claimant's condition finally improved. However, he remained on morphine, Oxycodone extended-release, Oxycodone immediate release of 15 mg and Oxycontin immediate release of 5 mg.[6] Claimant's prescriptions for these medications were continued through January 2014. Julie Henderson, N.P. completed an assessment on December 31, 201, including discussing pain control. Dr. Lindberg prescribed refills of Oxycodone extended-release, Morphine and Oxycodone 5 mg immediate release on January 27, 2014

12. Claimant testified that during and after the three hospitalizations he was taking pain medications. The ALJ notes the hospital records support Claimant's testimony that he was taking pain-killers throughout this time. He was not moving around, spending much of the time in bed or on the couch. His focus was on his legs, including the skin grafts. He felt some pain in his shoulders after his injury, on the right side more than the left.

13. Claimant began receiving PT at Physiotherapy Associates, starting on January 6, 2014. At the outset of this treatment, Claimant's lower extremities were the focus of the treatment. This included increasing Claimant's ROM, strength, weight-bearing and gait. Starting in May 2014 there were references in the PT reports to treatment of the right shoulder. This course of PT treatment continued through October 14, 2014. The PT notes documented improvement in Claimant's lower extremities. At the time of discharge, Claimant's goals for treatment of shoulder were said to have been met.

14. Claimant returned for a follow-up at UCH burn center on March 19, 2014. By that time Claimant's prescription with Oxycodone had been weaned down and his legs were continuing to improve. NP Henderson noted on March 19, 2014, Claimant was "having right shoulder pain with a clicking sound that he has had since the accident. He did suffer a fall when he got burned. Worker's Comp. told him to follow up here for shoulder pain."

[5] Claimant's Exhibit 2, pp.119-120.

[6] Claimant's Exhibit 2, pages 122–123.

15. On April 17, 2014 Claimant was evaluated by Deborah Saint-Phard, M.D. at University of Colorado Hospital. The pain was localized to the top of his right shoulder. The progress notes of April 17, 2014 indicate, "onset of right shoulder pain 9/2/13 – initial injury came from being pulled out of a tank then fell on catwalk".

16. Mark Osborne, M.D. also evaluated Claimant that day and assessed right shoulder pain and decreased range of motion most likely secondary to adhesive capsulitis. Claimant was referred for physical therapy for range of motion exercises for the right shoulder. A joint steroid injection was also considered. In that same consultation note, under HPI, Dr. Osborne's note reflects that Claimant was evaluated with left shoulder pain that was present since approximately December 2013. "He claims that once his pain began to decrease he noticed decreased range of motion in his right shoulder and a dull pain.… His pain is 6/10 in intensity and dull in nature. He claims that the pain is severe enough that it wakes him from sleep".[7]

17. Claimant was referred by Respondents for evaluation to Frank Polanco, M.D., which occurred on May 1, 2014. On examination, Claimant had limited range of motion of the right shoulder, as compared to the left. Dr. Polanco's assessment was: right shoulder strain, likely related to Claimant's supervisor pull him out of the vat by his arms. Dr. Polanco felt that Claimant had a strain and possible tendinitis or a partial thickness rotator cuff tear. On the WCM 164 form, Dr. Polanco's opinion was this showed evidence of causal relationship to his work-related claim. He further recommended conservative treatment over the course of 4 to 6 weeks initially. Claimant returned to full-time light duty work in May 2014 with Employer. Claimant continues to work full time with Employer.

18. On May 12, 2014, Claimant was examined by Alfred C. Lotman, M.D. at the request of Respondents. At that time, pain was noted with compression of both the right and left trapezius muscles. Claimant advised Dr. Lotman he had been dealing with this since the date of the injury, doing home exercises. No loss of motion in either shoulder was detected. He had slight crepitation with range of motion of the left shoulder. No positive findings were detected on stability, rotator cuff, or impingement testing. Claimant's right shoulder was distinctly lower than his left. Dr. Lotman's orthopedic opinion was that Claimant's shoulder complaints were not related to the date of the work injury. A significant amount of time had elapsed from the date of injury to Claimant's first report/mention of pain in his right shoulder. Claimant told him that he developed left shoulder pain the past Friday while at work. Claimant stated his left shoulder was now more symptomatic, which Dr. Lotman could not explain without a recent traumatic injury.

19. On May 23, 2014, Claimant was seen for follow-up by Paula M. Hornberger, PA-C in Dr. Polanco's office, who evaluated Claimant's lower and upper extremities. In the pain diagram, Claimant noted pain in his left shoulder, which was also reflected in the questionnaire. Restrictions in Claimant's ROM for the right shoulder were noted. The left shoulder had normal ROM. The diagnosis was lower

[7] Claimant's Exhibit 2, page 169.

extremity burns and right shoulder strain, and it was noted Claimant was waiting to begin treatment. PA-C Hornberger evaluated Claimant on June 20, 2014, but there was no indication that his upper extremities were evaluated.

20. On July 19, 2014, Claimant was examined by Dr. Polanco, whose diagnostic impression was 2nd and 3rd degree burns lower legs; DVT resolved. Dr. Polanco concluded Claimant was at MMI and assigned a medical impairment rating pursuant to the *AMA Guides* to his lower extremities. There was no indication that Dr. Polanco examined Claimant's shoulders at this time. The ALJ also notes Dr. Polanco did not offer an opinion regarding Claimant's left shoulder.

21. On July 9, 2015, Dr. Shank performed the DIME. Claimant advised he was working on the date of injury and fell into the oil vat. His supervisor grabbed him beneath his axilla bilaterally and forcefully pulled him out of the vat at the time of injury. He was diagnosed with burns and treated at the University of Colorado. Claimant said he had increasing shoulder pain, worse on the right than left, mostly with overhead activities. Claimant had mild pain with impingement and with the Hawkins test. Tenderness was noted about the rotator cuff insertion and bicipital true groove. Mild pain was found with Speed's test. Claimant had no evidence of a frozen shoulder bilaterally.

22. Dr. Shank opined Claimant was not at MMI with regard to his upper extremities. The medical records documented increasing shoulder pain throughout his post-injury course and the mechanism of injury coincided with his complaints of pain, stiffness, and limitations with his bilateral shoulders. Dr. Shank suggested he be referred to an upper extremity orthopedic surgeon for evaluation of his bilateral shoulder injuries and consider an injection, as well as an MRI and physical therapy program.

23. On October 13, 2015 Wallace Larson, M.D. prepared a record review on behalf of Respondents. Dr. Larson opined Claimant's shoulder complaints were not related to the date of work injury. Dr. Larson noted a significant amount of time elapsed from the date of injury to his first report/mention of pain in his shoulders. Dr. Larson stated a physical examination was not necessary to determine causal relatedness, or lack thereof. The ALJ finds Dr. Larson's opinions were less credible than those expressed by Dr. Shank because he did not examine Claimant. Also, Dr. Larson did not analyze the mechanism of injury as described by Claimant and whether this could have injured both shoulders.

24. Dr. Lotman testified as an expert in orthopedic surgery at hearing. He is Level II accredited pursuant to the WCRP. Dr. Lotman noted Claimant sustained a severe injury on September 3, 2013 when he fell in the vat, which caused 2nd and 3rd degree burns on his lower extremities. Dr. Lotman did not focus on the lower extremities and offered no opinions as to Claimant's treatment of these areas. His focus was on the causality and relatedness of Claimant's right shoulder complaints. Dr. Lotman noted that Claimant has diabetes, which can be a factor in shoulder conditions such as tendinitis. The ALJ was not persuaded by this opinion of diabetes as a potential cause, as there was no evidence that Claimant required treatment for tendinitis

in any part of his body prior to September 3, 2013. Dr. Lotman opined that was less of a chance of injury if Claimant was pulled out of the vat by the supervisor under the axilla (armpits).

25. Dr. Lotman disagreed that the narcotics would have masked the pain in Claimant's shoulder. He noted Claimant would have had to use his upper extremities to get in and out of the bed at the hospital. Dr. Lotman believed Claimant would have experienced symptoms at the hospital, which would have been reported to many of the observers. On cross-examination, Dr. Lotman admitted that he had not reviewed Dr. Polanco's records before the hearing.

26. Dr. Shank testified as an expert witness in orthopedic surgery, the specialty in which he is board-certified. He conducted the DIME on May 12, 2015. He noted Claimant told him that he was more focused on his burns and that treatment, but had pain at least in his right shoulder from the beginning. Dr. Shank said when he examined Claimant there was tenderness around the rotator cuff insertion and mild stiffness. Dr. Shank testified there positive results/pain with the impingement and Hawkin's tests. Dr. Shank opined this was some evidence that there may be rotator cuff pathology present, whether it was inflammation or a tear.

27. On the issue of causation, Dr. Shank opined Claimant's description of being pulled out of the vat could have caused the injuries, as described. Dr. Shank noted that his report initially noted Claimant had been lifted up by his armpits. He noted that if Claimant was pulled out by his arm(s) or wrists(s), an injury was more likely. More particularly, Dr. Shank testified as follows:

> "I think that would make me think that it was probably more likely that he could have injured his shoulder from the mechanism that you described. I mean, if somebody picks somebody up underneath the axilla or beneath the armpits, I think the mechanism would be less likely. So I think if somebody's grabbing somebody out of a vat of oil forcibly by their hand or their arms, I mean, it can certainly cause some sort of internal derangement within their shoulder, whether it be the labrum or the rotator cuff or something else".[8]

Dr. Shank described this as an unusual mechanism, specifically a forced axial load. Dr. Shank believed there was sufficient information to determine that his injury caused Claimant's shoulder pain. The ALJ found Dr. Shank's testimony on causation to be credible.

28. Dr. Shank explained further that he determined Claimant was not at MMI for the shoulders, as he did not have a lot of work up for those areas of the body. Dr. Shank disagreed with Dr. Larson's opinion expressed in the latter's chart review; specifically that there was no objective indication of trauma to the shoulder. Dr. Shank once again noted when Claimant was extracted from the vat, this was "trauma". Dr. Shank disagreed that Claimant's diabetes was a potential cause of adhesive capsulitis.

[8] Shank deposition, pp.7:23-8:7.

Dr. Shank noted Claimant did not have adhesive capsulitis at the time he examined him. Dr. Shank also believed the extensive pain medication Claimant had during the time he was undergoing grafting procedures would have affected his report of pain to his shoulders.

29. Dr. Shank also reviewed the IME report from Dr. Lotman. Dr. Lotman's conclusions did not change Dr. Shank's opinions. Dr. Shank testified that within a reasonable degree of probability, Claimant's bilateral shoulder condition occurred as a result of his injuries while working for Employer and was not at MMI for those injuries. The ALJ credited Dr. Shank's opinion, as his reasoning was sound and supported by the medical evidence. Dr. Shank credibly testified regarding the etiology of Claimant's shoulder complaints.

30. Respondents failed to overcome the opinions of Dr. Shank by clear and convincing evidence with regard to the cause of Claimant's bilateral shoulder problems and whether Claimant was at MMI. Dr. Larson's and Dr. Lotman's conclusions constitute a difference of opinion and did not constitute sufficient evidence to overcome Dr. Shank's opinions.

31. Evidence and inferences inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1),C.R.S. Generally, the Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. § 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and

actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). In this case, the credibility of Respondents' medical experts, the DIME physician, as well as Claimant was at the heart of the issue set for determination.

Overcoming DIME Physician's Opinion on Causation and MMI

A DIME physician's finding that a party has or has not reached MMI is binding on the parties, unless overcome by clear and convincing evidence. § 8-42-107(8)(b)(III), C.R.S.; *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Clear and convincing evidence means "evidence which is stronger than a mere 'preponderance'; it is evidence that his highly probable and free from serious and substantial doubt." *Metro Moving & Storage Co v. Gussert, supra*, 914 P.2d at 414 (citing CJI-Civ. 3d 3:2 (1988); *DiLeo v. Kotlnow*, 200 Colo. 119, 613 P.2d 318 (1980). A party meets this burden only by demonstrating that the evidence contradicting the DIME's MMI is "unmistakable and free from serious or substantial doubt." *Leming v. Indus. Claim Appeals Office*, 62 P.3d 1015, 1019 (Colo. App. 2002)[citing *DiLeo v. Koltnow, supra*]. The enhanced burden of proof imposed by § 8-42-108(b)(III), C.R.S., reflects an underlying assumption that the DIME, having been selected by an independent and unbiased tribunal, will provide a reliable medical opinion. *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590, 592 (Colo. App. 1998).

A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of the Claimant's medical condition are causally related to the industrial injury. *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007). A finding that the Claimant needs additional medical treatment to improve his injury-related medical condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002); *Reynolds v. Industrial Claim Appeals Office,* 794 P.2d 1090 (Colo. App. 1990). In this case, the DIME physician's opinion did not so much concern the need for additional treatment, but projected a future date for MMI after an evaluation by the ATP.

In this case, the controversy centered on Dr. Shank's determination that Claimant sustained an injury to both shoulders and was not at MMI, requiring additional treatment.

Causation

As a starting point, there was no dispute the Claimant suffered severe injuries on September 3, 2013 which included the 2nd and 3rd degree burns to his lower extremities. (Findings of Fact 4-6). He was hospitalized, first at Penrose Hospital, then at the University of Colorado Hospital. As found, Claimant underwent various surgical procedure, had significant complications and was prescribed narcotic medications

during and after his hospitalizations. Claimant received extensive treatment for his burns in the ensuing three months. Claimant testified he had symptoms in his shoulders in the aftermath of the September 3, 2013 accident, but he was focused on his lower extremities.

The ALJ concluded Respondents failed to overcome the opinions of Dr. Shank with regard to the question of whether the incident on September 3, 2013 caused bilateral shoulder injuries. First, the ALJ found Dr. Shank was a credible witness in the testimony he provided after the hearing. In this regard, Dr. Shank had the benefit of all of the medical records, which he reviewed and which became the basis of his medical testimony. Dr. Shank stated the mechanism of Claimant being pulled out by his wrist/arms was more likely to cause an injury. (Finding of Fact 27). The ALJ concluded that the mechanism of injury could have caused an injury to both shoulders, crediting Dr. Shank's testimony.

Second, the conclusion that Claimant suffered an injury to both shoulders was supported by evidence in the record in the form of the evaluations and treatment provided by Dr. Polanco. Claimant's pain diagrams and questionnaire admitted at hearing provided evidence to the ALJ that Claimant had pain complaints to both upper extremities. Dr. Polanco specifically opined that Claimant injured his right shoulder. (Finding of Fact 17). Also, and there was no evidence in the record that Dr. Polanco ever analyzed the efficacy of the PT Claimant received since he put Claimant at MMI on July 19, 2014. (Finding of Fact 19).

Third, the ALJ was persuaded by the testimony of Claimant that he suffered an injury to both shoulders. The ALJ found Claimant to be credible while testifying on this subject. Specifically Claimant testified that, in the aftermath of the accident, including the hospitalizations, his focus was on the treatment of his legs. (Finding of Fact 12). He did not engage in much by way of activity during this period of time. *Id.*

In coming to this conclusion, the ALJ considered Respondents' arguments that Dr. Shank erred in his conclusions after performing the DIME and failed to apply the *AMA Guides*. Respondents contended that clear error was present in Dr. Shank's analysis of the mechanism of injury. However, as found, Dr. Shank's testimony analysis of both potential mechanisms of injury was persuasive to the ALJ. In addition, there was objective evidence of bilateral shoulder injuries in the form of Dr. Polanco's records, which was not specifically addressed by Respondents.

Respondents made the argument that the delay in report of shoulder symptoms was persuasive evidence that Dr. Shank's conclusions were erroneous. Respondents introduced voluminous records of Claimant's hospitalizations and the expert opinions of Drs. Lotman and Larson to support their argument. However, the ALJ was not persuaded by these opinions. (Findings of Fact 23-24). In fact, the introduction of the hospital records supported Claimant's argument that he was taking substantial amounts of narcotics and focused more on the treatment of his lower extremities. (Finding of Fact 6, fn. 2). Although Dr. Lotman disagreed that narcotics would mask Claimant's

shoulder symptoms, he did not provide much by way of analysis. At most, the opinions of Respondents' experts constituted a difference of opinion on the issue of causation. (Finding of Fact 30).

Respondents also faulted Dr. Shank's analysis for the failure to analyze the impact of Claimant's insulin-dependent diabetes on the condition of both shoulders. Once again, Dr. Shank was asked this specific question and ruled out any role diabetes may have played when he testified. Also, there was no evidence in the record that Claimant required treatment before the accident or developed tendinitis or any other condition because of the diabetes. In fact, the evidence revealed Claimant was active, including engaging in the physical activity of refereeing basketball games. Accordingly, ALJ concluded that the evidence introduced by Respondents did not introduce the sufficient quantum of evidence required to overcome Dr. Shank's opinions

MMI

As found, Respondents also failed to overcome Dr. Shank's opinions on MMI. As found, Dr. Polanco as the ATP did not provide an opinion regarding whether Claimant's treatment for his shoulders was complete. The July 29, 2014 report contained no indication that Dr. Polanco evaluated Claimant's shoulders to determine whether he was at MMI or sustained a permanent medical impairment. The ALJ concluded Claimant continues to require treatment for his bilateral shoulder condition, as opined by Dr. Shank. (Finding of Fact 22).

ORDER

It is therefore ordered that:

1. Claimant is not at MMI.

2. Respondents shall provide treatment to Claimant for his left and right shoulders until he reaches MMI.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a

ISSUES

I. Whether Claimant has shown, by a preponderance of the evidence, that she is entitled to additional temporary disability benefits as a result of her admitted work injury.

II. If Claimant is entitled to additional temporary disability benefits, has Respondent shown, by a preponderance of the evidence, that Claimant was responsible for her own termination of employment.

III. If Claimant is entitled to additional temporary disability benefits, is Respondent entitled to offset such benefits due to Claimant's receipt of unemployment benefits.

FINDINGS OF FACT

Based upon the evidence received at hearing, the ALJ makes the following Findings of Fact:

1. Claimant was hired as a client care aide I, starting on February 16, 2016. (Claimant's Exhibit 2, pp. 17 & 19). Claimant was paid a monthly salary of $1,908.00.

2. At the time she was hired, the Claimant was advised that she would be placed on a probationary status for a twelve month period, which would end on February 16, 2017. (Claimant's Exhibit 2, p. 19).

3. The job of a client care aide I required the Claimant to provide assistance to patients, many of whom were confined to wheel chairs. This work involved assisting the patients with transfers from their wheel chair to a bed, or to assist them with bathing or using the restroom. This required her to be able to support patients weighing up to two hundred pounds or more, either by herself or with the help of another aide.

4. Before starting work on February 16, 2016, the record does not show that the Claimant had problems with her left knee, low back or hips. Furthermore, before her injury on March 25, 2016, Claimant alleges she was physically able to do her regular employment, and the record does not show otherwise.

5. On March 25, 2016, the Claimant suffered an admitted work-related injury when she was assisting another aide in transferring a patient from a wheel chair to his bed. Claimant lifted the patient's upper body while the other aide took control over the patient's legs. As they proceeded to move the patient towards his bed, the aide that was assisting the Claimant tripped over the

wheel chair. This caused an unexpected shift in the patient's weight, which resulted in an injury to the Claimant, including to her left knee.

6. After the injury, the Claimant reported it to her Employer and filled out a form documenting the injury. (Claimant's Exhibit 2, p. 22).

7. Claimant sought treatment at Parkview Medical Center's emergency room. (Claimant's Exhibit 8, p. 65).

8. After the accident, the Claimant was unable to continue her regular employment. Respondents filed a general admission on April 15, 2016, admitting to the payment of temporary total disability (TTD) benefits starting on March 26, 2016. (Claimant's Exhibit 11, p. 97).

9. While the Claimant was unable to perform her regular duties, the Respondents did inquire of Claimant's then treating physician, Dr. Terrence Lakin, D.O., whether the Claimant could perform modified work involving answering telephones, making copies, sorting documents, scanning and faxing, as well as data entry. (Claimant's Exhibit 2, p. 27). Dr. Lakin approved the duties for this modified employment on April 27, 2016.

10. As a result of the modified job offer, the Respondents started paying the Claimant temporary partial disability (TPD) benefits on April 20, 2016. (Claimant's Exhibit 11, p. 98).

11. The Respondents continued to pay TPD benefits until the Claimant was placed at MMI on May 20, 2016. On May 27, 2016, Respondents filed a final admission of liability, based on Claimant's then treating physician, Nicholas Kurz. (Claimant's Exhibit 11, P. 98). The final admission admitted for no permanent impairment, and also documented the termination of TPD benefits as of May 5, 2016. Claimant was released by Dr. Kurtz to full duty, with no work restrictions.

12. Dr Kurtz also stated that "the patient has been returned to their DOI baseline", and is advised to "follow-up with their PCP for this non-work related condition" (Claimant's Exhibit 3, p. 38).

13. Claimant had already presented to the Pueblo Community Health Center on May 11, 2017 for this issue. A MRI was discussed as a possibility if things did not improve. Pain medication was prescribed.

14. Claimant returned to Pueblo Community Health Center on May 24, 2017 (and after Dr. Kurz recommended follow-up with her PCP). She was treated by Erin Ordway, ***PA-C.*** At this time, it was discussed that the workers comp case was closed.

15. On June 6, 2016, Erin Ordway, ***PA-C,*** wrote a letter, addressed "to whom it may concern" recommending light duty, without significant lifting (>5 lbs), until Claimant had at least two weeks of physical therapy, after which a re-evaluation was recommended before a return to full duty. (Claimant's Exhibit 10, p. 92).

16. Claimant was once again seen at the Pueblo Community Health Center on August 2, 2016, this time by Dylan Devries, ***PAC*****.** Pain prescriptions were refilled, with an MRI being referred.

17. Nowhere in the records of any of Claimant's visit to Pueblo Community Health center is any mention that Claimant saw a *physician*, or that either *PAC* was operating under the direction or supervision of a *physician* in treating Claimant.

18. After being placed at MMI, the Respondents no longer offered the Claimant any modified work.

19. After Respondents filed a final admission of liability based on Dr. Kurz's opinion, the Claimant objected to the final admission and requested a Division-sponsored independent medical examination (DIME). The DIME was conducted by Dr. Miguel Castrejon on September 27, 2016. (Claimant's Exhibits 1, P. 1). Dr. Castrejon performed an examination of the Claimant as well as a review of the medical history. (Claimant's Exhibits 1, pp. 1-11). Dr. Castrejon conclusions differed from those of Dr. Kurz. The relevant language from Dr. Castrejon's report is referenced below:

> Dr. Kurz noted an examination that was "inconsistently reproducible" and provided a final impression of muscle strain of the left knee and lumbar pain on palpation. I do not see, in his physical examination, that Dr. Kurz evaluated the claimant for SI nor facet mediated pain. There were no nerve tension signs, as I observed today. It appears that Dr. Kurz then made the decision to place the claimant at maximum medical improvement primarily on the basis of inconsistent findings versus attempting to pursue in (sic) obtaining an adequate diagnosis. This examiner notes that it is the responsibility of the workers' compensation carrier to ensure that an accurate diagnosis and treatment plan can be established. This would not appear to have been the case. This examiner notes that at no time prior to her release was the claimant referred for any specialized imaging or electrodiagnostic studies. Unlike the examination
> by Dr. Kurz, my examination of the claimant today was consistent.
>
> In my professional opinion, the mechanism of injury is consistent with the claimant's presenting complaints for lumbar strain with involvement of the left sacroiliac joint for which treatment has not been provided.

> An MRI of the left knee was also obtained following her release by Dr. Kurz.
> The study revealed findings suggestive for a quadriceps tendonitis at the insertion of the patella. There was also reported to be a mild resulting bony
> edema of the lateral tibial plateau….The claimant's examination today of the left knee consisted of an antalgic gait, anterior knee pain with some medial joint line but negative McMurray's maneuver and mild decrease in motion. In my professional opinion, the mechanism of injury would be consistent with a straining injury to the left knee that involved the distal quadriceps tendon for which additional treatment focal to this condition is indicated.
>
> Based on my examination of the claimant, it is my professional opinion that the claimant is not at maximum medical improvement. This recommendation is made based upon the diagnosis of a left sacroiliac joint dysfunction that has not been diagnosed nor treated, as well as persistent knee pain for which additional focused treatment is indicated.

(Claimant's Exhibits 1, pp. 9 & 10).

20. The DIME physician, Dr. Castrejon, did not offer an opinion on Claimant's ability to return to work, with or without restrictions.

21. As a result of Dr. Castrejon's *'not at MMI'* opinion, Respondents filed a General Admission of Liability and authorized further medical treatment. (Respondent's Exhibit D)

22. Claimant returned to Dr. Kurz on January 23, 2017. Dr. Kurz continued Claimant's release to return to work full duty, without any restrictions. (Exhibit F, p. 083).

23. Claimant's care was then transferred to Dr. Centi. Claimant saw Dr. Centi on February 23, 2017, March 10, 2017, March 24, 2017, and April 7, 2017. At every visit, Dr. Centi continued Claimant's release to full duty with no restrictions. (Exhibit H and Exhibit 4, p. 49)

24. Claimant voluntarily resigned her employment with Employer effective August 10, 2016. (Exhibit J) Claimant was given the option to appeal the acceptance of her resignation if she felt that she was forced or coerced to resign. (Exhibit J, p. 101) Claimant testified that she did not appeal.

25. Claimant received unemployment benefits for the week ending September 17, 2016 through the week ending October 15, 2016 totaling $938.00. (Exhibit I).

26. Claimant began working for YWCA on February 21, 2017. (Exhibit 6)

27. The ALJ finds that no Authorized Treating *Physician* has placed any work restrictions on Claimant since Dr. Kurtz returned Claimant to full duty on May 20, 2017.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

B. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

C. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

Temporary Disability Benefits-Release by ATP

D. §8-42-105(3), C.R.S. provides, in relevant part, that temporary total disability benefits shall continue until Claimant reaches MMI, the employee returns to regular or modified employment, *or the attending physician gives the employee a written release to return to regular employment.* Once it is established that the attending physician has released a claimant to full duty, "the opinion of the attending physician carries

conclusive effect with respect to a claimant's ability to perform regular employment." *Bestway Concrete v. Indus. Claim Appeals Office*, 984 P.2d 680 (Colo. App. 1999); *Burns v. Robinson Dairy, Inc.*, 911 P.2d 661 (Colo. App. 1995). In light of an attending physician's opinion releasing a claimant to full duty, "any evidence concerning claimant's self-evaluation of her ability to perform her job is irrelevant and should be disregarded by the ALJ." *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997); *Burns, supra*.

E. Dr. Kurz, the *authorized treating physician* in this case, released Claimant to return to work with no restrictions when he placed her at MMI. Even though the DIME physician opined that Claimant was not at MMI, the attending physicians for Claimant's worker's compensation claim have continued to release Claimant to return to work with no restrictions. The DIME physician did not opine, nor was he authorized to opine, on Claimant's work restrictions.

F. Dr. Kurz' referral-for Claimant's same injuries-to Claimant's PCP (due to his belief that her claim was outside the Workers Comp system) opened the door to a conflicting opinion by another Authorized Treating Physician. *Cabela V. Industrial Claims Appeals Panel*, 198 P 3d 1277 (Colo. App 2008). However, Claimant was never evaluated or treated by a *physician* at Pueblo Community Health Center. Claimant's work restrictions recommended by her PA-C did not come under the direct supervision and control of a physician. The facts herein are also distinguishable from the case cited by Claimant in support: *Bassett v. Echo Canyon,* W.C NO. 4-260-804 (1997). In *Bassett,* sufficient evidence existed in the record to conclude that the physician's assistant (PA) worked directly with the ATP in examining and treating that Claimant, and in placing work restrictions on the Claimant. No such evidence exists in this record. To the extent that Erin Ordway, PA-C might be deemed to be acting under the direct supervision and control of a physician, the ALJ gives greater weight to the opinions of Drs. Kurz and Centi. Claimant has not shown, by a preponderance of the evidence, that she was unable to return to work without restrictions.

G. Claimant's TTD benefits thus terminated when Dr. Kurz first released her to return with no work restrictions.

Claimant's Responsibility for Termination

H. §8-42-103(1)(g), C.R.S. and §8-42-105(4), C.R.S., provide that if a Claimant is "responsible for termination of employment, the resulting wage loss shall not be attributable to the on-the-job injury." *See also, Colo. Springs Disposal v. Martinez*, 58 P.3d 1061 (Colo. App. 2002). Thus, if a Claimant is responsible for her termination, she is not entitled to recover temporary disability benefits for wage loss. *Padilla v. Digital Equip. Corp.*, 902 P.2d 414 (Colo. App. 1994). A Claimant is responsible for her termination where she is "at fault" for causing a separation in her employment. A finding of "fault" requires a volitional act or the exercise of a degree of control by a claimant over the circumstances resulting in the termination. *Padilla, supra.* This is a factual determination for the ALJ. *Padilla, supra.* Respondents have shown, by a

preponderance of the evidence, that Claimant voluntarily resigned her employment and did not appeal the acceptance of her resignation. Claimant is responsible for her wage loss after August 10, 2016 and is not entitled to temporary disability benefits after that date.

I. For the foregoing reasons, it is not necessary to address the issue of offsets due to unemployment compensation.

ORDER

It is therefore ordered that:

1. Claimant's request for additional temporary disability benefits is denied and dismissed.

2. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Colorado Springs, Colorado 80906

ISSUES

1. Whether Claimant has overcome by clear and convincing evidence the opinion of the Division Independent Medical Examination (DIME) physician Greg Reichhardt, M.D. regarding Claimant's maximum medical improvement (MMI) date and Claimant's permanent partial disability (PPD) impairment rating.

FINDINGS OF FACT

1. Claimant was employed by Employer as a foreman at the time of the admitted work injury. Claimant, at time of hearing, worked for the City and County of Denver in the traffic division.

2. On January 24, 2013, Claimant sustained an admitted work injury while employed by Employer. On that date, Claimant was struck in the head with a metal cap weighing approximately 15 pounds that fell from a traffic light pole approximately 30 feet high. The impact caused Claimant to lose consciousness, vomit, and seize. Claimant was transported emergently to Denver Health Medical Center (DHMC).

3. At DHMC Claimant underwent an emergent CT scan that showed a bilateral temporal bone fracture extending into the coronal suture, a right sided temporal fracture extending into the auditory canal and middle ear, a moderate right-sided subdural hematoma with compression of the brain and ventricles in the subarachnoid spaces, and small bi-frontal temporal hemorrhagic contusions with a small amount of subarachnoid hemorrhage. Claimant was taken directly to the operating room and underwent a right frontoparietal temporal decompressive craniectomy, removal of right hemispheric subdural hematoma, and evaluation of temporal contusion.

4. Post operatively, Claimant was diagnosed with severe traumatic brain injury, right-sided subdural hematoma, and malignant intracranial hypertension and was placed in a protective unit. Claimant had multiple follow up diagnostic studies and remained in the intensive care until until January 31, 2013.

5. On January 31, 2013 he was transferred to Craig Hospital where he underwent physical therapy, occupational therapy, and speech therapy. At Craig, Claimant's memory came back, he became ambulatory, he did very well with rehabilitation, and he made significant gains with cognition. On March 1, 2013 Claimant was discharged from Craig Hospital.

6. On March 6, 2013 Claimant was evaluated by Jim Schraa, Psy.D. Dr. Schraa opined that Claimant presented as doing well on initial testing with the exception of verbal memory and that the weakest subtest score was in the coding subtest which

fell in the mildly impaired range, consistent with Claimant's closed head injury. Dr. Schraa opined that Claimant presented as having strong ongoing cognitive recovery and that the major challenge appeared to be with family stressors. Claimant reported that he had conflict with his significant other over the years. *See* Exhibits A, 9.

7. On March 8, 2013 Claimant was evaluated by Dr. Schraa. Claimant reported no new cognitive problems or changes in mood but that his outlook on life had changed due to his injury. Claimant reported that his significant other was reactive to his questions regarding what he wanted to do with his future. Dr. Schraa opined that it was likely that they would need ongoing marital therapy. *See* Exhibit 9.

8. On May 2, 2013 Claimant was evaluated by Dr. Schraa. Dr. Schraa noted Claimant's desire to return to work but that neurosurgery had a restriction on his ability to work. Claimant reported that he had always had some marital issues but that he was less willing to entertain demands from his significant other. Again, Dr. Schraa noted that marital therapy appeared indicated. *See* Exhibit 9.

9. On June 21, 2013 Claimant was evaluated by Ron Carbaugh, Psy. D. Dr. Carbaugh noted that Claimant was referred for assessment of anger issues directly related to his January 2013 work injury. Claimant appeared somewhat anxious and at times frustrated and near tears. Claimant felt ready to return to work but had not yet been released by his care providers. Dr. Carbaugh noted that Claimant had made quite rapid recovery from a physical as well as cognitive standpoint but that Claimant expressed some frustration and ongoing irritability. Dr. Carbaugh noted some underlying anxiety during clinical interview. Dr. Carbaugh provided diagnostic impressions of probable personality traits or coping style affecting rehabilitation, and adjustment disorder. Dr. Carbaugh recommended adjustment counseling directly related to the work injury. *See* Exhibit 6.

10. On August 13, 2013 Claimant underwent a neuropsychological assessment performed by Suzanne Kenneally, Psy.D. Claimant reported his current physical symptoms as right frontal headache, daily right sided neck pain. He reported his cognitive symptoms as irritable, needing to keep a calendar, and being impulsive with spending. Dr. Kenneally opined that Claimant's IQ score was within the statistical interval indicative of average to above average IQ for general intelligence. In attention and concentration, Dr. Kenneally opined that Claimant's performance was from the average to superior range. She opined that on memory functioning Claimant's scores represented above average functioning and that he performed in the superior range for language skills. She opined that Claimant appeared to be functioning in the average to above average range across the majorities of modalities tested and that despite the severity of his injury, Claimant appeared to have made a significant and complete recovery. *See* Exhibits B, 8.

11. Dr. Kenneally noted some elevation indicating social alienation with antisocial behavior and indication of possible impulse control. Dr. Kenneally opined that it was likely that as Claimant continued to recovery, his psychological distress would

resolve. Dr. Kenneally opined that the current tests showed no residual cognitive impairment and had strong intact cognitive functioning. She provided the diagnostic impression of major neurocognitive disorder due to traumatic brain injury with resolution of cognitive defects. *See* Exhibits B, 8.

12. On February 13, 2014 Claimant was evaluated by Dr. Carbaugh. Claimant presented in an open and straightforward manner and reported being frustrated with how he perceived that his current company was treating him. Dr. Carbaugh opined that Claimant could be placed at MMI from a psychological standpoint at any time that Claimant's medical care concluded. Dr. Carbaugh noted that the calculation of an impairment rating would be complex given the multiple issues involved but that Claimant did not appear to have any work restrictions from a psychological standpoint. Dr. Carbaugh noted that if Dr. Plotkin placed Claimant at MMI, he would recommend 4-6 sessions of maintenance psychological follow up on an as needed basis. *See* Exhibit 6.

13. On April 29, 2014 Claimant was evaluated by Dr. Carbaugh. Dr. Carbaugh noted that Claimant appeared to be approaching MMI and had been referred out for the actual impairment rating process. Claimant believed that his medical treatment had run its course and was hopeful to put the workers' compensation issues behind him. Claimant was open in discussing psychological issues and was appreciative that follow up psychological sessions would be recommended as part of his maintenance care. Dr. Carbaugh opined that Claimant could certainly be considered at MMI from a psychological standpoint and Dr. Carbaugh recommended 4-6 sessions as maintenance on an as needed basis. *See* Exhibit 6.

14. On June 10, 2014 Claimant was evaluated by neurologist Richard Stieg, M.D. Dr. Stieg noted that Claimant had been referred by Dr. Plotkin for an independent impairment rating. Dr. Stieg reviewed medical records and performed a physical examination. Dr. Stieg provided the impression of: traumatic brain injury, post traumatic vision syndrome, adjustment disorder due to the work injury, post traumatic headache disorder, and disfigurement due to cranioplasty. Dr. Stieg opined that the permanent impairment from a neurologic standpoint was for post traumatic headaches and provided a 5% whole person impairment rating for episodic neurological symptoms. Dr. Stieg opined that additional impairment might be considered for posttraumatic vision disturbance and for disfigurement if Dr. Carbaugh felt that played a role in the adjustment disorder and was permanent but that it did not appear to be an issue per his review of Dr. Carbaugh's records. *See* Exhibits C, 7.

15. On July 9, 2014 Claimant was evaluated by Dr. Plotkin. Claimant felt that he was doing well but had occasional bilateral frontal headaches. Claimant also reported occasional discomfort near the anterior aspect of the cranioplasty on the right, some occasional fluid buildup near the anterior aspect of the cranioplasty, that his vision was not as good as it was prior to the injury, and that his sense of taste and smell seemed off. Claimant also reported getting frustrated at times, which was also a pre-injury trait and that he had some self consciousness because of the disfigurement on

the right side of his head. Dr. Plotkin performed a physical examination. Dr. Plotkin assessed: traumatic brain injury; skull fractures; hemorrhagic contusions; subdural and subarachnoid hemorrhages; status post craniectomy; status post cranioplasty times two; and adjustment disorder. Dr. Plotkin opined that Claimant reached MMI on July 9, 2014 and that Claimant had suffered a serious head injury and had made an excellent recovery. Dr. Plotkin opined that Claimant had comprehensive rehabilitation and had completed medical care. *See* Exhibits D, 5.

16. Dr. Plotkin opined that there were three components to Claimant's impairment assessment: neurologic, psychiatric, and disfigurement. Dr. Plotkin noted that Dr. Stieg performed a neurologic impairment rating and determined that Claimant had permanent impairment on the basis of posttraumatic headaches with a 5% whole person rating. Dr. Plotkin also noted that he contacted Dr. Carbaugh by phone to review the case and that Dr. Carbaugh noted that Claimant had stress and felt socially uncomfortable because of the disfigurement and that Claimant had a tendency to "hold it in" and had some anger and stress. Dr. Carbaugh felt that Claimant's psychological stress was not only related to the disfigurement. Dr. Plotkin noted that Claimant was referred to a psychiatric evaluation with Dr. Gutterman who evaluated Claimant and determined a 4% permanent partial impairment related to Claimant's adjustment disorder. Dr. Plotkin noted that he consulted the AMA Guides and that the determination of permanent impairment based on disfigurement was somewhat difficult to determine in this case but that Claimant's disfigurement was significant and played a critical role in his physical, psychological, and emotional wellbeing. Dr. Plotkin opined that under Table 1 on page 241, Claimant would likely fall under mild impairment and provided a 10% whole person impairment rating for disfigurement. Dr. Plotkin opined that this impairment rating was separate and unrelated to the psychological impairment which was primarily related to Claimant's adjustment disorder. *See* Exhibits D, 5.

17. Dr. Plotkin opined, therefore, that Claimant had whole person impairment of: 10% for disfigurement; 5% for neurologic impairment; and 4% for psychological impairment. Dr. Plotkin combined these values to come up with an 18% impairment of the whole person. Dr. Plotkin recommended the following maintenance care: rechecks with the primary occupational medicine physician as needed, follow up with the neurologist regarding seizure activity and anti-seizure medication, neurosurgical follow up as needed, follow up with optometrist as warranted, psychological counseling with Dr. Carbaugh for up to five additional sessions, and maintenance medications. *See* Exhibits D, 5.

18. Respondents filed a final admission of liability (FAL) consistent with Dr. Plotkin's report. Claimant objected and requested a DIME.

19. On July 11, 2014 Claimant was evaluated by neurologist Kirsten Nielsen, M.D. Dr. Nielsen noted that Claimant had a generalized seizure on the date of his work injury and had last been seen by her in January. Claimant reported no recurrence of seizure activity and that he had been driving and working full time. Claimant reported occasional bi-frontal headaches, made worse by stress. Claimant admitted to anxiety

attacks once per day. Dr. Nielsen performed a physical examination and noted that two negative EEGs had been performed on January 17, 2014 and on January 10, 2014. Dr. Nielsen noted that Claimant's anti-seizure medication was being tolerated well and that Claimant remained seizure free. *See* Exhibit 4.

20. On July 28, 2014 Claimant underwent an individual psychiatric consultation with Gary Gutterman, M.D. Claimant reported some psychological effects due to his head injury and that he was self-conscious about his cranium which had a dent in the middle and scars on the side of his head. Claimant reported that he wears a cap in order to cover up his head. Claimant reported being more frustrated and irritable in various situations and that he was more cautious and apprehensive at work and is worried about being reinjured. Claimant reported being more protective of his daughter and that he was worried that she might be injured in some way. Claimant reported nightmares at times and on occasion recurrent memories of what occurred. Dr. Gutterman opined that Claimant continued to experience a mild adjustment disorder as a result of his work injury, altered body image, and prior brain injury but that Claimant overall was doing reasonably well considering the significant injury that occurred. Dr. Gutterman opined that Claimant had experienced a 4% permanent partial mental impairment. Dr. Gutterman noted that Claimant was doing reasonably well without psychotropics and believed that the adjustment disorder would probably persist indefinitely given the type of injury that Claimant experienced. *See* Exhibits E, 3.

21. On January 12, 2015 Claimant underwent a DIME performed by Greg Reichhardt, M.D. Claimant reported that while taking down a traffic light pole, the pole hit him and knocked his helmet off. Claimant reported that a 15 pound metal cap then fell approximately 30 feet and hit him in the head and that his first memory afterwards was a couple of days later in the hospital. Claimant reported being self conscious about his injury and that it impacted his emotions and that he wore a hat to cover it up and was concerned about having to work in an environment where he would not wear a hat. Claimant reported decreased sense of taste and smell, pain above his nose, bilateral frontal headaches, pain over the lower thoracic area, and some symptoms of anxiety and depression. Claimant reported that his social functioning was interfered with and that he was more irritable and is nervous about injury and re-injury, had difficulty managing conflicts, and had decreased memory. Dr. Reichhardt reviewed medical records and performed a physical examination. *See* Exhibits F, 2.

22. Dr. Reichhardt provided the impression of: traumatic brain injury, post-traumatic headache; temporomandibular joint symptoms; thoracic pain; decreased sense of taste and smell; and visual symptoms including refractive change. Dr. Reichhardt opined that Claimant was at MMI and had reached MMI on June 9, 2014. Dr. Reichhardt recommended six follow up visits with a physician per year and cosmetic surgery for the temporal defect or the hypertrophic scar tissue anterior to the ear. Also, as maintenance, Dr. Reichhardt recommended any further surgery or treatment to address the PEEK flap. Dr. Reichhardt opined that Claimant sustained a 22% whole person impairment with 5% for traumatic brain injury, 10% for disfigurement/mental behavior, 3% for olfactory, and 5% for spinal impairment. Dr. Reichhardt noted that in

terms of Claimant's disfigurement, the AMA Guides indicate that if impairment due to disfigurement does exist, it usually manifested by a change in behavior such as an individual's withdrawal from society and should be evaluated in accordance with the criteria set in chapter 14 and Dr. Reichhardt opined that it was appropriate to give Claimant a rating for this according to Table 1, page 241. Dr. Reichhardt noted that Claimant was not given a separate psychiatric impairment rating, as it was used for the disfigurement rating. *See* Exhibits F, 2.

23. On January 27, 2015 Respondents filed a FAL consistent with Dr. Reichhardt's DIME report. *See* Exhibit 10.

24. On October 26, 2015 Claimant underwent an Independent Medical Examination (IME) performed by Elizabeth Bisgard, M.D. Claimant reported still having pain over the fracture site of the skull and popping over the allograft with different activities with occasional debilitating headaches. Claimant reported intermittent stabbing, aching pain in his lower thoracic spine. Dr. Bisgard reviewed medical records and performed a physical examination. Dr. Bisgard diagnosed: traumatic brain injury; skull fracture; moderate right subdural hematoma with compression of ventricle and subarachnoid spice, bi-temporal and bi-frontal hemorrhagic contusion; small subarachnoid hemorrhages; insomnia; back pain; and right upper extremity cephalic medial cubital and left basilica vein thrombosis. Dr. Bisgard agreed with Dr. Plotkin and Dr. Reichhardt that Claimant reached MMI on June 9, 2014. Dr. Bisgard also opined that Dr. Reichhardt calculated the impairment rating in accordance with the AMA Guides and made no error in his calculation. *See* Exhibits G, 1.

25. Dr. Bisgard agreed that a 5% whole person impairment was appropriate for the headache and 3% appropriate for the olfactory nerve loss. Dr. Bisgard noted that Dr. Reichhardt included the psychological impairment as part of the disfigurement, which was a method acceptable under the AMA Guides. Dr. Bisgard opined that she personally would not have included a 5% rating for the thoracic spine since the records reflected no mention of back pain for several months, but opined that Dr. Reichhardt did not err by including the thoracic spine. Dr. Bisgard opined that it would be appropriate for Claimant to have 8-10 maintenance treatments with a female psychologist. She also opined that Dr. Reichhardt's recommendations for maintenance for additional cosmetic surgery or revision of the PEEK allograft or for anti-seizure medications were appropriate. *See* Exhibits G, 1.

26. On April 5, 2016 Claimant underwent a psychological evaluation performed by Walter Torres, Ph.D. Dr. Torres noted that Claimant had been referred by his attorney for an evaluation to determine the presence of any injury related psychological conditions and impairment and the psychological impairment ratings that any such conditions and impairments would warrant. Dr. Torres reviewed medical records, interviewed Claimant, and performed psychological testing. Dr. Torres provided the diagnostic impression of adjustment disorder with depression and anxiety and alcohol use disorder. *See* Exhibit 13.

27. Dr. Torres opined that Claimant's symptoms of anxiety with panic attacks, pervasive self-doubt, persistent rumination and grave worry, social withdrawal, dysphoric emotionality, diminished sexual interest, and diminished motivation to enjoy previously enjoyed activities were due to his injury. Dr. Torres opined that Claimant avoided disclosure of his emotional dysfunction due to shame and immaturity when Claimant's treatment was active but that the pressure of Claimant's worries, distress, and symptoms had tended in the more recent months to overwhelm Claimant. Dr. Torres opined that Claimant was in need of psychological therapy now that he was more open and realistic and that the therapy should target the unrealistic conviction that Claimant developed about his destiny to develop dementia and the disfigurement, and shame through exposure and desensitization. *See* Exhibit 13.

28. Dr. Torres recommended 10 psychotherapeutic sessions. Dr. Torres opined that given that Claimant's underlying symptoms had not resolved in the course of previous treatment Claimant never reached MMI or alternatively, that Claimant had deteriorated and was no longer at MMI. Dr. Torres performed a mental impairment rating worksheet based on Claimant's psychological condition as it existed on the date of the evaluation. Dr. Torres assigned a 14% psychiatric impairment with impairment for sexual function, sleep, interpersonal relationships, communicating effectively with others, recreational activities, managing complex interactions with others, memory, and ability to set realistic goals. *See* Exhibit 13.

29. Dr. Bisgard testified by deposition consistent with her IME report. Dr. Bisgard opined that the DIME physician, Dr. Reichhardt, made no errors in the impairment rating and that the impairment rating provided by Dr. Reichhardt was supported by the AMA Guides. Dr. Bisgard opined that she would not have included the thoracic spine like Dr. Reichhardt did, but that he did not err. Dr. Bisgard opined that the DIME accounted for psychiatric impairment. Dr. Bisgard agreed that Claimant had reached MMI, consistent with the opinions of Dr. Plotkin and Dr. Reichhardt. Dr. Bisgard noted that although Dr. Torres provided several areas of rating, Claimant had pre-existing issues with: anger and impulse control, relationships, and alcoholism. Dr. Bisgard noted that Dr. Torres was the only evaluator outside the opinions that were similar including opinions from Dr. Carbaugh, Dr. Kenneally, Dr. Gutterman, Dr. Stieg, Dr. Plotkin, Dr. Reichhardt, and Dr. Nielson.

30. Dr. Bisgard noted that Dr. Gutterman had provided a 4% impairment rating for the adjustment disorder and that Dr. Plotkin used that plus a 10% impairment rating for disfigurement and that Dr. Plotkin provided the disfigurement rating alongside the psych rating. However, Dr. Bisgard noted that the DIME physician only provided the 10% disfigurement rating and did not provide a separate psych rating. Dr. Bisgard opined that awarding the mental impairment on top of the disfigurement impairment would be considered double-dipping. Dr. Bisgard opined that Dr. Reichhardt was not wrong and made no errors in calculating Claimant's impairment. Dr. Bisgard noted that Dr. Torres disagreed, but that Dr. Torres was not a level II accredited physician and that there was only a different opinion and no error by Dr. Reichhardt.

31. Claimant testified at hearing that he was a different person now and following his work injury and that he is now self-conscious, has anxiety, and has panic attacks. Claimant testified that he is irritable and impulsive now. Claimant testified that he put on a face with his psychological treatment with Dr. Carbaugh but that he was emotional and open with Dr. Bisgard. Claimant testified that he struggles now with communication and that he no longer has confidence like he used to have.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

OVERCOMING DIME ON MMI

MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." *See* § 8-40-201(11.5), C.R.S. A DIME physician's finding that a party has or has not reached MMI is binding on the parties unless overcome by clear and convincing evidence. *See* § 8-42-107(8)(b)(III), C.R.S.; *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Under the statute MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office,* 942 P.2d 1358 (Colo. App. 1997). A finding that the claimant needs additional medical treatment (including surgery) to improve his injury-related medical condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002); *Reynolds v. Industrial Claim Appeals Office,* 794 P.2d 1090 (Colo. App. 1990); *Sotelo v. National By-Products, Inc.,* W.C. No. 4-320-606 (I.C.A.O. March 2, 2000). The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, supra*. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician's finding concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). The question of whether the party challenging the DIME physician's finding regarding MMI has overcome the finding by clear and convincing evidence is one of fact for the ALJ.

Here, Claimant has failed to overcome the opinion of DIME physician Dr. Reichhardt on MMI by clear and convincing evidence. Rather, the opinion of Dr. Reichhardt on MMI is supported by consistent opinions from the authorized treating provider Dr. Plotkin, and from the treating psychologist Dr. Carbaugh. Dr. Bisgard also provided an opinion on MMI consistent with the DIME physician. Here, Claimant argues that due to the report of Dr. Torres, he has overcome the DIME physician's opinion on MMI by clear and convincing evidence. However, the ALJ disagrees and finds that Dr. Torres' opinion is merely a difference of opinion from multiple other providers. As found above, Dr. Carbaugh opined as early as February of 2014 that Claimant was at MMI from a psychological standpoint. Dr. Carbaugh found Claimant to be open in discussing psychological issues and also noted in his evaluation that Claimant did have a tendency to "hold it in" and had some anger, stress, and felt socially uncomfortable because of the disfigurement. Many providers recommended maintenance psychological visits to continue working on issues, but the only provider who opined that Claimant was not at MMI from a psychological standpoint was Dr. Torres. As found above, Dr. Gutterman noted that Claimant's adjustment disorder would probably persist indefinitely given the type of significant injury Claimant sustained.

Claimant's psychological issues, including adjustment disorder and disfigurement had become stable with no further treatment reasonably expected to improve these conditions at the point he was placed at MMI by DIME physician Dr. Reichhardt. Claimant was noted by many providers to be doing reasonably well despite the significant injury he sustained and Claimant was stable from a psychological standpoint when he was placed at MMI. Although he was not back to normal and had remaining psychological issues, these issues were found by Dr. Reichhardt to be stable at and MMI. This determination is consistent with the overall records and with the determination of MMI made by Dr. Reichhardt. Claimant has failed to show that it is highly probable that Dr. Reichhardt was incorrect in assigning MMI.

OVERCOMING DIME ON PPD

A DIME physician must apply the AMA Guides when determining the claimant's medical impairment rating. *See* § 8-42-101(3.7), C.R.S.; §8-42-107(8)(c), C.R.S. The finding of a DIME physician concerning the claimant's medical impairment rating shall be overcome only by clear and convincing evidence. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

As a matter of diagnosis the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office,* 78 P.3d 1150 (Colo. App. 2003). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590 (Colo. App. 1998). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000).

The questions of whether the DIME physician properly applied the AMA Guides, and ultimately whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office, supra*. A mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. *See Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO March 22, 2000).

Dr. Reichhardt provided a whole person impairment rating of 22%. This was provided based on: 5% for traumatic brain injury; 10% for disfigurement; 3% for olfactory; and 5% for spinal. The authorized treating provider, Dr. Plotkin provided an 18% whole person impairment rating based on: 5% for traumatic brain injury, 10% for

disfigurement, and 4% for psychiatric. Dr. Plotkin did not include any rating for olfactory or spinal. Dr. Reichhardt did not include any rating for psychiatric. Dr. Reichhardt specifically noted the reason why he declined to rate psychiatric in his DIME report. He opined that under the AMA Guides, if impairment due to disfigurement exists, it usually is manifested by a change in behavior such as an individual's withdrawal from society and should be evaluated in accordance with the criteria set in chapter 14. Dr. Reichhardt opined that it was appropriate to give Claimant a rating for this according to Table 1, page 241, hence the 10% whole person disfigurement rating. Dr. Reichhardt also noted in his DIME report Claimant was not given a separate psychiatric impairment rating, as it was used for the disfigurement rating. Dr. Bisgard opined that this was not an error and that rating for both in Claimant's case would be considered "double dipping."

Dr. Torres believed that Claimant's psychiatric rating was 14% whole person. However, Dr. Torres based this rating, in part, on several psychiatric issues that pre-existed the injury as shown by prior medical records. The opinion of Dr. Torres is not found credible or persuasive. Further, Dr. Torres merely showed a difference of opinion from the DIME physician on what the appropriate rating was and what conditions were causally related to Claimant's psychiatric rating. Dr. Torres did not point out error in Dr. Reichhardt's calculation of impairment. Similarly, although Dr. Plotkin believed that Claimant warranted an impairment rating for disfigurement separate and unrelated to the psychiatric impairment due to Claimant's adjustment disorder, Dr. Plotkin failed to identify error in Dr. Reichhardt's determination that the psychiatric impairment was included in the disfigurement rating. The providers in this case seem to disagree but as opined by Dr. Bisgard, there is merely a difference in opinion as to whether Claimant has a separate ratable psychiatric condition or whether his adjustment disorder is appropriately rating within the disfigurement rating. As Claimant ahs failed to show error in Dr. Reichhardt's rating, and has merely shown difference of opinion, Claimant has failed to meet his burden.

ORDER

It is therefore ordered that:

1. Claimant has failed to overcome by clear and convincing evidence the opinion of the DIME physician Dr. Reichhardt on MMI and PPD.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the

certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 25, 2017,

/s/ Michelle E. Jones

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUES

1. What is the true opinion of Division Independent Medical Examination ("DIME") physician , Brian Beatty, D.O., regarding Claimant's permanent impairment?

2. If Dr. Beatty's true opinion is that Claimant sustained a 20% whole person permanent impairment rating, has Claimant overcome the DIME physician's opinion by clear and convincing evidence?

3. If Dr. Beatty's true opinion is that Claimant sustained a 33% whole person permanent impairment rating, have Respondents overcome the DIME physician's opinion by clear and convincing evidence?

4. Whether wages paid to Claimant during a period of modified duty should be considered temporary total disability for purposes of the statutory benefit cap set forth in Section 8-42-107.5, C.R.S.

FINDINGS OF FACT

1. On November 13, 2014, Claimant sustained an admitted industrial injury when a 300-pound cylinder of ammonia fell on top of her. Claimant sustained lumbar transverse process fractures at T12, L1 and L2, an avulsion fracture to her left ring finger, a nasal fracture, rib fractures, liver laceration and a concussion.

2. Claimant was hospitalized at St. Anthony's hospital. Upon her release, Claimant treated primarily with Theodore Villavicencio, M.D. Claimant also treated with Eric Tentori, M.D., Samuel Chan, M.D., Philip Yarnell, M.D, and John Mark Disorbio, Ed.D., among others.

3. Claimant underwent treatment over the course of several months, including physical therapy and work hardening.

4. In December 2014, Dr. Villavicencio released Claimant to work modified duty. Claimant returned to work sometime thereafter. Claimant testified that she attempted to return to work as a driver soon after her injury and that she suffered a setback resulting in her physicians changing her restrictions. As of a March 13, 2015 evaluation, Claimant's restrictions included no commercial driving. Dr. Villavicencio allowed Claimant to return to driving in early April 2017; however, by the April 27, 2015 evaluation, Claimant was again restricted from commercial driving.

5. Claimant credibly testified that she continued to work light duty until the employer stopped giving her things to do. Claimant testified that she was required to, and did, stay in touch with the employer on a daily basis to see if they were going to have her

come in for any light duty work. Claimant testified she was expected to come in if there was work for her, and that she was available to do so in such event. Claimant testified that she also submitted timesheets. Claimant indicated that the inability to drive the commercial vehicles was the biggest impediment to her returning. As of August 18, 2015, Claimant was still on restrictions of 20 pounds lifting, and no driving or riding in a company vehicle.

6. Between August 1, 2015 and November 22, 2015, Claimant continued to receive her regular wages while on light duty restrictions and not receiving work from Employer. Claimant was subsequently placed back on temporary total disability. Employer paid Claimant $14,324.63 in wages during such time period. If claimant had received temporary total disability ("TTD") benefits instead of wages during this same time period, she would have received $12,301.58.

7. In March 2015, Dr. Villavicencio referred Claimant to Dr. Chan. Dr. Chan documented continuing concerns regarding underlying psychological issues of Claimant. On April 20, 2015, Dr. Chan remarked, "Today, the patient had a rather significant reaction to her emotional distress, which leads one to believe that the ongoing symptoms could be psychosomatically influenced." In a May 4, 2015 medical note, Dr. Chan noted, "the concern is whether there is underlying somatization." On May 11, 2015, Dr. Chan remarked, "I do feel that there is definitely an underlying psychological component to the patient's pain complaint." In a January 12, 2016 medical note, Dr. Chan commented, "…I do feel that there is a significant amount of underlying psychological dysfunction that might impede the patient's recovery as well as affect her presentation."

8. In October 2015, Dr. Villavicencio referred Claimant to Dr. Disorbio. Dr. Disorbio conducted a psychological evaluation of Claimant on October 28, 2015 and issued a report dated November 5, 2015. Dr. Disorbio diagnosed Claimant with pain disorder with psychological factors, somatization features and denied dependency. Claimant attended multiple follow-up sessions with Dr. Disorbio from February 2016 to September 2016.

9. On March 8, 2016, Claimant underwent a functional capacity evaluation with Concentra. Catherine Kent, BSc.PT, noted limited range of motion. Ms. Kent noted that Claimant put forth full effort, and that Claimant's pain could have affected Claimant while making functional decisions.

10. On March 11, 2016, Dr. Chan conducted a follow-up evaluation of Claimant. Dr. Chan determined Claimant had reached maximum medical improvement ("MMI") as of March 11, 2016. Dr. Chan noted the following lumbar range of motion findings, measured using the double inclinometer method:

- T12 range of motion/sacral range of motion: 110/56, 118/60, 120/80
- Lumbar extension: 32/6, 35/9, 36/10
- Straight leg raising on the right: 72, 69, 68
- Straight leg raising on the left: 82, 79, 77

- Lumbar right lateral flexion: 20/3, 23/2, 25/2
- Lumbar left lateral flexion: 21/5, 20/1, 27/4

11. Per American Medical Association Guides to the Evaluation of Permanent Impairment, Third Edition (Revised) ("AMA Guides"), Dr. Chan assigned a 15% whole person impairment rating under Table 53(I)(B) for the lumbar transverse process fractures. Dr. Chan assigned a 0% whole person impairment rating for range of motion. Dr. Chan assigned a 5% whole person impairment rating for the liver contusion. Dr. Chan also assigned a 29% left ring finger impairment rating, which converted to a 3% hand impairment, which converted to a 2% upper extremity impairment rating, which converted to a 1% whole person impairment rating. Dr. Chan assigned a total whole person impairment rating of 20%.

12. Dr. Chan testified by deposition on March 14, 2017. Dr. Chan testified as an expert in physiatry. Dr. Chan testified that he assigned a 15% whole person impairment rating for the lumbar spine based on Claimant sustaining three transverse process fractures. Dr. Chan testified that he did not assign an impairment rating for range of motion because there were no deficits in Claimant's lumbar range of motion. Dr. Chan testified that he had no reason to disagree with Dr. Disorbio's 2% psychiatric impairment rating and that he would have combined the psychiatric impairment rating with his own had Dr. Disorbio's rating occurred prior to his own.

13. Dr. Chan testified he spent approximately 15 to 20 minutes during his March 11, 2016 examination taking history and performing the range of motion measurements. Dr. Chan testified that he typically takes each measurement and then records the measurement. Dr. Chan testified that he used the double inclinometer method set forth by the Division of Workers' Compensation, and contended the measurements were valid. Dr. Chan testified he felt consistent effort was given by Claimant.

14. Dr. Chan testified that range of motion differs by day and effort, and that an examiner shoulder use range of motion measurements taken the day of, if valid, "regardless of what the other measurements have been before or after…" When asked if it is normal to see range of motion deficits with transverse process fractures, Dr. Chan testified "Not necessarily. The transverse process fracture and range of motion oftentimes is a rotation, which is not part of the calculation of impairment rating, unfortunately. And it's the extension and rotation that usually causes people more discomfort." Dr. Chan testified that it is recommended a DIME physician use their own range of motion calculations and perform a second set if determined invalid; however, Dr. Chan testified that, if a DIME physician determines range of motion measurements to be invalid, it is within his or her discretion to determine what measurements to use.

15. On March 21, 2016, Stephen A. Moe, M.D., conducted a psychiatric Independent Medical Examination "(IME") of Claimant at the request of Respondents. Dr. Moe opined it was probable that, since early 2015, non-physical factors were primarily responsible for Claimant's physical symptoms and impacted her functioning.

16. On September 22 2016, Brian Beatty, D.O. conducted a Division Independent Medical Examination ("DIME") and issued a DIME report. On examination, Dr. Beatty noted the following lumbar range of motion findings: "Flexion 20 degrees, extension 5 degrees, side bending right 15 degrees and side bending left 20 degrees. The patient has a negative straight leg raise to 65 degrees on the right and 65 degrees on the left." Dr. Beatty used an inclinometer for the measurements. Dr. Beatty assigned a 33% combined whole person impairment rating under the AMA Guides, consisting of a 28% whole person impairment rating for the lumbar spine, combined with a 5% whole person impairment rating for a liver contusion, and a 1% whole person impairment for a left ring finger injury. Dr. Beatty noted that his lumbar spine impairment rating consisted of a 15% whole person impairment rating under Table 53, and a 15% whole person impairment for loss of range of motion. Dr. Beatty remarked,

> My impairment was essentially the same as Dr. Chan's impairment except for one difference and that was for the range of motion where Dr. Chan found a 0% impairment and I found a 15% impairment. I felt that when I was taking the range of motion measurements that the patient may have been trying to manipulate the numbers by keeping her back straight though she was still moving her hips. There I would defer to Dr. Chan's impairment which is accurate and valid giving the patient a final impairment of 20% per Dr. Chan's calculations.

17. Despite including such comment in his report, on the Examiner's Summary Sheet, Dr. Beatty noted a 28% whole person spine impairment rating and assigned a final combined whole person impairment rating of 33%.

18. Dr. Beatty issued an Amended DIME report on October 12, 2016. Dr. Beatty clarified that he was assigning a total 20% whole person impairment, based on a 15% whole person impairment rating for the lumbar spine, combined with a 5% whole person impairment rating for the liver contusion, and a 1% whole person impairment rating for the left ring finger. On an amended Examiner's Summary Sheet, Dr. Beatty updated the 28% whole person spine rating to reflect a 15% whole person spine rating and the final combined whole person impairment rating to 20%, referencing Dr. Chan's evaluation.

19. Based on Dr. Beatty's initial DIME report and amended DIME report, the ALJ finds that the 20% whole person impairment rating is Dr. Beatty's true and final opinion. As Claimant is challenging the 20% whole person impairment rating, Claimant has the burden of proof to overcome Dr. Beatty's opinion by clear and convincing evidence.

20. On January 20, 2017, Sherry Young, OTR conducted a functional capacity evaluation of Claimant. Ms. Young issued a report dated February 1, 2017. Ms. Young remarked that Claimant's lumbar range of motion was "quite limited." Ms. Young found lumbar flexion at 80/55, 75/50 and 75/50, lumbar extension at 10/0, 10 and 7, right straight leg raising at 70 all three times, left straight leg raising at 60, 55, and 60, lumbar right lateral flexion at 16/0, 20/5 and 20/5 and lumbar left lateral flexion at 15/5, 12/5 and 15/5.

21. Ms. Young documented that she used two hand-held inclinometers to perform the measurements. Ms. Young found Claimant's results valid. Ms. Young remarked that Claimant was putting forth full and consistent effort.

22. On February 7, 2017, John S. Hughes, M.D. conducted an IME at the request of Claimant. Dr. Hughes noted the following regarding his examination of the lumbar spine:

> Curvatures are normal, and there us tenderness posteriorly over the left SI joint. Like Dr. Beatty, I note [Claimant's] flexion uses a 'bow,' with maximum sacral flexion 60 degrees and true lumbar flexion only 22 degrees. Also, like Dr. Beatty, I note right-in-excess-of-left lateral flexion restriction at 9 versus 14 degrees respectively. Lumbar spine extension is measured at 9 degrees in the seated position, and in the supine position, straight leg raise testing is 52 degrees over the right, 67 degrees over the left.

23. Dr. Hughes noted that Dr. Beatty's reduced range of motion findings of the lumbar spine were consistent with his findings and Ms. Young's findings. Dr. Hughes remarked,

> It seems highly implausible to me that an individual with 3-level transverse process fractures of the lumbar spine would have recovery of full lumbar spine ranges of motion, as noted by Dr. Chan. In review of medical record documentation currently available to me, I did not find any other examination that documented 'normal' lumbar spine ranges of motion. With this type of multilevel lumbar spine fracture, it is quite common for individuals to compensate by developing a technique of forward flexion, using the hip flexors and sparing the lumbar spine. This 'bow' maneuver is adaptive and appears consistent throughout [Claimant's] lumbar spine examinations, including the one done by Dr. Beatty on September 22, 2016.

24. Dr. Hughes assigned a 15% Table 53 whole person impairment rating and a 17% whole person impairment rating based on deficits in Claimant's lumbar range of motion. Dr. Hughes agreed Claimant should be assigned an impairment rating for her ring finger and for the liver contusion.

25. Dr. Hughes opined that Claimant was not exaggerating her symptoms, noting the similarity between his findings and Dr. Beatty's findings. Regarding Dr. Beatty's use of Dr. Chan's range of motion measurements, Dr. Hughes stated, "I disagree with Dr. Beatty's decision to use Dr. Chan's range of motion findings as there is biological plausibility for [Claimant's] lumbar spine range of motion limitations."

26. Dr. Hughes testified at hearing as an expert in occupational medicine. Dr. Hughes testified consistent with his IME report. Dr. Hughes agreed with the impairment

rating for the liver, the ring finger, and the 15% impairment rating for the transverse process fractures.

27. Dr. Hughes testified that there was inter-observational and intra-observational consistency of Claimant's lumbar range of motion findings. Dr. Hughes testified that Claimant consistently manifested a "bowing sort of maneuver" with forward flexion, as well as reduced right lateral flexion compared to left lateral flexion. Dr. Hughes opined that Claimant was giving valid and consistent effort. Dr. Hughes testified that his findings were consistent with Dr. Beatty's findings, which were substantially similar with Ms. Young's overall findings, with the exception of lateral flexion. Dr. Hughes testified that he did not see any other written inclinometric worksheet that indicated normal range of motion, and those that failed to include specific data did not provide an objective data point.

28. Dr. Hughes opined that Claimant should be assigned a permanent impairment rating for deficits in lumbar range of motion. Dr. Hughes testified that it was biologically plausible that the three transverse process fractures, though healed, impaired Claimant's range of motion to a measurable degree. Dr. Hughes acknowledged that, on occasion, transverse process fractures heal with full function and with no ongoing complaints of pain.

29. Dr. Hughes testified that the Division of Workers' Compensation Impairment Rating Tips encourage examiners to perform repeat measurements if he or she determines "something is off" with the measurements. Dr. Hughes testified that the examiner is permitted to adopt findings by another examiner or by the attending physician, and that the examiner shoulder fully explain his or her rationale for doing so. Dr. Hughes opined that, to his satisfaction, Dr. Beatty did not fully explain his rationale for using Dr. Chan's measurements. Dr. Hughes stated,

> I would agree with Dr. Beatty in the process that Dr. Beatty was employing, to look back at previous examination findings. And if they are more plausible than your findings, you may adopt those findings. But he really has a clinical burden of proof to bear if he is going against other manifestations such as a biological plausibility of a multilevel fracture having recovery of full range motion.

30. Dr. Hughes acknowledged that Dr. Beatty had the discretion to use Dr. Chan's range of motion measurements, and that it was not mandatory for Dr. Beatty to bring Claimant back for a repeat evaluation Dr. Hughes further testified that Dr. Chan filled out the range of motion worksheet as required, and that he had no reason to believe Dr. Chan made up his numbers.

31. Claimant testified that she spent approximately one hour and fifteen minutes with Dr. Beatty, who used a device to measure her and explained each of the tests. Claimant testified Dr. Beatty asked her to perform the range of motion tests three times. Claimant testified that her March 2016 exam with Dr. Chan took five to ten minutes, and that Dr. Chan had her bend forward once or twice. Claimant testified that she did not

observe Dr. Chan writing down any information. Claimant testified that the functional capacity tests took upwards of three hours. Claimant testified that she performed all of the tests to the best of her ability.

32. Claimant's medical records document varied lumbar range of motion. Dr. Villavicencio noted Claimant had full range of motion of the lumbosacral spine on December 16, 2014, January 13, 2015, January 30, 2015, and September 10, 2015. Dr. Villavicencio did not document any specific range of motion measurements on such dates. On February 12, 2015, Christine O'Neal, PA-C noted Claimant's flexion in the lumbar spine was 80 degrees, extension 20 degrees, left and right thoracic side-bending each at 20 degrees, and left and right thoracolumbar rotation each at 40 degrees. On March 4, 2015 and March 13, 2015, Dr. Villavicencio noted lumbar flexion of 60 degrees and extension of 0 degrees. On March 24, 2015, Michael Noce, M.D. noted Claimant had full lumbar range of motion. On April 27, 2015 and May 6, 2015, Dr. Villavicencio noted Claimant's lumbar flexion was 70 degrees, extension at 20 degrees, and the left and right thoracolumbar side-bending each at 15 degrees. On May 20, 2015, orthopedic surgeon Bryan Andrew Castro, M.D., remarked that Claimant had "good lumbar range of motion with forward bending, extension, lateral bending, and rotation." On June 16, 2015, July 7, 2015, and July 14, 2015, Dr. Villavicencio noted lumbar flexion of between 70-80 degrees and extension of 20 degrees.

33. The ALJ credits the opinion of Drs. Chan and Beatty over the contradictory opinion of Dr. Hughes as to Claimant's permanent impairment rating, and finds Claimant did not overcome the DIME physician's opinion by clear and convincing evidence.

34. The wages paid to Claimant during a period of modified duty should not be considered temporary total disability for purposes of the statutory benefit cap set forth in Section 8-42-107.5, C.R.S.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App.

2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

The True Opinion of the DIME Physician and Burden of Proof

The DIME physician's findings include his or her subsequent opinions, as well as his or her initial report. *Andrade v. Industrial Claim Appeals Office,* 121 P.3d 328, 330 (Colo. App. 2005). If a DIME physician issues conflicting or ambiguous opinions concerning MMI or impairment, it is the ALJ's province to determine the Division IME's true opinion as a matter of fact. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000); *Rainwater v. Sutphin*, WC 4-815 042-04 (ICAO September 9, 2014). Once the ALJ determines the true opinion of the DIME physician, the party seeking to overcome that opinion bears the burden of proof by clear and convincing evidence.

As found, Dr. Beatty's true opinion regarding Claimant's permanent impairment is that Claimant sustained a combined 20% whole person impairment rating, consisting of a 15% Table 53(I)(B) rating, a 5% whole person impairment rating for the liver contusion, and a 1% whole person impairment rating for the left ring finger. In his September 22, 2016 report, Dr. Beatty specifically stated that he was assigning Claimant a 20% final impairment based on Dr. Chan's calculations. Dr. Beatty explained that he was deferring to Dr. Chan's impairment rating regarding range of motion because he felt Claimant may have been trying to manipulate the numbers. While Dr. Beatty assigned a 33% final combined whole person permanent impairment rating on the Examiner's Summary Sheet, Dr. Beatty addressed any ambiguity by amending the Examiner's Summary Sheet to reflect a final combined whole person impairment rating of 20%, as referenced in his report.

As Claimant is challenging the 20% impairment rating, Claimant has the burden of proof to overcome Dr. Beatty's opinion by clear and convincing evidence.

Overcoming the DIME Physician's Opinion

A DIME's findings of MMI, causation, and impairment are binding on the parties unless overcome by "clear and convincing evidence." Section 8-42-107(8)(b)(III), C.R.S.; *Peregoy v. Indus. Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates it is "highly probable" that the DIME's findings are incorrect. *Qual-Med, Inc. v. Indus. Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME's opinion, "there must be evidence that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc.*, W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). A mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. *See Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO March 22, 2000).

A DIME physician must apply the AMA Guides when determining the claimant's medical impairment rating. Section 8-42-101(3.7), C.R.S.; Section 8-42-107(8)(c), C.R.S. Ultimately, the questions of whether the DIME physician properly applied the AMA Guides, and whether the rating was overcome by clear and convincing evidence, present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office, supra*. Not every deviation from the rating protocols of the AMA Guides requires the ALJ to conclude that the DIME physician's rating has been overcome as a matter of law. Rather, deviation from the AMA Guides constitutes evidence that the ALJ may consider in determining whether the DIME physician's rating has been overcome. *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117 (Colo. App. 2003); *Logan v. Durango Mountain Resort,* W.C. No. 4-679-289 (ICAO, April 3, 2009).

In *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000), the court noted that under the AMA Guides the "evaluation or rating of impairment is an assessment of data collected during a clinical evaluation and the comparison of those data to the criteria contained in the Guides." Consistent with this concept the Industrial Claim Appeals Office has upheld a DIME physician's impairment rating that excluded "valid" range of motion deficits from an impairment rating based on the determination that the range of motion deficits did not correlate with clinical observations and data. *Adams v. Manpower,* W.C. No. 4-389-466 (I.C.A.O. August 2, 2005); *Garcia v. Merry Maids,* W.C. No. 4-493-324 (I.C.A.O. August 12, 2002).

As found, Claimant failed to overcome Dr. Beatty's 20% permanent impairment rating by clear and convincing evidence. While Dr. Beatty noted that his own range of motion measurements supported a 15% range of motion impairment rating, Dr. Beatty chose to exclude his measurements based on his determination that Claimant may have been attempting to manipulate the measurements. Dr. Chan credibly testified that his range of motion measurements were valid. It was within Dr. Beatty's discretion to

use Dr. Chan's range of motion measurements under the circumstances. In his DIME report, Dr. Beatty provided an explanation as to why he elected to defer to Dr. Chan's range of motion measurements and impairment rating. Both full and limited range of motion were noted throughout Claimant's medical records. The crux of Claimant's argument lies in Dr. Hughes' opinion that it is biologically plausible that the transverse process fractures sustained by Claimant impaired Claimant's range of motion to a measurable degree. The ALJ concludes that the evidence presented demonstrates a mere difference of opinion between physicians and does not establish that it is highly probable Dr. Beatty erred in his assessment of Claimant's permanent impairment.

Applying the TTD Equivalent of Paid Wages to the Statutory Benefit Cap

Section 8-42-107.5, C.R.S., provides:

> No claimant whose impairment rating is twenty-five percent or less may receive more than seventy-five thousand dollars from combined temporary disability payments and permanent partial disability payments. No claimant whose impairment rating is greater than twenty-five percent may receive more than one hundred fifty thousand dollars from combined temporary disability payments and permanent partial disability payments. For the purposes of this section, any mental impairment rating shall be combined with the physical impairment rating to establish a claimant's impairment rating for determining the applicable cap. For injuries sustained on and after January 1, 2012, the director shall adjust these limits on the amount of compensation for combined temporary disability payments and permanent partial disability payments on July 1, 2011, and each July 1 thereafter, by the percentage of adjustment made by the director to the state average weekly wage pursuant to section 8-47-106.

Section 8-42-105(3), C.R.S. provides, in relevant part:

> Temporary total disability benefits shall continue until the first occurrence of any one of the following: (a) The employee reaches maximum medical improvement; (b) The employee returns to regular or modified employment; (c) The attending physician gives the employee a written release to return to regular employment; or (d) (I) The attending physician gives the employee a written release to return to modified employment, such employment is offered to the employee in writing, and the employee fails to begin such employment.

Respondents seek to have the TTD equivalent of the wages paid by Employer to Claimant during a period of modified duty included in the statutory benefit cap for temporary and permanent disability. Respondents contend Claimant is attempting to obtain a double recovery, and that any obligation of Respondents to pay TTD benefits was satisfied by paying Claimant wages in lieu of TTD. Respondents argue that Claimant did not sustain any wage loss between August 1, 2015 and November 22, 2015, and therefore should not be allowed to recover both wages and TTD.

Respondents cite *City and County of Denver v. Thomas*, 176 Colo. 483, 491 P.2d 573 (1971) and *Matthew McCurry v. Weatherford Int'l. Inc*., W.C. No. 4-851-156 (Jan. 18, 2007) in support of their contention.

In *City and County of Denver,* Denver firemen and policemen sought a ruling stating they were entitled to workers' compensation benefits in addition to their full salaries during the first year of disability. The court determined that a specific charter amendment allowing policemen to receive both their full salary and workers' compensation benefits during the first year of disability did not apply to firemen and, as such, the firemen were not entitled to workers' compensation benefits in addition to full salaries payable during the first year of disability. In *McCurry,* the employer paid Claimant base wages for a period of temporary disability during which Claimant had also been entitled to receive short-term disability benefits solely funded by the employer. The parties entered into a stipulation that the insurer would reimburse employer for the amount paid by employer during such time period, and that the payments by employer were equivalent to TTD benefits. The ALJ determined claimant was paid for lost wages and respondents' obligation to pay TTD benefits had been satisfied.

Both cases are factually distinct from the case at bench. Here, Employer paid Claimant her full wages while on modified duty, despite Employer not providing Claimant work. Claimant credibly testified that she was required to check-in with Employer for work and that she did so on a daily basis. Claimant also credibly testified that she was expected to work if needed, and that she was available to do so. No evidence was presented to the contrary. Claimant would not be entitled to TTD benefits upon returning to modified duty for Employer and being paid full wages during such time period. Claimant argues, and the ALJ agrees, that the cap on the combination of temporary total disability and permanent partial disability does not apply to wages paid while on modified duty in this circumstance, as the statute clearly refers to only temporary disability or permanent partial disability.

Section 8-42-124, C.R.S., in part, provides that an insurer may pay an employer the temporary total disability owed Claimant if the employer has a wage continuation plan. The statute states, in relevant part:

> (3) Such payments shall be paid directly to the employer during the period of time that such employer continues to pay a sum in excess of the temporary total disability benefits prescribed by articles 40 to 47 of this title and has not charged any earned vacation leave, sick leave, or other similar benefits to any employee so disabled and for so long as such employee is eligible for temporary disability benefits under the provisions of articles 40 to 47 of this title. The payment of such moneys to an employer shall constitute the payment of compensation or benefits to the employee in accordance with the provisions of section 8-42-103.
>
> (8) If any employer who pays to an injured employee a sum in excess of the temporary total disability benefits prescribed by articles 40 to 47 of this

> title and who has not charged the employee with any earned vacation leave, sick leave, or other similar benefits seeks to have assigned the compensation benefits otherwise due the injured employee as provided in this section, the employer shall notify the employee of said request at the same time the employer makes the request of the director or insurance carrier or both.

WCRP Rule 1-7 provides that "(A) An employer who wishes to pay salary or wages in lieu of temporary disability benefits may apply to the Director for authorization to proceed pursuant to §8-42-124(2), C.R.S."

While Respondents contend they paid Claimant wages in lieu of TTD, no evidence was presented establishing Employer sought or obtained authorization for a wage continuation plan. Employer paid Claimant wages during a period of modified duty during which Claimant was expected to work. Accordingly, the TTD equivalent of wages paid to Claimant for modified duty in these circumstances should not be included in the limits on temporary and permanent benefits.

ORDER

It is therefore ordered that:

1. The true opinion of the DIME physician, Dr. Beatty, is that Claimant sustained a 20% whole person permanent impairment rating.

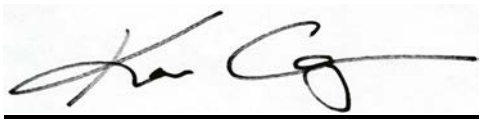
2. Claimant failed to overcome the DIME physician's opinion on permanent impairment by clear and convincing evidence.

3. The TTD equivalent of wages paid to Claimant while on modified duty from August 1, 2016 to November 22, 2016 shall not be applied toward the statutory benefit cap pursuant to Section 8-42-107.5, C.R.S.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 26, 2017



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-000-253-03

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on May 23, 2017, in Denver, Colorado. The hearing was digitally recorded (reference: 5/23/17, Courtroom 1, beginning at 8:30 AM, and ending at 11:00 AM).

Claimant's Exhibits1 through 11(which is a demonstrative anatomical chart marked by Ronald Swarsen, M.D., the Claimant's expert) were admitted into evidence, without objection. Respondents' Exhibits A through K were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Respondent, to be filed, electronically, within 5 working days, giving the Claimant 2 working days within which to file objections. After the referral, the ALJ decided to prepare the decision himself, without the benefit of a proposed decision. Consequently, the matter was deemed submitted for decision as of May 23, 2017.

ISSUE

The sole issue to be determined by this decision concerns the Claimant's request to convert the admission in the Amended Final Admission of Liability (FAL), dated January 17, 2017, for 9% of the right upper extremity (RUE), based on the rating of the Division Independent medical Examiner (DIME), John Douthit, M.D., which was automatically converted to 5% whole person, pursuant to the requirements of the *American Medical Association Guides to the Evaluation of Permanent Impairment,* 3rd Ed., Rev. At the commencement of the hearing, the Claimant withdrew the issue of medical benefits.

If the Claimant accepts the four corners of DIME Dr. Douthit's opinion concerning permanent medical impairment (PPD), the Claimant's burden of proof is by a "preponderance of the evidence" because a conversion does not involve a challenge to a DIME's opinions on degree of permanent impairment, maximum medical improvement (MMI), or causal relatedness of related conditions that are part and parcel of the DIME rating process and must be given presumptive effect whereby the standard of proof is "clear and convincing" evidence. *See* § 8-42-107 (8) (b) (III), C.R.S. Consequently, the Claimant's burden of proof is by a "preponderance of the evidence."

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Respondents' filed an Amended FAL, dated January 17, 2017, admitting for an average weekly wage (AWW) of $1,717.32, an MMI date of June 13, 2016, PPD of 9% of the RUE, pursuant to the rating of DIME Dr. Douthit, and denying post-MMI maintenance medical benefits.

2. The Claimant (date of birth, March 23, 1984) received an injury to his RUE on November 30, 2015, while working as a delivery driver for the Employer. He was lifting a package from ground level up to a dock, slightly above waist level, when felt considerable pain in his right shoulder.

3. On December 1, 2015, the Claimant came under the care of Brian Williams, M.D., at SCL Occupational Medicine. Dr. Williams became the Claimant's

authorized treating physician (ATP) and he referred the Claimant for an MRI (magnetic resonance imaging) of the right shoulder.

4. After Dr. Williams received the results of the MRI of the right shoulder, he referred the Claimant to Surgeon Thomas Mann, M.D., who performed surgery on the Claimant's right shoulder on January 20, 2016.

5. As a result of the surgery, Dr. Mann found "a well preserved glenohumeral joint." He indicated that: "There was a SLAP tear extending from about the 10:00 to 3:00 position. Ronald Swarsen, M.D., the Claimant's Independent Medical Records Review (IME) expert, indicated the same thing. Dr. Mann indicated that "the tear extended into the labral tissue slightly more significantly just behind the biceps." He further indicated that the biceps anchor was grossly intact other than the tear. He noted no other lesions.

6. Ultimately, the Claimant's ATP, Dr. Williams, released the Claimant to return to work at full duty, with no restrictions; no permanent impairment; no maintenance care recommended; and, Dr. Williams place the Claimant at MMI, all effective June 13, 2016. Thereafter, a DIME was requested and Dr. Douthit was selected as the DIME physician.

Division Independent Medical Examination (DIME) by John Douthit, M.D.

7. Dr. Douthit performed the DIME on November 14, 2016 (Respondents' Exhibit F). Dr. Douthit noted that the Claimant's general health was good. Dr. Douthit further noted that the Claimant had been returned to work without restriction. He noted a loss of strength in the Claimant's right arm. Ultimately, Dr. Douthit agreed with the ATP's date of MMI, and he rated the Claimant at 9% RUE, which the ALJ finds he mechanistically converted to 5% whole person, pursuant to the requirements of the *American Medical Association Guides to the Evaluation of Permanent Impairment,* 3rd Ed., Rev. Dr. Douthit makes no indication that a whole person rating was more appropriate than the scheduled rating of 9% RUE, which the Respondents admitted.

Claimant's Independent Medical Records Reviewer, Ronald Swarsen, M.D.

8. Dr. Swarsen did not prepare or submit a written report, however, he was qualified and testified as an expert on work-related injuries. He is fully Level 2 Accredited by the Division of Workers' Compensation (DOWC).

9. Dr. Swarsen was of the opinion that the Claimant's injury was at the glenoid labrum (above the shoulder). Dr. Swarsen extensively marked Claimant's Exhibit 11 in red, green and blue (glenohumeral joint) to illustrate "pain" and what he believed to be the site of functional impairment. It was Dr. Swarsen's opinion that the site of functional impairment was above the shoulder. Other than his anatomical

exposition, Dr. Swarsen did not persuasively contradict the totality of the evidence, both lay and other medical evidence, concerning the site of functional impairment.

Respondents' Independent Medical Examiner (DIME), F. Mark Paz, M.D.

10. Dr. Paz actually examined the Claimant on August 31, 2016, and submitted a written report (Respondents' Exhibit E). He is fully Level 2 Accredited by the DOWC and he testified as an expert at hearing on behalf of the Respondents.

11. Dr. Paz is of the opinion that the Claimant's right shoulder condition is clinically stable and he reached MMI on June 13, 2016. Dr. Paz rated the Claimant at 9% RUE. He noted that there were no restrictions for the Claimant to obtain his CDL (commercial drivers' license) from the Department of Transportation, which requires an applicant to be able to hook and unhook trailers from semis, place chains on semis, and other rigorous activities. The Claimant actually received his CDL sometime after his surgery for the admitted injury. An applicant must pass a physical exam. Dr. Paz actually performs such physical exams.

12. Dr.Paz was of the opinion that the Claimant did not require permanent physical restrictions and that the Claimant was "engaged in his usual duties and activities." The Claimant re-affirmed this in his hearing testimony. Dr. Paz further indicated that the Claimant "does not require medical maintenance."

13. The ALJ finds that Dr. Paz more clearly addresses the Claimant's lack of functional limitations beyond the right shoulder than does Dr. Swarsen. Indeed, Dr. Swarsen focuses on the anatomy (Claimant's Exhibits 10 and 11) and does not persuasively address functional limitations beyond the shoulder. For this reason, the ALJ finds Dr. Paz's opinions more persuasive and credible than the opinions of Dr. Swarsen.

The Claimant

14. According to the Claimant, he has returned to his former job at full duty. Although he did not mention neck early on to his medical providers, he later mentioned it and testified that he had neck pain. He did not persuasively indicate any functional problems concerning his neck. His counsel asked him if he could carry things on his shoulder, and the Claimant said he would not do this.

15. The ALJ finds that the totality of the Claimant's testimony does not support functional limitations beyond the RUE. Although the Claimant's counsel argues concerning the disconnect between the schedule (at or below the shoulder) and the glenohumeral joint and the *AMA Guides,* the test is the "situs of functional impairment," which can include pain that limits the function of other body parts transcending the

shoulder, or in the trunk of the body. There is no persuasive evidence that there are such functional limitations.

Ultimate Findings

16. As found herein above, the opinions of Dr. Paz more clearly address the Claimant's lack of functional limitations beyond the right shoulder than do the opinions of Dr. Swarsen. Indeed, Dr. Swarsen focuses on the anatomy (Claimant's Exhibits 10 and 11) and did not persuasively address functional limitations beyond the shoulder. For this reason, the ALJ finds Dr. Paz's opinions more persuasive and credible than the opinions of Dr. Swarsen. The ALJ further finds the Claimant's testimony concerning his later experienced neck problems weak and attenuated. Otherwise, his testimony was straight-forward and credible concerning his return to a full duty regimen.

17. Between conflicting medical opinions, the ALJ makes a rational choice, based on substantial evidence, to accept the opinions of Dr. Paz and to reject the opinion of Dr. Swarsen. Further, the ALJ finds that DIME Dr. Douthit did not comment on the appropriateness of a conversion to a whole person rating. Therefore, the ALJ infers and finds that Dr. Douthit considered his RUE rating appropriate. This rating is corroborated by Dr. Paz.

18. The situs of the Claimant's function impairment is the right upper extremity (RUE).

19. The Claimant has failed to prove, by a preponderance of the evidence that the situs of his functional impairment transcends the RUE, and that a conversion to a whole person rating is appropriate in this case.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558

(Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the opinions of Dr. Paz more clearly addressed the Claimant's lack of functional limitations beyond the right shoulder than did the opinions of Dr. Swarsen. Indeed, Dr. Swarsen focused on the anatomy (Claimant's Exhibits 10 and 11) and did not persuasively address functional limitations beyond the right shoulder. For this reason, the ALJ found Dr. Paz's opinions more persuasive and credible than the opinions of Dr. Swarsen. The ALJ further found the Claimant's testimony concerning his later experienced neck problems weak and attenuated. Otherwise, his testimony was straight-forward and credible concerning his return to a full duty regimen.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals*

Office, 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting medical opinions, the ALJ made a rational choice, based on substantial evidence, to accept the opinions of Dr. Paz and to reject the opinions of Dr. Swarsen. Further, the ALJ found that DIME Dr. Douthit did not comment on the appropriateness of a conversion to a whole person rating. Therefore, the ALJ inferred and found that Dr. Douthit considered his RUE rating appropriate. This rating was corroborated by Dr. Paz.

Conversion From Scheduled to Whole Person Rating

c. It is well-established that the question of whether a claimant sustained a "loss of an arm at the shoulder" within the meaning of § 8-42-107 (2) (a), C.R.S., or a whole person medical impairment compensable under § 8-42-107 (8) (c), C.R.S. is one of fact for determination by the ALJ. *Delaney v. Indus. Claim Appeals Office,* 30 P.3d 691 (Colo. App. 2000). In resolving this question, the ALJ must determine the site of the claimant's "functional impairment," and the site of the functional impairment is not necessarily the site of the physical injury itself. *Langston v. Rocky Mountain Healthcare Corp.,* 937 P.2d 883 (Colo. App. 1996); *Strauch v. PSL Swedish Healthcare System,* 917 P.2d 366 (Colo. App. 1996). Further, pain and discomfort which limit a claimant's ability to use a portion of her body may be considered "functional impairment" for purposes of determining whether an injury is on or off the schedule. *Also see, Fresquez v. Montrose School District RE-1J,* W.C. No. 4-969-602-01 [Indus. Claim Appeals Office (ICAO). April 14, 2017]. For a conversion, the party seeking it must accept the four corners of an ATP's or DIME'S opinion letter. The standard of proof is then "preponderance of the evidence." As found, the situs of the Claimant's functional impairment is the right upper extremity and it does not persuasively carry over to the trunk of the body.

Burden of Proof

d. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has failed to satisfy his burden of proof.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Claimant's request for a conversion from the scheduled admission of 9% of the right upper extremity to 5% of the whole person is hereby denied and dismissed.

B. The Amended Final Admission of Liability, dated January 17, 2017, is hereby approved and adopted as if fully restated herein.

DATED this_____day of May 2017.

ISSUES

- Whether Claimant suffered a compensable injury on December 10, 2014.
- Whether Claimant is entitled to temporary disability benefits.
- Whether Claimant should be penalized for not timely reporting his injury in writing.
- What is Claimant's average weekly wage.
- Medical Benefits (authorized provider, reasonably necessary.)
- Whether the policy of insurance between Pinnacol Assurance and Viart Construction, Inc., is void ab initio.
- Whether Custom Onsite, Inc. is the statutory employer of Claimant.
- Whether Custom On Site, Inc., has standing to assert any claims or defenses against Pinnacol Assurance's attempt to void the policy between Viart Construction and Pinnacol Assurance.
- Whether Pinnacol Assurance should be estopped from voiding the policy between Pinnacol Assurance and Viart Construction.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. C&E Construction ("C&E") provided construction framing services.
2. C&E was owned by Elvia Hernandez a/k/a Elvia Zavala, a/k/a Elvia Hernandez Zavala, ("Elvia"), and Claudio Torres Jr.
3. C&E was operated by Elvia and Claudio Torres Sr.
4. Claimant began working for C&E during 2011. According to Claudio Torres, Jr., C&E ceased operations during 2013. However, whether C&E continued doing business after 2013 is not known.

5. C&E was insured by Pinnacol Assurance ("Pinnacol"). The last period of time in which C&E was insured through Pinnacol was February 1, 2013 through May 29, 2013. The policy was cancelled for non-payment.

6. Viart Construction was incorporated on December 17, 2013. Viart Construction ("Viart") was owned and/or operated by Elvia and Claudio Torres Sr. Viart was the alter ego of C&E Construction.

7. Custom On Site was hired by Haselden Construction to provide commercial framing services for the Morning Star project in Boulder Colorado. The Morning Star project encompassed the building of a senior citizen home.

8. To complete the framing services for the Morning Star project, Custom On Site sub-contracted with Viart the framing work during 2014.

9. Claimant testified he never knew the exact corporate entity for which he worked. Claimant was always paid in cash. Claimant was under the impression that he worked for Elvia and Claudio Torres Sr., or C&E.

10. On December 10, 2014, Claimant was working for Viart and was working at the Morning Star project.

11. Claimant testified that he injured his back on December 10, 2014 while lifting a framed wall with Claudio Torres, Jr., and two other employees at the Morning Star project. Mr. Torres Jr. testified at hearing that he did not work at the Morning Star project on December 10, 2014. This ALJ credits Mr. Torres' testimony over Claimant's testimony and finds that Claimant was not working with Mr. Torres on December 10, 2014 and that Claimant did not lift a wall on that day with Mr. Torres.

12. Claimant testified that he reported his injury to Mr. Torres Jr. the same day. Mr. Torres testified that Claimant did not report an injury to him at any time. This ALJ credits Mr. Torres' testimony over Claimant's and finds that Claimant did not report an injury to Mr. Torres on December 10, 2014 or at any other time.

13. Claimant testified that the day after the accident he was contacted by Claudio Torres Sr. and taken to get a massage for his back. Claimant testified the massage did not help very much. Claimant, however, answered discovery and indicated that the day after the alleged accident he went to the emergency room to get medical treatment but could not see a doctor. Claimant's hearing testimony is inconsistent with his interrogatory answer. Plus, Claimant's contention in his answers to interrogatories that he went to the emergency room but could not see a doctor is also not credible.

14. Claimant testified that he attempted to return to work on Monday, December 15, 2014, but had to leave due to the pain. He further stated that after leaving work on Monday, he waited for Mr. Torres, Sr., to contact him about receiving medical treatment. After not hearing from Mr. Torres, Sr., Claimant stated he sought

medical treatment on his own. Claimant, however, did not seek medical treatment until December 26, 2014. Again, Claimant's hearing testimony is inconsistent with his answers to discovery in which he stated he went to the emergency room the day after the alleged accident and could not see a doctor.

15. Claimant testified that he did not return to work after December 15, 2014 and is seeking temporary total disability benefits from December 16, 2014 forward. Mr. Torres Jr. testified that Claimant was still working after December 15, 2014 because Claimant was present when Mr. Torres. handed out jackets to the Viart employees around Christmas of 2014. This ALJ credits Mr. Torres' testimony and finds that Claimant continued working after December 15, 2014. Claimant's testimony that he did not work after December 15, 2014 is not credible.

16. On December 26, 2014, Claimant went to St. Anthony Hospital North. The medical records indicate Claimant complained of low back pain for 3 months. The medical records also indicate Claimant has had intermittent lumbar back pain for the past 2-3 weeks after heavy lifting. Claimant was cross examined about that portion of the medical record which indicates he had back pain for 3 months. Claimant testified that the hospital must have gotten the information wrong because he does not speak English and he had his 11 year old daughter act as an interpreter. The medical records, however, indicate that an interpreter was used via telephone. Therefore, Claimant's testimony that the inconsistency in the medical records was due to his daughter acting as an interpreter is not credible since the hospital provided an interpreter.

17. On December 29, 2014, Claimant went to North Metro Chiropractic. The records indicate Claimant was injured on December 8, 2014 and not December 10, 2014. Claimant was cross examined about the discrepancy regarding the date of injury. Claimant testified that the provider must have written it down wrong. Claimant's testimony is again found to not be credible.

18. During 2014 and part of 2015, Claimant was on probation for driving under the influence of alcohol. Claimant testified that as part of his probation, he had to prove he was employed. Therefore, Claimant requested Claudio Torres Jr., the partial owner of C&E, to provide Claimant a letter confirming his employment. On January 23, 2015 a letter was issued on C&E Construction's letterhead stating Claimant was working for C&E Construction and has been an employee since March 15, 2011. The letter was signed by "Elvia Hernandez, Owner." Although C&E Construction allegedly ceased doing business in 2013, this cannot be confirmed. But, it is doubtful that Mr. Torres' Jr. would have assisted Claimant in getting the letter confirming Claimant's employment with C&E Construction as of January 23, 2015 if Claimant had not worked since December 15, 2014. Therefore, the letter dated January 23, 2015 is inconsistent with Claimant's testimony that he did not work after December 15, 2014.

19. The January 23, 2015 letter is also impacts Claimant's credibility. If Claimant had not been working since December 15, 2014, why is Claimant providing a

letter to his probation officer on January 23, 2015 indicating that he is currently working?

20. During January and February of 2015, Claimant was seen by Claudio Torres, Jr. working at another jobsite in Colorado Springs, Colorado. Therefore, contrary to Claimant's assertion that he did not work after December 15, 2014, Claimant continued to work after his alleged back injury of December 10, 2014.

21. On April 1, 2015, Claimant returned to St. Anthony Hospital North. The medical records indicate

> Patient states 3 days ago he was pulling upward on an object when he felt a sudden pop and pain in his back. Patient is noticing radiation of pain into both thighs. Patient is noticing a numbness and tingling sensation in both feet.

22. The April 1, 2015 medical report indicates Claimant injured himself three days ago and now has symptoms that radiate into his lower extremities. This medical report is inconsistent with Claimant's contention that he injured himself on December 10, 2014.

23. Claimant's testimony is not credible.

24. Claimant did not injure his back during the course and scope of his employment on December 10, 2014.

25. Because Claimant failed to prove that he injured his back during the course and scope of his employment, this ALJ is not making any findings of fact regarding the other issues raised by the parties since those issues are moot.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado (Act), §§8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of Claimants nor in favor of the rights of respondents. Section 8-43-201.

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). A workers' compensation case is decided on its merits. Section 8-43-201, *supra*. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

Claimant was required to prove by a preponderance of the evidence that at the time of the injury he was performing service arising out of and in the course of the employment, and that the injury or occupational disease was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. The question of whether Claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000).

In this case, Claimant has failed to prove by a preponderance of the evidence that he suffered a work related injury on December 10, 2014. As found, Claimant's version of events is not found to be credible.

Because Claimant's claim for benefits is found to not be compensable, the additional issues raised by the various parties are moot.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim for benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding

procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: 5-30-17

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Whether Claimant has proven by a preponderance of the evidence that he suffered a compensable back and neck injury on September 8, 2016 arising out of and in the course of his employment.

- Whether Claimant is entitled to reasonable and necessary medical treatment as a consequence of his injury sustained on September 8, 2016.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant began his employment with Morgan County as a Deputy Sheriff on or about September 1, 2014.

2. Claimant testified that he sustained an injury to his back and neck in the course and scope of his employment on September 8, 2016. Claimant stated the following at hearing:

> My shift partner, John Reedle, had picked that pursuit up at the county line, and we pursued that suspect through Morgan 24 County on I-76. We exited Morgan County up into Logan County, northbound on I-76, and we eventually got the suspect vehicle 1 stopped just south of Sterling on I-76. The way the pursuit ended, I ended up pulling up on the driver's side of the vehicle to pin shut the back door to prevent anyone in the back of the back of the car from getting out of the car. I exited my vehicle with my patrol -- or duty weapon drawn and pointed at the suspect, and ordered him to exit the vehicle. He complied with that order, and I ordered him to get on the ground. He complied with that order and laid down in front of my patrol car. I holstered my weapon at that time and approached the vehicle. I bent down, put my hands on the suspect. And when I did that, to place him custody, he drew his arms underneath him and was, then, laying on his arms, and would not give me his arms so that he could be placed into custody. A short struggle ensued as we tried to get his arms out from underneath him. Finally, after pain compliance techniques, we were able to get him in handcuffs I stood up at that time

> looked around to, kind of, get my bearings and what was happening around me when I realized my car was in the middle of I-76 on the right lane, and we were directly on the ground in front of my car, and I was in fear for my safety and the suspect's safety. If that -- my patrol car got hit, we would either be seriously injured or killed. At that point, I needed to get him out of traffic and get myself out of traffic. I bent down, grabbed the suspect by his 2 arms, and pulled him up, and I felt a pop in my back." (Hearing Tr Pgs 11-13).

3. Claimant testified that getting in a fight with a suspect is very intense. Claimant testified that:

> The amount of adrenaline and mental focus required is greater than, I think, what a normal person would see on the street. Your adrenaline just starts pumping so fast, because you never know what that suspect is capable of, if they're there to take your life. So almost every fight, you go into it as if you're fighting for your life." (Hearing Tr. Pg. 13).

4. Following the altercation Claimant described his symptoms progression. Claimant testified that:

> I felt the pop in my back, and I -- I made mental note of it, because it was -- it was something I had never felt before, and it was new. As we went through the night, I started feeling sore. That was something that was not uncommon for being in that kind of altercation. It's -- whenever you have something that's strenuous, it was normal to feel like that, so I, kind of, dismissed that. Went through the night, ended up going home. Was still sore when I got home. Really didn't think much of it until I woke up the next morning, and I had exponential increase in pain. I had extreme pain in my lower back. I had pain at the base of my neck. I had pain and a stabbing feeling going down my legs, numbness. (Hearing Tr. Pg. 14).

5. Regarding his symptom progression Claimant stated that:

> Whatever that pop was. The -- the adrenaline that I was feeling, I do believe, from my experience in law enforcement, is why I didn't start feeling anything until later that night. It's not uncommon, based on altercations, fights, pursuits, and other things I've been in in my career. (Hearing Tr. Pg. 27).

6. Claimant testified that he reported his injury the following day to Sergeant Griggs.

7. In the week following the altercation Claimant testified that his symptoms persisted. Claimant stated "The pain was basically on par with how it was when I woke up the morning after I had the extreme pain in my back, shooting pain and numbness in my legs, along with pain at the base of my skull." (Hearing Tr. Pg. 14).

8. Claimant then sought medical treatment when:

> After working and realizing that the pain that I was in was greatly impeding my ability to function at full capacity as a patrol office, and that it was a danger to myself, and it was a danger to the other officers that I serve with and the public, I decided it was time to go see what was wrong and what was going on with my back. (Hearing Tr. Pg. 15).

9. Prior to his employment with Morgan County, Claimant had a back injury in 2011 while working for the police department in Bicknell Indiana. The back injury resulted in Claimant having a lumbar fusion at the L5-S1 level in 2011. After the fusion, Claimant was returned to full duty in 2011. On February 27, 2012, Claimant was placed at MMI and was complaining of only occasional back pain.

10. Due to ongoing back pain, Claimant was prescribed and used a utility vest to carry his equipment while working in Bicknell Indiana. This was instead of wearing his equipment on a belt.

11. Claimant moved to Colorado around 2013. Claimant testified that once moving to Colorado he wanted to find a primary care physician who could monitor his back. Claimant testified that he found Dr. Hoppe and made an appointment with Dr. Hoppe because he was experiencing a stuffy and runny nose and wanted that to be assessed. He also testified that he wanted to get an x-ray of his back so that his new primary care physician would have a working knowledge of his back.

12. On December 16, 2013, Claimant was evaluated by Dr. Hoppe for a pre-employment physical. There is no mention of any back pain during this visit. Claimant was cleared for work.

13. On February 13, 2014, prior to Claimant's employment with Morgan County, Claimant was again evaluated by Dr. Hoppe. Claimant complained of back pain with shooting pains into his left leg. Claimant was prescribed Vicodin and Relefan. Claimant also complained of a stuffy nose.

14. On June 4, 2014, Claimant was again evaluated by Dr. Hoppe. The top of the medical note states: "Discuss back surgery complications from 2011." Claimant complained of chronic low grade back pain with numbness and shooting pains on

the left side. Due to Claimant's complaints, Dr. Hoppe recommended an MRI of Claimant's lumbar spine.

15. Claimant's testimony that he was not having any back problems prior to working for Morgan County and that he merely scheduled an appointment with Dr. Hoppe to have a local doctor be familiar with his back is not credible. Claimant was having back problems on February 13, 2014 and June 4, 2014.

16. On August 21, 2014, Claimant underwent a pre-employment physical with Dr. Charles Lehman. Claimant advised Dr. Lehman about his fusion in 2011. Claimant did not, however, indicate he was having any back problems. Therefore, Claimant was cleared to work for Morgan County without any restrictions.

17. On September 1, 2014, three months after being evaluated by Dr. Hoppe for complications from his back surgery, Claimant was hired by Morgan County as a Deputy Sherriff.

18. On September 29, 2015, approximately one year after he was hired by Morgan County, Claimant presented to Dr. Lisa Statz complaining of moderate back pain which Claimant stated started 4 months ago. Claimant stated that wearing his work belt aggravated his back symptoms and that he only felt symptoms when wearing his work belt. Claimant was complaining of numbness and tingling in his lower extremities. Dr. Statz' assessment was lumbar radiculopathy. Claimant was prescribed meloxicam and tramadol. He was also prescribed a load-bearing vest to carry his tactical equipment instead of using his belt. Dr. Statz also recommended an MRI of his low back.

19. On October 20, 2015, Claimant returned to Dr. Statz. Claimant was assessed as suffering from intervertebral disc disorders with radiculopathy. Claimant complained of moderate symptoms which occurred daily. He still complained of low back pain. Claimant's MRI was reviewed and he was advised to follow up with a neurosurgeon.

20. On December 1, 2015, Claimant returned to Dr. Statz. Although Claimant was wearing a duty vest, he still complained of ongoing persistent low back pain. Claimant was prescribed a lidocaine patch, lorazepam, meloxicam, tramadol, and Voltaren.

21. On December 7, 2015, Claimant was evaluated by Dr. Beth Gibbons, for a neurosurgical evaluation. Claimant reported to Dr. Gibbons he was doing great after his prior back surgery until he moved to Colorado. He stated that he initially thought his back problems were being caused by wearing a police utility belt, but once he switched to a tactical vest, he continued having back problems. Claimant also reported his left leg giving out during August or September. Dr. Gibbons noted that Claimant was having numbness in both of his legs and that

Claimant's pain level was a 4/10. Claimant also complained of left sided neck pain. He said his neck hurts when he has back pain.

22. Dr. Gibbons noted that Claimant was "developing L4-L5 hypermobility which can happen above a fused level." She went on to state that: "This is causing lumbar facet pain and most likely is causing the majority of your lumbar pain. You can get numbness without pain into the buttocks and legs from this issue as well. You have a normal neurological exam and there is no evidence of disc herniation or nerve impingement."

23. Dr. Gibbons did not think Claimant was a surgical candidate. Dr. Gibbons recommended Claimant see a pain interventionalist who could provide diagnostic and/or therapeutic steroid injections to help Claimant's pain. She also recommended physical therapy.

24. On February 3, 2016, Claimant was again evaluated by Dr. Statz. Claimant complained of persistent low back pain. Claimant denied any aggravating factors or relieving factors.

25. On February 16, 2016, Claimant was evaluated by Dr. Julie Quickert. Claimant was referred to Dr. Quickert by Dr. Kai Stobbe, of Dr. Gibbon's office, for evaluation and treatment of lumbar facet pain. According to Dr. Quickert's report, Claimant stated the pain started in 2010 after an injury. Claimant rated his pain at a 2/10 up to 8/10. Claimant stated that the pain was worse after sitting for long shifts at work. The pain was described as a constant, sharp, shooting, stabbing, throbbing, dull and burning. He described the pain as beginning in the low back and radiating bilaterally to his thighs and hips. He indicated that sitting, running, and bending worsened his pain. Claimant also stated that the back pain was interfering with activities of daily living such as work, sleep, recreation, and exercise. The report also indicates Claimant had a MRI on October 8, 2015, which showed disc pathology and lumbar spondylopathy L1-L2 through L5-S1. Dr. Quickert noted strength to the bilateral lower extremities was normal, heel/toe walk was normal, straight leg raise was negative bilaterally, Faber test was negative bilaterally, and the Kemp's test resulted in slight increase in pain bilaterally. Dr. Quickert stated that because Claimant had not had pain relief with conservative therapy, she recommended bilateral L3-L4 MBB, i.e., medial branch block. She stated that if Claimant had a good response to the MBB, then Claimant might benefit from a rhizotomy.

26. Claimant testified that his duty vest dramatically helped his back pain. This ALJ credits this testimony since Claimant did not seek treatment for his back between February 16, 2016 and September 29, 2016.

27. On September 29, 2016, Claimant was evaluated Nancy Samples, NP. The notes from that evaluation indicate Claimant stated that his back symptoms were aggravated by wearing a gun belt and that they improved once he began wearing a vest. The notes indicate that Claimant was able to resume most of his normal

activities but that Claimant reinjured his low back on September 16, 2016 while chasing and physically restraining a suspect. Claimant stated he heard a pop in his back and has had worsening pain since that time with radiation into his left leg and has been having difficulty performing his normal duties. Claimant did not complain of any neck pain. Claimant was diagnosed as suffering from left lumbar radiculopathy. Claimant was also assigned work restrictions of "no work for the next 1 week. Avoid lifting, twisting, bending." (Claimant's Ex 4, Pg. 14).

28. On October 7, 2016, Claimant presented to Dr. Statz. The report states that Claimant was in pursuit of a suspect a few weeks ago when he had the sudden onset of neck and back pain. He was diagnosed with cervicalgia and lumbar radiculopathy.

29. On October 7, 2016, Claimant underwent x-rays of his lumbar spine and cervical spine.

30. On October 14, 2016, Claimant was evaluated by Dr. Statz. Claimant stated his symptoms improved since being off work. Claimant did not feel he could physically do his job as a police officer any longer.

31. On October 14, 2016, Claimant underwent an MRI of his cervical spine. The MRI was normal.

32. On October 25, 2016, Claimant returned to Dr. Statz. Claimant was still having back pain and neck pain. The doctor thought Claimant's neck pain was due to Claimant guarding from his back pain.

33. Dr. Nicholas Olsen performed an IME on behalf of Respondents. Dr. Olsen determined that Claimant did not sustain a compensable injury to his back or neck. Dr. Olsen stated that:

> [Claimant] denied pain prior to the Summer and Fall of 2015. There are two medical records from Wayne Hoppe, M.D. The first is on 2/13/14 noting some back pain – wants an x-ray – some days much pain… light shooting pain in the left leg. Pain was great enough to receive prescription medications including Relefan and Vicodin. On 6/4/14, three months before taking his job with Morgan County Sherriff's Office, he returned to Dr. Hoppe noting "Some persistent numbness and shooting pain on the left side, chronic low back pain." Dr. Hoppe recommended an MRI of the lumbar spine to be completed… There is no indication in the medical records that the MRI had been completed or indication that [Claimant] had returned to Dr. Hoppe for a follow up evaluation. It is clear from reviewing these records that [Claimant's] symptoms he experiences today are similar to those he was reporting to Dr. Hoppe in June of 2014.

Based on his report of symptoms in June 2014, it is not surprising that he had complaints of lower back pain as he began his job with Morgan County Sherriff. While employed in Bicknell Indiana, he required a load bearing vest. He fought to receive the same kind of vest once working with the Morgan County Sherriff's office. Dr. Statz's first evaluation on 9/29/15 noted symptoms were "chronic and poorly controlled." There is no specific injury reported in Dr. Statz initial evaluation of 9/29/15. She did not have the benefit of reviewing Dr. Hoppe's medical records from the prior Summer of 2014 when making her assessments and recommendations.

When [Claimant] finally reports an aggravation of his symptoms on 9/8/16, they are similar symptoms reported to both Dr. Hoppe and later Kai Stobbe, PA-C/Beth Gibbons, M.D. on 10/7/16 are an extension of [Claimant's] longstanding complaints first documented by Dr. Hoppe. It is interesting to note that after the events of 9/8/16 that [Claimant] did not feel anything specifically. He explained this it was due to the fact "adrenaline was pumping hard." He described a pop as though he cracked his knuckles but did not notice any pain at that moment. Two hours later, he states he was a little bit sore. The type of soreness he described is on the same scale as his baseline discomfort reported throughout the medical records beginning with Dr. Hoppe's records. In fact, when he returns to Dr. Statz on 10/14/16, it is noted "having good resolution of symptoms off work."

In summary, the current symptoms described by [Claimant] detailed in Dr. Statz records do not document a distinct injury occurring on the events of 9/8/16 but rather a continuation of his symptoms that started in the Summer prior to his employment with Morgan County.

. . .

There is no injury to the cervical spine. There is no report of a cervical spine injury in Nancy Sample's M.D.'s note, the first physician to evaluate [Claimant] after the 9/18/16 incident. Dr. Statz provided him the benefit of the doubt and ordered an MRI of his cervical spine. The study completed on 10/4/16 is a normal cervical MRI. There is no diagnosis or findings to suggest a cervical diagnosis in need of treatment.

34. This ALJ does not credit Dr. Olsen's opinions regarding the cause of Claimant's back pain. Although Claimant did have prior chronic back pain, Claimant testified that his back pain got worse after the September 8, 2016 incident. This ALJ credits Claimant's testimony regarding the worsening of his condition and symptoms after the September 8, 2016 incident.

35. This ALJ does, however, credit Dr. Olsen's opinion that Claimant did not suffer a discreet injury to his neck on September 8, 2016. When Claimant was first evaluated by N.P. Samples, Claimant did not mention any neck pain. Plus, Claimant had neck pain prior to the September 8, 2016 incident. This ALJ is not persuaded by the evidence that Claimant injured his neck or aggravated a preexisting neck condition during the incident of September 8, 2016.

36. Claimant testified that his current back symptoms are different than those he discussed with Dr. Hoppe in 2014. Claimant testified "those symptoms were not things that impeded my life. They were not things that, you know, I -- would jerk me out of what I might be doing, as they are now." (Hearing Tr. Pg. 22).

37. At hearing Claimant compared his symptoms prior to the altercation to those subsequent. Claimant testified:

> Before the altercation, the -- the pain was minimal at best. If -- I if had any pain, it was low, low on the scale, and it did not impact me. After my altercation, the pain was continuous. It didn't go away. It was high on the pain scale relative to what I knew in relation to pain for my back. (Hearing Tr. Pg. 20).

38. Regarding functionality, Claimant testified that:

> Before the altercation, I was fully functional, in my eyes. I was able to get in and out of my patrol car on duty without issues. I was able to participate in events with my family, go to my step-kids' ballgames, go to their -- the triathlons for knowledge. I was able to go to the gym, to go hiking. I'd go walking. Just function in a normal capacity with my family. Since the injury, the pain has prohibited me from doing a lot of those things. I can no longer stand for extended periods of time without increased pain. Hiking, walking is something that I'm unable to do, and simple tasks, such as putting my socks on, is something that I actually have to work on, because leaning straight over is painful. (Hearing Tr. Pg. 21).

39. Claimant testified regarding his back symptoms prior to his date of injury versus his current symptoms. Claimant stated:

> Prior, I was able to function in full capacity prior to that. The vest helped. That fixed the issues I was having with the pain around my incision site. I was able to function on-duty. I was able to function off-duty. The pain was low, once again, relative to what I knew. And then, after, my functionality on-duty and off-duty decreased greatly. (Hearing Tr. Pg. 22).

40. This ALJ credits Claimant's testimony that his back symptoms got worse after the September 8, 2016 incident.

41. Claimant suffered an injury to his back on September 8, 2016 when he aggravated his preexisting back condition.

42. Claimant did not suffer an injury to his neck on September 8, 2016.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Principles

Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

Compensability

Claimant was required to prove by a preponderance of the evidence that at the time of the injury he was performing service arising out of and in the course of the employment, and that the alleged injury was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). The question of whether Claimant met the burden of proof to establish a compensable injury is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

In this case, Claimant credibly testified about the September 8, 2016 incident. Claimant credibly testified that during the September 8, 2016 incident, while subduing the suspect and picking him up from the busy highway, he felt a pop in his back. Claimant credibly testified that the incident caused his back pain to increase later that night and that it was much worse the following morning. Although Claimant's testimony regarding his lack of back symptoms prior to his employment with the Employer is not found to be credible, the existence of a pre-existing condition does not prevent a Claimant from establishing a compensable injury if the work accident aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990).

In this case, the evidence showed Claimant's accident of September 8, 2016, aggravated Claimant's pre-existing back condition and necessitated the need for medical treatment. In addition, due to the injury, N.P. Samples took Claimant off of work for 1 week.

Therefore, Claimant suffered a compensable injury to his low back on September 8, 2016.

Claimant also alleges that he injured his neck on September 8, 2016. However, when Claimant first sought medical treatment for his work related accident on September 29, 2016, Claimant did not complain of any neck pain. Moreover, on October 25, 2016, Dr. Statz described Claimant's neck pain as being secondary to guarding from his back pain. Lastly, Dr. Olsen stated in his report that there is no diagnosis or findings to suggest a cervical diagnosis in need of treatment.

Therefore, this ALJ concludes that Claimant has failed to establish that he suffered a distinct and compensable injury to his neck due to the September 8, 2016 work accident.

Medical Benefits

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the Claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). Pain is "a typical symptom from the aggravation of a pre-existing condition" and a claimant is entitled to medical treatment for pain as long as the pain was proximately caused by the injury and is not attributable to an underlying preexisting condition. *Rodriguez v. Hertz Corp.,* WC 3-998-279 (ICAO February 16, 2001).

This ALJ concludes that that Claimant aggravated his underlying back condition on September 8, 2016 and the aggravation necessitated the need for medical treatment. Therefore, Claimant is entitled to reasonable and necessary medical treatment as a consequence of his back injury sustained on September 8, 2016.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's suffered a compensable injury to his back on September 8, 2016.

2. Claimant did not suffer a compensable injury to his neck on September 8, 2016.

3. Respondent shall provide Claimant reasonable and necessary medical treatment to treat Claimant's back.

4. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: 5-30-17

Glen B. Goldman
Administrative Law Judge

Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 4-971-726-06

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER DENYING SUMMARY JUDGMENT IN FAVOR OF THE RESPONDENTS

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer/Respondents.

A hearing on the merits in the above-referenced matter is scheduled for July 11, 2017, in Denver, Colorado, on several issues, including medical benefits, including post maximum medical improvement (MMI) medical maintenance benefits; permanent partial disability (PPD) benefits and overcoming the Division Independent Medical Examination (DIME). On May 4, 2017, the Respondents filed an "Opposed Motion for Summary Judgment, alleging, *inter alia,* that Claimant's Application for hearing and the issues endorsed therein, including overcoming the DIME, were barred pursuant to § 8-43-203and the Pre-Hearing Conference Order of Pre-Hearing Administrative Law Judge (PALJ) Michael J. Barbo. Attached to the Respondents' Motion were Exhibits A through Q. On May 30, 2017, the Claimant filed "Claimant's Objection to Respondents' Opposed Motion for Summary Judgment, alleging, *inter alia*, that there was a disputed issue of material fact that required the evidentiary hearing of July 11, 2016, to wit, whether the Claimant "substantially complied with PALJ Barbo's July 19, 2016 Pre-Hearing Conference Order. Attached to the Claimant's Objection were Exhibits 1 through 14.

The matter was assigned to Edwin L. Felter, Jr., Administrative Law Judge (ALJ) for decision on the Respondent's Motion for Summary Judgment and the Claimant's Objection. Both matters were deemed submitted for decision on May 30, 2017.

ISSUES FOR SUMMARY JUDGMENT

The issues to be determined by this decision concern whether there are genuine issues of disputed material fact concerning whether the Claimant "substantially complied" with PALJ Barbo's Pre-Hearing Conference Order of July 19, 2016. The larger issue is whether the Claimant is entitled to an evidentiary hearing on the issues designated in her Application for Hearing, or whether the Claimant waived that right by violating PALJ Barbo's Pre-Hearing Conference Order.

The Respondents bear the burden of proof, by a preponderance of the evidence of establishing that there is no genuine issue of disputed material fact concerning the above-mentioned issues and that they are entitled to summary judgment as a matter of law.

FINDINGS OF FACT

Based on the undisputed evidence contained in the file, pleadings and exhibits, the ALJ makes the following Findings of Fact:

Preliminary Findings/Posture

1. This case involves a January 6, 2015 admitted injury to multiple body parts, including the Claimant's right lower extremity (RLE).

2. The Claimant timely filed an Application for Hearing to overcome the DIME's findings. On July 19, 2016, PALJ Michael J. Barbo issued an order holding the DIME in abeyance pending the determination of whether additional diagnostic testing was reasonably necessary and causally related to the Claimant's admitted injury. In his Order, PALJ Barbo stated, "If neither party appeals the decision then within 7 days from receipt of the order regarding the additional diagnostics, the claimant shall file an application for hearing on the issues ripe for hearing, including overcoming the DIME opinion."

3. On October 31, 2016, Office of Administrative Courts (OAC) ALJ Keith Motram issued his Findings of Fact, Conclusions of Law, and Order, determining the diagnostic testing at issue was reasonably necessary, and causally related to the Claimant's industrial injury of January 6, 2015.

4. On November 21, 2016 , the Claimant filed an Application for Hearing on the issues of overcoming the DIME, post-MMI medical maintenance benefits and PPD. On May 4, 2017,

5. On May 7, 2017, the Respondents moved for Summary Judgment to strike the Claimant's Application for Hearing and the issue of overcoming the DIME. The Respondents allege that the Claimant failed to comply with § 8-43-203, C.R.S., and PALJ Barbo's July 19, 2016 Pre-Hearing Conference Order. Because a disputed issue of material facts exists as to whether Claimant complied with and/or substantially complied with PALJ Barbo's July 19, 2016 Pre-Hearing Conference Order, the Respondents' Opposed Motion for Summary Judgment is hereby denied as found and concluded herein below.

Findings/History

6. As found herein above, the Claimant sustained an injury to multiple body parts, including her RLE. On March 5, 2015, the Respondents filed a General Admission of Liability (GAL) [Claimant's Exhibit 1, attached to the Claimant's Objection].

7. On October 12, 2015, the Respondents filed a Final Admission of Liability (FAL) [Claimant's Exhibit 2]. On November 9, 2015, the Claimant filed a timely objection to the FAL and filed a Notice and Proposal to Select an Independent Medical Examiner (DIME) [Claimant's Exhibit 3].

8. On February 10, 2016, the Claimant underwent a DIME with Susan Santilli, M.D., who was of the opinion that the Claimant was at MMI and that she had permanent impairment. Dr. Santilli also recommended that the Claimant undergo additional diagnostic testing regarding her ongoing RLE complaints [Claimant's Exhibit 4].

9. On February 23, 2016, the Respondents filed a new FAL, based on DIME Dr. Santilli's findings. The Respondents also admitted for medical benefits after MMI [Claimant's Exhibit 5].

10. On March 24, 2016, the Claimant objected to the FAL and applied for a hearing on reasonably necessary medical benefits, including authorization of a referral to Scott Primack, D.O; authorization of an EMG recommended by Dr. Santilli; and, PPD benefits, including overcoming the DIME's findings regarding MMI and the impairment rating [Claimant's Exhibit 6]. Hearing was scheduled for July 21, 2016 [Claimant's Exhibit 7].

11. On July 19, 2016, a Pre-Hearing Conference was held before PALJ Michael J. Barbo on the Claimant's request to withdraw her Application for Hearing without prejudice. PALJ Barbo granted the Claimant's Motion and ordered:

> Whether the DIME opinion is correct or incorrect, the issue of the additional diagnostic testing needs to be resolved. The

> injection itself may provide the necessary information to resolve the additional issue, or at least most of them.
>
> Within 7 days from the date of this prehearing the claimant shall file a new application for hearing on the issue regarding the additional diagnostic injection which has been recommended. All setting requirements are waived.
>
> The issue of overcoming the DIME is held in abeyance until the determination of the additional diagnostic testing is resolved. Upon receipt of the order regarding the additional diagnostics the parties shall confer. If neither party appeals the decision then within 7 days from the receipt of the order regarding the additional diagnostics, the claimant shall file an application for hearing on the issues ripe for hearing, including overcoming the DIME opinion. Otherwise, upon completion of the appeal process the claimant shall within 7 days from the final order on appeal, file an application for hearing on all issues ripe for determination, including overcoming the DIME opinion.

[Claimant's Exhibit 8].

12. On July 25, 2016, the Claimant applied for a hearing on reasonably necessary medical benefits, including authorization of a nerve block injection recommended by Levi Miller, M.D [Claimant's Exhibit 9].

13. On October 13, 2016, a hearing was held before ALJ Keith E. Mottram. On October 31, 2016, ALJ Mottram issued an Order determining "Respondents shall pay for the reasonable medical treatment necessary to prevent Claimant from further deterioration of her physical condition, including but not limited to the femoral cutaneous nerve block treatment provided by Dr. Miller." At the end of his Order, ALJ Mottram ordered, "All matters not determined herein are reserved for future determination." Additionally, ALJ Mottram stated:

> If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed

> it within twenty (20) days after mailing or service of the order of the judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S.

[Claimant's Exhibit 10].

14. On November 21, 2016, Claimant's counsel conferred with Respondents' counsel regarding whether Respondents were going to appeal ALJ Mottram's October 31, 2016 Order [Claimant's Exhibit 11]. The Respondents confirmed they were not going to appeal ALJ Mottram's Order [Claimant's Exhibit 12].

15. Also, on November 21, 2016, the Claimant applied for a hearing on reasonably necessary medical benefits, including post-MMI medical benefits, and PPD benefits, including overcoming the DIME's findings regarding MMI and the impairment rating. [Claimant's Exhibit 13]. Hearing is presently scheduled for July 11, 2017 [Claimant's Exhibit 14].

16. On May 4, 2017, the Respondents moved for Summary Judgment, alleging that the Claimant's Application for Hearing and the issues endorsed therein, including overcoming the DIME, were "barred as a matter of law pursuant to C.R.S. section 8-43-203 and PALJ Barbo's Pre-Hearing Conference Order. "

Ultimate Finding

17. There exists a genuine, disputed issue of material fact, *i.e.,* whether the Claimant "substantially" complied with PALJ Barbo's Pre-Hearing Order, and now seeks her day in court. More importantly, there is a legal issue of whether or not a PALJ, by Pre-Hearing Order, can extend discretionary times (to follow through on challenging a DIME) to the point when if the time is exceeded, a jurisdictional situation is created whereby an injured worker, who "substantially" complies is "out in the cold" as the Philip Nolan of injured workers—the person without a remedy.

