43. On July 2, 2017, Dr. D'Angelo performed a Respondents' sponsored IME. Claimant complained of "pin-point" tenderness localized to the midline region at the upper sacral area, where Claimant had been told was the location of the cyst. Claimant claimed that she had made a conscious decision to file a work claim while sitting in the parking lot, after a week-and-a-half while thinking about the implications for her career. Claimant's decision to report the injury as work-related was preceded by denials of her previous alleged injury. Dr. D'Angelo noted that Claimant's anticipated prognosis was recurrent, intermittent episodes of pain without any traumatic provocation. Claimant had noted that the cyst was larger on repeat MRIs, however, Dr. D'Angelo compared the records and did not find that the cyst had grown. Dr. D'Angelo noted that the radiologist for the 2017 MRI noted no significant interval change since the prior examination. Dr. D'Angelo noted that there was no evidence on the MRI evaluation or physical examination of any acute trauma, though there was evidence of a genetic condition. Dr. D'Angelo did not causally relate the alleged injury to an aggravation of her underlying degenerative spine disorder. Dr. D'Angelo opined that Claimant's present symptoms were due to an absence of treatment for a chronic degenerative disease. Dr. D'Angelo opined that any aggravation would have been a brief flare with return to baseline shortly thereafter.

44. Claimant testified that she had a back injury in 2014 after putting a package weighing approximately 25 to 26 pounds on the top shelf of a package car. Claimant testified that she felt a pop and intense pressure in her lower back with pain going down into her legs. Claimant testified that she did not see a doctor because she feared retaliation. Claimant nevertheless filed an EEOC claim against Employer in February 2014 after she was not interviewed for promotion.

45. Claimant testified that she worked full duty while receiving treatment for her back in 2015 and 2016. The effects of the 2016 ESI began to wear off around May 2016, after which she sought additional treatment and was evaluated for surgery. Claimant testified that she was hesitant about undergoing surgery, so she continued with physical therapy and became pain free between September 2016 and December 4, 2016.

46. Claimant testified that she told Mr. Loya "three times" during their December 2 discussion that she was worried about her back, contrary to the record and Mr. Loya's testimony. Claimant testified that she did not speak to Mr. Loya on

December 4, except to say hello. Claimant testified that she did not express concern about her back on December 4 and did not express discontent about having to work that day due to her school work, contrary to the record. Claimant testified that she worked the next day, on December 5 (Monday), and was still able to complete her school paper and go to work the full day."

47. Claimant testified that she was reluctant to meet Mr. Loya because she was fearful of being terminated. Claimant testified that, because she is not a doctor, she did not know whether she had a new injury or not. Claimant represents that her symptoms after December 4 were "100 percent different" from her symptoms "in the weeks and months leading up to December 4." Claimant testified that Mr. Loya prevented her from seeking treatment.

48. On cross-examination Claimant testified that she "might tell my doctor that I didn't get hurt at work, not to have to deal with [Employer]." Claimant testified, contrary to her medical records, that she had neither sought nor received treatment for work-related stress due to her dispute with her supervisors. Claimant testified that she did not seek medical treatment for her alleged August 19, 2014 injury to her back. Claimant testified that the pain for which she sought treatment in the emergency department on August 20, 2014 was not the same pain that she had in 2015 or presently. Claimant testified that she was presently seeking treatment for bilateral leg pain. Claimant acknowledged that the August 20, 2014 record reflects that she denied trauma, and that if she did have trauma, she would have reported this to her doctors. Claimant testified that she had pain in the exact same locations in 2015 as she does now. Claimant testified that she was evaluated in 2016 to ascertain the etiology of her pain and that her doctors had recommended surgery as an option, which she would have had to have pursued under private health insurance. Claimant testified that she made the decision to report a work-related injury for December 4 after Dr. Ogrodnick was unable to find any causal relationship to her alleged 2014 incident.

49. The ALJ finds Claimant's credibility to be compromised by both a lack of self control, and a proclivity to exaggerate. For example:

- When asked what she meant by telling Mr. Loya that "perhaps I should claim this pain as an injury;" Claimant responded, "I was just completely beside myself . . . and I could have just blurted out something just because I blurted it out."

- When given a copy of her job description, Claimant admittedly "got belligerent" and argued with Employer's HR personnel in such a manner that she was taken out of a public area and brought into a private office.

- When filling out the injury prevention report with Mr. Loya, Claimant interpreted Mr. Loya as questioning "her integrity," and she "got frustrated." When Mr. Loya asked Claimant how much the bags weighed, she responded, "I don't know, 129 – 120 pounds." Claimant recanted that

statement, saying she had exaggerated. The bags actually weighed between thirty and seventy pounds.

- Claimant later testified that her exaggerated report of how much the bags weighed "was one of those flippant statements that I said while in the heat of disbelief that [Mr. Loya] was questioning my integrity."

- Claimant admitted that she might provide her medical providers with inaccurate information "not to have to deal with [Employer].

- Claimant reported back pain on December 4, 2016 at the level of 20/10. Pain at a level of 10/10 is commonly understood to be the worst possible pain.

50. Mr. Loya testified that he was a health and safety manager at the Denver facility on December 4, 2016. Mr. Loya's duties included designing injury prevention strategies for the district, implementing training programs, ensuring the accurate reporting of injuries, and investigating injuries. Mr. Loya testified that Claimant would have undergone more extensive training than a typical employee, including yearly training in injury reporting. He testified that work-related injuries should be reported immediately to the management team. Mr. Loya testified that lifting is part of the essential job functions of CHSP supervisors. He testified that all of Employer's employees are expected to work during peak season, from Thanksgiving through Christmas, with few exceptions.

51. Mr. Loya testified that he contacted Claimant on December 2, notifying her that she needed to report to work on December 4. Mr. Loya testified that Claimant's objection on that date was specific to her school paper, and did not recall any mention of her back. Mr. Loya testified that he also had a conversation with Claimant on December 4 and that she expressed discontent about having to work on that day. Mr. Loya testified that Claimant had concerns about loading and unloading trailers, but not small sort, which he indicated were very different jobs.

52. Mr. Loya testified that Claimant explicitly denied having a work injury, at least three times, when asked on December 6. Mr. Loya testified that Claimant gave no indication that she had any sort of bending or lifting injury on this date. Mr. Loya testified that the first time he became aware that Claimant was reporting that she had injured herself at work was on December 16, and that she did not give any specific time or specific mechanism by which she injured herself. Mr. Loya testified that he was not aware of any time that UPS ever considered terminating Claimant after December 4. Mr. Loya testified that Claimant's assertion that he prevented her from seeing a doctor on December 16 was not accurate, as he said he could not make accommodations for her restrictions without medical documentation.

53. Dr. Kathleen D'Angelo testified that, to a reasonable degree of medical probability, there was no aggravation of a preexisting condition. Dr. D'Angelo testified that there were minimal, if any, objective findings during her examination. Dr. D'Angelo

testified that, medically, an exacerbation of an underlying condition involved a flare of the underlying condition and returned to normal once prostaglandin and cytokine levels return to normal. Dr. D'Angelo testified that Claimant's intermittent pain, with no pain pattern, was not consistent with an acute exacerbation of a medical condition. Dr. D'Angelo testified that Claimant had a normal progression of her underlying condition. Dr. D'Angelo testified that Claimant's synovial cysts were directly proportional to the degree of degeneration and that the growth of cysts occurred as degenerative conditions worsened. Dr. D'Angelo opined that all of Claimant's symptoms were progressive, including spondylolisthesis and arthropathy. Dr. D'Angelo noted that the examining radiologist comparing both the June 2016 and March 2017 MRIs indicated no clinical changes. Dr. D'Angelo testified that increased pain does not suggest an injury and that, by her own admission, Claimant did not have consistent pain since December 4, 2016.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

A compensable injury is one that arises out of and occurs within the course and scope of employment. § 8-41-301(1)(b), C.R.S. An injury occurs in the course of employment when it was sustained within the appropriate time, place, and circumstances of an employee's job function. *Wild West Radio v. Industrial Claim Appeals Office*, 905 P.2d 6 (Colo. App. 1995). An injury arises out of employment when there is a sufficient causal connection between the employment and the injury. *City of Brighton v. Rodriguez*, 318 P.3d 496 (Colo. 2014).

An aggravation of a preexisting condition is compensable. *Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. 1990); *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). If there is a direct causal relationship between the mechanism of injury and resultant disability, the injury is compensable if it caused a preexisting condition to become disabling. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999 (Colo. App. 2004). There must be some affirmative causal connection beyond a mere assumption that the asserted mechanism of injury was sufficient to have caused an aggravation. *Brown v. Industrial Commission*, 447 P.2d 694 (Colo. 1968). It is not sufficient to show merely that the asserted mechanism could have caused an aggravation, but rather Claimant must show that it is more likely than not that the mechanism of injury did, in fact, cause an aggravation. *Id*.

Simply because a claimant experiences symptoms while in the course and scope of their employment does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (August 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (April 10, 2008). Claimant has the burden to prove, by a preponderance of the evidence, a causal relationship between the work injury and the condition for which

benefits are sought. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). Whether a compensable injury has been sustained is a question of fact to be determined by the ALJ. *Eller v. Industrial Claim Appeals Office*, 224 P.3d 397 (Colo. App. 2009).

In determining whether a claimant has met her burden of proof, the ALJ may resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence. *Bodensleck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office*, 240 P.3d 429 (Colo. App. 2010).

Claimant's assertion that she suffered an aggravation of her documented and extensive preexisting lumbar condition is not supported by a preponderance of the evidence. Claimant expressly denied to Mr. Loya that she injured herself at work on December 4, 2016. Claimant originally identified her symptoms as having been related to a previous alleged work injury, which was not accepted and for which no evidence was presented. Contrary to Claimant's testimony, she did seek treatment for the same symptoms in 2014 under personal insurance, did not report a work-related injury to her doctors, and denied having trauma. Rather, Claimant's treatment history reflects a pattern of intermittent, chronic pain in her low back and bilateral legs, for which she sought an explanation. When the cause of Claimant's symptoms was identified after a 2016 MRI, she declined surgery under personal insurance and claimed her symptoms resolved.

Claimant's symptoms after December 4, 2016 were identical to those for which she sought treatment in 2014, 2015, and 2016. Claimant only reported having had a work-related injury after being told twice by Dr. Ogrodnick that there was no causal relationship to her alleged 2014 work injury. The MRI studies between 2016 and 2017 showed no clinically relevant changes. The cyst at L3-4 showed no relevant changes (the original estimate on the 2016 MRI was of 3.4 x 2.4 mm, with another note suggesting 5 mm, versus 4 mm on the 2017 MRI). Regardless, Dr. D'Angelo indicated that size of cysts naturally increases with the degenerative changes to the spine, absent acute trauma. Neither Dr. Kawasaki nor Dr. Rauzzino compared the 2016 and 2017 MRIs. Dr. D'Angelo credibly testified that the present symptoms were consistent with the history of chronic, intermittent, and degenerative back pain (with a suggested genetic factor), and not consistent with an aggravation.

Claimant's history suggests a retaliatory motive in filing this claim. In February of 2014, Claimant had a dispute at UPS for which she filed an EEOC claim. Claimant had an ongoing allegation of work-related stress at the time she claims her August 19, 2014 lifting injury occurred. Claimant claims she did not file a claim or seek treatment due to fear of retaliation, despite having filed an EEOC claim and a claim for work-related stress. The contemporaneous medical records from 2014 refute Claimant's assertion that she had a work injury but support that she had a non-related back condition with exacerbations of non acute origin.

Likewise, Claimant's reporting of the December 4, 2016 work injury arose after she was denied time off to finish a school paper, due the following day. Claimant indicated that she had worked on the paper December 2, December 3, December 4 prior to work, and then left work early, finishing her paper after receiving December 5 off (contrary to her testimony). Claimant thereafter related her pain to a previous injury, and did not suggest a work-related mechanism of lifting/bending until her report to David Loya on December 16, 2016. Claimant's testimony is inconsistent with the documented history of the claim in evidence and, regardless, the documented history is not suggestive by a preponderance of the evidence that a work-related injury occurred on December 4, 2016 in the manner described.

Respondents are liable only for those medical benefits which are reasonable and necessary to cure and relieve the effects of the industrial injury. § 8-42-101(1)(a), C.R.S.; *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). The record must distinctly reflect the medical necessity of any medical treatment needed to cure and relieve an injured employee from the effects of the industrial injury and any ancillary service, care, or treatment as designed to cure and relieve the effects of such industrial injury. *Public Service Co. of Colorado v. Industrial Claim Appeals Office of State of Colo.*, 797 P.2d 584 (Colo. App. 1999). The question of whether medical treatment is reasonable and necessary is one of fact for determination by an ALJ. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

Treatment for a work injury must not only be reasonable and necessary but must also be causally related to that injury. *Lerner v. Wal-Mart Stores, Inc*., 865 P.2d 915 (Colo. App. 1993). Claimant bears the burden to prove a causal connection exists between a particular treatment and the industrial injury. *Id*.; *see also Grover v. Industrial Commission of Colorado*, 759 P.2d 705 (Colo. 1988). Causation is a question of fact for resolution by the ALJ. *F.R. Orr Construction v. Rint, supra*.

In the event of a compensable claim, Claimant's work-related condition returned to baseline and her ongoing symptoms are the result of a chronic, non-related condition. No further treatment is reasonable, necessary, or related.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant has failed to meet her burden of proof by a preponderance of the evidence that she suffered an aggravation of a preexisting condition, or otherwise a compensable injury, arising out of the course and scope of her employment on December 4, 2016. Claimant's claim for compensation is denied and dismissed.

2. In the event of a compensable injury, no further medical benefits are reasonable, necessary, or related to the December 4, 2016 work injury, for which Claimant has returned to baseline.

3. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

WORKERS' COMPENSATION NO. WC 4-962-740-06

ISSUES

- Whether Respondents overcame the Division IME Report of Clarence Henke, M.D. dated January 12, 2017, as it pertains to MMI, PPD, and relatedness of Claimant's cervical spine treatment.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. On September 25, 2014 and September 26, 2014, Claimant sustained admitted work related injuries to her neck, right arm, and right shoulder.

2. The mechanism of injury Claimant reported to Dr. Freutter, who prepared a Physician's Report of Workers' Compensation Injury, was that she was standing on a ladder holding a steel and Plexiglas shelf over her head on the palm of her right hand. She reported that the shelf weighed "40 pounds or more," but testified at hearing that the shelf weighed ninety pounds. On September 27, 2014, Claimant reported that she was "installing shelf on ladder approx. 12' in air."

3. Claimant's injury complaints evolved over time.

- On September 27, 2014, when Claimant first sought treatment, she complained of right arm and shoulder pain, rating it as 6/10. On physical examination, her neck was supple and non-tender. X-rays of Claimant's right shoulder revealed no acute fracture or dislocation, mild degenerative arthritis of her acromioclavicular joint, and osteopenia. Her provider diagnosed a right shoulder sprain and right elbow neuropathy.

- On December 12, 2014, Levi Miller, D.O. noted that Claimant's chief complaints were of right elbow pain, weakness, and numbness. Claimant exhibited full range of motion and Dr. Miller ruled out cervical radiculopathy and other cervical spine injuries as Claimant's EMG and MRI studies and her physical examination did not support any diagnosis.

- On January 13, 2015, Flory Kreutter, M.D., noted that Claimant's cervical spine was very sensitive to light touch.

- On June 24, 2015, Claimant presented to Dr. Fall with neck pain as her chief complaint, followed by right shoulder and right elbow pain. Dr. Fall noted that Claimant exhibited "significant pain behaviors, rendering her examination nearly impossible." It appeared that Claimant was "voluntarily

guarding throughout the examination, and she gave poor effort with strength testing."

- On August 9, 2016, Dr. Fall noted that Claimant was no longer complaining of pain and numbness in her right arm.

4. Claimant's mental health status was identified as a potential or actual cause of her symptoms by her treatment providers.

- On October 4, 2014, Dr. Kreutter noted Claimant's anxiety and depression.

- On January 14, 2015, Dr. Kreutter twice noted, "Need to do a mental health screening to determine any underlying problems which could contribute to [her condition]."

- On June 24, 2015, Dr. Fall's assessment included, "Rule out somatoform disorder, conversion disorder, factitious disorder, or other psychological issues playing a role in her presentation and perceived disability." Dr. Fall recommended Claimant undergo a psychological evaluation.

- On April 11, 2016, Claimant failed to appear for a Demand Psychological Evaluation with Ron Carbaugh, Psy.D.

- On August 9, 2016 Dr. Fall's impressions included, "Rule out somatoform or conversion disorder." Dr. Fall recommended Claimant pursue treatment through her primary care provider for consideration of psychiatric referral for somatoform or conversion disorder.

- Several of Claimant's treatment providers noted that her objective findings were not consistent with her high levels of pain, and that Claimant exhibited pain behaviors.

- Several of Claimant's treatment providers noted that her complaints did not follow dermatome patterns and that her pain complaints did not make sense physiologically.

- Claimant refused to complete the DIME Summary Sheet prior to her examination.

- When asked whether she would attend a mental health evaluation, Claimant refused to answer.

5. Dr. Michael Horner primarily treated Claimant's neck and shoulder, while Dr. James Johnson primarily treated Claimant's shoulder and arm.

6. On March 14, 2016, Dr. Johnson wrote that Claimant's primary problem was her neck injury and that her shoulder was a minor concern.

7. On June 6, 2016, Dr. Homer noted that Claimant might be at MMI depending on her reaction to Botox injections which Dr. Horner was administering that day. "If she does not respond to the Botox treatment done at today's visit, then she will be at maximum medical improvement." Claimant had a serious negative reaction to the injections.

8. On June 24, 2015, Allison Fall, M.D., performed a second Respondents sponsored IME. Dr. Fall reported that Claimant was at MMI without impairment, and that there was no work-related injury to Claimant's cervical spine. Dr. Fall supported this conclusion by detailing Claimant's mechanism(s) of injury and Claimant's initial emergency room complaints.

9. On June 28, 2016, Dr. Horner answered a letter sent to him by Respondents' counsel opining that Claimant was at MMI for her cervical spine, but not for any other injury for which he had treatment appointments scheduled.

10. On August 9, 2016, Claimant returned to Dr. Fall for a follow-up IME.

11. On November 7, 2016, Claimant returned to Dr. Johnson for additional treatment. At that time, he opined that her primary source of symptoms was from her scapula-thoracic bursa.

12. On March 13, 2017, Claimant returned to Dr. Johnson who requested a repeat MRI of Claimant's right shoulder.

13. Although Dr. Homer placed Claimant's cervical spine injury at MMI on June 28, 2016, neither Dr. Homer nor Dr. Johnson placed Claimant at MMI for her other injuries after twenty-four months of treatment. Respondents applied for and obtained a "24 Month" DIME.

14. On December 27, 2017, Dr. Clarence E. Henke performed Claimant's DIME evaluation. He was instructed to examine and evaluate Claimant's right shoulder and right upper extremity, and to address the issues of MMI, impairment rating, and whether any further medical treatment would be necessary.

15. In his January 12, 2017 report, Dr. Henke determined Claimant was not at MMI for her neck and right upper extremity injuries.

16. Dr. Henke's report and conclusions are flawed in the following ways:

- Claimant testified at Hearing that Dr. Henke spoke with her husband regarding her claim, and Respondents contend that such conduct violates Rule 11-6(A). That rule specifically provides as follows: "(A) During the IME process, there shall be no communication allowed between the parties and the IME physician unless approved by the Director, or an administrative law judge. Any violation may result in cancellation of the IME." Rule 11-6(A) ensures that the opinion of the IME physician is perceived to be unbiased because it is not influenced by unregulated communications from either

party. *See Brownson-Rausin v. Industrial Claim Appeals Office*, 131 P.3d 1172, 1178 (Colo. App. 2005). Because Claimant's husband is not a party to this case, the ALJ finds no Rule 11-6(A) violation.

- Dr. Henke did not rate any impairment, a required step in the DIME process.

- Dr. Henke's findings pertaining to MMI and Claimant's cervical spine are not supported by meaningful analysis.

- Dr. Henke's examination and report were completed without having numerous relevant and necessary medical records, including Dr. Fall's August 9, 2016 IME Report. Claimant also refused to complete the DIME Summary Sheet prior to her examination. Without having all of the medical records at his disposal, especially Dr. Fall's second IME Report, Dr. Henke could not provide complete and accurate findings. Dr. Fall opined in her second IME report, among other things, that Claimant's cervical spine complaints were not related to the work related injury, that Claimant was at MMI without impairment, and that no further intervention was needed.

- Dr. Henke failed to provide any details or analysis as to why Claimant is not at MMI, or what needs to be done for Claimant to reach MMI.

- Dr. Henke recommended that Claimant should follow-up with Dr. Johnson for further orthopedic evaluation and treatment recommendations, which could include surgical intervention. Dr. Henke failed to state what body part Claimant should follow up with, what type of orthopedic evaluation Claimant needs, or why further orthopedic evaluation is necessary, despite nearly three years of treatment without any perceived benefit. Additionally, none of Claimant's treatment providers have recommended surgery, while several have found surgical intervention to be contraindicated.

17. Dr. Fall credibly testified that not only was Claimant at MMI without impairment, but that there was no work-related injury to Claimant's cervical spine.

- Dr. Fall supported this conclusion by detailing the mechanism(s) of injury and the initial complaints by Claimant at the emergency room.

- Despite nearly three years of extensive treatment, Claimant's function has not improved and her pain has worsened. Dr. Fall credibly testified that the objective findings on the MRIs, EMGs, and x-ray reports do not support Claimant's subjective pain complaints or reasons why Claimant claims the necessity of the arm sling.

18. Dr. Fall credibly testified that Claimant does not have CRPS, that none of the records state she has CRPS, that no provider has stated she currently has CRPS, and that Claimant does not meet the criteria for a CRPS diagnosis.

- Dr. Fall credibly testified that Claimant's medical records include no documentation of allodynia, vasomotor (temperature asymmetry and/or skin or color changes), sudomotor changes, such as edema and sweating changes, or motor or trophic changes with motor dysfunction, such as tremor, or dystonia.

- Dr. Fall testified that in the clinical evaluation, there also must be one sign and two more categories, with those categories being: sensory, vasomotor, sudomotor/edema, and motor/trophic. Dr. Fall stated Claimant did not meet these criteria as well.

- Dr. Fall further testified that the two IMEs she performed on Claimant did not document findings consistent with clinical CRPS, Dr. Horner's examinations have not documented findings consistent with clinical CRPS, and the DIME physician did not document findings consistent with CRPS. Nor did the DIME physician diagnose CRPS. Dr. Johnson noted only that Claimant could have CRPS in the future, but did not find that Claimant clinically had it at the time he saw her.

- Dr. Fall testified that psychological evaluations are indicated in any workup of CRPS to rule out any other underlying issues, but Claimant failed to comply with this recommendation and refused to appear for her demand psychological evaluation that was scheduled with Dr. Carbaugh on April 11, 2016. Dr. Fall concurred with Dr. Kreutter's opinion that there was a lack of known "dermatomes" and that Claimant should seek psychological examination.

19. None of Claimant's treatment provided any relief.

- Claimant reported to Dr. Henke that medications, rest, physical therapy, and injections "have not provided any relief." Also, Claimant stated "that she had achieved only 2% of her pre-injury level of health and [was] continuing to regress in her recovery."

- Claimant reported to Dr. Miller that she had no improvement from any of her initial treatments.

- On August 9, 2016, Claimant reported to Dr. Fall that her pain was alleviated by "nothing."

- Claimant's treatment included oral and topical medications, extensive physical therapy, home exercise programs, chiropractic care, trigger point injections, Botox injections, dry needling, and deep tissue massage. Claimant testified without equivocation that all of the treatment she received was of no help. Further, none of her symptoms had improved since the date of her injury, they had only grown worse.

20. Claimant was equivocal about further treatment. When asked if she would like more injections, Claimant responded that she could not answer because she did not know which ones. When asked if she would proceed with surgery if it were offered, she responded, “That would depend on the outcome.”

21. Claimant’s presentation at hearing was inconsistent. As Dr. Fall testified, Claimant became rigid and “fixed” when she testified; in comparison to the more fluid and fuller range of motion she exhibited when she sat at counsel’s table. The ALJ made the same observation.

22. The ALJ finds Claimant not credible. She exaggerated her pain and symptoms. Claimant’s refusal to undergo a psychological examination, her testimony that no treatment has provided any relief, and her ambivalence about additional treatment undermines her credibility concerning the presence of an actual injury. Additionally, several of Claimant’s treatment providers found no objective evidence to support Claimant’s complaints of non-physiologic and subjective severe pain. This finding is further supported by Claimant’s inconsistent presentation at hearing.

23. The ALJ finds Dr. Fall’s analysis and opinions to be more well-informed, thorough, credible and persuasive than those of DIME Dr. Henke.

24. The ALJ finds that Respondents have overcome by clear and convincing evidence the DIME doctor’s opinions on the issues of MMI, PPD, and the relatedness of Claimant’s cervical spine treatment.

25. ATP, Dr. Homer, placed Claimant’s cervical spine injury at MMI on June 28, 2016. Claimant received no impairment rating for her cervical spine injury.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the “Workers’ Compensation Act of Colorado” (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. bvApp. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or

improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

The finding of a DIME physician concerning MMI or a claimant's medical impairment rating is binding on the parties unless it is overcome by clear and convincing evidence. C.R.S. 8-42-107(8)(b)(III). Clear and convincing evidence is that which is "highly probable and free from serious or substantial doubt." Thus, the party challenging the DIME physician's finding must produce evidence contradicting the DIME which is unmistakable and free from serious or substantial doubt showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995*); Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App. 2002).

Respondents have produced evidence contradicting the DIME which the ALJ finds is unmistakable and free from serious or substantial doubt showing it highly probable the DIME physician is incorrect. The DIME doctor reviewed only a portion of Claimant's medical records and failed to consider Dr. Fall's second IME report. He did not rate any impairment as required. Dr. Henke failed to provide any details or analysis as to why Claimant is not at MMI, or what needs to be done for Claimant to reach MMI. Dr. Henke failed to state what body part Claimant should follow up with, what type of orthopedic evaluation Claimant needs, or why further orthopedic evaluation is necessary, despite nearly three years of treatment without any perceived benefit.

The determination of MMI must be made by an authorized treating physician. § 8-42-107(8)(b)(I), C.R.S.; *Town of Ignacio v. ICAO*, 70 p.3d 513 (Colo. App. 2002). The ALJ concludes that ATP Dr. Homer placed Claimant's cervical spine injury at MMI on June 28, 2016, with no impairment.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents have overcome the Division IME Report of Clarence Henke, M.D., dated January 12, 2017, by clear and convincing evidence, as it pertains to MMI, PPD, and relatedness of Claimant's cervical spine treatment.

2. Claimant reached MMI as of June 28, 2016, and without permanent impairment. As a result, Claimant does not require any further treatment with regard to her cervical spine.

3. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 22, 2017

Denver, CO 80203

ISSUES

1. Did Claimant prove by a preponderance of the evidence that a right knee surgery recommended by Dr. Fitzpatrick is reasonable, necessary and related to her admitted industrial injury?

FINDINGS OF FACT

1. Claimant worked for Employer as a telemetry technician. On January 25, 2017 she suffered admitted injuries when her chair tipped over, causing her to fall on her right side. She developed pain in several parts of her body, including her right knee, right elbow, right foot, and neck. Those issues have largely resolved, except the right knee symptoms.[1]

2. Claimant has a history of right knee problems pre-dating the industrial accident. On August 1, 2016, less than six months before her work injury, Claimant saw her PCP, Dr. Harry Keefe, for right knee pain. She reported pain and swelling for the past two weeks with no precipitating injury or trauma. Claimant found it difficult to stand, bend or straighten the knee, and had an abnormal gait, favoring the right knee. Dr. Keefe ordered an x-ray, which showed medial and patellofemoral compartment osteoarthritis. He prescribed tramadol and Mobic and instructed Claimant to wear a knee brace. He also referred Claimant to physical therapy for "right knee osteoarthritis and pain."

3. A few days later, Claimant completed an Outpatient Therapy Health History Form on which she described severe knee pain at an 8-9/10 level. She told the therapist she had "difficulty walking, sitting, and performing all activities due to pain with movement." On physical examination, she was tender to palpation around the knee and at the lateral and medial joint lines. Patellar mobility was decreased in all directions "due to swelling and OA." She had reduced range of motion and a "severe[ly]" antalgic gait. The therapist recommended 2-3 sessions per week for three months, but Claimant did not return after the first visit. At the hearing Claimant admitted she stopped therapy because it was "too much" for her, not because her knee was better.

4. On August 29, 2016, Claimant returned to Dr. Keefe with complaints of left knee pain. He referred her to an orthopedic surgeon "as bil[ateral] knees most likely have OA."

5. Claimant saw PA Aaron Molencamp at Parkview Orthopedics on September 20, 2016. She stated her knees had been hurting for "several months." At times the pain was bad enough to wake her up at night. Her knees were very stiff and painful when arising from a seated position. She said "this pain is quite severe for the first

[1] Claimant has also complained of low back pain, ostensibly related to altered gait. Claimant's low back was not a subject of the October 5, 2017 hearing and is not addressed by this Order.

few steps. Eventually this pain does slowly subside, however it never completely resolves." She also reported "tightness" in the back of her knee. She reported difficulty walking and going up and down stairs. She had tried over-the-counter knee braces which were not helpful because they did not fit properly. Examination of the right knee showed tenderness over the anteromedial joint line and in the peripatellar region. There was crepitus with motion, pain with flexion and extension, and Claimant walked with an antalgic gait.

6. PA Molencamp diagnosed osteoarthritis and recommended additional conservative treatment. He referred Claimant to Hanger Orthotics for bilateral knee braces due to "occasional instability" in both knees. They discussed cortisone or viscosupplementation injections, and Claimant elected to try bilateral cortisone injections.

7. The cortisone injections did not appreciably improve Claimant's symptoms. She obtained the knee brace but continued to have pain. Although she did not follow up with Parkview Orthopedics, at hearing she testified the knee continued to bother her and the conservative measures did not help.

8. After the January 25, 2017 accident at work, Claimant went to the Parkview Medical Center emergency room. She reported pain in her right knee, right foot, and neck. There was no appreciable swelling or ligamentous instability of the right knee, and only mild diffuse tenderness. A right knee x-ray showed mild lateral patellar subluxation and patellofemoral joint space narrowing with subchondral sclerosis, subchondral cyst formation, and osteophytes. The radiologist also noted an ossific density possibly representing a large osteophyte or an intra-articular body. The ER physician diagnosed multiple "contusions," prescribed ibuprofen and gave Claimant a knee immobilizer.

9. Claimant saw Dr. Michael Dallenbach the next day, on January 26, 2017. She told Dr. Dallenbach about the previous cortisone injection in the right knee but said it was "approximately 1 year ago." She described a "constant dull ache about her right knee" before the accident, which was "much more significant" after the fall at work. Dr. Dallenbach did not examine Claimant's knee because she said it was too painful to remove the knee immobilizer. He diagnosed a knee sprain/contusion with questionable intra-articular loose body and ordered an MRI to rule out internal derangement.

10. An MRI of the right knee was done on January 31, 2017. It showed tri-compartmental osteoarthritis with a large full-thickness patellar articular cartilage defect, moderate joint effusion, a small intra-articular loose body, medial patellar retinacular and medial collateral ligament partial tears, and a posteromedial joint capsular injury.

11. Claimant saw Dr. FitzPatrick, an orthopedic surgeon, on February 27, 2017. She described posterior and medial right knee pain. Claimant told Dr. FitzPatrick about the pre-injury cortisone injection and said she would not consider another because the injection was very painful and only helped for two weeks. She stated the pain was "very manageable" before the fall at work. Dr. FitzPatrick reviewed the August 2016 right knee x-ray and noted the loose body was "apparent at that time." Physical examination revealed no effusion or patellar crepitus. Range of motion was reduced in both knees

"symmetrically," and Claimant walked with an antalgic gait due to pain. The knee was tender to palpation at the medial and lateral joint lines. Dr. FitzPatrick diagnosed right knee osteoarthritis and a loose body. She opined the fall had "exacerbated" Claimant's pre-existing osteoarthritis. Dr. FitzPatrick recommended arthroscopy with chondroplasty, possible meniscus debridement, and loose body removal.

12. Dr. James Lindberg, an orthopedic surgeon, reviewed the surgery request on February 28, 2017. He noted Claimant's preinjury history of knee pain with minimal benefit from a cortisone injection. He reviewed the MRI and opined

> My impression is that these are all chronic changes. The loose body is more than likely based on the described position not causing any problems. Her problem is underlying osteoarthritis and arthroscopy with [sic] no benefit; therefore, surgery is denied."

13. Dr. FitzPatrick wrote to Insurer on March 16 to appeal the denial of surgery. She opined:

> Although [Claimant] was seen in 2016 for right knee arthritis primarily in the patellofemoral compartment she had a significant change in function after fall at work. These new symptoms represent exacerbation of baseline arthrosis with acute chondral injury related to this fall. Pain is no better with conservative measures including PT, brace and oral medications without ability to return to work. Additionally localizes pain to posteromedial aspect of the knee, correlating area of loose body noted on MRI.

14. Dr. Lindberg reviewed Dr. Fitzpatrick's appeal letter and opined:

> There is no new information presented by Dr. FitzPatrick other than symptomatic complaints of pain secondary to her pre-existing osteoarthritis. Arthroscopic debridement for degenerative arthritis is of no value and the position of the loose body is generally inaccessible by arthroscopy and is almost never a source of the problems. It appears to be a stable loose body in that position and is not responsible for catching or locking. I would continue to deny the surgery as requested for the reasons stated above.

15. Claimant had another right knee MRI on July 3, 2017. The radiologist interpreted it as showing severe patellofemoral osteoarthritis with large areas of full-thickness chondral loss over the patella, moderate to severe medial and lateral compartment osteoarthritis, and posteromedial capsular ossification.

16. Claimant saw Dr. David Walden for a second surgical opinion on July 11, 2017. It was difficult to get a clear picture of her preinjury knee problems because "she has some issues with remembering her previous care." Dr. Walden obtained x-rays which showed moderate osteoarthritis affecting all three compartments, particularly the patellofemoral joint. He also reviewed the MRI images, and saw no obvious meniscal tears or severe osteoarthritis. He noted "a large unusual osteophyte off the posterior aspect of the knee which is not acute," along with the loose body seen on previous

images. On examination, her right knee was tender medially and anteriorly, but "no specific location is more identifiably painful than the next." McMurray's sign was "equivocal." She had crepitus and limited range of motion. Dr. Walden diagnosed "bilateral knee osteoarthritis with right-sided acute irritation from trauma" and "right knee loose body of unknown etiology or clinical significance." He recommended Claimant try another cortisone injection or viscosupplementation but could consider surgery if conservative treatment failed. He opined there was "some chance" the fall had caused the loose body but doubted removing it would provide much benefit.

17. Claimant saw Dr. Timothy Hall for an Independent Medical Examination (IME) at her counsel's request on August 31, 2017. Claimant told Dr. Hall she had a cortisone injection in the right knee "about three years ago," with no additional treatment before the work accident. She said she had only occasional pain and giving way of her knees descending stairs before the work accident. After the accident her knee pain "changed dramatically" and she was now having pain "most of the time." She had difficulty with ambulation and used a cane. Dr. Hall assumed Claimant was "a good historian." Examination of the knee showed crepitus, joint line tenderness and reduced range of motion. Her gait was "very antalgic." Dr. Hall disagreed with Dr. Lindberg's assessment that the MRI showed "all chronic changes." Dr. Hall thought the MRI revealed "potentially acute" findings including the chondral defect and a possible meniscus injury. He opined her knee symptoms were "obviously" work-related:

> The pain in her knee is not from … the degenerative osteoarthritis. She had minimal symptoms prior to this fall. She has had an acute injury superimposed on the degenerative arthritis. Her pain is coming from the acute injury.

18. Dr. Hall supported the recommendation of arthroscopic surgery for diagnostic and "potentially" therapeutic purposes, depending on the pathology observed during surgery.

19. Claimant saw Dr. Eric Ridings for an IME at Respondents' request on September 6, 2017. He noted Claimant "was not forthright regarding her pre-existing knee pain, telling me today that her last knee pain previously had been more than five years ago. Hence, it does not seem reasonable to accept at face value her history that her right knee was fine and not in any way limiting prior to her fall at work." He agreed with Dr. Lindberg that Claimant's symptoms were due to her significant pre-existing degenerative changes rather than the fall at work. He opined Claimant may have suffered a contusion as a result of landing on her right side, but the mechanism of injury would not have caused, aggravated, or accelerated her pre-existing arthritis. He disagreed that surgery was reasonably necessary, citing the Lower Extremity MTGs.

20. Dr. Hall testified at the hearing and maintained his opinion that Claimant's industrial accident aggravated her pre-existing condition. He opined the accident did not aggravate Claimant's underlying pathology but aggravated her symptomatology, which ultimately resulted in the need for surgery. Dr. Hall admitted he did not have all of

Claimant's preinjury medical records during his IME, but he reviewed the records at the hearing and they did not change his opinions.

21. Ms. Raylene Wetzel, a critical care nurse manager for Employer, testified at hearing for Respondents. Ms. Wetzel was Claimant's supervisor and regularly interacted with her at work. Claimant had complained to Ms. Wetzel of right knee pain, swelling, in increased pain with weather changes on several occasions before the January 25, 2017 accident. Claimant told Ms. Wetzel she treated with Parkview Orthopedics because her knee was bothering her so badly and she had received knee injections. She also recalled Claimant occasionally elevated her right leg on a milk crate.

22. Ms. Wetzel observed Claimant typically walked with a limp and a slow gait before the work accident. She also observed Claimant having trouble getting out of her chair at times.

23. Dr. Ridings testified for Respondents in a posthearing deposition. He opined Claimant was not a reliable historian regarding the preinjury condition of her right knee. He opined the loose body is not symptomatic and does not require surgery. He explained that falling on her right side would not cause or aggravate the pathology in Claimant's knee. Dr. Ridings opined Claimant's underlying osteoarthritis would inevitably remain symptomatic and continue to progress regardless of the fall at work. He reiterated that any surgery would not be causally related to the industrial injury.

24. Dr. Ridings' and Dr. Lindberg's opinions regarding causation are more persuasive than opinions in the record to the contrary.

25. Ms. Wetzel's testimony is credible and persuasive.

26. Claimant failed to prove by a preponderance of the evidence that arthroscopic surgery proposed by Dr. FitzPatrick is causally related to the January 25, 2017 admitted injury.

CONCLUSIONS OF LAW

The respondents are liable for medical treatment which is reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a); *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997); *Country Squire Kennels v. Tarshis*, 899 P. 2d 362 (Colo. App. 1995). Even if the respondents admit liability, they retain the right to dispute the relatedness of any particular treatment, and the mere occurrence of a compensable injury does not compel the ALJ to find that all subsequent medical treatment was caused by the industrial injury. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997); *McIntyre v. KI, LLC*, W.C. No. 4-805-040 (ICAO, Jul. 2, 2010). Where the respondents dispute the claimant's entitlement to medical benefits, the claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). The claimant must also prove that the requested treatment is reasonably necessary, if disputed. Section 8-42-101(1)(a). The claimant must prove

entitlement to medical benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case are not interpreted liberally, in favor of either claimant or respondents. Section 8-43-201.

As found, Claimant failed to prove the proposed surgery is causally related to the January 25, 2017 industrial injury. There is no persuasive evidence that the accident caused any internal structural damage to Claimant's right knee. Although Dr. Walden speculated the loose body might be trauma-related, Dr. FitzPatrick dispelled that notion when she observed the loose body on the preinjury x-ray. Dr. Ridings persuasively explained Claimant's accident did not likely cause any of the multi-compartmental chondral damage seen on the MRI. Neither Dr. FitzPatrick nor Dr. Walden (both of whom personally reviewed MRI images) shared Dr. Hall's thesis that Claimant may have an acute medial meniscus tear. Although the radiologist mentioned the meniscal abnormality in the findings section of his report, he did not consider it sufficiently significant to include in the final impressions. He also thought it was likely degenerative.

Dr. FitzPatrick's and Dr. Hall's opinions are predicated on the assumption that the January 2017 accident caused a significant change in Claimant's symptomatology and baseline level of function. But the persuasive evidence does not support that supposition. Before the accident, Claimant described her knee pain as "severe."[2] She had a "severely" antalgic gait due to right knee pain. She had difficulty walking, standing, and climbing stairs. She had crepitus, painful range of motion and her knee gave way at times. She was prescribed a custom knee brace, had a cortisone injection and had considered viscosupplementation.

The rationale for surgery is based on factors that existed before the accident. Claimant could reasonably have been considered a surgical candidate before her work injury, as she already had advanced osteoarthritis causing significant pain, functional limitations, and occasional instability. She had tried and failed conservative measures including bracing, anti-inflammatories, physical therapy and cortisone injections. Had she returned to Dr. Likes immediately before the accident at work, he may well have suggested surgery as the remaining viable option.[3]

Multiple providers have noted Claimant's relatively poor memory for details regarding her past knee issue, which she also demonstrated at the hearing. Although the ALJ does not believe Claimant was purposely deceitful regarding her prior history, the ALJ is not inclined to give significant weight to her testimony regarding worsened symptomatology after the accident.

[2] She had 8-9/10 level pain in August 2006, the same level she reported as a current pain level at the hearing.

[3] As Dr. Ridings pointed out, many surgeons outside the workers' compensation system offer their patients arthroscopic surgery in similar situations. Dr. Walden also noted he would consider surgery if the conservative measures he recommended were unsuccessful.

There is no doubt Claimant suffered a painful contusion and strain/sprain injury when she fell on January 25, 2017. But the surgery is not proposed to remedy a contusion or a strain/sprain. The surgery is intended to address long-standing, chronic osteoarthritis that was symptomatic and functionally limiting before the accident. The totality of persuasive evidence simply does not show that the admitted accident proximately caused the need for surgery.

Since Claimant failed to prove the proposed surgery is causally related to the industrial injury, the question of reasonable necessity is moot.

ORDER

It is therefore ordered that:

1. Claimant's request for arthroscopic surgery proposed by Dr. Fitzpatrick is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Whether the right shoulder surgery recommended by David Schneider, M.D., is reasonable, necessary, and related to Claimant's admitted industrial injury.

- Whether David Schneider, M.D., is an authorized treating physician.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. This admitted claim involves an injury to Claimant's right shoulder. On April 11, 2014, Claimant, who works as a provisioning agent for Employer, was reaching into a cart with his right arm fully extended to remove a tray, which was stuck. As Claimant attempted to remove the tray, he felt a pop on his right shoulder. Previously, in 2010 and 2011, Claimant sought treatment for a work-related right shoulder injury. On January 17, 2011, Claimant treated with Mark Failinger, M.D., who noted that Claimant's right shoulder MRI showed a large, retracted tear that was likely present for many years. Dr. Failinger stated the recent work incident caused more symptomatology. Dr. Failinger opined that a surgery to repair the torn rotator cuff had an approximate 30% success rate and Claimant opted to try that surgery. Dr. Failinger opined that Claimant would eventually need a reverse total shoulder replacement.

2. On February 7, 2011, Claimant treated with A. Todd Alijani, M.D., who opined that Claimant "would be best off with an attempt at a repair of this massive tear. It is not clear to me if it is reparable. By definition this can only be ascertained through an attempt to repair it." Dr. Alijani opined that if the repair did not work, Claimant would be a candidate for a reverse total shoulder arthroplasty. Dr. Alijani opined, "I think that he would be much better suited with an attempt of a repair and if it is deemed irreparable at the time of surgery then we can proceed with a reverse total shoulder arthroplasty if indeed it is irreparable." On March 15, 2011, Dr. Alijani performed a right shoulder arthroscopy, debridement, decompression, and repair of massive rotator cuff tear. At Hearing, Claimant testified he was released back to full duty in September 2011 and that he did not seek any additional right shoulder treatment or have any ongoing right shoulder issues until his April 11, 2014 work-related injury.

3. On April 15, 2014, Claimant treated at Concentra with Michelle Honsinger, PA, and reported he had his right arm at full extension into a drink cart to pull out a 15-20 pound tray, which was stuck. While trying to pull it out, he felt immediate right shoulder pain. PA Honsinger assigned Claimant work restrictions and recommend he start physical therapy. On April 30, 2014, Claimant treated with PA Honsinger and reported 6/10 right shoulder pain. On May 14, 2014, Claimant treated with PA

Honsigner and reported 4/10 right shoulder pain and increased right shoulder pain with elevation and overhead use but that he is working within his restrictions. From April 22, 2014, through May 30, 2014, Claimant underwent eight physical therapy sessions at Concentra. During these sessions, Claimant continued to report right shoulder pain and discomfort, with decreased range of motion and pain with reaching forward and above his head.

4. On June 3, 2014, Claimant treated at Concentra with Matt Miller, M.D., and reported 6/10 right shoulder pain with radiating pain into his neck and down his right arm. Claimant reported that moving and lifting his shoulder caused increased pain. Dr. Miller referred Claimant back to Dr. Alijani. Claimant reported ongoing right shoulder problems since the April 2014 injury and increased pain and stiffness with physical therapy. Dr. Alijani recommended a right shoulder MRI, which revealed superior humeral head migration and multiple rotator cuff tears.

5. On June 17, 2014, Claimant treated with Dr. Miller and reported ongoing right shoulder pain and other symptoms. Dr. Miller reviewed the MRI, which revealed a rotator cuff tear, and recommended Claimant follow-up with Dr. Alijani for surgery. On June 27, 2014, Dr. Alijani reviewed the right shoulder MRI and opined the rotator cuff tear was not amenable to repair. Instead, Dr. Alijani recommended Claimant undergo a reverse total shoulder arthroplasty when his pain became intolerable. On July 1, 2014, Claimant treated with Dr. Miller and reported ongoing right shoulder pain but deferred surgery saying he would try and do his job with his right shoulder.

6. On July 31, 2014, Claimant treated with Dr. Miller, who noted Claimant required unrelated surgery that put his right shoulder treatment on hold. Dr. Miller maintained Claimant's treatment plan and work restrictions. On August 9, 2014, Claimant treated with Dr. Miller and reported increased right shoulder pain and discomfort and decreased range of motion.

7. On January 29, 2015, Claimant returned to Dr. Miller for his right shoulder injury and reported doing worse. Claimant reported 6/10 right shoulder pain with radiating pain into his upper back and numbness down his right arm. Claimant reported increased pain with motion. Dr. Miller recommended Claimant follow-up with Dr. Alijani regarding right shoulder surgery and maintained Claimant's work restrictions. On February 2, 2015, Claimant treated with Dr. Alijani and reported ongoing right shoulder pain. Dr. Alijani recommended Claimant proceed with a right total shoulder arthroplasty.[1]

8. On March 10, 2015, Claimant underwent a right total shoulder arthroplasty with Dr. Alijani, whose surgical report notes that he repaired Claimant's rotator cuff tears and performed a standard total shoulder arthroplasty. Claimant started physical therapy on March 19, 2015. By April 23, 2015, Claimant reported slow improvement to Dr. Miller. Claimant reported ongoing pain and only some improvement in range of motion.

[1] No explanation was offered for why a total shoulder arthroplasty was performed when a reverse total shoulder arthroplasty had been recommended.

Dr. Miller maintained Claimant's treatment plan and work restrictions. On April 20, 2015, and June 1, 2015, Dr. Alijani noted Claimant was doing well since surgery. On May 19, 2015, Claimant reported popping in his right shoulder during physical therapy.

9. On July 10, 2015, Claimant treated at Concentra with Candice Sobanski, M.D., and reported popping and clicking in his right shoulder and increased right shoulder pain from physical therapy. Claimant reported 4/10 pain and decreased range of motion. Dr. Sobanski referred Claimant for a right shoulder MRI, which revealed Claimant's right humeral head continued to be elevated, similar to the prior MRI. On July 31, 2015, Claimant treated with Dr. Sobanski and reported ongoing right shoulder pain and discomfort and range of motion loss. On August 24, 2015, Claimant treated with Dr. Sobanski and reported difficulty progressing in physical therapy and that he felt it was not helpful. Claimant reported the anterior aspect of his right shoulder drooped more than his left shoulder.

10. On August 31, 2015, Claimant treated with Dr. Alijani and reported right shoulder instability. Dr. Alijani noted his concern for Claimant possibly needing revision surgery and recommended Claimant undergo a CT arthrogram and stop physical therapy. On September 4, 2015, Claimant treated at Concentra with Darla Draper, M.D., and reported he went downhill after starting strength exercises in physical therapy. Claimant denied any new injury and reported he was unable to do physical therapy due to increased pain. On September 14, 2015, Claimant treated with Dr. Sobanski and reported 6/10 right shoulder pain that was getting worse and decreased range of motion. Claimant reported upper back and neck pain. Dr. Sobanski referred Claimant to Albert Hattem, M.D., and to Dr. Failinger for a second opinion. On September 22, 2015, Claimant underwent a right shoulder CT scan, which revealed multiple, compete rotator cuff tears and superior subluxation of the humeral head.

11. On October 16, 2015, Claimant treated with Dr. Alijani, who reviewed the right shoulder CT arthrogram. On physical examination, Dr. Alijani noted Claimant had "so-called pseudoparalysis of the upper extremity with weakness and abduction and forward elevation." Dr. Alijani opined Claimant's right total shoulder arthroplasty had failed and recommended Claimant undergo a revision of the right total shoulder arthroplasty and conversion to a reverse arthroplasty.

12. On November 5, 2015, Phillip Stull, M.D., performed a records review for Respondents. Dr. Stull opined that the right shoulder reverse arthroplasty was reasonable, necessary, and related to Claimant's April 11, 2014 injury.

13. On December 28, 2015, Claimant treated at Concentra with Dr. Hattem and reported the history of his right shoulder injury and treatment, including his ongoing right shoulder issues. Dr. Hattem noted that Dr. Alijani was recommending a revision total shoulder arthroplasty and conversion to a reverse arthroplasty. Dr. Hattem recommended Claimant proceed with the right shoulder revision and conversion to a reverse arthroplasty surgery.

14. On February 9, 2016, Claimant treated with Cary Motz, M.D., and Angelina Waller, PA-C, and reported his history of right shoulder problems, including his ongoing issues since the March 2015 surgery. Claimant reported persistent right shoulder pain and weakness and that he had experienced only minimal improvement with activity modification, physical therapy, and rest. Dr. Motz reviewed the risks of the surgery with Claimant, noted he was a low risk, and cleared him for surgery.

15. On February 17, 2016, Claimant underwent a revision right total shoulder arthroplasty/conversion to reverse right total shoulder arthroplasty with Dr. Alijani. On February 25, 2016, Claimant returned to Dr. Alijani, who noted a right shoulder x-ray revealed a dislocated prosthesis and referred Claimant back for surgery.

16. On February 26, 2016, Claimant underwent a revision of his right reverse total shoulder arthroplasty with Dr. Alijani. On February 29, 2016, Dr. Alijani noted Claimant's right shoulder was stable and recommended Claimant start physical therapy.

17. Between March 8, 2016, and June 26, 2016, Claimant treated with Drs. Hattem and Alijani, and underwent 12 physical therapy sessions. All noted Claimant was doing well.

18. On July 27, 2016, Claimant treated with Dr. Alijani and reported that he woke up that morning with significant right shoulder pain. Claimant stated that he started with a new physical therapist in June and that the therapist was making him do range of motion work that was uncomfortable and painful. Dr. Alijani took a right shoulder x-ray and did not believe the shoulder was dislocated. Dr. Alijani put Claimant in a sling and recommended he stop physical therapy. On August 8, 2016, Dr. Alijani recommended Claimant undergo a right shoulder CT guided aspiration, which Claimant underwent on August 22, 2016, to rule out an infection. On August 22, 2016, Claimant treated with Dr. Hattem and reported his increased right shoulder pain and decreased range of motion. Claimant reported he had to keep his arm still. Claimant detailed Dr. Alijani's recommendations, which Dr. Hattem agreed with.

19. On September 19, 2016, Claimant treated with Dr. Alijani, who did not think Claimant needed any additional surgery. On October 10, 2016, Claimant treated with Dr. Hattem and reported persistent right shoulder pain and discomfort with decreased range of motion. Dr. Hattem recommended Claimant follow Dr. Alijani's plan. On October 19, 2016, Dr. Alijani recommended Claimant undergo blood work. On November 11, 2016, Claimant treated with Dr. Hattem and reported he was doing the same, and Dr. Hattem maintained the treatment plan.

20. On October 12, 2016, William J. Ciccone, M.D., Respondents' retained expert witness, performed an independent medical examination. Dr. Ciccone opined that Claimant did sustain a right shoulder injury, but that Claimant's need for the right shoulder replacement was related to Claimant's arthritis, not the injury. Dr. Ciccone opined that the shoulder replacement and revision surgeries were reasonable and necessary.

21. On November 28, 2016, Respondents filed a General Admission of Liability (GAL) stopping Claimant's temporary total disability (TTD) benefits under this claim. In the remarks section of the GAL, the adjuster, Lindsey Williams, noted "TTD is now being paid off WC # 4959778."

22. On November 30, 2016, Claimant independently sought a second opinion from Timothy Lehman, M.D., at Panorama Orthopedics & Spine Center and reported bilateral shoulder pain and his history of right shoulder treatment, including surgeries. Dr. Lehman recommended Claimant treat with David Schneider, M.D., for his right shoulder condition.

23. On December 14, 2016, Claimant treated with Dr. Schneider and reported his right shoulder has been miserable with pain and stiffness. Dr. Schneider noted Claimant's right shoulder x-rays revealed high placement of the glenoid component and bone spurring of the humeral lesser and greater tuberosity. Dr. Schneider opined Claimant's right shoulder pain:

> primarily stems from some of the post op bone formation both of the greater tuberosity and lesser tuberosity and some abutment on the scapula. I am not sure whether or not there has been some drift of the glenosphere, but as it stands right now it's not in a healthy position.

Dr. Schneider recommended Claimant undergo a right shoulder revision reverse total shoulder arthroplasty to address his pain. On December 20, 2017, Claimant underwent an ultrasound guided right shoulder joint aspiration with synovasure testing with Mitchell Seemann, M.D. as recommended by Dr. Schneider.

24. On December 15, 2016, Claimant returned to Dr. Alijani, who noted Claimant underwent a second opinion the day before with Dr. Schneider. Dr. Alijani noted he had already spoken with Dr. Schneider and discussed the heterotopic ossification that was seen on the right shoulder x-ray and that they agreed Claimant needed to undergo a right shoulder CT scan with three-D reconstructions for possible revision right reverse total shoulder arthroplasty. On December 29, 2016, Claimant had the right shoulder CT scan, which revealed possible hardware loosening, suspected adjoining subtle undulating peroprosthetic fracture of the posterior proximal humerus, and curve-like remodeling of the anteroinferior scapular neck, suggesting "scapular notching" related to potential impingement of the humeral cup.

25. On January 9, 2017, Claimant treated with Dr. Hattem and reported that he had consulted with Dr. Schneider (which he paid for out of pocket). Claimant reported that Dr. Schneider and Dr. Alijani agreed that he needed to undergo an additional right shoulder surgery, which would involve repositioning the arthroplasty. Dr. Hattem maintained Claimant's treatment plan.

26. On February 8, 2017, Dr. Alijani opined that since Claimant's February 17, 2016 right reverse total shoulder arthroplasty, "the shoulder prosthesis has become

loose, requiring a revision arthroplasty. This particular surgery is out of my scope of practice. I have referred [Claimant] to Dr. Schneider who is very capable of performing this type of surgery."

27. On March 6, 2017, Claimant treated with Dr. Schneider, who noted Claimant returned after undergoing a right shoulder CT and meeting with Dr. Alijani. Dr. Schneider recommended Claimant proceed with the revision reverse shoulder arthroplasty. On March 28, 2017, Dr. Schneider submitted a request for authorization to Respondents for the right shoulder revision reverse total shoulder arthroplasty.

28. On May 11, 2017, Claimant applied for a hearing on authorized provider and reasonable and necessary medical benefits, specifically authorization of the surgery recommended by Dr. Schneider. On June 9, 2017, Respondents filed a Response to Claimant's Application for Hearing and endorsed reasonable and necessary medical benefits, specifically that the requested surgery is not reasonable or necessary.

29. On June 12, 2017, Claimant treated with Dr. Hattem and reported his right shoulder remained the same. Dr. Hattem maintained Claimant's treatment plan and work restrictions.

30. On June 15, 2017, Timothy S. O'Brien, Respondents' retained expert witness, completed an independent medical examination and opined that Claimant's April 11, 2014 work incident "neither significantly aggravated [Claimant's] condition nor did it accelerate this condition and thus [Claimant's] need for his first shoulder arthroplasty in 2015 and his current need for a revision of that procedure are not related to the work incident in question in this case."

31. Dr. O'Brien opined that regardless of whether the April 11, 2014 incident occurred, "the revision surgery that Dr. Schneider is now recommending would have been necessary at this exact same time as it is currently being recommended." Dr. O'Brien opined that the surgery recommended by Dr. Schneider is reasonable and necessary. Dr. O'Brien opined Claimant's need for the surgery recommended by Dr. Schneider "is the result of failed prior surgeries." Dr. O'Brien opined, "Regarding the minor injury that occurred on April 11, 2014, [Claimant] reached an end of healing within 4 weeks or by May 11, 2104 by which time he returned to his pre-injury level of function."

32. At Hearing, Claimant testified that in October 2010 he hurt his right shoulder while trying to close a galley door and in March 2011 he underwent right shoulder surgery. Claimant testified that about six months after surgery he was released at full duty and that he returned to his regular duty job. Claimant testified that between September 2011 and April 2014

- He did not seek any right shoulder treatment
- He was not under any work restrictions for his right shoulder

- His right shoulder felt great
- He was working a lot of overtime for Employer
- And that he did not have any limitations with his right shoulder.

33. Claimant testified that on April 11, 2014, he was reaching into a cart to grab a tray, but the tray was stuck. Claimant testified that as he pulled on the tray, he felt a pop in his right shoulder. Claimant testified that since that injury, he has not returned to the level of function he had prior to the April 11, 2014 injury.

- Claimant underwent additional right shoulder surgeries
- Since his second surgery, Claimant's shoulder has never stopped aching
- Whenever he uses his arm, his muscles bite and cramp up
- In approximately July 2016, Claimant woke up one morning and had extreme right shoulder pain and felt like something had shifted in his shoulder
- Claimant's right arm was rotated forward
- Claimant stopped physical therapy and had his arm in a sling
- Claimant's right shoulder was worse than earlier in the year and he had to take pain medications.

34. Claimant testified that in October 2016 he treated with Dr. Alijani, who recommended Claimant get a second opinion, and that Claimant told Dr. Alijani that he was going to Panorama for the opinion. While the recommendation does not appear in Dr. Alijani's notes, and Claimant paid for the initial appointment with Dr. Schneider, the ALJ credits Claimant's testimony as credible. Further, based on the context of Claimant's worsening symptoms, Dr. Alijani's soon to follow acknowledgement that he was unable to perform the necessary surgery, and how quickly Dr. Alijani and Dr. Schneider consulted about Claimant's case, the ALJ finds it more likely than not that Dr. Alijani recommended Claimant seek a second opinion.

35. Claimant testified that he used his computer and found Panorama Orthopedics, who was a workers' compensation provider. Claimant testified he scheduled an appointment with Panorama Orthopedics and told Dr. Alijani he was going to Panorama Orthopedics. Claimant treated with Dr. Schneider on December 15, 2016, and that when he saw Dr. Alijani the next day, Dr. Alijani had already spoken with Dr. Schneider. Claimant testified that Dr. Alijani told Claimant that he could not perform the surgery recommended by Dr. Schneider and referred Claimant to Dr. Schneider because he believed that Dr. Schneider could do the surgery. Claimant testified that

since the April 11, 2014 injury, he has not been able to work his full duty job and has not been able to do the things he likes to do outside of work due to his right shoulder injury.

36. At Hearing, Dr. O'Brien testified as an expert in the field of orthopedic surgery. Dr. O'Brien testified consistently with his IME report that the 2011 right shoulder MRI showed a chronic, not acute, rotator cuff tear. Dr. O'Brien opined that Claimant should have undergone the reverse total shoulder arthroplasty in 2011 and that he would not have recommended the rotator cuff repair that Dr. Alijani performed. Dr. O'Brien opined that the 2011 and 2014 work injuries did not aggravate Claimant's right shoulder condition or accelerate Claimant's need for a reverse total shoulder arthroplasty. Dr. O'Brien opined the surgery recommended by Dr. Schneider is not related to Claimant's 2014 work injury. Dr. O'Brien opined the surgery recommended by Dr. Schneider is reasonable and necessary and related to Claimant's failed February 2016 right shoulder surgery. Dr. O'Brien testified that, to his knowledge, Claimant never sought right shoulder treatment prior to the October 2010 work injury and was never under any work restrictions. Dr. O'Brien testified that Claimant's degenerative right shoulder condition was asymptomatic prior to the October 2010 work injury and the April 2014 work injury. Dr. O'Brien acknowledged that from September 2011 to April 2014, Claimant did not seek any right shoulder treatment and was not under any right shoulder work restrictions and was working his full duty job. Dr. O'Brien opined that Claimant reached MMI for his April 2014 work injury on May 11, 2014, because he had returned to his pre-injury level of function on that day. Nevertheless, Dr. O'Brien testified that prior the April 2014 work injury, Claimant was not reporting 6/10 right shoulder pain with radiating pain down his right arm and into his neck. In fact, Dr. O'Brien testified that Claimant was not having any of these or similar symptoms from September 2011 until the April 2014 work injury. Dr. O'Brien admitted that based on the medical records, or lack thereof, Claimant's baseline right shoulder condition is not 6/10 pain with radiating pain down his arm and into his neck.