Respondents; Arguments

Respondents argue that under § 8-43-203, C.R.S., a claim will automatically close as to the issues admitted in the FAL if the Claimant does not request a DIME or file an Application for Hearing on issues ripe for adjudication within thirty (30) days of the date of the FAL. § 8-43-203(2)(b)(II); C.R.S. *Peregoy v. Indus. Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004); *Drykopp v. Indus. Claim Appeals Office*, 30 P.3d 821, 822 (Colo. App. 2001).

In the present case, a FAL, dated October 12, 2015, was filed by Respondents consistent with the DIME. Thereafter, the Claimant filed an Application for Hearing to

overcome the DIME. That legal action of filing the Application for Hearing to overcome the DIME preserved that issue for adjudication. A hearing was then set on the issue. Two days before the hearing, the Claimant moved to withdraw the Application for Hearing without prejudice, on the ground that a diagnostic test may provide necessary information to help with the issue of overcoming the DIME. PALJ Barbo granted the withdrawal of the Application for Hearing, without prejudice to re-filing. A test had occurred and had been paid for by the Respondents. Additionally, PALJ Barbo's Order included specific requirements for the Claimant to have the ability to attempt to overcome the DIME opinion in the future. Nonetheless, a hearing was held on whether the diagnostic test was causally related to the admitted injury. ALJ Mottram found that it was causally related, in his decision, emailed to the parties on October 31, 2016.

PALJ Barbo, in his Order, required that if neither party appealed ALJ Mottram's decision**, within 7 days** from its receipt, regarding the additional diagnostics, the Claimant was required to file an Application for Hearing on the issues ripe for hearing, including overcoming the DIME opinion, if she wished to proceed on the issue(s). Essentially, by Pre-Hearing Order, PALJ Barbo modified the statutory time limits to appeal an ALJ decision, prescribed by § 8-43-301 (2), C.R.S., which is 20 days. According to PALJ Barbo's Order, the Claimant should have re-filed the Application for Hearing by November 7, 2016. The Application for Hearing was filed on November 21, 2016, 20-days after ALJ Mottram's decision was emailed to the parties (the 20th day fell on a Sunday, thus, the 20 days was up on November 21, 2016).

The Respondents argue that there was no request by the Claimant to PALJ Barbo to reconsider his Order and extend the statutory review time and change the date upon which Claimant was required to file an Application for Hearing to overcome the DIME. The respondents argue that there was no request by the Claimant, made to PALJ Barbo, to clarify the date if she or her attorney believed that it was unclear. Respondents further argue that If there was any issue regarding the finalization of ALJ Mottram's decision, that should have been addressed through conferral by Claimant's attorney with Respondents' attorney, as allegedly contemplated in PALJ Barbo's Order.

Pursuant to PALJ Barbo's Order, the issue of overcoming the DIME was ripe for adjudication and the deadline for filing an Application for Hearing, imposed by PALJ Barbo, statutory time limits notwithstanding, In fact, the issue of overcoming the DIME was ripe for adjudication and hearing on July 21, 2016. Finally, the Respondents argue that the filing of the Application for Hearing on November 21, 2016 on the issues ripe, including overcoming the DIME, was in violation of PALJ Barbo's Order and should be dismissed, statutory provisions notwithstanding. The ALJ herein does not find that Respondents' arguments persuasive.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Summary Judgment

a. Pursuant to Office of Administrative Courts Rules of Procedure (OACP) Rule 17, 1 CCR 1101-3, "any party may file a motion for summary judgment seeking resolution of any endorsed issue for hearing." Summary judgment may be sought in a workers' compensation proceeding. *See Fera v. Indus. Claim Appeals Office,* 169 P.3d 231, 232 (Colo. App. 2007). The OAC Rule allows a party to support its Motion with affidavits, transcripts of testimony, medical reports, or employer records. A motion for summary judgment may be supported by pleadings, depositions, answers to interrogatories, and admissions on file. C.R.C.P. 56; *See also Nova v. Indus. Claim Appeals Office*, 754 P.2d 800 (Colo. App. 1988) [C.R.C.P. and C.R.E. apply insofar as they are not inconsistent with the procedural or statutory provisions of the Act]. As found, Exhibits A through Q were attached to the Respondent's Motion, consisting of pleadings and other official documents.

b. Pursuant to Office of Administrative Courts (OACRP), Rule 17, 1 CCR 104-1, summary judgment is appropriate when there are no disputed issues of material fact and the moving party is entitled to judgment as a matter of law. As found, there are genuine issues of disputed material fact concerning whether the Claimant "substantially" complied with PALJ Barbo's Order and statutory provisions for challenging a DIME.

Jurisdictional Time Limits

c. In the present case, PALJ Barbo extended the statutory time for the Claimant to challenge the DIME. PALJ Barbo's outermost time limit after holding the time to apply for hearing to challenge the DIME in abeyance, as argued by the Respondents, was November 7, 2016. As found, the Claimant applied for a hearing on November 21, 2016. § 8-43-203 (2) (b) (II) (A), C.R.S., provides that a party has 30-days to contest a FAL in writing and apply for a hearing on ripe issues. The Claimant contested the FAL in 20-days and applied for a hearing (PALJ party had shortened the statutory time limit to 7 days). It is not within the judicial power (or administrative law power) to exclude from a statute that which the legislature expressly includes. *Martin v. Montezuma-Cortez Sch. Dist. RE-1,* 841 P.2d 237 (Colo. 1992). In the present case, pursuant to § 8-43-203 (2) (b) (II) (A), the legislature intended to give parties 30 days to appeal. PALJ Barbo gave the Claimant 7 days to either appeal ALJ Mottram's decision or apply for a hearing. The Claimant complied with the statute but not with PALJ Barbo's Order, which he neither had jurisdiction nor authority to shorten the statutory time limits.

Genuine Issue of Disputed Material Fact

d. Summary judgment is appropriate when the pleadings show that there is no genuine issue as to any material fact and that the moving party is entitled to judgment as a matter of law. C.R.C.P. 56(c); *Churchey v. Adolph Coors Co.*, 759 P.2d 1336 (Colo. 1988). This rule allows the parties to pierce the formal allegation of the pleadings and save the time and expense connected with trial when, as a matter of law, based on undisputed facts, one party could not prevail. See *Drake v. Tyner*, 914 P.2d 519 (Colo. Ct. App. 1996). As found, there are genuine issues of disputed material fact concerning "substantial" compliance with PALJ Barbo's Order and its interface with statutory provisions.

e. Once the moving party shows specific facts probative of a right to judgment, it becomes necessary for the non-moving party to set forth facts showing that there is a genuine issue for hearing. *See Miller v. Van Newkirk*, 628 P.2d 143 (Colo. App. 1980). As found, the Claimant's Objection to Respondents' Motion for Summary Judgment shows specific facts that there are genuine disputed issues of material fact.

Burden of Proof

f. The burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P. 2d 535 (Colo. App. 1992). That burden is "preponderance of the evidence." A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). As found, the Respondents have failed to satisfy their burden of proof that there is **no** genuine issue of disputed fact.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Respondent's Motion for Summary Judgment is hereby denied and dismissed.

B. The presently set hearing of July 11, 2017, shall proceed.

C. Any and all issues not determined herein are reserved for future decision.

DATED this_____day of May 2017.

ISSUES

- Did Claimant prove by a preponderance of the evidence that he is entitled to TTD benefits beginning June 22, 2016 and ongoing?

- Whether Claimant proved by a preponderance of the evidence that the left shoulder surgery requested by Ryan Hartman, M.D. is reasonable, necessary, and related to the industrial injury.

- Did Respondents prove by a preponderance of the evidence that Claimant's claim for ongoing medical and TTD benefits are barred by the defense of an intervening event?

STIPULATION

The parties stipulated Claimant's average weekly wage was $1,014.15. The ALJ accepted the Stipulation.

FINDINGS OF FACT

1. There was no evidence in the record which showed Claimant sustained an injury to his left shoulder before July 20, 2015.

2. On April 23, 2013, Claimant underwent a pre-employment physical, which was performed by Charles Lehman, M.D. No abnormalities were noted.

3. Claimant was hired by Employer in June 2015. His work varied from the job duties of a laborer to those of an operator. The typical job duties of a laborer include physically demanding tasks such as shoveling, digging, hauling, etc. As an operator, he would operate the heavy machinery used to lay pipelines.

4. Claimant sustained a compensable injury to his left shoulder on July 20, 2015.[1] Claimant testified he picked up two water valve boxes and threw them into the back of a pickup truck. Claimant did not hear a pop, but the pain in his left shoulder progressed to the point where he was not able to use his arm that evening.

5. Claimant reported the injury to the superintendent, Scott Crawford, at the end of the day.

[1] At the outset of the hearing counsel for Respondents confirmed a General Admission of Liability was filed.

6. Claimant testified he first saw a doctor on July 25, 2015. He explained the delay in seeking treatment because he did not want to "cause [Employer] a workmans' comp case, if it wasn't a real injury". He had discussed with representatives of Employer that he would wait a week to see if the shoulder would heal on its own.

7. Medical records from University of Colorado Health ("UCH") on July 27, 2015 were admitted at hearing. Claimant was examined by Jeannette Mercer, M.D. On examination Dr. Mercer documented that Claimant's left pectoralis, rhomboid, and trapezius muscles were all tender to palpation. Any movement to the shoulder was very painful and diagnosis was "severe" left shoulder strain. Dr. Mercer did not request any x-rays or other imaging. She instructed Claimant to wear a sling, heat the shoulder, and to follow the work restrictions of no use of the left arm at all.

8. An Employer's First Report of Injury (handwritten) was completed by Claimant on July 27, 2015. It documented that he injured his shoulder while lifting. On July 28, 2015, a typewritten E-1 was completed by Jackie Gottschalk on behalf of Employer.[2]

9. On August 12, 2015, Claimant returned to UCH and was evaluated by Dr. O'Toole. Claimant described his pain as 1-2/10 and was noted to have completed four physical therapy ("PT") visits. Tenderness was noted to deep palpation in the rotator cuff insertion. Full flexion, abduction and internal rotation was found. Dr. O'Toole's assessment was: left shoulder sprain, improving; MMI anticipated in three-six weeks. Claimant was returned to full duty.

10. Claimant returned to Dr. O'Toole on September 18, 2015. He said there was "no change" in his condition. He had been unable to schedule his massage therapy appointments due to a stressful situation at home. Claimant reported that he was "tolerating" his work activities, although he was experiencing discomfort in his shoulder after holding his left arm extended in front of him while operating a front-end loader at work for extended periods of time. On examination, Dr. O'Toole found restricted right cervical rotation, tenderness of the left trapezius over the top of the left shoulder and medial to the shoulder blade. The Hawkins and Jobe tests were negative. Dr. O'Toole's assessment was: thoracic somatic dysfunction; left trapezius and deltoid strains. Claimant received osteopathic manipulative therapy at Dr. O'Toole's office and medical massage therapy was to begin. MMI was projected to be in two weeks. Claimant had no work restrictions.

11. Claimant testified he worked for Employer until the end of September 2015. He gave his two week notice, then withdrew it. At the end of the two week period, his employment was terminated, as the company had hired a replacement.

12. Claimant was scheduled for an appointment with Dr. O'Toole on October 2, 2015, but did not attend that appointment. Claimant testified that he went to a

[2] Respondents' Exhibit H.

massage therapy appointment after the September visit with Dr. O'Toole, but did not receive any relief of his shoulder pain from the therapy.

13. Claimant went to work for a new employer (Griffin Construction) 3-4 weeks later. Claimant rested his shoulder, but continued to have pain. That job involved building pole barns. Claimant testified he informed his new employer of his shoulder condition. While Claimant was working for this employer, he took precautions not to re-injure his left shoulder. He would not use his left arm to lift and there were two co-employees who would help. Claimant noted they used scissor lifts when putting up the trusses. Claimant testified he did not suffer a new injury to his shoulder while working for Griffin. The ALJ credited Claimant's testimony and found him to be a credible witness.

14. Claimant left Griffin on or about December 24, 2015. Claimant testified he did not sustain any new injury to his left shoulder after leaving Griffin. There was a 3-4 month delay before he started working for a new company, Timberline Insulation. He continued to experience pain in his left shoulder. Claimant testified he told this new employer about his shoulder condition. He had a helper do the "grunt" work.

15. Claimant was involved in an automobile accident in either December 2015 or January 2016. The accident occurred in a parking lot when he turned too sharply and hit the passenger side door. The airbags did not deploy and Claimant did not receive any medical treatment. There was no evidence introduced that Claimant was injured in the collision.

16. Claimant returned to Dr. O'Toole on April 26, 2016. The medical note documents: "[Claimant] returns for reevaluation. He says that his left shoulder has continued to hurt and that [it] is more painful with overhead work. He denies new injury".[3] Claimant did not receive additional PT, massage therapy and had not done home exercises. Dr. O'Toole noted Claimant's left shoulder was elevated, with tenderness noted over the mid trapezius. No posterior tenderness was found, but the Hawkins impingement test was positive. Dr. O'Toole's assessment was: thoracic myofacial strain, subsequent encounter. PT was prescribed, but no work restrictions were issued. The WCM 164 noted Claimant was not at MMI.

17. After Claimant received five dry needling treatments, he returned to Dr. O'Toole on June 3, 2016. Tenderness was noted at the anterior acromion, along with a painful arc on abduction. Claimant had full range of motion ("ROM"). An MRI was ordered. Dr. O'Toole's treatment plan included additional PT and resumption of home exercises. Claimant was not at MMI, but had no work restrictions.

18. On June 14, 2016, Claimant underwent an MRI. The films were read by Andrew Mills, M.D., whose impression was: mild inferior labral tearing, and mild subacromial/subdeltoid bursitis. Minimal tendinopathy was noted distal to the infraspinatus.

[3] Claimant's Ex. 6, p. 34.

19. Claimant returned to Dr. O'Toole on June 17, 2016. Claimant's pain level was 7/10. Claimant had full ROM to 160 degrees on abduction. Dr. O'Toole's assessment was: shoulder impingement syndrome, left. He referred Claimant for an orthopedic evaluation.

20. On June 22, 2016, Claimant was examined by Thomas Sachtleben, M.D. at the Orthopedic & Spine Center of the Rockies. Claimant reported the July 20, 2015 injury as the cause of his symptoms. The record specifically states, "[Claimant] is avoiding heavy lifting and rarely has to do any overhead activities at his current job site". Dr. Sachtleben diagnosed Claimant with a left shoulder labral tear. On examination, Dr. Sachtleben found good rotator cuff strength, documented negative supraspinatus and Hawkins tests, and a positive crank test. Dr. Sachtleben performed a steroid injection, which improved the left shoulder ROM. Claimant was given restrictions of no repetitive lifting over 25 pounds and no overhead activities with his injured extremity.

21. Claimant testified Timberline did not have a light duty job and his employment ended when he received the above restrictions.

22. Claimant has not worked since his employment with Timberline ended.

23. On June 28, 2016, Claimant returned to Dr. O'Toole. On examination, Dr. O'Toole documented that the left shoulder was not tender to palpation and found abduction restricted. The Hawkins and Jobe tests were negative, but the Crank test was positive. Dr. O'Toole's assessment was: shoulder strain, left, subsequent encounter; labral tear of shoulder, left, subsequent encounter. He referred Claimant for PT and to orthopedic surgery.

24. No ATP, including Dr. O'Toole, has placed Claimant at MMI

25. Claimant was seen by a second orthopedist, Steven Seiler, M.D. on July 19, 2016. Claimant reported the same history to Dr. Seiler: an injury to his left shoulder while working for Employer one year prior. Dr. Seiler noted the O'Brien's test was positive, along with tenderness to palpation on the trapezius. Positive impingement was found with the Neer and Hawkins tests. Dr. Seiler assessment was: continued shoulder pain one year after injury and nondisplaced labral tears. Dr. Seiler referred Claimant to one of his partners who specialized in labral injuries.

26. A Notice of Contest was filed on behalf of Respondents on August 1, 2016.[4]

27. On September 12, 2016, Ryan Hartman, M.D. examined Claimant, who complained of pain in the anterior and lateral aspect of his shoulder, as well as periscapular pain. Dr. Hartman noted tenderness to palpation of the trapezius, limited ROM on the left side, as well as positive impingement findings with Neer and Hawkins tests. Dr. Hartman's diagnoses were: left shoulder work-related injury with

[4] At the hearing, it was noted that a med-only General Admission of Liability was filed. [Hearing transcript pp.3:19-22, 4:1-8].

impingement findings; left shoulder possible mild instability with a small anteroinferior labral tear. Dr. Hartman described the impingement as "fairly remarkable". Dr. Hartman recommended a left shoulder examination under anesthesia, arthroscopy with plans for subacromial bursectomy, less likely need for acromioplasty and probable anteroinferior labral repair, depending on findings at the time of the surgery. The ALJ inferred that Dr. Hartman concluded Claimant's need for surgery was related to the July 20, 2015 injury.

28. Claimant was examined by Timothy Hall, M.D. on November 16, 2016, at the request of his attorney. Dr. Hall reviewed the available medical records and noted Claimant's left shoulder was forward and elevated. He had restrictions in his neck ROM, with no evidence of full-thickness rotator cuff tear. Labral maneuvers were difficult because of diffuse pain. Pain was noted with anything over 90°. Dr. Hall's diagnoses were: probable impingement syndrome/subacromial bursitis; possible symptomatic labral tear; diffuse mild facial pain in the parascapular area, left side. Dr. Hall opined within a reasonable degree of medical probability that Claimant's left-sided shoulder symptoms were related to the injury which occurred in July 2015 at work. He recommended a subacromial bursa injection for both diagnostic and therapeutic purposes. If there was benefit from the injection, he suggested acromioplasty/decompression of the area due to the impingement syndrome.

29. Dr. O'Toole testified as an expert witness in occupational medicine, the specialty in which he is board certified. He is Level II accredited pursuant to the WCRP. Dr. O'Toole testified he treated Claimant for his work injury, starting on August 12, 2015. Dr. O'Toole noted the MRI showed mild tearing of the inferior labrum in the shoulder and bursitis. His assessment was shoulder impingement and he noted the bursitis was more consistent with impingement. It was "possible" that the labral tearing occurred with the lifting injury or it may have been pre-existing. It was also possible that the labral tearing could have occurred after Claimant was no longer working for Employer. Dr. O'Toole said the tenderness he appreciated when he first examined Claimant was consistent with tendinopathy of the supraspinatus tendon.[5]

30. Dr. O'Toole confirmed he did not see Claimant after the September 18, 2015 appointment until April 2016. He specifically asked Claimant if he suffered a new injury in the interim, which Claimant denied. On cross-examination, Dr. O'Toole indicated that Claimant had a positive Hawkins Impingement sign on April 26, 2016 that he did not note previously, and that likely "something" changed between September 2015 and April 2016.[6] When asked about Claimant's absence of treatment and subsequent employment being deemed a new injury, Dr. O'Toole responded, "I think it's quite possible."[7] Dr. O'Toole then indicated he "believed so" that Claimant may have

[5] O'Toole deposition, p. 11:3-8.

[6] O'Toole deposition, pp. 23:15 – 24:23.

[7] O'Toole deposition, pp. 25:15 – 26:5.

been at MMI prior to his subsequent work exposure.[8] When asked if he then thought Claimant's surgery was unrelated to his work with Employer, he answered, "I think so". Dr. O'Toole was asked what amount of Claimant's subsequent overhead work might have prompted his new symptoms: "I don't have a certain threshold, I guess. I'd have to look at it in light of other factors…Sounds like I didn't investigate that as thoroughly since the case was never closed as I might have. So yeah. I don't know".[9] The ALJ found Dr. O'Toole's testimony to be equivocal.

31. Claimant suffered a compensable industrial injury on July 20, 2015.

32. Claimant suffered no new injury after leaving his employment with Employer.

33. Respondents failed to meet their burden of proof that Claimant's left shoulder was injured or worsened by an intervening event.

34. Claimant is entitled to receive medical benefits to cure and relieve the effects of the July 20, 2015 industrial injury.

35. Claimant is entitled to receive TTD benefits from June 22, 2016 and continuing, as he has not worked since that time.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), §§ 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S. Generally, the Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. § 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

[8] O'Toole deposition, p. 27:16-25.

[9] O'Toole deposition, p. 32:5-7.

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). In this case, the credibility of Claimant, as well as Dr. O'Toole and Dr. Hall bore directly on the issue of causation.

Subsequent Intervening Event

Whether a particular condition is the result of an independent intervening cause is a question of fact for resolution by the ALJ. *See Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo.App.2000). The existence of an "intervening event" is an affirmative defense to Respondents' liability. Consequently, it is the Respondents' burden to prove that Claimant's condition is attributable to a subsequent intervening injury and not the industrial injury.

Colorado recognizes the "chain of causation" analysis holding that results flowing proximately and naturally from an industrial injury are considered to be compensable consequences of the injury. Thus, if the industrial injury leaves the body in a weakened condition and the weakened condition plays a causative role in producing additional disability or the need for additional treatment, such disability and need for treatment represent compensable consequences of the industrial injury. *Standard Metals Corp. v. Ball*, 474 P.2d 622 (1970); *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997). However, no compensability exists when a later accident or injury occurs as the direct result of an independent intervening cause. *Post Printing & Publishing Co. v. Erickson,* 30 P.2d 327 (1934).

In the case at bench, the evidence established Claimant suffered a compensable injury on July 20, 2015. (Finding of Fact 31). Claimant was working for Employer at the time and hurt his left shoulder. No contrary evidence was introduced to refute the conclusion that Claimant's original injury arose out of the work he was performing for Employer. Indeed, Respondents initially paid for his medical treatment under a reservation of rights and then subsequently filed a med-only GAL.

As determined in Findings of Fact 7, 9-10, the ALJ concluded Claimant required treatment for the left shoulder injury, which was provided by Dr. Mercer and O'Toole. This treatment was required to cure and relieve the effects of the July 20, 2015 injury. Respondents are liable for said treatment, as it was to cure and relieve the effects of the industrial injury.

The dispute in this case centered on whether Claimant either suffered a new injury or aggravation of his left shoulder condition after he left the employment of Employer. The ALJ concluded the evidence supported a determination that no such intervening event or subsequent injury occurred. (Findings of Fact 32-33). In this regard, the ALJ credited Claimant's testimony that he did not sustain a new injury while working for two subsequent employers. The evidence established Claimant advised

both employers of his left shoulder condition, and with regard to at least one employer, he had assistance, so as not to aggravate the injury. Claimant also testified that he continued to have pain in his left shoulder. (Finding of Fact 14).

The second area of support for the conclusion that Claimant's left shoulder condition was a result of the July 20, 2015 injury was found in the medical evidence. Medical evidence established Claimant had symptoms of impingement in the left shoulder. The objective evidence in the form of the MRI documented such impingement.

In addition, Claimant's treating orthopedic surgeons reported positive impingement in Claimant's left shoulder. (Findings of Fact 25 and 27). Claimant's IME physician also supported this conclusion. (Finding of Fact 28). The ALJ concluded this impingement result was a result of the July 20, 2015 injury.

In making this determination, the ALJ considered Respondents' contention that a subsequent intervening event served to cut-off their liability, as Claimant's left shoulder worsened. The ALJ concluded there was insufficient evidence offered by Respondents to support this affirmative defense. Although there was a gap in Claimant's treatment, no evidence of a subsequent injury was introduced. The MVA referenced by Respondents did not cause any injury to Claimant. (Finding of Fact 15). Also, Respondents did not introduce evidence to show Claimant's work for the subsequent employers was the cause of his increased symptoms. The ALJ credited Claimant's testimony that his symptoms continued uninterrupted from the time of his injury. (Finding of Fact 13-14). Claimant also testified that he had help while working for Griffin. (Finding of Fact 13). After that, he also had help and was not engaged in overhead work while working for Timberline. (Finding of Fact 14).

In addition, there was no evidence (as documented by the medical records), which showed Claimant's job duties caused the increase of symptoms in Claimant's left shoulder. Respondents pointed to Dr. O'Toole's testimony supporting their argument. However, Dr. O'Toole tergiversated greatly while testifying. On direct examination, he opined that the impingement syndrome was a result of the July 2015 injury. Then on cross-examination, Dr. O'Toole agreed that Claimant was almost at MMI and that he should have looked at the issue of a potential subsequent injury more closely. On balance, it cannot be said the Dr. O'Toole's testimony established Respondents' defense of an intervening event.

This case is distinguished from those in which there was evidence where Claimant suffered a subsequent traumatic injury. The Colorado Supreme Court held in *Post Printing & Publishing Co. v. Erickson, supra,* Claimant was not entitled to increased benefits where there was no evidence that the original knee injury caused him to fall and fracture an ankle. The Court noted:

> "Undoubtedly, any natural development of an industrial injury, uninfluenced by an independent intervening cause, should be attributed to such injury as a part of the loss to be compensated….Upon the happening of a later accident like the

one involved here, due to an efficient intervening cause, and not arising out of or in the course of employment, the law does not contemplate that the original compensation shall be increased merely because the later accident might or might or would not have happened if the employee had retained all of his former physical powers". 94 Colo. at 384.

Courts following the *Post Printing & Publishing Co.* case have analyzed the causation issue and required Respondents to provide treatment for those conditions which followed as a natural consequence of the industrial injury. *Owens v. Industrial Claim Appeals Office,* 49 P.3d 1187, 1188-1189 (Colo. App. 2002). Where a condition occurs independently of the industrial injury and Claimant requires treatment for that condition, Respondents are not required to pay for said treatment. *Owens v. Industrial Claim Appeals Office, supra,* 49 P.3d at 1189. However, where treatment such as a surgery is a natural consequence of the industrial injury Respondents are liable for that treatment. *Id.*

In the instant case, the evidence established Claimant's compensable injury led to his need for medical treatment. There was insufficient evidence introduced of an intervening injury. The ALJ concluded it was equally likely that Claimant's original injury never completely healed. Accordingly, Claimant's need for continuing treatment, including the surgery proposed by Dr. Hartman, is a direct consequence of the July 20, 2015 injury.

TTD Benefits

As found, there is no evidence Claimant returned to work after his employment with the third employer-Timberline. He has not been placed at MMI by any ATP and requires additional treatment. Therefore, Claimant established that he is entitled to receive TTD benefits.

Medical Benefits

Since the ALJ concluded there was no subsequent intervening event, Respondents are required to provide medical benefits to Claimant to cure and relieve the effects of his injury. This includes the surgery recommended by Dr. Hartman.

ORDER

It is therefore ordered that:

1. Respondents shall provide medical benefits to Claimant to cure and relieve the effects of the July 20, 2015 industrial injury. This includes the surgery proposed by Dr. Hartman

2. Respondents shall pay TTD benefits to Claimant from June 22, 2016 until terminated by law. TTD shall be paid at the rate of $676.10 per week.

3. Insurer shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES[1]

- Did Respondent sustain its burden to overcome the DIME physician's (Kristin Mason, M.D.) opinion that Claimant was not at MMI?
- Is Claimant entitled to medical benefits?
- Is Claimant entitled to change physicians to Ronald Hollis, M.D.?
- Is Claimant entitled to temporary total disability benefits from July 1, 2015 and continuing?

FINDINGS OF FACT

1. Claimant worked as a Health Care Tech II for Employer.

2. Prior to December 10, 2014, Claimant had not injured her left shoulder. There was no evidence in the record documenting any treatment to the left shoulder before December 2014.

3. On December 10, 2014, Claimant sustained an admitted industrial injury while stepping down from a bus. Claimant fell on her outstretched left arm. She testified she felt pain in her left shoulder.

4. Claimant sought treatment the next day (December 11, 2014) at Concentra and was evaluated by Kenneth Ginsburg, P.A. X-rays were taken that day and showed no bony abnormalities and mild degenerative changes of the acromioclavicular joint. PA Ginsburg's assessment was: fall, accidental; contusion of left shoulder or upper extremity; and left shoulder strain. Prescriptions for Naproxen and Orphenadrine were given to Claimant and physical therapy ("PT") was ordered.

5. Claimant testified she returned to work after her injury and performed modified duty for Employer.

6. From December 11, 2014 to April 7, 2015, Claimant received conservative treatment, including PT, acupuncture, and chiropractic manipulation at Concentra. In the evaluation which took place on January 27, 2015, PA Ginsburg noted improvement but continued Claimant's work restrictions. These included no lifting of more than 5 lbs. with left arm, no reaching away from the body and no lifting above shoulder level.

[1] The parties agreed to reserve this issue of average weekly wage ("AWW").

7. A patient status report from Terrence Thomas, D.C. at Absolute Health Center, dated February 9, 2015 was admitted into evidence. Claimant returned to Dr. Thomas, reporting left-sided paraspinal pain along the medial border of her shoulder blade. She indicated her average pain level was 3/10 and she reported 70% improvement since the injury. Claimant received manual therapy, including neuromuscular reeducation and kinetic activities, along with cryotherapy. Claimant was also instructed on stabilization, strengthening exercises and released from treatment.

8. At the time of her evaluation on February 17, 2015, PA Ginsburg recorded Claimant had completed chiropractic treatments, but was experiencing shoulder joint pain with abduction. Claimant's work restrictions were kept in place and she was referred for an orthopedic evaluation.

9. On March 3, 2015, Claimant was evaluated by Wiley Jinkins, M.D., who conducted the orthopedic consultation. At the evaluation, Claimant reported a pain level of 3/10. On examination, Claimant's left shoulder was positive for impingement, with positive Neer, Hawkins and O'Brien signs. There was no conclusive evidence of instability or adhesive capsulitis. Moderate tenderness to deep palpation in the area of the bicipital groove was noted. Dr. Jinkins' impression was: strain of the left shoulder, with possible internal derangement (rotator cuff tear). Dr. Jinkins performed an injection and recommended an MRI.

10. On March 12, 2015, Claimant underwent an MRI on her left shoulder. The films were read by Dennis Wilcox, M.D., whose impression was small undersurface partial-thickness tear of the subscapularis tendon; atrophy of the subscapularis muscle; acromioclavicular arthrosis with a small undersurface osteophyte of the distal clavicle; glenohumeral joint effusion. The ALJ concluded these were degenerative changes in Claimant's left shoulder. The ALJ concluded that the findings of arthrosis and the presence of an osteophyte referred to degenerative changes, which was confirmed by Dr. Larson's testimony.

11. Claimant completed a separation form on or about March 19, 2015.[2] Her last day of work was listed as June 5, 2015. The reason given was "retirement (effective July 1, 2015)". There was no reference in this form to Claimant's shoulder condition, nor was there reference to Claimant's medical condition as the reason for retirement. There was no evidence in the record that Claimant lost time from work through July 1, 2015. The ALJ inferred Claimant retired of her own volition.

12. Claimant testified she felt 85% improvement when Dr. Jinkins released her on May 12, 2015 and this treatment note emphasized she could return if her symptoms returned. Dr. Jinkins referred Claimant to PA Ginsburg for a confirmation of MMI and impairment.[3]

[2] Exhibit H.

[3] It is unclear why Dr. Jinkins referred Claimant back to PA Ginsburg, however, she was subsequently evaluated by Dr. Jones.

13. Claimant was also evaluated by Randall Jones, M.D. at Concentra on May 12, 2015. He referenced Dr. Jinkins' evaluation of the same day. In the examination, he found no tenderness and full range of motion ("ROM") in Claimant's left shoulder. He described the left shoulder as comparable to the right in all planes. Claimant was released from care at maximum medical improvement. The M164, dated May 15, 2015 noted Claimant was at MMI, released to return to work with no restrictions and sustained no permanent impairment.[4]

14. Claimant testified that because of her shoulder pain she would not have been able to perform signing for deaf students, which was required as part of her job duties. She experienced increased pain in her shoulder by July 2015. Claimant testified she would not have been able to perform these job duties had she returned to school on July 1, 2015.

15. Claimant is not entitled to TTD benefits from July 1, 2015 to December 9, 2015 based upon the return to work issued note by Dr. Jones and her voluntary retirement. There was no evidence Claimant had restrictions during this period of time.

16. Claimant testified the pain in her shoulder worsened in September/October 2015. Claimant did not fall or injure her left shoulder between May and October 2015. The ALJ credited Claimant's testimony and found she had increasing symptoms in her left shoulder. She did not receive any further treatment at Concentra after May 2015. Claimant stated the adjuster (Jackie Slade) told her no further treatment was going to be provided.

17. Claimant then went to Dr. Hollis, who had been recommended by a physician treating her husband. Dr. Hollis first evaluated her on October 21, 2015. There was no evidence in the record that Claimant was referred to Dr. Hollis by an ATP, nor was he in the chain of referrals within the workers' compensation system. Therefore, Dr. Hollis was not an ATP, as that term is defined by the Colorado Worker's Compensation Act.

18. When Claimant was evaluated by Dr. Hollis on October 21, 2015, he noted Claimant's pain had progressed to the point that it was affecting activities of daily living, including sleeping. She put her pain level at 7/10. On the intake form, Claimant noted the current pain/injury started in June 2015. She stated the pain had been present for four (4) months. On examination, "pretty significant" pain was noted upon palpation at the biceps tendon. Loss of strength was also noted. Dr. Hollis' assessment was complete tear of the left rotator cuff. It was unclear from this report whether Dr. Hollis had a complete set of records for Claimant. In his testimony at hearing, Dr. Hollis confirmed he did not.

---

[4] Respondent's post-hearing submission and discussions at the outset of the hearing confirmed no Final Admission of Liability ("FAL") was filed initially, as this was non-lost time claim. An FAL was filed November 12, 2015. [Hrg. Tr., pp. 7:4-7, 8:4-7]

19. Dr. Hollis authored a letter dated November 6, 2015 noting Claimant had an injury at work in December 2014. The letter specified that at the time of the work up, Claimant indicated she had an MRI that showed a rotator cuff tear per her report and she was told at the time her condition would not improve by repairing it. Claimant delayed having surgery and continued to have problems with the shoulder. Dr. Hollis noted he evaluated Claimant on October 21, 2015, at which time he discussed an arthroscopic repair of the rotator cuff. Dr. Hollis expressed a concern about waiting too long, which might prevent a repair. Dr. Hollis opined based on the knowledge he had Claimant's condition was caused by the injury back in December 2014, noting "with no prior injuries to that I do feel that the problem that causes injury and thus does fall under the workman's comp a scenario". The ALJ inferred Dr. Hollis was relying on Claimant's report of her history and did not have the MRI report at the time this letter was written. Dr. Hollis surgical recommendations were based upon his clinical findings made at the time of the October 21, 2015 evaluation.

20. On December 10, 2015, Dr. Hollis performed surgery on Claimant's left shoulder. The indications for the surgery were described by Dr. Hollis as: "long-standing left shoulder problems, then Claimant was diagnosed over a year ago with an injury". The pre-and post-operative diagnoses were the same, namely; left shoulder rotator cuff repair; left shoulder extensive partial proximal biceps tendon tear; and labral fraying degenerative type 2. Dr. Hollis performed a left shoulder arthroscopic extensive glenohumeral debridement, left shoulder acromial decompression, and left shoulder open subpectoral biceps tenodesis. In the surgical report, Dr. Hollis noted the supraspinatus and infraspinatus showed an intact tendon, but the upper portion of the subscapularis was torn and retracted past the point of repair. Type 2 degenerative fraying was also noted in the posterior labrum. The ALJ infers Claimant had work restrictions as a result of the surgery.

21. As a result of Claimant's December 10, 2015 surgery, she was precluded from working. There was no evidence in the record that Claimant returned to employment after her surgery. The ALJ concluded Claimant is entitled to TTD benefits, beginning on December 10, 2015.

22. Claimant returned to Dr. Hollis for post surgical follow-up on December 18, 2015 and January 15, 2016. Claimant was receiving PT at Colorado Sports and Spine and was doing ROM exercises.

23. Claimant underwent a DOWC IME ("DIME") on March 22, 2016, which was performed by Kristin Mason, M.D. Claimant's course of treatment was reviewed, including the injections performed by Dr. Jinkins. Dr. Mason noted Claimant retired in July and had improved. Then her symptoms increased. On examination, weakness was noted in Claimant's left deltoid, infraspinatus and supraspinatus. She was also tender over the bicipital groove more than the common rotator cuff tendon and AC. No obvious atrophy was noted and Claimant had good scapular mobility. Claimant had myofascial findings in the rhomboids, levator scapulae, as well as the trapezius on the left side.

24. Dr. Mason's assessment was: status post fall on outstretched hand, with full-thickness retracted subscapularis tear. She felt this appeared on Claimant's initial MRI as partial-thickness. In the absence of trauma, Dr. Mason opined Claimant had "ongoing impingement and spurring, which completed that tear somewhat after she was placed at MMI". The ALJ was not persuaded by this opinion as the opinions of Dr. Larson and Dr. Hollis were more persuasive as to the cause of the tearing. Dr. Mason opined Claimant's current condition was related to the event of December 10, 2014. This ultimate opinion by Dr. Mason was persuasive. The ALJ noted Dr. Mason did not provide a great deal of analysis regarding her ultimate opinion. Dr. Mason determined Claimant was not at MMI, including that she needed ongoing PT and follow-up with her surgeon. The ALJ credited Dr. Mason's opinion on whether Claimant was at MMI. Dr. Mason found if Claimant was at MMI, she would receive a 21% upper extremity rating, which converted to a 13% whole person impairment.

25. Claimant returned to Dr. Hollis on April 1, 2016. Claimant was found to be improving, particularly with regard to motion and strength. Claimant placed her pain level at 2/10. Claimant's treatment was to continue in the form of therapy gold on a home program. Claimant could return on an as needed basis, but had no long-term restrictions. The ALJ notes Dr. Hollis did not release Claimant to full duty work and there was no statement of MMI.

26. Wallace Larson, M.D. conducted a medical record review on behalf of Respondent. He did not examine Claimant. Dr. Wallace issued a report, dated June 29, 2016 based upon his review of treatment records through April 1, 2016. Dr. Wallace noted the records did not indicate any previous problems with Claimant's left shoulder and her employment was not suggestive of any repetitive use type disorder. He noted Claimant's condition was most consistent with degenerative change within her left shoulder, which was a non-work-related condition. Responding directly to Dr. Mason's opinion that impingement and spurring completed the tear, Dr. Wallace noted it was possible she had ongoing impingement and spurring, but this would be a degenerative condition rather than a work after related condition. He noted the medical literature was some inclusive as to whether not impingement is the source of rotator cuff tears.

27. Dr. Larson stated it did not appear Dr. Mason considered non-work related degenerative processes in her opinion. He felt Dr. Mason's opinion that this was work related was incorrect to a reasonable degree of medical probability. Dr. Wallace opined Claimant remained at MMI for her work related condition, as of May 12, 2015. Finally, Dr. Wallace opined Claimant's post-MMI surgery was not related to her work injury, nor was it reasonable and necessary to cure and relieve the effects of the work injury.

28. Dr. Larson testified as an expert in orthopedic surgery, with a subspecialty in hand and upper extremity surgery. He is Level II accredited pursuant to the WCRP. Dr. Larson testified regarding the surgery Claimant underwent, noting that the subscapularis tendon was torn and Dr. Hollis was not able to repair it. The more common type of rotator cuff tear occurred at the top part of the supraspinatus tendon. Dr. Larson opined that the tear occurred over a prolonged period of time due to the

aging process. Dr. Larson did not believe the degenerative process was affected by the original work injury. He stated the tear completed in between the time of her MRI (March 12, 2015) and the surgery (December 10, 2015). The ALJ notes there were slightly more than seven months between these two events.

29. Dr. Larson did not believe Claimant's subacromial impingement would have affected the subscapularis tendon that fully tore. Dr. Larson noted that Dr. Mason may have been under the impression that the supraspinatus tendon was the one that ruptured. There are some cases where impingement causes a supraspinatus tendon to tear and then that extends into other tendons such as the subscapularis and infraspinatus tendon, but that was not the case for Claimant. The most common way rotator cuffs tear in people Claimant's age was when the tendon weakened. Dr. Larson testified Claimant's pattern of slowly worsening pain fit the pattern of ongoing degenerative process, although he agreed a fall can cause a partial tear of the rotator cuff. There was no evidence of trauma in the MRI. He testified it was more likely the fall would cause a full thickness tear, as opposed to a partial tear.

30. Dr. Hollis testified as an expert orthopedic surgery, with a subspecialty in surgery at the shoulder and elbows. Dr. Hollis noted he first examined Claimant in October 2015 and obtained the history from Claimant herself. He did not have the MRI at that point. Dr. Hollis opined that Claimant's fall in December 2014 caused the partial tear as shown on the March 12, 2015 MRI. This was based on the lack of prior injuries, the fall and then extensive pain she experienced after the fall. Dr. Hollis disagreed with Dr. Mason that impingement was involved with the partial thickness tear, noting that eventually Dr. Mason concluded that the fall caused the need for the surgery. In this regard, he agreed with Dr. Larson that the impingement did not cause the tear. He postulated that Claimant's report of 85% relief was a result of the steroid shot.

31. Dr. Hollis provided an explanation as to the description of the full thickness tear that he found when surgery was performed, as opposed to the partial thickness tear as described the MRI report. Dr. Hollis review the MRI films prior to the surgery. More particularly, Dr. Hollis testified a partial thickness tear will enlarge over time, which caused the bicipital changes in the groove. He also explained the description of a "full tear" can be described in two ways. Some physicians use that to describe the whole tendon pulled off, but that was not this case. A portion of the tendon was pulled off; thus, it didn't involve Claimant's entire scapularis, rather the upper portion was torn, with the other half remaining. Dr. Hollis found the biceps tendon had degenerative tearing, which was "very common" with a subscapularis tear that sits there for a length of time-in this case 11 months. The ALJ credited this opinion and found Dr. Hollis to be more persuasive than Dr. Larson.

32. Dr. Hollis testified Claimant would have been mobile within six weeks of the surgery. He opined Claimant would have been released to return to work within three months or about mid-February 2016.[5] She would have a 5-10 pound lifting

[5] Hrg, Tr. pp. 77:10-17.

restriction. Dr. Hollis last saw Claimant on April 1, 2016 and noted he was pleased with her results and she had no long-term restrictions.

33. The ALJ concluded the December 10, 2014 fall aggravated Claimant's pre-existing condition, causing her to experience symptoms in the left shoulder. Based upon the totality of the evidence, including the expert opinions, the ALJ concluded the condition of Claimant's left rotator cuff was aggravated by the December 10, 2014 fall.

34. Respondent established Dr. Mason's opinion that the impingement and spurring caused Claimant's rotator cuff tear to complete the tear was erroneous. However, that was only one facet of her analysis. Dr. Mason's ultimate conclusion that Claimant's condition was related to the December 10, 2014 fall was correct. Respondent also did not overcome Dr. Mason's ultimate conclusion regarding MMI.

35. Claimant's fall and the injury she sustained led to Claimant's need for surgery performed by Dr. Hollis.

36. Respondent is liable for medical benefits provided by the ATPs and their referrals to cure and relieve the effects of this injury.

37. Claimant failed to establish she sustained a wage loss related to her industrial injury from December 10, 2014 through December 9, 2015.

38. Evidence and inferences inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), §§ 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S. Generally, the Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. § 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary

to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). In this case, the credibility of Dr. Larson and Dr. Hollis were determinative of whether Dr. Mason's opinions were overcome.

Legal Standard for Overcoming the DIME

In resolving the issues, the ALJ notes the question of whether Respondents overcame Dr. Mason's opinion is governed by §§ 8-42-107(8)(b)(III) and (c), C.R.S.; *Peregoy v. Indus. Claim Apps. Office*, 87 P.3d 261, 263 (Colo. App. 2004). These sections provide that the finding of a DIME physician selected through the Division of Workers' Compensation shall only be overcome by clear and convincing evidence. A DIME physician's findings of MMI, causation, and impairment are binding on the parties unless overcome by "clear and convincing evidence." § 8-42-107(8)(b)(III), C.R.S.; *Leprino Foods Co. v. Indus. Claim Appeals Office*, 134 16 P.3d 475, 482-83 (Colo. App. 2005); *accord Martinez v. Indus. Claim Appeals Office*, 176 P.3d 826, 827 (Colo. App. 2007).

Clear and convincing evidence is highly probable and free from serious or substantial doubt, and the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert,* 914 P.2d 411 (Colo. App. 1995). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAO July 19, 2004); see *Shultz v. Anheuser Busch, Inc.*, W.C. No. 4-380-560 (Nov. 17, 2000).

The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Indus. Claim Apps. Office*, 961 P.2d 590 (Colo. App. 1998). Since the DIME physician is required to identify and evaluate all losses and restrictions that result from the industrial injury as part of the diagnostic assessment process, the DIME physician's opinion regarding causation of those losses and restrictions is subject to the same enhanced burden of proof. *Id*. As noted below, Respondent met its burden of proof as to one aspect of Dr. Mason's opinion, but not as to her ultimate conclusion.

Causation and MMI

There was a significant question regarding the cause of Claimant's shoulder condition, namely whether it was the result of a degenerative process as opposed to the

trauma. The ALJ concluded Dr. Mason's analysis was erroneous as the cause of Claimant's full thickness subscapularis tear. (Finding of Fact 24). There was also some ambiguity in the use of the term-full-thickness tear, which was clarified by Dr. Hollis. (Finding of Fact 31). Both physician experts who testified at hearing were in agreement on this point; namely that impingement and spurring would not cause the tear. These opinions were more persuasive than that offered by Dr. Mason. Accordingly, Respondent met its burden of proof on at least one aspect of Dr. Mason's opinion.

However, Dr. Mason's ultimate conclusion that the fall caused Claimant's left rotator cuff to become symptomatic was correct. (Finding of Fact 24). This conclusion was supported by the medical evidence and the expert testimony of Dr. Hollis. (Finding of Fact 30). On this point, the ALJ credited the expert opinion of Dr. Hollis, who treated Claimant and performed the surgery. As found, Dr. Hollis credibly explained the terminology used regarding the partial tear (described in the MRI report) versus the full thickness tear referenced in the operative report. (Finding of Fact 31). The ALJ also credited his opinion regarding what caused the fraying of the biceps tendon in the groove. *Id.*

In addition, the ALJ concluded Dr. Mason's opinion regarding MMI was correct. (Finding of Fact 24). The ALJ credited Dr. Mason's opinion that Claimant required additional treatment to reach MMI. On this point, both Dr. Hollis' and Dr. Mason's opinions were more persuasive than those offered by Dr. Larson. In coming to this conclusion, the ALJ considered Respondent's argument that it was only the degenerative process in Claimant's shoulder that worsened after May 2015, which ultimately led to her need for surgery. Respondent also suggested that the facts of this case were more akin to post–MMI worsening, asserting this was a functional equivalent of a Petition to Reopen. Respondent cited *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000) for the proposition that DIME opinions on worsening do not require clear and convincing evidence to overcome.[6]

As the Court noted in *Leprino Foods v. Indus. Claim Apps. Office, supra,* 134 P.3d at 482: "As required by § 8-42-107(8), C.R.S. 2005, a DIME physician's opinions are given presumptive effect. Both determinations require the DIME physician to assess, as matter of diagnosis, whether the various components of the claimant's medical condition are causally related to the industrial injury". The ALJ looked at Dr. Mason's opinions on causation as a whole, concluding that Respondents adduced insufficient evidence to overcome her ultimate opinions. Therefore, a DIME physician's determinations concerning causation are binding unless overcome by clear and convincing evidence.

To reach the conclusion suggested by Respondent requires the ALJ to find that the fall did not worsen her condition, rather it was only the degenerative process which worsened. This artificially circumscribes what the evidence revealed about Claimant's shoulder; namely even though there were degenerative changes, these were aggravated by the December 10, 2014 fall. The conclusion that only the degenerative

[6] Footnote 2, p. 12 of Respondent's proposed Findings of Fact, Conclusions of Law and Order.

condition caused the rotator cuff tear was not supported by the medical evidence or expert opinions offered by Dr. Hollis.

Temporary Total Disability

To prove entitlement to TTD benefits, Claimant must prove that the industrial injury caused a disability lasting more than three work shifts; that she left work as a result of the disability; and that the disability resulted in an actual wage loss. *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). § 8-42-103(1)(a), C.R.S., requires Claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*.

The term disability connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by Claimant's inability to resume her prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the Claimant's ability effectively and properly to perform her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). TTD benefits ordinarily continue until one of the occurrences listed in § 8-42-105(3), C.R.S.; *City of Colorado Springs v. Industrial Claim Appeals Office, supra*.

The existence of disability presents a question of fact for the ALJ. There is no requirement that Claimant produce evidence of medical restrictions imposed by an ATP, or by any other physician. Rather, lay evidence alone may be sufficient to establish disability. *Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997).

Claimant argued she was entitled to TTD benefits starting on July 1, 2015. She testified at hearing she would not have been able to perform her job duties, specifically signing. However, in May 2015, Claimant was returned to work by Dr. Jones who said she was at MMI and had no restrictions. (Findings of Fact 13 and 15). Claimant did not introduce any evidence that she was taken off work after seeing Dr. Jones. Nor was there evidence in the record that an ATP issued work restrictions after Dr. Jones returned her to full duty. Based upon the evidence before the Court, Claimant failed to establish to meet her burden of proof to establish an entitlement to TTD benefits from July 1 through December 9, 2015.

However, the ALJ inferred Claimant would not have been able to work after her surgery. (Finding of Fact 21). The ALJ found that Claimant could not have worked for Employer or any other entity for some period of time. Thus, she would have been temporarily and totally disabled, at least for some period of time. Claimant therefore satisfied her burden of proof that she is entitled to TTD, beginning on December 10, 2015.

The ALJ next turned to the question of whether TTD is due and owing for a closed period of time (as suggested by Respondent) or is continuing (as argued by Claimant). This is complicated by the fact Claimant voluntarily retired and her employment ended July 1, 2015. There was no reference to Claimant's physical condition in the separation form. Also, there was no evidence before the ALJ that Respondent–Employer could not have continued to accommodate Claimant, as it had done from her injury to when she retired.

As the record now stands, there is no direct evidence that any of the statutory bases for terminating TTD were met. § 8-42-105(3), C.R.S. The ALJ reviewed the testimony of Dr. Hollis, who confirmed Claimant had no restrictions and could return to him as needed. (Finding of Fact 32). However, this is something short of a full-duty release to return to work. Also, Dr. Hollis did not complete a WCM 164 confirming MMI and/or a full duty release. Therefore, Claimant is entitled to TTD benefits from December 10, 2015, until terminated by law.[7]

Change of Physician

Claimant argued that she was denied treatment for non-medical reasons and, therefore, Dr. Hollis became an ATP by operation of law. More particularly, Claimant testified that the adjuster refused to allow her to return to Concentra. Claimant was not specific as to when this refusal occurred. This contradicted the written evidence, namely, the records of Dr. Jinkins, who noted Claimant could return to his office at any time. There also was no evidence in the record that Claimant ever requested a change of physician in writing.

As found, Claimant was attempting to change physicians after her ATP found her to be at MMI. Such an attempt to change physicians contravenes § 8-43-404 (III)(A), C.R.S.

The ALJ also notes, effective July 1, 2014, § 8-43-404 (10) (b), C.R.S. provides that the Employer may designate a new authorized physician within 15 calendar days following receipt of a written notice from the injured employee or his/her legal representative "that an authorized physician refused to provide medical treatment to the injured employee … for nonmedical reasons …". The written notice must be sent by certified mail, return receipt requested.

Here, there is no evidence or allegation that the Claimant ever sent such a written notice to Respondent. Accordingly, Claimant did not prove she is entitled to a change of physician under these circumstances.

ORDER

IT IS ORDERED:

[7] Respondents may be entitled to an offset for Claimant's receipt of retirement payments. In the interests of justice, the ALJ determines it is appropriate to order counsel for the parties to confer on this issue, as well as AWW.

1. Respondent shall provide medical benefits to Claimant through authorized treating physicians until she reaches MMI.

2. Respondent is not liable for the treatment provided by Dr. Hollis, as he was not an ATP.

3. Claimant's request for TTD benefits from July 1, 2015 through December 9, 2015 is denied and dismissed.

4. Respondent shall pay Claimant TTD benefits from December 10, 2015 and continuing. Respondent may be entitled to an offset for retirement benefits paid during this time. Counsel for Claimant and Respondent shall confer on this issue, as well as AWW. If no agreement is reached, either party may file an Application for Hearing on these issues.

5. Respondent shall pay interest on all benefits not paid when due.

6. Claimant's request for change of physician is denied and dismissed

7. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 4-968-201-01

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER DENYING SUMMARY JUDGMENT IN FAVOR OF THE RESPONDENTS

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer/Respondents.

A hearing on the merits in the above-referenced matter is scheduled for August 3, 2017, in Denver, Colorado, on several issues, including medical benefits, including average weekly wage (AWW); temporary partial disability (TPD) benefits; temporary total disability (TTD) benefits; and, permanent partial disability (PPD) benefits. On May 15, 2017, the Respondents filed an "Opposed Motion for Summary Judgment, "alleging, *inter alia,* that Claimant's temporary disability benefits should be suspended because the Claimant "has refused to apply for Federal Social Security Disability (SSDI) benefits as required by § 8-42-103 (1)(c)(I), C.R.S. Attached to the Respondents' Motion were Exhibits A through J. On May 30, 2017, the Claimant filed his "Objection to Respondents' Opposed Motion." There were no attachments accompanying the Claimant's Objection.

The matter was assigned to Edwin L. Felter, Jr., Administrative Law Judge (ALJ) for decision on the Respondent's Motion for Summary Judgment and the Claimant's Objection. Both matters were deemed submitted for decision on May 31, 2017.

Respondents' Exhibits A through J were attached to the Motion for Summary Judgment. No exhibits were attached to the Claimant's Objection.

ISSUES FOR SUMMARY JUDGMENT

The issues to be determined by this decision concern whether there are genuine issues of disputed material fact concerning whether the Claimant 's temporary disability benefits should be suspended because he has not applied for SSDI benefits as required by § 8-42-103 (1)(c)(I), C.R.S. There is a genuine issue of disputed material fact, *i.e.,* did the Claimant have good cause for not applying for SSDI benefits. An evidentiary hearing is required to resolve this issue.

The Respondents bear the burden of proof, by a preponderance of the evidence of establishing that there is no genuine issue of disputed material fact concerning the above-mentioned issues and that they are entitled to summary judgment as a matter of law. Further, the Respondents bear the burden of proof, by preponderant evidence, on their request to suspend the Claimant's temporary disability benefits.

Because Pre-Hearing ALJ (PALJ) Rob Erickson ordered the Claimant to apply for SSDI benefits by Order of January 24, 2017, and since the Division of Workers' Compensation (DOWC) denied the Respondents' Petition to Suspend benefits (February 15, 2017) until the Claimant applied for SSDI benefits, both matters are considered as an appeal of PALJ Erickson's Order and the DOWC denial of the Petition to Suspend Benefits.

FINDINGS OF FACT

Based on the undisputed evidence contained in the file, pleadings and exhibits, the ALJ makes the following Findings of Fact:

Preliminary Findings/Posture

1. On March 8, 2017, the Respondents filed an Amended Application for Hearing, endorsing the issue of suspension of benefits until the Claimant applies for periodic SSDI benefits. The hearing is presently set for August 3, 2017

2. Respondents allege that summary judgment is appropriate because it is undisputed that the "Respondents requested that the Claimant apply for SSDI benefits and the Claimant has refused to do so,

Findings/History

3. On June 20, 2013, the Employer hired the Claimant to work as a dishwasher.

4. On September 21, 2014, the Claimant sustained an admitted lumbar spine injury.

5. Following the admitted injury, the Claimant worked modified duty.

6. On September 15, 2015, the Denver restaurant went out of business. The Claimant remained on work restrictions and the Respondents started paying the Claimant TTD benefits, effective September 15, 2015. The Respondents filed a General Admission of Liability (GAL), dated September 28, 2015, admitting for medical benefits; an average weekly wage (AWW) of $266.70; and, TTD benefits of $177.80 per week from September 15, 2015 ongoing (Exhibit A, attached to Motion).

7. On August 25, 2016, the Claimant was placed at maximum medical improvement (MMI), with an 18% whole person rating.

8. On December 19, 2016, the Respondents requested that the Claimant apply for SSDI benefits (Exhibit B, attached to Motion).

The SSDI Controversy

9. On January 4, 2017, Claimant's counsel advised the Respondents that the Claimant would **not** apply for SSDI benefits because the Claimant was not eligible under the Social Security number for which he was receiving wages (Exhibit C, attached to Motion).

10. A pre-hearing conference was held before PALJ Rob Erickson on January 24, 2017. As a result of the pre-hearing conference, PALJ Erickson ordered the Claimant to apply for SSDI benefits. The herein appeal of the PALJ order ensued.

11. On February 15, 2017, the DOWC administratively denied the Respondents Petition to Suspend benefits. The herein appeal ensued.

12. On March 3, 2017, after a Division Independent medical Exam (DIME), the DIME physician rated the Claimant at 19% whole person.

13. On May 10, 2017, the Respondents filed the herein Motion for Summary Judgment,

14. In response to the Motion for Summary Judgment, the Claimant filed an Objection on May 30, 2017, alleging, *inter alia*, that there is a genuine issue of disputed material fact, *i.e.,* that the Claimant does not satisfy the conditions for receipt of SSDI benefits under 42 U.S.C.A. 405 (c)(2)(F); and, that the Claimant is aware of his ineligibility and fears that any application for SSDI benefits "may constitute the fraudulent act of intentionally misrepresenting entitlement to benefits.

15. There are genuine issues of disputed material fact concerning whether the had good reason for not applying for SSDI benefits, by virtue of being faced with the Hobson's Choice of filing an application for SSDI benefits, without satisfactory proof of a valid social security number, or filing under his present inaccurate social security number; or, filing under an inaccurate social security number, thus, risking self-incrimination; or, not filing and losing his TTD benefits.

Ultimate Fact

16. Unless the Respondents can demonstrate that the Claimant **is, in fact, eligible** for SSDI benefits, outside the content of an evidentiary hearing; or, in the alternative, the Claimant waives his Fifth Amendment rights under the U.S. Constitution and files an entirely truthful application for SSDI benefits, thus, opening himself up to criminal prosecution, thus, making a Hobson's Choice, there is a genuine issue of disputed material fact.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Summary Judgment

a. Pursuant to Office of Administrative Courts Rules of Procedure (OACP) Rule 17, 1 CCR 1101-3, "any party may file a motion for summary judgment seeking resolution of any endorsed issue for hearing." Summary judgment may be sought in a workers' compensation proceeding. *See Fera v. Indus. Claim Appeals Office,* 169 P.3d 231, 232 (Colo. App. 2007). The OAC Rule allows a party to support its Motion with affidavits, transcripts of testimony, medical reports, or employer records. A motion for summary judgment may be supported by pleadings, depositions, answers to interrogatories, and admissions on file. C.R.C.P. 56; *See also Nova v. Indus. Claim Appeals Office*, 754 P.2d 800 (Colo. App. 1988) [C.R.C.P. and C.R.E. apply insofar as they are not inconsistent with the procedural or statutory provisions of the Act]. As found, Exhibits A through J were attached to the Respondent's Motion, consisting of pleadings and other official documents. There were no attachments to the Claimant's Objection, however, the Objection sets forth alleged facts illustrating that there are genuine issues of disputed material fact.

b. Pursuant to Office of Administrative Courts (OACRP), Rule 17, 1 CCR 104-1, summary judgment is appropriate when there are no disputed issues of material fact and the moving party is entitled to judgment as a matter of law. As found, there are genuine issues of disputed material fact concerning whether the had good reason for not applying for SSDI benefits, by virtue of being faced with the Hobson's Choice of filing an application for SSDI benefits, without satisfactory proof of a valid social security number, or filing under his present inaccurate social security number; or, not filing and losing his TTD benefits.

Hobson's Choice/Self-Incrimination or Loss of TTD Benefits

c. As found, there are genuine issues of disputed material fact concerning whether the had good reason for not applying for SSDI benefits, by virtue of being faced with the Hobson's Choice of filing an application for SSDI benefits, without satisfactory proof of a valid social security number; filing under his present inaccurate social security number, thus, risking self-incrimination;; or, not filing and losing his TTD benefits. Almost 50 years ago, the U.S. Supreme Court held that an illegal gambler did **not** have to make the Hobson's Choice between self-incrimination for illegal gambling and failing to register and pay taxes to the IRS on the gambler's earnings. *See Marchetti v. U.S.,* 390 U.S. 39, 88 S. Ct. 697, 19 L.Ed.2d 889 (1968).

Genuine Issue of Disputed Material Fact

d. Summary judgment is appropriate when the pleadings show that there is no genuine issue as to any material fact and that the moving party is entitled to judgment as a matter of law. C.R.C.P. 56(c); *Churchey v. Adolph Coors Co.*, 759 P.2d 1336 (Colo. 1988). This rule allows the parties to pierce the formal allegation of the pleadings and save the time and expense connected with trial when, as a matter of law, based on undisputed facts, one party could not prevail. See *Drake v. Tyner*, 914 P.2d 519 (Colo. Ct. App. 1996). As found, there are genuine issues of disputed material fact concerning alleged good reasons for the Claimant **not** applying for SSDI benefits.

e. Once the moving party shows specific facts probative of a right to judgment, it becomes necessary for the non-moving party to set forth facts showing that there is a genuine issue for hearing. *See Miller v. Van Newkirk*, 628 P.2d 143 (Colo. App. 1980). As found, the Claimant's Objection to Respondents' Motion for Summary Judgment shows specific facts that there are genuine disputed issues of material fact.

Burden of Proof

f. The burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P. 2d 535 (Colo. App. 1992). That burden is "preponderance of the evidence." A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). As found, the Respondents have failed to satisfy their burden of proof that there is **no** genuine issue of disputed material fact.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Respondent's Motion for Summary Judgment is hereby denied and dismissed.

B. The presently set hearing of August 3, 2017, shall proceed.

C. Any and all issues not determined herein are reserved for future decision.

DATED this_____day of June 2017.

ISSUES

- Whether claimant has demonstrated by a preponderance of the evidence that the right knee surgery recommended by Dr. Tomas Pevny is reasonable medical treatment necessary to cure and relieve claimant from the effects of the admitted September 2, 2016 work injury.

FINDINGS OF FACT

1. Claimant is employed with employer as the maintenance supervisor for the school district. Claimant's position involves overseeing all maintenance at the elementary school, middle school, and high school. Claimant testified that his job duties include heavy lifting, a great deal of walking, frequent use of stairs and ladders, and repairing equipment (such as vacuums, floor buffers, and snow blowers).

2. Claimant suffered an admitted injury on September 2, 2016. Claimant testified that the injury occurred when he slipped and fell on a newly painted sidewalk that was wet with rain. Claimant testified that when he fell he lost consciousness for approximately 30 minutes and he injured his head, back, and right knee. Claimant also testified that his right leg is weakened because he suffered from polio as a child.

3. Claimant timely reported the September 2, 2016 injury to employer and received medical treatment at Aspen Valley Hospital on that date. Dr. John Glismann treated claimant at the hospital and diagnosed a concussion, right knee contusion and lumbar spine contusion. On that same date, x-rays of claimant's right knee showed a suspected nondepressed medial tibial plateau fracture. Claimant testified that he was told that he would be "better by Monday". Claimant reported to work for his next scheduled shift, but did not feel well. Claimant sought treatment with the school nurse and was instructed to see his doctor.

4. On September 7, 2016, claimant was first seen by his authorized treating physician ("ATP"), Dr. Glenn Kotz. At that time, claimant complained of headache, neck pain, altered cognition, and right knee pain. With regard to claimant's right knee, Dr. Kotz diagnosed internal derangement.

5. On October 17, 2016, a magnetic resonance image ("MRI") of claimant's right knee showed complex tears in the posterior horn medial meniscus and a chronic anterior cruciate ligament ("ACL") tear.

6. Following the MRI, Dr. Kotz referred claimant for a surgical consultation with Dr. Tomas Pevny who claimant saw on November 22, 2016. During the exam, Dr. Pevny observed a mild effusion in claimant's right knee. On that same date, claimant reported to Dr. Pevny that he developed significant pain and instability in his right knee after the September 2, 2016 fall. Dr. Pevny recommended claimant undergo right knee arthroscopy with debridement, right knee ACL revision using patella tendon cadaveric graft, medial meniscectomy, and possible medial cruciate ligament ("MCL") repair.

7. The medical records entered into evidence demonstrate that Dr. Pevny performed two surgeries on claimant's right knee in 2008. On January 3, 2008, Dr. Pevny performed a right ACL reconstruction and partial lateral meniscectomy. Then on April 24, 2008, claimant underwent a right ACL revision and an MCL reconstruction.

8. In a medical record dated November 4, 2008, claimant reported to Dr. Pevny that he did not feel any instability while using his right knee brace and he was able to work when wearing the brace. On that same date, Dr. Pevny released claimant to return to full duty work, with his knee brace. Claimant testified that following his second 2008 surgery, he was able to perform all of his normal job duties.

9. On December 22, 2016, Dr. Pevny opined that claimant is a surgical candidate because of the instability in his right knee. In that same letter Dr. Pevny noted that prior to the injury claimant "was doing well", but after the injury had "gross instability" in his right knee. In that same December 22, 2016 letter, Dr. Pevny indicated his opinion that the recommended surgery will improve claimant's function and allow him to return to work.

10. On December 2, 2016, January 6, 2017, and February 2, 2017, Dr. Jon Erickson reviewed claimant's medical records. Following each review, Dr. Erickson authored reports in which he opined that the recommended right knee surgery was not related to claimant's September 2, 2016 work injury. In his December 2, 2016 report, Dr. Erickson stated that it is his opinion that claimant suffered a minor knee injury on September 2, 2016 and that surgical intervention would be treating a preexisting condition.

11. Dr. Erickson noted in his February 2, 2017 report that there was no indication of an acute injury in the December 2016 MRI. Dr. Erickson also noted that claimant had no edema or soft tissue inflammation and that both the tibial and femoral tunnels have been "completely filled in with bone". Dr. Erickson further opined that claimant's right knee "had been devoid of an ACL for a lengthy period of time". Based upon Dr. Erickson's reports respondents denied authorization for the recommended right knee surgery.

12. Respondents sent claimant for an independent medical examination ("IME") with Dr. Jeffrey Raschbacher on April 18, 2017. In connection with the IME, Dr. Raschbacher reviewed claimant's medical records, obtained a medical history, and performed a physical examination of claimant. Following the IME, Dr. Raschbacher issued a report in which he opined that the recommended ACL reconstruction and

meniscectomy is not related to claimant's September 2, 2016 work injury. In support of his opinion, Dr. Raschbacher noted that claimant had no swelling at the time of the injury, which Dr. Raschbacher opines should have been present at that time. Dr. Raschbacher also noted in report that claimant's range of motion has deteriorated since the injury and the radiologic findings are described as "chronic".

13. The ALJ credits claimant's testimony and the medical records and finds that although claimant had preexisting right knee issues, it was not until the fall on September 2, 2016 that claimant began to experience symptoms of pain and instability.

14. The ALJ credits the medical records, claimant's testimony, and the opinion of Dr. Pevny over the contrary opinions of Drs. Erickson and Raschbacher and finds that claimant has demonstrated that it is more likely than not that the September 2, 2016 work injury resulted in the need for surgery to his right knee. The ALJ finds that claimant has demonstrated that it is more likely than not that the September 2, 2016 fall aggravated and accelerated claimant's preexisting right knee condition which has led to the need for surgical intervention.

15. The ALJ credits the medical records and the opinion of Dr. Pevny and finds that claimant has demonstrated that it is more likely than not that the recommended surgery will improve claimant's function and is necessary to relieve claimant from the effects of the September 2, 2016 work injury.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., (2016). A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2016).

3. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990).

4. A work related injury is compensable if it "aggravates accelerates or combines with "a preexisting disease or infirmity to produce disability or need for treatment." *See H & H Warehouse v. Vicory, supra.* Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

5. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

6. As found, claimant has demonstrated by a preponderance of the evidence that the September 2, 2016 work injury aggravated, accelerated or combined with claimant's preexisting right knee condition, necessitating medical treatment.

7. As found, claimant has demonstrated by a preponderance of the evidence that the right knee surgery recommended by Dr. Pevny is reasonable medical treatment necessary to cure and relieve claimant from the effects of the September 2, 2016 work injury. As found, the medical records, Dr. Pevny's opinions, and claimant's testimony are credible and persuasive.

ORDER

It is therefore ordered that:

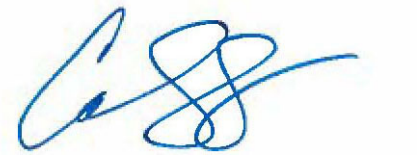
1. Respondents shall pay for the right knee surgery recommended by Dr. Pevny, pursuant to the Colorado Medical Fee Schedule.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP.

You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Dated: May 31, 2017



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

1. Whether Claimant has overcome by clear and convincing evidence the opinion of the Division Independent Medical Examination (DIME) physician Greg Reichhardt, M.D. regarding Claimant's maximum medical improvement (MMI) date and Claimant's permanent partial disability (PPD) impairment rating.

FINDINGS OF FACT

1. Claimant was employed by Employer as a foreman at the time of the admitted work injury. Claimant, at time of hearing, worked for the City and County of Denver in the traffic division.

2. On January 24, 2013, Claimant sustained an admitted work injury while employed by Employer. On that date, Claimant was struck in the head with a metal cap weighing approximately 15 pounds that fell from a traffic light pole approximately 30 feet high. The impact caused Claimant to lose consciousness, vomit, and seize. Claimant was transported emergently to Denver Health Medical Center (DHMC).

3. At DHMC Claimant underwent an emergent CT scan that showed a bilateral temporal bone fracture extending into the coronal suture, a right sided temporal fracture extending into the auditory canal and middle ear, a moderate right-sided subdural hematoma with compression of the brain and ventricles in the subarachnoid spaces, and small bi-frontal temporal hemorrhagic contusions with a small amount of subarachnoid hemorrhage. Claimant was taken directly to the operating room and underwent a right frontoparietal temporal decompressive craniectomy, removal of right hemispheric subdural hematoma, and evaluation of temporal contusion.

4. Post operatively, Claimant was diagnosed with severe traumatic brain injury, right-sided subdural hematoma, and malignant intracranial hypertension and was placed in a protective unit. Claimant had multiple follow up diagnostic studies and remained in the intensive care until until January 31, 2013.

5. On January 31, 2013 he was transferred to Craig Hospital where he underwent physical therapy, occupational therapy, and speech therapy. At Craig, Claimant's memory came back, he became ambulatory, he did very well with rehabilitation, and he made significant gains with cognition. On March 1, 2013 Claimant was discharged from Craig Hospital.

6. On March 6, 2013 Claimant was evaluated by Jim Schraa, Psy.D. Dr. Schraa opined that Claimant presented as doing well on initial testing with the exception of verbal memory and that the weakest subtest score was in the coding subtest which

fell in the mildly impaired range, consistent with Claimant's closed head injury. Dr. Schraa opined that Claimant presented as having strong ongoing cognitive recovery and that the major challenge appeared to be with family stressors. Claimant reported that he had conflict with his significant other over the years. *See* Exhibits A, 9.

7. On March 8, 2013 Claimant was evaluated by Dr. Schraa. Claimant reported no new cognitive problems or changes in mood but that his outlook on life had changed due to his injury. Claimant reported that his significant other was reactive to his questions regarding what he wanted to do with his future. Dr. Schraa opined that it was likely that they would need ongoing marital therapy. *See* Exhibit 9.

8. On May 2, 2013 Claimant was evaluated by Dr. Schraa. Dr. Schraa noted Claimant's desire to return to work but that neurosurgery had a restriction on his ability to work. Claimant reported that he had always had some marital issues but that he was less willing to entertain demands from his significant other. Again, Dr. Schraa noted that marital therapy appeared indicated. *See* Exhibit 9.

9. On June 21, 2013 Claimant was evaluated by Ron Carbaugh, Psy. D. Dr. Carbaugh noted that Claimant was referred for assessment of anger issues directly related to his January 2013 work injury. Claimant appeared somewhat anxious and at times frustrated and near tears. Claimant felt ready to return to work but had not yet been released by his care providers. Dr. Carbaugh noted that Claimant had made quite rapid recovery from a physical as well as cognitive standpoint but that Claimant expressed some frustration and ongoing irritability. Dr. Carbaugh noted some underlying anxiety during clinical interview. Dr. Carbaugh provided diagnostic impressions of probable personality traits or coping style affecting rehabilitation, and adjustment disorder. Dr. Carbaugh recommended adjustment counseling directly related to the work injury. *See* Exhibit 6.

10. On August 13, 2013 Claimant underwent a neuropsychological assessment performed by Suzanne Kenneally, Psy.D. Claimant reported his current physical symptoms as right frontal headache, daily right sided neck pain. He reported his cognitive symptoms as irritable, needing to keep a calendar, and being impulsive with spending. Dr. Kenneally opined that Claimant's IQ score was within the statistical interval indicative of average to above average IQ for general intelligence. In attention and concentration, Dr. Kenneally opined that Claimant's performance was from the average to superior range. She opined that on memory functioning Claimant's scores represented above average functioning and that he performed in the superior range for language skills. She opined that Claimant appeared to be functioning in the average to above average range across the majorities of modalities tested and that despite the severity of his injury, Claimant appeared to have made a significant and complete recovery. *See* Exhibits B, 8.

11. Dr. Kenneally noted some elevation indicating social alienation with antisocial behavior and indication of possible impulse control. Dr. Kenneally opined that it was likely that as Claimant continued to recovery, his psychological distress would

resolve. Dr. Kenneally opined that the current tests showed no residual cognitive impairment and had strong intact cognitive functioning. She provided the diagnostic impression of major neurocognitive disorder due to traumatic brain injury with resolution of cognitive defects. *See* Exhibits B, 8.

12. On February 13, 2014 Claimant was evaluated by Dr. Carbaugh. Claimant presented in an open and straightforward manner and reported being frustrated with how he perceived that his current company was treating him. Dr. Carbaugh opined that Claimant could be placed at MMI from a psychological standpoint at any time that Claimant's medical care concluded. Dr. Carbaugh noted that the calculation of an impairment rating would be complex given the multiple issues involved but that Claimant did not appear to have any work restrictions from a psychological standpoint. Dr. Carbaugh noted that if Dr. Plotkin placed Claimant at MMI, he would recommend 4-6 sessions of maintenance psychological follow up on an as needed basis. *See* Exhibit 6.

13. On April 29, 2014 Claimant was evaluated by Dr. Carbaugh. Dr. Carbaugh noted that Claimant appeared to be approaching MMI and had been referred out for the actual impairment rating process. Claimant believed that his medical treatment had run its course and was hopeful to put the workers' compensation issues behind him. Claimant was open in discussing psychological issues and was appreciative that follow up psychological sessions would be recommended as part of his maintenance care. Dr. Carbaugh opined that Claimant could certainly be considered at MMI from a psychological standpoint and Dr. Carbaugh recommended 4-6 sessions as maintenance on an as needed basis. *See* Exhibit 6.

14. On June 10, 2014 Claimant was evaluated by neurologist Richard Stieg, M.D. Dr. Stieg noted that Claimant had been referred by Dr. Plotkin for an independent impairment rating. Dr. Stieg reviewed medical records and performed a physical examination. Dr. Stieg provided the impression of: traumatic brain injury, post traumatic vision syndrome, adjustment disorder due to the work injury, post traumatic headache disorder, and disfigurement due to cranioplasty. Dr. Stieg opined that the permanent impairment from a neurologic standpoint was for post traumatic headaches and provided a 5% whole person impairment rating for episodic neurological symptoms. Dr. Stieg opined that additional impairment might be considered for posttraumatic vision disturbance and for disfigurement if Dr. Carbaugh felt that played a role in the adjustment disorder and was permanent but that it did not appear to be an issue per his review of Dr. Carbaugh's records. *See* Exhibits C, 7.

15. On July 9, 2014 Claimant was evaluated by Dr. Plotkin. Claimant felt that he was doing well but had occasional bilateral frontal headaches. Claimant also reported occasional discomfort near the anterior aspect of the cranioplasty on the right, some occasional fluid buildup near the anterior aspect of the cranioplasty, that his vision was not as good as it was prior to the injury, and that his sense of taste and smell seemed off. Claimant also reported getting frustrated at times, which was also a pre-injury trait and that he had some self consciousness because of the disfigurement on

the right side of his head. Dr. Plotkin performed a physical examination. Dr. Plotkin assessed: traumatic brain injury; skull fractures; hemorrhagic contusions; subdural and subarachnoid hemorrhages; status post craniectomy; status post cranioplasty times two; and adjustment disorder. Dr. Plotkin opined that Claimant reached MMI on July 9, 2014 and that Claimant had suffered a serious head injury and had made an excellent recovery. Dr. Plotkin opined that Claimant had comprehensive rehabilitation and had completed medical care. *See* Exhibits D, 5.

16. Dr. Plotkin opined that there were three components to Claimant's impairment assessment: neurologic, psychiatric, and disfigurement. Dr. Plotkin noted that Dr. Stieg performed a neurologic impairment rating and determined that Claimant had permanent impairment on the basis of posttraumatic headaches with a 5% whole person rating. Dr. Plotkin also noted that he contacted Dr. Carbaugh by phone to review the case and that Dr. Carbaugh noted that Claimant had stress and felt socially uncomfortable because of the disfigurement and that Claimant had a tendency to "hold it in" and had some anger and stress. Dr. Carbaugh felt that Claimant's psychological stress was not only related to the disfigurement. Dr. Plotkin noted that Claimant was referred to a psychiatric evaluation with Dr. Gutterman who evaluated Claimant and determined a 4% permanent partial impairment related to Claimant's adjustment disorder. Dr. Plotkin noted that he consulted the AMA Guides and that the determination of permanent impairment based on disfigurement was somewhat difficult to determine in this case but that Claimant's disfigurement was significant and played a critical role in his physical, psychological, and emotional wellbeing. Dr. Plotkin opined that under Table 1 on page 241, Claimant would likely fall under mild impairment and provided a 10% whole person impairment rating for disfigurement. Dr. Plotkin opined that this impairment rating was separate and unrelated to the psychological impairment which was primarily related to Claimant's adjustment disorder. *See* Exhibits D, 5.

17. Dr. Plotkin opined, therefore, that Claimant had whole person impairment of: 10% for disfigurement; 5% for neurologic impairment; and 4% for psychological impairment. Dr. Plotkin combined these values to come up with an 18% impairment of the whole person. Dr. Plotkin recommended the following maintenance care: rechecks with the primary occupational medicine physician as needed, follow up with the neurologist regarding seizure activity and anti-seizure medication, neurosurgical follow up as needed, follow up with optometrist as warranted, psychological counseling with Dr. Carbaugh for up to five additional sessions, and maintenance medications. *See* Exhibits D, 5.

18. Respondents filed a final admission of liability (FAL) consistent with Dr. Plotkin's report. Claimant objected and requested a DIME.

19. On July 11, 2014 Claimant was evaluated by neurologist Kirsten Nielsen, M.D. Dr. Nielsen noted that Claimant had a generalized seizure on the date of his work injury and had last been seen by her in January. Claimant reported no recurrence of seizure activity and that he had been driving and working full time. Claimant reported occasional bi-frontal headaches, made worse by stress. Claimant admitted to anxiety

attacks once per day. Dr. Nielsen performed a physical examination and noted that two negative EEGs had been performed on January 17, 2014 and on January 10, 2014. Dr. Nielsen noted that Claimant's anti-seizure medication was being tolerated well and that Claimant remained seizure free. *See* Exhibit 4.

20. On July 28, 2014 Claimant underwent an individual psychiatric consultation with Gary Gutterman, M.D. Claimant reported some psychological effects due to his head injury and that he was self-conscious about his cranium which had a dent in the middle and scars on the side of his head. Claimant reported that he wears a cap in order to cover up his head. Claimant reported being more frustrated and irritable in various situations and that he was more cautious and apprehensive at work and is worried about being reinjured. Claimant reported being more protective of his daughter and that he was worried that she might be injured in some way. Claimant reported nightmares at times and on occasion recurrent memories of what occurred. Dr. Gutterman opined that Claimant continued to experience a mild adjustment disorder as a result of his work injury, altered body image, and prior brain injury but that Claimant overall was doing reasonably well considering the significant injury that occurred. Dr. Gutterman opined that Claimant had experienced a 4% permanent partial mental impairment. Dr. Gutterman noted that Claimant was doing reasonably well without psychotropics and believed that the adjustment disorder would probably persist indefinitely given the type of injury that Claimant experienced. *See* Exhibits E, 3.

21. On January 12, 2015 Claimant underwent a DIME performed by Greg Reichhardt, M.D. Claimant reported that while taking down a traffic light pole, the pole hit him and knocked his helmet off. Claimant reported that a 15 pound metal cap then fell approximately 30 feet and hit him in the head and that his first memory afterwards was a couple of days later in the hospital. Claimant reported being self conscious about his injury and that it impacted his emotions and that he wore a hat to cover it up and was concerned about having to work in an environment where he would not wear a hat. Claimant reported decreased sense of taste and smell, pain above his nose, bilateral frontal headaches, pain over the lower thoracic area, and some symptoms of anxiety and depression. Claimant reported that his social functioning was interfered with and that he was more irritable and is nervous about injury and re-injury, had difficulty managing conflicts, and had decreased memory. Dr. Reichhardt reviewed medical records and performed a physical examination. *See* Exhibits F, 2.

22. Dr. Reichhardt provided the impression of: traumatic brain injury, post-traumatic headache; temporomandibular joint symptoms; thoracic pain; decreased sense of taste and smell; and visual symptoms including refractive change. Dr. Reichhardt opined that Claimant was at MMI and had reached MMI on June 9, 2014. Dr. Reichhardt recommended six follow up visits with a physician per year and cosmetic surgery for the temporal defect or the hypertrophic scar tissue anterior to the ear. Also, as maintenance, Dr. Reichhardt recommended any further surgery or treatment to address the PEEK flap. Dr. Reichhardt opined that Claimant sustained a 22% whole person impairment with 5% for traumatic brain injury, 10% for disfigurement/mental behavior, 3% for olfactory, and 5% for spinal impairment. Dr. Reichhardt noted that in

terms of Claimant's disfigurement, the AMA Guides indicate that if impairment due to disfigurement does exist, it usually manifested by a change in behavior such as an individual's withdrawal from society and should be evaluated in accordance with the criteria set in chapter 14 and Dr. Reichhardt opined that it was appropriate to give Claimant a rating for this according to Table 1, page 241. Dr. Reichhardt noted that Claimant was not given a separate psychiatric impairment rating, as it was used for the disfigurement rating. *See* Exhibits F, 2.

23. On January 27, 2015 Respondents filed a FAL consistent with Dr. Reichhardt's DIME report. *See* Exhibit 10.

24. On October 26, 2015 Claimant underwent an Independent Medical Examination (IME) performed by Elizabeth Bisgard, M.D. Claimant reported still having pain over the fracture site of the skull and popping over the allograft with different activities with occasional debilitating headaches. Claimant reported intermittent stabbing, aching pain in his lower thoracic spine. Dr. Bisgard reviewed medical records and performed a physical examination. Dr. Bisgard diagnosed: traumatic brain injury; skull fracture; moderate right subdural hematoma with compression of ventricle and subarachnoid spice, bi-temporal and bi-frontal hemorrhagic contusion; small subarachnoid hemorrhages; insomnia; back pain; and right upper extremity cephalic medial cubital and left basilica vein thrombosis. Dr. Bisgard agreed with Dr. Plotkin and Dr. Reichhardt that Claimant reached MMI on June 9, 2014. Dr. Bisgard also opined that Dr. Reichhardt calculated the impairment rating in accordance with the AMA Guides and made no error in his calculation. *See* Exhibits G, 1.

25. Dr. Bisgard agreed that a 5% whole person impairment was appropriate for the headache and 3% appropriate for the olfactory nerve loss. Dr. Bisgard noted that Dr. Reichhardt included the psychological impairment as part of the disfigurement, which was a method acceptable under the AMA Guides. Dr. Bisgard opined that she personally would not have included a 5% rating for the thoracic spine since the records reflected no mention of back pain for several months, but opined that Dr. Reichhardt did not err by including the thoracic spine. Dr. Bisgard opined that it would be appropriate for Claimant to have 8-10 maintenance treatments with a female psychologist. She also opined that Dr. Reichhardt's recommendations for maintenance for additional cosmetic surgery or revision of the PEEK allograft or for anti-seizure medications were appropriate. *See* Exhibits G, 1.

26. On April 5, 2016 Claimant underwent a psychological evaluation performed by Walter Torres, Ph.D. Dr. Torres noted that Claimant had been referred by his attorney for an evaluation to determine the presence of any injury related psychological conditions and impairment and the psychological impairment ratings that any such conditions and impairments would warrant. Dr. Torres reviewed medical records, interviewed Claimant, and performed psychological testing. Dr. Torres provided the diagnostic impression of adjustment disorder with depression and anxiety and alcohol use disorder. *See* Exhibit 13.

27. Dr. Torres opined that Claimant's symptoms of anxiety with panic attacks, pervasive self-doubt, persistent rumination and grave worry, social withdrawal, dysphoric emotionality, diminished sexual interest, and diminished motivation to enjoy previously enjoyed activities were due to his injury. Dr. Torres opined that Claimant avoided disclosure of his emotional dysfunction due to shame and immaturity when Claimant's treatment was active but that the pressure of Claimant's worries, distress, and symptoms had tended in the more recent months to overwhelm Claimant. Dr. Torres opined that Claimant was in need of psychological therapy now that he was more open and realistic and that the therapy should target the unrealistic conviction that Claimant developed about his destiny to develop dementia and the disfigurement, and shame through exposure and desensitization. *See* Exhibit 13.

28. Dr. Torres recommended 10 psychotherapeutic sessions. Dr. Torres opined that given that Claimant's underlying symptoms had not resolved in the course of previous treatment Claimant never reached MMI or alternatively, that Claimant had deteriorated and was no longer at MMI. Dr. Torres performed a mental impairment rating worksheet based on Claimant's psychological condition as it existed on the date of the evaluation. Dr. Torres assigned a 14% psychiatric impairment with impairment for sexual function, sleep, interpersonal relationships, communicating effectively with others, recreational activities, managing complex interactions with others, memory, and ability to set realistic goals. *See* Exhibit 13.

29. Dr. Bisgard testified by deposition consistent with her IME report. Dr. Bisgard opined that the DIME physician, Dr. Reichhardt, made no errors in the impairment rating and that the impairment rating provided by Dr. Reichhardt was supported by the AMA Guides. Dr. Bisgard opined that she would not have included the thoracic spine like Dr. Reichhardt did, but that he did not err. Dr. Bisgard opined that the DIME accounted for psychiatric impairment. Dr. Bisgard agreed that Claimant had reached MMI, consistent with the opinions of Dr. Plotkin and Dr. Reichhardt. Dr. Bisgard noted that although Dr. Torres provided several areas of rating, Claimant had pre-existing issues with: anger and impulse control, relationships, and alcoholism. Dr. Bisgard noted that Dr. Torres was the only evaluator outside the opinions that were similar including opinions from Dr. Carbaugh, Dr. Kenneally, Dr. Gutterman, Dr. Stieg, Dr. Plotkin, Dr. Reichhardt, and Dr. Nielson.

30. Dr. Bisgard noted that Dr. Gutterman had provided a 4% impairment rating for the adjustment disorder and that Dr. Plotkin used that plus a 10% impairment rating for disfigurement and that Dr. Plotkin provided the disfigurement rating alongside the psych rating. However, Dr. Bisgard noted that the DIME physician only provided the 10% disfigurement rating and did not provide a separate psych rating. Dr. Bisgard opined that awarding the mental impairment on top of the disfigurement impairment would be considered double-dipping. Dr. Bisgard opined that Dr. Reichhardt was not wrong and made no errors in calculating Claimant's impairment. Dr. Bisgard noted that Dr. Torres disagreed, but that Dr. Torres was not a level II accredited physician and that there was only a different opinion and no error by Dr. Reichhardt.

31. Claimant testified at hearing that he was a different person now and following his work injury and that he is now self-conscious, has anxiety, and has panic attacks. Claimant testified that he is irritable and impulsive now. Claimant testified that he put on a face with his psychological treatment with Dr. Carbaugh but that he was emotional and open with Dr. Bisgard. Claimant testified that he struggles now with communication and that he no longer has confidence like he used to have.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

OVERCOMING DIME ON MMI

MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." *See* § 8-40-201(11.5), C.R.S. A DIME physician's finding that a party has or has not reached MMI is binding on the parties unless overcome by clear and convincing evidence. *See* § 8-42-107(8)(b)(III), C.R.S.; *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Under the statute MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office,* 942 P.2d 1358 (Colo. App. 1997). A finding that the claimant needs additional medical treatment (including surgery) to improve his injury-related medical condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002); *Reynolds v. Industrial Claim Appeals Office,* 794 P.2d 1090 (Colo. App. 1990); *Sotelo v. National By-Products, Inc.,* W.C. No. 4-320-606 (I.C.A.O. March 2, 2000). The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, supra*. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician's finding concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). The question of whether the party challenging the DIME physician's finding regarding MMI has overcome the finding by clear and convincing evidence is one of fact for the ALJ.

Here, Claimant has failed to overcome the opinion of DIME physician Dr. Reichhardt on MMI by clear and convincing evidence. Rather, the opinion of Dr. Reichhardt on MMI is supported by consistent opinions from the authorized treating provider Dr. Plotkin, and from the treating psychologist Dr. Carbaugh. Dr. Bisgard also provided an opinion on MMI consistent with the DIME physician. Here, Claimant argues that due to the report of Dr. Torres, he has overcome the DIME physician's opinion on MMI by clear and convincing evidence. However, the ALJ disagrees and finds that Dr. Torres' opinion is merely a difference of opinion from multiple other providers. As found above, Dr. Carbaugh opined as early as February of 2014 that Claimant was at MMI from a psychological standpoint. Dr. Carbaugh found Claimant to be open in discussing psychological issues and also noted in his evaluation that Claimant did have a tendency to "hold it in" and had some anger, stress, and felt socially uncomfortable because of the disfigurement. Many providers recommended maintenance psychological visits to continue working on issues, but the only provider who opined that Claimant was not at MMI from a psychological standpoint was Dr. Torres. As found above, Dr. Gutterman noted that Claimant's adjustment disorder would probably persist indefinitely given the type of significant injury Claimant sustained.

Claimant's psychological issues, including adjustment disorder and disfigurement had become stable with no further treatment reasonably expected to improve these conditions at the point he was placed at MMI by DIME physician Dr. Reichhardt. Claimant was noted by many providers to be doing reasonably well despite the significant injury he sustained and Claimant was stable from a psychological standpoint when he was placed at MMI. Although he was not back to normal and had remaining psychological issues, these issues were found by Dr. Reichhardt to be stable at and MMI. This determination is consistent with the overall records and with the determination of MMI made by Dr. Reichhardt. Claimant has failed to show that it is highly probable that Dr. Reichhardt was incorrect in assigning MMI.

OVERCOMING DIME ON PPD

A DIME physician must apply the AMA Guides when determining the claimant's medical impairment rating. *See* § 8-42-101(3.7), C.R.S.; §8-42-107(8)(c), C.R.S. The finding of a DIME physician concerning the claimant's medical impairment rating shall be overcome only by clear and convincing evidence. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

As a matter of diagnosis the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office,* 78 P.3d 1150 (Colo. App. 2003). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590 (Colo. App. 1998). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000).

The questions of whether the DIME physician properly applied the AMA Guides, and ultimately whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office, supra*. A mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. *See Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO March 22, 2000).

Dr. Reichhardt provided a whole person impairment rating of 22%. This was provided based on: 5% for traumatic brain injury; 10% for disfigurement; 3% for olfactory; and 5% for spinal. The authorized treating provider, Dr. Plotkin provided an 18% whole person impairment rating based on: 5% for traumatic brain injury, 10% for

disfigurement, and 4% for psychiatric. Dr. Plotkin did not include any rating for olfactory or spinal. Dr. Reichhardt did not include any rating for psychiatric. Dr. Reichhardt specifically noted the reason why he declined to rate psychiatric in his DIME report. He opined that under the AMA Guides, if impairment due to disfigurement exists, it usually is manifested by a change in behavior such as an individual's withdrawal from society and should be evaluated in accordance with the criteria set in chapter 14. Dr. Reichhardt opined that it was appropriate to give Claimant a rating for this according to Table 1, page 241, hence the 10% whole person disfigurement rating. Dr. Reichhardt also noted in his DIME report Claimant was not given a separate psychiatric impairment rating, as it was used for the disfigurement rating. Dr. Bisgard opined that this was not an error and that rating for both in Claimant's case would be considered "double dipping."

Dr. Torres believed that Claimant's psychiatric rating was 14% whole person. However, Dr. Torres based this rating, in part, on several psychiatric issues that pre-existed the injury as shown by prior medical records. The opinion of Dr. Torres is not found credible or persuasive. Further, Dr. Torres merely showed a difference of opinion from the DIME physician on what the appropriate rating was and what conditions were causally related to Claimant's psychiatric rating. Dr. Torres did not point out error in Dr. Reichhardt's calculation of impairment. Similarly, although Dr. Plotkin believed that Claimant warranted an impairment rating for disfigurement separate and unrelated to the psychiatric impairment due to Claimant's adjustment disorder, Dr. Plotkin failed to identify error in Dr. Reichhardt's determination that the psychiatric impairment was included in the disfigurement rating. The providers in this case seem to disagree but as opined by Dr. Bisgard, there is merely a difference in opinion as to whether Claimant has a separate ratable psychiatric condition or whether his adjustment disorder is appropriately rating within the disfigurement rating. As Claimant ahs failed to show error in Dr. Reichhardt's rating, and has merely shown difference of opinion, Claimant has failed to meet his burden.

ORDER

It is therefore ordered that:

1. Claimant has failed to overcome by clear and convincing evidence the opinion of the DIME physician Dr. Reichhardt on MMI and PPD.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the

certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 25, 2017,

/s/ Michelle E. Jones

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-741-639-06

ISSUES

- Whether Respondents have overcome by clear and convincing evidence the DIME's determination that Claimant sustained bilateral carpal tunnel syndrome ("CTS") and resulting chronic regional pain syndrome ("CRPS") as a result of her November 10, 2006 work injury.

- Whether Respondents have overcome by clear and convincing evidence the DIME's impairment rating.

- Whether Respondents have overcome by clear and convincing evidence the DIME's date of MMI.

- Whether Claimant has proven by a preponderance of the evidence that she is entitled to ongoing maintenance medical benefits.

STIPULATIONS

- The parties stipulated that the average weekly wage is $725.00.

- The parties stipulated that the following issues are held in abeyance and reserved for future determination: temporary total and temporary partial disability benefits, permanent total disability benefits, benefits cap, offsets, and overpayment.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant sustained an admitted industrial injury when she fell at work on November 10, 2006.

2. On November 11, 2006, Wayne Draper, M.D., examined Claimant at Boulder Community Hospital (BCH). Claimant's "chief complaint" was pain in both hands for 1 day. Claimant gave a history that on the previous day she tripped and fell forward bracing herself with both hands. She reported pain in both hands with the right worse than the left. There was also "slight discomfort in the muscles of the left neck." There was "tingling" in the left middle finger with "minimal discomfort at the base of the left thumb." The note, which was written by a nurse, states Claimant reported "having carpal tunnel previously." On examination there was "slight tenderness noted to palpation over the palmer aspect at the base of the left thumb." The right hand was "swollen and ecchymotic over the 4th and 5th metacarpal areas dorsally." X-rays revealed a fracture of the proximal phalanx of the right 5th finger. The diagnoses included

- Fracture, proximal phalanx right 5th finger;
- Contusion of the right hand;
- Contusion of the left hand; and
- Left trapezius strain.

3. On November 20, 2006, Claimant saw a physical therapist at BCH who diagnosed left shoulder strain. Claimant reported problems of decreased strength in the left shoulder, tenderness in the left biceps tendon, and numbness in the left middle finger.

4. On February 26, 2007, Justin Green, M.D. examined Claimant. Claimant gave a history of "severe night time dysthesia affecting the left arm." She dated the "onset to following a fall where she hyperextended her wrists on 11-10-07" [sic]. On physical examination Dr. Green noted a "positive left carpal Tinel's sign." He performed EMG studies which revealed "absent median sensory responses, a markedly prolonged median motor distal latency, and prolonged median F-wave." Dr. Green assessed the electrodiagnostic results as evidence of moderate, median mononeuropathy at the left wrist (carpal tunnel syndrome), without denervation. There was no evidence of left upper extremity radiculopathy.

5. On May 2, 2007, Claimant returned to Dr. Green. Claimant reported "moderately severe, diffuse, dysthetic left arm pain that radiated up or down from her shoulder to her hand. She reported lesser complaints of similar paresthesia affecting the right hand. Dr. Green noted that examination of Claimant's upper extremities did not reveal clear sudomotor changes and there was no significant color change. There were equivocal Adson's signs for non-specific paresthesia bilaterally. Claimant also had a positive left carpal Tinel's sign and an "absent" right carpal Tinel's sign. There were negative Phalen's signs. Dr. Green assessed moderate left CTS, rule out right CTS and a history of bilateral wrist extension injuries. Dr. Green wrote Claimant had a "consistent mechanism of injury that may have led to traumatic carpal tunnel syndromes (TCRPS)." Dr. Green recommended EMG/nerve conduction studies for the right upper extremity and repeat studies of the left extremity to rule out a worsening condition.

6. On May 16, 2007, Dr. Green performed additional EMG studies of Claimant's right and left upper extremities. As a result he assessed electrodiagnostic evidence of a "moderate, median neuropathy at the right wrist (CTS), without denervation" and continued nerve conduction study evidence to suggest the presence of a moderate, median, mononeuropathy at the left wrist (CTS)."

7. On June 12, 2007 Kelley Wear-Maggitti, M.D. performed a left carpal tunnel release surgery and noted the presence of inflammation of the median nerve with "scarring and adhesions."

8. On June 19, 2007, Dr. Wear-Maggitti reported Claimant had no complaints and was very satisfied by the results of the left carpal tunnel release surgery. Claimant expressed a desire to undergo a right carpal tunnel release surgery.

9. On October 9, 2007 Dr. Wear-Maggitti performed a right carpal tunnel release surgery. The operative report notes there was a "significant amount of scar tissue encompassing the median nerve" and a neurolysis was performed to release the nerve from the scar tissue.

10. On November 20, 2007, Claimant reported to Dr. Wear-Maggitti that she was having a lot of pain in her right palm, a lot of numbness up her right arm, and problems with trigger fingers.

11. On February 6, 2008, Dr. Green noted Claimant was reporting increased dysthesia to light touch over the palm and distal right forearm and numbness over the tips of her fingers. Dr. Green noted "mild allodynia" to light stroking over the volar aspect of the right palm and distal forearm without swelling or pseudomotor changes. Dr. Green noted that Claimant's third EMG testing evidenced continued median mononeuropathy at the right wrist and that Claimant tolerated the test poorly because it caused her pain. Dr. Green assessed delayed recovery from right carpal tunnel release surgery and "rule out possible complex regional pain syndrome affecting the right hand and arm." Dr. Green referred Claimant for a triple phase bone scan and stated he would refer her for a stellate ganglion block if the test was normal.

12. On February 14, 2008, Claimant underwent a three phase bone scan of her distal forearms through her hands. The radiologist reported that the flow and blood pool images were normal. However, there was asymmetric slightly more prominent periarticular uptake about multiple right finger joints suggestive of chronic regional pain syndrome (CRPS).

13. On March 31, 2008, Melody Denham, M.D., examined Claimant on referral from Dr. Green. Dr. Denham noted Claimant had undergone a right-sided carpal tunnel release and had "had a complicated course since." Claimant reported experiencing pain in the right hand and wrist with "some extension up toward the elbow and shoulder." On examination Dr. Denham noted "some obvious atrophic changes" of the right hand and "marked allodynia over the area of the" surgical scar. Dr. Denham noted compromised range of motion of the right hand and wrist, and markedly decreased motor strength involving her fingers. Dr. Denham reviewed the triple phase bone scan results and noted "asymmetric uptake with a particular increased uptake in the right hand consistent with" CRPS. Dr. Denham assessed CRPS of the right upper extremity and recommended a stellate ganglion block (SGB).

14. Between March 31, 2008 and May 27, 2008, Dr. Denham performed four SGB's. On May 27, 2008 the doctor wrote Claimant had "undergone prior stellate ganglion blocks which have seemed to have given her temporal benefit."

However, Dr. Denham wrote it was "unclear at this juncture whether or not she has had protracted benefits, as her condition continues to be quite severe." Dr. Denham opined that if Claimant did not receive protracted benefit from the May 27 SGB, it might be necessary to consider other treatment options.

15. On June 9, 2008, Dr. Green noted Claimant had undergone four SGB's and stated that her "pain most recently dropped from 9/10 to 4/10." He recorded a diagnosis of CRPS of the right upper extremity and noted there had been "discussion concerning possible spinal cord stimulation."

16. On September 3, 2008, Dr. Green noted that with "the abnormal bone scan in February, I feel this is reasonable support for the presence of [CRS] in this case."

17. Dr. Floyd Ring, who is an expert in pain management, performed a record review for Respondents on October 3, 2008 to determine if Claimant was a candidate for an SCS. He found that Claimant had a work-related injury resulting in CTS. Dr. Ring stated that the bone scan and response to blocks "indicate a likelihood of CRPS, which is addressed in the [Medical Treatment] guidelines." He recommended delay in SCS placement until psychologist Dr. DiSorbio felt Claimant was ready for the procedure.

18. On January 12, 2009, Dr. Denham noted Claimant was reporting symptoms in both hands and in her feet.

19. On February 12, 2009, Bradley Vilims, M.D. examined Claimant and assessed CRPS type II "beginning in the right upper extremity, but mirroring to the left and now with symptoms consistent with extension into the lower extremities." Dr. Vilims diagnosed bilateral upper extremity CRPS and a positive bone scan with the "characteristic pulling (sic.) and changes on a triple phase that is consistent with her current diagnosis." Dr. Vilims indicated he would "begin the process for a cervical spinal cord stimulator trial."

20. On April 3, 2009, Dr. Vilims performed a procedure described as installation of a percutaneous spinal cord stimulator and intracanal cervical nerve root stimulator. The procedure initially provided good relief but Claimant reported developing severe pain and ultimately the trial was terminated.

21. On May 21, 2009, Gianacarlo Barolat, M.D. examined Claimant. Dr. Barolat noted Claimant's history of reflex sympathetic dystrophy (RSD) that began on the right and "traveled to her left upper extremity, then approximately three months ago spread to the lower extremities." Dr. Barolat noted Claimant gave a history of her "legs giving out" and that it had occurred three times over the prior week. Dr. Barolat assessed CRPS.

22. Prior to approving the spinal cord stimulator implantation, Respondents hired Dr. Vaughn Cohan to evaluate Claimant's case. He stated that Claimant began to exhibit signs and symptoms of bilateral CTS one month after her accident. Dr. Cohan noted that, following her CTS surgeries, Claimant developed CRPS in her

upper extremity and lower extremities. Dr. Cohan concluded that Claimant's previous treatment had been medically necessary. He agreed with Dr. Baralat's recommendation to proceed with the SCS implantation and concluded the procedure was appropriate. He based his opinions on evidence-based medicine guidelines to a reasonable degree of clinical certainty.

23. Prior to approving the spinal cord stimulator implantation, Respondents also hired Dr. Floyd Ring, an expert in pain management, to perform a record review to determine if Claimant was a candidate for a SCS. Dr. Ring found that Claimant had a work-related injury resulting in CTS. Dr. Ring opined that the bone scan and response to blocks "indicate a likelihood of CRPS, which is addressed in the [Medical Treatment] guidelines." He recommended delay in SCS placement until psychologist Dr. DiSorbio felt Claimant was ready for the procedure.

24. On July 29, 2009, Claimant came under the care of Jeffrey Kesten, M.D. Dr. Kesten is board certified in physical medicine and rehabilitation, pain medicine, and addiction medicine. He is level II accredited. Dr. Kesten examined Claimant and noted "her right hand is hypopigmented" compared to her left hand. There was no evidence of bilateral upper extremity hair and/or nail abnormalities, temperature abnormalities, muscle atrophy, or sudomotor changes. Dr. Kesten diagnosed bilateral shoulder upper extremity pain, a history of bilateral hand contusions, a right fifth proximal versus middle phalanx fracture, bilateral carpal tunnel syndrome, bilateral upper extremity CRPS II, and worsening of premorbid depression.

25. On August 10, 2009 Dr. Kesten noted similar findings to those he reported on July 29, 2009.

26. On August 11, 2009, Dr. Barolat performed a procedure described as the implantation of "two cervical spinal cord stimulation leads." This was for a diagnosis of RSD of the upper and lower extremities. A permanent stimulator was implanted on August 18, 2011. While Claimant initially did well, she ultimately suffered an infection and on September 18, 2009, the stimulator was removed.

ATP MMI and IMPAIRMENT RATING

27. On October 4, 2010, Dr. Kesten authored a report in which he "deemed" Claimant to have reached maximum medical improvement (MMI). He opined she had sustained a whole person impairment of 50% based on her CRPS. He explained that "per" the Division of Workers' Compensation (DOWC) he used the American Medical Association Guides to the Evaluation of Permanent Impairment, Third Edition (Revised) (AMA Guides) p. 109 Table 1 (for spinal cord and brain impairment values) to rate the CRPS.

28. On October 25, 2010, Dr. Kesten authored a report in which he stated Claimant remained at MMI. However, Dr. Kesten noted that he asked Claimant about her "recent lower extremity pain and balance problems." Claimant reported that she fell "quite frequently." She also reported that she fell and injured her right shoulder "in approximately September 2010" and was experiencing severe and persistent shoulder pain. Dr. Kesten wrote that considering the October 19, 2010 MRI findings he was going to refer Claimant to Thomas Mann, M.D., for a surgical consultation. This referral is inconsistent with a finding of MMI.

29. On December 8, 2010, Dr. Mann performed surgery on Claimant's right shoulder to repair a "large rotator cuff tear." The operative report notes Claimant had a long history of upper extremity and shoulder pain and suffered a "more recent fall and trauma that increased her pain and disability."

30. On February 8, 2011, Dr. Kesten noted that he received an inquiry from Insurer's adjuster asking whether he placed Claimant at MMI on October 10, 2004, and if so, requesting an impairment rating. The adjuster also asked whether Dr. Kesten had "rescinded" MMI. In this note Dr. Kesten stated that Claimant was deemed to be at MMI on October 4, 2010 with a 50% whole person impairment rating. He also noted that Claimant had undergone right shoulder surgery with Dr. Mann and was instructed to continue her "enrollment in a course of postoperative … physical therapy at Avista Therapy Center."

31. At a prior hearing on this claim ("the -04 hearing") Respondents conceded that they received Dr. Kesten's February 28, 2011 report on August 15, 2011.

32. On October 25, 2011, Dr. Kesten signed a Physician's Report of Worker's Compensation Injury (WC164) indicating Claimant reached MMI on October 4, 2010 with a 50% impairment rating.

33. On January 17, 2012, Dr. Kesten issued a report in which he determined Claimant had a 26 % upper extremity impairment rating for the right upper extremity. He stated that this rating converts to 16 % whole person impairment. He combined this rating with the prior 50% impairment rating for CRPS resulting in an "updated 58% whole person impairment rating" as of January 17, 2012.

DR. CEBRIAN'S PURPORTED DIME

34. In October 2010, Sandra O'Brien, Insurer's adjuster assigned to this claim considered obtaining a Respondents sponsored independent medical examination (RIME) from Dr. Carlos Cebrian or Dr. Jutta Worwag. However, Claimant advised Ms. O'Brien that she had been placed at MMI and the anticipated RIME did not take place.

35. In February 2012, Evelyn Bonham became Insurer's adjuster on this claim. Ms. Bonham received Dr. Kesten's January 17, 2012 report on April 18, 2012 and disagreed with his 58% whole person impairment rating. Ms. Bonham wrote in her adjuster's notes that she did not believe Dr. Kesten's rating should be

accepted and that she believed a DIME should be requested. She also indicated that she believed it was necessary to obtain a RIME to have another report to send to the DIME.

36. On April 24, 2013, Ms Bonham noted in the file that she contacted "Vickie at Exam Works" and requested an IME, "preferably with Dr. Cebrian."

37. On April 25, 2012, Ms. Bonham filed an N&P with the DOWC. The N&P indicated disagreement with Dr. Kesten's reports of January 17, 2012 and April 12, 2012 and proposed Dr. Allison Fall or Dr. Cebrian conduct the DIME.

38. In May 2012, Insurer attempted to schedule a DIME purporting that Dr. Worwag was the agreed upon DIME. When the DIME could not be scheduled with Dr. Worwag, Ms. Bonham scheduled the DIME with Dr. Cebrian and filed an amended application.

39. On June 27, 2012 Dr. Cebrian performed the purported DIME and on July 14, 2012 issued his report. Dr. Cebrian opined that Claimant's "claim-related" diagnoses are right fifth finger non-displaced fracture, contusion of the left and right hands, and left trapezius strain. Dr. Cebrian opined Claimant reached MMI for these conditions on October 4, 2010.

40. In his report Dr. Cebrian opined Claimant's left-sided CTS was not causally related to the November 10, 2006 industrial injury. In support of this conclusion Dr. Cebrian explained

    - That although Claimant had "some initial complaints" of tingling in the fourth and fifth fingers of the left hand, these were not "documented again until" February 9, 2007.

    - That although the February 26, 2007 EMG revealed moderate median nerve compression, all of Claimant's symptoms were in the "ulnar distribution."

    - Claimant's left median nerve compression was "incidental" to the injury and there "was not a physiological correlation between subjective complaints and the objective findings."

41. In his report Dr. Cebrian opined Claimant's right CTS was not related to the November 10, 2006 industrial injury. He explained that Claimant did not complain of right-sided paresthesias until May 2007. Dr. Cebrian opined there "was not a physiological or temporal correlation between the subjective complaints and the objective findings."

42. Dr. Cebrian suggested that the CTS documented in the EMG's could be due to another cause, i.e., age, sex, diabetes, recent pregnancy, arthritis or pre-existing hypothyroidism. However, Dr. Gellrick and Dr. Kesten testified that two arthritis tests after the injury ruled out arthritis; there was no documentation of CTS

secondary to Claimant's hypothyroidism either prior or subsequent to her work injury; the EMG's did not find the injury to the nerve that one would see as a result of hypothyroidism; and none of the other possible causes had changed between the date of injury and the EMG. Dr. Cebrian did no causation analysis to support his hypothesis and he could not document a specific cause that had intervened or changed between the date of the work injury and the EMG in support of his claim that the CTS developed from something other than the fall at work. Dr Cebrian admitted that no treating doctor attributed Claimant's CTS to any of Dr. Cebrian's possible causes.

43. In his report Dr. Cebrian opined Claimant does not have CRPS within the meaning of the AMA Guides Rule 17, Exhibit 7 (d) for the following reasons:

    - the February 14, 2008 triple phase bone scan was "suggestive of CRPS but the findings were minimal."

    - the "multiple stellate ganglion blocks were performed without protracted relief."

    - because "there was no protracted relief with the sympathetic blocks and there was not more than one positive diagnostic test" it was not medically probable that Claimant met the "diagnostic criteria for a diagnosis of CRPS."

    Based on the determination that Claimant did not meet the criteria for a diagnosis of CRPS, Dr. Cebrian opined Claimant was not entitled to a rating for this condition under the AMA Guides.

44. In his report Dr. Cebrian opined Claimant injured her right shoulder when she fell sometime in "June 2010." He opined there was no information in the record that this fall was the result of an injury-related condition. He further stated that no tests were done to establish that Claimant has CRPS in the lower extremities. He opined the falls that led to Claimant's right shoulder condition were not related to the November 2006 industrial injury.

45. Dr. Cebrian opined that Claimant has permanent impairment secondary to the placement and removal of the spinal cord stimulator "as she has persistent pain from the procedure." Dr. Cebrian opined this condition entitled Claimant to a 4% whole person impairment rating under Table 53IIB of the AMA Guides.

46. Dr. Cebrian disagreed with Dr. Kesten's recommendation for a second orthopedic consultation with respect to Claimant's right shoulder. He explained Claimant does not want this procedure and in any event the likelihood of improving function as a result of another rotator cuff repair is minimal. Dr. Cebrian opined Claimant's medications were compromising her ability to function, negatively affecting her condition, and contributing to her depression.

He recommended discontinuation of medications over the next six months under the supervision of a physician.

47. Dr. Kesten has treated Claimant for the past seven years. He reviewed Claimant's medical records from 1996 through the date of hearing, including both of Dr. Pitzer's reports, Dr. Cebrian's report, transcripts of the hearing before ALJ Cain, the depositions of Drs. Pitzer and Cebrian and Insurer's adjuster, his prior testimony, Claimant's deposition, Dr. Gelrick's report, and her deposition testimony.

48. Dr. Kesten disagreed with Dr. Cebrian's opinion that Claimant did not develop left and right-sided TCTS as a result of the November 10, 2006 industrial injury. With regard to the left-sided TCTS Dr. Kesten found there was a "physiologic correlation as well as a consistent mechanism of injury in which the symptoms presented in a temporal fashion." Dr. Kesten disagreed with Dr. Cebrian's statement that after "some initial complaints" of tingling in the fourth and fifth fingers of the left hand, these symptoms were not "documented again until" February 9, 2007. Dr. Kesten noted that on November 11, 2006 Claimant reported some tingling in the left middle finger. The ALJ finds Dr. Cebrian's focus on this one symptom to be more a reflection of his bias toward Respondents than an indication that this symptom was somehow more significant than any other.

49. Dr. Kesten disagreed with Dr. Cebrian that the November 11, 2006 examination indicated an ulnar nerve injury. Dr. Kesten explained that on November 11 no sensory nerve deficits were noted in either the median or the ulnar nerve distributions. Dr. Kesten opined that from the date of the injury through February 9, 2007 Claimant reported symptoms that constituted "warning signs" of TCTS including numbness and tingling of the third through the fifth fingers, swelling and tenderness over the thenar eminence, and proximal radiating symptoms into the arm. Based on the totality of the evidence, the ALJ finds this opinion of Dr. Kesten to be more reliable and persuasive than that of Dr. Cebrian.

50. Dr. Kesten disagreed with Dr. Cebrian's opinion that the left-sided median nerve compression findings on electrodiagnostic testing were "incidental" because Claimant's symptoms were in the ulnar nerve distribution and the subjective complaints were inconsistent with the objective findings. Dr. Kesten stated that CTS symptoms may appear in any and all fingers and can appear proximally or "up the arm" from the carpal tunnel. Dr. Kesten also noted that the nerve conduction studies performed by Dr. Green on February 26, 2007 evaluated the ulnar nerve and it was normal. Based on the totality of the evidence, the ALJ finds this opinion of Dr. Kesten to be more reliable and persuasive than that of Dr. Cebrian.

51. Dr. Kesten also disagreed with Dr. Cebrian's view that the right-sided CTS was not related to the industrial injury. Dr. Kesten explained that the mechanism of injury involved hyperextension of the right wrist and that Claimant demonstrated swelling and ecchymosis on November 11, 2006 when she was seen at BCH.

Dr. Kesten testified he agreed with Dr. Green's May 2, 2007 statement that Claimant has a "consistent mechanism of injury that may have led to traumatic carpal tunnel syndromes." Based on the totality of the evidence, the ALJ finds this opinion of Dr. Kesten and the causation analysis of Dr. Green to be more reliable and persuasive than that of Dr. Cebrian.

52. Dr. Kesten testified in the -04 hearing that he disagreed with Dr. Cebrian's opinion that Claimant does not have CRPS. Dr. Kesten explained that, contrary to Dr. Cebrian's assertions, Claimant meets the diagnostic criteria for a diagnosis of CRPS under the current version of the Medical Treatment Guidelines (MTG) for Complex Regional Pain Syndrome/Reflex Sympathetic Dystrophy. Dr. Kesten explained that the MTG make a distinction between "clinical CRPS" and "confirmed CRPS." He stated that under the MTG, clinical CRPS may be treated with less invasive procedures while confirmed CRPS may be treated with invasive or complex treatment. In any event, Dr. Kesten disagreed with Dr. Cebrian's opinion that Claimant has not had two "positive" tests sufficient to diagnose confirmed CRPS. He explained that in his opinion the findings on the triple phase bone scan were not "minimal" as suggested by Dr. Cebrian. He further opined Claimant exhibited positive responses to the SGB's performed by Dr. Denham and that nothing in the MTG requires that the relief from SGB's be "protracted" in order to constitute a positive diagnostic test. Based on the totality of the evidence, the ALJ finds this opinion of Dr. Kesten to be more reliable and persuasive than that of Dr. Cebrian.

53. Dr. Kesten opined in the -04 hearing that Claimant's CRPS probably "traveled" from her upper extremities to the lower extremities. He stated that this phenomenon is documented in the literature and is "thought to be a reflection of the centralization of this pathological process." Dr. Kesten opined that the traveling of the CRPS to the lower extremities likely compromised Claimant's lower extremity function causing her to experience numerous falls, including the fall that led to shoulder injury and surgery performed by Dr. Mann. Based on the totality of the evidence, the ALJ finds this opinion of Dr. Kesten to be reliable and persuasive.

54. Dr. Kesten testified in the -04 hearing that after he initially placed Claimant at MMI in October 2010 he continued to treat her. He further stated that after initially placing her at MMI he referred her for treatment to Dr. Mann for evaluation and treatment of her shoulder. Dr. Kesten explained that in January 2012 he issued a second impairment rating taking into account the shoulder injury and rating her for a "fairly complex" full thickness tear of the rotator cuff.

55. In the -04 hearing, ALJ Cain determined

    - Dr. Kesten did not place the claimant at MMI until at least January 17, 2012, when he issued the impairment rating for the right shoulder.

- Claimant never "agreed" with Ms. Bonham to allow Dr. Cebrian to act as the DIME physician.

- Insurer considered Dr. Cebrian to be a desirable DIME candidate because he would render opinions favorable to the insurer's views on issues including impairment and MMI.

- no valid DIME has been conducted and filed with DOWC.

See Cain Order dated December 1, 2014.

56. Respondents petitioned for review of the order. The petition was denied because the Cain Order was not a final order subject to review.

57. Dr. Kesten continued treating Claimant. Claimant also was treated at Holistic Family Practice. April 20, 2015, and July 27, 2015 notes continue to reflect Claimant's CRPS symptoms and diagnosis.

DR. PITZER RIME

58. Dr. Pitzer reviewed Claimant's medical records through the time of Dr. Cebrian's report. In his December 5, 2012 report, Dr. Pitzer agreed with Dr. Cebrian that Claimant's CTS was not related to her work injury. He reasoned

- No research studies related CTS to hand or wrist bruising;

- Claimant's CTS studies showed moderate CTS which he opined was more consistent with prolonged compression;

- Claimant's pain developed and increased with her CT release surgery.

59. At Respondents' request Dr. Pitzer performed a second records review and opined that it was more probable that Claimant's CTS was attributable to predisposing factors than to her work injury. He opined that Claimant's CTS and CRPS were not related to her work injury. Respondents deposed Dr. Pitzer on June 4, 2014. He testified that

- Claimant was not exposed to any work related risk factors for CTS.

- Claimant had predisposing factors including obesity and hypothyroidism.

- Moderate to severe mirror-image bilateral CTS such as Claimant's typically relates to predisposing risk factors versus trauma.

60. Dr. Pitzer did not examine Claimant and based his opinions solely on his incomplete records review. He was unsure whether he reviewed the actual EMG studies or relied on the report, and he did not review the records for physiological abnormalities.

61. For the past ten years approximately thirty-five percent of Dr. Pitzer's testimony has been for Respondents' counsel's firm. Ninety-six percent of Dr. Pitzer's testimony has been favorable to respondents.

62. While Dr. Pitzer is highly credentialed, his testimony was couched in terms of what "typically" occurs, he was unfamiliar with aspects of Claimant's physical examination findings, and his opinions were more about typical CTS and less about Claimant's case. For example, Dr. Pitzer stated that "most" nerve root trauma gets better with time, and "most" chronic compression neuropathies get worse over time. Based on that typical scenario, he opined that Claimant's EMG's were consistent with chronic carpal tunnel syndrome since they did not show improvement over time. DIME Dr. Gellrick testified that Dr. Pitzer's opinion is contrary to the MTG for CTS which recognize fluctuation in symptoms and on EMG tests.

63. Based on the totality of the evidence the ALJ is not persuaded by Dr. Pitzer's opinions.

DR. GELLRICK DIME

64. Dr. Gellrick was ultimately selected as the DIME. She physically examined Claimant on July 24, 2015. Dr. Gellrick also performed a thorough, extensive and detailed record review. In her report dated August 7, 2015, Dr. Gellrick assigned October 4, 2010 as the MMI date.

65. Dr. Gellrick agreed with the opinions of Drs. Kesten and Green that Claimant's CTS was caused by and related to her work injury. Dr. Gellrick agreed with the same doctors that Claimant went on to develop CRPS based on the results from her triple-phase bone scan, her reaction to the stellate ganglion blocks, and her clinical diagnosis.

66. Dr. Gellrick agreed with the opinion of Dr. Floyd Ring, who performed two record reviews for Respondents, that Claimant had CRPS and that the spinal cord stimulator and related surgeries were reasonably necessary to treat Claimant's condition.

67. Dr. Gellrick disagreed with Dr. Kesten's opinion that Claimant had CRPS in her lower extremities because the diagnosis was not supported by diagnostic testing and no physical examination had been performed.

68. Dr. Gellrick rated Claimant's impairment at 46% whole person – 45% physical impairment for CRPS, plus 1% psychiatric impairment for worsened depression.

69. Based on the totality of the evidence, the ALJ finds these opinions of Dr. Gellrick to be credible and persuasive.

CLAIMANT'S TESTIMONY

70. Claimant testified both by deposition dated October 7, 2014, and at hearing. Respondents' counsel called Claimant as their first witness and attempted to impeach her credibility with questions about the BCH intake form, a notation in one of Dr. Yee's records, the 2004 FCE related to her back injury, and surveillance video taken of Claimant. The ALJ finds Claimant's testimony to be credible for the following reasons:

- The BCH intake form that mentions "she does report having carpal tunnel previously" was dictated by someone other than Dr. Draper and it does not appear that Dr. Draper reviewed or signed the note. The notation is contrary to the numerous medical records which contain no mention of a carpel tunnel diagnosis or treatment prior to Claimant's work injury. The notation is also contradicted by Claimant's ability to perform the job duties she was assigned and her other recreational activities. The ALJ finds this notation to be unreliable and not persuasive evidence either that Claimant had carpel tunnel prior to her work injury or that Claimant was not consistent in her reporting.

- Dr. Yee treated Claimant in August 2003 for an unrelated back injury. His note from that visit states that Claimant "has had episodic left upper extremity and numbness in her forearm and hand." However, Claimant had no upper extremity weakness and the neurologic examination of Claimant's upper extremities revealed no motor or sensory deficits. The ALJ finds Dr. Yee's notation, when taken in context, is not persuasive evidence either that Claimant had carpel tunnel prior to her work injury or that Claimant was not consistent in her reporting.

- Claimant underwent a functional capacity evaluation (FCE) in 2004 related to her back injury. Part of the FCE involved a "hand function sort." While it was unclear during much of the hearing whether Claimant actually performed the activities mentioned, the ALJ finds that the activities were not performed. Rather, it seems Claimant was given a one-page form listing sixty-two activities and was asked to rate on a scale of 1 - 5 what she perceived her ability to do the activity was. One being "able" and five being "unable." While Respondents made much of Claimant's rating as 3 (restricted) such activities as "picking up small coins," and "sorting a deck of cards;" Claimant rated as 1 such activities as "use fork and knife," "cut a coupon," "pick out a paper clip," and "peel a potato." The one page form did not attach visual cues used during the sort. The ALJ finds the hand function sort to be unreliable and not persuasive evidence either that Claimant had carpel tunnel prior to her work injury or that Claimant was not consistent in her reporting.

71. Respondents showed video surveillance they had taken of Claimant which showed her entering and exiting her car, carrying a water bottle and light bag,

and drinking coffee among other things, in an apparent attempt to discredit Claimant's limitations. However, Claimant testified that she was able to do the activities shown and more because her right arm is not paralyzed. She explained that she has difficulty with fine hand movements such as writing and balancing a fork in her right hand. She further testified that her hands are shaky and that she is unable to make pottery as she had before the injury. Because she cannot raise her right arm, she has her hair washed at a salon. Both Drs. Kesten and Gelrick testified that they were not surprised that Claimant was able to perform the activities shown on the video and that the activities were within Claimant's medical abilities.

72. Drs. Gelrick, Kesten, Pitzer, and Cebrian all acknowledged that Claimant had not been diagnosed with or treated for CTS.

73. The ALJ attributes any inconsistencies in Claimant's testimony to Respondents' counsel's manner of questioning, the complexity and duration both of her treatment and of this litigation, and the passage of time. The ALJ finds Claimant to be credible.

74. Based on the totality of the evidence, the ALJ finds that Respondents have not met their burden of proving by clear and convincing evidence that Dr. Gellrick was incorrect in determining that Claimant sustained bilateral CTS and resulting CRPS as a result of her November 10, 2006 work injury.

75. Based on the totality of the evidence, the ALJ finds that Respondents have not met their burden of proving by clear and convincing evidence that Dr. Gellrick was incorrect in determining Claimant's impairment rating.

76. Based on the totality of the evidence, the ALJ finds that Respondents have not met their burden of proving by clear and convincing evidence that Dr. Gellrick was incorrect by assigning October 4, 2010 as the MMI date.

77. Based on the totality of the evidence, the ALJ finds that Respondents have not met their burden of proving by a preponderance of the evidence that Claimant is not entitled to ongoing maintenance medical benefits.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the

motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936).

It is in the ALJ's sole prerogative to assess the credibility of the witnesses and the probative value of the evidence to determine whether the claimant has met her burden of proof. *Dover Elevator Co. v. Indus. Claim Appeals Office*, 961 P.2d 1141 (Colo. App. 1998). It is within an ALJ's purview to assess the relative weight and credibility of various opinions. *See Kraft v. Medlogic Global Corp., et al.*, W.C. No. 4-412-711 (ICAO, Mar. 15, 2001) (citing *Rockwell Internat'l v. Turnbull*, 802 P.2d 1182 (Colo. App. 1990)). Additionally, if an individual expert's opinion contains contradictions or is subject to multiple interpretations, the ALJ may resolve the conflict by crediting only a portion of the opinion, or discrediting the opinion in its entirety. *See Kraft*, W.C. No. 4-412-711; *Johnson v. Indus. Claim Appeals Office,* 973 P.2d 624 (Colo. App. 1997).

A Division IME's findings of MMI, causation, and impairment are binding on the parties unless overcome by "clear and convincing evidence." § 8-42-107(8)(b)(III), C.R.S.; *Peregoy v. Indus. Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates it is "highly probable" that the Division IME physician's rating is incorrect. *Qual-Med, Inc. v. Indus. Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); *see also Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAO, Nov. 17, 2000).

Whether or not a party overcomes the Division IME is a question of fact for determination by the ALJ. § 8-43-301(8), C.R.S.; *Wackenhurt Corp. v. Indus. Claim Appeals Office*, 17 P.3d 202 (Colo. App. 2000); *Aldabbas v. Ultramar Diamond Shamrock*, W.C. No. 4-574-397 (ICAO, Aug. 18, 2004).

As a matter of law Dr. Gellrick's opinions on the issues of causation, MMI, and impairment are binding unless overcome by clear and convincing evidence. While Respondents offered the opinions of Drs. Cebrian and Pitzer for that purpose, the ALJ specifically found that their opinions were biased, based on limited information, and not persuasive. Additionally, Dr. Gellrick's opinions were supported by the opinions and findings of Drs. Kesten, Ring, Vilims, Cohan, Draper, Denham, Wear-Magitti, and Green.

A Claimant has the right to maintenance medical treatment that is reasonably necessary to relieve the effects of the industrial injury or prevent future deterioration of the claimant's work-related condition. *Grover v. Industrial Commission,* 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995).

If the evidence in a particular case establishes that, but for a particular course of medical treatment, a claimant's condition can reasonably be expected to deteriorate, so that she will suffer a greater disability than she has sustained thus far, such medical treatment, irrespective of its nature, must be looked upon as treatment designed to relieve the effects of the injury or prevent deterioration of the claimant's present condition. *Milco Construction v. Cowan*, P.2d 539, 542 (Colo. App. 1992).

The ALJ credits the opinions of Drs. Gelrick and Kester regarding maintenance medical care. Dr. Kesten testified that Claimant's current treatment for her CRPS includes medication; hand and wrist brace/splint; home biofeedback, a paraffin unit; ColdPac; TENS unit; attending modified yoga; and using treadmill at Orange Theory.

Dr. Gellrick agreed with Dr. Kesten's maintenance medical care, including home treatment and use of opioids, and she agreed that stopping Claimant's medications would worsen Claimant's symptoms.

Dr. Gellrick testified that Claimant should try to do home exercises, yoga, and walk her dogs or walk in the gym since those activities increase her function. Dr. Kesten testified that if Claimant did not go to yoga, walk on a treadmill, and follow Dr. Kesten's multimodal treatment plan, then Claimant's functioning would decline. Dr. Kesten's recommended care is reasonable, and necessary to relieve the effects of the industrial injury and prevent deterioration of Claimant's condition.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. As a result of Claimant's November 10, 2006 admitted injury, she developed CTS the treatment for which caused Claimant to develop CRPS in her upper extremities.

2. Claimant reached MMI on 10/4/10 with a whole person impairment of 45% for CRPS and a 1% psychological impairment due to worsened depression.

3. Claimant's stipulated AWW is $725, which results in a TTD amount of $483.33.

4. Respondents shall pay Claimant PPD to the statutory cap based upon the 45% whole person and 1% psychological impairments at the TTD rate of $483.33, less any TTD, TPD, and SSDI offsets.

5. Claimant requires ongoing maintenance medical care to relieve her from the effects of the injury. Dr. Kesten's treatment, as outlined in his testimony, is reasonably necessary and related to her admitted work injury and shall continue.

6. Insurer shall pay claimant interest at the rate of 8% per annum on compensation benefits not paid when due.

7. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 9, 2017

ISSUES

Did Claimant prove by a preponderance of the evidence that he injured his left knee while working for Employer on or about August 12, 2016?

FINDINGS OF FACT

1. Claimant works as a landscaper for Employer. Claimant alleges he injured his left knee as a result of his work duties in August 2016.

2. On his Worker's Claim for Compensation form, Claimant alleged an August 17, 2016 date of injury. At the hearing, Claimant amended his alleged date of injury to August 12, 2016.

3. Claimant's native and primary language is Spanish. Claimant's exact level of English-language fluency is unclear, but for purposes of this decision, the ALJ assumes Claimant speaks and understands minimal English.

4. Claimant sought treatment for his left knee on August 17, 2016 at the Memorial Hospital Emergency Room. The corresponding medical record indicates an interpreter was present. Claimant's primary complaint was left lower extremity pain "after a fall." The report states Claimant "tripped over a 2 x 4 on Friday."[1] He was having pain in both legs, worse on the left, which he said had "been ongoing [since] the weekend." Physical examination revealed mild effusion of the left knee with overlying ecchymosis. The knee was tender to palpation of the lateral joint line. X-rays of the left knee showed mild degenerative changes, but no acute fracture or dislocation. A "large joint effusion" was present. The ER physician diagnosed likely lateral meniscus injury of the left knee. He gave Claimant a brace and instructed him to follow up with orthopedic surgery.

5. Don Holstead is Employer's primary owner, and is actively involved in the company's day-to-day operations.

6. Within a few days after the ER visit, Claimant (or someone on his behalf) told Mr. Holstead his knee was hurting. No one mentioned a work injury. Mr. Holstead took Claimant to Alliance Urgent Care on August 24, 2016. Mr. Holstead utilizes Alliance Urgent Care to treat his employees, in part, because they have a Spanish-speaking provider. Mr. Holstead credibly testified he was unaware Claimant was claiming a work injury when he took him to Alliance.

[1] The immediately preceding Friday was August 12, 2016.

7. Upon arrival at Alliance Urgent Care, Claimant was evaluated by Mario Aragon, PA, NP. PA Aragon's report indicates "the patient states that approximately a week ago he twisted his knee when he stepped on a rock." Claimant reported his knee was very swollen and he was having difficulty walking on the left leg. He had tried ibuprofen with little to no relief. Physical examination of the left knee demonstrated a positive McMurray's sign and mild swelling. PA Aragon opined "I'm concerned that the patient has suffered a meniscus tear, therefore I am ordering an MRI." He prescribed prednisone and asked Claimant to follow-up after the MRI.

8. Neither party submitted the MRI report into evidence. Nevertheless, based on the evidence presented, the ALJ finds Claimant has a meniscal tear in his left knee.

9. Claimant filed a Workers' Claim for Compensation on November 18, 2016. Claimant described the mechanism of injury as: "I was carrying a pole over 100 lbs, and stepped in water and twisted. The poles [sic] weight fell on me when I twisted." Claimant described the location of the accident as: "Not sure, it was track [sic] homes in Colorado Springs." Claimant stated he reported the injury to "Julio Dorado, Jr. and he informed the boss."

10. At the hearing, Claimant testified he twisted his knee when he stepped on dog feces while carrying a fence post.

11. In his hearing testimony and pretrial discovery responses, Claimant stated the accident occurred at the Wolf Ranch development in Colorado Springs.

12. On February 22, 2017, Julio Dorado, Jr., Juan Dorado, and Clemente Ramirez stated in writing that they "did not witness or see [Claimant] get hurt at any time while working with him."

13. On March 3, 2017, Julio Dorado, Jr., Juan Dorado, Jesus Yanez, and Clemente Ramirez signed affidavits stating they had no knowledge of Claimant's alleged accident. Each coworker stated they did not witness Claimant injure himself while working, Claimant did not tell them he injured himself while working, and they did not hear Claimant tell anyone else he injured himself while working.

14. Julio Dorado, Jr. testified at the hearing. Mr. Dorado, Jr. is Claimant's direct supervisor. Mr. Dorado, Jr. did not witness Claimant's alleged accident. Mr. Dorado, Jr. recalled he and Claimant worked on fences at some time, but could not remember the date. Mr. Dorado, Jr. did not recall any time Claimant was injured while working on fences. Mr. Dorado, Jr. recalled being told Claimant was injured at some point, but could not remember when he was told that. Mr. Dorado, Jr. saw Claimant limping at some time, but did not know when or how Claimant hurt his knee. At some unknown date, Claimant told Mr. Dorado, Jr. he was hurt at work carrying a post.

15. Clemente Ramirez, Claimant's co-worker, testified at the hearing. Claimant told Mr. Ramirez he hurt his knee when he slipped or tripped. Mr. Ramirez could not recall the date of Claimant's statement, but "the day that he told me, we were putting down plants."

16. Jesus Yanez, Claimant's co-worker, testified at the hearing. Mr. Yanez typically delivers materials to Employer's various job sites. Mr. Yanez drove Claimant to Memorial ER on August 17. Claimant did not tell Mr. Yanez how or where he hurt his knee. Mr. Yanez interpreted the affidavits to the other Spanish-speaking coworkers "word-for-word" and "line by line." Mr. Yanez testified the crew spent 2-3 days working at the Canyon Ridge MHP project. He did not recall any fence posts or fencing materials on that project.

17. None of the witnesses could recall when they first learned of Claimant's alleged injury, but the ALJ infers it was well after the fact.

18. Claimant testified he injured his left knee working on a fence project at Wolf Ranch. He testified he stepped on dog feces and twisted his left knee while carrying a fence post. He testified he told "both" coworkers with whom he was working that day. Claimant identified another coworker, Joaquin, who allegedly witnessed the accident. Claimant testified he told Mr. Dorado, Jr. he had injured his leg that day.

19. Although Claimant has worked on projects at Wolf Ranch for Employer in the past, none of the projects were on or around Claimant's alleged date of injury. Employer had no jobs at Wolf Ranch during the week ending August 12, 2016. Based on Employer's business records, the crews did no fence work at Wolf Ranch "at any time close to" August 12.

20. On August 12, 2016, Employer's crews were working at the Canyon Ridge Mobile Home Park, performing various tasks such as removing trees, installing new plants and mulching. The Canyon Ridge MHP job entailed no fence building or repair.

21. None of the employees worked on August 17, 2016, because Mr. Holstead and his wife were out of town attending a wedding.

22. Claimant has failed to prove by a preponderance of the evidence that he injured his left knee while working for Employer.

CONCLUSIONS OF LAW

To receive compensation or medical benefits, Claimant must prove that he is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1), C.R.S.; *see, Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). Claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997), *cert. denied* September 15, 1997. The claimant must prove entitlement to benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The

facts in a workers' compensation case are not interpreted liberally, in favor of either claimant or respondents. Section 8-43-201.

The employer is liable for medical treatment which is reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a); *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997); *Country Squire Kennels v. Tarshis*, 899 P. 2d 362 (Colo. App. 1995). Where a claimant's entitlement to medical benefits is disputed, the claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, *supra*.

As found, Claimant has failed to prove by a preponderance of the evidence that he injured his knee at work on or about August 12, 2016. There are simply too many inconsistencies in the record to give Claimant's testimony or allegations significant weight. Every description of the alleged incident in the record is different—including Claimant's description at hearing. Claimant testified he stepped on dog feces. On the WC Claim form, Claimant stated he slipped on water. The ER physician documented he tripped on a 2 x 4. The urgent care report describes the incident as stepping on a rock. Although Claimant appeared sincere in his testimony at hearing, the testimony is not supported by other persuasive evidence. Claimant alleged that Mr. Dorado, Jr. and Mr. Ramirez witnessed his accident, but neither witness corroborated that allegation. No witness recalled Claimant being hurt or claiming an injury on any job involving fencing. Claimant suggests his coworkers were intimidated or coerced into signing their affidavits, but there is no persuasive evidence to support that supposition.

Claimant stated his injury occurred at Wolf Ranch. The medical records indicate Claimant's knee problems started on or about August 12, but Claimant was not working at the Wolf Ranch property on that date—or even that week. Claimant was working at the Canyon Ridge MHP the week of August 12, 2016, and that project involved no fence building or repair. Ultimately, the persuasive evidence fails to prove that Claimant injured his left knee at work on or about August 12, 2016.

ORDER

It is therefore ordered that:

1. Claimant's claim for workers' compensation benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to

the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 2, 2017

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that he has suffered a work injury arising out of, and in the scope of, his employment?

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ makes the following findings of fact:

1. The Claimant alleges that he sustained injuries to his back while performing his duties, cleaning rental cars on November 4, 2015. At the time, he was working approximately 20 hours per week over three non-consecutive days. He began work for Employer in August, 2015.

2. The Claimant went to Touchstone Health Care West on November 6, 2015 with complaints of "Back pain that started *1 week ago* has gotten worse in the 2 days." Claimant also stated: "Never had issue before." Claimant did not indicate at this visit that the condition was work related. (emphasis added)(Claimant's Exhibit 1, p.16)

3. Claimant was seen in follow up on November 12, 2015. At that time, he states that he has started a workers compensation claim. On this trip, he does not state how he injured himself to the medical provider. The clinical notes state:

> He is real depressed due to his limitations. He has lost multiple jobs due to the fact that he cannot physically do the work…He cannot remember all the jobs that he has lost *due to his back* in the past." (emphasis added). (Claimant's Ex. 1, p. 8)

4. The medical records submitted documented prior back pain and treatment for that pain. The available medical records start on February 15, 2011 when he was seen at Southern Colorado Clinic for back pain. Claimant stated:

> 11-7-07 Fall of (sic) 12' ladder on back and Right leg." He provided a pain diagram which showed burning and stabbing pain in the low back and into the right leg. It also showed the level of pain as an "8" on a scale of 1 to 10. (Respondent's Ex. A).

5. Claimant reports back pain on 6-7-2013. Claimant was seen at Centura Health and the Nurse Practitioner noted chronic low back pain:

> ..patient has a long gistory (sic) of back pain- he had been doing light maintenance-he was lifting cement bags-it does not happen the day of the activity-but then the next day-He states his L3-4-5 are stage "4"-…the pain is strictly in his lower back-no radiation…(Respondent's Ex. E, p.24).

6. The records from 7/8/13, 11/17/14, and 2/8/15 all note "chronic back pain" as a complaint. (Claimant's Ex. 1)

7. Additionally, Claimant's chief complaint in a visit to Centura Health on 10/12/2011 was "Memory Loss, Depression, Ringing in ears". (Claimant's Exhibit 1, p. 135).

8. Claimant underwent an MRI on 12/17/2015. The results were interpreted by Dr. Michael P. O'Neill to read, in conclusion:

> 1. Mild, degenerative disc disease is scattered throughout the lumbar spine.
>
> 2. At the L4-L5 level, disc space narrowing, and mild, circumferential spondylatic bulge is noted, with mild, bilateral neural foraminal narrowing, right greater than left. There is no central canal stenosis.
>
> 3. At the L4-L5 level, mild to moderate circumferential disc bulge is noted without disc protrusion or central canal stenosis.

(Claimant's Ex. 4, p. 195).

9. Claimant's testimony at hearing can be summarized, as follows: As a detailer for rental cars, he was expected to clean cars to prepare them for the next renter. At first, detailers were expected to perform these tasks in 12 minutes per car. This figure was lowered by Employer, eventually to 2 minutes per car. While at work on the day of his reported injury, Claimant was twisting his body at an odd angle to vacuum the rear portion of a Camaro, and felt extreme pain in his lower back, for which he sought treatment. He was returned to modified duty driving and delivering cars. He feels better in this capacity, but still reports an inflamed lower back.

9. Claimant was seen by Dr. Timothy O'Brien, an orthopedic surgeon for an IME. He saw the Claimant on April 26, 2016. Based on his examination of the Claimant and review of the medical records, he noted that Claimant is a poor historian, and the reliability of his self reported symptoms is suspect.

10. In the conclusion of his report, Dr. O'Brien's findings can be summarized:

> In my opinion, Mr. Dove did not sustain a work-related injury….Mr. Dove….has essentially a normal exam given his age….He is at no more risk for injury than any other member of his age group. (Respondent's Ex. B, p. 13).

In response to a question for an impairment rating, Dr. O'Brien notes:

> There is no work injury and, therefore, there is no impairment. Mr. Dove has an incurable, relentlessly progressive age-related genetically induced multilevel lumbar degeneration which by its very nature is expected to result in episodic pain. These episodes of pain….are not the result of any injury; rather these episodes of pain are in fact an expected episode of manifestation in Mr. Dove's underlying multilevel lumbosacral spondylosis.

11. Dr. O'Brien testified consistent with his report. He further noted that two months of cleaning cars as described by Claimant would not aggravate any pre-existing condition which Claimant may have suffered from.

12. Claimant has inherent limitations in his recall of events, by his own admission. Despite those limitations, the ALJ finds Claimant to be *sincere* in his testimony, but insufficiently *reliable* to establish that a compensable injury occurred.

13. Dr. O'Brien, in both his report, and live testimony, is persuasive on the issue of compensability at issue in this case.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), §§ 8-40-01,*et seq*., C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1), C.R.S*. The claimant shoulders the burden of proving by a preponderance of the evidence that he is a covered employee who suffered an "injury" arising out of and in the course of employment. *Section 8-41-301(1), C.R.S.; Faulker v.*

Industrial Claim Appeals Office, 12 P.3d 844 (Colo.App. 2000); City of Boulder v. Streeb, 706 P.2d 786 (Colo. 1985); Pacesetter Corp. v. Collett, 33 P.3d 1230 (Colo.App. 2001). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark, 197 Colo. 306, 592 P.2d 792 (1979)*. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. *Section 8-43-201, C.R.S*. A workers' compensation claim is decided on its merits. *Section 8-43-201, supra.*

B. In accordance with § 8-43-215, C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, *84 P.3d 1023 (Colo. 2004).* This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, 5 P.3d 385 (Colo. App. 2000).*

C. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16.

Compensability

D. As noted, for an injury to be compensable under the Act, it must "arise out of" and "occur within the course and scope" of employment. *Price v. Industrial Claim Appeals Office*, 919 P.2d 207, 210 (Colo. 1996). The "arising out of" test is one of causation. It requires that the injury have its origins in an employee's work related functions, and be sufficiently related thereto so as to be considered part of the employee's service to the employer. In this regard, there is no presumption that an injury which occurs in the course of a worker's employment arises out of the employment. *Finn v. Industrial Commission,* 165 Colo. 106, 437 P.2d 542 (1968); *see also, Industrial Commission v. London & Lancashire Indemnity Co.,* 135 Colo. 372, 311 P.2d 705 (1957) (*mere fact that the decedent fell to his death on the employer's premises did not give rise to presumption that the fall arose out of and in course of employment*). Rather, it is the Claimant's burden to prove by a preponderance of the evidence that there is a direct causal relationship between the employment and the injuries. § 8-43-201, C.R.S. 2006; *Ramsdell v, Horn,* 781 P.2d 150 (Colo. App. 1989).

E. The existence of a causal relationship between the Claimant's employment and any injuries suffered is a question of fact. *F.R. Orr Construction v. Rinta, 717 P.2d 965 (Colo. App. 1985).* The determination of whether there is a sufficient "nexus" or causal relationship between the claimant's employment and the injury is one of fact which the ALJ must determine based on the totality of the circumstances. *In Re Question Submitted by the United States Court of Appeals,* 759 P.2d 17 (Colo. 1988); *Moorhead Machinery & Boiler Co. v. Del Valle,* 934 P.2d 861 (Colo. App. 1996).

F. Here, the persuasive evidence demonstrates that Claimant has had a longstanding pre-existing degenerative lumber condition. The mechanism he describes which resulted in pain to his lower back did not result in an *injury*; instead, it was the periodic manifestation of his degenerative spinal condition already in existence. He did not aggravate, creating a new *injury* beyond temporary pain, this pre-existing condition while working for Employer.

G. Claimant has not met his burden of proof that he suffered a compensable injury.

ORDER

It is therefore ordered that:

1. Claimant's claim for workers compensation benefits is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 6, 2017

Administrative Law Judge
Office of Administrative Courts
2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

ISSUES

- Whether Claimant sustained on an injury on August 23, 2015, in the course and scope of her employment with employer.

- Whether claimant is entitled to temporary total disability benefits.

- Whether employer was covered by workers' compensation insurance on the date of injury.

- Whether employer notified the Division of Workers' Compensation of claimant's injury and lost time after she missed three work shifts.

- Whether employer filed a notice of contest or an admission of liability after employer became aware of claimant's loss of three days' time from her injury.

- Whether penalties should be assessed pursuant to the Act for:

    - Failure to carry workers' compensation insurance pursuant to section 8-43-408(1);

    - Failure to timely report claimant's injury to the Division of Workers' Compensation pursuant to sections 8-43-101 and 8-43-103;

    - Failure to pay medical bills timely pursuant to section 8-43-304(1); and

    - Failure to admit or deny claimant's claim pursuant to section 8-43-203(2).

- ✓ The issue of temporary partial disability was held in abeyance.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. The Administrative Law Judge specifically finds that notice of the hearing was properly served on the employer. Claimant testified that Raul Gonzales was employer's Director of Operations and "second in command" of the company behind employer's owner. The ALJ takes judicial notice of Secretary of State records which list Mr. Gonzales as employer's registered agent for service of process. Employer is found to be operating a business in the State of Colorado and subject to the provisions of the Colorado statutes governing workers' compensation.

2. On August 23, 2015, employer employed claimant as an event manager at the Denver Convention Center. One of claimant's job duties was washing and putting away containers. She testified that while she was cleaning a glass container, it broke. The broken glass cut her right hand between her fingers and her wrist on the top side of her hand. Claimant suffered an injury to her right hand in the course and scope of her employment.

3. The ALJ finds that claimant suffered a compensable injury.

4. A coworker immediately drove claimant to Denver Health Medical Center (DHMC) where she received emergency treatment, x-rays, and was admitted overnight. The severity of the injury required a hand specialist to evaluate claimant's severed tendon. A provider sutured claimant's hand and scheduled her to return the following week. Claimant incurred costs of at least $2,557.33 for that hospital visit.

5. Claimant notified employer of her injury by calling Mr. Gonzales from the emergency room.

6. For over one month, Mr. Gonzales represented to claimant that employer had workers' compensation insurance and that he would provide her with policy details. However, he never provided claimant with coverage information.

7. Employer represented to claimant that it would reimburse her for payments she made to DGMC and for her co-payments, but failed to do so. Employer also represented that it would pay DGMC directly and in full by March 16, 2016, but failed to do so.

8. Claimant was unable to finish her shift on August 23, 2015, and unable to work the following three days due to her injury. Claimant is entitled to temporary total disability benefits for that period of time.

9. Employer was required by statute to report claimant's injury to the Division of Workers' Compensation within ten days of the third shift missed. Upon review of the Division of Workers' Compensation file, the ALJ finds that employer did not provide such notice to the division at the time it was due, and had not provided such notice through the date of hearing.

10. Employer was required by statute to notify the Division of Workers' Compensation and claimant whether the injury was admitted or denied by filing either an admission of liability or a notice of contest within twenty days of learning that claimant suffered an injury that resulted in her missing three work shifts. Upon review of the Division of Workers' Compensation file, the ALJ finds employer filed neither an admission of liability nor a notice of contest on this claim at the time such were due, and has not done so through the date of the hearing.

11. Claimant underwent surgery on August 31, 2015. The following procedures were performed:

- Irrigation and debridement of claimant's left hand wound down to the tendon;

- Repair of claimant's left extensor digitorum comminus tendon to index and long fingers;

- Repair of claimant's left hand extensor imdicis proprius tendon;

- Repair of claimant's left hand extensor carpi radialis brevis tendon.

The cost for the surgery alone was at least $10,790.83.

12. Claimant was unable to work the day of the surgery and the four following days because of her injury. Claimant is entitled to temporary total disability benefits for that period of time.

13. Post surgery, claimant participated in physical and occupational therapy at DHMC. The purposes of the therapy were scar management, soft tissue mobilization, range of motion, and strengthening. Claimant's therapy also included prescription medication and equipment. Claimant incurred medical bills in the following amounts for her physical and occupational therapy.

• 9/15/2015		$601.28
• 9/25/2015	9/29/2015	$543.24
• 10/06/2015		$500.72
• 11/17/2015		$150.02
• 12/04/2015	12/28/2015	$831.02
	TOTAL	$2,626.28

14. The ALJ finds claimant's DHMC treatment providers and any referred providers are claimant's authorized treating providers.

15. The ALJ finds claimant's treatments at DHMC and at any referred providers were reasonably needed to treat, cure, and relieve claimant from the effects of her injury.

16. Claimant testified credibly that her annual salary was $42,000. The ALJ finds that claimant's average weekly wage is $807.69, and her weekly temporary disability rate $538.46.

17. The Division of Workers' Compensation records establish that employer was not insured for workers compensation at the time of claimant's injury. Claimant testified that Mr. Gonzales initially told her employer did have workers' compensation

insurance. However, he did not provide proof of insurance, and eventually admitted that employer did not carry workers' compensation insurance on the date of her injury.

18. The ALJ finds that employer was not insured for workers' compensation on the date Claimant was injured.

19. The Division of Workers' Compensation records establish that employer did not timely report claimant's injury and had failed to report such injury by the date of hearing.

20. The Division of Workers' Compensation records establish that employer did not timely admit or deny claimant's claim and had failed to do so by the date of hearing.

21. Claimant filed her application for hearing on September 6, 2016, seeking penalties, among other things. Because employer assured claimant for at least one month that it had workers' compensation insurance, the ALJ finds that Claimant's filed her request for penalties within one year of when she knew or reasonably should have known of the facts giving rise to possible penalties.

22. The ALJ specifically finds claimant to be a credible witness whose testimony was consistent with records in evidence.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

Claimant has the initial burden to prove by a preponderance of evidence that her condition arose out of and in the course of her employment. Section 8-41-301(1)(c); *Madden v. Mountain West Fabricators*, 977 P.2d 861 (Colo. 1999). Here Claimant has satisfied her burden that she suffered a compensable injury in the course and scope of her employment with employer.

Section 8-42-101(1)(a), C.R.S. provides that employers are liable for authorized medical treatment which is reasonable and necessary to cure or relieve the effects of the industrial injury. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). Thus, employer is liable for all of claimant's treatment at DHMC or at any referred provider all of which the ALJ has found to be reasonable and necessary. Employer is entitled to an offset for any amounts it has previously paid.

Section 8-42-105, C.R.S., provides that in the case of temporary total disability of more than three days in duration, the employee shall receive sixty-six and two-thirds percent of their average weekly wage for the duration of their total disability. The ALJ has found that claimant was temporarily totally disabled for the three days following her injury and for the four days following her surgery. The ALJ has also found claimant's weekly temporary disability rate to be $538.46. Thus, claimant is entitled to $753.84 in temporary total disability benefits.

An employer who has not complied with the insurance provisions of the Act at the time an employee is injured is subject to a fifty percent increase in the compensation and benefits provided in articles forty to forty-seven of the Act. Section 8-43-408(1). Here, the ALJ has found, based on claimant's credible testimony and review of the Division's files, that employer was not in compliance with the insurance provisions of the Act. Therefore, claimant is entitled to increase by fifty percent the amounts of compensation and benefits awarded in this order.

Section 8-43-103(1) of the Act requires employers to notify the division in writing of an injury for which compensation and benefits are payable. Notice is required within ten days after the injury. Here, employer was required to notify the division of claimant's August 23, 2015 injury by September 2, 2015. As found, employer did not timely notify the Division of claimant's injury, and had not notified the division as of the date of the hearing. The ALJ finds and concludes that employer violated section 8-43-103(1) of the Act.

No specific penalty has been provided for violation of section 8-43-103(1), thus the penalty provisions of section 8-43-304 apply. That section provides that an employer who violates a provision of articles 40 through 47 of the Act shall be punished by a fine of not more than $1,000 per day for each such offense. The ALJ has discretion to apportion the fine, in whole or in part, between the aggrieved party and the workers' compensation cash fund. The ALJ found employer failed to timely notify the division in writing of claimant's injury and that its failure to do so continued through the date of hearing. The ALJ assesses a fine of $100 dollars per day from August 26, 2015 through the date of hearing, February 21, 2017, apportioned 100% to claimant.

Employers are required to notify in writing both the division and the injured employee whether liability for a claim is admitted or denied. Section 8-43-203(1)(a), C.R.S. Such notice is required with twenty days after a report of injury should have been filed with the Division. *Id.* Pursuant to subsection (2)(a), if such notice is not filed, the employer may become liable for up to one day's compensation for each day's failure to so notify. Employer was required to notify claimant and the Division whether the claim was admitted or denied by September 22, 2015. Employers' liability is capped at the aggregate amount of three hundred sixty five days' compensation.

Based on the totality of the evidence the ALJ found employer filed neither an admission of liability nor a notice of contest on this claim at the time such were due, and had not done so through the date of the hearing. The purposes of requiring employers to admit or deny liability are to notify the claimant that she is involved in a proceeding with legal ramifications, and to notify the Division of the employer's position so that the Division may exercise its administrative oversight of the claims process. *Smith v. Myron Stratton Home*, 676 P.2d 1196 (Colo. 1984). The ALJ concludes that employer is liable for the aggregate amount of three hundred sixty five days' compensation. As required by section 8-43-203(2)(a), employer shall pay fifty percent of this penalty to claimant and fifty percent to the Subsequent Injury Fund.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's August 23, 2015 injury is compensable.

2. Employer shall pay all medical expenses reasonable, necessary and related to her August 23, 2015, injury specifically all those of Denver Health and their referrals beginning August 23rd, 2015 and continuing until treatment is completed and Claimant is placed at maximum medical improvement by an authorized treating physician. From the date of injury through the date of hearing this amount equaled $15,974.44. This amount is increased by 50% for employer's failure to carry workers' compensation insurance in violation of C.R.S. section 8-43-408(1), resulting in the amount of **$23,961.66**.

3. Employer shall pay Claimant temporary total disability for seven days at the rate of $115.38 per day for a total of $753.84 in temporary total disability benefits. This amount is increased by 50% for employer's failure to carry workers' compensation insurance in violation of C.R.S. section 8-43-408(1), resulting in the amount of **$1,130.76**.

4. In lieu of payment of the above compensation and benefits to Claimant, employer shall:

a. Deposit the sum of **$25,092.42** with the Division of Workers' Compensation, as trustee, to secure the payment of all unpaid compensation and benefits awarded. The check shall be payable to and sent to the Division of Workers' Compensation, Attn: Sue Sobolik, Special Funds Unit, 633 17th St, Suite 900, Denver, CO, 80202, or

b. File a bond in the sum of **$25,092.42** with the Division of Workers' Compensation within ten (10) days of the date of this order:

(1) Signed by two or more responsible sureties who have received prior approval of the Division of Workers' Compensation or

(2) Issued by a surety company authorized to do business in Colorado.

The bond shall guarantee payment of the compensation and benefits awarded.

c. Employer shall notify the Division of Workers' Compensation and Claimant of payments made pursuant to this Order.

d. The filing of any appeal, including a petition for review, shall not relieve Respondent of the obligation to pay the designated sum to the trustee or to file the bond. §8-43-408(2), C.R.S.

Any interest that may accrue on a cash deposit shall be paid to the parties receiving distribution of the principal of the deposit in the same proportion as the principal, unless the agreement or order authorizing distribution of the principal provides otherwise.

5. Employer shall pay claimant **$54,500.00** for violation of section 8-43-103(1), requiring employer to report claimant's injury to the Division.

6. Employer shall pay a penalty for failure to admit or deny liability for a period of 365 days at the rate of one days' compensation for each day, a total of **$42,000**, with 50% paid to Claimant ($21,000) and 50% paid to the Subsequent Injury Fund ($21,000).

7. Employer shall pay claimant interest at the rate of 8% per annum on compensation benefits not paid when due.

8. All other issues including but not limited to, temporary partial disability, permanent partial disability and disfigurement are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 2, 2017

/s/ Kimberly Turnbow
Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Whether Claimant suffered a compensable injury to her neck on August 24, 2016.
- Whether Claimant is entitled to reasonable, necessary, and related medical treatment.
- Whether the surgery performed by Dr. Kimball is reasonable, necessary, and related.
- Whether Claimant is entitled to temporary total disability benefits from August 31, 2016 through January 1, 2017 and May 1, 2017 through May 22, 2017.
- Whether Claimant is at-fault for her wage loss.
- Whether Claimant should be penalized for not reporting her injury in writing pursuant to 8-43-102(1).

STIPULATIONS

The parties stipulated that Claimant's average weekly wage is $461.54.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant was an employee of Planet Cheer. Claimant started working for Planet Cheer on June 1, 2016.
2. Planet Cheer provides cheering and gymnastic training to its students. Claimant worked as a tumbling and cheer coach. Claimant coached Employer's students. In addition to her coaching duties, Claimant also agreed to help Employer with social media and marketing.
3. Claimant's average weekly wage is $461.54.
4. Claimant contends that she injured her neck on August 24, 2016, while working and demonstrating a gymnastic move. Claimant contends the accident caused a herniated disc at C5/6 and necessitated the need for disc replacement surgery.

5. Claimant's job was physically demanding. Among other things, Claimant's job required her to lift and spot students and demonstrate various gymnastic and cheer moves.

6. On August 24, 2016, Claimant, who was 31 years old, was working for the Employer coaching various students.

7. The area in which Claimant was working on August 24, 2016, was under video surveillance. Claimant's Exhibit 20, contains surveillance video of Claimant working. The time stamp on the video is from 8:47.43 until 9:00.37.

8. The video shows Claimant assisting various students with their tumbling exercises. For example, at 8:55.55, Claimant is seen assisting a student with her tumbling exercise and then demonstrating a move in which she is seen flexing and extending her neck. Then, at 8:57.40, the time of the alleged accident, Claimant is seen demonstrating a landing in which Claimant is seen jumping on the trampoline and going backwards and landing on her feet on a thick mat. The incident at 8:57.40 seems insignificant. Claimant, however, credibly testified that the incident at 8:57.40 caused her to feel a pop and crunch in her neck when she landed. Claimant testified that she experienced pain in her neck and shoulders after the incident in which she was demonstrating a landing. According to Claimant "everything locked up." Consistent with Claimant's testimony, the video shows Claimant rubbing her shoulder and neck area about 5 seconds after she landed and walking around the gym. Shortly thereafter, Claimant is seen lying down and appears to be in pain.

9. Respondents' Exhibit DD contains additional surveillance video on the same day. At approximately 9:02.00 Claimant is seen getting some pills out of a drawer at work for her neck pain. Claimant is then seen using a foam roller on her neck. At 9:10.35, Claimant is back in the gym and rubbing the right side of her neck. At 9:11.58, Claimant is seen moving her shoulder and neck in an attempt to loosen up her neck. This additional surveillance supports Claimant's contention that she injured herself at work while demonstrating a landing.

10. Claimant's hearing testimony regarding the mechanism of injury, when combined with the video surveillance, is found to be credible and persuasive.

11. Within minutes of the injury, Claimant verbally reported the incident to the Employer, Amanda Shaw. Ms. Shaw is the owner of Planet Cheer.

12. There is additional surveillance the following day, August 25, 2016, of Claimant working. Claimant does not appear to be as active and fluid as she was before the work accident.

13. On Friday, August 26, 2016, Claimant met with Employer – Ms. Shaw - at Planet Cheer to discuss her work accident and injury. Instead of referring Claimant to a medical provider, Employer – Ms. Shaw - asked Claimant to sign a release ("the Release") and certify that she was physically capable of performing her job as a

cheer and tumbling coach/instructor. (Claimant's Exhibit 3.) The Release also required Claimant to release Employer from any liability for any injury incurred during any squad related activity or any coaching of private lessons. Claimant took the Release, but did not sign it. She merely folded it up and put it away and went back to work.

14. On August 27, 2016, Employer – Ms. Shaw - sent Claimant a text message asking Claimant if she was going to sign the Release by Monday, August 29th 2016. Due to numerous concerns regarding the Release, Claimant did not sign it by Monday, August 29, 2016. One reason Claimant did not sign the Release was because she was injured and the Release required Claimant to certify that she was physically capable of performing her job and Claimant was not able to physically perform her job.

15. On August 29, 2016, after not receiving the Release from Claimant, Employer – Ms. Shaw - decided to terminate Claimant.

16. On August 30, 2016, Claimant was terminated from her employment. Claimant received an email from Employer – Ms. Shaw - with a letter attached regarding her termination. The letter was from the Ms. Shaw. According to the attached letter, Claimant was terminated for the following reasons:

> Your extreme disrespect towards coaches, my athletes and me.
>
> You are very argumentative since being employed by Planet Cheer. You find it necessary to argue in front of the kids and parents. You were verbally reprimanded several times.
>
> You are unwilling to follow the direction of my company and work as a team.
>
> You did not perform the job function of improving our marketing and social media presence with Shannon. Your efforts, if any, were highly ineffective.
>
> You had inappropriate behavior with the athletes.
>
> You spoke negatively to athletes about other coaches and Planet Cheer.
>
> You received several complaints from parents that viewed your poor attitude and behavior.
>
> You had "No Shows" for practice without proper notification.
>
> You took advantage of being a salaried employee and did not take the position seriously.

17. Although Ms. Shaw cited numerous reasons for Claimant's termination, Ms. Shaw never formally wrote Claimant up for any of the reasons set forth in the letter. Ms. Shaw contended she discussed these issues with Claimant and advised her that she might not be able to continue working at Planet Cheer if the behavior continued. Claimant, however, denied the contentions set forth in the August 30, 2016 letter and denied she was warned by Ms. Shaw that she was in jeopardy of losing her employment based on her behavior.

18. There was, however, an ongoing disagreement between Claimant and Ms. Shaw regarding how to spot the gymnasts when they were performing stunts. The exact date this disagreement arose is not clear. But, the disagreement arose during June of 2016. Both Ms. Shaw and Claimant are level 1-5 accredited through the USASF. Claimant thought the spotting method used by Planet Cheer was not consistent with her training and the USASF and was not safe. Therefore, she started teaching the students her spotting method. Employer, however, wanted the students to use her spotting method, which she thought was safe and consistent with the USASF. Using different spotting methods was confusing for the students and increased the likelihood of an accident and injury. Therefore, Ms. Shaw advised Claimant to use Ms. Shaw's method. Claimant, however, continued to use her spotting method. Caitlyn Wyatt, another Planet Cheer employee, also testified that teaching the different spotting techniques was causing problems.

19. Ms. Shaw testified that she also hired Claimant to help market Planet Cheer through social media and other means. Ms. Shaw testified that Claimant failed to effectively work on marketing tasks. She testified that she started looking to replace Claimant around the beginning of July, 2016.

20. This ALJ finds that Claimant and Ms. Shaw did not have a good working relationship. The primary dispute between Ms. Shaw and Claimant arose out of the difference of opinion they had regarding how to spot students when they were performing stunts. This ALJ also finds that another problem Ms. Shaw had with Claimant involved marketing issues. Ms. Shaw expected Claimant to provide more help with marketing. Claimant did underperform in her marketing responsibilities. However, this ALJ finds that the tipping point and reason for Claimant's termination was Claimant's refusal to sign the Release. This ALJ finds Claimant had a reasonable basis to not sign the release. Among other things, the Release required Claimant to certify that she was physically able to perform her job. Claimant, however, had just been injured and was unable to fully perform her job. In addition, Claimant had legitimate questions regarding the legality of the Release. Consequently, Claimant's concerns about signing the release and refusal to sign the release became inextricably intertwined with her work injury and her legitimate questions regarding the legality of the Release. Therefore, this ALJ finds that Claimant's refusal to sign the Release was reasonable.

21. On August 30, 2016, Claimant presented to the emergency room due to ongoing neck pain. As set forth in the medical report, Claimant stated that:

> She is a cheerleading instructor and while spotting one of her students during a trick on the trampoline she turned her head and felt a pulling sensation in her neck with a gradual subsequent development of bilateral muscle soreness that has gotten progressively worse.

Claimant was diagnosed as suffering from a cervical strain and muscle spasm. However, the differential diagnosis included the possibility of a cervical disc herniation.

22. On August 31, 2016, Claimant was evaluated by her primary care physician Dr. Stuart Kassan of Colorado Arthritis Associates. Dr. Kassan follows Claimant for her Lupus. Claimant complained of a fair amount of joint pain and also mentioned that she "twisted her neck at work and was seen in the emergency room." Due to her neck pain, Dr. Kassan ordered a cervical spine MRI.

23. On August 31, 2016, Claimant also completed a Worker's Claim for Compensation. Claimant indicated on the Claim form that just before the accident she was "spotting athletes from trampoline onto landing." She also indicated that the injury occurred when she went to "transfer body weight from mat to tramp, felt pop in neck w/ extreme pain." Claimant also indicated that she immediately reported the injury to Ms. Shaw, her employer.

24. Upon the filing of her Workers' Claim for Compensation, neither Employer nor Insurer provided Claimant a list of medical providers who were willing to treat her alleged work injury. Therefore, Claimant continued treating with Dr. Kassan and Dr. Kassan became an authorized treating physician.

25. As of August 31, 2016, Claimant was unable to perform all functions of her job duties due to her neck injury and associated pain.

26. On September 9, 2016, Employer received written notice of the injury.

27. On September 19, 2016, Claimant underwent an MRI. The MRI showed "degenerative changes, most pronounced at the C5-C6, where a left foraminal disc protrusion superimposed on a disc bulge results in mild-to-moderate left neural foraminal narrowing, with probable minimal mass effect on the left C6 nerve root."

28. On September 20, 2016, Insurer filed a Notice of Contest.

29. Claimant's primary treating physician, Dr. Kassan, referred Claimant to Dr. J. Paul Elliott for a neurosurgical evaluation.

30. On November 11, 2016, Claimant was evaluated by Dr. Elliott. Dr. Elliott's report indicates Claimant:

> [P]resents with a 3 week history of neck pain radiating bilaterally into her upper extremities and extending into her 1^{st}-3^{rd} digits. She reports being on a trampoline while she was spotting someone during cheer practice and states that when she landed she felt pain and crunching in her neck. She reports neck pain radiating towards the base of her skull and into her forehead. She describes her pain as pins and needles and also reports numbness in her upper back muscles.

31. On December 13, 2016, Claimant was again seen by Dr. Elliott, who evaluated Claimant for ongoing neck pain and bilateral upper extremity paresthesias in no specific dermatomal distribution. At that time, Claimant remained without focal motor or sensory deficits or signs of myelpathy. Her x-rays did not demonstrate any instability. He did indicate that he reviewed her MRI which showed a left greater than right C5/6 foraminal stenosis secondary to a disc herniation. Dr. Elliott indicated that if conservative treatment failed to improve her condition, Claimant may be a candidate for a C5/6 disc replacement. This ALJ credits Dr. Elliott's opinion in finding that Claimant suffered from a disc herniation and that Claimant is a candidate for a C5/6 disc replacement should conservative treatment fail to improve her symptoms.

32. On December 14, 2016, Dr. Brian Reiss performed an IME on behalf of Respondents. Dr. Reiss evaluated Claimant and reviewed her medical records as well as the surveillance video. Dr. Riess concluded that based on his review of the video, he did not see any specific activity around the time of the commencement of her symptomatology that would have been sufficient to cause a herniated disc. According to Dr. Reiss, herniated discs can and do occur without any specific trauma. He went on to indicate that "the natural history of the degenerative process oftentimes leads to herniated disks which become symptomatic without any relationship to the activity being performed." He went on to state that in this situation, the patient began having pain and the pain may or may not be related to the herniated disc. He also stated that if the pain is secondary to the herniated disc, then the herniation of the disc probably caused the pain but there was no specific work activity that caused the disc herniation. He concluded that in this case, the patient's herniated disc and subsequent development of pain are probably not related to her work activity. He further stated that he believes "the patient's symptoms are not work-related and therefore treatment of her condition should be considered unrelated to her work." This ALJ does not find Dr. Reiss' opinions to be credible or persuasive in light of Claimant's testimony and the surveillance video.

33. On January 7, 2017, Claimant was again evaluated by Dr. Elliott. According to Dr. Elliott's report, Claimant "reported being on a trampoline while she was

spotting someone during cheer practice and states that when she landed, she felt pain and crunching in her neck." Dr. Elliott diagnosed Claimant as suffering from a cervical disc herniation with radiculopathy. He recommended an epidural steroid injection. Claimant underwent an epidural steroid injection. The injection did not improve her symptoms. This ALJ finds Dr. Elliott's opinion to be credible and persuasive in determining that Claimant suffered a cervical disc herniation with radiculopathy.

34. On January 26, 2017, Claimant was reevaluated by Dr. Elliott. Due to Claimant's failure to improve with conservative treatment and worsening symptoms, he recommended Claimant undergo a C5-6 anterior cervical discectomy and fusion to halt her neurologic decline.

35. On February 2, 2017, Dr. Michael Janssen performed a records review. He addressed whether the need for surgery was reasonable, necessary, and related to the alleged incident at work. Dr. Janssen relied heavily on Dr. Reiss' opinion in which Dr. Reiss, after reviewing the surveillance video of the incident, determined that the mechanism of injury did not seem sufficient enough to cause a cervical disc herniation. Therefore, Dr. Janssen concluded that while the surgery might be reasonable and necessary, the condition was not work related. It should be noted that Dr. Janssen also stated that surgery should be approached with caution since Claimant's anatomical symptoms and findings were not consistent with the MRI findings. This ALJ does not find Dr. Janssen's opinion regarding causation to be credible or persuasive since Dr. Janssen relied up on Dr. Reiss' opinion. In essence, Dr. Janssen deferred to Dr. Reiss regarding causation.

36. On February 3, 2017, Insurer denied authorizing the surgery, stating that the condition for which the surgery was being recommended was not compensable and the condition for which the care is requested in not related to the injury/illness for which they have admitted liability. It should be noted that the Insurer did not admit liability for any condition.

37. On February 22, 2017, Claimant presented to the emergency department due to neck and upper back pain. Claimant stated that she has had chronic pain since a workers' compensation trampoline accident. Claimant stated that she was scheduled for surgery this month but her claim was denied. She complained of pain every day, but stated that her symptoms have been exacerbated over the past two days. Claimant complained of a sharp, burning pain down her arms bilaterally to the elbows. Claimant also complained of experiencing numbness, tingling, and burning in her upper extremities that has become worse over the last few months, but has been present ever since the injury.

38. On March 6, 2017, Dr. Reiss issued a supplemental report after reviewing additional medical records. The records included an x-ray taken in 2016. Dr. Reiss concluded that the x-ray appeared to show an osteophyte at the inferior posterior margin of C5 which gives the appearance of retrolisthesis. Therefore,

he did not think there was significant motion on flexion-extension and no significant retrolisthesis at C5-6. He went on to state that the osteophyte "is indicative of a preexisting degeneration at that level and the bulging seen on the MRI may actually represent spur formation rather than disc protrusion. This also further supports my conclusions that there was a lack of injury from her work incident." This ALJ does not find Dr. Reiss' opinions to be credible or persuasive that Claimant does not have a herniated cervical disc or that she did not suffer an injury at work.

39. Dr. Elliott was not in Claimant's network of providers under her insurance and she had to find another surgeon. Therefore, Dr. Elliott referred Claimant to Dr. Kimball, another surgeon, who was in Claimant's insurance network.

40. On March 30, 2107, Claimant was evaluated by Dr. Kimball. In his report, Dr. Kimball noted that Claimant suffered an injury on a trampoline and was complaining of neck pain that was radiating into both shoulders, left greater than right, and pain and muscle spasm in her neck, left greater than right, as well as twitching in her muscles throughout her left arm and neck. Claimant was also complaining of numbness and generalized weakness in both upper extremities, which was worse in her 1st and 2nd digits bilaterally.

41. Dr. Kimball assessed Claimant as suffering from cervical disc disorder at the C5-C6 level with radiculopathy. He also set forth the following in his assessment regarding Claimant's diagnosis and treatment recommendations:

> [D]isc disruption, disc herniation and failure of disc at C5/6 with mild retrolisthesis at this level with healthy appearing facets, there is no anterolisthesis and I believe this is a result of her disc failure and not due to facet posterior ligamentous complex failure. I believe the retrolisthesis will reduce with disc height restoration. She has maximized conservative Tx, I do not believe she is a good candidate for fusion at her age and her risk of developing ALD is very high requiring additional surgery. She has exhausted conservative mgt. I recommend a C5/6 TDR [total disc replacement] with more constrained device like at PRO Disc C."

42. This ALJ finds Dr. Kimball's opinions to be credible and persuasive in that Claimant suffered a disc herniation at the C5/6 level and that a total disc replacement was reasonable, necessary and related to Claimant's August 24, 2016 work accident and injury.

43. On May 1, 2017, Dr. Kimball performed surgery on Claimant. He performed a disc replacement at the C5-C6 level.

44. On May 18, 2017, approximately 3 weeks after her surgery, Claimant returned to Dr. Kimball and reported a 50-70% improvement in her symptoms. On June 8,

2017, approximately 6 weeks after her surgery, Claimant returned to Dr. Kimball, and reported an approximate 85% improvement in her symptoms. Claimant's marked improvement after the surgery is persuasive that the surgery performed by Dr. Kimball was reasonable, necessary, and related to Claimant's August 24, 2016 work accident and injury.

45. Before the surveillance video was provided to Claimant, Claimant answered discovery regarding how she allegedly got hurt at work. The discovery was sent to Claimant on December 19, 2016. Although her answers are not signed and dated, Claimant admitted to answering them at hearing. Claimant stated that she was injured when:

> On August 24, 2016, I was spotting an athlete at the Planet Cheer Cheerleading Center. The athlete was working on the trampoline. I was on the trampoline itself. After putting this child down I hurt my neck stepping back onto the trampoline. This occurred when the trampoline sank and my neck got hurt. I reported my injury to the owner. I was hurt on a Wednesday and I went to the ER the following Monday, to the best of my recollection."

46. Claimant's first answers to discovery are inconsistent with her testimony at hearing and the surveillance video.

47. Claimant also answered discovery regarding whether she had any prior injuries. Claimant denied having any prior neck injuries. However, during cross examination, it was brought out that Claimant did injure her neck during a snowboarding accident in 2008 and had treated for prior neck problems. As pointed out by Respondents, Claimant was seen by Dr. Joshua Renkin, a neurologist, on May 28, 2008, and on two other occasions, for neck pain and other neurological concerns.

48. At her first visit with Dr. Renkin on May 28, 2008, Claimant complained of falling 2-4 months earlier and hitting her head. She also complained of having a knot on her neck which was painful and that she also had some crunchiness in her neck. However, upon closer inspection of Dr. Renkin's records, it appears that Dr. Renkin was primarily evaluating Claimant for a possible neurological disorder, such as multiple sclerosis. As set forth in his initial report, the primary reason for the evaluation was a concern about an abnormality on her cervical spine MRI and some tingling in her left arm. An MRI was taken and showed a linear hyperintensity at C5-6 of unclear etiology. However, on December 8, 2008, Dr. Renkin evaluated Claimant a third time after performing another MRI. It should be noted that Claimant did complain of having a lot of neck pain at this visit, but she associated the neck pain with spending a lot of time at her computer studying for exams. Dr. Renkin concluded that the repeat MRI was normal and there was nothing more he could do. Therefore, he recommended Claimant treat

her ongoing neck pain conservatively, which included ergonomic adjustment of her computer work and massage therapy.

49. Although Dr. Renkin released Claimant from his care, Claimant did continue having neck pain as set forth in the medical records of her primary treating physician, Dr. Kassan. For example, on June 16, 2009, Claimant complained of having increased cervical spine symptoms over the last 10 days. Due to her complaints, Dr. Kassan ordered a new cervical spine MRI, which was performed on June 24, 2009. Dr. Kassan also referred Claimant to Dr. Chad Hartley, a neurosurgeon. On August 28, 2009, Dr. Kassan noted some tenderness over Claimant's cervical spine. However, he did note that his review of the June 24, 2009 MRI showed no change from the October 24, 2008 MRI. Then, on April 27, 2010, Claimant was again complaining of cervical spine pain and symptoms in one of her hands.

50. On September 16, 2011, Claimant returned to Dr. Kassan. Claimant still complained of paresthesias in her upper extremities. Dr. Kassan noted that another MRI was performed on September 7, 2011 showing mild cervical spondylosis. He went on to state that there was no evidence of nerve or cord compression. He again recommended Claimant see Dr. Chad Hartley, a neurosurgeon. On November 29, 2011, Claimant was again seen by Dr. Kassan. Claimant complained of neck pain, but yet indicated she had not seen Dr. Hartley, the neurosurgeon. On December 11, 2012, Claimant was evaluated by Dr. Kassan and it was noted that she had some paraspinal tenderness of her cervical spine.

51. Claimant testified that she did not schedule an appointment to see Dr. Hartley, the neurosurgeon, because her condition improved.

52. Claimant's first answers to discovery regarding a lack of any prior neck injuries or symptoms were inconsistent with Claimant's medical history. Claimant's medical records demonstrate she had neck symptoms before her work accident.

53. Claimant answered interrogatories again on June 6, 2016. Claimant stated this time that she injured her neck while demonstrating a skill on the trampoline. Claimant also set forth information regarding her prior neck problems as set forth in Dr. Rankin's medical records. These answers were provided after Claimant obtained the surveillance video and Dr. Rankin's records. Therefore, Claimant conformed her answers to be consistent with the evidence that had been obtained which was inconsistent with her initial answers to discovery.

54. Dr. Reiss testified at hearing. Dr. Reiss is a board certified orthopedic surgeon and was qualified as an expert witness. Dr. Reiss testified consistent with his reports. He also testified that most herniated discs occur spontaneously due to degeneration and without a precipitating event. In other words, discs herniate without any cause, other than degeneration due to wear and tear, irrespective of activity. For example, he testified that people can wake up with a herniated disc.

He also testified that a disc can herniate while someone is merely tying their shoe. Dr. Reiss testified that it's not the event of tying one's shoe that causes the disc to herniate, but the degenerative process which causes the disc to herniate at that time. According to Dr. Reiss, there is always pressure on a disc and that, plus degeneration, causes them to herniate. Dr. Reiss also stated that the pain from a herniated does not always correlate with the specific time at which the disc herniates and that the pain close in time to an event does not mean that the event caused the herniation.

55. In this case, Claimant alleges the accident and injury in question occurred at 8:57.40. In this case, Dr. Reiss reviewed the surveillance video. He testified that it was very unlikely that the activity Claimant was performing at 8:57.40 caused the disc to herniate. Dr. Reiss further testified that the activity he observed Claimant engaged in at 8:57.40 would not have placed any additional pressure on Claimant's cervical spine and disc. According to Dr. Reiss, the pressure placed on the disc would have been no more than activities of daily living.

56. He further testified that he did not think the surgery performed by Dr. Kimball was reasonable and necessary to alleviate Claimant's upper extremity problems since they did not follow a C5-6 distribution. He was not convinced that Claimant was suffering from a herniated disc at the C5-C6 level. He also did not think performing the surgery for pain was reasonable and necessary. In essence, Dr. Reiss did not think a cervical disc replacement surgery was warranted for pain complaints which were not accompanied by anatomical weakness which correlated with the MRI findings. In other words, Dr. Reiss did not think that Claimant's pain complaints, without anatomical correlation justified the procedure. However, on cross examination, Dr. Reiss admitted that performing such a procedure for pain alone did not fall below the standard of care in this community. He testified that while he may not perform the surgery based on the findings, it was not below the standard of care to perform the surgery based upon Claimant's pain complaints. In addition, Dr. Reiss refused to consider Claimant's improvement in symptoms after the surgery in rendering his opinion as to whether the surgery was reasonable and necessary.

57. In light of the medical records of Dr. Kimball and Dr. Elliott, combined with Claimant's testimony and the surveillance video, this ALJ does not find Dr. Reiss' opinions to be credible or persuasive.

58. Claimant did not seek treatment for any neck complaints from November 23, 2015 until August 30, 2016.

59. On cross examination, Claimant was asked about the different statements contained in various medical records regarding how she got hurt. For example, the August 30, 2016 emergency room report indicates that Claimant was injured "while spotting one of her students during a trick on the trampoline she turned her head and felt a pulling sensation in her neck with a gradual subsequent development of bilateral muscle soreness that has gotten progressively worse."

Then, the August 31, 2016 medical note of Dr. Kassan indicates Claimant has increased cervical spine symptoms since "twisting at work." Thereafter, on January 7, 2017, Dr. Elliott's medical report indicates Claimant was on a trampoline and while spotting someone, she hurt her neck. Claimant testified that although she consistently described the incident to each medical provider, the words used by each medical provider were not her words, but the words chosen by the medical provider to describe the incident.

60. Caitlyn Wyatt, a current employee of Planet Cheer, testified at hearing. She is a tumbling and cheer coach. She testified that she was working on August 24, 2016 when Claimant alleged she injured her neck. Ms. Wyatt testified that Claimant told her that her neck and back would seize up due to her lupus. She also testified that Claimant did not say that her August 24, 2016 neck problems were caused by work.

ULTIMATE FINDINGS OF FACT

61. This ALJ finds that on August 24, 2016, Claimant injured her neck at work while demonstrating a landing. Claimant's injury included a herniated disc at the C5-C6 level. This ALJ finds that the critical event of demonstrating a landing caused Claimant to suffer a disc herniation at such time and place.

62. Claimant reported her work accident and injury to Employer on August 24, 2016 and August 26, 2016. Claimant also reported her injury in writing on August 31, 2016 when she completed and filed a Workers' Claim for Compensation.

63. The employer received written notice of the injury on September 9, 2016.

64. Claimant's injury necessitated the need for medical treatment.

65. Employer failed to timely provide Claimant a list of medical providers who were willing to treat Claimant for her work related injury. Therefore, the right of selection to select a treating physician passed to Claimant. Claimant selected Dr. Kassan to treat her work related injury. Dr. Kassan then referred Claimant to Dr. Elliott, a surgeon. However, because Dr. Elliott was not in Claimant's personal insurance network, Dr. Elliott referred Claimant to Dr. Kimball who was in Claimant's insurance network. Therefore, Dr. Kassan, Elliott, and Kimball are authorized providers.

66. Claimant's work injury impaired her ability to perform her regular job and obtain employment after she was terminated on August 30, 2016. Therefore, Claimant's wage loss was caused by her injury.

67. Claimant was terminated from her employment on August 30, 2016 because she refused to sign the Release which, among other things, required Claimant to certify that she was physically capable of performing her job. Claimant was unable to physically perform her job because she was injured. Claimant's refusal

to sign the Release was reasonable. Therefore, Claimant was not at-fault for her termination and wage loss.

68. Claimant's injury required surgery in the form of a total disc replacement at the C5-C6 level. The disc replacement surgery performed by Dr. Kimball on May 1, 2017 was reasonable, necessary, and related to Claimant's August 24, 2016 work accident and injury.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979) The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of Claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *Robinson v. Youth Track*, 4-649-298 (ICAO May 15, 2007).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

Claimant was required to prove by a preponderance of the evidence that at the time of the injury she was performing service arising out of and in the course of the employment, and that the injury or occupational disease was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. The question of whether the claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005).

This ALJ is cognizant that Claimant is not a reliable historian. For example, Claimant did not set forth a consistent mechanism of injury in her answers to discovery. In addition, Claimant's medical records do not set forth a consistent mechanism of injury when compared to the surveillance video. However, the inconsistencies can be attributed to a combination of how Claimant described the mechanism of injury each time based on her own memory and the words chosen by each medical provider when they wrote down Claimant's description of the injury. It must be borne in mind that inconsistencies are not uncommon to the adversary process which, of necessity, must rely upon the sometimes contradictory and often incomplete testimony of human observers in attempting to reconstruct the historical facts underlying an event. *See People v. Brassfield*, 652 P.2d 588, (Colo. 1982).

There is, however, surveillance video of Claimant at the instant she contends she was injured. The surveillance video shows Claimant demonstrating a move on the trampoline and landing mat. Within 5 seconds of landing on the mat, Claimant is seen rubbing her neck and shoulder area. Soon thereafter, Claimant is seen laying on the floor and appears to be in pain. In addition to the surveillance, Claimant did testify that upon landing on the mat, she felt the immediate onset of pain in her neck and shoulders and "everything locked up." Claimant's testimony is consistent with the surveillance video. And, although Claimant appears to have conformed her testimony and second

set of answers to discovery to be consistent with the surveillance video, her testimony at hearing regarding how she was injured and what she felt at the time of injury was found to be credible in light of the surveillance video.

This ALJ is also mindful that the incident shown on the surveillance video seems insignificant. Moreover, Dr. Reiss testified that the incident in question did not put any more stress on Claimant's disc than activities of daily living. According to Dr. Reiss, if Claimant has a disc herniation, it was caused by mere degeneration and has nothing to do with work. However, this ALJ did not find Dr. Reiss' testimony to be credible or persuasive in that work had nothing to do with Claimant's neck injury. A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). For example, in *H & H Warehouse v. Vicory, supra,* Claimant had an undetected cancerous growth in his arm. While at work a door was suddenly and unexpectedly opened which startled Claimant and caused him to hastily move his arm. The minor incident resulted in Claimant breaking his humerus. The Court found that "Claimant's fractured humerus resulted from a combination of abnormal motion in response to a startling stimulus, and the pre-existing weakness in the bone resulting from the cancer condition." *H & H Vicory* at 1169. The Court also stated that if "the critical event arises out of employment and 'but for' this event, the injury would not have occurred at such time and place, then the requirements of the Workers' Compensation Act have been met." Id.

This ALJ concludes that Claimant has proven by a preponderance of the evidence that she injured her neck on August 24, 2016 and suffered a herniated disc. Claimant's disc herniation was caused by Claimant demonstrating a landing. This ALJ further concludes that but for Claimant demonstrating the landing, the disc herniation would not have occurred at such time and place. Therefore, Claimant has proven by a preponderance of the evidence that her neck injury and disc herniation was caused by her work activities of demonstrating a landing.

Medical Benefits

General Medical Benefits

Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. C.R.S. § 8-42-101. However, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. C.R.S. § 8-41-301(1)(c); *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000). The evidence must establish the causal connection with reasonable probability, but it need not establish it with reasonable medical

certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 30 Colo. App. 224, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 2993. A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 293 (1951).

This ALJ concludes that Claimant's work accident and injury of August 24, 2016 caused Claimant's C5-6 disc herniation. Due to her disc herniation, Claimant required medical treatment in the form of evaluations, physical therapy, and surgery. Therefore, this ALJ concludes that Claimant has proven by a preponderance of the evidence that she is entitled to medical treatment to treat her neck injury and disc herniation.

Whether Claimant's neck surgery was reasonable, necessary, and related.

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

Claimant underwent conservative treatment in the form of physical therapy and an injection. As noted by Dr. Kimball, despite conservative treatment, Claimant continued having neck pain that was radiating into both shoulders, left greater than right, and pain and muscle spasm in her neck, left greater than right, as well as twitching in her muscles throughout her left arm and neck. Claimant was also complaining of numbness and generalized weakness in both upper extremities, which was worse in her 1st and 2nd digits bilaterally.

Although Claimant's paresthesias did not correlate with the MRI findings, Dr. Kimball, assessed Claimant as suffering from cervical disc disorder at the C5-C6 level with radiculopathy. He also set forth the following in his assessment regarding Claimant's diagnosis and treatment recommendations:

> [D]isc disruption, disc herniation and failure of disc at C5/6 with mild retrolisthesis at this level with healthy appearing facets, there is no anterolisthesis and I believe this is a result of her disc failure and not due to facet posterior ligamentous complex failure. I believe the retrolisthesis will reduce with disc height restoration. She has maximized conservative Tx, I do not believe she is a good candidate for fusion at her age and her risk of developing ALD is very high requiring additional surgery. She has exhausted conservative mgt. I recommend a C5/6 TDR [total disc replacement] with more constrained device like at PRO Disc C."

This ALJ found Dr. Kimball's opinion to be credible and persuasive in that Claimant suffered a disc herniation at the C5/6 level and that a total disc replacement was reasonable and necessary to treat Claimant's symptoms which included pain and paresthesias into her upper extremities.

In addition, on June 8, 2017, approximately 5 weeks after the surgery, Claimant reported an approximate 85% improvement in her symptoms.

Dr. Reiss testified that the neck surgery performed by Dr. Kimball was not reasonable and necessary. Dr. Reiss testified that in his opinion, a disc replacement surgery is not reasonable and necessary in Claimant's case because Claimant's complaints did not correlate with her MRI findings. In addition, Dr. Reiss testified that the surgery was being recommended to primarily to treat Claimant's neck pain and that in his opinion a disc replacement surgery is not reasonable to treat neck pain. Dr. Reiss was asked about Claimant's improvement in symptoms and whether that provided additional evidence to support Claimant's claim that the surgery was reasonable and necessary. Dr. Reiss was unwilling to use the post operative evidence of Claimant's improvement in rendering his opinion as to whether the surgery was reasonable and necessary. Consequently, Dr. Reiss' opinion was not found to be credible or persuasive by this ALJ.

Therefore, this ALJ concludes that Claimant has proven by a preponderance of the evidence that the neck surgery performed by Dr. Kimball on May 1, 2017, which consisted of a C5/6 total disc replacement was reasonable, necessary, and related to Claimant's August 24, 2016 work accident and injury.

Authorized Providers

Authorization to provide medical treatment refers to a medical provider's legal authority to provide medical treatment to Claimant with the expectation that the insurer will compensate the provider for the services rendered. *Bunch v. Industrial Claim Appeals Office,* 148 P.3d 381 (Colo. App. 2006); *One Hour Cleaners v. Industrial Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995).

Section 8-43-404(5)(a)(I)(A), applicable to this injury and claim for benefits, provides that:

> In all cases of injury, the employer or insurer shall provide a list of at least four physicians or four corporate medical providers or at least two physicians and two corporate medical providers, where available, in the first instance, from which list an injured employee may select the physician who attends said injured employee.

The statute further provides that if "the services of a physician are not tendered at the time of injury, the employee shall have the right to select a physician or chiropractor."

This statute affords the employer the right to designate at least four physicians and/or corporate providers that are deemed authorized to provide medical treatment. Consistent with the version of § 8-43-404(5)(a) that was amended in 1997, the current version provides that the employer's right to designate the authorized providers may be lost and the right of selection passed to the claimant if medical services are not tendered "at the time of injury." *See Rogers v. Industrial Claim Appeals Office,* 746 P.2d 565 (Colo. App. 1987).

The employer's obligation to appoint an ATP arises when it has some knowledge of the accompanying facts connecting an injury to the employment such that a reasonably conscientious manager would recognize the case might result in a claim for compensation. *Bunch v. Industrial Claim Appeals Office,* 148 P.3d 381 (Colo. App. 2006). Medical treatment that a claimant receives prior to the time the employer is provided with sufficient knowledge of a potential claim for compensation is not authorized; therefore, such treatment is not compensable. *Bunch v. Industrial Claim Appeals Office, supra*.

In this case, Claimant advised Employer, Amanda Shaw, on the day of the accident and on August 26, 2016, that she hurt her neck while working. Ms. Shaw, as a reasonably conscientious manager, should have recognized that the August 24, 2016 incident might result in a claim for compensation. In fact, after the incident, on August 26, 2016, Employer wanted Claimant to sign a Release indicating Claimant was physically capable of performing her job. In addition, Claimant filed a Workers' Claim for Compensation. Upon filing a Claim, neither Employer nor Insurer provided Claimant a list of medical providers. Under these circumstances, this ALJ finds that Employer was provided notice of the injury and did not designate any medical providers. Therefore, this ALJ finds that the right of selection passed to Claimant.

Claimant went to her personal physician, Dr. Kassan, to treat her neck complaints. Therefore, Dr. Kassan became Claimant's authorized treating physician. Dr. Kassan referred Claimant to Dr. Elliott for a neurosurgical evaluation. Therefore, Dr. Elliott became authorized. Dr. Elliott, however, was not in Claimant's network of providers. Therefore, Dr. Elliott referred Claimant to Dr. Kimball. Thus, Dr. Kimball became an authorized provider. Therefore, Claimant has proven by a preponderance of the evidence that Drs. Kassan, Elliott, and Kimball are authorized providers.

Temporary Total Disability Benefits.

Whether Claimant is entitled to TTD

To prove entitlement to TTD benefits, Claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that she left work as a result of the disability, and that the disability resulted in an actual wage loss. *Anderson v. Longmont Toyota*, 102 P.3d 323 (Colo. 2004); *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office*, 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S., requires Claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by Claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co*., 964 P.2d 595 (Colo. App. 1998). TTD benefits ordinarily continue until one of the occurrences listed in § 8-42-105(3), C.R.S.; *City of Colorado Springs v. Industrial Claim Appeals Office, supra.*

The existence of disability presents a question of fact for the ALJ. There is no requirement that the claimant produce evidence of medical restrictions imposed by an ATP, or by any other physician. Rather, lay evidence alone may be sufficient to establish disability. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997).

Claimant is requesting temporary total disability (TTD) benefits from August 31, 2016, when she completed her Workers' Claim for Compensation, through January 1, 2017, when she returned to employment. Claimant is also requesting TTD from May 1, 2017, when she underwent surgery, through May 22, 2017, when she returned to employment.

In this case, Claimant's job was physically demanding. Claimant's job required her to lift and spot students and demonstrate various cheer and gymnastic moves. Claimant's injury, which includes a cervical herniated disc, prevented Claimant from performing her regular job duties. Claimant was terminated from her employment on August 30, 2016. Claimant's injury prevented her from performing her regular job duties and impaired her ability to find replacement employment. Therefore, Claimant has proven by a preponderance of the evidence that she is entitled to temporary total disability benefits.

Claimant is entitled to TTD from August 31, 2016, the day after she was terminated and the day she completed her Workers' Claim for Compensation through January 1, 2017, the date Claimant found replacement employment. Claimant is also entitled to TTD from May 1, 2017, the date she underwent neck surgery, until May 22, 2017, the date she returned to employment.

Whether claimant is at-fault for her wage loss.

Section 8-42-103(1)(g), C.R.S., and § 8-42-105(4)(a), C.R.S., provide that if a temporarily disabled employee "is responsible for termination of employment, the resulting wage loss shall not be attributable to the on-the-job injury." Because these statutes provide a defense to an otherwise valid claim for TTD benefits, the respondents shoulder the burden of proof by a preponderance of the evidence to establish each element of the defense. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129 (Colo. App. 2008); *Brinsfield v. Excel Corp*., W.C. No. 4-551-844 (I.C.A.O. July 18, 2003). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

In Colorado Springs Disposal v. Industrial Claim Appeals Office, 58 P.3d 1061 (Colo. App. 2002), the court held the term "responsible" as used in the termination statutes reintroduces the concept of fault as it was understood prior to the Supreme Court's decision in *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Consequently, the concept of fault used in the unemployment insurance context is instructive. Fault requires a volitional act or the exercise of some control in light of the totality of the circumstances. *Padilla v. Digital Equipment Corp*., 902 P.2d 414 (Colo. App. 1994), opinion after remand, 908 P.2d 1185 (Colo. App. 1995); Brinsfield v. Excel Corp., supra.

Violation of an employer's policy does not necessarily establish the claimant acted volitionally with respect to a discharge from employment. *Gonzales v. Industrial Commission*, 740 P.2d 999 (Colo. 1987). However, a claimant may act volitionally if he is aware of what the employer requires and deliberately fails to perform accordingly. *Gilmore v. Industrial Claim Appeals Office*, *supra*. This is true even if the claimant is not specifically warned that failure to comply with the employer's expectations may result in termination. *See Pabst v. Industrial Claim Appeals Office*, 833 P.2d 64 (Colo. App. 1992). Ultimately, the question of whether the claimant was responsible for the termination is one of fact for determination by the ALJ. *Gilmore v. Industrial Claim Appeals Office*, *supra*.

In this case, Employer – Ms. Shaw - and Claimant did not have a good working relationship. There was an ongoing dispute between Ms. Shaw and Claimant regarding the spotting technique Claimant was teaching the students. However, once Claimant was injured, Employer wanted Claimant to sign a Release which indicated Claimant could physically perform her job. Once Claimant refused to sign the Release, Employer terminated Claimant. This ALJ found that the tipping point for Claimant's termination was Claimant's refusal to sign the Release. This ALJ, however, determined that Claimant's refusal to sign the Release was reasonable. Therefore, Claimant is not at-fault for her termination and subsequent wage loss.

Penalty for Late Reporting

The respondents seek a penalty against the claimant because the claimant failed timely to report the injury in writing as required by § 8-43-102(1)(a), C.R.S.

Section 8-43-102(1)(a) provides that an employee that sustains an injury from an accident "shall notify the said employee's employer in writing of the injury within four days of the occurrence of the injury." If the employee fails to report the injury in writing "said employee may lose up to one day's compensation for each day's failure to so report." Because the statute uses the word "may," imposition of a penalty for late reporting is left to the discretion of the ALJ. *LeFou v. Waste Management*, W.C. No. 4-519-354 (I.C.A.O. March 6, 2003).

In this case, Claimant advised Employer she was hurt on August 24, 2016, the date of the accident. In addition, Claimant completed a Workers' Claim for Compensation on August 31, 2016. Although the date the Workers' Claim for Compensation was filed is not clear from the record, it appears it was filed close in time to when it was completed since Respondents filed a Notice of Contest on September 20, 2016. Employer acknowledges receipt of the Workers' Claim for Compensation on September 9, 2016. This ALJ concludes that the delay in reporting the injury in writing did not prejudice Respondents. For example, it did not extend Claimant's period of disability benefits since Employer knew about the injury the day it happened. Therefore, based on the circumstances of this case, this ALJ concludes that any delay in reporting the injury in writing does not warrant the imposition of a penalty in this case.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant suffered a compensable injury to her neck on August 24, 2016.

2. Respondents shall provide to Claimant reasonable and necessary medical treatment which is related to the August 24, 2016 work accident.

3. Drs. Kassan, Elliott, and Kimball are authorized medical providers.

4. The neck surgery performed by Dr. Kimball was reasonable, necessary, and related to Claimant's industrial accident and injury. Respondents shall pay for Claimant's neck surgery pursuant to the Colorado Workers' Compensation Medical Fee Schedule.

5. Respondents shall pay Claimant TTD from August 31, 2016 through January 1, 2017 and from May 1, 2017 through May 22, 2017 at the rate

of $307.69 per week based on her stipulated average weekly wage of $461.54.

6. Respondents request for a late reporting penalty pursuant to Section 8-43-102(1)(a) is denied.

7. Insurer shall pay Claimant interest at the rate of 8% per annum on compensation benefits not paid when due.

8. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 1, 2017

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that he suffered a compensable lower back injury during the course and scope of his employment with Employer on September 11, 2016.

2. Whether Claimant has proven by a preponderance of the evidence that he is entitled to receive reasonable, necessary and causally related medical benefits for his industrial lower back injury.

3. Whether Claimant has established by a preponderance of the evidence that he is entitled to receive Temporary Total Disability (TTD) and Temporary Partial Disability (TPD) benefits for the period September 12, 2016 until terminated by statute.

4. A determination of Claimant's Average Weekly Wage (AWW).

FINDINGS OF FACT

1. Claimant is a 20 year old male who worked for Employer as a Night Stocker. His job duties involved unloading freight and stocking shelves. Claimant worked the night shift for approximately 30 hours each week.

2. Claimant initially earned $12.00 per hour plus a $2.00 per hour bonus for working the night shift or a total of $14.00 each hour. He earned gross wages in the amount of $14,801.28 for the 253 days or 36.14 weeks from January 1, 2016 through his last full pay period ending on September 10, 2016.. Dividing the gross wages by 36.14 weeks or $14,801.28/36.14 equals an AWW of $409.55. However, on November 6, 2016 Claimant received a raise to $12.75 per hour plus the $2.00 per hour bonus for working the night shift. By April 23, 2017 Claimant received a raise to $13.09 per hour plus the $2.00 per hour bonus for a total of $15.09 each hour. Reviewing Claimant's wage records and considering his raises yields an AWW of $518.57. An AWW of $518.57 constitutes a fair approximation of Claimant's wage loss and diminished earning capacity.

3. On September 11, 2016 Claimant was working in an aisle of Employer's retail store to stock merchandise. Some of the items he stocked were in boxes and other items were placed onto three-wheeled industrial carts by warehouse employees and pushed or placed into the aisles of the store. Claimant testified that around 12:00 a.m. he was stocking a shelf with merchandise. As he was straightening up he struck his back on one of the fully loaded industrial carts. Claimant believed that the cart likely rolled up behind him because he had not noticed the cart when he began stocking the

lowest shelf. However, Claimant was uncertain whether the cart was rolling or stationary when he struck his back.

4. Claimant's co-worker Taren Lutes was stocking shelves with Claimant on September 11, 2016. He was approximately four feet away from Claimant. Mr. Lutes explained that Claimant straightened up and struck his lower back on the front bar of the industrial cart. Although he was uncertain whether the cart was stationary or moving at the time of the impact, he remarked that the collision was strong enough to raise the front wheels of the cart approximately three to four inches off the ground. Mr. Lutes noted that Claimant cursed loudly when he struck his back on the cart.

5. Flow Team Lead and Claimant's supervisor Jon Kisch testified that he was working in the same aisle as Claimant and Mr. Lutes on September 11, 2016. Mr. Kisch explained that the industrial cart was already in the aisle when he began stocking shelves. He remarked that, although he was working only about seven feet away from Claimant, he did not hear the approximately 100 pound cart strike the floor during the incident. He also did not hear Claimant curse in pain after the accident. Mr. Kisch did not directly witness the incident and did not know Claimant had been injured until Mr. Lutes stated "[Claimant just hit his back on the cart. Looks like he's hurt."

6. Claimant explained that after the accident he suffered moderate back pain but completed his work shift. However, his pain worsened over the next several days and he missed scheduled work shifts because of his back injury. Claimant attempted to return to work on September 14, 2016 but has since been unable to return to full duty employment.

7. On September 16, 2016 Claimant visited the Boulder Community Hospital Emergency Room for an evaluation. Claimant reported that he was hit by a shopping cart in his lower back two days earlier. He was assessed with "back pain, back contusion" and received Motrin for his pain.

8. Claimant returned to the Boulder Community Hospital Emergency Room on September 17, 2016. He reported that he was struck in the buttocks area by a rolling shopping cart while bending over in a parking lot one day earlier. The medical record reflects that Claimant had "a minor abrasion to his right hip, no contusion or deformity in the sacral area."

9. Claimant recounted that he had always engaged in a number of outdoor activities including soccer, hiking, tennis, snowboarding and basketball. He had suffered several lower back injuries while participating in his physical activities, but they had all resolved by the time of the September 11, 2016 incident. The prior lower back incidents occurred in 2009, 2012 and 2013. Claimant visited a physician or chiropractor for treatment after each of the injuries and received pain medication for about six months after one of the accidents. Nevertheless, he returned to full activity and did not have any back problems for about three years prior to the September 11, 2016 lower back injury.

10. Claimant reported his lower back injury to Employer and was referred to Concentra Medical Centers for treatment. On September 28, 2016 Claimant underwent a lower back MRI. The MRI revealed a shallow right disc protrusion at L3-L4 and minor disc degeneration with minimal broad-based posterior disc protrusion at L4-L5.

11. On September 29, 2016 Claimant visited Concentra for treatment. A physical examination revealed tenderness and muscle spasms in his lower back area. Claimant was limited to working four hours each day, no lifting in excess of 20 pounds on an occasional basis and sitting 50% of the time. Concentra referred Claimant to John Sacha, M.D. for additional evaluation and treatment.

12. On October 10, 2016 Claimant visited Dr. Sacha for an examination. Claimant reported that he had been struck in the back by a rolling metal cart at work. After a physical examination Dr. Sacha diagnosed Claimant with lumbosacral radiculopathy. He recommended "bilateral L5 and S1 transforaminal epidural injections/spinal nerve blocks. This will be diagnostic and therapeutic." Dr. Sacha renewed Claimant's Tramadol prescription, began Lyrica and discontinued Naproxen.

13. On November 9, 2016 Claimant returned to Dr. Sacha for an evaluation. Dr. Sacha noted that his request for an epidural steroid injection had been denied. He commented that Claimant "was a good candidate for the procedure especially based on having radicular findings that corresponded to the findings on his MRI which corresponded to his physical examination."

14. On January 18, 2016 Dr. Sacha appealed the denial of his request for an epidural steroid injection. He detailed that Claimant's physical examination was consistent with radicular pain. On January 31, 2017 Insurer again denied Dr. Sacha's request for bilateral L5 and S1 epidural steroid injections. The denial was based on non-medical reasons that included a failure to demonstrate compensability and an untimely appeal.

15. On March 23, 2017 Claimant underwent an independent medical examination with John R. Burris, M.D. Dr. Burris also examined the exact type of cart involved in the September 11, 2016 incident. He concluded that the September 11, 2016 event did not cause Claimant any disability or need for medical treatment.

16. Based on his experience and review of the medical records Dr. Burris determined that the forces involved from the cart rolling and hitting Claimant were insufficient to cause bodily harm. He explained that there was no way for a cart rolling on a flat surface to build up sufficient velocity to generate the type of energy that would be expected to cause damage to bodily tissues. He further explained that there was a "push bar" going across the front of the cart and that in a collision the force would be distributed across the surface that was contacted. He noted for example that a sharp object causes a different effect than a blunt object with the same amount of force. Here, the bar would have distributed the force across a much broader area so there was less likelihood of a potential injury.

17. In addressing the scenario in which Claimant squatted, straightened up and struck the stationary cart, Dr. Burris explained that the forces were insufficient to cause a need for medical treatment. He specifically detailed that, if Claimant was as close to the cart as noted by the witnesses, the broad bar that he struck would have distributed the forces and was unlikely to cause damage.

18. On April 12, 2017 Dr. Sacha administered a bilateral L5-S1 epidural steroid injection with nerve blocks. The procedure was paid for through Claimant's private health insurance. At the conclusion of the injection Dr. Sacha remarked that Claimant had obtained greater than 90% relief from pain and thus demonstrated a diagnostic response.

19. On May 3, 2017 Dr. Sacha authored a letter explaining that Claimant's lower back symptoms were caused by the September 11, 2016 industrial accident. He remarked that Claimant's lower back and leg complaints had been consistent to all medical providers. Dr. Sacha commented that Claimant suffered a specific injury with trauma to his lower back. There were witnesses to the incident and the forces were so strong that when the cart struck him the wheels rolled up off the ground. He detailed that Claimant has exhibited consistent lower back and leg pain with no non-physiologic behaviors. Dr. Sacha summarized that all of the data, including Claimant's injury report, examination findings, consistency of symptoms and lack of treatment for back pain over the prior two years, suggested that Claimant suffered a compensable lower back injury on September 11, 2016.

20. On May 16, 2017 Claimant underwent an independent medical examination with John S. Hughes, M.D. Dr. Hughes also testified at the hearing in this matter. He diagnosed Claimant with a lumbar spine strain/sprain that had occurred on September 11, 2016. Claimant developed radicular lower back pain that had improved with epidural steroid injections. Dr. Hughes commented that Claimant simply presented with a "straightforward history of work-related lumbar spine injury with the development of bilateral radiculitis." He agreed with Dr. Sacha that Claimant had suffered a compensable lower back injury while working for Employer on September 11, 2016. He disagreed with Dr. Burris that the forces and mechanism of injury were insufficient to cause bodily harm. Dr. Hughes commented that Claimant had a "long slender torso that I believe increases his vulnerability to lumbar spine injury. His responses to treatment have been consistent with a radicular pain generator and I believe he is tracking toward a full functional recovery."

21. Dr. Burris testified at the hearing in this matter. He is a Board Certified expert in occupational medicine and is also Level II accredited by the Division of Workers' Compensation. Dr. Burris possesses both bachelor's and master's of science degrees in mechanical engineering and previously worked as a senior engineer. He was accepted as an expert in both occupational medicine and mechanical engineering.

22. Dr. Burris maintained that Claimant did not suffer a compensable industrial injury or require medical treatment as a result of a September 11, 2016 accident at work. He reiterated that the forces involved from the cart rolling and hitting Claimant

were insufficient to cause an industrial lower back injury. Dr. Burris disagreed with Dr. Sacha's causation opinion because it was predicated on the assumption that, "when the cart hit [Claimant] in the back, the back wheels rolled up off the ground." He remarked that there was simply insufficient force during the incident to lift an approximately 100 pound cart off the ground. Furthermore, Dr. Burris disagreed with Dr. Hughes' causation analysis because there was insufficient force from striking the cart to cause Claimant's lumbar spine injury. Accordingly, Dr. Burris summarized that Claimant did not suffer an injury or require any medical treatment as a result of the September 11, 2016 work incident.

23. Claimant has demonstrated that it is more probably true than not that he suffered a compensable lower back injury during the course and scope of his employment with Employer on September 11, 2016. Claimant explained that, while stocking shelves with merchandise, he straightened up and struck his back on a fully loaded industrial cart. Co-worker Mr. Lutes corroborated Claimant's account of the accident and explained that Claimant straightened up and struck his lower back on the front bar of the industrial cart. Although there is some discrepancy in the medical records about the precise details of the accident and Claimant and Mr. Lutes were uncertain whether the cart was stationary or moving, the record reflects that Claimant injured his lower back when he contacted the industrial cart on September 11, 2016.

24. The medical evidence reflects that Claimant suffered an industrial lower back injury while working for Employer on September 11, 2016. Dr. Sacha persuasively explained that Claimant's lower back symptoms were caused by the September 11, 2016 industrial accident. He remarked that Claimant's lower back and leg complaints had been consistent to all medical providers. Dr. Sacha commented that Claimant suffered a specific injury with trauma to his lower back. He detailed that Claimant has exhibited consistent lower back and leg pain with no non-physiologic behaviors. Dr. Sacha summarized that all of the data, including Claimant's injury report, examination findings, consistency of symptoms and lack of treatment for back pain over the prior two years, suggested that Claimant suffered a compensable lower back injury on September 11, 2016. Furthermore, Dr. Hughes commented that Claimant simply presented with a "straightforward history of work-related lumbar spine injury with the development of bilateral radiculitis." Dr. Hughes agreed with Dr. Sacha that Claimant had suffered a compensable lower back injury while working for Employer on September 11, 2016.

25. In contrast, Dr. Burris maintained that Claimant did not suffer a compensable industrial injury or require medical treatment as a result of a September 11, 2016 accident at work. Based on his expertise in mechanical engineering Dr. Burris determined that the forces involved from the cart striking Claimant were insufficient to cause bodily harm. He explained that there was no way for a cart rolling on a flat surface to build up sufficient velocity to generate the type of energy that would cause damage to bodily tissues. He further explained that there was a "push bar" going across the front of the cart and in a collision the force would be distributed across the surface that was contacted. In addressing the scenario in which Claimant squatted, straightened up and struck the stationary cart, Dr. Burris explained that the forces were

insufficient to cause a need for medical treatment. He specifically detailed that, if Claimant was as close to the cart as noted by the witnesses, the broad bar that he struck would have distributed the forces.

26. Despite Dr. Burris' opinion, the medical records and persuasive opinions of Drs. Sacha and Hughes demonstrate that Claimant suffered a compensable lower back injury when he made contact with the industrial cart on September 11, 2016. Specifically, Dr. Hughes disagreed with Dr. Burris that the forces and mechanism of injury were insufficient to cause bodily harm. He commented that Claimant had a long slender torso that increased his vulnerability to a lumbar spine injury. Dr. Hughes remarked that Claimant's responses to treatment have been consistent with a radicular pain generator. Accordingly, Claimant has demonstrated that it is more probably true than not that the September 11, 2016 industrial accident aggravated, accelerated or combined with his pre-existing lower back condition to produce a need for medical treatment.

27. Claimant has proven that it is more probably true than not that he is entitled to receive reasonable, necessary and causally related medical benefits for his industrial lower back injury. Claimant twice sought medical treatment for lower back symptoms at the Boulder Community Hospital Emergency Room within one week of the accident. He subsequently reported his lower back injury to Employer and was directed to Concentra for treatment. Claimant received authorized medical care through Concentra and Dr. Sacha. Although Respondent denied Dr. Sacha's request for an epidural steroid injection, he administered a bilateral L5-S1 epidural steroid injection with nerve blocks on April 12, 2017. The procedure was paid for through Claimant's private health insurance. At the conclusion of the injection Dr. Sacha remarked that Claimant had obtained greater that 90% relief from pain and thus demonstrated a diagnostic response. Based on the persuasive medical records and Claimant's testimony, Claimant is entitled to receive reasonable, necessary and causally related medical benefits to cure or relieve the effects of his September 11, 2016 lower back injury. Respondent is thus financially responsible for Claimant's lower back medical treatment including the epidural steroid injection from Dr. Sacha.

28. Claimant has established that it is more probably true than not that he is entitled to receive TTD and TPD benefits for the period September 12, 2016 until terminated by statute. Claimant explained that he attempted to return to work on September 14, 2016 but has since been unable to return to full duty employment. On September 29, 2016 Claimant received restrictions that limited him to working four hours each day, lifting no more than 20 pounds on an occasional basis and sitting 50% of the time. Because Claimant has not reached Maximum Medical Improvement (MMI) he is entitled to receive TTD and TPD benefits for the period September 12, 2016 until terminated by statute.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Compensability

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAP, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

7. As found, Claimant has demonstrated by a preponderance of the evidence that he suffered a compensable lower back injury during the course and scope of his employment with Employer on September 11, 2016. Claimant explained that, while stocking shelves with merchandise, he straightened up and struck his back on a fully loaded industrial cart. Co-worker Mr. Lutes corroborated Claimant's account of the accident and explained that Claimant straightened up and struck his lower back on the front bar of the industrial cart. Although there is some discrepancy in the medical records about the precise details of the accident and Claimant and Mr. Lutes were uncertain whether the cart was stationary or moving, the record reflects that Claimant injured his lower back when he contacted the industrial cart on September 11, 2016.

8. As found, the medical evidence reflects that Claimant suffered an industrial lower back injury while working for Employer on September 11, 2016. Dr. Sacha persuasively explained that Claimant's lower back symptoms were caused by the September 11, 2016 industrial accident. He remarked that Claimant's lower back and leg complaints had been consistent to all medical providers. Dr. Sacha commented that Claimant suffered a specific injury with trauma to his lower back. He detailed that Claimant has exhibited consistent lower back and leg pain with no non-physiologic behaviors. Dr. Sacha summarized that all of the data, including Claimant's injury report, examination findings, consistency of symptoms and lack of treatment for back pain over the prior two years, suggested that Claimant suffered a compensable lower back injury on September 11, 2016. Furthermore, Dr. Hughes commented that Claimant simply presented with a "straightforward history of work-related lumbar spine injury with the development of bilateral radiculitis." Dr. Hughes agreed with Dr. Sacha that Claimant had suffered a compensable lower back injury while working for Employer on September 11, 2016.

9. As found, in contrast, Dr. Burris maintained that Claimant did not suffer a compensable industrial injury or require medical treatment as a result of a September 11, 2016 accident at work. Based on his expertise in mechanical engineering Dr. Burris determined that the forces involved from the cart striking Claimant were insufficient to cause bodily harm. He explained that there was no way for a cart rolling on a flat surface to build up sufficient velocity to generate the type of energy that would cause damage to bodily tissues. He further explained that there was a "push bar" going

across the front of the cart and in a collision the force would be distributed across the surface that was contacted. In addressing the scenario in which Claimant squatted, straightened up and struck the stationary cart, Dr. Burris explained that the forces were insufficient to cause a need for medical treatment. He specifically detailed that, if Claimant was as close to the cart as noted by the witnesses, the broad bar that he struck would have distributed the forces.

10. As found, despite Dr. Burris' opinion, the medical records and persuasive opinions of Drs. Sacha and Hughes demonstrate that Claimant suffered a compensable lower back injury when he made contact with the industrial cart on September 11, 2016. Specifically, Dr. Hughes disagreed with Dr. Burris that the forces and mechanism of injury were insufficient to cause bodily harm. He commented that Claimant had a long slender torso that increased his vulnerability to a lumbar spine injury. Dr. Hughes remarked that Claimant's responses to treatment have been consistent with a radicular pain generator. Accordingly, Claimant has demonstrated that it is more probably true than not that the September 11, 2016 industrial accident aggravated, accelerated or combined with his pre-existing lower back condition to produce a need for medical treatment.

Medical Benefits

11. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAP, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAP, Nov. 13, 2000).

12. Authorization to provide medical treatment refers to a medical provider's legal authority to treat the claimant with the expectation that the insurer will compensate the provider. *Bunch v. Industrial Claim Appeals Office,* 148 P.3d 381, 383 (Colo. App. 2006); *One Hour Cleaners v. Industrial Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). Authorized providers include those to whom the employer directly refers the claimant and those to whom an ATP refers the claimant in the normal progression of authorized treatment. *Town of Ignacio v. Industrial Claim Appeals Office,* 70 P.3d 513 (Colo. App. 2002); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). Whether an ATP has made a referral in the normal progression of authorized treatment is a question of fact for the ALJ. *Suetrack USA v. Industrial Claim Appeals Office,* 902 P.2d 854 (Colo. App. 1995).

13. As found, Claimant has proven by a preponderance of the evidence that he is entitled to receive reasonable, necessary and causally related medical benefits for his industrial lower back injury. Claimant twice sought medical treatment for lower back

symptoms at the Boulder Community Hospital Emergency Room within one week of the accident. He subsequently reported his lower back injury to Employer and was directed to Concentra for treatment. Claimant received authorized medical care through Concentra and Dr. Sacha. Although Respondent denied Dr. Sacha's request for an epidural steroid injection, he administered a bilateral L5-S1 epidural steroid injection with nerve blocks on April 12, 2017. The procedure was paid for through Claimant's private health insurance. At the conclusion of the injection Dr. Sacha remarked that Claimant had obtained greater that 90% relief from pain and thus demonstrated a diagnostic response. Based on the persuasive medical records and Claimant's testimony, Claimant is entitled to receive reasonable, necessary and causally related medical benefits to cure or relieve the effects of his September 11, 2016 lower back injury. Respondent is thus financially responsible for Claimant's lower back medical treatment including the epidural steroid injection from Dr. Sacha.

Temporary Total/Partial Disability Benefits

14. Section 8-42-103(1), C.R.S. requires a claimant seeking temporary disability benefits to establish a causal connection between the industrial injury and subsequent wage loss. *Champion Auto Body v. Industrial Claim Appeals Office*, 950 P.2d 671 (Colo. App. 1997). To demonstrate entitlement to TTD benefits a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability and the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The term "disability," connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by the claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). A claimant suffers from an impairment of earning capacity when he has a complete inability to work or there are restrictions that impair his ability to effectively and properly perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

15. As found, Claimant has established by a preponderance of the evidence that he is entitled to receive TTD and TPD benefits for the period September 12, 2016 until terminated by statute. Claimant explained that he attempted to return to work on September 14, 2016 but has since been unable to return to full duty employment. On September 29, 2016 Claimant received restrictions that limited him to working four hours each day, lifting no more than 20 pounds on an occasional basis and sitting 50% of the time. Because Claimant has not reached Maximum Medical Improvement (MMI)

he is entitled to receive TTD and TPD benefits for the period September 12, 2016 until terminated by statute.

Average Weekly Wage

16. Section 8-42-102(2), C.R.S. requires the Judge to determine a claimant's AWW based on his earnings at the time of injury. The Judge must calculate the money rate at which services are paid to the claimant under the contract of hire in force at the time of injury. *Pizza Hut v. ICAO,* 18 P.3d 867, 869 (Colo. App. 2001). However, §8-42-102(3), C.R.S. authorizes a Judge to exercise discretionary authority to calculate an AWW in another manner if the prescribed methods will not fairly calculate the AWW based on the particular circumstances. *Campbell v. IBM Corp.,* 867 P.2d 77, 82 (Colo. App. 1993). The overall objective in calculating an AWW is to arrive at a fair approximation of a claimant's wage loss and diminished earning capacity. *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO May 7, 1997). Therefore, §8-42-102(3), C.R.S. grants an ALJ substantial discretion to modify the AWW if the statutorily prescribed method will not fairly compute a claimant's wages based on the particular circumstances of the case. *In Re Broomfield,* W.C. No. 4-651-471 (ICAP, Mar. 5, 2007). As found, An AWW of $518.57 constitutes a fair approximation of Claimant's wage loss and diminished earning capacity.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant suffered a compensable lower back injury on September 11, 2016 while working for Employer.

2. Claimant shall receive reasonable, necessary and related medical benefits designed to cure and relieve the effects of his September 11, 2016 industrial injury.

3. Claimant shall receive TTD and TPD benefits for the period September 12, 2016 until terminated by statute.

4. Claimant earned an AWW of $518.57.

5. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge;

and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

1. Did Respondent overcome the DIME's determination that Claimant is not at MMI by clear and convincing evidence?

2. Did Claimant prove by a preponderance of the evidence that he is entitled to a second surgical evaluation?

3. If Respondents overcome the DIME, did Claimant prove by a preponderance of the evidence that he has 11% upper extremity impairment?

FINDINGS OF FACT

1. Claimant worked as a warehouse employee for Employer. He suffered an admitted injury to his left elbow while lifting heavy shingles on September 10, 2015. He was moving bundles of shingles and experienced a pop in the left elbow with immediate pain and swelling.

2. Employer referred Claimant to Concentra Medical Centers for authorized treatment. At the initial evaluation, Dr. Lori Ross documented swelling of the left elbow, tenderness of the lateral epicondyle and reduced range of motion in all planes. Treating providers also observed swelling at several other appointments, which provides objective evidence of an injury to Claimant's left elbow.

3. Claimant received treatment through Concentra for diagnoses including left elbow strain, left radial nerve irritation, and left lateral epicondylitis. Claimant underwent conservative care including injections, pain medications, Lidoderm patches, splinting and bracing, and physical therapy, without substantial benefit.

4. An MRI of the left elbow on November 16, 2015 revealed a partial tear in the left superficial common extensor tendon.

5. An EMG performed on December 1, 2015 suggested mild left radial tunnel syndrome.

6. Claimant saw Dr. Hart, a hand surgeon, on several occasions. Dr. Hart initially thought Claimant's presentation was more consistent with radial tunnel syndrome rather than epicondylitis. He administered two radial tunnel injections which provided only short term relief. On February 4, 2016, Dr. Hart expressed concern that "we may not have the accurate diagnosis, since neither injection offered him any significant long-term relief, and I am concerned that if we undertake a radial tunnel release, it may not alleviate his symptoms." Dr. Hart recommended repeat EMG testing before making a final determination regarding surgery.

7. There was a gap in Claimant's treatment between February and August 2016 due to a dispute regarding whether he suffered an intervening injury. The issue went to hearing before ALJ Broniak on July 19, 2016, who found there was no intervening event and denied Respondents' request to terminate TTD benefits.

8. When Claimant resumed treatment at Concentra, he saw a new physician, Dr. Nicholas Kurz.

9. Dr. Kenneth Finn performed the repeat EMG on August 30, 2016. The testing was normal with no evidence of radial or ulnar nerve entrapment.

10. Claimant followed up with Dr. Hart on September 8, 2016 to review the EMG results. Dr. Hart revised his diagnosis and opined that Claimant likely has "a persistent case of lateral epicondylitis." Dr. Hart opined "it is reasonable at this point in time since we now have a normal nerve test to consider only releasing his left lateral epicondyle and debridement of the proximal origin of the ECRB tendon. Hopefully, that will alleviate some of his lateral epicondylar and proximal forearm pain." Dr. Hart estimated a 65% to 75% success rate for lateral epicondylitis surgery.

11. Claimant underwent a left lateral epicondylar release with exostectomy on October 4, 2016.

12. Claimant did not receive significant benefit from the surgery, and post-surgery medical records reflect significant ongoing pain and limitations.

13. Claimant saw Dr. Kurz on November 8, 2016, reporting severe elbow pain with light touch and minimal use of the upper extremity. Dr. Kurz recommended a second opinion with a different hand specialist, Dr. Kobayashi or Dr. Larsen. He also referred Claimant for a pain psychology evaluation with Dr. Staudenmayer.

14. The referrals were submitted to Respondents for authorization, but there is no indication they were approved.

15. Claimant returned to Dr. Kurz on November 29, 2016, and reported ongoing severe pain. Dr. Kurz opined that Claimant's pain appeared exaggerated and "out of proportion" to the physical exam. Dr. Kurz put Claimant at MMI with no impairment and released him to work without restrictions.

16. Claimant saw Dr. Thomas Higginbotham for a DIME on February 5, 2017. Dr. Higginbotham diagnosed an elbow strain/sprain with structural diagnostic evidence of partial tearing of the superficial common extensor tendon at its origin. Dr. Higginbotham also suspected subluxation of the proximal radioulnar joint with ongoing annular ligamentous sprain. Dr. Higginbotham opined Claimant is not at MMI "due to persistence of moderately severe pain and limitations and function of the left elbow. He merits a second orthopedic opinion as requested by his treating providers."

17. Respondents obtained video surveillance of Claimant in April and May 2017. A portion of the video shows Claimant entering and exiting a convenience store

and driving away. Another portion shows Claimant walking in the parking lot of a grocery-type store with a young girl, presumably his daughter. The bulk of the video footage was taken inside a nightclub where Claimant apparently works as a DJ. Most of the nightclub video is dark and shot from a distance, although there are a few segments with relatively clear views of Claimant. He appears to move his left arm freely, with no visible evidence of pain or limitation. He does not lift anything heavy or perform any forceful gripping activities.

18. Claimant saw Dr. Mark Failinger for an Independent Medical Examination (IME) at Respondents' request on May 8, 2017. Claimant reported persistent pain and weakness in the left elbow, worsened by gripping or lifting more than 6 pounds. He said the pain in the elbow was perhaps worse after the surgery. He indicated his range of motion had improved, but his functional ability remained about the same.

19. Based on his examination and review of Claimant's records, Dr. Failinger considered Claimant "very believable" and a "straightforward historian." Initially, he was inclined to agree with Dr. Higginbotham's recommendation for a second surgical opinion. But Dr. Failinger's impression changed dramatically after viewing the surveillance footage. He opined there was a "significant mismatch" between Claimant's appearance in the video and his presentation at the IME. Ultimately, Dr. Failinger agreed with Dr. Kurz that Claimant was at MMI on November 29, 2016 with no impairment.

20. Respondents failed to present clear and convincing evidence to overcome the DIME's determination that Claimant is not at MMI.

21. Claimant proved by a preponderance of the evidence that a second opinion as recommended by Dr. Higginbotham is reasonable and necessary treatment for his admitted injury.

CONCLUSIONS OF LAW

A. Respondents did not overcome the DIME's determination regarding MMI

The DIME's determination regarding MMI is binding unless overcome by clear and convincing evidence. Section 8-42-107(8)(b) and (c), C.R.S.; *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). This is a higher standard of proof than the typical "preponderance" standard. Clear and convincing evidence is "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App. 2002). Therefore, the party challenging a DIME's conclusions must demonstrate it is "highly probable" that the MMI finding is incorrect. *Qual-Med*, 961 P.2d at 592; *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

"Maximum Medical Improvement" (MMI) is defined as the point when any medically determinable physical or mental impairment as a result of the industrial injury has become stable and when no further treatment is reasonably expected to improve the condition. Section 8-40-201(11.5). A finding of MMI is premature if a course of

treatment has “a reasonable prospect of success” and the claimant is willing to submit to the treatment. *Reynolds v. Industrial Claim Appeals Office*, 794 P.2d 1080, 1081-82 (Colo. App. 1990). Additionally, a finding that a claimant is not at MMI may rest solely upon recommendations for further diagnostic evaluation if such procedures have a reasonable prospect of diagnosing or defining the claimant’s condition to suggest a course of further treatment. *E.g., Soto v. Corrections Corp*., W.C. No. 4-813-582 (ICAO, October 27, 2011).

As found, Respondents failed to overcome the DIME’s MMI determination by clear and convincing evidence. The medical evidence consistently documents ongoing symptoms and limitations associated with Claimant’s September 2015 work injury. Claimant had objective evidence of injury and ultimately underwent surgery, but remains symptomatic. The evaluation recommended by Dr. Higginbotham is essentially diagnostic, and ICAO has repeatedly held that “diagnostic procedures constitute compensable medical benefits that must be provided prior to MMI if such procedures have a reasonable prospect of diagnosing or defining the claimant’s condition so as to suggest the course of further treatment.” *E.g., Watier-Yerkman v. Da Vita*, W.C. No. 4-882-517-02 (January 12, 2015); *Soto v. Corrections Corp. of America*, W.C. No. 4-831-582 (October 27, 2011); *Jacobson v. American Industrial Service*, W.C. No. 4-487-349 (April 24, 2007).

The surveillance video is the lynchpin of Respondents’ argument. Dr. Failinger initially agreed that a second opinion was reasonable, but changed his mind after viewing the video. Admittedly, the surveillance video depicts Claimant using his left arm with no apparent difficulty or pain, which gives the ALJ pause regarding the veracity of Claimant’s pain complaints. But the activities Claimant performs in the video are relatively minimal, and do not require significant lifting or forceful gripping with his left arm. Furthermore, most of the video was taken from a distance in a darkened nightclub, which makes it difficult for the ALJ to draw definitive conclusions regarding Claimant’s true level of function. Clear and convincing evidence must be “unmistakable and free from serious and substantial doubt,” and the ALJ does not find the video sufficient to overcome the DIME’s determination, particularly when juxtaposed against the persuasive medical evidence.

B. A second opinion is reasonable and necessary

The respondents are liable for medical treatment that is reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a); *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997). Where the respondents dispute a claimant’s entitlement to medical benefits, the claimant must prove that the requested treatment is reasonable, necessary, and causally related to the injury. Section 8-42-101(1)(a); *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999).

A DIME’s recommendation regarding specific treatment is not entitled to presumptive weight, but is simply another medical opinion to consider when evaluating all the evidence under the preponderance standard. *Goff v. Schwan’s Home Services*,

W.C. No. 4-947-921-03 (August 9, 2017); *Holcombe v. FedEx Corp*., W.C. No. 4-824-259-05 (March 24, 2017); *Duplissis v. Shepard's*, W.C. No. 4-508-725 (December 3, 2002).

As found, Claimant proved by a preponderance of the evidence that a second surgical opinion is reasonable and necessary treatment for his injury. Claimant remains symptomatic despite conservative treatment and surgery. Dr. Kurz's initial decision to refer Claimant for a second opinion with a different hand specialist was reasonable and appropriate at the time. There is no persuasive justification for Dr. Kurz's decision to abruptly discharge Claimant barely three weeks later without even allowing him to complete the evaluation.

Based on the totality of evidence presented, the ALJ concludes that a second surgical opinion with Dr. Larsen or Dr. Kobayashi is reasonable and necessary.

ORDER

It is therefore ordered that:

1. Respondents' request to overcome the DIME regarding MMI is denied and dismissed.

2. Respondents shall pay for reasonable and necessary treatment to cure and relieve the effects of Claimant's injury and bring him to MMI, including a second surgical opinion with Dr. Larsen or Dr. Kobayashi.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 7, 2017

Office of Administrative Courts

ISSUES

- Did Respondents prove by clear and convincing evidence that the impairment rating assigned to Claimant by the Division IME physician, David Yamamoto, M.D. was incorrect?

- Has Claimant proven by a preponderance of the evidence that he is entitled to ongoing medical treatment for the work injury?

FINDINGS OF FACT

1. Claimant has worked for Employer for thirty-five years. At the time of his injury, Claimant was a wastewater operator.

2. Claimant's medical history was significant in that he previously received treatment for cervical spine disc degeneration, spondylolosis and chronic pain. Medical records were admitted which documented treatment Claimant received for these conditions.

3. Claimant sustained injuries when he fell from his bike in approximately July 2009. X-rays were taken of Claimant's cervical and thoracic spine; and a head CT was also done. The films showed no abnormalities.

4. Records from Kaiser Permanente, beginning on August 18, 2009 were admitted into evidence. At that time, Claimant was complaining of headaches and double vision following the bike accident. In the follow-up appointment on August 24, 2009, Claimant's symptoms were listed as headache and neck pain. Claimant described the headaches as starting in the upper back and radiating forward to the school. He was given a referral to neurology.

5. On September 10, 2009, Claimant was evaluated by a neurologist, C. Mindy Menake-Wiener, M.D. At that time, Claimant reported his headaches were better, but he had chronic intermittent numbness of the right upper extremity, which was worse while riding his bicycle. He also was complaining of diplopia. On examination, tenderness was noted in the left paraspinal region, but flexion and extension of the neck produced no symptoms. Dr. Menake-Wiener's impression was the Claimant had post concussive headaches that appeared to improve dramatically with chiropractic manipulation. There was no clinical history to suggest nerve impingement and Claimant's neurological evaluation was normal. Dr. Menake-Wiener opined Claimant had carpal tunnel syndrome, worse on the left and the right. She was unsure about the etiology of his visual complaints. The ALJ notes there was no reference to a loss of

range of motion ("ROM") in Claimant's cervical spine and a majority of this treatment note was concerned with the other parts of Claimant's body.

6. The evidence in the record documented that Claimant received chiropractic treatments for his cervical spine in the year before the July 24, 2014 injury. More particularly, he treated with Randy Kochevar, D.C. Claimant first treated with Dr. Kochevar on August 26, 2009, following the bicycle accident. Claimant complained of headaches, upper extremity and neck pain. Claimant received a multiple treatments in the months following the bicycle accident. Claimant returned to Dr. Kochevar on December 26, 2012, December 6, 2013 and March 28, 2014. These records documented an increase in Claimant's neck pain at these appointments and he received chiropractic treatments at that time. The ALJ found these records document at the fact Claimant received chiropractic treatments to coincide with the increase of headache and neck symptoms. These symptoms appeared to wax and wane, as there were intervals of time in which Claimant received no treatment. The last appointment with Dr. Kochevar was approximately three months before Claimant's industrial injury. These records documented neck stiffness and soreness, as well as symptoms related to migraines.

7. Additional records from Kaiser Permanente documented that Claimant treated on three occasions[1] for cervical symptoms in the one-year time frame before the July 24, 2014 accident. Christine Munson M.D. at Kaiser Permanente evaluated Claimant on August 13, 2013 for neck pain that began in 2009. Claimant reported that he had been obtaining chiropractic care with only temporary relief, acupuncture with only temporary relief, and physical therapy with only temporary relief. Claimant underwent a cervical facet injection at the C3-4 level on August 21, 2013. On October 23, 2013, Claimant returned to Kaiser Permanente and was evaluated by Cynthia Gacnic, M.D. At that time, Claimant complained of ongoing neck pain. Claimant reported the facet injection which was performed earlier did not help. Claimant was taking Flexeril and Ultram. The ALJ found these records did not document ongoing treatment with the doctors at Kaiser. The ALJ inferred Claimant sought treatment when he experienced an increase in symptoms. There was no indication in the record that any physician at Kaiser Permanente restricted Claimant's work activities.

8. Claimant testified that prior to his industrial injury, he felt pain at the base of his neck, which he related to migraines. He agreed that he felt neck and shoulder pain following the bike accident in 2009. Claimant downplayed his prior treatment both to his treating physicians and while testifying. This negative affected Claimant's credibility.

9. On July 24, 2014, Claimant sustained an admitted industrial injury when he fell at work. More particularly, he slipped and fell on polymer which was on the floor.

[1] A progress note from Scott Clemensen, M.D. at Kaiser (dated June 15, 2014) was admitted into evidence. This note referred to symptoms of weakness and lightheadedness after a bike ride. Chronic neck pain was listed as part of the active problem list, but there was no evaluation of the neck, nor treatment rendered thereto. An electrocardiogram and metabolic evaluation were ordered.

10. Claimant testified he felt pain in his in his neck and back after he fell. This included the area just above his shoulders. He also experienced migraine headaches for which he received treatment. Claimant testified the pain after his work injury was different than his previous pain.[2]

11. Claimant was evaluated on July 25, 2014 by Jeffrey Hawke, M.D. Dr. Hawke noted increased tone and tenderness to the trapezius muscle bellies, as well as their cervical and scapular extensions bilaterally. The axial compression and Spurling's tests were negative. No misalignment, asymmetry, defects or fusion were noted. Increased tone and tenderness were also noted in the thoracic spine. Dr. Hawke's assessment was: acute cervical, thoracic and lumbar strain; and right shoulder contusion. Dr. Hawke described the causality as work-related and completed a WCM-164 which noted same. He recommended a physical therapy ("PT"), as well as prescribing Naproxen and Cyclobenzaprine.

12. Claimant returned to Dr. Hawke on August 4, 2014. Claimant advised Dr. Hawke he was most worried about his neck, which was injured in the bike accident and he was now experiencing pain in the left shoulder. Dr. Hawke's diagnosis remained the same and Claimant was scheduled for a trigger point injection followed by a myofascial release.

13. Dr. Hawke followed Claimant for the next two months and determined he reached MMI on October 8, 2014. Dr. Hawke's assessment was: cervical thoracic strain, with chronic myofascial pain; lumbar strain with chronic myofascial pain and right shoulder contusion.

14. Claimant was evaluated by Roberta Anderson-Oeser, M.D. on August 6, 2014. Dr. Anderson-Oeser noted Claimant had a history of a cervical injury in 2009 for which he tried injection therapy, which was of no help, as well as chiropractic treatment which helped his symptoms. The ALJ concluded from this note Claimant disclosed his history of prior neck pain related to the bicycle accident and the treatment he received for those symptoms to Dr. Anderson-Oeser.

15. At the time of his evaluation with Dr. Anderson-Oeser, Claimant was complaining of cervical, thoracic, low back and right shoulder pain. On examination, palpable spasms in the cervical and thoracic paraspinals were noted. Claimant had palpable trigger points within the upper trapezius, splenius capitis, lavator scapulae and rhomboids bilaterally. Restricted cervical range of motion was noted. Claimant had tenderness over the right acromioclavicular joint. Dr. Anderson-Oeser's impressions were cervicothoracic strain, lumbar strain, right shoulder contusion and myofascial pain. She administered trigger point injections and advised Claimant to continue PT. The ALJ inferred Dr. Anderson-Oeser was of the opinion that Claimant required this treatment because of the industrial injury.

[2] Hearing Transcript ("Hrg. Tr.") p. 62:16-25.

16. A letter of medical necessity, dated July 29, 2014 and signed by Dr. Anderson-Oeser, was admitted into evidence. It requested purchase of a Flex-IT device for improvement of range of motion. There was no other evidence admitted at hearing regarding additional post-MMI treatment. Respondent did not introduce evidence that this device was not reasonable or necessary, however, it is not clear whether Claimant received this device.

17. On December 31, 2014, Claimant returned to Dr. Anderson-Oeser. He complained of pain in the posterior cervical and shoulder girdle region. Claimant had been see in the emergency room and a cervical MRI was ordered. Dr. Anderson-Oeser compared Claimant's 2012 and 2014 MRI, noting there were no significant changes. Dr. Anderson-Oeser's impression was cervicalgia; cervical degenerative disc disease and foraminal stenosis; thoracic strain; lumbar strain; and myofascial pain. Dr. Anderson-Oeser implicitly confirmed the prior determination of MMI made by Dr. Hawke. Dr. Anderson-Oeser did not schedule a follow-up visit, opining Claimant had treated adequately for his work injury.

19. On April 16, 2015, Claimant underwent an MRI of his thoracic lumbar spine. The films were read by Samuel Ahn, MD., which showed mild degenerative changes at T7-8, T8-9 and T10-11. Claimant's lumbar spine showed congenital spinal stenosis, exacerbated by chronic degenerative changes.

20. Claimant received psychological treatment with Ron Carbaugh, Psy. D. from April 10, 2015 through January 5, 2016. This included cognitive and behavioral therapy, as well as biofeedback treatment provided by Dr. Rebecca Hawkins. Dr. Carbaugh determined Claimant was at MMI from a psychological standpoint on January 5, 2016. The final diagnostic impressions were: somatic symptom disorder and persistent depressive disorder. Dr. Carbaugh did not recommend further psychological treatment.

18. Claimant returned to Dr. Anderson-Oeser on May on May 5, 2015. Claimant had been placed at MMI, with no impairment by Dr. Hawke with no impairment and no physical restrictions. He continued to have pain in the cervical, thoracic and lumbar spine. Claimant had tenderness over the cervical facet joints, paraspinal muscles and bilateral shoulder girdle muscles. Cervical range of motion was restricted with extension. Claimant's thoracic and lumbar ROM were within normal limits. Dr. Anderson-Oeser's impression was cervicalgia, degenerative disc disease of the cervical spine, cervical stenosis, thoracic strain, lumbar strain, and myofascial pain. Dr. Anderson-Oeser advised Claimant he had pre-existing cervical spine spondylosis and generative disc disease. She prescribed three sessions of cervical traction and recommended Claimant continue to see a pain psychologist for management of chronic pain.

19. Claimant was evaluated by Dr. Anderson-Oeser on June 22, 2015. Her diagnoses remained the same. Claimant reported a fairly high level of pain in the cervical, threats of the lumbar region. Claimant was receiving biofeedback, chiropractic

treatment and massage therapy. Dr. Anderson-Oeser wrote a prescription for four additional chiropractic visits and massage. She opined Claimant was at MMI for the work injury. A copy of Dr. Anderson-Oeser's prescription for treatment with Dr. Kochevar was admitted into evidence. This represented evidence to the ALJ that Dr. Anderson was aware of Claimant's treatment with this chiropractor.

20. On July 2, 2015, Claimant was seen for an initial evaluation with Brooks Comforti, D.O. Dr. Comforti's assessment included delayed recovery following the work related injury; chronic cervical and thoracic pain, localized myofascial pain reaction, history of depressive symptoms, somatic dysfunction. Dr. Comforti began Claimant on a program of osteopathic manipulative treatment in conjunction with modification progression of the independent exercise regimen. Records were admitted which documented the OMT treatment with Dr. Comforti through July 30, 2015.

21. Claimant was reevaluated by Dr. Anderson on the August 11, 2015. He had completed his biofeedback, which was somewhat helpful and was using a TENS unit, as well as taking Cymbalta and tizanidine. Claimant's cervical range of motion was minimally restricted and he had for ROM of the shoulders, elbows and wrists. Tenderness was noted over the lumbar paraspinal muscles, but no palpable trigger points were found. Lumbar ROM was within normal limits. Dr. Anderson-Oeser's impression remained the same as September 22, 2015 and Claimant remained at MMI.

22. On September 22, 2015, Claimant returned to Dr. Anderson-Oeser, at which time he reported ongoing pain in his neck and shoulder region. Claimant was using biofeedback, ice/heat and a TENS unit. Dr. Anderson-Oeser refilled his prescriptions, noting Claimant remained at full duty.

23. The ALJ concluded Claimant received treatment in the form of PT, chiropractic treatments, massage therapy, acupuncture and OMT through multiple health care providers from July 2014 through September 2015. Claimant subjectively reported some improvement in the final three months of treatment. The treatment was more extensive than what he received prior to the industrial injury, including after the bicycle accident in 2009.

24. There was no evidence admitted which showed Claimant returned to Dr. Anderson-Oeser or another ATP for further treatment after September 2015. No ATP opined Claimant needed treatment after MMI.

25. On December 8, 2015, Dr. Yamamoto performed a Division of Worker's Compensation independent medical examination (“DIME”). Claimant's current symptoms were listed as tightness in his neck and shoulders, as well as mid and lower back pain. He experienced tingling and numbness in the upper extremities, as well as depression and anxiety. His ability to stand and lift was limited. Tenderness was found over the paraspinal muscles of the mid-thoracic spine and lumbar spine. He also noted Claimant had reduced his bicycling after the injury and modified his work activities.

Dr. Yamamoto's assessment was: cervical strain, with persistent symptoms; pre-existing degenerative cervical spine changes; myofascial pain syndrome of the trapezii; and myofacial pain syndrome of the back and lower back.

26. Dr. Yamamoto found moderately decreased range of motion in Claimant's cervical spine, documenting the measurements he made in the worksheets attached to his report.

27. Dr. Yamamoto agreed Claimant reached MMI as of July 27, 2015 and assigned a 14% whole person impairment, which included 10% for loss of range of motion and 4% for a Table 53 (II) B specific disorder. As to this component of the rating, Dr. Yamamoto noted Claimant had over six months of medically documented pain and rigidity, which qualified him for this impairment. Dr. Yamamoto specifically stated he assigned a II(B) impairment as opposed to a II(C) impairment because there was no significant change on the MRI of the cervical spine done in 2012 compared with the 2014 cervical MRI. The ALJ concluded this was some evidence Dr. Yamamoto was generally aware of Claimant's prior cervical symptoms. Dr. Yamamoto did not reference records from Kaiser Permanente and Dr. Kochevar. The ALJ also notes Dr. Yamamoto's ROM measurements were valid; a fact which was not disputed by Respondent. Dr. Yamamoto concluded Claimant's headaches were pre-existing and were not ratable. He found Claimant's bilateral and shoulder pain were related to his myofascial pain syndrome. Dr. Yamamoto concluded Claimant had no psychological or lumbar impairment.

28. Dr. Yamamoto recommended maintenance treatment in the form of a trial of Baclofen and noted Claimant should remain on Cymbalta and either tizanadine or baclofen. He opined Claimant should receive 12 massage therapy and chiropractic appointments over the next 12 months. The ALJ concluded Claimant's ATP-s were in the best positon to determine what treatment, if any, Claimant required after MMI.

29. On March 28, 2016, Dr. Hughes performed an IME at the request of Claimant. At that time, Claimant had no paraspinous hypertonicity in the cervical spine, but reduced ROM. Spurling's maneuver was negative bilaterally. Claimant's lumbar spine had normal curvature and bilateral lumbar hypertonicity. He had reduced lumbar ranges of motion. Dr. Hughes' assessment was: past history of a post-traumatic headache disorder existing prior to July 24, 2014; work-related fall with multiple injuries sustained on July 24, 2014; cervical spine sprain/strain secondary to number two, with persistence of mechanical cervical spine pain; lumbar spine myofascial pain, also secondary to number two with persistence of mechanical lumbar pain.

30. Dr. Hughes opined Claimant sustained a cervical spine injury on July 24, 2014, meriting assignment of permanent impairment. In this regard, he believed Dr. Yamamoto correctly used Table 53 (of the *AMA Guides*) when he assigned a specific disorder impairment of 4% whole person. Dr. Hughes noted Claimant developed lumbar spine pain after the injury, which he characterized as more intermittent in nature. He agreed the date of MMI was July 27, 2015. He also agreed Claimant did not sustain

a permanent impairment to his lumbar spine and no permanent impairment for an injury-related psychiatric condition. Dr. Hughes disagreed with Dr. Yamamoto regarding impairment for worsening of Claimant's headaches. He recommended a review of pre-injury records and records from early on, as he was unable estimate permanent impairment stemming from a worsening of the pre-existing headaches. Dr. Hughes concurred with Dr. Yamamoto's recommendations regarding maintenance care.

31. Dr. Hughes testified at hearing as an expert in Occupational Medicine, the specialty in which he was board-certified. He is Level II accredited pursuant to the WCRP. Dr. Hughes' testimony was consistent with his findings at the time he performed the IME of Claimant. He reviewed the medical records available at that time of the IME, as well as additional records from Drs. Olsen, Kochevar and Kaiser Permanente at the time of his deposition. Dr. Hughes agreed Claimant did not provide exhaustive detail regarding his prior treatment. After reviewing the additional records, Dr. Hughes opined Claimant sustained a permanent impairment to his cervical spine.

32. Dr. Hughes offered the following opinion regarding Claimant's medical impairment rating:

> "I feel that within a reasonable degree of medical probability there was a medically documented injury to the cervical spine sustained as a result of the slip and fall injury of July 24th, 2014. I feel that there is adequate documentation through the present time, or at least through March 28, 2016, of continuing cervical spine pain. I agree that there is no discernible change in MRI structural status compared to prior to the work-related cervical spine injury, and that there are range of motion losses that exist after the work related injury.
>
> And while there's mention of range of motion losses in records from prior to the work-related injury, there is no quantification of same and there is also no documentation that this condition was independently disabling. The pre-existing condition was not an occupational condition, and so under the Division's decision worksheet, basically dealing with apportionment, this would not meet criteria for apportionment of permanent impairment."

33. Dr. Hughes' testimony was persuasive to the ALJ.

34. Dr. Hughes opined Claimant's prior neck pain was not independently disabling. Dr. Hughes opined there was not a medically documented injury sustained to the lumbar spine and Claimant did not have a ratable impairment with respect to that area. This was also true for the mid-back or thoracic spine. The ALJ noted Dr. Hughes' conclusions were concordant with Dr. Yamamoto's opinion.

35. Nicholas Olsen, M.D. testified as an expert witness at hearing. He is board certified in Physical Medicine and Rehabilitation, as well as Level II accredited pursuant to the WCRP. Dr. Olsen testified regarding the IME he performed on March 9, 2016 and noted he received additional medical records for Claimant's prior treatment

after completing the IME (in approximately May). He then received Dr. Hughes' report in June. Dr. Olsen said Claimant told him he was functioning fine, had no problems in the months and years before 2014. Dr. Olsen testified Claimant stated he did not have any neck pain leading up to the July 24, 2014 incident. Dr. Olsen testified Claimant identified headache pain, as well as pain in his upper trapezius and middle back. Dr. Olsen stated Claimant was not always direct in responding to his questions and he was asked several times about prior neck pain. Dr. Olsen believed Claimant intentionally left out his prior neck pain. He testified: "It is not something that would easily be forgotten and described as an honest mistake. It was very intentionally left out." [3]

36. Claimant told Dr. Olsen he was receiving chiropractic and treatment in 2014 relative to his migraine headaches, but denied receiving treatment for neck pain. Dr. Olsen testified that based upon his review of records from Dr. Kochevar and Kaiser, Claimant experienced neck symptoms which were persistent became chronic or progressive. As of the summer of 2013, Dr. Olsen believed Claimant's neck pain was getting worse. Dr. Olsen disagreed with Dr. Hughes that Claimant's prior neck pain was not independently disabling. He pointed to a note from Dr. Kochevar documenting the reduced ROM and difficulty looking up at work. The ALJ notes there was no reference to lost time or physical restrictions in this note. Dr. Olsen agreed with Dr. Hughes' opinion that there was no interval change between the two MRIs. Dr. Olsen also testified Claimant would have qualified for an impairment rating prior to July 24, 2014. He noted although there were no specifics regarding limitations in ROM, the records documented limitations in right and left lateral bending, as well as extension.

37. Dr. Olsen stated it was error for Dr. Yamamoto to provide an impairment rating where he did not have all the records and Claimant did not provide detail regarding his prior treatment. Dr. Olsen believed the records form Dr. Kochevar and Kaiser would have been critical to Dr. Yamamoto's evaluation. Dr. Olson believed Claimant had an exacerbation of symptoms after the July 24, 2014 incident and then returned to baseline. He opined Claimant did not require any further medical treatment. On cross-examination, Dr. Olsen agreed Table 53(II)(B) of the *AMA Guides* provided for a medical impairment rating of 4% for six months of medically documented pain and minimal to no changes between imaging. Both Dr. Hughes and Dr. Yamamoto opined Claimant was entitled to an impairment rating based upon this provision. Dr. Olsen agreed he assigned an impairment rating to Claimant under the same section of the *AMA Guides i*n his March 2016, report. Dr. Olsen disagreed with that conclusion. The ALJ found the opinions of Drs. Yamamoto and Dr. Hughes to be more persuasive than those offered by Dr. Olsen.

38. Respondent failed to overcome Dr. Yamamoto's opinions by clear and convincing evidence.

39. Claimant failed to satisfy his burden of proof to show an entitlement to post-MMI medical benefits.

[3] Hr. Tr. p. 34:10-14.

40. Evidence and inferences inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). In the case at bench, the ALJ focused on the respective medical opinions on the issue of whether Dr. Yamamoto's opinions were overcome by clear and convincing evidence.

Legal Standard for Overcoming the DIME

In resolving the issues, the ALJ notes the question of whether Respondents overcame Dr. Yamamoto's opinion is governed by §§ 8-42-107(8)(b)(III) and (c), C.R.S. *Peregoy v. Indus. Claim Apps. Office*, 87 P.3d 261, 263 (Colo. App. 2004). These sections provide that the finding of a DIME physician selected through the Division of Workers' Compensation shall only be overcome by clear and convincing evidence. A DIME physician's findings of MMI, causation, and impairment are binding on the parties unless overcome by "clear and convincing evidence". § 8-42-107(8)(b)(III), C.R.S.; *Leprino Foods Co. v. Indus. Claim Appeals Office*, 134 16 P.3d 475, 482-83 (Colo. App. 2005); *accord Martinez v. Indus. Claim Appeals Office*, 176 P.3d 826, 827 (Colo. App. 2007). Clear and convincing evidence is highly probable and free from serious or substantial doubt, and the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert,* 914 P.2d 411 (Colo. App. 1995). The mere difference of medical opinions does not constitute clear and convincing evidence to overcome the

opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAO July 19, 2004); see *Shultz v. Anheuser Busch, Inc.*, W.C. No. 4-380-560 (ICAO Nov. 17, 2000).