37. The ALJ finds that Dr. Schneider is an authorized treating physician. Claimant's undisputed testimony is that Dr. Alijani recommended Claimant get a second opinion, which he did with Dr. Schneider, who communicated with Dr. Alijani regarding Claimant's treatment plan. Then, in February 2017, Dr. Alijani exercised his independent judgment and referred Claimant to Dr. Schneider to complete the recommended surgery, as he is unable to perform the surgery. This referral was done in writing.

38. The next question is whether the surgery recommended by Dr. Schneider is related to Claimant's admitted work injury. All providers agree the surgery is reasonably necessary. Respondents argue the surgery is not related to the admitted work injury because the April 11, 2014 work injury did not aggravate Claimant's underlying condition or accelerate his need for the shoulder replacement. Nevertheless, Dr. O'Brien, in addition to Dr. Alijani and Dr. Schneider, opine the recommended surgery is directly related to Claimant's failed February 2016 right shoulder replacement. Respondents are liable for medical treatment flowing proximally and naturally from an industrial injury. In this case, Claimant's need for surgery is directly related to his failed February 2016 surgery, which was admitted under this claim.

Claimant has proven by a preponderance of the evidence that the right shoulder surgery recommended by Dr. Schneider is related to his admitted work injury.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the Workers' Compensation Act (Act), § 8-40-101, *et seq*., C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the right of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc., v. Indus. Claim. Apps. Office*, 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Ins. Co. v. Cline*, 57 P.2d 1205, 1209 (Colo. 1936); CJI, Civ. 3:17 (2013).

MEDICAL BENEFITS

Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. § 8-42-101, C.R.S. Nevertheless, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. § 8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Apps. Office,* 12 P.3d 844, 846 (Colo. App. 2000).

Claimant must establish the causal connection with reasonable probability but need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Indus. Comm'n*, 491 P.2d 106 (Colo. App. 1971); *Indus. Comm'n v. Royal Indemnity Co.,* 236 P.2d 2993. A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Indus. Comm'n v. Jones*, 688 P.2d 1116 (Colo. 1984); *Indus. Comm'n v. Royal Indemnity Co., supra*, 236 P.2d at 295-296.

Respondents' acknowledge that the requested surgery is reasonable and necessary. However, they argue that Claimant's requested surgery is not related to his injury because some evidence could support a conclusion that the surgery was necessary earlier and that the intervening surgeries were not related.

The ALJ is not persuaded by Respondent's argument because it does not recognize that *all* results flowing proximately and naturally from an industrial injury are compensable. *See Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970). As found, Claimant proved by a preponderance of the evidence that the surgery recommended by Dr. Schneider is reasonable, necessary, and related to Claimant's admitted industrial injury. Respondents' own expert, O'Brien, opined the surgery recommended by Dr. Schneider was reasonable and necessary and related to Claimant's failed February 2016 right shoulder surgery. Claimant's initial surgery flowed proximately and naturally from his admitted industrial injury. The proximate cause of Claimant's need for the requested surgery is the failure of his last authorized surgery. Thus, the ALJ concludes that the requested surgery is related to his treatment for his admitted industrial injury.

AUTHORIZED PROVIDER

Authorization to provide medical treatment refers to a medical provider's legal authority to treat the claimant with the expectation that the insurer will compensate the provider. *Bunch v. Indus. Claim Apps. Office*, 148 P.3d 381, 383 (Colo. App. 2006); *One Hour Cleaners v. Indus. Claim Apps. Office*, 914 P.2d 501 (Colo. App. 1995). Authorized providers include those to whom the employer directly refers the claimant and those to whom an ATP refers the claimant in the normal progression of authorized treatment. *Town of Ignacio v. Indus. Claim Apps. Office*, 70 P.3d 513 (Colo. App. 2002); *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997). Whether an ATP has made a referral in the normal progression of authorized treatment is a question of fact. *Suetrack USA v. Indus. Claim Apps. Office*, 902 P.2d 854 (Colo. App. 1995).

Claimant testified that in October 2016 he treated with Dr. Alijani, who recommended Claimant get a second opinion, and that Claimant told Dr. Alijani that he was going to Panorama for the opinion. While the recommendation does not appear in Dr. Alijani's notes, and Claimant paid for the initial appointment with Dr. Schneider, the ALJ credits Claimant's testimony as credible. Further, based on the context of Claimant's worsening symptoms, Dr. Alijani's soon to follow acknowledgement that he was unable to perform the necessary surgery, and how quickly Dr. Alijani and Dr. Schneider consulted about Claimant's case, the ALJ finds it more likely than not that Dr. Alijani recommended Claimant seek a second opinion.

The ALJ finds and concludes that Dr. Schneider is an authorized treating physician. Claimant's undisputed testimony is that Dr. Alijani recommended Claimant get a second opinion, which he did with Dr. Schneider, who communicated with Dr. Alijani regarding Claimant's treatment plan. Then, in February 2017, Dr. Alijani exercised his independent judgment and referred Claimant to Dr. Schneider to complete the recommended surgery, as he is unable to perform the surgery.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents shall pay for the right shoulder surgery recommended by David Schneider, M.D., as this surgery is reasonable, necessary, and related to Claimant's admitted industrial injury.

2. David Schneider, M.D., is an authorized treating physician.

3. All matters not determined herein are reserved for future determination.

4. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 22, 2017

/s/ Kimberly Turnbow
Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-044-321-01

ISSUES

- Whether Claimant sustained a compensable injury to his right shoulder on March 20, 2017.

- If so, whether rotator cuff surgery is reasonable, necessary, and related to the compensable injury.

STIPULATIONS

- The parties stipulated to an AWW of $308.32 in the event of a compensable claim.

- Workwell Occupational Medicine, including diagnostic referral for an MRI, and Dr. Robert Fitzgibbons, are authorized providers in this matter in the event of a compensable claim.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant has worked for Employer for 12 years as a loader/unloader, which involves unloading packages from the package car.

2. Claimant alleges that on March 20, 2017, he suffered a work-related injury to his right shoulder. Claimant testified that he began his shift at 6:00 p.m. At approximately 7:50 p.m., he was unloading a truck and attempted to remove a package from a stack. As he slid the package towards himself, he lost his grip causing his right arm to be pushed back. Claimant testified that he did not have any immediate pain or any sort of symptoms. Claimant finished his shift and testified that the event did not interrupt his work in any way. Claimant went home and slept without reporting a work injury.

3. Claimant experienced the onset of pain the following day, March 21, 2017, while operating the manual gearshift of his personal vehicle at approximately noon. Claimant characterized the onset of pain as "severe." Claimant testified that, after the onset of pain, he knew he needed to report a work-related injury to Employer.

4. Claimant first reported a work-related injury to his right shoulder to Employer's manager Aaron Shafenberg on March 21, 2017, about one hour before the start of his 6:00 p.m. shift. Claimant told Respondents' expert, Dr. Mark Paz, and also testified at hearing that he reported to Mr. Shafenberg that he had a work injury during

the evening shift on March 20, 2017, but that his discomfort developed when he was shifting his car earlier that day.

5. Claimant testified that Gary Penaflor, Employer's regional manager, was present by speakerphone when he reported the injury to Mr. Shafenberg. Claimant testified that Mr. Penaflor was upset upon hearing the report of injury. Mr. Penaflor wrote a letter, dated March 24, 2017, reprimanding Claimant for failing to immediately report his injury on March 20, 2017.

6. On March 22, 2017 Claimant had his initial visit at Workwell Occupational Medicine where William Ford, PA-C, evaluated and treated him. Mr. Ford reported Claimant describing his mechanism of injury as follows: "I injured my right shoulder pulling a box to lift, lost my grip and my shoulder went back." The record does not mention that the onset of pain did not occur until the following day, when Claimant was shifting his car. Mr. Ford indicated that Claimant injured his right shoulder "while lifting a box." Mr. Ford diagnosed as a work-related sprain of the right rotator cuff capsule. Mr. Ford placed Claimant on restricted duty with two pound lifting restrictions. Claimant subsequently continued working light duty for Employer. Mr. Ford recommended physical therapy and indicated that he would recommend an MRI if Claimant did not improve by the next visit.

7. Claimant participated in physical therapy with Workwell from March 24, 2017 through July 5, 2017.

8. On March 28, 2017, Claimant returned to Mr. Ford for reevaluation. Mr. Ford was highly suspicious of a rotator cuff tear and on April 4, 2017 he recommended an MRI of Claimant's right shoulder.

9. On April 11, 2017, Claimant underwent an MRI at Health Images. The MRI findings included: High-grade partial, near full-thickness tear of the anterior supraspinatus tendon; no full-thickness tear of the subscapularis tendon identified with tendonopathy and partial-thickness tearing of the subscapularis tendon likely; osteoarthritis of the acromioclavicular joint; and labral degeneration. Mr. Ford referred Claimant for orthopedic evaluation during an April 18, 2017 follow-up visit.

10. On April 28, 2017, orthopedic Dr. Robert Fitzgibbons evaluated Claimant. Claimant reported that he injured his shoulder on March 20, 2017 while lifting boxes at work. Dr. Fitzgibbons noted that the description of the onset of shoulder pain was "sudden," and that he did not have Mr. Ford's treatment summary. There was no indication that Claimant experienced the onset of pain the following day while driving. Dr. Fitzgibbons diagnosed Claimant with a right shoulder rotator cuff tear and recommended right shoulder rotator cuff repair, decompression, and debridement.

11. On May 2, 2017, Claimant returned to Mr. Ford who noted that Claimant was awaiting authorization of surgery. Mr. Ford maintained Claimant's work restrictions and noted that Claimant's modified duty with Employer had expired. Claimant was Claimant has remained off work since May 2, 2017.

12. On May 9, 2017, Respondents issued a letter to Dr. Fitzgibbons notifying him that the requested surgery was denied, pending determination of compensability of the claim.

13. Claimant subsequently saw Mr. Ford for regular follow-up visits at Workwell. Claimant also returned to see Dr. Fitzgibbons on two more occasions. Claimant's last visit with Mr. Ford was on August 16, 2017. Claimant's last visit with Dr. Fitzgibbons was on June 5, 2017. No persuasive evidence a finding that Claimant's treatment providers were aware of the delayed onset of Claimant's symptoms.

14. On July 21, 2017, Dr. Mark Paz performed a Respondents' sponsored IME. He issued his report on August 29, 2017. Dr. Paz took a history of the injury from Claimant with specific details about the alleged mechanism of injury and surrounding circumstances. Claimant described kneeling down and pulling the top box, on a stack of boxes three high, backwards with his right hand. Claimant stated that his right hand lost grip, came free, and pulled backwards so that the right hand movement ended at the level of the right shoulder. Claimant denied experiencing any symptoms to the right shoulder, neck, or right arm at the time of the incident. Claimant continued working after the event and completed his usual duties, moving additional boxes while pushing, pulling, and lifting boxes up to 50 to 60 pounds. Claimant did not develop symptoms during these activities and went home after his shift.

15. Claimant reported to Dr. Paz that he developed "severe pain" in the anterior aspect of his right shoulder at approximately noon on March 21, 2017. Claimant told Dr. Paz that he experienced pain while shifting his vehicle, which has a standard transmission, into reverse. Claimant described his discomfort as both immediate and "sharp" with pain at 6/10 on the VAS pain scale. Claimant told Dr. Paz that he went home, and did nothing. Claimant stated that he subsequently reported the injury to Employer, stating that he had discomfort that developed while shifting his transmission. When questioned about his prior medical and social history, Claimant denied any prior use of illicit drugs to Dr. Paz. Dr. Paz reviewed the MRI study and noted a rotator cuff tear.

16. Based upon the direct history provided by Claimant, the findings upon physical examination, and the review of the medical records, Dr. Paz opined it was not medically probable that the right shoulder rotator cuff tear was causally related to the alleged March 20, 2017 injury. Dr. Paz noted that, per the Level II Physician Accredited Curriculum, causal analysis involves consideration of temporal concerns and consistency with the described mechanism of injury. Dr. Paz noted the delayed onset of symptoms, as well as the onset of pain being associated with a non-work related activity. Dr. Paz opined that the mechanism described was not consistent with the findings on the MRI, which demonstrated no acute injury to the rotator cuff.

17. Dr. Paz testified at hearing as Respondents' medical expert and as a Level II Accredited Provider. Dr. Paz testified that the major findings on the April 11, 2017 MRI were a rotator cuff tear and arthritis within the acromioclavicular joint. Dr. Paz reviewed Dr. Fitzgibbons' opinion and that it appeared the doctor had not reviewed any

records prior to his evaluation. Dr. Paz testified that the mechanism documented by Dr. Fitzgibbons, lifting, was not consistent with the mechanism reported by Claimant during the IME. Dr. Paz likewise noted that the documentation by Dr. Fitzgibbons that the onset of shoulder pain was sudden was not consistent with the history given during the IME in regard to the alleged March 20 pulling event, but rather was consistent with the March 21 description of onset.

18. In Dr. Paz' experience, an acute rotator cuff tear would have immediate pain and symptoms. Dr. Paz testified that the mechanism of pulling in a rowing motion, as Claimant described, does not require the use of the rotator cuff, but instead the triceps muscle. Dr. Paz opined it was not medically probable that Claimant sustained an injury on March 20, 2017 based upon the given history and findings on the MRI. Dr. Paz acknowledged that the cause of Claimant's injury was not known, but that based upon the medical evidence, any injury was not work-related.

19. Claimant testified at hearing that he read Dr. Paz's IME report and that his statements in that report were accurate. Claimant reiterated the alleged mechanism of injury and onset of pain as being consistent with what he told Dr. Paz. Claimant testified that, after his shift on March 20, 2017, he went home and went to sleep. Claimant confirmed that he did not have symptoms until he was operating the manual gearshift of his personal vehicle, on March 21, 2017. Claimant confirmed his statement to Dr. Paz that he reported to Mr. Shafenberg that he developed pain while operating his gearshift on March 21, 2017.

20. Claimant testified that at present he could not lift his right arm up any higher than his left hand and could not go high with it, he could not do any yard work, he had a hard time getting cleaned up, shaving, and had to use his left arm and hand to compensate. Claimant testified that he had pain in his arm with activity and that his pain affects how he sleeps. Claimant testified that, in addition to working for Employer, he had worked at CarQuest, a/k/a Mountain Trucking, in 2016.

21. Claimant admitted at hearing that he had not disclosed several medical providers to Respondents in his answers to interrogatories. He acknowledged that he did not disclose treatment by Marylin Gandolph, PA-C, as his personal care provider, Dr. Kaye, Dr. Chitters for psychiatric care, or Centura Rehabilitation for substance abuse and rehabilitation in 2016. Claimant also acknowledged that he had not disclosed being Hepatitis C positive to Dr. Paz or providers at Workwell.

22. Aaron Shafenberg testified at hearing on Employer's behalf. Mr. Shafenberg testified that he has worked for Employer since 2006 and that he has been a business manager since April of 2016. Mr. Shafenberg testified that, prior to that, he was a full-time supervisor since 2008. Mr. Shafenberg testified that, as part of his job, he oversaw operations preload and local sort. Mr. Shafenberg testified that Claimant was part of the local sort and that he oversaw Claimant's work.

23. Mr. Shafenberg testified that Employer trains its employees to report work injuries as part of the "safe work methods training" on an annual basis. Employees are

trained to report injuries immediately so that they can receive appropriate and timely medical attention, so that the reported mechanism can be properly investigated, and so that Employer can prevent injuries to other employees. Mr. Shafenberg testified that Claimant was last trained in reporting procedures on June 1, 2016 and that if Claimant had followed proper procedures, he would have reported his alleged injury immediately to his direct supervisor, Scott Schwendeman, who would have then reported it to Mr. Shafenberg.

24. Mr. Shafenberg testified that Claimant came in approximately one hour early, prior to his shift, on March 21, 2017 and reported that he felt like he needed to go see a doctor. Mr. Shafenberg testified that he asked Claimant to clarify why, and he stated that he had an injury the previous night. Mr. Shafenberg testified that Claimant described that he was squatting/kneeling to unload packages, grabbed a package at opposite corners and was pulling into his "power zone," when his right hand slipped and jerked back. Mr. Shafenberg testified that Claimant never indicated that he was lifting or reaching over his head. Mr. Shafenberg testified that the "power zone" is the area between the armpits to approximately the mid-thigh or waist, and that employees are trained to lift within this zone to eliminate back and overreaching injuries.

25. Mr. Shafenberg testified that he asked Claimant why he didn't report his injury immediately and Claimant responded that he did not know that he was injured. Mr. Shafenberg was not aware that Claimant ever reported that he injured himself while operating the manual transmission of his vehicle. In regard to the March 24, 2017 disciplinary letter, Employer took no further disciplinary action and never considered terminating Claimant.

26. Claimant denied to Dr. Paz and failed to disclose in answers to interrogatories that he was diagnosed with and treated for insomnia, depression, anxiety, Bipolar, and ADD. He also denied to Dr. Paz and failed to disclose in answers to interrogatories that as late as February 2016 he was addicted to methamphetamine and using marijuana and that he had a history of IV drug use, cocaine use. He denied to Dr. Paz and failed to disclose in answers to interrogatories that he is Hepatitis-C positive. The ALJ finds that Claimant's denial of these conditions to Dr. Paz, and his failure to disclose them in written discovery diminishes his credibility. His use of cocaine and addiction to methamphetamines further diminishes his credibility.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

A compensable injury is one that arises out of and occurs within the course and scope of employment. § 8-41-301(1)(b), C.R.S. An injury occurs in the course of employment when it was sustained within the appropriate time, place, and circumstances of an employee's job function. *Wild West Radio v. Industrial Claim Appeals Office*, 905 P.2d 6 (Colo. App. 1995). An injury arises out of employment when there is a sufficient causal connection between the employment and the injury. *City of*

Brighton v. Rodriguez, 318 P.3d 496 (Colo. 2014). Claimant has the burden to prove, by a preponderance of the evidence, a causal relationship between the work injury and the condition for which benefits are sought. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). Whether a compensable injury has been sustained is a question of fact to be determined by the ALJ. *Eller v. Industrial Claim Appeals Office*, 224 P.3d 397 (Colo. App. 2009).

In determining whether a claimant has met her burden of proof, the ALJ may resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence. *Bodensleck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). When determining credibility, the ALJ should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness, probability or improbability, of the testimony and actions, the motives of the witness; whether the testimony has been contradicted; and bias, prejudice and interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936). The ALJ should consider an expert witness' special knowledge, training, experience, or research, and has broad discretion to determine the weight of evidence on this basis. *See Young v. Burke*, 338 P.2d 284 (Colo. 1959).

An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office*, 240 P.3d 429 (Colo. App. 2010). Substantial evidence is that "quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). It is the sole province of the fact finder to weigh the evidence and to resolve contradictions in the evidence. *See Pacesetter Corp. v. Collett*, 33 P.3d 1230 (Colo. App. 2001). It is not necessary that the ALJ address every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

Claimant has not established that it is more likely than not that his injury occurred as the result of the described event on March 20, 2017. Claimant did not have any symptoms, including pain or discomfort, at the time he alleges he was injured. Claimant continued to perform his work duties through the end of his shift, went home, and was able to sleep. Claimant testified that, as a result of his alleged injury, he had difficulty with multiple activities with the right arm and had trouble lifting. Claimant also testified that the alleged injury affected his sleep.

Claimant did not experience any symptoms until the acute onset of severe pain while operating the manual gearshift of his personal vehicle midday on March 21, 2017. Claimant then reported it as a work-related injury to Mr. Shafenberg without mentioning that he first experienced pain when shifting his vehicle. This is contrary to his hearing testimony and his report to Dr. Paz. Claimant admitted to Mr. Shafenberg that he did not immediately report he was injured because he did not know he was injured and did not have pain. As Dr. Paz explained, an acute rotator cuff tear would cause immediate

and severe pain. Based on the totality of the evidence, the ALJ finds and concludes that more likely than not, Claimant did not sustain a work related injury on March 20, 2017.

The treating providers who have causally related Claimant's injury to work appear to be unaware of the delayed onset in symptoms with an acute onset of pain after involvement in a non-related activity. Claimant admittedly withheld information concerning his prior treatment history and history of substance abuse, psychological issues, and Hepatitis C, despite being questioned about these issues. This history is relevant to the analysis of the Level II physician for diagnosis and treatment plan, per the Medical Treatment Guidelines.

Dr. Paz was aware of the reported mechanism and delayed onset. It is not evident that the evaluating surgeon was privy to this same information. Dr. Paz persuasively opined that the described mechanism was not consistent with a rotator cuff tear, as that structure would not be involved in the action Claimant described. Dr. Paz also opined that the delayed onset of symptoms was not consistent with an acute rotator cuff tear, despite the absence of an alternative mechanism for the injury observed on the MRI. Dr. Paz opined it was not medically probable that there was any injury to Claimant's right shoulder on March 20, 2017. Based upon the totality of the evidence, it is not likely that Claimant suffered a work-related injury to his right shoulder arising out of and occurring within the course and scope of his employment.

Respondents are liable only for those medical benefits which are reasonable and necessary to cure and relieve the effects of the industrial injury. § 8-42-101(1)(a), C.R.S.; *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). Treatment for a work injury must be causally related to that injury. *Lerner v. Wal-Mart Stores, Inc*., 865 P.2d 915 (Colo. App. 1993). Respondents are permitted to challenge causation and relatedness of the need for any treatment, despite having admitted liability for a claim. *Id*. Causation is a question of fact for resolution by the ALJ. *F.R. Orr Construction v. Rint*, 717 P.2d 965 (Colo. App. 1985).

Even in the event that Claimant experienced a compensable injury, it is not medically likely that the rotator cuff observed on the MRI, or the requested rotator cuff repair surgery, is causally related to an injury that arose out of and occurred within the course and scope of Claimant's employment on March 20, 2017.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant has failed to meet his burden to prove by a preponderance of the evidence that he sustained an injury which arose out of and occurred within the course and scope of his employment on March 20, 2017. Claimant's claim for compensation is denied and dismissed.

2. Even in the event that Claimant experienced a compensable injury, Claimant failed to meet his burden of proof by a preponderance of the evidence that the surgery requested to repair the rotator cuff repair tear is causally related. The surgery is denied.

3. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 22, 2017

/s/ Kimberly Turnbow
Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that she suffered injuries to her head, neck and upper extremities during the course and scope of her employment with Employer on March 24, 2017.

2. Whether Claimant has established by a preponderance of the evidence that she is entitled to receive reasonable, necessary and causally related medical treatment for her head, neck and upper extremity symptoms.

STIPULATION

The parties agreed that Claimant earned an Average Weekly Wage (AWW) of $796.36.

FINDINGS OF FACT

1. Employer is a large supermarket with a Bakery Department. Claimant worked for Employer as an Assistant Bakery Manager. On March 24, 2017 she was rolling a cookie rack from her department to the freezer area. Claimant explained that the wheeled rack was about six feet high, contained 12 shelves, was filled with trays of frozen cookies and weighed several hundred pounds. Claimant commented that, upon reaching the freezer area, the rack spun, fell and struck her in the head, face and mouth.

2. Claimant noticed that she was bleeding from the impact and went to the restroom to clean her wounds. After she left the restroom Store Manager Brian Day told her to leave work for the day and apply ice to her face. Claimant then completed her shift and went home.

3. At home Claimant took some medications and fitfully slept during the night. She awoke to report to work at 3:00 a.m. on March 25, 2017. Claimant remarked that she was unable to perform most of her job duties and primarily iced donuts until approximately 7:00 a.m. She explained that she was suffering headaches, dizziness and nausea.

4. At 7:00 a.m. Michelle Young arrived at the store. Claimant recounted to Ms. Young that she had been injured at work on the previous day, felt horrible and desired medical care. Ms. Young directed Claimant to Concentra Medical Centers for treatment.

5. On March 25, 2017 Claimant visited Concentra for an examination. Claimant recounted that she had been rolling a large, metal rack to the freezer area at work. The rack tipped over and struck her in the face. Claimant reported a headache, vertigo and facial abrasions. Stephen Danahey, M.D. diagnosed Claimant with

contusions of the nose, oral cavity and forehead. He also remarked that Claimant might have suffered a slight concussion. Dr. Danahey released Claimant to modified duty employment.

6. On April 5, 2017 Claimant returned to Concentra for an evaluation. Physician's Assistant Stephanie Missey noted that Claimant's chief complaints were head, face and neck injuries. Claimant also reported dizziness, dry eyes, eye pain, a headache, nausea and vomiting. PA-C Missey assessed Claimant with a forehead contusion and acute, tension-type headaches.

7. Claimant testified that on April 18, 2017 she awoke in the middle of the night to use the restroom. While she was walking back to her bedroom she fell down and was found lying on the ground.

8. On April 18, 2017 Claimant visited Concentra and was evaluated by Physician's Assistant Nickolas Curcija, PA-C Curcija noted that Claimant had "a severe migraine and she got dizzy and passed out, since then she has been getting dizzy and vomiting. [Claimant] state[d] her left arm is tingling and numb." PA-C Curcija referred Claimant to an emergency room for additional treatment.

9. On April 18, 2017 Claimant presented to the Emergency Department at UC Health. She reported nausea, vomiting, a left-sided headache, posterior neck pain and dizziness that had started two days earlier. Claimant also noted diffuse, left-sided numbness in the face and left upper extremity. A CTA revealed a Grade 1 left vertebral artery dissection without fracture or cord involvement. The exam was otherwise unremarkable without vascular or acute intracranial abnormalities. After a neurosurgical consultation physicians recommended cervical/brain MRIs.

10. A brain MRI was negative and did not reflect any acute intracranial abnormalities or stroke. The cervical MRI also did not demonstrate any acute abnormalities. Claimant was cleared by neurology and discharged.

11. On May 11, 2017 Claimant underwent an independent medical examination with Stanley Ginsburg, M.D. Claimant reported that she had been struck in the face by a metal rack but did not actually fall or lose consciousness. At the examination Claimant noted head pain, neck pain, shoulder pain, nose pain and headaches. Dr. Ginsburg documented normal neurologic and cerebellar testing. He acknowledged that Claimant probably had suffered a head injury and cervical strain. Dr. Ginsburg recommended follow-up with a neurologist to ensure that Claimant was stable and had reached Maximum Medical Improvement (MMI).

12. On June 1, 2017 Claimant underwent an independent medical examination with Allison M. Fall, M.D. Dr. Fall documented a small scar across the bridge of Claimant's nose. However, there was no swelling or scarring over the right eyebrow or on the lips. Dr. Fall remarked that Claimant was an excellent historian who recalled details from before and after the March 24, 2017 work accident. Claimant exhibited full

range of cervical motion with no radicular signs. She also had a normal neurologic examination.

13. Dr. Fall diagnosed Claimant with right forehead, nasal bridge and upper lip contusions as well as lacerations to the nasal bridge and upper lip that had resolved. She determined that Claimant did not sustain a cervical spine injury but instead had myofascial symptomology likely related to stress and guarding in the left upper quadrant. Dr. Fall was unable to attribute Claimant's reported lower extremity complaints to anything because there was no reported mechanism of injury to the lower extremities. Dr. Fall was also unable to attribute a possible left vertebral artery clot to the work-related injury, but sought to review additional records. She recommended biofeedback for muscle relaxation and to prevent guarding.

14. Claimant continued to periodically visit Concentra from May-July 2017 with continuing headaches. Claimant also reported new symptoms in her lower extremities and lower back. She was referred to a delayed recovery specialist for an evaluation.

15. Claimant requested a change of physician and visited neurologist Brian D. Williams, M.D. at SCL Physicians on August 15, 2017 for an examination. Dr. Williams noted that Claimant "has continued complaining of headaches, neck and upper back and shoulder pains, with intermittent dizziness that is provoked by certain head movements. At times, she feels quite anxious, and does not have control over her thoughts or feelings." Dr. Williams further noted Claimant had "some tenderness at the neck base at the C6-C7 level." He diagnosed Claimant with post-concussion syndrome, whiplash, a facial contusion, a cervical strain, myofascial muscle pain, vertebral artery stenosis and benign paroxysmal positional vertigo (BPPV). Dr. Williams documented that he was unsure whether the vertebral artery dissection had any bearing on the case because it was not consistent with her current symptoms. He recommended physical therapy.

16. On August 22, 2017 Claimant visited neurologist Alexander Zimmer, M.D. for an evaluation. Claimant complained of headaches, dizziness, nausea, vertigo and panic attacks. She also reported vision problems, bilateral posterior neck pain, rare lower back pain and occasional right foot swelling. A neurological examination yielded normal results and Claimant exhibited normal cervical range of motion. Dr. Zimmer recommended a psychological evaluation because it was possible Claimant was suffering from an underlying anxiety or adjustment disorder that was contributing to her headaches and other symptoms. He recommended a follow-up CT angiogram.

17. Nevertheless, Dr. Zimmer diagnosed Claimant with a concussion that occurred at work on March 24, 2017. He explained that "subsequent symptoms, including the headache, dizziness, nausea, abnormal mood including irritability and apathy, and somewhat situational visual symptoms are consistent with post-concussion headache syndrome. She also had an abnormal CT angiogram on [April 18, 2017]. This was consistent with trauma to the left vertebral artery, resulting in mild vertebral artery dissection. This was associated with increased neck pain, headache, dizziness, and transient left-sided symptomatology over the preceding 48 hours. The trauma to the left vertebral artery is consistent with her original head and neck injury." Dr. Zimmer also

remarked that Claimant had "some residual posterior neck pain consistent with cervical strain injury."

18. On August 23, 2017 Claimant returned to Dr. Williams for an examination. Claimant reported constant headaches that began at the base of her skull. She suffered intermittent dizziness that worsened with standing. Dr. Williams noted that Claimant's imaging on April 18, 2017 had revealed a vertebral artery anomaly that was a possible dissection or congenital in nature. He determined that the abnormality did not explain Claimant's predominant symptoms. Dr. Williams summarized that Claimant's symptoms were consistent with post-concussion syndrome and whiplash. He remarked that the documented mechanism of injury "consisting of a blow to the face provides a reasonable explanation for the ongoing symptoms, and it is appropriate to medically manage these symptoms."

19. On October 10, 2017 the parties conducted the post-hearing evidentiary deposition of Dr. Fall. Dr. Fall testified that Claimant was injured when one of the wheels locked on a metal cookie rack that weighed over 500 pounds. The rack spun and struck Claimant above her right eyebrow, in the center of her nose and in the center of her upper lip and gum. Dr. Fall assessed Claimant with right forehead, nasal bridge and upper lip contusions. Claimant also suffered lacerations to the nasal bridge and upper lip and myofascial pain in the left upper quadrant. She based her assessment on the mechanism of injury, the initial symptoms reported and her physical examination. Dr. Fall remarked that there were obvious lacerations and bleeding from Claimant's face that showed the trauma locations. She agreed with Dr. Danaher's initial assessment of a nose contusion, oral cavity contusion and forehead contusion. The records did not reveal that Claimant had suffered any facial or nose fractures.

20. Dr. Fall determined that Claimant likely did not suffer a concussion on March 24, 2017. Although she acknowledged that Claimant may have sustained a slight concussion, the mechanism of injury and Claimant's excellent recall suggested that Claimant did not suffer a concussion. Specifically, the mechanism of injury likely did not cause any significant movement of the head and the facial trauma would not have affected the brain. Dr. Fall explained that, even if Claimant had suffered a slight concussion, the symptoms would have initially been the most severe and improved over time until they had completely resolved. She commented that Claimant's symptoms were inconsistent with a concussion because she has continued to report additional complaints that have not resolved with the passage of time. Dr. Fall also remarked that imaging studies did not reflect any evidence of a brain injury. Finally, she determined that Claimant's continuing headaches and dizziness were not related to the March 24, 2017 accident. Notably, Claimant's headaches could have been caused by a variety of factors including stress and increased muscle tension.

21. Dr. Fall also explained that imaging studies revealed an abnormality in Claimant's vertebral artery. She noted that some providers referred to the condition as a Grade I vertebral artery dissection and others suggested it could be a vasospasm. The CT showed the vertebral artery had narrowed by approximately 25%. Dr. Fall determined that the results could have been a normal variant, a spasming, a small dissection or

tearing. She further remarked that the abnormality could have been caused by non-traumatic sources. Dr. Fall concluded that Claimant's symptoms were temporary and there were no ongoing neurological deficits. She determined that Claimant's symptoms related to the vertebral artery abnormality had resolved by the time of her discharge from the hospital. Dr. Fall agreed with Dr. Williams that Claimant's current symptoms were not causally related to the vertebral artery abnormality.

22. Dr. Fall explained that Claimant did not suffer a cervical strain while working for Employer on March 24, 2017. She noted that, based on the mechanism of injury, there was no torqueing, severe flexion or hyper-extension. Additionally, there were no initial complaints of neck pain and imaging was negative for an acute spinal injury. Dr. Fall testified that Claimant suffered from myofascial pain. She explained that with a cervical strain, something would have happened at the time of the injury, such as an overstretching leading to micro-tears. In contrast, myofascial pain does not require a specific inciting event or trauma and can be caused by stress or sleeping awkwardly. She explained that myofascial pain and a cervical strain have similar symptoms, including tension in the muscles and discomfort. Dr. Fall explained that a cervical strain is expected to improve and heal within three months. However, Claimant has continued to report severe neck pain approximately six months after her industrial accident. Dr. Fall recommended biofeedback for Claimant's myofascial pain to help with relaxation. She also agreed with Dr. Zimmer that Claimant could be suffering from an underlying anxiety or adjustment disorder that was contributing to her continuing headaches.

23. Claimant has demonstrated that it is more probably true than not that she suffered head injuries during the course and scope of her employment with Employer on March 24, 2017. Claimant was injured on March 24, 2017 when a large, metal cookie rack tipped over and struck her in the facial area. Dr. Danahey initially diagnosed Claimant with contusions of the nose, oral cavity and forehead. He also remarked that Claimant might have suffered a slight concussion. Claimant subsequently continued to report headaches and dizziness over the ensuing months. By August 15, 2017 neurologist Dr. Williams summarized that Claimant's symptoms were consistent with post-concussion syndrome and whiplash. Dr. Williams remarked that the documented mechanism of injury "consisting of a blow to the face provides a reasonable explanation for the ongoing symptoms, and it is appropriate to medically manage these symptoms." In a visit with neurologist Dr. Zimmer on August 22, 2017 Claimant complained of headaches, dizziness, nausea, vertigo and panic attacks. Although a neurological examination yielded normal results, Dr. Zimmer diagnosed Claimant with a concussion that occurred at work on March 24, 2017. He explained that "subsequent symptoms, including the headaches, dizziness, nausea, abnormal mood including irritability and apathy, and somewhat situational visual symptoms are consistent with post-concussion headache syndrome." Finally, at an independent medical examination Dr. Ginsburg documented normal neurologic and cerebellar testing. However, he acknowledged that Claimant probably suffered a head injury on March 24, 2017.

24. In contrast, Dr. Fall determined that Claimant's mechanism of injury and excellent recall suggested that she did not suffer a concussion. Specifically, the

mechanism of injury likely did not cause any significant movement of the head and the facial trauma would not have affected the brain. Dr. Fall explained that, even if Claimant had suffered a slight concussion, the symptoms would have initially been the most severe and improved over time until they completely resolved. She commented that Claimant's symptoms were inconsistent with a concussion because she has continued to report new symptoms that have not resolved with the passage of time. Dr. Fall also remarked that imaging studies did not reflect any evidence of a brain injury. Despite Dr. Fall's analysis, the persuasive reports of neurologists Drs. Williams and Zimmer as well as the opinion of Dr. Ginsburg suggest that Claimant continues to suffer post-concussive symptoms as a result of her March 24, 2017 industrial accident. She has consistently reported headaches, dizziness and other head symptoms that began when she was struck by a large cookie rack in the facial area while at work. Accordingly, Claimant's work activities on March 24, 2017 aggravated, accelerated or combined with her pre-existing condition to produce a need for medical treatment of her head injury.

25. Claimant has failed to establish that it is more probably true than not that she suffered injuries to her neck and upper extremities during the course and scope of her employment with Employer on March 24, 2017. Dr. Fall explained that Claimant did not suffer a cervical strain while working for Employer. She noted that, based on the mechanism of injury, there was no torqueing, severe flexion or hyper-extension. Additionally, there were no initial complaints of neck pain and imaging was negative for an acute spinal injury. Dr. Fall testified that Claimant suffered from myofascial pain. In contrast, Drs. Ginsburg, Williams and Zimmer noted that Claimant had suffered a cervical strain during the March 24, 2017 accident. However, Dr. Fall persuasively commented that with a cervical strain something such as overstretching leading to micro-tears would have happened at the time of the injury. Moreover, Dr. Fall explained that a cervical strain is expected to improve and heal within three months. Claimant has continued to report severe neck pain approximately six months after her industrial accident. Based on a review of the record and the persuasive analysis of Dr. Fall, it is unlikely that Claimant suffered a cervical injury on March 24, 2017 that continues to require medical treatment.

26. The record reflects that Claimant did not initially report any shoulder or upper extremity symptoms as a result of the March 24, 2017 accident. Claimant's upper extremity complaints have also varied over the course of her treatment. Finally, Claimant has not received any diagnoses related to her upper extremity complaints. Accordingly, Claimant's work activities on March 24, 2017 did not aggravate, accelerate or combine with any pre-existing condition to produce a need for medical treatment for her neck and upper extremity symptoms.

27. Claimant has established that it is more probably true than not that she is entitled to receive reasonable, necessary and causally related medical treatment for her head symptoms. The record reflects that Claimant has received authorized, reasonable and necessary medical treatment for her head complaints from various providers. However, Claimant's symptoms have persisted and she has not reached MMI. Moreover, Claimant continues to suffer headaches, dizziness and a myriad of other post-concussive symptoms that warrant additional treatment. Accordingly, Claimant shall receive

reasonable and necessary medical treatment for her head symptoms that is designed to cure or relieve the effects of her March 24, 2017 industrial injury.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Compensability

4. For an injury to be compensable under the Act, it must "arise out of" and "occur within the course and scope" of employment. *Price v. Industrial Claim Appeals Office*, 919 P.2d 207, 210 (Colo. 1996). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. § 8-41-301(1)(c) C.R.S.; *Faulkner v. Industrial Claim Appeals Office,*12 P.3d 844, 846 (Colo. App. 2000). The question of causation is generally one of fact for determination by the ALJ. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the

natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

7. As found, Claimant has demonstrated by a preponderance of the evidence that she suffered head injuries during the course and scope of her employment with Employer on March 24, 2017. Claimant was injured on March 24, 2017 when a large, metal cookie rack tipped over and struck her in the facial area. Dr. Danahey initially diagnosed Claimant with contusions of the nose, oral cavity and forehead. He also remarked that Claimant might have suffered a slight concussion. Claimant subsequently continued to report headaches and dizziness over the ensuing months. By August 15, 2017 neurologist Dr. Williams summarized that Claimant's symptoms were consistent with post-concussion syndrome and whiplash. Dr. Williams remarked that the documented mechanism of injury "consisting of a blow to the face provides a reasonable explanation for the ongoing symptoms, and it is appropriate to medically manage these symptoms." In a visit with neurologist Dr. Zimmer on August 22, 2017 Claimant complained of headaches, dizziness, nausea, vertigo and panic attacks. Although a neurological examination yielded normal results, Dr. Zimmer diagnosed Claimant with a concussion that occurred at work on March 24, 2017. He explained that "subsequent symptoms, including the headaches, dizziness, nausea, abnormal mood including irritability and apathy, and somewhat situational visual symptoms are consistent with post-concussion headache syndrome." Finally, at an independent medical examination Dr. Ginsburg documented normal neurologic and cerebellar testing. However, he acknowledged that Claimant probably suffered a head injury on March 24, 2017.

8. As found, in contrast, Dr. Fall determined that Claimant's mechanism of injury and excellent recall suggested that she did not suffer a concussion. Specifically, the mechanism of injury likely did not cause any significant movement of the head and the facial trauma would not have affected the brain. Dr. Fall explained that, even if Claimant had suffered a slight concussion, the symptoms would have initially been the most severe and improved over time until they completely resolved. She commented that Claimant's symptoms were inconsistent with a concussion because she has continued to report new symptoms that have not resolved with the passage of time. Dr. Fall also remarked that imaging studies did not reflect any evidence of a brain injury. Despite Dr. Fall's analysis, the persuasive reports of neurologists Drs. Williams and Zimmer as well

as the opinion of Dr. Ginsburg suggest that Claimant continues to suffer post-concussive symptoms as a result of her March 24, 2017 industrial accident. She has consistently reported headaches, dizziness and other head symptoms that began when she was struck by a large cookie rack in the facial area while at work. Accordingly, Claimant's work activities on March 24, 2017 aggravated, accelerated or combined with her pre-existing condition to produce a need for medical treatment of her head injury.

9. As found, Claimant has failed to establish by a preponderance of the evidence that she suffered injuries to her neck and upper extremities during the course and scope of her employment with Employer on March 24, 2017. Dr. Fall explained that Claimant did not suffer a cervical strain while working for Employer. She noted that, based on the mechanism of injury, there was no torqueing, severe flexion or hyper-extension. Additionally, there were no initial complaints of neck pain and imaging was negative for an acute spinal injury. Dr. Fall testified that Claimant suffered from myofascial pain. In contrast, Drs. Ginsburg, Williams and Zimmer noted that Claimant had suffered a cervical strain during the March 24, 2017 accident. However, Dr. Fall persuasively commented that with a cervical strain something such as overstretching leading to micro-tears would have happened at the time of the injury. Moreover, Dr. Fall explained that a cervical strain is expected to improve and heal within three months. Claimant has continued to report severe neck pain approximately six months after her industrial accident. Based on a review of the record and the persuasive analysis of Dr. Fall, it is unlikely that Claimant suffered a cervical injury on March 24, 2017 that continues to require medical treatment.

10. As found, the record reflects that Claimant did not initially report any shoulder or upper extremity symptoms as a result of the March 24, 2017 accident. Claimant's upper extremity complaints have also varied over the course of her treatment. Finally, Claimant has not received any diagnoses related to her upper extremity complaints. Accordingly, Claimant's work activities on March 24, 2017 did not aggravate, accelerate or combine with any pre-existing condition to produce a need for medical treatment for her neck and upper extremity symptoms.

Medical Benefits

11. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAP, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAP, Nov. 13, 2000).

12. As found, Claimant has established by a preponderance of the evidence that she is entitled to receive reasonable, necessary and causally related medical

treatment for her head symptoms. The record reflects that Claimant has received authorized, reasonable and necessary medical treatment for her head complaints from various providers. However, Claimant's symptoms have persisted and she has not reached MMI. Moreover, Claimant continues to suffer headaches, dizziness and a myriad of other post-concussive symptoms that warrant additional treatment. Accordingly, Claimant shall receive reasonable and necessary medical treatment for her head symptoms that is designed to cure or relieve the effects of her March 24, 2017 industrial injury.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant suffered a head injury while working for Employer on March 24, 2017 and shall receive reasonable, necessary and related medical benefits designed to cure or relieve the effects of her industrial injury.

2. Claimant's claim regarding neck and upper extremity injuries is denied and dismissed.

3. Claimant earned an AWW of $796.36.

4. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: November 27, 2017.

Denver, CO 80203

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that he is entitled to reopen his workers' compensation settlement based upon fraud or mutual mistake of material fact.

PROCEDURAL ISSUES

After the hearing, Claimant filed his Proposed Specific Findings of Fact, Conclusions of Law, and Order. Claimant also filed an Exhibit List and attached additional exhibits for review by the ALJ.

Respondent, Pinnacol, filed a Reply to Claimant's Post-Hearing Filing and Objection to Submission of Additional Evidence. Pinnacol objected to Claimant submitting a partial copy of a letter from CMS responding to Claimant's request for a re-review of the Medicare Set-Aside and objected to the April 4, 2014, medical report from Dr. Kahn. Although Claimant did provide the ALJ the partial copy of the letter from CMS, Claimant did not provide the ALJ with the April 4, 2014, report from Dr. Kahn.

The hearing in this matter was held upon Claimant's application for hearing. Claimant had every opportunity to present any evidence he deemed necessary at the October 25, 2017, hearing. The documents Claimant submitted post-hearing were not dated recently and there is no indication that they were not available at the time of hearing. Moreover, Respondent, Pinnacol, chose not to call any witnesses at the hearing based upon the evidence submitted by Claimant at the hearing. Allowing Claimant to submit additional evidence would be prejudicial to Respondent, Pinnacol, since they would not have the opportunity to call any witnesses and present additional evidence, should they desire, in light of the additional evidence submitted by Claimant. Therefore, the post-hearing exhibits submitted by Claimant will not be considered by the ALJ.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant is a 62 year old male who has a prior medical history of a severe right leg injury requiring multiple leg surgeries. He also has Parkinson's disease.

2. On May 10, 2006, Claimant sustained a compensable injury to his right knee while working on a Dav-Lin Construction project. (Resp. Exs. A, C) Claimant was diagnosed with meniscus tears in his right knee. On September 16, 2009, Kenneth Berliner, M.D. performed a right knee arthroscopic anterior cruciate ligament reconstruction and a medial and lateral meniscal tear debridement surgery. (Resp. Ex. B)

3. On June 28, 2010, Dr. John Obermiller opined that Claimant was at MMI for this claim, indicating Claimant's right knee was stable and showed no evidence of ongoing acute pathology. (Resp. Ex. G, bns 136-137)

4. On November 9, 2010, Fredrick V. Coville, M.D. performed a DIME. (Resp. Ex. D) He opined that claimant reached MMI on June 28, 2011 and assigned a 32% impairment rating for the right lower extremity. (Id. at bn 020) Dr. Coville recommended a regular home exercise program as maintenance care. (Id.) Pinnacol filed a Final Admission on January 27, 2011 admitting for the 32% scheduled rating, and reasonable and necessary maintenance care related to the claim. (Resp. Ex. E)

5. In 2011, Claimant was represented by Robert Trigg, Esq., and Pinnacol was represented by Thomas M. Stern, Esq. Claimant, through his attorney, entered into settlement negotiations with Pinnacol. On March 23, 2011, Mr. Stern emailed Mr. Trigg a copy of the MSA funding chart identifying what Pinnacol would propose to CMS should a conditional settlement agreement be reached. (Resp. Ex. F) A settlement agreement was ultimately reached, contingent upon CMS approval of the MSA funding.

6. On May 5, 2011, Pinnacol submitted a MSA proposal to CMS containing the proposed funding previously shared with Claimant's attorney. (Resp. Ex. G) The MSA proposal included a cover letter with the proposed funding, the FAL, a draft settlement agreement, rated ages, payment histories of all medical services and prescription medications provided to Claimant under the claim during the last two years, and the last two years of medical records in the claim. (Id.) Pinnacol proposed MSA funding of $110,011. (Id. at bn 036) The proposed MSA funding included (but was not limited to) yearly physician visits, yearly orthopedic visits, 24 total physical therapy visits, and 60 hydrocodone/acetaminophen per month for life. (Id.) The MSA did not include funding for a knee replacement surgery or topical cream. (Id.) The MSA proposal letter was sent to Mr. Trigg, Claimant's attorney, simultaneously with its submission to CMS. (Id. at bn 037)

7. Included in the medical records submitted to CMS was the November 9, 2010 DIME report of Dr. Coville, M.D., an orthopedic surgeon. (Resp. Ex. G, bns 143-146) Dr. Coville opined that "no specific further orthopedic surgery is indicated or needed at this point except that he needs to maintain strength in his quadriceps and hamstrings on a regular home exercise program, but he has been well instructed in this in the past." He also noted, "[t]here is a possibility that his mild

arthritic condition may progress and a knee replacement procedure might be needed in 15-25 years." (Id. at bn 144) Also included in the records to CMS was the February 15, 2011 report of Ronald F. Kahn, M.D., P.A., who noted that Claimant's medications had been reduced by 55%, and stated "we will decrease his medications to OTC only." (Resp. Ex. G, bns 179-181).

8. Claimant wrote letters to CMS disputing the MSA proposal on July 26, 2011, August 12, 2011, August 22, 2011, and August 28, 2011. (Resp. Ex. H) On July 26, 2011, Claimant disputed Pinnacol's MSA proposal for inadequate funding. (Resp. Ex. H, bns 201-203) He claimed that topical cream should have been included, pain medication should be funded at 120 per month, primary care visits should be monthly, physical therapy should be provided 3 times per week, and total knee replacement surgeries should be included. (Id. at bns 201-202) On that date, Claimant asked CMS to require $4,513,411.93 for the MSA. (Id. at bn 203) In his August 22, 2011, letter to CMS, Claimant revised his figures to CMS and asked CMS to require $5,036,476.91 for the MSA. (Id. at bn 204) The ALJ finds that Claimant first had knowledge of the proposed MSA funding on March 23, 2011 when Pinnacol emailed the proposed funding to his attorney. Claimant received additional notice of the proposed funding when his attorney was copied on the May 5, 2011 MSA proposal letter to CMS. Claimant testified that he knew what funding was proposed to CMS, and his knowledge is further evidenced by his July 26, 2011 letter to CMS disputing the proposed MSA.

9. On November 14, 2011, CMS issued an approval letter. (Resp. Ex. I) CMS stated, "instead of the submitter's proposed set-aside, CMS has determined that a different set-aside amount is necessary to protect Medicare's interest." (Id. at bn 207) CMS determined that a MSA of $90,357 adequately considered Medicare's interests. There were differences in the proposed MSA and the approved MSA which included CMS requiring funding for additional physician visits (12 per year for 1 year, and then 4 per year for 23 years) and lower pricing for hydrocodone/acetaminophen. (Id. at bn 214) Claimant and his attorney were both copied on the November 14, 2011 approval letter. (Id. at bn 209)

10. Despite Claimant's contention to CMS in his letters that $4,513,411.93 or $5,036,476.91 would have to be set aside to pay for his future medical treatment which he contended was reasonable, necessary, and related to his industrial injury, Claimant agreed to settle his workers' compensation claim, and waive his right to future medical benefits, for $29,477.19 plus the funding of a MSA in the amount of $90,357.

11. The parties then entered a Settlement Agreement which was signed by Claimant on December 19, 2011, and approved by the DOWC on December 30, 2011. (Resp. Ex. J) The funding terms of the CMS approval letter were incorporated into the Settlement Agreement as Exhibit B, Medicare Set-Aside Agreement. Paragraph 3 and subsection 3(h) of the Settlement Agreement specifically states that as consideration for the amount paid under the terms of the Settlement

Agreement, Claimant was giving up the right to claim all compensation and benefits to which Claimant might be entitled – including medical benefits. Paragraph 4 of the Settlement Agreement states, "The parties stipulate and agree that this claim will never be reopened except of the grounds of fraud or mutual mistake of material fact." Paragraph 9(A)(2) of the Settlement Agreement states, "the settlement proceeds include consideration for present and future medical care. The parties agree that the Respondents will not be responsible for any medical care needed by the Claimant, even if Claimant's future medical expenses are greater than, equal to, or less than the amount of the settlement." Paragraph 6 of the Medicare Set-Aside Agreement states, "Claimant understands that the funds placed in the Account do not include money for items not currently covered by Medicare. Claimant further understands that he has been compensated for these items under the Workers' Compensation Settlement and that if these expenses become covered by Medicare in the future Claimant will pay for them if Medicare refuses to do so. It is agreed by the parties that this agreement is not contingent upon, nor is it a condition precedent or subsequent to this agreement that Claimant's Medicare covered expenses in fact be equal to any amounts to be paid under this agreement, or that Medicare pay for any of Claimant's future medical expense related to the injuries settled in the Workers' Compensation Settlement." (Resp. Ex. J)

12. On January 28, 2015, after the parties settled the case, CMS issued an updated approval letter and requested additional funding of the MSA. (Claimant's Exhibit 1, February 6, 2015, Letter from Pinnacol Assurance to DHHS; Resp. Ex. S at bn 270)

13. On February 6, 2015, Pinnacol wrote to DHHS and stated that the $90,357 CMS determined was required to fund the MSA as set forth in the November 14, 2011, approval letter from CMS was final and could not be modified. (Claimant's Exhibit 1, February 6, 2015, Letter from Pinnacol Assurance to DHHS)

14. On March 18, 2015, CMS responded to Pinnacol. CMS agreed that the $90,357 they determined was required to fund the MSA as set forth in the November 14, 2011, approval letter could not be modified. CMS rescinded their January 28, 2015, updated approval letter. CMS stated that:

> The WCMSA funding has been restored to the originally approved amount in accordance with the 2011 WCMSA approval letter and the court approved settlement. As the re-review requests from 2013 and 2014 post-dated the court approved settlement, (which included the specific amount of WCMSA funding) those re-review requests cannot be considered once a court approves a settlement, including the WCMSA amount stated in the WCMSA approval letter, no changes to a WCMSA can be made.

(Resp. Ex. N)

15. Therefore, the amount determined by CMS to adequately consider Medicare's interests and fund the MSA remained at $90,357. (Resp. Ex. N)

16. Claimant testified, and the ALJ accepts Claimant's testimony, that he knew what MSA funding CMS was requiring and what funding was provided in the Settlement Agreement prior to signing the Settlement Agreement on December 19, 2011. Claimant understood that the MSA funding would be $90,357. Claimant specifically acknowledged that he knew that the MSA funding only included 60 hydrocodone pills per month, 24 physical therapy visits, that it did not include topical cream, nor a total knee replacement surgery; yet he signed the Settlement Agreement anyway. (Hrg. Trans. @ 9:20 a.m.) Claimant's testimony that he thought he had to sign the Settlement Agreement because his claim was "closed" is not credible. The FAL dated January 7, 2011, clearly admitted for ongoing maintenance care. Claimant was represented by counsel throughout the entire settlement process.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A Claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S.

A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306. 592 P.2d 792 (1979); *People v. M.A*., 104 P.3d 273, 275 (Colo. App. 2004) The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been

contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005)

Reopening

Section 8-43-204(1) permits an injured worker to settle "all or part of any claim for compensation, benefits, penalties, or interest." Sections 8-43-204(1) and 8-43-303(1), C.R.S, provide that a settlement may be reopened on the ground of fraud or mutual mistake of material fact. The burden of proof is on the party seeking to reopen the settlement. Section 8-43-303(4), C.R.S.

Reopening based on fraud

To reopen a claim on grounds of fraud, Claimant must prove that the Respondent made false representations which Claimant relied upon to settle the claim. Section 8-43-303(1), C.R.S.; *Morrison v. Goodspeed*, 68 P.2d 458 (Colo. 1937). The elements of fraud or material misrepresentation are: (1) A false representation or concealment of a material existing fact, or a representation as to a material fact with reckless disregard of its truth; (2) Made with knowledge on the part of one making the representation that it is false; (3) Ignorance on the part of the one to whom the representation is made, or the fact concealed, of the falsity of the representation or the existence of the fact; (4) Making of the representation or concealment of the fact with the intent that it be acted upon; and (5) Action taken based on the false representation or concealment resulting in damage. *Arczynski v. Club Mediterrancee of Colorado, Inc.,* W.C. No. 4-156-147 (December 15, 2005) citing *Morrison v. Goodspeed, supra.*

In support of his attempt to reopen the settlement, Claimant alleges several errors in the MSA proposal Pinnacol submitted to CMS. Claimant alleges that Pinnacol incorrectly lowered the amount of medication in the MSA proposal. However, the February 15, 2011 medical report of Dr. Kahn generated three months before the MSA proposal indicates Claimant had reduced his medication by half and would be weaned to over the counter medications. (Resp. Ex. G, bn 179) Claimant contends that Pinnacol omitted a total knee replacement surgery from the MSA proposal. However, Dr. Coville opined Claimant did not need any further orthopedic intervention at that time. Claimant alleges the amount of physical therapy was misstated. However, the amount of total funding was clearly stated in the proposal, and Dr. Coville stated Claimant should utilize a home exercise program. Claimant alleges that topical cream was omitted from the proposal. However, no representation was made by Pinnacol that it would be included in the MSA proposal. Similarly with physician visits, Pinnacol clearly stated the number of physician visits they were proposing. As it turned out, CMS required more, but not as many as Claimant wanted.

These alleged errors or omissions, even if they were true, do not amount to fraud. Claimant did not prove that Pinnacol was aware of the "falsity" of their alleged errors or omissions. Claimant did not rely upon any of these alleged errors or

omissions in entering into the Settlement Agreement. Claimant had full knowledge of what was included in the MSA proposal, and Claimant also had full knowledge of the funding CMS was requiring in their approval letter dated November 14, 2011. He had this knowledge long before signing the settlement documents. Claimant understood that the Settlement Agreement provided him $29,477.19 plus $90,357 for the MSA which was far less than the $4 million dollars and $5 million dollars he petitioned CMS to require for the MSA. Pinnacol did not make any false representations regarding the MSA funding, and Claimant did not rely upon any false representations made by Pinnacol when he signed the December 30, 2011 Settlement Agreement. The ALJ concludes that Claimant has not proven by a preponderance of the evidence that Pinnacol made any false representation which he relied upon to settle the claim.

Reopening based on mutual mistake

To reopen a settlement based on mutual mistake of material fact, Claimant must show (1) the mistake was mutual, meaning "both parties must share the same [factual] misconception," (2) the mistaken fact must be material, meaning a fact which goes to the "very basis of the contract," and (3) the mistaken fact must be a past or present existing one, as opposed to "a fact to come into being in the future." *England v. Amerigas Propane*, 395 P.3d 766, 770 (Colo. 2017). The mutual mistake must relate to the nature of the known injuries, rather than "mistakes as to the future course and effects of those injuries." *Gleason v. Guzman*, 623 P.2d 378, 383 (Colo. 1981). In other words, the mistake "must relate to a past or present fact rather than an opinion or prophecy about the future." *Id.* Further, a mutual mistake is one which is reciprocal and common to both parties to an agreement. *Maryland Casualty Co. v. Buckeye Gas Products Co*., 797 P.2d 11 (Colo. 1990); *Gary v. Chevron U.S.A., Inc.*, 867 P.2d 117 (Colo. App. 1993).

The errors in the MSA alleged by Claimant are not mutual mistakes of material fact. Although Claimant alleges that certain treatment or funding should have been included in the MSA, he understood that it was not included when he entered into the Settlement Agreement. Regardless of how the final amount of the MSA was reached, it was the final amount of the MSA that was material to the settlement. Both parties understood what the final funding amount of the MSA would be at the time of settlement, and agreed to it.

The ALJ concludes that Claimant has not proven by a preponderance of the evidence that there were any mutual mistakes of material fact which the parties relied upon in entering into the Settlement Agreement.

Claimant's request to reopen the Settlement Agreement based upon mutual mistake of material fact and/or fraud is denied.

ORDER

It is therefore ordered that:

1. Claimant has not proven that his claim should be reopened for fraud. Claimant has not proven that his claim should be reopened due to a mutual mistake

of material fact. Claimant's petition to reopen the settlement is therefore denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 27, 2017

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Whether Claimant proved, by a preponderance of the evidence, he sustained an injury in the course and scope of his employment on December February 24, 2017.

- Whether Claimant proved, by a preponderance of the evidence, an average weekly wage in the amount of $755.02.

- Whether Claimant proved, by a preponderance of the evidence, he is entitled to ongoing temporary total disability benefits since February 27, 2017.

- Whether treatments provided by Concentra Medical Centers and their referrals, including Health Images Diamond Hill, John Aschberger, M.D., at U.S. Med Group, and Mark Winslow, D.O., at Rocky Mountain Osteopathic Medicine, including the recommendation by Dr. Aschberger for a "S1 injection," are reasonable, necessary and related to the compensable injury.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant is 55 years old having a date of birth of August 24, 1962 and worked as a material handler for Employer beginning November 11, 2016.

2. Employer paid Claimant $14.00 an hour for regular hours and $21.00 for overtime. Between November 12, 2016 and February 24, 2017, Claimant worked 506 regular hours and 31 overtime hours, earning $7,084 in regular and $651 in overtime wages. Claimant's total pay for the 103 days was $7,735. Thus, Claimant's average daily wage was $75.10, and his average weekly wage was $525.70.[1]

3. On July 7, 2008, Claimant experienced a previous admitted industrial injury working as a material handler for another employer. Claimant's then ATP released him at maximum medical improvement ("MMI") on June 18, 2009, to "work without restrictions."

4. Claimant did not experience any medical symptoms related to his lumbar spine between his release to full-duty on June 18, 2009, and his workplace accident on February 24, 2017.

[1] While Respondents' exhibit AA purports to be a check history report for the period January 1, 2016 through March 23, 2017, the report actually includes Claimant's pay history beginning with the pay period ending November 19, 2016.