The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Indus. Claim Apps. Office*, 961 P.2d 590 (Colo. App. 1998). Since the DIME physician is required to identify and evaluate all losses and restrictions that result from the industrial injury as part of the diagnostic assessment process, the DIME physician's opinion regarding causation of those losses and restrictions is subject to the same enhanced burden of proof. *Id*. The elevated burden is evidence of the Colorado Legislature's intent to limit overcoming the DIME physician's opinion to those cases where it is more probable than not that the opinion was incorrect

As noted below, the ALJ concluded that Dr. Yamamoto's opinions were not overcome with regard to Claimant's impairment rating. The ALJ's rationale was two-fold; first, the medical evidence supported Dr. Yamamoto's conclusion that Claimant sustained a permanent impairment as a result of the July 24, 2014 industrial injury. As a starting point, Claimant sustained an admitted industrial injury for which he required treatment. Dr. Anderson-Oeser oversaw this treatment and made objective findings during her evaluations of Claimant that led the ALJ to conclude his work injury necessitated said treatment. (Findings of Fact 14-17).

In his report, Dr. Yamamoto concluded Claimant sustained an industrial injury and met the criteria for permanent medical impairment. Dr. Yamamoto's report included a medical records summary, including documenting the treatment with Dr. Anderson-Oeser, whose reports noted least a portion of Claimant's treatment before the July 2014 injury. Dr. Yamamoto also referenced the 2012 MRI, which was indicative of his awareness of Claimant's prior cervical issues. (Finding of Fact 27). In addition, Dr. Yamamoto's rating was based upon valid range of motion measurements, as well as Table 53 of the *AMA Guides*. (Finding of Fact 21). Respondent did not adduce evidence to contradict this fact. (Finding of Fact 23). Dr. Yamamoto provided a specific rationale as to why Claimant was rated under Table 53 II(B) as opposed to Table 53 II(C), which lent credence to his opinions on permanency. Dr. Yamamoto also considered Claimant's psychological condition, the lumbar spine and upper extremities, as well as the issue of apportionment. He concluded that Claimant had no permanent impairment in these areas and there was no apportionment.

Dr. Yamamoto' conclusions were buttressed by the opinions offered by Dr. Hughes, who agreed Claimant had a permanent impairment to his cervical spine. More particularly, Dr. Hughes testified that Claimant met the criteria for an impairment rating. (Finding of Fact 26). Dr. Hughes also observed that while Claimant could potentially have been entitled to an impairment rating for his prior injuries, there was no evidence that this condition was independently disabling. (Finding of Fact 26). The ALJ credited Dr. Hughes' opinions and found these to be more persuasive than Dr. Olsen.

Second, the ALJ considered Respondent's argument that Claimant's failure to fully disclose his prior history and the lack of records in the possession of Dr. Yamamoto vitiated his opinion regarding permanency. As determined in Findings of Fact 27 and 31, Claimant did not provide extensive detail to Drs. Yamamoto and Hughes, regarding his prior cervical treatment. Dr. Olsen also noted Claimant did not provide detail reading his prior treatment and testified that Claimant intentionally withheld that information. (Finding of Fact 35). Several of the physicians noted Claimant was a poor historian. The ALJ also found Claimant downplayed his prior neck symptoms and treatment, as well as relating these to migraine headaches. While this negatively impacted Claimant's credibility, it did not refute the findings made by Dr. Yamamoto. Ultimately, although there was evidence Dr. Yamamoto did not have all the records related to Claimant's prior treatment, the ALJ determined this did not invalidate the medical impairment rating.

It was unrefuted that Claimant was injured on July 24, 2014 when he fell at work. The ALJ determined Dr. Yamamoto had information regarding the condition of Claimant's cervical spine sufficient to allow him to fully evaluate Claimant. There were references to Claimant's MRI in 2012, which Dr. Yamamoto compared with the 2014 MRI. Further, Dr. Yamamoto's DIME report documented the fact that he had Dr. Anderson-Oeser's records, which discussed the prior cervical treatment. Dr. Yamamoto examined Claimant and determined he had a ratable medical impairment to his cervical spine, pursuant to the *AMA Guides*. Dr. Yamamoto also concluded there was no apportionment. Dr. Yamamoto's conclusions were supported by the testimony of Dr. Hughes, who even though he did not have all of the prior records, concluded Claimant sustained a permanent medical impairment as a result of his industrial injury. (Findings of Fact 31-32). On balance, the ALJ was persuaded Dr. Yamamoto had sufficient information regarding Claimant's prior conditions and treatment to correctly assess his medical impairment.

Therefore, at most, Dr. Olsen's opinions were contraposed to those offered by Dr. Yamamoto and Dr. Hughes. Dr. Olsen's opinions were simply a difference of opinion between medical professionals and did not constitute sufficient evidence to overcome the DIME. This was not sufficient to persuade the ALJ that Dr. Yamamoto's conclusions were more probably incorrect or not supported by the medical evidence.

Grover Medical Benefits

The claim for medical treatment beyond the point of maximum medical improvement is governed by *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). In *Grover v. Industrial Commission*, the Colorado Supreme Court authorized maintenance care to maintain MMI or to prevent further deterioration of a Claimant's condition. *Milco Construction v. Cowan,* 860 P.2d 539, 541 (Colo. App. 1992). An award for *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended, nor a finding that Claimant is actually receiving medical treatment*. Holly Nursing Care Center v ICAO*, 992 P.2d 701 (Colo. App. 1999). Claimant must prove entitlement to *Grover* medical benefits by a

preponderance of the evidence. *Lerner v. Wal-Mart Stores, Inc.*, 865 P.2d 915 (Colo. App. 1993).

Claimant failed to show he was entitled to post-MMI medical benefits. First, there was no evidence in the record that any of the Claimant's ATPs recommended maintenance treatment. (Finding of Fact 18). No recommendations for post-MMI treatment were made by either Dr. Hawke or Dr. Anderson-Oeser. *Id.* In addition, there was no persuasive evidence in the record that Claimant received treatment after September 2015 that was related to the July 2014 industrial injury.

Second, the opinions offered by Dr. Yamamoto (as the DIME physician) were not entitled to any special deference and the ALJ concluded Claimant's ATPs were in the best position to determine his need for maintenance medical treatment. (Finding of Fact 24). Accordingly, The ALJ determined Claimant failed to meet his burden of proof on this issue and was not entitled to *Grover* medical benefits.

ORDER

It is therefore ordered:

1. Respondent shall pay PPD benefits to Claimant based on Dr. Yamamoto's 14% medical impairment rating.

2. Respondent shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

3. Claimant's request for post-MMI medical benefits is denied and dismissed.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a

petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-036-817-01

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

,

Claimant,

v.

,

Employer,

and

Insured Respondent.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on August 23, 2017, in Denver, Colorado. The hearing was digitally recorded (reference: 8/23-17, Courtroom 1, beginning at 1:30 PM, and ending at 4:00 PM).

Hereinafter shall be referred to as the “Claimant." shall be referred to as the “Respondent” or “Employer.” All other parties shall be referred to by name.

Claimant’s Exhibits 1 through 10 were admitted into evidence, without objection. Respondents’ Exhibits A through K were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ ruled from the bench and referred

preparation of a proposed decision to counsel for the Claimant, which was filed, electronically, on August 30, 2017. No timely objections were filed. After a consideration of the proposed decision, the ALJ has modified it and hereby issues the following decision.

ISSUES

The issues to be determined by this decision are whether the Claimant sustained a compensable right shoulder injury and/or a compensable aggravation/acceleration of a pre-existing right shoulder condition on January 19, 2017; if so, is the Claimant entitled to medical benefits, including the right shoulder surgery recommended by Cary Motz, M.D. [an authorized treating physician (ATP)] on February 22, 2017.

The Claimant bears the burden of proof by "a preponderance of the evidence" on all issues.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. On January 19, 2017, the Claimant injured her right shoulder while attempting to open a door during a fire drill. She entered the doorway, reached back with her right arm extended away from her body, pushed the bar on the door, and felt a pop in her right shoulder and immediate right shoulder pain. She immediately felt excruciating right shoulder pain and could not raise her arm to 40 degrees. That same day, she went to the Castle Rock emergency room (ER) and reported right shoulder pain and the circumstances surrounding her injury (Claimant's Exhibit 5, pp. 9-17). The Claimant reported that on January 15, 2017, she lifted a vacuum at home and felt right shoulder pain and then on January 19, 2017, she attempted to push open the door and felt increased right shoulder pain. *Id*.

2. The Claimant reported her injury to the Employer immediately following the injury and completed an incident report the following morning. On January 24, 2017, the Respondent filed an Employer's First Report of Injury (Claimant's Exhibit 1, p. 1). On February 8, 2017, the Respondent filed a Notice of Contest (Claimant's Exhibit 2, p. 2). On April 26, 2017, the Claimant filed an Application for Hearing (Claimant's Exhibit 3, pp. 3-5). On May 26, 2017, the Respondent filed a Response to Claimant's Application for Hearing (Claimant's Exhibit 4, pp. 9-17). The Hearing was set and occurred on August 23, 2017.

3. On January 19, 2017, the Claimant sustained a right shoulder injury arising out of and in the course and scope of her employment with the Employer. Additionally, the right shoulder surgery recommended by Dr. Motz on February 22, 2017, is reasonably necessary and causally related to her January 19, 2017 work-related injury. Dr. Motz is one of the Claimant's ATPs.

Nicole Leitch, Certified Physician's Assistant (PA-C), and Kathryn Bird, D.O. - Authorized Treating Physicians (ATPs) at Concentra

4. On January 22, 2017, the Claimant treated at Concentra with Physician Assistant (PA) Nicole Leitch and reported that on January 15, 2017, she picked up a vacuum that weighed approximately 10-12 pounds and had immediate soreness in her right shoulder. PA Leitch noted that the Claimant attempted to continue vacuuming but had to stop. The Claimant disagrees with this note. Indeed, the Claimant was insistent (to no avail) that PA Leitch correct the note because the Claimant continued vacuuming after the incident. The Claimant reported that her right shoulder soreness gradually improved throughout the week. She also reported that she did not have any problems with movement or range of motion (ROM). The Claimant reported that on January 19, 2017, she attempted to push open a locked door with a release bar and heard a pop in her right shoulder. She reported that she had immediate pain in her right shoulder and arm and that her pain was significantly worse than it was on Sunday, and that she now had loss of ROM. She reported that her pain levels have remained the same since the injury on the January 19th. On physical examination, PA Leitch noted that the Claimant had 45 degrees of forward flexion. PA Leitch assigned work restrictions and referred the Claimant for physical therapy (PT) [Claimant's Exhibit 6, pp. 18-23]. At hearing, the Claimant testified that she told PA Leitch that she was able to continue vacuuming on January 15, 2017. The Claimant also testified that about six weeks after her January 22, 2017 appointment she received a copy of PA Leitch's report and that she went to Concentra and asked PA Leitch to change her report, but she would not do it. The ALJ infers and finds that the Claimant's request to PA Leitch to change her note is a credibility enhancer for the Claimant's version of the January 15 events. The ALJ makes a rational decision, based on substantial evidence, to accept the Claimant's version of events, *i.e.,* that she was able to continue vacuuming on January 15.

5. On January 25, 2017, the Claimant treated with Kathryn Bird, D.O., and reported the January 15 and January 19 incidents. Dr. Bird stated that she did not think pushing a door would be a mechanism of injury that would cause a rotator cuff tear. Dr. Bird did not further explain this statement/conclusion. Dr. Bird referred the Claimant to Cary Motz, M.D., an orthopedic surgeon (Claimant's Exhibit 6, pp. 24-26).

6. On February 8, 2017, the Claimant treated with Dr. Bird and reported ongoing right shoulder pain. She reported that PT has been helpful but that she was still sore. Dr. Bird noted that she reviewed Dr. Motz's report, and he was of the opinion that

Claimant did, in fact, sustain a work-related injury. Dr. Bird referred the Claimant for an MRI (magnetic resonance imaging) [Claimant's Exhibit 6, pp. 27-31].

7. On March 23, 2017, the Claimant treated with Dr. Bird, who noted that the surgery recommended by Dr. Motz was denied (by the self-insured Employer). Dr. Bird placed the Claimant at MMI (maximum medical improvement); gave the Claimant an impairment rating and told the Claimant to come back when her claim is reinstated (Claimant's Exhibit 6, pp. 36-41). The ALJ infers and finds that Dr. Bird placed the Claimant at MMI solely because the claim was denied by the self-insured Employer—on legal grounds, not medical grounds.. The ALJ infers that Dr. Bird's finding of MMI involves a medico-legal judgment, which Dr. Bird surrendered to a faceless "apparatchik" of the self-insured Employer.

8. From January 25, 2017, through February 15, 2017, the Claimant underwent six physical therapy sessions (Claimant's Exhibit 9, pp. 64-84).

Cary Motz, M.D. – Claimant's Authorized Surgeon

9. On January 31, 2017, the Claimant treated with Dr. Motz and reported both the January 15 and January 19 incidents and her ongoing pain complaints. Dr. Motz stated that, "It is certainly possible that she could tear her rotator cuff pushing on a heavy door, and I believe that this work injury resulted in the injury to her shoulder." The ALJ finds that Dr. Motz rendered an opinion, to a reasonable degree of medical probability, that the Claimant sustained a compensable injury to her right shoulder in the "door pushing" incident of January 19.Dr. Motz recommended a right shoulder MRI. He added, "I do not believe the prior injury four days before had any significant effect on her shoulder, as there was a clear new event on 01/19/2017 that precipitated the ER visit and subsequent treatment" (Claimant's Exhibit 8, pp. 55-57). Dr. Motz's causality opinion conflicts with Dr. Bird's opinion. Based on substantial evidence, the ALJ makes a rational decision to accept Dr. Motz's causality opinion and to reject Dr. Bird's causality opinion.

10. On February 21, 2017, the Claimant treated with Dr. Motz and reported ongoing right shoulder pain, weakness, difficulty lifting, especially over the shoulder, and problems sleeping. Dr. Motz noted that he reviewed the Claimant's right shoulder MRI, which revealed an acute on chronic rotator cuff tear. Dr. Motz recommended right shoulder arthroscopy with debridement and repair. On February 22, 2017, Dr. Motz requested authorization for surgery (Claimant's Exhibit 8, pp. 58-61).

Annu Ramaswamy, M.D.

11. On May 9, 2017, the Claimant treated with Dr. Ramaswamy and reported the circumstances surrounding the January 15 and January 19, 2017 right shoulder incidents. She told Dr. Ramaswamy that after the January 15, 2017 incident she

continued vacuuming (about one hour). She reported that she felt like she pulled a muscle, and she did not seek medical attention because the pain was not severe. Regarding the January 19, 2017 incident, the Claimant reported that she felt a pop in her right shoulder and immediate pain and range of motion loss. She reported that she could not move her right arm and had to use her left arm to lift her right arm. She reported ongoing problems with overhead maneuvers and right shoulder weakness. Dr. Ramaswamy stated he reviewed the MRI, which revealed acute tendon tears in the setting of chronic tendon tears. Dr. Ramaswamy deferred making a causality determination until he reviewed the Claimant's medical records and the right shoulder MRI with a radiologist (Claimant's Exhibit 7, pp. 42-46).

12. On May 25, 2017, the Claimant again treated with Dr. Ramaswamy, who noted that he spoke with Dr. Seda, a radiologist who reviewed Claimant's MRI, and the MRI revealed chronic rotator cuff tears with acute inflammation. Again, Dr. Ramaswamy pointed out that the MRI revealed acute tendon tears in the setting of chronic tendon tears. On physical examination, Dr. Ramaswamy noted impingement testing was positive. Dr. Ramaswamy stated the opinion that pushing open a door would not correlate with the mechanism of injury for a rotator cuff tear acutely. He was of the opinion that the January 19, 2017 incident "likely caused a mild right shoulder strain at best given the acute range of motion loss in the shoulder" (Claimant's Exhibit 7, Pp. 47-54). The ALJ infers and finds that Dr. Ramaswamy's ultimate opinion supports an aggravation of any pre-existing condition, however, insofar as it conflicts with Dr. Motz's causality opinion, the ALJ makes a rational decision to reject Dr. Ramaswamy's opinion on lack of causality and to accept Dr. Motz's opinion.

Right Shoulder MRI

13. On February 13, 2017, the Claimant had a right shoulder MRI, which revealed acute superimposed on chronic full-thickness supraspinatus and infraspinatus tendon tears with edema extending along the muscles (Claimant's Exhibit 10, pp. 85-86).

William Ciccone, M.D. – Respondent's Independent Medical Examiner (IME)

14. On March 1, 2017, William J. Ciccone, II, M.D., completed a records review and recommended that the surgery recommended by Dr. Motz be denied because "it is not clear that the Claimant sustained a work-related injury." Dr. Ciccone stated the opinion that the surgery recommended by Dr. Motz is reasonably necessary but not related to the January 19, 2017 incident. Dr. Ciccone stated the right shoulder MRI revealed an acute on chronic rotator cuff injury, but he could not determine if it was related to the January 15 or the January 19 event. Dr. Ciccone was of the opinion that pushing open a door could not cause a significant shoulder injury (Respondent's Exhibit G, pp. 31-33).

15. On July 5, 2017, Dr. Ciccone completed an IME at Respondent's request. He reviewed the Claimant's medical records and performed a physical examination. The Claimant reported both the January 15 and January 19 incidents. On physical examination, Dr. Ciccone noted that the Claimant's right upper extremity (RUE) is extremely weak with external rotation and supraspinatus strength testing. Dr. Ciccone found positive Hawkins, Neer's, and impingement signs. He also noted a positive bear hug test and positive O'Brien's test. He noted that the Claimant has grinding and clicking in her shoulder with range of motion. Dr. Ciccone stated the opinion that

> the request for right shoulder arthroscopy and rotator cuff repair should be denied by worker's compensation insurance (a legal recommendation). I do not believe that the claimant suffered a work related injury. The act of pushing a bar to open a well-functioning door is not an injury, but rather an act of daily activity.

Dr. Ciccone was of the opinion that the right shoulder MRI revealed evidence of an acute muscle strain but no evidence of an acute tendon injury (Respondent's Exhibit G, pp. 34-40).

16. At the hearing, Dr. Ciccone testified consistently with his March 1 and July 5, 2017 reports. He testified as an expert in the field of orthopedic surgery and sports medicine. Regarding the January 19, 2017 incident, Dr. Ciccone rendered the opinion that the Claimant sustained a minor sprain or strain about her right shoulder rotator cuff. He stated the opinion that the incident at work in no way aggravated or caused increased tearing of the chronic appearing rotator cuff tear. Dr. Ciccone testified that he reviewed the Claimant's right shoulder MRI, which showed chronic rotator cuff tears. Dr. Ciccone stated the evidence of muscle and tendon atrophy on the MRI shows that the rotator cuff tears are chronic. Dr. Ciccone testified the MRI did reveal muscle tears (i.e. tendons connect muscle to bones and the acute injury is shown at the muscle), which is evidence of an acute injury. Dr. Ciccone was of the opinion that the January 19, 2017 incident did not cause a rotator cuff tear, and the Claimant's mechanism of injury is not an accepted way to cause a rotator cuff tear. He did not explain what was "an accepted way to cause a rotator cuff tear." Dr. Ciccone was of the opinion that the Claimant's acute muscle strain healed and that her current symptoms are related to her pre-existing degenerative condition. His underlying explanation was significantly lacking. Indeed, Dr. Motz articulated a persuasive underlying explanation for the causal relatedness of the January 19 "door" incident. Dr. Ciccone testified that at the time of the IME, the Claimant had almost full range of motion in her right shoulder. Dr. Ciccone was of the opinion that right shoulder surgery recommended by Dr. Motz is reasonably necessary, but not related to the Claimant's January 19, 2107 work-related injury. Dr. Ciccone stated that despite having full ROM, the Claimant still has decreased function in her right shoulder, evidenced by her inability to write on the white board with her right arm extended away from her body or overhead and her extreme weakness. Dr. Ciccone is not aware of the Claimant having any similar symptoms prior to January 19, 2017. Dr.

Ciccone also testified that even though a person has chronic rotator cuff pathology, it does not mean the person is having shoulder pain or functional limitation and does not mean someone needs treatment. Based on substantial evidence, the ALJ makes a rational decision to accept Dr. Motz's opinion and to reject Dr. Ciccone's opinion on causality.

The Claimant

17. Claimant has worked at the Employer's high school as a mathematics teacher for thirteen years. She teaches algebra and trigometric pre-calculus. On Sunday, January 15, 2017, four days prior to her work-related injury, the Claimant was vacuuming and turned to pick up the vacuum-cleaner to walk up the stairs, lifted it with her right arm, and felt right shoulder pain. She did not hear a pop in her shoulder. Despite what it says in PA Leitch's January 22, 2017 report, Claimant testified that while her shoulder initially hurt, she did, in fact, continue vacuuming. The ALJ finds that PA Leitch's January 22, 2017 report is wrong and that about six weeks later, when the Claimant finally received a copy of the initial medical report, she called the PA who treated her and asked her to change what was in her report, but the PA would not change it. According to the Claimant, her right shoulder hurt but that it did not hurt that bad, and she was not in severe pain on January 15. She did not go to the ER (emergency room) or to a doctor because she did not think it was that bad. Prior to the incident of January 15, the Claimant never had any issues with her right shoulder, including no right shoulder pain or other symptoms and no prior right shoulder treatment. The Claimant returned to work on Monday, January 16, 2017, and worked January 16, 17, 18, and 19, without any issues with her right shoulder. She did not have any issues doing her job, including no issues writing on the white board. She had slight pain in her right shoulder, but nothing like the pain after the incident on January 19, 2017. The Claimant did not have any problems washing her hair or putting on her clothes and did not have any problems with personal hygiene after the January 15, 2017 incident and before the January 19, 2017 incident.

18. On January 19, 2017, the Claimant was outside with hundreds of students assisting with a fire drill. She was leading the students back into the school, and the students were only using one of two doors. When the Claimant approached the doors, only the door on the left was open. She reached out with her right arm to open the door right, pulled on the handle, but the door was locked. She then entered the school through the left door, slightly turned, and reached back with her right arm to push open the door on the right. When she pushed on the bar with her outstretched right arm to open the door, she felt a pop in her right shoulder and instantly had significant, excruciating right shoulder pain. She continued into the building and ran into a student who tried to give her a high five because he did well on a test, and she was not able to do it. When the Claimant returned to her classroom to finish her last class of the day, she could not raise her right arm and had to use her left arm to lift up her right arm. The Claimant demonstrated for the ALJ that after the injury she could not lift her right arm to

40 degrees. In the four days before January 19, 2017 (and after the January 15, 2017 incident), the Claimant did not have any problems lifting her arm or using her arm above her head, other than slight pain. After the January 19, 2017 incident, the Claimant could not raise her right arm up without assistance from her left arm and could not write on the white board. According to the Claimant, the January 19, 2017 incident was the most excruciating pain she has had in years. The Claimant reported the injury to her department chair, Rodney Oosterhouse, and other colleagues immediately after the injury, even before she continued teaching her last class. The Claimant finished her last period, left the school, and drove straight to the ER at Castle Rock Adventist Hospital. She reported both the January 15 and January 19 incidents to the ER physicians and she was referred to an orthopedic surgeon. She reported the injury in writing to the Employer the next morning, January 20, 2017. She went to Concentra, the Emp0loyer's workers' compensation provider, on Sunday, January 22, 2017, and reported the January 15 and January 19 incidents.

19. The Claimant continues to have decreased strength in her right shoulder and is still unable to use her right arm extended away from her body or overhead. When teaching, she is still unable to write on the white board with her arm extended away from her body or overhead. She did not have any problems doing these activities prior to January 19, 2017. The evidence concerning her before and after condition is convincing.

Ultimate Findings

20. The ALJ finds the opinions of Dr. Motz, an authorized treating surgeon, consistent with the Claimant's version of events on January 19, 2017; carefully articulated; and, more persuasive and credible than all other medical opinions to the contrary, for the reasons herein above specified. Further, the ALJ finds the Claimant's testimony credible and persuasive. She felt strongly enough about PA Leitch's erroneous note that the "Claimant stopped vacuuming" on January 15, that the Claimant was insistent that PA Leitch correct the note because the Claimant continued vacuuming. As found herein above, this fact enhances the Claimant's credibility. Otherwise, the Claimant's testimony was straight-forward, credible, and for the most part undisputed.

21. Between conflicting medical opinions, the ALJ makes a rational choice, based on substantial evidence, to accept the causality and other opinions of Dr. Motz, and to reject other medical opinions to the contrary, including the opinion of IME Dr. Ciccone.

22. The ALJ finds that the Claimant has proven, by a preponderance of the evidence that she sustained a compensable aggravation of any underlying chronic and/or degenerative right shoulder condition on January 19, 2017, in the "door" incident, and this arose out of the course and scope of her employment for the Employer herein.

23. The ALJ finds that all of the Claimant's medical care and treatment for her work-related right shoulder injury of January 19, 2017, was authorized because the Claimant went to the Employer-designated medical provider; Concentra; and, it was within the chain of authorized referrals because all referrals, reflected in the evidence, emanated from Concentra, including the referral to Dr. Motz.

24. The ALJ finds that all of the medical care and treatment for the Claimant's compensable right shoulder injury of January 19, 2017, was and is causally related thereto and reasonably necessary to cure and relieve the effects thereof.

.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, this ALJ makes the following Conclusion of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Apps. Office*, 183 P.3d 784 (Colo. App. 2008); *Kroupa v. Indus. Claim Apps. Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull*, 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9TH Cir. 1977). The ALJ determines the credibility of witnesses. *Arenas v. Indus. Claim Apps. Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Apps. Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Apps. Office*, 297 p.3d 964, 2012 COA 85. The same principles concerning credibility determinations that apply to lat witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. 131, 134 P. 254 (1913); *also see Heinicke v. Indus Claim Apps. Office*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistently or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke*, 139 Colo. 305, 228 P.2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on

an expert's knowledge, skill, experience, training, and education. *See* § 8-43-210, C.R.S.; *One Hour Cleaners v. Indus. Claim Apps. Office*, 914 P.2d 501 (Colo. App. 1995). As found, *See, Annotation, Comment: Credibility of Witness Giving Un-contradicted Testimony as Matter for Court or Jury*, 62 ALR 2d 1179, maintaining that the fact-finder is not free to disregard un-contradicted testimony. As found, Claimant's testimony and Dr. Motz's opinion are credible, persuasive and convincing.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Pain Connection Plus v. Indus. Claim Apps. Office*, 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Apps. Office*, 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Apps. Office*, 131 P.3d 1172 (Colo. App. 2005); *also see Martinez v. Indus. Claim Apps. Office*, 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by substantial evidence, which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact-finder to weigh the evidence and resolve contradictions in the evidence. *See Pacesetter Corp. v. Collett*, 33 P.3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus Claim Apps. Office*, 224 P.3d 397, 399-400 (Colo. App. 2009). As found, the ALJ made rational choices, based on substantial evidence, to accept the Claimant's testimony and to accept Dr. Motz's causality opinion and recommendation of causally-related surgery; and, to reject Dr. Ramaswamy's, Dr. Ciccone's, and Dr. Bird's opinions.

Compensability

c. A compensable injury is one that arises out of and in the course of employment. § 8-41-301(1) (b), C.R.S. The "arising out of test is one of causation. If an industrial injury aggravates or accelerates a preexisting condition, the resulting disability and need for treatment is a compensable consequence of the industrial injury. Thus, a claimant's personal susceptibility or predisposition to injury does not disqualify the claimant from receiving benefits. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). An injured worker has a compensable new injury **if the employment-related activities aggravate, accelerate, or combine with the pre-existing condition to cause a need for medical treatment or produce the disability for which benefits are sought. §** 8-41-301(1) (c), C.R.S. *See Merriman v. Indus. Comm'n,* 120 Colo. 400, 210 P.2d 448 (1949); *Anderson v. Brinkoff,* 859 P.2d 819 (Colo. 1993); *National Health* 21 *Laboratories v. Indus. Claim Appeals* Office, 844 P.2d 1259 (Colo. App. 1992); *Snyder v. Indus. Claim Appeals* Office, 942 P.2d 1337 (Colo. App. 1997).

Also see § 8-41-301(1) (c), C.R.S; *Parra v. Ideal Concrete,* W.C. No. 4-179-455 [Indus. Claim Appeals Office (ICAO), April 8, 1998]; *Witt v. James J. Keil Jr.,* W.C. No. 4-225334 (ICAO, April 7, 1998). As found, the January 19, 2017 incident permanently aggravated and accelerated the Claimant's underlying asymptomatic right shoulder condition. Therefore, she sustained a compensable injury to her right shoulder on January 19, 2017.

Medical Benefits

d. Because this matter is compensable, Respondent is liable for medical treatment that is reasonably necessary to cure or relieve the effects of an industrial injury. § 8-42-101(a), C.R.S.; *Snyder v. Indus. Claim. Apps. Office*, 942 P.2d 1337 (Colo. App. 1997). To be a compensable benefit, medical care and treatment must be causally related to an industrial injury. *Dependable Cleaners v. Vasquez*, 883 P.2d 583 (Colo. App. 1994). As found, the Claimant's need for the right shoulder surgery recommended by Dr. Motz on February 27, 2017, is causally related to the Claimant's January 19, 2017, work-related injury. Additionally, medical treatment must be reasonably necessary to cure and relieve the effects of an industrial injury. § 8-42-101(1)(a), C.R.S.; *Morey Mercantile v. Flynt,* 97 Colo. 163, 47 P.2d 864 (1935); *Sims v. Indus. Claim Apps. Office*, 797 P.2d 777 (Colo. App. 1990). As found, the Claimant's need for the right shoulder surgery recommended by Dr. Motz on February 22, 2017, is reasonably necessary to cure and relieve the effects of Claimant's January 19, 2017 work-related injury.

Burden of Proof

e. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing his entitlement to benefits. §§ 8-43-201 & 8-43-210, C.R.S.; *see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Apps. Office*, 12 P.3d 844 (Colo. App. 2000); *Lutz v. Indus Claim Apps. Office*, 24 P.3d 29 (Colo. App. 2000); *Kieckkhafer v. Indus. Claim Apps. Office*, 284 P.3d 202, 205 (Colo. App. 2012). Also, the burden of proof is generally placed on the party asserting the affirmative of a proposition. *Crowin & Co. v. Medina*, 860 P.2d 535 (Colo. App. 1992). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim. Apps. Office (ICAO), March 20, 2002]; *also see Ortiz v. Principi*, 274 P.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim App. Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant sustained her burden of proving, by a preponderance of the evidence that she sustained a compensable injury on January 19, 2017; and, the right shoulder surgery recommended by Dr. Motz on February 22, 2017, is reasonably necessary to cure and relieve the effects of that injury;, and, causally related to it.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Respondent shall pay all the costs of causally related and reasonably necessary medical care and treatment for the Claimant's compensable right shoulder injury of January 19, 2017, including the right shoulder surgery recommended by Dr. Motz on February 22, 2017, subject to the Division of Workers' Compensation Medical Fee Schedule.

B. Any and all issues not determined herein are reserved for future decision..

DATED this 7 day of September 2017.

/s/ Edwin L. Felter, Jr.
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's Order, you may file a Petition to Review the Order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the Order, as indicated on the certificate of mailing or service; otherwise, the Judge's Order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the Order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, see § 8-43-301(2), C.R.S. (as amended, SB 09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a Petition to Review at http://www.colorado.gov/dpa/oac/forms-WC.htm.**

ISSUES

I. Whether Claimant is entitled to ongoing Temporary Total Disability payments, beginning November 19, 2015?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. Claimant was employed for SkyWest Airlines (Employer) for ten years. Claimant's job title was a ramp agent. On May 16, 2015, Claimant injured both of his shoulders while lifting bags in the bag room and loading them onto a cart.

2. Respondents filed a General Admission of Liability on June 30, 2015, and admitted to medical benefits and temporary total disability benefits (TTD). Respondents' have admitted to TTD benefits only from May 19, 2015 to June 22, 2015.

3. On June 19, 2015, his authorized treating (ATP) physician at Concentra, Dr. Peterson, changed Claimant's temporary work restrictions to no lifting over thirty pounds, no pushing or pulling over sixty pounds, and no reaching above shoulders. (Ex. 4, p. 23). Claimant testified that he returned to work between June 19, 2015 and July 22, 2015. Claimant testified that the only reason he was on light duty is because he talked to his doctor and asked the doctor to raise his restrictions up to thirty pounds. He testified that Employer would not let him work light duty with any restrictions limiting lifting to under thirty pounds.

4. On July 22, 2015, Claimant retired from Employer. This was exactly 10 years from his original date of hire, and the first date he could retire and be eligible for travel benefits. Claimant testified that he retired because he could no longer do his job. Claimant testified that he had eight surgeries in eight years. He testified that this work injury was a bad one and he wasn't able to lift anymore or help people on the ramp.

5. Claimant testified that when he retired from SkyWest he only received flight benefits; in effect, discounted airfares on United Airlines, which are also available to current employees. Claimant testified that he did not have a 401(k) or pension with SkyWest.

6. Claimant testified that he was planning on getting another less physically demanding job after he retired. He has not sought employment since retiring, as he has not reached "full medical improvement" (sic), and does not yet know what work he will be capable of doing moving forward. Claimant testified that he was still going through physical therapy and then he found out he needed surgery on both rotator cuffs.

7. On November 19, 2015, Dr. Wiley Jinkins performed an arthroscopic biceps tenodesis, subacromial decompression, and distal clavicle resection surgery on Claimant's right shoulder. (Ex. 5, p. 108).

8. On November 30, 2015, Claimant was evaluated by ATP Dr. Randall Jones of Concentra (Ex. 4, p. 51-53). Dr. Jones assigned work restrictions of "no work".

9. On December 31, 2015, Dr. Jones continued Claimant's restrictions of "no work". (Ex. 4, pp. 54-56).

10. On March 25, 2016, Dr. Jones assigned Claimant temporary work restrictions of lifting up to ten pounds occasionally, push/pull up to ten pounds occasionally, and no reaching above shoulders with affected extremities. (Ex. 4, pp.58-61).

11. On April 25, 2016, Dr. Jones continued Claimant's temporary work restrictions at lifting up to ten pounds occasionally, push/pull up to ten pounds occasionally, and no reaching above shoulders with affected extremities. (Ex. 4, pp.63-65).

12. On April 28, 2016, Dr. Jinkins performed an arthroscopic subacromial decompression, arthroscopic soft tissue tenodesis, and limited distal clavicle resection surgery on his left shoulder. (Ex. 5, p. 111).

13. On May 23, 2016, Dr. Jones evaluated Claimant. (Ex. 4, pp. 66-69). Dr. Jones assigned temporary work restrictions of lifting up to ten pounds, push/pull up to ten pounds, no reaching above shoulder with affected extremities, unable to use power/impact/vibratory tool with left upper extremity, wear splint/brace on left upper extremity.

14. On June 7, 2016, Claimant was evaluated by Dr. Jinkins. (Ex. 5, p. 115). Dr. Jinkins noted that Claimant was making progress with left shoulder, but was having increased problems with his right shoulder. It was noted that Claimant attributed the increased symptoms in the right shoulder to favoring that shoulder. It was noted that Claimant is "not working and, once again, it will be recalled that [Claimant] "retired" *from his* ***previous*** *job* and *is not planning to return to his* ***same line of work."*** *(emphasis added).*

15. On June 23, 2016, Claimant was once again evaluated by Dr. Jones. (Ex. 4, pp. 72-74). Dr. Jones assigned temporary work restrictions of lifting up to ten pounds occasionally, push/pull up to ten pounds occasionally, no reaching above shoulders with affected extremities, unable to use power/impact/vibratory tool with left upper extremity, wear splint/brace on left upper extremity.

16. On August 2, 2016, Claimant was evaluated by Dr. Jinkins. (Ex. 5, pp. 117-118). Dr. Jinkins noted that he felt that Claimant was "able to work at the present time in a 100% sedentary capacity with no lifting over 2 pounds and nothing over waist high if any such work was available to him."

17. On August 3, 2016, Claimant returned for a follow-up appointment with Dr. Jones. (Ex. 4, pp. 75-78). Dr. Jones notes that Claimant's temporary work restrictions are no lifting over ten pounds occasionally, push/pull up to ten pounds occasionally, no reaching above shoulder with affected extremities, unable to use power/impact/vibratory tool with left upper extremity, wear splint/brace with left upper extremity.

18. On September 7, 2016, Dr. Jones again examined Claimant. (Ex. 4, pp. 80-83). Dr. Jones assigned Claimant temporary work restrictions of no lifting over twenty pounds occasionally, push/pull up to twenty pounds occasionally, no reaching above shoulder with affected extremities, unable to use power/impact/vibratory tool with left upper extremity, wear splint/brace with left upper extremity constantly.

19. On October 7, 2016, Dr. Jones examined Claimant. (Ex. 4, pp. 85-88). Dr. Jones continued Claimant's temporary work restrictions which had been assigned during the September 7, 2016 visit.

20. On December 21, 2016, Claimant was evaluated by Dr. Jinkins. (Ex. 5, pp. 119-120). Dr. Jinkins recommended repeat right and left rotator cuff repair surgeries.

21. On December 29, 2016, Dr. Jones examined Claimant. (Ex. 4, pp. 92-93). Dr. Jones continued Claimant's temporary work restrictions.

22. On February 9, 2017, Dr. Jones examined Claimant. (Ex. 4, pp. 94- 98). Dr. Jones continued Claimant's temporary work restrictions.

23. On February 16, 2017, Claimant underwent a right rotator cuff repair, open subacromial decompression/acromioplasty surgery. (Ex. 5, p. 121). The surgery was performed by Dr. Jinkins.

24. On March 9, 2017, Claimant was examined by Dr. Peterson. (Ex. 4, pp. 99-103). Dr. Peterson assigned Claimant temporary work restrictions of lifting up to twenty pounds occasionally, push/pull up to twenty pounds occasionally, no reaching above shoulders, unable to use power/impact/vibratory tool with left and right upper extremity, wear sling on right upper extremity constantly, no use of right upper extremity.

25. On May 10, 2017, Dr. Peterson examined Claimant. (Ex. 4, pp. 104-107). Dr. Peterson changed Claimant's temporary work restrictions to lifting up to five pounds occasionally, push/pull up to five pounds occasionally, no reaching above shoulders with affected extremities, unable to use power/impact/vibratory tool with right and left upper extremities. During this visit, Dr. Peterson noted that

Claimant was thinking about retiring *from his job* in July. (Ex. B, p. 12)(emphasis added).

26. On May 15, 2017, Claimant underwent a left repeat acromioplasty, rotator cuff repair, and release of the coracoacromial ligament. (Ex. 5, p. 124).

27. At hearing, Claimant testified that he was not able to return to employment after any of the four surgeries that he had for his right and left shoulder. Claimant testified that his restrictions changed right after having the first surgery on November 19, 2015. Claimant testified that to his understanding, his current work restrictions are 'no lifting over twenty pounds'.

28. Claimant testified that he has not received any form of income since he stopped working for Employer. Claimant testified that he suffered wage loss due to not being able to work. Claimant testified that at the time that he left Employer he did not foresee that he was going to need four surgeries.

29. Claimant testified that he wasn't sure he was going to retire before the injury occurred on May 16, 2015, but he was contemplating retiring before the injury occurred, due to having sustained several work injuries at this job. He stated he was just unable to continue this line of work. He was hoping to find something less physically demanding, like Bass Pro, but even then he was concerned about his ability to meet their lifting requirements.

30. At hearing, Brenda Fage testified at Respondents' request. Ms. Fage testified that she is a workers' comp analyst for Employer. Ms. Fage testified that she very closely tracks workers' comp claims that occur at Employer. Ms. Fage testified that Employer does not offer any pension benefits. She testified that Employer offers a travel benefit which is based on seniority. She testified that the travel benefit means that the retired employee can have access to flying on a reduced cost through United Airlines. She testified that active employees get the travel benefit as well.

31. Ms. Fage testified regarding Employer's return to work policy after work injuries. She testified that:

> When an injured employee has an injury, and they are given restrictions from the medical provider, if those restrictions are something that can be accommodated at the current station where they are working, they are able to come back to modified duty on a transitional work agreement for 90 days.

32. Ms. Fage testified that employees are allowed to work for 90 days during the transitional work agreement. She testified that after a surgery the transitional work agreement is effectively reset, and a new 90 day period starts. She testified that after the 90 days is up, the employee is taken off work until the restrictions are full duty release. The Transitional Work Assignment did not have to be in the same line of work that the injured worker was performing before being injured.

33. Ms. Fage testified that once a SkyWest employee decided to retire, they would notify their current manager. The manager would start the process with SkyWest headquarters to get the retirement packet to apply for retirement. The entire process takes approximately one week to complete.

34. Ms. Fage testified that if Claimant was still working for Employer currently she would have approached his manager to see if he could have accommodated Claimant's restrictions. Claimant's status upon leaving Skywest was that he was "eligible for rehire".

35. The ALJ finds both Claimant and Ms. Fage to be credible and sincere in their respective testimony. There are no significant conflicts which must be resolved.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1).* Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The ALJ, as the fact-finder, is charged with resolving conflicts in testimony. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990) Moreover, the ALJ may accept all, part, or none of the testimony of a witness. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion). In this case, both witnesses are credible. The conclusions to draw are based on legal principles, instead of credibility.

C. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Temporary Total Disability

D. To receive temporary disability benefits, the claimant must prove the injury caused the disability. Section 8-42-103 (1), C.R.S. 2001; PDM Molding, Inc. v. Stanberg, 898 P. 2d 542 (Colo. 1995). As stated in PDM, the term "disability" refers to the claimant's physical inability to perform regular employment. *See also McKinley v. Bronco Billy's,* 903 P. 2d 1239 (Colo. App. 1995). Once the claimant has established a "disability" and a resulting wage loss, the entitlement to temporary disability benefits continues until terminated in accordance with §8-42-105(3)(a)-(d), C.R.S. 2001. Claimant is not required to prove that the industrial injury is the "sole" cause of his wage loss to recover temporary disability benefits. Jorge Saenz Rico v. Yellow Transportation, Inc. W.C. No. 4-547-185 (ICAO December 1, 2003), citing *Horton v. Industrial Claim Appeals Office,* 942 P. 2d 1209 (Colo. App. 1996).

E. To prove entitlement to temporary total disability (TTD) benefits, claimant must prove that the industrial injury or disease caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg,* 898 P. 2d 542 (Colo. 1995). The term disability connotes two elements: (1) Medical incapacity evidences by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume her prior work. *Culver v. Ace Electric,* 971 P. 2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Murphy,* 964 P. 2d (Colo. App. 1998).

Voluntary Separation

F. Where it is determined that a temporarily disabled employee is responsible for termination of employment the resulting wage loss shall not be attributable to the on-the-job injury. In *Colorado Springs Disposal v. Industrial Claim appeals Office,* 58 P. 3d 1061 (Colo. App. 2002), the court held that the term "responsible" reintroduced into the Workers' Compensation Act the concept of fault. In this context fault requires that the claimant must have performed some volitional act or exercised a degree of control over the circumstances resulting in the termination. *Padilla v. Digital Equipment Corp.,* 902 P. 2d 414 (Colo. App. 1995) *opinion after remand* 908 P. 2d 1185 (Colo. App. 1985). That determination must be based upon an examination of the totality of circumstances. *Id.*

The burden to show that the claimant was responsible for her discharge is on the respondents. *Colorado Compensation Insurance Authority v. Industrial Claim Appeals Office,* 18 P. 3d 790 (Colo. App. 2000).

G. In this case, Claimant voluntarily retired from Employer on July 22, 2015. The question is whether or not Claimant's condition worsened due to natural progression of the industrial injury that occurred while Claimant worked for Employer. In *Anderson v. Longmont Toyota*, the Colorado Supreme Court held that "Section 8-42-2015(4) bars TTD wage loss claims when the voluntary or for-cause termination of the modified employment causes the wage loss, but not when the worsening of a prior work-related injury incurred during the employment causes the wage loss." *Anderson v. Longmont Toyota*, 102 P. 3d 323 (Colo. Sup. 2004).

H. In *Anderson*, the Colorado Supreme Court agreed with the ICAO's conclusion on two separate cases, *Anderson* and *Krause*, that:

> [A] worsened condition rendered [Anderson] unable to perform the job. Similarly, after he left the modified employment, [Krause] experienced a worsening of condition that required surgery and prevented him from returning to work. In both situations, because the worsened condition and not the termination of employment caused the wage losses, the ICAO concluded that the claimants were entitled to TTD benefits.
> *Id*. at 331.

I. Claimant retired from Employer on July 22, 2015. The only benefit that he received when he retired was flight benefits. He did not receive a 401(k) or pension. He testified that he intended to return to some type of employment in the future, but wanted to work in an area that was less physically demanding. He did not foresee that he was going to have to undergo four surgeries at the time that he retired from Employer. The initial surgery on November 19, 2015 rendered Claimant unable to work. Like the Claimants in *Anderson*, the worsened condition of surgeries has prevented Claimant from returning to work, and it still does.

J. In *Grisbaum v. Industrial Claim Appeals*, in June 2001 the claimant suffered a compensable injury and continued to work with no restrictions. *Grisbaum v. Industrial Claim Appeals Office, 109 P.3d 1054*. In January 2002 the claimant voluntarily resigned from his employment while still under treatment for the work-related injury. In March 2002 the claimant was restricted to light duty because his condition was worsening. In May 2002, the claimant was taken off work completely. In September 2002 and November 2002 the claimant underwent surgeries. The Court of Appeals held that "[b]ecause the ALJ found that the *industrial injury* caused claimant's inability to work beginning in May 2002, we conclude claimant is entitled to an award of TTD benefits even though his resignation was voluntary."

K. Like the Claimant in *Grisbaum*, Claimant voluntarily retired. Afterwards, Claimant's condition worsened and required four surgeries. He was unable to work as of November 19, 2015. He has not been able to return to work due to the repeated surgeries. All four surgeries are related to the work injury. Therefore, the ALJ finds that the industrial injury caused Claimant's inability to work beginning on November 19, 2015 and Claimant is entitled to TTD benefits even though his original resignation for Skywest was voluntary. The ALJ does not adopt Respondent's argument that the "very definition of retirement is to leave one's job and cease working [altogether]." Thousands of individuals 'retire' after 20 years in the military, then seek work in civilian capacity. Such persons never intend to cease working altogether. Others 'retire' from professional sports, but then seek different work better suited to their physical abilities. Claimant was 56 years old when he retired from Skywest. He did not retire from the workforce; he retired from Skywest. Claimant then wanted something better suited to his declining physical abilities. Something like Bass Pro.

Offered Work Restrictions/Worsening of Condition

L. Respondents argue that Claimant should not be entitled to TTD benefits, because Employer would have accommodated his restrictions had he not retired. Ms. Fage's testified that Employer will only accommodate injured workers' work restrictions for 90 days. Afterwards, the injured worker would remain out of work until released to full duty work. She testified that there is a "reset" button of 90 days after a surgery. Claimant was out of work on restrictions for more than 90 days between surgeries. Had Claimant not retired the initial 90 day period would have expired at the end of September, 2015. Claimant's first surgery was on November 19, 2015. Therefore, Claimant would have been off work completely; thus entitled to TTD benefits before the surgery took place on November 19, 2015. Even if Claimant continued to work for SkyWest, he would be entitled to TTD benefits for a period of time between each surgery. Claimant would be entitled to ongoing TTD benefits, as he is still on work restrictions, and it has been more than 90 days since his last surgery.

M. Respondents argue that Employer would have been able to accommodate Claimant's work restrictions had he still been employed for Employer. Ms. Fage testified that if Claimant had still been employed by Employer, she would have contact the manager in his department to inquire about modified work within Claimant's restrictions. She did not testify that she actually contacted Claimant's manager and asked about modified work. In the past, this has not always been the case with other injuries. While she credibly testified that she believed that there likely would have been modified work available for Claimant, her testimony regarding accommodated work within Claimant's restrictions during this time period is based on speculation.

N. The preponderance of the evidence has established that Claimant suffered a worsening of condition requiring him to remain off work beginning on November 19, 2015. Claimant suffered a worsening of condition each time he underwent the four surgeries on his right and left shoulders. Therefore, regardless of what might have

been offered as temporary work restrictions, Claimant is entitled to ongoing TTD benefits beginning on November 19, 2015.

ORDER

It is therefore ordered that:

1. Claimant is entitled to ongoing Temporary Total Disability benefits, beginning on November 19, 2015.

2. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

STATE OF COLORADO

W.C. No. 4-505-378-04

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER GRANTING SUMMARY JUDGMENT IN FAVOR OF THE RESPONDENTS ON STATUTE OF LIMITATIONS

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

,

Claimant,

v.

,

Employer,

and

Insured Respondent.

A hearing on the merits is scheduled for November 17, 2017, in Greeley, Colorado. A status conference is scheduled for November 15, 2017.

The matter was assigned to Edwin L. Felter, Jr., Administrative Law Judge (ALJ) for decision on the Respondent's Motion for Summary Judgment, filed on August 22, 2017, and the Claimant's Objection thereto, filed on August 24, 2017. Both matters were deemed submitted for decision on August 29, 2017.

.

Hereinafter shall be referred to as the "Claimant." shall be referred to as the "Employer." All other parties shall be referred to by name.

Respondents' Exhibits A and B were attached to the Motion for Summary Judgment. There were no attachments to the Claimant's Objection to Respondent's Motion for Summary Judgment.

ISSUE FOR SUMMARY JUDGMENT

The issue to be determined by this decision concerns whether there is a genuine issue of disputed material fact concerning whether the Claimant's claim for post maximum medical improvement (MMI) medical benefits [*Grover* medical benefits] is barred by the statute of limitations.

The Respondents bear the burden of proof, by a preponderance of the evidence of establishing that there is no genuine issue of disputed material fact concerning the Statute of Limitations. The Claimant bears the burden, by preponderant evidence of establishing that there is a genuine issue of disputed material fact concerning whether the statute of limitations was tolled.

FINDINGS OF FACT

Based on the undisputed evidence contained in the file, pleadings and exhibits, the ALJ makes the following Findings of Fact:

Preliminary Findings/Posture

1. The Claimant was employed by the Respondent and sustained a hearing loss with a date of injury of May 31, 2001.

2. The Claimant's claim was admitted and Respondent paid medical benefits and permanent partial disability (PPD) benefits to the Claimant.

3. Respondent filed a Final Admission of Liability (FAL) on December 2, 2002, admitting for a 2.8% binaural hearing loss and denying post-MMI medical maintenance benefits.

4. Respondent filed an Amended FAL, dated July 5, 2005, which also denied post-MMI medical maintenance benefits.

5. Despite the denial of post-MMI medical maintenance benefits, the Respondent paid some additional medical benefits to Claimant, including some maintenance supplies for the Claimant's hearing aids. The last medical benefits paid were in 2016.

6. The Claimant filed **no** timely Objections to either FAL, nor did he file an Application for Hearing in 2002 or in 2005.

Findings/Statute of Limitations

7. The Claimant filed an Application for Hearing on July 25, 2017, on issues of reasonably necessary medical benefits and "admitted *Grover* medical benefits."

8. The Claimant recently requested additional medical benefits for his hearing loss claim/hearing aids, which was denied, based on the Respondent's position that any further claim for medical benefits is barred by the statute of limitations.

9. Under § 8-43-303(1), C.R.S., at any time within six years after the date of injury, the ALJ may reopen a claim. § 8-43-303(2)(b) provides that, at any time within two years after the date the last medical benefits become due and payable, the ALJ may reopen the claim only as to medical benefits.

10. There is no argument that this claim was closed by FALs, which denied post-MMI medical maintenance care.

11. It is undisputed that the Claimant has not filed a Petition to Reopen.

12. The Claimant's Application for Hearing, dated July 25, 2017, alleges entitlement to "*Grover* medical benefits" based upon the proposition that medical maintenance benefits are still open because the Respondent paid some additional medical benefits after the denials of post-MMI medical maintenance benefits in the FALs. The Claimant's implied theory is that the Respondent. Has subsequently waived its former denials or, in the alternative, is stopped from persisting in the Respondent's denials of post-MMI medical maintenance benefits by virtue of paying the benefits after the statute of limitations has run,

13. At the time the Claimant reported his work-related injury, the Employer had no notice of a "lost time" injury or a permanently disabling injury.

Tolling of Statute of Limitations

14. In his Objection, the Claimant does **not** allege that the statute of limitations was tolled in any way.

15. The ALJ infers and finds that above-referenced claim was not a "lost-time" claim. Indeed, the Claimant in his Objection makes no showing of a "lost-time' injury or a failure of the Respondent to file an Employer's First Report of Injury, which could affect a tolling of the statute of limitations.

16. The ALJ infers and finds that the Respondent admitted and paid the Claimant's medical benefits until the admitted date of MMI, December 9, 2002; and, the respondent paid some additional medical benefits to the Claimant after its denial of post-MMI medical maintenance benefits. The ALJ infers and finds that these subsequent payments were voluntary and gratuitous and did not amount to a voluntary re-opening of the Claimant's case.

Ultimate Findings

17. The totality of the pleadings and evidence establishes, by preponderant evidence that there is no genuine issue of disputed material fact concerning whether or not the statute of limitations has run on post-MMI medical maintenance benefits..

18. There is no evidence that the statute of limitations was tolled because of legal tolling provisions. Moreover, the Claimant argues that the statute was tolled because the Respondent paid additional post-MMI medical maintenance benefits after the finality of the FALs. As found, there was **no** voluntary re-opening by the Respondent by virtue of the fact that it voluntarily and gratuitously paid some additional medical benefits after the finality of the FALs, denying post-MMI medical maintenance benefits.

19. The ALJ finds that any claims for additional post-MMI medical maintenance benefits are barred by the relevant statutes of limitations,

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Summary Judgment

a. Pursuant to Office of Administrative Courts Rules of Procedure (OACP) Rule 17, 1 CCR 1101-3, "any party may file a motion for summary judgment seeking resolution of any endorsed issue for hearing." Summary judgment may be sought in a workers' compensation proceeding. *See Fera v. Indus. Claim Appeals Office,* 169 P.3d 231, 232 (Colo. App. 2007). The OAC Rule allows a party to support its Motion with affidavits, transcripts of testimony, medical reports, or employer records. A motion for summary judgment may be supported by pleadings, depositions, answers to interrogatories, and admissions on file. C.R.C.P. 56; *See also Nova v. Indus. Claim Appeals Office*, 754 P.2d 800 (Colo. App. 1988) [C.R.C.P. and C.R.E. apply insofar as they are not inconsistent with the procedural or statutory provisions of the Act]. As found, the FALS were attached to the Motion for Summary Judgment. There were **no** attachments to the Claimant's Objection.

.

b. Pursuant to Office of Administrative Courts (OACRP), Rule 17, 1 CCR 104-1, summary judgment is appropriate when there are no disputed issues of material fact and the moving party is entitled to judgment as a matter of law. As found, there are **no** genuine issues of disputed material fact concerning the applicability of the relevant statutes of limitations; and, the tolling of the statute of limitations.

Tolling of Statute of Limitations

c. The workers' compensation statute of limitations begins to run when an injured worker, as a reasonable person, recognizes the nature, seriousness and probable compensable nature of the injury, *City of Boulder v. Payne,* 162 Colo. 345, 426 P.2d 194 (1967). When a worker recognizes the compensable nature of the injury is a fact question, which must be resolved as the result of an evidentiary hearing. *Richmond v. Indus. Comm'n,* 33 Colo. App. 21, 513 P.2d 1088 (1973). As found, the relevant statutes of limitations were **not** tolled by any relevant tolling principles.

d. As found, the Claimant filed an Application for Hearing on the issue of entitlement to additional medical maintenance benefits. He did not file a Petition to Re-open. If he had filed a Petition to Reopen, it would be barred by the statute of limitations. § 8-43-303(1), C.R.S., provides that within six years after the date of injury any "award" may be reopened on the grounds of change of condition. § 8-43-303(2)(b) provides that within two years after the date the last medical benefit becomes due and payable, the ALJ "may reopen an award only as to medical benefits" based on change of condition.

e. § 8-43-103(2), C.R.S., states in part that "the payment of medical care cannot be considered payment of compensation or medical benefits." See also *Snyder v. Indus. Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997).

f. In *Arneson v. Kimzey Casing Service, Inc.,* W.C. No. 4-201-940 [Indus. Claim Appeals Office (ICAO), June 6, 1996], ICAO determined that respondents might pay for medical examinations and treatment after claim closure in an effort to discover whether claimant's condition has worsened sufficiently to reopen the claim. ICAO, in *Richard Dowrey v. Hilton Hotel,* W.C. No. 3-114-127 (ICAO, November 19, 2003), reiterated that respondents' action in paying for medical treatment after closure of the claim did not constitute a waiver of the right to require the claimant to prove the statutory grounds for re-opening when the claimant sought an order requiring respondents to pay for treatment. The Claimant herein is arguing that Respondent's voluntary payment of medical benefits means that the Respondent waived its right under the Act and voluntarily "reopened" the case. Both case law and the Act contra-indicate this argument. Voluntary payment of medical benefits by the Respondent does not reopen the claim or vitiate the Claimant's duty to file a Petition to Reopen. See also *Snyder v. Indust. Claim Appeals Office, supra*; *Rodolfo Morin v. ACE Hardware and*

Fidelity & Guaranty Insurance Co., W.C. No. 4-906-748-04 (ICAO, May 6, 2014). Under the statute, payments made for treatment are not considered an admissions of liability and do not waive the jurisdictional requirement to file a Petition to Reopen to obtain additional medical benefits.

Genuine Issues of Disputed Material Fact

g. Summary judgment is appropriate when the pleadings show that there is no genuine issue as to any material fact and that the moving party is entitled to judgment as a matter of law. C.R.C.P. 56(c); *Churchey v. Adolph Coors Co.*, 759 P.2d 1336 (Colo. 1988). This rule allows the parties to pierce the formal allegation of the pleadings and save the time and expense connected with trial when, as a matter of law, based on undisputed facts, one party could not prevail. See *Drake v. Tyner*, 914 P.2d 519 (Colo. App. 1996). As found, there are **no** genuine issues of disputed material fact concerning the applicability of the statute of limitations or the tolling thereof.

h. Once the moving party shows specific facts probative of a right to judgment, it becomes necessary for the non-moving party to set forth facts showing that there is a genuine issue for hearing. *See Miller v. Van Newkirk*, 628 P.2d 143 (Colo. App. 1980). As found, The Respondent's Motion and attachments show that they have a right to summary judgment. The Claimant's Objection fails to counter with an averment that there are any genuine issues of disputed material fact concerning the tolling of the relevant statutes of limitation.

i. There are exceptions to the two-year statute of limitations under § 8-43-103(2), but they do not apply in this case. For instance, § 8-43-103(2), C.R.S., provides: "In all cases in which the employer has been given notice of an injury and fails, neglects, or refuses to report said injury to the division as required by the provisions of [the Workers' Compensation Act], this statute of limitations shall not begin to run against the claim of the injured employee … until the required report has been filed with the division. *Likens v. Dep't of Corrs*, W.C. No. 4-560-107 (ICAO Feb. 10, 2004). This applies to alleged "lost time" or "permanently disabling injuries of which an employer has notice. As found, the Employer had **no** notice of "lost time' injuries in either W.C. No. 5-025-140-01 or W.C. No. 5-025-409-02.

j. Finally, § 8-43-103(2), C.R.S., indicates that the statute of limitations will not apply to a claimant "if it is established to the satisfaction of the director within three years after the injury…that a reasonable excuse exists for the failure to file such notice claiming compensation and if the employer's rights have not been prejudiced.'" As found, the Claimant's claims were filed more than three years after he, as a reasonable person, knew or should have known, of the serious and probable compensable nature of his claims to post-MMI medical maintenance care.

k. There was **no** tolling of the statute of limitations due to any failure to report the injury on the part of Employer. § 8-43-102(2), C.R.S., provides that the statute of limitations is tolled where an employer does not "report said injury to the division as required by the provisions of [the Workers' Compensation Act]." Thus, where no report was required to be filed, the statute of limitations is not tolled. As found, the Employer herein did not know of a claimed "lost time" injury until September 7, 2016 or thereafter, a time beyond the relevant statutes of limitation.

l. The statutory reporting requirements are set out in § 8-43-101, C.R.S. *See Grant v. Indus. Claim Appeals Office*, 740 P.2d 530 (Colo. App. 1987). § 8-43-101(1), C.R.S., requires that the within ten days after notice of knowledge that an employee had contracted a permanently physically impairing injury or lost-time injury, the employer shall file a report with the division. *Pierce-Kouyate v. Wilson's of Colo. Ltd.*, W.C. No. 4-717-784 (ICAO Nov. 21, 2007). A "lost time injury" is defined as one that causes the claimant to miss more than three work shifts or three calendar days of work, and the employer's notice is measured by the "reasonably conscientious manager" standard. *Grant,* 740 P.2d at 531. There is no requirement to file a First Report of Injury, however, where the employer has no notice or knowledge that a claimant had a lost-time injury or permanent physical impairment. *Pierce-Kouyate v. Wilson's of Colo. Ltd., supra.* The claimant bears the burden of establishing the tolling of the statute of limitations. Regardless, there was no persuasive evidence of the tolling of the Statute of Limitations. *Grant*, 740 P.2d at 532. As found, the Claimant failed to prove that there was a tolling of the statute of Limitations.

Burden of Proof

m. The burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P. 2d 535 (Colo. App. 1992). That burden is "preponderance of the evidence." A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). As found, the Respondent satisfied its burden of proof that there is **no** genuine issue of disputed material fact concerning the applicability of the relevant statutes of limitations. The Claimant failed to satisfy his burden on the alleged "tolling" of, or waiver of the relevant statutes of limitations.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Respondent's Motion for Summary Judgment is hereby granted.

B. Any and all claims for post-maximum medical improvement maintenance benefits are hereby denied and dismissed.

C. The hearing of November 17, 2017 is hereby vacated.

DATED this 11 day of September 2017.

ISSUES

- Whether claimant has proven by a preponderance of the evidence that he sustained a compensable injury arising out of and in the course and scope of his employment with employer.

- If claimant has proven a compensable injury, whether claimant has proven by a preponderance of the evidence that the medical treatment he received following the injury was reasonable and necessary to cure and relieve claimant from the effects of the work injury.

- If claimant has proven a compensable injury, whether claimant has proven by a preponderance of the evidence that the medical treatment he received following the injury was authorized medical treatment.

- If claimant has proven a compensable injury, what is claimant's average weekly wage (AWW)?

- If claimant has proven a compensable injury, whether claimant has proven by a preponderance of the evidence that he is entitled to temporary total disability (TTD) benefits.

- Whether claimant has proven by a preponderance of the evidence that he is entitled to a 50% increase in any indemnity benefits, pursuant to Section 8-43-408(1), C.R.S., for employer's failure to maintain workers' compensation insurance.

FINDINGS OF FACT

1. In 2016, employer operated a trucking company in Commerce City, Colorado. Ms. Moran testified that the employer's company is incorporated in Colorado. Claimant traveled to Colorado to complete employment paperwork when he was hired by employer.

2. Claimant was employed by employer as a truck driver. Claimant's job duties included picking up and delivering loads. Employer assigned these specific loads to claimant. During his employment, claimant was paid $1,600.00 per week.

3. On September 1, 2016, claimant was driving one of employer's trucks in Arizona when he was involved in a serious motor vehicle accident. It is undisputed that at the time of the accident claimant was operating employer's vehicle at the direction of employer. It is undisputed that the cause of the accident is unknown.

4. Based upon the law enforcement reports entered into evidence, claimant was unconscious at the scene of the accident and flown to Lake Havasu Regional Medical Center. Claimant was then flown to Abrazo West Valley Hospital and admitted with severe injuries including "a brain bleed and a cervical fracture". Claimant remained in a coma for a period of time. Employer was aware that claimant was involved in the September 1, 2016 motor vehicle accident. Ms. Moran testified that she remained in constant communication with claimant's spouse regarding claimant's condition. Claimant has not returned to work since the September 1, 2016 accident.

5. Respondent agrees that the medical treatment claimant received following the September 1, 2016 accident was reasonable and necessary medical treatment. At the hearing, claimant submitted evidence of a total of $3,793.17 in unpaid medical bills.

6. The ALJ credits the evidence presented at hearing and finds that claimant has demonstrated that it is more likely than not that he suffered a compensable injury on September 1, 2016 arising out of and in the course and scope of his employment with employer.

7. Based upon the evidence entered at hearing, the ALJ finds that employer did not have workers' compensation insurance at the time of claimant's injury on September 1, 2016. The ALJ credits the evidence presented and finds that claimant has demonstrated that it is more likely than not that employer was subject to the Colorado Workers' Compensation Act at the time of claimant's work injury.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., (2016). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been

contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2016).

3. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment." *See H & H Warehouse v. Vicory, supra.*

4. As found, claimant has demonstrated by a preponderance of the evidence that he suffered a compensable injury arising out of and in the course and scope of his employment with employer when he was involved in a motor vehicle accident while operating the employer's vehicle on September 1, 2016.

5. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

6. As found, it is undisputed that the medical treatment claimant received following the September 1, 2016 work injury was reasonable and necessary to cure and relieve claimant from the effects of the injury. Therefore, the ALJ concludes that claimant has demonstrated by a preponderance of the evidence that medical treatment he received following the work injury was reasonable, necessary, and related to that injury.

7. "Authorization" refers to the physician's legal authority to treat, and is distinct from whether treatment is "reasonable and necessary" within the meaning of Section 8-42-101(1)(a), C.R.S. 2008. *Leibold v. A-1 Relocation, Inc.*, W.C. No. 4-304-437 (January 3, 2008). Section 8-43-404(5)(a) specifically states: "In all cases of injury, the employer or insurer has the right in the first instance to select the physician who attends said injured employee. If the services of a physician are not tendered at the time of the injury, the employee shall have the right to select a physician or chiropractor." "[A]n employee may engage medical services if the employer has expressly or impliedly conveyed to the employee the impression that the employee has authorization to proceed in this fashion…." *Greager v. Industrial Commission*, 701 P.2d 168 (Colo. App. 1985), *citing*, 2 A. Larson, *Workers' Compensation Law* § 61.12(g)(1983).

8. As found, claimant received medical care on an emergent basis following the September 1, 2016 work injury. As found, employer was aware of claimant's medical condition following the injury. The ALJ concludes that claimant has proven by a

preponderance of the evidence that the medical treatment he received following the September 1, 2016 injury was authorized medical treatment.

9. To prove entitlement to temporary total disability (TTD) benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a) C.R.S., *supra*, requires claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). There is no statutory requirement that claimant establish physical disability through a medical opinion of an attending physician; claimant's testimony alone may be sufficient to establish a temporary disability. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

10. As found, claimant has not worked since the September 1, 2016 work injury. The ALJ concludes that claimant's compensable injury resulted in claimant's inability to work. Therefore, claimant has demonstrated by a preponderance of the evidence that he is entitled to TTD benefits beginning September 1, 2016, and ongoing until terminated by law.

11. The ALJ must determine an employee's AWW by calculating the monetary rate at which services are paid the employee under the contract of hire in force at the time of the injury, which must include any advantage or fringe benefit provided to the Claimant in lieu of wages. Section 8-42-102(2), C.R.S.; *Celebrity Custom Builders v. Industrial Claim Appeals Office*, 916 P.2d 539 (Colo. App. 1995).

12. Based upon the evidence, the ALJ concludes that claimant's AWW is $1,600.00.

13. Section 8-43-408(1) C.R.S., provides that in cases where the employer is subject to the provisions of the Colorado Workers' Compensation Act and has not complied with the insurance provisions required by the Act, the compensation or benefits provided in said articles shall be increased fifty percent.

14. As found, claimant has proven by a preponderance of the evidence that employer was not insured for workers' compensation at the time of his injury. As found, claimant's compensation and benefits shall be increased by fifty percent pursuant to Section 8-43-408(1), C.R.S.

ORDER

It is therefore ordered that:

1. Claimant has demonstrated by a preponderance of the evidence that he suffered a compensable injury on September 1, 2016 while employed with employer.

2. Respondent shall pay for the reasonable medical treatment necessary to cure and relieve claimant from the effects of the September 1, 2016 work injury.

3. Respondent is liable for payment of TTD benefits beginning on September 1, 2016, and ongoing until terminated by law.

4. Claimant's TTD benefits shall be calculated using an average weekly wage of $1,600.00.

5. Claimant is entitled to a 50% increase to benefits and compensation because of employer's failure to carry workers' compensation insurance, pursuant to Section 8-42-408(1), C.R.S.

6. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

7. All matters not determined herein are reserved for future determination.

8. In lieu of payment of the above compensation and benefits to the claimant, the Respondent-Employer shall:

a. Within ten (10) days of the date of service of this order, deposit the sum of $57,000.00 with the Division of Workers' Compensation, as trustee, to secure the payment of all unpaid compensation and benefits awarded. The check shall be payable to: Division of Workers' Compensation/Trustee. The check shall be mailed to the Division of Workers' Compensation, P.O. Box 300009, Denver, Colorado 80203-0009, Attention: Sue Sobolik/Trustee;

OR

b. Within ten (10) days of the date of service of this order, file a bond in the sum of $57,000.00 with the Division of Workers' Compensation:

(1) Signed by two or more responsible sureties who have received prior approval of the Division of Workers' Compensation; or

(2) Issued by a surety company authorized to do business in Colorado.

The bond shall guarantee payment of the compensation and benefits awarded.

It is further ordered that the Respondent-Employer shall notify the Division of Workers' Compensation of payments made pursuant to this order.

It is further ordered that the filing of any appeal, including a petition to review, shall not relieve the employer of the obligation to pay the designated sum to the trustee or to file the bond. §8-43-408(2), C.R.S.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

WORKERS' COMPENSATION NO. WC 4-935-211-03

ISSUE

- Whether Respondents have met their burden of proving by a preponderance of the evidence that previously admitted medical maintenance benefits are not causally related to the occupational injury that occurred on November 15, 2013.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant is a teacher for the Cherry Creek School District.

2. On November 15, 2013, Claimant suffered a compensable injury when she stumbled to the ground after a student suddenly opened a door knocking Claimant backward.

3. Prior to the injury, Claimant had suffered prior back and head injuries related to horseback riding and motor vehicle accidents, and had a long history of depression.

4. On July 14, 2014, the initial ATP, Dr. Rashbacher, discharged Claimant from care at MMI with no work restrictions and no impairment. At discharge, Dr. Raschbacher noted that Claimant "is working with horses extensively," and that he was "medically not well able to explain" her ongoing arm symptoms "but that in any event, no further treatment or intervention would likely be necessary." Dr. Raschbacher did recommend continuing with the anti-depressant Citalopram on a regular basis for a couple of months and maintenance follow-ups with Rebecca Hawkins, Ph.D.

5. On January 6, 2015, a Division Independent Medical Examiner, John Sacha, M.D., evaluated Claimant and found Claimant was not at MMI, stating that "I do not find significant evidence of a closed-head injury at this point," but suspecting a cervical facet syndrome.

6. After the initial DIME, ATP Alisa Koval, M.D, provided additional treatment. On September 8, 2015, Dr. Koval placed Claimant at MMI and returned Claimant to full duty with no work restrictions. At that point, Dr. Koval recommended as maintenance care massage therapy, medications, specialist follow-ups, chiropractic care and use of supplements.

7. On October 14, 2015, DIME physician, John Sacha, M.D., placed Claimant at MMI with no work restrictions and released her to full duty. Dr. Sacha diagnosed cervical facet syndrome, adjustment disorder versus reactive depression, and possible history of a concussion.

8. Dr. Sacha recommended ongoing maintenance care "over the next one to two years." Dr. Sacha's recommendations for maintenance medical care also included chiropractic care and use of medications, and added acupuncture and a gym membership. Dr. Sacha, however, disagreed with the use of supplements for maintenance.

9. Post MMI, Claimant received ongoing medical maintenance directed by Dr. Koval. Maintenance treatment included psychiatric care from Steven Dworetsky, M.D., psychological counseling from Glenn M. Kaplan, Ph.D., and Lawrence Haburchak, Psy.D., and specialist care for Claimant's alleged mild traumatic brain injury from Susan Ladley, M.D. Claimant additionally received chiropractic care and massage therapy.

10. On November 10, 2015, at the first maintenance visit, Dr. Koval recommended massage therapy, chiropractic care, and continued to manage Claimant's medications.

11. Dr. Koval continued this maintenance regimen, and by April 4, 2016, added a trial of psychotherapy with Glenn Kaplan, Ph.D.

12. As of June 7, 2016, Dr. Koval's maintenance plan no longer included referrals for chiropractic care.

13. On August 3, 2016, Dr. Koval added a referral to Susan Ladley, M.D., for evaluation in addition to continuing massage therapy and psychotherapy with Dr. Kaplan, who in July had concluded that Claimant was ready for discharge planning.

14. Claimant, apparently not accepting Dr. Kaplan's recommendations, self-referred to Lawrence Haburchak, Psy.D., a rehab psychologist regarding her panic symptoms Dr. Koval expanded Claimant's maintenance referral to include treatment with Dr. Haburchak, and added Steven Dworetsky, M.D., for medication management. Insurer authorized maintenance treatment with both Dr. Haburchak and Dr. Dworetsky

15. Additionally, Claimant began receiving maintenance treatment from Dr. Ladley in August of 2016. Thus, after being placed at MMI, Claimant's maintenance treatment expanded to include four new medical professionals: Dr. Kaplan, Dr. Ladley, Dr. Haburchak, and Dr. Dworetsky.

16. By December 20, 2016, Dr. Koval recognized that Claimant's physical complaints (primarily, chronic neck pain and headaches) were well controlled, and she continued to struggle with mental health issues. Dr. Koval noted that Claimant "is very close to reaching the baseline at which she lived prior to the incident, and I am optimistic that with continued psychotherapy and medication management she will get there."

17. In February 2017, Dr. Koval recommended Claimant follow-up with Dr. Haburchak for therapy and with Dr. Dworetsky for continued medication management.

18. On February 27, 2017, Dr. Ladley discharged Claimant from her care, noting that her services are no longer required and focus wwould be with psych specialists.

19. On May 5, 2017, Dr. Koval noted that Claimant's chronic neck pain was "well-controlled" and that the "symptoms of anxiety & claustrophobia, [are] also well-controlled by her maintenance regimen per Dr. Dworetsky." Claimant continued to work full duty. Dr. Koval assessment as of May, 2017 included intractable pain in the cervical region and an anxiety disorder. Dr. Koval's only recommended treatment plan was to follow-up with Dr. Dworetsky for medication management.

20. On December 13, 2016, Robert Kelinman, M.D., conducted a psychiatric independent medical examination of Claimant. In addition to the examination, Dr. Kleinman obtained a medical history from the Claimant, and completed a comprehensive review and summary of Claimant's medical records. Dr. Kelinman's report is dated December 18, 2016.

21. Dr. Kleinman noted in his report and testified at hearing that Claimant provided an inaccurate psychiatric history when she claimed not having depression before 2010 or any treatment for depression before 2010.

22. Persuasive medical record show that Claimant was taking the anti-depressant Citalopram in December, 2008, for a prior episode of depression. Claimant continued taking anti-depressant medications throughout medical encounters on April 8, 2009, May 4, 2009, and July 1, 2009 at which time Bupropion was added. This anti-depressant medication continues on September 25, 2009, November 17, 2009, February 22, 2010, and July 15, 2010. Medical records from July 2010 indicate that Claimant's Citalopram dosage Claimant was increased from 20 mg to 40 mg. Also of note, this medical appointment was to evaluation Claimant's post-concussion syndrome after falling off a horse and hitting a fence post with her head.

23. By August 23, 2010, Claimant carried a diagnosis of chronic depression. And, shortly after Claimant's July 2010 head injury, Claimant ran her truck into a ditch while not wearing a seat belt and hit her head again. Her symptoms after this MVA included memory problems, an inability to remember names, difficulty following tasks, and word finding. Claimant later attributed these symptoms to the work-related injury.

24. September 3, 2010 medical records noted Claimant was continuing to take anti-depressant medications. In November 2010, two of Claimant's grandparents passed away. She experienced other psychological stressors including a medical bill incurred when her dog was kicked by a horse, her husband's unemployment, and a bankruptcy filing. Claimant continued on the same anti-depressant medication regimen. At that time, Claimant's symptoms included lack of sleep, feeling overwhelmed, anxiety, depression and improving memory loss.

25. In April 2011, Claimant reported severe depression and continued on the anti-depressants. Claimant's records do not indicate whether or when Claimant

discontinued with anti-depressant medication. However, on April 25, 2013, seven months before her work-related injury, Claimant's "Patient Active Problem List" included "DEPRESSSION."

26. Dr. Kleinman opined that Claimant's underreporting of her history of depression would lead medical providers and examiners to underestimate her history of depression, which would in turn affect their ability to correctly diagnose and treat Claimant.

27. The ALJ finds that Claimant's report of the injury and immediate aftermath varied and were not consistent with her hearing testimony. Specifically, her initial reports did not include any head trauma but later Claimant reported not only head trauma but also loss of consciousness. Objective medical testing for a head injury was read as normal. Claimant initially reported falling onto her bottom but later reported "flying across the hallway," and "landing fifteen feet away." Dr. Kleinman opined Claimant's inaccurate history of the injury led to the "pursuit of a neurocognitive disorder [that] has delayed her recovery and likely created an iatrogenic element." Dr. Kleinman's opinion is consistent with the evaluations of two neuropsychologists: Suzanne Kenneally, Psy.D., and Rebecca Hawkins, Ph.D., who both assessed at worst an "uncomplicated concussion."

28. On March 27, 2014, Dr. Kenneally evaluated Claimant and concluded that Claimant experienced a simple, uncomplicated concussion. Dr. Kenneally diagnosed Claimant with a Major Depressive Disorder with Anxious Distress, Moderate. Claimant under reported her history of depression to Dr. Kenneally, stating only that "she saw a psychotherapist for two to three sessions" after the death of her grandparents. According to Dr. Kenneally's evaluation and valid testing: "[Claimant's] MCMI-III profile indicated that her depression may be long standing in nature, predating the 11/15/2013 workplace injury."

29. Dr. Hawkins found the same confounding pre-existing history. Claimant reported to Dr. Hawkins a history of "one prior depressive episode that lasted approximately one year." However, testing indicated "an almost total absence of psychological dysfunction" on the "Self-Disclosure" testing, leading Dr. Hawkins to note that Claimant's reporting should be questioned. Dr. Hawkins assessed "very mild, intermittent symptoms of depression in addition to isolated symptoms of anxiety," but noted that that although a diagnosis of a Major Depressive Disorder was appropriate, the "prior history of depression would instead suggest that such was a recurrence."

30. With respect to a head injury, Dr. Hawkins noted that Claimant had "significant Psychological Factors Adversely Affecting Physical Complaint (316) that contributed to her delayed recovery," and that the ongoing subjective complaints "are more likely to be associated with non injury-related psychological factors."

31. In December 2016, based on his review of the record and independent evaluation, Dr. Kleinman concluded that Claimant "has now seen four psychologists, and is entering a third course of treatment. It is my recommendation that she have a

limited number of appointments with Dr. Haburchak and then terminate treatment for the workers' compensation injury." Dr. Kleinman specifically recommended four to six sessions of therapy over no more than two months. Dr. Haburchak provided four sessions of psychotherapy after Dr. Kleinman's recommendation between December 22, 2016 and February 2, 2017.

32. With respect to medications, Dr. Kleinman recommended continued medications "with appointments every two weeks for one month, then no more than monthly for no more than 5 months." Dr. Kleinman further explained that based "on the recurrent nature of her disorder, medications should be continued longer but such lengthier treatment would be outside of workers' compensation." Dr. Dworetsky monitored Claimant's medications for six months between December 2016 and May 2017.

33. At hearing, Dr. Kleinman testified that the treatment provided since his December 2016 evaluation completed the maintenance treatment related to the recurrent depressive episode, anxiety, and other psychiatric symptoms caused by the work-related injury. Dr. Kleinman also explained in detail that any future recurrence of depression or psychiatric symptoms is not related to the work-related injury.

34. L. Barton Goldman, M.D., also completed an independent review of Claimant's medical records and opined that further treatment of the inconsistent physical symptoms would "be misdirected and relatively harmful." Dr. Goldman agreed with Dr. Kleinman's recommendations stating that any ongoing "psychological and psychiatric maintenance very likely does now fall outside the scope of this claim and should be managed through Ms. Bolton's private physicians." With specific reference to the neck and musculoskeletal complaints, "any additional care required for those somatic complaints would also be best managed outside the scope of this claim."

35. Claimant did not appear for the hearing and no testimony was offered on Claimant's behalf.

36. The ALJ finds that Respondents have met their burden of proving by a preponderance of the evidence that previously admitted medical maintenance benefits are not causally related to the occupational injury that occurred on November 15, 2013.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado (Act), §§8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201.

The right to workers' compensation benefits, including medical payments, arises only when an injured employee initially establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301, C.R.S. (1996 Cum.Supp.); *see Popovich v. Irlando,* 811 P.2d 379 (Colo.1991).

With respect to maintenance medical benefits after MMI, once a claimant establishes the probability of a need for future treatment, the claimant is entitled to a general award of future medical benefits, subject to the employer's right to contest compensability, reasonableness, or necessity. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Hanna v. Print Expediters Inc.*, 77 P.3d 863, 866 (Colo. App. 2003).

Here, Respondents filed an FAL admitting for maintenance medical treatment pursuant to *Grover*. Respondents are not precluded from contesting their liability for a particular treatment or generally for any ongoing maintenance treatment. When respondents contest liability for a particular medical benefit, the claimant must prove that such contested treatment is reasonably necessary to treat the industrial injury. See *Grover*, 759 P.2d at 712; *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). Where respondents attempt to modify an issue that previously has been determined by an admission, they bear the burden of proof for such modification. Section 8-43-201(1), C.R.S.

Here, Respondents seek an end to all medical maintenance treatment, and therefore Respondents bear the burden by a preponderance of the evidence to show why they are no longer responsible for maintenance medical benefits in general. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

No persuasive evidence supports the need for ongoing medical treatment for Claimant’s physical complaints. Claimant’s ATP Dr. Koval has stated that Claimant’s physical complaints are under control. Dr. Ladley released Claimant from care, and Dr. Koval’s current recommendation is only for monitoring medications with the psychiatrist Dr. Dworetsky. According to Dr. Goldman, any physical complaints should now be managed outside the workers’ compensation system. And, Claimant has offered no persuasive evidence to support the need for maintenance treatment to address any ongoing physical complaints.

With respect to Claimant’s need for ongoing psychiatric maintenance care, the preponderance of evidence supports Respondents’ position ending that care. Dr. Koval recommends continued monitoring of medications by a psychiatrist. But, even Dr. Koval in December 2016 anticipated that Claimant was returning to her pre-injury baseline, stating then that Claimant “is very close to reaching the baseline at which she lived prior to the incident, and I am optimistic that with continued psychotherapy and medication management she will get there.”

Persuasive evidence establishes that Claimant suffered from long-standing psychiatric issues, including depression and anxiety, before the work related injury. Even if Claimant was not taking anti-depressant medications after April 2011, medical records show that on April 25, 2013, seven months before the work-related injury, Claimant's "Patient Active Problem List" included "DEPRESSSION." The ALJ finds and concludes that more likely than not, Claimant's psychiatric symptoms had not abated prior to her work injury.

No persuasive evidence supports a finding that Claimant's symptoms were substantially different in kind or intensity after her work injury. Claimant did not testify or offer evidence that her psychological problems were different after the work injury. Nor is there persuasive medical evidence suggesting that Claimant's symptoms were of a significantly different type, regardless of diagnosis. Physicians Dr. Hawkins and Dr. Kenneally described long-standing and recurring depression and anxiety. The recurrent depression and anxiety symptoms existed prior to the work related injury and most likely were caused by variable stressors, including unknown triggers before 2008, horse accidents that caused concussions, a motor vehicle accident that caused a concussion, and the combination of deaths in the family, her dog getting kicked by a horse, and financial difficulties. Doctors Hawkins, Kenneally, Kleinman, and Godlman, all recognized the long-standing problems and symptoms recurred due to her post traumatic stress or adjustment disorder after the work-related injury.

The ALJ finds persuasive Dr. Kleinman's opinion that Claimant suffers from recurrent episodes of depression and anxiety, and that those episodes are no longer causally related to the adjustment or post-traumatic stress disorder following the work injury. Claimant offered no persuasive evidence to dispute Dr. Kleinman's opinion. Nor has Claimant testified or offered any persuasive evidence to support that any alleged ongoing psychiatric symptoms are related to her work injury.

Dr. Kleinman's opinion that Claimant's current symptoms are recurrent depressive episodes and anxiety unrelated to the work injury is supported by the evaluations of two treating neuropsychologists. Dr. Kenneally found that Claimant's depression was long standing in nature and predated the workplace injury. Dr. Hawkins also found that Claimant's depression was recurrant. And, both Dr. Kenneally and Dr. Hawkins arrived at these conclusions despite being handicapped by Claimant providing an inaccurate and incomplete mental health history.

Additionally, the ALJ concludes, based on a totality of the evidence, that whatever ongoing problems Claimant alleges, Claimant functions at the same baseline level she functioned at before the work injury. Claimant continues to work as a school teacher without restriction. Claimant has also returned to competitive horse jumping, an activity that requires high levels of complex planning and activities. Her participation in this activity is consistent with her return to her pre-injury baseline and that any ongoing care is not related to the work injury.

The ALJ concludes that Respondents have met their burden of proving by a preponderance of the evidence that previously admitted medical maintenance benefits are not causally related to the occupational injury that occurred on November 15, 2013.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents' liability for ongoing maintenance treatment for Claimant's work related injury is hereby terminated.

2. Issues not expressly decided herein are reserved to the parties for future determination.

3. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

Is Claimant's claim for post-MMI medical benefits, including treatment with Dr. Weinstein, Dr. Olson, and a change of physician, barred by the Stipulation approved on April 26, 2016?

FINDINGS OF FACT

1. Claimant suffered an admitted injury to his right shoulder on May 22, 2014.

2. Dr. Daniel Olson has been Claimant's primary ATP throughout his course of treatment.

3. Dr. David Weinstein performed a rotator cuff and biceps tendon repair on December 12, 2014.

4. On July 27, 2015, Dr. Olson put Claimant at MMI with an 8% whole person rating. Dr. Olson's July 29, 2015 MMI report contains the following recommendation regarding post-MMI medical care: "He will require the cyclobenzaprine for the next 12 months. He is also [to] continue his conditioning on an independent basis in the post rehabilitation program."

5. Respondents filed a Final Admission of Liability on August 4, 2015 based on Dr. Olson's report. The FAL stated "Respondents admit for authorized [post-MMI medical] benefits per the report from Dr. Olson dated 07/29/2015. Any benefits not specifically admitted are denied."

6. Claimant timely objected to the FAL and requested a DIME.

7. Claimant saw Dr. Miguel Castrejon for the DIME in December 2015. Dr. Castrejon's report stated, "Maintenance care as recommended by Dr. Olson is medically reasonable."

8. Respondents filed a second FAL on January 22, 2016, with identical language regarding medical benefits after MMI: "Respondents admit for authorized benefits per the report from Dr. Olson dated 07/29/2015. Any benefits not specifically admitted are denied."

9. Claimant timely objected to the FAL, and requested a hearing on issues of whole person impairment, disfigurement, and "medical benefits after MMI." A hearing on Claimant's application was scheduled for June 2, 2016.

10. Before the hearing, the parties executed a Stipulation to Resolve Ripe Issues. The Stipulation included the following provisions:

> Parties are desirous of resolving ***all ripe endorsed and unendorsed issues*** specifically in relation to this claim, W.C. No. 4-954-886, without the vagaries of litigation.
>
> Parties agree that the hearing set for 1:00 PM in Pueblo on June 2, 2016 should be canceled, and that ***all ripe issues that are or could have been endorsed for that hearing in relation to this claim are resolved by this Stipulation***. (Emphasis added).

11. The stipulation was signed by the parties on April 21, 2016 and approved by ALJ Walsh on April 26, 2016.

12. Several months later, Claimant requested additional medical benefits beyond those referenced on the January 22, 2016 FAL. Respondents denied Claimant's request, and applied for a hearing, seeking enforcement of the Stipulation.

13. To resolve the issues set for hearing, Respondents authorized a one-time the evaluation with Dr. Weinstein. Respondents explicitly stated they were not waiving any defenses or enforcement of the prior Stipulation.

14. Claimant saw Dr. Weinstein on November 23, 2016 and described progressive discomfort and popping in the shoulder over the previous 4-6 months. Dr. Weinstein diagnosed right scapulothoracic myofascial inflammation with bursitis. He recommended a scapulothoracic cortisone injection followed by 4 to 6 weeks of physical therapy.

15. Claimant returned to Dr. Weinstein on January 13, 2017. His symptoms were unchanged since his last visit and the cortisone injection had given only minimal relief. Dr. Weinstein opined Claimant's symptoms were consistent with myofascial inflammation of his scapular rotators and posterior rotator cuff muscles. He did not think Claimant required any surgery. He gave Claimant another cortisone injection and recommended he continue his home exercise program. Dr. Weinstein further opined Claimant "may benefit from 1-2 cortisone injections over the next year."

16. Claimant requested additional medical treatment, which Respondents denied based on the Stipulation.

17. The Stipulation is not ambiguous.

18. Claimant's requests for medical treatment from Dr. Weinstein and further follow-up with Dr. Olson and a change of physician are foreclosed by the Stipulation and the January 22, 2016 FAL. Claimant's claim is closed with respect to medical benefits beyond those specifically delineated in the FAL.

CONCLUSIONS OF LAW

A final admission closes all admitted issues unless the claimant requests a hearing "on any disputed issues that are ripe for hearing" within 30 days of the final admission. Section 8-43-203(2)(b)(II)(A). The January 22, 2016 FAL admitted only for post-MMI treatment as described in Dr. Olson's July 29, 2015 report and denied anything else. Although Claimant preserved his right to seek a general award of post-MMI treatment by timely requesting a hearing, he subsequently relinquished that right by entering into the Stipulation to Resolve Ripe Issues.

A stipulation incorporated into a decree precludes a party from advancing legal contentions contrary to the plain and unambiguous terms of the agreement. *USI Props. East, Inc. v. Simpson*, 938 P.2d 168 (Colo. 1997). The Stipulation unambiguously states its purpose was to resolve "all ripe issues that are or could have been endorsed for [ ] hearing in relation to this claim." Claimant had endorsed the issue of "medical benefits after MMI," so the only way the issue could remain open despite the Stipulation is if it was not "ripe."

An issue is "ripe for hearing" if it is addressed in a final admission and the legal prerequisites to adjudicating the issue (such as MMI and permanent impairment determinations) are complete. "Ripeness" concerns whether an issue is subject to adjudication under the statute, not whether a party is prepared to litigate the issue. *E.g., Franklin v. Colorado Springs School District #11*, W.C. No. 4-436-174 (February 24, 2004); *Chavez v. Cargill, Inc*. W.C. No. 4-421-748 (November 1, 2002).

Claimant's entitlement to a general award of medical benefits after MMI was ripe for adjudication when he requested a hearing to challenge the January 22, 2016 FAL. A claimant is entitled to a general award of post-MMI medical benefits if there is substantial evidence to show that future treatment is reasonably necessary to relieve the effects of the injury or prevent deterioration of his condition. Section 8-42-107(8)(f); *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Hanna v. Print Expediters*, 77 P.3d 863 (Colo. App. 2003). The issue of *Grover* medical benefits must be addressed when permanency is determined or it is waived. *Milco Construction v. Cowan*, 860 P.2d 539 (Colo. App. 1982).

Claimant argues that additional treatment beyond that listed in Dr. Olson's July 29, 2015 report was not ripe because no other treatment was recommended by the time of the Stipulation. But that was no bar to pursuing a general award of *Grover* medical benefits at that time. Indeed, a claimant need not be receiving any treatment at the time of MMI to obtain a general award of future medical benefits. *Holly Nursing Care Center v. Industrial Claim Appeals Office*, 992 P.2d 701 (Colo. App. 1989). Rather, the claimant must only prove he is likely to require *some* form of treatment in the future. *Stollmeyer v. Industrial Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995).

There was no legal impediment to pursuing a general award of *Grover* medical benefits at the June 2, 2016 hearing. Therefore, the issue was "ripe," and is now closed by the Stipulation and the January 22, 2016 FAL, subject to statutory reopening.

ORDER

It is therefore ordered that:

1. Claimant's claim is closed for medical benefits not referenced on the January 22, 2016 FAL, subject to statutory reopening.

2. Claimant's request for additional medical benefits after MMI, including treatment with Dr. Weinstein, Dr. Olson and a change of physician, is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 12, 2017

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUE

The issue raised for consideration at hearing is whether Claimant sustained his burden of proof to establish that he is entitled to post maximum medical improvement (MMI) medical benefits.

STIPULATION OF FACT

1. The parties agreed that Claimant's average weekly wage was the $200 per week admitted by Respondents in the Final Admission of Liability dated March 11, 2016, which creates an overpayment of permanent partial disability benefits of $11,136.12.

FINDINGS OF FACT

1. Claimant sustained an injury while employed by Employer on March 17, 2014, claiming injuries to his head in a fall on ice while at work.

2. Following the injury, Claimant received treatment with Dr. Kirk Nelson with Concentra, and his referral, Dr. John Aschberger. It is undisputed Claimant last treated with Dr. Nelson for his industrial injury on May 22, 2015, shortly after Claimant was placed at maximum medical improvement (MMI). It is undisputed that Dr. Nelson did not make recommendations for ongoing medical treatment for Claimant's cervical spine.

3. Claimant last treated with Dr. Aschberger on March 28, 2016, who diagnosed chronic low back pain, recommended a repeat MRI scan and prescribed Robaxin for Claimant's low back condition. Dr. Aschberger made no recommendations for further maintenance care in relation to Claimant's cervical spine.

4. Dr. Aschberger and Dr. Nelson did not recommend any specific maintenance care for the Claimant's cervical spine condition. Claimant did not request a specific medical care in relation to his cervical spine, and indeed, none has been recommended by his attending physicians since his placement at MMI.

5. Claimant underwent an independent medical examination (IME) with Dr. Brian Lambden on March 28, 2016. Dr. Lambden opined that Claimant's chronic low back condition was related to his aging process and congenital spondylosis and not his industrial injury. He further declined to recommend any medical maintenance care.

6. Claimant underwent a DIME with Dr. John Tyler on August 3, 2016. Dr. Tyler opined that Claimant had reached MMI on April 15, 2015, and that his ongoing lower back complaints were not related to his industrial injury. Specifically, Dr. Tyler opined "I do not find convincing evidence of any ongoing residual symptomatology to the lumbar spine that I feel is directly related to the industrial injury of March, 2014."

7. Respondents filed a Final Admission of Liability (FAL) on December 2, 2016.

8. Claimant did not challenge the finding of the DIME examiner establishing that his present lower back complaints are not related to his March 17, 2014, industrial injury. Instead, Claimant seeks authorization for post-MMI medical maintenance benefits as the same were denied by Respondents on the FAL.

9. It is undisputed that Claimant did not testify as to any specific treatment post MMI he is seeking to have authorized or as to any specific treatment he has requested since his DIME that has been denied by Respondents. Instead, he is seeking an Order for maintenance care based on his treatment with Dr. Aschberger and what was recommended prior to the DIME completion.

10. It is undisputed that Claimant has not seen any physician since the DIME was completed in August, 2016.

CONCLUSIONS OF LAW

General Legal Principles

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a workers' compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is evidence that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936).

3. In this case, the primary question is whether Claimant proved by a preponderance that he is entitled to an order awarding maintenance medical benefits. The Act addresses medical benefits in Section 8-42-101(1)(a), C.R.S., which provides:

> Every employer … shall furnish … such medical, hospital, and surgical supplies, crutches, and apparatus as may reasonably be needed at the time of the injury … and thereafter during the disability to cure and relieve the employee from the effects of the injury.

4. The respondents are liable to provide such medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury." Section 8-42-101(1)(a), C.R.S. Colorado courts have ruled that the need for medical treatment may extend beyond the point of MMI where the claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or prevent further deterioration of her condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609 (Colo. App. 1995). The question of whether the claimant proved that specific treatment is reasonable and necessary to maintain his/her condition after MMI or relieve ongoing symptoms is one of fact for the ALJ. *See Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

5. Claimant failed to sustain his burden of proof to establish entitlement to an order awarding post MMI medical benefits. The ALJ finds the Division independent medical examination (DIME) report of Dr. John Tyler that Claimant's chronic low back condition is not related to his March 2014 industrial injury binding and persuasive. Claimant did not seek to overcome the DIME report of Dr. Tyler with respect to his determination of causation of the low back condition by clear and convincing evidence, thus Dr. Tyler's opinion concerning causation of Claimant's injuries and symptoms is binding on this Court.

6. The ALJ is further persuaded by the opinion of Dr. Brian Lambden who likewise does not attribute the cause of Claimant's present chronic low back pain to his March 2014 industrial injury.

7. The ALJ is further persuaded by the opinions of both Dr. John Aschberger and Dr. Kirk Nelson, who did not recommend any specific maintenance care for the Claimant's cervical spine condition. Claimant did not request a specific medical care in relation to his cervical spine, and indeed, none has been recommended by his attending physicians since his placement at MMI.

8. The only treatment Dr. Aschberger recommended prior to the DIME was treatment to address Claimant's chronic low back pain. As Claimant's chronic low back condition is not work related, his treatment to address this condition is likewise not related to Claimant's industrial injury, thus is not authorized.

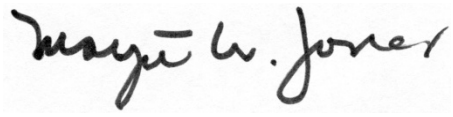
ORDER

1. Claimant's claim for *Grover* medical benefits is denied and dismissed.

2. Any and all issues not determined herein are reserved for future decision.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 12, 2017



Margot W. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that he suffered a compensable cervical spine injury during the course and scope of his employment with Employer on December 22, 2016.

2. Whether Claimant has proven by a preponderance of the evidence that he is entitled to receive reasonable, necessary and causally related medical benefits for his industrial cervical spine injury.

3. Whether Claimant has established by a preponderance of the evidence that he is entitled to receive Temporary Total Disability (TTD) and Temporary Partial Disability (TPD) benefits for the period December 26, 2016 through July 30, 2017.

4. A determination of Claimant's Average Weekly Wage (AWW).

FINDINGS OF FACT

1. Claimant is a 43 year old male who worked for Employer as a Manufacturing Specialist III.

2. Claimant testified that on December 22, 2016 he was attempting to remove a large spool from a calibration meter as part of his job duties. The spool weighed approximately 36 pounds and was located in an area above Claimant's shoulders. Claimant explained that he used "all of his force" to move the spool up and down and back and forth to loosen it from the calibration meter. Claimant positioned his head at a right angle to look up at the spool and experienced a "pop" or "click" in his right neck and shoulder area. However, he remarked that he did not suffer immediate pain radiating into his arms. The incident occurred between 11:30 a.m. and 12:00 p.m. Claimant completed his shift and went home at about 2:00 p.m.

3. On December 23, 2016 Claimant awoke to significant pain between his neck and right shoulder. The pain also extended down through his right arm.

4. Because Claimant's pain would not subside he sought medical care with Janet Tameren, M.D. at American Family Urgent Care on December 25, 2016. Dr. Tameren noted that Claimant did not report an injury. Claimant stated he had "no known injury" and commented that he "moved furniture a month ago but doesn't think it's related to the pain."

5. On December 27, 2016 Claimant sought treatment at the Sky Ridge Medical Center Emergency Department with Heather Groth, M.D. Claimant complained of right shoulder pain that had radiated through his neck and down his right arm for the

past two weeks. The pain became worse over the past two days. The record contains no report of an incident at work and specifically provides that the pain was "not related to exertion."

6. On December 29, 2017 Claimant contacted Employer's short-term disability carrier UNUM. A representative of UNUM inquired whether Claimant had suffered a work-related accident or injury. Claimant denied that his symptoms were caused by his work activities.

7. Claimant's co-worker Nick Patel testified at the hearing in this matter. He explained that he was working about three feet perpendicular to Claimant on December 22, 2016. While Claimant was removing a spool he complained of pain and stated "see, you can be my witness." Mr. Patel commented that Claimant had been complaining of pain for approximately one month or longer prior to the December 22, 2016 incident.

8. Employer's Operations Supervisor James Benson testified that on December 27, 2016 he received a voicemail message from Claimant noting that he was going to a hospital. Claimant did not specify any work injury or accident that necessitated a hospital visit.

9. Mr. Benson also remarked that he received a voicemail message from Claimant on January 4, 2017. Claimant advised that he would return to work on January 9, 2017 but did not suggest that he had suffered an injury at work.

10. Employer's Human Resources Business Partner Susan Townsend testified at the hearing in this matter. She explained that Claimant contacted her on December 28, 2016 stating that he was suffering severe pain and would not make it to work. Claimant commented that he did not know what had caused his symptoms.

11. On January 9, 2017 Claimant reported to Mr. Benson that he had suffered a work-related injury to his right neck area. Employer directed Claimant to Concentra Medical Centers for evaluation and treatment.

12. On January 9, 2017 Claimant visited Felix Meza M.D. at Concentra for an examination. Claimant explained that on December 22, 2016 he was removing a spool overhead at work when he experienced a burning sensation in his neck area. When he pulled down the approximately 30 pound spool he felt a "pop" in his neck. Claimant completed his work shift but suffered sharp pain in his neck, shoulder and arm region on the following day. Cervical spine x-rays were normal. Dr. Meza diagnosed Claimant with neck, thoracic spine and shoulder pain. He also noted a cervical radiculopathy. Dr. Meza prescribed physical therapy and medications. He assigned work restrictions of no overhead lifting and no lifting in excess of 25 pounds to waist level.

13. On January 30, 2017 Claimant underwent an MRI of his cervical spine. The MRI revealed a large right paracentral and subarticular zone disc extrusion at C6-C7. The extrusion likely caused severe narrowing of the right recess and impingement of the exiting right C7 nerve root.

14. On February 6, 2017 Claimant visited Dr. Meza for an examination. Claimant reported continuing neck pain. Dr. Meza assigned restrictions of no use of the right arm, no overhead activity and only seated work.

15. On March 16, 2017 Claimant visited Thomas Puschak, M.D. at Panorama Orthopedics and Spine Center for an examination. Claimant reported that he suffered a work injury in December 2016 when "he was pushing, pulling and shifting a spool, weighed about 36 pounds, kind of at shoulder maybe held high, little bit higher back and forth, to and fro, got into some awkward positions, felt a pop in his neck and had severe unremitting radicular symptoms down the right arm."

16. On July 31, 2017 Dr. Puschak testified through a pre-hearing evidentiary deposition in this matter. He acknowledged that he had not taken any classes through the Division of Workers' Compensation regarding causation analysis and was not Level II accredited. Dr. Puschak also recognized that his information consisted of his March 16, 2017 report and documents that he received from Claimant's counsel during the deposition. Nevertheless, he concluded that Claimant's described mechanism of injury could cause, worsen or aggravate a herniated disc.

17. Dr. Puschak acknowledged that Claimant had not mentioned he had been experiencing cervical symptoms in the weeks prior to the December 22, 2016 industrial incident. He noted that Claimant's failure to disclose prior symptoms "cloud[ed]" his opinion about whether the condition was work-related. Dr. Puschak also recognized that, in the absence of a comprehensive review of all of Claimant's records and statements, his causation analysis was even "more cloudy." He remarked that herniated discs do not require trauma but can arise spontaneously from everyday activities.

18. Henry Roth, M.D. testified at the hearing in this matter. Dr. Roth was accepted as an expert in occupational and internal medicine. He is also an expert on the Division of Workers' Compensation Medical Treatment Guidelines and Level II accredited. Dr. Roth reviewed Claimant's medical records and the deposition of Dr. Puschak.

19. Dr. Roth explained that Claimant suffers from cervical spinal stenosis. Spinal stenosis is a degenerative condition that usually presents gradually and spontaneously. Symptoms tend to wax and wane over time. Dr. Roth summarized that Claimant's spinal stenosis and disc herniation were not caused or aggravated by his work activities for Employer on December 22, 2016. He noted that Claimant's pain complaints constituted the manifestation of symptoms that existed prior to the industrial spool incident.

20. Dr. Roth reasoned that the medical documentation reflecting numbness down Claimant's arm prior to December 22, 2016 was important for his causation analysis because it reflected likely idiopathic spinal stenosis and degenerative changes. Claimant did not sustain a new or different injury as a result of his work activities on

December 22, 2016. Furthermore, Dr. Roth noted that the medical records revealed Claimant was unaware of the exact onset or reasons for his cervical symptoms.

21. In specifically addressing Claimant's mechanism of injury on December 22, 2016 Dr. Roth commented that there was nothing specific about his work activities that would have caused his cervical spine injuries. He remarked that the equipment upon which Claimant was working was not overhead but instead about 30 degrees above shoulder height. Accordingly, Claimant's work activities in removing the spool were unlikely to have caused his cervical spine injuries.

22. Claimant has failed to demonstrate that it is more probably true than not that he suffered a compensable cervical spine injury during the course and scope of his employment with Employer on December 22, 2016. Initially, Claimant testified that he experienced a "pop" or "click" in his right neck and shoulder area after removing a spool from a calibration meter. He awoke to significant pain between his neck and right shoulder on the following morning. The pain also extended down through his right arm. However, the medical records reveal that Claimant did not likely suffer an industrial cervical spine injury while working for Employer on December 22, 2016.

23. On a December 25, 2016 visit with Dr. Tameren Claimant did not report an injury. Claimant stated he had "no known injury" and noted that he "moved furniture a month ago but doesn't think it's related to the pain." Two days later at the Sky Ridge Medical Center Emergency Department Claimant complained of right shoulder pain that had radiated through his neck and down his right arm for the past two weeks. The pain became worse over the past two days. The record contains no report of an incident at work. On December 29, 2016 a representative of UNUM contacted Claimant and he denied his symptoms were caused by his work activities. Furthermore, Claimant's co-worker Mr. Patel remarked that while Claimant was removing a spool on December 22, 2016 he complained of pain and stated "see, you can be my witness." Mr. Patel commented that Claimant had been complaining of pain for approximately one month or longer prior to the accident. Finally, although Claimant contacted Employer representatives Mr. Benson and Ms. Townsend within two weeks of December 22, 2016 about missing work, he did not attribute his injuries to any work incident.

24. The persuasive testimony of Dr. Roth also suggests that Claimant did not likely suffer a cervical spine injury at work on December 22, 2016. Dr. Roth explained that Claimant suffers from cervical spinal stenosis. Spinal stenosis is a degenerative condition that usually presents gradually and spontaneously. Symptoms tend to wax and wane over time. Dr. Roth summarized that Claimant's spinal stenosis and disc herniation were not caused or aggravated by his work activities for Employer on December 22, 2016. Claimant's symptoms constituted the natural progression of a degenerative process. In contrast, Dr. Puschak concluded that Claimant's described mechanism of injury could cause, worsen or aggravate a herniated disc. However, he acknowledged that Claimant had failed to mention he had been experiencing cervical symptoms in the weeks prior to the December 22, 2016 industrial incident. Dr. Puschak noted that Claimant's failure to disclose prior symptoms "cloud[ed]" his opinion about whether the condition was work-related. Accordingly, based on the medical records,

credible witness testimony and persuasive opinion of Dr. Roth, Claimant's work activities on December 22, 2016 did not aggravate, accelerate or combine with his pre-existing cervical spine condition to produce a need for medical treatment.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAP, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition

or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

7. As found, Claimant has failed to demonstrate by a preponderance of the evidence that he suffered a compensable cervical spine injury during the course and scope of his employment with Employer on December 22, 2016. Initially, Claimant testified that he experienced a "pop" or "click" in his right neck and shoulder area after removing a spool from a calibration meter. He awoke to significant pain between his neck and right shoulder on the following morning. The pain also extended down through his right arm. However, the medical records reveal that Claimant did not likely suffer an industrial cervical spine injury while working for Employer on December 22, 2016.

8. As found, on a December 25, 2016 visit with Dr. Tameren Claimant did not report an injury. Claimant stated he had "no known injury" and noted that he "moved furniture a month ago but doesn't think it's related to the pain." Two days later at the Sky Ridge Medical Center Emergency Department Claimant complained of right shoulder pain that had radiated through his neck and down his right arm for the past two weeks. The pain became worse over the past two days. The record contains no report of an incident at work. On December 29, 2016 a representative of UNUM contacted Claimant and he denied his symptoms were caused by his work activities. Furthermore, Claimant's co-worker Mr. Patel remarked that while Claimant was removing a spool on December 22, 2016 he complained of pain and stated "see, you can be my witness." Mr. Patel commented that Claimant had been complaining of pain for approximately one month or longer prior to the accident. Finally, although Claimant contacted Employer representatives Mr. Benson and Ms. Townsend within two weeks of December 22, 2016 about missing work, he did not attribute his injuries to any work incident.

9. As found, the persuasive testimony of Dr. Roth also suggests that Claimant did not likely suffer a cervical spine injury at work on December 22, 2016. Dr. Roth explained that Claimant suffers from cervical spinal stenosis. Spinal stenosis is a degenerative condition that usually presents gradually and spontaneously. Symptoms tend to wax and wane over time. Dr. Roth summarized that Claimant's spinal stenosis and disc herniation were not caused or aggravated by his work activities for Employer

on December 22, 2016. Claimant's symptoms constituted the natural progression of a degenerative process. In contrast, Dr. Puschak concluded that Claimant's described mechanism of injury could cause, worsen or aggravate a herniated disc. However, he acknowledged that Claimant had failed to mention he had been experiencing cervical symptoms in the weeks prior to the December 22, 2016 industrial incident. Dr. Puschak noted that Claimant's failure to disclose prior symptoms "cloud[ed]" his opinion about whether the condition was work-related. Accordingly, based on the medical records, credible witness testimony and persuasive opinion of Dr. Roth, Claimant's work activities on December 22, 2016 did not aggravate, accelerate or combine with his pre-existing cervical spine condition to produce a need for medical treatment.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

.Claimant's request for Workers' Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

I. What are the specific repayment terms of a $97,614.12 overpayment of temporary total disability ("TTD") benefits paid to Claimant?

FINDINGS OF FACT

1. Claimant suffered admitted industrial injuries on May 9, 2012.

2. Respondents filed a General Admission of Liability ("GAL") on August 14, 2012 admitting for TTD benefits beginning on July 16, 2012 at $732.57 per week.

3. On October 20, 2014, Claimant underwent a 24-month Division Independent Medical Examination ("DIME") at the request of Respondents. Dr. Brian Beatty determined Claimant reached maximum medical improvement ("MMI") as of June 15, 2012 and assigned a 16% whole person impairment rating.

4. Dr. Beatty subsequently reviewed video surveillance of Claimant and medical records and issued a supplemental DIME report on January 27, 2015. Dr. Beatty concluded Claimant reached MMI as of June 15, 2012 with a 0% whole person impairment rating.

5. Respondents filed a Final Admission of Liability ("FAL") on February 13, 2015 based on Dr. Beatty's January 27, 2015 supplemental DIME report. Respondents asserted an overpayment of TTD benefits in the amount of $97,641.12.

6. ALJ Cannici held a hearing on June 30, 2015 on multiple issues, including whether Respondents were entitled to recover an overpayment in the amount of $97,641.12. ALJ Cannici issued a Findings of Fact, Conclusions of Law, and Order on February 11, 2016 which, among other things, denied Respondents' request to recover an overpayment in the amount of $97,641.12.

7. Respondents appealed ALJ Cannici's February 11, 2016 order to the Industrial Claim Appeals Office ("ICAO") on multiple grounds. ICAO set aside ALJ Cannici's February 11, 2016 order and remanded the matter for further findings and a new order.

8. ALJ Cannici issued a Findings of Fact, Conclusions of Law and Order on Remand ("Remand Order") on September 23, 2016. ALJ Cannici found that Employer established by a preponderance of the evidence that they are entitled to recover an overpayment of TTD benefits. ALJ Cannici stated,

> …because of the retroactive MMI determination, Claimant had received TTD benefits from July 16, 2012 and continuing for a total of $97,641.12.

> The TTD benefits that Respondents paid after June 15, 2012 constituted an overpayment. Claimant's challenge to the $97,641.12 overpayment was predicated on the invalidity of Dr. Beatty's MMI and impairment determinations. However, Claimant has failed to produce unmistakable evidence that Dr. Beatty's MMI and impairment determinations were incorrect.

ALJ Cannici ordered that Respondents are entitled to recovery of the $97,641.12 overpayment. ALJ Cannici did not address the specific repayment terms of the overpayment, finding that evidence about repayment terms was not presented.

9. Respondents and Claimant appealed AJ Cannici's Remand Order. Respondents appealed solely on the grounds that the Remand Order did not specifically state how Claimant will repay the overpayment.

10. ICAO issued its Final Order on January 31, 2017. ICAO affirmed ALJ Cannici's September 23, 2016 Remand Order and stated as follows: "Because the ALJ's Order contemplates the possibility of future litigation concerning the repayment terms of the overpayment, it is not currently final reviewable on this issue."

11. Neither party appealed the ICAO order. Claimant failed to submit any evidence of an appeal and stipulated to this fact on the record. As a result, the order that Respondents are entitled to recover an overpayment from Claimant in the amount of $97,641.12 is now final.

12. Respondents filed an Application for Hearing ("AFH") on March 30, 2017 endorsing the sole issue of the repayment terms of the overpayment. Claimant stated in the Response to Application for Hearing that respondents cannot collect the overpayment.

13. At hearing before ALJ Cayce on July 25, 2017, counsel for Respondents and Claimant made brief arguments regarding the issue of overpayment and repayment terms. No testimony was presented by either party. Other than Claimant's average weekly wage ("AWW") included in the February 13, 2015 FAL, no evidence was presented regarding Claimant's financial situation, such as Claimant's current income and financial responsibilities. Per the February 13, 2015 FAL, Claimant's AWW is $1,098.86.

14. Respondents request repayment at the rate at which Claimant was paid TTD benefits, $732.57 per week or $1,465.14 every two weeks. Claimant made no request as to a repayment amount or schedule.

15. Considering Claimant's AWW, the circumstances and amount of overpayment, and absent further evidence regarding Claimant's financial situation, the ALJ finds that a payment of $250.00 per month is reasonable.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, Section 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1), C.R.S. Generally, the claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

The ALJ's resolution of issues will be affirmed if supported by substantial evidence in the record. Section 8-43-301(8), C.R.S.; *City and County of Denver School District 1 v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). Substantial evidence is that quantum of probative evidence, which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

Overpayment

Claimant contends that Respondents have the burden of proving entitlement to specific repayment terms. Claimant further asserts that there is no statutory direction or clear guidance in case law regarding whether an overpayment of TTD benefits must be repaid retroactively, how to treat various forms of overpayments, and the terms of repayment. Respondents further contend that it is against public interest to award retroactive payments of TTD benefits.

Section 8-43-207(1)(q), C.R.S. grants ALJs the authority to require repayment of overpayments. The term "overpayment" is defined in Section 8-40-201(15.5), C.R.S. as

> money received by a claimant that exceeds the amount that should have been paid, or which the claimant was not entitled to receive, or which results in duplicate benefits because of offsets that reduce disability or death benefits payable under said articles. For an overpayment to result, it is not necessary that the overpayment exist at the time the claimant received disability or death benefits under said articles.

"Generally, an 'overpayment' is anything that has been 'paid' but is not 'owing as a matter of law.'" *Cooper v. Indus. Claim Appeals Office*, 109 P.3d 1056 (Colo. App. 2005). In *Simpson v. Indus. Claim Appeals Office*, 219 P.3d 354 (Colo. App. 2009), *rev'd on other grounds*, 232 P.3d 777 (Colo. 2010), the Court considered the statutory definition of "overpayment" in Section 8-40-201(15.5), C.R.S. and found it provided for three distinct categories of overpayment:

> …one category is for overpayments created when a claimant receives money "that exceeds the amount that should have been paid"; the second category is for money received that a "claimant was not entitled to receive"; and the final category is for money received that "results in duplicate benefits because of offsets that reduce disability or death benefits" payable under articles 40 to 47 of Title 8. § 8-40-201(15.5). See *Simpson*, 219 P.3d at 359.

As found, ALJ Cannici ordered that Respondents are entitled to recover an overpayment from Claimant in the amount of $97,641.12. It is undisputed that Claimant did not appeal ICAO's order affirming ALJ Cannici's Remand Order. As such, the order that Respondents are entitled to recover a $97,641.12 overpayment of TTD benefits is final.

Orders for the retroactive repayment of benefits have been upheld on multiple occasions by ICAO and the Court of Appeals. *See Simpson v. Indus. Claim Appeals Office, supra*; *Arenas v. Indus. Claim Appeals Office*, 8 P.3d 558, (Colo. App. 2000); *Josue v. Indus. Claim Appeals Office*, Colo. App. No. 16CA1036 (March 2, 2017)(unpublished); *Stroman v. Southway Services, Inc.*, W. C. No. 4-366-989 (August 31, 1999); *In re Claim of Haney,* W.C. No. 4-796-763 (ICAO, July 28, 2011); *Mattorano v. United Airlines*, W.C. No. 4-861-379-01 (ICAO, July 25, 2013)*; In re Claim of Heffner*, W.C. No 4-869-417-02 (ICAO 2016).

The ALJ has the discretion to determine repayment terms. *See Louisiana Pacific Corporation v. Smith*, 881 P.2d 456 (Colo. App. 1994) (holding that the ALJ did not abuse his discretion by prorating the repayment over claimant's expected life span where the recovery rate was not mandated by statute and the ALJ's order was supported by substantial evidence and plausible inferences drawn from conflicts in the record); *Smith, supra* ("Concerning claimant's assertion that the recoupment schedule in onerous, the ALJ has discretion to fashion a remedy, and claimant has not demonstrated any abuse of that discretion*"); In re Claim of Schramek,* W.C. No. 4-601-867 (2001); *In re Claim of Reekstin-Martinez*, W.C. No. 4-832-902 (May 9, 2013).

Regarding Claimant's argument as to public policy, the ALJ is not persuaded the retroactive repayment of an overpayment of TTD benefits is a violation of public policy. The court in *Josue* addressed a public policy argument similar that the argument made here by Claimant. The Court noted the following regarding claimant's argument in *Josue*:

> Claimant also contends that requiring him to repay the overpayment violates both the Act's beneficent purpose and public policy. He argues that awarding employer an overpayment has the effect of 'making an injured worker responsible for a subsequent determination of medical authorization, or risk having to pay subsistence TTD benefits, subject to recoupment.' He also asserts that he is essentially being punished for following his doctor's orders and should not be held accountable for a later determination that the doctor's actions were unauthorized. *Josue, supra.*

The Court was not persuaded, noting that the legislature intended for employers to recoup overpayments and "anticipated that in some circumstances those overpayments would arise from benefits that may have been due and owing when paid." The Court further stated,

> Although we do not disagree that paying back benefits can be difficult for claimants, we note that the alternative – obtaining an order on contested claimants before payments are made in order to avoid an overpayment – would likely impose an even greater burden on claimants. As employer points out, if employers are unable to recoup benefits later found to be improper, 'they would be less willing to grant benefits in the first instance without thorough investigation and litigation.' Such circumstances could leave disabled claimants with no income while they wait for resolution of any challenges to their benefits. Conversely, if employers have no means to recoup overpayments, claimants could be emboldened to delay litigation or resolution in order to continue receiving benefits they know an employer will not be able to recoup. Neither of these scenarios conforms with the legislative purpose of the Act. *Id.*

The ALJ agrees with the reasoning set forth in *Josue* regarding the public policy argument.

As found, Claimant did not present any testimony or evidence regarding Claimant's financial situation, nor did Claimant make any request as to a repayment amount or schedule. The only evidence of Claimant's financial situation was the AWW of $1,098.86 noted in the FAL. Respondents requested at hearing that Claimant be ordered to repay the overpayment at a rate of $732.57 per week or $1,465.14 every two weeks. Respondents contend that, due to the large amount of the overpayment, a nominal repayment schedule would be inappropriate. While the ALJ acknowledges the substantial amount of the overpayment, the ALJ deems repayment at a rate of $732.57 per week unreasonable. As found, a payment of $250.00 per month is reasonable considering Claimant's AWW and the circumstances and amount of overpayment. Accordingly, Claimant shall repay Respondents $250.00 per month in overpaid TTD benefits until recovered in full.

ORDER

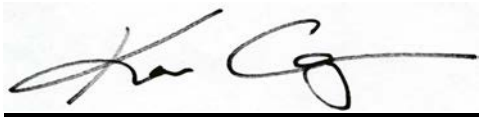
It is therefore ordered that:

1. Claimant shall repay Respondents an overpayment of $97,641.12 in TTD benefits at a rate of $250.00 per month until recovered in full.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 12, 2017



Administrative Law Judge Kara R. Cayce
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-031-105-01

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

,

Claimant,

v.

Non-Insured Employer,

and

,

Non-Insured Employer,

Non-Insured Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on June 8, 2017, and August 28, 2017, in Denver, Colorado. The hearing was digitally recorded (reference: 6/8/17, Courtroom 1, beginning at 8:30 AM, and ending at 3:05 PM; and, 8/28/17, Courtroom 1, beginning at 8:30 AM, and ending at 6:00 PM). Astrid DeVos of InterVoz served as the Spanish/English Interpreter at the June 8 session of the hearing. Mari Welch served as the Spanish/English Interpreter at the August 28 session of the hearing.

The Claimant was present in person and represented by Respondent was represented by at the June 8 session of the hearing; and, by at the August 28 session of the hearing. Despite receiving legal notice of the June 8 session of the hearing, failed to appear at the June 8

session of the hearing and, therefore, waived his appearance. He did, however, appear at the August 28 session of the hearing and he was self-represented,

Hereinafter shall be referred to as the "Claimant." Jose shall be referred to as "Employer G." shall be referred to as "Employer P." All other parties shall be referred to by name.

Claimant's Exhibits 1-13 were admitted into evidence without objection. Exhibits 13a, 14, 15 and 16 were admitted into evidence after Claimant laid foundation. Respondents Exhibits A, B and D were admitted into evidence, without objection. The ALJ reserved ruling on Exhibit C. Ultimately, Exhibits C, and E through G were rejected.

The hearing was bifurcated, within the course of one proceeding, first on the issue of "independent contractor" versus "employee," wherein both non-insured Respondents bear the burden of proof, by a preponderance of the evidence; and, second, if the Claimant was determined to be an "employee," the issues of compensability of the September 12, 2016 injury; and, if compensable, medical benefits and temporary total disability (TTD) benefits from September 12, 2016 and continuing. The Claimant bears the burden of proof, by preponderant evidence on the later issues. The third issue is whether Employer G and Employer P are jointly and severally liable for workers' compensation benefits.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Claimant, which was filed, electronically, on September 8, 2017. Non-Insured Respondents P and G were given two working days within which to file objections. The Respondents filed no timely objections. After a consideration of the proposed decision, the ALJ has modified it and hereby issues the following decision.

ISSUES

The issues to be determined by this decision concern: (1) whether the Claimant was an "independent contractor," or an "employee" at the time of his left wrist fracture and right hip sprain of September 12, 2016; (2) if he was an "employee," whether he sustained compensable injuries, arising out of the course and scope of employment, on September 12, 2016; (3) if he sustained compensable injuries, whether he is entitled to medical benefits and TTD benefits from September 12, 2016 and continuing; and, are both non-insured Respondents jointly and severally liable for workers' compensation benefits under established case law.

Respondents bear the burden of proof, by a preponderance of the evidence on the "independent contractor" issue. The Claimant bears the burden on all other issues,, by preponderant evidence on.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

"Independent Contractor" Versus "Employee"

1. The Claimant was hired by Employer G in 2005, seasonally. He was last hired by Employer G for the season beginning May, 2016. The season would be approximately from May through November. Employer G would provide the Claimant with an air pistol, a hose and a harness to complete his job. Employer G would decide what hours the Claimant would work and he would have another worker, Denis Ayala, picked Claimant up from his home and took him to the job site. Employer G decided how much the Claimant was paid. Employer G would split the funds among his workers and the Claimant had no control over how the funds were split. Employer G had the right to terminate the Claimant's services at any time, and in fact, did fire him on one occasion. If the Claimant decided he did not like a particular job, Employer G would get mad and fire him. Although the Claimant was a trained roofer, Employer G oversaw and supervised all the work he completed. The Claimant has never negotiated a contract to perform roofing work with a homeowner or business. He has always been a laborer working for someone else. While working for Employer G, the Claimant did not work for other employers. Employer G made the overall decisions during working hours and the Claimant was instructed by Employer G to comply with any instructions given by Bryan K. Taylor, the principal of Employer P (the alleged statutory employer, or co-employer) while Taylor was on the jobsite. The Claimant was one of several workers engaged by Employer G to work on the 2500 South Madison Street job. A crew of 4 individuals was needed to perform the roofing job. Jose Fredy Guillen, the principal of Employer G, was one of the four crew members. This was corroborated by a coworker, Serge Velazquez. Guillen referred to the crew as "amigos," and the ALJ refers to the crew as the "four amigos."

2. Serge Velazquez, the Claimant's co-worker, testified that Employer G and Denis Ayala would also pick the Claimant up to go to the jobsite. Employer G would make the decision of how much money the Claimant would get paid and Employer G would supervise the Claimant. Employer G would obtain the contracts; would establish when "the three other amigos" would be picked up to take them to the jobsite; would provide tools such as harnesses and compressors; would decide how much the workers would be paid; and, Employer G would supervise the work being performed. Employer G would establish what work to perform and when According to Velazquez, Ayala would take the Claimant to work and Velasquez never saw the Claimant be driven

by his wife to work. Velasquez further stated that Employer G decided everything, including what he would be paid. Employer G would pay Velasquez $300 per day.

3. Ayala considered himself a laborer and an employee. Ayala was not present when Claimant was hired [though Ayala later contradicted himself by stating he completed an independent contractor form (which the ALJ finds lacking in credibility)]. For the job at 2500 Madison, Ayala was paid $400 per day. . He would sometimes drive for Employer G. Ayala would be the one to collect the workers. Ayala further stated that Employer G would provide tools like the compressor and that Employer G had specific hours they were required to work. According to Ayala, Employer G would supervise his work and decided what times he would work. Ayala further stated that he had never contracted to perform a roofing job on his own as Employer G would obtain the contracts. Ayala has no business of his own. He would work with Employer G exclusively when there was work and when there was no work, he would do side jobs.

4. Efrain Mundo is the owner of Mundo Construction. Mundo provides roofing services. Mundo testified that Claimant worked for him several years ago. Mundo called Claimant an" independent contractor," without a satisfactory underlying explanation. The Claimant, however, worked under Mundo's employee, Jorge, who controlled the hours he would work, would provide tools like harnesses, would work exclusively for Mundo. , Claimant did not have his own company, and Claimant did not set his own rate of pay. Therefore, Claimant was an employee of Mundo Construction notwithstanding the title he was given for the work he performed.

5. Guillen testified that he would tell the other three how the hiring company wanted the work to be done when they contracted for roofing work. Employer P would hire Employer G, and then, according to Guilin, Guillen would involve the other three workers. Guillen would look at the house and tell the other three how to do the job. Guillen stated that Claimant at one point walked off the job and Guillen later told him that he could not come back to work. Guillen used his vehicle to drive all four of them to work in a 4-door Chevrolet 2500 truck. He had his personal equipment and tools in the truck, and Ayala would take the vehicle home with him sometimes. Guillen paid for the gas and he instructed Ayala to pick up Guillen first and then the others. Guillen admitted he had written some texts to the Claimant, after the injury, agreeing to pay his medical bills and money per week (Claimant's Exhibit 14). Guillen admitted that he wrote on a Facebook site that Claimant "worked for him" (Claimant's Exhibit 15). Guillen wrote the post because he was upset that Claimant was suing Employer P.

6. Guillen described the group of four roofers as "amigos," which the ALJ finds entirely lacking in credibility in light of Claimant's Exhibit 15, a copy of a text message from Guillen to Alfredo Garcia (in Spanish but translated at hearing by Interpreter Welch) wherein Guillen, one of the "four amigos" texted: " A ese puto no lo contraten asi poco demand a mi patron les aviso guys mucho cuidado co ese conpa (Translation: "be extremely careful with this 'fucker' and don't hire him "). Indeed, other

than the few damning admissions made by Guillen, the ALJ infers and finds that his testimony amount to an incredible conscious effort to evade responsibility for an employee injured on the job. His offer to pay the Claimant's hospital bills and $400 per week goes far beyond commonsensical altruistic intentions, especially in light of the "four amigos" fiction, and it amounts to a tacit admission of liability by an employer for the Claimant's injuries, which the ALJ hereby infers and finds.

7. There was no written document indicating that the Claimant was an "independent contractor." Therefore, there is no presumption to be overcome. Respondents have failed to prove that the Claimant was an independent contractor. The pertinent facts establish, to the contrary, that the Claimant was acting as an employee for Employer. The evidence establishes that the Claimant is an employee:

(A) Claimant worked exclusively for the Employer while the Employer had work. He worked during the roofing season, which would typically be from about May through November in any particular year. He started with the Employer in approximately 2005. The Claimant worked exclusively for the Employer from May 2016 through the date of his injury of September 12, 2016.

(B) The Claimant, Velazquez and Ayala, testified that Employer G supervised their work. Employer G specifically instructed the Claimant that Bryan Taylor (the principal of Employer P) was in charge when he was not on site and was instructed to follow his instructions.

(C) Each roofer was paid differently for their work. Ayala was paid $400 per day, Velazquez was paid $300 per day and Claimant $250 per day. Although the rates varied between individuals, the ALJ infers and finds that the Claimant was paid based on time and work performed as opposed to receiving a lump sum.

(D) Employer G had exclusive control to terminate the Claimant. The Claimant understood that if he had rejected any particular part of a project, he would have been terminated. And indeed, the Claimant was previously terminated and rehired the following season by Employer G on one prior occasion. Further, the Claimant had no authority to employ, control, or discharge assistants.

(E) Employer G was the one to initially direct the Claimant in performing the specific work of a roofer at the job site where the Claimant was injured.

(F) Employer G provided tools to the Claimant including the air pistol, the hose, the harness and compressor. The Claimant used some of his personal small tools brought in a bag. The tools provided by the Employer

were used all the time on job sites and the work performed could not be completed without the tools supplied by Employer G.

(G) As corroborated by Velazquez and Ayala, Employer G set the hours. In fact, Employer G would have his employee, Ayala, pick the others up from their homes and take them to the jobsite. They were picked up between 7:00 AM. to 8:00 AM. and worked until completion, sometimes to 8:00 PM. or 9:00 PM. By picking up the Claimant, Employer G had exclusive control of the time of performance. This also required the Claimant to work exclusively for Employer G under subpart (A) above, since the Claimant would have been unable to work for another employer without transportation or freedom to leave the job site.

(H) The Claimant was paid directly by Employer G, in cash personally, and the Claimant did not have a company to whom the funds were paid. Employer G determined how much the Claimant received for the work performed.

(I) The Claimant has never owned a business of his own or contracted for services at any time. Neither have the two coworkers that testified, despite testifying for Respondents that they were "independent contractors." They did not exercise control over the work they were performing for Employer G.

Based on the aforementioned facts, the preponderance of the evidence establishes that the Claimant was an "employee" at the time of his injury on September 12, 2016. An analysis under the "control" test shows that Respondents failed to prove that the Claimant was an "independent contractor" because Employer G exhibited exclusive control on several factors including the pay rate, right to terminate without liability, right to control assistants, and time of performance. In addition, Employer G exhibited control by providing necessary tools and requiring exclusivity for Employer G when Employer G dictated the hours worked. .Respondents also failed to show that the Claimant was an" independent contractor" under the relative nature of work test. The "relative nature of the work" test balances the nature of the Claimant's work in relation to the regular business of the employer contains the following elements: the character of the Claimant's work or business – how skilled it is, how much of a separate calling or enterprise it is, to what extent it may be expected to carry its own accident burden and so on – and its relation to the employer's business, that is, how much it is a regular part of the employer's regular work, whether it is continuous or intermittent, and whether the duration is sufficient to amount to the hiring of continuing services as distinguished from

contracting for the completion of a particular job. The Claimant's relationship to Employer G satisfies all of the above elements.

8. Bryan Taylor, the principal of Employer P, negotiates the roofing contracts as a general contractor, and then hires "subcontractors who perform the labor side of roofing tear offs and installations." According to Taylor (who is also a licensed and experienced roofer), Taylor hired Employer G as a subcontractor to perform a roof installation at 2500 South Madison Street. The Claimant was injured while working for Employer G, pursuant to a roofing contract that Employer G and Taylor negotiated, and this was a regular part of the business of both Employer P and Employer G. The Claimant was hired as part of his normal seasonal hire with Employer G in May 2016. The Claimant was **not** hired for the particular job at 2500 South Madison Street, but as a regular seasonal employee of Employer G. Therefore, the duration of engagement between the Claimant and Employer G was sufficient to establish a working relationship that is distinguished from completion of the particular job at 2500 South Madison Street. Consequently, Respondents failed to show, by a preponderance of the evidence that the Claimant was an" independent contractor. "

9. The Claimant was terminated by Employer G on at least one prior occasion for not attending work. Respondents claimed that Claimant was not required to work exclusively for Employer G and that he was "free to accept or deny any particular roofing project." Respondents also noted, however, that every job required a team of four to complete (the so called "four amigos'), and Employer G's employee, Denis Ayala, would give the Claimant a ride to work. Further, for all practical purposes the Claimant was not "free" to leave without the transportation provided by Ayala. Respondents argue that the Claimant was contracted on a per-job basis and not a salaried or hourly employee. For all intents and purposes, this is either compensation based on time or piece-work. Respondents concede that Claimant was paid by the square. Respondents thus concede that the Claimant was not paid an upfront agreed-upon lump sum, but rather based on his performance for piece work. Compensation based on time or piece-work is usually consistent with the status of an "employee," and not an "independent contractor. "

10. Respondents do not distinguish between **tools** and **equipmen**t but claim that Employer G only supplied equipment. The evidence establishes that Claimant was supplied a compressor, an air pistol, rope, and a harness. These kinds of tools were used on every job. There is no distinction between the two in this case. Respondents also argue that the work hours were at the discretion of the Claimant. As discussed above, the Claimant was at the mercy of Employer G by virtue of the fact that Ayala picked him up from his home and drove him to and from the job site. The Claimant did not enjoy the "benefits of being an independent contractor" by controlling his hours or the jobs he accepted, but was under the control of Employer. Finally, Respondents

argue that the Claimant customarily engaged in an independent trade. As support, Respondents cite Efrain Undo's testimony that the Claimant contacted him in November 2016 asking for work. This testimony is consistent with Claimant's testimony related to his seasonal work. The Claimant typically worked exclusively for Employer off and on from May through November since 2005.

11. Therefore, Respondents have failed to prove, by a preponderance of evidence that Claimant was an "independent contractor." The Claimant was an employee of Employer G. This ALJ issued a decision from the bench that Claimant is an employee of Employer G, not and independent contractor. Following this determination, the hearing proceeded on the remaining issues.

Compensability

12. Jose Freddy Guillen owns Employer G but it is not a corporation registered with the State of Colorado, he is the sole proprietor of the business. He received payment personally for work performed for Employer P (Claimant's Exhibit 16).

13. The Claimant worked for Employer G for various years as a seasonal worker. He was last hired by Employer G in May 2016 and worked for Employer G through September 12, 2016, the date of the injury.

14. On September 12, 2016, at approximately 2:00 PM., the Claimant sustained a closed fracture to his left wrist and a sprain to his right hip during the course and scope of his employment when a stack of approximately 36 plywood boards fell on him (Claimant's Exhibits 1 and 13a). The Claimant had been unloading plywood from the trailer, which were stacked on either side. Each piece weighed about 10 to 13 lbs. The Claimant went inside the trailer to get a sheet of plywood, when he pulled it, in the middle of the trailer in between the two large stacks, the trailer moved, and the stack of plywood fell on Claimant. The trailer belonged to Taylor. The ALJ infers and finds that Taylor, the principal of Employer P, was in a relationship with Employer g that strongly resembled a partnership.

15. The Claimant was employed as a laborer by Employer G, intermittently from 2005 to 2016, until his injury. Employer G hired the Claimant in Atlanta, Georgia. Over the years, the Claimant worked for Employer in 10 different states. The Claimant worked for other construction companies during the seasonal periods that the Claimant did not work for Employer G and Employer P. The Claimant's schedule was set by Employer G. Employer P obtained clients, and provided all the materials and tools, except for small, personal tools belonging to the Claimant.

16. The Claimant first called Employer G, then an ambulance. Taylor arrived at the job site and drove the Claimant to the emergency room (ER) at Porter Adventist Hospital. Taylor left the Claimant at the hospital and told the Claimant's wife to meet him there. The ALJ finds that Taylor, by his actions, implicitly authorized the Claimant's emergent care at the Porter ER.

Medical Care and Treatment

17. The Claimant was treated in the ER where they documented a history of injury to the left wrist and hand when he was trying to move 35-45 sheets of plywood. He was diagnosed with a left wrist fracture. The X-ray showed a comminuted intra-articular fracture of the distal radius, an ulnar styloid fracture and mild widening of the scapholunate interval suggesting ligamentous injury. The Claimant was referred to Carlton Clinkscales, M.D., at Hand Surgery Associates, for follow-up care (Claimant's Exhibit 11).

18. On September 15, 2016, Sean M. Griggs, M.D., of Hand Surgery Associates examined the Claimant and diagnosed him with a closed "fracture of unspecified carpal bone, left wrist." Dr. Griggs became the Claimant's authorized treating physician (ATP). Dr. Griggs recommended an open reduction with internal fixation and Claimant elected to undergo surgery. The health history and intake reflected that the Claimant was sent from the Porter ER and that Claimant was inside a trailer moving materials when he was injured (Claimant's Exhibit 12)

19. On September 16, 2016, Dr. Griggs performed surgery to repair the Claimant's left wrist, with no complications. Dr. Griggs noted, in relevant part, "There was significant comminution. There was a large fragment displaced dorsally…The patient was noted to have a significant impaction injury to the joint surface" (Claimant's Exhibit 12) The intraoperatively X-ray views taken of the Claimant's left wrist showed anatomic reduction of the fracture with a radial styloid pin plate positioned anatomically. The joint surface appeared to be reconstructed. The ulnar styloid appeared to be well-reduced (Exhibit 12).

20. On September 19, 2016, the Claimant returned to see Dr. Griggs for a postoperative follow-up visit. The Claimant had developed blisters between his fingers and a mild fracture blister near his incision. Claimant was noted to have clean pin sites, and a new dressing was applied (Claimant's Exhibit 12). On September 26, 2016, the Claimant returned to Dr. Griggs for a physical examination and three views of the left wrist were obtained. The examination demonstrated benign incisions and "near anatomic reduction of his fracture. There is a plate and K wire fixation." Dr. Griggs recommended a long-arm cast, with follow-up in two weeks with X-ray. Dr. Griggs also imposed work restrictions of "No use of his left upper extremity" (Claimant's Exhibit 12).

21. On October 10, 2016, Dr. Griggs examined the Claimant. The physical examination revealed that the Claimant's pin sites were benign, his incision was healed, and the Claimant was neurologically intact. The X-rays demonstrated no change in fracture alignment or position and that his hardware was well-positioned. The two dorsal k wires were removed without complication and a short-arm cast was applied. The Claimant's work restrictions remained, "No use of the left hand." (Claimant's Exhibit 12) On October 24, 2016, the Claimant's physical examination showed that his fracture was consolidated, with no change in the position or alignment of the hardware, and that the Claimant's ulna styloid was well-positioned. Dr. Griggs prescribed physical therapy (PT) two times per week for four weeks. The Claimant's restrictions were lessened to lifting, carrying 2 lbs and to wear his splint at all times (Claimant's Exhibit 12). Dr. Griggs is of the opinion that the treatment recommended is causally related to the injury of September 12, 2016.

22. The Claimant received PT treatment from Babett Lobban, O.T. (Occupational Therapist) at Hand Surgery Associates on October 27 and November 14, 2016. On November 14, 2016, over eight weeks after his surgery, the Claimant continued to experience "stiffness of left hand, not elsewhere classified" and "[p]ain in left wrist" (Claimant's Exhibit 12)

23. The Claimant discontinued medical care due to denial of service and the debt incurred. He has not been treated by anyone else. He has had no other injuries or accidents since his work injury of September 12, 2016. He continues to experience pain in both wrists and cannot put much weight on his hands or arms. Guillen told Claimant that he would pay for the medical bills. According to the Claimant, he was not able to return to work from September 12, 2016 through April 19, 2017 because of the medical restrictions imposed upon him by his ATP. Claimant returned to light duty work on April 20, 2017 for another employer.

24. The Claimant was never provided a Designated Provider List (DPL) pursuant to Workers' Compensation Rules of Procedure (WCRP), Rule 8-2, 7 CCR 1101-3.

25. The ALJ finds that the Respondents failed to show designation of a medical provider. Indeed, Taylor took the Claimant to the Porter ER, which provided emergent services, and then referred the Claimant to Hand Surgery Associates, where he was first seen by Dr. Clinkscales and next treated by Dr. Griggs, who became the Claimant's ATP. Dr. Griggs referred the Claimant to PT, which was provided by O.T. Lobban of Hand Surgery Associates. Therefore, selection passed to the Claimant. Here, the Claimant reported the injury and selected Dr. Griggs. Therefore, Dr. Griggs is an authorized treating physician. All of the Claimant's medical care and treatment for his injuries of September 12, 201`6 was authorized and within the authorized chain of referrals.

26. To date, the Claimant has received evaluations at the Porter ER, and at Hand Surgery Associates with Dr. Griggs and the PT by O.T. Lobban. The Claimant had surgery on September 16, 2016. Dr. Griggs last saw the Claimant on October 24, 2016 due to Claimant's lack of funds. Dr. Griggs last provided the Claimant restrictions of 2 lbs. lifting. Claimant only saw the PT therapist twice. These treatments were reasonably necessary to cure and relieve the effects of the September 12, 2016 compensable injury and they are causally related the Claimant's injuries sustained during the course and scope of his employment.

Average Weekly Wage (AWW)

27. While working for Employer G, the Claimant was paid approximately $250 per day. He was not sure that he was paid the same amount as the other workers but that is what Guillen told the workers. According to the Claimant, he generally earned from $1,100 to $1,300 per week. According to Guillen, his employees would go find other work when he did not have work. According to the Claimant, sometimes he would earn $550 in three days.

28. For the job at 2500 S. Madison Street, Employer P paid Employer G a first installment of $2,300 and a second installment of $735.00 for a total of $3,035.00, which if divided by 4 would be $758.75 (Claimant's Exhibit 16). The job took 2 days. According to Taylor, in a period of 3 weeks, Employer G had 11 days of work from Employer P. Taylor did not know whether or not the Claimant would get other jobs when Employer G did not have work, that Employer G did have other employment and that the 11 days may not have been the only source of income for the Claimant.

29. Because the default method will not fairly establish the Claimant's AWW in this case, the discretionary method is appropriate to use in order to arrive at a fair approximation of the Claimant's temporary wage loss. The Claimant's earnings averaged $1,072.72 a week. This is based on the Claimant's testimony that Claimant would sometimes earn $550 in 3 days. Employer P agreed. Taylor stated that in a three week period Employer G had worked for Employer P a total of 11 days. This is roughly 53% of 21 days. Therefore, Claimant's AWW is calculated as $550 times 4 divided by 53% times 92% to reach the $1,072.72, which is hereby established as the Claimant's AWW.

Temporary Total Disability

30. As of the last session of the hearing on August 28, 2017, the Claimant had not been released to return to work without restrictions; had not been declared to be at maximum medical improvement; had not returned to any work nor was he able to do so; and, he had not earned any wages. Therefore, he was sustaining a 100% temporary

wage loss, and he was temporarily and totally disabled from September 12, 2016, through April 19, 2017, both dates inclusive, a total of 220 days.

Temporary Partial Disability (TPD) After April 19, 2017

31. The Claimant did not return to work, at all, from September 12, 2016 through April 19, 2017, because of the medical restrictions imposed upon him by his ATP, Dr. Griggs. The Claimant returned to light duty work on April 20, 2017 for another employer. These restrictions resulted in Claimant being unable to perform his regular employment and the restrictions were a direct result of the injury that Claimant sustained when he fractured his left arm on September 12, 2016. Therefore, depending on his wages at the light duty work, he may be entitled to TPD benefits after April 19, 2017.

32. Respondents argue that the Claimant had earnings additional earnings after April 20, 2017 by virtue of his wife's food business, which entailed selling food from the couple's car at roofing sites. The Claimant would accompany his wife while his wife made and sold Mexican food. His wife bought all the materials, prepared all the food, did all the cooking, handled the money and the Claimant only accompanied her because she was afraid to be alone.-- her food business was of a short duration – approximately three months. This was confirmed by Maria Pedrosa, his wife. Her testimony is undisputed and it makes sense. Therefore, the ALJ is not free to disregard it. Consequently, the ALJ finds that the Claimant had no earnings attributable to his wife's food business.

33. At present, there is insufficient evidence to establish the Claimant's temporary wage loss when he was working light duty for another employer and still under restrictions.

Joint and Several Liability of Employer G and Employer P

34. Bryan Taylor co-owns Employer P, a small contracting business, with his wife. According to Taylor, Employer P is a contracting company that provides exterior home repair, including roofing, painting, windows, and gutter repair (Hrg. Tr. p. 25:1-26:1-3). Taylor would from time to time contract with Employer G to perform specific roofing jobs for Employer P. Taylor indicated that Employer P has contracted with Employer G to work on various jobs since 2005. (Hrg. Tr. p. 34:24-35:1). In September 2016, Jerry McManus contracted with Employer P to perform roof replacement on his house located at 2500 South Madison Street in Denver, Colorado.(Hrg. Tr. p. 34:6-10). Employer P, in turn, contracted with Employer G to obtain a crew to perform the roofing work (Hrg. Tr. 34:11- 23).

35. According to Taylor, part of his business involved roofing. He went on to state that he is the owner jointly with his wife (Hrg. Tr. p. 26:1-2 and p. 28:12-25). He

stated that he is very involved in every aspect of the work. (Tr. p. 31:23-25). Taylor personally did roofing work (Hrg. Tr. p. 32:1-7). He hires others to help when he needs it, such as Employer G to do roofing tear off and installation, and perform some of the labor. He does some of the labor himself. (Hrg. Tr. p. 32:9-25). Taylor negotiated the roofing contract with McManus at 2500 S. Madison Street in Denver (Hrg. Tr. p. 33:19-21 and p. 34:6-13). For the project in question, Taylor hired Employer G, and Employer G would hire the help he would need to complete the job (Hrg. Tr. p. 34:13-25).

Penalty for Failure to Insure for Workers' Compensation

36. Both Employer G and Employer P failed to insure their liability for Workers' Compensation and are, therefore, jointly and severally liable for a 50% penalty on all indemnity benefits.

Ultimate Findings

37. The Respondents failed to prove, by a preponderance of the evidence that the Claimant was an "independent contractor" on the date of his injuries on September 12, 2016.

38. The Claimant has proven, by preponderant evidence that he was an "employee" of Employer G and indirectly of Employer P; and Employers G and P were employers as defined by the Workers' Compensation Act.

39. Both Respondents failed to insure their liability for Workers' Compensation on the date of the Claimant's injury, September 12, 2016.

40. The Claimant's testimony, supporting the proposition that he was an "employee" on the date of his injury is, essentially, corroborated by Velasquez and Ayala, and it is persuasive and credible. The testimony of Jose Fredy Guillen is riddled with conceptual inconsistencies and improbablities in light of the totality of the evidence. The ALJ, therefore, finds that the testimony of Guillen is **not**.credible. Bryan Taylor's testimony neither supports nor detracts from the proposition that the Claimant was an "employee" and not an "independent contractor." All of the medical opinions in evidence are undisputed, persuasive and credible.

41. Between the conflicting testimonies of the Claimant and Guillen, the ALJ makes a rational choice, based on substantial evidence, to accept the Claimant's testimony and to reject Guillen's testimony.

42. The Claimant sustained compensable injuries to his left wrist, arising out of the course and scope of his employment, on September 12, 2016.

43. All of the Claimant's medical care and treatment was first of an emergent nature at the Porter ER; and, subsequently authorized and within the chain of authorized referrals; causally related to the September 12, 2016 compensable injury; and, reasonably necessary to cure and relieve the effects of that injury.

44. The Claimant's AWW is $1,072.66, which ordinarily would yield a TTD rate of $715.10 per week, however, penalized by 50% penalty for failure to insure yields a TTD rate of $1,07266 per week, 0r $153.24 per day.

45. The Claimant was temporarily and totally disabled from September 12, 2016, through April 19, 2017, both dates inclusive, a total of 220 days.

46. Further evidence is required on the precise amount of the Claimant's temporary wage loss from April 20, 2017, through the present time.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an

expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the medical opinions in the evidence were undisputed, inherently reasonable and credible. Therefore, the ALJ accepts them as fact. *See, Annotation, Comment: Credibility of Witness Giving Un-contradicted Testimony as Matter for Court or Jury,* 62 ALR 2d 1179, maintaining that the fact finder is not free to disregard un-contradicted testimony. As found, the Claimant's testimony, supporting the proposition that he was an "employee" on the date of his injury is, essentially, corroborated by Velasquez and Ayala, and it was persuasive and credible. The testimony of Jose Fredy Guillen was riddled with conceptual inconsistencies and improbablities in light of the totality of the evidence. As found, the testimony of Guillen was **not**.credible. Bryan Taylor's testimony neither supported nor detracted from the proposition that the Claimant was an "employee" and not an "independent contractor."

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between the conflicting testimonies of the Claimant and Guillen, the ALJ made a rational choice, based on substantial evidence, to accept the Claimant's testimony and to reject Guillen's testimony.

"Independent Contractor" versus "Employee"

c. Section 8-40-202(2)(b)(III), C.R.S., provides that the existence of any one of the factors listed in the statute is not conclusive. It is not necessary to satisfy all nine criteria in order to demonstrate that an individual is or is not an employee. *Nelson v.*

Indus. Claims Appeals Office, 981 P.2d 210, 212 (Colo. App. 1998) [holding that a finding that two of the nine criteria were not satisfied did not preclude the ALJ from concluding that the Claimant was working as an independent contractor]. The reverse is also true. The definition of an "employee" is broad and was so intended by the General Assembly. *Indus. Comm'n v. Valley Chip & Supply Co.*, 133 Colo. 258, 293 P.2d 972 (1956). There are two tests for determining whether a worker is an actual employee or an independent contractor: the "control" test, and the "relative nature of the work" test. *Stampados v. Colorado D & S Enterprises, Inc.,* 833 P.2d 815, 817 (Colo.App. 1992). If either test is satisfied, the worker is an employee. Id. at 817. Under the control test, the most important point in determining whether an individual is an independent contractor or an employee is the right of either to terminate the relationship without liability. *Indus. Comm'n v. Valley Chip & Supply Co*., supra at 974; see also *Indus. Comm'n v. Hammond*, 236 P. 1006 (Colo. 1925); *Brush Hay Milling Co. v. Small*, 388 P.2d 84 (Colo. 1963); *Faith Realty & Dev. Co. v. Indus. Comm'n*, 460 P.2d 228 (Colo. 1969). It is the power of control, not the fact of control that is the principal factor in distinguishing an employee (servant) from a contractor. *Indus. Comm'n v. Valley Chip & Supply Co.,* supra at 974. The right immediately to discharge involves the right to control. *Indus. Comm'n v. Bonfils*, 241 P. 735, 736 (Colo. 1925). Where compensation is based upon time or piece the workman is usually an employee and where it is based upon a lump sum for the task he is usually a contractor. *Brush Hay & Mill. Co. v. Small*, supra at page 87.

d. As found, Respondents failed to prove that the Claimant was an independent contractor. The pertinent facts established, to the contrary, that the Claimant was acting as an employee for Employer. The evidence shows that Claimant is an employee:

> (J) Claimant worked exclusively for Employer while Employer had work. He worked during the roofing season, which would typically be from about May through November in any particular year. He started with Employer in approximately 2005. Claimant worked exclusively for Employer from May 2016 through the day of his injury of September 12, 2016.
>
> (K) Claimant, Mr. Velazquez and Mr. Ayala, testified that Employer supervised their work. Employer specifically instructed Claimant that Mr. Taylor was in charge when he was not on site and was instructed to follow his instructions.
>
> (L) Each worker was paid differently for their work. Mr. Ayala was paid $400 per day, Mr. Velazquez was paid $300 per day and Claimant $250 per day. Although the rates varied between individuals, it is clear from the witnesses' testimonies that Claimant was paid based on time and work performed as opposed to receiving a lump sum.

(M) Employer had exclusive control to terminate Claimant. The Claimant understood that if he had rejected any particular part of a project, he would have been fired. And indeed, Claimant was previously fired and rehired the following season by Employer on one prior occasion. Further, Claimant had no authority to employ, control, or discharge assistants.

(N) Employer was the one to initially train Claimant to perform the work of a roofer.

(O) Employer provided tools to the Claimant including the air pistol, the hose, the harness and compressor. Claimant used some of his personal small tools brought in a bag. The tools provided by Employer were used all the time on job sites and the work performed could not be completed without the tools supplied by Employer.

(P) As testified by Claimant, Mr. Velazquez and Mr. Ayala, Employer set the hours. In fact, Employer would have his employee, Mr. Ayala pick them up from their homes and take them to the jobsite. They were picked up between 7:00 a.m. to 8:00 a.m. and worked until completion, sometimes to 8:00 p.m. or 9:00 p.m. By picking up the Claimant, Employer had exclusive control of the time of performance. This also required Claimant to work exclusively for Employer under subpart (A) above, since Claimant would have been unable to work for another employer without transportation or freedom to leave the job site.

(Q) Claimant was paid directly by Employer in cash personally and Claimant did not have a company to whom the funds were paid. Employer determined how much he received for the work performed. Claimant was paid based on time as opposed to receiving a lump sum.

(R) Claimant has never owned a business of his own or contracted for services at any time. Neither have the two coworkers that testified, despite curiously testifying for Respondents that they were independent contractors. They did not exercise control over the work they were performing for Guillen.

As found, the Claimant was an employee at the time of his injury on September 12, 2016. An analysis under the "control" test established that Respondents failed to prove that the Claimant was an independent contractor because Employer exhibited exclusive control on several factors including pay rate, right to terminate without liability, right to control assistants, and time of performance. In addition, Employer exhibited control by

providing necessary tools and requiring exclusivity for Employer when Employer dictated the hours worked.

e. Respondents also failed to show that Claimant was an independent contractor under the "relative nature of work" test. The "relative nature of the work" test balances the nature of the Claimant's work in relation to the regular business of the employer. *Brush Hay & Mill. Co. v. Small*, 154Colo. 11, 388 P,.2d 84 (1963). It contains the following elements: the character of the Claimant's work or business – how skilled it is, how much of a separate calling or enterprise it is, to what extent it may be expected to carry its own accident burden and so on – and its relation to the employer's business, that is, how much it is a regular part of the employer's regular work, whether it is continuous or intermittent, and whether the duration is sufficient to amount to the hiring of continuing services as distinguished from contracting for the completion of a particular job. *Brush Hay & Mill. Co. v. Small*, *supra* at page 87.

f. Section 8-40-202(2)(b)(III), C.R.S., provides that existence of any one of the factors listed in the statute is not conclusive. It is not necessary to satisfy all nine criteria in order to demonstrate that an individual is or is not an employee. *Nelson v. Indus. Claims Appeals Office*, 981 P.2d 210, 212 (Colo. App. 1998) [holding that a finding that two of the nine criteria were not satisfied did not preclude the ALJ from concluding that the Claimant was working as an independent contractor]. The reverse is also true. The definition of an "employee" is broad and was so intended by the General Assembly. *Indus. Comm'n v. Valley Chip & Supply Co.*, *supra* at 974. There are two tests for determining whether a worker is an actual employee or an independent contractor: the "control" test, and the "relative nature of the work" test. *Stampados v. Colorado D & S Enterprises, Inc., supra* at 817. If either test is satisfied, the worker is an employee. *Id.* at 817. Under the control test, the most important point in determining whether an individual is an independent contractor or an employee is the right of either to terminate the relationship without liability. *Indus. Comm'n v. Valley Chip & Supply Co*., supra at 974; see also *Indus. Comm'n v. Hammond*, 77 Colo. 414, 236 P. 1006 (1925); *Brush Hay Milling Co. v. Small*, *supra*; *Faith Realty & Dev. Co. v. Indus. Comm'n*, 170 Colo. 215, 460 P.2d 228 (1969). It is the power of control, not the fact of control that is the principal factor in distinguishing an employee (servant) from a contractor. *Indus. Comm'n v. Valley Chip & Supply Co.,* supra at 974. The right immediately to discharge involves the right to control. *Indus. Comm'n v. Bonfils*, 78 Colo. 306, 241 P. 735, 736 (1925). Where compensation is based upon time or piece the workman is usually an employee and where it is based upon a lump sum for the task he is usually a contractor. *Brush Hay & Mill. Co. v. Small*, supra at page 87. As found, the Claimant was an "employee" on the date of his compensable injury, September 12, 2016.

Compensability

g. In order for an injury to be compensable under the Workers' Compensation Act, it must "arise out of" and "occur within the course and scope" of the employment. *Price v. Indus. Claim Appeals Office,* 919 P.2d 207, 210, 210 (Colo. 1996). An injury "arises out of' employment if it would not have occurred **but for** the fact that the conditions and obligations of employment placed the employee in a position that he or she was injured." *See City of Brighton v. Rodriguez,* 318 P.3d 496, **2014 CO 7** [presumption that an injury arises out of employment when an unexplained injury occurs during the course of employment. Thereupon, it is incumbent to show that non-work related factors caused the injury]. Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any benefits are awarded. § 8-41-301 (1) (c), C.R.S. *See Faulkner v. Indus. Claim Appeals Office,* 24 P.3d 844 (Colo. App. 2000)*; Eller v. Indus. Claim Appeals Office*, 224 P.3d 397, 399 (Colo. App. 2009); *Cabela v. Indus. Claim Appeals Office,* 198 P.3d 1277, 1279 (Colo. App. 2008). The question of causation is generally one of fact for determination by an ALJ. *Faulkner* at 846; *Eller* at 399-400. As found, the Claimant sustained a compensable injury to his left wrist on September 12, 2016, arising out of the course and scope of his employment for the Employers herein.

Failure to Designate Medical Provider

h. An employer's right of first selection of a medical provider is triggered when the employer has knowledge of the accompanying facts connecting the injury to the employment. *Jones v. Adolph Coors Co.,* 689 P. 2d 681 (Colo. App. 1984). An employer must tender medical treatment forthwith on notice of an injury or its right of first selection passes to the injured worker. *Rogers v. Indus. Claim Appeals Office,* 746 P.2d 565 (Colo. App. 1987). As found, Employer G and Employer P did not furnish the Claimant with a list of designated providers. Also, as found, Bryan Taylor of Employer P, by choosing to take the Claimant to the Porter ER, implicitly, by his actions, selected the Porter ER as the first medical provider.

i. Section 8-43-404(5)(a)(I)(A), C.R.S. provides:

> In all cases of injury, the employer or insurer shall provide a list of at least four physicians or four corporate medical providers or at least two physicians and two corporate medical providers or a combination thereof where available, in the first instance, from which list an injured employee may select the physician who attends the injured employee.

Further, WCRP, Rule 8-2(A) provides:

> When an employer has notice of an on-the-job injury, the employer or insurer shall provide the injured worker with a written list of designated providers from which the injured worker may select a physician or corporate medical provider. For purposes of this rule 8, the list will be referred to as the designated provider list.

WCRP Rule 8-2(A)(1) states that "a copy of the written designated provider list must be given to the injured worker in a verifiable manner within seven (7) business days following the date the employer has notice of the injury." Here, Claimant requested help with his claim but was not provided with a designated provider list in a written verifiable manner. Therefore, WCRP Rule 8-2-(E) applies in this matter, which states: "If the employer fails to supply the required designated provider list in accordance with this rule, the injured worker may select an authorized treating physician or chiropractor of their choosing." As found, Employer G and Employer P admitted they knew of the accident the same day of the accident. Respondents failed to designate a medical provider. Therefore, the right of selection passed to the Claimant. Here, Claimant reported the injury and selected Dr. Griggs. Therefore, Dr. Griggs is an authorized treating physician (ATP).

Medical Benefits

j. Because this matter is compensable, Respondents are liable for medical treatment which is reasonably necessary to cure or relieve the effects of an industrial injury. § 8-42-101(1) (a), C.R.S; *Snyder v. Indus. Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). As found, the Porter ER provided emergent care. A medical emergency allows an injured worker the right to obtain treatment without undergoing the delay inherent in notifying the employer and awaiting approval. However, once the emergency has ended, the employee must give notice to the employer of the need for continuing care. *Sims v. Indus. Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990).

k. Respondents are liable for medical treatment which is causally related and reasonably necessary to cure or relieve the effects of an industrial injury if a claim is compensable. § 8-42-101(1) (a), C.R.S; *Snyder v. Indus. Claim Appeals Offic*e, 942 P.2d 1337 (Colo. App. 1997). The evidence must establish the causal connection with reasonable probability, not medical certainty. *Ringsby Truck Lines, Inc. v. Indus. Comm'n*, 30 Colo. App. 224, 491 P.2d 106 (1971). Reasonable probability exists if the proposition is supported by substantial evidence which would warrant a reasonable belief in the existence of facts supporting a particular finding. *F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). As found, all of the Claimant's medical care and treatment for his compensable left wrist injuries of September 12, 2016, is causally related thereto and reasonably necessary to cure and relieve the effects thereof. *See also Dependable Cleaners v. Vasquez,* 883 P.2d 583 (Colo. App. 1994). As found, Dr. Griggs was of the opinion that the treatment recommended is related to the injury of September 12, 2016. Also, medical treatment must be reasonably necessary to cure

and relieve the effects of the industrial occupational injury. § 8-42-101(1) (a), C.R.S; *Morey Mercantile v. Flynt*, 97 Colo. 163, 47 P.2d 864 (1935); *Sims v. Indus. Claim Appeals Offi*ce, 797 P.2d 777 (Colo. App. 1990). The question of whether the Claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). To date, Claimant has received evaluations at the emergency room and at Hand Surgery Associates with Dr. Griggs and the therapist. Claimant had surgery on September 16, 2016. Dr. Griggs last saw Claimant on October 24, 2016 due to Claimant's lack of funds. Dr. Griggs last provided Claimant restrictions of 2 lbs. lifting. Claimant only saw the therapist twice. These treatments are reasonably necessary to cure and relieve the effects of the September 12, 2016 compensable injury and they are causally related to the Claimant's injuries sustained during the course and scope of his employment, and reasonably necessary to cure and relieve the effects thereof.

l. To be authorized, all referrals must remain within the chain of authorized referrals in the normal progression of authorized treatment. *See Mason Jar Restaurant v. Indus. Claim Appeals Office,* 862 P. 2d 1026 (Colo. App. 1993); *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P. 2d 501 (Colo. App. 1995); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). When an ATP refers an injured worker to his personal physician, under the mistaken belief that the claim was not compensable, the referral was nonetheless within the chain of authorized referrals and, thus, subsequent treatment was authorized. *See Cabela v. Indus. Claim Appeals Office,* 198 P.3d 1277 (Colo. App. 2008). As found, all referrals from Hand Surgery Associates, Dr. Clinkscales, and Dr. Griggs, including the referral to .O.T. Lobban, were within the authorized chain of referrals.

Average Weekly Wage

m. the term "average weekly wage" (AWW) is a key part of the formula used to calculate compensation for injured workers, and it is based upon the definition of "wages" provided at § 8-40-201(19)., C.R.S. *See Indus. Claim Appeals Office v. Ray*, 145 P.3d 661 (Colo. 2006). To determine a claimant's AWW, the ALJ may choose from two different methods set forth in § 8-42-102. The first method, referred to as the "default provision," provides that an injured employee's AWW "be calculated upon the monthly, weekly, daily, hourly, or other remuneration which the injured or deceased employee was receiving at the time of injury." § 8-42-102(2). The default provision in § 8-42-102(2)(a)-(f), lists six different formulas for conducting this calculation. Pursuant to § 8-42-102(5)(a), the phrase "at the time of injury" in subsection (2) requires the AWW to be determined using the wage earned on the date of the employee's accident. The second method for calculating a Claimant's AWW, referred to as the "discretionary exception," applies when the default provision will not fairly compute the employee's AWW. § 8-42-102(3). In such a circumstance, the ALJ has discretion to compute the AWW of a Claimant in such other manner and by such other method as will, based

upon the facts presented, fairly determine the employee's AWW. *Benchmark/Elite, Inc. v. Simpson,* 232 P.3d 777 (Colo. 2010).

n. The overall objective of calculating AWW is to arrive at a fair approximation of Claimant's wage loss and diminished earning capacity. *Coates, Reid & Waldron v. Vigil,* 856 P.2d 850 (Colo. 1993); *Ebersbach v. United Food & Commercial Workers Local No 7*, W.C. No. 4-240-475 [Indus. Claim Appeals Office (ICAO), May 7, 1997]; *Vigil v. Indus. Claim Appeals Office*, 841 P.2d 335 (Colo.App.1992). Because the default method will not fairly compute the Claimant's AWW in this case, the discretionary method is appropriate to use in order to arrive at a fair approximation of the Claimant's temporary wage loss. His earnings averaged $1,072.72. This is based on the Claimant's testimony that he would sometimes earn $550 in 3 days. As found, Employer P agreed. Taylor stated that in a three week period Employer G had worked for Employer P a total of 11 days. This is roughly 53% of 21 days. Therefore, Claimant's AWW is calculated as $550 times 4 divided by 53% times 92% to reach the $1,072.72, which ordinarily yields a TTD rate of $715.14, but penalized by 50% for failure to insure, the TTD rate is $1,072.72 per week, or $153.25 per day.

Penalty for Failure to Insure:

o. Section 8-43-408, C.R.S., addresses employers who, at the time of the injury, are uninsured. § 8-43-408(1). It states, in pertinent part:

> In any case where the employer is subject to the provisions of articles 40 to 47 of this title and at the time of an injury has not complied with the insurance provisions …,the employee, if injured, … in any such case the amounts of compensation or benefits provided in said articles shall be increased fifty percent.

As found, Employers G and P were non-insured. Therefore, all indemnity benefits to Claimant should be increased by 50%.

Temporary Disability Benefits

p. To establish entitlement to temporary disability benefits, a claimant must prove that the industrial injury has caused a "disability," and that he has suffered a wage loss that, "to some degree," is the result of the industrial disability. § 8-42-103(1), C.R.S; *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). When a temporarily disabled employee loses his employment for other reasons which are not his responsibility, the causal relationship between the industrial injury and the wage loss necessarily continues. Disability from employment is established when the injured employee is unable to perform the usual job effectively or properly. *Jefferson Co. Schools v. Headrick*, 734 P.2d 659 (Colo. App.1986). This is true because the employee's restrictions presumably impair his opportunity to obtain employment at pre-

injury wage levels. *Kiernan v. Roadway Package System*, W.C. No. 4-443-973 (ICAO, December 18, 2000). There is no statutory requirement that a claimant must present medical opinion evidence from of an attending physician to establish her physical disability. See *Lymburn v. Symbois Logic*, 952 P.2d 831 (Colo. App. 1997). Rather, the Claimant's testimony alone is sufficient to establish a temporary "disability." *Id*. As found, As found, the Claimant was temporarily and totally disabled from September 12, 2016, through April 19, 2017, both dates inclusive, a total of 220 days.

q. Once the prerequisites for TTD are met (*e.g.,* no release to return to full duty, MMI has not been reached, a temporary wage loss is occurring; modified employment is not made available, and there is no actual return to work), TTD benefits are designed to compensate for temporary wage loss. TTD benefits are designed to compensate for a 100% temporary wage loss. *See Eastman Kodak Co. v. Industrial Commission,* 725 P. 2d 107 (Colo. App. 1986); *City of Aurora v. Dutch,* 799 P. 2d 461 (Colo. App. 1990). As found, aggregate past due TTD benefits from September 12, 2016, through April 19, 2017, both dates inclusive, a total of 220 days, equal $33,715.00.

r. As found, TPD benefits after April 20, 2017, must be ascertained at a later time.

Statutory Employer and/or Employer P

s. The Statutory Employer Statute, § 8-41-401(1)(a), C.R.S., provides, in pertinent part:

> Any [entity] operating or engaged in or conducting any business by leasing or contracting out any part or all of the work thereof to any lessee, sublessee, contractor, or subcontractor ... shall be construed to be an employer as defined in articles 40 to 47 of this title and shall be liable as provided in said articles to pay compensation for injury or death resulting there from to said lessees, sublessees, contractors, and subcontractors and their employees....

This provision prevents employers from avoiding responsibility to pay workers' compensation benefits by conducting their business through a separate, uninsured employer. *Finlay v. Storage Technology Corp*., 764 P.2d 62, 64 (Colo.1988). In turn, § 8-41-401(2), C.R.S., provides statutory employers concomitant immunity from suit if the injured worker's direct employer carries workers' compensation insurance. So the spirit of the law is that employers should not avoid liability by hiring out work. Further, the statute at § 8-41-401(1)(a), C.R.S., is to prevent employers from avoiding responsibility under the workers' compensation act by contracting out their regular work to non-insured contractors rather than hiring the worker directly. *Winer's Pumping Units v. Emerald Gas Operating Co.,* 936 P.2d 627, 629 (Colo.App.1997). Under § 8-41-

401(1)(a), C.R.S., a company which is engaged in business by leasing or contracting out part or all of its work to a subcontractor is the employer of the employees of the subcontractor and is liable for the injuries of employees of the subcontractors, unless the subcontractor is insured. As found, Employer P is in the business of contracting with home owner for roofing contracts. Bryan Taylor, the owner of Employer P, agreed that he had hired Employer G, subcontracting some of its roofing work. The Claimant was an employee of Employer G and Employer P.

Joint and Several Liability

t. The holding in *Sechler v. Pastore et al.,* 103 Colo. 139, 84 P.2d 61 (1938) was also echoed in *Archer Freight Lines, Inc. v. Horn Transp., Inc.,* 32 Colo. App. 412, 514 P.2d 330 (1973) as the case most on point. While *Sechler* is 79 years old, the opinion has not been overruled. It is still good law. In *Sechler* the Claimant sustained a compensable injury on March 11, 1937. Previous to this time the general contractor, Pastore, had entered into an agreement with the Sechler Electric Company for the installation of electric outlets in a house being constructed by Pastore in Denver, Colorado. At the time of the injury, the Claimant, an electrician, was engaged in making such installments as an employee of the Sechler Electric Company. Neither the employer nor the contractor carried workers' compensation insurance. After a number of hearings, the Industrial Commission ordered that both the Sechler Electric Company and Pastore pay compensation to the Claimant. The lower court issued an order affirming the award of the Industrial Commission in all respects and with the further adjudication that the liability for the payment of compensation as between the employer and the contractor was therein fixed as a primary liability against the former and a secondary liability against the latter. The Industrial Commission was directed to modify its award accordingly. The Supreme Court, however, found that in the case of a compensable injury to an employee of the subcontractor, there is no express statutory authority to determine or fix a comparative degree of liability for the compensation as between the subcontractor employer and the contractor. *Index Mines Corporation v. Indus. Comm'n*, 82 Colo. 272, 259 P. 1036 (Colo. 1927). *American Radiator Company v. Franzen* [81 Colo. 161], 254 P. 160 (Colo. 1927). The Supreme Court in *Sechler* further stated that the primary purpose of the Workers' Compensation Act is to expeditiously provide an award of compensation in favor of an injured employee against all persons who may be liable therefore. Proceedings should not be hampered or delayed by the adjudication of collateral issues relating to degrees of liability of the parties made responsible by the statute for the payment of compensation. Such a determination may well involve questions of contractual obligations or even equitable considerations between the responsible parties, of no concern to the injured employee, and, if involved, should be resolved by a court in an independent proceeding in which the employee should not be required to participate. The Colorado Supreme Court found the Connecticut Supreme Court persuasive in *Johnson v. Mortenson*, 110 Conn. 221, 147 A. 705, 66 A.L.R. 1428, at page 707 that stated:

> The better view and practice of the compensation commissioners appears to have been to regard their jurisdiction as limited to determination of the right of the employee to compensation and as to who is liable therefore to such Claimant, leaving the rights and liabilities between those held jointly liable to the Claimant 'to be worked out in such proceedings, among). They stated that the jurisdiction in a workers' compensation matter is limited to a determination of the right of an employee to compensation and to a determination of who is liable for the award under the statute. Collateral issues relating to the contractual rights and liabilities between the employers are of no concern to the employee and should be resolved by a court in an independent proceeding in which the employee should not be required to participate.

These cases were followed in *Herman Hernandez v. MDR Roofing, Inc., Alliance Construction & Restoration, Inc., Norma Patricia Hoff, et al*. W.C. No. 4-850-627-03, (ICAO, September 20, 2013) The decision was affirmed in *Pinnacol Assurance v. Norma Patricia Hoff et. al.,* 375 P.3d 1214 (Colo. 2016). In the underlying decision, the court concluded that, in addition to MDR, who was the Claimant's direct employer, Hoff and Alliance, were Claimant's statutory employers under §§ 8-41-402 and 8-41-401 of the Workers' Compensation Act. The ALJ then concluded that Hoff, Alliance, and MDR should pay for the Claimant's medical and temporary disability benefits. Finding that none of these three parties had a workers' compensation insurance policy in effect on the date of injury, the ALJ held them jointly liable for Claimant's benefits. The ALJ ordered each of the non-insured employers to post bond in the amount of $50,000. In its petition to review, MDR asserted that the ALJ erred in finding MDR jointly liable for the Claimant's loss. The court disagreed with MDR. *Coffey v. Curry Graham d/b/a Affordable Roofing*, W.C. No. 3-909-714 (ICAO, January 24, 1991). See also *Sechler v. Pastore*, *supra.* In the prior underlying ICAO Final Order, the panel instructed the ALJ that pursuant to *Sechler*, the non-insured statutory employers bear joint liability. As found, Bryan Taylor, through his company, Employer P, contracted Employer G and its employees, to perform his contracted roofing work. Whether this arrangement was a joint venture or whether Employer P was the general contractor is irrelevant as, both are non-insured. Therefore they are jointly and severally liable for the Claimant's workers' compensation benefits.

Burden of Proof

u. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App.

2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). Also, the burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P.2d 535 (Colo. App. 1992). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the jointly and severally liable Respondents failed to sustain their burden of proof that the Claimant was an "independent contractor." The Claimant sustained his burden on the issues of being an "employee" of non-insured entities; compensability; medical benefits; AWW; and, TTD from September 12, 2016, through April 19, 2017

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Claimant was an employee of Employer G. Respondents G and P failed to prove that the Claimant was an independent contractor.

B. Employer G is not a corporation but a sole proprietorship. Therefore, Jose Fredy Guillen is personally liable for benefits to the Claimant, jointly and severally with Employer P.

C. Employer P, is the statutory employer and/or indirect employer of the Claimant. It is a corporation.

D. The Claimant sustained a compensable injury to his left wrist and right hip during the course and scope of his employment on September 12, 2016.

E. Both Employer G and Employer P failed to comply with the insurance provisions of the Workers' Compensation Act because they did not have workers' compensation insurance as required by law. Therefore, Claimant has established that the amount of compensation and benefits due to him are increased by 50%.

F. Respondents are jointly and severally liable and shall pay the costs of causally related and reasonably necessary medical care and treatment to cure and relieve him of the effects of the Claimant's compensable injuries, provided by ATPs, including Porter Hospital, Focus Hand and Arm Surgery Center, Carlton Clinkscales,

M.D., Sean M. Griggs, M.D., at Hand Surgery Associates, and O.T. Babett Lobban, subject to the Division of Workers' Compensation Medical Fee Schedule. The Claimant paid some of his medical bills in order to receive medical care. Pursuant to § 8-42-101(6)(b), C.R.S., Respondents, jointly and severally, shall reimburse Claimant for 100% of the medical benefits paid by Claimant in the amount of $5,320 (*See* Claimant's Exhibit 12.).

G. Because both Employers are jointly and severally liable for payment of Claimant's medical costs associated with his compensable injuries of September 12, 2016, no medical provider shall seek to recover such costs from the Claimant under pain of penalty pursuant to. § 8-42-101(4), C.R.S.

H. The Claimant's average weekly wage is $1,072.72.

I. Both Respondents, jointly and severally, shall pay the Claimant temporary total disability benefits of $1,072.66 (penalized by 50% for failure to insure The Claimant's AWW is $1,072.66, which yields a TTD rate of $1,072.66 per week, or $153.24 per day. For the period from September 12, 2016 until April 19, 2017, when Claimant started a light duty job despite his restrictions, a total of 220 days both Respondents shall pay the Claimant aggregate past due benefits in the amount of $33,715.00, which is payable retroactively and forthwith.

J. Both Respondents, jointly and severally, shall pay the Claimant interest at the rate of eight percent (8%) per annum on all amounts of indemnity benefits due and not paid when due.

K. In lieu of payment of the above compensation and benefits to the Claimant, both Respondents shall:

1. Within ten (10) days of the date of service of this order, deposit the amount of $39,032.17 with the Division of Workers' Compensation, as trustee, to secure the payment of all unpaid compensation and benefits awarded. The check shall be payable to: Division of Workers' Compensation/Trustee. The check shall be mailed to the Division of Workers' Compensation, P.O. Box 300009, Denver, Colorado 80203-0009, Attention: Sue Sobolik/Trustee; OR

2. Within ten (10) days of the date of service of this order, file a bond in the amount of $60,000.00 with the Division of Workers' Compensation;

(a) Signed by two or more responsible sureties who have received prior approval of the Division of Workers' Compensation; or

(b) Issued by a surety company authorized to do business in the State of Colorado. The bond shall guarantee payment of the compensation and benefits awarded.

L. Both Respondents, jointly and severally, shall notify the Division of Workers' Compensation of payments made pursuant to this order.

M. The filing of any appeal, including a petition to review, shall not relieve the both Respondents, jointly and severally, of the obligation to pay the designated sum to the trustee or to file the bond. §8-43-408(2), C.R.S.

N. Any and all issues not determined herein, including the issues of temporary partial disability after April 20, 2017 and permanent disability are reserved for future decision.

DATED this_____day of September 2017.

_____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that she sustained a compensable injury to her lower back and/or left hip on or about June 25, 2015?

II. Has Claimant shown, by a preponderance of the evidence, that she is entitled to all reasonable, necessary, and related treatment for her lower back and/or left hip for the incident which occurred on or about June 25, 2015?

III. Has Claimant shown that Respondents are subject to penalties pursuant to §8-43-203(2)(a) C.R.S., for failure to timely admit or deny her claim for workers compensation benefits?

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following Findings of Fact:

1. Claimant worked for employer, N-Link Corporation, from November 2009, through July 31, 2015, after which she was laid off for lack of work. Her job included managing 17 computers in classrooms and servicing servers, to include installing batteries.

2. On June 25, 2015. Claimant was sitting cross-legged on the floor, holding a large battery in front of her. She was attempting to place this battery into the battery rack, which was about a foot off the floor. Claimant was sliding the battery into the rack when the battery slipped, dropping several inches before she could regain a proper grip. Claimant testified that she "jolted" forward to try to catch it. The battery was above her lap and didn't actually strike the Claimant, or the floor. Claimant asserts that she felt immediate 8-9/10 pain to her lower left lumbar region, buttocks and into her thigh.

3. While Claimant admitted having previous lower back injuries and ongoing symptoms, she denied having the left gluteal and left leg symptoms prior to this incident, and feels that this incident aggravated her underlying lower back condition.

4. An incident report was filed by Claimant the following afternoon (Ex. 3). On this report, Claimant states that she was "*trying to get an appointment with* my *doctor*" (emphasis added). Claimant continued to work her regular employment until her layoff on July 31, 2015. Claimant ultimately filed a workers' claim for compensation, and on December 8, 2016 the Division of Workers Compensation notified Respondents via letter that a position must be taken within 20 days. Claimant testified that TriCare had declined treatment, stating that this incident was a work-related injury.

5. The Claims adjuster, Beatrice Diaz, testified that Claimant was provided a designated provider list by the employer, not by her. Ms. Diaz testified that she reached out to Claimant on July 2, 2015, July 6, 2015 and also sent a letter to claimant on July 6, 2015. Ms. Diaz also attempted to contact Claimant on July 14, 2015. Ms. Diaz received no responses from any attempted contacts. She then "internally closed" this claim.

6. Claimant testified that the providers on the list would not accept an appointment and therefore, she contacted Ms. Diaz regarding further care with Dr. Bissell. However, Ms. Diaz testified that Claimant did not contact her regarding further care from the designated provider list or treatment with Dr. Bissell for the June 25, 2015 case. Dr. Bissell was only authorized for treatment for the July 10, 2014 case.

7. Following Claimant's layoff on July 31, 2015, Claimant applied and received unemployment benefits from August 10, 2015 through January 30, 2016 (Ex. HHH). At hearing, Claimant did not deny that in order to maintain her unemployment benefits, she had to be physically able to work, keep work logs and that she did apply for jobs during that period of time.

8. Claimant has a lengthy history of back complaints. Her low back pain complaints began 21 years prior to 2011, after a pregnancy. As of May 25, 2011, Claimant was seen in physical therapy for neck, shoulder, and low back pain (Ex. D; p. 14).

9. On September 21, 2012, Claimant was seen for chronic low back pain. It was noted that her back pain occurred when standing, cooking, doing chores, and bending to help her daughter. She was trying to walk for exercise, but the back pain became worse, *with pain in her left hip extending down her left leg* (Ex. H, pp. 35-36)(emphasis added).

10. A series of low back x-rays was performed on October 1, 2012. In the comments for the Reason for Order, it was noted that "*[Claimant] had low back pain* for years. *The back pain is present most of the time. It is* severe *now, with pain extending down the* left *leg"* (Ex. I, pp. 38-39)(emphasis added).

11. On May 20, 2014, Claimant was referred to Dr. Bissell for evaluation of chronic low back pain. She also complained of neck, mid back, and bilateral upper limb pain. Dr. Bissell noted that Claimant had fallen in November 2011. With regard to her low back, his diagnosis was "chronic low back pain, widespread soft tissue pain syndrome with nonrestorative sleep and cognitive dysfunction, query fibromyalgia. Today's symptoms are nonspecific and widespread." (Ex. M; pp. 52-54).

12. On June 24, 2015, MRIs were taken of Claimant's lumbar spine, which showed mild degenerative changes (Ex. N; p. 55).

13. On July 10, 2014, Robert Cowan PA-C, noted that since Claimant fell in November (2011) and did not develop pain until March or April (2014), it was unlikely

that the pain was directly related to the fall. He opined her shoulder pain was a repetitive stress injury rather than acute trauma. He also related her low back pain to myofascial pain syndrome, likely related to a repetitive stress injury rather than an acute injury (Ex. O; p. 56).

14. On September 23, 2014, Dr. Bissell performed bilateral L2 through S1 medial branch blocks (Ex. Q; pp. 65-66). An intake diagram of October 22, 2014, shows widespread body pain (Ex. P; p. 60).

15. On March 17, 2015, Claimant was again seen by Dr. Bissell and again he noted widespread body pain, much of which was due to fibromyalgia. With regard to her low back condition, he did not plan on repeating her lumbar medial branch blocks due to her negative response to the diagnostic injection (Ex. T; p. 79).

16. Dr. Bissell saw Claimant on April 14, 2015, and she was requesting a repeat of the medial branch blocks to her mid and low back. "Pain 8/10; normal daily pain 6/10; 20% improvement with medication" (Ex. V, pp. 86-87).

17. On June 9, 2015, (now two weeks prior to the incident at issue), Claimant saw Dr. Bissell for mid to low back pain and he ordered an L2-S1 radiofrequency neurotomy (RFN) (Ex. W; pp. 89-90).

18. Following the incident of June 25, 2015, Claimant had contact with providers at Evans Army facility on June 25, 2015, June 30, 2015, July 1, 2015, and July 20, 2015. At none of these appointments does Claimant mention this incident. (Ex. X, p. 92) (Ex. Y, p. 93) (Ex. Z, p. 94) (Ex. AA, p. 95).

19. On July 22, 2015, Claimant received left L2-S1 medial branch RFN procedures from Dr. Bissell. It was noted that she had "recalcitrant *low back pain* unresponsive to conservative management." (Ex. BB, p. 96) Claimant makes no mention of the July 25, 2015 event at this appointment.

20. Claimant was again seen in by Dr. Bissell's office on August 10, 2015, September 17, 2015, October 19, 2015, December 15, 2015 and December 17, 2015. None of those visits note a June 25, 2015 event (Ex. DD, EE, GG, HH, II). Claimant did not treat for her low back after December 17, 2015.

21. Claimant was first seen by Dr. Eric Ridings on July 11, 2016. Dr. Ridings performed an Independent Medical Examination ("IME") at that employer's request with regard to the July 10, 2014, workers' compensation claim. Claimant completed a questionnaire at the time of that IME. She noted that her problems began as a result of the fall at work in 2011, which caused severe pain and other issues in her back, neck, and shoulders. She also completed a pain diagram, which showed pain in the left lower extremity and top of the left hip (Ex.TT, pp 148, 152). There was no mention at this IME of a June 25, 2015 event.

22. Dr. Rook performed an IME at Claimant's request on July 21, 2016. In his report, Dr. Rook also noted that Claimant was having low back pain since 1991. Claimant noted that she had compounded creams for her neck and her low back, which she used often off and on for years and found them helpful. After her fall in 2011, she had marked increase in neck and low back pain and the compounded creams were no longer effective. He diagnosed (among other things) Claimant with chronic low back pain, myofascial pain syndrome, component of facet mediated pain, left-sided sacroiliac joint dysfunction, and negative lower extremity neurological examination. Dr. Rook did not opine that Claimant's back, neck or shoulder complaints were related to the 2011 claim or the 2014 claim. There is no mention of the June 25, 2015, event as a possible cause of her low back complaints (Ex. UU, pp. 153-165).

23. Claimant requested a Division IME ("DIME") for her July 10, 2014 injury. She was assigned to Dr. Caroline Gellrick MD. The DIME took place on November 1, 2016. In Dr. Gellrick's history, it was noted that Claimant had low back pain, 75% in the back and 25% in her leg. The symptoms dated back to 2011 after a fall at work. She specifically noted that Claimant had no new injuries, no car accidents and no slip and falls. Her pain level was 7/10. Activities that make the pain worse include walking, sitting, standing, exercise, bending, working, cleaning, pulling, lifting, and pushing. She can sit for 1 to 2 hours, stand for 10 minutes, drive for 20 minutes, walk for 10 minutes. Claimant states that she stays in bed most of the time. (Ex. WW; pp. 184-185).

24. Dr. Gellrick further noted in her DIME that "the medical records supplied are replete the numerous complaints of fibromyalgias and musculoskeletal pains which predated 2014. There were numerous references to fibromyalgia seen in the Evans Army medical records of Fort Carson." (Ex. WW; p 187).

25. In comparison, on May 20, 2014, (one year prior to the date of this incident), Claimant had reported to Dr. Bissell 8/10 pain currently, 6/10 at rest and 9/10 pain with activity. Any strength training aggravates her pain, as do most household chores. She estimates she can sit for more than 1 hour, stand for 10 minutes and walk for 10 minutes, walking increases her back pain, which is alleviated by sitting, but not by cessation of walking (Ex. M, p. 52).

26. Dr. Ridings performed an IME on April 11, 2017, for this case at issue. Claimant also completed a pain diagram, similar to the one completed at her DIME on July 11, 2016. Claimant reported to Dr. Ridings that she felt excruciating pain in her left lower lumbar and left buttock area following this event. After describing the incident to Dr. Ridings, it was his opinion that the mechanism of injury as described would not cause an injury. Claimant indicated she was seen by Dr. Bissell for injuries related to her 2011 worker's compensation claim, but could not recall when she reported the 2015 injury to Dr. Bissell's office. Claimant also could not recall whether she developed left lower leg symptoms before or after the battery incident (Ex. CCC, pp. 217-218).

27. Dr. Ridings provided a deposition on August 16, 2017 for this case. He testified that an incident at work or pain on the job does not necessarily constitute an injury. Dr.

Ridings' testified that there was no significant reported change in pain, treatment or functionality before and then after the June 25, 2015 event. His opinion, based on a reasonable degree of medical probability, is that Claimant did not sustain a work-related injury on or about June 25, 2015. Extensive medical records by many providers did not reference a June 25, 2015 injury. Rather, Claimant's history showed many years of widespread severe pain throughout most of her body. Until recently, Claimant has asserted that her low back, left hip and leg pain were a result of a 2011 fall (Ex. CCC, p. 222; Ex. TT, p. 152).

28. Beatrice Diaz acknowledged that Insurer received the workers' claim for compensation on December 14, 2016, and she was confused due to the multiple claims and was waiting for a workers' compensation claim number. She was on vacation over the holidays and then in January 2017, insurer's computers were down for a time.

29. The Director of Workers Compensation then sent a notice to Respondents on February 10, 2017 that they had yet to take a position pursuant to § 8-43-203 C.R.S. and WCRP 5-2(D). Respondents were ordered to take a position within 15 days. Respondents then filed their Notice of Contest on February 15, 2017. (Ex. HHH)

CONCLUSIONS OF LAW

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of the Respondents. Section 8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of ALJ. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's

testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

Compensability

D. The Workers' Compensation Act creates a distinction between an "accident" and an "injury." The term "accident" refers to an "unexpected, unusual, or undesigned occurrence." Section 8-40-201(1), C.R.S. In contrast, an "injury" contemplates the physical or emotional trauma caused by an "accident." An "accident" is the cause and an "injury" is the result. No benefits flow to the victim of an industrial accident unless the accident causes a compensable "injury." A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967). *Soto-Carrion v. C & T Plumbing, Inc.*, WC 4-650-711 (ICAO February 15, 2007).

E. The mere fact that a Claimant experiences pain at work does not necessarily require a finding of a compensable injury. In *Miranda v. Best Western Rio Grande Inn*, W.C. No. 4-663-169 (ICAO April 11, 2007), the panel stated "[p]ain is a typical symptom caused by the aggravation of pre-existing condition."

F. However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of a natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Renta*, 717 P.2d 965 (Colo. App. 1995).

G. Claimant may have sustained an *incident* at work, but did not sustain a compensable *injury.* Although Claimant stated she sought treatment with the designated provider at Concentra who allegedly refused to treat her, she never contacted the insurer or employer for a different provider. Dr. Ridings' testimony is persuasive that it is unlikely that the mechanism of injury described by claimant could have caused an industrial injury. Claimant missed no time from, applied for unemployment upon her termination from employment, met the requirements to maintain her unemployment benefits and sought employment. In addition, there is no mention of this injury to any provider, no significant change in pain levels, no change in level of function and no change in recommended treatment prior to and after the alleged June 25, 2015 event. Moreover, Claimant had previously insisted that her back problems were related to a 2011 fall as reported to Dr. Rook in July 2016, Dr. Ridings in July 2016 and Dr. Gellrick in November 2016.

H. Claimant has failed meet her burden of proving that she sustained an injury on June 25, 2015. The records do not support a causal connection between the incident of June 25, 2015, and Claimant's low back complaints. In addition, Claimant has significant pre-existing low back complaints, which were actively treated with medial branch blocks and a suggested radiofrequency neurotomy as late as June 9, 2015. Dr. Ridings and Dr. Bissell have opined that Claimant has fibromyalgia, which accounts for her widespread and diffuse pain complaints as noted on multiple providers' pain diagrams. Her DIME doctor in an earlier case also noted the numerous references to fibromyalgia in her medical records.

Penalties and Medical Benefits

I. Claimant asserts a penalty pursuant to § 8-43–202(2)(a) for failure to file a position within 20 days after claim for worker's compensation benefits has been filed pursuant to 8-43 202 (1)(a) and 5-2(D). Section 8-43-203 (2) (a) provides:

> If such notice is not filed as provided in subsection (1), the employer or, if insured, the employer's insurance carrier, as the case may be, may become liable to the claimant, *if the claimant is successful on the claim of compensation,* for up to one day's compensation for each day's failure so notified……(emphasis added).

J. If the Claimant fails to prove compensability, the penalty is not applicable. *Muragara v. Sears Roebuck and Company*, W.C. 4-726-134 and W.C. 4-712-263 (ICAO September 8, 2015).

K. The ALJ has found that Claimant has failed to prove a compensable injury, which occurred on June 25, 2015. Therefore, medical benefits and penalties need not be further addressed.

ORDER

It is therefore ordered that:

1. Claimant's claim for workers compensation benefits is denied and dismissed.

2. Claimant's claim for penalties is denied and dismissed.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 13, 2017

Colorado Springs, Colorado 80906

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that she is entitled to prescription medication, specifically Percocet, Tizanidine, Lyrica, Lidopro Cream, Celebrex, and Trintellix.

II. Whether Claimant is entitled to costs pursuant to C.R.S. § 8-42-101(5).

STIPULATIONS

The parties stipulated that there are no unpaid and contested medical benefits.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant worked for Respondent as a bus aid.

2. On April 28, 2014, Claimant suffered a compensable injury while lifting a 15-20 pound child out of a car-seat. Claimant bent forward and twisted and felt a pop in her mid-lumbosacral area. At the time of the injury, Claimant had the immediate onset of low back pain with bilateral lower extremity numbness and tingling.

3. Claimant came under the care of Dr. Mathwich and underwent conservative treatment for a back strain. Her treatment included physical therapy, chiropractic care, acupuncture, and modified duty. Claimant did not improve with conservative treatment. Therefore, she was sent to physiatry for evaluation and treatment.

4. After being sent to physiatry, Claimant underwent facet joint injections, epidural steroid injections, and medial branch blocks. None of the injections or blocks gave her significant relief.

5. On October 15, 2014, Claimant underwent an MRI. The MRI showed severe levoscoliosis and multilevel degenerative disc disease.

6. Claimant was evaluated by two orthopedic surgeons. Both agreed that Claimant could benefit from surgery. There were, however, concerns about her heavy smoking history, psychosocial issues, and depression. Claimant was also

evaluated by Dr. Castro. Dr. Castro did not think Claimant was a good surgical candidate.

7. After her work related injury, Claimant's mood changed. She became edgy and depressed.

8. On February 19, 2015, Claimant underwent a psychological evaluation by Ron Carbaugh, Psy.D. He reported a history of depression and anxiety without a history of intensive psychotherapy and that she had been given an antidepressant in the past. Psychometric testing was suggestive of longstanding depression. The testing also indicated Claimant's "profile suggests she is preoccupied with her bodily functions and her health, with a tendency at times to overreact to real medical issues and to complain about relatively minor ailments. She may solicit more attention than may be called for from healthcare personnel." The testing also indicated that "She is extremely sensitive to changes in her physical symptoms that may result in complaints without a medical basis." Based on his evaluation, Dr. Carbaugh determined that Claimant was a poor surgical candidate.

9. Dr. Carbaugh's report also indicated that the testing shows that her somatization score is close to the average for a pain patient. His report goes on to provide that "Individuals with a clearly defined organic basis for pain often respond in this manner." Dr. Carbgaugh diagnosed Claimant as suffering from a somatic symptom disorder.

10. Claimant was also evaluated and treated by Joel Cohen, Ph.D. In his initial evaluation, Dr. Cohen indicated that a good bit of Claimant's depression centered on the loss of two children after their births. However, after considering Claimant's preexisting depression, he still determined a portion of Claimant's depression was due to her work related injury. Dr. Cohen determined that Claimant was suffering from an injury related diagnosis of adjustment reaction with mixed features including both anxiety and depression. In light of his diagnosis, he recommended that Claimant be evaluated for the use of antidepressants, even though she had not responded well to them in the past.

11. Claimant was evaluated and treated by Dr. Gutterman, a psychiatrist. Dr. Gutterman prescribed Claimant Trintellix for her work related depression and anxiety. Since taking the Trintellix, Claimant's mood has improved.

12. Claimant also came under the care of Dr. Anderson-Oeser. Dr. Anderson-Oeser treated Claimant for her pain complaints and managed her prescription medication.

13. Due to her work related injury, Claimant suffers from depression, anxiety, chronic back pain, muscle spasms, and neuropathic pain into her lower extremities.

14. Claimant did not undergo back surgery.

15. On March 30, 2016, Claimant was placed at maximum medical improvement by Dr. Mathwich. Dr. Mathwich recommended maintenance medical treatment.

16. On April 29, 2016, Respondent filed a final admission of liability and admitted for reasonable, necessary, and related maintenance medical benefits.

17. Dr. Anderson-Oeser has prescribed the following medication to treat Claimant's work related injury as maintenance medical treatment:

    a. Percocet,

    b. Tizanidine,

    c. Lyrica,

    d. Lidopro cream, and

    e. Celebrex.

18. Respondents have been paying for Claimant's maintenance medical treatment, including the prescription medication at issue. Therefore, as stipulated to by the parties, there are no unpaid and contested medical benefits.

19. Dr. Anderson-Oeser testified at hearing regarding the purpose of each medication and its effectiveness for Claimant.

20. Dr. Anderson-Oeser testified that she is prescribing Percocet for Claimant's chronic back pain. She testified that the Percocet is reducing Claimant's back pain and increasing Claimant's functioning. Dr. Anderson-Oeser indicated that Claimant might be bed ridden without the Percocet.

21. Dr. Anderson-Oeser also testified that she is prescribing the Tizanidine to treat Claimant's muscle spasms. She testified that the Tizanidine is reducing Claimant's muscle spasms and increasing Claimant's functioning.

22. Dr. Anderson-Oeser testified that she is prescribing the Lyrica to treat Claimant's neuropathic pain. She also testified that the Lyrica is reducing Claimant's neuropathic pain and increasing Claimant's functioning.

23. Dr. Anderson-Oeser testified that she is prescribing the Lidopro cream to help treat Claimant's back pain and reduce the amount of Percocet Claimant uses. She testified that the Lidopro cream is reducing Claimant's pain complaints and increasing her functioning.

24. Dr. Anderson-Oeser also testified that she is prescribing Claimant Celebrex for her back pain. She testified that the Celebrex is reducing Claimant's back pain, reducing the amount of Percocet that is necessary, and is increasing Claimant's functioning.

25. Dr. Anderson-Oeser testified that the purpose of Claimant's current medication regimen is to make Claimant as functional as possible with the least amount of opioid (Percocet) medication. She also testified that the current medication regimen has increased Claimant's ability to function and perform specific activities of daily living.

26. This ALJ finds Dr. Anderson-Oeser's testimony to be credible and persuasive.

27. This ALJ finds that each medication which is being prescribed by Dr. Anderson-Oeser is part of a comprehensive pharmacological plan to decrease Claimant's chronic pain and increase Claimant's functioning and ability to perform activities of daily living.

28. Claimant testified regarding the benefit of each medication. Claimant testified that the Percocet minimizes her back pain and allows her to be more functional. She also stated that the Percocet allows her to do laundry, dishes, and take care of her 6 year-old son. This includes getting him ready for school and keeping him occupied. The Percocet also helps Claimant maintain her pilates routine. If she misses a dose of Percocet, she has more pain and more stiffness.

29. Claimant testified that the Tizanidine reduces her muscle spasms and increases her functioning. Claimant also testified that the Lyrica has reduced her neuropathic pain and increased her functioning. She also testified that the Lidopro cream decreases her pain in the morning when she first gets up and before the Percocet starts to work. Claimant further testified that the Celebrex helps to reduce her pain and reduce her use of Percocet. Since starting the Celebrex, Claimant has decreased her use of Percocet.

30. Claimant also testified that the Trintellix, which is prescribed by Dr. Gutterman makes her feel better and that she's less grouchy.

31. Claimant reported to Dr. Anderson-Oeser that her current medication regimen is 50% effective at controlling her symptoms.

32. Claimant's testimony is found to be credible and persuasive that each medication being prescribed is reducing her symptoms and increasing her functioning.

33. Each medication which is currently being prescribed by Dr. Anderson-Oeser is reducing Claimant's pain and increasing Claimant's level of functioning. Due to the combination of each medication being prescribed, Claimant has less pain and is able to do more activities of daily living. Due to the medication being prescribed, Claimant is able to care for her child, wash dishes, participate in pilates, and engage in other activities of daily living.

34. This ALJ finds that each medication which is being prescribed at this time is increasing Claimant's functioning and ability to perform activities of daily living.

35. Respondents had Claimant evaluated by Dr. Wunder. Dr. Wunder issued a report and testified at hearing. Dr. Wunder is of the opinion that the medication being prescribed by Dr. Anderson-Oeser is not reasonable and necessary. He is also of the opinion that the medication being prescribed by Dr. Gutterman is not reasonable, necessary, or related to Claimant's work related injury.

36. Dr. Wunder indicated that the literature indicates that the use of opioids – Percocet - to treat non-malignant chronic pain has no known benefit. Dr. Wunder, however, does not cite to this literature. Dr. Wunder also indicated that Claimant should be weaned from her Percocet over a two week period. But, Dr. Wunder was not aware of Claimant's current dosage.

37. The Director's Medical Treatment Guidelines, Rule 17, exhibit 9, pg. 68, warn that the use of narcotics to manage chronic pain "is fraught with controversy and lack of scientific research." Moreover, the Medical Treatment Guidelines indicate that "Extreme caution should be used in prescribing controlled substances for workers with one or more 'relative contraindications.'" Claimant has sleep apnea which is a "relative contraindication." *See* Medical Treatment Guidelines, Rule 17, exhibit 9, pg. 76. Therefore, pursuant to the Medical Treatment Guidelines, extreme caution should be used in prescribing opioids for Claimant. However, the Medical Treatment Guidelines do not prohibit the use to opioids to treat non-malignant chronic pain.

38. Dr. Wunder also indicated that the use of Lyrica for neurogenic pain is not supported by Claimant's evaluations, which includes Claimant's electrodiagnostic studies which were normal. However, Dr. Anderson-Oeser credibly testified that Claimant has had neurological findings and complaints which support the use of Lyrica. In addition, Claimant credibly testified that the Lyrica reduces her neuropathic pain complaints of tingling in her lower extremities and burning in her feet.

39. Dr. Wunder also indicated that the use of Tizanidine for muscle spasms was not reasonable and necessary. Claimant credibly testified that the Tizanidine reduces her muscle spasms and increases her functioning.

40. Dr. Wunder also indicated that Trintellix is not reasonable, necessary, or related. Dr. Wunder indicated that Claimant's depression is not related to her industrial injury. Dr. Wunder stated that it is not reasonable to conclude that her depression was caused by such a minor injury. Claimant, however, credibly testified that her injury has contributed to her poor mood and that the Trintellix is making her feel better.

41. Dr. Wunder also testified that the Lidopro cream is not reasonable and necessary because the cream is probably not penetrating Claimant's adipose tissue and is therefore not working. Claimant, however, credibly testified that the Lidopro cream works and reduces her pain in the morning before her Percocet starts to work.

42. Claimant currently suffers from chronic back and neuropathic pain due to her work related injury. Dr. Wunder did not propose any meaningful medication or treatment regimen to manage Claimant's current pain complaints and dysfunction.

43. This ALJ does not find Dr. Wunder's opinions to be persuasive.

44. The Percocet, Tizanidine, Lyrica, Lidopro cream, Celebrex, and Trintellix is reasonable and necessary and related to Claimant's work related injury at this time.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of Claimant nor in favor of the rights of Respondents. Section 8-43-201, *supra*.

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

I. Whether Claimant has proven by a preponderance of the evidence that she is entitled to prescription medication, specifically Percocet, Tizanidine, Lyrica, Lidopro Cream, Celebrex, and Trintellix.

Respondents are liable to provide such medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury." Section 8-42-101(1)(a), C.R.S. Colorado courts have ruled that the need for medical treatment may extend beyond the point of MMI where Claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or prevent further deterioration of her condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609 (Colo. App. 1995).

In cases where Respondents file a final admission of liability admitting for ongoing medical benefits after MMI they retain the right to challenge the compensability, reasonableness, and necessity of specific treatments. *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003). When Respondents challenge Claimant's request for specific medical treatment Claimant bears the burden of proof to establish entitlement to the benefits. *Ford v. Regional Transportation District,* W.C. No. 4-309-217 (ICAO February 12, 2009). The question of whether Claimant proved that specific treatment is reasonable and necessary to maintain her condition after MMI or relieve ongoing symptoms is one of fact for the ALJ. *See Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

In this case, Claimant credibly testified that the medication regimen, as a whole, is reducing her pain and increasing her functioning and ability to perform activities of daily living. The combination of medication being prescribed by Drs. Gutterman, and Anderson-Oeser, allows Claimant to get out bed, take care of her six year old child, do laundry, wash dishes, participate in pilates and perform other activities of daily living.

Dr. Anderson-Oeser also credibly testified that the medication regimen, as whole, is reducing Claimant's pain complaints and increasing her ability to perform activities of daily living. As found, the current medication regimen allows Claimant to take care of her son, do laundry, wash dishes, participate in pilates and perform other activities of daily living. Dr. Anderson-Oeser also testified that Claimant's mood is better.

Dr. Wunder's opinions were not found to be persuasive by this ALJ. As found, Dr. Wunder did not find any of the current medication at issue to be reasonable, necessary, and related to Claimant's work related injury. Moreover, Dr. Wunder did not propose any meaningful medication or treatment regimen to manage Claimant's current pain complaints and dysfunction. Therefore, his opinions were not found to be persuasive.

Claimant has established by a preponderance of the evidence that the present medication regimen is currently reasonable, necessary, and related to Claimant's industrial accident. Therefore, this ALJ concludes that Claimant has established that

the Percocet, Tizanidine, Lyrica, Lidopro cream, Celebrex, and Trintellix are currently reasonable, necessary and related to treat her from the effects of her industrial injury.

II. Whether Claimant is entitled to costs pursuant to C.R.S. § 8-42-101(5).

Claimant seeks application of § 8-42-101(5), C.R.S. This subsection provides that if a party applies for a hearing regarding entitlement to medical maintenance benefits that are unpaid and contested, and such benefits are admitted fewer than 20 days before hearing (or ordered after the application for hearing is filed), the Claimant receives costs incurred in pursuing the medical benefits.

In this case, the parties stipulated that at the time of hearing, there were no maintenance medical benefits that were "unpaid and contested." Respondent continued to pay for Claimant's medication, but contested their ongoing liability for such. Therefore, because there were no unpaid medical benefits, this ALJ concludes that costs cannot be awarded under Section 8-42-101(5).

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondent shall pay for Claimant's Percocet, Tizanidine, Lyrica, Lidopro cream, Celebrex, and Trintellix.

2. Claimant's request for costs pursuant to 8-42-101(5) is denied and dismissed.

3. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: 9-15-17

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUE

Whether Respondents have produced clear and convincing evidence to overcome the Division Independent Medical Examination (DIME) opinion of Justin Green, M.D. that .she has not reached Maximum Medical Improvement (MMI) as a result of her admitted December 3, 2015 lower back injury.

FINDINGS OF FACT

1. Claimant worked as a Pet Stylist for Employer. On December 3, 2015 she suffered an admitted industrial injury to her lower back. While Claimant was attempting to lift a dog she developed lower back pain that radiated into her legs.

2. On January 27, 2016 Claimant visited Dean L. Prok, M.D. for an examination. He assigned work restrictions, prescribed physical therapy and referred her for pain management treatment.

3. Claimant continued to receive medical treatment for her lower back through authorized providers. On April 26, 2016 she visited Franklin Shih, M.D. for an evaluation. Dr. Shih recommended a lumbar MRI and remarked that "if there is no significant anatomic pathology that would be a contraindication to chiropractic, I would recommend a trial of 6 sessions."

4. Although the MRI recommended by Dr. Shih was not performed Claimant continued to receive treatment for her December 3, 2015 lower back injury. On July 27, 2016 Authorized Treating Physician (ATP) Kevin O'Toole, M.D. determined that Claimant had not reached Maximum Medical Improvement (MMI) because she required a lumbar MRI "to evaluate for spinal or disc abnormalities."

5. By October 26, 2016 Dr. O'Toole determined that Claimant had reached MMI despite the lack of a lumbar MRI. He noted that Claimant could return to full duty employment with no work restrictions. Dr. O'Toole noted that Claimant had reached MMI on March 9, 2016 with no permanent impairment and did not require medical maintenance treatment.

6. On November 1, 2016 Respondents filed a Final Admission of Liability (FAL) consistent with Dr. O'Toole's MMI and impairment determinations. The FAL also noted an overpayment of $4,773.70.

7. Claimant objected to the FAL and sought a Division Independent Medical Examination (DIME).

8. On March 3, 2017 John R. Burris, M.D. performed a records review ofm Claimant's case. He determined that Claimant had suffered a lumbar soft tissue strain with no evidence of radiculopathy on December 3, 2015. Dr. Burris noted that the natural progression of Claimant's symptoms suggests improvement over days or weeks regardless of medical treatment.

9. On March 20, 2017 Claimant underwent a DIME with Justin D. Green, M.D. Dr. Green concluded that Claimant had not reached MMI. He agreed with Dr. Shih's recommendation of April 26, 2016 that Claimant required a lumbar spine MRI "to rule out any other significant structural abnormality or impairment."

10. Respondents subsequently filed an Application for Hearing and sought to overcome Dr. Greene's MMI determination.

11. .On July 7, 2017 Claimant underwent a lumbar MRI pursuant to DIME Dr. Green's recommendation. The MRI revealed intervertebral disc dessication at multiple levels. The diagnostic testing also revealed multiple other abnormalities including broad=based disc bulges, mild facet hypertrophy and annular tears.

12. On July 12, 2017 Claimant returned to Dr. Shih for an evaluation. After reviewing the results of the lumbar MRI report Dr. Shih remarked "I see nothing that I would recommend we pursue more aggressively with injections or surgery." He noted that Claimant had reached MMI but was unable to complete an impairment rating because of invalid range of motion measurements. Although Dr. Shih asked Claimant to return for range of motion measurements in one week Respondents refused to authorize a return visit.

13. On July 20, 2017 Dr. Burris issued an additional report. He explained that Claimant's lumbar MRI revealed degenerative changes of annular tears and disc bulges that did not cause her symptoms. Dr. Burris emphasized that the MRI also did not reflect any acute changes in Claimant's lumbar spine. He summarized that there were no objective findings that supported an impairment rating for the December 3, 2015 incident.

14. Dr. Burris testified at the hearing in this mater. BEGIN HERE.

---

2. Claimant began receiving conservative treatment from Authorized Treating Physician (ATP) Thomas White, M.D. An MRI revealed a complete tear to a portion of Claimant's supraspinatus tendon. Dr. White referred Claimant to Robert Hunter, M.D. for a surgical consultation.

3. On March 23, 2015 Claimant underwent right shoulder surgery. Dr. Hunter performed a right shoulder rotator cuff repair and AC joint resection decompression with acromioplasty.

4. Claimant underwent post-operative conservative treatment and physical therapy for several months. She explained that while she was undergoing physical therapy she developed left shoulder pain. Claimant did not recall when her left shoulder began to hurt and did not correlate any specific injury to her symptoms. Instead, Claimant contends that her left shoulder complaints were caused by overcompensation after her right shoulder surgery. She commented that her left shoulder pain is progressively worsening and her right shoulder symptoms are worse than they were before surgery.

5. On October 26, 2015 Dr. White concluded that Claimant had reached Maximum Medical Improvement (MMI) for her September 21, 2014 admitted right shoulder injury. Dr. White released Claimant from care without impairment or the need for maintenance treatment. He explained to Claimant that it might take up to one year for complete recovery from surgery because of her age and history of injury. Dr. White explained that continuing numbness and difficulties that Claimant was experiencing in both shoulders was not work-related.

6. Claimant challenged Dr. White's MMI and impairment determinations and sought a Division Independent Medical Examination (DIME). On March 31, 2016 Claimant underwent a DIME with Stanley H. Ginsburg, M.D. Dr. Ginsburg agreed with Dr. White that Claimant had reached MMI for her right shoulder on October 26, 2015 and her left shoulder complaints were not work-related. Dr. Ginsburg disagreed with Dr. White's 0% permanent impairment rating and assigned a 6% scheduled impairment for Claimant's right shoulder range of motion deficits. He also noted that Claimant was entitled to medical maintenance care.

7. On June 8, 2016 Respondents field an Amended FAL consistent with Dr. Ginsburg's MMI determination and impairment rating. The FAL also recognized that Claimant was entitled to receive medical maintenance benefits.

8. On June 14, 2016 Claimant underwent an independent medical examination with Timothy Hall, M.D. Dr. Hall disagreed with Dr. Ginsburg's findings and concluded that Claimant had not reached MMI. He determined that Claimant's left shoulder complaints were work related due to overcompensation following surgery and she required additional medical treatment for both shoulders. Dr. Hall also provided Claimant with a 16% scheduled impairment rating for the right shoulder. He noted that Dr. Ginsburg failed to include a 10% rating for resection of the bone performed during shoulder surgery in addition to a range of motion impairment.

9. On June 17, 2016 Claimant underwent a second right shoulder MRI. The MRI revealed an intact supraspinatus tendon and evidence of tendinopathy with no objective evidence of additional tearing or fraying.

10. On September 21, 2016 Claimant underwent an independent medical examination with Carlos Cebrian, M.D. Dr. Cebrian performed a physical examination and medical records review. He agreed with Drs. White and Ginsburg that Claimant had reached MMI on October 26, 2015 and her left shoulder complaints were not work-

related. Dr. Cebrian remarked that Claimant had poor posture with rounded shoulders and kyphosis of the cervical spine. He noted that Claimant had not been working for several months. There was no explanation for her continued left shoulder symptoms because her activities lacked the combination of repetition and force to produce an injury. Dr. Cebrian agreed with the 6% scheduled impairment rating for Claimant's right shoulder assigned by Dr. Ginsburg. He noted that Dr. Ginsburg correctly did not assign an additional impairment for a distal clavicle resection because Claimant had undergone an acromioplasty. Dr. Cebrian explained that an acromioplasty is a minor shaving of the bone that is different from a resection of the bone.

11. Dr. Hall testified at the hearing in this matter. He maintained that Claimant had not reached MMI and required additional left shoulder treatment. Dr. Hall commented that overcompensation was a common condition with shoulder injuries and Claimant had guarded her right shoulder following surgery. He noted that Claimant warranted an additional 10% scheduled impairment rating for a distal clavicle resection. Dr. Hall remarked that a 10% rating for a distal clavicle resection was mandatory pursuant to the Colorado Division of Workers' Compensation *Impairment Rating Tips* (*Impairment Rating Tips*).

12. Claimant also testified at the hearing in this matter. She explained that she continues to suffer pain in both of her shoulders. Claimant acknowledged that she has not worked for Employer since January 2016 but her pain symptoms continue to worsen.

13. Dr. Cebrian testified at the hearing in this matter. He agreed with Dr. Ginsburg that Claimant reached MMI on October 26, 2015 and warranted a 6% scheduled impairment rating for her right shoulder injury. However, Dr. Cebrian disagreed with Dr. Ginsburg that Claimant required medical maintenance treatment. He explained that Claimant suffered from kyphosis and would continue to experience pain due to degenerative, age-related factors.

14. Dr. Cebrian also explained that Dr. Hall incorrectly concluded that Claimant's left shoulder condition was causally related to her September 21, 2014 injury. He commented that Claimant did not mention any left shoulder symptoms prior to reaching MMI. Moreover, he disagreed with Dr. Hall that Claimant warranted a 16% extremity rating for her right shoulder injury based on range of motion deficits and the distal clavicle resection. Although Dr. Cebrian acknowledged that Claimant was entitled to a 6% extremity impairment rating for range of motion deficits, the additional 10% rating noted by Dr. Hall was inappropriate. Relying on the *Impairment Rating Tips,* Dr. Cebrian commented that it is not mandatory to assign a 10% rating based on the specific procedure. Instead, Dr. Cebrian noted that the rating physician has discretion to assign the additional impairment "if" warranted and based on the total clinical picture. He specifically commented that the *Impairment Rating Tips* are designed to capture all possible surgical outcomes. Notably, a physician can assign "up to" an additional 10% impairment. Dr. Cebrian concluded that the additional impairment was not warranted.

15. Claimant has failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Ginsburg that she reached MMI on October 26, 2015 as a result of her September 21, 2014 admitted right shoulder injury. Initially, Dr. Ginsburg agreed with ATP Dr. White that Claimant had reached MMI for her right shoulder on October 26, 2015 and her left shoulder complaints were not work-related. Moreover, Dr. Cebrian agreed with Drs. White and Ginsburg that Claimant had reached MMI on October 26, 2015 and her left shoulder complaints were not work-related. Dr. Cebrian remarked that Claimant had poor posture with rounded shoulders and kyphosis of the cervical spine. He noted that Claimant had not been working for several months. There was no explanation for her continued left shoulder symptoms because her activities lacked the requisite repetition and force to produce an injury.

16. In contrast, Dr. Hall disagreed with Dr. Ginsburg's findings and concluded that Claimant had not reached MMI. He determined that Claimant's left shoulder complaints were work-related due to overcompensation following surgery and she required additional medical treatment for both shoulders. However, Dr. Hall did not detail how Dr. Ginsburg erred in determining that Claimant reached MMI on October 26, 2015 or otherwise incorrectly applied the *AMA Guides for the Evaluation of Permanent Impairment Third Edition (Revised) (AMA Guides*). Accordingly, Claimant has failed to produce unmistakable evidence free from serious or substantial doubt that Dr. Ginsburg's MMI determination was incorrect.

17. Claimant has failed to establish that it is more probably true than not that DIME Dr. Ginsburg's 6% scheduled impairment rating for her admitted right shoulder injury was incorrect. Initially, Dr. Ginsburg assigned a 6% scheduled impairment rating for Claimant's right shoulder range of motion deficits. In contrast, Dr. Hall noted that Claimant warranted an additional 10% scheduled rating for a distal clavicle resection. He remarked that a 10% rating for a distal clavicle resection was mandatory pursuant to the *Impairment Rating Tips*. Nevertheless, Dr. Hall acknowledged that only a small portion of the bone was shaved during the surgical procedure.

18. Dr. Cebrian persuasively agreed with Dr. Ginsburg that Claimant warranted a 6% scheduled impairment rating for her admitted right shoulder injury. He disagreed with Dr. Hall that Claimant warranted a 16% extremity rating for her right shoulder injury based on range of motion deficits and the distal clavicle resection. Specifically, the additional 10% rating noted by Dr. Hall was inappropriate. Relying on the *Impairment Rating Tips,* Dr. Cebrian commented that it is not mandatory to issue a 10% rating based on the specific procedure. Instead, Dr. Cebrian noted that the rating physician has discretion to assign the additional impairment "if" warranted and based on the total clinical picture. Dr. Cebrian specifically commented that the *Impairment Rating Tips* are designed to capture all possible surgical outcomes. Notably, a physician can assign "up to" an additional 10% impairment. The record thus reveals that Dr. Ginsburg properly exercised his discretion by assigning a 6% scheduled impairment rating for Claimant's admitted right shoulder injury.

19. Respondents have established that it is more probably true than not that they are entitled to withdraw their June 8, 2016 FAL that acknowledged reasonable,

necessary and related medical maintenance benefits designed to relieve the effects of Claimant's September 21, 2014 industrial injury or prevent further deterioration of her condition. ATP Dr. White placed Claimant at MMI on October 26, 2015 without the need for maintenance treatment. He had explained to Claimant that it might take up to one year for complete recovery from surgery because of her age and history of injury. Dr. White remarked that continuing numbness and difficulties that Claimant was experiencing in her shoulders was not work-related. Dr. Cebrian also determined that Claimant did not require medical maintenance treatment. He explained that Claimant suffered from kyphosis and would continue to experience pain due to degenerative, age-related factors. Although Dr. Ginsburg recommended medical maintenance treatment, the persuasive opinions of Drs. White and Cebrian reflect that additional care will not likely relieve the effects of Claimant's September 21, 2014 industrial injury or prevent further deterioration of her condition. Respondents are thus permitted to withdraw their admission for medical maintenance treatment in the June 8, 2016 FAL.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Overcoming the DIME

4. In ascertaining a DIME physician's opinion, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998). A DIME physician's

determination regarding MMI and permanent impairment consists of his initial report and any subsequent opinions. *In Re Dazzio,* W.C. No. 4-660-149 (ICAP, June 30, 2008); *see Andrade v. Industrial Claim Appeals Office,* 121 P.3d 328 (Colo. App. 2005).

5. A DIME physician is required to rate a claimant's impairment in accordance with the *AMA Guides*. §8-42-107(8)(c), C.R.S.; *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117, 1118 (Colo. App. 2003). However, deviations from the *AMA Guides* do not mandate that the DIME physician's impairment rating was incorrect. *In Re Gurrola,* W.C. No. 4-631-447 (ICAP, Nov. 13, 2006). Instead, the ALJ may consider a technical deviation from the *AMA Guides* in determining the weight to be accorded the DIME physician's findings. *Id.* Whether the DIME physician properly applied the *AMA Guides* to determine an impairment rating is generally a question of fact for the ALJ. *In Re Goffinett,* W.C. No. 4-677-750 (ICAP, Apr. 16, 2008).

. 6. A DIME physician's findings of MMI, causation, and impairment are binding on the parties unless overcome by "clear and convincing evidence." §8-42-107(8)(b)(III), C.R.S.; *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAP, July 19, 2004); *see Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAP, Nov. 17, 2000).

7. However, the DIME provisions of §8-42-107(8)(c), C.R.S. only apply in cases of whole body impairment. *See Egan v. Industrial Claim Appeals Office*, 971 P.2d 664, 666 (Colo. App. 1998). The percentage rating for scheduled benefits is determined based simply upon the preponderance of the evidence standard. *See In Re Baran,* W.C. No. 4-906-018 (ICAP, Oct. 16, 2015). Because Dr. Ginsburg assigned a right shoulder extremity impairment rating, the preponderance standard applies in evaluating her permanent impairment.

8. As found, Claimant has failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Ginsburg that she reached MMI on October 26, 2015 as a result of her September 21, 2014 admitted right shoulder injury. Initially, Dr. Ginsburg agreed with ATP Dr. White that Claimant had reached MMI for her right shoulder on October 26, 2015 and her left shoulder complaints were not work-related. Moreover, Dr. Cebrian agreed with Drs. White and Ginsburg that Claimant had reached MMI on October 26, 2015 and her left shoulder complaints were not work-related. Dr. Cebrian remarked that Claimant had poor posture with rounded shoulders and kyphosis of the cervical spine. He noted that Claimant had not been working for several months. There was no explanation for her continued left shoulder symptoms because her activities lacked the requisite repetition and force to produce an injury.

9. As found, in contrast, Dr. Hall disagreed with Dr. Ginsburg's findings and concluded that Claimant had not reached MMI. He determined that Claimant's left shoulder complaints were work-related due to overcompensation following surgery and she required additional medical treatment for both shoulders. However, Dr. Hall did not detail how Dr. Ginsburg erred in determining that Claimant reached MMI on October 26, 2015 or otherwise incorrectly applied the *AMA Guides for the Evaluation of Permanent Impairment Third Edition (Revised) (AMA Guides*). Accordingly, Claimant has failed to produce unmistakable evidence free from serious or substantial doubt that Dr. Ginsburg's MMI determination was incorrect.

10. As found, Claimant has failed to establish by a preponderance of the evidence that DIME Dr. Ginsburg's 6% scheduled impairment rating for her admitted right shoulder injury was incorrect. Initially, Dr. Ginsburg assigned a 6% scheduled impairment rating for Claimant's right shoulder range of motion deficits. In contrast, Dr. Hall noted that Claimant warranted an additional 10% scheduled rating for a distal clavicle resection. He remarked that a 10% rating for a distal clavicle resection was mandatory pursuant to the *Impairment Rating Tips*. Nevertheless, Dr. Hall acknowledged that only a small portion of the bone was shaved during the surgical procedure.

11. As found, Dr. Cebrian persuasively agreed with Dr. Ginsburg that Claimant warranted a 6% scheduled impairment rating for his admitted right shoulder injury. He disagreed with Dr. Hall that Claimant warranted a 16% extremity rating for her right shoulder injury based on range of motion deficits and the distal clavicle resection. Specifically, the additional 10% rating noted by Dr. Hall was inappropriate. Relying on the *Impairment Rating Tips,* Dr. Cebrian commented that it is not mandatory to issue a 10% rating based on the specific procedure. Instead, Dr. Cebrian noted that the rating physician has discretion to assign the additional impairment "if" warranted and based on the total clinical picture. Dr. Cebrian specifically commented that the *Impairment Rating Tips* are designed to capture all possible surgical outcomes. Notably, a physician can assign "up to" an additional 10% impairment. The record thus reveals that Dr. Ginsburg properly exercised his discretion by assigning a 6% scheduled impairment rating for Claimant's admitted right shoulder injury.

Withdrawing the FAL/Medical Maintenance Benefits

12. To prove entitlement to medical maintenance benefits, a claimant must present substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve the effects of the industrial injury or prevent further deterioration of his condition. *Grover v. Industrial Comm'n.,* 759 P.2d 705, 710-13 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609, 611 (Colo. App. 1995). Once a claimant establishes the probable need for future medical treatment he "is entitled to a general award of future medical benefits, subject to the employer's right to contest compensability, reasonableness, or necessity." *Hanna v. Print Expediters, Inc.*, 77 P.3d 863, 866 (Colo. App. 2003); *see Karathanasis v. Chilis Grill & Bar,* W.C. No. 4-461-989 (ICAP, Aug. 8, 2003). Whether a claimant has presented substantial evidence justifying an award of *Grover* medical benefits is one of

fact for determination by the Judge. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 919 P.2d 701, 704 (Colo. App. 1999).

13. The court of appeals has previously concluded that the burden of proof to establish compensability remained on the claimant even when an employer was attempting to withdraw an admission of liability. However, the Colorado Workers' Compensation Act has since been amended to change the burden of proof when respondents are attempting to withdraw admissions of liability. Specifically, respondents must now prove by a preponderance of evidence that the claimant did not suffer a compensable injury as defined under Colorado law. §8-43-201(1) (2015), C.R.S. On February 18, 2008 Respondents filed a FAL in response to Dr. Crosby's MMI and impairment determinations. The FAL also specified that Claimant was entitled to receive reasonable, necessary and related medical benefits. In order to withdraw the FAL Respondents thus have the burden of proving by a preponderance of the evidence that Claimant is not entitled to receive reasonable, necessary and related medical maintenance benefits designed to relieve the effects of her April 18, 2005 industrial injury or prevent further deterioration of her condition pursuant to *Grover v. Industrial Comm'n.,* 759 P.2d 705 (Colo. 1988).

14. As found, Respondents have established that it is more probably true than not that they are entitled to withdraw their June 8, 2016 FAL that acknowledged reasonable, necessary and related medical maintenance benefits designed to relieve the effects of Claimant's September 21, 2014 industrial injury or prevent further deterioration of her condition. ATP Dr. White placed Claimant at MMI on October 26, 2015 without the need for maintenance treatment. He had explained to Claimant that it might take up to one year for complete recovery from surgery because of her age and history of injury. Dr. White remarked that continuing numbness and difficulties that Claimant was experiencing in her shoulders was not work-related. Dr. Cebrian also determined that Claimant did not require medical maintenance treatment. He explained that Claimant suffered from kyphosis and would continue to experience pain due to degenerative, age-related factors. Although Dr. Ginsburg recommended medical maintenance treatment, the persuasive opinions of Drs. White and Cebrian reflect that additional care will not likely relieve the effects of Claimant's September 21, 2014 industrial injury or prevent further deterioration of her condition.. Respondents are thus permitted to withdraw their admission for medical maintenance treatment in the June 8, 2016 FAL.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant has failed to overcome the DIME opinion of Dr. Ginsburg. She reached MMI on October 26, 2015.

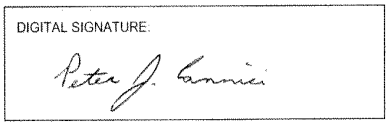
2. Claimant sustained a 6% scheduled impairment for her right shoulder as a result of her September 21, 2014 injury.

3. Respondents are permitted to withdraw their admission for medical maintenance treatment in the June 8, 2016 FAL.

4. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: July 25, 2017.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
633 17th Street Suite 1300
Denver, CO 80202

ISSUES

- Whether claimant had proven by a preponderance of the evidence that he suffered a compensable injury arising out of and in the course and scope of his employment with employer on September 10, 2016.

- If claimant's injury is found compensable, whether claimant had proven by a preponderance of the evidence that medical treatment he received for the September 10, 2016 injury was reasonable, necessary, and authorized.

- If claimant's medical treatment is found to be reasonable, necessary, and authorized, whether claimant had proven by a preponderance of the evidence that respondent shall reimburse Medicaid pursuant to Section 8-42-101(6)(a) and (b), C.R.S.

- If claimant's injury is found compensable, what is claimant's average weekly wage (AWW)?

- If claimant's injury is found compensable, whether claimant had proven by a preponderance of the evidence that he is entitled to temporary total disability (TTD) benefits for the period of September 10, 2016 through May 6, 2017.

- If claimant's injury is found compensable, whether claimant had proven by a preponderance of the evidence that he is entitled to a 50% increase in any indemnity benefits, pursuant to Section 8-43-408(1), C.R.S., for employer's failure to maintain workers' compensation insurance.

- Whether claimant has shown by a preponderance of the evidence that penalties should be assessed pursuant to Section 8-43-304, C.R.S. for respondent's failure comply with two orders to compel discovery responses.

FINDINGS OF FACT

1. Claimant currently resides in Montrose, Colorado. He has experience working as a carpenter and framer. Claimant met employer in August 2016 and began providing services to employer at that time. Claimant testified that his job duties included supervising the employer's crew. Claimant provided work on a roofing project, a redwood deck project, and a job that involved removing siding.

2. Claimant testified that employer paid him between $1,200.00 and $1,400.00 per week. Claimant was paid by check and these checks were issued to claimant's name. The amount paid to claimant was determined by Mr. Medina.

3. Claimant testified that he previously ran a framing business while living in Fort Collins, Colorado. However, when claimant moved from the Fort Collins area to Montrose, he sold that business to his son.

4. On September 10, 2016, claimant was working at the job involving removing siding from a residence[1]. It is undisputed that claimant was at that job location at that direction of respondent. It is also undisputed that claimant was injured while working at that job site on September 10, 2016.

5. Claimant testified that he sustained an injury on September 10, 2016 when he was standing on a ladder. The ladder slipped and claimant's right leg became caught in the ladder, injuring claimant's right ankle. Claimant was transported from the job site to Montrose Memorial Hospital by the homeowner's brother.

6. It is undisputed that employer was notified of claimant's injury. Mr. Media testified that he visited claimant at the hospital. Mr. Media and claimant both testified that Mr. Medina did not provide claimant with a list of medical providers at any time after learning of claimant's injury.

7. Claimant testified that since his injury he has had four surgeries on his right foot and ankle. These surgeries were performed by Dr. Tim Judkins. The first surgery was performed on September 10, 2016 and involved external fixation of a right pilon fracture. On September 20, 2016, Dr. Judkins performed an open reduction and internal fixation of claimant's distal tibia and fibula. Thereafter, claimant developed an infection and returned to surgery on February 21, 2017. On that date, Dr. Judkins removed the right medial distal tibial plate and performed irrigation and debridement of the right distal tibia wound. When the infection did not resolve, claimant returned to surgery for the fourth time on March 3, 2017 for removal of the remaining hardware and irrigation and debridement of the skin, subcutaneous, fascia, and bone.

8. Claimant testified that medical expenses related to the September 10, 2016 injury have been paid for by Medicaid. Claimant requests an order requiring respondent to reimburse Medicaid for those expenses.

9. Claimant testified that he did not work between the date of his injury on September 10, 2016 and May 6, 2017. Beginning on May 7, 2017, claimant began working for Jim Bob Homes. As of the date of the hearing, claimant is self employed. Claimant also testified that at the time of the September 10, 2016 injury he was not self employed. The ALJ finds claimant's testimony to be credible and persuasive.

10. Mr. Media testified at hearing that his company did not have workers' compensation insurance at the time of claimant's September 10, 2016 injury.

[1] The parties refer to the September 10, 2016 job site as "the job at Nancy's".

11. On May 2, 2017, claimant filed a motion to compel discovery responses in this matter. As of that date, respondent had not filed a response to claimant's application for hearing and had not responded to interrogatories submitted by claimant. On May 16, 2017, ALJ Keith Mottram granted claimant's motion to compel.

12. Thereafter on August 15, 2017, ALJ Sidanycz granted claimant's second motion to compel discovery responses. As of August 15, 2017, respondent had not complied with ALJ Mottram's May 16, 2017 order. At the commencement of the hearing on June 15, 2017, ALJ Sidanycz issued an order from the bench that penalties would be assessed and summarized in the ALJ's full order.

13. At the August 24, 2017 hearing Mr. Medina agreed that he had received the interrogatories and the orders compelling him to respond. Mr. Medina admitted that he had not answered the interrogatories.

14. The ALJ credits claimant's testimony and finds that claimant has demonstrated that it is more likely than not that he sustained an injury while working for employer on September 10, 2016.

15. The ALJ credits the medical records entered into evidence and finds that claimant has demonstrated that it is more likely than not that the medical treatment claimant received following the September 10, 2016 injury was reasonable and necessary to cure and relieve claimant from the effects of the work injury.

16. The ALJ credits claimant's testimony and finds that upon learning of claimant's injury respondent did not provide claimant with a list of medical providers. The ALJ further credits claimant's testimony and finds that claimant has demonstrated that it is more likely than not that the choice of medical provider passed to claimant.

17. The ALJ credits claimant's testimony and finds that claimant has demonstrated that it is more likely than not that reasonable and necessary medical treatment related to claimant's September 10, 2016 work injury was paid for by Medicaid.

18. The ALJ credits claimant's testimony and finds that he was paid an average of $1,300.00 per week while working for respondent. The ALJ finds that claimant has demonstrated that it is more likely than not that his AWW at the time of the injury was $1,300.00.

19. The ALJ credits claimant's testimony and finds that claimant has demonstrated that it is more likely than not that he was unable to work for from September 10, 2016 through May 6, 2017. The ALJ further credits claimant's testimony and finds that claimant has demonstrated that it is more likely than not that claimant's September 10, 2016 work injury led to his inability to work during that time.

20. The ALJ credits Mr. Media's testimony and finds that claimant has demonstrated that it is more likely than not that respondent did not have workers' compensation insurance on September 10, 2016.

21. The ALJ credits the procedural records and finds that claimant has demonstrated that it is more likely than not that prior to the August 24, 2016 hearing respondent failed to comply with two orders to compel discovery responses.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., (2015). A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2015).

4. Section 8-40-202(2)(a), C.R.S., provides that an individual performing services for pay for another is deemed to be an employee:

> "unless such individual is free from control and direction in the performance of the service, both under the contract for performance of service and in fact and such individual is customarily engaged in an independent trade, occupation, profession, or business related to the service performed."

5. In this matter, respondent was prevented from asserting affirmative defenses at hearing because of discovery violations. Despite this, some evidence was presented at hearing regarding the relationship between claimant and respondent. The ALJ has considered that evidence and concludes that claimant was employed by respondent. There is no persuasive evidence that claimant was customarily engaged in an independent trade, occupation, or business. Furthermore, the ALJ is persuaded that claimant was subject to respondent's direction and control in the performance of his work.

6. Respondent argues in his position statement that claimant was not an employee of respondent because no documentation has been presented to show an employment relationship. The ALJ is not persuaded by this argument. Under the Colorado Workers' Compensation Act an individual performing work for another is presumed to be an employee unless the evidence shows otherwise. In this case the lack of "employee" related paperwork does not negate the statutory presumption of employment.

7. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with" a preexisting disease or infirmity to produce disability or need for treatment. *See H & H Warehouse v. Vicory, supra.*

8. As found, claimant has demonstrated by a preponderance of the evidence that he sustained a compensable injury on September 10, 2016 that arose out of and in the course and scope of his employment with respondent. As found, claimant's testimony is credible and persuasive.

9. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

10. As found, the medical treatment claimant received following the September 10, 2016 work injury was reasonable and necessary to cure and relieve claimant from the effects of the work injury. As found, the medical records are credible and persuasive.

11. "Authorization" refers to the physician's legal authority to treat, and is distinct from whether treatment is "reasonable and necessary" within the meaning of Section 8-42-101(1)(a), C.R.S. 2008. *Leibold v. A-1 Relocation, Inc.*, W.C. No. 4-304-437 (January 3, 2008). Section 8-43-404(5)(a) specifically states: "In all cases of injury,

the employer or insurer has the right in the first instance to select the physician who attends said injured employee. If the services of a physician are not tendered at the time of the injury, the employee shall have the right to select a physician or chiropractor." "[A]n employee may engage medical services if the employer has expressly or impliedly conveyed to the employee the impression that the employee has authorization to proceed in this fashion…." *Greager v. Industrial Commission*, 701 P.2d 168 (Colo. App. 1985), *citing*, 2 A. Larson, *Workers' Compensation Law* § 61.12(g)(1983).

12. As found, upon learning of claimant's work injury respondent failed to provide claimant with a list of medical providers. Therefore, claimant has demonstrated by a preponderance of the evidence that the choice of medical provider passed to claimant. Therefore, the medical treatment claimant received following his work injury (including treatment provided by Montrose Memorial Hospital and Dr. Judkins) was authorized medical treatment. Claimant's testimony and Mr. Medina's testimony is credible and persuasive on this issue.

13. Section 8-42-101(6)(a) and (b), C.R.S. provides, in pertinent part:

> "If an employer receives notice of injury and the employer or, if insured, the employer's insurance carrier, after notice of the injury, fails to furnish reasonable and necessary medical treatment to the injured worker for a claim that is admitted or found to be compensable, the employer or carrier shall reimburse the claimant, or any insurer or governmental program that pays for related medical expenses, for the costs of reasonable and necessary treatment that was provided."

14. As found, claimant's reasonable and necessary medical treatment following the September 10, 2016 work injury was paid for by Medicaid. Therefore, respondent shall reimburse Medicaid for those costs of reasonable and necessary medical treatment. As found, claimant's testimony is credible and persuasive on this issue.

15. The ALJ must determine an employee's AWW by calculating the monetary rate at which services are paid the employee under the contract of hire in force at the time of the injury, which must include any advantage or fringe benefit provided to the Claimant in lieu of wages. Section 8-42-102(2), C.R.S.; *Celebrity Custom Builders v. Industrial Claim Appeals Office*, 916 P.2d 539 (Colo. App. 1995).

16. As found, claimant's AWW at the time of the injury was $1,300.00. The testimony of claimant is found to be credible and persuasive on this issue.

17. To prove entitlement to TTD benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a) C.R.S.,

supra, requires claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). There is no statutory requirement that claimant establish physical disability through a medical opinion of an attending physician; claimant's testimony alone may be sufficient to establish a temporary disability. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

18. As found, claimant was unable to work from September 10, 2016 through May 6, 2017. As found, claimant's inability to work was caused by the September 10, 2016 work injury. Therefore, claimant is entitled to TTD benefits for the period of September 10, 2016 through May 6, 2017.

19. Section 8-43-408(1) C.R.S., provides that in cases where the employer is subject to the provisions of the Colorado Workers' Compensation Act and has not complied with the insurance provisions required by the Act, the compensation or benefits provided in said articles shall be increased fifty percent.

20. As found, respondent did not comply with the Colorado Workers' Compensation Act by failing to obtain and maintain workers' compensation insurance. Therefore, claimant's compensation in this claim shall be increased by 50%.

21. Section 8-43-304, C.R.S., governs when penalties may be imposed in a workers' compensation matter and provides, in relevant part, that any employer or insurer:

> "who violates any provision of [the Workers' Compensation Act], or does any act prohibited thereby, or fails or refuses to perform any duty lawfully enjoined within the time prescribed by the director or panel…, or fails, neglects, or refuses to obey any lawful order…, shall be subject to … a fine of not more than one thousand dollars per day for each such offense."

This provision has been construed as applying to violation of an order issued by an ALJ. *Giddings v. Industrial Claim Appeals Office,* 39 P.3d 1211 (Colo. App. 2001).

22. Before penalties may be assessed the ALJ must first determine whether a party has violated any provision of the Workers' Compensation Act or an order. If the ALJ finds such a violation, penalties may be imposed if it is also found that the employer's actions were objectively unreasonable. Section 8-43-304, C.R.S*. City Market, Inc. v. Industrial Claim Appeals Office*, 68 P.3d 601 (Colo. App. 2003); *Pioneers Hospital of Rio Blanco County v. Industrial Claim Appeals Office*, 114 P.3d 97 (Colo.

App. 2005); *Jimenez v. Industrial Claim Appeals Office*, 107 P.3d 965 (Colo. App. 2003). The "objective standard" is measured by reasonableness of the insurer's action and does not require knowledge that the conduct was unreasonable." *Colorado Compensation Insurance Authority v. Industrial Claim Appeals Office*, 907 P.2d 676 (Colo. App. 1995).

23. An order is defined as including "any decision, finding and award, direction, rule, regulation, or other determination arrived at by the director or an administrative law judge." *See* Section 8-40-201(15), C.R.S. The fine shall be apportioned in whole or part at the discretion of the director or administrative law judge between the aggrieved party and the workers' compensation cash fund created in Section 8-44-112, C.R.S. with the amount apportioned to the aggrieved party being a minimum of fifty percent of any penalty assessed. *See* Section 8-43-304, C.R.S. In addition, Section 8-43-305 C.R.S. provides that each day a party engages in the violation is construed as a separate offense.

24. In this case, claimant seeks penalties for respondent's failure to comply with two separate court orders directing respondent to respond to interrogatories presented by claimant. As found, respondent received the interrogatories in this matter and the motions to compel. Respondent admitted that he did not respond to the discovery requests as ordered. The ALJ concludes that respondent violated two orders. The ALJ also concludes that respondent's failure to act was not reasonable. Therefore penalties are appropriate in this matter.

25. As found, respondent failed to comply with both the May 16, 2017 order to compel and the August 15, 2017 order to compel. Respondent failed to comply with these orders from May 16, 2017 until the hearing date of August 24, 2017. The ALJ calculates this to be a total of 101 days. Respondent shall pay a penalty of $50 per day totaling $5,050.00 in penalties. Of that total, 100% shall be paid to claimant and no payment shall be paid to the subsequent injury fund.

ORDER

It is therefore ordered that:

1. Claimant's suffered a compensable injury on September 10, 2016 that arose out of and in the course and scope of his employment with respondent.

2. Respondent is responsible for payment of reasonable medical treatment necessary to cure and relieve claimant from the effects of the September 10, 2016 work injury.

3. Respondent shall reimburse Medicaid for the cost of reasonable and necessary medical treatment related to claimant's September 10, 2016 work injury.

4. Claimant's average weekly wage (AWW) is $1,300.00.

5. Respondents shall pay claimant temporary total disability (TTD) benefits for the period of September 10, 2016 through May 6, 2017.

6. Claimant's benefits shall be increased by 50% because of respondent's failure to obtain and maintain workers' compensation insurance.

7. Employer shall be liable to claimant for 101 days of penalties at the rate of $50.00 per day, totaling $5,050.00. Of that total, 100% shall be paid to claimant and no payment shall be paid to the subsequent injury fund.

8. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

9. In lieu of payment of the above compensation and benefits to the claimant, the Respondent-Employer shall:

a. Within ten (10) days of the date of service of this order, deposit the sum of $40,000.00 with the Division of Workers' Compensation, as trustee, to secure the payment of all unpaid compensation and benefits awarded. The check shall be payable to: Division of Workers' Compensation/Trustee. The check shall be mailed to the Division of Workers' Compensation, P.O. Box 300009, Denver, Colorado 80203-0009, Attention: Sue Sobolik/Trustee;

OR

b. Within ten (10) days of the date of service of this order, file a bond in the sum of $40,000.00 with the Division of Workers' Compensation:

(1) Signed by two or more responsible sureties who have received prior approval of the Division of Workers' Compensation; or
(2) Issued by a surety company authorized to do business in Colorado.

The bond shall guarantee payment of the compensation and benefits awarded.

10. It is further ordered that the Respondent-Employer shall notify the Division of Workers' Compensation of payments made pursuant to this order.

11. It is further ordered that the filing of any appeal, including a petition to review, shall not relieve the employer of the obligation to pay the designated sum to the trustee or to file the bond. §8-43-408(2), C.R.S.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail,

as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

_____

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, CO 81501

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that she suffers functional impairment off the schedule of injuries set forth by § 8-42-107, C.R.S. and is entitled to permanent partial disability benefits based on a whole person conversion of the upper extremity rating.

STIPULATIONS

1. Respondents agree to pay temporary partial disability benefits to Claimant in the amount of $11.57 for November 18, 2015 through December 1, 2015.

2. Respondents agree to pay temporary partial disability benefits to Claimant in the amount of $192.84 for August 10, 2016 through August 23, 2016.

FINDINGS OF FACT

1. Claimant is employed by employer as a certified nursing assistant (CNA).

2. On November 4, 2015 Claimant sustained an admitted compensability injury while performing her normal work duties when she tripped into a wheelchair and fell, landing on her right side.

3. On November 25, 2015 Claimant was evaluated by David Orgel, M.D. He noted right hip pain and right wrist pain and recommended therapy. Dr. Orgel noted that Claimant was not at maximum medial improvement. Claimant continued to undergo intermittent conservative treatment with Dr. Orgel. *See* Exhibit 2.

4. On February 11, 2016 Claimant was evaluated by David Conyers, M.D. Dr. Conyers noted that Claimant had an MRI study of the right wrist and right forearm that revealed some tendinopathy in the forearm, showed that the treiquetral fracture in the wrist was healed solidly, and showed some degeneration between the proximal pole hamate and the lunate. Claimant reported symptoms in her proximal forearm and elbow that radiated up into the base of the neck and reported breast area and scapular area tenderness as well as tenderness at the base of the neck. On examination, Dr. Conyers found exquisite tenderness over the scalenus anticus muscle at the base of the neck on the right side producing symptoms into the shoulder breath scapular areas and down into Claimant's arm. Dr. Conyers opined that Claimant's forearm and elbow symptoms were related to cervical brachial pathology and that efforts should concentrate on the cervicobrachial area and that treatment of the area would resolve the right arm symptoms. *See* Exhibit 5.

5. On March 4, 2016 Claimant was evaluated by Dr. Orgel. He noted that Dr. Conyers did not believe that Claimant's arm pain was related to the wrist fracture and was recommending an evaluation for cervical brachial region. However, Dr. Orgel opined that the previous evaluation did not really suggest a radicular etiology of Claimant's symptoms. Claimant reported significant and fairly constant moderate pain the right lateral arm. Dr. Orgel noted that since the hand surgeon did not feel the pain was related to the wrist fracture and since Claimant's elbow x-ray showed no abnormalities, he would refer Claimant to Dr. Tobey for evaluation but would not order an MRI of the neck because he was not quite sure what he was treating. *See* Exhibit B.

6. Claimant continued to be evaluated by Dr. Orgel. On March 18, 2016, Dr. Orgel noted that Claimant's right wrist fracture appeared to be solidly healed with no wrist or hand complaints. Dr. Orgel noted that Claimant's right neck and shoulder pain had not improved and had perhaps worsened somewhat. Dr. Orgel opined that Claimant's presentation was starting to narrow and that it suggested a shoulder, rather than neck, etiology of symptoms. Dr. Orgel recommended an MRI of the right shoulder, and referred Claimant to orthopedics. *See* Exhibits 2, 3.

7. On April 6, 2016 Claimant was evaluated by John Tobey, M.D. Claimant reported pain in the right shoulder, forearm, and hip. On examination, Dr. Tobey noted minimal tenderness in the right cervical paraspinals, moderate tenderness in the posterior right shoulder, and significant tenderness of the extensor forearm. Dr. Tobey found that range of motion of the cervical spine was mildly limited in all planes. Dr. Tobey doubted that Claimant's significant tenderness in the extensor forearm and the right shoulder was cervical radicular in nature and opined that Claimant's exam suggested possible labral tear in the right shoulder. Dr. Tobey opined that a cervical spine MRI was not needed. *See* Exhibits 4, E.

8. On April 18, 2016 Claimant was evaluated by Dr. Orgel. Claimant reported right neck and right shoulder pain. Dr. Orgel noted that the MRI showed a labral tear in the right shoulder and that Claimant really had more regional shoulder pain than true radicular symptoms. Dr. Orgel found good range of motion of the neck without pain. Claimant reported painful range of motion in the right shoulder with all movements. Dr. Orgel assessed labral tear of the right shoulder. *See* Exhibit B.

9. On May 23, 2016 Claimant was evaluated by Marc Cahn, D.C. Claimant reported increased right cervicothoracic and shoulder pain as well as increased lower back pain. Dr. Cahn noted that Claimant was referred only for the lumbar spine and right hip. Claimant asked Dr. Cahn to contact Dr. Orgel to see if it was okay for him to treat the cervicothoracic area. *See* Exhibit D.

10. On June 6, 2016 Claimant was evaluated by Dr. Orgel. Claimant reported right neck and right shoulder pain. Dr. Orgel noted that Claimant did have a labral tear in the right shoulder but that Claimant was not interested in surgery despite reported significant pain in the shoulder including pain with activity and some crepitation. Dr.

Orgel noted on examination no tenderness of the trapezius, deltoid, or other upper extremity muscles. He found no tenderness to palpation of the subacromial and subdeltoid regions and that Claimant had no range of motion restrictions, but that she reported pain in all planes. Dr. Orgel noted that Claimant would continue in therapy and that if she was not improving she would either need to proceed with surgery or have her claim closed. *See* Exhibit B.

11. On November 7, 2016 Claimant was evaluated by Dr. Orgel. Claimant reported continued significant pain but that she was not interested in surgery and Dr. Orgel placed her at maximum medical improvement. Dr. Orgel noted Claimant's range of motion impairment and crepitation impairment and opined that she had a 15% upper extremity impairment or a 9% whole person impairment. *See* Exhibits 3, B.

12. On January 5, 2017 Respondents filed a final admission of liability (FAL) admitting for a scheduled impairment rating of 15% of body code 01.

13. Claimant contends that the scheduled impairment rating should be converted to a whole person impairment rating.

14. Claimant testified at hearing that her pain goes up her shoulder to her neck and head. Claimant testified that lifting increases her pain in the back of her shoulder and in her scapula area. Claimant indicating that pushing and pulling also increases her pain and Claimant pointed to the area of muscles down her pectoral on the front of her body and the scapula on the back of her body as areas she experiences pain with certain movements.

15. Claimant's testimony is found credible. Claimant continues to experience pain and loss of function due to her injury that is in her shoulder, trapezius region, neck, scapula, and pectoral chest area. The objective evidence of labral tear combined with the credible testimony of Claimant shows that the pain and limitations extend beyond the arm at the shoulder and that Claimant suffers limitations of the shoulder joint and that suffers pain and limitations beyond the shoulder joint.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Scheduled Injury vs. Whole Person Impairment

Section 8-42-107, C.R.S., sets forth two different methods of compensating medical impairment. Subsection (2) provides a schedule of disabilities and subsection (8) provides for whole person ratings. The question of whether the Claimant sustained a whole person medical impairment compensable under § 8-42-107(8), C.R.S., is one of fact for determination by the ALJ. The application of the schedule depends upon the "situs of the functional impairment" rather than just the situs of the original work injury. *Strauch v. PSL Swedish Health Care System*, 917 P.2d 366 (Colo. App. 1996). Pain and discomfort which limit a Claimant's ability to use a portion of the body is considered functional impairment for purposes of determining whether an injury is off the schedule. *Mader v. Popejoy Construction Co., Inc*., W.C. No. 4-198-489 (August 9, 1996). Claimant bears the burden of establishing functional impairment beyond the arm at the shoulder and the consequent right to permanent partial disability benefits under § 8-42-107(8)(c), C.R.S., by a preponderance of the evidence. *Maestas v. American Furniture Warehouse,* W.C. No. 4-662-369 (June 5, 2007); *Johnson-Wood v. City of Colorado Springs,* W.C. No. 4-536-198 (ICAO June 20, 2005).

In this case, Claimant's testimony, substantiated by the medical records, establish that Claimant is entitled to a whole person medical impairment under § 8-42-107(8)(c), C.R.S. because she has suffered functional impairment to a part of the body

that is not contained on the schedule of impairment. Claimant has met her burden by a preponderance of the evidence that her functional impairment extends beyond the "arm at the shoulder." The credible evidence shows that Claimant's shoulder joint itself is impaired. It does not function as it did before Claimant's work injury. Activities including pushing and pulling cause pain in Claimant's shoulder, shoulder joint, in her upper right back muscles, in the front pectoral/chest area, and in her cervical area such that she is unable or limited in her ability to engage in those motions that she had no trouble with prior to her work injury. Thus, Claimant has established that the situs of her functional impairment is beyond just the location of the arm at the shoulder. The mere fact that the shoulder joint might affect arm mobility does not mean Claimant sustained only a "loss of arm at the shoulder." Accordingly, the ALJ finds that Claimant has established by preponderant evidence that her impairment is not on the schedule of permanent impairments that she is entitled a rating for the whole person.

ORDER

It is therefore ordered that:

1. Claimant suffered functional impairment beyond the shoulder at the arm and off the schedule of injuries listed at § 8-42-107(2), C.R.S. Claimant is entitled to permanent partial disability benefits based upon a whole person impairment rating of 9%.

2. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 18, 2017

/s/ Michelle E. Jones

_____

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUES

1. Did Respondent prove by a preponderance of the evidence that none of Claimant's ongoing treatment, including medication refills, epidural steroid injections, facet joint injections, rhizotomies, and SI joint injections, are causally related to his admitted March 3, 2000 industrial injury?

2. Did Claimant prove by a preponderance of the evidence that the treatment regimen prescribed by Dr. Finn, including medications, injections, and rhizotomies, is reasonably necessary?

FINDINGS OF FACT

1. Claimant suffered an admitted industrial injury on March 3, 2000 due to a large explosion while checking a natural gas leak. He was thrown approximately 20-25 feet, and a wall collapsed on top of him.

2. Claimant injured his left shoulder, low back, bilateral elbows, and sustained hearing loss as a result of the accident. He had a rotator cuff repair and bilateral carpal tunnel release.

3. Claimant has had persistent low back pain since the injury. A lumbar MRI on March 29, 2000 was interpreted as showing degenerative changes at L3-4 and L4-5, moderate bilateral neuroforaminal stenosis with facet degeneration, and an L4-5 annular tear.

4. Claimant received relatively aggressive nonsurgical treatment for his low back injury, including facet injections, epidural steroid injections, radiofrequency neurotomies, and SI joint injections.

5. Claimant had a history of chronic intermittent low back pain before the accident, which he primarily treated with periodic chiropractic manipulation. The symptoms were relatively mild. The most closely contemporaneous medical record before the industrial injury is dated March 6, 2000, at which time Claimant described his back problems as "just occasional tightness and stiffness." There is no persuasive evidence that the pre-existing back pain substantially limited Claimant's ability to perform vocational, recreational or other activities.