5. On February 24, 2017, Clamant reported to work and started his shift at his normal 4:30 a.m. start time. At approximately 7:45 a.m., as Claimant was standing on a lift, putting away product on the fourth shelf of a six shelf material storage unit with his arms outstretched, Claimant's lift was hit by another lift at ground level. Claimant was attached to the top of his lift by a safety harness. After Claimant's lift was struck by the other lift, he fell to his side where his fall was stopped by his left forearm hitting another shelf.

6. Claimant credibly testified that immediately after the accident he lowered the lift to the ground and began picking up product that had fallen from his lift on impact. Shortly thereafter Claimant developed low back pain which he then reported to his supervisor.

> Claimant sought same-day treatment at Concentra Medical Center where physician's assistant ("PA") Lacie Esser evaluated him. Claimant reported right side low back pain with pain and tingling down both legs. Ms. Esser assessed lumbar strain, radicular syndrome of lower limbs, and a history of back pain. Ms. Esser assigned a greater than 50% probability that the injury was work-related based on Claimant's symptoms and physical exam findings, which she determined were consistent with Claimant's mechanism of injury. She noted, "Appears to be an exacerbation/aggravation of pre-existing lumbar issues form 8 years ago."

Ms. Esser prescribed medications, physical therapy, and imposed work restrictions. Dr. Brian Counts supervises Ms. Esser, and he reviewed the chart, concurred with the final disposition, and signed the report.

7. On February 27, 2017 Employer required Claimant to fill out a workers' compensation "Employee Report of Incident" which Claimant filled out indicating that he had reported the injury at 7:45 a.m. and that a co-worker "ran into the bottom of the pallet with his lift."

8. On February 27, 2017 Employer filled out a "Employer's First Report of Injury," indicating that Claimant was struck, injuring his neck and back while "picking" and that Claimant was taken immediately to a clinic/hospital.

9. Claimant returned to Concentra on February 27, 2017 with continued pain in his low back and down his left leg. Physical therapy was providing some relief.

10. Claimant credibly testified Employer permitted him to work for two days following his injury accommodating his temporary work restrictions from Ms. Esser. But Employer ran out of work within Claimant's restrictions and sent him home. Employer told Claimant he could return to work when he no longer had restrictions. As of the hearing, Claimant remained under restrictions from both the medical providers at the Concentra Medical Facility and ATP John Aschberger, M.D.

11. On May 3, 2017 Claimant returned to Concentra where Ms. Esser noted that Claimant was "Doing the same as last visit, feels he has plateaued. Has pain across the glute and down bilateral legs to the knees (posterolaterally). Doing PT and HEP. No longer working, they sent him home as they had nothing for him to do." She continued his assessment s of Lumbar Strain, Radicular syndrome of lower limbs, and history of herniated intervertebral disc.

12. On March 16, 2017 Claimant underwent an MRI requested by Ms. Esser which MRI reflected multilevel degenerative disc disease and fact arthrosis. Specifically, "L3-L4 disc contacts the bilateral traversing L4 nerve roots with mild dorsal displacement of the left L4 root. L5-S1 disc contacts the bilateral traversing S1 nerve roots with mild dorsal displacement of the right S1 root."

13. On March 27, 2017, Dr. John Aschberger, M.D., at U.S. Med Group, evaluated Claimant on Ms. Esser's referral. Claimant consistently reported his mechanism of injury and onset of symptoms. Dr. Aschberger noted Claimant's prior back injury and MRI findings. Dr. Aschberger remarked that Claimant "may be a candidate to consider corticosteroid injection," and continued conservative treatment in the meanwhile.

14. On April 17, 2017 Claimant returned to ATP Aschberger, reporting continued low back pain and radiation of symptomology radiating into his bilateral lower extremities. Claimant reported no significant improvement with chiropractic care. Dr.Aschberger's Assessment provided:

> ASSESSMENT: Low back pain with lumbosacral strain. There have been symptoms of radiculitis. I had noted a decreased right patellar reflex with the last appointment, not replicated today.
>
> He does have MRI findings with disc bulging and apparent displacement of the S1 nerve root on the right, with narrowing identified to a mild degree at the left. Given the symptoms and the MRI findings and lack of gains, **I recommend a trial of an S1 selective nerve root block.** I did put in that referral for Mr. Love. Precautions and issues were reviewed. I will see him back one week after. I also initiated gabapentin. Precautions and side effects were reviewed. Recheck in 3 weeks. **I recommend restrictions of bending and twisting, restricted to occasional only, and lifting restrictions at 20 pounds.**

15. On May 2, 2017 Claimant returned to Dr. Aschberger whose assessment remained:

> Low back pain and lumbosacral strain with MRI findings of disc bulging and encroachment in the S1 nerve root**. He has positive response to provocative testing. His symptoms**

> **and findings coincide with the MRI scan.** Mr. Love would like to proceed with the injection and we will check on that for him. Recheck with myself in 3 weeks. No new prescription is provided today. I do not recommend any change in his work restrictions.

16. Between February 7, 2017 through July 19, 2017, Claimant underwent a series of 28 physical therapy visits at Concentra, which he testified he was unhappy with, as it did not provide any long-term relief like the relief he received from physical therapy in his 2008 claim.

17. On July 20, 2017 Claimant returned to ATP Aschberger who noted as follows:

> When I had last seen Mr. Love on 06/22/2017, I noted issues of a disc bulge at L5-S1, but examination findings and symptoms suggesting S1 irritation. **I have put in for an S1 selective nerve root block previously and that had not been authorized.** He continues with lumbosacral pain and radiation of symptomatology into the right leg. He has been taking gabapentin, which he has found to be helpful, but has had to limit the amount.
>
> ASSESSMENT
>
> 1. Lumbar Strain
> 2. Left lumbar radiculitis
> 3. Mild findings of S1 irritation on the right.
>
> He is a candidate to consider S1 injection as well. That is still pending approval and I will review the IME if forwarded. Otherwise, Mr. Love is currently status quo. I will see him back in 3 weeks.

18. Claimant credibly testified at hearing that he continues to have pain shooting down his left leg, which was not present prior to the events of February 24, 2017.

19. Respondents retained the services of Mark Paz, M.D., who opined that Claimant's mechanism of injury could not have caused Claimant's underlying degenerative spine condition. Dr. Paz testified, however, that the restrictions assigned by Ms. Esser at the first visit on February 24, 2017 were appropriate for the symptoms Claimant was complaining of, but that eventually those restrictions should have been lifted. Dr. Paz opined that although an injection recommended by Dr. Aschberger was reasonable and necessary, it was not causally related to the accident of February 24, 2017. Dr. Paz agreed that the 2009 report of ATP Mason, which addresses Claimant's L5-S1 disc bulge, indicated that in 2009 it was a "minor disc bulge" with no reference to a disc contacting the "bilateral traversing S1 nerve root." Although Dr. Paz indicated

that that condition could have been preexisting, the record is devoid of any symptoms or treatment for that body part after June 18, 2009.

20. Dr. Paz testified at hearing consistently with his report. He opined that the medical treatments rendered by Ms. Esser on February 24, 2017 were appropriate. Dr. Paz opined, however, that Claimant's long term problems and symptoms were from underlying degenerative disease. He acknowledged no medical records after June 18, 2009 support his opinion.

21. The ALJ finds it is more likely than not that Claimant's forklift was hit while at work on February 24, 2017 injuring Claimant, which resulted in symptoms requiring medical care which symptoms are still present. The ALJ is not persuaded by Respondents' expert's testimony to the contrary and finds the reports of Claimant's ATPs at Concentra including Ms. Esser, Darla Draper, M.D., and Dr. Aschberger, more persuasive.

22. Thus, the ALJ finds Claimant's claim is compensable.

23. The only evidence in the record regarding Claimant's employment is that Employer would not permit him to return to work after February 27, 2017, which evidence is supported by Ms. Esser's March 3, 2017 medical records where she indicates that his Employer "sent him home as they had nothing for him to do." Accordingly, Claimant is entitled to temporary total disability ("TTD") benefits from February 27, 2017 ongoing, until terminated pursuant to statute, subject to applicable offsets as Claimant testified he is receiving unemployment benefits.

24. The ALJ has found Claimant's average weekly wage was $525.70. Therefore, Claimant's weekly reimbursement rate is that amount multiplied by 66.33%, yielding $348.70.

25. The ALJ finds all medical care rendered by Concentra, which referred Claimant to Concentra Physical Therapy; which referred Claimant to Health Images at Diamond Hill; and referred Claimant to John Aschberger, M.D., at U.S. Med Group; who referred Claimant to Mark Winslow, D.O., at Rocky Mountain Osteopathic Medicine are reasonable, necessary and related. This includes Dr. Aschberger's request for injections.

26. Any determination concerning other issues is premature at this time, as a matter of fact.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ does not address every piece of evidence that might lead to a conflicting conclusion. The ALJ may reject evidence contrary to the findings above as unpersuasive. *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2005).

In order to recover benefits a claimant must prove that he sustained a compensable injury. A compensable injury is one which arises out of and in the course of employment. Section 8-41-301(1)(b), C.R.S. The "arising out of" test is one of causation. It requires that the injury have its origins in an employee's work-related functions. *Finn v. Indus. Comm'n,* 165 Colo. 106, 437 P.2d 542 (1968). It is the claimant's burden to prove by a preponderance of the evidence that there is a direct causal relationship between the employment and the injuries. *Ramsdell v. Horn,* 781 P.2d 150 (Colo. App. 1989).

Based on the totality of the evidence, the ALJ concludes that Claimant has sustained his burden of proving by a preponderance of the evidence that he sustained a low back injury on February 24, 2017 and, therefore, is entitled to benefits under the Workers' Compensation Act.

Once compensability is established, Respondents are liable for medical treatment that is reasonably necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. *See Colorado Compensation Insurance Authority v. Nofio,* 886 P.2d 714 (Colo. 1994); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). A determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ, and an ALJ's resolution should not be disturbed if supported by substantial evidence in the record.

Authorized providers include those medical providers to whom the claimant is directly referred by the employer, as well as providers to whom an ATP refers the claimant in the normal progression of authorized treatment. *Kilwein v. Industrial Claim Appeals Office*, 198 P.3d 1274 (Colo. App. 2008); *Town of Ignacio v. Industrial Claim Appeals Office,* 70 P.3d 513 (Colo. App. 2002). Respondents designated Concentra as the authorized provider.

The question of whether medical treatment is reasonable and necessary is one of fact for determination by the ALJ. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002); *Wal-Mart Stores, Inc. v. Industrial Claims Office*, 989 P.2d 251 (Colo. App. 1999). The ALJ concludes the medical care rendered by Concentra and its referrals to Concentra Physical Therapy, Health Images at Diamond Hill, John Aschberger, M.D., at U.S. Med Group, and Mark Winslow, D.O., at Rocky Mountain Osteopathic Medicine are reasonable, necessary and related, as well as Dr. Aschberger's requested authorization for Claimant to have a spinal injection at the L1 level.

Claimant has established by a preponderance of the evidence that his earnings plus overtime equate to an AWW of $525.70.

As a matter of law, any determinations concerning other issues are premature.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant has established by a preponderance of the evidence that he suffered a compensable injury on February 24, 2017.
2. Claimant's has established by a preponderance of the evidence an average weekly wage off $525.70 at the time of his on-the-job injury.
3. Claimant established by a preponderance of the evidence he is entitled to temporary total disability benefits from February 27, 2017, ongoing, subject to applicable offsets.
4. Respondents shall pay for all medical care rendered to date by the physicians at Concentra Medical Facility, including their referrals for an MRI on March 16, 2017 at Health Images Diamond Hill, treatment with Dr. Aschberger at U.S. Med Group, and treatment with Dr. Winslow at Rocky Mountain Osteopathic Medicine as reasonable, necessary, and related, including ATP Aschberger's request for authorization for an S1 injection.
5. Respondent shall pay to Claimant interest at the rate of 8% per annum on all amounts of compensation not paid when due.
6. Issues not expressly decided herein are reserved to the parties for future determination.
7. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 27, 2017

ISSUES

- Whether claimant has demonstrated by a preponderance of the evidence that medical treatment he has received since October 15, 2014 (including but not limited to prescription medications, physical therapy, treatment provided by Delta County Memorial Hospital, and Dr. Ellen Price) constitutes reasonable medical treatment necessary to maintain claimant at maximum medical improvement (MMI).

- Whether respondents have demonstrated by a preponderance of the evidence that claimant experienced an intervening event on October 15, 2014 that was sufficient to sever respondents' liability and terminate claimant's maintenance medical care.

FINDINGS OF FACT

1. Claimant suffered an admitted injury to his low back on September 19, 2009. A magnetic resonance image (MRI) of claimant's lumbar spine showed a disk protrusion at the L4-L5 level. Dr. Ellen Price is claimant's authorized treating physician (ATP).

2. Claimant testified that since his injury on September 19, 2009 he has back pain all the time. Claimant also testified that he typically has pain that is 7 out of 10. Claimant testified that his current symptoms include pain in his low back that radiates into his legs. During this claim surgery was recommended. However, claimant elected not to pursue surgery.

3. On March 12, 2010, Dr. Ericson Tentori placed claimant at MMI and assessed a permanent impairment rating of 22% whole person. At that appointment, claimant reported ongoing significant low back pain and stiffness, ongoing bilateral pain and paresthesias in his lower extremities, and radicular symptoms in his right lower extremity. Dr. Tentori assessed claimant with L5 bilateral radiculopathy and associated anxiety and depression. Dr. Tentori opined that claimant would need maintenance medical treatment including acupuncture, an EMG/nerve conduction study, continued use of Lyrica and "any other medications deemed appropriate by Dr. Price".

4. Respondents filed a Final Admission of Liability (FAL) on May 14, 2010, admitting for the MMI date of March 12, 2010 and the 22% whole person impairment rating assessed by Dr. Tentori.

5. Since being placed at MMI claimant has received various maintenance medical treatment including acupuncture, physical therapy, prescription medications (including Tramadol, Lyrica), and a gym pass.

6. Claimant testified that on October 15, 2014, he was outside in his yard and bent over to pick up a garden hose. While in that act of bending, claimant felt pain in his low back that was so severe he "felt like passing out". Claimant was transported by ambulance to Delta County Memorial Hospital.

7. Medical records from Delta County Memorial Hospital from October 15, 2014 indicate that claimant was seen in the Emergency Department by Dr. Carl Malito. At that time, claimant reported sharp pain in his low back. Dr. Malito opined that claimant pulled muscles in his low back. Claimant was prescribed Vicodin and instructed to self-treat with ibuprofen, heat, and ice. Dr. Malito also instructed claimant to return to Dr. Price and continue with physical therapy.

8. Claimant was seen by Dr. Price on November 6, 2014. At that time, claimant described his attempt to pick up the hose and that "he felt quite weak and he nearly passed out". Dr. Price ordered 12 to 15 sessions of physical therapy to address sacroiliac (SI) joint pain and radiculopathy. Dr. Price also ordered an MRI of claimant's lumbar spine.[1] Claimant returned to Dr. Price on December 4, 2014 and reported that he was doing better. On that date, Dr. Price described the October 15, 2014 incident as an exacerbation of claimant's low back radiculopathy.

9. Claimant was again seen by Dr. Price on March 5, 2015. At that visit Dr. Price opined that claimant would likely "have events at least once a month where he is going to need treatment". At that time, Dr. Price also stated her opinion that the October 15, 2014 incident was not a new injury, but "simply an exacerbation of [claimant's] old injury".

10. On June 2, 2016, Dr. Marc Steinmetz performed a review of claimant's medical records and opined that the October 15, 2014 hose incident was a new injury that caused a permanent aggravation of claimant's condition. In support of this opinion, Dr. Steinmetz notes that claimant was not undergoing physical therapy prior to October 15, 2014. However, following that incident, claimant was referred to physical therapy and had an increase in his need for narcotic pain medications. Therefore, Dr. Steinmetz reasoned that claimant's private medical insurance should be responsible for the October 2014 emergency room visit and other related medical treatment.

11. Based upon the opinion of Dr. Steinmetz, respondents argue that on October 15, 2014 claimant suffered an intervening injury, thus severing respondents' liability for medical treatment. As a result, respondents have denied all medical treatment for claimant since October 15, 2014.

[1] As of the date of Dr. Price's deposition on May 22, 2017, the ordered MRI had not been performed.

12. Dr. Price testified by deposition in this matter. Dr. Price confirmed her opinion that the October 15, 2014 incident was not a new injury, but rather a "re-exacerbation" of claimant's September 19, 2009 work injury. Dr. Price testified that it is "inevitable" that claimant will experience exacerbations of his symptoms.

13. Dr. Price also testified that it is her opinion that claimant has ongoing maintenance medical treatment needs related to the September 19, 2009 work injury. These include continuing to take the medications Lyrica, Zoloft, and tramadol. Dr. Price testified that claimant should receive acupuncture once a month, pool therapy, and a gym pass. In addition, Dr. Price opined that claimant will need 6 to 8 weeks of physical therapy when he experiences a flare-up of his low back symptoms.

14. The ALJ credits the opinions of Dr. Steinmetz over the conflicting opinions of Dr. Price and finds that the October 15, 2014 incident was a new injury to claimant's back and not an exacerbation of claimant's work injury. The ALJ finds that the October 15, 2014 incident resulted in an emergency room visit, physical therapy treatment, and an increase in claimant's use of narcotic medications establish evidence of a new injury. The ALJ also finds that respondents have demonstrated that it is more likely than not that the October 15, 2014 incident constituted an intervening event that severed respondents' liability.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., (2016). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2016).

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as

unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). The need for medical treatment may extend beyond the point of maximum medical improvement where claimant requires periodic maintenance care to prevent further deterioration of his physical condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). Section 8-42-101, C.R.S., thus authorizes the ALJ to enter an order for future maintenance treatment if support by substantial evidence of the need for such treatment. *Grover v. Industrial Commission, supra*.

5. If an intervening event triggers disability or need for medical treatment, then the causal connection between the original injury and the claimant's condition is severed. *See Post Printing & Publishing Co. v. Erickson*, 94 Colo. 382, 384, 30 P.2d 327, 328 (1934). Respondents are only liable for subsequent injuries which "flow proximately and naturally" from the compensable injury. *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970).

6. As found, respondents have demonstrated by a preponderance of the evidence that on October 15, 2014 claimant suffered an intervening event that was sufficient to sever respondents' liability and terminate claimant's maintenance medical care. As found, the opinions of Dr. Steinmetz are credible and persuasive.

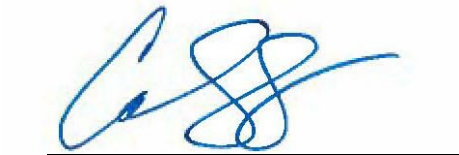
ORDER

It is therefore ordered that:

1. On October 15, 2014 claimant suffered an intervening event that was sufficient to sever respondents' liability and terminate claimant's maintenance medical care.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Dated: November 27, 2017



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

The issues to be determined by this decision are:

1. Whether Claimant proved by a preponderance of the evidence that on February 3, 2016, he sustained a right knee injury or aggravation of his preexisting right knee condition arising out of and in the course and scope of his employment with the Employer; and

2. Whether Claimant proved by a preponderance of the evidence that he is entitled to reasonably necessary medical benefits, including the right knee surgery recommended by Dr. McNair, related to his February 3, 2016 work injury.

FINDINGS OF FACT

Having considered the evidence presented at hearing, the following Findings of Fact are entered.

1. Claimant is a 31 year old man who has been employed by Employer since October 2014. At the time of a right knee injury which is the subject of this claim, Claimant was employed by Employer as a mechanical engineer.

2. On February 3, 2016, Claimant was walking down an icy sidewalk between buildings at work when he slipped on ice and injured his right knee. As a result, Claimant had right knee pain, swelling, and instability. Claimant testified credibly at hearing that when his knee did not improve over the next one to two weeks, he went to the employee health clinic at work and completed an incident report on February 16, 2016. Claimant testified that he was referred to physical therapy but did not start right away because he was waiting for Respondents to get it setup. Claimant testified that while waiting for the physical therapy to begin, he stopped doing physical activity due to right knee pain, swelling and instability.

3. On March 4, 2016, Justin Adams, Occupation Health RN for the Employer, completed a First Report of Injury detailing Claimant's February 3, 2016, injury. Claimant reported he was walking east of building 330 when he slipped on ice and caught himself on a railing. Claimant reported right knee pain and discomfort. Claimant identified Andrew Hayes as a witness to the accident. Claimant reported the injury to the Employer on February 16, 2016.

4. On March 28, 2016, Claimant underwent his first physical therapy appointment at the Functional Performance Center and reported right knee pain (2-6/10) and instability. Claimant reported that when he was injured, his knee twisted to the right while forcefully extended. Claimant report he had mild pain immediately following the injury and that over the next two weeks his symptoms became severe, so much so that he limped and had to limit his time on his feet. Claimant reported he noticed swelling and bruising for about a week after the injury. Claimant also reported several episodes of instability and intermittent episodes of catching and locking. From March 30, 2016, through July 11, 2017, Claimant underwent seven additional physical therapy sessions and consistently reported right knee pain, instability and popping.

5. On April 28, 2016, Claimant treated with Andrew Plotkin, M.D., at the Employer's Wellness Center regarding his right knee injury. Dr. Plotkin recommended a right knee MRI to rule out a meniscus tear.

6. On May 10, 2016, Claimant underwent a right knee MRI, which revealed "subchondral marrow edema in the central weight bearing aspect of the lateral tibia with a grade 4 chondral fissure overlying and grade 3 chondral fissure in the patellar apex with irregularity but no definite full-thickness extension."

7. On May 25, 2016, Claimant treated with Patrick McNair, M.D., an orthopedic surgeon, and reported the nature and mechanism of his injury. Claimant reported right knee pain, stiffness, weakness, and popping and increased symptoms with increased function. Claimant reported he has had persistent right knee pain, locking and catching since the injury. Dr. McNair noted that Claimant's right knee shows signs of an effusion and that he has a significant amount of patellofemoral crepitance. Dr. McNair reviewed the right knee MRI and noted Claimant has a "significant cartilage injury underneath the patella as well as to the articular surface of the lateral tibial plateau with surrounding edema." Dr. McNair added that Claimant "has an interesting MRI for his young age." Dr. McNair recommended a steroid injection to decrease the inflammation associated with the effusion. Dr. McNair noted that if the injection does not provide long lasting relief, then the next option would be surgical intervention. Dr. McNair gave Claimant the injection.

8. On June 6, 2016, Claimant treated with Dr. Plotkin, who noted Claimant has been followed at the Wateron WC clinic for his February 2016 right knee injury, when he slipped on an icy hill. Claimant reported approximately 30% improvement from the right knee injection but continued pain between 2-5/10. Claimant reported that his knee occasionally feels like it is going to give out. Claimant reported he has been active biking, trail running, and cycling. On physical examination, Dr. Plotkin noted mild tenderness of the far lateral joint line with some crepitus. Dr. Plotkin reviewed the right knee MRI and noted the subchondral bone marrow edema on the lateral tibial weight bearing surface. Dr. Plotkin recommended Claimant give it a few more weeks to see how he responds to the injection and to decrease activity. Dr. Plotkin also noted that Claimant is on chronic opiate pain medication due to a jaw surgery, which may mask some of his symptoms.

9. On July 5, 2016, Claimant returned to Dr. McNair and reported the injection benefited him marginally, not significantly, and that he still has right knee pain, instability, and swelling. On physical examination of Claimant's right knee, Dr. McNair noted patellofemoral crepitus, trace effusion, and tenderness over the lateral pole of the patella, as well as the lateral joint line. Dr. McNair opined that before Claimant undergoes any surgery, he needs to undergo a focused physical therapy program. Dr. McNair added that if physical therapy does not work, then he will likely proceed with arthroscopic surgery.

10. On July 7, 2016, Claimant treated with Dr. Plotkin and reported continued, sharp lateral right knee pain and the occasional feeling that his knee is going to give out. Claimant reported that he has noticed some increased right knee pain, which he related to decreasing his opioid pain medication from his jaw surgery. Claimant reported he has not done any trail running in a few weeks. Dr. Plotkin agreed with Dr. McNair that Claimant needed an aggressive physical therapy program.

11. On July 8, 2016, John Raschbacher, M.D., at Respondents' request, he performed a medical records review and opined that Claimant's right knee MRI revealed a chronic condition, no acute injury, that Claimant does not have any acute or discrete findings attributable to the work-related injury and that the recommended surgery is not related to Claimant's work injury.

12. On July 19, 2016, Claimant had a physical therapy appointment and reported right knee pain and instability and that he went for a run and felt increased right knee symptoms. From July 21, 2016, through September 19, 2016, Claimant underwent 10 physical therapy sessions and consistently reported right knee pain, instability and increased pain with increased function.

13. On August 16, 2016, Claimant treated with Dr. McNair and reported continued right knee pain and instability. Claimant reported that his right knee is very painful during and after exercise. Claimant reported his right knee is very painful while bike riding and that he is not able to run. Dr. McNair noted that Claimant had failed conservative management and that Claimant "is not able to do many of the activities he likes to do without pain" and that he is "not able to do any of the activities that he enjoys outside of daily activities." Dr. McNair recommended Claimant proceed with a right knee arthroscopy and chondroplasty and requested authorization from Respondents.

14. On August 24, 2016, Claimant returned to Dr. Plotkin and reported continued right knee pain and increased discomfort with activities such as running. Claimant reported he has decreased his running due to his right knee pain. Dr. Plotkin noted he reviewed Dr. Raschbacher's IME report. Dr. Plotkin opined:

> I am in agreement with Dr. Raschbacher that [Claimant] has significant degenerative chondral fissuring of the right knee that is most likely chronic in nature. I feel it is probable that the chondral fissuring noted on the MRI scan predated the work-related injury on 2/3/2016 and unlikely to have

> resulted from the work injury, given the mechanism of injury. Given [Claimant's] mechanism of injury, presentation and MRI findings, I feel it is most likely that the patient experienced an aggravation of the underlying degenerative process in his right knee. If [Claimant] has had previous evaluation or treatment of his right knee, a review of the medical records would help clarify [Claimant's] preexisting knee pathology and any current recommendations for surgery. Claimant's Exhibit 6, pages 29-30

15. On September 26, 2016, Claimant treated with Dr. Plotkin, who noted Claimant's ongoing right knee issues and maintained Claimant's treatment plan.

16. On January 17, 2017, Respondents filed a Notice of Contest. On January 26, 2017, Claimant applied for a Hearing on compensability and reasonable and necessary medical benefits. On February 24, 2017, Respondents filed a Response to Claimant's Application for Hearing and did not endorse any other issues relevant for purposes of this Order.

17. On April 28, 2017, Dr. Raschbacher performed an IME for Respondents and prepared a report of the same date. Dr. Raschbacher noted Claimant's mechanism of injury, post-injury symptoms, activities and treatment, and preexisting condition as reflected in the right knee MRI. Claimant reported he can only do limited recreational activities and exercising as compared to what he could do prior to the injury. Claimant reported he can only do limited snowboarding, limited biking and running, and limited weight training. These activities are limited due to Claimant's right knee pain, instability, popping and swelling. Claimant denied any prior right knee injuries or treatment. Dr. Raschbacher opined the right knee MRI results revealed a preexisting, non-work related condition and that the mechanism of injury did not produce any significant objective pathology attributable to the date of injury. Dr. Raschbacher opined that no further treatment is related to Claimant's work injury.

18. At hearing, Claimant credibly testified that he works as a senior mechanical engineer for Employer and that his work for Employer is considered classified. Claimant testified that prior to his work injury he was very active. His recreational activities included running, mountain biking, cycling, hiking and snowboarding, among others. Claimant testified that he would cycle approximately two to three days a week, ride his road bike approximately 10 miles per week, and ran a few miles multiple days per week. Claimant testified that prior to February 2016 he never had any injuries, problems or treatment of his bilateral knees and that he never had any issues with his right knee that would limit his ability to snowboard, bike, run or do anything else.

19. Claimant credibly testified at hearing consistent with his reports to Employer and to medical providers. On February 3, 2016, he was walking down a steep, icy sidewalk between buildings at work with a coworker, Andrew Hayes, when he slipped and caught himself on the railing. Claimant testified that after the work injury he stopped snowboarding, cycling and mountain biking until he could start physical therapy. Claimant testified he had to wear a knee brace and his athletic activities were drastically

limited. Claimant testified that he has not returned to the level of physical activity he was capable of prior to his work injury.

20. On September 22, 2017, Dr. Raschbacher testified by post-hearing deposition. Dr. Raschbacher testified as an expert in the field of occupational medicine. Dr. Raschbacher testified Claimant's right knee MRI revealed chondral fissuring, which are lesions in the cartilage. Dr. Raschbacher testified the February 3, 2016, work injury did not cause the chondral fissuring. Dr. Raschbacher testified chondral fissuring is a chronic condition that develops over time. Dr. Raschbacher attributes Claimant's ongoing right knee issues to his chronic condition, not the February 3, 2016, right knee injury. Dr. Raschbacher testified the surgery recommended by Dr. McNair is not reasonable or necessary on a work-related basis.

21. On the other hand, Dr. Plotkin, Claimant's authorized treating physician, attributes Claimant's ongoing right knee problems and need for treatment to the February 3, 2016 incident. Dr. Plotkin opined that the February 3, 2016, incident aggravated Claimant's preexisting, previously asymptomatic right knee condition. Dr. McNair did not perform a causation analysis. His medical reports and treatment recommendations seems to agree with Dr. Plotkin's conclusion that the February 3, 2016 injury aggravated Claimant's preexisting right knee condition.

22. The ALJ finds Dr. Plotkin's opinion, as authorized treating physician, to be more credible and persuasive than Dr. Raschbacher's opinion. The ALJ finds that Claimant proved by a preponderance of the evidence that the February 3, 2016 work injury aggravated Claimant's preexisting right knee condition and that Claimant is entitled to reasonable and necessary medical benefits, including the surgery recommended by Dr. McNair, needed to cure and relieve him from the effects of that injury.

CONCLUSIONS OF LAW

Having entered the foregoing Findings of Fact, the Judge reaches the following Conclusions of Law.

The purpose of the Workers' Compensation Act (Act), Sections 8-40- 101, et seq., C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40- 102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the right of the Claimant nor in favor of the rights of Respondents. § 8-43- 201(1), C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43- 201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc., v. Indus. Claim. Apps. Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witnesses'; testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and

actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Ins. Co. v. Cline*, 57 P.2d 1205, 1209 (Colo. 1936); CJI, Civ. 3:17 (2013).

COMPENSABILITY

A compensable injury is one that arises out of and occurs within the course and scope of employment. Section 8-41- 301(1)(b), C.R.S. An injury occurs in the course of employment when it was sustained within the appropriate time, place, and circumstances of an employee's job function. *Wild West Radio v. Indus. Claim Apps. Office*, 905 P.2d 6 (Colo. App. 1995). An injury arises out of employment when there is a sufficient causal connection between the employment and the injury. *City of Brighton v. Rodriguez,* 318 P.3d 496 (Colo. 2014). Where the claimant's entitlement to benefits is disputed, the claimant has the burden to prove, by a preponderance of the evidence, a causal relationship between the work injury and the condition for which benefits are sought. *Snyder v. Indus. Claim Apps. Office*, 942 P.2d 1337 (Colo. App. 1997). An aggravation of a preexisting condition is compensable. *Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. 1990). If there is a direct causal relationship between the mechanism of injury and resultant disability, the injury is compensable if it caused a preexisting condition to become disabling. *Duncan v. Indus. Claim Apps. Office,* 107 P.3d 999 (Colo. App. 2004). However, there must be some affirmative causal connection beyond a mere assumption that the asserted mechanism of injury was sufficient to have caused an aggravation. *Brown v. Indus. Comm'n*, 447 P.2d 694 (Colo. 1968). It is not sufficient to show merely that the asserted mechanism could have caused an aggravation, but rather Claimant must show that it is more likely than not that the mechanism of injury did, in fact, cause an aggravation. Id.

As found, Claimant proved by a preponderance of the evidence that on February 3, 2016, he injured his right knee in the course and scope of his employment with the employer.

MEDICAL BENEFITS

Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. Section 8-42-101, C.R.S. Nevertheless, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. Section 8-41- 301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Apps. Office,* 12 P.3d 844, 846 (Colo. App. 2000). Claimant must establish the causal connection with reasonable probability but need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Indus. Comm'n*, 491 P.2d 106 (Colo. App. 1971); *Indus. Comm'n v. Royal Indemnity Co.*, 236 P.2d 2993. A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required*. Indus. Comm'n v. Jones*, 688 P.2d 1116 (Colo. 1984); *Indus. Comm'n v. Royal Indemnity Co*., supra, 236 P.2d at 295-296. All results

flowing proximately and naturally from an industrial injury are compensable. *See Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970).

As found, Claimant proved by a preponderance of the evidence that he is entitled to reasonable and necessary medical benefits, including the right knee surgery recommended by Dr. McNair, related to his February 3, 2016, work-related right knee injury.

ORDER

It is therefore ordered that:

1. Claimant proved by a preponderance of the evidence that on February 3, 2016, he sustained a right knee injury arising out of and in the course and scope of his employment with the Employer.

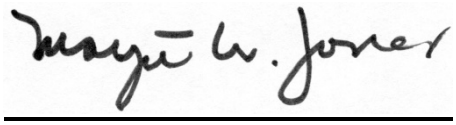
2. Claimant proved by a preponderance of the evidence that he is entitled to reasonable and necessary medical benefits, including the surgery recommended by Dr. McNair, related to his February 3, 2016, work-related right knee injury.

3. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 28, 2017



Margot W. Jones, Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that her right knee, right shoulder and bilateral hip symptoms are causally related to her October 7, 2016 industrial accident.

2. Whether Claimant has proven by a preponderance of the evidence that the proposed PRP injections for her left hip are reasonable, necessary and causally related to her October 7, 2016 industrial accident.

FINDINGS OF FACT

1. Claimant worked for Employer as a Traffic Controller. On October 7, 2016 she was working at a road construction site. Although she flagged an automobile driver to stop, the vehicle did not appear to slow down. Claimant turned and ran but was struck from behind by the vehicle and fell to the ground on her right side. She immediately experienced pain in her neck and lower back.

2. Claimant initially visited HealthOne Occupational Medicine and Rehabilitation for an evaluation. However, she was referred to an emergency room. Claimant underwent x-rays of her lumbosacral and cervical spine that were negative.

3. On October 10, 2016 Claimant returned to HealthOne for an evaluation. After a physical examination Claimant was diagnosed with the following: (1) a lumbosacral contusion; (2) a cervical strain; (3) a right shoulder contusion; and (4) a right knee contusion. HealthOne determined there was a "greater than 51% probability that [the injuries were] work related."

4. On October 24, 2016 Claimant visited Authorized Treating Physician (ATP) Roberta P. Anderson-Oeser, M.D. for an initial consultation. Claimant reported that she was injured on October 7, 2016 when she was struck by a vehicle from behind while working as a Traffic Controller at a construction site. She landed on her right side and experienced immediate pain in her neck and lower back. Claimant noted that during the ensuing days she suffered pain in her right knee, right hip and right shoulder. However, Claimant remarked that her shoulder, hip and knee symptoms were improving and only her lower back pain persisted.

5. Dr. Anderson-Oeser diagnosed Claimant with contusions of the right knee, right shoulder, lower back and pelvis. She also commented that Claimant suffered bilateral sacroiliac joint strains, a cervical strain and muscle spasms. Dr. Anderson-Oeser continued Claimant's physical therapy, home exercise program and modified work duty. She also prescribed medications and a left sacroiliac joint injection.

6. On October 25, 2016 Respondents filed a General Admission of Liability (GAL). The GAL acknowledged that Claimant was entitled to receive medical benefits and Temporary Total Disability (TTD) benefits as a result of her October 7, 2016 accident.

7. On November 9, 2016 Claimant visited Robert Watson, M.D. at HealthOne for an examination. Dr. Watson noted that the visit involved a recheck of Claimant's neck, back, right shoulder and right knee symptoms. He noted that Claimant's neck and back remained fairly sore but her right shoulder and right knee were improving. Dr. Watson also mentioned "a little bit of clicking" in Claimant's right knee but her pain was diminishing. He diagnosed Claimant with the following: (1) a lower back contusion; (2) a cervical strain; (3) a right knee strain; and (4) a right shoulder strain. Dr. Watson recommended physical therapy, massage therapy and medications. He also continued Claimant's work restrictions of only sedentary job duties.

8. On December 5, 2016 Respondents filed a second GAL The GAL recognized that Claimant was entitled to receive medical benefits, TTD benefits for the period October 10, 2016 through November 28, 2016 and Temporary Partial Disability (TPD) benefits from November 29, 2016 until terminated.

9. On January 10, 2017 Claimant returned to Dr. Anderson-Oeser for an examination. Claimant mentioned bilateral hip pain, but was most concerned about her left buttocks and hip area. She noted frequent popping in her left hip with flexion and adduction. Claimant acknowledged that she had not previously reported popping in her left hip.

10. On January 31, 2017 Claimant underwent an MRI of her left hip based on pain and instability. The MRI reflected a "mild cam type of acetabular impingement" and possible "anterosuperior labral tear." Claimant also exhibited mild chondral degeneration and "mild insertional tendinosis on the greater trochanter with mild underlying trochanteric bursitis."

11. On February 16, 2017 Claimant visited orthopedic surgeon John Xenos, M.D. for an evaluation of left hip pain. Claimant noted that her left hip symptoms were acute and began when she was struck by a vehicle at work on October 7, 2016. She emphasized that she had been experiencing continuous left hip pain since the date of her accident.

12. On April 18, 2017 Claimant returned to Dr. Xenos for an examination. Claimant reported that she suffered from swelling, pain, numbness, weakness and stiffness in her left hip area. She commented that her symptoms were aggravated by daily activities. Dr. Xenos diagnosed Claimant with degenerative osteoarthritis of the left hip. He commented that Claimant had received conservative medical treatment, including medications and physical therapy, but had not obtained relief. Dr. Xenos thus summarized that "her current condition represents a precipitation, aggravation and exacerbation of preexisting left hip degenerative joint disease beyond normal progression." He recommended left hip PRP injections and possible surgical intervention in the form of a total hip arthroplasty.

13. On April 28, 2017 Claimant underwent an independent medical examination with Timothy O'Brien, M.D. After performing a medical records review and conducting a physical examination Dr. O'Brien determined that Claimant suffered the following musculoskeletal injuries when she was struck by a vehicle while working for Employer: (1) a minor cervical spine strain/sprain; (2) a minor lumbosacral spine strain/sprain; and (3) a gluteal contusion. He concluded that the October 7, 2016 work accident did not result in a right shoulder injury, right knee injury or bilateral hip injuries. The accident also did not cause a "radiculopathy due to a cervical or lumbar disc herniation."

14. Dr. O'Brien explained that Claimant only complained of neck and lower back pain shortly after the October 7, 2016 accident when she visited the emergency room. She did not mention shoulder, hip or knee pain. Dr. O'Brien reasoned that tissue injuries from a traumatic accident manifest immediately after the event. He remarked that it is nearly impossible to have tissue tears due to energy dissipation and not be aware of the immediate onset of pain. Dr. O'Brien commented that, when tissue tears from trauma, the nerves in the area also tear and the individual recognizes a painful stimuli. He determined that Claimant's delayed onset of pain in the hip, knee and shoulder areas "were all manifestations of her personal health although they were nonorganic in nature." Dr. O'Brien also stated that Claimant has exhibited little objective evidence or findings consistent with a traumatic injury. Instead, Claimant has only mentioned subjective complaints that are not reproducible. Finally, all of Claimant's imaging studies have been normal.

15. In specifically addressing Claimant's right knee and right shoulder complaints, Dr. O'Brien reiterated that the symptoms were not reported until days after the October 7, 2016 accident and thus likely not work-related. Moreover, he commented that in a November 8, 2016 visit with Dr. Watson Claimant exhibited full right shoulder range of motion and provocative testing was normal. Moreover, although there was some clicking in the right knee, Claimant exhibited full range of motion and no objective abnormalities. Accordingly, Dr. O'Brien reasoned that, regardless of causation, Claimant's right knee and right shoulder pain had resolved by November 9, 2016.

16. In discussing Claimant's bilateral hip complaints Dr. O'Brien disagreed with Dr. Xenos' suggestion that she suffered post-traumatic osteoarthritis as a result of the October 7, 2016 accident. Dr. O'Brien explained that the delayed reporting of hip symptoms suggested that Claimant did not suffer a hip injury at work. He thus summarized that Claimant's hip degenerative arthritis "is a personal health issue and not causally related to the work incident." Accordingly, all of Dr. Xenos' treatment recommendations were not causally related to the October 7, 2016 industrial incident.

17. Claimant testified at the hearing in this matter. She explained that she had been suffering from bilateral hip pain since she was struck by a car on October 7, 2016. Claimant noted that her right hip symptoms improved over time but her left hip pain continued. She acknowledged that her right knee and right shoulder symptoms resolved approximately six weeks after her work accident.

18. On October 3, 2017 the parties conducted the post-hearing evidentiary deposition of Dr. O' Brien. Dr. O'Brien maintained that Claimant suffered the following musculoskeletal injuries when she was struck by a vehicle at work: (1) a cervical spine strain/sprain; (2) a lumbosacral spine strain/sprain; and (3) a gluteal contusion. He concluded that the October 7, 2016 work accident did not cause a right shoulder injury, right knee injury or bilateral hip injuries. Dr. O'Brien explained that the delayed onset of pain in the right shoulder, right knee and bilateral hips lacked an anatomic basis and thus the symptoms were not causally related to the October 7, 2016 accident. Furthermore, Dr. O'Brien remarked that Claimant has exhibited migratory pain during her course of medical treatment that did not correlate with her initial injury complaints.

19. Dr. O'Brien reasoned that diagnostic testing revealed Claimant suffers from degenerative changes consistent with her age of 46 years. He specifically determined that Claimant did not suffer an aggravation of a pre-existing degenerative condition when she was struck by a vehicle on October 7, 2016. Dr. O'Brien noted that Claimant would have known whether she aggravated her pre-existing degenerative conditions because she would have experienced pain in affected body parts immediately after the accident. He remarked that there are very specific nerve endings that connect to the brain, and when tissues and nerves tear, there is a painful stimulus sent to the brain that delineates the location of the injury. Because Claimant was able to detect pain in her neck and lower back immediately after the accident, she was capable of experiencing pain in other body parts but failed to report additional symptoms.

20. Dr. O'Brien specifically addressed Dr. Xenos' request for left hip PRP injections. Reasoning that the injections are typically unsuccessful and contraindicated, Dr. O'Brien concluded that the procedure for Claimant was not reasonable and necessary. He remarked that there has been no proof that the injections create new cells in hips and knees. Furthermore, there are no scientific studies demonstrating that PRP injections actually work. Dr. O'Brien also explained that Dr. Xenos' recommendation for a total left hip replacement was premature and additional conservative care is warranted. He reasoned that there is simply no causal link between Claimant's October 7, 2016 industrial incident and left hip symptoms. He more broadly explained that Claimant's right shoulder, right knee and bilateral hip symptoms were not related to her October 7, 2016 work accident.

21. Claimant has failed to demonstrate that it is more probably true than not that her right knee, right shoulder and bilateral hip symptoms are causally related to her October 7, 2016 industrial accident. Initially, Claimant was struck by a motor vehicle while working for Employer on October 7, 2016. She suffered immediate pain in her neck and lower back. Claimant was diagnosed with the following: (1) a lumbosacral contusion; (2) a cervical strain; (3) a right shoulder contusion; and (4) a right knee contusion. By October 24, 2016 Claimant suffered pain in her right knee, right hip and right shoulder. However, she remarked that her shoulder, hip and knee symptoms were improving and only her lower back pain persisted. In fact, on November 9, 2016 Dr. Watson noted that Claimant's neck and back remained fairly sore but her right shoulder and right knee were improving. He diagnosed Claimant with the following: (1) a lower back contusion; (2) a cervical strain; (3) a right knee strain; and (4) a right shoulder strain. On January 10, 2017 Claimant

visited Dr. Anderson-Oeser and mentioned bilateral hip pain, but was most concerned about her left buttocks and hip area. She noted frequent popping in her left hip with flexion and adduction. Claimant acknowledged that she had not previously reported popping in her left hip. A review of the medical records reveals that Claimant was initially diagnosed with contusions and a cervical strain. However, she has reported a myriad of different, intermittent, migrating symptoms that have gradually improved over time. Notably, Claimant did not mention left hip pain until about three months after her October 7, 2016 accident.

22. The persuasive opinion of Dr. O'Brien demonstrates that Claimant's right knee, right shoulder and bilateral hip symptoms are not likely causally related to her October 7, 2016 industrial accident. Dr. O'Brien explained that Claimant suffered the following musculoskeletal injuries when she was struck by a vehicle on October 7, 2016: (1) a cervical spine strain/sprain; (2) a lumbosacral spine strain/sprain; and (3) a gluteal contusion. He concluded that the October 7, 2016 work accident did not result in a right shoulder injury, right knee injury or bilateral hip injuries. Dr. O'Brien explained that the delayed onset of pain in the right shoulder, right knee and bilateral hips lacked an anatomic basis and the symptoms were thus not causally related to the October 7, 2016 accident. He reasoned that diagnostic testing revealed Claimant suffers from degenerative changes in her left hip that are consistent with her age. Dr. O'Brien specifically determined that Claimant did not suffer an aggravation of a pre-existing degenerative condition when she was struck by a vehicle on October 7, 2016. He summarized that Claimant has exhibited migratory pain during her course of medical treatment that did not correlate with her initial injury complaints. Finally, based on a review of the medical records Dr. O'Brien reasoned that, regardless of causation, Claimant's right knee and right shoulder pain had resolved by November 9, 2016.

23. In contrast, Dr. Xenos determined that the October 7, 2016 accident caused an "aggravation and exacerbation of preexisting left hip degenerative joint disease beyond normal progression." He recommended left hip PRP injections and possible surgical intervention in the form of a total hip arthroplasty. Furthermore, Claimant maintained that she has been suffering from bilateral hip pain since the date of the accident. However, the medical records reveal a significant delay in the initial reporting of left hip symptoms. Notably, Claimant did not mention left hip pain until almost three months after her October 7, 2016 accident. The significant temporal delay attenuated any causal connection between the motor vehicle accident and left hip injuries. Attributing Claimant's left hip symptoms to her work accident is thus speculative. Instead, Claimant's left hip complaints more likely constitute the natural progression of her pre-existing degenerative condition. Moreover, Claimant acknowledged that her right knee and right shoulder symptoms resolved approximately six weeks after her work accident. Accordingly, based on the medical records and persuasive opinion of Dr. O'Brien, Claimant has failed to demonstrate that the October 7, 2016 accident aggravated, accelerated or combined with her pre-existing condition to produce a need for medical treatment for her right knee, right shoulder and bilateral hip symptoms.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. For an injury to be compensable under the Act, it must "arise out of" and "occur within the course and scope" of employment. *Price v. Industrial Claim Appeals Office*, 919 P.2d 207, 210 (Colo. 1996). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. § 8-41-301(1)(c) C.R.S.; *Faulkner v. Industrial Claim Appeals Office,*12 P.3d 844, 846 (Colo. App. 2000). The question of causation is generally one of fact for determination by the ALJ. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App.

1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

7. As found, Claimant has failed to demonstrate by a preponderance of the evidence that her right knee, right shoulder and bilateral hip symptoms are causally related to her October 7, 2016 industrial accident. Initially, Claimant was struck by a motor vehicle while working for Employer on October 7, 2016. She suffered immediate pain in her neck and lower back. Claimant was diagnosed with the following: (1) a lumbosacral contusion; (2) a cervical strain; (3) a right shoulder contusion; and (4) a right knee contusion. By October 24, 2016 Claimant suffered pain in her right knee, right hip and right shoulder. However, she remarked that her shoulder, hip and knee symptoms were improving and only her lower back pain persisted. In fact, on November 9, 2016 Dr. Watson noted that Claimant's neck and back remained fairly sore but her right shoulder and right knee were improving. He diagnosed Claimant with the following: (1) a lower back contusion; (2) a cervical strain; (3) a right knee strain; and (4) a right shoulder strain. On January 10, 2017 Claimant visited Dr. Anderson-Oeser and mentioned bilateral hip pain, but was most concerned about her left buttocks and hip area. She noted frequent popping in her left hip with flexion and adduction. Claimant acknowledged that she had not previously reported popping in her left hip. A review of the medical records reveals that Claimant was initially diagnosed with contusions and a cervical strain. However, she has reported a myriad of different, intermittent, migrating symptoms that have gradually improved over time. Notably, Claimant did not mention left hip pain until about three months after her October 7, 2016 accident.

8. As found, the persuasive opinion of Dr. O'Brien demonstrates that Claimant's right knee, right shoulder and bilateral hip symptoms are not likely causally related to her October 7, 2016 industrial accident. Dr. O'Brien explained that Claimant suffered the following musculoskeletal injuries when she was struck by a vehicle on October 7, 2016: (1) a cervical spine strain/sprain; (2) a lumbosacral spine strain/sprain; and (3) a gluteal contusion. He concluded that the October 7, 2016 work accident did not result in a right shoulder injury, right knee injury or bilateral hip injuries. Dr. O'Brien explained that the delayed onset of pain in the right shoulder, right knee and bilateral hips lacked an anatomic basis and the symptoms were thus not causally related to the October 7, 2016 accident. He reasoned that diagnostic testing revealed Claimant suffers from degenerative changes in her left hip that are consistent with her age. Dr. O'Brien specifically determined that Claimant did not suffer an aggravation of a pre-existing degenerative condition when she was struck by a vehicle on October 7, 2016. He summarized that Claimant has exhibited migratory pain during her course of medical treatment that did not correlate with her initial injury complaints. Finally, based on a review of the medical records Dr. O'Brien reasoned that, regardless of causation, Claimant's right knee and right shoulder pain had resolved by November 9, 2016.

9. As found, in contrast, Dr. Xenos determined that the October 7, 2016 accident caused an "aggravation and exacerbation of preexisting left hip degenerative joint disease beyond normal progression." He recommended left hip PRP injections and possible surgical intervention in the form of a total hip arthroplasty. Furthermore, Claimant maintained that she has been suffering from bilateral hip pain since the date of the accident. However, the medical records reveal a significant delay in the initial reporting of left hip symptoms. Notably, Claimant did not mention left hip pain until almost three months after her October 7, 2016 accident. The significant temporal delay attenuated any causal connection between the motor vehicle accident and left hip injuries. Attributing Claimant's left hip symptoms to her work accident is thus speculative. Instead, Claimant's left hip complaints more likely constitute the natural progression of her pre-existing degenerative condition. Moreover, Claimant acknowledged that her right knee and right shoulder symptoms resolved approximately six weeks after her work accident. Accordingly, based on the medical records and persuasive opinion of Dr. O'Brien, Claimant has failed to demonstrate that the October 7, 2016 accident aggravated, accelerated or combined with her pre-existing condition to produce a need for medical treatment for her right knee, right shoulder and bilateral hip symptoms.

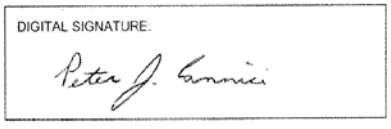
ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's claim for Workers' Compensation benefits for her right knee, right shoulder and bilateral hip symptoms is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: November 28, 2017.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Did Claimant prove by a preponderance of the evidence that Respondent should be penalized for failure to obtain a peer review of Dr. Sung's request for surgery authorization within seven (7) business days?

FINDINGS OF FACT

1. Claimant worked for Employer as a deputy sheriff. He suffered numerous admitted injuries in a serious motor vehicle accident on January 9, 2015.

2. Initial treatment was primarily directed to Claimant's right hip and right shoulder. He had right hip surgery in January 2015, and two right shoulder surgeries, in May 2015 and January 2016 respectively.

3. In 2016, Claimant's neck became an additional focus of treatment. Electrodiagnostic testing in September 2016 showed mild right carpal tunnel syndrome and a possible right C6-7 radiculopathy.

4. Claimant saw Dr. Barry Ogin, an orthopedic surgeon, for an Independent Medical Examination (IME) at Respondent's request on December 7, 2016. Dr. Ogin recommended a cervical MRI and possible injections depending on the MRI results.

5. Claimant had the cervical MRI on December 12, 2016 which showed disc bulges and protrusions at C3-4 through C6-7.

6. On January 3, 2017, Claimant saw Dr. Roger Sung, an orthopedic surgeon, who recommended he try injections before considering surgery.

7. Claimant had trigger point injections with Dr. Sparr which were not helpful. He had an epidural steroid injection that relieved his arm symptoms for several days, but a second epidural steroid injection provided no benefit.

8. Dr. Sung reevaluated Claimant on May 3, 2017 and recommended a C5-7 cervical discectomy and fusion.

9. Dr. Sung's office submitted a surgery preauthorization request dated May 15, 2017. Leslie Cavanaugh, the claims adjuster for Respondent's TPA, received the request on May 24, 2017.

10. On May 30, 2017, Respondent advised Dr. Sung in writing that the surgery was denied because it did not appear reasonable, necessary, or related to Claimant's

industrial injury. The letter stated Respondent planned to request a hearing and seek a second opinion regarding the surgery.

11. Respondent filed an Application for Hearing on June 1, 2017.

12. On June 6, 2017, Respondent requested Dr. Ogin to perform a medical records "peer review" regarding the surgery.

13. Dr. Ogin completed the peer review on June 15, 2017. He agreed the surgery was reasonably necessary and related to Claimant's accident.

14. Claimant filed a Response to Respondent's Application for Hearing on June 22, 2017. He endorsed penalties and included the following language:

> Claimant seeks daily Sec. 8-43-305 penalties for Respondents' continuing violation of WCRP 16-11(B). No review medical report within 7 business days. From 6/5/17 on.

15. For unknown reasons, Dr. Ogin's report was not sent to Respondent until Friday, July 14, 2017. On Monday, July 17, Ms. Cavanaugh tried to fax Dr. Sung's office advising the surgery was approved. The fax transmission was unsuccessful because Ms. Cavanaugh inadvertently used area code 970 rather than 719. Ms. Cavanaugh did not review the fax transmission report and was unaware that the transmission had failed.

16. The next day, on July 18, Respondent's counsel notified Claimant's counsel via email that Respondent would authorize surgery based on Dr. Ogin's report.

17. Respondent's counsel notified Dr. Sung in writing on August 2, 2017 that surgery was approved. Claimant ultimately had surgery on October 3, 2017.

18. On August 23, 2017, ALJ Lamphere granted Claimant's Motion for Summary Judgment on the issue of whether surgery was automatically authorized under Rule 16. ALJ Lamphere noted WCRP 16-11(B) required Respondent to obtain a peer review of the preauthorization request within seven (7) business days of receiving the request even though they had timely requested a hearing. ALJ Lamphere held that the deadline to obtain the peer review expired on June 5. Since Respondent did not request the peer review until June 6, they missed the deadline by one day. Therefore, ALJ Lamphere held the surgery was automatically authorized by WCRP 16-11(E) and ordered Respondent to pay for the surgery and ancillary treatment.

19. Ms. Cavanaugh testified at hearing on behalf of Respondent. She had arranged for Dr. Ogin to perform a peer review rather than schedule an IME because she thought it would be the quickest way to evaluate whether the proposed surgery was reasonable, necessary and related. Ms. Cavanaugh knows Rule 16 requires a peer review within seven business days of a request for preauthorization. Ms. Cavanaugh offered no specific reason for the delay in obtaining the peer review. There is no persuasive evidence of malicious intent or other improper motive, and the ALJ infers that the delay was inadvertent and due to oversight.

CONCLUSIONS OF LAW

At hearing, Claimant indicated he was seeking penalties under the "general penalty" provision at § 8-43-304(1), which provides:

> Any employer or insurer . . . who violates any provision of [the Workers' Compensation Act], or does any act prohibited thereby, or fails or refuses to perform any duty lawfully enjoined within the time prescribed by the director or panel, for which no penalty has been specifically provided, or fails, neglects, or refuses to obey any lawful order made by the director or panel or any judgment or decree made by any court as provided by said articles shall be . . . punished by a fine or not more than one thousand dollars per day for each such offense . . . .

The assessment of penalties is governed by an objective standard of negligence and involves a two-step analysis. The ALJ must first determine whether the insurer or employer violated the Act, a rule, or an order. Second, the ALJ must determine whether the violation was objectively reasonable. *Pioneers Hospital v. Industrial Claim Appeals Office*, 114 P.3d 97 (Colo. App. 2005); *Diversified Veterans Corporate Center v. Hewuse*, 942 P.2d 1312 (Colo. App. 1997); *City Market, Inc. v. Industrial Claim Appeals Office*, 68 P.3d 601 (Colo. App. 2003).

Whether the insurer's conduct was objectively reasonable presents a question of fact for the ALJ. *Pioneers Hospital v. Industrial Claim Appeals Office,* 114 P.3d 97 (Colo. App. 2005). A party establishes a *prima facie* showing of unreasonable conduct by proving that an insurer violated the statue or a rule of procedure. If the claimant makes a *prima facie* showing, the burden shifts to the respondents to show their conduct was reasonable under the circumstances. *Pioneers Hospital v. Industrial Claim Appeals Office, supra*; *Human Resource Co. v. Industrial Claim Appeals Office,* 984 P.2d 1194 (Colo. App. 1999).

An insurer acts unreasonably if it fails to take action that a reasonable insurer would take to comply with the statute, a rule or an order. *Pioneers Hospital, supra*. To be objectively reasonable, an insurer's actions (or inaction) must be predicated on "a rational argument based in law or fact." *Diversified Veterans Corporate Center v. Hewuse, supra*. Since the analysis involves an objective standard of reasonableness, the claimant does not have to show the insurer knew or should have known its actions were unreasonable. *Pueblo School District No. 70 v. Toth,* 924 P.2d 1094 (Colo. App. 1996).

Section 8-43-304(4) provides that any application for hearing on penalties "shall state with specificity the grounds on which the penalty is being asserted." The requirement to describe the basis for the penalty claim "with specificity" is an exception to the general notice pleading rules that otherwise apply to workers' compensation hearings. The specificity requirement serves two functions. First, it notifies the alleged violator of the basis of the claim so it may cure the violation within the statutory time frame. Second, it ensures the alleged violator receives notice of the legal and factual bases for the penalty claim to protect its due process rights to present evidence, confront adverse evidence,

and present argument to support its position. *Jakel v. Northern Colorado Paper, Inc.*, W.C. No. 4-524-991 (October 6, 2003). The party seeking a penalty must plead the appropriate statutory section or rule justifying the penalty claim. *Carson v. Academy School District 20*, W.C. No. 4-439-660 (April 28, 2003).

A penalty claim may be dismissed if it does not state the grounds for the alleged penalty with sufficient specificity. *E.g*., *Maragara v. Xerox Business Services*, W.C. No. 4-946-815-02 (January 27, 2015); *Young v. Bobby Brown Bail Bonds*, *Inc.*, W.C. No. 4-632-376 (April 7, 2010); *Marcelli v. Echostar Dish Network*, W.C. No. 4-776-535 (March 2, 2010).

Claimant's June 22, 2017 Response to Application for Hearing stated:

> Claimant seeks daily Sec. 8-43-305 penalties for Respondents' continuing violation of WCRP 16-11(B). No review medical report within 7 business days. From 6/5/17 on.

The ALJ agrees with Respondent that Claimant did not plead his penalty claim with sufficient specificity. The point of the specificity requirement is to ensure the opposing party can readily and clearly ascertain *from the initial pleading* the exact factual and legal theory upon which the penalty claim is based. But Claimant's application invoked no specific provision of the Act which imposes a penalty. Rather, he only cited § 8-43-305, which contains no penalty. Section 8-43-305 merely provides that every day during which an insurer violated an order constitutes "a separate and distinct violation," and that any penalty elsewhere provided in the Act shall be "cumulative." Although Claimant described of the conduct he believes should be penalized, *i.e*., failing to obtain a peer review within seven business days, he did not state what penalty he is requesting.

This ICAO addressed this issue in *Jordan v. Rio Blanco Water Conservancy District*, W.C. No. 4-937-000-01, and held that a party seeking penalties under the general penalty provision must explicitly cite § 8-43-304(1). Noting that the Act contains a variety of penalty sections, the Panel held:

> A statement of the particular penalty remedy sought is a critical element of the grounds for the penalty claim. The direction that the specific grounds for the penalty be identified in the application would include specification of the penalty sought to be applied . . . . The claimant's pleading regarding a penalty claim was deficient to the extent it did not identify § 8-43-304(1) as the statutory penalty section for which she sought a penalty . . . .

The discussion in *Jordan* is directly applicable to Claimant's penalty claim and persuades the ALJ Claimant failed to satisfy the specificity requirement. Accordingly, the request for penalties under § 8-43-304(1) should be dismissed.

ORDER

It is therefore ordered that:

1. Claimant's request for penalties is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 29, 2017

Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-022-847-03

ISSUES

- Whether Claimant has proved by a preponderance of the evidence that the L4-5 lumbar decompression recommended by Andrew Castro, M.D., Allison Fall, M.D. and John Burris, M.D. is reasonable and necessary to cure and relieve the effects of Claimant's industrial injuries.