6. Claimant saw Dr. Kenneth Finn, a physiatrist, for an Independent Medical Examination (IME) at Respondent's Request on December 12, 2000. Claimant described constant right-greater-than-left-sided low back pain radiating to the buttocks. He also reported numbness and tingling in his feet, depending on his level of back pain. Dr. Finn diagnosed mechanical discogenic low back pain, facet dysfunction, and an

annular tear. Dr. Finn apportioned 50% of the low back symptoms to the industrial injury and 50% to the pre-existing condition.

7. In February 2001, the parties agreed to designate Dr. Finn as Claimant's primary ATP.

8. Dr. Finn revised his opinion regarding apportionment based on a "re-review" of Claimant's records. Utilizing a "but for" theory of causation, Dr. Finn opined that "his low back condition is 50% pre-existing and 50% work-related, however the need for treatment is 100% related to his work-related injury."

9. Dr. Finn put Claimant at MMI on March 19, 2002, with an impairment rating that included 11% whole person for the lumbar spine.

10. Respondent filed a Final Admission of Liability (FAL) on May 16, 2002 based on Dr. Finn's impairment determination. The FAL also admitted for "Grover medical."

11. Claimant had a second lumbar MRI on December 20, 2002, which showed moderate facet arthropathy bilaterally at L4-5, an L4-5 annular tear, and possible left L5 nerve root compression. There were "similar, but less prominent degenerative findings" at L3-4 without stenosis or impingement. The radiologist compared the images to the March 2000 MRI and opined that the findings were "unchanged."

12. Claimant was taken off MMI in 2004 for bilateral carpal tunnel surgery. Dr. Finn put him back at MMI on September 29, 2004, with no change to his impairment rating.

13. Respondent filed an FAL on November 16, 2004 admitting for reasonable, necessary, and related "Grover" medical benefits.

14. Treatment since MMI has been primarily directed to Claimant's ongoing low back pain. Claimant does not appear to receive any treatment specifically directed to the shoulder or upper extremity injuries.

15. Claimant had another lumbar MRI on February 7, 2004, which showed similar findings at L4-5, including an annular tear, a mild disc bulge, bilateral facet arthropathy and "slight encroachment on the L5 nerve root bilaterally." The radiologist compared the images to the previous MRI and concluded: "no significant change has occurred comparing this exam to the study dated December 19 [sic], 2002."

16. Claimant had a fourth lumbar MRI on April 24, 2012. Although the radiologist did not have the prior films available for comparison, the described findings were similar to the previous MRIs. The only substantial difference is the MRI did not show the annular tear.

17. A repeat lumbar MRI on May 2, 2015 showed substantially similar findings at L3-4 and L4-5.

18. Claimant's most recent lumbar MRI was performed on August 18, 2016. The radiologist described the findings as "stable" and "unchanged from the prior examination."

19. Claimant has seen Dr. Finn regularly for maintenance care since being put at MMI. He has received periodic lumbar ESIs, facet injections, rhizotomies and SI joint injections. These interventions relieve Claimant's pain and allow him to be more functional. There is no persuasive evidence of any significant negative side effects of these interventions.

20. Dr. Finn also provides ongoing medication management which includes narcotic pain medications. Specifically, Claimant takes Exalgo (a long-lasting narcotic), Dilaudid (for breakthrough pain), Zanaflex (a muscle relaxer), and Movantik (for opioid-induced constipation). The medications relieve Claimant's pain and allow him to be more functional. There is no persuasive evidence that Claimant abuses his medications.

21. Dr. Sander Orent performed an IME for Respondent on April 30, 2007. Dr. Orent reviewed Claimant's preinjury medical records in conjunction with his examination, noting Claimant's long history of intermittent back pain and a positive HLA-B27 test. Dr. Orent believed Claimant had an "undiagnosed medical condition," i.e., HLA-B27 arthropathy and ankylosing spondylitis, that "needs aggressive intervention" outside of the workers' compensation system. If the workup for inflammatory autoimmune disease proved negative, Dr. Orent opined "the current treatment plan seems to be doomed to a cycle of increasing medications, increasing frequency of injections, and increasing symptomatology." Dr. Orent recommended a strengthening and stretching program "with decreased emphasis on [other treatment] modalities."

22. Claimant saw Dr. Brian Beatty for an IME at Respondent's request on May 26, 2016. Dr. Beatty did not question the sincerity of Claimant's low back complaints but opined that his ongoing symptoms are not causally related to the March 3, 2000 injury. Dr. Beatty opined:

> Recent MRIs revealed degenerative disk disease and facet arthrosis with developing spinal stenosis, all of which I do not believe are related to the injury of 2000 but is a chronic ongoing degenerative process related to age along with wear and tear. It is noted there were no major injuries on the initial MRIs for example fractures or herniated discs and there were degenerative changes already noted at L3-L4 and L4-L5 with moderate bilateral neural foraminal stenosis at L4-5, due predominately to facet degeneration and hypertrophy. He had already been treating for intermittent back pain prior to this injury and I believe the natural course of the degenerative changes found on the initial MRIs would have brought him to the point where he is today with a gradual worsening of his condition.

23. Dr. Beatty also opined that, regardless of causation, further treatment with narcotics is not reasonable and necessary. Instead, Dr. Beatty recommended Claimant transition to Suboxone with the eventual goal of weaning off all medications.

24. After receiving Dr. Beatty's report, Respondents denied Claimant's request for additional injections and narcotic medication.

25. Dr. Finn testified in a posthearing deposition on July 11, 2017. Dr. Finn acknowledged Claimant's "history of chronic low back pain," but opined he "had a pretty significant injury when the house blew up next to him, and that aggravated his [ ] pre-existing condition."

26. Dr. Finn further opined "we all have degenerative changes in our spine, as we age, and he did have a prior long history of chronic pain. And then he had this event, that caused that condition to become aggravated, and I don't think it ever went back to the pre-injury levels of pain. And although his MRI continued to show ongoing degenerative changes, we had to take his clinical presentation and his history into consideration, because he has an annular tear, and he has facet arthritis, and he has a spondyloarthropathy, and maybe SI joint pain. But, again, if it [ ] hadn't been for that injury, I probably wouldn't have been treating the guy."

27. Regarding the medications, Dr. Finn stated "I am not excited that he is on chronic opioids for his chronic back pain – I would love for him to be off those medications – but the patient is reporting to me that they allow his pain to be tolerable and manageable and allow him to function. So I can't argue with that." Dr. Finn opined that Suboxone is also an opioid and akin to using methadone to treat heroin addiction. Although "it would not be unreasonable" to switch Claimant to Suboxone, "it's almost robbing Peter to pay Paul." Dr. Finn testified that he regularly reviews PDMP reports regarding Claimant and administers random drug screens. He described Claimant is "very compliant" and has no concerns that Claimant abuses his medications.

28. Dr. Beatty testified in a posthearing deposition on August 1, 2017. He reiterated his opinion that Claimant's need for additional low back treatment, including injection therapy and medications, is not causally related to the March 3, 2000 injury. Dr. Beatty opined Claimant's pre-existing degenerative condition would inevitably have progressed regardless of the industrial accident. He testified "it would continue to worsen over time. He'd continue to get – facets would continue to enlarge [ ] maintain inflammation. The discs would continue to gradually degenerate; again, lose that water content, bulge out. He'd get the spurring and gradual development of spinal stenosis." Dr. Beatty opined there was no evidence in the original MRI that the accident had accelerated the underlying degenerative process.

29. Dr. Beatty also testified Claimant's ongoing use of muscle relaxers and narcotics is not reasonably necessary. Dr. Beatty opined that "in today's current environment, there is nothing in this gentleman, as far as having axial low back pain and mechanical back pain, that requires opioid use for pain control." Dr. Beatty opined that opioids tend to perpetuate and amplify people's perception of pain, and predicted

stopping the medications would "probably . . . reduce his back pain and probably eliminate the need for these recurrent injections." He recommends Claimant transition to Suboxone as a way to wean off narcotics.

30. Dr. Finn's opinions are more persuasive than those of Dr. Beatty and Dr. Orent.

31. The March 3, 2000 industrial accident permanently aggravated Claimant's underlying pre-existing degenerative lumbar spine condition.

32. Respondents failed to prove by a preponderance of the evidence that none of Claimant's ongoing symptoms are causally related to the March 3, 2000 injury.

33. Claimant proved by a preponderance of the evidence that the medications prescribed by Dr. Finn are reasonably necessary to relieve the effects of his injury and prevent deterioration of his condition.

34. Claimant proved by a preponderance of the evidence that periodic injections and rhizotomies are reasonably necessary to relieve the effects of his injury and prevent deterioration of his condition.

CONCLUSIONS OF LAW

A. Respondent failed to prove that none of Claimant's ongoing treatment for low back pain is causally related to his admitted March 2000 injury

The respondents are liable for medical treatment from authorized providers that is reasonably necessary to cure or relieve the employee from the effects of the injury. Section 8-42-101; *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). The need for medical treatment may extend beyond MMI if the claimant requires further treatment to relieve the effects of the injury or prevent deterioration of their condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988).

Even where the respondents admit liability for post-MMI medical benefits, they remain free to contest the reasonable necessity and causal connection of any specific future treatment. *Milco Construction v. Cowan*, 860 P.2d 539 (Colo. App. 1992). Ordinarily, the claimant must prove by a preponderance of the evidence that an injury directly and proximately caused the condition for which he seeks benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). But § 8-43-201(1) was amended in 2009 to place the burden of proof on the party seeking to modify an issue determined by an admission or order. The effect of this statutory provision is to create separate burdens of proof regarding Claimant's entitlement to ongoing treatment.

At hearing, Respondent argued it is not seeking to terminate all post-MMI treatment, but merely disputes the relatedness of treatment directed to Claimant's low back. But Claimant's only current post-MMI treatment is directed to his low back, and Dr. Beatty explicitly opined that "I do not believe that ongoing treatment is reasonable,

necessary and related to the original injury of March 3, 2000." Respondent's proposed FFCLO states that "Claimant's request for medication refills, epidural steroid injections, facet joint injections, radiofrequency neurotomies, and SI joint injections are all hereby denied." That covers all maintenance care Claimant receives, and the practical effect of Respondent's causation argument would terminate all of his ongoing treatment. Consequently, Respondent must prove by a preponderance of the evidence that the treatment by Dr. Finn is not causally related to the 2000 work injury. *See Salisbury v. Prowers County School District RE2*, W.C. No. 4-702-144 (June 5, 2012); *Dunn v. St. Mary Corwin Hospital*, W.C. NO. 4-754-838-01 (October 1, 2013); *Munoz v. JBS Swift & Co. USA, LLC*, W.C. No. 4-780-871-03 (October 7, 2014); *Baker v. Poudre School District*, W.C. No. 4-750-735 (July 8, 2011).

On the other hand, Respondent also argues that ongoing treatment with narcotics and muscle relaxers is not reasonable and necessary, regardless of causation. Claimant retains the burden to prove that any specific form of treatment is reasonably necessary. *Milco Construction, supra*. Therefore, Claimant must prove by a preponderance of the evidence that narcotic pain medication is reasonably necessary.

As found, Respondent failed to prove by a preponderance of the evidence that none of the treatment by Dr. Finn is causally related to the work injury. Although Claimant suffered some degree of chronic low back pain related to degenerative changes before his accident, the industrial accident permanently aggravated his underlying pre-existing condition. Since the injury, Claimant's low back pain has clearly been more severe and constant than it was before the accident, and his need for treatment escalated dramatically. Dr. Beatty conceded that Claimant's preinjury treatment for back pain was "intermittent," whereas it has been "ongoing and regular" since the accident. Claimant's symptomology has never returned to his preinjury baseline level. Nor is there any persuasive evidence of any significant change in his underlying condition sufficient to sever the admitted causal connection between his symptoms and the 2000 injury. Claimant's symptoms have remained largely the same since he was put at MMI. He has been receiving facet injections, radiofrequency neurotomies, epidural steroid injections and SI joint injections at a relatively steady frequency for many years. Dr. Beatty's opinion that Claimant's degenerative changes would have inevitably progressed regardless of the injury is belied by the MRIs, which have been stable and relatively unchanged since 2000. Objectively, there has been no substantial progression of the underlying structural abnormalities, and the ALJ is not persuaded that Claimant's symptoms inevitably would have worsened to cause him to need extensive treatment irrespective of the accident.

B. The treating regimen prescribed by Dr. Finn is reasonable and necessary

As found, Claimant proved that the treatments prescribed by Dr. Finn, including medications, are reasonably necessary to relieve the effects of his injury.

The ALJ appreciates Dr. Beatty's concerns regarding the potential dangers of long-term opioid use and his experience with some patients whose quality of life improved after stopping narcotics. But the ALJ is persuaded that medications are being

used reasonably in this case. The MTGs recognize opioids as an appropriate form of treatment for long-term chronic pain, and the opioids prescribed by Dr. Finn increase and maintain Claimant's functional abilities. Based on the evidence presented, the ALJ concludes Dr. Finn's prescriptions of medications, including opioids, have been reasonable and necessary to relieve the effects of Claimant's injury and prevent deterioration of his condition.

Similarly, the persuasive evidence demonstrates that the periodic injections and rhizotomies are reasonably necessary because they reduce the severity of Claimant's symptoms for significant periods of time. This, in turn, increases his ability to function and likely reduces the amount and type of medication he would otherwise require.

ORDER

It is therefore ordered that:

1. Respondent's request to terminate Claimant's ongoing maintenance treatment as unrelated to his March 3, 2000 injury is denied and dismissed.

2. Respondent shall pay for all reasonably necessary treatment to relieve the effects of Claimant's injury or prevent deterioration of his condition, including the medications prescribed by Dr. Finn, and periodic epidural steroid injections, facet injections, rhizotomies and SI joint injections.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 18, 2017

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-996-237-02

ISSUE

- Whether Claimant established by a preponderance of the evidence that she sustained a cumulative trauma injury to her neck, upper back, and low back.

STIPULATION

If the claim should be found compensable, the parties stipulated to an average weekly wage of $1,285.40.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant worked for the Employer for approximately two years.

2. On September 17, 2015, Employer terminated Claimant's employment. September 14, 2015, was the last day Claimant worked. On October 5, 2015, Claimant filed a Workers' Claim for Compensation.

3. Claimant experienced chronic neck and upper back pain, and difficulties sitting and driving, attributable to multiple motor vehicles accidents (MVAs) prior to the work incident.

   - In 1999 Claimant was involved in a MVA and underwent five years of treatment for her neck and upper back.

   - In 2008, Claimant experienced a flare in symptoms and received medical treatment for her neck and thoracic spine at the Centeno-Schultz Clinic. Claimant treated with Dr. Centeno until October 2009 for her neck and upper back as a result of her chronic neck and upper back condition.

   - In January 2012, Claimant was involved in another MVA in which her vehicle was struck head-on by a sports utility vehicle. Dr. Centeno assessed claimant with a re-aggravation of old facet and thoracic supraspinous and interspinous ligament injury. Claimant received additional treatment for her neck and thoracic spine, including postural education.

   - Claimant continued to treat at the Centeno Schultz Clinic for her neck and upper back symptoms throughout 2013. She received prolotherapy and

IMS injections on the following dates: January 30, 2013, March 26, 2013, April 3, 2013, May 8, 2013, July 9, 2013, and October 9, 2013.

- Just prior to her employment in November 2013 with Employer, Claimant reported an increase in her neck and upper back pain. Dr. Centeno attributed this increased pain to claimant's increased activity. On October 5, 2013, Claimant reported twice monthly pain flares.

4. On April 13, 2014, five months into her job with Employer, Claimant slipped on ice and fell on her back. This was not a work related event. Claimant was taken by ambulance to the emergency room for examination and treatment. Claimant complained of thoracic spine and low back and right hip pain.

- On May 2, 2014, Claimant returned to the Centeno-Schultz Clinic for treatment of neck and upper back pain. Claimant reported the recent fall had significantly exacerbated pain and tightness in her upper back.

5. Beginning in July 2014, Claimant underwent regular treatments for her neck and thoracic spine. Claimant underwent trigger point injections variably in her head, neck and upper back on the following dates: July 29, 2014; August 26, 2014; September 22, 2014; October, 28, 2014; December 1, 2014; January 25, 2015; and April 27, 2015.

- On August 26, 2014; Claimant reported her "usual thoracic pain" that had become more bothersome.

- On April 27, 2015, the physician's assistant also recommended an Egoscue therapist to work with Claimant on her posture issues.

6. The evidence supports a finding that Claimant attributed her pain symptoms to prolonged sitting.

- In December 2012, Claimant reported Dr. Centeno that she was pain-free until late afternoon, and then after sitting for a long time at work, she experienced an increase in pain. Claimant had previously complained that sitting at work increased her symptoms.

- Claimant testified that she has complained of pain as a result of sitting at a desk, sitting for long periods, sitting in general, and sitting while driving since at least 2008.

- Claimant's complaints that driving and sitting aggravated her neck and thoracic spine symptoms, pre-date her employment with the Employer and the alleged non-ergonomic work stations.

- On June 4, 2015, Claimant reported to Dr. Centeno that her pain increased after sitting at her desk for a few hours. Claimant denied any

new injury and attributed her increased pain to postural changes caused by the thoracic proliferent injections she received in April 2015. Claimant was instructed to change how she slept as well as her posture at work, in order to relieve her discomfort. To further address her pain, Claimant was prescribed a 'posture shirt' to address her long-standing scoliosis.

7. Claimant's treating physicians did not opine that her condition was caused or aggravated by her work duties. Neither Dr. Centeno nor physician assistant Shannon Bock opined that Claimant's neck and upper back condition had been caused or aggravated by her work duties.

8. Claimant attributed her increased pain and deteriorated condition to her April 2014 slip and fall, not her work duties.

- On June 16, 2015, Claimant reported to her therapist at Howard Head Sports Medicine that her current symptoms were from a fall on the ice when she fell on her back. Claimant reported after the January 2012 MVA, her symptoms were only 80% resolved and that she reinjured herself in April 2014 when she fell on ice. She did not report that her symptoms were caused either by standing at the front desk area in an awkward position or by sitting for long periods of time at work.

- In June 2015, Claimant reported to Allied Chiropractic that her "current issue" was ongoing neck and upper back pain from her fall on the ice.

9. Dr. Henry Roth, a Level II accredited physician, credibly opined that Claimant did not suffer a work-related injury to her neck and upper back.

- On March 14, 2016, Dr. Roth evaluated Claimant. Claimant reported to Dr. Roth that her onset of neck and upper back pain occurred and gradually worsened beginning in December 2014 when Employer remodeled the front desk, one of Claimant's three workstations.

- Dr. Roth reviewed Claimant's medical records, performed a physical examination, and provided a causation opinion. Dr. Roth determined that there was no mechanism of injury in this claim. Dr. Roth credibly opined that Claimant's medical records showed Claimant had been under continuous intermittent treatment for chronic neck and thoracic spine pain complaints dating back fifteen years. The intensity of Claimant's treatment escalated the year prior to the claim. Dr. Roth confirmed that Claimant denied any new condition.

- Dr. Roth correlated Claimant's three MVAs and the slip and fall in April 2014 with her complaints of worsening symptoms. Claimant's treatment following each of the MVAs, as well as the slip and fall, was the same as her treatment after the 2015 alleged workers' compensation injury. Dr.

Roth noted that Claimant's June 16, 2015 x-rays revealed only degenerative changes, and no instability or acute abnormality.

- Dr. Roth noted that Dr. Centeno's physician's assistant looked at pictures provided by Claimant, and from the pictures assessed that one of Claimant's work stations was ergonomically not correct. Dr. Roth credibly opined that 'ergonomically not correct' is a matter of opinion; there is no ergonomic standard. Thus, one could not possibly tell from pictures alone whether a workstation was ergonomically suited for Claimant.

- Dr. Roth acknowledged that muscular discomfort could result from sustained sitting. But sitting is common to all employment and normal activities of daily living. Further, muscular discomfort does not equate to an injury. Per the current Colorado Treatment Guidelines, sustained sitting is not considered to be in injurious activity.

- Dr. Roth opined that Claimant's theory that she sustained an injury to her neck and thoracic spine by working in an ergonomically incorrect position lacks medical support. Dr. Roth credibly explained that muscular discomfort from prolonged static postures as the result of an individual's unique personal predilection is not a disruption to the spinal anatomy. Evaluated as a cumulative trauma or repetitive motion injury, Dr. Roth concluded that Claimant's postures were not associated with any force.

- Dr. Roth noted that Claimant performed multiple work activities throughout the day, so she had the opportunity to change from sitting to standing and walking. Dr. Roth also noted that Claimant was not continuously typing at the front desk, so that activity would not satisfy the time thresholds of a cumulative trauma injury. Finally, Dr. Roth opined that Claimant's discomfort was reasonably medically expected given her chronic personal medical conditions.

- Claimant acknowledged that although she worked some long shifts, she was neither sitting nor standing for long hours because she was required to walk around and check on operations around the hotel. Claimant acknowledged that while working at the front desk, she was also training front desk agents. Claimant acknowledged that during her shifts she also tended bar, occasionally washed dishes, also helped set up and break down special events at the hotel. Claimant acknowledged that as sales manager and director of sales, she conducted site tours, and the tours could take anywhere from fifteen minutes to an hour long. She also conducted tastings for weddings which lasted up to an hour.

- Dr. Roth credibly opined that "it is not medically probable or even medically possible to associate Claimant's symptoms with otherwise unremarkable, ordinary sitting and standing, even if her posture were not always ideal.

10. Dr. Roth also credibly opined that Claimant did not suffer a work related injury to her low back because there was no temporal relationship between her pain complaints and the alleged mechanism of injury.

- Claimant reported to Dr. Roth that she had an onset of low back pain in mid-October 2015, as the result of cleaning baseboards on September 14, 2015. Claimant reported her symptoms did not begin until four weeks because it was a "delayed condition." Dr. Roth opined that Claimant did not sustain a lumbar spine injury as a result of cleaning baseboards. Dr. Roth credibly opined that the activity of cleaning baseboards provided no mechanism of injury to alter the anatomy of the lumbar spine. Dr. Roth confirmed that Claimant's October 30, 2015 lumbar spine MRI revealed only ordinary lower lumbar degenerative changes.

- Dr. Roth further opined that no impact, compressive event, or cumulative low back activity occurred while Claimant cleaned baseboards. Claimant did not experience low back pain on September 14, 2015 when she cleaned the baseboards, and she did not experience discomfort that night or the next day. Claimant did not report low back pain until mid-October, a month after her employment terminated.

- Claimant acknowledged that she did not have immediate low back pain after cleaning the baseboards. Claimant testified that she did not have low back pain until nearly a month after her termination from employment.

11. Despite Claimant's testimony and her reports to Dr. Roth in March 2016 that she injured her low back cleaning baseboards, October 29, 2015 medical records show that Claimant attributed her delayed onset of low back pain to "sitting at a non-ergonomic desk for long hours each day."

12. Claimant had a prior workers' compensation claim involving her low back which occurred when she was moving furniture for a different employer. Claimant also complained of low back pain after her 2012 MVA. She also experienced low back pain after her fall in 2014.

13. Claimant is a poor historian. Her testimony about the timing of her treatment and what necessitated it was inconsistent with the medical records. For example:

- Claimant reported to Dr. Roth that she reached her baseline status as of January 1, 2016. However, Claimant testified that she did not reach her baseline until October 1, 2016.

- After reporting to Dr. Roth in March 2016 that she had reached her baseline on January 1, 2016, Claimant continued to treat for her neck and upper back pain, including treating with Dr. Centeno for neck and upper

back pain as recently as July 25, 2017, the day before hearing and nearly two years after not working for the Employer.

- Claimant testified that her symptoms began in December 2014, when Employer remodeled the front desk and that the remodeled desk was the primary cause of her increased pain. However, the medical records do not reflect that Claimant's increased symptoms were the result of standing at the front desk in an awkward position. Rather, persuasive medical records document Claimant's reports of increased pain when she sat at one of her two desks.

14. Claimant did not report to Employer that her neck and upper back symptoms were related to her work duties until she was terminated. Claimant testified that in January 2015 she informed Employer that her workstations caused her increased neck pain. Claimant further testified that she had to increase her treatment in June 2015 because all three of her work stations caused her increase in pain and symptoms. However, Claimant later admitted that she did not report a potential workers' compensation claim until Dr. Centeno told her she needed to take an extended period of time off of work. Claimant did not file a Workers' Claim for Compensation until after she was terminated.

15. Claimant's testimony about her standing work station was not persuasive. Claimant testified that the remodeled front desk where she took reservations was approximately forty-two inches high. However, Claimant testified that in order to take a reservation at that desk, she "was hunched over nearly in half. While Claimant testified that she was five feet eleven inches, her medical records state her height as fifty-nine inches, or five foot nine inches. In either event, writing on a forty-two inch high surface would likely not require one to hunch over nearly in half. In contrast, Claimant described her primary desk as "a little bit uncomfortable for me."

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979) The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. Section 8-43-201, C.R.S.

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

A claimant's right to compensation initially hinges upon a determination that "at the time of the injury, the employee is performing service arising out of and in the course of the employee's employment." C.R.S. § 8-41-301(1)(b). The "arising out of" test is one of causation which requires that the injury have its origins in an employee's work-related functions. There is no presumption than an injury which occurs in the course of employment arises out of the employment. *Finn v. Industrial Commission,* 165 Colo. 106, 437 P.2d 542 (1968). The evidence must establish the causal connection with reasonable probability, but it need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 30 Colo. App. 224, 491 P.2d 106 (Colo. App. 1971). A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 293 (1951).

Whether a compensable injury has been sustained is a question of fact to be determined by the ALJ. *Eller v. Industrial Claim Appeals Office*, 224 P.3d 397 (Colo. App. 2009). The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the proximate causal relationship between an incident/injury and the need for medical treatment, plus entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. (2017). See City of *Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000).

Claimant must prove that an occupational disease is an injury that results directly from the employer or conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of employment. Section 8-40-201(14), C.R.S.; *Climax Molybdenum Co. V. Walter*, 812 P.2d 1168 (Colo. 1991); *Campbell v. IBM Corp*., 867 P.2d 77 (Colo. App. 1993).

The fact that a claimant experiences symptoms while performing work does not require the inference there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

Rather, the symptoms could represent the logical and recurrent consequence of the pre-existing condition. *F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985).

Claimant has suffered from chronic neck and upper back pain for at least fifteen years. In January 2012, Claimant was involved in a head-on collision, which aggravated her underlying neck and thoracic spine condition. Since the 2012 MVA, Claimant has consistently treated for her neck and thoracic spine pain.

While Claimant was treating for her 2012 MVA, she reinjured herself when she slipped and fell on ice in April 2014. The medical records persuasively document Claimant's regular treatment, which included injections, medications, and therapy for her neck and thoracic spine after this slip and fall.

Dr. Roth, the only Level II accredited physician to evaluate Claimant, provided a causation opinion which followed the Colorado Medical Treatment Guidelines. Dr. Roth credibly opined that Claimant sustained no mechanism of injury to her neck and thoracic spine as a result of her work duties. Dr. Roth opined that the musculature discomfort associated with a sitting posture is common to all employment and normal activities of daily living. More importantly, Dr. Roth credibly opined that muscular discomfort is not the same as an "injury" and per the Colorado Medical Treatment Guidelines, it is not considered to be an injurious activity.

Dr. Roth persuasively opined that Claimant would not meet the requirements of an injury under the cumulative trauma guidelines. Dr. Roth persuasively opined that Claimant's postures were not associated with any force, and Claimant had the opportunity to change from sitting to standing. Moreover, Dr. Roth persuasively opined that Claimant was able to perform multiple different work activities throughout the day, which would eliminate the requirement that Claimant had to maintain long periods of repetitive motions or static positions. Claimant did not dispute these facts, and acknowledged that she was not seated at her desk for a prolonged period of time, and when she worked at the front desk, she was not on the phone taking reservations the entire time.

Neither Dr. Centeno nor Ms. Bock opined that Claimant's work duties caused or aggravated her pre-existing conditions, thus causing the need for treatment. Therefore, Dr. Roth's opinion that it was not medically probable that Claimant's neck and thoracic spine complaints could have been caused by sitting and standing. Thus the ALJ finds and concludes that it is medically probable that Claimant's ongoing symptoms were not caused, aggravated, or exacerbated by her work activities.

Dr. Roth also credibly opined that Claimant did not sustain an injury to her low back as a result of cleaning the baseboards on September 14, 2015. Dr. Roth based his opinion on the fact that no impact or compressive event occurred and there were no cumulative activities which could have caused an injury. Dr. Roth reached this conclusion because Claimant had no immediate pain and did not complain of low back pain until a month after the event, a fact that the claimant does not dispute. Dr. Roth

opined that the temporal relationship between the alleged low back injury and the late onset of pain negates that the cleaning activity caused an injury.

Claimant's testimony that the cause of her pain was related to her work duties is not credible because her medical records document her repeated statements to her medical providers that she suffered from chronic pain which had increased as a result of the April 2014 slip and fall.

However, after filing a workers' compensation claim in October 2015, Claimant then attributed her pain and symptoms to sitting long hours at a non-ergonomic desk as noted in the November 2015 medical records. In March 2016, however, Claimant reported to Dr. Roth that her symptoms began when she had to stand in an awkward position at the front desk. At hearing, Claimant testified that all three work stations contributed to her increased pain, but then indicated it was primarily standing at the front desk.

Claimant's testimony that the alleged non-ergonomic work stations caused her symptoms, rather than the aggravation of a chronic condition from the 2014 slip and fall, is not persuasive.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant failed to prove by a preponderance of the evidence that she suffered a compensable injury to her neck, upper back or her lumbar spine.
2. Claimant's claim is denied and dismissed with prejudice.
3. Issues not expressly decided herein are reserved to the parties for future determination.
4. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Whether Respondents have produced clear and convincing evidence to overcome the Division Independent Medical Examination ("DIME") physician's opinion that Claimant sustained a combined 25% scheduled impairment to his left upper extremity as a result of his November 12, 2014 industrial injury.

II. Whether Claimant has proven by a preponderance of the evidence that he requires post-maximum medical improvement ("MMI") treatment other than as recommended by the authorized treating physician ("ATP").

III. Whether Claimant established by a preponderance of the evidence that he is entitled to conversion of his scheduled upper extremity impairment rating to a whole person impairment rating.

FINDINGS OF FACT

1. In October 2005 Claimant sustained a non work-related injury to his left shoulder while playing football. Claimant was 12 years of age at the time. Claimant treated with Orthopedic Associates LLC. Medical records from November 2005 document glenohumeral instability of the left shoulder, including slipping and catching. An MRI taken November 21, 2005 was normal.

2. On September 14, 2006, James McElhinney, MD performed an arthroscopy, left shoulder glenohumeral reconstruction, open capulsar shift type. The operative report notes Claimant experienced recurrent dislocations of the left glenohumeral joint. Medical records indicate that by December 13, 2006 Claimant was experiencing minimal discomfort and had good strength.

3. Claimant testified that he underwent extensive rehabilitation and completely recovered from the September 2006 surgery.

4. Claimant returned to Dr. McElhinney on February 21, 2007 after slipping and falling on ice and feeling something in his shoulder. Claimant reported that his shoulder later slipped partially out of the joint while he was washing his hair. Dr. McElhinney gave an impression of a probable re-injury of the left glenohumeral joint.

5. Claimant testified that after 2007 he had normal function of his left shoulder. Claimant stated that, from 2007-2013, he participated in basketball and lacrosse on the high school and collegiate levels, participating in weightlifting, running, jumping, hitting and shooting without any shoulder issues.

6. On November 12, 2014, Claimant suffered an admitted industrial injury to his left shoulder after slipping and falling on ice. Claimant was 21 years old at the time of the industrial injury.

7. Claimant sought treatment at Lutheran Medical Center Emergency Room on November 12, 2014. Claimant reported slipping on ice and landing with his arm outstretched. On physical examination, Ann Margaret Shimkus, PA-C noted left upper extremity tenderness along the acromioclavicular ligament joint and shoulder, with no sulcus sign and no step off. PA-C Shimkus further noted that there were no limitations of movement distal to the shoulder, but pain at the shoulder with range of motion. It was noted that an x-ray obtained on November 12, 2014 revealed findings for a non-displaced coracoid fracture. PA-C Shimkus gave an impression of a fracture of coracoid process of the left scapula. No subsequent medical records indicate Claimant sustained a fracture.

8. Claimant returned to Lutheran Medical Center Orthopedic Hospitalists on November 13, 2014. On physical examination, PA-C Jason McKown noted full and pain-free range of motion of Claimant's left elbow and wrist. PA-C McKown further noted tenderness to palpation at the acromioclavicular joint posterior shoulder along the body of the scapula and mild tenderness anteriorly along the biceps tendon and the coracoids process. Claimant's active range of motion was 30 degrees of forward flexion and 30 degrees of abduction. Passive range of motion was about 90 degrees of forward flexion. PA-C McKown noted a negative drop arm test and good external and internal rotation against resistance. PA-C McKown assessed left shoulder pain.

9. Claimant sought a second opinion at St. Anthony's Hospital Emergency Room on November 17, 2014. Claimant reported pain radiating down his left arm. On examination, Kyle Kirkpatrick, PA-C noted minimal tenderness of the mid-thoracic spine without step-off deformity, and no tenderness of the cervical and lumbar spine. Internal and external rotation of the left shoulder was normal with no gross deformity of the anterior shoulder. PA-C Kirkpatrick further noted "moderate tenderness of the left superior and inferior scapula without step-off deformity, crepitus." A CT scan was obtained and revealed a small Hill-Sachs lesion with no other possible acute fracture or dislocation. OS acromiale was also noted. PA-C Kirkpatrick gave a primary impression of a left Hill-Sachs deformity.

10. Claimant presented to Concentra Medical Centers ("Concentra") on November 21, 2014. Claimant reported falling directly onto his left shoulder. Claimant complained of pain in the left lateral shoulder. On physical examination, Craig Hare, PA-C noted limited range of motion of the left shoulder in all planes with normal appearance and normal diffuse palpation. Shoulder strength was normal bilaterally. PA-C Hare noted that a previous x-ray showed a Hill-Sachs deformity. PA-C Hare assessed a contusion of left shoulder/upper extremity and left shoulder sprain. PA-C Hare referred Claimant for physical therapy and released Claimant to work modified duty.

11. Claimant attended a follow-up evaluation with PA-C Hare on December 2, 2014 Claimant reported having no strength in his shoulder. PA-C documented, "Difficult to

ascertain where patient is having pain. Describes diffuse and pain with ROM to all planes." On examination, PA-C Hare noted normal appearance, normal diffuse palpation, and normal strength bilaterally with limited range of motion in all planes. PA-C Hare referred Claimant to an orthopedic specialist.

12. Claimant presented to orthopedic surgeon Mark Failinger, MD on December 18, 2014. Claimant reported that his initial discomfort was in the shoulder blade, but "he feels it more in shoulder and feels unstable again." Claimant also reported that it was difficult lifting his arm to the side and he thought it "might come out." Claimant further reported that there was no locking or catching. Dr. Failinger noted Claimant had a past surgical history of left shoulder stabilization. On examination, Dr. Failinger noted Claimant lifted to about 40 or 50 degrees actively and 160 degrees passively, "without a problem." Claimant had good external rotation strength with some give-way. The lift-off test was negative. Abduction strength was weak. Dr. Failinger further documented, "Abduction and external rotation, he seems to have anterior translation." Dr. Failinger gave an impression of left shoulder status post stabilization procedure, probable recurrent instability. Dr. Failinger recommended Claimant undergo an MRI.

13. On December 23, 2014, Claimant presented to Scott Richardson, MD at Concentra. Regarding the mechanism of injury, Claimant reported that he fell back with his left hand outstretched and pushed up onto his left shoulder. Claimant reported being worried about instability and occasional popping and radiation of pain into his arm. On examination, Dr. Richardson noted tenderness in the biciptal groove, deltoid, anterior glenohumeral joint, and supraspinatus muscle. Range of motion tests were deferred.

14. A December 30, 2014 MRI revealed no evidence of internal derangement or a Hill-Sachs deformity or Bankart lesion. The MRI did reveal unfused os acromiale without evidence of surrounding bone marrow edema.

15. Dr. Failinger reevaluated Claimant on January 8, 2015. Dr. Failinger noted that the MRI did not show any obvious abnormalities. Claimant reported having less pain and a little better motion, but some pain in the mid ranges. On examination Dr. Failinger noted Claimant lifted to about 90-100 degrees actively and 160 degrees passively "without a problem," with some pain in the mid range. Dr. Failinger further noted multidirectional motion in both shoulders without apprehension.

16. On January 29, 2015, Dr. Failinger noted 160 degrees passive and 90 degrees active forward flexion with good external rotation and give-way abduction strength. Dr. Failinger further noted multidirectional laxity in both shoulders. Dr. Failinger administered an injection in Claimant's left shoulder for diagnostic and therapeutic purposes.

17. On March 24, 2015, Casey McKinney, PA-C at Concentra noted tenderness in the deltoid and anterior glenohumeral joint and full range of motion with pain with abduction.

18. On April 14, 2015, Dr. Richardson noted tenderness in the deltoid, anterior glenohumeral joint and supraspinatus muscle with near full range of motion.

19. On June 11, 2015, Dr. Richardson noted mild diffuse tenderness to palpation mostly in the posterior aspect with full range of motion.

20. On June 25, 2015, Dr. Richardson noted tenderness in the deltoid, anterior glenohumeral joint, scapula and supraspinatus muscle with full range of motion. Dr. Richardson referred Claimant to an orthopedic specialist.

21. On July 2, 2015, Claimant reported to Dr. Failinger that the injection helped initially, but then he suffered a setback. Claimant reported gaining strength, but pain lifting up to the side, and instability. On examination, Dr. Failinger noted 170 degrees of active and passive external rotation strength with some multidirectional laxity in both shoulders.

22. On July 16 and July 30, 2015, Dr. Richardson noted minimal or no tenderness and full range of motion.

23. On August 10, 2015, PA-C McKinney noted tenderness in the anterior glenohumeral joint and full range of motion. PA-C McKinney further noted, “Popping and subjective pain with abduction and forward extension above shoulder level.” PA-C McKinney again referred Claimant to an orthopedic specialist.

24. Claimant presented to orthopedic specialist Craig Davis, MD on September 1, 2015. Regarding the mechanism of injury, Claimant reported that he fell to the side and his left arm was pushed overhead. On examination, Dr. Davis noted full range of motion with pain at about 90 degrees of abduction and forward elevation. Dr. Davis further noted Claimant had good strength and no obvious instability. Apprehension and relocation tests were positive. Sulcus sign was negative. Dr. Davis gave an impression of possible biceps instability along with subacromial bursitis of the left shoulder. Dr. Davis opined Claimant may be a reasonable candidate for surgical treatment, noting, “He does have reproducible clicking and pain with abduction, which was relieved significantly by subacromial injections.”

25. A September 15, 2015 MRI revealed unfused apophysis versus os acromiale with no Hill-Sachs lesion and no rotator cuff tear or tendinopathy,

26. Dr. Davis reevaluated Claimant on September 29, 2015 and noted full range of motion with pain and “reproducible clicking with abduction at around 90 degrees.” Dr. Davis gave an impression of persistent left shoulder pain following a strain. Dr. Davis stated, “I think this patient may have some subtle instability. He has a history of instability surgery in the past and his mechanism of injury is consistent with a capsular stretch. This could result in superior migration of the humeral head with secondary bursitis.” Dr. Davis noted Claimant’s case was unusual due to his young age and not having “frank instability.” Dr. Davis referred Claimant to Dr. Mike Hewitt, another orthopedic specialist.

27. Dr. Hewitt evaluated Claimant on October 5, 2015. Claimant complained of pain within the lateral and posterior aspect of his shoulder, and popping and catching with overhead use. On examination, Dr. Hewitt noted active range of motion of 170 degrees of forward flexion with a painful arc beyond 100 degrees, external rotation of 70 degrees, and internal rotation to T8. The lift-off and cross-arm tests were negative, while the apprehension test was positive. There was no focal tenderness about the clavicle or AC joint and mild-to-moderate tenderness about the impingement areas. Dr. Hewitt further noted that there was no obvious atrophy in the left shoulder. Dr. Hewitt assessed: status post left shoulder hyperabduction injury with persistent pain and a positive apprehension test. Dr. Hewitt remarked that Claimant has persistent symptoms consistent with instability and had failed conservative management. Dr. Hewitt opined that Claimant is an appropriate candidate for shoulder arthroscopy with possible capsular placation versus labral repair.

28. On November 12, 2015, Dr. Richardson noted tenderness in the anterior, lateral superior and posterior shoulder with full range of motion. Dr. Richardson assessed a dislocation of the left shoulder joint and left shoulder instability. Dr. Richardson again referred Claimant to an orthopedic specialist.

29. On December 3, 2015, Claimant reported clicking in his shoulder. Dr. Richardson noted tenderness in the anterior, lateral and posterior shoulder with an active range of motion of 40 degrees of extension and 110 degrees of abduction with pain.

30. On January 19, 2016, Claimant underwent a left shoulder posterior capsular placation and subacromial bursectomy performed by Dr. Hewitt. Dr. Hewitt's postoperative diagnoses included left shoulder 2+ posterior instability, patulous posterior capsule, and moderate subacromial bursitis.

31. Claimant testified that the surgery reduced his pain and increased his stability but did not improve his function.

32. Claimant attended multiple post-operative evaluations at Concentra with Dr. Hewitt and Theodore Villavicencio, MD. Claimant also underwent a second phase of physical therapy. By June 3, 2016, Claimant was reporting that his pain was "mild and more annoying than anything." Dr. Villavicencio noted tenderness to the anterior glenohumeral joint with limited range of motion in all planes. Dr. Villavicencio also noted the following active range of motion measurements: 120 degrees of forward flexion with pain, 30 degrees of extension with pain, 120 degrees of abduction with pain, and painful internal rotation.

33. On July 8, 2016, Dr. Hewitt noted Claimant's active range of motion was 160 degrees of forward flexion, 60 degrees of external rotation, and internal rotation to T10 with mild pain. Instability testing was negative. There was no focal tenderness about the shoulder. Dr. Hewitt remarked that Claimant's range of motion and strength had "significantly improved," and that Claimant had not had any further issues with instability. Dr. Hewitt opined that Claimant was approaching maximum medical

improvement ("MMI"). Dr. Hewitt recommended a six-month gym membership and an orthopedic follow-up one to two times over the course of the year as maintenance care. No permanent restrictions were anticipated.

34. Claimant testified Dr. Hewitt did not use an instrument to measure his range of motion.

35. On July 28, 2016. Claimant reported improved pain and no new symptoms. Dr. Villavicencio noted a limited active range of motion in all planes, with 140 degrees of forward flexion, 30 degrees of extension, 130 degrees of abduction with pain, and painful internal rotation.

36. Dr. Villavicencio placed Claimant at MMI on August 24, 2016. Claimant rated his pain at 1/10 pain. On examination, Dr. Villavicencio noted that there was no tenderness. Active range of motion measurements were as follows: 150 degrees of forward flexion, 60 degrees of extension, 150 degrees of abduction, 50 degrees of adduction, 60 degrees of internal rotation, and 60 degrees of external rotation. Dr. Villavicencio noted all of the range of motion measurements were without pain. Motor strength was normal bilaterally with flexion at 4+/5 on the right side. Dr. Villavicencio opined that Claimant had a work-related fall resulting in dislocation, but had returned to excellent functional status. Dr. Villavicencio assigned a 5% upper extremity (3% whole person) impairment rating based on range of motion deficits. As maintenance care, Dr. Villavicencio recommended a six-month gym membership and as-needed orthopedic follow-up with Dr. Hewitt over the course of the year. Dr. Villavicencio released Claimant to full duty with no permanent restrictions.

37. Claimant testified that Dr. Villavicencio measured his assisted range of motion.

38. Respondents filed a Final Admission of Liability ("FAL") on September 6, 2016, admitting for an MMI date of August 24, 2016 and a 5% upper extremity impairment, per Dr. Villavicencio's August 24, 2016 evaluation. Respondents admitted liability for reasonably necessary and related post-MMI medical treatment as authorized by the authorized treating physician.

39. Claimant objected to the FAL and underwent a DIME with J.E. Dillon, MD on January 24, 2017. Dr. Dillon physically examined Claimant and reviewed medical records. Dr. Dillon's summary of medical records does not reference any medical records prior to November 12, 2014. Regarding Dr. Villavicencio's August 24, 2016 examination, Dr. Dillon remarked, "Of note, [Claimant] reports that Dr. Villavicencio performed essentially active assisted range of motion rather than active range of motion for the assessment."

40. Claimant reported to Dr. Dillon that he slipped on ice and fell onto his outstretched left hand. Claimant complained of pain in his left shoulder with exacerbation with any movements and use of the left upper extremity. Claimant reported that his symptoms had not significantly subsided since shortly after the January 2016 surgery. Dr. Dillon noted, "He does indicate that the shoulder felt 'more

stable' after the surgery, but the continued pain and limited range of motion." Claimant reported an inability to lift more than five pounds using his whole arm and an inability to lift his hand above his shoulder. Claimant also reported suffering a left shoulder dislocation in 2005 and undergoing surgery for a recurrent dislocation. Claimant reported that he recovered completely from those incidents.

41. Regarding Dr. Dillon's physical examination of Claimant, Dr. Dillon noted that Claimant guarded "from movements at the left shoulder." Dr. Dillon noted clicking and some crepitus with movement at the left shoulder. Hawkins, Neer and cross-arm tests were positive. Spurling's test was negative. Dr. Dillon documented normal muscle bulk and strength in the upper extremities and fluid neck movements. Dr. Dillon noted the following active range of motion measurements: 80 degrees of flexion, 20 degrees of extension, 20 degrees of adduction, 60 degrees of abduction, 25 degrees of internal rotation, and 60 degrees of external rotation.

42. Dr. Dillon concurred with Dr. Villavicencio's MMI date of August 24, 2016. Dr. Dillon stated, "Injury to the left shoulder is described, status post shoulder stabilization surgery. This is a ratable condition. No evidence of neck injury and no ratable condition at this level." Dr. Dillon assigned a 20% range of motion impairment rating and a 6% impairment rating under Section 3.1j of the AMA Guides for joint crepitus and clicking, for a combined total 25% upper extremity rating (15% whole person). Regarding post-MMI medical treatment, Dr. Dillon opined that further follow-up with Dr. Hewitt is indicated, the frequency of which was dependent on the nature of Claimant's symptoms. Dr. Dillon remarked, "The need for further treatment and the nature of that treatment would be best judged by Dr. Hewitt. Any treatment for issues related to the occupational injury in question or the surgery performed should be considered covered under this claim"

43. On April 7, 2017, Timothy O'Brien, MD conducted an Independent Medical Examination ("IME") of Claimant at the request of Respondents. Dr. O'Brien issued an IME Report dated April 17, 2017. Dr. O'Brien performed a medical record review and physically examined Claimant. Regarding the mechanism of injury, Claimant reported that he slipped, landed on his left hand, "and then the extremity was forcefully abducted by his fall against the ground when he fell backwards onto the posterior shoulder…" Claimant complained of stiffness, pain, weakness, and loss of endurance and strength. Claimant reported to Dr. O'Brien that he never regained motion in his shoulder.

44. On physical examination, Dr. O'Brien noted no tenderness in the cervical spine, thoracic spine or scapular area, but pain in the anterior subacromial arch on the left. Dr. O'Brien further noted no atrophy in the supraspinatus or infraspinatus fossa, and normal and symmetric muscle bulk and tone. Claimant's arms and forearms measured equal bilaterally. Claimant's grip strength on the right was 38 pounds and 8-10 pounds on the left. Dr. O'Brien documented, "Strength testing of the biceps and tricpes as well as the wrist dorsiflexors and volar flexors was associated with profound clapsed-knife effort on the left. This finding was not noted on the right." Dr. O'Brien noted the following active range of motion measurements on the left: abduction to 85 degrees, forward elevation to 90 degrees, external rotation to 65 degrees in abduction and 50 degrees at

Claimant's side, internal rotation to 45 degrees in abduction and to the posterior-superior iliac spine. Dr. O'Brien further noted that there was no palpable or audible crepitus of either shoulder during active range of motion testing or with provocative testing.

45. Dr. O'Brien noted that provocative tests were difficult to analyze on the left because of splinting and "an inability to abduct the arm to even 80 degrees on the left. [Claimant] also indicated he was somewhat apprehensive about performing some of these tests due to pain." Dr. O'Brien documented that Claimant was able to elevate his left arm to 160 degrees and right arm to 180 degrees in forward elevation with wall-walking.

46. Dr. O'Brien opined that Claimant did not suffer a dislocation, but instead suffered a minor work-related left shoulder sprain or strain. Dr. O'Brien remarked that, if Claimant had suffered a dislocation, it would be "virtually impossible" to have full range of motion, which was noted in the November 12, 2014 emergency room record. Dr. O'Brien stated that acute shoulder dislocations are incredibly painful and associated with profound functional impairment until the dislocation has been reduced. Dr. O'Brien further stated that the CT scan and MRI prove that there was no substantial acute intra-articular injury, as there was no evidence of intra-articular swelling and hydration changes, or intra-articular bleeding.

47. Dr. O'Brien further opined that the industrial injury did not substantially aggravate or accelerate Claimant's pre-existing and longstanding multidirectional instability of the left shoulder. Dr. O'Brien contended that the December 30, 2014 MRI scan demonstrated chronic longstanding changes that were the result of Claimant's age and prior history of dislocation and surgical intervention. Dr. O'Brien further opined that Claimant's minor sprain/strain healed on or before December 30, 2014, and that Claimant's ongoing subjective complaints, medical attention, and exam findings after December 30, 2014 were of "reflection of Claimant's personal issues and are not causally related to the work incident."

48. Dr. O'Brien noted that it was difficult to ascertain Claimant's true level of function due to the presence of nonorganic factors in his examination. Dr. O'Brien concluded that the only way to explain the absent of atrophy but presence of significant side-to-side differences in strength was to implicate lack of effort and nonorganic factors. Dr. O'Brien stated,

> If [Claimant] cannot be relied upon to provide a full effort during strength testing, then his effort during range of motion must also be called into question. In fact, once nonorganic factors are documented, the utilization on any exam outcomes or subjective input as a foundation for clinical thinking or decisions should be abandoned as there is not way (*sic*) to trust those 'claimant-dependent' inputs as valid.

49. Dr. O'Brien opined that Dr. Dillon's findings were inaccurate because Dr. Dillon "relied on a claimant who was misrepresenting his true level of pain and function." Dr.

O'Brien argued that Dr. Dillon's impairment rating based on a side-to-side difference in range of motion is not valid because the absence of atrophy during his exam of Claimant proves that there was no disuse or stiffness. Dr. O'Brien further concluded that crepitus has no correlation to function.

50. Claimant testified that Dr. O'Brien did not measure his range of motion or his biceps.

51. Dr. O'Brien testified at hearing on behalf of Respondents as an expert in orthopedics and orthopedic surgery. Dr. O'Brien is board certified in orthopedic surgery and Level II accredited by the Colorado Division of Workers' Compensation. Dr. O'Brien testified consistent with his IME report. Dr. O'Brien again opined that Claimant suffered a minor shoulder sprain or strain and no acute dislocation, noting Claimant had normal to near-normal range of motion after the work injury. Dr. O'Brien stated that it was not medically probable for the Hill-Sachs lesion to have been caused by Claimant's injury, as there were no acute signs of bleeding.

52. Dr. O'Brien stated that he had since reviewed Claimant's medical records pre-work injury, and that such medical records evidenced bilateral multidirectional instability. Dr. O'Brien contended that the surgery performed by Dr. McElhinney failed to correct posterior instability and pre-disposed Claimant to future shoulder instability.

53. Dr. O'Brien stated that he does not believe Claimant's reports to him and Dr. Dillon regarding his functioning is accurate. Claimant's report that his symptoms had not significantly subsided since shortly after the January 2016 surgery is inconsistent with the medical records. Dr. O'Brien contended that there was no physiologic, medical or objective evidence for Claimant's escalating pain complaints and implicated non-organic factors. Exam findings can only be explained by implicating non-organic factors.

54. Dr. O'Brien testified that he did, in fact, measure Claimant's arm girth. Dr. O'Brien testified that there was no explanation for the discrepancy in grip strength and for the absence of atrophy, which would be expected if Claimant had not be able to use his arm normally. Dr. O'Brien stated that he was unable to complete a full shoulder exam because Claimant indicated the maneuvers were too painful. Dr. O'Brien testified that the range of motion exhibited at his exam was dramatically less than the prior three physicians, and contended that it was not medically probable that strength and range of motion in a healthy young man would deteriorate in five months without further injury. Dr. O'Brien stated that there was a discrepancy between Claimant's active range of motion and passive range of motion during his exam, and opined that there should be symmetric strength and range of motion based on the absence of atrophy.

55. Dr. O'Brien stated that Claimant's July 8, 2016 and August 24, 2016 range of motion measurements were near-normal, with no mention of crepitus. Dr. O'Brien contended that there is no physiological or objective evidence for Claimant's subsequent loss of function.

56. Dr. O'Brien opined that Dr. Dillon was clearly wrong in assigning a 20% impairment rating. Dr. O'Brien stated that DIME physicians are required to review historical medical records and that there is no indication Dr. Dillon reviewed records from Claimant's prior shoulder injuries. Dr. O'Brien further opined that Dr. Dillon discounted the presence of nonorganic factors and historical inconsistency from Claimant. Further, using subjective complaints and exam performance where reliability is in question creates inaccuracy in assigning an impairment rating. The prior records would be important to the causation analysis and impairment rating.

57. Dr. O'Brien further testified that Dr. Dillon was clearly wrong in assigning an impairment rating for joint crepitation under the AMA Guides.

58. Dr. O'Brien again opined that Claimant did not sustain any permanent impairment beyond the left arm at the shoulder as a result of the work incident. Dr. O'Brien stated that it is very common to see a small loss of range of motion after a stabilization procedure and opined that Claimant sustained a 5% scheduled impairment for range of motion deficits.

59. The ALJ credits the medical records and the opinions of Drs. O'Brien, Villavicencio and Hewitt over the conflicting opinion of Dr. Dillon as to Claimant's permanent physical impairment.

60. The ALJ finds Claimant's testimony regarding his physical examinations and his function to not be credible or persuasive.

61. Respondents have overcome the DIME physician's opinion on permanent impairment by clear and convincing evidence.

62. Based on the preponderance of the evidence, Claimant is assigned a 5% scheduled upper extremity permanent impairment rating.

63. Claimant has failed to establish by a preponderance of the evidence that the situs of functional impairment is beyond the arm at the shoulder.

64. Claimant has failed to establish by a preponderance of the evidence that he requires post-MMI treatment other than as recommended by the ATP.

65. Evidence and inferences contrary to these findings were not credible and persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, Section 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must

be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1), C.R.S. Generally, the claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado*, 717 P.2d 1000 (Colo. App. 1986).

The ALJ's resolution of issues will be affirmed if supported by substantial evidence in the record. Section 8-43-301(8), C.R.S.; *City and County of Denver School District 1 v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). Substantial evidence is that quantum of probative evidence, which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

Overcoming the DIME Opinion on Permanent Impairment

A DIME physician must apply the AMA Guides when determining the claimant's medical impairment rating. Section 8-42-101(3.7), C.R.S.; Section 8-42-107(8)(c), C.R.S. The finding of a DIME physician concerning the claimant's medical impairment rating shall be overcome only by clear and convincing evidence. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

As a matter of diagnosis the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office,* 78 P.3d 1150 (Colo. App. 2003). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590 (Colo. App. 1998). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000).

In *Wackenhut Corp.,* the court noted that under the AMA Guides the "evaluation or rating of impairment is an assessment of data collected during a clinical evaluation and the comparison of those data to the criteria contained in the Guides." Consistent with this concept the Industrial Claim Appeals Office has upheld a DIME physician's impairment rating that excluded "valid" range of motion deficits from an impairment rating based on the determination that the range of motion deficits did not correlate with clinical observations and data. *Adams v. Manpower,* W.C. No. 4-389-466 (I.C.A.O. August 2, 2005); *Garcia v. Merry Maids,* W.C. No. 4-493-324 (I.C.A.O. August 12, 2002).

The questions of whether the DIME physician properly applied the AMA Guides, and ultimately whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office, supra*. Not every deviation from the rating protocols of the AMA Guides requires the ALJ to conclude that the DIME physician's rating has been overcome as a matter of law. Rather, deviation from the AMA Guides constitutes evidence that the ALJ may consider in determining whether the DIME physician's rating has been overcome. *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117 (Colo. App. 2003); *Logan v. Durango Mountain Resort,* W.C. No. 4-679-289 (ICAO April 3, 2009). Moreover, a mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. *See Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO March 22, 2000).

The ALJ concludes Respondents have overcome the DIME physician's opinion on permanent impairment by clear and convincing evidence. Dr. Dillon's clinical findings were not in substantial accordance with the information in the record. Chapter 1.2 of the AMA Guides states, in part, "If the findings of the impairment evaluation are not consistent with those in the record, the step of determining the percentage of impairment is meaningless and should not be carried out until communication between the involved physicians or further clinical investigation resolves the disparity." Claimant's active range of motion measurements leading up to and at the time of MMI were significantly greater than Dr. Dillon's measurements approximately five to six months later. At the time Claimant was placed at MMI by Dr. Villavicencio, Claimant rated his pain at 1/10, and his active range of motion measurements were obtained without pain.

Claimant's reports to Dr. Dillon regarding his functional status and lack of improvement post-surgery are inconsistent with the medical records and his reports to other physicians.

Dr. O'Brien credibly testified that there is no physiologic explanation for Claimant's decrease in function from MMI to Dr. Dillon's examination. Furthermore, Dr. O'Brien credibly testified that Dr. Dillon's own findings of normal muscle tone and strength contradict her range of motion measurements. Dr. Dillon did not address the significant discrepancies in range of motion measurements nor did she address the inconsistency in Claimant's subjective reports to her and what was contained in the medical records. Although Dr. Dillon noted Claimant reported suffering a prior dislocation and recurrent dislocation and surgery, there is no indication Dr. Dillon reviewed medical records from prior to the work injury, which Dr. O'Brien credibly testified is imperative to the role of the DIME physician in both the causation and impairment rating analysis. Dr. O'Brien credibly and persuasively testified that both his and Dr. Dillon's findings on clinical examination can only be explained by non-organic factors.

Additionally, Dr. Dillon provided no explanation as to why she assigned an impairment rating for both range of motion limitations and joint crepitation. Section 3.1j of the AMA Guides states,

> Joint crepitation with motion can reflect synovitis or cartilage degeneration…*The evaluator must use judgment and avoid duplication of impairments when other findings, such as synovial hypertrophy, carpal collapse with arthritic changes, or limited motion are present* [emphasis not added]. The latter findings may indicate a greater severity of the same underlying pathological process and take precedence over joint crepitation, which should not be rated in these instances.

While Section 3.1j does indicate that it is within the DIME physician's judgment to assign an impairment rating for joint crepitation, it clearly cautions against assigning duplicate impairment ratings for other findings. Dr. Dillon provided no explanation as to her reasoning for assigning an impairment rating for both limited motion and joint crepitation. Dr. O'Brien credibly opined that Dr. Dillon erred in assigning an impairment rating for joint crepitation in Claimant's circumstances. Based on the totality of the evidence, Respondents have established that it is highly probable that Dr. Dillon's permanent impairment rating is incorrect.

Once the ALJ determines that the DIME's rating has been overcome, the claimant's correct medical impairment then becomes a question of fact and the ALJ is free to calculate the claimant's impairment rating based upon the preponderance of the evidence. *See Garlets v. Memorial Hosp.*, W.C. No. 4-336-566 (ICAO Sept. 5, 2001). "The only limitation is that the ALJ's findings must be supported by the record and consistent with the AMA Guides and other rating protocols." *Deleon v. Whole Foods Market, Inc.*, W.C. No. 4-600-477 (ICAO Nov. 16, 2006).

As Respondents have overcome Dr. Dillon's impairment rating, the ALJ is charged with calculating Claimant's impairment rating based on the preponderance of the evidence. As previously discussed, Dr. O'Brien also credibly testified that Dr. Dillon erred in assigning an impairment rating for joint crepitation. Claimant's ATP, Dr. Villavicencio, determined Claimant sustained a 5% upper extremity impairment for loss of range of motion. Dr. Villavicencio's opinion is supported by the medical records and Dr. Hewitt's clinical findings. Dr. O'Brien credibly testified that it is very common to see a small loss of range of motion after a stabilization procedure, and agreed with an impairment rating of 5%. Accordingly, Respondents have proven that it is more likely than not that Claimant sustained a 5% upper extremity impairment rating for loss of range of motion.

Medical Benefits

The respondents are liable to provide such medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury." Section 8-42-101(1)(a), C.R.S. Colorado courts have ruled that the need for medical treatment may extend beyond the point of MMI where the claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or prevent further deterioration of her condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609 (Colo. App. 1995).

In cases where the respondents file a final admission of liability admitting for ongoing medical benefits after MMI they retain the right to challenge the compensability, reasonableness, and necessity of specific treatments. *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Ford v. Regional Transportation District,* W.C. No. 4-309-217 (ICAO February 12, 2009). The question of whether the claimant proved that specific treatment is reasonable and necessary to maintain his or her condition after MMI or relieve ongoing symptoms is one of fact for the ALJ. *See Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

As found, Claimant has failed to prove by a preponderance of the evidence that he requires other medical treatment to maintain his condition at MMI other than as recommended by the ATP. Dr. Dillon opined that any further treatment would be best judged by Dr. Hewitt. Dr. Hewitt and Dr. Villavicencio recommended Claimant receive a six-month gym membership and attend one to two orthopedic follow-up appointments over the course of the year as maintenance care. Claimant has not established that is more likely than not that he requires post-MMI medical treatment other than as recommended by his ATP.

Conversion of Medical Impairment Rating

Section 8-42-107(1)(a), C.R.S., provides that when an injury results in permanent medical impairment and the "injury" is enumerated in the schedule set forth in subsection (2) of the statute, "the employee shall be limited to the medical impairment benefits as specified in subsection (2)." If the claimant sustains an injury not found on the schedule, Section 8-42-107(1)(b), C.R.S. provides the claimant shall "be limited to medical impairment benefits as specified in subsection (8)," or whole person medical impairment benefits. As used in these statutes the term "injury" refers to the part or parts of the body that sustained the ultimate loss, not necessarily the situs of the injury itself. Thus, the term "injury" refers to the part or parts of the body that have been functionally disabled or impaired. *Warthen v. Industrial Claim Appeals Office,* 100 P.3d 581 (Colo. App. 2004); *Strauch v. PSL Swedish Healthcare System*, 917 P.2d 366 (Colo. App. 1996). Under this test the ALJ is required to determine the situs of the functional impairment, not the situs of the initial harm, in deciding whether the loss is one listed on the schedule of disabilities. *Strauch v. PSL Swedish Healthcare System, supra.* Under the "situs of the functional impairment" test there is no requirement that the functional impairment take any particular form. Therefore, pain and discomfort that limit the claimant's ability to use a portion of the body may constitute functional impairment. *Agliaze v. Colorado Cab Co.,* W.C. 4-705-940 (ICAO April 29, 2009); *Johnson-Wood v. City of Colorado Springs,* W.C. 4-536-198 (ICAO June 20, 2005); *Vargas v. Excel Corp.,* W.C. 4-551-161 (ICAO April 21, 2005). The ALJ may also consider whether the injury has affected physiological structures beyond the arm at the shoulder. *Brown v. City of Aurora,* W.C. 4-452-408 (ICAO October 9, 2002).

Section 8-42-107(2)(a), C.R.S. provides for scheduled compensation based on "loss of an arm at the shoulder." The claimant bears the burden of proof by a preponderance of the evidence to establish functional impairment beyond the arm at the shoulder and the consequent right to permanent partial disability benefits awarded under Section 8-42-107(8)(c), C.R.S. Whether the claimant met the burden of proof presents an issue of fact for determination by the ALJ. *Delaney v. Industrial Claim Appeals Office,* 30 P.3d 691 (Colo. App. 2001); *Johnson-Wood v. City of Colorado Springs, supra.*

"Functional impairment" is distinct from physical (medical) impairment under the AMA Guides and as noted, the site of functional impairment is not necessarily the site of the injury itself. The site of functional impairment is that part of the body which has been impaired or disabled. *Strauch, supra.* Physical impairment relates to an individual's health status as assessed by medical means. On the other hand, disability or functional impairment pertains to a person's ability to meet personal, social, or occupational demands, and is assessed by non-medical means. Consequently, physical impairment may or may not cause "functional impairment" or disability. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office*, 984 P.2d 656, 658 (Colo. App. 1998). Physical impairment becomes a disability only when the medical condition limits the claimant's capacity to meet the demands of life's activities. *Lambert & Sons, Inc., supra.* Symptoms of pain do not automatically rise to the level of a functional impairment. To the contrary, there must be evidence that such pain limits or interferes with a claimant's

ability to use a portion of his body to be considered a functional impairment. *See Mader v. Popejoy Construction Co., Inc.,* W.C. No. 4-198-489 (August 9, 1996). Thus, in order to determine whether permanent disability should be compensated as physical impairment on the schedule or as functional impairment as a whole person, the issue is not whether Claimant has pain, but whether the injury and the associated pain caused thereby has impacted part of Claimant's body which limits his "capacity to meet personal, social and occupational demands." *Askew v. Industrial Claim Appeals Office*, 927 P.2d 1333 (Colo. 1996); *Bernal v. CMHIP*, W.C. No. 4-956- 645 (October 5, 2015).

As found, Claimant has failed to establish by a preponderance of the evidence that he his scheduled upper extremity impairment rating should be converted to a whole person rating. There is insufficient credible and persuasive evidence establishing that Claimant suffered functional impairment beyond the left arm at the shoulder. Claimant's testimony as to his functional limitations was not credible. As previously discussed, there were significant discrepancies in Claimant's reported functioning and clinical findings between the time of MMI and the DIME. Dr. O'Brien credibly testified that Claimant's presentation is due to non-organic factors. Dr. O'Brien credibly testified that atrophy would be expected if Claimant's function was limited as reported. No atrophy was noted by Dr. O'Brien, Dr. Dillon, Dr. Hewitt or Dr. Villavicencio. There is insufficient credible and persuasive evidence Claimant sustained functional impairment beyond the arm at the shoulder. As such, Claimant has failed to prove that it is more likely than not that his scheduled impairment rating should be converted to a whole person impairment rating.

ORDER

It is therefore ordered that:

1. Respondents have overcome the DIME physician's permanent impairment rating by clear and convincing evidence. Based on the preponderance of the evidence, Claimant is assigned a 5% scheduled upper extremity rating.

2. Claimant has failed to establish by a preponderance of the evidence that he requires post-MMI medical treatment other than as authorized by the ATP. Claimant's claim for additional medical benefits not previously admitted is denied and dismissed.

3. Claimant has failed to establish by a preponderance of the evidence that his scheduled upper extremity impairment rating should be converted to a whole person impairment rating.

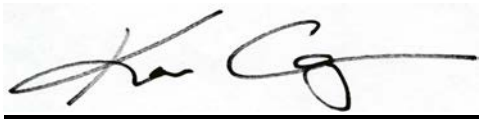
4. Insurer shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver,

CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 18, 2017



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Is Claimant entitled to a Permanent Partial Disability rating, based upon his recent Division Independent Medical Examination ("DIME")?

FINDINGS OF FACT

Based upon the evidence presented at Hearing, the ALJ makes the following Findings of Fact:

1) On the date of the hearing Claimant was 31 years of age and was a high school graduate, having graduated from high school in 2004.

2) Claimant testified that he has no medical training or medical background and simply followed the direction of the authorized treating physician's (ATP's) at all times.

3) Claimant worked for Respondent for approximately 3½ years as an "Assembly Technician" working up to 16 hours per day, five days a week. Claimant testified that he very much enjoyed his work and looked forward to a long term career with Respondent employer.

5) The listed date of injury is April 15, 2015, even though Claimant testified his symptoms started earlier.

6) Claimant was terminated by Respondent employer on or about October 6, 2016, as he was no longer capable of performing the work required.

7) Claimant testified as to the strenuous and manual nature of the job he had assembling chiller units and then fabricating/installing aluminum and copper condenser tubes. (Ex. 3) Claimant also operated a press to manufacture the tubes that were then "stuffed" into the chiller cabinets. Such work was done on a production basis and Claimant testified that he was required to use a battery-operated hand held driver to install one and a half inch (1½) self-tapping the bolts utilizing the battery operated driver. Each chiller cabinet required 38 bolts and a total of 16 or more units were manufactured during each shift. In performing such functions, Claimant testified that his hands and wrists were regularly torqued when the bolts were driven into the chiller cabinets for assembly. Claimant also testified that reaching into the chiller cabinets to install the tubes required him to contort his hands, wrists and arms in awkward positions. The actual tubes were anywhere from 8 to 21 feet long and required significant force in terms of pulling and pushing.

8) Claimant began feeling the initial onset of symptoms in late 2014 and was urged to simply use topical creams that were supplied by the employer.

9) Claimant testified that he had no pre-existing conditions including no prior traumatic injuries or no evidence of underlying chronic conditions that affected him before his work related symptoms began. In fact, Claimant began his career with Respondent employer through a temporary service that had screened him for such conditions before he was hired by Respondent employer.

10) After approximately eight (8) months, Claimant was finally referred to ATP, Dr. Terrance Lakin. Dr. Lakin initially diagnoses 1) Hx complex regional pain syndrome of upper limbs bilateral; 2) Hx of carpal tunnel. (Ex. D)

11) ATP Dr. Lakin referred Claimant to Dr. Karl Larsen who subsequently performed surgery on his right wrist on August 4, 2015 and on his left wrist on October 20, 2015.

12) Claimant testified that following the two surgeries his condition began to gradually worsen. He described the pain to Dr. Larson as a nine (9) on a scale of 1 to 10. Claimant testified that as his symptoms began to increase he was unable to use either upper extremity for almost any activities including dressing, personal hygiene, activities of daily living and even the lifting and diapering of his one year old child.

13) Claimant testified that he then developed a severe anxiety/depression due to the chronic pain and that his ATP, Dr. Lakin referred him to Dr. Gary Nueger, psychologist and Dr. Gary Gutterman, psychiatrist.

14) In a letter dated April 28, 2015, Dr. Lakin responded to a fax from Respondent's adjuster stating that:

> "It is my opinion that the guidelines are extremely helpful and educational and I utilize them frequently when appropriate but certainly no manual or algorithm can accommodate for every specific patient or mechanism of injury. When patients present that do not fit the guideline, I use reasonable and appropriate education, training and experience."

He goes on to state:

> "He has a working diagnosis of bilateral carpal tunnel syndrome based on clinical exam findings. His left hand demonstrates carpal tunnel syndrome on nerve conduction studies that were done January 30, 2015. MRI of his left wrist performed on January 5, 2015, indicated mild intercarpal arthrosis, anomalous position of the median nerve and carpal tunnel which can be associated with carpal tunnel syndrome, flexor tendon, hyper spasticity and neurological symptoms." (Ex. 1 p. 2).

Further down, Dr. Lakin states:

> Job duties meet the following on risk factor definitions from the table. My opinion is that he would reach awkward posture and repetition duration equating to six hours of supination –pronation with 10 cycles, 30 seconds or less for posture is used to rate at least 50% of a task cycle. He therefore would have a primary risk factor that is physiologically related to diagnosis risk factor."

Lastly, he states:

> "He appears to be much more symptomatic in both hands then when the study was done in January 2015." (Ex. 1)

Later, however, once Dr. Lakin obtained all records pertinent, he placed Claimant at MMI on 9/16/16, stating:

> Released from WC Care. Issue is Non Occupational problem. Transition to primary care provider and encourage to obtain referral to same or similar specialists. (Ex. 9 p. 51).

15) On referral from Dr. Lakin, Claimant saw Gretchen Brunworth, MD. In turn, Dr. Brunworth referred Claimant to Barbara Goldstein, MD, an Assistant Professor of Medicine at National Jewish for a rheumatologic consult.

16) Claimant saw Dr. Goldstein on August 19, 2016. In her report, Dr. Goldstein summarized Claimant's care and treatment to date. Such included the fact that he was, based on a workup, HLA-B27 positive and he had an abnormal MRI (of his hands). (Ex. H).

17) Claimant's physical exam revealed good pulses and no edema in his extremities, along with shoulders, elbows and hands without any obvious warmth or swelling in them. He also had fairly good range of motion, although tender at the wrists on palpation. (Ex. H).

18) Dr. Goldstein then referenced lab results (which Dr. Hall admitted he did not have) from March and June 2016. (Ex. H).

19) Based on her exam and review of extremely relevant records including lab results, it was her opinion, as a specialist in the field, that Claimant likely suffered from inflammatory arthritis unrelated to his carpal tunnel syndrome. She then recommended follow up testing and care, which Claimant admitted he has so far failed to get. (Ex. H).

20). After his examination with Dr. Goldstein, Claimant saw Dr. Brunworth on August 22, 2016. A few days before, Dr. Brunworth had spoken with Dr. Goldstein about her findings and opinions. It was Dr. Goldstein's opinion, as a specialist in the

field, that Claimant had some type of arthritis and he needed to see a rheumatologist. At the August 22, 2016 visit, Dr. Brunworth told Claimant he'd developed arthritis that was not caused by his work activities and he therefore needed to seek treatment under his private insurance and get a referral to a rheumatologist. She assured him the rheumatologist had excellent medications that should be able to help him. Claimant admitted he failed to seek such care. (Ex. G).

21) On September 15, 2016, Dr. Lakin placed Claimant at MMI, at full duty, with no restrictions and no follow up care for his work related injury i.e. bilateral carpal tunnel syndrome. He was to transition to a specialist for treatment of his (non-work related) arthritis. (Ex. D, pp. 7–11).

22) Dr. Timothy Hall performed a Division Independent Medical Examination (DIME) on February 22, 2017, that outlined all of Mr. Ortiz complaints and his medical history. His impressions include: overuse syndrome, bilateral upper extremity's primarily involving hands with the following specific diagnosis: 1) carpal tunnel syndrome bilaterally; 2) ulnar neuritis; 3) De Quervains tenosynovitis; 4) mild or medium epicondylitis bilaterally and 5) mood and sleep disturbance related to chronic pain and functional deficits (depression/anxiety). Dr. Hall further opined that he did not feel that Claimant met the criteria for chronic regional pain syndrome. Dr. Hall did not dispute Dr. Lakin's placement of Claimant at MMI on September 16, 2016, albeit for different reasons. Dr. Hall simply opined that there was "simply nothing more to offer him [Claimant]". (Ex. 11 pp. 70-71).

23) Dr. Hall testified in person at the hearing and stated his differential diagnosis as a "cumulative trauma disorder". When he was asked: it is your belief that his work activities at Trane doing this assembly type work is why he is in this situation he is in now? His response was "yes". He then went onto outline the methodology he used to apply the rating system based upon his experience as a Physiatrist with over 35 years of experience.

24) Dr. Hall also opined on the issue of an underlying arthritic condition that "people with rheumatoid arthritis usually do not have numbness, tingling, stabbing, shooting, burning hyper trophic pain. They have joint pain and it is a very specific type of pain. He went on to state "I have not seen any convincing evidence that he has a generalized auto immune arthritic process. So I would assign those findings to change locally in the wrist as part of the whole cumulative syndrome".

25) On exam, Dr. Hall noted Claimant's pain complaints were diffuse, meaning they were not specific to his fingers, knuckles or hands, but rather more of an allover complaint. His physical exam also revealed pain complaints that were not in a particular dermatomal distribution, but were instead rather diffuse. (Ex. E). He testified Claimant had an unusual presentation; that the objective EMG test results are not 'all that bad'; that he really does not know exactly what Claimant has (for his injuries) and that this case is a really unusual situation.

26) Dr. Hall's February 22, 2017, DIME report assigns a bilateral 21% upper extremity impairment which he then converts to a 24% whole person impairment rating.

27) Dr. Joseph Sollender consulted for Respondent on this case, beginning in 2016. He then performed an Independent Medical Examination ("IME") on May 18, 2017. He provided a detailed analysis of a Job Demands Analysis which had been performed for Employer. He concluded that the carpal tunnel syndrome risk factors did not apply to Claimant, even based upon working 11 to 13 hour days. He noted that Dr. Hall, in his DIME report, did not have access to this document; nor did Dr. Hall have the closing notes from Dr. Lakin, when he placed Claimant at MMI, and concluded that the case was non-occupational.

28) Dr. Sollender further noted that Dr. Hall did not have the blood work from Dr. Goldstein, and the follow-up with Dr. Brunworth. Dr. Sollender further noted that

> If a person is positive for HLA-B27 and has symptoms such as chronic pain, inflammation, and/or degenerative changes to his bones (as seen on X-ray), then it supports a diagnosis of ankylosing spondylitis, reactive arthritis, or another autoimmune disorder that is associated with the presence of HLA-B27 (Ex. 5 p. 27)

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1).* Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The ALJ, as the fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990) Moreover, the ALJ may accept all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,*

165 Colo. 504, 441 P.2d 21 (1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion). In this case, while the parties agree that Claimant has reached MMI, the rating process used by Dr. Hall has come into question.

C. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Overcoming the DIME Opinion of Dr. Hall-Generally

D. A DIME physician's findings of causation, MMI and impairment are binding on the parties unless overcome by "clear and convincing evidence." Section 8-42-107(8)(b)(III), C.R.S.; *Qual-Med v. Industrial Claim Appears Office*, 961 P.2d 590 (Colo. App. 1998); *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinion concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995) In other words, to overcome a DIME physician's opinion regarding MMI, permanency or the cause of a particular component of a claimant's medical condition, the party challenging the DIME must demonstrate that the physicians determinations in these regards are highly probably incorrect and this evidence must be "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo. App. 2002). *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appears Office, supra.*

E. In resolving the question of whether the DIME physician's opinions have been overcome, the ALJ may consider a variety of factors including whether the DIME physician properly applied the AMA Guides and other rating protocols. *See Metro Moving and Storage Co. v Gussert,* 914 P.2d 411 (Colo. App. 1995); *Wackenhut Corp. v. Indus. Claim Appeals Office*, 17 P.3d 2002 (Colo. App. 2000); *Aldabbas v. Ultramar Diamond Shamrock*, W.C. No. 4-574-397 (ICAO August 18, 2004). The ALJ should also consider all of the DIME physician's written and oral testimony. *Lambert and Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998).

Has Claimant initially proven that his condition affects the Whole Person?

F. Dr. Hall acknowledged (per Desk Aid #11) that the basis of his rating, cumulative trauma staging, is only to be "used to rate permanent impairment of specific disorders when no other rating is available" in the AMA Guides. Dr. Hall however, testified that the conditions he rated Claimant for (neuritis and tendonitis) are individually ratable under the AMA Guides. (Ex. J, pp. 8 - 9).

G. If the DIME physician offers ambiguous or conflicting opinions concerning MMI *or* impairment, it is for the ALJ to resolve the ambiguity and determine the DIME physician's true opinion as a matter of fact. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000); *Stephens v. North & Air Package Express Services*, W. C. No. 4-492-570 (February 16, 2005), aff'd, *Stephens v. Industrial Claim Appeals Office* (Colo. App. 05CA0491, January 26, 2006) (not selected for publication). In so doing, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office*, 984 P.2d 656, 659 (Colo. App. 1998). A DIME physician's finding of MMI and permanent impairment consists not only of the initial report, but also any subsequent opinion given by the physician. See *Andrade v. Industrial Claim Appeals Office*, 121 P.3d 328 (Colo. App. 2005)(ALJ properly considered DIME physician's deposition testimony where he withdrew his original opinion of impairment after viewing a surveillance video); see also, *Jarosinski v. Industrial Claim Appeals Office*, 62 P.3d 1082 (Colo. App. 2002)(noting that DIME physician retracted original permanent impairment rating after viewing videotapes showing the claimant performing activities inconsistent with the symptoms and disabilities she had reported).

H. *DIME provisions do not apply to the rating of scheduled injuries.* See *Egan v. Industrial Claim Appeals Office,* 971 P.2d 664 (Colo. App.1998) Hence, where the impairment rating attributable to a scheduled injury is in dispute, the Claimant is not required to obtain a DIME to challenge an admission but may set the matter for a hearing at which the extent of permanent impairment may be litigated. *McCormick v. Exempla Healthcare* W. C. No. 4-594-683 (January 27, 2006). In this matter, Claimant's injuries (bilateral carpal tunnel syndrome) are solely on the schedule. Claimant has not shown, by a preponderance of the evidence, *and as a threshold matter*, that his injuries affect the whole person. As such, Dr. Hall's PPD opinion is merely advisory.

Has Claimant proven Causation (and thus an extremity rating), by a Preponderance of the Evidence?

I. Although the opinions of a DIME physician often carry presumptive weight, no presumptive weight is afforded a DIME physician opining about scheduled injuries. Section 8-42-107(8), C.R.S. 2014, requires a party challenging a DIME for non-scheduled injuries to overcome the DIME opinion by clear and convincing evidence. The statute does not attach a commensurate burden of proof for scheduled injuries, which are set out in section 8-42-107(2). See *Delaney v. Indus. Claim Appeals Office*, 30 P.3d 691, 693 (Colo. App. 2000) (recognizing that the requirement to

overcome a DIME opinion by clear and convincing evidence applies “only to non-scheduled impairments”); see also *Egan v. Indus. Claim Appeals Office*, 971 P.2d 664, 665-66 (Colo. App. 1998).

J. Dr. Hall’s PPD opinions do not follow the mandate that cumulative trauma staging is only used to rate permanent impairment of specific disorders when no other rating is available in the AMA Guides.

K. Thus, Dr. Hall’s opinions on PPD are not afforded the enhanced burden of proof to overcome. “Although the Medical Treatment Guidelines are not part of the AMA Guides, they may be relevant to the impairment rating under consideration by the ALJ. A physician's application of those Guidelines when assessing an impairment rating, goes to the weight the ALJ gives to an impairment rating. *Ortiz v. Service Experts, Inc*., W.C. No. 4-657-974 (January 22, 2009) (ALJ credited impairment rating of physician applying impairment rating tips).

L. As noted, Dr. Hall did not have complete information when he conducted the DIME. For reasons entirely unclear, Dr. Hall did not have the Dr. Lakin's notes for almost one year leading up to the DIME, the last being March 10, 2016. Up through that date, Dr. Lakin still thought it was cumulative trauma. Much changed, and significantly, after 3/10/16; most notably the likely diagnosis of rheumatoid arthritis by Dr. Goldstein. Dr. Lakin referenced this in his closing notes when he placed Claimant at MMI, and closed as non-occupational. Dr. Hall did not view these critical records, which existed at the time of his DIME. Moreover, the records make clear that Claimant was informed of this unfortunate news by Drs. Goldstein and Brunworth, with recommendations for treatment options. Instead, Dr. Hall was left the impression by Claimant that while he had seen these physicians, he was not told of this diagnosis by them. Dr. Hall made clear in his report he had not seen any blood work. The blood work existed, along with other critical documents. While Dr. Hall's DIME report was effectively supplemented by his testimony (having viewed the critical documents only earlier on the date of the hearing), the enhanced burden of proof in overcoming his conclusions is no longer applicable.

M. While Claimant presents as sincere in describing his medical history and the symptoms he has experienced (with the conspicuous exception of telling Dr. Hall at the DIME that 'the rheumatologist [Dr. Goldstein] does not feel he has arthritis'), Claimant is not a medical professional. Further, the medical reports-including Dr. Hall's- are replete with references to Claimant's ongoing fragile emotional state. Thus, the ALJ finds that Claimant's self reported medical history is of limited utility in determining causation.

N. The objective data, while not complete, supports a diagnosis of some form of inflammatory arthritis. Claimant's rheumatoid factor went from 'negative' in 03/2016 to '10' in 06/2016. HLK-B27 was positive in 03/2016. His MRI was also 'concerning' for inflammatory arthritis. That data, along with his history, led Dr. Goldstein to conclude that Claimant suffers from "Probable inflammatory arthritis". This was seconded by Dr. Brunworth a few days later, after which Claimant was encouraged to seek treatment for

this unfortunate condition. As of yet, the record is silent if he has been successful in doing so.

O. This new data also led Dr. Lakin to change his initial conclusion from work-related to non-occupational, and discharge Claimant from his care.

P. Several additional points beyond the objective data are addressed by Dr. Sollender, leading him to a similar conclusion. The Job Demands Analysis led him to conclude that Claimant's duties at Trane included no primary risk factors, and no secondary risk factors beyond the force required to perform his job duties for 4 hours out of 11 to 13 hours per day. Despite Claimant being placed on light work duty post-surgery, his overall hand condition worsened. This, despite the apparent success of the surgery, and sufficient passage of time to allow healing. Dr. Sollender also noted on May 5, 2016 that Claimant's physical exam lacked any objective evidence of carpal tunnel syndrome on the left side, and 'barely' any on the right side. Claimant's complaints are also now diffuse in nature, as also noted by Dr. Hall.

Q. In summary, Claimant has not shown, by a preponderance of the evidence, that the symptoms he is now experiencing arose out of his employment with Trane. Rather, the ALJ finds that, more likely than not, Claimant suffers from some form of inflammatory arthritis which has led to his unfortunate constellation of symptoms.

R. Since causation has not been shown, there is no further need to address an extremity impairment rating.

ORDER

It is therefore ordered that:

1. Claimant request for a Permanent Partial Disability rating is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 18, 2017

Colorado Springs, Colorado 80906

ISSUES

- Whether Claimant proved by a preponderance of the evidence that his left hip condition is related to his April 23, 2014 work-related injury.

- Was the relatedness issue ripe for determination?

PROCEDURAL POSTURE

Respondents filed an Application for Hearing ("AFH") on or about August 2, 2016. The issues on which an adjudication was requested included medical benefits (reasonably necessary) and relatedness of medical care.

At the outset of the hearing, Claimant objected to the medical benefits issue, asserting that no issue was ripe for determination. In particular, Claimant was not seeking to have the proposed left hip surgery, a fact that was communicated to Respondent on the eve of hearing.

Respondent, by and through its attorney of record, averred it had a right to seek a determination of whether Claimant's left hip condition was related to the admitted industrial injury. Respondent confirmed it was not seeking to withdraw the previously filed General Admission of Liability ("GAL"). As noted *infra*, the ALJ determined the issue of relatedness was ripe for determination.

FINDINGS OF FACT

1. Claimant is employed as a supervisor for Employer. In that capacity, he supervised individuals completing various tasks at the wastewater treatment plant. He also performed some of these tasks.

2. Claimant had a history of chronic low back pain, which was documented in the record. Claimant treated with Byron Jones, M.D. for low back pain. [1] Claimant also underwent an MRI of the lumbar spine on November 10, 2011. The films were read by Steven Brown, M.D. Dr. Brown's impression was very small central and left paracentral HNP at L5-S1, which caused mild mass effect on the ventral thecal sac and perhaps on the descending segment of the left S1 nerve root. The L5-S1 disc showed continued degenerative desiccation. Dr. Brown also noted a minimal concentric annular bulge at L4-L5 without lateralized protrusion. The other lumbar discs appeared normal.

[1] Dr. Jones' records were not admitted at hearing. The October 24, 2016 report of Gary Zuehlsdorff, D.O. was admitted into evidence as Exhibit Q. Dr. Zuehlsdorff noted Claimant longstanding low back pain and received injections, physical therapy ("PT"), as well as dry needling treatments. He also took medications and had a pain contract. There was no reference to treatment of the left hip.

3. Records from Exempla Spine Physical Therapy from January 8 through February 26, 2014 were admitted at hearing. The notes from January 28, 2014 referred to bilateral hip pain and Claimant received PT that day. The February 4, 2014 PT note documented that the Claimant's left hip was higher than the right. On February 11, 2014, Claimant responded well to stretching, which helped relieve right hip pain. The February 27, 2014 note referenced decreased hip extension on the right side, which was treated. On March 3, 2014, Claimant reported he was significantly better. The ALJ noted there was no evidence in the record which showed Claimant received treatment for either hip for an extended period of time before the April 22, 2014 injury.

4. No evidence was admitted at hearing which documented any treatment by Claimant for his right or left hip before 2014.

5. On April 22, 2014, Claimant suffered an admitted industrial injury while riding an ATV at work. Claimant testified he was going down to a concrete ramp when a goose flew directly at him. He swerved to the right and the ATV flipped, which caused him to be thrown inside the roll cage. Claimant testified he was moved around within the interior and had to crawl out of the ATV.

6. Claimant testified he felt pain on the right side, as well as his neck, shoulder, upper back and right knee. He also felt right hip pain immediately after the accident.

7. An Employee's Written Notice of Injury to Employer was completed by Claimant on April 23, 2014. Claimant stated the accident occurred when he swerved to avoid an oncoming goose and tipped the ATV onto its right side. Claimant identified soreness in the right shoulder and upper back, as well as a bruised right hip in response to the question about his injuries.

8. On April 23, 2014, Stan Thurber [safety specialist] completed an Employer's First Report of Injury on behalf of Employer. Claimant was noted to be driving an all-terrain vehicle on the property as part of his routine work as a supervisor. Claimant's right shoulder, hip and upper back were listed as the parts of body affected by the accident.

9. That same day, Claimant was evaluated by Monica Fanning, FNP OccMed Colorado, the ATP for Employer. He was complaining of pain in the upper back, left and right shoulder, soreness in the neck and a bruise on the right hip. On examination, tenderness was found across the iliac crest region, although the ilia were fairly symmetrical. Lying straight leg raise test was negative, however, Patrick’s sign was mildly positive to the right. A contusion at the trochanter insertion site was observed. Range of motion ("ROM") was painful, but no popping, clicking or crepitus was noted. The ALJ noted these were objective signs of injury to Claimant’s right hip.

10. NP Fanning's assessment was: motor vehicle accident; thoracic strain and contusion; lumbar spine; left shoulder strain; right shoulder contusion and abrasion;

and blunt head trauma. NP Fanning wrote a prescription for Ibuprofen and Norco, as well as recommending the application of ice to all affected areas. The report was countersigned by Dr. Zuelhlsdorff.

11. Claimant received conservative treatment of the left shoulder, including an injection. Because his symptoms persisted, he underwent surgery, which was performed by James Johnson, M.D. on July 3, 2014. Dr. Johnson's post-operative diagnoses included: subacromial decompression; lateral clavicular resection; positive Bankart repair; extensive bursectomy and debridement of labrum.

12. Dr. Zuelhlsdorff continued his treatment of Claimant, both before and after the shoulder surgery. Medical records from Dr. Zuelhlsdorff were admitted at hearing. These records documented Claimant's progress after the surgery. Complaints referable to the right hip were noted on September 5, 2014, October 3, 2014, and November 4, 2014.[2] Claimant's pain diagrams also documented these symptoms. In the December 8, 2014 note, Claimant reported massage therapy helped the symptoms in his hip and low back.[3] On January 9, 2015, improvement in the right hip was noted after an injection. Claimant did not report symptoms or receive treatment for his left hip during this period of time. The ALJ concluded Claimant had persistent right hip symptoms following the April 22, 2014 injury.

13. Dr. Zuelhlsdorff noted Claimant fell at work on January 23, 2015, which aggravated his left shoulder and right hip, but not dramatically. Clamant continued treatment for the right hip. On February 20, 2015, PT was started for the right hip. On March 11 and 30, 2015, pain was noted in Claimant's right hip around the trochanter insertion site. On April 13, 2015, Dr. Zuelhlsdorff injected Claimant's right hip.

14. On May 22, 2015, Dr. Zuelhlsdorff reevaluated Claimant. At that time, he reported improvement in the left shoulder, but stated the right shoulder was worse. Claimant was scheduled to see Brian White, M.D. on May 27 for his hip, noting the pain had been more on the lateral side and a little more on the left side trochanteric area. On examination, pain was noted in the right shoulder. Dr. Zuelhlsdorff's assessment related to the right hip included the conclusion that the secondary fall on January 23, 2015 led to a slight exacerbation of right and left shoulders and the right hip, which were minimal given the history and examination.

15. On May 27, 2015, Dr. White conducted an initial evaluation of Claimant. The report was prepared by Shawn Karns, MPA, PA-C, who noted Claimant has had pain over the lateral aspect of the right hip since landing on his right side and right hip on April 22, 2014. He had a contusion injury. Claimant underwent a cortisone injection, which gave him 70% relief. Claimant also noted that the left hip had become more painful over the last three months similar to how the right hip had been in the past. He had since developed groin pain. Claimant's chronic low back pain was noted as mild

[2] Exhibit C, pp. 20, 23, 26.

[3] Exhibit C, pp. 29.

and he was able to distinguish this from hip issues. On examination, Claimant's gait was non-antalgic. He had a negative Trendelenburg sign and gait, with excellent lumbar ROM. X-rays showed underlying reactive CAM morphology over bilateral femoral neck, consistent with some underlying femoroacetabular impingement with alpha angles greater than 60°, Tonnis grade of zero bilaterally. Claimant had a small calcification lateral to the acetabulum on the left side, which Dr. White thought could indicate a chronic labral injury. The MRI showed a degenerative labral tear on the right side, as well as some mild trochanteric bursitis.

16. PA-C Karns' assessment was: Claimant was a 48-year-old male with findings consistent with underlying femoroacetabular impingement, degenerative labral tear on the right side; concern for impingement, labral tear on the left as well as bilateral trochanteric bursitis. Dr. White issued an addendum and opined that the majority of Claimant's pain was coming from the joint. He thought it started as a significant contusion injury to the lateral aspect of the hip, but with the impaction injury, Claimant probably injured the joint. He recommended a diagnostic injection to confirm the pain generator. If confirmed, his recommendation was consideration of hip arthroplasty addressing primarily the joint with a femoroacetabular osteoplasty and labral repair versus reconstruction. The ALJ inferred Dr. White was of the opinion Claimant required surgery on the right hip as a result of the April 22, 2014 workplace injury.

17. On August 31, 2015, Claimant underwent right hip surgery, performed by Dr. White. In a note to Dr. Zuelhlsdorff dated September 1, 2015, Dr. White stated he performed a hip arthroplasty, along with a bursectomy and windowing of the iliotibial (IT) band. Dr. White found an extensively torn acetabular labrum and underlying impingement on both sides of the joint. Dr. White noted Claimant had some complaints of pain on the left side, which were primarily of lateral pain. He recommended a steroid injection in the left trochanteric region.

18. On October 26, 2015, Dr. Zuelhlsdorff issued a report entitled Chart Review Report of Causality for Left Hip. Dr. Zuelhlsdorff noted he reviewed the whole chart and was sending the note at the request of Dr. White. Dr. Zuelhlsdorff recounted the treatment history after the April 22, 2014 injured in which Claimant had left shoulder surgery and received treatment for continuing low back and right hip pain. On May 22, 2015, Dr. Zuelhlsdorff noted left hip pain for the first time in the record. The pain was in the left trochanteric area. Dr. Zuelhlsdorff also noted Dr. White documented Claimant complained of progressively worse left hip pain over the last three months in his May 27, 2015 note.

19. Dr. Zuelhlsdorff opined Claimant's left hip condition was work-related. Even though roughly 13 months elapsed from the injury to the time the left hip was first mentioned, Claimant had a very significant mechanism of injury in his rollover accident. Dr. Zuelhlsdorff stated that more likely than not this was a work-compensable claim for the left hip, as Claimant probably injured it during roll-over, which took a while to

manifest, given the flow of the case, the multiple other diagnoses, with the resulting worsening of the left hip over time.[4] The ALJ found this opinion to be persuasive.

20. On November 18, 2015, Claimant underwent a left hip MR arthrogram and diagnostic injection, which were administered by Jeffrey Weingardt, MD. Dr. Weingardt's impression was: subtle tears involving the superior and anterior left acetabular labrum; dysplastic change noted at the anterolateral left femoral head neck junction with minimal underlying bone marrow edema; probable femoral acetabular impingement involving right hip joint; moderate spondylosis at L5-S1; patchy edema noted within the right femoral head extending into the neck of uncertain etiology; small volume right hip joint effusion.[5]

21. A note dated November 19, 2015 prepared by PA-C Karns was admitted into evidence. It referenced a telephone conference with Claimant after Dr. White reviewed the results of the left hip MRI. The films showed that the joint spaces were well-preserved, but Claimant had a labral tear. Claimant underwent a diagnostic injection and his pain was taken away for a short time. PA-C Karns noted Claimant would be a candidate for hip arthroscopy surgery.

22. Claimant for returned to Dr. White on December 8, 2015, which was roughly 3 months post right hip arthroscopy. Dr. White noted the ROM of the right hip was nice and smooth throughout, without any pinching or significant discomfort. Left hip ROM was good overall, but Claimant got significant discomfort with the anterior impingement maneuver. The single leg bridge on the right side demonstrated weakness compared to the contralateral side, which was to be expected at this point. Dr. White's assessment was that Claimant's right hip was doing well post-operatively. He diagnosed continued left hip pain consistent with a femoroacetabular impingement and labral tear. Dr. White noted Claimant was a candidate for left hip arthroscopy surgery, as well as with potential for labral reconstruction on that side.

23. On December 31, 2015, an Amended GAL was filed on behalf of Respondent, admitting for wage and medical benefits.

24. Claimant returned to Dr. White on March 9, 2016. This was approximately six months post the right hip arthroscopy (with labral reconstruction and greater trochanteric bursectomy). Claimant's left side was characterized as getting progressively worse, despite PT. Claimant had no pain on the right side, including the trochanteric region. On the left side, pain was noted with the anterior impingement maneuver. He had no real trochanteric symptoms. Dr. White reviewed x-rays, which showed very similar CAM morphology of the proximal femur on the left side, with a pre-operative alpha angle exceeding 60°. A review of the MRI confirmed a labral tear, very similar labral size, which was very small as seen on the other side. Dr. White's assessment included confirmation that Claimant had done well with the right hip

[4] Exhibit H, p. 63.

[5] The reference to the right hip appears to be a typographic or transcription error,

arthroscopy. He also diagnosed left-sided impingement, with labral tear, but no bursal symptoms. Dr. White opined it was reasonable to move forward with the left hip arthroscopy, femoroacetabular osteoplasty, with labral reconstruction. The ALJ noted Dr. White was of the opinion that Claimant's left hip condition was getting worse at this point in time.

25. On June 23, 2016, Claimant underwent an independent medical examination requested by Respondent, which was performed by Allison Fall, M.D. At the time of the evaluation, Claimant advised Dr. Fall he had complained of left hip pain prior to the surgery on the right hip. He said when he began putting most of the weight on his left side, it became very painful. Claimant indicated he had chronic low back pain, which increased significantly after the hip surgery. On examination, Claimant had unrestricted ROM of both shoulders, with no signs of impingement or instability. Claimant reported pain along the medial scapular border of the right periscapular area. Claimant's right hip revealed well-healed surgical portals. No tenderness was noted over the sacroiliac joint. Examination of Claimant's left hip revealed some mild pain with and range flexion and rotation. No clicking or crepitus was noted.

26. Dr. Fall's assessment was: (a) S/P right hip arthroscopy on 8/31/15, with femoral osteoplasty, acetabular rim trimming, greater trochanteric bursectomy, and windowing of the IT band-at MMI following aggravation of underlying condition from work-related ATV accident; (b) S/P left shoulder arthroscopic subacromial decompression, distal clavicle resection, and Bankart lesion repair-at MMI following aggravation of underlying condition from work-related ATV accident; (c) same underlying condition on the left hip of femoroacetabular impingement; (d) chronic low back pain on opioid medication with noncompliance on prior UDTs; psychological issues likely affecting presentation and perceived disability.

27. Dr. Fall had no further treatment recommendations. She concluded Claimant's symptom presentation for his hip was related to his underlying somatic symptom disorder and acetabular configuration rather than injuries from the ATV accident. Dr. Fall noted there were no initial complaints regarding the left hip. Dr. Fall characterized her findings with regard to the left hip on examination as minimal and opined these should be treated outside the workers' compensation system.

28. Claimant returned to Dr. Zuelhlsdorff on July 15, 2016 for an evaluation of bilateral shoulders, bilateral hips and upper back. His right hip was 90% better; his left hip was no better, but not overtly worsening. Claimant's history of low back pain and treatment with Dr. Jones was also referenced. Claimant was not taking any medications issued by Dr. Zuelhlsdorff and had discontinued PT. Claimant was working at modified duty. Dr. Zuelhlsdorff scheduled a follow-up appointment in one month.

29. Dr. Zuelhlsdorff evaluated Claimant on October 24, 2016 and noted the focus of the evaluation was on Claimant's hips (as was the July 15, 2016 evaluation). Claimant's left hip was no better and he remained on modified duty. On examination, the appearance of the left hip was normal, including the anterior hip joint and proximal quadriceps. Palpation was normal and full range of motion was noted, with pain on

abduction. Flexion strength was 4/5 and 5/5 on the right side without pain. Dr. Zuelhlsdorff's diagnoses were: MVA; injury of right shoulder, sequela; injury right hip, sequela; injury of left shoulder; injury of left hip, subsequent encounter; surgery follow-up. Claimant's work restrictions were continued.

30. Claimant testified he had not been in any accidents since April 2014, nor had he injured his left hip in any other event.

31. Dr. Zuelhlsdorff testified as an expert at hearing. He is a specialist in Occupational Medicine and is board-certified in Internal Medicine. He is Level II accredited pursuant to the WCRP. Dr. Zuelhlsdorff noted Claimant sustained multiple injuries as a result of the April 22, 2014 accident. He has seen Claimant on average once per month since the time of the accident.

32. Dr. Zuelhlsdorff testified he believed the condition of Claimant's left hip was related to the subject accident. Dr. Zuelhlsdorff confirmed Claimant had complaints of pain in the right hip one day after the accident and there was bruising noted on examination. The symptoms in the left hip did not show up immediately. Given the complexity of injury in the multitude of problems Claimant had, Dr. Zuelhlsdorff did not think it was unusual that he did not report hip pain right away. He said particularly with hips, it can take some time for the symptoms to manifest. The key factor in his opinion was the mechanism of injury. Dr. Zuelhlsdorff noted this was a rollover accident in which Claimant was not restrained, which applied significant forces to the right hip. There would have also been forces applied to the left hip. Dr. Zuelhlsdorff based this conclusion was based upon the principles of physics and noted force vectors would have operated on both sides of Claimant’s body. Dr. Zuelhlsdorff opined these forces were the causes of the pathology in both of Claimant's hips.

33. Dr. Zuelhlsdorff testified symptoms in the left hip manifested subjectively in approximately May 2015. Dr. Zuelhlsdorff also noted that Claimant may not have experienced symptoms immediately, as he was relatively immobile after the accident and not putting a great deal of weight on the hips.

34. Dr. Zuelhlsdorff noted Claimant could have a degenerative condition in the labrum, including a tear, which was not symptomatic until the accident. This was the basis for his conclusion that his condition was more likely than not the result of the injury. The ALJ found Dr. Zuelhlsdorff's testimony persuasive.

35. Dr. Zuelhlsdorff testified Claimant had received PT, home exercises medications and an injection as treatment for the left hip. Surgery on the left hip was an option. Dr. Zuelhlsdorff testified he was aware Claimant had decided, at least at this time, not to proceed with surgery of the left hip. At this time, he recommended home exercises and medications. Dr. Zuelhlsdorff testified Claimant may require surgery for the left hip in the future and opined it was part of the work injury.

36. Dr. Fall testified as an expert in Physical Medicine and Rehabilitation. Dr. Fall has an undergraduate degree in biomedical engineering and testified as an expert

in this field, as well. She is Level II accredited pursuant to the WCRP. She testified consistently with the opinions expressed in her report, although did not focus on Claimant's somatic condition.

37. Dr. Fall testified there was no work-related injury to the left hip. She did not believe the subsequent treatment for the right hip aggravated the left hip. She based her opinion on Claimant's prior medical history, as well the accident itself. Dr. Fall believed Claimant's treatment for the low back prior to the injury had relevance. She testified Claimant's prior low back condition, which was chronic, included hip symptoms and that was significant. She noted the SI joints and hamstrings were structures involved in the low back treatment. The ALJ found Dr. Fall did not identify any treatment of either hip before 2014. Dr. Fall also testified Claimant did not provide a full history to his treating physicians.

38. Dr. Fall testified that there was no temporal relationship between Claimant's reported symptoms in the left hip and the accident. She disagreed with Dr. Zuelhlsdorff on this point. She disagreed that there would have been force vectors operating on Claimant's left hip, although Dr. Fall conceded on cross-examination that a twisting type injury could cause symptoms in the hip. Dr. Fall opined Claimant's soft tissues would have absorbed some the forces operating on his body. Dr. Fall postulated Claimant would have had symptoms right away, had there been an injury to the left hip. She testified the tearing of tissues would cause symptoms. She noted the MRI findings were similar on the left side, as the right. Dr. Fall cited Dr. White, who noted Claimant had a particular angulation of the hip (60°), which pre-disposed him to impingement. Dr. Fall also noted the radiologist described the labral tear as degenerative. Dr. Fall concluded Claimant's hip condition was degenerative, as opposed to an acute injury. She noted some patients with this condition manifested symptoms in their twenties.

39. Dr. Fall testified Claimant injured his right hip in the subject accident, but not his left. Dr. Fall stated that while it was possible, it was not medically probable that Claimant injured his left hip in the accident. The ALJ found Dr. Fall did not provide an explanation as to why Claimant's left hip symptoms manifested after the rollover accident and not before. Dr. Fall did not believe that the surgery on the right hip caused Claimant's left hip to become symptomatic. She cited the medical literature for the proposition that overuse would not have caused the left hip to become symptomatic, but there was no specific article cited and nothing specifically the Workers' Compensation Medical Treatment Guidelines. On cross-examination, Dr. Fall was also asked if Claimant was more active after the right hip surgery, which was documented in the medical records. Dr. Fall did not believe this would be a cause of left hip symptoms.

40. Claimant met his burden of proof and the evidence established the symptoms in his left hip were related to the industrial injury. The ALJ relied upon Claimant's treating physicians, Dr. White and Dr. Zuehllsdorff, who were in the best position to determine whether Claimant's left hip condition was related to the workplace injury.

41. Claimant was not requesting surgery on his left hip as of the date of the hearing.

42. The evidence and inferences inconsistent with these findings were not credible and persuasive.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Generally, Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. § 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Ripeness

In *Olivas-Soto v. Industrial Claim Appeals Office*, 143 P.3 d 1178, 1180 (Colo. App. 2006), the Colorado Court of Appeals considered when an issue was ripe. In that case, Claimant suffered a work place injury and was placed at MMI by his ATP. After a DOWC Independent Medical Examination confirmed MMI, Employer filed a Final Admission of Liability ("FAL"), accepting the date of MMI and admitting for PPD benefits. Claimant filed a timely objection to the FAL and Application for Hearing, but did not endorse the issue of permanent total disability benefits. Claimant subsequently filed two Applications for Hearing, which listed the PTD benefits issue. Respondents asserted the issue of PTD benefits was not ripe because it had not been endorsed on the original AFH.

The Court of Appeals held PTD was ripe for determination at the time the FAL was filed and Respondent admitted for PPD benefits. Writing for the Court, Justice Rovira stated: "Generally, ripeness tests whether an issue is real, immediate, and fit for

adjudication. [citing *Bd. of Dirs. V. Nat'l. Union Fire Ins. Co.* 105 P. 3d 653 (Colo. 2005)]. Under that doctrine, adjudication should be withheld for uncertain or contingent future matters that suppose a speculative injury which may never occur". 143 P.3d at 1180.

The ALJ determined that the issue of whether Claimant's left hip condition was related to the industrial injury was ripe for determination. This issue was ripe at the time Respondent filed its AFH, as the question of surgery for the left hip was controverted. Although Claimant subsequently decided not to have the surgical procedure, the issue of relatedness remained ripe for determination. Under the test articulated by the Court in *Olivas-Soto v. Industrial Claim Appeals Office*, this issue remained controverted and was ready for resolution by the ALJ.

Relatedness of Left Hip

A pre-existing condition "does not disqualify a Claimant from receiving workers' compensation benefits". *Duncan v. ICAO*, 107 P.3d 999, 1001 (Colo. App. 2004). Further, if a pre-existing condition is stable but is aggravated by an occupational injury, the resulting occupational injury is still compensable because the incident caused the dormant condition to become disabling. *Siefried v. Industrial Commission*, 736 P.2d 1262, 1263 (Colo. App. 1986). Thus, if an industrial injury aggravates, accelerates, or combines with a pre-existing condition so as to produce disability and need for treatment, the claim is compensable. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). The ALJ determined the instant case fit within this factual scenario.

In the case at bench there was no dispute Claimant suffered a compensable injury on April 22, 2014. Respondents provided medical benefits to cure and relieve the effects of the injury, including treatment of the right hip. The ALJ found Claimant's right hip had a contusion immediately following the accident. (Finding of Fact 9). Claimant had persistent right hip symptoms following the April 22, 2014. (Findings of Fact 12-14). Claimant's treating physicians initially provided conservative treatment for the right hip, then surgery was performed. In this regard, Claimant's right hip had underlying conditions which became symptomatic after the workplace injury. *Id.* These included femoroacetabular impingement, labral tear(s), as well as bilateral trochanteric bursitis. (Finding of Fact 16). Claimant's ATPs (Dr. Zuelhlsdorff and Dr. White) concluded Claimant's right hip condition was related to the workplace injury. These physicians concluded Claimant's roll-over accident aggravated these underlying conditions and the ALJ was persuaded by their opinions. (Findings of Fact 16 and 19).

The ALJ also determined Claimant proved that he developed symptoms in his left hip as a result of the industrial injury, albeit not initially. Claimant's left hip had some of the same underlying conditions as the right hip. The medical evidence supported the conclusion the left hip conditions was related to the industrial injury. The ALJ first relied upon Dr. Zuelhlsdorff's analysis on causation when determining the left hip condition was related. (Findings of Fact 18-19). Dr. Zuelhlsdorff's testimony that the forces present in this type of accident could cause an injury to both hips were credible, as was his explanation that an underlying degenerative condition could become symptomatic

after this accidents. (Finding of Fact 32). The inference drawn from Dr. White's evaluations of Claimant were also persuasive to the ALJ. (Finding of Fact 16).

Second, there was evidence in the record that Claimant's left hip condition was aggravated by Claimant's use following the surgery on the right hip. (Finding of Fact 19). Dr. Zuelhlsdorff also noted this in his causation analysis.[6] Claimant's testimony also supported this conclusion. That aggravation of the underlying condition of the left hip resulted from treatment for the industrial injury and led the ALJ to conclude it was related to the industrial injury. (Finding of Fact 40).

Third and finally, there was no evidence in the records that Claimant had a hip diagnosis and treatment plan (including surgery) before the subject accident. He received some very limited physical therapy in 2014. This was related to treatment of low back symptoms. The PT records referred primarily to Claimant's right hip for a period of slightly more than one month. (Finding of Fact 3). However, at the conclusion of these records, Claimant reported a resolution of his symptoms. Most important for the ALJ, there was no medical opinion which tied this treatment to the underlying condition of either hip. No evidence was in the record that showed Claimant received any treatment before 2014. (Finding of Fact 4).

In coming to this conclusion, the ALJ considered Dr. Fall's testimony and Respondent's argument that the delay in reporting symptoms was significant and should lead to the conclusion that this was a degenerative as opposed to an acute condition. The ALJ concluded this was a significant issue and Dr. Fall's testimony raised questions about the etiology of Claimant's left hip symptoms. Dr. Fall raised valid questions concerning the delay in left hip symptoms. However, Dr. Fall did not provide an explanation why it was only after the workplace injury that Claimant's left hip was symptomatic to the degree it required treatment and ultimately surgery was recommended. As noted, *supra*, Claimant's treating physicians provided the rationale that was persuasive to the ALJ. In this respect, Dr. Fall's testimony was less persuasive than Dr. Zuelhlsdorff. On balance, the ALJ found this was a significant accident, which injured multiple parts of Claimant's body. There were significant forces at work on Claimant's body, which injured the left hip. The ALJ determined the workplace accident caused the underlying condition in Claimant's left hip to become symptomatic and require treatment

The ALJ makes no findings as to whether the proposed surgery is reasonable and necessary at this juncture. Those issues were not before the Court, as Claimant has not requested that Respondent provide that medical benefit.

ORDER

IT IS HEREBY ORDERED:

[6] Exhibit H, p. 63.

1. Respondents shall provide medical benefits to Claimant for the injury to his left hip.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 15, 2017

Timothy L. Nemechek
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

STIPULATION

1. Both parties stipulated that the issue of Average Weekly Wage would be held in abeyance, pending a resolution of the contested issues heard at hearing.

ISSUES

I. Whether the Claimant has proven, by a preponderance of the evidence, that she suffered a compensable injury as a result of her fall in the employer-supplied parking lot which occurred on or about February 3, 2016.

II. If the claim is compensable, what medical benefits are reasonable, necessary, and related to this claim.

III. If the claim is compensable, has Claimant suffered from one or more intervening causes, either of which is sufficient to sever the causal relationship between the compensable injury and subsequent symptoms Claimant may have experienced.

IV. Whether Claimant has shown, by a preponderance of the evidence, that she is entitled to Temporary Total Disability benefits as a result of a compensable injury.

FINDINGS OF FACT

Based upon the evidence received at hearing, the ALJ makes the following Findings of Fact:

1. Claimant is a 21-year-old package handler for the Employer who slipped and fell on ice in the employee parking lot as she left work on February 3, 2016. Claimant began working for the Employer on December 12, 2015. Claimant worked the early morning shift from 3:00 a.m. to 9:00 a.m. and worked from 20 to 25 hours per week, at $11.00 per hour.

2. Claimant alleges that, at approximately 8:46 a.m. on February 3, 2016, she was walking through the parking lot after her shift ended and fell onto her rear, tailbone, and low back. Claimant did not hit her head, her neck, her upper back, her hands, her elbows, or any other body part beyond the low back area. Claimant testified that, after she fell, she laid on the ground "for a minute or so," until an unidentified UPS co-worker came over and assisted her in getting up. Claimant testified that this person witnessed the fall.

3. Claimant testified that she did not remember whether she felt immediate pain after the fall as she was in shock. However, Claimant later told Respondents' expert, Dr. Kathleen D'Angelo, that she felt instant pain in her tailbone pursuant to the fall during her IME examination. Respondents' Hearing Exhibits ("RHE") F at 14. After she fell, Claimant left the parking lot and attended her classes at school. Claimant testified that she first began experiencing pain when she left school and returned home. Claimant testified that she first began experiencing pain in her tailbone. Claimant did not report a work injury to UPS on this day and did not seek medical treatment.

4. Claimant reported a work injury to her supervisor at her next shift, on February 4, 2016. Claimant selected SCL Physicians at Wheat Ridge as her provider and saw Andrew Hildner, PA-C, on February 4, 2016, after completing her shift. Claimant presented with complaints of lumbar and sacral pain. RHE G at 49. Claimant denied any "neurological red flag symptoms."

5. Claimant had a normal gait and no bruising or obvious abnormality upon inspection of the lumbar spine. RHE G at 51. Claimant had no sacroiliac joint tenderness. Claimant was tender upon palpation over the inferior sacrum and had bilateral paraspinal tenderness, which had alternating sides in severity throughout the examination.

6. X-ray studies of the pelvis, sacrum, and coccyx showed no evidence of fracture or dislocation and had good anatomical alignment. There was no obvious fracture in the inferior lumbar vertebrae, which also had normal alignment. PA Hildner noted that there were no concerns for a fracture or neurological involvement, and noted that Claimant had good range of motion without complaint, a nonantalgic gait, and was able to sit comfortably during the examination. RHE G at 52. There was no crepitus noted. Claimant was given 20 pound repetitive lifting restrictions for work.

7. Claimant returned to SCL and saw Dr. Ogrodnick on February 8, 2016. RHE G at 53. Claimant reported that she had back and hip pain and had frequent "cracking" in these areas, which felt unnatural to her. Dr. Ogrodnick noted that Claimant had told PA Hildner that she was in shock and couldn't tell what was hurting her. Claimant stated that "she now knows that driving and handwriting causes increased right arm numbness," which she first noticed the evening after her initial visit. Claimant also reported left arm numbness. Claimant testified at hearing that she did not have symptoms in her left arm.

8. Claimant also reported right leg numbness, which she first noticed on February 6, 2016. RHE G at 53. Claimant further complained of urinary incontinence and had called in sick to work. Dr. Ogrodnick noted that Claimant walked with a limp and needed to hold the exam table when walking

on her toes. RHE G at 55. Claimant reported tenderness in her lumbar spine and both sacroiliac joints. Claimant became tearful with passive right hip flexion due to pain in her right buttock. *Id*. Dr. Ogrodnick diagnosed Claimant with a sacral contusion. Dr. Ogrodnick ordered a STAT MRI to eliminate concern for cauda equina syndrome. RHE G at 53.

9. Claimant had two MRI studies of the lumbar spine performed. The record is unclear why the second one occurred. The first study was performed on February 10, 2016. RHE F at 29. The second study was performed on February 11, 2016. Both studies were reviewed and compared by Dr. Michael Preece. The impression of the lumbar spine was normal. RHE H at 80.

10. A follow-up note with Dr. Ogrodnick on February 12, 2016 notes that "plain films" (X-rays) of the pelvis taken that day did not reveal any acute osseous abnormality. RHE G at 56. Dr. Ogrodnick noted that Claimant “chuckled at how she just started crying ‘for no reason’” after the x-ray that day. Claimant told Dr. Ogrodnick that this date was the first time that she experienced pain radiating into her right fifth toe. It was noted in the records that Claimant was working modified duty in a seated capacity. Claimant was positive for memory loss. RHE G at 57. Claimant again presented with a limp. RHE G at 58. Claimant began to cry when lightly palpated in her anterior right iliac crest.

11. Dr. Ogrodnick noted during a February 16, 2016 follow-up visit that Claimant was having a significant emotional response and was at risk for delayed recovery. RHE G at 59. Dr. Ogrodnick noted that Claimant’s Oswetry disability questionnaire score of 56% indicated severe disability. Claimant presented with a limp on this date and reported her leg would become numb if she did not walk in this manner. Claimant reported that she could not stand up straight due to severe pain in her low back. Claimant reported concern about becoming disabled like her parents. Dr. Ogrodnick referred Claimant to a psychologist.

12. Claimant began physical therapy on February 19, 2016. RHE F at 43. The therapist notes indicate that Claimant would benefit from stabilization and strengthening the sacroiliac region.

13. Claimant reported no improvement during a follow-up visit with Dr. Ogrodnick on February 29, 2016. RHE G at 63. Dr. Ogrodnick noted a substantial risk for delayed recovery. Claimant declined psychological treatment, as she felt there was nothing wrong psychologically. Claimant testified that she declined care because she did not believe that Dr. Ogrodnick’s intentions were to help her, because he believed that her physical pain and physical ailments were psychological. Dr. Ogrodnick noted that Claimant smiled frequently throughout the examination and ambulated without a limp. RHE G at 65.

14. Dr. Ogrodnick saw Claimant again on March 15, 2016 and expressed concern about possible somatoform disorder. RHE G at 66. Dr. Ogrodnick noted that Claimant's Oswetry questionnaire results reflected a score near the crippled category, and it was communicated to Claimant that this was highly inconsistent with her normal MRI study. Dr. Ogrodnick noted in the record that he advised Claimant that it was difficult to substantiate ongoing work restrictions due to the lack of objective findings and her inconsistent examinations.

15. Claimant presented to Dr. Tomm Vanderhorst, also at SCLP clinic, on March 16, 2016. RHE G at 69. Claimant was a walk-in evaluation because she had "too much pain with [her] current work." Claimant testified that she saw Dr. Vanderhorst because Dr. Ogrodnick was not available. Dr. Vanderhorst gave Claimant 35 pound lifting restrictions with 30 minutes maximum of standing and walking. RHE G at 70.

16. Claimant returned to see Dr. Ogrodnick on March 21, 2016. RHE G at 72. Dr. Ogrodnick noted that Claimant did not understand the resistance to taking her off work. Claimant reported that she could not even put weight on her right leg. Claimant walked slowly with a short stride and limp. RHE G at 74. Claimant told Dr. Ogrodnick "It's the worst pain I've ever been in in my life". RHE G at 72. Dr. Ogrodnick opined that Claimant's "constellation of symptoms" required a consultation to rule out multiple sclerosis. Claimant last reported to work at the Employer on March 23, 2016. She testified that she was told not to return to work until she had "hundred percent clearance from the doctor."

17. Claimant was then involved in a motor vehicle accident on March 30, 2016. Claimant was taken to St. Anthony Hospital by ambulance. RHE F at 16. Claimant told Dr. D'Angelo during her IME that she felt neck pain immediately. Claimant testified that she had neck and shoulder injuries from the accident, and that she did not have injuries to her lower back, hips, or tailbone as a result of the injury.

18. The emergency room record from St. Anthony's on the date of the accident states that Claimant was rear-ended by another vehicle traveling at low speed. RHE I at 81. It is noted that Claimant was restrained. Claimant claimed that she was thrown forward and "began to feel pain in her neck and back soon thereafter." The nurse's note indicates reports of posterior neck tenderness and low back pain. Claimant denied any extremity numbness or weakness. A CT scan of both the cervical and lumbar spine were obtained. RHE I at 82. There were no acute findings. Both studies were normal and unremarkable. RHE I at 84-85.

19. Dr. Ogrodnick maintained that Claimant's subjective complaints remained inconsistent with her objective findings during Claimant's next visit, on April 4,

2016. RHE G at 75. Claimant did not disclose that she had been involved in a recent motor vehicle accident. Dr. Ogrodnick noted that, despite the examination, Claimant denied any leg pain, numbness, or weakness. Claimant also walked without a limp during this examination. RHE G at 77. Claimant was subsequently discharged from SCL, and Dr. Vanderhorst later indicated that Claimant was discharged, as no further care was authorized. RHE G at 78.

20. As a result of this car accident, Claimant began treatment with Dr. Bethany Wallace at Injury Treatment Centers Lakewood on April 13, 2015. RHE J at 87. Claimant's complaints included the following: cervical strain; neck pain; thoracic sprain and pain; lumbar strain and low back pain; jaw pain; concussion; vertigo; memory loss; insomnia; left elbow pain and contusion; left forearm pain; occipital neuritis; posttraumatic headaches; and cervicogenic headaches. RHE J at 88.

21. Claimant underwent physical therapy treatment with regular follow-up visits with Dr. Wallace. Treatment included therapy for the low back, in addition to the cervical region, and it was noted on at least one occasion that the modalities utilized caused low back pain. RHE J at 100. At cervical MRI performed on April 28, 2017 was returned normal. RHE J at 92-93. Claimant treated with Dr. Wallace through the end of July 2016. RHE J at 108.

22. Claimant saw Dr. Bennett Machanic for an IME commissioned by Claimant on June 13, 2016. Claimant's Hearing Exhibits ("CHE") 8 at 167. Claimant presented with multiple complaints, including: low back pain; numbness over the right leg and right arm; difficulties with memory, focus, and concentration; and significant emotional depression. Dr. Machanic noted that he had been provided "a scanty amount of medical records." Dr. Machanic noted that Claimant had chiropractic care in 2011 and that it was not clear why this was done, but that the treatment nevertheless ended later that year.

23. Claimant told Dr. Machanic that she struck her lower back when she fell on February 3, 2016. CHE 8 at 168. Claimant told Dr. Machanic that she had two MRI studies, one that showed discogenic damage and another that was normal. CHE 8 at 167. Dr. Machanic noted that Claimant had been involved in a motor vehicle accident on March 30, 2016 with an automobile traveling "at a very high rate of speed driven by an intoxicated driver," and that this accident caused increased low back pain and neck pain. Dr. Machanic noted that he did not have medical records beyond March 21, 2016.

24. Upon examination by Dr. Machanic, Claimant complained of non-related neck pain, low back pain affecting the tailbone to the lower right leg, numbness in the right leg, right arm numbness, and weakness in both her leg and arm. CHE 8 at 169. Claimant claimed she dropped objects due to weakness. Claimant further complained of deficits in memory, focus, concentration, and

depression. Dr. Machanic noted that Claimant broke into tears on multiple occasions during his examination. Dr. Machanic measured breakaway weakness in the right leg. Dr. Machanic noted that it was "very clear that [Claimant] can walk without much difficulty on tiptoes, heels, perform tandem and retrogrades."

25. Dr. Machanic opined that Claimant injured her low back pursuant to a slip-and-fall at work. CHE 8 at 170. Dr. Machanic noted progressive symptoms in the right arm and leg and indicated there was right ulnar neuropathy and right meralgia paresthetica. Dr. Machanic opined that there was significant depression and "perhaps some posttraumatic emotional stress." Dr. Machanic stated that the March 30, 2016 motor vehicle accident "apparently caused neck pain" and that it was "not entirely clear" whether this made the work-related injury worse. Notwithstanding, Dr. Machanic stated that "we can separate out issues fairly nicely" based upon the available materials at the time.

26. Dr. Machanic recommended an EMG and nerve conduction studies of the right arm and leg. Dr. Machanic opined that Claimant was not at MMI and did not calculate an impairment rating. Dr. Machanic opined that Claimant had low back pain, right hip pain, and "signs" that right ulnar neuropathy meralgia paresthetica are work-related conditions.

27. In a report dated June 15, 2016, with Ginger K. Spence, LPC, Claimant presented for psychological treatment. RHE K at 109. It was noted that Claimant presented for initial treatment in November 2014 and treated through July 2015. RHE K at 109-110. Claimant denied any legal problems or problems with work or schooling. It is noted that Claimant had significant problems with anxiety and had struggled with anxiety for the majority of her life. Claimant treated for posttraumatic stress disorder and it was noted that this causes clinically significant stress or impairment in social, occupational, and other important areas of functioning.

28. Claimant presented to Dr. D'Angelo for an IME commissioned by Respondents on August 24, 2016. RHE F at 11. Claimant had complaints including: low back pain; buttock pain; right leg pain and numbness; right arm pain and numbness; problems thinking; stress; and bowel inconsistency. RHE F at 12. Claimant reported that she was worse since the injury. Claimant denied having similar or previous problems. RHE F at 13.

29. Dr. D'Angelo recorded Claimant's history of the alleged incident. Claimant stated that she fell and could not remember whether she was helped up by a person who offered assistance. RHE F at 14. Claimant stated that she then went to her car and drove directly to school. Claimant stated that she immediately felt pain in her low back and tailbone, and subsequently favored her right side due to hip pain.

30. Claimant denied having hip pain prior to the incident. Claimant stated that she did not immediately experience hip pain, which developed later. RHE F at 15. Claimant also stated she subsequently noticed symptoms in her right arm and leg. Claimant stated that Dr. Ogrodnick informed her that she had a "perfect" MRI. RHE F at 17. Claimant stated that she was denied further treatment after March of 2016 and that, as a result, "things have gotten worse." RHE F at 17. Claimant stated that she did feel improvement in her hip during physical therapy, but that she didn't feel improvement in the low back because this was not addressed by the therapist. RHE F at 18.

31. Dr. D'Angelo reviewed multiple medical records, including records from Claimant's preexisting medical history. Dr. D'Angelo reviewed records dating back to 2009, some of which reflected a long history of orthopedic issues and complaints. RHE F at 29. Claimant had bilateral foot pain in 2009. Claimant had complaints throughout 2011 of pain in her neck, including headaches, lumbar spine, thoracic spine, and right sacroiliac joint. RHE F at 24-25. These complaints also included pain down the legs. Claimant had complaints of low back pain in 2014 and complaints of bilateral hip pain at this time as well, with no known trauma. RHE F at 27. Claimant also treated for significant anxiety and depression in 2014.