- Whether the L4-5 lumbar decompression surgery is reasonable necessary and related to the October 13, 2014, or March 23, 2016, worker's compensation claims.

- Whether Claimant proved by a preponderance of the evidence that W.C. No. 4-977-514 should be reopened for a worsened condition.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant has worked as a bus driver for Employer since 2008.

2. On October 13, 2014, Claimant sustained work-related injuries to his low back when he slipped and fell on the wet bathroom floor while working for Employer. Thereafter, Claimant experienced low back and left leg pain.

3. On October 16, 2014, Claimant was evaluated by Michelle Honsinger, PA-C at Concentra. Claimant advised Ms. Honsinger that he slipped and fell on the wet bathroom floor at work on October 13, 2014, and that he landed on his back. Claimant reported that he sought treatment because his pain was not improving and even worsening. Claimant reported low back pain that radiated into his left buttock and left thigh with a pain level of 7/10.

4. On October 23, 2014, Claimant returned to Concentra and reported that he continued to suffer from back pain that shot down his left leg.

5. On November 6, 2014, Claimant was evaluated by Glenn Petersen, PA-C, at Concentra. Claimant advised Mr. Petersen that he continued to experience low back pain that radiated into his left leg and that there was no change in symptoms despite therapy. Accordingly, Mr. Peterson recommended that Claimant undergo an MRI of his lumbar spine.

6. On November 12, 2014, Claimant underwent his first lumbar spine MRI which demonstrated:

   1) *Small broad-based disc protrusion at L4-5, resulting in mild central canal stenosis and moderate bilateral foraminal compromise but as yet,* ***no exiting nerve root deformity****.*
   2) ***Other disc levels remain normal from T11-12 to L5-S1****.*

3) *No osseous trauma or spondylolisthesis. No evidence of a spinal infection or bone tumor.*
4) *No abnormal distal thoracic cord signal or syrinx.*

7. Claimant returned to Concentra on November 13, 2014, at which time it was noted that Claimant did not suffer from muscle pain, neck pain, joint swelling, joint stiffness, muscle weakness or night pain.

8. On November 18, 2014, Claimant was examined by Lacie Esser, PA-C, at Concentra who noted Claimant's MRI findings which demonstrated a small broad-based disc protrusion at L4-L5 with moderate bilateral foraminal encroachment. Ms. Esser noted Claimant's complaints of back pain that radiated down to his left leg. Ms. Esser stated that she would like to send Claimant for a spine consultation to see if he would be a candidate for an epidural steroid injection ("ESI").

9. On December 4, 2014, Gary Ghiselli, M.D. at Denver Spine Surgeons evaluated Claimant and reported that he had been working non-operatively without pain relief with back pain that radiated into his left leg. Dr. Ghiselli found that Claimant had minimal leg symptoms and no weakness on exam. After his physical exam and review of the MRI, Dr. Ghiselli opined that, "**We do not feel that surgery is necessary at this time**. We have recommended that he see a Physiatrist to maximize all non-operative treatment including possible injections to help therapeutically and diagnostically. He can return to see us if surgical evaluation needs to be done again. However, currently we do not feel that surgery would benefit him."

10. On December 4, 2014, Claimant also saw Glenn Petersen, PA-C, at Concentra after his consultation with Dr. Ghiselli. Mr. Petersen noted that Claimant continued to experience back pain that radiated down his left leg and that Dr. Ghiselli only advised him to consult with a physiatrist for possible injections.

11. Claimant was evaluated by physiatrist, Rick Zimmerman, D.O. on January 7, 2015. Claimant reported ongoing low back. **Dr. Zimmerman's straight leg raise and neural tension were negative bilaterally**. Dr. Zimmerman also noted no specific tenderness in the SI joints, sciatic notches or greater trochanters bilaterally. After review and examination, Dr. Zimmerman performed Claimant's first bilateral L4-5 transforaminal ESI. After performing the ESI, Dr. Zimmerman noted that in the recovery room, Claimant stood, flexed and extended his lumbar spine and reported no low back pain. Claimant demonstrated improved range of motion reaching down to his lower shins and eventually touching his ankles, which was a functional improvement compared to his pre-injection ability to reach to his upper shins with his fingertips. **Dr. Zimmerman officially considered it a diagnostic response to the ESI**.

12. On February 9, 2015, thirty-four days after undergoing his first ESI, Claimant was evaluated by Allison Fall, M.D. at Concentra. Claimant reported that he was doing well, able to do his independent home exercise program and that he had no pain. Claimant also advised Dr. Fall that he was still under restrictions but stated that he did not really need them. Dr. Fall's examination revealed that forward flexion, extension

and right and left lateral bending were full and pain-free and that there were **no radicular signs**. Dr. Fall's final impression was that Claimant suffered from an **asymptomatic L4-5 disc protrusion** and she discharged him from care and released him to full duty. Dr. Fall opined that there was **no impairment or indication for work restrictions**.

13. On February 26, 2015, Claimant was involved in a non work-related motor vehicle collision.

14. On February 27, 2015, Claimant presented to Denver Health Medical Center Emergency Room and was evaluated by Cecilia Sorensen, M.D. Dr. Sorensen reported that Claimant was status post a motor vehicle collision from the day before as a restrained driver with no airbag deployment and that Claimant's car was drivable after the collision. Dr. Sorensen stated that after Ibuprofen and Tramadol was administered, his only complaints were of neck pain and headaches. Specifically, that Claimant was complaining of left lateral neck pain. Dr. Sorensen determined that Claimant did not warrant any imaging studies. Most notably, Dr. Sorensen noted that Claimant reported whiplash and **denied incontinence, weakness, tingling or any other pain**. Dr. Sorensen's official diagnosis was that Claimant suffered from upper back pain and discharged him after Motrin was administered. The Nursing Notes also state that Claimant was medicated with Motrin and observed to be ambulatory with a steady gait from the Emergency Department.

15. On March 4, 2015, six days after the motor vehicle collision, Claimant consulted with J. Stephen Gray, M.D. at Lakewood Injury Treatment Center. Claimant's chief complaints were headaches, neck pain and left low back pain with lower extremity symptoms. Dr. Gray noted Claimant's statement that upon impact, he was slammed, thrown forward and caught by the seatbelt which slammed him backwards and to the left where he hit the left side of his head on the post of the jeep. Claimant advised Dr. Gray that he did not lose consciousness but that he did experience immediate left-sided head pain. Dr. Gray noted that Claimant had some improvement in neck pain and minimal improvement in his low back pain. Most notably, Claimant graded his neck pain and 3-4/10 and his back pain at 7/10. Claimant informed Dr. Gray that he had been treated in the past several months for a prior work-related low back injury and that he had an MRI showing a disc protrusion. Claimant reported some aching pain down into his left posterolateral thigh area but specified that, "This does not go down to his knee and has not since the accident." Dr. Gray noted that in Claimant's prior work-related care, he had the same left-sided posterolateral leg pain, and for that reason, underwent one ESI. Dr. Gray reviewed Claimant's MRI and agreed that prior to the motor vehicle collision, his MRI demonstrated a, "small broad-based disc protrusion at L4-5." Dr. Gray's primary assessment was that Claimant suffered from a scalp contusion, mild concussion, cervical strain and exacerbation of pre-existing low back pain with recurrence of left lower extremity symptoms, probably referred. Dr. Gray ordered X-rays of Claimant's cervical and lumbar spine and a repeat MRI of his low back to rule out a worsening of his preexisting broad-based disc protrusion at L4-5.

16. Claimant returned Concentra on March 11, 2015, where he was evaluated by Rosalie Einspahr, N.P. Claimant informed Ms. Einspahr that he suffered from neck, low back and left leg pain. Due to the exacerbation of Claimant's preexisting low back and left leg pain, Claimant was referred back to Dr. Fall.

17. On March 13, 2015, Claimant underwent a second lumbar spine MRI which now demonstrated:

> *L1-L2: No disc herniation, foraminal narrowing, or spinal stenosis.*
>
> *L2-L3: No disc herniation, foraminal narrowing, or spinal stenosis.*
>
> *L3-4: There is mild bilateral facet hypertrophy. There is no focal disc herniation or central canal stenosis. A component of relatively mild bilateral neural foraminal narrowing is noted but there is no significant nerve impingement.*
>
> *L4-5: There is relatively mild bilateral facet hypertrophy. There is mild disc desiccation. There is a shallow broad-based posterior disc protrusion and annular fissure, slightly asymmetric to the left. This contacts and abuts the descending bilateral L5 nerve roots, slightly greater on the left than right. There is no significant central canal stenosis. There is mild to moderate left and relatively mild right sided foraminal narrowing.*
>
> *L5-S1: There is relatively mild bilateral facet hypertrophy. There is no significant disc herniation. No central canal stenosis. No significant foraminal narrowing.*
>
> *IMPRESSION:*
>
> *Mild degenerative disc disease and facet hypertrophy of the lumbar spine, greatest at L4-L5. A shallow broad-based posterior disc protrusion and annular fissure at L4-L5 abuts the descending L5 nerve root, slightly greater on the left than right. There is relatively mild left greater than right L4-5 neural foraminal narrowing.*

This imaging report was subsequently amended with ADDENDUM #1 which stated:

> *Request for addendum has been made to compare with a previous spine MRI from 11/12/2014, which is now available for comparison. The broad-based posterior* ***disc protrusion at L4-L5 is slightly improved and decreased in size in the interval****. No other significant interval changes have occurred.*

18. Claimant returned to Dr. Gray at Lakewood Injury Treatment Center on March 25, 2015, and advised Dr. Gray that he continued to have moderately severe neck pain and moderate low back pain that ran down to the posterolateral aspect of his left leg to his knee. Upon review of Claimant's most recent MRI, Dr. Gray stated, "It

should be noted that in comparing this with the previous MRI there did not appear to be any significant changes. We will ask Dr. Fall to look at these two MRIs and help us differentiate whether there are any new findings. Again, **to this examiner's eye, there is no significant difference in these films**." On examination of Claimant's lumbar spine, Dr. Gray stated that there was no evidence of spasm, erythema, edema or step-off. Dr. Gray also found that Claimant's legs were neurovascularly intact. Dr. Gray referred Claimant for chiropractic care and advised him to follow-up with Dr. Fall to discuss the possibility of a repeat epidural steroid injection.

19. On April 22, 2015, Claimant was re-evaluated by Dr. Gray who reported that Claimant continued to complain of low back pain with left lower extremity symptoms that remained unchanged since their last visit. Claimant reported that his neck pain was improving and denied any new symptomatology. Claimant did not report new symptomatology in his legs and denied any bowel or bladder incontinence, dysfunction, or urinary retention. Dr. Gray's examination of Claimant's lumbar spine revealed no evidence of spasm, erythema, edema, step-off or significant abnormal curvature. Dr. Gray also noted that there was no localized tenderness to palpation of Claimant's lumbar spine. Dr. Gray recommended that Claimant continue with chiropractic care, physical therapy and massage twice a week.

20. Claimant returned to Dr. Gray on May 13, 2015, where he continued to complain of left-sided low back pain and left leg pain. Claimant advised Dr. Gray that his pain improved somewhat since their last visit. Dr. Gray noted that Claimant would not be allowed to see Dr. Fall under his prior work-related claim and other than relatively mild neck discomfort, Claimant denied any new symptomatology. Dr. Gray continued to recommend that Claimant see a physiatrist to determine whether an epidural steroid injection or some sort of injection therapy would be appropriate and that he was to follow-up with his work comp doctor regarding his injuries as well.

21. Claimant was evaluated by Kirk Holmboe, D.O. at Concentra on May 13, 2015. On this date, Dr. Holmboe released Claimant from care and found that he reached maximum medical improvement for his 2014 work-related injuries. Dr. Holmboe stated, "At this point I will release him from care for his work related injury as he was doing quite well when last seen by Dr. Fall and she imposed no restrictions and did not assign any impairment. Further care will have to come through his or other drivers auto insurance."

22. On May 19, 2015, Claimant was evaluated Yusuke Wakeshima, M.D. Claimant advised Dr. Wakeshima that his current symptoms were posterior neck pain and upper back region pain, which Dr. Wakeshima determined to be 100% related to the 2015 MVA. Claimant also reported low back pain with left posterior thigh and leg pain with no lower extremity weakness, bowel or bladder dysfunction. Dr. Wakeshima acknowledged Claimant's history of a preexisting low back injury with corresponding left leg symptoms and stated that he would request notes from Dr. Fall as well as Dr. Holmboe to review and determine what percentage of his symptoms were related to the 2015 MVA and what percentage were related to the 2014 work injury. Dr. Wakeshima

planned to see Claimant back to discuss apportionment of his lumbar spine region and future treatment plans based on his review of the MRI studies.

23. Claimant returned to Dr. Wakeshima on June 2, 2015, and reported pain in his low back, left leg, neck and upper back. Dr. Wakeshima reviewed Claimant's prior lumbar MRI studies and noted that his review of the MRI on November 12, 2014, before the MVA and after his first work-related injury reported only a small broad-based disc protrusion with mild central canal stenosis and moderate bilateral foraminal compromise with no exiting nerve root deformity. Dr. Wakeshima opined that on his over-read of the 2014 MRI, there was facet arthrosis appreciated at multiple levels as well as an annular tear. Accordingly, Dr. Wakeshima opined that Claimant's MRI findings before and after the non work-related MVA **probably did not significantly change despite contrasting reports**. Dr. Wakeshima planned to have Claimant take his 2015 MRI films back to Advanced Medical Imaging so they could compare it to their 2014 MRI to determine if there were any real significant interval changes from his lumbar spine MRI before and after the 2015 MVA. However, it was Dr. Wakeshima's opinion that he did not observe a significant interval changes between Claimant's 2014 and 2015 MRIs. Most notably, Dr. Wakeshima stated, **"Upon my over-read of the MRI films from November 12, 2014, I am not really seeing that much difference that the MRI of March 13, 2015 and I would like to confirm whether there has been no significant interval change."**

24. Dr. Wakeshima re-evaluated Claimant on June 16, 2015, and stated that since his last evaluation, Claimant did not report any change in his neck and low back pain symptoms, specifically that his neck was now as equally as painful as his low back. On this date, Dr. Wakeshima was still without Claimant's 2014 work injury records. In the absence of medical records and based purely on Claimant's subjective responses and answers, Dr. Wakeshima opined that 60% of his ongoing low back pain was related to the MVA of February 26, 2015, and that 40% was preexisting and related to the work injury on October 13, 2014. Dr. Wakeshima recognized that he would need to re-address this apportionment after Claimant's 2014 and 2015 MRIs were properly compared and contrasted by Advanced Medical Imaging. Dr. Wakeshima stated, "**I would like to see him one more time to obtain the radiologist's inputs regarding comparison MRI studies as well as review Dr. Fall's notes, and determine what was accomplished in the past and how severe his pain was prior to his motor vehicle accident.**"

25. On June 30, 2015, Claimant returned to Dr. Wakeshima and reported no significant change in his pain symptoms. Specifically that he still experienced pain in his lower neck, low back and left leg. Dr. Wakeshima noted that Claimant was able to have his lumbar MRI imaging studies over-read to compare and contrast any significant interval changes between the 2014 and 2015 MRIs. Dr. Wakeshima stated, "**They did compare the MRI from March 13, 2015 with an MRI on November 12, 2014 and it did report that there was a broad-based posterior disc protrusion at L4-5 that has slightly improved and decreased in size in the interval. No significant interval change has occurred.**" Dr. Wakeshima also had notes from Dr. Holmboe available to him for review. Dr. Wakeshima noted that Dr. Holmboe's last note indicated he was at

MMI. Dr. Wakeshima opined that Claimant would benefit from undergoing electrodiagnostic studies to make sure there was no radiculopathy. In terms of Claimant's neck and low back pain, Dr. Wakeshima wanted him to undergo a course of chiropractic treatment with acupuncture times six sessions each to see if it improved his pain symptoms. With regard to treatment of Claimant's low back, Dr. Wakeshima stated, "**His MRI studies of the lumbar spine and cervical spine did not demonstrate any major pathology that would lead one to suspect that spine surgical intervention currently is indicated.**"

26. On July 14, 2015, Claimant presented to Wayne Hoffman, D.C. per Dr. Wakeshima's referral. Dr. Hoffman reported Claimant's chief complaints of neck pain, mid back pain, low back pain and that his progress had stagnated. On physical exam, Dr. Hoffman performed orthopedic testing which most notably included a Lasègue's test which was negative bilaterally. Dr. Hoffman also performed a **straight leg test to diagnose lumbosacral radiculopathy which was also negative bilaterally,** demonstrating that Claimant did not reproduce a pain pattern in his bilateral lower extremities when tested for lumbar radiculopathy.

27. On July 21, 2015, Claimant returned to Dr. Hoffman and advised him that he was still experiencing cervical pain at a 3/10 level, no mid back pain at all and improved low back pain at 3/10. Dr. Hoffman assessed that Claimant's cervical spine improved, that his thoracic pain resolved and that his lumbar spine was improved as well.

28. On July 21, 2015, Claimant was also evaluated by Bethany Wallace, M.D. at Lakewood Injury Treatment Center. Claimant advised Dr. Wallace that he was getting better, that his left leg pain was receding and not as intense or consistent and that he still had stiffness in his neck and low back. Claimant reported that if he sat for a long time, it aggravated his left leg. Most notably, Dr. Wallace noted that Claimant was getting much better after the slip and fall at the time Dr. Fall evaluated him on February 9, 2015, just prior to his 2015 MVA. Dr. Wallace also noted Claimant's reports that he no longer needed assistance to stand up and that **he was not interested in injections or surgery**. Claimant reported that, "He is pleased that the chiropractic and the acupuncture, have helped a lot." **Dr. Wallace also performed another straight leg test which was negative** for a reproduced pain pattern in his lower extremities. Dr. Wallace merely recommended that Claimant continue physical therapy, massage therapy, chiropractic and acupuncture and that he could consider spinal surgery for the lumbar disc problem and sciatica. Dr. Wallace did not request authorization for a second epidural steroid injection nor did she request authorization for spinal surgery. Claimant's low back and left leg symptoms had much improved and he was not interested in pursuing further treatment on his low back. Dr. Wallace's one-time evaluation was done under the auspices of a consultation, not a surgical recommendation.

29. On December 8, 2015, Claimant underwent a Division Independent Medical Examination with Jade Dillon, M.D. for evaluation of his October 13, 2014, work injury. Dr. Dillon noted that Claimant's MRI on November 12, 2014, only demonstrated a small broad-based disc protrusion at L4/5 with mild central canal stenosis and moderate

bilateral foraminal compromise with no focal nerve root deformity. She also noted Claimant's neurosurgical evaluation by Dr. Ghiselli on December 14, 2014, wherein Dr. Ghiselli found that Claimant was not a surgical candidate as it related to his 2014 work injuries. Dr. Dillon relied on Dr. Fall's report dated February 9, 2015, which reflected a good response to the first epidural steroid injection on January 7, 2015. Dr. Dillon also agreed with Dr. Holmboe's assertion that Claimant reached MMI for the 2014 work injuries to his low back and left leg. Absent the second subsequent intervening event on March 23, 2016, Dr. Dillon could only conclude that Claimant's increased low back pain and left leg symptoms were due to the non work-related MVA on February 26, 2015. Thus, Dr. Dillon concurred with Dr. Holmboe that Claimant reached MMI on May 13, 2015, for his 2014 work injuries and that his low back pain and left leg symptoms were not ratable conditions; therefore assigning a 0% impairment rating.

30. Aside from DIME Dr. Dillon's finding that Claimant reached MMI on his 2014 low back and left leg conditions, and that Claimant's low back and left leg symptoms were not ratable conditions, Dr. Dillon recorded that as of December 8, 2015, Claimant's symptoms remained isolated to his low back and left leg. Additionally, Dr. Dillon recorded that Claimant moved well with normal gait, stance and balance and, most notably, that her straight leg raising test was negative bilaterally. Dr. Dillon concluded that Claimant merely suffered from a lumbar strain as a result of the occupational injury on October 13, 2014, which she found to go on to good recovery with conservative treatment.

31. On March 23, 2016, Claimant was involved in a second motor vehicle accident while driving a bus for Employer.

32. As the DIME provided no medical treatment, Claimant received no medical treatment for his low back from July 21, 2015, until after his March 23, 2016 accident. This is a period of over 9 months of no treatment.

33. On March 31, 2016, Claimant returned to Concentra and was evaluated by Catherine Hunt, P.A. Ms. Hunt noted Claimant's description of the work-related motor vehicle accident on March 23, 2016, stating that, "Patient reports he was driving a bus and another car was hit, which then lost control and hit the front of the bus with the front of their car. Patient states he was driving about 20 mph at time of impact and was restrained." Ms. Hunt recorded Claimant's chief complaint to be low back pain. Claimant's pain diagram dated March 31, 2016, reveals that, in contrast to all of his prior complaints of low back and left leg pain, Claimant now documented increased low back pain with stabbing pain that radiated into *both* legs.

34. On April 20, 2016, Claimant returned to Concentra and was evaluated by Valerie Skvarca, PA-C. Ms. Skvarca noted that Claimant was still complaining of left-sided low back pain at 6/10. Claimant was forthright in advising Ms. Skvarca that he had a previous history of back injuries and therefore asked for a repeat lumbar spine MRI.

35. On April 29, 2016, Claimant underwent a third lumbar spine MRI read by Bao Nguyen, M.D. which revealed:

1. *Moderate bilateral L4-5 neuroforaminal stenosis and mid central spinal canal stenosis at this level owing to a broad-based protrusion.*
2. *Minor central disc bulge at L5-S1.*

36. Dr. Nguyen filed an addendum to the April 29, 2016, MRI report which stated:

COMPARISON: MRI 11/12/2014

No interval change is appreciated in comparison to the prior MRI exam of 2014.

37. Claimant returned to Concentra on May 5, 2016, and was evaluated by Nickolas Curcija, PA-C. Claimant advised Mr. Curcija that his pain was unimproved despite therapy or medications and that he had been experiencing cramps in *both* legs at night. Mr. Curcija performed a positive straight leg test. Claimant's corresponding pain diagram also documents his ongoing reports of low back pain and bilateral leg pain.

38. On May 19, 2016, Claimant returned to Concentra and was re-examined by Mr. Curcija who specifically noted that, "The patient presents today with recheck back pain radiating down to legs." Another positive straight leg test was performed and again, Claimant's pain diagram continued to document low back pain and bilateral leg pain.

39. Claimant returned to Dr. Fall on May 20, 2016. Although Dr. Fall acknowledged that Dr. Nguyen noted no interval change between the 2014 MRI and 2016 MRI, Dr. Fall found that, in contrast to the 2014 MRI, the 2016 MRI demonstrated moderate bilateral L4-5 neuroforaminal stenosis and mid central spinal canal stenosis due to a broad-based disc protrusion. Dr. Fall stated that Claimant continued to report low back and bilateral leg symptoms and that he was now experiencing parasthesias down *both* legs. Another positive straight leg test was performed and Dr. Fall opined that Claimant had radicular findings consistent with his 2016 MRI. Dr. Fall therefore recommended that Claimant undergo *bilateral* L4-5 transforaminal steroid injections.

40. On June 9, 2016, Claimant returned to Concentra and was re-examined by Mr. Curcija who noted that Claimant was still waiting for his bilateral L4-5 transforaminal steroid injections and that therapy was increasing his pain symptoms. Mr. Curcija reported that Claimant's pain level was 6/10 and that it was located in the low back bilaterally with pain radiating to his bilateral calves. Mr. Curcija also noted that Claimant was experiencing weakness in his both legs.

41. Claimant returned to Dr. Fall on June 10, 2016, and reported that he had a return of symptoms with pain radiating down both legs. Dr. Fall noted that Claimant's bilateral L4-5 transforaminal steroid injections were still pending and, in contrast to her diagnosis of an asymptomatic L4-5 disc protrusion for the 2014 injury, Dr. Fall now found that Claimant suffered from left greater than right L4 radiculitis. Dr. Fall stated that she would await the results of the bilateral L4-5 transforaminal steroid injections.

42. On June 17, 2016, Claimant was evaluated by Robert Kawasaki, M.D. Dr. Kawasaki stated that Claimant was still experiencing low back pain, bilateral thigh region pain, calf cramps and numbness and tingling in his left leg. Dr. Kawasaki then performed right L4-5 transforaminal steroid injections with L4 spinal nerve root block and left L4-5 transforaminal steroid injections with L4 spinal nerve root block.

43. On June 23, 2016, Claimant returned to Concentra and was re-evaluated by Mr. Curcija. Six days had passed since Claimant underwent bilateral L4-5 transforaminal steroid injections and L4 spinal nerve root blocks; however, Claimant continued to report back pain that radiated into *both* legs and that he did not feel any symptom relief following the injections as he continued to have pain at 6/10 in his low back that radiated down to both legs and into his calves. Mr. Curcija performed another positive straight leg test which caused a pulling sensation in Claimant's lower extremity. Again, Claimant's corresponding pain diagram indicates that he continued to report low back pain and bilateral leg pain.

44. Claimant returned to Dr. Fall on June 24, 2016, one week after his bilateral L4-5 transforaminal steroid injections and L4 spinal nerve root blocks, and continued to report no change in symptoms. Dr. Fall noted that the injection he received as a result of his 2014 worker's compensation claim was the only thing that helped that the second set of injections did not change anything. Claimant continued to report pain down both legs and that he was even experiencing numbness in his posterior calf. Accordingly, Dr. Fall recommended an electrodiagnostic evaluation of Claimant's left leg to rule out radiculopathy.

45. On August 25, 2016, Insurer admitted liability for medical benefits on the 2016 work-related injuries.

46. Dr. Fall performed Claimant's electrodiagnostic evaluation on August 26, 2016. Dr. Fall noted that electrodiagnostic evaluation of Claimant's left leg revealed increased insertional activity in the lower lumbar paraspinals and in the left gastrocnemius. Dr. Fall also stated that she saw a visible involuntary contraction of the left gastrocnemius when Claimant was lying flat. Dr. Fall assessed that Claimant suffered from left L5 radiculitis without significant denervation. After reviewing his treatment, Dr. Fall recommended that Claimant undergo a left L5-S1 transforaminal injection which would address the left L5 nerve root. Due to his ongoing low back and bilateral leg symptoms, Claimant asked Dr. Fall if he could discuss his symptoms with a spine surgeon. Dr. Fall felt this request was appropriate and wrote a referral for a surgical evaluation to be done after the L5-S1 transforaminal injection its response could be discussed. Again, Claimant's corresponding pain diagram indicates that he continued to report low back pain and bilateral leg pain.

47. On September 2, 2016, Claimant returned to Concentra where he was evaluated by Dr. Cava. Claimant continued to report low back pain that radiated into both legs and also, that he was having difficulty with sexual function and erections due to his severe back pain and severe cramping in his buttocks and legs. Dr. Cava's straight leg test was positive bilaterally but worse on the left.

48. On September 7, 2016, Claimant was evaluated by spine surgeon, Bryan Castro, M.D. Dr. Castro's report states, "The patient has lower back pain with pains going down his legs, left side greater than right. Sometimes he gets cramping in the legs as well. He has some numbness in the medial calf with some pain and cramping in the posterior aspect of the leg, left greater than right. His low back pains are greater than the leg pains. He has pain with any activities." Most notably, Dr. Castro's report states, "The patient states that now since his automobile accident in March [2016], the pains have been significantly increased." Dr. Castro reviewed Claimant's treatment history and acknowledged that the L5-S1 transforaminal injection as recommended by Dr. Fall was still pending. Dr. Castro's review of systems were, "Positive difficulty and pain with walking, some difficulty with sexual relations secondary to pain." Dr. Castro reviewed Claimant's lumbar spine MRI of April 29, 2016, and compared it to the lumbar MRI of November 12, 2014, which he found to highlight some disc desiccation at L4-L5 with mild disc protrusion and annular tear. Ultimately, Dr. Castro's report states that he was in agreement with proceeding with bilateral L5-S1 transforaminal epidural steroid injections and found them to be reasonable. Once again, Claimant's corresponding pain diagram indicates that he continued to report low back pain and bilateral leg pain.

49. Dr. Zimmerman performed Claimant's left L5-S1 transforaminal epidural steroid injection on September 14, 2016. Dr. Zimmerman reported that Claimant's pre-procedure pain score at rest was 6/10 and his straight leg raise and neural tension were positive. After the injection, Claimant's pain score at rest was 0/10. Dr. Zimmerman stated, "Lumbar range of motion improved with forward bending and reaching down to his mid shins with his fingertips, and extension improved to approximately 10" or 15". He had no significant pain with these maneuvers, and straight leg raise pain was reduced from 8/10 before the procedure to 2/10 after the procedure, being a diagnostic response. The patient stood and ambulated without difficulty. Motor and sensation were intact in both lower limbs."

50. Claimant returned to Dr. Fall on September 23, 2016, nine days after his left L5-S1 transforaminal epidural steroid injection, and reported that he was worse. Claimant explained that initially, he was numb so he did not experience pain in Dr. Zimmerman's clinic; however, once he left, the numbing medicine wore off and his pain returned and increased to the point where he was even having difficulty doing things around the house. Dr. Fall's straight leg test was again positive and she referred Claimant for pool therapy two times a week for three weeks for core stabilization and low back pain. Again, Claimant's corresponding pain diagram indicates that he continued to report low back pain and bilateral leg pain.

51. Claimant was re-evaluated by Dr. Cava at Concentra on September 29, 2016. Dr. Cava stated that if Claimant experienced worsening radicular symptoms, that a follow-up with Dr. Castro should be considered to re-evaluate Claimant's need for surgery. Dr. Cava also noted that the most recent injection did not help and that Claimant continued to experience difficulty with sexual function and erections due to severe back pain and severe cramping in his buttocks and legs. Dr. Cava reported that Claimant's pain radiated into his buttocks, thighs, bilateral calves and was worse on the left with associated symptoms of lower extremity numbness, lower extremity tingling and

lower extremity weakness. Dr. Cava's repeat straight leg test was once again positive and Claimant's corresponding pain diagram indicates that he continued to report low back pain and bilateral leg pain.

52. Claimant was re-examined by Dr. Fall on October 7, 2016. Claimant reported a pain level of 6/10 and Dr. Fall's physical exam revealed decreased flexion with pain radiating down both legs and a positive straight leg raise bilaterally in the seated position. Dr. Fall's impression was that Claimant suffered a lumbosacral strain with a small broad-based disc protrusion at L4-5 with surgery not yet recommended by Dr. Castro. Again, Claimant's corresponding pain diagram indicates that he continued to report low back pain and bilateral leg pain.

53. Between October 13, 2016, and October 27, 2016, Claimant was seen at Concentra at least three more times, and continued to complain of low back pain that radiated into both legs at each appointment.

54. Claimant returned to Dr. Fall on November 14, 2016, where she recorded that Claimant did not benefit from pool therapy. Specifically that, "He states he is 0% better. He still has pain going down the leg and the back. He states they are both together, so one is not worse than the other." Dr. Fall did not have further treatment recommendations, only that she would recommend a follow-up with Dr. Castro prior to MMI to re-address the reasonable necessity of surgery.

55. Claimant was re-evaluated by Dr. Castro on November 15, 2016. Dr. Castro noted Claimant's report of worsened symptoms and stated, "Just prior to closing the case, I will get him a new MRI to make sure there is [sic] no new findings and indeed if this still remains with no significant herniation, then surgical intervention would not be offered. At that point, he will be placed at MMI from a surgical standpoint. We will see him back after the MRI." Again, Claimant's corresponding pain diagram indicates that he continued to report low back pain and bilateral leg pain.

56. On November 23, 2016, Claimant underwent his fourth lumbar spine MRI, which demonstrated:

IMPRESSION

1. *Canal stenosis L4-L5 level with protrusion and annular tearing. Mild inferior foraminal narrowing is noted.*
2. *L5-S1 with canal narrowing. Foraminal narrowing right greater than left.*

57. Claimant followed up with Dr. Fall on December 5, 2016, who reviewed the results of his fourth lumbar MRI scan. After reviewing the MRI, Dr. Fall assessed that Claimant suffered from **L4-5 and L5-S1 disc protrusions with bilateral lower extremity radiculitis with possible progression on a more recent study**. Dr. Fall stated that she would await the recommendations of Dr. Castro in light of these new MRI findings. Again, Claimant's corresponding pain diagram indicates that he continued to report low back pain and bilateral leg pain.

58. Claimant returned to Dr. Castro on December 7, 2016, to re-address the reasonable necessity of surgery. Dr. Castro stated that Claimant's MRI scans appeared to be significantly changed when compared to the last MRI. Dr. Castro stated that there were no new herniations or instability patterns; however, Claimant demonstrated moderate stenosis of the lateral recesses bilaterally at L4-5. Dr. Castro informed Claimant that low back pain was not an indication for surgical intervention in his case where there was no instability or worsening findings in his low back but that *his buttock and leg pain could be treated with a lumbar decompression*. In lieu of recommending ineffective conservative management, Dr. Castro recommended a one-level microdiscectomy decompression for decompression of lateral recesses to hopefully improve Claimant's claudicatory-type symptoms, which in a setting of moderate stenosis and failure to respond to conservative management, was a reasonable consideration. Dr. Castro stated that there was no indication for a fusion or any other structural type of surgery but that due to Claimant's ongoing pain and worsening of symptoms, he would begin surgical planning for a one-level decompression. Again, Claimant's corresponding pain diagram indicates that he continued to report low back pain and bilateral leg pain.

59. On December 12, 2016, Claimant returned to Dr. Fall who agreed with Dr. Castro's surgical recommendation of a one-level decompression. Claimant's corresponding pain diagram continued to indicate low back pain and bilateral leg pain.

60. On December 14, 2016, Dr. Castro's office requested authorization of an L4-5 lumbar decompression, which was scheduled to take place on December 29, 2016, at Lutheran Medical Center.

61. On January 9, 2017, Claimant returned to Dr. Fall and advised her that the L4-5 lumbar decompression was denied. Claimant stated that he was quite miserable, in a lot of pain and actually felt sick that the surgery had been denied. Dr. Fall noted that Claimant was still working and having pain in his low back and both legs. Dr. Fall assessed that Claimant suffered from L4-5 and L5-S1 disc protrusions with bilateral lower extremity radiculitis. Dr. Fall stated, "I agree with the surgical recommendation by Dr. Castro, the orthopedic spine specialist." Dr. Fall wanted Claimant to follow up with her in one month so if he was to pursue surgery, he would not be at MMI. If however Dr. Fall saw that Claimant would not pursue surgery, she planned to proceed with an impairment rating. Claimant's corresponding pain diagram continued to indicate low back pain and bilateral leg pain.

62. Claimant returned to Dr. Fall on February 6, 2017, and reported ongoing symptoms in both legs and that his pain was quite bad. Claimant advised Dr. Fall that a hearing was set regarding denial of the L4-5 lumbar decompression and that he was to attend two Respondent-sponsored IMEs with Brian Reiss, M.D. and John Burris, M.D. Dr. Fall prescribed additional medication for his radicular symptomatology and advised Claimant that it was only a temporary solution. Claimant's corresponding pain diagram continued to indicate low back pain and bilateral leg pain.

63. On February 27, 2017, Dr. Burris performed a Respondent-sponsored IME. Dr. Burris was to respond to a letter from Respondents dated February 2, 2017. In that letter, Respondents asked Dr. Burris to address the following question:

> *If Mr. Camara has not reached MMI from any work-related injuries, please describe what further treatment is reasonable and necessary to bring him to MMI. Please specifically address whether Dr. Castro's request for authorization to perform an L4-5 lumbar decompression is reasonable, necessary and related to Mr. Camara's injury of March 23, 2016.*

After Dr. Burris conducted his physical exam and reviewed the records, Dr. Burris concurred with Drs. Fall and Castro that Claimant suffered from low back pain with bilateral lower extremity radiculitis. In response to Respondents' inquiry on whether Dr. Castro's request for authorization to perform an L4-5 lumbar decompression was reasonable, necessary and related to the March 23, 2016, injury, Dr. Burris stated:

> *Although he has a history of prior back injuries**, the records support the 3/23/2016 event as the proximate cause of his current symptoms**. Because he has continued symptoms and his treating specialists recommend additional treatment, **I do not believe he has reached maximum medical improvement**. **I believe the L4-5 lumbar decompression recommended by Dr. Castro is reasonable, necessary and related to the 3/23/2016 event**.*

64. On March 1, 2017, Claimant underwent a second Respondent-sponsored IME with Dr. Reiss. By contrast, Dr. Reiss opined that the 2016 work MVA did not change Claimant's preexisting condition. It is Dr. Reiss' opinion that treatment should be considered related to Claimant's only preexisting incident not related to his work injuries. In contrast to the overwhelming evidence, Dr. Reiss' report states that he does not believe the 2015 MVA produced even a temporary aggravation of Claimant's preexisting condition. Dr. Reiss testified consistent with his report that he did not contest the L4-5 lumbar decompression itself, only that it could only be related to the 2015 MVA. On cross-examination, Dr. Reiss admitted that he did not have or review any medical records showing that Claimant suffered from any back pain prior to February 26, 2015. Dr. Reiss also admitted that he did not recall any medical records documenting that Claimant's pain complaints after the 2014 work claim were isolated to his left leg and low back, which would allow him to properly compare and contrast Claimant's complaints of low back and left leg pain prior to March 23, 2016, to Claimant's complaints of low back pain and bilateral leg symptoms after March 23, 2016.

65. Dr. Reiss testified at hearing that the surgery could only be related to the 2016 work MVA if his worsening of condition was simply a lumbar strain superimposed upon Claimant's preexisting condition, which included spinal stenosis and lower extremity symptomatology. Dr. Reiss testified that if Claimant received any injury in the 2016 work MVA, it was possible he had a lumbar strain and that treatment of a lumbar strain was not surgical intervention but physical therapy and time. Dr. Reiss' testimony is inconsistent with every other provider's opinion, the overwhelming medical records

and the objective findings on Claimant's four separate MRI scans documenting that Claimant's initial lumbar strain was objectively worsened after the March 23, 2016, work MVA.

66. Claimant returned to Dr. Fall on March 13, 2017, and advised her that he still had ongoing low back and bilateral leg pain. Dr. Fall addressed Dr. Burris' IME opinion and acknowledged that he found the surgery to be medically reasonable, necessary and related to the March 23, 2016, work injuries. Dr. Fall stated, "Hopefully, this means that the insurance will now approve the surgery and he can proceed." Dr. Fall also wrote Claimant a prescription for a three-month gym membership while he awaited surgery in order to keep him active, mobile and to help him with symptom relief.

67. On April 13, 2017, Claimant returned to Concentra and was re-evaluated by Nickolas Curcija, PA-C. Mr. Curcija noted that Claimant's symptoms remained the same, if not worse, with pain radiating down to the backs of both legs to his calves. Claimant also reported occasional numbness in his left shin and intense pain in the back of his legs which limited his ability to be intimate with his wife. Claimant's corresponding pain diagram continued to indicate low back pain and bilateral leg pain.

68. On May 1, 2017, Claimant followed up with Dr. Fall who acknowledged receipt of Dr. Reiss' IME opinion stating that the L4-5 lumbar decompression was not related to the work injury of March 23, 2016, but rather to Claimant's preexisting condition he solely attributed to the MVA on February 26, 2015. Claimant advised Dr. Fall that although he received treatment from Dr. Wakeshima, he did not pursue surgery after the February 26, 2015, motor vehicle accident and that he was in fact doing well after the 2015 MVA, up until the work-related MVA on March 23, 2016.

69. On May 2, 2017, and May 11, 2017, Claimant was seen at Concentra and continued to complain of ongoing low back pain that radiated into both legs. Claimant's corresponding pain diagrams on these two dates also continued to indicate low back pain and bilateral leg pain.

70. Claimant was evaluated by Albert Hattem, M.D. on May 22, 2017, and reported persistent low back pain with bilateral leg numbness. Claimant rated his pain at 6/10 and advised Dr. Hattem that this injury has really impacted his life and that he continued to have problems with his wife. Claimant stated that prior to March 2016, he was not having these problems. On physical exam, Dr. Hattem's straight leg test was positive in the seated position bilaterally.

71. Dr. Fall re-examined Claimant on June 12, 2017, and noted that Claimant's pain was worsening and that he was experiencing a lot of leg pain and cramping. Claimant rated his pain at 7/10. Since the hearing was scheduled so far out, and there was no treatment to undergo apart from the denied L4-5 lumbar decompression, Dr. Fall recommended proceeding forward with an impairment assessment at their next scheduled visit.

72. Claimant underwent a third IME with John Hughes, M.D. on June 26, 2017. Similar to Drs. Castro, Fall and Burris, Dr. Hughes agreed that the surgical treatment as proposed by Dr. Castro was reasonable and necessary; however, in contrast to every other treating provider, Dr. Hughes found that original 2014 work injury was the proximate cause of his current symptoms. Dr. Hughes stated that:

> *I do believe that surgical treatment as proposed by Dr. Castro is reasonable, necessary, and related to a natural progression of Mr. Camara's initial work-related lumbar spine injuries of October 13, 2014. In my opinion, Mr. Camara is not at MMI pending this surgical treatment.*
>
> *RECOMMENDATION*
>
> *It is my opinion that Mr. Camara sustained work-related lumbar spine injuries on October 13, 2014, that did not resolve, as noted by Dr. Dillon in her report of December 8, 2015. He has now developed left L5 radiculopathy, and I believe that the surgical treatment recommended by Dr. Castro is reasonable, necessary, and related to Mr. Camara's initial work-related lumbar spine injury of October 13, 2014.*

73. Claimant was finally re-evaluated by Dr. Hattem on July 6, 2017, and reported no change in his symptoms within the last 1 ½ months. Claimant continued to report persistent low back pain at 7/10 with ongoing bilateral leg pain. Claimant reported that his low back pain equaled his leg pain and that his right leg was now worse than the left.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder

should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

In the present case, Claimant began suffering from low back pain and left leg symptoms on October 13, 2014. On February 9, 2015, Dr. Fall evaluated Claimant and found that he merely suffered from an asymptomatic L4-5 disc protrusion as a result of his 2014 work claim. On February 26, 2015, Claimant was involved in a non work-related motor vehicle accident which temporarily aggravated his underlying low back pain and left leg symptoms. On June 30, 2015, Dr. Wakeshima, became the first provider to expressly opine that Claimant's MRI studies on March 13, 2015, did not demonstrate any major pathology that would lead one to suspect that spine surgical intervention was indicated at that time. In this case, the undersigned ALJ agrees with Claimant that the IME report of Dr. Reiss reflects enhanced effects of the claim he was hired to review (the February 26, 2015, MVA claim) to provide an opinion that would mitigate Respondents' obligation to deliver medical benefits per Sections 8-40-101, *et seq.*, C.R.S. The medical records substantiate that prior to March 23, 2016, Claimant's medical treatment was isolated to his low back and left leg.

Reasonable and Necessary Medical Benefits

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. See § 8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714 (Colo. 1994). The claimant has the burden of proof to establish the right to specific medical benefits by a preponderance of the evidence. § 8-43-201, C.R.S.; *Valley Tree Service v. Jimenez*, 787 P.2d 658 (Colo. App. 1990). The question of whether a claimant has proved that specific medical treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). It is the Judge's sole prerogative to assess the sufficiency and probative value of the evidence to determine whether the claimant has met his burden of proof. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999).

Once the claimant establishes the probability of need for future treatment, as is found in this case, the claimant is entitled to a general award of future medical benefits, subject to the respondents' right to contest the compensability of any particular treatment on grounds that the treatment is not authorized or not reasonably necessary. *Holly Nursing Care Center v. Industrial Claim Appeals Office*, 992 P.2d 701 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). Here, Claimant has proven by a preponderance of the evidence Claimant was finished treating for his 2015 MVA by the time he was involved in the motor vehicle accident on March 23, 2016, while in the course and scope of his employment with Employer. Claimant received no medical treatment whatsoever in the more than nine months preceding his March 23, 2016 work related accident. The medical records persuasively document that Claimant's treatment after the 2016 MVA included injections, medications and therapy for his low back and bilateral lower extremities. Moreover, the medical records persuasively and overwhelmingly document that Claimant's complaints of bilateral leg symptomatology did not begin until after the motor vehicle accident on March 23, 2016.

Similarly, the ALJ is not persuaded by Respondents' assertion that Claimant is attempting to get the L4-5 lumbar decompression "bootstrapped" onto the 2016 work claim. On July 21, 2015, Dr. Wallace recorded Claimant's express statement that he was not interested in any injections or surgery at that time. In fact, Dr. Wallace specifically stated that, "He is pleased that chiropractic and acupuncture, have helped a lot." The ALJ finds that Claimant credibly and persuasively testified that he was not sent for any surgery as a result of his evaluation with Dr. Wallace in relation to his 2015 MVA claim. Additionally, the ALJ finds that Dr. Wallace's report is indicative of a mere consultation, not an actual request to conduct surgery, as Respondents contended multiple times at hearing. As is found, Claimant was not a surgical candidate as a result of the 2015 MVA.

Dr. Burris, a Level II accredited physician appointed by Respondents to conduct an IME, provided a causation opinion which the ALJ finds credible and persuasive. Dr. Burris concurred with Dr. Castro and Dr. Fall in opining that although Claimant had a history of back injuries, the records support the 3/23/2016 event as the proximate cause of Claimant's current symptoms. Dr. Burris does not believe Claimant has reached MMI. More importantly, Dr. Burris credibly opined that the L4-5 lumbar decompression recommended by Dr. Castro is reasonable, necessary and related to the 3/23/2016 event. As is found, the L4-5 lumbar decompression is reasonable, necessary and related to the March 23, 2016, work-related MVA claim.

Based on the totality of the evidence presented, the ALJ is not persuaded by Respondents' argument that Claimant's low back and bilateral leg symptoms are primarily attributable to the February 26, 2015, non work-related motor vehicle accident. Although Claimant sustained an aggravation of his preexisting low back pain and left leg symptoms on February 26, 2015, he did not seek any injections or surgery as a result of that MVA and he was finished treatment by the time he was involved in the MVA on March 23, 2016. Respondents did not introduce any persuasive evidence to refute the records of Drs. Castro, Fall or Burris confirming that Claimant sustained additional

injuries to his low back with new symptomatology in both legs as a result of the work-related motor vehicle accident on March 23, 2016.

By contrast, Claimant has been continuously and increasingly limited since the March 23, 2016, industrial injury. Moreover, Claimant provided ample evidence to document additional symptoms in his both legs after the March 23, 2016, motor vehicle accident. Also persuasive was Claimant's testimony and medical records demonstrating that the March 23, 2016, work MVA was the only precipitating event that compelled Claimant to report that he was having difficulty with sexual function and erections due to his severe back pain and severe cramping in his buttocks and legs.

The ALJ concludes that Dr. Burris' opinion that Claimant's low back and bilateral leg symptoms are related to the March 23, 2016, work MVA is credible, persuasive and more persuasive than the contrary causational opinion of Dr. Reiss. The medical records substantiate, and Dr. Burris credibly explained that Claimant's increased low back symptoms with new bilateral leg symptoms are related to the March 23, 2016, work MVA. After the March 23, 2016, work MVA, new findings were observed on Claimant's MRI at the L5-S1 level with new symptoms manifesting in both legs. Moreover, when Claimant's 2014 and 2015 MRIs were compared, every treating provider opined that the 2015 MRI did not demonstrate significant interval changes. By contrast, upon official comparison of Claimant's 2014 and 2015 MRIs, it was found that the broad-based posterior disc protrusion present as a result of the 2014 work claim had actually slightly improved and decreased in size in the interval by March 13, 2015.

Accordingly, Dr. Reiss was not persuasive as to his opinion that the 2015 could be the only cause for Claimant's current symptoms. Dr. Reiss' opinions are not consistent with Claimant's medical records nor do they negate any physician's opinion that an L4-5 lumbar decompression is actually necessary. Dr. Reiss' opinion that the 2015 MVA did not even aggravate Claimant's 2014 low back symptoms is biased, unpersuasive and inconsistent with the overwhelming medical records. That Dr. Reiss issued an opinion in favor or Respondents should not come as a surprise. At hearing, Dr. Reiss admitted that he "testif[ies] for the respondents. That's who hires [him]. That's who pays [him]. And that's who [he] testif[ies] for." Incredibly, and despite all evidence to the contrary, Dr. Reiss issued the opinion that Claimant suffered no injury *at all* as a result of his March 23, 2016 car crash. After weighing the medical opinions and potential biases as a whole, the ALJ finds Drs. Castro, Fall and Burris more persuasive.

Claimant has proved by a preponderance of the evidence that the exacerbation of his low back pain accompanied by new symptomatology in both legs was caused by his involvement in the motor vehicle collision that occurred at work on March 23, 2016. Therefore, Claimant is entitled to such medical benefits under the 2016 worker's compensation claim. The one-level, one-sided decompression surgery is therefore authorized, reasonable, necessary and related to the March 23, 2016, worker's compensation claim. The ALJ is persuaded that the March 23, 2016, incident is the most likely cause of Claimant's current low back and bilateral leg symptomatology, which ultimately requires an L4-5 lumbar decompression as recommended by Drs. Castro, Fall and Burris.

Reopening W.C. No. 4-977-514 - 2014 CLAIM

Given Dr. Hughes' opinion that Claimant's work-related lumbar spine injuries on October 13, 2014, did not resolve and that surgical treatment is related to a natural progression of Claimant's initial work-related injury on October 13, 2014, there is limited basis to reopen the claim in W.C. No. 4-977-514. To warrant reopening, it is not necessary that a worker's industrial disability, i.e. the degree of permanent partial disability, has increased. Rather, reopening is also appropriate where additional medical and temporary disability benefits are warranted. *See Osborne v. Industrial Commission*, 725 P.2d 63 (Colo.App. 1986); *Chavez v. Industrial Commission*, 714 P.2d 1328 (Colo.App. 1985).

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. The L4-5 lumbar decompression as recommended by Drs. Castro, Fall and Burris is reasonable, necessary and related to Claimant's March 23, 2016, work-related MVA.

2. Claimant requires the medical treatment recommended by Drs. Castro, Fall, and Burris to cure and relieve him of the effects of his March 23, 2016, industrial injuries and their sequelae and is entitled to a general award of medical benefits. Respondents shall pay for the Claimant's L4-5 lumbar decompression, and all other medical care Dr. Chamberlain deems reasonable and necessary.

3. Issues not expressly decided herein are reserved to the parties for future determination.

4. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 28, 2017

Denver, CO 80203

ISSUES

I. May Respondents amend their General Admission of Liability to adjust the Average Weekly Wage of Claimant?

II. Was Claimant responsible for his own termination of employment?

III. If so, has Claimant suffered a worsening of his condition, which would entitle him to Temporary Total Disability payments?

FINDINGS OF FACT

Based upon the evidence received at hearing, the ALJ makes the following Findings of Fact:

1. Respondents filed a General Admission of Liability on June 1, 2017, admitting to reasonable and necessary medical benefits for this claim, and an AWW of $800. (Ex. B). In his original Worker's Claim for Compensation, Claimant listed his Average Weekly Wage at $400.00 (Ex. A)

2. On Thursday, April 27, 2017, Claimant testified he injured his lower back and neck when he was rear ended while stopped at a light. Claimant declined medical care at the time of the accident. Claimant testified he believed he was injured on a Saturday, but the ALJ takes administrative notice that April 27, 2017 was a Thursday.

3. Claimant testified that he was off work for the next 2 days, and still did not seek treatment because he wasn't really in pain, since he was not really moving around very much after the accident.

4. When Claimant returned to work, he testified that he returned to regular work, lifting 25-75 pounds and performing all the activities of a mechanic.

5. Claimant testified that when he returned to work the Tuesday following the accident, the pain was severe. Roger Myers was out of town when the accident occurred, and returned to work on Tuesday, May 2, 2017. When Myers returned, he talked to Claimant about the accident and how he was doing. Myers testified that Claimant reported that his neck and shoulders were a little stiff, but that he was working through it. Claimant testified that he told Bill (co-mechanic Billy Butterfield) and Myers that he was in a lot of pain, but he still did not seek treatment. He further testified that the pain has "worsened as I went."

6. Claimant worked with Myers for three more days until he found out he was going to be terminated on May 5, 2017, because he was underperforming his expected skills, knowledge and ability.

7. Claimant did not seek medical care until the day after he was terminated, on May 6, 2017, at Memorial Hospital. Claimant testified that he sought care because he was in a lot of pain, had constant headaches, and his lower back was painful, mostly on the right side and shooting down his right leg and neck.

8. Claimant testified that this pain in his back, going down his leg, began on the Tuesday when he went back to work. Claimant testified that he did not seek care because he was trying to work through the pain, and didn't want to lose his job. Claimant also testified that he did not seek care because he's not a complainer, and didn't want to complain.

9. Claimant was originally hired as a lead technician.

10. Myers testified that the lead technician is the more knowledgeable, mature employee expected to do jobs on their own without supervision. He testified that Claimant did not live up to the expectations of a lead technician. He explained that he did not expect to have to tell Claimant how to do things, or how to do them quicker, and that as a lead tech, Claimant was expected to either have the skills, or know how to look up the correct answer.

11. Myers testified that making mistakes while putting a customer's car together could result in injury or death. As an example, he testified that on one occasion Claimant installed a brake caliper pin upside down, which could fall out and cause the customer's wheel to lock up. When he confronted Claimant why this occurred, Claimant's response was that "Nobody taught me".

12. Myers testified that he fired the Claimant based on his performance, knowledge and ability. Claimant testified that he was fired because he was not living up to standards as a diagnostician given his 30 years of experience. Claimant agreed that doing reliable work is critical to keeping your customer base, and testified that making errors and would be problematic.

13. Claimant testified that Roger talked to him the first week about his work product, and on a weekly basis after that. Claimant took these conversations to be a "kick in the butt," but not that he was doing anything wrong per se. Myers testified that he spoke to Claimant repeatedly about his mistakes. Claimant testified that when Myers spoke to him about the mistakes, it was basically "pep talks."

14. Claimant initially testified that he did not recall having issues with making errors. However, Claimant then admitted to multiple mistakes, including lifting a garage door into a truck and denting the truck. Claimant first denied that this error cost the shop, then admitted that he was not aware whether or not this cost the shop. Myers testified that he gave the customer $100 off their bill, in lieu of authorizing a body shop repair.

15. Claimant also admitted to breaking an oxygen sensor, and that he didn't know what happened. He did later acknowledge that it was an oversight by him. Claimant also admitted to breaking a hose for a crank case ventilation system.

16. Claimant initially testified that he did not recall an error in failing to tighten bolts correctly, and then clarified that he caught the issue before the car left, took the time to fix it, and retightened the cams. This was done “on his own time”. Myers testified that not only did Claimant leave the cam bolts loose, but he also broke the ‘evap solenoid’. Myers testified that Claimant correcting his error took costly time to repair, as Claimant had to pull the car back around into the shop, remove the top of the engine, correctly tighten the cam shafts, reinstall the top of the engine and pull the car back out.

17. Claimant denied an error in crushing fuel lines while removing a transmission, testifying that they were already bent, and that he just “bent them more.” These lines were ultimately replaced.

18. Myers testified to another of Claimant’s failed repairs, when Claimant used a ventilation hose that was too long when repairing a Camry, and that the car came back after Claimant was let go.

19. Claimant testified that he paid for all replacement supplies for anything he broke. Myers testified that he paid for multiple parts that Claimant broke, including an evap solenoid, crank case ventilation hose, and air intake ducting.

20. Claimant further testified that he did not recall having issues with working slow. However, Claimant admitted that an engine repair job he worked on would not have taken as long if he pulled it out through the bottom of the car, and not the top. Roger testified that mechanics have been pulling the engine from the bottom for years, and that an experienced mechanic should have known this.

21. Roger testified that time was also lost because he had to teach Claimant things he should already know. In one example, Roger had to take time to teach the Claimant how to correctly test Alternators, to verify whether they were bad.

22. Roger testified that Claimant worked slower than the average mechanic “book times”, and rarely finished work within the allotted time. In one example, Claimant testified that he did not recall any issue involving a Honda cylinder head. Myers testified that Claimant was asked to repair a gasket leak, and it took 3 times longer than book time. Myers gave the customer a $100 discount, given the delay in repair.

23. Myers testified that a “comeback” is when a mistake is made while repairing a vehicle, and the work has to be redone to fix the mistake. He explained that comebacks take time to repair, which is a negative to the technician *and* to the shop, because it takes away from time that could be spent on other work. Claimant initially testified that he had no comebacks during his employment, and then clarified that he had no comebacks he could recall. Myers testified that Claimant’s testimony that he had no comebacks was “very incorrect.” He testified that Claimant had comebacks throughout his 6 weeks of employment before his injury, including his very first repair.

24. Claimant was hired under the flag hour compensation (“flag”) system. (Ex. F). Under this system, the employee is paid per job based on the amount charged to the

customer, and the amount charged to the customer is based on the “blue book” time it would take the average mechanic to do the specific task.

25. The flag system rewards employees who are efficient and get work done faster than the “average” mechanic, as the quicker you work, the more money you make. The owner also makes more money if the employee works fast, so it is in the employer’s interest to keep the employee busy. Claimant testified that he was familiar with the flag pay system prior to working with Employer.

26. While working for Employer, Claimant earned a total of $2,147.50 prior to his work injury. (Ex. C). However, Myers testified that Claimant’s earnings of $739.10 for one pay period were incorrect, as Claimant should have been paid $20 an hour, instead of $19 an hour. Therefore, Claimant’s pre-injury earnings should actually have been $2,186.40.

27. Claimant worked for 5 weeks and 3 days prior to his injury, as the testimony established that he started working on March 20. (Ex. C)

28. Claimant testified that he expected to make $750 to $800 a week. He admitted that he knew he wasn’t guaranteed a salary of $800 a week, and that he would have to earn it by doing the work. Claimant testified that when he filled out his Claim for Compensation, he listed his average weekly wage at $400, because that was “basically” what he was earning. Claimant also noted in testimony that “I was paid fairly for the work I was doing”.

29. Prior to working for Respondent, Claimant ran his own mechanic shop, called Hampton’s Automotive. Claimant testified that while working for himself, he charged $65 an hour, and “basically made $750 a week.” At a different point, he indicated he could make “up to a couple thousand” per week.

30. Claimant testified he wasn’t given the jobs by Myers to meet 40 hours per week, and that his co-workers Billy and Jesse were getting more jobs. Myers testified that he did have enough work for Mr. Hampton, outside of a customary reduction in business towards the end of April, which he attributed to it being tax season. He testified that Claimant could have earned more if he had less comebacks, and greater ability and knowledge.

31. Claimant testified he was assigned lot of ‘mediocre’ jobs, such as oil changes and brake jobs. He also testified that some jobs in the flag system are better than other jobs, because they are easier to do, like brakes, oil changes, and bleeding a brake system. Claimant testified you can make more money by doing a lot of oil changes versus a few motor exchanges. Myers testified that for diagnostic jobs, it is not unusual to go beyond the flag rate average time.

32. After his termination, Claimant sought and received unemployment benefits, from the week ending May 20, 2017 through the week ending July 15, 2017, at the rate of $450 a week. (Ex. G).

33. The day after Claimant was terminated, he sought care in the emergency room of Memorial Health on May 6, 2017. (Ex. 1, p. 4). Claimant reported pain in the neck,

low back, with radicular symptoms into the right lower extremity, which had started 2 to 3 days after his accident. (Ex. 1, p. 8). He reported pain that would shoot into his right hip and buttock area and into the leg *on certain occasions.* (emphasis added). Sometimes he said he wakes up in (sic) his arms feel little bit numb, *but none of these happened until 5 or 6 days after the accident occurred.* (emphasis added).

34. Claimant followed up with Dr. Robi Anne Baptist for further care. (Ex. I). Claimant reported neck pain and new low back pain radiating down his right lower extremity. (*Id*. at p. 17). On May 10, 2017, Dr. Baptist gave Claimant restrictions of no lifting more than 5 lbs, no carrying, squatting, or bending. (Ex. I, p.18).

35. Claimant began to treat with Total Function Physical Therapy on 5/31/17. By this time, Claimant had been placed on pain medication. His history on that day, states, in pertinent part:

> Getting out of a chair is difficult. He can't sit for long because he feels pressure on his buttock. If he shifts weight, he can tolerate it 1-2 hours. He has difficulty with stairs and getting in/out of his car. He has a dull headache that is usually in the back of his head and recently moved toward the front of his head as well. He feels symptoms are worsening. He can sleep about 4 hours at night before he wakes. His head also feels heavy at times and difficult to hold.

His modified Oswestry Low Back Pain was listed at 72% disability. He was issued a TENS unit. (Ex. 4.-no page #).

36. The next day, on 6/1/17, Claimant was seen once again. He reports feeling better after using the TENS unit. (Ex. 4- no page #)

37. At visit #3, on 6/7/17, "Pt demonstrates relief with lumbar flexion and extension is painful. Log roll technique instructed to avoid excess rotation of the spine, which was less painful than pt's usual method…TENS unit issued for home use. (Ex. 4- no page #)

38. Progress notes show some improvement until visit #6 on 6/16/17, which note that "Pt stood less than 20 minutes in a garage yesterday and has had excruciating pain in low back since then." Any relief afforded was not long lasting. (Ex. 4, no page #).