32. Dr. D'Angelo noted that Claimant had numerous delayed onset of symptoms and complaints following her initial medical evaluation at SCL. RHE F at 35. Dr. D'Angelo noted that the location of the symptoms varied and metastasized over time, which was inconsistent with acute trauma and without medical explanation. Dr. D'Angelo opined that these complaints were not substantiated by objective physical or diagnostic findings. Dr. D'Angelo noted that acute traumatic spine injuries are also acutely symptomatic. *Id*. Dr. D'Angelo indicated that, had Claimant developed a lumbar disc herniation or a neurological injury due to the fall, her symptoms would have been evident immediately. Dr. D'Angelo opined that Claimant's somatic symptoms, such as cognitive difficulties, anxiety, and depression, were impossible to explain from the established mechanism injury.

33. Dr. D'Angelo opined that Claimant sustained a contusion of the coccyx with myofascial pain to the lumbar and sacral regions pursuant to the February 3, 2016 fall. RHE F at 36. Dr. D'Angelo opined that Claimant had Somatic Symptom Disorder causing a litany of complaints and that this should be evaluated under private insurance. Dr. D'Angelo opined that Claimant was at MMI with no permanent impairment.

34. Claimant was then involved in a second motor vehicle accident on October 11, 2016. RHE L at 111. This was not disclosed to Respondents through discovery requests. Claimant is represented by an attorney and is pursuing a claim against the allegedly at-fault driver.

35. Medical records from Denver Health on this date note that Claimant was the restrained passenger in a vehicle that was rear-ended at what Emergency Medical Services ("EMS") described as "incredibly low" speeds. RHE L at 111. The record indicates that the impact was so minimal that there was no paint transfer between vehicles. The speed of the impact was characterized as "walking speed." RHE L at 112. Upon EMS arrival, Claimant was found shrieking and sobbing violently, was unwilling to get out of the vehicle, and was not redirectable. EMS treated Claimant with Versed, which Dr. Machanic testified is a tranquilizer/sedative.

36. Claimant was seen in the emergency room approximately 20 minutes after the accident. RHE L at 112. Claimant complained to the emergency room doctor of neck and back pain. Claimant denied a history of anxiety attacks. It was noted that the examination was limited due to Claimant's "hysteria." A physical examination indicated no noted issues with the pelvis, cervical, thoracic, or lumbar spine, no crepitus, deformities, or evidence of trauma. It is noted in the records from that event that "all of the above serious potential etiologies are felt to be highly unlikely based upon the information available and that Claimant's symptoms improved in the emergency room. Claimant was discharged and not given further medications.

37. Claimant testified at hearing that she was still experiencing symptoms. Claimant claimed there was pain radiating from her lumbar spine to her tailbone, with cracking in the low back and hips. Claimant also testified that she still has symptoms of numbness and tingling in her right arm and leg. Claimant also testified that she had issues with frequency and urgency of urination. Claimant related all of these issues to her slip-and-fall.

38. Claimant denied having any injuries to the low back as a result of her motor vehicle accidents. Claimant also denied having received treatment for her low back. Claimant testified that she had not been having any problems with these body parts prior to the slip-and-fall and that the previous chiropractic care that she received was for "maintenance." Claimant testified that she did not have any past pain in her back or in her hip. Claimant testified that Dr. Ogrodnick's medical records from February 18, 2016, where he indicated that he palpated Claimant's iliac crest area, were incorrect and that he did not palpate this area. Claimant testified that there was no point in this claim during which her symptoms improved.

39. Dr. Machanic testified at hearing on behalf of Claimant. Dr. Machanic testified that, at the time of his examination, Claimant had difficulties or "at least complaints" in her back, her right arm and leg, her right elbow, and also with her neck. Dr. Machanic testified that he felt that the neck was not work-related. Dr. Machanic testified that, based upon the records he reviewed, the "most logical answer" to the symptoms pursuant to the fall was a sacroiliac

hip issue. Dr. Machanic also testified that he “suspect[ed] the right elbow was injured at the time of the fall,” as well as the back.

40. Dr. Machanic testified that Claimant had an aggravation of the right femoral cutaneous nerve. Dr. Machanic testified that there was no evidence that the motor vehicle accident affected these symptoms. Dr. Machanic further testified that he could not make a medical distinction between related psychological or emotional issues and those issues which are not related to the claim. Dr. Machanic testified that Claimant’s emotions did compromise interaction during examination but, “for the most part,” he thought that “probably she was a reliable historian.”

41. Dr. Machanic acknowledged that the medical records do not reflect that Claimant fell on either side of her hips, onto her hand, onto her elbows, or onto any other body part other than her low back region. Dr. Machanic acknowledged that Claimant "may or may not" suffer from a somatization disorder. Dr. Machanic had not reviewed the extent of the medical records and was not aware of the second motor vehicle accident at the time of his testimony. Dr. Machanic acknowledged that there were inconsistencies in the medical records concerning Claimant’s reports of her medical history and what the medical history reflects.

42. Dr. D’Angelo testified on behalf of Respondents. Dr. D’Angelo testified that Claimant had a somatoform disorder and a lifelong pattern of presenting frequently to providers with multiple complaints, including bilateral hip, low back, and leg pain, prior to the slip-and-fall. Dr. D’Angelo testified that the only injury Claimant suffered was a contusion to the coccyx and some myofascial irritation. Dr. D’Angelo testified that Claimant had undergone multiple diagnostic tests and that there was no evidence of objective, physiological, structural damage. Dr. D’Angelo testified that the x-ray studies performed showed no objective abnormalities to the coccyx.

43. Dr. D’Angelo testified that Claimant did not have any injury requiring active treatment and that there was “nothing to be done for this,” as there were no positive findings absent subjective complaints of pain. Dr. D’Angelo testified that the femoral cutaneous nerve was purely sensory and could not cause motor weakness, which Claimant had exhibited, and that her presentation and examination findings were inconsistent with an injury to this nerve. Tr. at 117, ll. 6-16.

44. Dr. D’Angelo testified that Claimant’s symptoms would be expected to resolve without treatment. Dr. D’Angelo testified that Claimant should have been at MMI and discharged after the February 21 and 22, 2016 MRI studies showed no evidence of an acute injury. Dr. D’Angelo testified that additional diagnostic testing was not necessary to rule out additional treatment prior to MMI.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following Conclusions of Law:

General Legal Principles

A. The purpose of the Workers' Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1).* Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The ALJ, as the fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990) Moreover, the ALJ may accept all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion).

C. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Credibility

D. The ALJ finds that Claimant is not reliable as a medical historian, as her account of her prior medical history in testimony and in the medical records is inconsistent with the medical records prior to her February 3, 2016 fall. The Court finds that Claimant is not sufficiently reliable in her account of the symptoms she reportedly experienced from her two motor vehicle accidents. In each instance, Claimant reported some onset or increase in low back pain as identified in the medical records.

E. The ALJ finds Dr. Machanic to be sincere, but insufficiently persuasive. Dr. Machanic's opinion was not based upon the full medical history of the claim and was derived in large part from Claimant herself. Dr. Machanic's testimony regarding clear objective findings and causality was not consistent with his own report, the medical records, the opinion of the treating providers, or his physical examination. Dr. Machanic's opinion regarding causality is not sufficiently persuasive to meet Claimant's burden of proof.

F. Dr. D'Angelo testified persuasively regarding her opinions on causality, impairment, and reasonable, necessary, and related medical treatment.

Compensability

G. A compensable injury is one that arises out of and occurs within the course and scope of employment. § 8-41-301(1)(b), C.R.S. An injury occurs in the course of employment when it was sustained within the appropriate time, place, and circumstances of an employee's job function. *Wild West Radio v. Industrial Claim Appeals Office*, 905 P.2d 6 (Colo. App. 1995). An injury arises out of employment when there is a sufficient causal connection between the employment and the injury. *City of Brighton v. Rodriguez*, 318 P.3d 496 (Colo. 2014). Simply because a claimant experiences symptoms while in the course and scope of their employment does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (August 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (April 10, 2008). Claimant has the burden to prove, by a preponderance of the evidence, a causal relationship between the work injury and the condition for which benefits are sought. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). Whether a compensable injury has been sustained is a question of fact to be determined by the ALJ. *Eller v. Industrial Claim Appeals Office*, 224 P.3d 397 (Colo. App. 2009).

H. Claimant's did suffer a work-related injury on February 3, 2016 as the result of a slip-and-fall in the icy parking lot after completing her shift. However, her continuing complaints of injury are based purely on subjective complaints without supporting diagnostic evidence. Claimant testified that she did not know whether she had pain after she fell. Claimant's representation to Dr. D'Angelo that she experienced the immediate onset of pain in her back after the fall was inconsistent with her own testimony at hearing, and her representations to PA Hildner upon her initial medical visit. Claimant did not immediately report a work-related injury or treatment and instead drove directly to school, attended her classes for the day, and testified that she did not experience the onset of symptoms until later in the evening.

I. All diagnostic tests performed in the claim were returned negative for any acute injuries or abnormalities. Upon Claimant's initial examination by the treating provider,

there was no evidence of trauma or obvious abnormality of the lumbar spine upon inspection. Claimant denied any neurological symptoms or sacroiliac joint tenderness. X-ray studies of the pelvis, sacrum, and coccyx have consistently been normal. Two MRI studies of the lumbar spine subsequently performed at the request of the treating provider reflected no evidence of any abnormalities or acute findings. A second x-ray of the pelvic region performed on February 12, 2016, at the request of Dr. Ogrodnick, showed no evidence of abnormalities. Additional diagnostics, including a CT scan performed of the lumbar spine after the March 30, 2016 motor vehicle accident, showed no acute findings. There was no evidence of crepitus in the pelvis or lumbar spine. The only initial finding was tenderness reported by Claimant upon palpation over the inferior sacral area. Dr. D'Angelo opined that Claimant simply suffered a contusion with myofascial irritation pursuant to the slip-and-fall that would not require treatment and resolve with the passage of time.

J. Dr. D'Angelo felt that Claimant had a somatoform disorder, pursuant to which Claimant had chronic complaints derived from psychological stressors. Dr. Machanic acknowledged that possibility as well, but stated that that did not mean Claimant did not suffer real injuries. Claimant had a documented preexisting history suggestive of a "lifelong" pattern of multiple complaints involving her lumbar spine, bilateral hips, and lower extremity pain and numbness. Claimant is found not reliable in regard to her account of her medical complaints of pain and dysfunction prior to the incident. Moreover, Claimant's pain behaviors after both of her motor vehicle accidents support the persistence of subjective complaints of pain in multiple body parts, including those allegedly related to her fall, without supporting objective evidence of any acute injury. Conversely, assuming Claimant's reaction to her motor vehicle accidents was genuine, it renders it problematic to apportion her back complaints between her work injury and her traffic accidents-at least one of which is subject to litigation.

K. Claimant's asserted mechanism of injury is not consistent with her complaints. Claimant had an expanding array of complaints that do not correspond to objective evidence in the record. Dr. Ogrodnick noted on multiple occasions that Claimant's subjective complaints did not correlate with objective findings. Claimant fell onto her tailbone/low back/buttocks region. Claimant did not fall onto her side or her hips and did not hit her head, neck, hands, arms, or elbows during the fall. Claimant subsequently developed complaints into her right arm, left arm, right hip, and right leg, without a supporting mechanism for these alleged injuries. Sacroiliac joint pain was not present upon initial examination- which itself occurred a day after the fall- and did not develop until later.

L. Dr. D'Angelo credibly testified that there was no medical explanation for Claimant's symptoms. Dr. D'Angelo's opinion that, if Claimant had an acute injury corresponding with her subjective complaints, her symptoms would have manifested quickly is persuasive. Dr. Machanic's opinion that Claimant suffered right arm ulnar neuropathy is not supported by a causal mechanism anywhere in the medical records or testimony. Likewise, Dr. Machanic's opinion that Claimant had breakaway leg weakness and neurological issues in her right leg as a result of a femoral cutaneous

nerve injury resulting from the fall is not supported by other medical evidence. The ALJ finds Dr. D'Angelo's opinion that an injury to this nerve should not cause breakaway weakness in the leg to be persuasive. The ALJ parenthetically finds that there was no evidence, from Dr. D'Angelo, Dr. Mechanic, or the admitted medical records, to support a psychological or mental injury related to the slip-and-fall.

Medical Benefits

M. Respondents are liable only for those medical benefits which are reasonable and necessary to cure and relieve the effects of the industrial injury. § 8-42-101(1)(a), C.R.S.; *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997); *City of Durango v. Dunagan*, 939 P.2d (Colo. App. 1997). The record must distinctly reflect the medical necessity of any medical treatment needed to cure and relieve an injured employee from the effects of the industrial injury and any ancillary service, care, or treatment as designed to cure and relieve the effects of such industrial injury. *Public Service Co. of Colorado v. Industrial Claim Appeals Office of State of Colo.*, 797 P.2d 584 (Colo. App. 1999). The question of whether medical treatment is reasonable and necessary is one of fact for determination by an ALJ. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002); *Wal-Mart Stores, Inc. v. Industrial Claims* Office, 989 P.2d 251 (Colo. App. 1999).

N. Treatment for a work injury must not only be reasonable and necessary but must also be causally related to that injury. *Lerner v. Wal-Mart Stores, Inc*., 865 P.2d 915 (Colo. App. 1993). Respondents are permitted to challenge causation and relatedness of the need for any treatment, despite having admitted liability for a claim. *Hanna v. Print Expediters, Inc*. 77 P.3d 863 (Colo. App. 2003); *Snyder v. Industrial Claim Appeals Office of the State of Colo*., 942 P.2d 1337 (Colo. App. 1997). In a dispute over medical benefits that arises after filing an admission of liability, Respondents may assert, based upon subsequent medical reports, that workers' compensation claimant did not establish a threshold requirement of direct causal relationship between the on-the-job injury and need for medical treatment. *Snyder v. Industrial Claim Appeals Office of the State of Colo., supra*. Claimant bears the burden to prove a causal connection exists between a particular treatment and the industrial injury. *Id*.; *see also Grover v. Industrial Commission of Colorado*, 759 P.2d 705 (Colo. 1988). Causation is a question of fact for resolution by the ALJ. *F.R. Orr Construction v. Rint*, 717 P.2d 965 (Colo. App. 1985).

O. While this fall in the parking lot is a compensable claim, Claimant's reasonable, necessary, and related medical treatment was performed in relation to a sacral/coccyx contusion. As noted previously, Dr. D'Angelo credibly testified that this would have resolved independent of active medical care. Dr. D'Angelo credibly testified that Claimant should have been discharged after multiple diagnostic studies reflected no objective diagnostic evidence of an acute injury in February 2016. The ALJ finds Dr. D'Angelo's opinion that no *further* medical care is reasonable, necessary, or related to the claim to be persuasive. The ALJ finds insufficient evidence to support the relatedness of treatment for Claimant's multiple subjective complaints involving her right

upper extremity, her lower right extremity, her hips, her urinary incontinence and urgency, or her emotional distress. There is no *additional* medical treatment that is reasonable, necessary, or related to this compensable injury.

Intervening Cause/Event

P. While this parking lot fall is a compensable injury, there is substantial evidence in the record to support an intervening cause occurred as a result of the March 30, 2016 motor vehicle accident, as well as the October 11, 2016 motor vehicle accident.

Q. In the event of a compensable injury, an intervening cause may sever the causal relationship between an employee's work injury and the resulting disability. *El Paso County Department of Social Services v. Donn*, 865 P.2d 877 (Colo. App. 1993). An intervening incident that breaks causation between the injury and resulting wage loss means that the employee forfeits both temporary and permanent benefits. *Schlage Lock v. Lahr*, 870 P.2d 615 (Colo. App. 1993). Likewise, an independent medical condition is also not compensated as part of the work-related injury. *Owens v. Industrial Claim Appeals Office*, 49 P.3d 1187 (Colo. App. 2002).

R. Claimant sustained two motor vehicle accidents subsequent to her fall on February 3, 2016 and during the course of this claim. The nature of both accidents was similar and involved Claimant being rear-ended by another driver while restrained and seated in a vehicle. While both accidents involved another vehicle traveling at a relatively slow rate of speed and were notably minor, Claimant's subjective complaints pursuant to each accident are nevertheless the same or similar to those prior to the first March 30, 2016 motor vehicle accident, with the exception of the neck. Both accidents involved complaints of the low back and subsequent emotional distress. Of note, Dr. D'Angelo credibly testified that symptoms of neuralgia paresthetica in Claimant's lower extremity would be *more likely* caused by a motor vehicle accident than a slip-and-fall onto the buttocks because of the tightening of the seatbelts across the pelvis.

S. Claimant also treated with Dr. Wallace, who saw Claimant after the first accident, with physical therapy for her lumbar condition. The ALJ finds, by a preponderance of the evidence, that it is more likely than not that Claimant's alleged ongoing conditions of lumbar and lower extremity radicular numbness were caused or aggravated by the motor vehicle accidents than a result of the natural progression of a compensable slip-and-fall on February 3, 2016. Likewise, given the extent and nature of the emotional reaction to the October 11, 2016 motor vehicle accident, it is more likely than not that any ongoing emotional distress is related to this subsequently occurring automobile accident.

Temporary Total Disability Benefits

T. To qualify for temporary total disability (TTD) benefits, a workers' compensation claimant must establish three conditions: 1) the work injury caused the

disability; 2) claimant left work as a result of the injury; and 3) temporary disability is total and lasts for more than three working days (emphasis added). *City of Colorado Springs v. Industrial Claim Appeals Office*, 954 P.2d 637 (Colo. App. 1997).

U. The preponderance of the evidence does not establish an ongoing work-related disability. Nor does the evidence support a finding that Claimant has suffered any work-related work loss.

ORDER

It is therefore ordered that:

1. Claimant's work-related sacral/coccyl contusion has now resolved. There is no ongoing reasonable , necessary, or related medical treatment needed to further treat this injury.

2. Claimant's claim for further treatment for her right arm, leg, hips, or emotional distress is denied and dismissed.

3. Claimant's claim for further medical treatment following her second automobile accident of October 11, 2016 is denied and dismissed.

4. Claimant's claim for temporary disability benefits is denied and dismissed.

5. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Did Claimant prove entitlement to TTD benefits commencing March 16, 2017?

2. Did Respondents prove a basis to terminate Claimant's TTD benefits on or after March 27, 2017?

STIPULATIONS

Respondents stipulated Claimant is entitled to TTD benefits from March 16, 2017 through March 27, 2017.

FINDINGS OF FACT

1. Claimant worked as a project manager for Employer. His job entailed a combination of sedentary management duties and more physically demanding construction job site inspections. The inspections frequently required walking on uneven surfaces and climbing ladders. Claimant's average weekly wage was $1,722.30.

2. Claimant sustained an admitted injury on January 17, 2017 when he stepped off a curb and twisted his left knee.

3. Employer did not refer Claimant to a physician, so he selected Dr. Ronald Royce, an orthopedic surgeon. Dr. Royce has been Claimant's primary ATP throughout the claim.

4. Claimant underwent arthroscopic surgery on March 9, 2017. The operative report documents synovitis, meniscal damage, and extensive multi-compartmental cartilage loss.

5. Claimant initially planned to continue working despite surgery. He advised Employer "it is my intention not to miss any time for this, we have way too much going on. I may be moving a little slow for a bit but I'll be in the fight."

6. Claimant worked until being terminated on March 15, 2017, and received full wages through that date.

7. Claimant contacted Dr. Royce's office and requested two weeks off from work. Dr. Royce gave him a note dated March 13, 2017 which stated: "please excuse [from work] for: 2 weeks."

8. Respondents stipulated that Claimant is entitled to TTD benefits from March 16, 2017 until March 27, 2017 for the two-week period he was taken "off work" by Dr. Royce.

9. Claimant saw Dr. Royce on March 20, 2017 for his first postoperative appointment. He told Dr. Royce "my knee is in a lot of pain." Physical examination of the knee documented warmth and swelling with painful, restricted range of motion. Claimant ambulated with an antalgic gait. Dr. Royce advised him to "increase activity as pain allows with warnings of risk of reinjury."

10. Claimant returned to Dr. Royce on March 28, 2017. His pain level had improved, although he still demonstrated warmth, swelling, and limited range of motion of the knee. Dr. Royce noted Claimant was "healing slower than expected." He advised Claimant to begin physical therapy, and stated, "**Plan return to work when safe as demonstrated with physical therapy.**" (Emphasis added). Dr. Royce submitted a referral order for 12 visits of physical therapy, which included a note to the therapist: "**Please advise when patient will be safe to work.**" (Emphasis added).

11. Claimant next saw Dr. Royce on April 25, 2017 and reported his left knee was "improving slowly." He rated his knee pain at 5/10. His main complaint on that date was bilateral hip pain due to an unrelated condition. Regarding the left knee, Dr. Royce noted "will follow-up as recommended and as needed" and instructed Claimant to "return if symptoms worsen or fail to improve." No specific follow-up appointment was scheduled.

12. Claimant saw Dr. Royce again on May 17, 2017 and was "still having pain." Dr. Royce noted Claimant was limping and stated, "patient is not doing well." He opined Claimant's pain was likely related to severe arthritis. He stated, "hopefully this can be treated with injection treatment and restriction of painful activity and would not recommend that he do therapy that aggravates [the] knee." Dr. Royce gave Claimant a cortisone injection and recommended he return in a week.

13. Claimant had another MRI on June 6, 2017 which showed a new tear of the medial meniscus, a full thickness radial tear, and a full thickness cartilage defect.

14. Claimant saw Dr. Royce on June 9, 2017 to review the MRI. Ultimately, Dr. Royce recommended another surgery. Respondents denied the surgery based on a Rule 16 review from Dr. Ciccone. Claimant had surgery on June 29, 2017 through his health insurance. Respondents' liability for surgery was not an issue at the August 9, 2017 hearing, and is not addressed by this Order.

15. The parties had a *Samms* conference with Dr. Royce on June 28, 2017. Dr. Royce indicated he had discharged Claimant on April 25, 2017, instructing him to follow-up as needed. Dr. Royce opined that Claimant's work injury aggravated his significant pre-existing arthritis. He opined that the significant findings on the June 6 MRI were new and likely occurred after April 25, 2017. Dr. Royce confirmed there was no note taking Claimant off work other than the one dated March 13, 2017.

16. Claimant has not returned to work since his termination from Employer. He applied for and received unemployment benefits in the amount of $557.

17. Dr. Royce did not release Claimant to return to regular employment.

18. Dr. Royce has not placed Claimant at MMI.

19. Respondents did not prove a basis to terminate TTD benefits on or after March 27, 2017.

CONCLUSIONS OF LAW

A claimant is entitled to TTD benefits if the injury causes a disability, the disability causes the claimant to leave work, and the claimant misses more than three regular working days. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The claimant must establish a causal connection between a work-related injury and the subsequent wage loss to obtain TTD benefits. *Id*. The term disability connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by limitations which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

Respondents stipulated that Claimant is entitled to TTD benefits from March 16, 2017 to March 27, 2017, essentially confessing the threshold requirements for TTD eligibility. The dispositive issue is whether Respondents established a legally sufficient basis to terminate Claimant's TTD benefits.

Once commenced, TTD benefits continue until one of the events enumerated in § 8-42-105(3)(a)-(d). Here, Respondents seek to apply § 8-42-105(3)(c), which mandates termination of TTD when "the attending physician gives the employee a written release to return to regular employment." Section 8-42-105(3)(c) is an affirmative defense, so Respondents have the burden to establish the requisite factual predicates. *Witherspoon v. Metropolitan Club of Denver*, W.C. No. 4-509-612 (December 16, 2004); *Schuldies v. United Sporting Good Wholesale*, W.C. No. 4-413-232 (January 7, 1999).

The ALJ may not disregard the attending physician's opinion that a claimant is released to return to regular employment. *Burns v. Robinson Dairy, Inc*., 911 P.2d 661 (Colo. App. 1995). But the ALJ has the authority to resolve conflicting or ambiguous opinions issued by the attending physician. *Imperial Headware, Inc. v. Industrial Claim Appeals Office*, 15 P.3d 295 (Colo. App. 2000); *Bestway Concrete v. Industrial Claim Appeals Office*, 984 P.2d 680 (Colo. App. 1999); *Joe v. Harrison Western Construction Corp.*, W.C. No. 4-747-660 (February 25, 2009). Determining whether a claimant has been released to full duty is a question of fact for the ALJ. *Popke v. Industrial Claim Appeals Office*, 944 P.2d 677 (Colo. App. 1997).

The ALJ concludes Dr. Royce's opinion regarding whether Claimant was released to regular work on March 27, 2017 is ambiguous and subject to conflicting inferences. Although Dr. Royce never explicitly stated Claimant was released to full duty, but Respondents argue his note taking Claimant "off work for two weeks" implicitly released him to regular employment at the end of that two-week period. That interpretation is not supported by Dr. Royce's contemporaneous records, particularly the March 28 office note and therapy order. In his narrative report, Dr. Royce stated, "Return to work when safe as demonstrated with physical therapy." And the therapy referral order specifically asked the therapist to "please advise when patient will be safe to work." It would be illogical for Dr. Royce to make those statements if he believed Claimant was released to regular work. Claimant was slighly more than two weeks out from surgery, had not even started physical therapy, and was still having significant symptoms and swelling. It makes much more sense from a medical perspective to have Claimant participate in physical therapy before releasing him to his regular duties, which included inspecting construction sites. Furthermore, had Dr. Royce intended to release Claimant to full duty as of March 27, the ALJ would have expected him to make that clear at the *Samms* conference. Based on the totality of evidence presented, the ALJ concludes that Dr. Royce did not release Claimant to regular work.

Although Respondents did not specifically argue MMI as a basis to terminate TTD, the issue was fairly raised by the evidence presented. Therefore, the ALJ has also considered whether Dr. Royce put Claimant at MMI. *See* § 8-42-105(3)(a). Dr. Royce "discharged" Claimant to follow-up as needed on April 25, 2017, which could be interpreted as a determination of MMI. But he did not explicitly state Claimant was at MMI at that time, and when Respondents asked him on May 8, 2017 whether Claimant was at MMI, he replied "No." Dr. Royce opined Claimant's anticipated MMI date is "undetermined" because "left knee arthroscopy is planned." To the extent Dr. Royce's opinion regarding MMI is ambiguous, the ALJ concludes he has not put Claimant at MMI. *See Blue Mesa Forest v. Lopez*, 928 P.2d 831 (Colo. App. 1996) (when the treating physician issues conflicting opinions concerning MMI, the ALJ must resolve the conflict). Therefore, § 8-42-105(3)(a) does not provide a basis to terminate Claimant's TTD.

Based on the evidence presented, the ALJ concludes that none of the terminating events listed in § 8-42-105(3)(a)-(d) have occurred. Accordingly, Claimant is entitled to ongoing TTD benefits commencing March 16, 2017.

ORDER

It is therefore ordered that:

1. Insurer shall pay Claimant TTD benefits at the weekly rate of $939.82 commencing March 16, 2017 and continuing until terminated according to law.

2. Insurer may offset the $557 Claimant received in unemployment benefits.

3. Insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

- Whether Claimant proved by a preponderance of the evidence that his left hip condition is related to his April 23, 2014 work-related injury.

- Was the relatedness issue ripe for determination?

PROCEDURAL POSTURE

Respondents filed an Application for Hearing ("AFH") on or about August 2, 2016. The issues on which an adjudication was requested included medical benefits (reasonably necessary) and relatedness of medical care.

At the outset of the hearing, Claimant objected to the medical benefits issue, asserting that no issue was ripe for determination. In particular, Claimant was not seeking to have the proposed left hip surgery, a fact that was communicated to Respondent on the eve of hearing.

Respondent, by and through its attorney of record, averred it had a right to seek a determination of whether Claimant's left hip condition was related to the admitted industrial injury. Respondent confirmed it was not seeking to withdraw the previously filed General Admission of Liability ("GAL"). As noted *infra*, the ALJ determined the issue of relatedness was ripe for determination.

FINDINGS OF FACT

1. Claimant is employed as a supervisor for Employer. In that capacity, he supervised individuals completing various tasks at the wastewater treatment plant. He also performed some of these tasks.

2. Claimant had a history of chronic low back pain, which was documented in the record. Claimant treated with Byron Jones, M.D. for low back pain. [1] Claimant also underwent an MRI of the lumbar spine on November 10, 2011. The films were read by Steven Brown, M.D. Dr. Brown's impression was very small central and left paracentral HNP at L5-S1, which caused mild mass effect on the ventral thecal sac and perhaps on the descending segment of the left S1 nerve root. The L5-S1 disc showed continued degenerative desiccation. Dr. Brown also noted a minimal concentric annular bulge at L4-L5 without lateralized protrusion. The other lumbar discs appeared normal.

[1] Dr. Jones' records were not admitted at hearing. The October 24, 2016 report of Gary Zuehlsdorff, D.O. was admitted into evidence as Exhibit Q. Dr. Zuehlsdorff noted Claimant longstanding low back pain and received injections, physical therapy ("PT"), as well as dry needling treatments. He also took medications and had a pain contract. There was no reference to treatment of the left hip.

3. Records from Exempla Spine Physical Therapy from January 8 through February 26, 2014 were admitted at hearing. The notes from January 28, 2014 referred to bilateral hip pain and Claimant received PT that day. The February 4, 2014 PT note documented that the Claimant's left hip was higher than the right. On February 11, 2014, Claimant responded well to stretching, which helped relieve right hip pain. The February 27, 2014 note referenced decreased hip extension on the right side, which was treated. On March 3, 2014, Claimant reported he was significantly better. The ALJ noted there was no evidence in the record which showed Claimant received treatment for either hip for an extended period of time before the April 22, 2014 injury.

4. No evidence was admitted at hearing which documented any treatment by Claimant for his right or left hip before 2014.

5. On April 22, 2014, Claimant suffered an admitted industrial injury while riding an ATV at work. Claimant testified he was going down to a concrete ramp when a goose flew directly at him. He swerved to the right and the ATV flipped, which caused him to be thrown inside the roll cage. Claimant testified he was moved around within the interior and had to crawl out of the ATV.

6. Claimant testified he felt pain on the right side, as well as his neck, shoulder, upper back and right knee. He also felt right hip pain immediately after the accident.

7. An Employee's Written Notice of Injury to Employer was completed by Claimant on April 23, 2014. Claimant stated the accident occurred when he swerved to avoid an oncoming goose and tipped the ATV onto its right side. Claimant identified soreness in the right shoulder and upper back, as well as a bruised right hip in response to the question about his injuries.

8. On April 23, 2014, Stan Thurber [safety specialist] completed an Employer's First Report of Injury on behalf of Employer. Claimant was noted to be driving an all-terrain vehicle on the property as part of his routine work as a supervisor. Claimant's right shoulder, hip and upper back were listed as the parts of body affected by the accident.

9. That same day, Claimant was evaluated by Monica Fanning, FNP OccMed Colorado, the ATP for Employer. He was complaining of pain in the upper back, left and right shoulder, soreness in the neck and a bruise on the right hip. On examination, tenderness was found across the iliac crest region, although the ilia were fairly symmetrical. Lying straight leg raise test was negative, however, Patrick’s sign was mildly positive to the right. A contusion at the trochanter insertion site was observed. Range of motion ("ROM") was painful, but no popping, clicking or crepitus was noted. The ALJ noted these were objective signs of injury to Claimant’s right hip.

10. NP Fanning's assessment was: motor vehicle accident; thoracic strain and contusion; lumbar spine; left shoulder strain; right shoulder contusion and abrasion;

and blunt head trauma. NP Fanning wrote a prescription for Ibuprofen and Norco, as well as recommending the application of ice to all affected areas. The report was countersigned by Dr. Zuelhlsdorff.

11. Claimant received conservative treatment of the left shoulder, including an injection. Because his symptoms persisted, he underwent surgery, which was performed by James Johnson, M.D. on July 3, 2014. Dr. Johnson's post-operative diagnoses included: subacromial decompression; lateral clavicular resection; positive Bankart repair; extensive bursectomy and debridement of labrum.

12. Dr. Zuelhlsdorff continued his treatment of Claimant, both before and after the shoulder surgery. Medical records from Dr. Zuelhlsdorff were admitted at hearing. These records documented Claimant's progress after the surgery. Complaints referable to the right hip were noted on September 5, 2014, October 3, 2014, and November 4, 2014.[2] Claimant's pain diagrams also documented these symptoms. In the December 8, 2014 note, Claimant reported massage therapy helped the symptoms in his hip and low back.[3] On January 9, 2015, improvement in the right hip was noted after an injection. Claimant did not report symptoms or receive treatment for his left hip during this period of time. The ALJ concluded Claimant had persistent right hip symptoms following the April 22, 2014 injury.

13. Dr. Zuelhlsdorff noted Claimant fell at work on January 23, 2015, which aggravated his left shoulder and right hip, but not dramatically. Clamant continued treatment for the right hip. On February 20, 2015, PT was started for the right hip. On March 11 and 30, 2015, pain was noted in Claimant's right hip around the trochanter insertion site. On April 13, 2015, Dr. Zuelhlsdorff injected Claimant's right hip.

14. On May 22, 2015, Dr. Zuelhlsdorff reevaluated Claimant. At that time, he reported improvement in the left shoulder, but stated the right shoulder was worse. Claimant was scheduled to see Brian White, M.D. on May 27 for his hip, noting the pain had been more on the lateral side and a little more on the left side trochanteric area. On examination, pain was noted in the right shoulder. Dr. Zuelhlsdorff's assessment related to the right hip included the conclusion that the secondary fall on January 23, 2015 led to a slight exacerbation of right and left shoulders and the right hip, which were minimal given the history and examination.

15. On May 27, 2015, Dr. White conducted an initial evaluation of Claimant. The report was prepared by Shawn Karns, MPA, PA-C, who noted Claimant has had pain over the lateral aspect of the right hip since landing on his right side and right hip on April 22, 2014. He had a contusion injury. Claimant underwent a cortisone injection, which gave him 70% relief. Claimant also noted that the left hip had become more painful over the last three months similar to how the right hip had been in the past. He had since developed groin pain. Claimant's chronic low back pain was noted as mild

[2] Exhibit C, pp. 20, 23, 26.

[3] Exhibit C, pp. 29.

and he was able to distinguish this from hip issues. On examination, Claimant's gait was non-antalgic. He had a negative Trendelenburg sign and gait, with excellent lumbar ROM. X-rays showed underlying reactive CAM morphology over bilateral femoral neck, consistent with some underlying femoroacetabular impingement with alpha angles greater than 60°, Tonnis grade of zero bilaterally. Claimant had a small calcification lateral to the acetabulum on the left side, which Dr. White thought could indicate a chronic labral injury. The MRI showed a degenerative labral tear on the right side, as well as some mild trochanteric bursitis.

16. PA-C Karns' assessment was: Claimant was a 48-year-old male with findings consistent with underlying femoroacetabular impingement, degenerative labral tear on the right side; concern for impingement, labral tear on the left as well as bilateral trochanteric bursitis. Dr. White issued an addendum and opined that the majority of Claimant's pain was coming from the joint. He thought it started as a significant contusion injury to the lateral aspect of the hip, but with the impaction injury, Claimant probably injured the joint. He recommended a diagnostic injection to confirm the pain generator. If confirmed, his recommendation was consideration of hip arthroplasty addressing primarily the joint with a femoroacetabular osteoplasty and labral repair versus reconstruction. The ALJ inferred Dr. White was of the opinion Claimant required surgery on the right hip as a result of the April 22, 2014 workplace injury.

17. On August 31, 2015, Claimant underwent right hip surgery, performed by Dr. White. In a note to Dr. Zuelhlsdorff dated September 1, 2015, Dr. White stated he performed a hip arthroplasty, along with a bursectomy and windowing of the iliotibial (IT) band. Dr. White found an extensively torn acetabular labrum and underlying impingement on both sides of the joint. Dr. White noted Claimant had some complaints of pain on the left side, which were primarily of lateral pain. He recommended a steroid injection in the left trochanteric region.

18. On October 26, 2015, Dr. Zuelhlsdorff issued a report entitled Chart Review Report of Causality for Left Hip. Dr. Zuelhlsdorff noted he reviewed the whole chart and was sending the note at the request of Dr. White. Dr. Zuelhlsdorff recounted the treatment history after the April 22, 2014 injured in which Claimant had left shoulder surgery and received treatment for continuing low back and right hip pain. On May 22, 2015, Dr. Zuelhlsdorff noted left hip pain for the first time in the record. The pain was in the left trochanteric area. Dr. Zuelhlsdorff also noted Dr. White documented Claimant complained of progressively worse left hip pain over the last three months in his May 27, 2015 note.

19. Dr. Zuelhlsdorff opined Claimant's left hip condition was work-related. Even though roughly 13 months elapsed from the injury to the time the left hip was first mentioned, Claimant had a very significant mechanism of injury in his rollover accident. Dr. Zuelhlsdorff stated that more likely than not this was a work-compensable claim for the left hip, as Claimant probably injured it during roll-over, which took a while to

manifest, given the flow of the case, the multiple other diagnoses, with the resulting worsening of the left hip over time.[4] The ALJ found this opinion to be persuasive.

20. On November 18, 2015, Claimant underwent a left hip MR arthrogram and diagnostic injection, which were administered by Jeffrey Weingardt, MD. Dr. Weingardt's impression was: subtle tears involving the superior and anterior left acetabular labrum; dysplastic change noted at the anterolateral left femoral head neck junction with minimal underlying bone marrow edema; probable femoral acetabular impingement involving right hip joint; moderate spondylosis at L5-S1; patchy edema noted within the right femoral head extending into the neck of uncertain etiology; small volume right hip joint effusion.[5]

21. A note dated November 19, 2015 prepared by PA-C Karns was admitted into evidence. It referenced a telephone conference with Claimant after Dr. White reviewed the results of the left hip MRI. The films showed that the joint spaces were well-preserved, but Claimant had a labral tear. Claimant underwent a diagnostic injection and his pain was taken away for a short time. PA-C Karns noted Claimant would be a candidate for hip arthroscopy surgery.

22. Claimant for returned to Dr. White on December 8, 2015, which was roughly 3 months post right hip arthroscopy. Dr. White noted the ROM of the right hip was nice and smooth throughout, without any pinching or significant discomfort. Left hip ROM was good overall, but Claimant got significant discomfort with the anterior impingement maneuver. The single leg bridge on the right side demonstrated weakness compared to the contralateral side, which was to be expected at this point. Dr. White's assessment was that Claimant's right hip was doing well post-operatively. He diagnosed continued left hip pain consistent with a femoroacetabular impingement and labral tear. Dr. White noted Claimant was a candidate for left hip arthroscopy surgery, as well as with potential for labral reconstruction on that side.

23. On December 31, 2015, an Amended GAL was filed on behalf of Respondent, admitting for wage and medical benefits.

24. Claimant returned to Dr. White on March 9, 2016. This was approximately six months post the right hip arthroscopy (with labral reconstruction and greater trochanteric bursectomy). Claimant's left side was characterized as getting progressively worse, despite PT. Claimant had no pain on the right side, including the trochanteric region. On the left side, pain was noted with the anterior impingement maneuver. He had no real trochanteric symptoms. Dr. White reviewed x-rays, which showed very similar CAM morphology of the proximal femur on the left side, with a pre-operative alpha angle exceeding 60°. A review of the MRI confirmed a labral tear, very similar labral size, which was very small as seen on the other side. Dr. White's assessment included confirmation that Claimant had done well with the right hip

[4] Exhibit H, p. 63.

[5] The reference to the right hip appears to be a typographic or transcription error,

arthroscopy. He also diagnosed left-sided impingement, with labral tear, but no bursal symptoms. Dr. White opined it was reasonable to move forward with the left hip arthroscopy, femoroacetabular osteoplasty, with labral reconstruction. The ALJ noted Dr. White was of the opinion that Claimant's left hip condition was getting worse at this point in time.

25. On June 23, 2016, Claimant underwent an independent medical examination requested by Respondent, which was performed by Allison Fall, M.D. At the time of the evaluation, Claimant advised Dr. Fall he had complained of left hip pain prior to the surgery on the right hip. He said when he began putting most of the weight on his left side, it became very painful. Claimant indicated he had chronic low back pain, which increased significantly after the hip surgery. On examination, Claimant had unrestricted ROM of both shoulders, with no signs of impingement or instability. Claimant reported pain along the medial scapular border of the right periscapular area. Claimant's right hip revealed well-healed surgical portals. No tenderness was noted over the sacroiliac joint. Examination of Claimant's left hip revealed some mild pain with and range flexion and rotation. No clicking or crepitus was noted.

26. Dr. Fall's assessment was: (a) S/P right hip arthroscopy on 8/31/15, with femoral osteoplasty, acetabular rim trimming, greater trochanteric bursectomy, and windowing of the IT band-at MMI following aggravation of underlying condition from work-related ATV accident; (b) S/P left shoulder arthroscopic subacromial decompression, distal clavicle resection, and Bankart lesion repair-at MMI following aggravation of underlying condition from work-related ATV accident; (c) same underlying condition on the left hip of femoroacetabular impingement; (d) chronic low back pain on opioid medication with noncompliance on prior UDTs; psychological issues likely affecting presentation and perceived disability.

27. Dr. Fall had no further treatment recommendations. She concluded Claimant's symptom presentation for his hip was related to his underlying somatic symptom disorder and acetabular configuration rather than injuries from the ATV accident. Dr. Fall noted there were no initial complaints regarding the left hip. Dr. Fall characterized her findings with regard to the left hip on examination as minimal and opined these should be treated outside the workers' compensation system.

28. Claimant returned to Dr. Zuelhlsdorff on July 15, 2016 for an evaluation of bilateral shoulders, bilateral hips and upper back. His right hip was 90% better; his left hip was no better, but not overtly worsening. Claimant's history of low back pain and treatment with Dr. Jones was also referenced. Claimant was not taking any medications issued by Dr. Zuelhlsdorff and had discontinued PT. Claimant was working at modified duty. Dr. Zuelhlsdorff scheduled a follow-up appointment in one month.

29. Dr. Zuelhlsdorff evaluated Claimant on October 24, 2016 and noted the focus of the evaluation was on Claimant's hips (as was the July 15, 2016 evaluation). Claimant's left hip was no better and he remained on modified duty. On examination, the appearance of the left hip was normal, including the anterior hip joint and proximal quadriceps. Palpation was normal and full range of motion was noted, with pain on

abduction. Flexion strength was 4/5 and 5/5 on the right side without pain. Dr. Zuelhlsdorff's diagnoses were: MVA; injury of right shoulder, sequela; injury right hip, sequela; injury of left shoulder; injury of left hip, subsequent encounter; surgery follow-up. Claimant's work restrictions were continued.

30. Claimant testified he had not been in any accidents since April 2014, nor had he injured his left hip in any other event.

31. Dr. Zuelhlsdorff testified as an expert at hearing. He is a specialist in Occupational Medicine and is board-certified in Internal Medicine. He is Level II accredited pursuant to the WCRP. Dr. Zuelhlsdorff noted Claimant sustained multiple injuries as a result of the April 22, 2014 accident. He has seen Claimant on average once per month since the time of the accident.

32. Dr. Zuelhlsdorff testified he believed the condition of Claimant's left hip was related to the subject accident. Dr. Zuelhlsdorff confirmed Claimant had complaints of pain in the right hip one day after the accident and there was bruising noted on examination. The symptoms in the left hip did not show up immediately. Given the complexity of injury in the multitude of problems Claimant had, Dr. Zuelhlsdorff did not think it was unusual that he did not report hip pain right away. He said particularly with hips, it can take some time for the symptoms to manifest. The key factor in his opinion was the mechanism of injury. Dr. Zuelhlsdorff noted this was a rollover accident in which Claimant was not restrained, which applied significant forces to the right hip. There would have also been forces applied to the left hip. Dr. Zuelhlsdorff based this conclusion was based upon the principles of physics and noted force vectors would have operated on both sides of Claimant’s body. Dr. Zuelhlsdorff opined these forces were the causes of the pathology in both of Claimant's hips.

33. Dr. Zuelhlsdorff testified symptoms in the left hip manifested subjectively in approximately May 2015. Dr. Zuelhlsdorff also noted that Claimant may not have experienced symptoms immediately, as he was relatively immobile after the accident and not putting a great deal of weight on the hips.

34. Dr. Zuelhlsdorff noted Claimant could have a degenerative condition in the labrum, including a tear, which was not symptomatic until the accident. This was the basis for his conclusion that his condition was more likely than not the result of the injury. The ALJ found Dr. Zuelhlsdorff's testimony persuasive.

35. Dr. Zuelhlsdorff testified Claimant had received PT, home exercises medications and an injection as treatment for the left hip. Surgery on the left hip was an option. Dr. Zuelhlsdorff testified he was aware Claimant had decided, at least at this time, not to proceed with surgery of the left hip. At this time, he recommended home exercises and medications. Dr. Zuelhlsdorff testified Claimant may require surgery for the left hip in the future and opined it was part of the work injury.

36. Dr. Fall testified as an expert in Physical Medicine and Rehabilitation. Dr. Fall has an undergraduate degree in biomedical engineering and testified as an expert

in this field, as well. She is Level II accredited pursuant to the WCRP. She testified consistently with the opinions expressed in her report, although did not focus on Claimant's somatic condition.

37. Dr. Fall testified there was no work-related injury to the left hip. She did not believe the subsequent treatment for the right hip aggravated the left hip. She based her opinion on Claimant's prior medical history, as well the accident itself. Dr. Fall believed Claimant's treatment for the low back prior to the injury had relevance. She testified Claimant's prior low back condition, which was chronic, included hip symptoms and that was significant. She noted the SI joints and hamstrings were structures involved in the low back treatment. The ALJ found Dr. Fall did not identify any treatment of either hip before 2014. Dr. Fall also testified Claimant did not provide a full history to his treating physicians.

38. Dr. Fall testified that there was no temporal relationship between Claimant's reported symptoms in the left hip and the accident. She disagreed with Dr. Zuelhlsdorff on this point. She disagreed that there would have been force vectors operating on Claimant's left hip, although Dr. Fall conceded on cross-examination that a twisting type injury could cause symptoms in the hip. Dr. Fall opined Claimant's soft tissues would have absorbed some the forces operating on his body. Dr. Fall postulated Claimant would have had symptoms right away, had there been an injury to the left hip. She testified the tearing of tissues would cause symptoms. She noted the MRI findings were similar on the left side, as the right. Dr. Fall cited Dr. White, who noted Claimant had a particular angulation of the hip (60°), which pre-disposed him to impingement. Dr. Fall also noted the radiologist described the labral tear as degenerative. Dr. Fall concluded Claimant's hip condition was degenerative, as opposed to an acute injury. She noted some patients with this condition manifested symptoms in their twenties.

39. Dr. Fall testified Claimant injured his right hip in the subject accident, but not his left. Dr. Fall stated that while it was possible, it was not medically probable that Claimant injured his left hip in the accident. The ALJ found Dr. Fall did not provide an explanation as to why Claimant's left hip symptoms manifested after the rollover accident and not before. Dr. Fall did not believe that the surgery on the right hip caused Claimant's left hip to become symptomatic. She cited the medical literature for the proposition that overuse would not have caused the left hip to become symptomatic, but there was no specific article cited and nothing specifically the Workers' Compensation Medical Treatment Guidelines. On cross-examination, Dr. Fall was also asked if Claimant was more active after the right hip surgery, which was documented in the medical records. Dr. Fall did not believe this would be a cause of left hip symptoms.

40. Claimant met his burden of proof and the evidence established the symptoms in his left hip were related to the industrial injury. The ALJ relied upon Claimant's treating physicians, Dr. White and Dr. Zuehllsdorff, who were in the best position to determine whether Claimant's left hip condition was related to the workplace injury.

41. Claimant was not requesting surgery on his left hip as of the date of the hearing.

42. The evidence and inferences inconsistent with these findings were not credible and persuasive.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Generally, Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. § 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Ripeness

In *Olivas-Soto v. Industrial Claim Appeals Office*, 143 P.3 d 1178, 1180 (Colo. App. 2006), the Colorado Court of Appeals considered when an issue was ripe. In that case, Claimant suffered a work place injury and was placed at MMI by his ATP. After a DOWC Independent Medical Examination confirmed MMI, Employer filed a Final Admission of Liability ("FAL"), accepting the date of MMI and admitting for PPD benefits. Claimant filed a timely objection to the FAL and Application for Hearing, but did not endorse the issue of permanent total disability benefits. Claimant subsequently filed two Applications for Hearing, which listed the PTD benefits issue. Respondents asserted the issue of PTD benefits was not ripe because it had not been endorsed on the original AFH.

The Court of Appeals held PTD was ripe for determination at the time the FAL was filed and Respondent admitted for PPD benefits. Writing for the Court, Justice Rovira stated: "Generally, ripeness tests whether an issue is real, immediate, and fit for

adjudication. [citing *Bd. of Dirs. V. Nat'l. Union Fire Ins. Co.* 105 P. 3d 653 (Colo. 2005)]. Under that doctrine, adjudication should be withheld for uncertain or contingent future matters that suppose a speculative injury which may never occur". 143 P.3d at 1180.

The ALJ determined that the issue of whether Claimant's left hip condition was related to the industrial injury was ripe for determination. This issue was ripe at the time Respondent filed its AFH, as the question of surgery for the left hip was controverted. Although Claimant subsequently decided not to have the surgical procedure, the issue of relatedness remained ripe for determination. Under the test articulated by the Court in *Olivas-Soto v. Industrial Claim Appeals Office*, this issue remained controverted and was ready for resolution by the ALJ.

Relatedness of Left Hip

A pre-existing condition "does not disqualify a Claimant from receiving workers' compensation benefits". *Duncan v. ICAO*, 107 P.3d 999, 1001 (Colo. App. 2004). Further, if a pre-existing condition is stable but is aggravated by an occupational injury, the resulting occupational injury is still compensable because the incident caused the dormant condition to become disabling. *Siefried v. Industrial Commission*, 736 P.2d 1262, 1263 (Colo. App. 1986). Thus, if an industrial injury aggravates, accelerates, or combines with a pre-existing condition so as to produce disability and need for treatment, the claim is compensable. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). The ALJ determined the instant case fit within this factual scenario.

In the case at bench there was no dispute Claimant suffered a compensable injury on April 22, 2014. Respondents provided medical benefits to cure and relieve the effects of the injury, including treatment of the right hip. The ALJ found Claimant's right hip had a contusion immediately following the accident. (Finding of Fact 9). Claimant had persistent right hip symptoms following the April 22, 2014. (Findings of Fact 12-14). Claimant's treating physicians initially provided conservative treatment for the right hip, then surgery was performed. In this regard, Claimant's right hip had underlying conditions which became symptomatic after the workplace injury. *Id.* These included femoroacetabular impingement, labral tear(s), as well as bilateral trochanteric bursitis. (Finding of Fact 16). Claimant's ATPs (Dr. Zuelhlsdorff and Dr. White) concluded Claimant's right hip condition was related to the workplace injury. These physicians concluded Claimant's roll-over accident aggravated these underlying conditions and the ALJ was persuaded by their opinions. (Findings of Fact 16 and 19).

The ALJ also determined Claimant proved that he developed symptoms in his left hip as a result of the industrial injury, albeit not initially. Claimant's left hip had some of the same underlying conditions as the right hip. The medical evidence supported the conclusion the left hip conditions was related to the industrial injury. The ALJ first relied upon Dr. Zuelhlsdorff's analysis on causation when determining the left hip condition was related. (Findings of Fact 18-19). Dr. Zuelhlsdorff's testimony that the forces present in this type of accident could cause an injury to both hips were credible, as was his explanation that an underlying degenerative condition could become symptomatic

after this accidents. (Finding of Fact 32). The inference drawn from Dr. White's evaluations of Claimant were also persuasive to the ALJ. (Finding of Fact 16).

Second, there was evidence in the record that Claimant's left hip condition was aggravated by Claimant's use following the surgery on the right hip. (Finding of Fact 19). Dr. Zuelhlsdorff also noted this in his causation analysis.[6] Claimant's testimony also supported this conclusion. That aggravation of the underlying condition of the left hip resulted from treatment for the industrial injury and led the ALJ to conclude it was related to the industrial injury. (Finding of Fact 40).

Third and finally, there was no evidence in the records that Claimant had a hip diagnosis and treatment plan (including surgery) before the subject accident. He received some very limited physical therapy in 2014. This was related to treatment of low back symptoms. The PT records referred primarily to Claimant's right hip for a period of slightly more than one month. (Finding of Fact 3). However, at the conclusion of these records, Claimant reported a resolution of his symptoms. Most important for the ALJ, there was no medical opinion which tied this treatment to the underlying condition of either hip. No evidence was in the record that showed Claimant received any treatment before 2014. (Finding of Fact 4).

In coming to this conclusion, the ALJ considered Dr. Fall's testimony and Respondent's argument that the delay in reporting symptoms was significant and should lead to the conclusion that this was a degenerative as opposed to an acute condition. The ALJ concluded this was a significant issue and Dr. Fall's testimony raised questions about the etiology of Claimant's left hip symptoms. Dr. Fall raised valid questions concerning the delay in left hip symptoms. However, Dr. Fall did not provide an explanation why it was only after the workplace injury that Claimant's left hip was symptomatic to the degree it required treatment and ultimately surgery was recommended. As noted, *supra*, Claimant's treating physicians provided the rationale that was persuasive to the ALJ. In this respect, Dr. Fall's testimony was less persuasive than Dr. Zuelhlsdorff. On balance, the ALJ found this was a significant accident, which injured multiple parts of Claimant's body. There were significant forces at work on Claimant's body, which injured the left hip. The ALJ determined the workplace accident caused the underlying condition in Claimant's left hip to become symptomatic and require treatment

The ALJ makes no findings as to whether the proposed surgery is reasonable and necessary at this juncture. Those issues were not before the Court, as Claimant has not requested that Respondent provide that medical benefit.

ORDER

IT IS HEREBY ORDERED:

[6] Exhibit H, p. 63.

1. Respondents shall provide medical benefits to Claimant for the injury to his left hip.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether Respondents have produced clear and convincing evidence to overcome the Division Independent Medical Examination (DIME) opinion of Lloyd J. Thurston, D.O. that .Claimant has not reached Maximum Medical Improvement (MMI) and suffered a provisional 15% whole person impairment rating as a result of his admitted December 4, 2015 hernia.

2. Whether Claimant has established by a preponderance of the evidence that he is entitled to receive reasonable, necessary and related medical maintenance benefits designed to relieve the effects of his December 4, 2015 hernia or prevent further deterioration of his condition pursuant to *Grover v. Industrial Comm'n.,* 759 P.2d 705 (Colo. 1988).

STIPULATION

The parties agreed that Claimant is entitled to receive medical maintenance care as directed by Authorized Treating Physician John T. Sacha, M.D. including medications and referral to a urologist for treatment of erectile dysfunction.

FINDINGS OF FACT

1. Claimant is a 30 year-old male who worked for Employer as a Mover. On December 4, 2015 Claimant suffered an admitted hernia during the course and scope of his employment while lifting furniture.

2. Employer referred Claimant to Concentra Medical Centers for treatment. He underwent two surgeries for bilateral inguinal hernias. However, the surgeries failed to relieve Claimant's symptoms.

3. In June 2016 Claimant was referred to Authorized Treating Physician (ATP) John T. Sacha, M.D. for an examination. Dr. Sacha diagnosed Claimant with ilioinguinal and iliohypogastric neuropathy. He noted that Claimant's nerve damage was caused by an unusual surgical approach during his hernia procedures.

4. Dr. Sacha concluded that Claimant reached Maximum Medical Improvement (MMI) on August 17, 2016. He prescribed medical maintenance treatment. Relying on the *AMA Guides for the Evaluation of Permanent Impairment Third Edition (Revised) (AMA Guides*), Dr. Sacha remarked that, although Table 51 addresses nerve damage, it does not contain impairments for ilioinguinal or iliohypogastric nerves. Instead, Dr. Sacha reasoned that Table 6 on page 196 of the *AMA Guides* regarding classes of hernia impairment was the appropriate Table. He noted that Claimant was experiencing frequent pain but did not have a protrusion or

defect with abdominal pressure that was readily reduced. Dr. Sacha thus placed Claimant in Class I of Table 6 and assigned a 5% whole person impairment rating as a result of the December 4, 2015 accident.

5. On September 26, 2016 Respondents field a Final Admission of Liability (FAL) consistent with Dr. Sacha's MMI and impairment determinations.

6. Claimant challenged the FAL and sought a Division Independent Medical Examination (DIME). Lloyd J. Thurston, D.O. performed the DIME and issued a report on March 11, 2017. Dr. Thurston concluded that Claimant had not reached MMI. He reasoned that further evaluations by a hernia surgeon and urologist would be appropriate. Dr. Thurston explained that "[i]f urologist and surgeon have no additional recommendations, it is my medical opinion [Claimant] is at MMI." He commented that placing Claimant at MMI currently would be "unfortunate as it is my opinion [Claimant] remains in significant, unexplained and unexpected pain."

7. Similar to Dr. Sacha, Dr. Thurston also utilized Table 6 on page 196 of the *AMA Guides* in calculating an impairment rating. However, he placed Claimant in Class II instead of Class I of the Table. Dr. Thurston explained that, "if the urologist and surgeon find nothing else to treat" a 15% whole person impairment rating is appropriate.

8. On March 16, 2017 Respondents filed an Application for Hearing seeking to overcome Dr. Thurston's DIME determination. On March 24, 2016 Claimant filed a Response to the Application.

9. Dr. Sacha reviewed Dr. Thurston's DIME report and explained that a 15% whole person impairment rating was inappropriate. He noted that Claimant had visited numerous physicians but agreed that Claimant was entitled to an additional general surgical evaluation. However, he commented that Claimant did not require an evaluation from a urologist because he lacked any "significant urological dysfunction." In addressing Dr. Thurston's 15% whole person impairment rating Dr. Sacha remarked that Class I of the hernia impairments in the *AMA Guides* requires "frequent protrusion at the site of the defect." However, Claimant lacked frequent protrusion. Instead, Claimant had pain that was "neuropathic in nature and not at the site of the palpable defect." Accordingly, Dr. Sacha concluded that Dr. Thurston's 15% whole person impairment rating was incorrect.

10. Dr. Sacha referred Claimant for a second surgical evaluation with Dr. Beck. Dr. Beck did not have any additional surgical recommendations. Dr. Sacha also noted that a urologist had determined that Claimant did not have any urologic impairment.

11. On July 20, 2017 the parties conducted the pre-hearing evidentiary deposition of Dr. Sacha. He explained that Claimant's pain and discomfort was caused by ilioinguinal and iliohypogastric neuropathy as a result of his surgeries. Dr. Sacha commented that Claimant did not have any urological dysfunction.

12. Dr. Sacha testified that Claimant's ongoing problems are neurological in character. He could have rated the Claimant using Table 51 of the *AMA Guides*, but there are no ilioinguinal and iliohypogastric nerve ratings available. Dr. Sacha commented that the correct mechanism to evaluate Claimant's permanent impairment was thus Table 6 of the *AMA Guides*. Claimant has visited a third general surgeon as suggested by Dr. Thurston and no further surgery has been recommended. Therefore, Dr. Sacha concluded that Claimant reached MMI on August 17, 2016 and only required medical maintenance treatment. He explained that Dr. Thurston used the wrong class of hernia impairmentin in assigning a rating. Although Table 6 is proper for hernia impairments Claimant fits into Class I as opposed to Class II because of his undisputed lack of a palpable defect or protrusion. Nevertheless, Dr. Sacha acknowledged that "this is an interesting area to rate because the Division gives you a lot of latitude when it comes to a non-named nerve that's not on Table 51." He recognized that Claimant falls somewhere between classes I and II of Table 6. Dr. Sacha also remarked that, if Dr. Thurston had provided a better explanation of his impairment rating, it might have been defensible.

13. Respondents have failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Thurston that .Claimant has not reached MMI and suffered a provisional 15% whole person impairment rating as a result of his admitted December 4, 2015 hernia. Initially, Claimant suffered admitted hernia injuries while working for Employer. He subsequently underwent two surgeries for bilateral inguinal hernias. However, the surgeries failed to relieve Claimant's symptoms. ATP Dr. Sacha concluded that Claimant reached MMI on August 17, 2016 with a 5% whole person impairment.

14. On March 11, 2017 DIME Dr. Thurston concluded that Claimant had not reached MMI and assigned a provisional 15% whole person impairment rating. He recommended further evaluation by a hernia surgeon and urologist. Dr. Thurston explained that "[i]f urologist and surgeon have no additional recommendations, it is my medical opinion [Claimant] is at MMI." However, he commented that placing Claimant at MMI would be "unfortunate" because he was suffering significant and unexplained pain.

15. In contrast, Dr. Sacha maintained that Claimant had reached MMI on August 17, 2016. He remarked that Claimant had undergone an evaluation with Dr. Beck and there were no additional surgical recommendations. Dr. Sacha also noted that a urologist had determined that Claimant did not have any urologic impairment. He explained that Dr. Thurston used the wrong class of hernia impairment pursuant to the *AMA Guides* in assigning a rating. Dr. Sacha reasoned that, although Table 6 is proper for hernia impairments, Claimant fits into Class I as opposed to Class II because of his undisputed lack of a palpable defect or protrusion.

16. Dr. Thurston concluded that Claimant warranted additional evaluations because he was experiencing significant and unexplained pain. Although Dr. Sacha noted that the recommended evaluations have been completed, it is it is premature to speculate about whether Dr. Thurston would now determine that Claimant has reached

MMI. Instead, the critical inquiry is whether Respondents have produced unmistakable evidence free from serious or substantial doubt about whether Dr. Thurston erred in determining Claimant has not reached MMI. However, Dr. Sacha did not contend that Dr. Thurston misapplied the *AMA Guides* or otherwise erred in reaching an MMI determination. Furthermore, although there is a dispute about Claimant's appropriate impairment rating based on the *AMA Guides*, Dr. Thurston simply issued a provisional rating because Claimant has not attained MMI. Accordingly, Respondents have failed to demonstrate that it is highly probable that Dr. Thurston's MMI and provisional impairment determinations are incorrect.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. In ascertaining a DIME physician's opinion, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998). A DIME physician's determination regarding MMI and permanent impairment consists of his initial report and any subsequent opinions. *In Re Dazzio,* W.C. No. 4-660-149 (ICAP, June 30, 2008); *see Andrade v. Industrial Claim Appeals Office,* 121 P.3d 328 (Colo. App. 2005).

5. A DIME physician is required to rate a claimant's impairment in accordance with the *AMA Guides*. §8-42-107(8)(c), C.R.S.; *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117, 1118 (Colo. App. 2003). However, deviations from the

AMA Guides do not mandate that the DIME physician's impairment rating was incorrect. *In Re Gurrola,* W.C. No. 4-631-447 (ICAP, Nov. 13, 2006). Instead, the ALJ may consider a technical deviation from the *AMA Guides* in determining the weight to be accorded the DIME physician's findings. *Id.* Whether the DIME physician properly applied the *AMA Guides* to determine an impairment rating is generally a question of fact for the ALJ. *In Re Goffinett,* W.C. No. 4-677-750 (ICAP, Apr. 16, 2008).

. 6. A DIME physician's findings of MMI, causation, and impairment are binding on the parties unless overcome by "clear and convincing evidence." §8-42-107(8)(b)(III), C.R.S.; *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAP, July 19, 2004); *see Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAP, Nov. 17, 2000).

7. As found, Respondents have failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Thurston that .Claimant has not reached MMI and suffered a provisional 15% whole person impairment rating as a result of his admitted December 4, 2015 hernia. Initially, Claimant suffered admitted hernia injuries while working for Employer. He subsequently underwent two surgeries for bilateral inguinal hernias. However, the surgeries failed to relieve Claimant's symptoms. ATP Dr. Sacha concluded that Claimant reached MMI on August 17, 2016 with a 5% whole person impairment.

8. As found, on March 11, 2017 DIME Dr. Thurston concluded that Claimant had not reached MMI and assigned a provisional 15% whole person impairment rating. He recommended further evaluation by a hernia surgeon and urologist. Dr. Thurston explained that "[i]f urologist and surgeon have no additional recommendations, it is my medical opinion [Claimant] is at MMI." However, he commented that placing Claimant at MMI would be "unfortunate" because he was suffering significant and unexplained pain.

9. As found, in contrast, Dr. Sacha maintained that Claimant had reached MMI on August 17, 2016. He remarked that Claimant had undergone an evaluation with Dr. Beck and there were no additional surgical recommendations. Dr. Sacha also noted that a urologist had determined that Claimant did not have any urologic impairment. He explained that Dr. Thurston used the wrong class of hernia impairment pursuant to the *AMA Guides* in assigning a rating. Dr. Sacha reasoned that, although Table 6 is proper for hernia impairments, Claimant fits into Class I as opposed to Class II because of his undisputed lack of a palpable defect or protrusion.

10. As found, Dr. Thurston concluded that Claimant warranted additional evaluations because he was experiencing significant and unexplained pain. Although Dr. Sacha noted that the recommended evaluations have been completed, it is it is premature to speculate about whether Dr. Thurston would now determine that Claimant has reached MMI. Instead, the critical inquiry is whether Respondents have produced unmistakable evidence free from serious or substantial doubt about whether Dr. Thurston erred in determining Claimant has not reached MMI. However, Dr. Sacha did not contend that Dr. Thurston misapplied the *AMA Guides* or otherwise erred in reaching an MMI determination. Furthermore, although there is a dispute about Claimant's appropriate impairment rating based on the *AMA Guides*, Dr. Thurston simply issued a provisional rating because Claimant has not attained MMI. Accordingly, Respondents have failed to demonstrate that it is highly probable that Dr. Thurston's MMI and provisional impairment determinations are incorrect.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

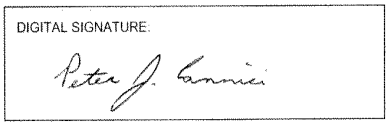
1. Respondents have failed to overcome the DIME opinion of Dr. Thurston that Claimant has not reached MMI and sustained 15% provisional impairment rating.

2. Claimant shall receive medical maintenance care as directed by ATP Dr. Sacha including medications and referral to a urologist for treatment of erectile dysfunction.

3. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: September 19, 2017.



_____

Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
633 17th Street Suite 1300
Denver, CO 80202

ISSUES

1. Pursuant to the standards established in *City of Littleton v. Industrial Claim Appeals Office*, 370 P.3d 157 (Colo. 2016) and *Industrial Claim Appeals Office v. Town of Castle Rock*, 370 P.3d 151 (Colo. 2016) whether Respondents have established that Claimant did not suffer the compensable occupational disease of melanoma during the course and scope of his employment as a firefighter for Employer under § 8-41-209, C.R.S.

STIPULATIONS

The parties agreed that Claimant has established the following threshold requirements pursuant to § 8-41-209, C.R.S.:

1. Claimant suffered cancer in the form of melanoma that is covered under the statute;

2. Claimant has been a firefighter for more than five years; and

3. There is no evidence that Claimant's melanoma existed at the time he was hired as a firefighter.

The parties further stipulated that, if compensable, Claimant's average weekly wage is $1,721.22.

FINDINGS OF FACT

1. Claimant is a male who has been employed as a firefighter for Employer since 2000.

2. Claimant grew up in Albuquerque, New Mexico and lived there from 1972 until 2000. As a child, Claimant was involved in outdoor activities that included Cub Scouts, Boy Scouts, soccer, and track and field. Claimant also rode his bicycle as a teenager before he had a driver's license.

3. In New Mexico, Claimant worked as an outdoor framer in approximately 1998 or 1999. After moving to Colorado and beginning work as a firefighter for Employer, Claimant continued to work in outdoor framing and deck building as a side job and performed this work in addition to firefighting from 2001 through 2008.

4. In approximately 2005 or 2006 Claimant started his own business, Zuke's Woodworks, and continued to build decks and furniture. Claimant also remodeled

buildings and basements. This business involved working both inside and outside. While performing this type of work, Claimant wore a t-shirt and pants or shorts.

5. From 2000 through 2011 Claimant ran marathons, biked, and hiked outdoors. Claimant also would wear t-shirts and shorts for these activities, depending on the weather.

6. Claimant has had numerous moles and freckles on his body for years, and recalls having them on his body as a child. Claimant's father is of non-Hispanic Caucasian descent. Claimant's mother is of 50% non-Hispanic Caucasian descent and 50% Native American descent.

7. On July 15, 2002 Claimant underwent a physical performed by Raewyn Shell, M.D. Claimant reported that he had some moles that his wife wanted Dr. Shell to look at. Dr. Shell diagnosed Claimant with five atypical or possible dysplastic nevi. Dr. Shell removed these moles or nevi on September 24, 2002 and a pathology report identified the five moles as "atypical" with three being dysplastic.

8. On October 9, 2002 Claimant had another mole removed and the suspected diagnosis by Dr. Shell was dysplastic nevus and it was noted the mole was atypical.

9. In 2008 Claimant developed a mole on his right calf. Claimant advised Dr. Shell on October 23, 2008 that he had a questionable mole on his right leg. This mole was at the same site where Claimant subsequently was diagnosed with melanoma.

10. On July 31, 2009 Claimant was evaluated by Dr. Shell and wanted Dr. Shell to look at the mole on his right calf because it was different than it had been and because Claimant believed the mole looked funny.

11. On September 19, 2011 Claimant had the mole on his right calf removed. On September 26, 2011 Claimant was diagnosed with invasive melanoma on the right calf at the site of the removed mole. Claimant underwent a second excision close to the same area on his right calf on November 22, 2011.

12. On December 11, 2011 Claimant was evaluated by Annyce Mayer, M.D. On February 28, 2012 Dr. Mayer issued a report. Dr. Mayer assessed Claimant with Stage 3B melanoma, superficial spreading type. Dr. Mayer opined that "much remains unknown about what causes cancer, why some people with multiple risk factors for melanoma go on to develop melanoma but many of others with those same risk factors do not."

13. Dr. Mayer opined that it was not possible to identify all the carcinogens that Claimant was exposed to over the course of his firefighting career, but that Claimant had repeated and prolonged skin contact with a number of different chemical carcinogens as well as respiratory exposure. Dr. Mayer also opined that Claimant had intermittent sun exposure and only used sunscreen during training and not during wild land fires or other calls.

14. Dr. Mayer opined that excess risk of malignant melanoma was observed in a number of studies of cancer risk in firefighters including a Howe & Burch study (1.73), the LeMasters meta-analysis (1.32), and the Bates study (1.50).

15. Dr. Mayer opined that Claimant had a number of underlying risk factors for melanoma including multiple nevi, dysplastic nevi, history of sunburn, and sun exposure that were outside of his work as a firefighter. Dr. Mayer opined that there were many people in Colorado with one or all of those same risk factors who did not have melanoma. Dr. Mayer opined that it is not known the degree to which risk factors are simply additive or the degree to which there is an interaction between risk factors, such that the risk of cancer due to an underlying host factor could be greatly increased by an environmental/occupational exposure.

16. Dr. Mayer testified by deposition in this matter consistent with her written report. Dr. Mayer explained the difference between cause and risk as risk being a particular exposure of factor that makes it more likely someone will develop a condition versus causation where it is medically probable that the condition was caused de novo.

17. Dr. Mayer testified that she examined Claimant's skin, and that he had approximately 50-100 moles and many freckles. Dr. Mayer was not confident in her ability to completely distinguish freckles and moles, but noted that Claimant had many present on his body. Dr. Mayer testified that the presence of moles/nevi does not say anything about nevi as a causative factor of melanoma.

18. Dr. Mayer testified that in occupational medicine, risk factors in many cases are simply an indication of an increase in risk rather than specific indication of causation and that having multiple risk factors does not mean a person is going to develop the outcome or particular condition. Referring to the LeMasters study regarding the risk of melanoma in firefighters, Dr. Mayer testified that firefighting was determined as a possible risk for malignant melanoma but again that relative risk does not establish causation.

19. Dr. Mayer testified and agreed that Claimant's mole count and sun exposure were possible risk factors for melanoma but again opined that risk did not establish causation.

20. On February 27, 2012 William Milliken, M.D. issued a report after performing a medical records review. Dr. Milliken noted that the issue in this case was the possibility that firefighting exposure was causally linked to the process of skin cancer (melanoma) development (carcinogenesis) and the possibility that occupational toxicant exposures incurred as a firefighter might have contributed to the melanocyte DNA changes which led to melanoma cell formation in Claimant's right calf.

21. Dr. Milliken opined that melanoma is causally linked to sun exposure, especially in Caucasians living in high sun exposure areas, and especially following a lifetime of sun exposure. Dr. Milliken noted that Claimant grew up in New Mexico and worked in Colorado, both relatively sunny regions, indicating an increased sun exposure

over Claimant's life to date. Dr. Milliken opined that sun exposure was a highly probable cause of Claimant's melanoma.

22. Dr. Milliken noted that well accepted scientific evidence suggested that approximately 90% of melanoma cases in those of European descent living in high ambient sun exposure climates are due to sun exposure and that Claimant was of partial European descent and had significant sun exposure living in sunny regions.

23. Dr. Milliken opined that it was highly probable that Claimant's sun exposure and moles on his body, including multiple dysplastic nevi, were the cause of Claimant's melanoma. Dr. Milliken opined that the probability the melanoma was caused by those factors was 6-10 times normal.

24. Dr. Milliken opined that with the environmental and phenotype based risk for melanoma being 6-10 times normal in Claimant's case, the much smaller risk of melanoma due to firefighting skin exposure at 1.32 times normal, was minor in comparison.

25. Dr. Milliken testified by deposition in this matter consistent with his written report. Dr. Milliken opined that 90 percent of melanoma cancer is associated with a mutation caused by sun exposure leading to the conjecture that 90 percent of melanoma tumors are sun-induced. With regard to the increasing incidence of melanoma in the population at large Dr. Milliken opined that it is theorized that this is due to increased sun exposure.

26. Dr. Milliken also opined that the presence of multiple atypical or dysplastic nevi is a known risk factor for the development of melanoma. Dr. Milliken testified that presence of a dysplastic mole (nevi) is considered a precursor of melanoma but that this does not mean it is going to become melanoma and, in general, most people with atypical moles don't get melanoma. Sun exposure may well accelerate the process of a dysplastic mole progressing to melanoma but it will not happen in the majority of people.

27. Dr. Milliken acknowledged that it would be difficult to prove the cause of melanoma in any person with any number of risk factors for development of this form of cancer and Dr. Milliken agreed that the cause of melanoma remains unknown.

28. Dr. Milliken opined that risk factors such as sun exposure and presence of dysplastic moles/nevi pose a higher risk for development of melanoma by Claimant than his exposures as a firefighter considered in the LeMasters study. Dr. Milliken opined that Claimant's atypical nevus count followed by sun exposure were greater risk factors for Claimant's development of melanoma than Claimant's exposures as a firefighter.

29. Dr. Milliken testified that in some cases, cancer can be the result of firefighting exposure. Dr. Milliken testified that the LeMasters study sought to classify the association of firefighting with melanoma as unlikely, possible, or probable and that the final analysis resulted in a possible classification with a statistically greater chance of developing melanoma in the firefighting population of 1.32. Dr. Milliken opined,

however, that Claimant had other risk factors with statistically far greater than the 1.32 affecting the firefighting population.

30. Dr. Milliken testified that a number of studies have indicated that the higher the number of moles on a person's body, the higher the risk factor for melanoma. Dr. Milliken testified that could be based on the number of total moles on the body or based on the number of atypical moles, but that the higher the number of moles, the higher the risk of melanoma. Dr. Milliken testified that Claimant had 4-5 atypical moles which would place him at 10.49 increased risk (with 5 atypical moles), compared to the 1.32 increased risk due to firefighting.

31. Dr. Milliken testified that Claimant's greatest risk for melanoma by far was due to Claimant's mole count. Dr. Milliken also opined that the next greatest risk for development of melanoma was due to Claimant's history of sun exposure. Dr. Milliken agreed that firefighting had some increased risk for developing melanoma, but that it was less than the risk due to the mole count and the sun exposure.

32. The LeMasters study, which both experts relied upon to some degree, classifies the relative risk for melanoma at a 95% confidence interval for the normal mole count on a person's body. For normal mole count, someone with between 41-60 moles has an increased relative risk for melanoma of 2.24. For normal mole count, someone with between 61-80 moles has an increased relative risk for melanoma of 3.26. For normal mole count, someone with between 81-100 moles has an increased relative risk for melanoma of 4.74. After examining Claimant's skin, Dr. Mayer opined that Claimant had between 50-100 moles. In each of the categories analyzing normal mole count and relative risk of melanoma, the risk is higher than the risk associated with firefighting and melanoma, which is between 1.32 and 1.7 depending on which study is used.

33. The LeMasters study also classifies the relative risk at a 95% confidence interval for atypical nevi/moles. For atypical mole count, someone with 3 atypical moles has an increased relative risk for melanoma of 4.1. For atypical mole count, someone with 4 atypical moles has an increased relative risk for melanoma of 6.55. For atypical mole count, someone with 5 atypical moles has an increased relative risk for melanoma of 10.49. Although there was some disagreement as to what qualified as an atypical nevi for purposes of this chart, both experts agreed that Claimant had multiple atypical nevi. Again, in each category, the risk of melanoma due to Claimant's atypical nevi is much higher than the risk associated with firefighting.

34. Respondents have established by a preponderance of the evidence that Claimant did not suffer the compensable occupational disease of melanoma during the course and scope of his employment as a firefighter for Employer under §8-41-209, C.R.S. Respondents introduced evidence of Claimant's specific exposures and risks for developing melanoma that were statistically more significant than the risk of developing melanoma while firefighting. The expert testimony of Dr. Milliken is found credible and persuasive.

35. Although Dr. Mayer disputed Dr. Milliken's analysis, the record demonstrates that it is more probably true than not that the cause of Claimant's melanoma is not related to his employment as a firefighter for Employer. In fact, Dr Mayer agreed that Claimant had significant risk factors related to both his mole count and sun exposure. Respondents have established that Claimant's particular risk factors as outlined by Dr. Milliken render it more probable that his cancer arose from a source outside the workplace. Accordingly, Claimant's request for Workers' Compensation benefits is denied and dismissed.

CONCLUSIONS OF LAW

The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Compensability – Occupational Disease

For an injury to be compensable under the Act, it must "arise out of" and "occur within the course and scope" of employment. *Price v. Industrial Claim Appeals Office*, 919 P.2d 207, 210 (Colo. 1996). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. §8-41-301(1)(c) C.R.S.; *Faulkner v. Industrial Claim Appeals Office,*12 P.3d 844, 846 (Colo. App. 2000). The question of causation is generally one of fact for determination by the ALJ. *Faulkner,* 12 P.3d at 846.

Section 8-41-209, C.R.S. reverses the burden of proof for firefighters who have developed certain types of cancers. The statute provides:

8-41-209 **Coverage for occupational diseases contracted by firefighters – repeal.**

(1) Death, disability, or impairment of health of a firefighter of any political subdivision who has completed **five or more years** of employment as a firefighter, caused by cancer of the **brain, skin, digestive system hematological system or genitourinary system** and resulting from his or her employment as a firefighter, shall be considered an occupational disease.

(2) Any condition or impairment of health described in subsection (1) of this section:

(a) Shall **be presumed** to result from a firefighter's employment if, **at the time of becoming a firefighter or thereafter, the firefighter underwent a physical examination that failed to reveal substantial evidence** of such condition or impairment of health that preexisted his or her employment as a firefighter; and

(b) Shall not be deemed to result from the firefighter's employment if the firefighter's employer or insurer shows by a preponderance of the medical evidence that such condition or impairment did not occur on the job.

. . .

(emphasis added).

In *City of Littleton v. Industrial Claim Appeals Office*, 370 P.3d 157, 165 (Colo. 2016) the Colorado Supreme Court determined that the statutory presumption embodied in §8-41-209(2), C.R.S. "is substantive in that it remains in the case as a substitute for evidence." However, the court emphasized that the statutory presumption "is not conclusive, or irrebuttable." *Id*. at 168. The employer can overcome the presumption by producing a preponderance of the medical evidence that the firefighter's cancer "did not occur on the job." *Id*. at 165. Nevertheless, the employer faces a "formidable" burden, "because the employer is tasked with proving a negative." *Id*. at 172.

The Supreme Court in *City of Littleton* clarified the types of evidence that employers can use to rebut the statutory presumption and prove that a firefighter's cancer is not work-related. The employer may attempt to meet its burden either with evidence establishing the absence of either general or specific causation. *Id.* at 168. Specifically an employer may prove by a preponderance of the medical evidence either: "(1) that a firefighter's known or typical occupational exposures are not capable of causing the type of cancer at issue; or (2) that the firefighter's employment did not cause the firefighter's particular cancer, where, for example, the claimant firefighter was not exposed to the cancer-causing agent, or where the medical evidence renders it

more probable that the cause of the claimant's cancer was not job-related." *Id*. at 172. Notably, §8-41-209(2)(a), C.R.S. does not require the employer "to disprove causation from every conceivable substance." *Id.* at 171. In fact, if a firefighter's exposure is "speculative, remote or illogical, then it is not typical of the occupation." *Id.*

In this case, and when remanded by the Colorado Supreme Court, *Industrial Claim Appeals Office v. Town of Castle Rock*, 370 P.3d 151, 157 (Colo. 2016) the Supreme Court further determined that to meet its burden of proof the employer is not required to prove a specific alternate cause of the firefighter's cancer. Rather, the employer need only establish by a preponderance of the medical evidence that the firefighter's employment did not cause cancer because the firefighter's particular risk factors render it more probable that the cancer arose from a source outside the workplace. *Id.*

As found, Respondents have established that it is more probably true than not that Claimant did not suffer the compensable occupational disease of melanoma during the course and scope of his employment as a firefighter for Employer under §8-41-209, C.R.S. Respondents introduced evidence of Claimant's specific exposures and risks for developing melanoma that were statistically more significant than the risk of developing melanoma while firefighting. Initially, the firefighter cancer presumption statute provides that skin cancer is presumed to be caused by an occupational exposure if an individual has been a firefighter in excess of five years. Claimant worked as a firefighter for Employer for over 11 years. Medical examinations prior to and during his tenure as a firefighter did not reveal that he was suffering from melanoma.

As found, Dr. Milliken persuasively concluded that Claimant's cancer was more likely caused by Claimant's mole count and Claimant's sun exposure than due to his work activities as a firefighter for Employer. Claimant's normal mole count is very high, which places him at a much higher relative risk for developing melanoma than due to the risk associated with firefighting. Claimant's atypical mole count also places him at a much higher relative risk for developing melanoma than due to the risk associated with firefighting. Additionally, Claimant is of 75% Caucasian, non Hispanic European descent and has lived in high sun regions his entire life. Claimant has participated in outdoor activities for much of his life. Claimant's risk of developing melanoma due to sun exposure also, as opined by Dr. Milliken, is higher than the risk associated with firefighting. Respondents have established sufficient evidence to rebut the presumption that Claimant's melanoma is causally related to his work activities. Rather, Respondents have established that it is more probable that Claimant's melanoma is related to Claimant's mole count and/or sun exposure. Dr. Milliken is found credible and persuasive. Claimant had a considerably increased relative risk for the development of melanoma based on factors not related to his work activities. It is remote and speculative to attribute Claimant's melanoma to his occupation as a firefighter. Instead, Claimant's particular risk factors as outlined by Dr. Milliken render it more probable that his cancer arose from a source outside the workplace. Accordingly, Claimant's request for Workers' Compensation benefits is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request for Workers' Compensation benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 20, 2017

/s/ Michelle E. Jones

_____

Michelle E. Jones
Administrative Law Judge

1525 Sherman St., 4th Floor
Denver, CO 80203

ISSUES

1. Did Claimant prove a change of condition that would justify reopening her claim for additional medical treatment?

2. If Claimant proved that her claim should be reopened, are Respondents liable for treatment Claimant received from her personal providers after April 7, 2016?

FINDINGS OF FACT

1. Claimant worked for Employer as a certified nursing assistant (CNA). On May 17, 2014, she sustained an admitted low back injury while assisting a patient from her bed to a commode.

2. Dr. Dallenbach was Claimant's primary ATP throughout her claim. Between May 19, 2014 and the MMI date of November 24, 2014, Dr. Dallenbach provided comprehensive workup and treatment, including extensive diagnostic testing and referrals to several specialists. She saw Dr. Bainbridge for pain management/injections, Dr. D.K. Caughfield for an EMG/NCV testing, Dr. David Hopkins for a psychological evaluation and therapy, William Beaver, M.A. for biofeedback therapy, and Dr. Ali Murad for a neurosurgical evaluation. Dr. Dallenbach consistently prescribed and monitored Claimant's medications and referred her for two courses of physical therapy.

3. Despite receiving continuous care under Dr. Dallenbach's direction, Claimant went to the emergency room at Parkview Medical Center on numerous occasions, including five visits between August 16, 2014 and September 10, 2014. The primary purpose of those visits was to obtain pain medication, and at least one ER physician thought Claimant had secondary gain and narcotic dependence issues.

4. Claimant has had two lumbar MRIs which revealed very mild degenerative changes. The first MRI on May 30, 2014 showed a "mild" disc bulge at L4-5, "minimal" anterolisthesis and a broad-based disc bulge at L5 S1 without central stenosis or neural foraminal narrowing, and "no evidence of acute abnormality."

5. Claimant saw Dr. Bainbridge, a physiatrist, in July and August 2014. Dr. Bainbridge reviewed the MRI and raised a concern of a possible L5 S1 disk fragment causing right S1 impingement. However, based on her reported symptoms and the physical examination findings, Dr. Bainbridge opined Claimant's pain was primarily coming from her SI joints. He recommended bilateral SI joint injections for diagnostic and potentially therapeutic purposes.

6. Claimant underwent bilateral SI joint injections on July 18, 2014, with no significant sustained benefit. Dr. Bainbridge suggested bilateral epidural steroid injections to the bilateral S1 nerve roots.

7. On July 30, 2014, Claimant saw Dr. Caughfield for an EMG/NCV study, which demonstrated findings consistent with a mild right S1 radiculopathy.

8. Claimant saw Dr. Dallenbach on August 11, 2014 to discuss her return to part-time modified duty. She was quite upset about being returned to work and told Dr. Dallenbach she felt he cornered her, lied to her, and stabbed her in the back. Claimant sat without shifting in her chair or supporting herself with her arms during the appointment, which lasted for approximately one hour. She demonstrated no difficulty standing, sitting down or moving around the office. Dr. Dallenbach further noted:

> During the interview, [Claimant] was quite tearful, however, on conclusion of the interview she proceeded to the lobby of the clinic where it was immediately evident from an observational perspective that she did not demonstrate any affective pain behaviors, i.e. she was no longer tearful and crying but was noted to be laughing lightheartedly.

9. Dr. Dallenbach initially took Claimant off work that day due to her psychological presentation. But on further reflection, he determined she could return to part-time modified duty performing primarily sedentary duties two hours per day up to 10 hours per week.

10. Claimant had a second MRI on August 19, 2014 which showed "no significant abnormality." There was "very minimal disk bulging" at L5 S1 with no encroachment on the spinal canal or neural foramina. The radiologist opined there was "no change" from the May 30, 2014 MRI. Dr. Dallenbach also asked another radiologist to review the first MRI, who agreed it showed no significant abnormality.

11. At her August 20, 2014 appointment with Dr. Dallenbach, Claimant reported 9/10 pain and stated she was spending essentially the entire day lying on a heating pad and only moving about "every once in a while when I try to sit long enough to have dinner with my family."

12. Dr. Dallenbach discussed Claimant's condition with her physical therapist on September 8, 2014. The therapist told Dr. Dallenbach:

> I really do not think that she is going to buy into this. She complained of pain without provocation and she really did not put forth any effort. It is interesting to note that when she was leaving she seemed to be walking better than when she came in and one of the assistants verbalized that to [Claimant], and right after that, she started walking in a more abnormal fashion. I went to the door and watched her leave, and at first as she was leaving, she had a really abnormal gait, but as she and her mom got closer to the car, she was moving, using her hands and talking with her mom, laughing, and did not seem to have any pain at all. She got into the

car without any apparent difficulty and then must've dropped something because she had to get out and had no problem whatsoever.

13. On September 10, 2014, Claimant told Dr. Dallenbach her pain was so severe she could barely shower by herself. Regarding her willingness to participate in additional physical therapy, Claimant said "I will do anything you tell me to. You can throw a brick me, but I really do not think I'm going to get anything out of it."

14. Claimant was ultimately discharged from physical therapy because she "exhibited no capacity for advancement of therapeutic activity during treatment."

15. Despite the essentially normal MRIs and minimal EMG findings, in deference to Claimant's reports of severe pain and dysfunction Dr. Dallenbach referred her for a neurosurgical evaluation with Dr. Ali Murad.

16. Claimant saw Dr. Murad on October 1, 2014. Her most bothersome symptom was axial lumbosacral pain. She rated her pain level at 7/10. The neurological exam was normal "except mild right thigh flexion weakness 4+/5 – not clear if exerting fully or limited by pain." Dr. Murad reviewed both lumbar MRIs and opined there was no evidence of instability, fracture, disc herniation or nerve impingement. He noted the "very minimal" L5 S1 disk bulge was not causing any significant stenosis. Dr. Murad commented "nonstructural causes" of back pain are "difficult to treat . . . [and] the same goes for low back pain in the absence of any objective findings on imaging or exam." Ultimately, Dr. Murad opined "there is no indication for surgical intervention," and "no contraindication to increasing activity, doing physical therapy, etc."

17. Claimant obtained a second opinion from another neurosurgeon, Dr. Joseph Illig, on October 27, 2014. Dr. Illig observed Claimant's gait was "smooth and fluid." Her reflexes were normal, except for the diminished right Achilles reflex. Sensory testing showed a "patchy" alteration of pinprick sensation in a "nondermatomal" pattern. Dr. Illig opined that "except for subtle sensory abnormalities the neurological examination is benign." He opined there was no basis for surgery.

18. In November 2014, Claimant's supervisor relayed to Dr. Dallenbach some information from one of Claimant's coworkers regarding her presentation at work. The coworker indicated Claimant had not complained of any increased pain while performing modified duties and did not appear to have any difficulty completing her assigned tasks.

19. On November 24, 2014, Claimant told Dr. Dallenbach she had gotten worse since returning to work. Dr. Dallenbach reviewed time records which showed Claimant had worked only eight shifts for a total of 16.06 hours that month. Dr. Dallenbach explained it was important to increase her work hours as part of the rehabilitative process. Claimant became angry with Dr. Dallenbach's decision to liberalize her restrictions. She quickly rose from her chair without difficulty and exited the examination room with a normal gait and no sign of pain. In the lobby, she became belligerent and cursed repeatedly. She insisted the increased hours would put her in the emergency room and demanded "Are you going to pay for it Dr. Dallenbach?" Dr.

Dallenbach informed Claimant he would place her at MMI and refer her for lumbar range of motion measurements. Claimant exclaimed "this is fucking bullshit," and left the clinic.

20. Dr. Dallenbach subsequently issued a "Report of Maximum Medical Improvement and Impairment Rating." Relying on the DOWC's Impairment Rating Tips, he opined Claimant did not qualify for a rating because she had no specific diagnosis or objective pathology. He opined "the mere presence" of incidental mild degenerative changes in the lumbar spine was "not sufficient justification to attribute correlation to a nonspecific spinal complaint." He indicated her final diagnosis was "low back pain, not work-related." He also opined Claimant required no injury-related maintenance care.

21. Claimant had a DIME with Dr. Anjmun Sharma on August 6, 2015. Claimant appeared to sit comfortably in the examination room despite claiming "10/10" pain. Dr. Sharma characterized the physical exam as "a completely benign normal examination." He noted there was minimal objective evidence to substantiate an injury in May 2014. Nevertheless, Dr. Sharma appears to have given Claimant considerable benefit of the doubt and assigned 9% whole person impairment. Regarding maintenance care, Dr. Sharma opined:

> There are no structural lesions on MRIs or other diagnostic tests. She failed injections. The patient also had negative x-rays. She has also had other EMG studies that have been negative for any lower extremity peripheral neuropathy or radicular symptoms. Nothing can be supported from the medical record to sustain the patient's ongoing need for care.

22. Insurer filed a Final Admission of Liability on August 25, 2015 based on Dr. Sharma's DIME report. The FAL denied medical benefits after MMI. Claimant timely objected and requested a hearing on the issue of post-MMI medical benefits.

23. Administrative Law Judge Lamphere conducted a hearing on March 3, 2016. After thoroughly considering all the evidence, ALJ Lamphere issued detailed findings of fact, conclusions of law and order which denied further medical care as not reasonable, necessary, or related to her May 17, 2014 injury.

24. Claimant did not appeal ALJ Lamphere's order, and it became final.

25. After being released by Dr. Dallenbach, Claimant treated with her personal providers through the Southern Colorado Clinic. On September 17, 2015, Claimant saw Amanda Fadenrecht, NP for complaints of "continued back pain." Her daily pain was 8/10 and she requested an increase of Cymbalta[1] and Neurontin. Nurse Fadenrecht stated Claimant's condition had "deteriorated," but there are no objective findings or other significant clinical findings documented in the report that appear substantially worse than those reflected in Dr. Dallenbach's records.

[1] The ALJ notes ALJ Lamphere had specifically found Cymbalta was not reasonable and necessary because there was no persuasive evidence it provided Claimant with any meaningful benefit.

26. Approximately four weeks after the hearing with ALJ Lamphere, Claimant saw Nurse Fadenrecht for a medication refill, and reported "no change in chronic back pain with radiculopathy." Similarly, on August 12, 2016, Claimant reported "no change in pain, not worsening or improving." Later records describe her ongoing symptoms with terms such as "persist[ent]," "chronic," and "unchanged."

27. Claimant began seeing Dr. Brandon Green in November 2016 for "pain management." Dr. Green has administered sacral nerve root rhizotomies, medial branch blocks and epidural steroid injections. The intervenetions have expanded to include the thoracic and upper lumbar areas. Her pain medication was eventually escalated to Dilaudid, although she subsequently stopped Dilaudid after a withdrawal experience.

28. Dr. Green does not appear to have obtained any new MRIs, but simply relied on the 2014 MRIs.

29. Claimant saw Dr. Eric Ridings for an Independent Medical Examination (IME) on June 27, 2017 at Respondents' request. Dr. Ridings interviewed and examined Claimant and performed a comprehensive review of her medical records. Dr. Ridings opined Claimant had an extensive course of medical care but continues to have widespread nonanatomic pain complaints, with no significant objective abnormalities documented. Dr. Ridings opined that at most Claimant had an initial work-related diagnosis of thoracolumbar strain which objectively resolved. Dr. Ridings concluded Claimant has no objective findings of any ongoing diagnosis related to her work injury, remains at MMI, and requires no maintenance care. Dr. Ridings opined there is no credible evidence Claimant's work-related condition has worsened.

30. The opinions of Dr. Dallenbach, Dr. Sharma, and Dr. Ridings, are credible and persuasive.

31. Claimant failed to prove a change of condition that would justify reopening her claim for additional medical benefits.

CONCLUSIONS OF LAW

Section 8-43-303 authorizes an ALJ to reopen any award on the grounds of error, mistake, or a change in condition. The reopening authority reflects a "strong legislative policy" that the goal of achieving a fair and just result overrides the interests of litigants in obtaining final resolution of their dispute. *Padilla v. Industrial Commission*, 696 P.2d 273, 278 (Colo. 1985). Thus, a "final" award means only that the matter has been concluded subject to reopening if warranted under the applicable statutory criteria. *Renz v. Larimer County School District Poudre R-1*, 924 P.2d 1177 (Colo. App. 1996). The authority to reopen a claim is permissive, and the decision whether to reopen a claim when the statutory criteria have been met is left to the ALJ's discretion. *Id*. The party requesting reopening bears the burden of proof on any issue sought to be reopened. Section 8-43-304(4).

Here, Claimant is seeking to reopen her case based on a change of condition. In the reopening context, a change in condition refers "to a change in the condition of the

original compensable injury or to a change in the claimant's physical or mental condition which can be causally connected to the original compensable injury." *Chavez v. Industrial Commission*, 741 P.2d 1328, 1330 (Colo. App. 1985). Even if a claimant proves a change in condition, she is not automatically entitled to have his claim reopened. Rather, reopening is only appropriate if additional benefits will be awarded. *Richards v. Industrial Claim Appeals Office*, 996 P.2d 756 (Colo. App. 2000).

As found, Claimant failed to prove a change of her medical condition to justify reopening her claim. Although Claimant told Dr. Ridings her condition is worse, there is no persuasive evidence to support that allegation. Claimant's current condition appears to be essentially the same as it was while she was treating with Dr. Dallenbach and at the DIME. Claimant has reported extreme levels of pain and severe disability since her date of injury. Given the numerous inconsistencies documented in the record and Claimant's demonstrated proclivity toward embellishment of her symptoms, the ALJ is not inclined to give her subjective pain complaints substantial weight. There is no persuasive objective evidence to support her contention she has worsened.

ORDER

It is therefore ordered that:

1. Claimant's request to reopen her claim is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that the lumbar surgery recommended by Dr. Toby Moore is reasonable, necessary, *and related* to his admitted claim?

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. On January 29, 2015, the Claimant was injured while restraining a violent patient while working for the Respondent Employer. A first report of injury was filed, (Exhibit A, p. 2), followed by a General Admission of Liability dated March 1, 2016, which admitted the claim. (Exhibit A, p. 3).

2. As part of his treatment under this claim for the January 29, 2015 injury, the Claimant underwent a Hemilaminotomy and discectomy at L4-5 by Dr. Michael W. Brown, M.D., on December 29, 2015. (Exhibit 6, p. 73).

3. The Claimant was then involved in a motor-vehicle collision while attending a medical appointment related to this workers' compensation claim. "He is status post laminectomy at L4-L5 (sic) Dr. Brown. This has been doing well until April 18 when he was up in Colorado Springs going to his next appointment with Dr. Brown. He was a passenger in his son's Jeep. They were stationary when they're hi(t) from behind by some(one) going approximately 35 miles an hour." "[Claimant] has noticed some increased stiffness since then, but so far no recurrence of the left leg pain…." (Exhibit 6, Pg. 53).

4. Records from physical therapists who were treating the Claimant before the motor-vehicle collision of April 18, 2016, also indicated that Claimant was showing reasonable improvements following his surgery. (Exhibit 4, pp. 61-63).

5. As a result of his worsening back pain, Dr. Daniel Olson, M.D., had referred Claimant for a surgical consultation. (Exhibits, Pg. 43). Claimant was then seen by Dr. Toby Moore for a surgical consultation.

6. Since the motor-vehicle collision of April 18, 2016, the Claimant's states to Dr. Moore that his back pain has worsened. However, Claimant also notes to Dr. Moore that "he never received much relief from that procedure." (Exhibit 1, pp. 2-3).

7. Dr. Moore did an evaluation of the Claimant on February 7, 2017, when he examined Claimant and reviewed his medical history. (Exhibit 1, pp. 1-4). Dr. Moore took lumbar x-rays of the Claimant and examined them as part of his evaluation. "AP and lateral plain radiographs [of] the patient's lumbar spine were obtained and reviewed today." Dr. Moore viewed MRI images and interpreted them himself. "MRI of the L-spine obtained at an outside facility on 1/13/2017 was also reviewed…."

8. In reviewing the MRI image, Dr. Moore noted that the MRI scan showed a "severe central and lateral recess stenosis at L4-5." This finding was also mentioned on the previous radiological report, as 'central canal stenosis' (Exhibit 5, p. 69). The difference in findings is simply that there is no mention that the stenosis at the L4-L5 level on April 21, 2015, was being called "severe."

9. Dr. Moore then recommended the L4-L5 laminectomy. (Exhibit I).

10. In evaluating the opinion of Dr. Moore compared to that of Respondent's IME physician, Dr. Jorge O. Klajnbart, D.O., this ALJ notes that Dr. Klajnbart admitted on cross-examination that he did not personally review the MRI images. He further admitted on cross-examination that if the Claimant was his actual patient, then he would have reviewed the actual images, as opposed to relying on a radiologist's report.

11. Dr. Klajnbart testified that the MRI imaging of January 13, 2017, showed no changes from an earlier MRI taken on April 21, 2015.

12. Dr. Klajnbart stated during the hearing that his opinion on the MRI scans was also voiced by treating physician, Dr. Michael C. Sparr. However, like Dr. Klajnbart, Dr. Sparr also never actually reviewed the MRI images. Instead, he relied upon a radiological report. This is noted in Dr. Sparr's medical records. "I obtained an MRI of the lumbar spine. The report was fully reviewed…." (Exhibit 2 p. 5). "This is reportedly unchanged from the previous MRI…." *Id*.

13. Prior even to his original injury of January 29, 2015, Claimant has had a history of back issues. On October 22, 2014, Claimant had gone to his primary care provider ("PCP"), complaining of lower back pain which had begun two weeks prior, and that was now radiating down his left side. He described the pain as being dull, aching, and constant, with weakness and stiffness. He also reported that heat, muscle relaxants and pain medications had been effective in the past. He received an injection in his lower back on this date. (Exhibit B).

14. On November 21, 2014, Claimant again complained to his PCP of lower back pain "since October of gradual onset" (Exhibit C, p. 10).

15. In the weeks following his surgery of December 29, 2015, Claimant reported resolution of his left leg pain, but continued pain in his left buttock. (Exhibit G, p. 133, Exhibit D, pp. 70-78).

16. Following his April 18, 2016 traffic accident, Claimant saw Dr. Michael Sparr, MD. At that time, Claimant complained of constant, achy back pain, greater on the left side. He denied any leg symptoms. Dr. Sparr recommended lumbar injections, for both therapeutic and diagnostic purposes (Exhibit H, pp. 138-143).

17. On September 14, 2016, Claimant saw Dr. Sparr, and reported no change in symptoms. He was provided a gluteal trigger point injection and was then referred for massage therapy. (Exhibit H, pp. 144-145).

18. On October 4, 2016, Claimant again saw Dr. Sparr, once again noting no significant difference in his pain levels. Massage therapy was continued, along with an additional trigger point injection. (Exhibit H, pp 152-156).

19. On October 11, 2016, Dr. Sparr then performed a left sacroiliac joint injection. This relieved the *central* buttock pain, but not to the left side. (Exhibit H, pp.159-163).

20. On October 26, 2016, Dr. Sparr then ordered a new lumber MRI to rule out any further discogenic cause for Claimant's continued lower back pain. (Exhibit H, p. 170)

21. Once this MRI was performed on January 13, 2017, Dr. Sparr noted that the MRI showed "degenerative findings but *nothing new since his surgery.*"(Exhibit H, p. 177) (emphasis added).

22. On March 16, 2017, Claimant went to his PCP, this time regarding his elevated blood sugar levels relating to his longstanding diabetes (Exhibit J).

23. On June 1, 2017, Claimant reported to his massage therapist that his low back pain is "less intense and less frequent." (Exhibit K).

24. On July 12, 2017, the Claimant saw Dr. Jorge O. Klajnbart, D.O. for an independent medical examination. Dr. Klajnbart is a Level II accredited orthopedic surgeon. He has been trained to make causation determinations with regard to surgical recommendations. He had postdoctoral training in orthopedic surgery through the U.S. Army. Approximately one-third of his medical practice since 1999 has focused upon various treatment modalities for lower back injuries, but he longer performs back surgeries himself.

25. At the IME, Claimant did not mention to Dr. Klajnbart that he continues to have pain below the buttocks. Regardless, Dr. Klajnbart concluded that any

neurogenic claudation referred to by Dr. Moore is more likely than not due to the congenital stenosis and pedicle shortening and not due to any acute traumatic event.

26. Dr. Klajnbart found that the January 13, 2017 MRI confirmed "no significant change in his lumbar spine" following the Claimant's April 20, 2016 motor vehicle accident. (Exhibit L, p.200). Dr. Klajnbart's physical examination of the Claimant showed normal reflexes, excellent strength and good range of motion.

27. Dr. Klajnbart stated in his IME report: "The combination of a normal lumbar spine examination with an unchanged MRI of the lumbar spine upholds a medical opinion that the individual did not sustain any significant injury to his lumbar spine that would require surgical intervention from this motor vehicle collision." (Exhibit L, p.200).

28. On August 1, 2017, ATP Dr. Olson noted his review of Dr. Klajnbart's report, and only offered in response that "*one could argue* that the car accident has made this condition symptomatic." (Exhibit. D, p.119) (emphasis added).

29. In his testimony, Dr. Klajnbart addressed the possibility of the auto accident causing significant nerve swelling in the spinal cord of Claimant:

Q And you testified that an acute incident could make the--the nerve endings swell within the spine. What---is that possible?

A To--to make nerve endings swell you need significant trauma, on the order of being ejected from a vehicle.. So it--can it, is it a possibility, absolutely. Is it medically probable, no sir.

30. Dr. Klajnbart testified that he agreed with Dr. Moore's findings that determined the Claimant's pain generators to be non-industrial in nature.

31. Dr. Klajnbart testified that the Claimant's pain is not discogenic in nature. Instead, it is being generated by his non-industrial degenerative conditions, namely his congenitally shortened pedicles, his congenital stenosis and his neurogenic claudation.

32. Dr. Klajnbart testified that the Claimant's report of a gradual onset of lower back pain in October 2014 prior to his work injuries made it more likely than not that he was suffering from these non-industrial, degenerative conditions before he was injured at work. He also testified, however, that these preexisting conditions did *not* make the Claimant more susceptible to traumatic lower back injuries:

Q So, it's your testimony that somebody with a narrowing of the spinal canal is not any more susceptible to injury to their lumbar spine than--than somebody with a normal spine?

A That's correct.

33. Dr. Klajnbart testified that if either the incident of January 29, 2015 or the motor vehicle accident of April 18, 2016 caused the Claimant's preexisting, non-industrial conditions to temporarily flare symptomatically, surgical correction would not be reasonably necessary to treat those flares. Rather, any resultant swelling or inflammation would be temporary in nature.

34. Dr. Klajnbart testified that the Claimant's diabetes could also be causing him nerve-related pain in the lower back and lower extremities.

35. Dr. Klajnbart testified that range of motion measurements have little, if no impact on the questions of causation, relatedness and necessity of the surgery proposed by Dr. Moore.

36. Dr. Klajnbart testified that while possibly reasonable and necessary, there is no evidence to support that the surgery proposed by Dr. Moore is causally related to the Claimant's industrial injuries.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., (2013). A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and

actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2013).

3. The Employer must only provide medical treatment that is reasonable and necessary to cure and relieve the effects of the Claimant's industrial injury. *Colo.Comp.Ins.Auth. v. Nofio*, 886 P.2d 714 (Colo. 1994).

4. The failure of past surgeries to relieve pain and limitations is a sound basis for denying further surgical intervention that is otherwise physiologically indicated. See *Holcombe v. FedEx*, W.C. 4-824-259 (ICAO, March 24, 2017).

5. The Claimant was actively treating, including an injection, for a gradual-onset of lower back pain with left-sided radiculopathy immediately prior to his industrial injury. This preexisting condition presented similarly to the Claimant's reports of lower back and left-sided symptoms after his industrial accident and the subsequent motor vehicle accident.

6. Claimant had actively treated for his lower back and left-sided condition with muscle relaxers and narcotics even prior to the original industrial injury.

7. The Claimant's L4-5 surgery on December 29, 2015 resolved the Claimant's *left leg* symptoms, according to his reports to his treatment providers. This leads the ALJ to believe that the surgery successfully repaired the Claimant's herniated disk.

8. However, Claimant's L4-5 surgery on December 29, 2015 did not relieve his lower back and left buttock pain. Pain complaints in these areas have been consistent from before the industrial accident through to the most recent examination of the Claimant by Dr. Klajnbart on July 12, 2017.

9. Dr. Sparr made numerous attempts to isolate and treat the Claimant's low back and left buttock pain through multiple injections, both diagnostic and therapeutic, as well as targeted massage therapy. When his efforts did not succeed, he ordered a MRI to rule out any further discogenic cause of the Claimant's continued low back and left buttock pain.

10. The lumbar MRI on January 13, 2017 did reveal non-industrial conditions that explain the Claimant's ongoing complaints. The MRI did not reveal any objective findings to suggest that the Claimant's ongoing pain in the lower back and left buttock is related to his industrial injuries.

11. Dr. Moore is not Level II accredited with the Division of Workers' Compensation, and he did not address the *causation* issue at all for the surgery he proposed. Dr. Moore's experience with treating and operating on lower back conditions

is not presented in the record, but the ALJ sees no evidence to question his capabilities as a back surgeon.

12. Dr. Klajnbart, on the other hand, is a Level II accredited orthopedic surgeon with vast experience treating and evaluating lower back conditions. Dr. Klajnbart performed the most recent physical examination of the Claimant, reviewed his medical history and then made a causal analysis with regard to Dr. Moore's proposed surgery.

13. Dr. Klajnbart agreed with Dr. Moore's findings. Those findings all point to non-industrial conditions: namely congenital stenosis, congenitally shortened pedicles and non-traumatic neurogenic claudation. Dr. Klajnbart agrees with Dr. Sparr (and Dr. Moore, for that matter) that there is no acute, discogenic cause of the Claimant's continued low back and left buttock complaints.

14. Dr. Olson noted that the April 18, 2016 motor vehicle accident caused an increase in the Claimant's lower back and left buttock symptoms. A temporary flare in symptoms does not justify surgical intervention. In this case, the Claimant's lower back and left buttock symptoms have remained fairly constant. They have only fluctuated mildly in reported severity since the initial industrial accident, and they began before the initial industrial accident. The Claimant himself told Dr. Moore that the initial surgery did not significantly help this condition for his lower back and left buttock.

15. The ALJ is not persuaded that the two MRI reports differ in any material fashion on the causation issue. Nor was it necessary to personally view the images to render a better conclusion than the radiologists already have. In terming the stenosis "severe", Dr. Moore did not opine on *relatedness*; merely his opinion for the need for surgery.

16. In the final analysis, to accept Claimant's theory of recovery in this case, the ALJ must contrast Dr. Olson's single reference in his report that "*one could argue*" that this car accident rendered his condition symptomatic, versus the opinion stated by Dr. Klajnbart that this is not medically probable. The objective evidence also does not support this theory. Claimant carries the burden of proof on this issue, and it has not been met here.

17. Taken as a whole, the evidence actually shows that it is more likely than not that the need for the surgery proposed by Dr. Moore is *related* to non-industrial factors. These non-industrial factors include neurogenic claudation, congenitally shortened pedicles, congenital stenosis, and possibly the Claimant's ongoing diabetes.

ORDER

It is therefore ordered that:

1. Claimant's request for the surgery being proposed by Dr. Moore is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 25, 2017

/s/ William G. Edie
William G. Edie
Administrative Law Judge

2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

ISSUES

I. Whether Claimant proved, by a preponderance of the evidence, that he sustained a compensable injury to his ears and neck?

II. If compensable, whether Claimant proved, by a preponderance of the evidence, that he was entitled to medical benefits including reimbursement for physical therapy co-pays?

III. If compensable, whether Respondents proved, by a preponderance of the evidence, that Claimant did not timely report the injury?

Although Claimant asserted entitlement to wage loss, the undersigned ALJ determined that temporary total disability (TTD) benefits were not endorsed as an issue for hearing. Consequently, this order does not address Claimant's entitlement to TTD benefits. Because Claimant's entitlement to TTD is not addressed, the ALJ specifically reserves for future determination, the issue of Respondents entitlement to penalties for late reporting, including the time period and the amount of any such asserted penalty.

FINDINGS OF FACT

Based upon the evidence presented, including the post hearing deposition testimony of Dr. Reiner, the ALJ enters the following findings of fact:

1. Employer operates a research and development company which supports a variety of federally funded projects. As part of their work, Employer collects sensitive data to develop and support the research projects they underwrite. Some information gathered as part of the research conducted is proprietary and protected from disclosure to the general public. Claimant's position occasionally brings him in contact with such data stored on computer hard drives. He testified this data ranges from top secret to unclassified.

2. On October 6, 2016, Claimant sought direction concerning the disposal of three metal computer hard drives[1] he felt may have contained the residue of sensitive "For Official Use Only" (FOUO) information.

3. According to Claimant, he took the hard drives to a security officer and asked him to take them for destruction. The security officer declined, prompting Claimant to ask if he should simply throw them in the trash. Getting no direction from security, Claimant decided to take the drives to a metal dumpster located on company grounds.

[1] Estimated to weigh about five pounds. See Respondents' Exhibit C.

4. Intent on rendering the suspected FOUO information on the drives useless, Claimant placed the drives in a plastic bag; top knotted it and proceeded to the aforementioned dumpster. From an "over watch" position, approximately 12 feet above the ground upon which the dumpster sat, Claimant slung the bag containing the metal drives overhead forcefully into the wall of the metal dumpster in an effort to shatter the data containing platters inside.

5. Claimant testified that the impact of the metal hard drives with the metal wall of the dumpster emitted a loud sound that came "blasting" back at him. He likened the sound to a gunshot, testifying that he was knocked backward. Claimant testified that he experienced immediate pain and ringing in his ears so severe that he decided to drive home to take 1600 mg of Ibuprofen.

6. While driving home, Claimant noticed that in addition to the pain and ringing in his ears, he had limited range of motion of his neck. Once home, Claimant took Ibuprofen and proceeded to a pre-scheduled meeting.

7. Five days prior to the October 6, 2016 incident (October 1, 2016), Claimant inadvertently walked face first into a door at his home after getting up at night to use the bathroom. Claimant testified that he sustained an abrasion on the bridge of his nose and likely suffered a mild concussion as a consequence. He sought treatment with his primary care physician, Linda Silvera, who ordered x-rays to verify that his nose was not broken.

8. Claimant testified that after experiencing neck stiffness as well as pain and ringing in his ears for two weeks following the October 6, 2016 incident, he sought treatment with Dr. James Yohanan at Colorado ENT & Allergy. According to Claimant, he self referred to Dr. Yohanan because his health insurance does not require a referral from a primary care provider. By the time Claimant saw Dr. Yohanan, approximately 30 days had elapsed from the initial incident date.

9. The ALJ finds Claimant's testimony concerning the events leading up to the October 6, 2016 event and the symptoms he experienced afterwards credible.

10. Claimant was first evaluated by Dr. Yohanan on November 3, 2016. During this appointment, Claimant's history of present illness (HPI) was documented as follows:

> A 49-year–old male seen in initial consultation of ear pain following a forehead, head and neck injury one month ago. He says it came on shortly after the injury. He accidently walked into the side of a door striking the bridge of his nose. . . . His job requires a lot of concentration and there is some stress. He says these are both triggers for what his main complaint is, bilateral ear pain sometimes transmitting to headache. He says the ear pain is behind the ears and we found taut muscle bands, the mastoid, tenderness infraauricular and C1-C2 tightness bilaterally.

11. Physical examination, including otoscopic evaluation of the ears was normal; however, examination of the neck revealed "bilateral infraauricular tenderness, mild mastoid muscle insertion tenderness and tightness with passive movement." Claimant's C1-C2 rotation was measured at 2-5 degrees with discomfort bilaterally." Normal rotation was documented as 45 degrees. Claimant's hearing was tested and his audiogram was found to be "normal" although one "possible conductive component at 3kHz was found in the right ear."

12. In diagnosing Claimant with otalgia and cervicalgia, Dr. Yohanan opined as follows: "Almost certainly what I am finding on exam as a cause of [Claimant's] stress and tension related posterior ear pain is probably related to some soft tissue musculoskeletal injury to his neck from the injury a month ago. The acute tightening of the musculature in this area is probably triggering ear pain. It certainly can be worse with stress and tension as triggers. I see no primary otologic disorder nor would I expect one with this mechanism of injury." Dr. Yohanan referred Claimant to Cornerstone Physical Therapy for additional evaluation and treatment.

13. There is no mention of the October 6, 2016, dumpster incident Claimant alleges to have caused his symptoms in Dr. Yohanan's November 3, 2016 medical record.

14. Claimant began treatment at Cornerstone Physical Therapy (Cornerstone) for tinnitus (ringing) and pain behind his ears and head under the care of Roni Sorensen on November 7, 2016. Claimant continued his treatment at Cornerstone through March 1, 2017. He paid a total of $1,690.00 in co-pays for his treatment with Ms. Sorensen.

15. On February 16, 2017, Claimant returned to Dr. Yohanan for a follow-up appointment regarding his tinnitus. During this encounter, Dr. Yohanan corrected and clarified the history surrounding the ringing in Claimant's ears and the pain in his neck. In his report from this date of service, Dr. Yohanan notes:

> Patient was seen back in November about a month after an injury. I have a very detailed note, but on closer questioning it turn out there were 2 incidents, somewhat related, but about five days apart that was not clear to me. He admitted he was in "bad shape" when he saw me last, but is feeling remarkably better now. Basically, he had the head and neck injury that is detailed in my previous note on a Sunday. He says he probably had a mild concussion that was affecting his concentration and thinking. He was not noticing hypersensitivity to sounds or light, but again he just did not feel right after that injury. He thinks that might have influenced the behavior he had at work where he threw about 5 pounds of metal into a metal trash contained making a very loud acoustic sound. He likened it to a gunshot. It probably caused a slight percentage more to his right ear than his left. Immediately, he started to notice tinnitus. We referred him for physical

> therapy because of the neck findings which were probably related to the first injury. Interestingly, over time his neck is feeling much better, and he says this has lessened the tinnitus, but it is still present in the background. He is wondering if it ever is going to go away. He also asked about an opinion on his hearing loss. I pulled up his audiogram and actually would not term him as having a true hearing loss. I believe at 2000 Hz he had a single tone on the right side that was borderline of normal levels, but that is the only tone at either side that was a finding. Therefore, I would not call it a hearing loss, although he may have a perception of hearing loss. . .

16. Based upon the content of Dr. Yohanan's February 16, 2017 report, the ALJ finds that he was unaware of the October 6, 2016 incident involving the disposal of computer hard drives into a metal dumpster as well as the alleged impact that the method of disposal had on Claimant's hearing and neck. The ALJ finds it probable that Claimant was laboring under the effects of a mild concussion caused by the October 1, 2016 incident and simply did not provide a history concerning the October 6, 2016 incident and the cause of his tinnitus and neck pain. Consequently, Dr. Yohanan provided an opinion that the pain and ringing in Claimant's ears as well as his neck pain were a direct result of striking his nose on a door on October 1, 2016.

17. During the February 16, 2017 encounter, Dr. Yohanan provided assurances to Claimant that he "really [did] not have hearing loss." Based upon the objective testing referenced in Claimant's medical records along with the opinions of Dr. Yohanan and Dr. Reiner, the ALJ is persuaded that Claimant, more probably than not, does not have hearing loss.

18. At the conclusion of the February 16, 2017 appointment, Dr. Yohanan opined: "I do think the muscle tension of the head and neck injury aggravated by his hypersensitivity to sound from his concussion led to the onset of the tinnitus." He also stated: "Given the situation above and the temporal relationship and possibly of hypersensitivity of his ears and cochlear to sound after a concussion, the work-related noise exposure both temporally and theoretically played a role in his symptoms." The undersigned ALJ interprets the above opinions from Dr. Yohanan to indicate that the conditions of Claimant's employment, i.e. slamming the hard drives into the metal dumpster acted upon an individual weakness and hypersensitivity to result in Claimant developing tinnitus and neck pain after being sensitized to the same by the October 1, 2016 concussion. Consequently, the ALJ finds that the act of destroying the hard drives aggravated a pre-existing, yet latent tinnitus which then became manifest giving rise to the need for treatment.

19. Concerning the reporting of the incident to the Employer, Claimant acknowledged that he did not report the alleged incident to the Employer until after he saw Dr. Yohanan in November of 2016. Claimant testified that he was in "bad shape" and could not report the injury earlier and that the filing procedures to initiate a claim

were buried within Employer's website. The ALJ is not persuaded based upon Claimant's indication that he reported the injury after learning he had hearing loss.

20. Barbara Barrasso, who is a registered nurse with MITRE Health Services, testified that part of her role is intake of workers' compensation claims for the Employer. On November 29, 2016, Claimant provided a written report of the incident to Employer by completing an injury report and a workers' compensation claim.

21. Ms. Barrasso testified that she sent a designated provider list to Claimant at his work email identified as the list contained at Exhibit H along with the contact information of Ms. Sherri Stoner, the CNA Insurance Claims Specialist, who was assigned to handle Claimant's claim. The list contained four local providers who Claimant could see for workers' compensation treatment.

22. Claimant did not present any evidence that he had treated with anyone other than Dr. Yohanan and physical therapist Roni Sorenson for his alleged injury and he acknowledged that he began treating with them prior to the reporting of the incident to any Employer representative.

23. Erin Schultz, the local Colorado Springs Facility Security Officer for Employer, testified concerning the Employer's policies on disposal of unclassified material. She indicated that the only materials that were actually disposed of at the Employer's Colorado Springs location were paper documents, CDs, and DVDs, which could all be shredded. She testified that it was standard policy to accept all unclassified drives (like the hard drives at issue here) including hard drives from employees' home computers for disposal. She testified that such hard drives would be collected in a box stored in the safe in the security office and from time to time would the box would be sent to Employer's home office which would in turn forward it to the National Security Agency (NSA) for ultimate destruction. She testified that all security officers were trained to accept such hard drives in accordance with this policy.

24. Ms Schultz testified that the dumpster outside of the building was not locked or secured, as would be required by Department of Defense policy, because no sensitive materials were ever disposed of in that dumpster. She testified that breaking the hard drives would not be enough to destroy the residual information because broken pieces from the platters could be reconstituted to access the data contained on the drive. Consequently, she testified that shattering the drives would not comply with the Employer's policy for disposal of drives containing sensitive information.

25. As noted above, Dr. Seth Reiner testified by post-hearing evidentiary deposition. Dr. Reiner is board-certified by the American Board of otolaryngology for head and neck surgery. Dr. Reiner testified as an expert in ear, nose and throat (ENT) conditions, including hearing loss and tinnitus caused by acoustic trauma.

26. Dr. Reiner testified when there is an impact and sound, we perceive that

sound by vibration of molecules against other molecules as the sound propagates itself on linear lines. He testified that the greatest hearing damage would be from an up close exposure to an acoustic source which damage would lessen with distance. According to Dr. Reiner, most sound will escape out of the opening of a container along the path of least resistance. After reviewing the pictures of the dumpster in question, Dr. Reiner noted that the dumpster appeared wide open. Consequently, Dr. Reiner opined that any sound created by striking the wall or side of the dumpster would dissipate quickly over its large surface area. He also noted that the plastic bag used to contain the drives in this case may have provided some insulation against the sound, lessening it.

27. Dr. Reiner testified that he anecdotally attempted to re-create Claimant's mechanism of injury taking three hard drives in a plastic bag and sling them into a dumpster from a distance of three feet and measuring the decibel level from the opening of the dumpster with a decibel meter. (Decibels are a measure of sound pressure for the sound we perceive. According to Dr. Reiner, he was only able to produce a range of decibels from 93 – 105. For context, he referred to Purdue University's publication for examples illustrating decibel levels. It noted that motorcycle at 25 feet away would be 90 decibels. A helicopter taking off at 100 feet is equal to 100 decibels. Dr. Reiner explained that 110 decibels with a riveting machine would still take a couple of hours of exposure to cause any trauma. According to Dr. Reiner, acoustic trauma from a single/momentary exposure would take 150 decibels. Therefore, Dr. Reiner concluded that he could "find no evidence of any event that caused significant ear damage, tinnitus or ear pain from [the] event that happened on October 6th." Given the number of variables involved and the methodology utilized to recreate the dumpster incident here, the ALJ is not persuaded that Dr. Reiner's "experiment" is, as he testified, a "very accurate representation" of the incident involving the attempted destruction of the hard drives in this case. To the contrary, the ALJ concludes that the results of Dr. Reiner's "experiment" do not meet the standards for consideration of scientific evidence. Consequently, the ALJ finds Dr. Reiner's opinion that slamming the hard drives into the metal dumpster could not have caused tinnitus and neck pain unreliable and unconvincing.

28. Dr. Reiner also testified that Dr. Yohanan's treatment does not support that Claimant suffered an acoustic trauma in this case. Concerning Claimant's alleged hearing loss, Dr. Reiner explained that Claimant's audiogram with Dr. Yohanan that showed only a slight, right-sided drop at 2000 Hertz, which was within normal limits. Moreover, even assuming that the dumpster incident was as loud as a gunshot, the hearing loss would have been at 4,000 Hertz and not 2,000 Hertz. While the ALJ is persuaded that Claimant does not have a hearing loss based upon the results of objective testing, the ALJ finds that the testing performed does not and cannot measure tinnitus or the presence of neck pain. Even Dr. Reiner testified that tinnitus can be present in the absence of hearing loss. Consequently, the evidence presented persuades the ALJ that Claimant suffered an acoustic trauma causing tinnitus and neck pain after forcibly slamming the hard drives into a metal dumpster. Dr. Reiner's contrary opinion that Claimant's tinnitus is age related and/or caused by the October 1, 2016 concussion is not convincing.

29. Dr. Reiner also testified that the mechanism of injury as described by Claimant would not have caused a musculoskeletal injury. As noted at paragraph 10 above, Claimant's ear pain was noted initially to be behind the ears and it was documented on examination that Claimant had "taut muscle bands, mastoid, tenderness infraauricular and C1-C2 tightness bilaterally." The ALJ finds it probable that Claimant's ear pain and tinnitus resulted in increased muscle tightness/tenderness, i.e. a stiff neck prompting his need for physical therapy involving the cervical spine. While Claimant's exposure to a loud gunshot like sound probably did not cause a primary injury to the neck, the ALJ is persuaded that his ear pain and tinnitus indirectly caused the need for neck treatment.

30. Claimant has failed to establish that he suffered a compensable hearing loss as a consequence of the October 6, 2016 incident. However, the evidence presented persuades the ALJ that Claimant has proven, by a preponderance of the evidence, that he suffered a compensable injury to his neck and ears, in the form of tinnitus as a direct consequence of slamming the hard drives onto the wall of the dumpster in question. Nonetheless, the evidence presented convinces the ALJ that the treatment Claimant obtained through Dr. Yohanan's office and Cornerstone Physical Therapy as a consequence of these compensable injuries is not authorized.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). A Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

B. In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensecki v. ICAO*, 183 P.3d 684 (Colo.App.*2008).* The ALJ determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo.App.2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo.App.2002). The same principles concerning credibility determinations that apply to lay witnesses apply to

expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo.App.2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). In this case, the ALJ concludes that the Claimant is a reliable witness. His testimony supported by the record evidence including the medical records submitted for consideration. Specifically, the ALJ concludes that Claimant's testimony regarding the events leading up to his injuries and the symptoms he described thereafter are credible and persuasive. Moreover, the ALJ concludes that the opinions of Dr. Yohanan are credible and more persuasive than the contrary opinions of Dr. Reiner.

C. In accordance with Section 8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5. P3.d 385 (Colo.App.2000).

Compensability

D. To sustain his burden of proof concerning compensability, Claimant must establish that the condition for which he seeks benefits was proximately caused by an "injury" arising out of and in the course of employment. *Loofbourrow v. Industrial Claim Appeals Office*, 321 P.3d 548 (Colo.App.2011), *aff'd Harman-Bergstedt, Inc. v. Loofbourrow*, 320 P.3d 327 (Colo. 2014); *Section 8-41-301(I)(b), C.R.S.*

E. The phrases "arising out of" and "in the course of" are not synonymous and a claimant must meet both requirements for the injury to be compensable. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 20 (Colo. 1988). The latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d 379, 381 (Colo. 1991). An injury occurs "in the course of" employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co.,* 38 Colo. App. 48, 51, 552 P.2d 1033, 1036 (1976). Here, there is little question that Claimant's alleged injury occurred within the time and place limits of his employment relationship with Employer and during an activity, specifically attempting to destroy the data containing plates encased in a metal computer hard drive. Nonetheless, the question of whether the alleged conditions, for which Claimant seeks benefits, "arose out of" his employment must be resolved before the injury is deemed compensable.