39. Visit #7, occurring 6/21/17, notes that "Pt had a significant amount of pain Friday night, but it has gradually decreased since that time. He has not done any long amounts of standing since then." (Ex. 4-no page #).

40. The next visit is #8, occurring on 6/23/17. It notes: "Pt is getting frustrated with pain. He tried walking last night, but could not for more than 10-15 minutes. He would like to resume walking so that he can lose weight." (Ex. 4- no page #).

41. The final visit noted is #9, occurring on 6/28/17. Claimant is still noted to be limited in range of motion, but more notably, "Pt hasn't been able to walk more than approximately 10 minutes." (Ex. 4-no page #).

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1).* Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The ALJ, as the fact-finder, is charged with resolving conflicts in testimony. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990) Moreover, the ALJ may accept all, part, or none of the testimony of a witness. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion). In this instance, both witnesses are sincere in describing the events at issue; any differences in their testimony is simply a good faith difference in recall.

C. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Temporary Total Disability

D. To receive temporary disability benefits, the claimant must prove the injury caused the disability. Section 8-42-103 (1), C.R.S. 2001; PDM Molding, Inc. v. Stanberg, 898 P. 2d 542 (Colo. 1995). As stated in PDM, the term "disability" refers to the claimant's physical inability to perform regular employment. *See also McKinley v. Bronco Billy's,* 903 P. 2d 1239 (Colo. App. 1995). Once the claimant has established a "disability" and a resulting wage loss, the entitlement to temporary disability benefits continues until terminated in accordance with §8-42-105(3)(a)-(d), C.R.S. 2001. Claimant is not required to prove that the industrial injury is the "sole" cause of his wage loss to recover temporary disability benefits. Jorge Saenz Rico v. Yellow Transportation, Inc. W.C. No. 4-547-185 (ICAO December 1, 2003), citing *Horton v. Industrial Claim Appeals Office,* 942 P. 2d 1209 (Colo. App. 1996).

E. To prove entitlement to temporary total disability (TTD) benefits, claimant must prove that the industrial injury or disease caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg,* 898 P. 2d 542 (Colo. 1995). The term disability connotes two elements: (1) Medical incapacity evidences by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume her prior work. *Culver v. Ace Electric,* 971 P. 2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Murphy,* 964 P. 2d (Colo. App. 1998).

Responsible for Termination

F. Where it is determined that a temporarily disabled employee is responsible for termination of employment the resulting wage loss shall not be attributable to the on-the-job injury. In *Colorado Springs Disposal v. Industrial Claim appeals Office,* 58 P. 3d 1061 (Colo. App. 2002), the court held that the term "responsible" reintroduced into the Workers' Compensation Act the concept of fault. In this context fault requires that the claimant must have performed some volitional act or exercised a degree of control over the circumstances resulting in the termination. *Padilla v. Digital Equipment Corp.,* 902 P. 2d 414 (Colo. App. 1995) *opinion after remand* 908 P. 2d 1185 (Colo. App. 1985). That determination must be based upon an examination of the totality of circumstances. *Id.* The burden to show that the claimant was responsible for her discharge is on the respondents. *Colorado Compensation Insurance Authority v. Industrial Claim Appeals Office,* 18 P. 3d 790 (Colo. App. 2000).

G. In this case, Respondents have met their burden of showing that Claimant was responsible for his own termination. This is so, despite Claimant's good faith in self-reporting his mistakes, and taking all corrective action to address them at what he believed to be his own expense. Claimant wished to keep his position; he simply made too many errors for a small business to continue to absorb. There is no requirement

that employer show misconduct on the part of Claimant; unmet expectations due to a series of errors is sufficient.

Worsening of Condition

H. The real question is whether or not Claimant's condition worsened due to natural progression of the industrial injury which had occurred while Claimant worked for Employer. In *Anderson v. Longmont Toyota*, the Colorado Supreme Court held that "Section 8-42-2015(4) bars TTD wage loss claims when the voluntary or for-cause termination of the modified employment causes the wage loss, but not when the worsening of a prior work-related injury incurred during the employment causes the wage loss." *Anderson v. Longmont Toyota*, 102 P. 3d 323 (Colo. Sup. 2004).

I. In *Anderson*, the Colorado Supreme Court agreed with the ICAO's conclusion on two separate cases, *Anderson* and *Krause*, that:

> [A] worsened condition rendered [Anderson] unable to perform the job. Similarly, after he left the modified employment, [Krause] experienced a worsening of condition that required surgery and prevented him from returning to work. In both situations, because the worsened condition and not the termination of employment caused the wage losses, the ICAO concluded that the claimants were entitled to TTD benefits.
> *Id*. at 331.

J. Claimant was terminated for cause on May 5, 2017. He reported to Memorial Hospital on this admitted claim the next day, and in considerable distress. His condition has continued to deteriorate well beyond the symptoms that Claimant was able to "power through" for a few days after his original onset of symptoms a few days after the accident. Claimant's last medical records from June, 2017 show an inability to walk or stand for more than a few minutes. This is a considerable worsening from when he was terminated. At that time, the extent of his injuries were known to no one. Like the Claimants in *Anderson*, the worsened condition has prevented Claimant from returning to work, and it still does. He was placed on restrictions on May 10, 2017- restrictions which Employer would be unable to accommodate, even if Claimant was a treasured employee. By all accounts, this small business needed all hands to perform heavy lifting, stooping, and squatting.

K. In *Grisbaum v. Industrial Claim Appeals*, in June 2001 the claimant suffered a compensable injury and continued to work with no restrictions. *Grisbaum v. Industrial Claim Appeals Office, 109 P.3d 1054*. In January 2002 the claimant voluntarily resigned from his employment while still under treatment for the work-related injury. In March 2002 the claimant was restricted to light duty because his condition was worsening. In May 2002, the claimant was taken off work completely. In September 2002 and November 2002 the claimant underwent surgeries. The Court of Appeals held that "[b]ecause the ALJ found that the *industrial injury* caused claimant's inability to work

beginning in May 2002, we conclude claimant is entitled to an award of TTD benefits even though his resignation was voluntary."

L. Like the Claimant in *Grisbaum*, Claimant was responsible for his own termination. Afterwards, Claimant's condition worsened considerably. He was effectively unable to work as an auto mechanic as of May 10, 2017, when he was placed on restrictions. He has not been able to return to work due to continued symptoms. His symptoms are related to the work injury, and not due to any prior medical issues. Therefore, the ALJ finds that the industrial injury caused Claimant's inability to work beginning on May 10, 2017 and Claimant is entitled to TTD benefits, even though he was terminated for cause.

Offered Work Restrictions/TTD benefits

M. Respondents argue that Claimant should not be entitled to TTD benefits, because Employer was deprived of the chance to offer work restrictions. For reasons partially noted already, this is unpersuasive. By all accounts, including Mr. Myers', this shop needed all four employees to work at full capacity. That is why Claimant was terminated to begin with. He was not even afforded the chance to work for diminished wages caused by his limited billings. Given the deteriorating relationship, it stretches the imagination to think that Employer, if only afforded the opportunity, would have accommodated Claimant's work restrictions. He was already let go before any work restrictions were put into place.

N. The preponderance of the evidence has established that Claimant suffered a worsening of condition, requiring him to remain off work beginning on May 10, 2017. Claimant was unable to perform his work as an auto mechanic as of that date. Therefore, Claimant is entitled to ongoing TTD benefits beginning on said date, to be offset by his unemployment benefits paid during this time period.

Average Weekly Wage

O. Respondent's would like to withdraw the admitted Average Weekly Wage (AWW), alleging a clerical error in its original calculation. Based upon the evidence in the record, the ALJ concurs. Regardless of Claimant's expectations (reasonable or not) of his position with Employer, or his past history at other places, Claimant was paid what he earned here. He testified that he was paid appropriately for the work he actually performed. Claimant himself listed his Average Weekly Wage at $400 on his original Claim for Workers Compensation, dated May 11, 2017.

P. There is adequate wage information in the record to calculate his AWW at the time of injury. The ALJ adopts the overall reasoning of Respondents, but with some adjustments.

1) Claimant was paid $848.40 for 40.40 hours of work for the two week period ending 4/1/17.

2) Claimant worked 38.9 hours for the two week period ending 4/15/17. By all accounts, he should have been paid at $20 per hour, instead of the $19 per hour noted in the payroll records. The correct figure is therefore $778.00.

3) According to testimony of Myers (which the ALJ accepts as accurate), there is a traditional dip in business in the last part of April, likely due to tax season. For that reason, Claimant's predictably diminished wages (even though pre-injury for most of this pay period) for the period ending 4/29/17 are not used in the AWW calculation. Claimant was also injured on 4/27/17, thus making this pay period even less representative of his earnings.

4) The remainder of his wages for the period ending 5/13/17 are all post-injury.

5) The first four weeks used in the calculation yield an AWW of $406.60. ($1624.40 / 4 weeks = $406.60)

Q. By a preponderance of the evidence, Claimant's Average Weekly Wage is found to be $406.60, which is largely in line with what Claimant himself originally reported to the Division of Workers Compensation.

ORDER

It is therefore ordered that:

1. Claimant's Average Weekly Wage is $406.60.

2. Claimant is entitled to Temporary Total Disability payments, beginning May 10, 2017, until terminated by agreement of the parties or by operation of law.

3. Claimant's TTD payments are to be offset by the unemployment benefits he collected during his period of disability.

4. The insurer shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures

to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Whether Claimant has proven by a preponderance of the evidence that Shannon Fontana sustained a compensable injury in the course and scope of her employment, entitling Claimant to death benefits.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Shannon Fontana had known William Hogarth had known for approximately 30 years and they were best friends.

2. Ms. Fontana and Mr. Hogarth had worked together at other automobile dealerships, including Spradley Barr Greeley Ford, prior to their employment by Employer. Mr. Hogarth testified that he worked as the Service Director at Spradley Barr and Ms. Fontana was the Service Manager. Although technically Ms. Fontana reported to Mr. Hogarth, she was his best friend and a peer at work.

3. Mr. Hogarth testified that while at Spradley Barr, he drove a company car and would pick Ms. Fontana up and drive to work. Mr. Hogarth asked for a company car from Spradley Barr because he did not have a vehicle of his own.

4. Mr. Hogarth testified that both he and Ms. Fontana were contemplating going to work for Employer. Mr. Hogarth testified that he requested a company car as part of his compensation package with Employer, and that a demo car was part of his compensation package. Mr. Hogarth signed the demo agreement for the car.

5. James White was the general manager and partner at Employer on May 25, 2016, and he had been with the dealership for fifteen years. As the general manager, Mr. White recruited and hired new employees. Mr. White was involved in offering employment to Ms. Fontana, and he was familiar with her compensation package. He testified that Employer did not offer Ms. Fontana a company car as part of her compensation package because only certain higher level managers and grade level employees were eligible for demo cars. Ms. Fontana was not offered a car and did not sign a demo car agreement.

6. Mr. White testified that Ms. Fontana's compensation package did not include any means of transportation to and from work, and that Employer did not provide any special consideration or treatment for transportation to Ms. Fontana. Mr. White testified that Ms. Fontana would have been expected to arrive at work, just like every other service manager.

7. Although Mr. White was aware that Mr. Hogarth and Ms. Fontana were carpooling, he had no expectations regarding whether Mr. Hogarth and Ms. Fontana intended to continue their personal carpool arrangement.

8. Steve Lacy, the fixed operations director, was also involved in hiring Mr. Hogarth and Ms. Fontana. Mr. Lacy testified that Ms. Fontana was not provided a demo car as part of her compensation package. Mr. Hogarth did not have a car, so Employer provided him with a car, but nothing was discussed with Ms. Fontana regarding how she planned on getting to work. Ms. Fontana was not provided any means of transportation to and from work as part of her employment compensation package.

9. Mr. Lacy was aware that Mr. Hogarth and Ms. Fontana were carpooling, but he did not think anything of it because Ms. Fontana was no different than any other service manager who was required to get to work. Mr. Lacy testified that Employer does not ask its employees how they intend to get to work. The car was given to Mr. Hogarth, but how he chose to use it or whether to carpool was up to him; it was not at Employer's direction.

10. Mr. Hogarth testified that he was not required to nor was it part of his employment compensation with Spradley Barr to provide transportation for Ms. Fontana. It was a personal arrangement between Mr. Hogarth and Ms. Fontana that they would carpool to and from work.

11. A company car was not part of Ms. Fontana's compensation, and she did not sign a demo car agreement.

12. Mr. Hogarth kept the car at his house and he had the keys. Ms. Fontana did not have keys to the car, and was not permitted to use the car at her discretion.

13. Claimant testified that Ms. Fontana had her own car and would have used it if Mr. Hogarth did not take her to work.

14. When Mr. Hogarth and Ms. Fontana began working for Employer, their personal arrangement to carpool simply continued as it had while they worked at Spradley Barr.

15. Mr. Hogarth's employment did not require him to share the car with Ms. Fontana. Employer never instructed Mr. Hogarth to provide transportation for Ms. Fontana. Employer did not provide him with a car on the condition that he and Ms. Fontana would carpool to work. Rather, any assumptions that he and Ms. Fontana would carpool to work were between them and not the Employer.

16. Approximately one week after Ms. Fontana began working as a service manager for Employer, she was involved in a motor vehicle accident as a passenger in the demo car Mr. Hogarth was driving while the two were travelling into work. Ms. Fontana did not survive the accident.

17. Based on the credible testimony provided by Mr. Hogarth, Mr. White and Mr. Lacy, the ALJ finds that Ms. Fontana's compensation package did not include a demo car nor did it include a specific means of transportation to and from work.

18. The ALJ further finds that while Mr. Hogarth was provided a demo car, the Employer did not require nor instruct Mr. Hogarth to provide transportation for Ms. Fontana as a part of either Ms. Fontana's or Mr. Hogarth's compensation package.

19. The ALJ finds that Ms. Fontana's carpool arrangement with Mr. Hogarth pre-dated her employment with the Employer and its continuation was not at the direction of the Employer. Furthermore, the ALJ finds that Mr. Hogarth, as Ms. Fontana's supervisor, neither instructed nor required Ms. Fontana to carpool with him as their carpool arrangement was personal in nature.

20. The ALJ further finds that since the carpool arrangement stemmed from a personal relationship and existed prior to Mr. Hogarth's and Ms. Fontana's employment with Employer, travel was not contemplated by Ms. Fontana's employment with Employer because Employer did not pay for Ms. Fontana's commuting to and from work nor did Employer provide Ms. Fontana with a means of transportation.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. Section 8-43-201, C.R.S.

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence

contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

A claimant's right to compensation initially hinges upon a determination that "at the time of the injury, the employee is performing service arising out of and in the course of the employee's employment." C.R.S. § 8-41-301(1)(b). The "arising out of" test is one of causation which requires that the injury have its origins in an employee's work-related functions. There is no presumption that an injury which occurs in the course of employment arises out of the employment. *Finn v. Industrial Commission,* 165 Colo. 106, 437 P.2d 542 (1968).

Whether a compensable injury has been sustained is a question of fact to be determined by the ALJ. *Eller v. Industrial Claim Appeals Office*, 224 P.3d 397 (Colo. App. 2009). The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the proximate causal relationship between an incident/injury and the need for medical treatment, plus entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. (2013). See City of *Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985).

Commuting employees are not typically within the course of employment. These injuries are generally not compensable. *See Madden v. Mountain West Fabricators*, 977 P. 2d. 861 (Colo. 1999). In *Madden*, the Court reiterated the longstanding rule that injuries sustained by claimants going to work from home and while returning, are not compensable. This is known as the "coming and going rule."

The *Madden* opinion set forth four categories of evidence that may establish a travel injury to be an exception to the going and coming exclusion: (1) whether the travel occurred during working hours; (2) whether the travel occurred on or off the employer's premises; (3) whether the travel was contemplated by the employment contract; and (4) whether the obligations or conditions of employment created a "zone of special danger" out of which the injury arose.

The *Madden* court also listed three categories of cases generally recognized as exceptions to the going and coming exclusion because travel is contemplated by the employment contract: (a) the particular journey was assigned or directed by the employer, (b) the travel was at the express or implied request of the employer and conferred a benefit beyond the employee's arrival at work, and (c) the travel was singled out for special treatment as an inducement to employment. The common element in these types of cases is that the travel is a substantial part of the service to the employer.

The accident occurred while Ms. Fontana was traveling to work, prior to her work hours, and did not occur on Employer's premises. Additionally, there was not sufficient evidence to support a conclusion that the obligations or conditions of employment created a "zone of special danger." There was not sufficient evidence that the travel was assigned or directed by Employer or that the travel was at the express or implied request of Employer and conferred a benefit beyond the employee's arrival at work.

With respect to whether travel was singled out for special treatment, Mr. Hogarth and Ms. Fontana were very close friends for nearly thirty years. Mr. Hogarth and Ms. Fontana worked together at other auto dealerships prior to their employment with Employer. At their prior employment, Mr. Hogarth was permitted to use a company car to travel to and from work because he did not own a car. Because of their close friendship, Mr. Hogarth and Ms. Fontana began carpooling to work while working for their prior employer.

Mr. Hogarth and Ms. Fontana sought employment with Employer. Mr. Hogarth requested use of a company car as part of his compensation package with Employer because he did not own a car. Employer provided a company car to Mr. Hogarth and he signed the demo agreement.

Employer, however, did not provide Ms. Fontana with a company car and she was not part of the demo agreement signed by Mr. Hogarth. Furthermore, Ms. Fontana's compensation package did not include transportation to and from work. Based on Mr. Hogarth's and Ms. Fontana's arrangement at their prior employment and their close personal relationship, Mr. Hogarth and Ms. Fontana chose to continue their carpool arrangement once they began their employment with Employer.

Employer's knowledge that Mr. Hogarth and Ms. Fontana carpooled to work did not extend the transportation provided by Employer to Mr. Hogarth to Ms. Fontana. Mr. Hogarth was not required by Employer to provide transportation to Ms. Fontana, and as her supervisor, he neither instructed nor required that she carpool with him to work.

Thus, the ALJ concludes that travel was not contemplated by the employment contract; therefore, Ms. Fontana was not in the course and scope of her employment when she was traveling to work on the morning of May 25, 2016, when the accident occurred.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant failed to prove by a preponderance of the evidence that Ms. Fontana was in the course and scope of her employment at the time of the accident, and thus, there is not a compensable workers' compensation claim.

2. Claimant's claim is denied and dismissed with prejudice.

3. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 30, 2017

Denver, CO 80203

ISSUES

1. Whether the final admission of liability (FAL) filed in this claim is void for lack of a maximum medical improvement (MMI) determination of Claimant's left ankle by an authorized treating provider.

2. Whether the claim is closed due to Claimant's failure to timely request a DIME following a determination of MMI and/or failure to timely request a hearing.

3. Whether, alternatively, a petition to reopen should be granted.

FINDINGS OF FACT

1. Claimant was employed by Employer as a Senior Manager.

2. On October 24, 2008 Claimant sustained a compensable injury to his left ankle when he stepped into a hole and tore ligaments in his left ankle.

3. Claimant eventually underwent four left ankle surgeries related to his injury.

4. The first surgery was performed on November 7, 2008 by Dr. Desai.

5. The second surgery was performed on April 7, 2010 by Mark Conklin, M.D. Claimant continued to follow up with Dr. Conklin following the second left ankle surgery.

6. On April 23, 2010 a general admission of liability (GAL) was filed. The GAL noted the injury date of October 24, 2008 and that temporary total disability benefits from April 8, 2010 through April 13, 2010 would be paid. The remarks indicate that the carrier accepted liability of medical and indemnity benefits due to left ankle tenosynovitis. *See* Exhibit T.

7. On August 26, 2011 Claimant reported to Dr. Conklin that his left foot continued to feel as though there was some type of nerve pain. Claimant also had tenderness and swelling on the right foot. An injection was provided in the right foot. Dr. Conklin recommended physical therapy and provided Claimant with lateral heel wedges. *See* Exhibit 13.

8. On September 9, 2011 Dr. Conklin issued a letter to the Claims Adjuster. Dr. Conklin stated in the letter, "The last time I saw Mr. Stutz was on August 23, 2011 of

which most of his problems concerned his right foot pain and swelling and did an injection to that area. Despite him having continued difficulty with his left ankle, I do feel that he is at Maximum Medical Improvement and feel that there is not much more to do with him from that standpoint. He continues to have nerve type of pain, which may be coming from his back or going down his leg for which he may wind up need persistent care from Dr. Wong." *See* Exhibits 13, A to Respondent's position statement.

9. At the very next appointment with Dr. Conklin and on October 26, 2011, Claimant continued to report nerve pain and numbness over the lateral aspect of his left ankle and foot. Claimant had received several spinal injections for treatment of stenosis and left leg radiculitis with Dr. Wong, but Claimant did not think that his current pain was coming from the lumbar spine and wanted further evaluation. Dr. Conklin performed a physical examination and noted that Claimant's last left ankle MRI was a year old. Dr. Conklin recommended a new MRI to evaluate the left ankle peroneal tendons to rule out tear. *See* Exhibit 13.

10. On November 7, 2011 Claimant underwent an updated MRI of his left ankle. The impression provided was: tenodesis of the torn peroneus brevis to the peroneus longus, just proximal to the level of the peroneus longus accessory ossicle; residual intra substance signal abnormality within the peroneus brevis at the level of the tenodesis that may represent postsurgical intra substance scarring or tendinosis; and persistent mild common peroneal tendon sheath tenosynovitis. *See* Exhibit 13.

11. On November 11, 2011 Claimant reviewed the results of the MRI with Dr. Conklin. Dr. Conklin recommended that Claimant be assessed by Dr. Wong regarding weakness in Claimant's back and left leg. Dr. Conklin indicated that if Dr. Wong found Claimant to be stable, Claimant should return to discuss a flexor halluces longus tendon transfer procedure for Claimant's left ankle. *See* Exhibit 13.

12. On January 11, 2012 Claimant underwent his third left ankle surgery which was performed by Dr. Conklin. The procedure performed was: left ankle peroneal tendon tenolysis; flexor halluces longus tendon transfer from the medial arch of the foot over to the peroneus brevis tendon stump; and tenodesis or transfer of the distal end of the flexor halluces longus tendon to the flexor digitorum longus tendon. *See* Exhibit 13.

13. On January 17, 2012 Respondents filed a GAL. The GAL indicated that temporary total disability benefits were paid from January 11, 2012 and continued and that Claimant was unable to work due to the January 11, 2012 surgery. The date of MMI was listed as N/A. *See* Exhibit T.

14. Following the third left ankle surgery, Claimant continued to have pain and swelling in his left ankle as well as problems with his gait. In June of 2012 Dr. Conklin noted a left foot drop, pain, altered gait and recommended an ankle brace. *See* Exhibit 13.

15. In August of 2012 Claimant continued to report pain aggravated by walking and standing and Dr. Conklin recommended a plan of a fourth left ankle surgery of subtelar fusion with proximal tibia bone graft. *See* Exhibit 13.

16. On January 16, 2013 Claimant underwent his fourth left ankle surgery which was performed by Dr. Conklin. The procedure performed was: corrective triple fusion; navicular decuboid joint fusion; posterior tibial tendon lengthening; and proximal tibial bone graft. *See* Exhibit 13.

17. After the fourth left ankle surgery, Claimant completed physical therapy focused on his awkwardly misaligned left leg as a result of his multiple surgeries. Claimant was noted to have an altered gait with mal-alignment of his left leg. *See* Exhibit 1.

18. Claimant began to experience increasing left knee pain during this period of time following his fourth left ankle surgery and eventually a left total knee replacement was recommended by Peter Lammens, M.D. Dr. Lammens anticipated that the total left knee replacement would help to correct the alignment of Claimant's left leg. *See* Exhibit 1.

19. On August 22, 2013, Claimant was evaluated by Daniel Ocel, M.D. Dr. Ocel noted Claimant's history of traumatic injury to the left ankle with it being a severe inversion injury. Dr. Ocel noted that the ankle procedures Claimant had undergone as well as the knee surgical recommendation. Dr. Ocel noted significant diminished range of motion of the ankle to dorsiflexion, weakness, and abnormal gait. Dr. Ocel opined that Claimant's difficulty was stemming from the remaining hind-foot valgus and that it could be corrected with a calcaneal osteotomy, possible FDL transfer, as well as gastroc recession. Dr. Ocel recommended a CT scan of the left hind-foot, but recommended that Claimant have his left knee replacement performed first and then that they would do the CT scan of the hind-foot and stage the hind-foot corrective osteotomy. Dr. Ocel repeated the recommendation that a fifth ankle surgery be performed after Claimant underwent a left knee replacement at an October, 2013 evaluation. *See* Exhibit7.

20. The relatedness of the total left knee replacement was contested and Claimant underwent a hearing at OAC. In an Order dated January 29, 2014, ALJ Cannici found that Respondents were financially responsible for the additional medical treatment in the form of a total left knee replacement. ALJ Cannici referred to the opinions of doctors who noted that the left ankle surgeries had caused Claimant to suffer an altered gait, that the altered gait had precipitated degenerative changes in the left knee, that the total left knee replacement was necessary to correct the left leg misalignment, and that the total left knee replacement should precede a fifth left ankle surgery. *See* Exhibit 1.

21. ALJ Cannici did not Order that Respondents were responsible for a fifth left ankle surgery or that a fifth left ankle surgery was reasonable, necessary, or related to the compensable injury. *See* Exhibit 1.

22. On July 15, 2014 Claimant underwent a total left knee replacement performed by Dr. Lammens. Claimant also underwent a left knee manipulation under anesthesia on October 16, 2014 performed by Dr. Lammens. *See* Exhibit S.

23. Claimant continued to treat with Dr. Lammens for his left knee and underwent physical therapy for his left knee following his surgery. On December 15, 2014 Dr. Lammens noted that Claimant should continue physical therapy and had made great progress for his left leg, but continued to have left foot issues. On February 13, 2015 Dr. Lammens noted that Claimant was doing globally well with the left total knee and that Claimant would return to him in a year and would to go Dr. Ocel eventually to look at his foot, but recommended Claimant stay out of the operating room for a while to recover from knee surgery. *See* Exhibits 9, S.

24. On October 22, 2015 Dr. Lammens opined that Claimant was at MMI for the left knee injury and that Claimant would need to be referred to a Level II physician in the future for impairment rating assessment. *See* Exhibits 13, S.

25. At this point, Claimant had recovered from the left knee surgery and Dr. Lammens had opined that Claimant reached MMI for his left knee. For unknown reasons, Claimant did not return to any physician regarding his left ankle and follow up despite a prior and outstanding fifth left ankle surgery recommendation from Dr. Ocel (to occur following the left knee surgery). Instead, Respondents referred Claimant to Prejit, Deol, D.O. for an impairment rating.

26. Dr. Deol had never been involved in the treatment of Claimant prior to her impairment rating examination. On April 6, 2016 Dr. Deol met with Claimant. Dr. Deol noted that Claimant was present for an impairment rating of his left knee and left ankle for Workman's Compensation. *See* Exhibit 4.

27. Dr. Deol reviewed the history and performed a physical examination. She noted that Claimant had a complicated history and had undergone multiple surgeries on the left ankle and left knee. She provided an impairment rating and noted significant deficits. Dr. Deol indicated that Claimant had completed his impairment rating on April 6, 2016 and she indicated it would be submitted back to the work comp team and that Claimant would follow up with his physicians as needed. On the closing report, Dr. Deol did not check that Claimant had reached MMI nor did she reference any MMI dates for either the left knee or left ankle that she had rated. Dr. Deol simply indicated Claimant was there for a rating, she provided the rating and measurements, and she sent the case back to the work comp team. *See* Exhibit 4.

28. On May 5, 2016 Respondents filed a Final Admission of Liability (FAL). The FAL noted temporary total disability benefits had been paid from April 8, 2010

through April 13, 2010 and from January 11, 2012 through April 5, 2016. The FAL listed a MMI date of April 6, 2016 and admitted to a permanent partial disability rating of 85% of body code 23 (leg at the hip). Attached to the FAL was Dr. Deol's rating report. *See* Exhibit 4.

29. On May 26, 2016 Claimant filed an Objection to the FAL. Claimant noted that as grounds for the objection that he was not at MMI, that he still needed to have surgery on his left foot and his right knee, that the FAL did not rate his hip, other leg and back, and that he was permanently totally disabled. Claimant did not request a DIME nor did he apply for hearing. *See* Exhibit 5.

30. On July 25, 2016 Claimant filed an Application for Hearing checking the issues of medical benefits and permanent total disability. *See* Exhibit C.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

MMI and FAL

An authorized treating physician (ATP) is required to make a determination as to when the injured employee reaches maximum medical improvement. *See* § 8-42-107(8)(b)(I), C.R.S. If either party disputes a determination by an authorized treating physician on the question of whether the injured worker has or has not reached maximum medical improvement, an independent medical examiner may be selected. *See* § 8-42-107(8)(b)(II), C.R.S. An ALJ may resolve conflicts or ambiguities in the evidence concerning whether or not an ATP actually placed the claimant at MMI. *Town of Ignacio v. Industrial Claim Appeals Office,* 70 P.3d 513 (Colo. App. 2002). It is well established that a determination of MMI is not divisible and cannot be parceled out among the various components of a multi-faceted injury. *Paint Connection Plus v. Industrial Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010). There is no provision for partial MMI. *Id.*

In Paint connection, the court reasoned that because MMI was not divisible the rating physician's report triggered no obligation to file a FAL and that waiting to admit liability until the rating physician found claimant at MMI for all conditions was an alternative. *Id*. In this case, Respondents argue that the claim is essentially closed because Claimant failed to follow the proper procedure and failed to request a DIME in response to a determination that Claimant had reached MMI. Respondents thus argue that the determination of MMI is binding. Respondents point to the determination of MMI as to the left knee made by Dr. Lammens and the impairment rating by Dr. Deol where she rated both the left knee and left ankle. Respondents argue that by performing the impairment rating, Dr. Deol made an implicit determination of MMI for both the left ankle and the left knee. Respondents also attached to their position statement a letter sent to the claims examiner in September of 2011 where Dr. Conklin indicated that Claimant was at MMI for the left ankle. They therefore argue that the correct process for Claimant would have been to request a DIME after the MMI determination or apply for hearing and that the claim should be closed as Claimant failed to request a DIME or apply for hearing within 30 days of the FAL on the issues of MMI and permanent impairment.

Respondents further argue that any request or petition to reopen the claim is not actually a request to re-open but an attack on the MMI determination without going through the DIME process. Respondents argue that Claimant failed to file an application for hearing within 30 days of the FAL to prevent closure of the issues in the FAL and that by failing to argue that the FAL was invalid, Claimant acquiesced that the FAL was valid and waived any argument that the FAL was invalid. However, as found above, Claimant filed an objection to the FAL noting that Claimant was not at MMI and

still needed surgery on the left foot among items listed in the objection and did not acquiesce to the invalid FAL.

Respondents' arguments are not found persuasive. Initially, the ALJ concludes that there has been no determination by an authorized treating physician or any physician that Claimant is at MMI for all parts of the multi-faceted injury. We know that the admitted injury initially involved the left ankle. It was also found by ALJ Cannici to involve the left knee. As found above, Claimant underwent extensive left ankle treatment including four left ankle surgeries. After the fourth surgery, a left knee replacement was recommended and Respondents' liability for the left knee was disputed. Respondents ultimately lost and were ordered to pay medical benefits for the disputed left knee. During this time, a fifth left ankle surgery had been recommended By Dr. Ocel but was recommended to not take place until after the left knee surgery. After the dispute over the left knee relatedness was resolved by hearing, Claimant underwent the left knee surgery and was eventually placed at MMI for his left knee by Dr. Lammens. At that time, instead of sending Claimant back to an ATP to see what the recommendations would be for the left ankle, Respondents simply referred Claimant to a physician to provide an impairment rating.

Dr. Deol, who performed the impairment rating, had not treated Claimant during the course of the claim and simply noted that Claimant had been referred for an impairment rating. She performed the impairment rating, rated the left knee and left ankle, and did not check MMI or opine as to what date Claimant reached MMI on either his left ankle or left knee. The ALJ rejects the argument that Dr. Deol implicitly placed Claimant at MMI by performing an impairment rating. Dr. Deol never treated Claimant and simply noted that Claimant had been referred for an impairment rating, which she performed. Dr. Deol also did not check MMI or note any specific dates that Claimant had achieved MMI. There was no implicit determination of MMI made by Dr. Deol. The doctor simply performed an impairment rating and measurements per the referral for a rating that she received. Respondents then filed a FAL without ever sending Claimant back to an ATP for left ankle evaluation despite the fact that they were aware that a fifth left ankle surgery had been previously recommended.

The ALJ finds that Claimant has never been placed at MMI for his left ankle, which is a major component of Claimant's multi-faceted injury. Claimant, as found above, has undergone four left ankle surgeries and had (prior to his left knee surgery) a recommendation for a fifth left ankle surgery. There is no statutory requirement for Claimant to seek a DIME when he has not yet been placed at MMI. Respondents cannot file a premature FAL and then argue that Claimant can no longer attack MMI when Claimant, in fact, has never been placed at MMI. The statutory requirement for Claimant to either request a DIME or apply for hearing was never triggered in this case as Claimant was never placed at MMI for his multi-faceted injury.

Further, the ALJ rejects the contention that ATP Dr. Conklin placed Claimant at MMI for his left ankle in September of 2011. Although Dr. Conklin submitted a letter to the claims adjuster indicating Claimant was at MMI for the left ankle, there is conflicting

evidence from Dr. Conklin indicating his belief Claimant was not, in fact, at MMI. Initially, the letter was sent to the claims adjuster and it does not appear that a MMI determination was ever communicated to Claimant or to the Division. It is unclear if Claimant was ever advised that he was being placed at MMI for his left ankle in September of 2011, putting him on notice of an obligation to object, seek a DIME, or apply for hearing. Additionally, Dr. Conklin at the very next visit in October of 2011, recommended an updated left ankle MRI that had significant findings. Further, Dr. Conklin, four months later, performed a third left ankle surgery. Dr. Conklin continued to treat the left ankle and eventually performed a fourth left ankle surgery. Dr. Conklin's actions in recommending an MRI approximately one month after the September, 2011 letter to the adjuster and in performing a third left ankle surgery approximately four months after the letter to the adjuster are inconsistent with a determination of MMI for the left ankle. Further, as found above, Respondents filed a GAL on January 17, 2012, four months after the letter to the adjuster noting that MMI for the injury was N/A and admitting to TTD for the time off work following the third left ankle surgery performed by Dr. Conklin. The argument that Dr. Conklin placed Claimant at MMI for the left ankle in September of 2011 is found not to be persuasive. MMI is known to be a point in time when any medically determinable physical impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition. *See* § 8-40-201(11.5), C.R.S. Clearly, during the fall of 2011, despite the letter to the claims adjuster, Dr. Conklin continued significant treatment to Claimant's left ankle to improve Claimant's condition and eventually performed a third left ankle surgery in January of 2012 and a fourth left ankle surgery in January of 2013 to continue to treat Claimant's condition. Claimant has not been placed at MMI for his left ankle and the actions of Dr. Conklin, Respondents filing of a GAL, and the continued treatment of the left ankle after September of 2011 support this determination.

Here, Respondents were aware that there was a significant left ankle injury and an outstanding recommendation for a fifth left ankle surgery. Yet, for unknown reasons, they referred Claimant for an impairment rating after Claimant recovered from the disputed left knee surgery. They never sent Claimant back to an ATP to see if Claimant's left ankle needed further treatment despite being aware of the outstanding recommendations and significant injury to the left ankle. In this case, the only MMI determination is to Claimant's left knee. Claimant has never been placed at MMI for the left ankle and has not been found to be at MMI for the left ankle by an ATP or by any provider. Since MMI cannot be parceled out amongst a multi faceted injury, Claimant has never been placed at MMI and the statutory requirement to request a DIME and/or a hearing has never been triggered. The claim is not closed, Claimant is not barred from arguing MMI, and Claimant has not acquiesced to the invalid FAL. Suggesting that a claim can close after Respondents file an invalid FAL because of any inaction on Claimant's behalf is inconsistent with the purpose of the Act. This would encourage Respondents to regularly file invalid FALs hoping that a Claimant will not timely object in an effort to close claims. Here, although Claimant did not timely request a DIME or a hearing, Claimant's obligation to do so was never triggered as he had never been placed at MMI.

The ALJ concludes that the FAL in this case is void. Respondents erred by filing a FAL prior to a determination of MMI for the multi faceted injury. Claimant shall return to an ATP. The ATP shall be subject to the normal requirements of determining if and when Claimant is at MMI for his left ankle and his multi-faceted injury. As this has not yet happened, the claim remains open and Claimant shall be returned to the ATP for follow up until he is determined to be at MMI for the multi faceted injury.

ORDER

It is therefore ordered that:

1. Claimant has not been placed at MMI for his multi-faceted injury.

2. The FAL is void as it was filed prior to a determination of MMI.

3. Claimant shall return to an ATP who will be subject to normal requirements for evaluating, determining, and reporting when and if Claimant has reached MMI for the multi-faceted injury.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 4-960-618-01

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on November 15, 2017, in Denver, Colorado. The hearing was digitally recorded (reference: 11/15/17, Courtroom 1, beginning at 8:30 AM, and ending at 10:30 AM).

Claimant's Exhibits 1 through 11 were admitted into evidence, without objection, with the exception of Exhibit 2, which was rejected, based on Respondents' objection. Respondents' Exhibits A through AA were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Claimant, which was filed on November 22, 2017. Respondents filed objections to the proposed decision on November 29, 2017, essentially requesting some additions consistent with the ALJ's bench ruling at the conclusion of the hearing. .After consideration of the proposal and the objections thereto, the ALJ hereby issues the following decision.

ISSUE

The sole issue to be determined by this decision concerns Respondents' application to overcome the Division Independent Medical Examination (DIME) opinion

of Thomas W. Higginbotham, D.O., as to the degree of permanent whole person impairment. The parties agree that the date of maximum medical improvement (MMI) is December 12, 2015. The parties further agreed to hold permanent total disability and all other issues in abeyance for consideration at a future hearing, if necessary.

At the conclusion of the Respondents' case-in-chief, Claimant's counsel moved for a judgment in the nature of a directed verdict, which was granted.

The Respondents shouldered the burden of proof by clear and convincing evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant (d.o.b. October 4, 1993) sustained admitted injuries to his back, right foot, right leg, and calf on August 20, 2014, while working for the Employer herein.

2. The Claimant was working at a car wash when a metal grate gave way and the Claimant fell 4 feet, doing the spits and injuring his back, and both legs.

3. As a result of the fall, the Claimant sustained an injury his left ankle and also developed complex regional pain syndrome (CRPS) in his right leg. The Claimant has had a permanent spinal cord stimulator implanted to help him with the CRPS symptoms.

4. The Claimant is unable to walk for more than about 150 feet without crutches or a cane and he cannot ascend stairs or inclines without crutches.

5. The Claimant was placed at maximum medical improvement on December 12, 2016 by his treating physician, Yani Zinis, D.O., who deferred entirely to Annu Ramaswamy, M.D., on the degree of permanent impairment.

6. Ultimately, the Respondents filed a Final Admission of Liability (FAL), dated February 10, 2017, admitting for post-maximum medical improvement (MMI) medical maintenance benefits; and average weekly wage (AWW) of $545.76;; temporary total disability (TTD) benefits of $363.80 per week from August 21, 2014, through December 11, 2016; and permanent partial disability (PPD) benefits of 19%

whole person, with an MMI date of December12, 2016 (which was stipulated as the MMI date), based on the rating of Yani C. Zinis, D.O., who was the Claimant's authorized treating physician (ATP).

7. The Claimant timely requested a DIME, which was performed by Dr. Higginbotham. Dr. Higginbotham rated the Claimant's PPD at 45% whole person. Subsequently, the Respondents challenged the DIME opinion on degree of PPD and requested the hearing, which occurred on November 15, 2017.

8. As found herein above, the parties agree with the DIME's MMI date of December 12, 2015.

Independent Medical Examination (IME) by Annu Ramaswamy, M.D.

9. Dr. Ramaswamy performed an IME at the request of Respondents. Dr. Ramaswamy diagnosed the Claimant as having a right ankle insertional posterior tibial tendon tear, CRPS in the right lower extremity, resolved deep vein thrombosis, right lumbar strain, and reactive depression and anxiety.

10. Dr. Ramaswamy assigned an impairment rating for the CRPS in the amount of 10%. He also gave Claimant a 10% rating for the lumbar strain. Dr. Ramaswamy's total impairment rating was 19%.

11. Dr. Zinis, the ATP, adopted Dr. Ramaswamy's disability rating in his report of December 22, 2016.

Dr. Higginbotham's DIME

12. Dr. Higginbotham performed the DIME on June 13, 2017. The totality of his report (30 pages in length) indicates that the Claimant suffers from severely disabling work-related injuries (Claimant's Exhibit 3).

13. Dr. Higginbotham's diagnosis was extensive, consisting of twelve components:

a. forcible backward extension strain with contusion about the right lower extremity;
b. subsequent right popliteal and peroneal deep vein therombosis with resolution at the popliteal vein by 09/16/2014 and complete resolution by 11/25/2014;
c. anticoagulant therapy for about 1 year with no recurrence;

d. hypercoagulability studies indicative of homocysteinemia and an elevated serology lupus study, untrelated to this work-related injury;
e. sacroiliac and iliolumbar pain and strain with structural diagnostic evidence at L2/3 to the left and disc protrusion at L3/4 affecting both exiting L4 nerve roots;
f. no electrodiagnostic evidence of lumbar radiculopathy;
g. structural diagnostic evidence of multilevel thoracic disc protrusions with mild to moderate cord effacement most significant at T7/8 and T11/12 moderate-sized right paracentral protrusion effacing the spinal cord moderately, of questionable clinical significance or relatedness;
h. initial structural diagnostic evidence of right foot of nonspecific soft tissue swelling and dorsal-laterally with insertional tear of the posterior tibial tendon described as being severe and partial with normal peroneus longus and brevis tendons with subsequent healing on structural diagnostic studies with nominal insertional posterior tibial tendon tendinitis;
i. **complex regional pain disorder (CRPS) right lower extremity Type 1 related to forcible stretch of neurovascular structure and supported by autonomic testing (QSART), theromgram and positive response to several lumbar sympathetic ganglion blocks with MRI (magnetic resonance imaging) evidence of interval marrow signal alteration likely reflecting CRPS with persistent pain and functional limitations** emphasis supplied)
j. status post 03/04/2016 percutaneous temporary implantation of spinal cord stimulator favorable results;
k. status post 04/29/2016 permanent implantation of spinal cord stimulator with overall and continued improved effects for pain control and functionality; and,
l. psychologic assessment of an adjustment disorder with mild anxious and depressed mood, relatively stable without psychotropic medication and without any indication of maladaptive behaviors or symptom magnification (Claimant's Exhibit 3, bates stamp 33, 34).

14.. The ALJ infers and finds that DIME Dr. Higginbotham has diagnosed a multitude of severe physical problems and limitations that resulted from the Claimant's admitted work-related injury.

15 DIME Dr. Higginbotham assigned the following work restrictions for the Claimant, during an 8-hour day:

a. sitting continuously up to 2 hours; intermittently up to 5 hours;
b. walking; none continuously; intermittently up to 2 hours;
c. standing: continuously up to 1 hour with assistive devices;
d. bending: none continuously; intermittently up to 1 hour;
e. squatting: none continuously or intermittently;
f. climbing: none continuously or intermittently;
g. kneeling: none continuously or intermittently;
h. twisting: none continuously; intermittently up to 1 hour;
i. lifting: no lifting or carrying as assistive devices are used for ambulation and balance.
j. repetitive hand use: no limitations with simple grasping or fine manipulation; no continuous pushing or pulling;
k. above shoulder activity: none continuously; intermittently up to 1 hour;
l. repetitive feet use: none continuously;
m. position changes: frequent;
n. any cardiac, visual or hearing limitations: none known;
o. environmental restrictions: avoid temperature extremes, unprotected heights dampness, slippery work surfaces, high speed working, exposure to dust, fumes or gases for safety egress and segmental and whole-body vibration; limited driving;
p. interpersonal relations: none;
q. work activity: anticipated to have varying difficulties with persistence, concentration and pacing of tasks.

16. The ALJ infers and finds that the DIME's assigned physical restrictions are multi-faceted and substantial. These restrictions preclude many activities on the Claimant's part.

17. Dr. Higginbotham agreed to the date of MMI as being December 12, 2016. He rendered a different opinion, however, with regard to the Claimant's permanent impairment rating. He found that the Claimant had a whole person disability rating of 45%. He provided a 15% whole person rating for the spine and a 35% rating for the CRPS.

18. The rating instructions for CRPS of the lower extremity are found in Table 1 at page 109 of the *AMA Guides the Evaluation of Permanent Impairment,* 3rd Ed., Rev (hereinafter the "Guides"), which provides the following instructions:

Station and gait	**Impairment of Whole Person**
Can stand but walks with difficulty	5 – 20
Can stand but walks only on the level	20 – 35
Can stand but cannot walk	40 – 60
Can neither stand nor walk	65

19. Dr. Higginbotham found that because the Clamant is able to stand but can only walk on level surfaces, he was entitled to a 35% rating for the CRPS. His overall permanent impairment rating is 45% whole person.

Dr. Ramaswamy's Testimony at Hearing

20. Dr. Ramaswamy testified at hearing as a witness for Respondents. He stated that he gave a 10% whole person rating because the Claimant could walk and could ascend stairs, albeit with crutches. He also stated that using crutches to ascend stairs is not recommended due to safety issues. The ALJ infers and finds that the 10% rating on this basis is not appropriate and, essentially, contrary to DIME Dr. Higginbotham's rating regarding the Claimant's inability to ascend or descend stairs without crutches.

21. On cross-examination Dr. Ramaswamy conceded that when the *Guides* refer to walking and ambulating on un-level surfaces, they are probably referring to walking without the assistance of crutches or a walker. This concession undercuts Dr. Ramaswamy's 10% rating regarding the Claimant's ability to ascend stairs.

22. The ALJ finds that the plain meaning of walking refers to doing so without crutches or a walker. Therefore the Claimant's disability for CRPS more appropriately falls within the second category of 20- 35%.

Ultimate Findings

23. The ALJ finds Dr. Higginbotham's permanent impairment rating of 45% whole person persuasive, credible, and consistent with the severity of the Claimant's physical condition.

24. Between conflicting opinions on degree of permanent impairment, the ALJ makes a rational choice, based on substantial evidence, to accept DIME Dr. Higginbotham's opinion and to reject Dr. Ramaswamy's opinion.

25. The ALJ finds that Dr. Ramaswamy's opinion on permanent impairment could meet the "preponderance of the evidence" burden but for the anomaly referenced in paragraph 21 herein above , and it does not rise to the level of clear and convincing evidence as required by §8-42-106(8), C.R.S.. Indeed, Dr. Ramaswamy has a good faith difference of opinion with DIME Dr. Higginbotham's permanent impairment rating, which does not rise to the level of clear and convincing evidence. Therefore, the Claimant has proven, by clear and convincing evidence that the degree of his permanent medical impairment is commensurate with a rating of 45% as determined by DIME Dr. Higginbotham.

26. At the conclusion of the Respondents' case-in-chief, their evidence could not get any better. Either the Respondents had proven that DIME Dr. Higginbotham permanent impairment rating was wrong, by clear and convincing evidence, or they had not. In this case, Respondents had not proven their case by clear and convincing evidence at the time their case was concluded.

27. The FAL admits for reasonably necessary and causally related post-MMI maintenance medical benefits. Therefore, these benefits shall continue as prescribed by the Claimant's ATPs.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or

unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, DIME Dr. Higginbotham's permanent impairment rating of 45% whole person persuasive, credible, and consistent with the severity of the Claimant's physical condition.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting opinions on degree of permanent impairment, the ALJ made a rational choice, based on substantial evidence, to accept DIME Dr. Higginbotham's opinion and to reject Dr. Ramaswamy's opinion on degree of permanent impairment.

Overcoming the DIME

c. The party seeking to overcome a DIME physician's opinions bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000). *Also see Leprino Foods Co. v. Indus. Claim Appeals Office,* 134 P.3d 475 (Colo. App. 2005). The DIME physician's

determination of permanent medical impairment is binding unless overcome by "clear and convincing evidence." *Metro Moving & Storage Co. v. Gussert,* 914 P.2d 411 (Colo. App. 1995); *See also Peregoy v. Indus. Claim Appeals Office,* 87 P.3d 261 (2004); and § 8-42-107(b)-(c), C.R.S. *Also see Whiteside v. Smith,* 67 P.3d 1240 (Colo. 2003). Where the threshold determination of compensability is not an issue, a DIME physician's conclusion that an injured worker's medical problems were components of the injured worker's overall impairment constitutes a part of the diagnostic assessment that comprises the DIME process and, as such the conclusion must be given presumptive effect and can only be overcome by clear and convincing evidence. *Qual-Med, Inc. v. Indus. Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998); *Leprino Foods Co. v. Indus. Claim Appeals Office,* 134 P.3d 475, 482 (Colo. App. 2005); *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 400 (Colo. App. 2009). "Clear and convincing evidence" is evidence, which is stronger than preponderance, is unmistakable, makes a fact or facts highly probable or the converse, and is free from serious or substantial doubt. *Metro Moving & Storage Co. v. Gussert, supra; Leming v. Indus. Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo. App. 2002). In other words, a DIME physician's finding may not be overcome unless the evidence establishes that it is "highly probable" that the DIME physician's opinion is incorrect. *Postelwait v. Midwest Barricade,* 905 P.2d 21 (Colo. App. 1995). To overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt". *Adams v. Sealy, Inc.,* W.C. No. 4-476-254 [Indus. Claim Appeals Office (ICAO), Oct. 4, 2001]. **A mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician.** *Javalera v. Monte Vista Head Start, Inc.,* W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); *see Shultz v. Anheuser Bush, Inc.,* W.C. No. 4-380-560 (ICAO, Nov. 17, 2000). As found, Dr. Ramaswamy's opinion on permanent impairment may meet the "preponderance of the evidence" test, but it does not rise to the level of clear and convincing evidence as required by §8-42-106(8), C.R.S.. Indeed, Dr. Ramaswamy had a good faith difference of opinion with DIME Dr. Higginbotham's permanent impairment rating, which does not rise to the level of clear and convincing evidence. Therefore, the degree of the Claimant's permanent medical impairment is commensurate with a rating of 45% as determined by DIME Dr. Higginbotham.

Judgment in the Nature of a Directed Verdict

d. Colo. Rules of Civil Procedure, Rule 41(b) (1), provides that, after a plaintiff in a civil action *tried without a jury* has completed the presentation of his evidence, the defendant may move for a dismissal on the grounds that the plaintiff has failed to present a prima facie case for relief. In determining whether to grant a motion to dismiss in the nature of a directed verdict, the court is not required to view the evidence in the light most favorable to the plaintiff, as argued by a claimant. *Rowe v. Bowers*, 160 Colo. 379, 417 P.2d 503 (Colo. 1966)*; Blea v. Deluxe/Current, Inc.*, W.C.

No. 3-940-062 [Indus. Claim Appeals Office (ICAO), June 18, 1997] (applying these principles to workers' compensation proceedings). Neither is the court required to "indulge in every reasonable inference that can be legitimately drawn from the evidence" in favor of the Claimant. Rather, the test is whether judgment for the respondents is justified on the claimant's evidence. *Amer. National Bank v. First National Bank*, 28 Colo. App. 486, 476 P.2d 304 (Colo. App. 1970); *Bruce v. Moffat County Youth Care Center*, W. C. No. 4-311-203 (ICAO, March 23, 1998). The question of whether the Claimant carried this burden was one of fact for resolution by the ALJ. *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). As found, at the conclusion of the Respondents' case-in-chief, their evidence could not have gotten any better. Either the Respondents had proven their case by clear and convincing evidence or they had not. In this case, Respondents had not proven their case by clear and convincing evidence at the time their case was concluded, thus, a judgment in the nature of a directed verdict was appropriate.

Post-MMI Medical Maintenance Benefits

e. An employee is entitled to continuing medical benefits after MMI if reasonably necessary to relieve the employee from the effects of an industrial injury. *See Grover v. Indus. Comm'n of Colorado*, 759 P.2d 705 (Colo. 1988). The record must contain substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve a claimant from the effects of an injury or to prevent further deterioration of his condition. *Stollmeyer v. Indus. Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995); *Grover v. Indus. Comm'n, supra*. Such evidence may take the form of a prescription or recommendation for a course of medical treatment necessary to relieve a claimant from the effects of the injury or to prevent further deterioration. *Stollmeyer v. Indus. Claim Appeals Office, supra*. An injured worker is ordinarily entitled to a general award of future medical benefits, subject to an employer's right to contest causal relatedness and reasonable necessity. *See Hanna v. Print Expediters,* 77 P.3d 863 (Colo. App. 2003). Treatment to **improve** a claimant's condition does **not** fall under the purview of *Grover* benefits. *Shalinbarger v. Colorado Kenworth, Inc.,* W.C. No. 4-364-466 [Indus. Claim Appeals Office (ICAO), March 12, 2001]. As found, Respondents admitted for post-MMI medical maintenance benefits in the FAL and the Claimant is, therefore, entitled to reasonably necessary and causally related post-MMI medical maintenance benefits.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Respondents having failed to overcome the Division Independent Medical Examination opinion of Thomas W. Higginbotham, D.O., Respondents shall, therefore,

pay the Claimant permanent partial disability benefits, based on 45% whole person permanent medical impairment.

B. Respondents are entitled to credit for all permanent partial disability benefits paid pursuant to the Final Admission of Liability, dated February 10, 2017.

C. respondents shall pay indemnity benefits up to the statutory cap as permitted by § 8-42-107.5, C.R.S.

D. Because the Respondents are continuing to pay permanent medical impairment benefits at the appropriate rate, no interest is warranted.

E. Respondents shall continue to pay the costs of reasonably necessary and causally related post maximum medical improvement maintenance benefits, pursuant to the Final Admission of Liability.

F. Any and issues not determined herein, including permanent total disability, are reserved for future decision.

DATED this_____day of December 2017.

_____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that he is entitled to maintenance medical benefits.

II. Whether Respondents have proven by a preponderance of the evidence that they are entitled to recovery of an asserted $13,354.60 overpayment of indemnity benefits paid over the statutory cap as provided for in C.R.S. § 8-42-107.5.

FINDINGS OF FACT

Based upon the totality of the evidence presented, the ALJ enters the following findings of fact:

I. Background & Procedural History

1. Claimant was employed by Employer as a maintenance worker when he sustained a compensable injury to his groin/lower abdomen on December 27, 2012. As part of completing a service call, Claimant felt a pop/pull in his groin while attempting to lift a 50-80 pound tool box. He reported his injury and liability for the same was admitted. Claimant was referred for medical care and ultimately underwent two surgical procedures to repair an ilioinguinal hernia.

2. Claimant reached maximum medical improvement ("MMI") on June 27, 2013. Respondents filed a Final Admission of Liability ("FAL") on July 17, 2013. A Final Admission of Liability ("FAL") was filed by Respondents on July 17, 2013. Although no permanent partial disability ("PPD") benefits were admitted to based upon the report of MMI authored by Claimant's authorized treating physician (ATP), Dr. Shireen Rudderow, Respondents admitted to maintenance care in the form of prescription medications, including Gabapentin and Ultram for a duration of one year.

3. At the request of Respondents, Carlos Cebrian, M.D., conducted an Independent Medical Exam ("IME") of Claimant on July 18, 2013. Following his evaluation, Dr. Cebrian agreed with Dr. Rudderow that Claimant was appropriately placed at MMI without permanent impairment, noting that Claimant did not have evidence of a recurrent hernia and was without palpable abdominal defect. Dr. Cebrian opined that there was "no indication for ilioinguinal nerve ablation and/or explantation of the surgical mesh placed by Dr. Khan on January 23, 2013.

4. Claimant timely objected to the July 17, 2013 FAL on July 29, 2013 and filed an Application for a Division Independent Medical Examination ("DIME") on August 15, 2013.

5. Dr. Brian Beatty, completed the requested DIME on April 29, 2014. During the DIME, Claimant reported worsening symptoms of right lower abdominal pain radiating into the right testicle. Bending, coughing, sneezing, exercise, prolonged walking and lifting greater than 20 pounds aggravated Claimant's ongoing symptoms.

6. Dr. Beatty placed Claimant at maximum medical improvement ("MMI") on June 27, 2013 and provided a 4% whole person impairment rating; however, he believed that Claimant should obtain a second opinion regarding whether injections and/or additional surgery for mesh excision or an ilioinguinal neurotomy would be appropriate. Dr. Beatty recommended restrictions, including no more than six hours of walking or standing per day, no longer than 15 minutes at a time with a 15 minute break, no lifting, pushing, pulling, or carrying over 20 pounds, and occasional bending at the waist.

7. After completion of the DIME, Respondents filed a second FAL on May 28, 2014, admitting liability for permanent impairment consistent with Dr. Beatty's April 29, 2014 DIME report.

8. Claimant filed an Application for Hearing endorsing reasonable and necessary medical care, AWW, temporary total disability ("TTD"), and overcoming the DIME regarding MMI and PPD. A hearing was held on May 20, 2015. Following the aforementioned hearing, ALJ Donald E. Walsh, found, among other things, that Claimant's request to overcome the DIME with respect to MMI and PPD was denied and dismissed. Nonetheless, Claimant's request to reopen his claim was granted. ALJ Walsh ordered Respondents to pay Claimant TTD benefits beginning May 20, 2015 and ongoing until terminated by operation of law and found Claimant's AWW effective October 1, 2013 to be $946.83.

9. Respondents filed a General Admission of Liability ("GAL") on August 7, 2015 consistent with the order of ALJ Walsh.

10. Claimant presented to Dr. Ramshaw on September 3, 2015 for medical evaluation at which time both surgical and nonsurgical options for further treatment were discussed.

11. Approximately one year later, on May 27, 2016, Claimant presented to Dr. Ramshaw for diagnostic laparoscopy with explantation of the right inguinal mesh placed by Dr. Kahn in 2013. Claimant also underwent neurolysis, neurectomy, and laparoscopic assisting right groin nerve blocks with long acting local anesthetic without complication.

12. Following his recovery from surgery, Claimant returned to Dr. Jenks. Dr. Jenks placed Claimant at MMI with 17% whole person impairment on September 6, 2016. As part of his September 6, 2016 report, Dr. Jenks noted that Claimant would be limited permanently to sedentary work with no lifting over 10 pounds; no bending, kneeling, or

crawling. He also indicated that Claimant would need to alternate between sitting, standing and walking as needed.

13. On October 28, 2016, Respondents filed a FAL consistent with Dr. Jenks' September 6, 2016 report. The FAL, however, failed to acknowledge the statutory cap on benefits.

14. Claimant filed an Objection to the FAL and an Application for Hearing on November 23, 2016, endorsing compensability, medical benefits, PPD, and Permanent Total Disability ("PTD"). Respondents filed a Response to Application for Hearing on December 5, 2016.

15. Because the October 28, 2016 FAL did not limit indemnity payments to the statutory cap and because Respondents were paying PPD over the cap, Respondents filed a Petition to Modify, Terminate, or Suspend Compensation ("Petition") on March 1, 2017**.** Based on § 8-42-107.5, C.R.S., Respondents requested to suspend compensation for the period from December 9, 2016 and ongoing because Claimant's date of injury was December 27, 2012 with a statutory cap of $78,482.00. Respondents asserted that the statutory cap was met and exceeded on December 9, 2016.

16. After filing their Petition, Respondents filed an Opposed Motion to Endorse Additional Issues for Hearing ("Motion") on March 1, 2017, including termination of payment of indemnity benefits over the statutory cap, credit, overpayment, and reimbursement by Claimant to Respondent-Insurer of indemnity benefits paid to him over the cap. Claimant filed an Objection to the Petition on March 6, 2017.

17. A preconference hearing was held on March 15, 2017 before Prehearing Administrative Law Judge ("PALJ"), Robert J. Erickson, who, among other things, added Petition to Modify, Terminate, or Suspend Compensation to the issues to be addressed at hearing. However, the Division of Workers' Compensation did not rule on the Motion. On May 3, 2017, Respondents requested a ruling. The Motion was denied by PALJ Jeffrey Goldstein. PALJ Goldstein ruled that it was too late to add the issue(s) to the May 18, 2017 hearing, but that another hearing may be held on the issue(s). At the hearing on May 18, 2017,

18. A hearing was convened on May 18, 2017 by the undersigned ALJ during which Respondents requested reconsideration of PALJ Goldstein's Order. The undersigned denied the request. Based upon the evidence presented at the May 18, 2017 hearing, the undersigned concluded that an overpayment existed in Respondents' favor, but that a subsequent hearing was necessary to determine the specific amount and collection of the overpayment. Accordingly, Respondents filed an Application for Hearing on the issues of overpayment and maintenance medical benefits, which as noted above commenced November 7, 2017.