F. The "arising out of" test is one of causation. It requires that the injury have its origins in an employee's work related functions, and be sufficiently related thereto so as to be considered part of the employee's service to the employer. *Horodyskyj v. Karanian*, 32 P.3d 470, 475 (Colo. 2001). It is the burden of the claimant to establish causation by a preponderance of the evidence. *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844, 846 (Colo.App.2000). There is no presumption that an injury which occurs in the course of employment also arises out of the employment. *Finn v. Industrial Commission,* 165 Colo. 106, 437 P.2d 542 (1968). The evidence must establish the causal connection with reasonable probability, but it need not establish it with medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 30 Colo. App. 224, 491 P.2d 106 (Colo.App.1971); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 2993. Medical evidence is not required to establish causation. To the contrary, lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado, 717 P.2d 1000 (Colo.App.1986).* As found here, Claimant's testimony regarding the event leading up to and the cause of his symptoms is credible and supported by the content of the medical records.

G. Moreover, Respondents suggestion, through Dr. Reiner that Claimant's symptoms are a direct consequence of the concussion suffered five days prior to the incident involving destruction of the computer hard drives, is not convincing. While the evidence presented establishes that Claimant saw his PCP who obtained x-rays of the nose there is a dearth of medical evidence to support a conclusion that Claimant had ongoing ringing in his ears prior to the October 6, 2016 incident. Moreover, any aggravation of a pre-existing condition (neck pain) or susceptibility to injury (tinnitus) does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo.App.2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo.App.1990). Aggravations of pre-existing, yet latent conditions which become manifest by the work injury are nonetheless compensable. See *Subsequent Injury Fund v. Devore*, 780 P.2d 39 (Colo.App. 1989); *Seifried v. Industrial Commission*, 736 P.2d (Colo.App.1986). As found here, the undersigned ALJ interprets the opinions from Dr. Yohanan to indicate that the conditions of Claimant's employment, i.e. slamming the hard drives into the metal dumpster acted upon an individual hypersensitivity to cause Claimant to develop tinnitus and worsened neck pain after being sensitized to the same by the October 1, 2016 concussion. The totality of the evidence presented, including the medical records and Claimant's testimony persuades the ALJ that the attempt to destroy the data containing pates in the hard drives combined with the latent effects of Claimant's prior concussion to produce pain and ringing in the ears and a painful stiff neck.

H. Pain is a typical symptom from the aggravation of a pre-existing condition. Thus, a claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by the employment–related activities and not the underlying pre-

existing condition. *See Merriman v. Industrial Commission*, 120 Colo. 400, 210 P.2d 488 (1940). Here, the evidence presented supports a conclusion that the pain and ringing in Claimant's neck and ears is a direct consequence of his work-related activities and not the lingering effects of a prior concussion. As found, the contrary opinions of Dr. Reiner are not persuasive. Consequently, the claimed injuries are compensable.

Medical Benefits & Claimant's Entitlement to Reimbursement for Physical Therapy Co-payments

I. As noted, Claimant bears the burden of establishing entitlement to medical treatment. *See Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997); *Sims v. Industrial Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). Once a claimant has established a compensable work injury, he/she is entitled to a general award of medical benefits and respondents are liable to provide all reasonable and necessary medical care to cure and relieve the effects of the work injury. *Section 8-42-101, C.R.S.*; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Regardless, Respondents are only liable for authorized treatment. Authorization refers to a physician's legal status to treat the industrial injury at the respondents' expense. *Bunch v. Industrial Claim Appeals Office*, 148 P.3d 381 (Colo. App. 2006); *Popke v. Industrial Claim Appeals Office*, 944 p.2d 677 (Colo. App. 1997). Under §8-43-404(5)(a)(I)(A), C.R.S. 2014 the employer has the right in the first instance to designate the authorized provider to treat the claimant's compensable condition. The rationale for this principle is that the respondents may ultimately be liable for the claimant's medical bills and, therefore, have an interest in knowing what treatment is being provided. *Andrade v. Industrial Claim Appeals Office*, 121 P.3d 328 (Colo. App. 2005). Consequently, if the claimant obtains unauthorized medical treatment, the respondents are not required to pay for it. Section 8-43-404(7), C.R.S. 2005; *Yeck v. Industrial Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999); *Pickett v. Colorado State Hospital*, 32 Colo. App. 282, 513 P.2d 228 (1973).

J. Under § 8-43-404(5)(a), C.R.S., the employer or insurer is afforded the right in the first instance to select a physician to treat the injury. The statute requires the employer or insurer to "provide a list of at least two physicians, . . . in the first instance, from which list an injured employee may select the physician who attends said injured employee." Similarly, Workers' Compensation Rules of Procedure, Rule 8-2(A), 7 Code Colo. Reg. 1101-3, states that "[w]hen an employer has notice of an on the job injury, the employer or insurer shall provide the injured worker with a written list . . .." In order to maintain the right to designate a provider in the first instance, the employer has an obligation to name the treating physician forthwith upon receiving notice of the compensable injury. *See Rogers v. Industrial Claim Appeals Office,* 746 P.2d 545 (Colo. App. 1987). The failure to tender the "services of a physician ... at the time of injury" gives the employee "the right to select a physician or chiropractor." The employer's duty to designate is triggered once the employer or insurer has some knowledge of facts that would lead a reasonably conscientious manager to believe the case may involve a claim for compensation. *Bunch v. Industrial Claim Appeals*

Office, 148 P.3d 381 (Colo.App. 2006); *Jones v. Adolph Coors Co.,* 689 P.2d 681 (Colo. App. 1984); *Gutierrez v. Premium Pet Foods, LLC*, W.C. No. 4-834-947 (Industrial Claim Appeals Office, September 6, 2011). In this case, Claimant treated on his own before reporting the alleged injury. The record evidence is devoid of any indication that Claimant reported his injuries or made a claim prior to seeing Dr. Yohanan. Moreover, Claimant sought physical therapy through Cornerstone based upon the referral of Dr. Yohanan before reporting his claim. He did not he seek authorization to continue therapy with Cornerstone from Insurer after he reported the injury. The evidence presented persuades the ALJ that once he reported his injuries, Ms. Barrasso promptly sent a designated provider list to Claimant from which to select a medical provider to attend to his injuries. There is a lack of credible evidence to establish that the right to select a medical provider in the first instance somehow passed to Claimant. Indeed, Claimant makes no such claim. Instead, Claimant asserts that he is entitled to reimbursement for his treatment simply because it is connected to his compensable injuries. The ALJ is not persuaded. Here, the evidence presented persuades the ALJ that all of the treatment Claimant is seeking reimbursement for is from unauthorized providers who began treating him prior to when he reported the injury without a forthcoming subsequent authorization from the Insurer. Accordingly, the ALJ concludes that Respondent's are not liable for the costs of Claimant's treatment with Dr. Yohanan or the physical therapy obtained through Cornerstone.

ORDER

It is therefore ordered that:

1. Claimant's asserted injuries to the neck and for tinnitus are deemed compensable. Claimant's claim for hearing loss is denied and dismissed.

2. Respondents are liable for all reasonable, necessary and related medical treatment to cure and relieve Claimant from the effects of his compensable neck injury and tinnitus.

3. Claimant's request for reimbursement for medical treatment obtained through Dr. Yohanan and Cornerstone Physical Therapy are denied and dismissed.

4. Respondents request for penalties for late reporting along with any issues not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding

procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

WORKERS' COMPENSATION NO. WC 4-992-423-01

ISSUES

- Whether Respondents have proven by clear and convincing evidence that DIME Dr. Miguel Castrejon erred by finding Claimant not at MMI, as a result of the August 26, 2015 work-related injury.

- If the DIME opinion has been overcome, whether Claimant has proven by a preponderance of the evidence that he is entitled to PPD benefits.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. On July 10, 2015, Employer hired Claimant to work as a ramp agent. Employer required Claimant to undergo a pre-employment physical. The physical focused on Claimant's hearing to determine whether it was sufficient for Claimant to safely perform his job duties, and a drug screen. Records document that Claimant underwent an audiogram and a urinary drug screen on July 10, 2015. Records from the pre-employment physical reveal a superficial and cursory physical examination was performed.

2. Claimant provided incomplete and misleading information on his Physical Exam questionnaire.

- Claimant did not respond to questions asking whether he had ever been off work for more than one day due to job-related illness or injury, and whether he had ever been hospitalized. Both questions, if answered accurately, required significantly lengthy and detailed responses.

- In answer to the question "Do you have decreased function in the hips, knees, legs, ankles or feet," Claimant answered "No." Had he been truthful here, the doctor would have learned about Claimant's knee problems, permanent work restrictions, the discussion of a total knee replacement, his injections, his prescription for a cane, his prescription shoes and compression stockings, his chronic gout and his need for foot care. Claimant also denied any musculoskeletal problems and stated he had never had surgery.

- Claimant provided an incomplete occupational history.

- Claimant inaccurately reported that he exercised for thirty minutes three times per week.

- Claimant provided an incomplete list of the prescription medications he took, including ones for out of control diabetes and chronic gout. Kaiser medical records of Claimant's August 20, 2015 exam show Claimant was actually on at least fourteen medications at that time.

3. Claimant has had long-standing problems and treatment for both of his knees, a sampling is provided below. This list is by no means comprehensive.

- On December 31, 2007, Claimant sustained a right knee injury while working at Wal-Mart.

- On January 18, 2008, Claimant sustained a second work injury at Wal-Mart involving "an injury to the quadriceps tendon or some kind of internal derangement in the knee." An MRI of his right knee was taken and Claimant received two injections into his knee. Surgery was recommended for a medial meniscal tear. Claimant received narcotic pain medications for at least four months. On May 7, 2009, Claimant received a 22% impairment of the right knee/right lower extremity.

- On September 7, 2009, Claimant sought medical treatment reporting he felt a pop in his knee walking down steps. Claimant complained of left knee pain and swelling. Claimant was noted to have a history of gout and cramping on both calves.

- On March 10, 2010, Claimant sought medical treatment for right knee pain lasting twelve hours. Claimant reported that his symptoms feel like prior gout flares. Six days earlier, Claimant had presented to the UHC emergency department where he was given Vicodin for the same symptoms.

- On April 10, 2010, Claimant sought medical treatment. Records of that visit indicate Claimant's prior history of gout and noted he had a flare now in right knee and left ankle. Claimant reported an inability to ambulate or bear weight. Claimant received Fentanyl en route to the hospital and Claimant was given four Medrol Dosepaks, Dilaudid, Valium, and Zofran, during his stay and upon discharge.

- On June 26, 2010, Claimant presented for an SSDI Exam. Records from that visit document gout flare ups in Claimant's feet, ankles and knees, and that Claimant had had several hospitalizations for gout flares.

- Claimant sustained a third workers' compensation claim against an employer in the auto industry and did not work from July 2010 through at least April 27, 2011. On April 27, 2011 Claimant was experiencing diffuse bilateral tenderness from his knees to his feet with edema and erythema of his lower extremities. Claimant's medical provider attributed Claimant's leg pain to chronic liver disease or possibly from lung disease.

- Records from a May 2, 2011 medical examination note that Claimant had experienced problems with gout for the last three years, including attacks in the dorsal aspect of his feet, his ankles, and his knees.

- On June 29, 2011, Claimant filed a personal injury lawsuit against Wal-Mart alleging he slipped at the store with his right leg out in front of him. Claimant reported that his right leg continued forward, he twisted to his left (twisting the knee medially and the ankle in aversion) then fell onto his buttocks. On physical examination Claimant reported moderate tenderness and mild swelling in the medial joint line right knee, and limited range of motion secondary to pain. Claimant received a financial settlement in his personal injury suit.

- On July 18, 2011, orthopedic surgeon Stephen Lindenbaum evaluated Clamant and recommended a right knee MRI. On July 20, 2011 the right knee MRI took place and a surgery was recommended.

- On October 17, 2011 Claimant underwent an arthroscopic surgery to address right knee pain due to torn medial meniscus along with lateral meniscal tear.

- On October 26, 2011, Claimant returned to Dr. Lindenbaum reporting he slipped and fell *again* at a Wal-Mart store and reinjured his right knee. Claimant filed a personal injury lawsuit against Wal-Mart for this right knee injury.

- On January 25, 2012, Dr. Lindenbaum injected Claimant's right knee with steroid due to ongoing symptoms.

- On May 8, 2012 Claimant was prescribed a cane.

- On May 24, 2012, Claimant continued experiencing right knee pain.

- On July 17, 2012, Claimant was in physical therapy for his right knee. He stated, "my knee pain doesn't allow me to kneel on bed or getting up or down to floor, there's a pain in my knee cap that I feel everything [sic] I move my knee. I don't have the flexibility; feel like I didn't get the right attention for it in my therapy; had 1 injection helped for a few days; then its [sic] back. Continually swells as I use it."

- On September 5, 2012, Claimant sought medical care presenting with knee swelling. Prior treatment included over three months of physical therapy. Following that treatment, Claimant reported his symptoms worsened, and were aggravated by walking. Dr. Lindenbaum recommended weight reduction [Claimant's BMI was over 45], a patella centering brace, and additional physical therapy.

- Between November 7, 2012 and December 14, 2012, Claimant received additional physical therapy for his right knee.

- On January 28, 2013, Claimant sought emergency room treatment for a right knee injury. Claimant slipped on ice at gas station landing on his right knee.

- On January 29, 2013 Claimant obtained an MRI of his right knee. The MRI showed prior meniscus surgery and no acute tear. An area could have indicated chronic inflammation of one of his tendons or an acute injury. Claimant was recommended for physical therapy and if no improvement then to orthopedic referral.

- On January 27, 2014, Claimant sought medical treatment for an injury to his left knee. Claimant reported a twisting injury which occurred at home when he was getting out of a car. He reported moderate joint pain and mild difficulty walking. The medical provider noted mild tenderness and swelling.

- On January 28, 2014, Claimant called a medical provider and reported developing left knee pain getting out of car the day before. Claimant reported developing left knee pain. Claimant reported that he had been wearing a brace, and noticed notice swelling in his left calf, and that he was unable to bend his knee. He reported his entire knee felt warm, and that his leg was shaking due to constant pain and pressure he felt to his knee cap.

- On January 29, 2014, Claimant reported to an emergency room and was diagnosed with left knee arthrocentesis. A fluid analysis was performed and the results were consistent with gout. Claimant received an intra-articular steroid injection.

- On December 8, 2014, Claimant sought medical care presenting with Gout flare ups in both knees. Claimant was taking but not responding to his gout medication. Claimant reported he could not get up.

- On December 14, 2014 Claimant complained of bilateral knee swelling. He was taking narcotics with improvement to his right but not left knee. Imaging showed a popliteal cyst 3cm x 4cm, which was surgically removed.

- On December 16, 2014, Claimant saw orthopedic surgeon Darin Allred MD. “Pt is here for initial evaluation of his left knee. He has had a 1 month history of progressive left knee pain. It started off after a history of gout. He went to the ER and was given a DepoMedrol oral Dosepak which fixed his right knee but not his left. He has had a history of gout and has had previous problems in his knees before. Since that time, he has

had difficulty walking due to this pain. A lot of his pain is associated with flexion of his knee. He has severe obesity and many of the medical problems typically associated with it including diabetes and peripheral neuropathy. X rays show moderate medial compartment arthritis and joint space loss." Dr. Allred recommended they start with a steroid injection. Dr. Allred felt Claimant was much too large and young for an arthroplasty and knee arthroscopy would likely not yield a successful result and would be challenging in somebody Claimant's size.

4. As early as June 26, 2010, Claimant carried diagnoses of hypertension, migraines, vertigo, hyperlipidemia, GERD, chronic cervical neck pain, chronic lower back pain, bipolar disorder, major depression, chronic and severe gout, and multiple kidney stones. Medical records from that date indicate that "most ERs in the local region do not want to treat him because they feel he is seeking narcotic drugs." Claimant reported that he had become an emergency room abuser. Claimant further reported that he had been in and out of prison between 1990 and 2004, and acknowledged he had a "significant legal history that included convictions for sex offenses, assault, and theft." Claimant reported auditory hallucinations "now and then," that "come and go," and acknowledged two inpatient psychiatric admissions.

5. Claimant testified at hearing that on August 26, 2015, he was working for Employer as a ramp agent at DIA. Although Claimant began employment approximately six and a half weeks earlier, he had only been working on the tarmac with planes for about two weeks. Claimant was standing near the hitch were a tow bar was attached to a vehicle used to push back the airplane. This vehicle is called a Pushback or a Tug interchangeably. Claimant was facing the Tug and the aircraft was behind him. The tow bar connecting the Tug to the plane was to his left. Claimant reached across his body with his right hand to unhook the tow bar from the hitch. The tug driver had the vehicle in drive instead of reverse, and the tow bar was pushed out of the hitch. This caused the bar to swing towards Claimant and come in contact with Claimant's legs across his shins below his knees. Claimant testified his hips were essentially ninety degrees to the tow bar. His left hand was on the handle of the tow bar. Claimant testified the tow bar hit him first on the left side of his left leg, on the top of his calf below the knee. He twisted away from the tow bar, but the tow bar then hit him on the right leg. Throughout the event, the tow bar remained attached to the plane.

6. Claimant's report of injury, filed on the date of injury, stated that the tug driver put the tug into drive. According to Claimant, "the tow bar in my hand [met] with pushback and [the tow bar] smacked across both legs below the knees." At hearing, Claimant agreed this was what occurred.

7. Claimant sought emergency room care three times between August 20, 2015 and August 27, 2015, apparently related to his uncontrolled diabetes. The week of Claimant's injury, his BMI was 47.

8. Insurer admitted liability for the injury.

9. On August 27, 2015, Claimant reported to Concentra that he was "Working while removing tow bar from aircraft when tug caused tow bar to strike (L>R) legs below the level of the knee." Claimant told medical providers at Concentra that his past medical history was noncontributory and mentioned nothing about his numerous prior conditions and treatment which impacted his knees. Concentra records indicated no obvious signs of trauma. Claimant reported that the injurious event occurred because of "the incompetence of his supervisor."

10. Concentra medical records from November 23, 2015, discuss Claimant continuing on Oxycodone. Claimant was continued on Oxycodone at his December 17, 2015 Concentra appointment.

11. On September 22, 2015, Dr. Cary Motz performed an orthopedic evaluation of Claimant.

- While taking his medical history Dr. Motz noted, "He denies any prior problems or injury to either knee." Claimant was not truthful with Dr. Motz about his prior knee problems.

- Claimant reported he was hit with a tow bar in the shins. He did not report any significant twisting injury. He stated his pain went up from the shins into his knee and he had significant discomfort in both knees since the injury.

- Regarding causation, Dr. Motz noted,

    - "The patient's mechanism of injury being of a direct blow to the shins without a twisting or squatting injury is unlikely to cause a meniscal tear."

    - "I do not believe that the meniscal tear that was seen on the MRI of the left knee is related to this injury."

    - "It is most likely degenerative tear related to the patient's obesity."

    - "The patient has significant global knee pain that is out of proportion to his MRI of the left knee and out of proportion to his exam."

- Dr. Motz concluded, "I believe it is highly unlikely that surgery is going to improve this patient's course . . . We also discussed the probability that the meniscal tear is not related to the work injury based upon the mechanism of injury." Dr. Motz concluded any need for surgery was not work related, and even if it was work related, surgery was not reasonable or necessary.

12. Claimant testified that following Dr. Motz's evaluation, he requested a second opinion. On September 25, 2015, Dr. Sobanski evaluated Claimant. Claimant

told Dr. Sobanski that he had never had left knee pain prior to his August 26, 2015 work injury. Claimant was not truthful with Dr. Sobanski about his prior knee problems.

13. On October 19, 2015, Dr. Michael Hewitt evaluated Claimant.

- Upon examination, Dr. Hewitt noted Claimant had a significantly antalgic gait and was using crutches. However, he noted no obvious bilateral quadriceps atrophy which would be expected with crutch use.

- Dr. Hewitt noted, "He described being struck directly on the anterior aspect of both proximal tibias without specific twisting mechanism. The patient understands this is an uncommon mechanism for a meniscus tear which usually requires more of a pivoting mechanism."

- Dr. Hewitt concluded, "I would be concerned that knee arthroscopy would not provide significant benefit.

Like Dr. Motz, Dr. Hewitt found that any need for surgery was not work related, but also found that surgery was not reasonable and necessary.

14. Claimant admitted at hearing that he did not tell the truth to his doctors. He did not tell Dr. Hewitt, Dr. Sobanski, Dr. Motz, Dr. Castrejon, or Dr. Shih that he had prior left knee problems, prior right knee arthroscopy, a history of chronic gout affecting his knees, and uncontrolled diabetes which required Claimant to wear special shoes and socks and which required specialized foot care.

15. From August 26, 2015 until December 23, 2015, Claimant received extensive conservative treatment including physical therapy, pool therapy, diagnostics, injections, and medications, including narcotics. Claimant reported none of his treatment relieved his bilateral knee pain.

16. Despite receiving medical treatment through workers' compensation, Claimant sought additional medical treatment outside of the Workers' Compensation system. Examples include:

- On September 15, 2015, Claimant presented to Kaiser to obtain an MRI of his left knee. Kaiser noted, "Orthopedic referral for bilateral knee problem; chronic/recurrent injury. The patient is interested in an MRI and second opinion about the knee."

- On December 2, 2016, Claimant presented to the University of Colorado Health Center with 12-hours of burning right knee pain, which he reported felt similar to his past gout flare-ups. His provider noted "bilateral knees: no effusion, warmth, or arrhythmia."

17. On December 23, 2015, Dr. John Burris evaluated Claimant.

- Dr. Burris noted, "[Claimant] is very somatically focused and he wears neoprene braces on both knees. [Claimant] has not returned to work since the original event. He cannot tell me what makes his pain better or worse…He does not describe any instability with ambulation or locking of the knees."

- Claimant did not use crutches when he saw Dr. Burris despite having used crutches two months earlier when he saw Dr. Hewitt.

- Dr. Burris opined that the only logical diagnosis was contusion to the lower legs.

    - Claimant continued to have diffuse pain complaints four months after a minor contusion injury to his lower legs.

    - He had diagnostic testing which was unrevealing, and two evaluations with specialists who documented pain out of proportion to examination, and that the findings on MRI were not likely related to the reported mechanism of injury.

    - Dr. Burris placed Claimant at MMI with no impairment and no restrictions. Dr. Burris determined no maintenance or follow-up were required.

    - Following Dr. Burris' assessment he noted, "[Claimant] verbalizes understanding of the specialist's evaluations. He does state that 'it does not make any sense to him.' He states that he had no problems before this and he does not know how he could suddenly have arthritis after such an event." This statement was untruthful. Dr. Burris concluded that based on the evaluation Claimant had undergone through the specialists he was referred to, he could not explain Claimant's persistent pain complaints with the reported mechanism of injury.

    - Claimant was not truthful with Dr. Burris about his prior knee problems and treatment.

18. On December 18, 2016, Dr. Edwin Healey performed an IME at Claimant's request. Dr. Healy noted that Claimant "continues to take Percocet5/325 mg every two to four hours for pain. Claimant was somewhat forthcoming with Dr. Healey, mentioning that he sustained a prior work-related injury to his knee in 2007-2008, and that he had a right knee surgery with Dr. Lindenbaum in 2011. Dr. Healey was also provided with these records. However, nothing in Dr. Healey's IME report indicates that he reviewed any of Claimant's extensive Kaiser records, including a surgical evaluation for his left knee 6-months prior to beginning work for Employer and frequent complaints of lower extremity pain. Claimant untruthfully reported to Dr. Healey that following his 2011 right knee surgery with Dr. Lindenbaum, he did not have any complaints of

bilateral knee pain until the date of injury. Dr. Healey relied on Claimant's untruthful history. It appears Dr. Healey was not provided Claimant's records from Dr. Lindenbaum over the year following his surgery, his physical therapy records, or Kaiser or ER records, which prove Claimant's right knee continued to be highly symptomatic. The medical records that Dr. Healey did not review directly and uncontrovertibly oppose Claimant's untruthful assertion that he was free of knee pain following surgery and had no complaints for four years. Dr. Healey was not provided Claimant's entire medical records and clearly misapprehended Claimant's true medical history. The ALJ finds that Dr. Healy's medical opinions are not reliable.

19. On May 12, 2016, Claimant attended a DIME with Dr. Miguel Castrejon. Claimant reported the tow bar jerked towards him to the point where it impacted the left knee anteriorly and the right knee at the medial joint line. As the tow bar forcefully pushed towards him, Claimant reported to Dr. Castrejon that his body was rotated to the right. With regards to his right knee, Claimant reported he underwent an arthroscopy and after surgery, "The claimant had reported almost complete resolution of his right knee pain and was able to resume all of his normal activities without pain. The claimant denied any prior left knee pain until August 26, 2015." Again, Claimant's report was not truthful. Claimant's current complaints were of constant burning pain involving both knees located anteriorly and posteriorly. He noted a sensation of weakness and giving way. Claimant rated his then current pain at 9/10.

20. Claimant reported the mechanism of his injury to Dr. Castrejon as the tow bar striking his knees forcing him to rotate his body. This report was inconsistent with Claimant's earlier reports – that there was no twisting mechanism -- given to Dr. Sobanski, the physical therapist, Kaiser, Dr. Motz, Dr. Hewitt, and Dr. Burris. Dr. Castrejon was unable to reconcile this discrepancy. Despite admitting to prior right knee problems, Claimant stated his right knee surgery allowed him to resume all activities without pain. This was not truthful. Claimant continued to deny a history of left knee problems.

21. Claimant reported to Dr. Castrejon that he had work related left shoulder problems as well. A report from Dr. Stephen Lindenbaum dated August 26, 2015 stated, "At the time he related to me that the original [left shoulder] injury was at work at the airport where he works on the ramp and was injured. At that time, he didn't have a lot of pain or discomfort in the shoulder. He continued to work in this condition. He feels strongly that the original injury was at work." Claimant failed to tell to Dr. Castrejon that on January 26, 2016, Claimant presented to Kaiser and reported he dislocated his shoulder while walking his dog. As to Claimant's left shoulder, Dr. Castrejon noted, "The claimant admits that these symptoms began approximately five months post-injury. He also admits that he developed left shoulder pain after his left arm was forcefully abducted when his dog pulled on the leash. There is no documentation of left shoulder pain being related to the injury in question." Claimant changed his true medical history in an attempt to convert his personal physical problems into work related diagnoses.

22. Dr. Castrejon's medical records review contained MRIs of Claimant's right knee in 2008 and 2011. No other medical records were provided for the period prior to

Claimant's work injury. Following his examination of Claimant and review of the incomplete medical records in his possession, Dr. Castrejon concluded, "There has been no prior left knee condition that has required medical treatment, loss of work time or level of permanent impairment . . . I have not been provided with the complete medical file surrounding these two prior injuries therefore I am unable to conclude what specific [right knee] surgery was performed. Nevertheless, there is no medical documentation that would support a need for ongoing medical care, loss of work time or permanent impairment prior to the event of August 26, 2015. Dr. Castrejon concluded Claimant was not at MMI and recommended repeat MRIs for both knees and an additional orthopedic surgical consultation. Dr. Castrejon noted Claimant did not require bracing or use of assistive devise.

23. Respondents did not contest this first DIME and the case was returned to a General Admission. Claimant underwent repeat MRIs of both knees on August 25, 2016.

24. Claimant sought medical treatment with extreme frequency for an enormous number of issues. Claimant testified at hearing that he currently had at least 40 different health problems or illnesses. Claimant testified these medical conditions make it difficult to accurately recall his medical history. During the six months before Claimant applied for his job with Employer, between January 2015 and July 2015, Claimant had been to emergency rooms or sought medical care on 115 occasions. Emergency departments considered Claimant an "emergency room abuser" and placed on a care plan.

25. Claimant has uncontrolled diabetes. He would not follow his providers' instructions regarding diet or insulin control and often went off of his insulin for days ata time. He required foot care due to his diabetes, but often did not attend to this need. He was required to wear compression stockings and special shoes which he often did not do. Despite his numerous medical conditions which required consistent medical attention, Claimant did not have a primary care physician.

26. Claimant applied for Social Security Disability benefits at least two times, most recently in 2015. In these proceedings, Claimant represented that he was completely unable to perform any type of work.

27. On August 30, 2016, Dr. Joseph Hsin evaluated Claimant. Claimant reported a tow bar weighing 100-pounds struck his bilateral shins. Claimant reported persistent bilateral knee pain, left worse than right. "He is limping and noted occasional swelling. He had multiple injections, which did not help." Following examination Dr. Hsin opined, "The patient has a very difficult exam and significant hypersensitivity. It is difficult to tell whether or not he has non-organic pain out or proportion to exam versus hypersensitivity from a nerve issue. Certainly, his pain pattern is not consistent with his pathology on MRI. The right knee MRI was essentially normal. The left knee MRI does demonstrate anterior horn meniscus tear. I would tend to agree with Dr. Motz that the mechanism of injury is not consistent with his pathology. Nonetheless, I would be reluctant to operate on this patient. I cannot help with his diffuse knee pain that radiates

to his mid-thigh, which does not appear to be coming from his small lateral meniscus tear."

28. On September 21, 2016, Claimant returned to Dr. Burris. Claimant reported diffuse bilateral knee pain at 8/10. He reported no significant changes. Following examination Dr. Burris concluded, "Because we have completed these recommendations with no further treatment recommended as a result, he is once again at MMI. Based on the nature of the original mechanism, the diagnostic testing, the opinions from three orthopedic surgeons and his examination, I do not believe Dr. Castrejon's impairment rating is valid. . . [Claimant] understands that we have now completed the recommendations from the Division IME. The patient is requesting potential nerve testing. I told him that I cannot pursue these tests, as it was not authorized by the Division IME. The patient is released from care at MMI. I find no objective basis for impairment or permanent work restrictions. No maintenance or follow-up are required."

29. On January 3, 2017, Dr. Castrejon performed a follow-up DIME. Dr. Castrejon stated, "I noted that there had been no prior left knee condition that had required medical treatment, loss of work time or level of permanent impairment. In fact, prior to his employment the claimant had undergone a pre-hire physical examination during which time he was cleared for full duty." Dr. Castrejon concluded, "Yet again, how does one explain the bilateral knee findings in an individual who one day, one week, one month, three months prior to the event of August 26, 2015 was working in an unrestricted fashion and not requiring medical care nor experiencing loss of work time. How also does one explain a pre-employment clearance or the ability on the part of the claimant to have held prior employment in physically demanding positions without need for medical care or loss of worktime. Dr. Castrejon opined Claimant was not at MMI. He assigned provisional ratings of an 18% right lower extremity and a 20% left lower extremity. Dr. Castrejon opined Claimant was still in need of a surgical review or required surgery for his knees.

30. At that time, Respondents filed their application for hearing to overcome the DIME and began discovery which ultimately revealed Claimant's prior medical problems and treatment discussed above.

31. Federicco Boccadoro, Employer's Safety Station Manager, testified if the tug had been driven forward instead of backward, the tow bar would have fallen to one side of the hitch. The tow bar would have then fallen down to the ground, not pushed up into Claimant's upper shin or knee. It would have struck a person who is the same height as Claimant at the height of mid-calf or lower. If there were any force to the event, it would have broken the shear pin on the aircraft, which did not occur.

32. On April 25, 2017, Claimant attended an IME with Dr. Franklin Shih. Dr. Shih concurred with the four previous surgeons that Claimant was not a surgical candidate.

33. Dr. Shih noted that at that time, Claimant was on the following medications: Humulin, Metformin, Colchicine, Oxycodone, Proair, Amlodipine, Atorvastatin, Gabapentin, Lisonopril, Pantoprazole, Tamulosin, and Dicyclomine.

34. Dr. Shih testified at hearing to the following:

- Claimant was not a credible historian. "There were aspects of his history that mechanically were implausible. There were aspects of his history that were inconsistent with the past medical records. There were inconsistencies in the medical records of histories and events to different providers. And so there – there was a lack of focus to make me feel comfortable that his history was accurate."

- Dr. Shih did not believe that Dr. Castrejon, the DIME physician, had the full set of records that Dr. Shih had the opportunity to examine.

- Claimant did not have an objective examination to support his complaints. Claimant had diffuse tenderness and said "Ouch" everywhere Dr. Shih pushed. Dr. Shih threw in a couple sham maneuvers. Dr. Shih stated, "By sham maneuver, an example would be I passively, so I took his ankle and I move his ankle down and I move his ankle up, and that caused knee pain. And mechanically, me passively moving the ankle up and down should have done nothing to elicit knee pain. And so at that point, my ability to interpret any of the physical exam subjective complaints gets significantly diminished because something that really shouldn't have caused anything resulted in an 'ow.'" Dr. Shih testified this lack of objective findings was also echoed by other doctors.

- The mechanism of injury did not make sense from a medical or a physics perspective. Dr. Shih explained that physically, the accident could not have happened the way Claimant demonstrated to the court. The tow bar could not have stricken both legs, and was too low to the ground to strike the knees. Furthermore, Claimant gave different histories about the mechanism of injury to different providers.

- Claimant was not a good surgical candidate. Dr. Shih explained the complaints Claimant associated with his knees were not coming from his knee or the articular surface of his knee He explained there was nothing on exam or anything in the history which established Claimant's knee complaints were due to a specific pathology of the knee. With Claimant's pathology, an operation for the meniscus would actually increase his risk of eventually having more problems with the knee. Claimant was already at high risk for degenerative arthritis of the knee associated with chronic gout. With Claimant's weight, any of the things that we would do are more likely to break down. With diabetes, "he's more likely to have failure, infections, all sorts of bad stuff." So there're multiple levels of why surgery is not indicated."

- Dr. Shih opined that Dr. Castrejon's DIME conclusions were wrong. "When you have four surgeons saying to a non-surgeon 'we shouldn't do surgery,' I think that's more than a difference of opinion. Dr. Castrejon doesn't have the depth of background that went into my analysis of this. I mean, [Claimant] reported [to Dr. Castrejon] no significant right knee problems after his first right knee surgery. When, in fact, the medical records show significant problems recovering after the right knee surgery. [Dr. Castrejon] didn't have the information about the gout." Dr. Shih explained that this has to be taken into account by doctors and this was not considered by Dr. Castrejon.

- The DIME doctor did not have Claimant's history of gout in the knees. Even though Claimant reported he had gout, when specifically asked by Dr. Shih if he had gout affecting his knees, Claimant untruthfully said it never affected his knees. Therefore, Dr. Shih had no confidence that other doctors were aware Claimant had chronic gout in his knees. Gout causes wear and tear in the menisci and inflammation of the soft tissues around it. Having that history would be necessary for a doctor to assess whether surgery would help or hurt Claimant and Dr. Castrejon did not have this medical history.

- Claimant has been diagnosed with a pain disorder. Malingering is a type of pain disorder involving conscious symptom magnification deliberately for secondary gain. Dr. Shih stated that malingering could be an explanation for Claimant's behavior. "Why do I feel there's a pain disorder at play? Well if you look at the records, you look at the multiple pain complaints and multiple areas. You look at the multiple different providers describing non-objective findings. Those all play together if there's more than what makes sense purely from a mechanical standpoint."

- Dr. Shih stated no doctor should rely on Claimant's pre-employment physical. Despite "passing" his pre-employment physical, Claimant felt he was disabled three to four months earlier. "In March and April of 2015, what was the claimant's intention regarding working? Based on the social security application, it indicated that he felt he was unable to perform regular work activities and qualified for social security disability."

- There is no further medical treatment to recommend. "It's my opinion that we've done what's medically prudent and to do more risks hurting the patient more than helping him and that would come and go with one of our vows of first do no harm."

35. Dr. Shih assigned no impairment as a result of Claimant's date of injury. "Given the inability to rely on Mr. Krause' subjective report, his non-physiologic presentation and his inaccurate history, an objective area of impairment cannot be indentified."

36. Respondents have met their burden of establishing by clear and convincing evidence that Dr. Castrejon erred by finding Claimant not at MMI.

37. Mr. Boccadoro's testimony, Dr. Shih's testimony, the photographs and the two videos establish that it was physically impossible for the tow bar to strike Claimant's knees or bend around Claimant to strike his right knee as he described. At most, he suffered contusion to his shins.

38. Based on the totality of the evidence, the ALJ finds Claimant did not give an accurate medical history to Dr. Castrejon. Dr. Castrejon's conclusion that Claimant had no prior left knee problems was based on faulty information. Claimant admitted he did not tell any of his doctors about meeting with an orthopedic surgeon six months before he began working for Employer or their discussion about a total knee replacement for his left knee. Dr. Castrejon's conclusion that Claimant had recovered fully from his right knee problems was inaccurate and not supported by the medical records. Dr. Castrejon's reference to the pre-employment physical showing Claimant was without symptoms prior to hire is misplaced because he was unaware Claimant grossly misrepresented his medical history to the doctor performing the pre-employment physical. Dr. Castrejon was unaware Claimant had applied for Social Security Disability Insurance a mere three months before he applied for a job as a full time baggage handler. Claimant did not advise Dr. Castrejon of his prior impairment rating of 22% to his right knee. Without an accurate history, Dr. Castrejon's opinion regarding MMI and PPD are wrong.

39. The ALJ finds it highly probable that Dr. Castrejon's opinion that Claimant suffered a twisting mechanism of injury is wrong. Only after Drs. Hewitt and Motz explained twisting was necessary to cause injuries like his did Claimant change how the injury happened. Dr. Castrejon opined that he took a better history; however, he did not consider that it was more likely that Claimant changed his history. In addition, Dr. Castrejon did not discuss the physics of the event as did Dr. Shih. If Claimant twisted away from the tow bar, he could not have been hit on the right knee/leg if the tow bar was still attached to the fully loaded aircraft.

40. In addition to Dr. Castrejon's mistakes regarding Claimant's medical history or how the mechanism of injury occurred, Dr. Castrejon erred in opining that Claimant was a surgical candidate. Claimant is not a surgical candidate as opined by four surgeons and Dr. Shih. Respondents proved by clear and convincing evidence that Dr. Castrejon is wrong because if no surgery is available, then no care is available for Claimant and he remains at MMI.

41. Dr. Burris and Dr. Shih assigned no impairment for Claimant's injuries and these opinions are more credible than those of Dr. Castrejon. Dr. Castrejon's provisional impairment ratings for Claimant's bilateral knees are not persuasive. The ratings, if any are appropriate, are attributable due to Claimant's preexisting conditions.

42. Claimant also was assigned a 22% extremity impairment of the right knee on May 27, 2009, which would be available for apportionment against any PPD rating here.

43. Because the ALJ finds Claimant is at MMI, offsets should be taken against any TTD owed for Claimant's work: at the Parking Spot from July 14, 2016 to August 14, 2016 at $10.50/hour for 40 hours per week; at La Quinta from October 21, 2016 to February 12, 2017 at $10.50 hour for 40 hours; and at Extended Stay America from February 13, 2017 through February 28, 2017 for 30 hours per week at $12.00/hour.

44. The ALJ specifically finds that Claimant is not credible. Claimant intentionally misled his treatment providers in attempts to receive treatment for injuries and medical conditions which were in no way related to a work related injury. Claimant's intentional misrepresentations

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2005). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201(1).

OVERCOMING THE DIME REGARDING MMI

The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, supra*. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician's finding concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). The question of whether the party challenging the DIME physician's finding regarding MMI has overcome the finding by clear and convincing evidence is one of fact for the ALJ.

MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further

treatment is reasonably expected to improve the condition." Section 8-40-201(11.5), C.R.S. A DIME physician's finding that a party has or has not reached MMI is binding on the parties unless overcome by clear and convincing evidence. Section 8-42-107(8)(b)(III), C.R.S.; *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

In the case at bar, Claimant is at MMI. Claimant has a long-standing history of bilateral knee complaints. Claimant was dishonest with Dr. Castrejon about his medical history. Dr. Castrejon did not have Claimant's complete medical records. Dr. Castrejon's opinion that the Claimant was not at MMI was based on inaccurate information. Dr. Castrejon was unaware of Claimant's medical history and Claimant's problems telling the truth. Claimant was dishonest about his frequent trips to the emergency room, was dishonest about his previous bilateral knee and lower extremity complaints, and was dishonest about his overall health status to his workers' compensation providers, all of which are relevant in determining whether he is at MMI.

Dr. Castrejon's opinion as to MMI because Claimant simply reported subjective pain is not reasonable because Claimant's complaints of pain cannot be taken at face value based on his physical finding, his credibility issues, his longstanding narcotic drug use, and other persuasive medical evidence. Claimant's severe knee pain complaints cannot be explained by any objective findings. Claimant's physical examination was non-physiologic.

Dr. Franklin Shih's opinion is the most credible. Claimant's bilateral knee complaints have been deemed non-surgical by four surgeons. Claimant's pain is not explained by his MRI findings or any persuasive medical findings. Credible and persuasive evidence supports a finding that surgery is more likely to make Claimant worse, not better. For these reasons, the ALJ adopts the opinion of Dr. Shih that Claimant is at MMI without any permanent impairment.

Respondents have proven by clear and convincing evidence that DIME Dr. Castrejon erred in his DIME report by opining Claimant is not at MMI as a result of the August 26, 2015 work-related injury.

PERMANENT IMPAIRMENT RATING

Because Respondents have overcome the DIME by clear and convincing evidence, Claimant is at MMI. Therefore, the ALJ must determine whether Claimant there is entitled to permanent partial disability benefits. Once the ALJ determines that the DIME's rating has been overcome, Claimant's correct medical impairment then becomes a question of fact and the ALJ is free to calculate Claimant's impairment rating based upon a preponderance of the evidence. See *Garlets v. Memorial Hosp.*, W.C. No. 4-336-533 (ICAO September 5, 2001).

Dr. Castrejon's opinion on impairment for Claimant's knee is not persuasive. The ALJ adopts the opinions of Dr. Burris and Dr. Shih that Claimant does not have any permanent impairment in his knees attributable to this injury.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents have proven by clear and convincing evidence that DIME Dr. Miguel Castrejon erred in his Division Independent Medical Exam report as to maximum medical improvement, the need for additional medical treatment, and permanent impairment. Claimant is at MMI, requires no additional medical treatment, and sustained no permanent impairment as a result of the August 26, 2015 work-related injury.

2. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 26, 2017

/s/ Kimberly Turnbow
Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Whether claimant has proven by a preponderance of the evidence that he is entitled to a scheduled impairment rating of 16% for his right upper extremity.

- Whether claimant has proven by a preponderance of the evidence that he is entitled to convert his scheduled impairment rating to a whole person award.

- Whether claimant sustained a serious permanent disfigurement to areas of his body normally exposed to public view, resulting in additional compensation, pursuant to Section 8-42-108, C.R.S.

FINDINGS OF FACT

1. Claimant was employed with employer as a driver and armored guard. Claimant suffered an admitted injury to his right shoulder on October 7, 2014. Claimant testified that the injury occurred when he slipped and fell against the inside of his work vehicle, striking his collarbone and right shoulder.

2. After claimant reported the injury to employer he was sent for treatment with authorized treating physician (ATP), Dr. J. Dale Utt. Initially treatment included pain medications, heat, ice, and physical therapy.

3. On November 18, 2014, a magnetic resonance image (MRI) of claimant's right shoulder showed thickening of the inferior capsule, but no rotator cuff tear.

4. Claimant continued to have pain and Dr. Utt referred him to Dr. Mitchell Copeland for consultation. Claimant was first seen by Dr. Copeland on November 21, 2014. At that time, claimant reported sharp and stabbing pain, popping, and reduced range of motion in his right shoulder. Dr. Copeland diagnosed adhesive capsulitis and administered a subacromial injection. Dr. Copeland also recommended additional physical therapy treatment.

5. Thereafter, claimant continued to have pain and decreased range of motion in his right shoulder. On March 17, 2015, claimant was seen by Dr. Utt who noted that claimant might need up to a year from the date of injury to reach maximum medical improvement ("MMI"). Although claimant was seen by Dr. Utt on April 28, 2015 and May 29, 2015, claimant was not yet placed at MMI.

6. On August 18, 2015, claimant returned to Dr. Copeland and reported that he was working without restrictions. Claimant had stopped physical therapy treatment by that time and was following a home exercise program. Dr. Copeland reinstituted physical therapy.

7. On October 30, 2015, Dr. Copeland noted that despite physical therapy treatment, claimant had not had significant improvement. At that time, Dr. Copeland ordered an MRI of claimant's right shoulder. On November 11, 2015, the MRI was taken and showed a small full thickness tear of the supraspinatus tendon, with fluid in the subacromial subdeltoid bursa, a small joint space effusion and subchondral cystic change in the humeral head.

8. On December 24, 2015, Dr. Copeland performed a right shoulder arthroscopic bursectomy, subacromial decompression with acromioplasty and repair of a chronic tear of the supraspinatus.

9. On June 28, 2016, Dr. Utt placed claimant at MMI and assessed a permanent impairment rating of 10% for claimant's right upper extremity. Dr. Utt also assigned a number of work restrictions that included no more than 30 to 40 pounds lifting with his right arm to his waist, no more than 20 to 30 pounds overhead, and no more than 20 pounds for repetitive lifting. Claimant testified at hearing that he continues to have these same work restrictions.

10. Dr. Utt testified that when he placed claimant at MMI, claimant exhibited symptoms of decreased shoulder motion and mid-thoracic spasm.

11. Respondents filed a Final Admission of Liability (FAL) on August 31, 2016 admitting for a permanent impairment rating of 10% for claimant's right upper extremity and the MMI date of July 28, 2016 [*sic*]. Claimant timely contested the FAL on September 13, 2016 and requested a Division-independent medical examination (DIME).

12. On January 26, 2017, Dr. James McLaughlin performed a DIME. Dr. McLaughlin reviewed claimant's medical records, obtained a medical history, and performed a physical examination of claimant in connection with the DIME. Following the DIME, Dr. McLaughlin determined claimant's date of MMI to be June 20, 2016 and assessed a 16% impairment rating for claimant's right upper extremity; (which converts to a whole person impairment rating of 10%). Dr. McLaughlin assessed a higher impairment rating than Dr. Utt because there was evidence of crepitus in claimant's right shoulder during the physical exam. Dr. McLaughlin testified that at the time of the DIME, claimant had irritation over the parascapular area and tenderness on his right collarbone at the right acromioclavicular (AC) joint.

13. On April 14, 2017, respondents filed an amended FAL, admitting for the impairment rating of 16% for claimant's right upper extremity and the MMI date of June 20, 2016.

14. Claimant testified that when he was placed at MMI his symptoms included crepitus with pain in his right shoulder and into his chest and right armpit area. Claimant also testified that he continues to have them same symptoms, which limit his activities. Claimant testified that he has difficulty reaching overhead and his pain symptoms impact his sleep.

15. Claimant left employment with employer in early 2016. Claimant then began working for May Trucking in July 2016 as an "over the road" truck driver. Claimant testified that his new employment allows him to work within his permanent work restrictions. This includes operating a truck with an automatic transmission and a "normal, car sized" steering wheel.

16. The ALJ credits claimant's testimony, the medical records, and the opinion of Dr. McLaughlin and finds that claimant has demonstrated that it is more likely than not that the appropriate impairment rating for claimant's right upper extremity is 16%.

17. The ALJ credits claimant's testimony and the medical records and finds that claimant has demonstrated that it is more likely than not that he suffers from a permanent impairment to his right upper extremity. The ALJ also finds that claimant has demonstrated that it is more likely than not that he has pain and discomfort that limit his ability to use his right upper extremity.

18. As a result of the December 24, 2015 shoulder surgery, claimant has four well-healed arthroscopic scars on his right shoulder.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2014).

3. Section 8-42-107(1) states in pertinent part:

(a) When an injury results in permanent medical impairment and the employee has an injury or injuries enumerated in the schedule set

forth in subsection (2) of this section, the employee shall be limited to medical impairment benefits as specified in subsection (2) of this section.

(b) When an injury results in permanent medical impairment and the employee has an injury or injuries not on the schedule specified in subsection (2) of this section, the employee shall be limited to medical impairment benefits as specified in subsection (8) of this section.

4. The question of whether the claimant has sustained an "injury" which is on or off the schedule of impairment depends on whether the claimant has sustained a "functional impairment" to a part of the body that is not contained on the schedule. *Strauch v. PSL Swedish Health Care System*, 917 P.2d 366 (Colo. App. 1996). Functional impairment need not take any particular impairment. Discomfort which interferes with the claimant's ability to use a portion of his body may be considered "impairment." *Mader v. Popejoy Construction Company, Inc.*, W.C. No. 4-198-489, (ICAO August 9, 1996). Pain and discomfort which limits a claimant's ability to use a portion of his body may be considered a "functional impairment" for determining whether an injury is on or off the schedule. *See, e.g., Beck v. Mile Hi Express Inc.*, W.C. No. 4-238-483 (ICAO February 11, 1997).

5. It is the claimant's burden of proof by a preponderance of the evidence to establish both that he suffered a permanent impairment and that the permanent impairment is either contained on the schedule set forth at subsection (2) or not on the schedule specified in subsection (2). Further, it is the claimant's burden to prove by a preponderance of the evidence the extent of the permanent impairment.

6. As found, claimant has proven by a preponderance of the evidence that he has a permanent injury to his right upper extremity. As found, an impairment rating of 16% for claimant's right upper extremity is appropriate. As found, claimant's testimony, the opinion of Dr. McLaughlin, and the medical records are credible and persuasive.

7. As found, claimant has demonstrated that he suffers from a functional impairment in the form of pain and discomfort that limits his ability to use his right upper extremity. Therefore, claimant is entitled to a 10% whole person impairment award pursuant to Section 8-42-107(8), C.R.S. As found, claimant's testimony and the medical records are credible and persuasive.

8. Section 8-42-108 (1), C.R.S. provides that a claimant may be entitled to additional compensation if, as a result of the work injury, he has sustained a serious permanent disfigurement to areas of the body normally exposed to public view.

9. As found, claimant has a visible disfigurement to his body consisting of four well-healed arthroscopic scars on his right shoulder as a result of his October 7,

2014 work injury. Therefore, claimant has sustained a serious permanent disfigurement to areas of the body normally exposed to public view.

ORDER

It is therefore ordered that:

1. Respondents shall pay claimant PPD benefits based on a whole person impairment rating of 10%.

2. Respondents shall pay claimant $400.00 for his disfigurement. Respondents shall be given credit for any amount previously paid for disfigurement in connection with this claim.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. DATED: September 27, 2017

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

I. Whether Claimant has proven, by a preponderance of credible evidence, that he sustained a compensable injury on November 26, 2016.

II. Whether Claimant has proven, by a preponderance of the evidence, that he is entitled to reasonable and necessary medical benefits, including the hernia surgery recommended by Dr. John Weaver.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant was hired by Employer on July 22, 2015 as a shuttle driver. Claimant's job duties included driving people, and their luggage, to and from Denver International Airport. As part of his job, he also had to lift luggage in and out of the shuttle.

2. On July 22, 2015, Claimant underwent a medical evaluation as part of a Commercial Driver Fitness Determination. See Exhibit 1. As set forth in the evaluation, Claimant was checked for a number of conditions, including a hernia. Claimant was found to not be suffering from a hernia as of July 22, 2015. See Exhibit 1.

3. On or about November 11, 2016, Claimant was advised by Employer that they were restructuring their workforce. Claimant was given the option to contract with Employer as an independent contractor. On November 16, 2016, Claimant declined the offer. Claimant was not, however, terminated at that time.

4. On November 26, 2016, Claimant was working for Employer and transporting passengers to Denver International Airport and they had 2 heavy suitcases. While moving their suitcases, Claimant felt some pain and discomfort in his midsection - abdomen. It felt like he pulled a muscle. Claimant continued working that day.

5. On November 27, 2016, Claimant worked and his abdomen became more painful and symptomatic. Therefore, on November 27, 2016, Claimant reported his injury to his employer/manager, Tim Maeda. Mr. Maeda told Claimant that he did not know the procedure for dealing with a work injury and for Claimant to report the injury the following day by contacting someone else in management.

6. On November 28, 2016, Claimant called Ms. Jacqueline Rice, the driver manager, and reported his injury. She stated that a report had to be made as soon as possible. Ms. Rice, however, was leaving that day at 2:00 p.m. and Claimant could not make it into the office that day before 2:00 p.m.

7. On November 29, 2016, Claimant came to work and gave a written statement to Employer representatives, Renee (last name unknown), Travis Manafee, and Jacqueline Rice regarding his injury. Upon Claimant reporting his injury to Employer, Employer referred Claimant to Concentra.

8. On November 29, 2016 Claimant went to Concentra and was evaluated by Dr. Jonathan Bloch. The medical report indicates Claimant stated he was lifting Saturday and felt an acute sharp tearing pain in his umbilical region, just above his naval. Dr. Bloch diagnosed Claimant as suffering from an umbilical hernia.

9. Dr. Bloch indicated that his objective findings were consistent with Claimant's history and the work related mechanism of injury.

10. This ALJ finds Dr. Bloch's report persuasive that Claimant suffered a hernia at work while lifting.

11. Dr. Bloch referred Claimant to Dr. John Weaver, a surgeon.

12. On November 30, 2016, Claimant was terminated from his employment due to Employer's restructuring.

13. On December 8, 2016, Employer representative, Ms. Janet Garretson, Regional Director of Human Resources, completed an Employer's First Report of Injury. The Employer's First Report of Injury indicates Claimant was injured on November 26, 2016 while moving luggage at the airport. The Report also indicates that Employer was notified of the accident and injury on November 29, 2016.

14. The Employer's First Report of Injury is consistent with the findings above that Claimant reported being injured on November 26, 2016 while moving luggage and that he reported the injury to the employer on November 29, 2016.

15. On December 20, 2016, Dr. Weaver evaluated Claimant. Dr. Weaver's report outlines the following history:

> This is a 51-year-old gentleman who presents to me in consultation from Jonathan Bloch for further evaluation of a supraumbilical ventral hernia. The patient states he was at work on the date of injury, 11/26/2016, when he was lifting bags. The patient stated he noted acute pain in his periumbilical region after this. He noted a bulge above the belly button.

16. Dr. Weaver diagnosed Claimant with a ventral hernia.

17. Dr. Weaver recommended surgical repair of the hernia. He recommended an open ventral hernia repair with mesh.

18. Claimant testified at hearing regarding his injury and the reporting of his injury. Claimant's testimony is found to be credible.

19. Mr. Jason Luckey testified on behalf of Respondents. Mr. Luckey testified that Claimant reported a back injury to him during a meeting on November 28, 2016. Mr. Luckey's testimony is inconsistent with the Employer's First Report of Injury which indicates Claimant reported an injury to his abdomen. Mr. Luckey's testimony is not found to be credible or persuasive as to whether Claimant suffered a hernia on November 26, 2016.

20. Mr. Selecter testified that he and Claimant were terminated on November 30, 2016. Mr. Selecter also testified that Claimant told him that he injured himself at work and this conversation occurred before they were terminated on November 30, 2016. Mr. Selecter could not, however, recall when this conversation took place. This ALJ finds this portion of Mr. Selecter's testimony to be credible and persuasive that Claimant injured himself at work and that he and Claimant were terminated on November 30, 2016.

21. This ALJ finds Claimant suffered a hernia on November 26, 2016 due to lifting luggage while working.

22. This ALJ further finds that upon being notified of the injury on November 29, 2016, Employer referred Claimant to Concentra where Claimant was evaluated by Dr. Bloch. This ALJ also finds that Dr. Bloch referred Claimant to Dr. Weaver. Therefore, this ALJ finds that Dr. Bloch and Weaver are authorized providers.

23. Dr. Weaver has recommended surgery to repair Claimant's hernia. Dr. Weaver has recommended an open ventral hernia repair with mesh placement.

24. This ALJ finds Dr. Weaver's report persuasive that Claimant has a hernia and that the surgery recommended by Dr. Weaver is reasonable, necessary, and related to Claimant lifting luggage at work on November 26, 2016.

25. This ALJ finds that the open ventral hernia repair with mesh placement surgery recommended by Dr. Weaver is reasonable, necessary, and related to Claimant's November 26, 2016 work injury.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. Claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

I. Whether Claimant has proven, by a preponderance of credible evidence, that he sustained a compensable injury on November 26, 2016.

Claimant was required to prove by a preponderance of the evidence that at the time of the injury he was performing service arising out of and in the course of the employment, and that the injury or occupational disease was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. The question of whether Claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant underwent a medical examination on July 22, 2015 and it was determined that he did not have a hernia. Claimant's job required him to transport passengers and their luggage to and from Denver International Airport. As part of his job, Claimant was required to lift luggage.

Claimant credibly testified that he injured himself on November 26, 2016 while lifting a passenger's suitcase. Claimant credibly testified that he reported his injury on November 27, 2016 and November 29, 2016 to Employer and was referred to Concentra where he was evaluated by Dr. Bloch. Dr. Bloch evaluated Claimant and diagnosed Claimant as suffering from a hernia. Dr. Bloch also indicated that his objective findings, i.e., hernia, were consistent with the mechanism of injury described by Claimant.

Claimant has established by a preponderance of the evidence that he injured himself at work on November 26, 2016 while lifting a passenger's suitcase. Claimant has established by a preponderance of the evidence that he suffered a hernia on November 26, 2016 due to lifting a suitcase. Therefore, this ALJ concludes that Claimant suffered a compensable injury on November 26, 2016.

II. **Whether Claimant has proven, by a preponderance of the evidence, that he is entitled to reasonable and necessary medical benefits, including the hernia surgery recommended by Dr. John Weaver.**

Medical Benefits

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether Claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

Dr. Bloch and Dr. Weaver diagnosed Claimant with a hernia. As found, the hernia was caused by Claimant's work activities. Dr. Weaver has recommended an open ventral hernia repair with mesh placement to fix the work related hernia. As found, the surgery is reasonable, necessary, and related to Claimant's work injury. Therefore, it is concluded that Claimant has established by a preponderance of the evidence that the hernia surgery recommended by Dr. Weaver is reasonable, necessary, and related to Claimant's November 26, 2016 injury.

Authorized Provider

Authorized providers include those medical providers to whom the claimant is directly referred by Employer, as well as providers to whom an ATP refers the claimant in the normal progression of authorized treatment. *Kilwein v. Industrial Claim Appeals Office*, 198 P.3d 1274 (Colo. App. 2008); *Town of Ignacio v. Industrial Claim Appeals*

Office, 70 P.3d 513 (Colo. App. 2002); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997).

In this case, Employer referred Claimant to Concentra where he was evaluated by Dr. Bloch. Dr. Bloch evaluated Claimant and determined Claimant had a hernia. Thereafter, Dr. Bloch referred Claimant to Dr. Weaver, a surgeon, who also diagnosed Claimant as suffering from a hernia and recommended surgery. Moreover, Respondent's did not dispute that Dr. Bloch and Dr. Weaver are authorized providers. Therefore, this ALJ concludes that Dr. Bloch and Dr. Weaver are authorized providers.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant suffered a compensable injury in the form of a hernia on November 26, 2016.

2. Respondents shall provide reasonable, necessary, authorized, and related medical treatment to treat Claimant's hernia.

3. Dr. Bloch and Dr. Weaver are authorized providers.

4. Respondents shall pay for Dr. Weaver to perform the open ventral hernia repair with mesh placement surgery. Respondents shall pay for the surgery pursuant to the Colorado Workers' Compensation Medical Fee Schedule.

5. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 29, 2017

_____

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that she sustained compensable injuries to her neck, right shoulder, right knee, and lower back as a result of a fall occurring at work?

II. Has Claimant shown, by a preponderance of the evidence, that she is entitled to reasonable, necessary, and related medical benefits as a result of this fall?

STIPULATIONS

I. Claimant's Average Weekly Wage is $624.00

II. In the event the claim is found to be compensable, Claimant is entitled to Temporary Total Disability payments for 10.5 days, all in 2016, as follows: March 28-1/2 day; March 29 through April 1; July 25 through July 29, and August 1.

FINDINGS OF FACT

Based upon the evidence received at hearing, the ALJ makes the following Findings of Fact:

1) Claimant has been employed by Employer from May 19, 2014 up until the date of the hearing. Her job at Employer, in part, included working in a clean room and cleaning various components with an air hose at a work bench. When she did this task she sat on a "bar stool" type chair and put her feet on a foot rest.

2) On March 28, 2016, Claimant was working in clean room 2, cleaning components at her work bench. When she got up from her chair, she grabbed her tool box and pushed the chair under her desk. As she proceeded forward she tripped on an air hose that was hanging on the lip of her work bench and fell first onto her right knee. Claimant testified that she asked to have the air hose moved several times and she was not happy with the workstation set up. The precise sequence of events thereafter will never be known with certainty; by their nature, falls are unexpected, sudden, and end abruptly. Instincts take over. Perceptions are distorted. In any event, Claimant wound up on her back. There was no one else in the Clean Room when the incident occurred

3) Initially Claimant noticed right knee pain. Within a short time thereafter Claimant started to notice low back, neck, and right shoulder pain

4) Right after she got up off the floor, Claimant sat in her chair for a few minutes. She then went in to another clean room to let her boyfriend know what

happened. After she told her boyfriend what happened she returned to the seat at her work station and shortly thereafter notified her supervisor, John Gurule.

5) At Employer's Direction, Claimant presented to Dr. J. Douglas Bradley at Emergicare on March 28, 2016 with complaints of right knee, right shoulder, right posterior neck, and right lower back pain. Dr. Bradley noted a history of tripping on an air hose with her left foot and starting to fall. Claimant told Dr. Bradley as she was falling she attempted to grab a chair and fell onto her right knee and now has neck pain, right shoulder pain, and low back pain due to twisting during the fall. Physical examination revealed pain in the lumbar spine and tenderness in the neck. Dr. Bradley diagnoses were strain of muscle, fascia, and tendons of the neck and back along with a right knee contusion. Dr. Bradley prescribed medications, recommended hot packs be used, and return for follow up in one week. (Ex. 2, pp. 7-11)

6) On March 30, 2016, presented herself to Excel Physical Therapy for an initial evaluation. The P.T. note of that date reflects a history of Claimant getting her foot stuck in a hose hanging from the table and falling. This same note reflects that as she fell, Claimant twisted to try and catch herself but fell onto her back. (Ex. 2. p. 68)

7) Claimant returned to Emergicare on April 4, 2016 where she was seen by Dr. Joseph Zaremba. On this date, Claimant told Dr. Zaremba her back and neck pain was worsening with her back pain being most severe. Claimant advised Dr. Zaremba that she had a prior history of chronic back pain and migraines. Physical examination revealed "neck twist is decreased", tenderness of the right posterior neck, discomfort at midline of lumbar at the right trapezius, and reduced range of motion (ROM) of neck and lumbar spine. Dr. Zaremba recommended Claimant continue PT, home exercises, and medication. Dr. Zaremba gave work restrictions; max lift/carry 5 pounds, no lifting from the ground, max walking/standing 3 hours per day, 45 minutes at a time with 15 minute stretch breaks every hour, max sitting 4 hours per day,45 minutes at a time with 15 minutes stretching in between each hour. (Ex.1.pp.16-19)

8) Claimant was seen in follow up by Dr. Zaremba on April 18, 2016. On this date, Claimant indicated she was still experiencing neck and low back pain but her right shoulder pain had resolved. Dr. Zaremba recommended Claimant continue with the treatment program previously recommended. Dr. Zaremba also recommended Claimant have pool therapy and an MRI. (Ex. 1-pp. 23-27)

9) On April 22, 2016 Claimant had MRIs performed of her cervical, thoracic, lumbar spines, and right shoulder at Peak Medical Imaging. The MRI of the cervical spine revealed advanced disc degeneration at the C4-5 level, C5-6 level and degenerative changes at other levels. The MRI of the thoracic spine was negative for any acute fractures. There was noted a left-sided paracentral disc protrusion at T10-T11with narrowing of the left foramina with possible nerve

impingement in a T10 distribution. There was also a small right-sided disc protrusion at C5-6 and a broad disc protrusion at T6-7. MRI of the lumbar spine demonstrated, in part, a right paracentral disc extrusion which displaces the right L5 nerve roots and causes mild to moderate central spinal stenosis and severe right lateral recess stenosis, and moderate to severe right neural foraminal narrowing. In addition, the MRI revealed a small to medium-sized left paracentral disc protrusion which was displacing the left S1 nerve roots. The MRI report states: "consider correlation for *left* L5 and left S1 radiculopathy." MRI of the right shoulder showed moderate subscapularis tendonitis with possible intrasubstance tear of the tendon, moderate tendonitis, and intra substance degeneration without tear of the supraspinatus. (Ex. 3, pp. 83-93)(emphasis added).

10) On April 26, 2016, Claimant returned to Dr. Zaremba, reporting that her knee was back to normal, but she had reduced range of motion of her neck. Claimant was reporting *right* leg numbness. Dr. Zaremba noted that there was minimal improvement with physical therapy, but felt Claimant had a symptomatic L5 disc and recommended she see Dr. Scheper for a series of epidural steroid injections. Dr. Zaremba also noted that the MRI of the right shoulder shows bursitis and a small intra substance tear which should improve with P.T. and if not, a referral will be made to Dr. Walden for a shoulder injection. (Ex. 1, pp. 32-35)

11) On May 2, 2016, Claimant was evaluated by an orthopedic surgeon, Dr. David Walden. Dr. Walden's notes indicated that on March 28, 2016, Claimant tripped over an air hose and landed initially on her right knee and then fell onto her back and "presumably" her shoulder. Claimant reported to Dr. Walden that her knee hurt the worst at first but the back quickly became painful. In addition, Claimant told Dr. Walden that her shoulder was not the primary problem, but after a visit or two of P.T. the shoulder had become more painful. Claimant described the pain as going up into the neck, over the clavicle region, into the shoulder blade, then down the arm. Physical examination revealed pain upon palpation in the midline spine, trapezius muscles, over the sternoclavicular joint, anterior, posterior and lateral acromial regions, anterior and posterior glenohumeral regions, and the medial border of the scapula. Range of motion was full passively but there was pain with all motions. All other testing was normal. Dr. Walden diagnosed right shoulder possible rotator cuff strain, cervical spine pathology with significant foraminal stenosis possibly affecting the C5 nerve root, and right upper quadrant myofascial pain. Dr. Walden opined that it is *unlikely* Claimant has true shoulder pathology although rotator cuff strain certainly could have occurred with the mechanism of injury described. Dr. Walden administered a Depo-Medrol injection for both diagnostic and therapeutic purposes. Dr. Walden felt Claimant's pain was mainly myofascial and she might benefit from some soft tissue work and perhaps chiropractic intervention. (Ex. 1-pp. 38-39)

12) Claimant was seen again by Dr. Zaremba on May 17, 2016 with continued complaints of right shoulder and low back pain which has essentially been the same since the last visit. On this date, Claimant was complaining of sciatic pain

in both legs. Dr. Zaremba wrote that neither P.T. nor the shoulder injection seemed to help. He again referred Claimant to Dr. Scheper for injections, and to biofeedback for pain management. (Ex.1 pp. 40-43)

13) On June 6, 2016, Claimant was evaluated by Dr. Stephen Scheper. Dr. Scheper noted a history of Claimant at work performing her routine activities when she tripped on an air hose, landing on her right knee which slipped out from under her and she subsequently fell onto the right and posterior side of her back. Physical examination revealed standing flexion painful at about 90 degrees, extension at 30 degrees, facet loading unrestricted bilaterally. Claimant was equally painful in the right lumbar region at end range of all motions, which radiated into the thigh with flexion and facet loading right. Palpation revealed significant tenderness at the L4 and L5 spinous processes, right facets at these levels. Dr. Scheper also found "significant myofascial hypertonicism in the paraspinals in the mid to low lumbar region right greater than left bilaterally and mild myofascial hypertonicity in the right piriformis. Dr. Scheper's impressions were low back and right leg pain secondary to large L4/5 disc extrusion 2 ½ months after the injury which has been unresponsive to P.T. and medications. Dr. Scheper recommended an epidural steroid injection. (Ex. 9, pp.142-145).

14) Claimant returned to Dr. Zaremba on June 7, 2016. On this date Claimant indicated her neck pain was improving and is now a 0/10 in severity. However, Claimant was still having shoulder and back pain. Physical examination revealed decreased flexion at bilateral shoulders to 40 degrees. Range of motion of the lumbar spine was 60 degrees forward flexion with decreased flexion active range of motion of the lumbar spine. Dr. Zaremba prescribed medication and was "concerned" Claimant will need further care for her pain to include injections. (Ex. 1, pp. 50-53)

15) Between March 30, 2016 and June 7, 2016, Claimant had five sessions of P.T. with minimal results. (Ex. 2-pp. 67-78)

16) On June 17, 2017 Claimant underwent psychological testing by Dr. Herman Staudemeyer. Dr. Staudemeyer felt Claimant may be somatizing in her psychological testing but this appeared to be unconscious rather than volitional malingering. Of concern to Dr. Staudemeyer were some compensation, pain, and treatment satisfaction factors, but noted that her Job Dissatisfaction Score was "*average* at the 54th %tile". Dr. Staudemeyer felt that Claimant's defensiveness and poor insight makes her a poor candidate for psychological counseling. Claimant declined any psychological counseling but was willing to pursue biofeedback. Dr. Staudemeyer felt Claimant would benefit from biofeedback therapy to assist with pain management. He referred her to William Beaver for eight 1-hour sessions. (Ex. 4-pp. 94-101)

17) On July 6, 2016 Claimant initiated biofeedback with Mr. Beaver. Under Mr. Beaver, Claimant had eight sessions of biofeedback up through September 7,

2016. Mr. Beaver's office note of September 7, states that Claimant's follow through with self management skills appeared to be satisfactory and he discharged her from care. (Ex. 5, pp.102-124)

18) On July 8, 2016 Claimant was seen by Dr. Erik Ritch at Emergicare with ongoing complaints of low back and right leg pain along with right neck and shoulder pain. Physical exam was similar to that of Dr. Zaremba's examination done on June 7, 2016. Dr. Ritch noted that Claimant's shoulder injury was helped by Dr. Walden's injections but has returned. Dr. Ritch wanted to wait to see how Claimant's biofeedback sessions and epidural injection went before making any surgical referrals. Dr. Ritch opined that Claimant seems likely to have permanent problems with pain and might not make a full recovery. (Ex. 1-pp. 56-59)

19) Claimant was seen again by Dr. Ritch on August 5, 2016 with continued pain in her back, neck, and right shoulder. On this day Claimant reported that she had the epidural steroid injection with no effect. Dr. Ritch referred Claimant to Dr. Primack for an evaluation. Dr. Ritch felt that Claimant's injury may have triggered a chronic pain cycle that is unlikely to be broken, but he would appreciate another doctor's input. (Ex 1, pp. 60-62)

20) On July 14, 2016 and again on September 1, 2016 Claimant underwent epidural steroid injections with Dr. Scheper. In a follow up, on September 8, 2016 after the two injections, Claimant reported 20% improvement but was still experiencing midline lumbosacral pain radiating into the right anterolateral thigh and anterior leg below the thigh. Dr. Scheper felt that there was persistent right L3-L4 radicular pain and sensory disturbance with decreased right L3-L4 radicular pain and sensory disturbance with decreased deep tendon reflexes, hypoesthesia, and mild weakening of the L4-L5 tibialis anterior and EHL. Dr. Scheper specifically noted that lumbar imaging revealed multilevel degenerative disc derangement, most prominent to L4-L5, with a right paracentral/lateral recess extrusion displacing the L5 nerve root causing severe lateral recess stenosis. Dr. Scheper recommended an EMG of the right lower extremity and to consider a surgical evaluation. He indicated that the next possible step would include a diagnostic medial branch block but he indicated that her radicular symptoms appeared more prominent than any facet symptoms. However, Dr. Scheper felt that revisiting facet injections may be a better option if the EMG was negative. (Ex. 9-pp. 153-154).

21) At the request of Respondents, Claimant was evaluated by Dr. Carlos Cebrian on October 16, 2016. As part of his examination, Dr. Cebrian reviewed Claimant's medical records, both before and after the March 18, 2016 injury date. Claimant spoke to Dr. Cebrian of getting out of her chair, grabbing her tool box and pushing the chair in. As she did so, her left foot got caught on an air hose, causing her to fall forward. Claimant further told Dr. Cebrian that she hit her right knee on the ground, rolled her body, and hit the posterior aspect of her right shoulder, and falling on her back. She stated that right after this incident, she had

some discomfort in her right knee. When she got up, she started to feel discomfort in her buttocks. Dr. Cebrian's report further noted that she "told her supervisor, 'John' and was taken to Emergicare." (Ex. B-p.10)

22) At the time of the evaluation, Claimant told Dr. Cebrian that her primary problem is back pain, but she was also having pain on the anterior aspect of her right shoulder which goes down to her hand, with numbness in her hand. Claimant also told Dr. Cebrian that she has no dexterity in her hand and drops objects on a daily basis. Finally, Claimant told Dr. Cebrian she only has neck pain on an occasional basis and her knee pain has completely resolved. Claimant told Dr. Cebrian her worst symptoms are in the morning when she feels very stiff and it takes her quite a while to get going. Upon examination of the cervical spine, Dr. Cebrian found full range of motion with pain side to side. Dr. Cebrian indicated that examination of the left shoulder revealed no swelling bruising, spasms, trigger points, or atrophy. Range of motion, according to Dr. Cebrian, was within normal limits. Examination of lumbar spine revealed, in part, no spasms, trigger points, or atrophy but there was diffuse lumbar spine tenderness, to light touch, over the paraspinal muscles and spine. Dr. Cebrian ultimately opined that in the March 28, 2016 incident, Claimant, at most, would have sustained a right knee contusion; possibly a cervical and lumbar strain, along with a right shoulder strain that should have resolved within a few days with or without medical treatment. Dr. Cebrian wrote in his report that Claimant's subjective symptoms are out of proportion to her objective findings and that most of her problems are related to preexisting conditions and or psychological conditions, none of which are related or exacerbated by the March 28, 2016 incident. Dr. Cebrian said Claimant was at maximum medical improvement as of October 16, 2016 and needs no further medical care. (Ex B, pp. 25-32)

23) Claimant was evaluated by Dr. Jack Rook on November 10, 2016. Claimant told Dr. Rook that on the date of the injury there was machinery taking up room on her work table and she had to move to her left to perform her job. There was also an air hose resting on her left leg that she used in performing her job duties. Claimant further told Dr. Rook that she was in the process of getting out of her chair and as she proceeded forward she tripped on the air hose which was tangled up with her left leg and as she fell forward she struck her knee on the ground, twisted abruptly to her left in an effort to avoid hitting her head, and landed on her right shoulder, right hip, and back. Claimant further told Dr. Rook that initially, she had right knee pain, but within a short time started experiencing severe pain in her low back. Dr. Rook's evaluation included a review of Claimant's medical records post injury. Claimant also told Dr. Rook that a few years prior to the March 28, 2016 incident she had *left* lower sciatica symptoms for which she had a lumbar MRI performed. Claimant told Dr. Rook that this problem resolved, with no ongoing issues until her fall at work. (Ex. 6,pp. 126-131)

24) Dr. Rook noted Claimant's complaints include mild neck pain that comes and goes, but it is much improved. Dr. Rook further noted that Claimant was experiencing severe right shoulder pain radiating down right arm to hand, and over time, she has been experiencing more frequent numbness in the right hand associated with a decrease in dexterity. Claimant also related having episodes of slurred speech when she was having numbness in her right arm. Finally, Claimant complained of severe and constant low back pain which radiates down her *right* lower extremity. Dr. Rook performed a physical examination and noted that Claimant had to switch positions several times from sitting to standing due to complaints of low back pain and ambulated with an antalgic gait, all of which Dr. Rook felt were compatible with in the context of her spinal pathology. Further findings upon physical exam were as follows: Knee jerk 2+ and symmetric bilaterally, right ankle jerk was unattainable and the left ankle jerk 2+, straight leg raising test was positive on the right and negative on the left, and pinprick sensation was diminished in the right lower extremity in L4, L5, and S1 distributions when compared to the left. Examination of the right shoulder revealed moderate to severe tenderness of the anterior shoulder capsule and the right upper trapezius muscle, with a positive impingement test on the right. Palpation of the neck and back musculature revealed increased muscle tone with severe tenderness of the right sided paracervical and trapezius muscles. There was also found severe tenderness with palpation of the lower spinal processes and the right sacroiliac joint, as well as, palpable spasm and facet joint tenderness in the right-sided lower lumbar paraspinal regions. (Ex. 6, pp. 131-133)

25) Dr. Rook's diagnoses were as follows:

1) Chronic right shoulder pain;
   - MRI evidence of rotator cuff tear, rotator cuff tendonitis and bursitis. Surrounding myofascial pain.
   - Rule out component of pain due to cervical radiculopathy.

2) Chronic neck pain;
   - Aggravation of cervical degenerative disc disease.
   - Paraspinal muscles spasm

3) Low back pain with right lower extremity sciatica;
   - MRI evidence of disc extrusion at the L4-5 level and degenerative disc disease at the L5-S1 level.

4) MRI evidence of nerve root entrapment as per lumbar MRI scan.
   - Right sacroiliac joint strain.
   - Probable right lower extremity L5-S1 radiculopathy

5) Right hand numbness of uncertain etiology.
   - Rule out secondary to cervical radiculopathy

- Rule out carpel tunnel syndrome
- Rule out central neurological cause such as transient ischemic attacks.
-

6) Sleep disturbance.

26) Dr. Rook opined that, based upon the patient's history, physical examination and review of the medical records provided to him, that Claimant's current cervical, right shoulder, low back, and right lower extremity symptoms are related to Claimant's fall at work that occurred on March 28, 2016. Dr. Rook felt that Claimant's residual neck pain is a reflection of an aggravation of underlying cervical disk disease in conjunction with the overlying myofascial pain. Dr. Rook recommended further treatment including a follow up visit with Dr. Walden for Claimant's shoulder complaints, electro diagnostic studies of her right arm and both legs, and surgical consults for her neck and low back problems. (Ex. 6, pp.126-135)

27) Claimant testified that on March 28, 2016 in the early afternoon she was at her work station, when she moved to the right to move an air hose out of her lap. At the same time, she reached around to grab her toolbox, pushed her chair in and as she did all this, her leg and foot got tangled up in the air hose and she fell to the ground. When she fell to the ground, Claimant testified that she landed on her knee, turned her body, and hit the ground with her shoulder and lower back. Shortly after the incident occurred, a co-worker came by to assist her. According to Claimant there was no one else in the room at the time she fell. Claimant reported her injury to John Gurule shortly after the incident occurred. Later that same day Claimant was transported to Emergicare by a co-worker at the direction of Mr. Gurule and the H.R. manager Christian Moray.

28) Claimant testified that as a result of the care she has received that her knee pain has resolved and her neck is a lot better, but she continues to have problems with her low back. Since injuring herself, Claimant has continued to work for employer at modified duty.

29) Claimant testified that prior to the incident of March 28, 2016 she had no prior knee or neck problems other than some short lived left sided lower back pain with *left* radicular pain as a result of slipping on some ice in late 2014. Claimant also testified that she saw a chiropractor on January 20-21, 2015 for treatment related to the incident on the ice. Claimant also testified that she had some sort of problem in her low back in the 1990's, but she had no ongoing problems from said injury.

30) Claimant also testified that she had purchased a new automobile in February, 2016 (one month *prior* to this accident). Claimant further testified that she has been able to make her payments without incident.

31) Lorene Proper is a co-worker of Claimant. She testified that she did not actually see Claimant fall, but when she went into the room where Claimant works, Claimant was picking up a few tools that were on the floor. In addition, Ms. Proper testified that when asked Claimant if she was okay, Claimant said her knee hurt. Ms. Proper also testified that at times prior to the March 28, 2016 incident, Claimant would complain of low back, shoulder, and neck pain due to poor ergonomics, such as sitting or craning her neck for extended periods of time. Finally, Ms. Proper testified that she overheard a conversation Claimant had with a fellow co-worker regarding getting an attorney and asking how much she thought she could get.

32) On cross examination, Ms. Proper admitted that she also has back pain, neck pain, and shoulder pain due to poor job ergonomics. In addition, Ms. Proper testified that in the area where the Claimant was supposed to have had the conversation about getting an attorney that there is noise with fans and vents going all the time.

33) Dr. Rook testified as an expert in physical medicine and rehabilitation. Dr. Rook testified that based upon the history given to him by Claimant, his review of the pertinent medical records, and his examination of Claimant that she sustained injuries to her neck, right shoulder, and low back to include a disc extrusion at the L4-5 level with nerve entrapment bilaterally. Dr. Rook recognized that while Claimant had pre-existing degenerative changes in her back, they were essentially asymptomatic and that it was the work injury that created her symptom complex. Dr. Rook based his opinion on a variety of factors including minimal prior complaints, an MRI which revealed, in part, a herniated disc with an extruded fragment which correlates with Claimant's clinical presentation. Dr. Rook went on to testify that most people have degenerative age related changes in their spine but these changes do not necessarily correlate with pain. Dr. Rook felt that a history of when symptoms first occurred after some sort of traumatic event and what symptoms a person has prior to the traumatic event is important in determining etiology. While Dr. Rook recognized that Claimant had a low back issue in December 2014 through late January 2015, he opined that the fact that she went well over a year without any care until she fell at work buttresses his opinion as to causation.

34) Following the December 7, 2016 Hearing, Claimant was evaluated by her primary care physician at Colorado Springs Health Partners on December 8, 2016. (Ex. K, pp. 132-144). Claimant reported that she had experienced two episodes of right hand and arm numbness with speech difficulties that lasted about 30 to 40 minutes. . Claimant was referred for a brain MRI. The MRI scan showed a brain tumor in the left posterior parietal region with moderate surrounding edema. Claimant underwent a craniotomy and resection of the brain tumor on January 19, 2017. (Ex. M, pp. 199-201). The tumor was found to be a meningioma. Dr. Cebrian testified that a meningioma was a slow growing tumor and Claimant's meningioma was likely present at the time of her alleged fall. Dr.

Rook concurred with this particular assessment.

35) Dr. Rook testified that Claimant's brain tumor diagnosed subsequent to the work injury does not play a part in her low *back* problems. Dr. Rook went on to say that if the brain tumor were contributing to her right leg problems, she would have hyperreflexia and not a loss of reflexes. Dr. Rook further explained that Claimant has a loss of reflexes which is indicative of a L5 radiculopathy. Dr. Rook felt that the loss of reflexes in the right leg correlates with the extruded disc fragment as seen on the MRI.

36) Regarding Claimant's shoulder problems, Dr. Rook testified that they are related to an impingement syndrome which should resolve within 6 to 12 weeks with conservative care. If conservative care fails, Dr. Rook felt surgery might be an option.

37) Dr. Cebrian testified as an expert in family practice. Dr. Cebrian testified that since his initial evaluation he has reviewed some additional records along with a transcript from the hearing. Dr. Cebrian testified that in terms of examination findings there were a lot of subjective type complaints with pain behaviors and non-physiologic finding for all of the body parts evaluated. Dr. Cebrian opined that Claimant did not sustain any injury as a result of the March 28, 2016 fall at work. Dr. Cebrian testified that the mechanism of injury coupled with the brain tumor and the physical examination leads him to the conclusion that Claimant did not sustain any injuries as a result of the fall at work. Dr. Cebrian explained that in his opinion, most, if not all of Claimant's symptoms are related to the brain tumor or are non-physiologic, since there was no evidence of an orthopedic injury. Dr. Cebrian opined that the diagnosis of the brain tumor explained many of Claimant's symptoms. He explained that a tumor in the left parietal lobe such as Claimant's would cause symptoms on the right side. He opined that the brain tumor could cause weakness, balance difficulties, tremors, radiculopathy, forgetfulness, and cognitive difficulties. Dr. Cebrian noted that Dr. Rook was the only medical examiner to identify decreased reflexes and pinprick on the right lower extremity. Dr. Cebrian opined that Claimant did not require lumbar surgery. Based on this, Dr. Cebrian said that Claimant never needed medical care or needs future care as it relates to the fall at work.

38) Dr. Cebrian conceded that many of Claimant's treating physicians found diminished reflexes and positive straight leg raising both of which can be indicative of a potential S1 radiculopathy. Dr. Cebrian also conceded that pursuant to the D.O.W.C. treatment guidelines, low back pain frequently does not have a clear diagnosis agreed upon by all examiners. Finally, Dr. Cebrian agreed that while Claimant had a low back injury in January, 2015 there was no medical documentation he was aware of that indicated Claimant had any ongoing low back issues from January, 2015 up until Claimant fell at work on March 28, 2016.

39) The ALJ, based upon the evidence presented, finds Claimant to be sufficiently credible and persuasive.

40) The ALJ finds the opinions of Dr. Rook regarding the etiology of Claimant's knee, neck, right shoulder, and low back problem and treatment ther more persuasive than the contrary opinions of Dr. Cebrian.

41) Based upon the evidence presented the ALJ finds that Claimant had pre-existing degenerative changes in her right shoulder, cervical spine, and lumbar spine. The ALJ further finds no credible evidence to suggest that Claimant was having any symptoms in the low back for at least a year prior to the fall and no credible evidence that Claimant was experiencing shoulder or neck pain prior to the fall. Consequently, the evidence presented persuades the ALJ that Claimant's pre-existing degenerative changes in the low back, neck, and shoulder were more probably than not asymptomatic and non-limiting until the fall at work. In addition, while it is recognized that Claimant has a brain tumor which likely pre-existed the fall at work, there was no credible or persuasive medical evidence presented which reveals that Claimant's present problems with her right shoulder, neck, and low back are related to the tumor. A review of the medical record evidence does not reflect any symptoms or problems in these areas prior to the fall except for the low back issue in January, 2015 in spite of Dr. Cebrian's and Dr. Rook's testimony that the brain tumor was likely present for some time prior to Claimant's fall at work. Consequently, Claimant has proven by a preponderance of the evidence that she suffered compensable injuries to her knee, neck, right shoulder, and low back arising out of and within the course and scope of her work.

42) Crediting the opinions of Dr. Rook and the Claimant's treating provider, the ALJ finds that the medical care and treatment provided by the health care providers at Emergicare and any referrals therefrom are reasonable and necessary to cure and relieve Claimant from the effects of the industrial injury.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), *Sections 8-40-101, C.R.S. 2007, et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1), C.R.S*. In general, the Claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. *Section 8-43-201, C.R.S*. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the

evidence, to find that a fact is more probably true than not, *Page V. Clark, 197 Colo. 306, 592 P.2d 792 (1979).* The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of the Respondents. *Section 8-43-201, C.R.S.*

B. In accordance with *§8-43-215 C.R.S*., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office, 84 P.3d 1023 (Colo. 2004)*. This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, 5 P.3d 385 (Colo. App. 2000).*

C. Assessing weight, credibility and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office, 43, P .3d 637 (Colo. App. 2001).* Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline, 57 P.2d 1205 (Colo. 1936); Bodensieck v. Industrial Claim Appeals Office, 183 P.3d 684 (Colo. App. 2008)*; *Kroupa v. Industrial Claim Appeals Office, 53 P.3d 1192 (Colo. App. 2002)*.

D. Claimant's testimony regarding the fall at work is supported by the medical record evidence. Claimant has been reasonably consistent regarding how she fell. The precise sequence of events of her fall will never be known, absent a high-resolution video of the event. Not surprisingly, Claimant may have provided nuanced versions of her fall, depending upon who was asking the questions, and the context in which they were asked. The ALJ finds, by a preponderance of the evidence, that this fall occurred, *and through no deliberate act of Claimant.* Whether her brain tumor (likely in existence at the time) contributed to her lack of agility is of no consequence here. The ALJ is not persuaded that Claimant's purchase of a new car-one month *prior to* her fall-had any bearing on what occurred. Similarly, the ALJ is not persuaded that Claimant's statements to a co-worker about pursuing a claim through an attorney (which likely did occur, despite ambient noise) diminish her credibility. One might reasonably assume that persons who feel they have been injured in some fashion would explore redress through the courts. Standing alone, her statements do not imply any fraudulent motive. Similarly, Claimant has been

reasonably consistent in describing her various symptoms to her medical providers, and the sequence in which they occurred. Claimant, however, is not a physician, and is not positioned to determine relatedness or causation.

Compensability

E. To sustain her burden of proof concerning compensability, Claimant must establish that the condition for which she seeks benefits was proximately caused by an "injury" arising out of and in the course of employment. *Loofbourrow v. Industrial Claim Appeals Office, 321 P.3d 548 (Colo. App. 2011)*, *aff'd Harman-Bergstedt, Inc. v. Loofbourrow, 320 P.3d 327 (Colo. 2014); Section 8-41-301(/)(b), C.R.S.*

F. The phrases "arising out of" and "in the course of" are not synonymous and a Claimant must meet both requirements for the injury to be compensable. *Younger v. City and County of Denver, 810 P.2d 647, 649 (Colo. 1991)*; *In re Question Submitted by U.S. Court of Appeals, 759 P.2d 17, 20 (Colo. 1988)*. The latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando, 811 P.2d 379, 381 (Colo. 1991)*. An injury occurs "in the course of" employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co., 38 Colo. App. 48, 51, 552 P.2d 1033, 1036 (1976).* Claimant's injury occurred within the time and place limits of her employment with employer and performing an activity which is connected to her job duties. Claimant was at her work bench cleaning components when her feet got tangled in a hose as she got up from her chair and then hit the floor hard.

G. The "arising out of' test is one of causation. It requires that the injury have its origins in an employee's work related functions, and be sufficiently related thereto so as to be considered part of the employee's service to the employer. *Horodyskyj v. Karanian, 32 P.3d 470, 475 (Colo. 2001).* The determination of whether there is a sufficient "nexus" or causal relationship between a Claimant's employment and the injury is one of fact which the ALJ must determine based on the totality of the circumstances. In Re Question Submitted by *The United States Court of Appeals, 759 P.2d 17 (Colo. 1988); Moorhead Machinery & Boiler Co. v. Del Valle, 934 P .2d 861 (Colo. App. 1996).* In this case, Claimant noticed symptoms in her neck, right shoulder, low back and knee shortly after she fell. The medical record evidence reveals that Claimant has complained of problems in these body parts on a reasonably consistent basis since the fall-but not prior. In addition, Claimant has seen multiple physicians since the fall and has received treatment on a consistent basis. While Claimant has had some preexisting issues with her back, they became significantly more symptomatic after this fall. There is objective evidence of pre-existing issues with her shoulder. Once again, however,

Claimant did not complain of her shoulder before this incident. And as the record shows, Claimant is not bashful about seeking medical care when something hurts. Her knee is now fine. Her neck was mostly healed as of the hearing. Based upon a totality of the evidence presented the ALJ concludes that Claimant has established the requisite causal connection between the fall at work and her injuries. Consequently, the injuries are compensable.

Medical Benefits

H. Once a Claimant has established the compensable nature of her work injury, she is entitled to a general award of medical benefits and Respondents are liable to provide all reasonable and necessary and related medical care to cure and relieve the effects of the work injury. *Section 8-42-101, C.R.S.; Grover v. Industrial Commission, 759 P.2d 705 (Colo. 1988); Sims v. Industrial Claim Appeals Office, 797 P. 2d 777 (Colo. App. 1990)*. However, a Claimant is only entitled to such benefits as long as the industrial injury is the proximate cause of her need for medical treatment. *Merriman v. Indus. Comm'n, 210 P.2d 448 (Colo. 1949); Standard Metals Corp. v. Ball, 172 Colo. 510, 474 P.2d 622 (1970); § 8-41-301(1)(c), C.R.S*. Ongoing benefits may be denied if the current and ongoing need for medical treatment or disability is not proximately caused by an injury arising out of and in the course of the employment. *Snyder v. City of Aurora, 942 P.2d 1337 (Colo. App. 1997).* The mere occurrence of a compensable injury does not require an ALJ to find that all subsequent medical treatment and physical disability was caused by the industrial injury. To the contrary, the range of compensable consequences of an industrial injury is limited to those which flow proximately and naturally from the injury. *Standard Metals Corp. v. Ball, supra*. Claimant's injury occurred within the time and place limits of her employment with employer and performing an activity which is connected to her job duties.

I. Where the relatedness, reasonableness, or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc., W.C. No. 4-117-758 (ICAO April 7, 2003).* The question of whether a particular medical treatment is reasonably necessary to cure and relieve a Claimant from the effects of the injury is a question of fact. *City & County of Denver v. Industrial Commission, 682 P.2d 513 (Colo. App. 1984).* As found here, Claimant has proven by a preponderance of the evidence that she sustained injuries to her neck, right shoulder, low back, and knee as a result of fall at work. The evidence presented persuades the ALJ that these compensable injuries are the proximate cause of Claimant's need for medical treatment. It is recognized that Dr. Cebrian believes that Claimant does not need any care as a result of the fall. However, multiple doctors, including Dr. Rook, have evaluated Claimant and opined she was injured. In addition these same doctors recommended care for her injuries to include physical therapy, medication, and injections. Diagnostics might be

necessary to establish a link between Claimant's fall and her back symptoms, versus her brain tumor. Taken in its entirety, the ALJ concludes, based on the totality of the evidence, that the care Claimant has received to date under the providers at Emergicare and any referrals therefrom is reasonable, necessary, and related to the March 28, 2016 work injury.

ORDER

It is therefore ordered that:

1. The March 28, 2016 injuries to Claimant's neck, right shoulder, low back and knee are compensable.

2. Respondents shall pay for all medical expenses, pursuant to the worker's compensation fee schedule, to cure and relieve Claimant from the effects of the injuries to her neck, right shoulder, low back, and right knee.

3. Respondents shall pay Temporary Total Disability Payments in accordance with the Stipulation.

4. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Is the opinion of the Division Independent Medical Examiner ambiguous on the issue of Maximum Medical Improvement? If so, what is the DIME's determination?

2. Which party must overcome the DIME opinion regarding MMI by clear and convincing evidence?

3. Did the party with the burden to overcome the DIME regarding MMI meet their burden by clear and convincing evidence?

4. If Claimant is not at MMI, is the surgery proposed by Dr. John Pak reasonable, necessary, and related to Claimant's admitted April 18, 2015 injury?

5. The issues of average weekly wage and temporary disability benefits were reserved pending the outcome of this hearing.

FINDINGS OF FACT

1. Claimant works for Employer as a Deputy Sheriff. On April 18, 2015, he sustained an admitted injury to his right knee while attempting to restrain an inmate. Several other responding deputies piled on top of Claimant and the inmate, causing Claimant to twist his knee.

2. Employer referred Claimant to Dr. Frank Polanco for authorized treatment. Claimant was initially diagnosed with a right knee strain and prescribed physical therapy.

3. On May 4, 2015 Dr. Polanco discharged Claimant at MMI with no impairment and no restrictions. There is no dictated report in the record for this date of service, but a handwritten form that appears to have been completed by Dr. Polanco indicated Claimant's knee injury had "resolved." However, a form completed by Claimant in conjunction with that appointment indicated he was still having 3/10 right knee pain, aggravated by standing and sprinting.

4. Claimant testified he told Dr. Polanco at the May 4, 2015 appointment he was still having knee pain. The ALJ finds this testimony credible because it is consistent with the form Claimant completed at that appointment. Nevertheless, he returned to work and performed his duties to the best of his abilities with no formal restrictions.

5. After leaving Dr. Polanco's office on May 4, Claimant called Mr. Rick Bransford in Employer's Risk Management department and requested another physician. Mr. Bransford replied, "okay, give me some time."

6. Claimant did not hear back from Mr. Bransford several months. Eventually, Claimant grew impatient and called Mr. Bransford again. Ultimately, Employer allowed Claimant to change physicians to CCOM.

7. Claimant saw Dr. Kathryn Murray at CCOM on November 10, 2015. He reported 4/10 right knee pain. He told Dr. Murray the knee was still painful when he was released by Dr. Polanco, and had continued to worsen over time, particularly when "walking around or picking up his kids." The pain was also severely aggravated by sprinting to respond to a "code," after which he would limp for the rest of the day. Claimant could not "pinpoint" the exact location of pain "as it seems to radiate through the entire front knee and into the posterior knee." Dr. Murray diagnosed an unspecified "sprain" of the right knee, and ordered an MRI.

8. Claimant had the MRI on November 19, 2015. No chondral defects were identified, nor was there any evidence of meniscal or ligament damage. The only significant findings were a small joint effusion, mild synovitis in the anterior intercondylar notch, and mild to moderate semimembranosus bursitis.

9. After reviewing the MRI, Dr. Murray suggested a cortisone injection, which Claimant declined because "everybody who has ever had this done that he knows it made it worse or did not help." Claimant agreed to try physical therapy. He had stopped taking NSAIDs because "it wasn't helping." His pain was worse if he tried to squat or kneel. He indicated the pain was in the medial aspect of the knee and underneath the kneecap. He felt the pain "has not changed," and expressed frustration there was nothing on the MRI to explain his symptoms.

10. Claimant saw Dr. Murray again on December 29, 2015. He had been off work for several weeks due to the birth of his daughter. During that time his knee felt better, and he had "not really had any pain in 2 weeks." Dr. Murray recommended he continue with PT and liberalized his restrictions.

11. Claimant returned to Dr. Murray on January 7, 2016 with increased pain. He indicated "simply going back to work and having prolonged standing and walking his flared up the left knee pain." He also reported increased pain due to performing lunges in PT the previous day. Dr. Murray referred Claimant to an orthopedic surgeon to evaluate other treatment options.

12. Claimant saw Trisha Finnegan, NP-C at Front Range Orthopedics on January 19, 2016. He reported ongoing deep, constant knee pain that was aggravated by prolonged standing, walking, twisting, bending, and squatting. Physical examination revealed tenderness of the medial patellar facet, the medial femoral condyle, and the medial joint line, mild discomfort with patellar grind test, decreased quadriceps flexibility and a tight lateral retinaculum. Nurse Finnegan opined the physical examination was consistent with patellofemoral syndrome administered an intra-articular steroid injection.

13. Claimant followed up with Dr. John Pak at Front Range Orthopedics on February 19, 2016, and reported his pain had increased after the steroid injection. Dr.

Pak's examination showed tenderness over the lateral and medial patellar facets, mild discomfort with patellar grind test and a tight lateral retinaculum. Dr. Pak thought Claimant had exhausted conservative measures and recommended diagnostic arthroscopy with a probable lateral retinacular release.

14. Dr. William Ciccone II performed a Rule 16 peer review for Respondent on February 26, 2016, and recommended surgery be denied. Dr. Ciccone noted the MRI showed only mild to moderate semimembranosus bursitis, with no evidence of any meniscus tear or degenerative changes. He recommended an ultrasound-guided steroid injection along the semimembranosus insertion with continued physical therapy. He thought diagnostic arthroscopy was not warranted and Claimant would not likely benefit from a lateral release because there was no evidence of patellar chondromalacia or maltracking.

15. Dr. Edward Szuszczewicz in Dr. Pak's office administered an ultrasound-guided steroid injection on March 31, 2016. For unknown reasons, Dr. Szuszczewicz injected the knee joint itself, rather than the semimembranosus insertion as Dr. Ciccone at recommended. Claimant received no significant benefit from the injection.

16. On April 18, 2016, Dr. Pak again recommended diagnostic arthroscopy with probable lateral retinacular release.

17. Dr. Ciccone performed a second Rule 16 record review on May 23, 2016. He noted the intra-articular injection performed by Dr. Szuszczewicz would not be expected to alleviate the semimembranosus bursitis. Dr. Ciccone maintained his opinion that diagnostic arthroscopy is unlikely to alleviate Claimant's symptoms due to lack of significant MRI findings. He also opined that Claimant's anterior patellofemoral pain is not related to the April 18, 2015 injury, which was limited to a minor strain/sprain with semimembranosus bursitis.

18. Claimant saw Dr. Ciccone on August 8, 2016 for a formal IME at Respondent's request. Physical examination showed normal range of motion, no effusion, and no pain on palpation of the lateral retinaculum or lateral facet. He had diffuse pain around the patella with patellofemoral grind testing. Strength was normal and there was no measurable atrophy or girth difference between the right and left knees. Dr. Ciccone noted that two previous injections failed to provide even temporary relief for the duration of the anesthetic, which argues against the presence of intra-articular pathology that would respond to surgical intervention. Dr. Ciccone opined Claimant suffered a twisting injury that stretched the insertion of the semimembranosus muscle causing bursitis. He believed the injury-related condition was adequately treated and resolved. Dr. Ciccone reaffirmed his opinions that surgery would not likely benefit Claimant and his patellofemoral pain is not related to the April 2015 injury. Dr. Ciccone opined Claimant was at MMI with 4% right lower extremity impairment.

19. Dr. Murray placed Claimant at MMI on September 2, 2016 after reviewing Dr. Ciccone's IME report. She opined Claimant could return to work with no restrictions and required no maintenance care.

20. Claimant requested a DIME, which was performed by Dr. Stephen Gray on January 9, 2017. Dr. Gray opined that Claimant's ongoing symptoms were causally related to his injury:

> [I]t is medically probable that [Claimant] did experience aggravation of his pre-existing patellofemoral syndrome while recovering from his 4-18-15 work-related right knee injury. As there are gait abnormalities and changes in muscle mass and knee stress dynamics with limping, wearing braces, and compensating with the other knee/leg during the early phases of the injury/recovery process, it is reasonable to conclude that these factors played a role in the shift of pain from his posterior knee/leg pain to an anterior patellofemoral type pain.

21. Dr. Gray stated Claimant "was medically probably at MMI as of the 2nd September 2016." He also checked the "Yes, the claimant reached MMI" box on the Examiner's Summary Sheet. But Dr. Gray clouded the issue of MMI with the following language in the "maintenance care" section of the report:

> [Claimant] does appear to be a surgical candidate for his persistent right knee patellofemoral syndrome, in the opinion of his surgeon. Denials of authorization for surgery appear to have been based on the acceptance of liability for the patellofemoral syndrome, rather than a disagreement amongst surgeons about indications for surgery with a persistent patellofemoral syndrome. As I am not a surgeon, I would leave the appropriateness of the surgery, given the diagnosis of patellofemoral syndrome, to the surgeons. I would support attribution of aggravation of the pre-existing problem to the 4-18-16 [sic] injury and post-injury early return to work dynamics. If [Claimant] is given authorization for surgery, and if he chooses to go forward with surgery, he would then not be at MMI until adequate therapies had been tried and enough time had passed.

22. Dr. Gray calculated a 6% lower extremity rating. Respondents filed an FAL based on Dr. Gray's report, and Claimant timely requested a hearing to challenge the determination of MMI.

23. Respondent sent Claimant for an IME with Dr. James Lindberg on June 27, 2017. Physical examination documented 4 cm of right quadriceps atrophy, tenderness medial to the patella in the area of the medial prepatellar plica, and anterolateral joint line pain with squatting. The lateral patellar facet was nontender. Dr. Lindberg diagnosed medial patella plica syndrome. He opined there was no evidence of patellar instability or chondromalacia either on MRI or the physical exam. Dr. Lindberg opined:

> As a result of the findings on the MRI and the physical exam, where he was tender over the anteromedial joint line over the medial femoral condyle, which is consistent with plica syndrome, I would recommend a diagnostic arthroscopy and excision of the plica, if that is the only

> pathology found. I would agree with Dr. Ciccone that I see no evidence at this time the lateral release would be indicated, and would specifically deny that unless there were overwhelming objective findings and arthroscopy to justify this.

24. Dr. Pak testified via deposition for Claimant on July 20, 2017. Dr. Pak opined Claimant's symptoms and physical examination findings led him to the diagnosis of anterior knee pain a.k.a. patellofemoral pain. Dr. Pak opined MRIs often poorly visualize chondromalacia under the patella. He explained Claimant has a tight lateral retinaculum, which can exacerbate and perpetuate patellofemoral pain. He explained a diagnostic arthroscopy would allow him to look inside the knee and see if there is any pathology to explain Claimant's symptoms not demonstrated on MRI. He also opined releasing the lateral retinaculum may alleviate some of Claimant's pain by taking pressure off the kneecap. Dr. Pak initially opined, without explanation, that Claimant's patellofemoral symptoms were injury-related. Later in the deposition, after being presented with additional information by Respondent's counsel, Dr. Pak opined the condition was "probably not" work-related.

25. Dr. Ciccone testified via deposition for Respondent on August 7, 2017. Dr. Ciccone indicated he did not perceive tightness of Claimant's lateral retinaculum on his physical examination. He further noted any lateral retinacular tightness would likely produce lateral knee pain whereas Claimant has more medial symptoms. He explained Claimant did not demonstrate any symptoms of ongoing semimembranosus bursitis, confirming his opinion that the original injury had resolved. He reiterated his opinion that Claimant's patellofemoral symptoms are not related to the April 2015 injury.

26. Dr. Gray's report is ambiguous regarding whether he believes Claimant is at MMI.

27. Dr. Gray determined Claimant to be at MMI as of September 2, 2016.

28. Claimant did not overcome the determination of MMI by clear and convincing evidence.

CONCLUSIONS OF LAW

A. What is the DIME's determination regarding MMI?

The DIME's determination regarding MMI is binding unless overcome by clear and convincing evidence. Section 8-42-107(8)(b) and (c), C.R.S.; *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). This is a higher standard of proof than the typical "preponderance" standard. Clear and convincing evidence is "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App. 2002). Therefore, the party challenging a DIME's conclusions must demonstrate it is "highly probable" that the MMI finding is incorrect. *Qual-Med*, 961 P.2d at 592; *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

If the DIME issues conflicting or ambiguous opinions about whether the claimant's condition is work-related, or the Claimant has reached MMI, the ALJ must determine the Division IME's true opinion as a matter of fact. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2005). Once the ALJ clarifies the ambiguous opinion regarding these issues, the party seeking to overcome that opinion bears the burden of proof by clear and convincing evidence. *Id*.

The ALJ concludes Dr. Gray's opinion regarding MMI is ambiguous and subject to differing interpretations. On the Examiner's Summary Sheet, and in the body of the report, Dr. Gray explicitly stated Claimant reached MMI as of September 2, 2016. But he also stated that if Claimant receives authorization for surgery for patellofemoral syndrome, then he would not be at MMI.

The ALJ concludes Dr. Gray found Claimant to be at MMI on September 2, 2016. Although he opined Claimant would not be at MMI **if** he has surgery, he did not actually opine that Claimant needs surgery. Rather, he deferred that decision to others. "Maximum Medical Improvement" (MMI) is defined as the point when any medically determinable physical or mental impairment as a result of the industrial injury has become stable and when no further treatment is reasonably expected to improve the condition. Section 8-40-201(11.5). Dr. Gray resolved the causation question in Claimant's favor, but punted to "the surgeons" the issue of whether surgery is reasonably expected to improve Claimant's condition. After considering all the statements in Dr. Gray's reports, the ALJ credits his explicit statement that Claimant "was medically probably in MMI as of the 2nd of September, 2016" as reflecting his "true" finding regarding MMI.

B. Claimant did not overcome the DIME on MMI.

Having found that the DIME declared MMI as of September 2, 2016, it follows Claimant has the burden to overcome that determination by clear and convincing evidence. As found, Claimant has not overcome the determination of MMI by clear and convincing evidence. Claimant's argument regarding MMI hinges on having surgery, but the evidence on that point is highly conflicting. Although the ALJ found Claimant's testimony regarding his progression of symptoms since the injury to be forthright and sincere, the question of whether surgery is reasonable, necessary and causally related to the injury is primarily a medical question. The DIME deferred the decision regarding surgery to "the surgeons," who are all over the map on this issue. Claimant has seen three surgeons with three different opinions regarding whether the diagnostic arthroscopy and lateral release proposed by Dr. Pak is reasonably necessary. Dr. Lindberg opined the lateral release is not indicated but thinks a different surgery is warranted. Dr. Ciccone thinks Claimant will not benefit from surgery. The opinion evidence regarding causation is similarly splintered. Dr. Ciccone strongly opined the patellofemoral syndrome is not injury-related, and Dr. Pak concluded it is "probably not" work-related.

After considering the totality of the evidence presented, the ALJ simply cannot conclude Claimant presented clear and convincing evidence to overcome the DIME regarding MMI.

ORDER

It is therefore ordered that:

1. Claimant's request to overcome the DIME regarding MMI is denied and dismissed.

2. Claimant's request for arthroscopic surgery proposed by Dr. Pak is denied and dismissed.

3. All matters not determined herein, or otherwise closed by operation of law, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 29, 2017

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

I. Whether Claimant's 20% scheduled impairment rating should be converted to a 12% whole person impairment rating.

II. Whether Claimant is entitled to temporary partial disability benefits from December 21, 2014 to May 23, 2015 in the amount of $1,217.13.

III. Whether Claimant is entitled to disfigurement benefits due to his left shoulder surgery.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant worked for Employer packing eggs.

2. Claimant's date of birth is July 1, 1954. On the date of injury, Claimant was 60 years old.

3. Claimant suffered a compensable injury to his left shoulder on November 13, 2014, while packing eggs.

4. On November 24, 2014, Claimant was evaluated by Dr. Matt Slaton. Claimant complained of pain in his left anterior and left lateral shoulder as well as his neck. Claimant was diagnosed with a shoulder sprain and rotator cuff injury. Claimant was also given work restrictions which precluded him from performing his regular job.

5. On January 9, 2015, Claimant was evaluated by Dr. Slatton. Claimant complained of worsening left shoulder pain and neck pain.

6. On January 12, 2015, Claimant underwent an MRI of his left shoulder. The MRI showed full-thickness supraspinatus and anterior infraspinatus tendon tears with retraction and mild volume loss. The MRI also showed acromioclavicular joint arthrosis.

7. On January 19, 2015, Claimant was again evaluated by Dr. Slatton. Claimant continued to complain of shoulder pain and neck pain.

8. On February 3, 2015, Claimant was evaluated by orthopedic surgeon Dr. Thomas Mann, of Cornerstone Orthopedics. Based on Claimant's physical exam, MRI findings, and history, Dr. Mann recommended left shoulder surgery.

9. Shoulder surgery was scheduled for February 11, 2015. Claimant, however, developed pulmonary issues. Therefore, surgery was postponed until August 12, 2015.

10. On August 12, 2015, Dr. Mann performed a left shoulder arthroscopy with arthroscopic rotator cuff repair and subacromial decompression.

11. On May 2, 2016, Claimant was evaluated by Dr. Thurston. Claimant was still working, but he had work restrictions which consisted of no work above his left shoulder with his left arm. Claimant was also being prescribed ibuprofen and oxycodone on an as needed basis for pain.

12. On May 24, 2016, Claimant was evaluated by Dr. Thurston. Claimant's restrictions were increased slightly to a little work above shoulder level. Although Claimant's restrictions were increased, Claimant was still being prescribed oxycodone for pain, as needed, and 600 mg of ibuprofen, as needed.

13. Claimant treated with Concentra from January 19, 2015 to June 21, 2016. Prior to almost every appointment, Claimant filled out a pain diagram. These pain diagrams consistently demonstrate deep aches along the shoulder joint and the upper back shoulder blade as well as the front pectoral regions reflecting pain proximal to the shoulder joint, that is, toward the torso.

14. Claimant testified the industrial injury radiates pain and tenderness toward his neck, upper back and pectoral region. This testimony is credible and consistent with the medical records from multiple different medical providers.

15. On June 21, 2016, Dr. Thurston placed Claimant at maximum medical improvement and provided Claimant a 10% scheduled impairment rating which converts to a 6% whole person impairment rating. At this visit, Claimant was complaining of joint pain and muscle pain.

16. On October 12, 2016, Claimant was evaluated by Dr. Brian Mathwich for a Division IME. According to the medical report, Claimant complained of constant baseline left shoulder pain. Claimant also stated the pain was mild most of the time but increased when he is using his shoulder more frequently in lifting, extending, and work above shoulder height. According to the report, Claimant has to take 800 mg of ibuprofen when the pain becomes too intense.

17. Dr. Mathwich also noted palpation of the left trapezius muscle revealed a large trigger point in the mid trapezius body which was very tender on palpation. Claimant also had very specific point tenderness over the anterior glenohumeral

joint and diffuse pain on palpation throughout the shoulder with maximum tenderness anteriorly.

18. Dr. Mathwich provided Claimant a 20% upper extremity rating which converts to a 12% whole person impairment rating.

19. On March 2, 2017, Claimant underwent and IME which was performed by Dr. Linda Mitchell. Claimant complained of left shoulder pain, with a pain level of 5/10. Claimant stated that he was not able to lift his arm above chest level due to both pain and limited range of motion. Claimant stated that he has been working since being placed at MMI but has been avoiding lifting above chest level since being placed at MMI. Claimant stated that if he works too much, he gets pain bilaterally in the interscapular region. Claimant also stated that he takes ibuprofen – 800 mg – twice a day, which helps. Dr. Mitchell provided Claimant work restrictions. She stated that Claimant should avoid lifting more than 10 pounds frequently or 20 pounds occasionally with his left upper extremity. She also said that he should avoid reaching away from his body or reaching above chest level with the left upper extremity.

20. Claimant credibly testified that he complained of neck pain, but did not get any treatment for his neck pain.

21. Claimant credibly testified about his pain due to his shoulder injury.

22. Claimant has constant pain in his left shoulder. Claimant has functional impairment in his left shoulder.

23. Claimant's left shoulder pain radiates down to his elbow.

24. Claimant's left shoulder pain radiates into his neck and causes functional impairment of his neck.

25. Due to this shoulder injury, Claimant has pain and trigger points in his left trapezius which is proximal to the shoulder joint and on his torso, causing functional impairment of his trapezius.

26. Due to his shoulder injury and associated pain, Claimant cannot perform work above shoulder level with his left shoulder and arm.

27. Due to his shoulder injury, Claimant has pain in the interscapular region, bilaterally, which is on his torso, causing functional impairment in his interscapular region.

28. Claimant's shoulder injury has caused functional impairment beyond the arm and that is not listed in the schedule of disabilities.

29. Claimant's shoulder injury has affected physiological structures beyond the arm at the shoulder.

Temporary Partial Disability Benefits

30. Claimant is requesting temporary partial disability benefits from December 21, 2014 to May 23, 2015.

31. Claimant's work injury impacted his earning capacity from December 21, 2014 to May 23, 2015.

32. Claimant credibly testified that he would have to clock out for his work related therapy and medical appointments. This testimony was confirmed by the Respondent Employer's witness.

33. Claimant missed work due to his work related injury from December 21, 2014 through May 23, 2015 to attend medical appointments for his work related injury.

34. Claimant's admitted average weekly wage (AWW) is $545.97.

35. From December 21, 2014 to May 23, 2015 (a period of 154 days or 11 weeks) Claimant earned $9,615.69. At the admitted AWW he should have earned $12,011.34. His total wage loss was $2,395.62 for a total of temporary partial and temporary total disability of $1,581.11. During this time Respondents paid temporary total disability benefits in the amount of $363.98 from 2/18/15 to 2/24/15. (See Exhibit B and Exhibit 1)

			AWW	ACTUAL	WAGE LOSS	TPD DUE
12/21/14	1/3/15	14	$1,091.94	$1,028.54	$ 63.37	$ 41.82
1/4/15	1/17/15	14	$1,091.94	$846.02	$ 245.92	$ 162.31
1/18/15	1/31/15	14	$1,091.94	$1,038.93	$ 53.01	$ 34.99
2/1/15	2/14/15	14	$1,091.94	$859.22	$ 232.72	$ 153.60
2/15/15	2/28/15	14	$1,091.94	$247.25	$ 844.69	$ 557.50
3/1/15	3/14/15	14	$1,091.94	$834.65	$ 257.29	$ 169.81
3/15/15	3/28/15	14	$1,091.94	$790.35	$ 301.59	$ 199.05
3/29/15	4/11/15	14	$1,091.94	$908.68	$ 183.26	$ 120.95
4/12/15	4/25/15	14	$1,091.94	$1,016.13	$ 75.81	$ 50.03
4/26/15	5/9/15	14	$1,091.94	$999.10	$ 92.84	$ 61.27
5/10/15	5/23/15	14	$1,091.94	$1,046.82	$ 45.12	$ 29.78
			$12,011.34	$9,615.69	$2,395.62	$1,581.11
					TTD Paid	$ 363.98
					TPD Due	

$1,217.13

36. Claimant is entitled to temporary partial disability benefits in the amount of $1,217.13 for the time period of December 21, 2014 to May 23, 2015.

Disfigurement

37. As a result of his work injury, Claimant has a visible disfigurement to his left shoulder consisting of four arthroscopic scars. Claimant has three ½ long by 1/8 wide scars and one small circular scar which is approximately ¼ inch in diameter.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A*., 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

I. Whether Claimant's 20% scheduled impairment rating should be converted to a 12% whole person impairment rating.

The question of whether the claimant sustains a "loss of an arm at the shoulder" within the meaning of §8-42-107(2)(a), C.R.S., or a whole person medical impairment compensable under §8-42-107(8), C.R.S. is one of fact for determination by the ALJ. In resolving this question, the ALJ must determine the situs of the claimant's "functional impairment," and the situs of the functional impairment is not necessarily the location of the injury itself. *Langton v. Rocky Mountain Health Care Corp.*, 937 P.2d 883 (Colo. App. 1996); *Strauch v. PSL Swedish Healthcare System*, 917 P.2d 366 (Colo. App. 1996).

Under the "situs of the functional impairment" test there is no requirement that the functional impairment take any particular form. Therefore, pain and discomfort that limit the claimant's ability to use a portion of the body may constitute functional impairment. *Aligaze v. Colorado Cab Co.,* W.C. 4-705-940 (ICAO April 29, 2009); *Johnson-Wood v. City of Colorado Springs,* W.C. 4-536-198 (ICAO June 20, 2005); *Vargas v. Excel Corp.,* W.C. 4-551-161 (ICAO April 21, 2005). The ALJ may also consider whether the injury has affected physiological structures beyond the arm at the shoulder. *Brown v. City of Aurora,* W.C. 4-452-408 (ICAO October 9, 2002). However, although a physician's impairment rating may be considered in determining the situs of the functional impairment, the AMA Guides' definitions of where the torso ends and the extremity begins are of no consequence in resolving the issue. *Langton v. Rocky Mountain Health Care Corp.,* 937 P.2d 883 (Colo. App. 1996); *Strauch v. PSL Swedish Healthcare System, supra.*

In this case, Claimant has functional impairment of his left shoulder joint. Claimant also has chronic left shoulder pain and discomfort that limits Claimant's ability to use his left shoulder and arm. The functional impairment of his left shoulder joint combined with the chronic shoulder pain prevents Claimant from being able to perform overhead work with his left shoulder and arm.

In addition, due to his shoulder injury, Claimant has pain and trigger points in his left trapezius muscle which is on his torso. Claimant also has pain in his intrascapular region, bilaterally, and his neck. The additional pain in his trapezius, intrascapular region, and neck was caused by his shoulder injury and has caused functional impairment of physiological structures beyond his left arm which are not listed in the schedule of disabilities.

This ALJ concludes that Claimant has established by a preponderance of the evidence functional impairment beyond the arm. Therefore, Claimant has proven, by a preponderance of the evidence, that the 20% extremity rating should be converted to a 12% whole person impairment rating.

II. Whether Claimant is entitled to temporary partial disability benefits from December 21, 2014 to May 23, 2015 in the amount of $1,217.13.

When Claimant establishes that his or her work-related injury contributed in some degree to a temporary wage loss, Claimant is eligible for temporary disability benefits. Such benefits are precluded only when the work-related injury plays no part in the

subsequent wage loss. *Lindner Chev. v. Indus. Claim*, 914 P.2d 496 (Colo. App. 1995). The term "disability" refers to the claimant's inability to perform his regular employment. *McKinley v. Bronco Billy's*, 903 P.2d 1239 (Colo. App. 1995).

In this case, Claimant missed work due to his work injury. As found, Claimant had to clock out of work to attend therapy and medical appointments between December 21, 2014 and May 23, 2015. This resulted in a decrease in Claimant's earnings from December 21, 2014 to May 23, 2015. As found, from December 21, 2014 to May 23, 2015 (a period of 154 days or 11 weeks) Claimant earned $9,615.69. At the admitted AWW he should have earned $12,011.34. His total wage loss was $2,395.62 for a total of temporary partial and temporary total disability of $1,581.11. During this time Respondents paid temporary total disability in the amount of $363.98 from 2/18/15 to 2/24/15.

Therefore, this ALJ concludes that Claimant is entitled to $1,217.13 in temporary partial disability benefits from December 21, 2014 to May 23, 2015.

III. Whether Claimant is entitled to disfigurement benefits due to his left shoulder surgery.

An award of disfigurement is discretionary with the ALJ so long as he or she considers the relevant factors. See *Arkin v. Industrial Commission*, 145 Colo. 463, 358 P.2d 879 (1961).

Public view means if the scars would be apparent in swimming attire, compensation would be appropriate. *Twilight Jones Lounge v. Showers*, 732 P.2d 1230 (Colo. App. 1986) A disfigurement award should be based on an observable compromise of the natural appearance of a person. See *Arkin v. Industrial Commission*, 145 Colo. 463, 358 P.2d 879 (1961); *Twilight Jones Lounge v. Showers*, 732 P.2d 1230 (Colo. App. 1986).

In this case, Claimant has a visible disfigurement to his left shoulder consisting of four arthroscopic scars. Claimant has three ½ long by 1/8 wide scars and one small circular scar which is approximately ¼ inch in diameter. This ALJ concludes that Claimant shall be entitled to $500.00 for his disfigurement.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request for conversion of the award of scheduled impairment benefits to whole person permanent physical impairment benefits is granted. Claimant's 20% scheduled impairment rating shall be converted to a 12% whole

person impairment rating. Respondents are ordered to pay Claimant an award of 12% whole person impairment, taking credit for any PPD benefits previously admitted and paid.

2. Respondents shall pay Claimant temporary partial disability benefits in the amount of $1,217.13 from December 21, 2014 to May 23, 2015.

3. Respondents shall pay Claimant $500 for his disfigurement.

4. Respondents shall pay Claimant interest at the rate of 8% per annum on compensation benefits not paid when due.

5. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 29, 2017

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

The issue presented for consideration at hearing is whether the Claimant overcame the opinion of the Division independent medical examiner (DIME) regarding impairment rating by clear and convincing evidence.

FINDINGS OF FACT

1. Claimant is a 68 year old woman who worked for Employer as an accountant for two years. On January 20, 2015, in the course and scope of Claimant's employment, she lifted a box and injured her entire back on the right side. Claimant promptly reported the injury to her supervisor.

2. Claimant treated with Dr. Nicholas R. Reinholtz, D.C. receiving adjustments, physical modalities, myofascial release and massage therapy to treat her condition. Claimant was placed at maximum medical improvement (MMI) on June 29, 2016.

3. On June 29, 2016, Dr. Shimon Blau, MD, a physiatrist and an authorized treating physician, placed Claimant at MMI and assessed Claimant to have a 20% whole person impairment. Dr. Blau assessed,

> Cervical flexion was measured at 32 degrees equaling 3% impairment, cervical extension was 13 degrees equaling 5% impairment, right lateral flexion was 20 degrees equaling 2% impairment, left lateral flexion was 18 degrees equaling 2% impairment, right rotation was 44 degrees equaling 2% impairment and left rotation was 63 degrees equaling 1% impairment. Added together this equals 15% impairment for range of motion. In addition, she was assigned 6% based on table 53 on page 80 [of the *American Medical Association Guides to the Evaluation of Permanent Impairment, Third Edition (Revised)*]. The 6% for the specific disorder was then combined with the 15% for the range of motion using the combined values chart to yield a total of 20% spine impairment and 20% whole person impairment.

4. On January 26, 2017, Respondents filed a Final Admission of Liability. Respondents admitted liability for a 16% whole person impairment based on the DIME report of Dr. Brian Beatty dated December 15, 2016.

5. In the DIME report, Dr. Beatty noted that "[Claimant] had a cervical MRI that showed moderate to severe multi-level disc desiccations, moderate C6-7 disk

height loss with mild to moderate anterior osteo formation,…" Dr. Beatty performed an impairment rating stating,

> Based on the AMA guides Third Edition Revised [the *American Medical Association Guides to the Evaluation of Permanent Impairment, Third Edition (Revised)*] the patient was found to have a 16% whole person impairment. This was arrived at based on 4% impairment from table 53, page 80, #IIB, combined with the 12% impairment for loss of range of motion.

6. The AMA *Guides* at Table 53, page 80 provides at paragraph IIB that a claimant is entitled to a 4% whole person impairment for the cervical spine where the injury is "[u]noperated, with medically documented injury and a minimum of six months of medically documented pain and rigidity with or without muscle spasms, associated with none-to-minimal degenerative changes on structural tests.

7. The *AMA Guides* at Table 53, page 80 provides at paragraph IIC that a claimant is entitled to a 6% whole person impairment for the cervical spine where the injury is "[u]noperated, with medically documented injury and a minimum of six months of medically documented pain and rigidity with or without muscle spasms, associated with moderate to severe degenerative changes on structural tests; includes unoperated herniated nucleus pulposus with or without radiculopathy."

8. Claimant proved by clear and convincing evidence that the DIME report of Dr. Beatty is most probably incorrect because Dr. Beatty utilized the *AMA Guides* incorrectly. Dr. Beatty utilized the *AMA Guides,* Table 53, paragraph IIB, instead of paragraph IIC and the doctor assessed a 16% whole person impairment when Claimant was entitled to an18% whole person impairment.

9. The evidence established that Claimant had moderate to severe degenerative changes on structural tests and therefore was entitled to an impairment rating under Table 53 paragraph IIC of the *AMA Guides.* In the DIME report, it is clear that Dr. Beatty was aware that Claimant had moderate to severe degenerative changes in the cervical spine. Dr. Beatty states at page 5 of the DIME report that, "[Claimant] had a cervical MRI that showed moderate to severe multi-level disc desiccations, moderate C6-7 disk height loss with mild to moderate anterior osteo formation,…" Despite this knowledge, Dr. Beatty assessed Claimant to have a 4% impairment under the provision of paragraph IIB which addresses conditions in which the injured party has none to minimal degenerative changes on structural tests.

10. Accordingly, it is concluded that Claimant is entitled to an 18% whole person impairment rating.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-43-201(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201(1), C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201(1), *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

3. Section 8-42-107(8)(b)(III) and (c), C.R.S. provides that the DIME physician's finding of MMI and permanent medical impairment is binding unless overcome by clear and convincing evidence. Clear and convincing evidence is highly probable and free from substantial doubt, and the party challenging the DIME physician's finding must produce evidence showing it is highly probably the DIME physician is incorrect. *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). A fact or proposition has been proved by clear and convincing evidence if, considering all of the evidence, the trier-of-fact finds it to be highly probable and free from substantial doubt. *Metro Moving & Storage, supra.* A mere difference of opinion between physicians fails to constitute error. See *Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-356 (March 22, 2000).

4. The ALJ may consider a variety of factors in determining whether a DIME physician erred in his opinions including whether the DIME appropriately utilized the Medical Treatment Guidelines and the AMA Guides in his opinions.

5. Claimant proved by clear and convincing evidence that the DIME report of Dr. Beatty is most probably incorrect because Dr. Beatty utilized the *AMA Guides* incorrectly. Dr. Beatty utilized the *AMA Guides,* Table 53, paragraph IIB, instead of paragraph IIC and the doctor assessed a 16% whole person impairment when Claimant was entitled to an18% whole person impairment.

6. The evidence established that Claimant had moderate to severe degenerative changes on structural tests and therefore was entitled to an impairment rating under Table 53 paragraph IIC of the *AMA Guides.* In the DIME report, it is clear that Dr. Beatty was aware that Claimant had moderate to severe degenerative changes in the cervical spine as he noted this fact at page 5 of his report. However, Dr. Beatty erred by failing to assess Claimant's impairment under Table 53 IIC.

7. Therefore, it is concluded that Claimant has an 18% whole person impairment rating.

ORDER

It is therefore ordered that:

1. Respondents shall be liable for workers' compensation benefits based on an 18% whole person permanent impairment.

2. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.