II. Claimant's Medical Treatment History and Need for Maintenance Medical Care

19. Claimant has treated with multiple providers since his injury in 2012. On December 28, 2012, Claimant first saw ATP Shireen Rudderow, M.D., who was Claimant's primary ATP. Khurram Khan, M.D., ultimately performed a laparoscopic right inguinal hernia repair on January 23, 2013. Following the surgery, Claimant continued to have pain in the upper groin area and on April 17, 2013, had a CT scan of the abdomen and pelvis, which were completely normal with no evidence of recurrent hernia but which revealed a possible problem with a blood vessel. Therefore, a Doppler ultrasound was performed of the bilateral lower extremities on April 19, 2013, which was also normal.

20. Dr. Rudderow placed Claimant at MMI without impairment on June 27, 2013. At the request of Respondents, Carlos Cebrian, M.D., conducted an Independent Medical Exam ("IME") of Claimant on July 18, 2013. Following his evaluation, Dr. Cebrian agreed with Dr. Rudderow that Claimant was appropriately placed at MMI without permanent impairment noting that Claimant did not have evidence of a recurrent hernia and was without palpable abdominal defect. Dr. Cebrian opined that there was "no indication for ilioinguinal nerve ablation and/or explantation of the surgical mesh placed by Dr. Khan on January 23, 2013.

21. Following Dr. Cebrian's IME, Dr. Brian Beatty, completed a Claimant requested Division Independent Medical Examination (DIME) on April 29, 2014. During the DIME, Claimant reported worsening symptoms of right lower abdominal pain radiating into the right testicle. Bending, coughing, sneezing, exercise, prolonged walking and lifting greater than 20 pounds aggravated Claimant's ongoing symptoms.

22. Dr. Beatty placed Claimant at maximum medical improvement ("MMI") on June 27, 2013 and provided a 4% whole person impairment rating; however, he believed that Claimant should obtain a second opinion regarding whether injections and/or additional surgery for mesh excision or an ilioinguinal neurotomy would be appropriate. Dr. Beatty recommended restrictions, including no more than six hours of walking or standing per day, no longer than 15 minutes at a time with a 15 minute break, no lifting, pushing, pulling, or carrying over 20 pounds, and occasional bending at the waist.

23. After completion of the DIME, Respondents filed a second FAL on May 28, 2014, admitting liability for permanent impairment consistent with Dr. Beatty's April 29, 2014 DIME report.

24. On September 23, 2014, Claimant presented to John Sacha, M.D., for a second opinion. During his evaluation, Dr. Sacha noted that Claimant denied pain and had normal sensation in the lower extremities although he continued to endorse "pain localized to the right groin that radiates into the right scrotum with burning, numbness, and tingling." It was also noted that Claimant had suffered a work-related closed head injury in 2001 and a heart attack in April 2014. Following his evaluation, Dr. Sacha reached an impression of ilioinguinal neuropathy which he felt may respond to a "one-time right ilioinguinal radiofrequency procedure." Dr. Sacha also noted because Claimant did not have a recurrent hernia, the chance that his symptoms would improve

with repeat surgery was low. Claimant underwent an ilioinguinal radiofrequency neurotomy on October 10, 2014, which provided no improvement.

25. Claimant presented to Michael Crissey, M.D., with a cane on November 17, 2014 for a urology consult. Dr. Crissey completed a thorough examination after which he noted that Claimant had a challenging problem which he could not solve. He recommended the following: "Repeat surgical exploration with lysis and possible mesh removal" in addition to repeat RFA (radio-frequency ablation) of the inguinal nerve and a trial of Lyrica.

26. On December 22, 2014, Dr. Sacha performed a records review and opined that a repeat radiofrequency for ilioinguinal neuropathy had a very low chance of providing any kind of benefit and recommended no surgical procedures other than home exercise, strengthening program, and a gym pass. Dr. Sacha also opined that a cane was not reasonable, necessary and related to the work injury as a cane for someone that had ilioinguinal neuropathy and was actually contraindicated "because the alteration in gait mechanics will actually contribute to issues with other areas other than the ilioinguinal neuropathy." Dr. Sacha reiterated that Claimant was at MMI and no further active care was indicated.

27. Following Dr. Sacha's records review, Claimant filed an Application for Hearing on January 23, 2015, endorsing reasonable and necessary medical care, AWW, temporary total disability ("TTD"), and overcoming the DIME regarding MMI and PPD. Respondents timely filed a Response to Application for Hearing on January 23, 2015.

28. On February 24, 2015, Claimant was evaluated by Dr. Jeffery Jenks. Claimant described continued pain symptoms in the right groin region with radiation into the right leg aggravated by Valsalva maneuvers and significant depression. Dr. Jenks noted that Claimant had been seen by a number of physicians and that there was a disagreement among them as to whether Claimant should have further surgery. Dr. Jenks recommended referral to Bruce Ramshaw, M.D., a nationally known expert for revision surgery for failed herniographies with entrapment of the ilioinguinal nerve.

29. At the request of Respondents, Claimant presented to Dr. Cebrian for a follow-up IME on March 20, 2015. Dr. Cebrian reiterated his opinion that Claimant was appropriately placed at MMI on June 27, 2013, noting further that Claimant's "constellation of symptoms has continued to expand" with reported weakness and collapsing resulting in falls. Dr. Cebrian opined that there was no claim-related physiologic explanation for Claimant's expanding complaints. He also noted that Claimant was no more functional while taking opioid medications than without them. Consequently, he recommended that Claimant be weaned from opioids over the next month. Dr. Cebrian also opined that the restrictions provided by Dr. Beatty were arbitrary and that it was not medically necessary that Claimant limit himself**.** He recommended an increase in Claimant's activity level to help attenuate the nerve response and noted that Claimant was able to work in his medically probable opinion.

30. On April 24, 2015, Respondents requested Dr. Sacha provide an opinion on whether Dr. Jenks' referral to Dr. Ramshaw was medically reasonable, necessary, or related. Dr. Sacha opined that Claimant would not be a good candidate for any type of aggressive interventional procedure, and that Claimant refrain from opioids. Dr. Sacha recommended an aggressive home exercise strengthening and conditioning program.

31. Claimant returned to Dr. Jenks on May 14, 2015, who again referred him to Dr. Ramshaw for evaluation regarding revision surgery status post hernia repair.

32. On May 28, 2015, Respondents requested Dr. Cebrian to conduct a Rule 16 review and provide an opinion on whether Dr. Jenks' referral for an additional surgical consultation was medically reasonable, necessary, or related to Claimant's December 27, 2012 work injury. Dr. Cebrian noted that he agreed with Dr. Sacha that no further surgical treatment was medically reasonable or necessary and the likelihood of any benefit would be extremely low. Accordingly, Dr. Cebrian opined that the referral to Dr. Ramshaw was not medically reasonable or necessary and should be denied.

33. Respondents denied the referral to Dr. Ramshaw prompting Claimant to file an Application for an Expedited Hearing regarding his need for additional medical benefits on June 2, 2015.

34. A hearing was held on May 20, 2015 before ALJ Donald E. Walsh, who denied and dismissed Claimant's request to set aside Dr. Beatty DIME opinions with respect to MMI and PPD. However, Claimant's request to reopen his claim was granted paving the way for Claimant's evaluation by Dr. Ramshaw.

35. Claimant presented to Dr. Ramshaw on September 3, 2015 for medical evaluation at which time both surgical and nonsurgical options for further treatment were discussed.

36. On May 27, 2016, Claimant returned to Dr. Ramshaw for diagnostic laparoscopy with explantation of the right inguinal mesh placed by Dr. Kahn in 2013. Claimant also underwent neurolysis, neurectomy, and laparoscopic assisting right groin nerve blocks with long acting local anesthetic without complication.

37. Following his recovery from surgery, Claimant returned to Dr. Jenks. Dr. Jenks placed Claimant at MMI with 17% whole person impairment on September 6, 2016.

38. At the request of Respondents, Claimant presented to Dr. Cebrian for a follow-up IME on February 6, 2017. Dr. Cebrian opined that Claimant was appropriately placed at MMI by Dr. Jenks on September 6, 2016. Dr. Cebrian opined that the continuation of opioids was not medically reasonable or necessary.

39. Dr. Jenks' license to practice medicine as a physician was suspended on January 17, 2017. Consequently, his role as Claimant's ATP ended. On February 23, 2017, Respondents designed Dwight R. Leggett, M.D. as Claimant's new ATP.

However, Dr. Leggett refused to accept Claimant as a patient. On March 2, 2017, Respondents requested that Claimant choose from a list of physicians to become his ATP. Claimant choose Dr. Timothy Sandell, who also refused to accept Claimant as a patient, due to a "conflict of interest." Claimant then chose Dr. Frank Polanco to be his primary ATP.

40. Dr. Polanco examined Claimant on April 3, 2017. He noted that Claimant presented with chronic pain and that his recent treatment had been "passive and primarily medication oriented." Citing the medical treatment guidelines, Dr. Polanco noted that "evidenced based studies recommend an active program for pain management and do not support long term opioid prescribing without objective documentation of adequate analgesic effect and functional improvement." Dr. Polanco recommended that Claimant wean from opioid dependence. Claimant never returned to Dr. Polanco.

41. Dr. Ballard has recognized that Claimant's "needed prescribed medications [do] have side effects that have affected his limited abilities, and these side effects can potentially cause further harm to Mr. Lange and/or harm others in a workplace environment." Nonetheless, he did not recommend that Claimant's medications be terminated or tapered.

42. Claimant, on his own accord, returned to Dr. Sandell who, without authorization from Insured, unexplainably agreed to initiate treatment with Claimant after having rejected the opportunity to establish a treatment relationship previously due to a "conflict of interest." Dr. Sandell evaluated Claimant on May 17, 2017, noting that Claimant "[was] wishing to transfer his care to [his] office." Dr. Sandell noted that Claimant had been seen for pain management and that Butrans had been helpful in stabilizing his pain. Consequently, Dr. Sandell placed Claimant on a pain medication contract and renewed his Butrans prescription. Claimant had a follow-up appointment with Dr. Sandell on August 15, 2017, during which visit Dr. Sandell recommended a follow-up appointment with Dr. Kahn for surgical reevaluation.

43. Claimant did not seek a change of physician to Dr. Sandell and the evidence presented persuades the ALJ that Dr. Sandell is not an authorized treating provider in this case.

44. While it is clear that Dr. Sandell reviewed "some" of the records authored by Dr. Jenks, the evidence presented persuades the ALJ that he is not familiar with the opinions of Dr. Polanco or Dr. Cebrian regarding Claimant's need for ongoing treatment, including continued prescriptions for opioid medication.

45. Dr. Cebrian reviewed Dr. Sandell's recommendation for a surgical reevaluation by Dr. Khan, and opined that the request for a surgical reevaluation is not medically reasonable or necessary in this claim. Specifically, Dr. Cebrian wrote, "Mr. Lange's problem is not surgical. He has a Chronic Pain Disorder. There is no type of surgery or surgical procedure that will change Mr. Lange's complex symptom complex."

III. Respondents' Asserted Overpayment

46. Based upon the evidence presented, the ALJ finds that Claimant's date of injury is December 27, 2012. Pursuant to C.R.S. § 8-42-107.5, the statutory cap concerning payments from combined temporary and permanent partial disability benefits limits Claimant's payment of the same to $78,482.00 for his date of injury. The evidence presented persuades the ALJ that Insurer has paid a total of $91,836.60 in indemnity benefits. Consequently, the ALJ finds that Claimant has received $13,354.60 in indemnity benefits in excess of the statutory cap ($91,836.60 - $78,482.00 = $13,354.60). Accordingly, the overpayment made to Claimant by Insurer is $13,354.60.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

I. General Legal Principals

A. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law, and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the voluminous record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Clam Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. Moreover, the ALJ may accept all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion). Although Claimant did not testify, the record evidence presented persuades the ALJ that Claimant suffers from persistent intractable pain which has proved difficult to control. Consequently, the ALJ finds Claimant's ongoing pain complaints credible. Nonetheless, the question of whether Claimant is entitled to ongoing medical treatment for his pain is substantially more complicated necessitating the analysis set forth below.

II. Claimant's Entitlement to Maintenance Medical Treatment

C. The need for medical treatment may extend beyond the point of maximum medical improvement where a claimant requires periodic maintenance care to relieve the effects of the work related injury or prevent further deterioration of his condition. *Grover v. Indus. Comm'n*, 759 P.2d 705 (Colo. 1988). In *Milco Construction v. Cowan,* 860 P.2d 539 (Colo.App. 1992), the Court of Appeals established a two-step procedure for awarding ongoing medical benefits under *Grover v. Industrial Commission, supra*. The Court stated that an ALJ must first determine whether there is substantial evidence in the record to show the reasonable necessity for future medical treatment "designed to relieve the effects of the injury or to prevent deterioration of the claimant's present condition." If the claimant reaches this threshold, the Court stated that the ALJ should then enter "a general order, similar to that described in *Grover*." Even with a general award of maintenance medical benefits, respondents still retain the right to dispute whether the need for medical treatment was caused by the compensable injury or whether it was reasonable and necessary. *See Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo.App. 2003) (a general award of future medical benefits is subject to the employer's right to contest compensability, reasonableness, or necessity).

D. While a claimant does not have to prove the need for a specific medical benefit, and respondents remain free to contest the reasonable necessity of any future treatment; the claimant must prove the probable need for some treatment after MMI due to the work injury. *Milco Construction v. Cowan*, supra. The question of whether the claimant met the burden of proof to establish an entitlement to ongoing medical benefits is one of fact for determination by the ALJ. *Holly Nursing Care Center v. Industrial* Claim Appeals Office, 992 P.2d 701 (Colo.App. 1999); *Renzelman v. Falcon School District,* W. C. No. 4-508-925 (August 4, 2003). In this case, the ALJ credits the opinion of Drs. Polanco and Cebrian to find and conclude that open ended prescriptions for opioid medications are unreasonable. Here, there is a dearth of objective evidence to support a conclusion that Claimant's continued use of Butrans has produced an adequate analgesic effect to improve Claimant's functional status. Consequently, Drs. Polanco and Cebrian make a convincing argument that Claimant should be weaned from this medication. Nonetheless, "weaning" by its very definition suggests that Claimant needs additional care/monitoring to prevent a deterioration of his current condition as he withdraws from the opioids used to treat the pain caused by his admitted industrial injury. In crediting the opinions of Drs. Polanco and Cebrian concerning weaning Claimant from opioids, the ALJ concludes that Claimant is entitled to maintenance care for this purpose. The evidence presented also persuades the ALJ that Claimant's ongoing medical appointments should be tapered down and ultimately discontinued to stop what the ALJ concludes has been an over reliance on medical treatment providers resulting in an illness-role identification and development of a somatoform disorder on the part of Claimant.

III. Respondents' Asserted Overpayment

E. Section 8-40-201(15.5), C.R.S. provides as follows:

> "Overpayment" means money received by a claimant that exceeds the amount that should have been paid, or which the claimant was not entitled to receive, or which results in duplicate benefits because of offsets that reduce disability or death benefits payable under said articles. For an overpayment to result, it is not necessary that the overpayment exist at the time the claimant received disability benefits under said articles.

Thus, §8-40-201(15.5), C.R.S. provides for three categories of possible overpayment: (1) a claimant receives money "that exceeds the amount that should have been paid"; (2) money received that a "claimant was not entitled to receive"; and (3) money received that "results in duplicate benefits because of offsets that reduce disability or death benefits" payable under articles 40 to 47 of Title 8. *See Simpson v. Industrial Claim Appeals Office,* 219 P.3d 354 (Colo. App. 2009), *rev'd in part on other grounds, Benchmark/Elite, Inc. v. Simpson,* 232 P.3d 777 (Colo. 2010).

F. Respondents bear the burden, by a preponderance of the evidence that Claimant received an overpayment of indemnity benefits. Respondents' assertion of the right to recover an overpayment is a factual matter for determination by the ALJ. *Karyn Milazzo v. Total Long-term Care*, *Inc.*, W.C. No. 4-852-795-02, (ICAP Jun. 11, 2014).

G. Section 8-42-107.5, C.R.S., limits the amount of compensation a claimant may receive in TTD and PPD benefits depending on the claimant's impairment rating. If a claimant's impairment rating is below 25% of the whole person, his compensation is limited to $78,482.00 based on a date of injury on and after July 1, 2012. *See generally*, C.R.S. § 8-42-107.5. Here, Claimant was injured on December 27, 2012, and the impairment (3% mental impairment and 15% physical impairment) admitted to by Respondents is less than 25% of the whole person. Accordingly, under § 8-42-107.5, C.R.S., Claimant's compensation, including TTD and PPD benefits, is limited to $78,482.00.

H. Respondents filed a Petition requesting termination of payment of indemnity benefits paid to Claimant over the statutory cap. Claimant objected to Respondents' Petition. Thus, Respondents could not unilaterally stop paying indemnity benefits to Claimant without an order from the court or until the total payment was complete. *See Mattorano v. United Airlines*, W.C. No. 4-861-379-01 (ICAO July 25, 2013). Ultimately, Respondents paid the full value of PPD and therefore ongoing indemnity payments ended. However, Respondents paid a total of $91,836.60 in indemnity benefits. Consequently, an overpayment exists because the statutory cap pursuant to § 8-42-107.5, C.R.S. was met and exceeded by $13,354.60 ($91,836.60 - $78,482.00 = $13,354.60). Per Section 8-40-201(15.5), C.R.S, there is an overpayment that has been made by Respondents, because Claimant received money that he was not entitled to receive under Section 8-42-107.5, C.R.S. Accordingly, the $13,354.60 must be repaid by Claimant to Insurer pursuant to C.R.S. § 8-43-207(1)(q).

I. The parties have been unable to agree on a repayment schedule concerning the overpayment. When the parties are unable to agree upon a schedule, the ALJ is empowered to determine the terms of the repayment. C.R.S. § 8-43-207(1)(q). In this case, the ALJ concludes that Respondents' request to recoup the overpayment at a rate of $200.00 per month will likely work an undue hardship on Claimant. In order to avoid undue hardship to the Claimant, the ALJ concludes that the overpayment shall be repaid at a rate of $50.00 per month. *Louisiana Pacific Corp. v. Smith*, 881 P.2d 456 (Colo.App. 1994)(repayment schedule based upon injured workers life expectancy permissible in order to avoid undue hardship).

ORDER

It is therefore ordered that:

1. Claimant shall repay $13,354.60 to respondents at a rate of $50.00 per month. Claimant shall contact Respondents' counsel to obtain the necessary details regarding when and where payments are to be sent.

2. Respondents shall pay for all reasonable, necessary and related medical expenses associated with weaning Claimant from the opioid medication used to treat the pain caused by his industrial injury. The weaning program shall be coordinated through Dr. Polanco and continue in duration and include all treatments which are reasonable and necessary to safely withdraw Claimant from opioids.

3. Claimant's ongoing medical appointments with the treating providers in this claim shall be tapered down and discontinued over a time which is left to the sound medical discretion of Dr. Polanco as Claimant is being tapered off of his opioid medication.

4. All matters not determined herein are reserved for future determination.

DATED: 12/1/2017

/s/ Richard M. Lamphere

Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the

certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Whether claimant has proven by a preponderance of the evidence that the medical treatment recommended by Dr. Marc Peck (including physical therapy and injections) constitutes reasonable medical treatment necessary to maintain claimant at maximum medical improvement ("MMI").

FINDINGS OF FACT

1. Claimant suffered an admitted injury to his right wrist on December 1, 2011. The injury occurred when claimant slipped on ice and fell. At the time of the injury claimant worked as a certified automotive technician (mechanic) for employer. Claimant continues to work for employer. Since the injury claimant has undergone two wrist surgeries, a number of injections, and physical therapy.

2. On April 23, 2014, Dr. John Joseph performed an arthroscopic triangular fibrocartilage complex (TFCC) debridement on claimant's right wrist. On June 25, 2014, Dr. Joseph placed claimant at MMI and determined that claimant had no permanent impairment. Based upon Dr. Joseph's report, respondents filed a Final Admission of Liability (FAL) on July 14, 2014. Claimant objected to the FAL and requested a Division-sponsored independent medical examination (DIME)

3. On November 19, 2014, claimant attended a DIME with Dr. Franklin Shih. Dr. Shih agreed that claimant had reached MMI, and assessed an impairment rating of 5% for claimant's right upper extremity. In addition, Dr. Shih recommended claimant undergo a magnetic resonance image (MRI) of his right wrist.

4. An MRI of claimant's right wrist was taken on November 24, 2014 and showed a tear along the scapholunate ligament. Dr. Joseph recommended claimant undergo an arthroscopic TFCC repair with debridement on his right wrist. That second surgery was initially denied by respondents. However, after a hearing on the matter the surgery was authorized.

5. On December 1, 2015 Dr. Joseph performed a right wrist scapholunate repair, synovectomy, and TFCC repair.

6. On October 19, 2016, claimant returned to Dr. Joseph who noted that claimant was doing very well since the surgery and had experienced a decrease in pain following a dorsal wrist injection. At that time, Dr. Joseph stated that he would recommend maintenance treatment allowing for physical therapy. Dr. Joseph indicated that therapy would help claimant "work on his motion if he starts to get stiff". Dr. Joseph also recommended the possibility of another injection, if needed.

7. On November 30, 2016, claimant was placed at MMI by his authorized treating physician (ATP) Dr. Marc Peck. At that time, Dr. Peck recommended maintenance medical treatment, including physical therapy and injections.

8. On February 6, 2017, claimant was seen by Dr. Frederick Scherr for an impairment rating. Dr. Scherr agreed that claimant reached MMI on November 30, 2016. Dr. Scherr released claimant to full duty with no work restrictions. At that time, Dr. Scherr deferred to Dr. Peck on the issue of maintenance care.

9. Claimant attended a second DIME with Dr. Shih on March 21, 2017. At that time, Dr. Shih determined that claimant was at MMI as of November 30, 2016. Dr. Shih also assessed a permanent impairment rating of 8% for claimant's right upper extremity. In the March 21, 2017 DIME report Dr. Shih stated that claimant "should discuss his ongoing use of ibuprofen and aspirin with his physicians". The DIME report is otherwise silent regarding maintenance medical treatment.

10. Respondents filed a FAL on April 5, 2017 admitting for reasonable and necessary maintenance medical treatment. Claimant did not contest the FAL.

11. Claimant testified that after his first surgery he returned to work for employer in August or September 2015. At that time claimant was placed in a shop foreman position. As foreman claimant did not actively perform repairs on vehicles. Instead claimant supervised the other technicians/mechanics. However, when the shop was short mechanics, claimant would need to step in and perform the duties of a mechanic. Claimant testified that at first he was doing very little mechanical type work. That work has increased as the shop continues to lack the necessary technicians.

12. Claimant testified that he continues to work as a foreman, but does more and more work as a technician. As claimant has increased the amount of technician related work he performs he has noticed a return of his right wrist symptoms. Claimant returned to Dr. Peck on May 22, 2017, and reported that his right wrist started hurting when he returned to work as a mechanic. Claimant also reported difficulty with grasping and pinching and overall difficulty using his right hand. At that time, Dr. Peck recommended that claimant undergo physical therapy.

13. The recommended physical therapy was reviewed by Dr. Sollender on June 2, 2017. Dr. Sollender opined that physical therapy is not reasonable, necessary or related to claimant's 2011 wrist injury. Respondents have denied physical therapy treatment.

14. On July 31, 2017, respondents sent claimant for an independent medical examination (IME) with Dr. Sollender. Dr. Sollender opined in his report that "[t]he temporary aggravation of [claimant's] wrist he has experienced is a natural response to his debilitated wrist and is related to his original industrial injury." Dr. Sollender also opined that claimant did not need additional medical treatment. In his report, Dr. Sollender stated that if claimant refrained from performing technician work duties his symptoms will resolve.

15. Dr. Sollender testified at hearing that it is his opinion that claimant's current symptoms are the result of a temporary aggravation of his right wrist condition and not related to his original injury. Therefore, it is Dr. Sollender's opinion that the recommended physical therapy is not necessary. Dr. Sollender also testified that claimant should not be performing mechanic type duties as such duties are likely to aggravate his injury.

16. The ALJ credits claimant's testimony and the recommendations of claimant's treating physicians, Dr. Peck and Dr. Joseph, over the conflicting opinion of Dr. Sollender and finds that claimant has demonstrated that it is more likely than not that his current right wrist symptoms are related to the December 1, 2011 work injury. The ALJ also finds that claimant has demonstrated that it is more likely than not that he is in need of maintenance medical treatment (including physical therapy and injections) to treat these symptoms and remain at MMI.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2016).

4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

5. The need for medical treatment may extend beyond the point of maximum medical improvement where claimant requires periodic maintenance care to prevent further deterioration of his physical condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). Section 8-42-101, C.R.S., thus authorizes the ALJ to enter an order for future maintenance treatment if support by substantial evidence of the need for such treatment. *Grover v. Industrial Commission, supra*.

6. As found, claimant has demonstrated by a preponderance of the evidence that his current right wrist symptoms are related to the December 1, 2011 work injury. As found, claimant has demonstrated by a preponderance of the evidence that the physical therapy and injections recommended by Dr. Peck constitute reasonable medical treatment necessary to maintain claimant at MMI. As found, claimant's testimony and the opinions of Drs. Peck and Joseph are credible and persuasive.

ORDER

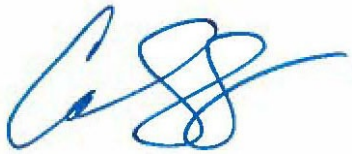
It is therefore ordered that:

1. Respondents shall pay for the physical therapy and injections as recommended by Dr. Peck, pursuant to the Colorado Medical Fee Schedule.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Dated: December 4, 2017



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he sustained a compensable work related occupational disease of bilateral hearing loss and has established that his pre-existing bilateral hearing loss was aggravated or accelerated by the conditions of his employment with Employer.

2. Whether Claimant has established by a preponderance of the evidence that he is entitled to reasonable and necessary medical care related to his bilateral hearing loss, including prescriptions for hearing aids.

3. Whether a portion of Claimant's hearing loss is attributed to his pre-existing condition and can be apportioned out from any hearing loss aggravated by his work exposure.

FINDINGS OF FACT

1. Claimant is employed by Employer as a transportation maintenance 1 worker and has been so employed since approximately November of 2014.

2. Claimant's job duties include general maintenance in and around highways involving replacing/repairing guardrails, pot hole repair, and bridge repair. Claimant uses a variety of tools in performance of his work duties that include jackhammers, pavers, high pressure air machines, generators, rototill machines, and snow plow trucks. Claimant's work activities and daily job assignments vary from day to day.

3. Prior to working for Employer, Claimant held jobs that also involved heavy equipment, large trucks, loud machinery, and use of various tools.

4. When he was hired by Employer, Claimant underwent a physical that included a hearing test. The hearing test showed that Claimant had pre-existing bilateral high frequency sloping hearing loss.

5. The hearing test performed on November 17, 2014 had the following results:

	Left	Right
500 Hz	5	10
1000 Hz	5	5

2000 Hz	10	05
3000 Hz	10	20
4000 Hz	35	45
6000 Hz	60	50
8000 Hz	60	50

See Exhibits 7, F.

6. Claimant testified that he was unaware of his mild hearing loss and did not notice it or know about it prior to the 2014 hearing test.

7. On October 18, 2016, after working for Employer for approximately two years, Claimant underwent a biannual physical that included a new hearing test. The October 2016 hearing test again showed bilateral high frequency sloping hearing loss, worse and more significant than the 2014 test.

8. Claimant testified that during the two years he worked for Employer, he did not notice a change in his hearing and that he did not seek medical treatment before October of 2016 for any perceived hearing loss. Claimant did not seek treatment until after the October 2016 hearing test.

9. After the 2016 hearing test and finding out that his hearing loss was significant at high frequency, Claimant sought treatment.

10. On November 18, 2016 Claimant was evaluated at HealthOne Occupational Medicine & Rehabilitation. Claimant reported on the hearing history form that his hearing was good, that he did not have a hearing loss, that he did not use hearing aids, that he had family members with hearing loss, and that within the past year he had severe ringing in both ears. Claimant reported that within the last year he did not have sudden hearing loss or fluctuating hearing loss. Claimant reported that in a noisy area at work he used his hearing protection 100% of the time. Claimant reported that he had a noisy job, used firearms to hunt, used firearms to target practice, and had noisy hobbies including power tools and motorcycles. *See* Exhibits 6, E.

11. On November 18, 2016 at HealthOne, Claimant underwent a hearing test/audiogram that showed the following levels:

	Left	Right
500 Hz	05	05
1000 Hz	10	10
2000 Hz	15	05
3000 Hz	20	30
4000 Hz	45	45
6000 Hz	80	60
8000 Hz	75	65

See Exhibits 6, E.

12. On November 30, 2016 Claimant was evaluated at Kaiser by audiologist Jolene Emmer. Claimant reported a significant decrease in hearing sensitivity over the last two years. Claimant reported that he had significant noise exposure at work. Claimant reported bilateral tinnitus. Audiologist Emmer noted mild sloping to severe sensorineural hearing loss (3000 to 8000 Hz) in the right ear, and moderate sloping to severe sensorineural hearing loss (4000 to 8000 Hz) in the left ear. Audiologist Emmer noted speech reception threshold at 10 dB HL for both the right and left and right 96% at 50 dB HL and left at 100% at 50 dB HL. Audiologist Emmer assessed bilateral sensorineural hearing loss and opined that the hearing loss was significant enough to result in auditory communication deficits, such as difficulties hearing in background noises. Audiologist Emmer opined that Claimant may benefit from the use of amplification with tinnitus management. *See* Exhibit D.

13. On January 25, 2017 Employer filled out a first report of injury form. Employer indicated that Claimant believed he had lost significant amount of hearing in both ears due to a loud work environment even with the hearing protection that was provided by Employer. *See* Exhibit 3.

14. On January 26, 2017 Claimant was evaluated by Hiep Ritzer, M.D. Claimant reported that in a Department of Transportation physical on October 18, 2016 he was advised of his hearing loss and that he followed up with a Kaiser physician who recommended that he may benefit from hearing aids for the hearing loss and tinnitus. Claimant reported that he worked with a lot of loud noise and had been with Employer for two years. Dr. Ritzer noted that Claimant had an audiogram from November 17, 2014 that showed high frequency hearing loss bilaterally. Dr. Ritzer noted that the audiogram from October 18, 2016 showed progression of high frequency hearing loss bilaterally and assessed bilateral hearing loss, progressive for the last two years. Dr. Ritzer opined that the objective findings were consistent with a history of work related mechanism of injury. Dr. Ritzer referred Claimant to Dr. Lipkin for hearing loss evaluation, hearing aids, and tinnitus evaluation as well as an impairment rating for the progressive hearing loss. *See* Exhibits 8, C.

15. On February 2, 2017 Claimant filled out an employee report of injury. Claimant reported that he had loss of hearing over a two year period that occurred changing plow blades, using jackhammers, using generator, using impact gun, working next to traffic, and driving loud trucks. *See* Exhibit 4.

16. On February 9, 2017 Claimant was evaluated by Alan Lipkin, M.D. Claimant reported hearing loss that had been occurring for the past two years. Claimant reported that he was exposed to loud noises at work including: impact guns, traffic, jack hammer, hammers on steel, and various banging. Claimant reported that he wore hearing protection but that it did not adequately block out the noises at work. Claimant reported newer ear plugs blocked out all the noise which was not always safe when working on the side of the road. Claimant reported bilateral tinnitus and a constant non pulsatile high

pitched sound and bilateral decreased hearing. Claimant reported that his symptoms of tinnitus had been getting worse over time and that he was unsure how long he had the tinnitus. Claimant reported that his father also had noise exposure and hearing loss. On examination, Dr. Lipkin found that Claimant's hearing to conversational voice was moderately impaired. Dr. Lipkin assessed: tinnitus, bilateral; bilateral sensorineural hearing loss; and noise induced hearing loss of both ears. Dr. Lipkin ordered a comprehensive audiometry threshold evaluation and tympanometry impedance testing. Dr. Lipkin opined that work related noise induced hearing loss was highly likely with tinnitus secondary to this. Dr. Lipkin opined that Claimant was a candidate for hearing aids necessitated by Claimant's work related noise induced hearing loss and recommended Claimant meet with the audiologists regarding hearing aids. Dr. Lipkin requested Claimant follow up in one year for a hearing check. Dr. Lipkin opined that Claimant was at maximum medical improvement but would need maintenance treatment with hearing aids and interval audiology and clinical follow up. Dr. Lipkin opined that because of the high frequency nature of the hearing loss, there was no ratable percentage of hearing or whole person impairment. *See* Exhibits 9, B.

17. On February 9, 2107 Dr. Lipkin wrote a letter to Dr. Ritzer indicating that he had concluded with Claimant and assessed: tinnitus, bilateral; bilateral sensorineural hearing loss; and noise induced hearing loss of both ears. Dr. Lipkin indicated that work related noise induced hearing loss was highly likely with tinnitus secondary to that. Dr. Lipkin also indicated that Claimant was a candidate for hearing aids necessitated by the work related noise induced hearing loss. *See* Exhibits 9, B.

18. On March 16, 2017 Dr. Lipkin wrote a letter to Insurer's claim examiner. Dr. Lipkin noted that he had received Insurer's communication concerning Claimant. Dr. Lipkin noted that the hearing screen on November 17, 2014 had predated Claimant's employment with Employer and that the screen had showed bilateral sloping hearing loss, worse in the upper frequencies, although it was somewhat less severe than the February 9, 2017 study. Dr. Lipkin opined, therefore, that the pre-existing hearing loss appeared to have progressed over the last couple of years. Dr. Lipkin opined that the hearing loss was likely related to the tinnitus. Dr. Lipkin opined that sinus issues would have nothing to do with sensorineural hearing loss and that the relative contributions of smoking, family history of hearing loss, and aging were impossible to apportion into Claimant's worsening hearing. Dr. Lipkin opined that it would be reasonable to assume that Claimant's two year employment exacerbated the prior sensorineural hearing loss, assuming that Claimant had significant noise exposure. *See* Exhibits 9, B.

19. On April 17, 2017 Respondents filed a notice of contest notifying Claimant that liability was contested/denied as the injury/illness was not work related. On May 5, 2017 Claimant applied for hearing. *See* Exhibits 1, 5.

20. On September 10, 2017, Sabina Scott, Au.D. issued an audiologist report. Audiologist Scott noted that Claimant had pre-existing hearing loss pre-dating his employment with Employer. She noted that the November 2014 hearing test showed normal hearing from 250 Hz to 3000 Hz that then sloped to a mild to moderately severe

hearing loss with the left ear worse. Audiologist Scott opined that due to Claimant's younger age and long history of loud noise exposure, the pre-existing hearing loss was likely resulting from noise exposure verses aging and that Claimant had a long history of both occupational as well as recreational noise exposure. Audiologist Scott noted that the pre-existing noise exposure included occupational exposure (many years of forklift driving, truck driving, operating cranes, using hammers, and using saws) and included recreational noise exposure (guns, firearms, target shooting, loud music/concerts, noisy motorcycles, noisy dirt bikes). Audiologist Scott opined that as little as one gunshot can cause permanent hearing loss if high quality hearing protection was not consistently used. *See* Exhibit A.

21. Audiologist Scott opined that the type of hearing loss Claimant had was sensorineural hearing loss that refers to the damage of the delicate inner ear hair cell structures most commonly resulting from a combination of loud noise exposure, genetic influences, and aging of the ear. Audiologist Scott opined that based on the hearing test results, Claimant was a candidate for hearing aids in 2014 and that his hearing loss at that time was significant. Audiologist Scott opined that by 2017 Claimant's hearing loss appeared to have worsened by about 30% on average in the right ear, and by 44% on average in the left ear compared to the results from 2014. She opined, however, that the recommended treatment remained the same as it would have been in 2014 with a recommendation for custom hearing aid amplification. *See* Exhibit A.

22. Audiologist Scott reviewed Dr. Lipkin's letter to Insurer from March of 2017. Audiologist Scott noted that while Dr. Lipkin concluded it would be reasonable to assume that Claimant's employment with Employer exacerbated Claimant's hearing loss, more specific information would be needed in order to render a valid conclusion about what may have caused Claimant's progression of hearing loss over those years. Audiologist Scott opined that without knowing specifically what equipment Claimant was exposed to, what decibel levels, or the duration of exposure, it could not be concluded with absolute certainty that Employer was solely responsible for the change in hearing. Audiologist Scott noted that the loud noise exposure with Employer was not measured with a sound level meter, documented with exposure duration times, or compared to the permissible time weighted average charts. Audiologist Scott noted Claimant's long history of recreational loud noise exposure from various hobbies and interests along with his long occupational noise history and opined that those factors made it virtually impossible to determine the exact cause of Claimant's decline in hearing between 2014 and 2017. *See* Exhibit A.

23. Claimant testified at hearing. Claimant indicated that when he was hired by Employer he had never been advised that he had hearing loss and didn't have any problems that he noticed with his hearing. Claimant testified that when he was hired in 2014 he did have ringing in his ears, or tinnitus. Claimant testified that after the 2014 hearing test, no one advised him that he had hearing loss. Claimant testified that after his 2016 hearing test, he was advised that he had severe hearing loss. Claimant testified that in the two years of working for Employer, he did not notice any change in his hearing but also testified that when he first started working for Employer he could hear if someone

was talking while turned away from him and that now if someone was turned away from him while talking he has trouble understanding what they are saying.

24. Claimant testified that he purchased a motorcycle in approximately April of 2016. Claimant testified that in 2016 he rode his motorcycle approximately 8 times and that in 2017 he had ridden his motorcycle approximately 5 times. Claimant testified that his longest ride was probably about 150 miles in one day. Claimant testified that when he rides his motorcycle he does not wear a helmet or any ear protection. Claimant testified that he was not sure whether he told Dr. Ritzer or Dr. Lipkin about his motorcycle riding and testified that he must have forgotten to disclose motorcycle riding in his answers to interrogatories where he was asked to identify all exposures to noise outside of work including motorcycle riding. Claimant also indicated that he went hunting one time in September of 2016 and that he fired 10-15 rounds. Claimant indicated that while hunting, he wore ear protection. Claimant testified that he did not tell his doctors that he had been hunting in 2016. Claimant testified that between 2014 and 2016 he had been to three music concerts. Claimant testified that he did not tell his doctors that he had been to concerts and also did not disclose the concerts in his answers to interrogatories.

25. Claimant testified that a majority of his noise exposure occurs at work and he estimated that 90% of his noise exposure is work related.

26. Although ear protection was provided by Employer, Claimant did not wear it at all times while working. Claimant did not wear it when working highway jobs, as he assessed the risk of oncoming traffic/dangers to be too high.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony

and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

Claimant is required to prove by a preponderance of the evidence that the condition for which he seeks medical treatment was proximately caused by an injury or occupational disease arising out of and in the course of employment. *See* § 8-41-301(1)(c), C.R.S. Claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant has failed to meet his burden to establish by a preponderance of the evidence that he sustained a work related occupational disease of bilateral hearing loss. As found above, when Claimant was hired by Employer he had pre-existing bilateral hearing loss. Although Claimant sustained additional hearing loss during his two years of employment with Employer, there is insufficient evidence to establish that the worsening of Claimant's hearing is work related or due to occupational exposures. Claimant is credible that he is often exposed to loud noises at work. However, during the

two years in which his hearing worsened, Claimant also was exposed to loud noises outside of work and he testified credibly as to his noise exposures while hunting, attending concerts, and riding his motorcycle. Even assuming Claimant's estimation that 90% of his noise exposures occur at work and 10% of his noise exposures occur outside of work, there is insufficient evidence that the level of noise exposures at work exceed the level of noise exposures outside of work or that the levels at work were damaging. There was a lack of evidence as to decibel levels of either work activities or outside recreational activities. Although we know Claimant's hearing got worse during the two year period in question, it would be speculative to conclude that the worsening was caused by noise exposure at work versus noise exposure outside of work. There is insufficient evidence that the work related noise exposure was sufficient to cause damage to Claimant's delicate inner ear hair cell structures and the further progression of sensorineural hearing loss that was shown by testing. Rather, it is just as likely that the progression was due to non-work related noise exposures during the two year period of time in question. As found above, Dr. Ritzer opined that the hearing loss progression was consistent with a history of work related mechanism of injury. However, Dr. Ritzer was not made aware of the noise exposures Claimant had outside of work from loud recreational activities. Similarly, Claimant did not disclose to Dr. Lipkin the non-occupational noise exposures that occurred during the two year period in question. Dr. Lipkin opined that it would be reasonable to assume that Claimant's two year employment exacerbated Claimant's prior sensorineural hearing loss assuming Claimant had significant noise exposure at work. Like Dr. Ritzer, Dr. Lipkin did not know that Claimant had exposure to loud noises from his recreational activities and did not opine how that exposure outside of work would impact his overall opinion. Further, Dr. Lipkin noted that he had to make an assumption that Claimant had significant noise exposure at work. As neither Dr. Ritzer nor Dr. Lipkin knew the actual levels of noise at Claimant's work and also did not know that Claimant had loud noise exposures outside of work, their opinions overall are not persuasive.

Claimant testified that the jobs he performs are loud, but there is insufficient evidence that his job duties were at a damaging noise level sufficient to cause the progression of or aggravate/accelerate his pre-existing bilateral hearing loss. From the evidence presented, it appears just as likely that the non-occupational exposures to loud noises (gunfire, concerts, and motorcycle riding) caused the aggravation/acceleration of Claimant's pre-existing sensorineural hearing loss. Audiologist Scott is credible and persuasive that even one exposure to a high noise level (one gunshot) can cause permanent hearing loss if high quality hearing protection was not consistently used. Audiologist Scott is also credible and persuasive that more specific information is needed to render a valid conclusion as to what may have caused the progression of Claimant's pre-existing hearing loss during his two years of employment with Employer. Here, Claimant testified to both loud recreational noise exposures and loud occupational noise exposures. However, there is insufficient evidence to conclude which exposures were the damaging ones or were sufficient to cause the progression of his hearing loss. As there is insufficient evidence to establish, more likely than not, that the occupational exposures were the ones that caused the progression of Claimant's pre-existing hearing loss, Claimant has failed to meet his burden.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish by a preponderance of the evidence that he sustained a compensable work related occupational disease and has failed to establish that his pre-existing bilateral hearing loss was aggravated or accelerated by the conditions of his employment with Employer.

2. The claim is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 4, 2017,

/s/ Michelle E. Jones

_____

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

STIPULATION

Prior to the commencement of hearing, the parties agreed to hold the issue of average weekly wage (AWW) in abeyance.

REMAINING ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that he sustained a compensable injury to his right eye while working for Employer on January 23, 2017.

II. If Claimant established that he suffered a compensable injury to his right eye, whether he proved, by a preponderance of the evidence, that he is entitled to reasonable, necessary and related medical treatment to cure and relieve him of the effects of said injury.

III. If Claimant established that he suffered a compensable eye injury, whether he demonstrated, by a preponderance of the evidence, that he is entitled to temporary total disability benefits between January 24, 2017 and March 12, 2017.

Because the undersigned concludes that Claimant failed to prove that he sustained a compensable injury on January 23, 2017, this order does not address questions II-III set forth above.

FINDINGS OF FACT

Based upon the evidence presented, including the post hearing deposition of Dr. Haug, the ALJ adopts the following findings of fact:

1. Claimant asserts that he sustained a torn retina and other ocular injury while working for A-1 Services, Inc. on January 23, 2017.

2. Claimant is the Head Technician (mechanic) at A-1 Services, Inc. On January 23, 2017, he was working underneath a tractor changing a fuel filter. Claimant testified that as he loosened and removed the fuel filter, diesel fuel splashed in his right eye. He testified that he got up "real quick" from under the tractor and flushed his right eye with water.

3. Claimant testified that when he arose from under the tractor that he immediately experienced white flashes and then a "blob with squiggly lines, black." He rinsed his eye and testified that after doing so, he did not work the rest of the day but instead went home.

4. Claimant admitted that he does not recall hitting his head when getting out from under the tractor.

5. The following day, Claimant testified that when he awoke, the vision in his right eye was nearly black. He testified that he dressed, drove to work, and reported his injury to his employer, Hal Stevens, who directed Claimant to make an appointment with an eye doctor.

6. Claimant presented to ABBA Eyecare the same day, January 24, 2017. ABBA Eyecare referred claimant to Southwest Retina Consultants, where Claimant was examined and evaluated by Dr. Sara Haug.

7. Dr. Haug testified via post hearing evidentiary deposition on August 29, 2017.

8. Upon presentation to Dr. Haug, Claimant provided a history that diesel fuel had splashed into his right eye, that he had flushed his right eye with water, and that he went back to work. He reported that about two hours later, after the diesel fuel had splashed into his eye, he experienced a decrease in his vision. RE A, Bates 1.

9. During her examination of Claimant, Dr. Haug appreciated a vitreous hemorrhage and a subretinal hemorrhage. She diagnosed Claimant with a vitreous hemorrhage secondary to a Valsalva retinopathy. Deposition of Dr. Haug (Haug Depo.) p. 8, l. 4-7, 19-21.

10. Respondents' medical expert, Dr. Ronald Wise, testified at hearing to the nature of a vitreous hemorrhage: the body of the eye is filled with a jelly called the vitreous. Bleeding into the vitreous is called a vitreous hemorrhage.

11. Dr. Haug testified that a Valsalva retinopathy can occur when there is increased intrathoracic pressure such as that cause by heavy lifting, straining with constipation, coughing, vomiting, and other similar things which increase the pressure in the thorax. Haug Depo, p. 8, l. 22-25; p. 9, l. 1-2.

12. Dr. Haug testified that Claimant did not report that he had performed any heavy lifting at work on the date of injury. Haug Depo. P. 20, l. 2-7.

13. Dr. Haug testified that if Claimant had sustained a vitreous hemorrhage secondary to a Valsalva retinopathy on the date of injury, he would have experienced symptoms much more quickly than the two hours he reported had passed before experiencing symptoms. Haug Depo. p. 14, l. 8-14.

14. Dr. Haug testified that regardless of when Claimant's symptoms began, in her medical opinion, the splash of diesel fuel into his right eye had nothing to do with the vitreous hemorrhage secondary to a Valsalva retinopathy. Haug Depo. p. 15, l. 1-6. A diesel fuel splash into the eye does not cause Valsalva retinopathy according to Dr. Haug. Haug Depo. p. 19, l. 9-11.

15. When Dr. Haug evaluated Claimant on the date of injury, she did not recommend immediate surgery. Instead, she advised Claimant that a vitreous hemorrhages secondary to a Valsalva retinopathy most often clear on their own. However, due to Claimant's insistence of claimant, she agreed that she would perform the surgery within a week if Claimant still desired. Haug Depo. p. 9, l, 10-20. Dr. Haug ultimately performed surgery one week later, on January 31, 2017. Haug Depo. p. 9, l. 21-24.

16. During the surgery to correct the vitreous hemorrhage, Dr. Haug testified that she did not appreciate any findings consistent with a retinal tear or detachment. Haug Depo. p. 9, l. 25; p. 10, l. 1-2.

17. Dr. Haug testified that when she performs surgery generally, if she sees areas that could be suspicious for retinal tearing, she will "add laser in the peripheral retina" and that she has a low threshold to add the laser, as she did in this case. Haug Depo. p. 10, l. 2-7. However, when asked specifically on direct examination by Claimant's counsel, Dr. Haug testified that she did not observe any retinal tearing in Claimant's right eye. Haug Depo. p. 11, l. 13-16. She further testified that the purpose of the surgery was to address the vitreous hemorrhage. Haug Depo. p. 11, l. 20-21.

18. The only ocular injury that Dr. Haug identified as having been sustained by Claimant was the vitreous hemorrhage secondary to a Valsalva retinopathy. She testified that a Valsalva retinopathy can be acute or chronic, and that there is no way of telling whether Claimant's condition was acute or chronic. Haug Depo. p. 15, l. 21-25, p. 15, l. 1-5.

19. Claimant contends that Dr. Haug imposed work restrictions effective January 24, 2017, following his first appointment with Dr. Haug. However, Dr. Haug's medical record from January 24, 2017 does not reflect any work restrictions assigned by Dr. Haug. RE A, Bates 1.

20. Claimant also testified that the designated provider/authorized treating provider, Dr. Aaron Singh, assigned work restrictions immediately following the injury event. Yet it is noted that Claimant did not present to Dr. Singh for the first time until February 13, 2017, approximately two weeks following the surgery. CE 4, Bates 34.

21. Claimant sought an independent medical examination (IME) with Dr. Timothy Hall on July 17, 2017.

22. Dr. Hall reviewed medical records from Dr. Haug and an IME report from Respondents' medical expert, Dr. Ronald Wise. He documents in his IME report Claimant's reported mechanism of injury to both Dr. Haug and Dr. Wise, neither of whom documented any reported trauma to Claimant's head. Similarly, Dr. Hall does not document anywhere in his IME report that Claimant reported striking his head while getting up from under the tractor. CA 5, Bates 81-82.

23. Dr. Hall conceded that he did not conduct an extensive eye exam of Claimant, and that his examination was not as extensive as that of Dr. Wise. CE 5, Bates 82. Additionally, Dr. Hall documented that "there is nothing new unearthed" from his examination and evaluation of claimant during his IME. CE 5, Bates 82. Nevertheless, Dr. Hall diagnosed Claimant with post-concussive syndrome with probable post trauma vision syndrome with minimal cognitive symptoms. CE 5, Bates 82.

24. Dr. Hall stated in his IME report that he disagreed with the findings of Respondents' medical expert, Dr. Ronald Wise, because Dr. Wise did not provide an alternate mechanism of injury besides that of diesel fuel splashing into claimant's right eye. CE 5, Bates 81. Regarding Dr. Hall's concerns, the ALJ finds from the evidence presented, that Claimant reported nothing other than diesel fuel splashing into his eye as the mechanism of injury when he saw Dr. Haug and Dr. Wise.

25. The opinions of Dr. Haug and Dr. Wise are supported by the objective findings on examination and the medical records admitted into evidence. Based upon the evidence presented, the ALJ finds the opinions of Drs. Haug and Wise credible and more persuasive than the contrary opinions of Dr. Hall.

26. As noted above, Respondents referred Claimant to Dr. Wise for an independent medical examination (IME) on May 16, 2017 regarding whether the Claimant ocular pathology was causally related to the mechanism of injury (MOI) described by Claimant, specifically getting diesel fuel splashed into his right eye. RE B.

27. Dr. Wise is a Board certified ophthalmologist and is Fellowship trained in corneal disease and anterior segment pathology. He has practiced ophthalmology for 22 years and is licensed in the states of Colorado, Kansas, and Texas. Dr. Wise is also a Level II Certified Ophthalmologist with the Division of Workers' Compensation. He's been Level II certified for more than a decade.

28. As part of his IME, Dr. Wise conducted a comprehensive ophthalmology evaluation and ocular testing of Claimant. He also obtained a personal history from Claimant, including a description of the MOI. Claimant informed Dr. Wise that he got diesel fuel in his right eye while working underneath a tractor, and that he stood up rapidly to wash his eye out with water. He also reported that later in the day, he began to experience difficulties with his vision. Claimant gave no history or report of direct eye trauma and no history or report of striking his head as he stood up to wash out his eye. RE B, Bates 12.

29. Dr. Wise testified that he agreed with the diagnosis determined by Dr. Haug, specifically that Claimant had sustained a vitreous hemorrhage secondary to a Valsalva retinopathy.

30. Dr. Wise further testified that while diesel fuel might cause irritation to the cornea of the eye, it is incapable of causing a Valsalva retinopathy or a torn retina. He also documented this in his IME report. RE B, Bates 15.

31. Following review of records and the IME, Dr. Wise opined in his IME report and in his live testimony that the MOI as described by Claimant, getting diesel fuel in the eye and rising rapidly to wash out the eye, presents no correlation or causal connection to the ocular condition diagnosed and treated by Dr. Haug.

32. Dr. Wise testified that he specifically asked Claimant if he had struck his head and that Claimant did not say that he had. Dr. Wise never had any indication from Claimant's self-reported history or his medical records that Claimant struck his head while getting up from under the tractor to wash his eye.

33. At hearing, Claimant testified that he had immediate visual disturbances following the splash of diesel fuel in his right eye. However, claimant's medical records clearly document a prior self-report that he did not begin experiencing symptoms until at least two hours after the incident, or even until the next day. RE A, Bates 1; CE 4, Bates 34; CE 5, Bates 81. Claimant also testified at hearing that after he washed his eye, he went home and did not work the rest of the day, however, Claimant's medical records document that he worked for at least two additional hours, and in his report to Dr. Singh at Pagosa Springs Medical Center, Claimant reported that he worked the remainder of the day. RE A, Bates 1; CE 4, Bates 34.

34. Claimant testified that he informed his treating providers and evaluating providers all of the events that transpired on the date of injury; he told them everything that happened.

35. Claimant did not provide any history to Dr. Haug, Dr. Wise, or to Dr. Hall that he had struck his head or had any direct trauma to the right eye.

36. The ALJ credits the opinions of Drs. Haug and Wise to find that Claimant's vitreous hemorrhage was likely caused by a Valsalva retinopathy and is unrelated to getting diesel fuel splashed into his eye.

37. Based upon the evidence presented, the ALJ finds that Claimant has failed to establish that he suffered a compensable injury to his right eye on January 23, 2017 as he has alleged. While an incident occurred, the evidence presented fails to establish a causal connection between the MOI, i.e. getting diesel fuel in the eye and Claimant's ocular condition which forms the basis of his claim for medical and indemnity benefits.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

A. To sustain his burden of proof concerning compensability, Claimant must establish that the condition for which he seeks benefits was proximately caused by an "injury" arising out of and in the course of employment*. Loofbourrow v. Industrial Claim Appeals Office*, 321 P.3d 548 (Colo.App. 2011), *aff'd Harman-Bergstedt, Inc. v. Loofbourrow*, 320 P.3d 327 (Colo. 2014); *Section 8-41-301(I)(b), C.R.S.*

B. The phrases "arising out of" and "in the course of" are not synonymous and a claimant must meet both requirements for the injury to be compensable. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 20 (Colo. 1988). The latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d 379, 381 (Colo. 1991). An injury occurs "in the course of" employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co.,* 38 Colo. App. 48, 51, 552 P.2d 1033, 1036 (1976). Here, there is little question that Claimant's alleged injury occurred within the time and place limits of his employment relationship with Employer and during an activity, specifically replacing a fuel pump in furtherance of his duties as a mechanic for Employer. Nonetheless, the question of whether the alleged conditions, for which Claimant seeks benefits, "arose out of" his employment must be resolved before the injury is deemed compensable.

C. The "arising out of" test is one of causation. It requires that the injury have its origins in an employee's work related functions, and be sufficiently related thereto so as to be considered part of the employee's service to the employer. *Horodyskyj v. Karanian*, 32 P.3d 470, 475 (Colo. 2001). The fact that Claimant may have experienced an onset of pain while performing job duties, does not mean that he sustained a work-related injury. An incident which merely elicits pain symptoms without a causal connection to the industrial activities does not compel a finding that the claim is compensable. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Parra v. Ideal Concrete,* W.C. No. 3-963-659 and 4-179-455 (April 8, 1988)*; Barba v. RE1J School District,* W.C. No. 3-038-941 (June 28, 1991); *Hoffman v. Climax Molybdenum Company,* W.C. No. 3-850-024 (December 14, 1989).

D. Under the Workers' Compensation Act (hereinafter Act) there is a distinction between the terms accident and injury. An "accident" is defined under the Act as an "unforeseen event occurring without the will or design of the person whose mere act causes it; an unexpected, unusual or undersigned occurrence." Section 8-40-201(1), C.R.S. In contrast, an "injury" refers to the physical trauma caused by the accident. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967); *see also*, §8-40-201(2)(injury includes disability resulting from accident). Consequently, a "compensable" injury is one which requires medical treatment or causes disability. *Id*.;

Romero v. Industrial Commission, 632 P.2d 1052 (Colo. App. 1981); *Aragon v. CHIMR, et al.*, W.C. No. 4-543-782 (ICAO, Sept. 24, 2004). No benefits flow to the victim of an industrial accident unless the accident results in a compensable "injury." *Romero*, supra; §8-41-301, C.R.S. While the ALJ is persuaded that Claimant's visual problems were genuine and his need for treatment reasonable and necessary, the record submitted is persuasive of the fact that his visual condition, i.e. a vitreous hemorrhage is not related to getting diesel fuel in the eye, but rather to an event that increased his intrathoracic pressure such as heavy lifting, straining with constipation, coughing, and/or vomiting. Claimant offered no testimony or other evidence that he had been engaged in any heavy lifting on the date of injury or any other activity which would cause an increased intrathoracic pressure. Rather, Claimant asserted originally that he had sustained a horseshoe retinal tear that required surgical repair after he had splashed diesel fuel into his right eye while changing a fuel filter under a tractor. In his reports to treating providers and evaluating physicians, Claimant stated only that when the diesel fuel splashed into his right eye, he quickly got up from under the tractor and rinsed his eye.

E. Later at hearing, Claimant suggested that he may have struck his head while getting up from under the tractor, but the medical records predating the hearing are devoid of any such suggestion and Claimant admitted he never reported to Dr. Haug, Dr. Wise, or Dr. Hall that he had hit his head. Moreover, Claimant agreed that when he responded to interrogatories, despite having at least three separate interrogatories in which to report that he had struck his head, he never made such assertion nor did he report that he hit his head. The ALJ finds the question of whether Claimant struck his head particularly germane to the issue of compensability since it provides a MOI which would arguably support a conclusion that Claimant's need for ocular treatment with Dr. Haug was causally related to his work duties on January 23, 2017. Consequently, the ALJ has carefully considered Claimant's testimony and has weighed it against the balance of the competing evidence, including the medical records presented. Based upon that review, the ALJ finds and concludes that the suggestion that Claimant may have hit his head while standing quickly to wash out his eye was raised for the first time at hearing. The suggestion is inconsistent with and contradicted by the documentary evidence, including the medical records of Dr. Haug, and Dr. Wise. Based upon the evidence presented, the ALJ finds that the inconsistencies in Claimant's testimony cannot be reconciled with the more persuasive competing record evidence. Accordingly, the ALJ concludes that Claimant's intimation that he may have hit his head upon standing is unconvincing and unreliable.

F. Given the distinction between the terms "accident" and "injury" an employee can experience symptoms, including pain from an "accident" at work without sustaining a compensable "injury." This is true even when the employee is clearly in the course and scope of employment performing a job duty. See *Aragon*, supra, ("ample evidence" supports ultimate finding that no injury occurred even where the claimant experienced pain when struck by a bed she was moving as part of her job duties); see also, *McTaggart-Kerns v. Dell, Inc.,* W.C. No. 4-915-218 (ICAO, May 29, 2014)(where Claimant involved in motor vehicle accident without resultant injuries, no compensable

injury occurred). As explained by a Panel of the Industrial Claims Appeals Office in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (October 27, 2008), a coincidental correlation between a claimant's work and his symptoms does not mean there is a causal connection between a claimant's injury and his/her work. To the contrary, as noted by the Panel in *Scully* "correlation is not causation." Further, there is no presumption that an employee found injured on the employer's premises is presumably injured from something arising out of his work. *See Finn v. Industrial Commission,* 437 P.2d 542, 544 (Colo. 1968). While the evidence presented supports that Claimant's work duties caused him to get diesel fuel in his right eye, it does not support a nexus between getting diesel fuel in the eye and Claimant's vitreous hemorrhage which required treatment. Simply put, while an incident occurred, the evidence presented supports a conclusion that the incident did not cause Claimant's need for treatment nor did the incident cause Claimant's disability. Consequently, the ALJ concludes that Claimant has failed to prove, by a preponderance of the evidence, that there is a causal connection between his employment and the resulting conditions for which medical treatment and indemnity benefits are sought. §8-43-201, C.R.S.; *Ramsdell v. Horn*, 781 P.2d 150 (Colo.App. 1989); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000). Because Claimant failed to establish he suffered a compensable "injury" as defined by the aforementioned legal opinions, his claim must be denied and dismissed. Accordingly, the claims for medical and temporary disability benefits need not be addressed further.

ORDER

It is therefore ordered that:

1. Claimant's claim for benefits is denied and dismissed.

DATED: December 5, 2017

/s/ Richard M. Lamphere

Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to

the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Have Respondents shown, by a preponderance of the evidence, that Claimant did not suffer a compensable injury on October 3, 2016, thus entitling Respondents to withdraw their General Admissions of Liability?

II. If compensability is established, has Claimant shown, by a preponderance of the evidence, that she is entitled to Medical Treatment which is reasonable, necessary, and related to her work injury, including, but not limited to, ongoing physical therapy and purchase of a TENS unit as recommended by her ATP?

STIPULATIONS

The parties stipulated that Claimant's Average Weekly Wage is $1,094.41. This stipulation was accepted by the ALJ.

FINDINGS OF FACT

Based upon the evidence received at hearing, the ALJ makes the following Findings of Fact:

Injury and Treatment

1. Claimant fell at work on October 3, 2016. While leaving a work-related meeting, she lost her footing on some carpeted stairs, and fell down the last three stairs, striking, at various times, her buttocks, knees, and arms.

2. Claimant sought treatment for the October 3, 2016 incident the following day at the emergency room for the Heart of the Rockies Medical Center. (Ex. 4, pp. 8-14). It was reported at that time that Claimant had a fall at work the day prior. She tripped and fell down approximately three stairs, landing on her arms and knees. Claimant reported pain in her back, neck, right hip, right knee, left shoulder, and left knee. Physical examination documented that she had moderate soft-tissue and "vertebral tenderness in the right upper, mid and lower and left upper, mid and lower thoracic area." *Id.* at 10. Exam of the right hip demonstrated moderate tenderness and limited range of motion secondary to pain. Exam of the right knee documented moderate tenderness and mild swelling along with limited range of motion secondary to pain. Claimant also had tenderness of the left knee and range of motion limited due to pain.

3. Claimant was diagnosed with an acute traumatic thoracic back strain and contusions to the right and left knees. She was given work restrictions to include no

bending or stooping, no prolonged sitting, and no lifting greater than 10 pounds for seven days. Claimant self-reported to her treating physician that she had a history of fibromyalgia, hypertension, and diabetes mellitus.

4. Claimant was first seen at her Workers' Compensation ("WC") provider's clinic, First Street Family Health in Salida, on October 11, 2016. (Ex. 5, pp. 78-80). She was seen regularly by Jennifer Lee, PA-C. Her Authorized Treating Physician ("ATP") was Joel Schaler, MD. Claimant reported a similar mechanism of injury; she lost her footing and fell down three steps, tumbling forward and landing on her hands and knees. Physical examination of Claimant revealed midline tenderness to palpation from T5 to T10, and tenderness to palpation of the lateral paraspinal muscles of the mid-thoracic spine. This WC provider continued Claimant's work restrictions, prescribed Percocet and cyclobenzaprine, and referred Claimant for physical therapy.

5. Her ATP, Dr. Schaler, filed a series of Physician's Reports on 2/17/17 (Ex. 4, p. 120), 3/21/17 (*Id* at 127), 4/17/17 (*Id* at 134), 6/7/17 (*Id* at 138), and 7/17/17 (*Id* at 142). Dr. Schaler was consistent in ordering additional and continued physical therapy, the use of a TENS unit, and stating that Claimant was not yet at MMI, with an unknown date for reaching it. At no point has Claimant's ATP placed her at MMI.

6. Dr. Schaler also noted in his report of April 16, 2017 that "I believe the original injury aggravated an underlying chronic fibromyalgia which she is slowly recovering from…..She is not at MMI, but she has improved significantly by about 75% per her estimation since the originally(sic) injury." (Ex. 4, p. 132).

7. Claimant also began physical therapy on October 24, 2016. (Ex. 6, pp. 143-146). The physical therapist documented that Claimant reported immediate right hip, knee, and thoracic pain. She had continued to work as the manager for Employer, and reported level 8 out of 10 right hip and thoracic back pain. The pain was described as being constant, sharp, and aching.

8. Claimant's stated goal for physical therapy was simply, "To get back to the way [she] was before the fall." *Id.* at 144. Claimant was noted to be unable to perform the full thoracic mobility tests, due to complaints of pain and wincing with palpation. Findings included decreased strength, decreased flexibility, and impaired Range of Motion ("ROM").

9. Claimant followed up at First Street Family Health on October 25, 2016. (Ex. 5, pp. 81-83). Claimant reported that her thoracic back and right hip pain had not improved; in fact it had worsened slightly. Claimant was instructed to continue physical therapy and continue working within her light duty restrictions. As of November 2, 2016, Claimant was still experiencing severe pain and had reduced her working hours to four to five hours per day. Claimant reported the same symptoms on November 8, 2016, noting very slight improvement at that time.

10. On November 24, 2016, Claimant sought emergency treatment at the Heart of the Rockies Regional Medical Center emergency room. (Ex. 4, pp. 17-19). Physical examination again documented tenderness throughout the thoracic spine, along with the lumbar spine. The treating physician recommended work restrictions of no lifting greater than 10 pounds, no bending or stooping and no prolonged sitting. Lumbar radiculopathy was noted on this visit. *Id* at 18.

11. Claimant's reported to the same facility again January 24, 2017. It was noted she received relief from thoracic extension, position changes, heat, and rest. (Ex. 4, p. 26). She reported that used to feel "independent" in her level of functioning until this injury occurred. Her physical therapist documented on this date that Claimant had decreased lumbothoracic ROM secondary to pain, decreased lower extremity strength, hypertonic musculature, and poor scapulothoracic mobility.

12. Claimant was documented to have had a "good response" to physical therapy on January 26, 2017. (Ex. 4, p. 29). Her pain had reduced, and she reported feeling "really good" on this date. Claimant returned to work on January 31, 2017 on light duty, performing mostly office work. On February 2, 2017, Claimant's physical therapist noted that her thoracic mobility was improving. (Ex. 4, p. 36).

13. Claimant reported "60-70% improvement" on February 14, 2017. (Ex. 4, p. 44). Claimant had "asked for more visits" and it was hoped that she would hear soon if more therapy was approved by the WC carrier.

14. Claimant's physical therapy was then discontinued after her next session and she was not able to obtain any further therapy until June 26, 2017. (Ex. 4, p. 57).

15. When Claimant returned to physical therapy on June 26, 2017, it was documented that she had returned to therapy, because 8 additional visits had been approved. (Ex. 4, p. 57). She reported to the physical therapist, "I feel like my symptoms would be resolved by now if I could have only be[en] allowed to continue with PT back in February." Claimant was observed at this visit to have gait abnormalities, sensory/reflex changes, and an up-regulated SNS (sympathetic nervous system), secondary to persistent systemic discomfort.

16. Claimant's final documented physical therapy visit occurred on July 6, 2017. (Ex. 4, pp. 73-77). She again reported improvement and having "less pain" with physical therapy.

Medical Opinions

17. On June 13, 2017, Dr. Frank Polanco performed a peer review regarding Claimant's treating physician's request for a new TENS unit for home use. (Ex. B, pp. 7-9). Dr. Polanco ultimately felt the TENS unit should be denied, because there has been no documentation of objective effectiveness. On July 25, 2017, Dr. Polanco reviewed another request from Dr. Schaler, this time for more physical therapy. (Ex. B,

pp. 10-13). Dr. Polanco denied the request, because Claimant had exceeded the number of physical therapy sessions recommended under the medical treatment guidelines, and there was no documented functional improvement. In this same report, however, Dr. Polanco notes that "Therapy has helped". *Id* at 11.

18. The gap in Claimant's physical therapy was in part due to Respondents' scheduling of an independent medical examination ("IME") with Dr. Wallace Larson. The IME took place on March 9, 2017. (Ex. 7, Ex. A). Claimant reported the same falling mechanism of injury to Dr. Larson. Physical examination documented tenderness of the thoracic spine, right greater than left, and tenderness of the entire lumbar spine, right greater than left also. Dr. Larson reviewed Claimant's records for his IME, but no reference is made in his report to any of the physical therapy notes from February of 2017, which had documented Claimant's improvement with therapy.

19. Dr. Larson was asked to provide an answer to several questions posed by Respondents. (Ex. 7, pp. 175-76, Ex. A, pp. 5-6). Dr. Larson opined that Claimant "does not have an established anatomic diagnosis" and no "specific anatomic injuries." Dr. Larson stated that the fall at work did not aggravate any of Claimant's pre-existing conditions, nor did it cause any "identified anatomic injury." Dr. Larson felt that Claimant did not need any further medications or treatment because she did not have an "identified anatomic injury." Dr. Larson was also asked whether Claimant was at MMI for her work related injury, to which he opined the medical records did not establish a specific date of MMI, but that Claimant would have been at MMI by the date of his evaluation; to wit: March 9, 2017.

20. Claimant subsequently underwent an IME with Dr. Jack Rook at the request of Claimant's counsel on August 25, 2017. (Ex. 8). Dr. Rook obtained a history from Claimant regarding the injury, and the progression of her treatment and symptoms. Dr. Rook also reviewed Dr. Larson's IME report. Dr. Rook noted that it had been 10 months since Claimant's injury. Although she had physical therapy, she only had one session of dry needling and no massage therapy, no chiropractic care, and no injection therapy. Claimant reported to Dr. Rook that she continued working full-time for the employer out of financial necessity, despite her primary care physician's recommendation to work only part-time.

21. Dr. Rook documented Claimant's current complaints of pain, the most severe of which was focused around her mid to low back and hips. (Ex. 8, p. 185). She indicated her back pain felt 'muscular', with occasional sharp severe pain in her mid to lower back radiating to her buttocks.

22. Claimant reported that she was making progress with her physical therapy in February before it was discontinued. She felt the delay in the authorization of her additional treatment set her back considerably. Claimant reported just recently starting physical therapy again. She reported ongoing use of her old TENS unit, despite the new TENS unit prescribed by her ATP having been denied. She also began using a sacroiliac joint belt that was given to her by her physical therapist.

23. Dr. Rook discussed Claimant's prior medical history with her, including her diagnosis of fibromyalgia. (Ex. 8, p. 186). Claimant reported that her fibromyalgia used to cause "aching" type pain, which was different from the severe pain since the injury at work. She was able to perform the full duties of her job without any restriction prior to her injury.

24. Dr. Rook also performed a physical examination of Claimant. The examination of Claimant's back revealed increased muscle tone, with severe tenderness of her bilateral paraspinal muscles, extending from the thoracolumbar junction to the sacrum. There was noted to be exquisite tenderness of the bilateral sacroiliac joints.

25. Dr. Rook diagnosed Claimant with thoracic and lumbar myofascial pain syndrome with chronic muscle spasms. He also wanted to rule out facet malalignment, and bilateral sacroiliac joint strain/dysfunction. (Ex. 8, p. 187-188). Dr. Rook opined that Claimant likely strained and tore muscles and ligaments throughout her back, pelvis, and hip region when she fell at work. Although Claimant was predisposed to hypersensitivity due to her fibromyalgia, Dr. Rook indicated her clinical condition had markedly worsened from a soft-tissue perspective.

26. Dr. Rook opined that Claimant was *not* at MMI, and that she likely would require a few more months of ongoing physical therapy, along with pool therapy, which would be of optimal benefit, considering Claimant's severe myofascial pain. He felt Claimant may also benefit from a chiropractic evaluation and massage therapy. Dr. Rook also indicated a consultation with a pain management specialist would be warranted for possible trigger point injections as well as more specialized medication management. Dr. Rook recommended Claimant have a TENS unit purchased for home use, due to her long-term problem, and her favorable response to earlier usage of the TENS unit.

Testimony at Hearing

27. Claimant testified at hearing in Respondents' case-in-chief. She was asked regarding a previous back injury she had sustained at work. She explained that she had strained her back four or five years ago working for the same employer, but simply sought treatment for a short period of time on her own, as she wanted to avoid filing a workers' compensation claim at that time. Claimant was also asked regarding a physical therapy referral that was made for her by a physician in 2014. Claimant explained that the therapy was for her general aches as a result of her fibromyalgia. Although she would have pain in her back, it was not constant, nor was it nearly severe as it had been since the October 3, 2016 fall. She would typically treat these aches by soaking in a hot tub of water and using her heating pad. Claimant also testified that she had received good relief from her TENS unit to date.

28. Claimant testified that she had worked for the employer for approximately fifteen years, prior to the fall of October 3, 2016. She had never missed more than a

week of work due to illness or injury prior to this fall. Her job would require her to frequently lift items ranging from 5 to 100 pounds, and she was able to perform her job duties in full for the fifteen years prior to October 3, 2016. She testified regarding the difference between the aches prior to the fall, and the pain after the fall. She described the symptoms prior to the fall as more of minor aches and pains; almost a feeling of soreness from overworked muscles. Since the fall, it is more of a severe, constant pain.

29. Dr. Larson testified at hearing on behalf of Respondents. It was his testimony that Claimant's symptoms did not correspond with any particular anatomic injury. He felt that the injury sustained by Claimant should have been minor, and relieved through time alone. Dr. Larson identified the lack of pathology on the x-rays and MRIs in opining that Claimant did not sustain any degree of anatomic injury with a specific diagnosis. He testified that he did not think ongoing physical therapy or use of the TENS unit would be reasonable, necessary, or related to the admitted fall, as Claimant had widespread, diffuse symptoms not attributable to the fall.

30. Dr. Larson testified that it was his opinion Claimant may have sustained a minor strain when she fell, but that she had too many non-anatomic findings to be able to tell for certain. He testified at hearing that she would have been at MMI for her work injury the day after it occurred.

Summary of Claimant's Prior Medical History

31. Claimant had treated at First Street Family Health in Salida since at least 2009. On 7/27/2009, Claimant twisted her back at work, but no further follow-up is noted, as "a rapid recovery was expected". (Ex. C, pp. 14-16). She was treated for depression beginning in 2010 (Ex. C, p. 17). The records do not reflect that such treatment was wholly successful. On Sept. 23, 2010, Claimant was referred to physical therapy for neck pain (Ex. C, p. 22).

32. Claimant complained of a sudden onset of generalized pain on 6/24/14 to Dr. Meggan Grant-Nierman, DO, with First Street. She complained that she "hurt everywhere, feels like someone took a baseball bat to me"…can't stay awake—Came on all of a sudden. Claimant complained of fatigue. (Ex. C, p. 51). Further examination of the records, however, shows a diagnosis of an unspecified fever, likely viral in nature. Nothing in the records indicate that this illness carried over to her current complaints.

33. As recently as June 16, 2016, (Ex. C, p. 65), and again on September 13, 2016 (Ex. C, p. 69), Claimant had been diagnosed with fibromyalgia. Claimant consistently acknowledges this in her medical history.

Procedural History

34. Sharmie Jensen testified telephonically at hearing in her capacity as a claims representative for the Respondent-Insurer. She testified that Claimant's claim had been reassigned to her in January of 2017. She alleged that she scheduled an IME

with Dr. Wallace Larson to figure out why Claimant was not progressing towards MMI and to seek ideas for additional treatment.

35. She testified initially that there were also records from Claimant's primary care provider from before the date of that injury which made her question compensability. On cross-examination, Ms. Jensen acknowledged that in fact, she did not have the prior medical records at the time she sent Claimant for an IME with Dr. Larson.

36. Respondents had initially filed a General Admission of Liability on November 17, 2016, admitting for Medical Expenses and Temporary Total Disability beginning 11/8/2017 and ongoing. (Ex. 3).

37. A subsequent General Admission of Liability was filed on April 18, 2017. Respondents admitted to Medical Benefits, Temporary Total Disability from 11/8/16 through 1/29/17, and Temporary Partial Disability from 1/30/17 through 4/30/17. It was noted that Claimant had returned to work light duty at full wages. (Ex. I)

38. Respondents then filed an Application for Hearing on June 28, 2017, contesting Compensability and Reasonable and Necessary Medical Benefits, and seeking to withdraw all previously filed General Admissions of Liability. (Ex. 1, Ex J). Claimant timely filed her Response thereto. (Ex. 2, Ex. K).

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following Conclusions of Law:

Generally

1. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

2. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. Assessing weight, credibility and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the ALJ. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968). In this case, Respondents argue that Claimant's credibility is so lacking that her reported symptoms do not establish a compensable claim. The ALJ finds that Respondents have not shown this. Instead, the evidence shows that Claimant is genuinely dismayed at her lack of progress, and that she desires to get better in order to return to work without restrictions. While an imperfect historian, and lacking in sophistication-the ALJ doubts Claimant lifted 100 pounds at work, for example-Claimant is sincere in her testimony, and in reporting her symptoms to her medical providers.

Withdrawal of General Admission of Liability

4. Any party seeking to modify an issue determined by a general or final admission of liability, summary order, or full order, shall bear the burden of proof for any such modification. § 8-43-201(1) C.R.S.; *Dunn v. St. Mary Corwin Hospital*, W.C. No. 4-754-838 (Oct. 1, 2013). The aforementioned statute was added in 2009 to reverse the effect of *Pacesetter Corp v. Collett*, 33 P.3d 1230 (Colo. App. 2001) that allowed Respondents to move to withdraw an admission of liability without being assessed the burden of proof. The statute in its current form placed the burden on the respondents and much such a withdrawal the procedural equivalent of a reopening. Therefore, Respondents must prove by a preponderance of the evidence that Claimant did not sustain a compensable injury.

5. Admissions of liability bind respondent, subject only to subsequent litigation. *H.L.J. Management v. Kim*, 804 P.2d 250 (Colo. App. 1990). Once either party endorses an issue for adjudication, prior admissions of liability may be altered, changed or withdrawn on a prospective basis. *H.L.J. Management, supra.* Respondent may even obtain complete relief, including a finding that no compensable injury ever existed. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3rd 844 (Colo. App. 2000). Pursuant to C.R.S. Section 8-43-201 (1), respondent has the burden of withdrawing its previously filed GALs in this claim by a preponderance of the evidence. "Employer does

not have to show why its admission was improvidently filed in order to contest liability." *Pacesetter v. Industrial Claim Appeals Office,* 33 P.3d 1230 (Colo. App. 2001).

Compensability

6. For an injury to be compensable under the Workers' Compensation Act, it must "arise out of" and "occur within the course and scope" of the employment. *Price v. Indus. Claim Appeals Off.,* 919 P.2d 207, 210, 210 (Colo. 1996); *Schepker v. Daewoo North*, W.C. No. 4-528-434 (ICAO April 22, 2003). An injury "arises out of" employment when the origins of the injury are sufficiently related to the conditions and circumstances under which the employee usually performs his or her job functions as part of the employee's services to the employer. *See Schepker, supra.* "In the course of" employment refers to the time, place, and circumstances of the injury. *Id.* There is no presumption that an injury arises out of employment when an unexplained injury occurs during the course of employment. *Finn v. Indus. Comm'n,* 165 Colo. 106, 108-09, 4437 P.2d 542 (1968).

7. Under the Workers Compensation Act, there is a distinction between the terms "accident" and "injury". An "accident" is defined under the Act as an "unforeseen event occurring without the will or design of the person whose mere act causes it; an unexpected, unusual or undersigned occurrence." § 8-40-201(1), C.R.S. In contrast, an "injury" refers to the physical trauma caused by the accident. *City of Boulder v. Payne,* 162 Colo. 345, 426 P.2d 194 (1967); see also, § 8-40-201 (2) (injury includes disability resulting from accident). Consequently, a "compensable injury" to establish a compensable workers' compensation claim is one which requires medical treatment or causes disability. *Id.; Romero v. Industrial Commission,* 632 P.2d 1052 (Colo. App. 1981); *Aragon v. CHIMR, et al.,* W.C. No. 4-543-782 (ICAO, Sept. 24, 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167, 1169 (Colo. App. 1990); *Subsequent Injury Fund v. State Compensation Insurance Authority,* 768 P.2d 751 (Colo. App. 1988)." *Romine v. Air Wisconsin Airlines,* W.C. No. 4-609-531 (October 12, 2006). No benefits flow to the victim of an industrial accident unless the accident results in a compensable "injury." *Romero, supra;* § 8-41-301, C.R.S.

8. The ALJ finds that Respondents have failed to meet their burden to establish that Claimant did not in fact sustain a compensable injury as previously admitted to by Respondents. Claimant fell at work on October 3, 2016. She sought treatment the next day as a result of the fall, and it was documented at the emergency room that Claimant had symptoms of pain in her back, neck, right hip, right knee, left shoulder, and left knee. The physical examination performed at the emergency room is consistent with the mechanism of injury and Claimant's subjective complaints. Claimant was given restrictions of no lifting more than ten pounds for at least seven days. Claimant's fall at work warranted medical treatment. This resulted in lost time from work; therefore, compensability has been shown.

9. Respondents argue that Claimant did not sustain any "injury," and that simply having pain does not amount to a compensable injury. However, multiple

medical providers have diagnosed Claimant with various injuries, including an acute strain to the back, contusions to the knees, myofascial pain syndrome, bilateral sacroiliac joint dysfunction, etc. It was Dr. Rook's opinion that Claimant likely strained or tore muscles and ligaments throughout her back, pelvis, and hip when she fell at work. Respondents have not met their burden to show that this did not occur.

10. The medical treatment guidelines at WCRP Rule 17, Exhibit 9 specifically address chronic pain disorders, which states that "Chronic pain is a phenomenon not specifically relegated to anatomical or physiologic parameters." (WCRP Rule 17, Exhibit 9, p. 6). The Guidelines go on to state:

> While diagnostic labels may pinpoint contributory physical and/or psychological factors and lead to specific treatment interventions that are helpful, a large number of patients defy precise taxonomic classification. Furthermore, such diagnostic labeling often overlooks important social contributions to the chronic pain experience. Failure to address these operational parameters of the chronic pain experience may lead to incomplete or faulty treatment plans.

Exhibit 9 of Rule 17 allows for treating pain that may not have a "precise taxonomic classification." In any event, ALJ finds that Claimant did in fact sustain defined injuries. Claimant freely admitted to her providers that she, and family members, suffer from fibromyalgia. The ALJ concurs with Claimant's ATP, and Dr. Rook, that Claimant's work injury aggravated her underlying fibromyalgia, making it significantly more symptomatic, despite a lack of specific anatomic findings, as urged by Dr. Larson.

Medical Benefits

11. The Claimant has the burden to prove his entitlement to medical benefits by a preponderance of the evidence. §8-43-201, C.R.S. The Respondents are only liable for the medical treatment that is reasonable and necessary to cure and relieve the work-related injury. §8-42-101(1)(a), C.R.S. Where the relatedness, reasonableness or necessity of medical treatment is disputed, the Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc.,* W.C. No. 4-117-758 (ICAO April 7, 2003)

12. The ALJ finds that Claimant has proven by a preponderance of the evidence that she is entitled to all reasonable, necessary, and related treatment for her mid-back, low back, hips, and SI joints as a result of the October 3, 2016 work injury. This specifically includes, but is not limited to, ongoing physical therapy and a new TENS unit as prescribed by her ATP, with the concurrence of Dr. Rook.

13. Claimant sustained multiple injuries when she fell at work. Physical therapy was helping improve both Claimant's pain and function before being

discontinued by Respondents. The ALJ finds that a resumption of physical therapy is reasonable, necessary, and related to Claimant's injury. Claimant also reported some relief from the TENS unit. Dr. Polanco denied the TENS unit primarily because there was a lack of documentation of "objective effectiveness." This opinion is unpersuasive. The ALJ finds that Claimant's testimony, the opinions of Dr. Rook, and the medical records from Claimant's ATP show that the TENS unit is reasonable, necessary, and related to the compensable work injury.

ORDER

It is therefore ordered that:

1. Claimant suffered a compensable injury on October 3, 2016. Respondents may not withdraw their General Admissions of Liability.

2. Claimant is entitled to Medical Benefits to treat her work injury as recommended by her ATP, including, but not limited to, continued physical therapy, and purchase of a TENS unit.

3. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 6, 2017

/s/ William G. Edie

William G. Edie
Administrative Law Judge
Office of Administrative Courts
2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that she suffered a compensable left ankle injury during the course and scope of her employment with Employer on December 21, 2016.

2. Whether Claimant has proven by a preponderance of the evidence that she is entitled to receive Temporary Total Disability (TTD) benefits for the period December 22, 2016 until terminated by statute.

3. A determination of Claimant's Average Weekly Wage (AWW).

STIPULATION

The parties agreed that, if Claimant suffered a left ankle injury at work on December 21, 2016, her medical care has been authorized, reasonable and necessary.

FINDINGS OF FACT

1. Claimant worked for Employer as a Massage Therapist at Denver International Airport (DIA). Her job duties involved massaging clients, providing education, selling products and greeting customers. Claimant earned a salary of approximately $36,000 per year or $730.00 each week.

2. On December 21, 2016 Claimant was performing a chair massage on a client with particularly tight shoulders. In applying pressure to the middle of the client's back with her elbow, Claimant increased the force on her left leg. As Claimant turned her left foot outward she experienced immediate pain in her left ankle and shouted "ouch." Although Claimant acknowledged that she had problems standing all day at work during her shift, she denied prior pain or problems with her left ankle.

3. Claimant's Supervisor Sean Daly testified at the hearing in this matter. He explained that he assigned Claimant a corrective action on December 21, 2016. He noted that the discipline was predicated on Claimant's attendance issues and discussed the matter with her in a common area at DIA. The Corrective Action Form specifies that Claimant had been disciplined for lateness/attendance issues on three prior occasions in September and October 2016. The corrective action constituted a "Final Warning" prior to termination.

4. Mr. Daly commented that he did not receive any injury report from Claimant on December 21, 2017. However, he acknowledged that he might not have been available because he could have been at Employer's other location approximately 150 yards away at DIA.

5. On December 22, 2016 Claimant contacted Mr. Daly to report her left ankle injury. She also notified Employer's corporate office for treatment recommendations. However, she remarked that she did not receive any instructions about how to proceed.

6. Mr. Daly recalled that he had received a telephone call from Claimant on December 22, 2016. However, she did not report a work injury, but stated that she had injured her left foot shoveling snow. Claimant noted that she would not make it to work on December 22, 2016. Mr. Daly scheduled Claimant to work after December 22, 2016 and never received any restrictions limiting her ability to work.

7. On December 22, 2016 Claimant visited her personal medical treatment provider Elizabeth Couture, P-AC at Peak Vista Community Health Centers in Strasburg. Claimant reported that she had injured her left foot while stretching approximately six months earlier. The shooting pain ran from her heel to lower calf. Claimant did not receive medical treatment but obtained orthotics. PA-C Couture diagnosed Claimant with plantar fasciitis of the left foot.

8. On December 22, 2016 Claimant also visited The Medical Center of Aurora for an examination. Claimant reported that "she works at the airport on her feet all day performing massages. She states she will regularly have sore feet from being on them all day. Patient states yesterday she was stepping out of her car when she had a worsening pain in her left foot and ankle." Claimant denied any trauma and did not "roll her feet or have anybody step on them." The report also provided that Claimant "has history of plantar fasciitis but states this feels different."

9. On December 29, 2017 Claimant visited Podiatry Associates, P.C. for an evaluation of her left ankle. Claimant reported that she did not suffer a discrete injury. Her left ankle pain began after work on December 21, 2016 and worsened by the morning of December 22, 2016. Claimant noted pain while walking after getting out of bed in the morning. Cynrhia S. Oberholtzer-Classen, DPM diagnosed Claimant with plantar fasciitis as a result of chronic overuse. She noted that Claimant's work as a massage therapist required her to remain on her feet each day and caused an overuse injury. Dr. Oberholtzer-Classen immobilized Claimant's left foot with a CAM boot in an effort to alleviate her symptoms. By January 10, 2017 Dr. Oberholtzer-Classen released Claimant to full duty employment.

10. On January 15, 2017 Claimant completed a Workers' Claim for Compensation. She noted that she injured her left foot and the back of her left leg while working for Employer on December 21, 2016. Claimant specifically detailed that her injuries were caused by "working, giving massage, concrete floors for over a year, stretching, bending, twisting, turning, and kneeling, using feet for balance and that she was required to stand all day with no sitting allowed." In response to a question on the form about what "object or substance directly harmed" her she responded "the cement floor."

11. On March 3, 2017 Employer prepared a First Report of Injury. The Report specified that Claimant suffered injuries to her lower extremities while performing a chair

massage on December 22, 2016. Claimant explained that she was experiencing pain in her left foot while completing a massage and the symptoms worsened after work.

12. On March 10, 2017 Claimant underwent an MRI of her left ankle. Audrey Krosnowski, M.D. reviewed the MRI. She noted that the MRI reflected chronic tendinopathy in Claimant's left Achilles tendon, a plantar calcaneal spur in the plantar fascia and "osteochondral insult to the medial shoulder of the talar dome."

13. On May 12, 2017 Claimant completed a second Workers' Claim for Compensation. She remarked that she injured her left ankle while massaging a client on December 21, 2016. Claimant specified that she "changed position for massage and ended up with too much weight on ankle."

14. On June 8, 2017 Claimant underwent an independent medical examination with Scott Resig, M.D. She reported that on December 22, 2016 while performing a massage she twisted, turned and noticed left ankle pain. Although Claimant acknowledged that she had been suffering left ankle pain for the preceding six months, she managed her condition with orthotics. Claimant remarked that the December 22, 2016 incident significantly increased her symptoms. She commented that she had received an injection for her plantar fasciitis and worn a boot for several months. Nevertheless, her symptoms continued. Dr. Resig diagnosed Claimant with "an osteochondral defect of the medial talus with resolving plantar fasciitis and possible CRPS." He noted that it was impossible to determine whether Claimant's left ankle symptoms were causally related to her work accident. However, Dr. Resig remarked that "the pain apparently did worsen at the time of the injury on 12/22/16 and, therefore, it is plausible that with a reasonable degree of medical certainty that the injury occurred on 12/22/2016." He further detailed that Claimant did not have any ankle complaints prior to her injury but she may have aggravated her plantar fasciitis or "caused an osteochondral defect of the medial talus" while at work. Dr. Resig emphasized the need for an evaluation by a pain specialist to consider her possible CRPS.

15. Claimant testified at the hearing in this matter. She maintained that she injured her left ankle while massaging a client at work. Claimant acknowledged that she had received prior disciplinary actions for arriving late for her scheduled work shifts. The most recent disciplinary action occurred on the date of her left ankle injury or December 21, 2017. Claimant remarked that, contrary to Mr. Daly's testimony, she did not injure her left ankle shoveling snow because she lived in an apartment complex that provided snow removal.

16. Dr. Resig testified at the hearing in this matter. He diagnosed Claimant with an osteochondral defect of the talus and possible CRPS in her left ankle. Dr. Resig explained that an osteochondral defect is a break in cartilage typically caused by a traumatic accident. An osteochondral defect usually involves a severe twisting or shearing event "where the ankle will twist, shear a piece of cartilage [and] cause a break or crack in it." The injury is frequently accompanied by immediate pain or swelling. In response to a question about whether standing for long periods of time could have caused Claimant's osteochondral defect Dr. Resig responded that it could not. He continued that

if Claimant "kinda felt like an ouch and moved on" the injury would not fit the severe category. Dr. Resig summarized that, based on objective symptoms, he could not specify the cause of Claimant's left ankle injury.

17. Claimant has failed to demonstrate that it is more probably true than not that she suffered a compensable left ankle injury during the course and scope of her employment with Employer on December 21, 2016. Initially, Claimant explained that, while she was performing a massage on a client at work, she turned her left foot outward and immediately experienced pain in her left ankle. However, the record reflects that Claimant has suffered a lengthy history of left foot/ankle difficulties and provided a variety of accounts regarding the mechanism of injury. On December 22, 2016 Claimant visited her personal medical provider and reported that she had injured her left foot while stretching approximately six months earlier. She specifically received an injection for her plantar fasciitis and worn a boot for several months. Later on December 22, 2016 Claimant reported that she suffers sore feet from standing all day at work. She specifically explained that on December 21, 2016 she was stepping out of her car when she had worsening pain in her left foot and ankle. Claimant denied any trauma and did not "roll her feet or have anybody step on them." At a podiatry visit on December 29, 2016 Claimant reported that she did not suffer a discrete injury. Her left ankle pain simply began after work on December 21, 2016 and worsened by the morning of December 22, 2016. Furthermore, on her first Workers' Claim for Compensation Claimant noted that her left foot/ankle injuries occurred over a period of time. She detailed that her symptoms were caused by "working, giving massage, concrete floors for over a year, stretching, bending, twisting, turning, and kneeling, using feet for balance and that she was required to stand all day with no sitting allowed." The record is thus replete with inconsistencies regarding the mechanism of Claimant's left ankle injury.

18. The testimony of Dr. Resig also suggests that Claimant did not suffer a left ankle injury while at work on December 21, 2016. Relying on a left ankle MRI, Dr. Resig noted that Claimant suffers from an osteochondral defect of the medial talus and resolving plantar fasciitis. He explained that an osteochondral defect is a break in cartilage typically caused by a traumatic incident. An osteochondral defect usually involves a severe twisting or shearing event "where the ankle will twist, shear a piece of cartilage [and] cause a break or crack in it." Dr. Resig summarized that, based on objective symptoms, he could not speculate on the cause of Claimant's left ankle injury. However, because Claimant's left foot/ankle pain worsened at work on December 21, 2017 she may have aggravated her plantar fasciitis or osteochondral defect. Nevertheless, the bulk of Dr. Resig's opinion reveals that Claimant's activity of performing a chair massage on December 21, 2017 lacked sufficient force to cause a chondral defect. In conjunction with her inconsistent accounts of the cause of her left ankle symptoms, Claimant has failed to demonstrate that her work activities on December 21, 2016 aggravated, accelerated or combined with her pre-existing condition to produce a need for medical treatment.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. For an injury to be compensable under the Act, it must "arise out of" and "occur within the course and scope" of employment. *Price v. Industrial Claim Appeals Office*, 919 P.2d 207, 210 (Colo. 1996). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. § 8-41-301(1)(c) C.R.S.; *Faulkner v. Industrial Claim Appeals Office,*12 P.3d 844, 846 (Colo. App. 2000). The question of causation is generally one of fact for determination by the ALJ. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App.

1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

7. As found, Claimant has failed to demonstrate by a preponderance of the evidence that she suffered a compensable left ankle injury during the course and scope of her employment with Employer on December 21, 2016. Initially, Claimant explained that, while she was performing a massage on a client at work, she turned her left foot outward and immediately experienced pain in her left ankle. However, the record reflects that Claimant has suffered a lengthy history of left foot/ankle difficulties and provided a variety of accounts regarding the mechanism of injury. On December 22, 2016 Claimant visited her personal medical provider and reported that she had injured her left foot while stretching approximately six months earlier. She specifically received an injection for her plantar fasciitis and worn a boot for several months. Later on December 22, 2016 Claimant reported that she suffers sore feet from standing all day at work. She specifically explained that on December 21, 2016 she was stepping out of her car when she had worsening pain in her left foot and ankle. Claimant denied any trauma and did not "roll her feet or have anybody step on them." At a podiatry visit on December 29, 2016 Claimant reported that she did not suffer a discrete injury. Her left ankle pain simply began after work on December 21, 2016 and worsened by the morning of December 22, 2016. Furthermore, on her first Workers' Claim for Compensation Claimant noted that her left foot/ankle injuries occurred over a period of time. She detailed that her symptoms were caused by "working, giving massage, concrete floors for over a year, stretching, bending, twisting, turning, and kneeling, using feet for balance and that she was required to stand all day with no sitting allowed." The record is thus replete with inconsistencies regarding the mechanism of Claimant's left ankle injury.

8. As found, the testimony of Dr. Resig also suggests that Claimant did not suffer a left ankle injury while at work on December 21, 2016. Relying on a left ankle MRI, Dr. Resig noted that Claimant suffers from an osteochondral defect of the medial talus and resolving plantar fasciitis. He explained that an osteochondral defect is a break in cartilage typically caused by a traumatic incident. An osteochondral defect usually involves a severe twisting or shearing event "where the ankle will twist, shear a piece of cartilage [and] cause a break or crack in it." Dr. Resig summarized that, based on objective symptoms, he could not speculate on the cause of Claimant's left ankle injury. However, because Claimant's left foot/ankle pain worsened at work on December 21, 2017 she may have aggravated her plantar fasciitis or osteochondral defect. Nevertheless, the bulk of Dr. Resig's opinion reveals that Claimant's activity of performing a chair massage on December 21, 2017 lacked sufficient force to cause a chondral defect. In conjunction with her inconsistent accounts of the cause of her left ankle symptoms, Claimant has failed to demonstrate that her work activities on December 21, 2016 aggravated, accelerated or combined with her pre-existing condition to produce a need for medical treatment.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's claim for Workers' Compensation benefits for her left ankle symptoms is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-993-117-06

ISSUES

- Whether Claimant established by clear and convincing evidence that Dr. Finn erred by placing Claimant at MMI?

- Whether Claimant's left shoulder condition is related to her July 8, 2015 work injury entitling her to medical benefits?

- Whether Claimant sustained a permanent disfigurement as a result of the compensable right shoulder injury?

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant is a 55 year old female who Employer employed as a packer when she injured her right shoulder on July 8, 2015. She was reaching overhead for an empty carton when she felt a pop in her shoulder. She felt pain in her right shoulder, neck and hand.

2. Claimant did not seek treatment until August 7, 2015 when she saw Richard Shouse PA-C at Arbor Occupational Medicine. Mr. Shouse diagnosed shoulder tendonitis, prescribed medication, referred Claimant to physical therapy, and assigned work restrictions.

3. Claimant left Employer approximately three days later on August 10, 2015. She has not worked since.

4. Two and a half months later, despite being off work, Claimant began complaining of left sided shoulder pain. Dr. Orgel's October 30, 2015 report states that Claimant had pain in her left bicep and tricep. She had good range of motion. There was no weakness to resisted elbow movement. Dr. Orgel stated that the pain appeared to be muscular in nature. He did not find anything about her presentation to be "worrisome." Claimant testified that she did not have left shoulder pain prior to this, her left shoulder pain came on slowly, and the pain was not a result of any specific event.

5. On November 5, 2015, after conservative care failed, Claimant had surgery on her right shoulder. Claimant testified that she did not perform household activities. She lives with an adult daughter who performed all the household tasks. Claimant only attend to her personal hygiene and occasionally prepared simple meals for herself. Claimant testified that at all times, she obeyed Dr. Orgel's restrictions.

6. On January 12, 2016, Dr. Erickson performed a physician advisor review regarding the relatedness of Claimant's left shoulder complaints. Claimant was emphatic that her left shoulder complaints were caused by overuse of her left upper extremity while she recovered from her right shoulder surgery. However, Dr. Erickson concluded: "Contralateral overuse, however, has been thoroughly examined in the Workers' Compensation literature, and there is insufficient evidence that an injury can occur to the contralateral side from overuse. One interesting point in the majority of these studies is that a workers' activities are severely restricted and reduced after an injury, making it highly unlikely that a contralateral injury could occur. . . . I would conclude, to a reasonable degree of medical probability, that the left shoulder pain experienced by Ms. Loredo is not related to her work injury, or the surgery to her right shoulder."

7. Dr. Orgel noted on March 25, 2016 that Claimant's left shoulder was improving with physical therapy. She had good range of motion and all other tests were negative. Dr. Orgel noted that he was holding his request for a left shoulder MRI. On May 18, 2016, Dr. Orgel thoroughly examined Claimant's left shoulder and surrounding musculature. The examination was negative. He specifically noted that Claimant's left bicep tendon and rotator cuff were not tender, and there was no range of motion deficit. No weakness was noted.

8. On June 17, 2016, Dr. Orgel placed Claimant at maximum medical improvement and assigned a 13% upper extremity impairment rating for the right shoulder. Dr. Orgel noted Claimant continued to complain of significant pain in the right shoulder despite a repeat MRI revealing that the rotator cuff was intact and there was no failure of her surgery. Dr. Orgel released Claimant to full duty at that time. Dr. Orgel did not provide work restrictions because he found her right shoulder to be essentially normal on repeat MRI. Respondents filed a final admission admitting to this rating. Claimant requested a DIME.

9. Dr. Kenneth Finn performed the DIME examination and authored a report dated September 29, 2016. Dr. Finn agreed with the MMI date and assigned a 12% upper extremity impairment rating for the right shoulder injury. Respondents admitted to this rating in a final admission dated October 12, 2016.

10. Despite recommendations for maintenance care in the form of medication refills for one year post MMI, Claimant did not return to Dr. Orgel for eleven months, on May 15, 2017. Dr. Orgel noted Clamant had completed her psychological counseling. On examination, Claimant exhibited limited active range of motion in all planes, which was not found with passive movement. Passive range of motion was found to be full. The rotator cuff was intact and there was no improvement after two subacromial injections. Dr. Orgel noted that her examination suggested that her presentation was out of proportion to her objective findings in that she would only abduct and flex her right arm to 90 degrees though he could easily obtain 180 degrees of passive motion, and there was no obvious weakness. Additional surgery to the right shoulder was not indicated. Dr. Orgel noted that Claimant was not filling her prescriptions any longer. Dr.

Orgel noted Claimant remained at fully duty release with no follow up medical care and remained at MMI.

11. Claimant pursued further treatment for her left shoulder under her own insurance. She underwent a left shoulder MRI on September 11, 2017, approximately one year and three months after she reached MMI, and over two years from the date of her injury. The MRI identified multiple abnormalities including a full thickness tear of the distal supraspinatus tendon and a partial thickness tear of the subscapularis tendon which was noted to be related to subcoracoid impingement. There was also a full thickness rupture of the long head of the biceps tendon and degenerative changes in the acromioclavicular joint.

12. The MRI findings are inconsistent with Dr. Orgel's prior findings on physical examination on May 18, 2016 of a specific lack of tenderness in the bicep tendon. Further, Claimant exhibited essentially full range of motion of her left shoulder when she was seen by Dr. John Paul Spittler on October 25, 2016 for an ultrasound guided injection to the right shoulder. Dr. Spittler performed full examinations of the right and left shoulders, and the values he recorded on the left were essentially normal. The "close to normal" nature of these results for left shoulder active range of motion was confirmed during Dr. Finn's testimony. These reports support a finding that Claimant did not have significant tendon or rotator cuff injuries to her left shoulder at those times. Dr. Finn also noted that the MRI findings are inconsistent with the examination of Richard Shouse on June 1, 2016, just prior to Dr. Orgel placing Claimant at MMI. On that date, Mr. Shouse noted Clamant had the same examination on both shoulders, and presented as angry, defensive and hostile.

13. Dr. Finn testified as an expert in the fields of general medicine, physical medicine and rehabilitation, pain medicine and pain management at hearing on Respondents' behalf. Dr. Finn is level II accredited with the DOWC. He was present at hearing and listened to Claimant's testimony. Dr. Finn normally treats in his medical practice the same types of injuries that Claimant complained of.

14. According to Dr. Finn, Claimant completed a pain drawing and patient history form at the DIME appointment. Neither included complaints of left shoulder pain or dysfunction. A copy of this patient history form, which includes the pain drawing, was admitted into evidence as Respondents' Exhibit P. Claimant alleged that she complained of left shoulder pain during the evaluation but could not recall whether Dr. Finn examined her left shoulder. It is clear from the DIME report and Dr. Finn's testimony that he did in fact examine and consider Claimant's left shoulder.

15. At the time he authored his report, Dr. Finn was aware that Claimant was alleging compensatory pain in the left shoulder. However, she reported pain only in the right shoulder and marked the pain diagram accordingly. Dr. Finn examined both upper extremities during his examination. Nothing about the left shoulder examination made Dr. Finn believe treatment for the left shoulder was warranted, and there was no impairment for the left shoulder.

16. Prior to hearing, Dr. Finn reviewed additional records of treatment which occurred after his DIME, including a follow up visit from Dr. Orgel, the left shoulder MRI, University Hospital records, and Clinica Family Health records. None of the information changed Dr. Finn's opinion that Claimant's left shoulder complaints are not related to Claimant's injury.

17. The left shoulder MRI showed multiple tears and tendonitis. These are very similar findings as those initially found on the right side. In Dr. Finn's experience, such tears would typically be caused by trauma. Very rarely would such MRI findings be caused by overuse. Some of the degenerative findings such as bursitis, inflammation, and arthritis are also quite typical for patients of Claimant's age. Dr. Finn testified that the rotator cuff tears shown on MRI are not related to compensatory use of her left shoulder as a result of her right shoulder injury. He agreed with Dr. Erickson's findings in this regard. Further, Claimant did not report pain to Dr. Finn or indicate on the pain diagram any pain in the left shoulder. Dr. Finn agreed with Dr. Erickson's statements regarding actual injury to contralateral sides. Normally, compensatory pain from having surgery on one shoulder would be musculoskeletal or muscle related pain, stiffness or spasm. There is "absolutely" a difference between the compensatory muscle tightness Claimant exhibited and the tendon and rotator cuff tears revealed on MRI.

18. If the left MRI symptoms had been present during Claimant's active treatment, one would expect her to have consistently reduced range of motion in probably all planes of movement of the shoulder. She did not.

19. Dr. Finn maintained his opinions, within a reasonable degree of medical probability, as to MMI, permanent impairment, and the relatedness of Claimant's left shoulder MRI findings. In his opinion, the MRI findings are not related to compensatory pain from her right shoulder injury. Claimant at all times denied having any pre-existing conditions in her left shoulder, and there are no medical reports or other evidence to establish that she had a preexisting rotator cuff tear or other injury or condition which might have been aggravated by the right shoulder injury.

20. The ALJ finds Dr. Finn to be credible and persuasive when testifying in support of his DIME report and opinions. His testimony is more persuasive and reasoned than that of Claimant concerning relatedness of the left shoulder conditions, particularly when the totality of evidence in the medical records is considered. Claimant exhibited non-physiological complaints, symptoms out of proportion to objective findings, and significant injuries on an MRI taken over two years after her work injury and approximately a year and a half post MMI which are inconsistent with her prior physical examinations and inconsistent with a finding of overuse or compensatory pain.

21. Claimant was released with maintenance recommendations of medication refills for one year and six visits for psychological counseling. Claimant underwent a psychological examination but only completed two of the six recommended therapy sessions. On May 15, 2017, Dr. Orgel noted Claimant would have two months of more medication, but that she had not been refilling her medications through his office. A

review of the medical records reflects that at the time of her discharge at MMI, she had only been taking Ibuprofen. Claimant presented no persuasive evidence or testimony that ongoing treatment should be provided for her right shoulder. She completed the recommendations of the authorized treating physician and there are no medical reports evidencing additional treatment designed to cure and relieve the effects of the industrial injury. The ALJ therefore concludes that Claimant is not entitled to additional maintenance medical care related to her right shoulder injury.

22. Claimant exhibited a surgical scar on the anterior of her right shoulder approximately two inches in length and well healed. Claimant also has an arthroscopic portal scar on the posterior of her right shoulder. The ALJ finds that the permanent disfigurement from this injury warrants an award of $500. Respondents have paid Claimant $500 in disfigurement as a result of this injury. Respondents thus are entitled to a credit in this amount against the award of disfigurement made herein.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. "Claimant in a workers' compensation claim shall have the burden of proving entitlement to benefits by a preponderance of the evidence; the facts in a workers' compensation case shall not be interpreted liberally in favor of either the rights of the injured worker or the rights of the employer; and a workers' compensation case shall be decided on its merits." *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006). Where a party presents expert opinions, the weight, and credibility, of the opinions are matters exclusively within the discretion of the

ALJ as the fact-finder. *Cordova v. Industrial Claim Appeals Office,* P.3d (Colo. App. No. 01CA0852, February 28, 2002).

The DIME physician's findings of maximum medical improvement and permanent impairment are binding unless overcome by clear and convincing evidence. Section 8-42-107(8)(c), C.R.S. The finding of a DIME physician that a particular component of the claimant's impairment was caused by the industrial injury is binding unless overcome by clear and convincing evidence. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). The determination of maximum medical improvement inherently requires the examining physician to determine the cause or causes of the claimant's condition. Thus, a DIME physician's finding that a condition is or is not related to the industrial injury must be overcome by clear and convincing evidence when challenging a finding of maximum medical improvement. Section 8-42-107(8)(b)(III), C.R.S.; *Cordova v. Industrial Claim Appeals Office, supra*.

Clear and convincing evidence is highly probable and free from serious or substantial doubt, and the party challenging the DIME physician's findings must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). A fact or proposition has been proven by clear and convincing evidence if, considering all the evidence, the trier-of-fact finds it to be highly probable and free from serious or substantial doubt. *Metro Moving & Storage Co. v. Gussert, supra.* In other words, to overcome a DIME physician's opinion, "[T]here must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAP, Oct. 4, 2001).

The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc.*, W.C. Nos. 4-532-166 & 4-523-097 (ICAP, July 19, 2004).

The present case is similar in nature to the recent decision by the Industrial Claim Appeals Panel in *Powell v. Aurora Public Schools*, W.C. # 4-974-718-03 (ICAO March 15, 2017). In that case, claimant attempted to overcome the maximum medical improvement determination of the DIME physician Dr. Fillmore. Claimant had obtained a subsequent MRI of her hip reflecting a labral tear. As here, the medical testimony supported a conclusion that there was no evidence of pathology until a significant period of time post-injury – in the *Powell* case, thirteen months. The ALJ was not persuaded that the DIME physician would have altered his opinion on maximum medical improvement had he seen the MRI results at the time of his exam. The Panel stated: "Insofar as Dr. Fillmore did not have the MRI results at the time he conducted his examination and reached his opinion on maximum medical improvement, this evidence goes only to the weight of his opinion. Nevertheless, this did not preclude the ALJ from crediting his opinion. As noted above, the weight and credibility to be assigned evidence is a matter within the discretion of the ALJ." *Cordova v. Industrial Claim Appeals Office, supra.*

Similar circumstances exist here. As found, Dr. Finn testified at hearing that the MRI findings in the left shoulder in fact did not change his opinion regarding maximum medical improvement or the relatedness of the left shoulder condition to the industrial injury. He explained that the types of conditions seen on the MRI are not the types of injuries he would expect to occur as a result of "overuse" or compensatory activities with the contralateral shoulder. In fact, he testified that "very rarely" would such findings on an MRI be caused by overuse. Dr. Finn's opinions are supported by Dr. Erickson's physician advisor review report on this issue. Some of the degenerative findings such as bursitis, inflammation, and arthritis are also quite typical for a person of claimant's age. Dr. Erickson and Dr. Finn agree that contralateral compensatory pain anticipated from having surgery on one shoulder would be musculoskeletal or muscle related pain, stiffness, or spasm. Dr. Finn agrees with Dr. Erickson's statements regarding actual injury to contralateral body parts. Dr. Finn explained that there is "absolutely" a difference between compensatory muscle tightness and the tendon and rotator cuff tears and age-consistent degenerative findings exhibited on the MRI.

Based on this evidence and the credible and persuasive testimony of Dr. Finn, the ALJ therefore finds and concludes Claimant has failed to establish by clear and convincing evidence that the DIME physician was clearly wrong when he assessed Claimant to be at MMI on June 17, 2016. Claimant did not overcome Dr. Finn's opinions that she remains at MMI, and her left shoulder condition is not related to the admitted right shoulder injury.

The ALJ finds and concludes that based on the totality of the evidence in this case, there are no ongoing recommendations for additional treatment from the authorized treating physician at this time. The recommendations made at the time of MMI have been completed. Further, Claimant did not present persuasive evidence as to ongoing maintenance care needed to cure and relieve the effects of the industrial injury. Claimant has not carried her burden of proof to establish by a preponderance of the evidence the need for additional maintenance care related to the admitted injury to her right shoulder.

Claimant is entitled to disfigurement for her right shoulder surgical scars as outlined above.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents shall pay Claimant $500 for permanent disfigurement due to surgical scars related to this injury, with credit allowed for any amount of disfigurement benefits already paid in this claim.

2. Claimant did not overcome the DIME by clear and convincing evidence

    - Claimant remains at MMI.
    - Claimant's left shoulder is not related.
    - Claimant's claim for additional medical benefits is denied and dismissed.

3. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 6, 2017

1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-047-389-01

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on November 30, 2017, in Denver, Colorado. The hearing was digitally recorded (reference: 11/30/17, Courtroom 1, beginning at 8:30 AM, and ending at 12:30 PM).

Claimant's Exhibits 1 through 30 were admitted into evidence, without objection. Respondents' Exhibits A through M, with the exception of pages 90 and 91 of Exhibit J (whereby the Claimant's objection was sustained) were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Claimant. After careful consideration, the ALJ has decided to issue the following decision without the benefit of a proposed decision.

ISSUES

The issues to be determined by this decision concern compensability (specifically implicating whether or not the Claimant's auto accident of May 16, 2017 occurred while the Claimant was in the "sphere" of her employment while traveling for her Employer);

and, whether the accident was subject to the "going to" and "coming from" rule, or an exception thereto by virtue of the Claimant performing duties arising out of the course and scope of her employment at the time of the accident.

If the case is compensable, the additional issues are medical benefits (authorization, causally related and reasonably necessary; average weekly wage (AWW); and, temporary total disability (TTD) benefits from June 1, 2017 (the Claimant was paid full wages through May 31, 2017).

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant (d.o.b. November 6, 1959) now lives in San Antonio, Texas. By agreement of the parties, the Claimant appeared at the hearing by telephone.

2. In April 2017, the Employer hired the Claimant as a "Landscape Architectural Project Manager," a professional position requiring a professional registration with the State of Colorado. She started at a salary of $78,000 per year plus a minimum profit sharing of $12,000 for the first year. The ALJ finds that the contract of hire establishes an AWW of $1,730.77 ($90,000 divided by 52 weeks). Two-thirds of the AWW exceeds the statutory cap of $948.15 per week for Fiscal year (FY) 2016/2017. Therefore, the maximum TTD rate in this case is $948.15 per week.

3. The Claimant's job duties involved consulting with entities, such as the City of Loveland and Denver, on large scale infrastructure developments. For example, she worked with the City and County of Denver on a project involving a land bridge from downtown Denver to the national Western Center. The Claimant traveled two to three times per week for the Employer, using her own personal vehicle for which she was reimbursed mileage and tolls. The Employer's office is in Aurora and, at the time of the accident, the Claimant lived in Broomfield, Colorado. For the mutual convenience of the Employer and the Claimant, the Claimant would leave to a work site up north from home and return home from the north. Indeed, the Employer advised her that her home was conveniently situation for the Claimant to handle business in northern Colorado.

4. According to the Claimant, she was reimbursed round trip when she left for a job in Northern Colorado and returned home as opposed to returning to the Aurora office. According to Rita Shank, the Employer's controller, who testified at hearing, the Claimant was reimbursed on the way to a job but not on the return trip unless the Claimant was returning to the Aurora office, even if it was to do no work activities at the

Aurora office. Under the circumstances of this case, Shank's version of the reimbursement policy makes no sense to the ALJ if the return trip was to the Claimant's home as opposed to the Aurora office, although it was a shorter return distance to the Claimant's home. On the record at hearing, the ALJ took administrative notice of the fact that the Claimant's home in Broomfield was a shorter distance from Loveland than the Aurora office. There was no objection. The ALJ, therefore, finds the Claimant's version concerning travel reimbursement more credible and persuasive than Rita Shank's version.

5. For employees whose jobs were highly mobile, such as the Claimant, the Employer accepted the proposition that they would leave for a project from home and return home, if the project was closer to the employee's home, which was true under the circumstances of the present case.

The Accident of May 16, 2017 and "Sphere" of Employment

6. On May 16, 2017, the Claimant drove to Firestone, Colorado, to attend a business meeting, and from there she drove to the City of Loveland to attend a planning meeting, which was in the course and scope of her employment. The meeting was with the City of Loveland Public Works officials and it ended at 3:50 PM. Thereafter, the Claimant began driving home. At the intersection of North Washington Avenue and East 1st Street in the City of Loveland, the Claimant was involved in an auto accident. In the official accident report, the Loveland police Officer noted that the Claimant failed to stop/yield right away at a stop sign (Claimant's Exhibit 2).. The Claimant was broad-sided by another vehicle. As a result of the collision, the Claimant sustained serious concussive and vision injuries.

7. At the time of the collision, the Claimant placed a call on her cell phone to Jodi Lessman, a technical specialist with the Loveland Department of Public Works. Lessman testified by telephone, and she corroborated the business nature of the telephone call at the time of the accident. According to Lessman, at some point in the call, the Claimant said, "I've been involved in an accident and the line went dead. Lessman is not a personal friend of the Claimant. The Claimant placed the call concerning outreach for the Big Thompson Master Project, a business purpose. The Claimant used a hands-free ear plug for her cellphone at the time of the accident. The Accident Report makes no notation concerning alleged "distracted driving." Lessman further stated that the Claimant called her back after the accident to report what happened. The ALJ finds that even if the Claimant was "going" home within the ambit of the "coming from work" rule," she had stepped back into the course and scope of her employment when she placed the work-related call to Lessman.

8. Further, according to the Claimant's undisputed testimony, which the ALJ finds credible and persuasive, the Claimant left the Loveland meeting and after she made the telephone call to Lessman, the Claimant was going to make notes of the

phone call but the accident prevented her from doing so. Consequently, she remained within the course and scope of her employment at the time of the accident.

9. The "Employee Handbook" of the Employer (Respondents' Exhibit L), which the Claimant acknowledged in writing receiving (Respondents Exhibit L, bates stamp 000146) sets forth the following policy concerning portable communication device use while driving (Respondents' Exhibit L, bates stamp 000136):

> Employees who drive on company business must abide by all state or local laws prohibiting or limiting…cell phone use while driving **[The ALJ took administrative notice on the record that the use of cell phones while driving does not violate any state or local laws in Colorado and there was no objection].**
>
> Regardless of the circumstances, including slow or stopped traffic, if any use is permitted while driving, employees should proceed to a safe location off the road and safely stop the vehicle before placing or accepting a call. If acceptance of a call is absolutely necessary while the employee is driving, and permitted by law, the employee must use a hands-free option and advise the caller that he/she is unable to speak at that time and will return the call shortly.

10. The Respondents are not alleging a safety violation, seeking to reduce benefits by 50%. Moreover, relying on an allegedly analogous Industrial Claim Appeals Office (ICAO) opinion, the Respondents argue that the Claimant deviated from "the sphere" of her employment by placing the call while driving, in violation of the Employer's policy as herein above stated, thus, making her injuries non-compensable.

11. To accept "the sphere of employment" argument under the unique circumstances of this case, as opposed to alleging a safety rule violation, would subvert the beneficent, no-fault intent of the Workers' Compensation Act (hereinafter the "Act"), which provides injured workers with 50% benefits even when they have willfully violated a safety rule that resulted in their injury. A deviation from the "sphere of employment" argument would deprive an injured worker of 100% of workers' compensation benefits, opening up "Pandora's Box" to a wholesale removal of cases from the ambit of workers' compensation coverage and render the "safety Violation" provisions concerning a 50% reduction in benefits meaningless. Under the circumstances, the ALJ finds that the Respondents argue for an unwarranted expansion in the nature of a "frolic and detour" removal from the "course and scope" of employment. In the present case, the Claimant placed the call for purely business reasons, not for the purpose of a frolic and detour. Further, she did **not** perform unnecessary work in direct disobedience of an Employer's

order. She may have violated a safety policy but that was not a designated issue and it was not reserved as an issue. Therefore, it is waived. Furthermore, the Claimant was going to make notes of the telephone conversation with Lessman, when she could find a safe place to pull over and write the notes before getting home, thus, she remained within the course and scope of her employment at the time of the accident.

12. The ALJ finds that the Claimant's injuries arose out of the course and scope of her employment for the Employer and she did **not** deviate from the "sphere of employment" to a degree contemplated by prevailing case law or ICAO opinions, thus, she sustained compensable injuries in the auto accident of May 16, 2017.

Medical—Cate Blanche Referral by Claimant's Supervisor

13. On the same day as the compensable accident, the Claimant reported it to her immediate supervisor, Kevin Shanks. Without specifying a specific medical provider, Kevin Shanks told the Claimant to go see a doctor. Although endorsed as a witness on the respondents' case information Sheet (CIS), Kevin Shanks was not called to testify. Consequently, it is unrefuted that Kevin Shanks told the Claimant to go see a doctor, without specifying any specific medical provider. The Claimant first went to her family physician, Sara A. George, M.D. By virtue of the fact that the Claimant's supervisor gave her a carte blanche in the selection of the first medical provider, Dr. George became an authorized treating physician (ATP) for the Claimant. Consequently, all referrals in the authorized chain of referrals, emanating from Dr. George, are authorized.

14. On May 23, 2017, Dr. George re-evaluated the Claimant and diagnosed a severe concussion. Dr. George thereupon referred the Claimant to a concussion specialist, the Blue Sky Concussion Clinic, where the Claimant came under the care of Cheryl Melick, M.D., a neurologist. Dr. Melick referred the Claimant to Boulder Brain Recovery for speech therapy, where the Claimant was evaluated by Hilary Booco, M.A., CCC, a speech and language pathologist; and, to Rebecca E. Hutchins, O.D., for an evaluation of vision defects. These medical providers were within the chain of authorized referrals.

15. In a report, dated June 5, 2017, Hilary Booco stated that the Claimant presented with a cognitive-communication disorder secondary to a concussion injury she sustained on May 16, 2017. Booco indicated that formal testing revealed deficits in the areas of auditory memory for meaningful information, visual-spatial skills, and word retrieval fluency. According to Booco, given the Claimant's educational level, her scores represented decrements from her prior level of functioning. Booco was of the opinion that the Claimant's cognitive challenges, coupled with her physical and emotional symptoms "will impact her ability to perform tasks in both work and home environments." Booco went on the state the following opinion: She (Claimant) will likely have difficulty completing tasks or making decisions in a timely manner, remembering

what she must do on a daily basis, organizing and tracking information, visualizing plans for future landscaping projects (**the core functions of the Claimant's pre-injury job)** , prioritizing tasks, processing spoken and written information quickly, communicating efficiently and effectively, keeping up with household tasks and chores, etc. At this time, the patient is not working or driving, as recommended by Dr. Melic." (Claimant's Exhibit 14, bates stamp 056).

16. Rebecca E. Hutchins, O.D., did a comprehensive binocular vision evaluation on June 19, 2017, and completed testing on August 17, 2017. In a report dated August 18, 2017 (Claimant's Exhibit 15). Dr. Hutchins indicated that at the Claimant's last vision evaluation by Dr. Brian Nichols in January 2017, the Claimant was diagnosed with dry eyes. Dr. Hutchins observed that the Claimant complained of severe headaches since the accident, which wake her up at night and can last all day. The Claimant reported that she is now light sensitive and no longer raises her blinds at home. Dr. Hutchins diagnosed the following: for refraction, presbyopia; for binocularity, Dr. Hutchins is of the opinion that her binocularity is poor and she is symptomatic. Dr. Hutchins' ultimate impressions were: convergence insufficiency; general binocular vision disorder with right eye suppression at near, headache, photophobia, deficiencies of smooth pursuits and saccadic dysfunction. Dr. Hutchins stated: "These diagnoses are frequently seen after a concussion, whiplash, or mild traumatic brain injury and they, coupled with her symptoms, constitute what is termed a Post Trauma Vision Syndrome. There is a reasonable degree of medical probability that they were caused by the MVA (motor vehicle accident) noted above." She also has a pre-existing presbyopia." The Claimant indicated that she would be moving back to San Antonio, Texas, and Dr. Hutchins referred her to a local optometrist who works with vision rehabilitation. Dr. Hutchins ultimately was of the opinion that the Claimant's vision issues definitely…prevent her from returning to work.

17. Dr. Melick referred the Claimant to North Boulder Physical Therapy and Sports Rehabilitation for concussion therapy, where she was first seen on June 1, 201`7. The un-named physical therapist (PT) noted that the Claimant had previous concussions and a history of vestibular challenges ongoing for more than 20 years (Claimant's Exhibit 17, bates stamp 063). The ALJ finds, however, that the Claimant was able to do the full range of her job duties before the compensable injuries of May 16, 2017, and could not thereafter. The ALJ further finds that the accident of May 16, 2017 aggravated and accelerated all of the Claimant's concussive and visual conditions to the point that she has been unable to work at her pre-injury job since the auto accident of May 16, 2017.

Medical—Referral by Insurance Carrier

18. On May 26, 2017, upon referral by the insurance carrier, the Claimant saw James Fox, M.D., at Concentra. Dr. Fox was of the opinion that his objective findings were consistent with the mechanism of injury (Respondents' Exhibit C, bates stamp

000003). Dr. Fox noted that the Claimant was seen initially by her primary care physician (Dr. George), who referred her to Dr. Melick. Dr. Fox restricted the Claimant from returning to work until June 9, 2017. He rendered **no** diagnoses of the Claimant's condition nor did he refer the Claimant to any specialists. The ALJ infers and finds that Dr. Fox's release to return to work is without any medical foundation and it is contradicted by the Claimant's testimony, as well as the aggregate medical evidence. As of August 1, 2017, Dr. Melick, who was providing primary care to the Claimant, had not released the Claimant to return to her pre-injury work. The ALJ infers and finds that the aggregate medical evidence following the visit with Dr. Fox supersedes his skeletal release to return, without a diagnosis.

19. All of the Claimant's medical care and treatment as reflected in the evidence was and is authorized, causally related to the compensable injury of May 16, and reasonably necessary to cure and relieve the effects that injury.2017

Move to San Antonio, Texas

20. On October 2, 2017, the Claimant moved to San Antonio, Texas so she could be near a family support system and because the cost-of-living there is less than in the Denver Metro area. The ALJ infers and finds that the move made sense because the Claimant was not able to work and had no income. Although the insurance carrier should reasonably have been aware of this move, it made **no** medical referral in San Antonio so the Claimant began treatment with her health care provider. The Claimant could either return to the Denver area for treatments by authorized medical providers, whereby the Respondents would be required to pay her travel expenses, or the carrier could make a referral to a treatment provider in San Antonio.

Average Weekly Wage (AWW)

21. In April 2017, the Employer hired the Claimant as a "Landscape Architectural Project Manager," a professional position requiring a professional registration with the State of Colorado. She started at a salary of $78,000 per year plus a minimum profit sharing of $12,000 for the first year. The ALJ finds that the contract of hire establishes an AWW of $1,730.77 ($90,000 divided by 52 weeks). Two-thirds of the AWW exceeds the statutory cap of $948.15 per week for Fiscal year (FY) 2016/2017. Therefore, the maximum TTD rate in this case is $948.15 per week.

Temporary Total Disability

22. The Claimant has not been able to work since the accident of May 16, 2017. Her persuasive and credible testimony supersedes Dr. Fox skeletal release to return to work on June 9, 2017, without even a diagnosis. The aggregate evidence, lay and medical, supersedes any piecemeal releases to return to work before definite diagnoses were made concerning the severity of the Claimant's condition. The ALJ

infers and finds that the Claimant has not been able to return to her pre-injury work since May 16, 2017; she has not worked or earned any wages since that time; and, she has not been declared to be at maximum medical improvement, however, she was paid full salary until June 1, 2017. Therefore she is entitled to TTD benefits from June 1, 2017 and continuing. The period from June 1, 2017, through the hearing date, November 30, 2017, both dates inclusive is 183 days. Based on the maximum TTD rate for FY 2016/2017 of $948.15 per week, which equals $140.59 per day, aggregate past due TTD benefits for this period equal $25, 727.97.

Ultimate Findings

23. The ALJ finds the Claimant's testimony about the accident and her present condition highly credible and persuasive. The ALJ further finds that her testimony concerning her inability to work since the accident outweighs and is more persuasive and credible than the skeletal medical release to return to work provided by Dr. Fox of Concentra and any piecemeal releases provided by any other medical providers before definitive diagnoses were rendered. Further, the ALJ finds the opinions of Dr. Melick and her referrals, concerning the Claimant's present condition as compared to her pre-accident condition more credible and persuasive than any opinions to the contrary. Indeed, their opinions are virtually undisputed.

24. Between conflicting opinions, the ALJ makes a rational choice, based on substantial evidence, to accept the opinions of Drs. George and Melick and their referrals, concerning the work-relatedness of the Claimant's present post-concussive condition, and to reject all opinions to the contrary. Further, the ALJ makes a rational choice, based on substantial evidence, to accept the Claimant's testimony concerning her inability to work since May 16, 2017, and to reject all opinions to the contrary.

25. The Respondents are not alleging a safety violation, seeking to reduce benefits by 50%. Moreover, relying on an allegedly analogous Industrial Claim Appeals Office (ICAO) opinion, the Respondents argued that the Claimant deviated from "the sphere" of her employment by placing the call while driving, in violation of the Employer's cell phone policy as herein above found, thus, removing her injuries, altogether, from compensability

26. To accept "the sphere of employment" argument, as opposed to an allegation of a safety rule violation, would subvert the beneficent, no-fault intent of the Workers' Compensation Act (hereinafter the "Act"), which provides injured workers with 50% benefits even when they have knowingly violated a safety rule. A deviation from the "sphere of employment" would deprive the injured worker of 100% of workers' compensation benefits. Under the circumstances, as found, the Respondents argue for an unwarranted expansion of the "frolic and detour" exception to the "course and scope" of employment. In the present case, as found, the Claimant placed the call for purely business reasons, not for the purpose of a frolic and detour. Further, she did **not**

perform unnecessary work in direct disobedience of an Employer's order. She may have violated a safety policy but that was not a designated issue and it was not reserved as an issue. Therefore, it is waived. Furthermore, as found, the Claimant was going to make notes of the phone conversation as soon as she could find a safe place to pull over and write notes. Thus, she remained in the course and scope of her employment at the time of the accident.

27. As found, the Claimant's injuries arose out of the course and scope of her employment for the Employer and she did **not** deviate from the "sphere of employment" to a degree contemplated by prevailing case law or ICAO opinions. Thus, the Claimant sustained compensable injuries in the auto accident of May 16, 2017.

28. As found, all of the Claimant's medical care and treatment for the effects of the May 16, 2017 auto accident was authorized, within the chain of authorized referrals, causally related to the compensable injuries, and reasonably necessary to cure and relieve the effects thereof.

29. As found, the Claimant's AWW is of $1,730.77 ($90,000 divided by 52 weeks). Two-thirds of the AWW exceeds the statutory cap of $948.15 per week for Fiscal Year (FY) 2016/2017. Therefore, the maximum TTD rate in this case is $948.15 per week.

30. As found, the Claimant was paid full wages through June 1, 2017. As further found, she is entitled to TTD benefits of $948.15 per week, or $140.59 per day, from June 1, 2017 and continuing.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo.

App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the Claimant's testimony about the accident and what she was doing at the time plus what she intended to do (make written notes after the phone call with Lessman) and her present condition is highly credible and persuasive. As further found, her testimony concerning her inability to work since the accident outweighs and is more persuasive and credible than the skeletal medical release to return to work provided by Dr. Fox of Concentra and any piecemeal releases provided by any other medical providers before definitive diagnoses were rendered. Further, as found, the opinions of Dr. Melick and her referrals, concerning the Claimant's present condition as compared to her pre-accident condition are more credible and persuasive than any opinions to the contrary. Indeed, their opinions are virtually undisputed. *See, Annotation, Comment: Credibility of Witness Giving Un-contradicted Testimony as Matter for Court or Jury,* 62 ALR 2d 1179, maintaining that the fact finder is not free to disregard un-contradicted testimony.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An

ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting opinions, the ALJ made a rational choice, based on substantial evidence, to accept the opinions of Drs. George and Melick and their referrals, concerning the work-relatedness of the Claimant's present post-concussive condition, and to reject all opinions to the contrary. Further, as found, the ALJ made a rational choice, based on substantial evidence, to accept the Claimant's testimony concerning her inability to work since May 16, 2017, and to reject all opinions to the contrary.

Compensability—Course and Scope of Employment

c. Ordinarily, an injury while traveling to and from work is not compensable. *See Madden v. Mountain West Fabricators,* 977 P.2d 861 (Colo. 1999). There are many exceptions, however, to the "going to and coming from" rule. Exceptions where there are "special circumstances" include:

- travel during working hours;
- the obligations or conditions of employment create a "special zone of danger" resulting in the injury. *Madden v. Mountain West fabricators, supra*;
- performing a service requested by the employer;
- traveling between job assignments;
- reimbursement for the employee's cost of commuting;
- being on "travel status" while working out-of-town.

As found, even if the Claimant was going home ("coming from") her job-related meeting in Loveland, at the time of the work-related phone call and the accident, she was within the course and scope of her employment. Furthermore, as found, she was going to pull over to a safe place on the side of the road, after the phone call with Lessman, to make written notes of the phone call, thus, she remained within the course and scope of her employment at the time of the accident.

d. If an employee does a purely personal errand or deviation while on "travel status," and is injured this may take the injury out of the ambit of compensability. *See Pat's Power Tongs, Inc. V. Miller,* 172 Colo. 541, 474 P.2d 613 (1970). When the personal errand or deviation is completed, however, the employee on "travel status" returns to the regular travel routine and continuous coverage resumes. *See Phillips Contracting, Inc. v. Hirst,* 905 P.2 9 (Colo. App. 1995). There was no persuasive evidence that the Claimant was doing any personal errands before and after the accident.

e. A compensable injury is one that arises out of and in the course of employment. Section 8-41-301(1) (b), C.R.S. The "arising out of" test is one of

causation. If an industrial injury aggravates or accelerates a preexisting condition, the resulting disability and need for treatment is a compensable consequence of the industrial injury. Thus, a claimant's personal susceptibility or predisposition to injury does not disqualify the claimant from receiving benefits. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). An injured worker has a compensable new injury **if the employment-related activities aggravate, accelerate, or combine with the pre-existing condition to cause a need for medical treatment or produce the disability for which benefits are sought.** § 8-41-301(1) (c), C.R.S. *See Merriman v. Indus. Comm'n,* 120 Colo. 400, 210 P.2d 448 (1949); *Anderson v. Brinkoff,* 859 P.2d 819 (Colo. 1993); *National Health Laboratories v. Indus. Claim Appeals Office,* 844 P.2d 1259 (Colo. App. 1992); *Snyder v. Indus. Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). An injury resulting from the concurrence of a preexisting condition and a hazard of employment is compensable. *H & H Warehouse v. Vicory*, *supra*. *Duncan v. Indus. Claims App. Office*, 107 P.3d 999 (Colo. App. 2004). Even where the direct cause of an accident is the employee's pre-existing disease or condition, the resulting disability is compensable where the conditions or circumstances of employment have contributed to the injuries sustained by the employee. *Ramsdell v. Horn*, 781 P.2d 150 (Colo.App. 1989). *Also see* § 8-41-301(1) (c), C.R.S; *Parra v. Ideal Concrete,* W.C. No. 4-179-455 [Indus. Claim Appeals Office (ICAO), April 8, 1998]; *Witt v. James J. Keil Jr.,* W.C. No. 4-225-334 (ICAO, April 7, 1998). As found, although the Claimant had pre-existing concussions and vestibular problems, an un-named North Boulder Physical Therapy physical therapist noted that the Claimant had previous concussions and a history of vestibular challenges ongoing for more than 20 years. As found, however, the Claimant was able to do the full range of her job duties before the compensable injuries of May 16, 2017, and could not thereafter. As further found, the accident of May 16, 2017 aggravated and accelerated all of the Claimant's pre-existing concussive and visual conditions to the point that she has been unable to work at her pre-injury job since the auto accident of May 16, 2017.

"Sphere of Employment" Argument

f. Respondents argue that because the Claimant violated the "cell phone" policy of the Employer, the Claimant was removed from the "sphere of employment" and, thus, her injuries were not compensable. The Respondents principally rely on the Industrial Claim Appeals office (ICAO) opinion in *Escobedo v. Midwest Drywall Company, Inc.,* W.C. No. 4-700-124 (ICAO, July 13, 2007), wherein the claimant and his partner were using scaffolding. Two supervisors noticed problems with the scaffolding. The claimant was directly told by his supervisor to cease using the scaffolding until replacement parts could be obtained. The claimant was told he could wait for the replacement parts or go home. The supervisors removed the wheels, side rails and plank from the scaffolding so that it was unusable. The supervisors then left. The claimant waited for 30 to 40 minutes for the new parts but they did not arrive. The claimant then decided to rebuild the scaffolding and continue working. In doing so, he fell and sustained injuries. Under the unique circumstances of the case, the ALJ found

that the claimant had failed to establish that the fall was proximately caused by an injury arising out of the course and scope of employment. The ALJ concluded that the employer's specific directive to the claimant temporarily limited the claimant's "sphere of employment," thus, the injuries were not compensable. Relying on *Bill Lawley Ford v. Miller,* 672 P.2d. 1031 (Colo. App. 1983), *ICAO* affirmed the ALJ. The facts in the present case are significantly distinguishable from the facts in *Escobedo.* As found herein above, there are several reasons why the Claimant remained in the course and scope of her employment at the time of the accident.

g. In *Bill Lawley Ford v. Miller, supra,* the facts are even **less** analogous to the facts in the present case. There, the employee was a tow truck driver who was sent to pick up a tow truck. The employee had informed the employer that his vehicle had broken down. The employee had been drinking during the day and drank more while traveling with the co-worker sent to pick up the employee. The employer ordered the employee to stay where he was for the night, but the employee disobeyed the order and was then involved in an accident. The Court of Appeals held that the employer's order limited "the sphere of employment" and that acting in violation of that order, the employee was not acting in the course of employment. The ALJ concludes that an analogy of the facts in the present case to the facts in *Bill Lawley* are attenuated to the point of not being germane herein. Indeed, extreme caution must be used in order not to confuse a safety violation with removal from "the sphere of employment." Otherwise, why have a beneficent system that still gives benefits (50%) to a willful safety violator, when an employer could avoid liability altogether by taking the position that the safety violator removed himself/herself from "the sphere of employment."

Medical

h. Because this matter is compensable, Respondents are liable for medical treatment which is reasonably necessary to cure or relieve the effects of an industrial injury. § 8-42-101(1) (a), C.R.S; *Snyder v. Indus. Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). Pursuant to § 8-43-404 (5) (a) (I) (A), C.R.S., the employer is required to furnish an injured worker a list of at least two physicians or two corporate medical providers, in the first instance. An employer's right of first selection of a medical provider is triggered when the employer has knowledge of the accompanying facts connecting the injury to the employment. *Jones v. Adolph Coors Co.,* 689 P. 2d 681 (Colo. App. 1984). An employer must tender medical treatment forthwith on notice of an injury or its right of first selection passes to the injured worker. *Rogers v. Indus. Claim Appeals Office,* 746 P.2d 565 (Colo. App. 1987). As found, upon reporting the accident/injury to her supervisor, Kevin Shank, he told her to go to a doctor, without specifying any particular medical provider. Thereupon, the Claimant went to her primary care physician, Dr. George. The Claimant's testimony in this regard was found credible and undisputed. Therefore, Dr. George was an authorized treating physician (ATP). Thereafter, the Employer sent the Claimant to Concentra, where she was seen

once by Dr. Fox who, as found, issued a skeletal release to return to work, without rendering a diagnosis. Therefore, Dr. Fox was also authorized. The Claimant has two authorized medical providers. Dr. Fox, however, made no referrals to other medical providers.

l. To be authorized, all referrals must remain within the chain of authorized referrals in the normal progression of authorized treatment. *See Mason Jar Restaurant v. Indus. Claim Appeals Office,* 862 P. 2d 1026 (Colo. App. 1993); *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P. 2d 501 (Colo. App. 1995); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). When an ATP refers an injured worker to his personal physician, under the mistaken belief that the claim was not compensable, the referral was nonetheless within the chain of authorized referrals and, thus, subsequent treatment was authorized. *See Cabela v. Indus. Claim Appeals Office,* 198 P.3d 1277 (Colo. App. 2008). As found, all referrals emanating from ATP Dr. George and Dr. Melick were within the authorized chain of referrals

j. To be a compensable benefit, medical care and treatment must be causally related to an industrial injury or occupational disease. *Dependable Cleaners v. Vasquez,* 883 P. 2d 583 (Colo. App. 1994). As found, Claimant's medical treatment is causally related to the compensable aggravation and acceleration of her pre-existing concussive condition, as caused by the accident/injuries of May 16, 2017.. Also, medical treatment must be reasonably necessary to cure and relieve the effects of the industrial occupational disease. § 8-42-101 (1) (a), C.R.S. *Morey Mercantile v. Flynt,* 97 Colo. 163, 47 P. 2d 864 (1935); *Sims v. Indus. Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). As found, the Claimant's medical care and treatment was and is reasonably necessary to cure and relieve the effects of the aggravating injuries of May 16, 2017.

Average Weekly Wage (AWW)

k. An AWW calculation is designed to compensate for **total** temporary wage loss. *Pizza Hut v. Indus. Claim Appeals Office,* 18 P. 3d 867 (Colo. App. 2001). *See* § 8-42-102, C.R.S. As found, the Claimant's AWW is $1,730.77 ($90,000 divided by 52 weeks). Two-thirds of the AWW exceeds the statutory cap of $948.15 per week for Fiscal Year (FY) 2016/2017. Therefore, the maximum TTD rate in this case is $948.15 per week.

Temporary Total Disability

l. To establish entitlement to temporary disability benefits, a claimant must prove that the industrial injury has caused a "disability," and that she has suffered a wage loss that, "to some degree," is the result of the industrial disability. § 8-42-103(1), C.R.S; *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Disability from employment is established when the injured employee is unable to perform the usual

job effectively or properly. *Jefferson Co. Schools v. Headrick*, 734 P.2d 659 (Colo. App.1986). This is true because the employee's restrictions presumably impair her opportunity to obtain employment at pre-injury wage levels. *Kiernan v. Roadway Package System*, W.C. No. 4-443-973 (ICAO, December 18, 2000). There is no statutory requirement that a claimant must present medical opinion evidence from of an attending physician to establish her physical disability. See *Lymburn v. Symbois Logic*, 952 P.2d 831 (Colo. App. 1997). Rather, the Claimant's testimony alone is sufficient to establish a temporary "disability." *Id*. As found, the Claimant's testimony and the aggregate medical evidence in the record was more credible and outweighed Dr. Fox's early June 2017 release to return to work, without a diagnosis. As further found, the Claimant was paid full wages through June 1, 2017. Also as found, she is entitled to TTD benefits of $948.15 per week, or $140.59 per day, from June 1, 2017 and continuing.

m. Once the prerequisites for TTD are met (*e.g.,* no release to return to full duty, MMI has not been reached, a temporary wage loss is occurring and modified employment is not made available, and there is no actual return to work), TTD benefits are designed to compensate for a 100% temporary wage loss. *See Eastman Kodak Co. v. Indus. Comm'n,* 725 P. 2d 107 (Colo. App. 1986); *City of Aurora v. Dortch,* 799 P. 2d 461 (Colo. App. 1990). As found herein above, all the prerequisites for the Claimant's receipt of TTD benefits from June 1, 2017 and continuing have been met.

n. As found, the Claimant is entitled to retroactive TTD benefits of $948.15 per week, or $140,.59 per day, from June 1, 2017 through the hearing date, November 30, 2017, both dates inclusive, a total of 183 days, in the aggregate amount of $25, 728.49. From December 1, 2017 until cessation or modification of benefits is warranted by law, Respondents are liable for continuing TTD benefits at the rate of $948.15 per week.

Burden of Proof

o. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the

Claimant has sustained her burden on all issues. Including the fact that she did **not** deviate from her "sphere of employment" at the time of her auto accident and resultant injuries.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Respondents shall pay the costs of all authorized, causally related and reasonably necessary medical expenses, attributable to her compensable injuries of May 16, 2017, subject to the Division of Workers' Compensation Medical Fee Schedule.

B. Respondents shall pay the Claimant temporary total disability benefits of $948.15 per week, or $140.59 per day, from June 1, 2017 and continuing until cessation or modification thereof is warranted by law.

C. Respondents shall pay the Claimant past due temporary total disability benefits in the aggregate amount of $25, 728.49, which is payable retroactively and forthwith. Thereafter, Respondents shall continue paying the Claimant temporary total disability benefits as provided in paragraph. B above.

D. Respondents shall pay the Claimant statutory interest at the rate of eight percent (8%) per annum on all amounts due and not paid when due.

E. Any and all issues not determined herein, including permanent total disability, are reserved for future decision.

DATED this_____day of December 2017.

ISSUES

I. Whether Respondents overcame the Division IME of Dr. Douthit, by clear and convincing evidence, regarding Claimant's impairment rating.

II. Whether Respondents overcame the Division IME of Dr. Douthit, by clear and convincing evidence, regarding MMI.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. On March 28, 2016, Claimant slipped on a patch of ice in the parking lot at work. Claimant landed on her left hip, buttocks, and left wrist. Claimant reported the accident to Employer and was referred to Concentra for medical treatment.

2. On March 28, 2016, Claimant presented to Concentra and was evaluated by Dr. Bryan Counts. Claimant complained of 8/10 pain which was mostly left sided and involved her low back, left hip, and thigh area. Claimant's symptoms included some shooting pain down the back side of her left leg to her knee. Claimant underwent an x-ray of her left hip due to her low back and hip pain. The x-rays were normal. Claimant was diagnosed as suffering from a contusion to her left hip, lumbar strain, and contusion to her left wrist. Dr. Counts prescribed physical therapy and ibuprofen. Dr. Counts concluded that Claimant's symptoms and physical exam findings were consistent with the mechanism of injury.

3. On April 6, 2016, Claimant returned to Dr. Counts. Dr. Counts noted that Claimant was returning for a recheck of her back pain, hip pain, and upper leg pain. He also noted that between visits, Claimant's pain got much worse and she could not get out of bed and had to call an ambulance. Claimant was seen at University Hospital and was prescribed valium and ibuprofen. Claimant underwent additional x-rays, which were negative. Claimant was using a cane and could barely stand for very long or ambulate very far. Dr. Counts assessed Claimant as suffering from a contusion of her left hip and a lumbar strain. Claimant was prescribed tizanidine, a muscle relaxant, and advised to not work or drive within 8 hours of taking the muscle relaxant. Dr. Counts noted that Claimant's history and mechanism of injury were consistent with her presenting symptoms and physical examination.

4. On April 11, 2016, Claimant returned to Concentra and was evaluated by Glenn Peterson, PA-C. It was noted that Claimant was limping on the left, but Claimant reported that she was improving. Claimant was provided work restrictions of no working more than 4 hours per day.

5. On April 19, 2016, Claimant returned to Dr. Counts. Claimant complained of ongoing back pain with tingling and numbness. Dr. Counts noted ongoing joint stiffness. He continued Claimant on her muscle relaxant tizanidine.

6. On April 28, 2016, Claimant returned to Concentra due to ongoing back and hip pain. Claimant's symptoms included muscle weakness, limping, and night pain. Claimant was seen by Dr. Counts. His assessment of lumbar strain continued. Claimant was provided work restrictions which limited her work to 5 hours per day.

7. On May 13, 2016, Claimant returned to Dr. Counts. Claimant continued to complain of back pain as well as pain and numbness down her left thigh. She also indicated that with prolonged sitting, her pain got worse and that she also had spasms in her left thigh. Claimant was frustrated with her symptoms as she could not sit or stand for prolonged periods of time. Dr. Counts noted that Claimant had ongoing joint stiffness. Dr. Counts ordered an MRI. He also continued Claimant's physical therapy and directed Claimant to continue taking her muscle relaxant, tizanidine, at night.

8. Due to persistent complaints of low back pain and radiated symptomology into her left lower extremity, Dr. Counts referred Claimant to Dr. Aschberger.

9. On June 7, 2016, Claimant was evaluated by Dr. Aschberger. He noted that Claimant underwent an MRI on May 31, 2016. The MRI demonstrated degenerative disc changes at L3-L4, L4-L5, and L5-S1 with facet degenerative changes at L4-L5 and severe facet degenerative changes at L5-S1. The MRI did not show any obvious nerve root encroachment.

10. Dr. Aschberger also noted Claimant had restricted motion at the PSOS. He also noted there was tightness at her lower lumbar paraspinal musculature and that her lumbosacral flexion was 70 degrees and her extension was 20 degrees. Dr. Aschberger's assessment included lumbar contusion, hip contusion, IT band myofascial irritation, lumbosacral dysfunction, SI joint irritation, and psoas spasm and tightness. Dr. Aschberger went on to note that Claimant's objective findings were consistent with her subjective complaints and consistent with the described injury. Based on his evaluation, Dr. Aschberger referred Claimant for manual therapy and OMT. He also noted that Claimant was a candidate for lumbar facet injections given the positive response to provocative maneuvers, SI injection, and a cortisteroid injection along the IT band. His report also noted that Claimant should continue taking her medications which included an anti-inflammatory and muscle relaxant.

11. On July 14, 2016, Claimant returned to Dr. Aschberger. He noted that her range of motion had improved, but yet Claimant continued to take a muscle relaxant intermittently. His assessment included lumbosacral dysfunction and SI joint irritation. He noted that her MRI demonstrated degenerative changes at L3 through S1 with facet degenerative changes identified, with the most severe at L5-S1. Due to Claimant's different levels of involvement and radiated symptomology, Dr. Aschberger recommended electrodiagnostic testing to see if there was any specific localized nerve root involvement. At this visit, it was also noted that Claimant was still taking an anti-inflammatory and a muscle relaxant.

12. On August 17, 2016, Claimant returned to Dr. Aschberger. Claimant continued to complain of pain in the left low back and radiation of her symptoms into the lateral thigh. Claimant stated that her pain levels started to decrease, but then she increased her activity level and that caused her pain to increase. Therefore, her overall pain complaints remained the same. Dr. Aschberger evaluated Claimant and noted that she was still tight and tender at the left SI joint. Dr. Aschberger ordered an SI joint injection. He also performed electrodiagnostic testing which was normal. Claimant noted her pain was 60% better.

13. On August 24, 2016, Claimant was evaluated by Glenn Petterson, PA-C. At this visit, Claimant still had back pain and joint stiffness. He recommended Claimant continue taking her muscle relaxant, tizanidine.

14. On September 15, 2016, Claimant returned to Dr. Aschberger due to ongoing back pain and achiness into her left hip. Dr. Aschberger noted that Claimant had a diagnostic response to her SI joint injection. Claimant had no pain for about 7 hours. Dr. Aschberger also noted Claimant had tightness, i.e., rigidity, in her psoas musculature bilaterally. Dr. Aschberger referred Claimant for massage therapy hoping that would "loosen her up." Dr. Aschberger's assessment at that time was lumbar contusion.

15. On September 23, 2016, Claimant was evaluated by Lacie Esser, PA-C. PA Esser noted ongoing back pain and joint stiffness.

16. On October 14, 2016, Claimant was evaluated by Dr. Counts. He noted Claimant did not have full range of motion of her lumbar spine. He noted leftward side bending and extension were lagging. He also noted tenderness at the left SI joint and L5 left paraspinal area. His assessment at that time was SI joint dysfunction and contusion of the left hip and thigh.

17. On October 20, 2016, Claimant was evaluated by Dr. Aschberger. Dr. Aschberger noted that although Claimant's recovery has been slow, Claimant reported that treatment had been beneficial. Dr. Aschberger wanted Claimant to finish up her treatment with Dr. Conforti and her massage therapy. He also wanted Claimant to continue taking her anti-inflammatory and muscle relaxant. His assessment at that time was still a lumbar contusion with SI joint irritation.

18. As of the October 20, 2016, visit with Dr. Aschberger, Claimant had a medically documented injury to her lumbar spine – lower back - with more than six months of medically documented pain and rigidity, with and without muscle spasm.

19. On November 1, 2016, Claimant was evaluated by PA Petersen. He noted ongoing symptoms of back pain, stiffness in her back, and joint stiffness.

20. On November 10, 2016, Claimant returned to Dr. Aschberger. He noted progressive improvement. Claimant denied any radicular symptomology, but she still had back pain. Dr. Aschberger noted Claimant's lumbar flexion was limited to 90 degrees, but found full extension. His assessment was lumbar contusion and ailments of SI irritation. He continued her medications of naproxen and tizanidine. Claimant noted her pain was about 60% better.

21. On November 21, 2016, Claimant was again evaluated by Dr. Counts and he noted that Claimant did not have full range of motion of her lumbar spine. Regarding work restrictions, Dr. Counts noted that Claimant needs to be able to leave the counter as needed to stretch her back.

22. On November 30, 2016, Claimant was evaluated by Dr. Aschberger. His assessment of Claimant was a lumbar strain. Although Claimant, subjectively, did not think the injection helped, Dr. Aschberger noted some objective improvements. Claimant noted she was about 65% better.

23. On December 19, 2016, Claimant was evaluated by Dr. Counts. He noted Claimant had ongoing back pain with decreased range of motion in her lumbar spine. He also noted tightness and stiffness. On January 6, 2017, Claimant was again seen by Dr. Counts. He noted ongoing back pain, back stiffness, but improving range of motion in her low back.

24. On January 26, 2017, Claimant was evaluated by Dr. Bloch. This was the first time Dr. Bloch evaluated Claimant. Dr. Bloch indicated that: "ongoing behavior consistent with malingering as much as anything." He went on to state that "She strikes me as deconditioned and unmotivated and unhappy with her job, which I would say is the cause of her stated need for less work than anything related to this injury." Therefore, Dr. Bloch placed Claimant at maximum medical improvement and determined she had no impairment.

25. Claimant credibly testified that Dr. Bloch evaluated her for only 5-10 minutes. Although Dr. Bloch indicated that he thought Claimant was malingering, there is no indication in the record that any other medical provider thought Claimant was malingering. The medical records consistently document that Claimant's history and mechanism of injury were consistent with her presenting symptoms and physical examination. Moreover, Dr. Aschberger, as set forth below, disagreed with Dr. Bloch's statement that Claimant was malingering. In addition, Claimant credibly testified that she likes her job and has won awards for her performance at work. There was no credible evidence in the record that Claimant was

unhappy with her job and did not want to work – as stated by Dr. Bloch. Therefore, the ALJ does not credit Dr. Bloch's opinions.

26. On February 2, 2017, Claimant returned to Dr. Aschberger. He disagreed with Dr. Bloch's assessment. Dr. Aschberger assessed Claimant as suffering from a lumbar strain. He also noted Claimant's lumbosacral range of motion was limited to 80 degrees of flexion and 30 degrees of extension. Dr. Aschberger also stated the following:

> "[Claimant] has had consistent findings. I have not noted exaggerated pain behaviors with evaluation. Dr. Bloch had indicated ongoing behavior "consistent with malingering" which I did not have any sense of. There have been objective findings with her evaluations with myself as well as with osteopathic evaluation. . . I think it is reasonable for [Claimant] to try and increase her work hours. Ultimately, it is reasonable to continue with the osteopathic as reviewed by Dr. Counts. I would like [Claimant] to follow up with Dr. Counts specifically as he has been familiar with the case. If there is persistent localized irritation, I believe that a follow up injection would be reasonable.

27. The ALJ finds Dr. Aschberger's opinions to be credible and persuasive.

28. On February 14, 2017, Claimant was evaluated by Dr. Aschberger. Claimant noted ongoing low back pain which was 4-5/10 in the morning and improved to 2-3/10 throughout the day. Dr. Aschberger noted Claimant continued to take tizanidine and naproxen. He also noted her lumbosacral flexion was limited to 80 degrees, but that her extension was full. His ongoing assessment was lumbar strain. Claimant noted she was about 75% better.

29. On March 13, 2017, Claimant underwent another injection. Claimant indicated the injection decreased her pain and improved her movement and made her more mobile.

30. On March 14, 2017, Claimant was evaluated by Dr. Aschberger. Dr. Asberger's assessment was persistent low back pain with SI irritation. He noted that since Claimant had been placed at MMI by Dr. Bloch, ongoing treatment was maintenance treatment. He also noted that if Claimant continued with persistent recurrent irritation with objective findings, an impairment rating would be appropriate.

31. On May 10, 2017, Claimant underwent a left SI joint injection, which was performed by Dr. Sacha. Claimant had an approximate 70-80% relief of her pain. Dr. Sacha determined it was a borderline diagnostic response to the procedure.

32. On May 14, 2017, Claimant returned to Dr. Aschberger. He noted Claimant recently had another SI joint injection and had a nice response to the injection confirming that was the likely source of her pain. He noted that the procedure notes from Dr. Sacha, who performed the injection, indicated Claimant had 70 to 80% improvement with a borderline diagnostic response. Dr. Aschberger noted that maintenance medical treatment would be reasonable. He also noted that they discussed MMI and impairment, but yet Dr. Aschberger did not provide Claimant an impairment rating.

33. On May 22, 2017, Claimant underwent a Division Independent Medical Examination ("DIME"), which was performed by Dr. John Douthit. As set forth in his report, Dr. Douthit determined Claimant reached MMI on May 22, 2017. Dr. Douthit also provided Claimant an 8% whole person impairment rating for the injury to her lumbar spine pursuant to the AMA Guides. The impairment rating was comprised of a 5% rating pursuant to Table 53 II(B) of the AMA Guides, due to a specific disorder of the lumbar spine, and a 3% rating due to a loss of range of motion.

34. In his report, Dr. Douthit stated that after reviewing the medical records, "I found no strictly objective findings noting underlying pain and restrictive range of motion of the lumbar spine."

35. In his report, Dr. Douthit ultimately provided Claimant a diagnosis of "lumbosacral pain syndrome." He then stated the following:

> The source of pain is speculation and there may be a large functional component. Her MRI is ordinary and consistent with her age and no examiner has reported objective findings. There has been no evidence of any studies that would indicate a permanent anatomical change or injury has occurred and any organic injury should have recovered or will so with the passage of time. As regard to rating, I will allow that she now had pain for over six months on her lumbar spine with minimal changes. Table 53 AMA Guide III, IIb will allow 5% impairment. I will also allow 3% impairment with loss of range of motion, which would equal an 8% impairment in a whole person.

36. Dr. Douthit also testified by deposition. In his deposition, Dr. Douthit clarified the statements and opinions set forth in his report. Dr. Douthit testified that although there were no objective physical findings that explained Claimant's low back pain complaints, there were some objective MRI findings which supported Claimant's low back pain complaints. Dr. Douthit testified that he tended to agree with Dr. Bloch that Claimant's complaints were nonphysiologic. However, Dr. Douthit was asked whether he agreed with Dr. Bloch's conclusion that Claimant's history and mechanism of injury do not appear to be consistent with Claimant's presenting symptoms and physical exam. Dr. Douthit stated that he did not agree with Dr.

Bloch's conclusion. Dr. Douthit stated that Claimant gave a history that she fell and injured her back and left hip. Later in his testimony, Dr. Douthit stated that he believed Claimant was injured due to the fall. Dr. Douthit also testified that based upon the MRI findings, which he determined were objective, he believed Claimant had degenerative disease of her lumbar spine and it was aggravated by the fall at work.

37. In support of the impairment rating he provided for Claimant, Dr. Douthit testified that:

> [B]ased on my interpretation versus her symptoms, the subjectivity of it, and I felt that there was a possibility that she aggravated her – she had degenerative diseases of her lumbar spine and was having pain therefrom, and that's why I gave her a rating.

38. The ALJ finds that Dr. Douthit's opinions as set forth in his report and testimony conflict at times. However, the ALJ resolves such conflicts and finds that Dr. Douthit determined the following:

- Claimant injured her back on March 28, 2016, when she fell and aggravated her preexisting degenerative lumbar disease.
- Claimant's medical records document more than 6 months of pain and rigidity, with and without muscle spasm, in her lumbar spine.
- Claimant's pain complaints, and evidence of her injury, are supported by the objective findings demonstrated by the MRI of her lumbar spine.
- Claimant has a specific disorder of her lumbar spine which is rateable under table 53 II(B) of the AMA Guides and entitled Claimant to a 5% impairment rating.
- Claimant had decreased range of motion in her lumbar spine, which entitled Claimant to an additional 3% impairment.
- Claimant's total impairment due to her work related injury pursuant to the AMA Guides is 8%.
- He did not rate Claimant for chronic pain.
- Claimant's rating was based upon objective evidence of anatomic or physiologic correlation.

39. The ALJ finds Dr. Douthit's opinion that Claimant has an 8% whole person impairment of her lumbar spine pursuant to the AMA Guides due to her work injury to be credible.

40. On September 18, 2017, Claimant underwent an IME, which was performed by Dr. John Hughes. Although Dr. Hughes did not think Claimant was at MMI due to increased pain complaints and decreased range of motion of her lumbar spine, he did provide Claimant a provisional impairment rating. He agreed with Dr. Douthit that Claimant qualified for a 5% rating pursuant to Table 53 II(B) of the

AMA Guides due to a specific disorder of her lumbar spine. He also found that Claimant's range of motion had decreased and that Claimant was entitled to an additional 9% impairment for her decrease in range of motion. He concluded Claimant had a 14% impairment pursuant to the AMA Guides. The ALJ finds Dr. Hughes' opinion that Claimant has a rateable impairment to be persuasive that Claimant has a rateable impairment pursuant to the AMA Guides and §8-42-107(8)(c), C.R.S.

41. Claimant suffered a medically documented injury to her lumbar spine.

42. Claimant has a specific disorder of her lumbar spine. The specific disorder is degenerative disease of her lumbar spine which was aggravated by her fall at work.

43. Claimant's medical records demonstrate she has had back pain for more than six months. Claimant's low back pain complaints are found to be credible. Therefore, Claimant has had more than six months of medically documented pain.

44. Claimant's medical records demonstrate Claimant has had limited range of motion and joint stiffness in her low back for more than six months. Her medical records also establish that Claimant has been taking a muscle relaxant, tizanidine, for more than six months to help treat her muscle spasms and joint stiffness in her low back. Therefore, Claimant has had more than six months of medically documented rigidity with, and without, muscle spasm in her low back.

45. Claimant also has minimal degenerative changes to her lumbar spine, which are demonstrated by structural tests, i.e., her MRI.

46. Claimant's MRI findings, range of motion impairment, muscle spasms, and stiffness, which were associated with her injury, constitute objective findings of anatomic or physiologic correlation regarding her back injury.

47. Dr. Douthit properly applied the AMA Guides in determining Claimant's impairment rating. The impairment rating provided by Dr. Douthit is based on a specific disorder of Claimant's lumbar spine which is supported by a medically documented injury to her lumbar spine and is accompanied with a minimum of six months of medically documented pain and rigidity, with non-to-minimal degenerative changes on structural tests, pursuant to Table 53(II)(B) of the American Medical Association Guidelines to the Evaluation of Permanent Impairment, Third Edition, Revised (AMA Guides).

48. Claimant was not provided an impairment rating for chronic pain without objective anatomic or physiologic correlation.

49. The impairment rating provided by Dr. Douthit is consistent with §8-42-107(8)(c), C.R.S.

50. At the time of the hearing on November 9th, 2017, Claimant testified that she continues to struggle with pain and continues to take some time off work due to her pain. She testified that she cannot sit still or stand for long periods of time and that she must switch from seated to standing position while working. Claimant also testified that she is not able to do what she used to, and that she basically works, comes home, and then takes a muscle relaxant. She testified that she has been limited in her ability to engage in recreational activities. However, on cross examination, Claimant admitted to riding motorcycles with her boyfriend – in a limited capacity - on multiple occasions since the incident. This includes going for a motorcycle ride after the IME with Dr. Hughes on September 18, 2017, after she advised Dr. Hughes that she had burning low back pain of 5/10. Claimant also admitted during cross examination that since her injury, she has done some traveling. However, the ALJ does not find Claimant's admitted recreational activities to be inconsistent with her general presentation to medical providers during the course of her claim, inconsistent with her injury, or inconsistent with her direct testimony. Therefore, the ALJ finds Claimant's presentation to her medical providers and her testimony regarding her injury and symptoms to be credible.

51. Pursuant to the AMA Guides Claimant has an 8% whole person impairment of her lumbar spine due to her work injury.

52. Claimant reached MMI on May 22, 2017.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the

evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Respondents overcame the Division IME of Dr. Douthit, by clear and convincing evidence, regarding Claimant's impairment rating.

A DIME physician must apply the AMA Guides when determining Claimant's medical impairment rating. Section 8-42-101(3.7), C.R.S.; §8-42-107(8)(c), C.R.S. The finding of a DIME physician concerning Claimant's medical impairment rating shall be overcome only by clear and convincing evidence. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

As a matter of diagnosis the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office,* 78 P.3d 1150 (Colo. App. 2003). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590 (Colo. App. 1998). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000).

The questions of whether the DIME physician properly applied the AMA Guides, and ultimately whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office, supra*. A mere difference of opinion between physicians does not

necessarily rise to the level of clear and convincing evidence. *See Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO March 22, 2000).

"Where the DIME physician's opinions are internally inconsistent it is the ALJ's sole prerogative as the fact finder to resolve the conflict and determine the nature of the DIME physician's true opinions." *E.g. Wales v. Infab, Inc.,* 2002 Colo. Wrk. Comp. LEXIS 462 (ICAO 2002)(citing *Lambert & Sons, Inc. v. Industrial Claim Appeals Office*, 984 P.2d 656 (Colo. App. 1998)). To the extent a medical expert's opinions are internally inconsistent or subject to varying inferences, the ALJ may resolve the inconsistency by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968).

Respondents contend Claimant is not entitled to an impairment rating pursuant to Section 8-42-107(8)(c). Respondents contend the 8% whole person impairment rating provided by Dr. Douthit is based on chronic pain without objective findings of anatomic or physiologic correlation.

Section 8-42-107(8)(c) provides:

> For purposes of determining levels of medical impairment, the physician shall not render a medical impairment rating based on chronic pain without anatomic or physiologic correlation. Anatomic correlation must be based on objective findings.

First, Claimant has a specific disorder of her lumbar spine which is rateable under Table 53 of the AMA Guides. In his report, Dr. Douthit diagnosed Claimant as suffering from lumbosacral pain syndrome, which he also described in his deposition as degenerative lumbar spine disease, which was aggravated by Claimant's fall. Therefore, as found by the ALJ, Dr. Douthit rated Claimant for a specific disorder of her lumbar spine under Table 53 of the AMA Guides. Thus, this is not a case in which the impairment rating is based solely on "chronic pain." Therefore, Section 8-42-107(8)(c) is inapplicable to the facts of this case. *See Murphy v. Legend's Casino*, W.C. No. 4-297-222 (May 24, 2001); *Herrera v. Sturgeon Electric Co*., W.C. No. 4-320-602 (January 8, 1999) (anatomic correlation requirement not applicable where Claimant is rated for a specific disorder of lumbar spine under the AMA Guides).

Second, Claimant's MRI of her lumbar spine objectively demonstrated degenerative disease of her lumbar spine. In addition, Claimant was also found to have range of motion impairment, muscle spasms, and stiffness, which were associated with her lumbar spine injury. Therefore, even if Section 8-42-107(8)(c) was applicable, Claimant's MRI findings, range of motion impairment, muscle spasms, and stiffness, which were associated with her injury, constitute objective findings of anatomic or physiologic correlation sufficient to uphold a rating involving "chronic pain." *See Herrera v. Sturgeon Electric Co., supra (anatomic correlation requirements of § 8-42-107(8)(c) satisfied where claimant exhibited reduced movement of the spine); Welker v. Bogue Construction Inc., W.C. No. 4-309-642 (March 5, 1998).*

Respondent's cite to *Silva v. Express Temporary Service*, W.C. No. 4-303-227 (April 28, 1998) for the proposition that Claimant is not entitled to an impairment rating. *Silva*, however, does not require a different result. In that case the ALJ credited the treating physician's opinion that Claimant's pain was not the result of a diagnosis based condition, but instead resulted from "non-work-related psychological factors." In this case, based upon the opinion of Dr. Douthit, which this ALJ credits, it was found that Claimant's back pain was caused by a diagnosis based condition, i.e., the aggravation of her degenerative lumbar disease. Plus, this ALJ found that Claimant's back pain was supported by objective anatomical and physiological findings, which included the MRI, muscle spasm, stiffness, and decreased range of motion. Moreover, this ALJ did not find Dr. Bloch's opinion credible in which he opined Claimant was malingering. Therefore, *Silva* is factually and legally distinguishable from this case.

The impairment rating Dr. Douthit provided Claimant is consistent with the AMA Guides and Section 8-42-107(8)(c). Respondents' have failed to overcome the impairment rating provided by Dr. Douthit by clear and convincing evidence. Therefore, this ALJ concludes that Claimant has an 8% whole person impairment due to her industrial injury as determined by Dr. Douthit.

II. Whether Respondents overcame the Division IME of Dr. Douthit, by clear and convincing evidence, regarding the date of MMI.

A DIME physician's finding that a party has or has not reached MMI is binding on the parties unless overcome by clear and convincing evidence. Section 8-42-107(8)(b)(III), C.R.S.; *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Respondents did not dispute the finding of the Division Examiner that Claimant reached MMI on May 22, 2017. Therefore, Claimant reached MMI on May 22, 2017.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents' have failed to overcome the Division IME regarding Claimant's impairment rating or the date of MMI.

2. Claimant suffered an 8% whole person impairment rating as a result of her industrial injury.

3. Claimant reached MMI on May 22, 2017.

4. Insurer shall pay Claimant interest at the rate of 8% per annum on compensation benefits not paid when due.

5. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 6, 2017

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-993-117-06

ISSUES

- Whether Claimant established by clear and convincing evidence that Dr. Finn erred by placing Claimant at MMI?
- Whether Claimant's left shoulder condition is related to her July 8, 2015 work injury entitling her to medical benefits?
- Whether Claimant sustained a permanent disfigurement as a result of the compensable right shoulder injury?

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant is a 55 year old female who Employer employed as a packer when she injured her right shoulder on July 8, 2015. She was reaching overhead for an empty carton when she felt a pop in her shoulder. She felt pain in her right shoulder, neck and hand.

2. Claimant did not seek treatment until August 7, 2015 when she saw Richard Shouse PA-C at Arbor Occupational Medicine. Mr. Shouse diagnosed shoulder tendonitis, prescribed medication, referred Claimant to physical therapy, and assigned work restrictions.

3. Claimant left Employer approximately three days later on August 10, 2015. She has not worked since.

4. Two and a half months later, despite being off work, Claimant began complaining of left sided shoulder pain. Dr. Orgel's October 30, 2015 report states that Claimant had pain in her left bicep and tricep. She had good range of motion. There was no weakness to resisted elbow movement. Dr. Orgel stated that the pain appeared to be muscular in nature. He did not find anything about her presentation to be "worrisome." Claimant testified that she did not have left shoulder pain prior to this, her left shoulder pain came on slowly, and the pain was not a result of any specific event.

5. On November 5, 2015, after conservative care failed, Claimant had surgery on her right shoulder. Claimant testified that she did not perform household activities. She lives with an adult daughter who performed all the household tasks. Claimant only attend to her personal hygiene and occasionally prepared simple meals for herself. Claimant testified that at all times, she obeyed Dr. Orgel's restrictions.

6. On January 12, 2016, Dr. Erickson performed a physician advisor review regarding the relatedness of Claimant's left shoulder complaints. Claimant was emphatic that her left shoulder complaints were caused by overuse of her left upper extremity while she recovered from her right shoulder surgery. However, Dr. Erickson concluded: "Contralateral overuse, however, has been thoroughly examined in the Workers' Compensation literature, and there is insufficient evidence that an injury can occur to the contralateral side from overuse. One interesting point in the majority of these studies is that a workers' activities are severely restricted and reduced after an injury, making it highly unlikely that a contralateral injury could occur. . . . I would conclude, to a reasonable degree of medical probability, that the left shoulder pain experienced by Ms. Loredo is not related to her work injury, or the surgery to her right shoulder."

7. Dr. Orgel noted on March 25, 2016 that Claimant's left shoulder was improving with physical therapy. She had good range of motion and all other tests were negative. Dr. Orgel noted that he was holding his request for a left shoulder MRI. On May 18, 2016, Dr. Orgel thoroughly examined Claimant's left shoulder and surrounding musculature. The examination was negative. He specifically noted that Claimant's left bicep tendon and rotator cuff were not tender, and there was no range of motion deficit. No weakness was noted.

8. On June 17, 2016, Dr. Orgel placed Claimant at maximum medical improvement and assigned a 13% upper extremity impairment rating for the right shoulder. Dr. Orgel noted Claimant continued to complain of significant pain in the right shoulder despite a repeat MRI revealing that the rotator cuff was intact and there was no failure of her surgery. Dr. Orgel released Claimant to full duty at that time. Dr. Orgel did not provide work restrictions because he found her right shoulder to be essentially normal on repeat MRI. Respondents filed a final admission admitting to this rating. Claimant requested a DIME.

9. Dr. Kenneth Finn performed the DIME examination and authored a report dated September 29, 2016. Dr. Finn agreed with the MMI date and assigned a 12% upper extremity impairment rating for the right shoulder injury. Respondents admitted to this rating in a final admission dated October 12, 2016.

10. Despite recommendations for maintenance care in the form of medication refills for one year post MMI, Claimant did not return to Dr. Orgel for eleven months, on May 15, 2017. Dr. Orgel noted Clamant had completed her psychological counseling. On examination, Claimant exhibited limited active range of motion in all planes, which was not found with passive movement. Passive range of motion was found to be full. The rotator cuff was intact and there was no improvement after two subacromial injections. Dr. Orgel noted that her examination suggested that her presentation was out of proportion to her objective findings in that she would only abduct and flex her right arm to 90 degrees though he could easily obtain 180 degrees of passive motion, and there was no obvious weakness. Additional surgery to the right shoulder was not indicated. Dr. Orgel noted that Claimant was not filling her prescriptions any longer. Dr.

Orgel noted Claimant remained at fully duty release with no follow up medical care and remained at MMI.

11. Claimant pursued further treatment for her left shoulder under her own insurance. She underwent a left shoulder MRI on September 11, 2017, approximately one year and three months after she reached MMI, and over two years from the date of her injury. The MRI identified multiple abnormalities including a full thickness tear of the distal supraspinatus tendon and a partial thickness tear of the subscapularis tendon which was noted to be related to subcoracoid impingement. There was also a full thickness rupture of the long head of the biceps tendon and degenerative changes in the acromioclavicular joint.

12. The MRI findings are inconsistent with Dr. Orgel's prior findings on physical examination on May 18, 2016 of a specific lack of tenderness in the bicep tendon. Further, Claimant exhibited essentially full range of motion of her left shoulder when she was seen by Dr. John Paul Spittler on October 25, 2016 for an ultrasound guided injection to the right shoulder. Dr. Spittler performed full examinations of the right and left shoulders, and the values he recorded on the left were essentially normal. The "close to normal" nature of these results for left shoulder active range of motion was confirmed during Dr. Finn's testimony. These reports support a finding that Claimant did not have significant tendon or rotator cuff injuries to her left shoulder at those times. Dr. Finn also noted that the MRI findings are inconsistent with the examination of Richard Shouse on June 1, 2016, just prior to Dr. Orgel placing Claimant at MMI. On that date, Mr. Shouse noted Clamant had the same examination on both shoulders, and presented as angry, defensive and hostile.

13. Dr. Finn testified as an expert in the fields of general medicine, physical medicine and rehabilitation, pain medicine and pain management at hearing on Respondents' behalf. Dr. Finn is level II accredited with the DOWC. He was present at hearing and listened to Claimant's testimony. Dr. Finn normally treats in his medical practice the same types of injuries that Claimant complained of.

14. According to Dr. Finn, Claimant completed a pain drawing and patient history form at the DIME appointment. Neither included complaints of left shoulder pain or dysfunction. A copy of this patient history form, which includes the pain drawing, was admitted into evidence as Respondents' Exhibit P. Claimant alleged that she complained of left shoulder pain during the evaluation but could not recall whether Dr. Finn examined her left shoulder. It is clear from the DIME report and Dr. Finn's testimony that he did in fact examine and consider Claimant's left shoulder.

15. At the time he authored his report, Dr. Finn was aware that Claimant was alleging compensatory pain in the left shoulder. However, she reported pain only in the right shoulder and marked the pain diagram accordingly. Dr. Finn examined both upper extremities during his examination. Nothing about the left shoulder examination made Dr. Finn believe treatment for the left shoulder was warranted, and there was no impairment for the left shoulder.

16. Prior to hearing, Dr. Finn reviewed additional records of treatment which occurred after his DIME, including a follow up visit from Dr. Orgel, the left shoulder MRI, University Hospital records, and Clinica Family Health records. None of the information changed Dr. Finn's opinion that Claimant's left shoulder complaints are not related to Claimant's injury.

17. The left shoulder MRI showed multiple tears and tendonitis. These are very similar findings as those initially found on the right side. In Dr. Finn's experience, such tears would typically be caused by trauma. Very rarely would such MRI findings be caused by overuse. Some of the degenerative findings such as bursitis, inflammation, and arthritis are also quite typical for patients of Claimant's age. Dr. Finn testified that the rotator cuff tears shown on MRI are not related to compensatory use of her left shoulder as a result of her right shoulder injury. He agreed with Dr. Erickson's findings in this regard. Further, Claimant did not report pain to Dr. Finn or indicate on the pain diagram any pain in the left shoulder. Dr. Finn agreed with Dr. Erickson's statements regarding actual injury to contralateral sides. Normally, compensatory pain from having surgery on one shoulder would be musculoskeletal or muscle related pain, stiffness or spasm. There is "absolutely" a difference between the compensatory muscle tightness Claimant exhibited and the tendon and rotator cuff tears revealed on MRI.

18. If the left MRI symptoms had been present during Claimant's active treatment, one would expect her to have consistently reduced range of motion in probably all planes of movement of the shoulder. She did not.

19. Dr. Finn maintained his opinions, within a reasonable degree of medical probability, as to MMI, permanent impairment, and the relatedness of Claimant's left shoulder MRI findings. In his opinion, the MRI findings are not related to compensatory pain from her right shoulder injury. Claimant at all times denied having any pre-existing conditions in her left shoulder, and there are no medical reports or other evidence to establish that she had a preexisting rotator cuff tear or other injury or condition which might have been aggravated by the right shoulder injury.

20. The ALJ finds Dr. Finn to be credible and persuasive when testifying in support of his DIME report and opinions. His testimony is more persuasive and reasoned than that of Claimant concerning relatedness of the left shoulder conditions, particularly when the totality of evidence in the medical records is considered. Claimant exhibited non-physiological complaints, symptoms out of proportion to objective findings, and significant injuries on an MRI taken over two years after her work injury and approximately a year and a half post MMI which are inconsistent with her prior physical examinations and inconsistent with a finding of overuse or compensatory pain.

21. Claimant was released with maintenance recommendations of medication refills for one year and six visits for psychological counseling. Claimant underwent a psychological examination but only completed two of the six recommended therapy sessions. On May 15, 2017, Dr. Orgel noted Claimant would have two months of more medication, but that she had not been refilling her medications through his office. A

review of the medical records reflects that at the time of her discharge at MMI, she had only been taking Ibuprofen. Claimant presented no persuasive evidence or testimony that ongoing treatment should be provided for her right shoulder. She completed the recommendations of the authorized treating physician and there are no medical reports evidencing additional treatment designed to cure and relieve the effects of the industrial injury. The ALJ therefore concludes that Claimant is not entitled to additional maintenance medical care related to her right shoulder injury.

22. Claimant exhibited a surgical scar on the anterior of her right shoulder approximately two inches in length and well healed. Claimant also has an arthroscopic portal scar on the posterior of her right shoulder. The ALJ finds that the permanent disfigurement from this injury warrants an award of $500. Respondents have paid Claimant $500 in disfigurement as a result of this injury. Respondents thus are entitled to a credit in this amount against the award of disfigurement made herein.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. "Claimant in a workers' compensation claim shall have the burden of proving entitlement to benefits by a preponderance of the evidence; the facts in a workers' compensation case shall not be interpreted liberally in favor of either the rights of the injured worker or the rights of the employer; and a workers' compensation case shall be decided on its merits." *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006). Where a party presents expert opinions, the weight, and credibility, of the opinions are matters exclusively within the discretion of the

ALJ as the fact-finder. *Cordova v. Industrial Claim Appeals Office,* P.3d (Colo. App. No. 01CA0852, February 28, 2002).

The DIME physician's findings of maximum medical improvement and permanent impairment are binding unless overcome by clear and convincing evidence. Section 8-42-107(8)(c), C.R.S. The finding of a DIME physician that a particular component of the claimant's impairment was caused by the industrial injury is binding unless overcome by clear and convincing evidence. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). The determination of maximum medical improvement inherently requires the examining physician to determine the cause or causes of the claimant's condition. Thus, a DIME physician's finding that a condition is or is not related to the industrial injury must be overcome by clear and convincing evidence when challenging a finding of maximum medical improvement. Section 8-42-107(8)(b)(III), C.R.S.; *Cordova v. Industrial Claim Appeals Office, supra*.

Clear and convincing evidence is highly probable and free from serious or substantial doubt, and the party challenging the DIME physician's findings must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). A fact or proposition has been proven by clear and convincing evidence if, considering all the evidence, the trier-of-fact finds it to be highly probable and free from serious or substantial doubt. *Metro Moving & Storage Co. v. Gussert, supra.* In other words, to overcome a DIME physician's opinion, "[T]here must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAP, Oct. 4, 2001).

The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc.*, W.C. Nos. 4-532-166 & 4-523-097 (ICAP, July 19, 2004).

The present case is similar in nature to the recent decision by the Industrial Claim Appeals Panel in *Powell v. Aurora Public Schools*, W.C. # 4-974-718-03 (ICAO March 15, 2017). In that case, claimant attempted to overcome the maximum medical improvement determination of the DIME physician Dr. Fillmore. Claimant had obtained a subsequent MRI of her hip reflecting a labral tear. As here, the medical testimony supported a conclusion that there was no evidence of pathology until a significant period of time post-injury – in the *Powell* case, thirteen months. The ALJ was not persuaded that the DIME physician would have altered his opinion on maximum medical improvement had he seen the MRI results at the time of his exam. The Panel stated: "Insofar as Dr. Fillmore did not have the MRI results at the time he conducted his examination and reached his opinion on maximum medical improvement, this evidence goes only to the weight of his opinion. Nevertheless, this did not preclude the ALJ from crediting his opinion. As noted above, the weight and credibility to be assigned evidence is a matter within the discretion of the ALJ." *Cordova v. Industrial Claim Appeals Office, supra.*

Similar circumstances exist here. As found, Dr. Finn testified at hearing that the MRI findings in the left shoulder in fact did not change his opinion regarding maximum medical improvement or the relatedness of the left shoulder condition to the industrial injury. He explained that the types of conditions seen on the MRI are not the types of injuries he would expect to occur as a result of "overuse" or compensatory activities with the contralateral shoulder. In fact, he testified that "very rarely" would such findings on an MRI be caused by overuse. Dr. Finn's opinions are supported by Dr. Erickson's physician advisor review report on this issue. Some of the degenerative findings such as bursitis, inflammation, and arthritis are also quite typical for a person of claimant's age. Dr. Erickson and Dr. Finn agree that contralateral compensatory pain anticipated from having surgery on one shoulder would be musculoskeletal or muscle related pain, stiffness, or spasm. Dr. Finn agrees with Dr. Erickson's statements regarding actual injury to contralateral body parts. Dr. Finn explained that there is "absolutely" a difference between compensatory muscle tightness and the tendon and rotator cuff tears and age-consistent degenerative findings exhibited on the MRI.

Based on this evidence and the credible and persuasive testimony of Dr. Finn, the ALJ therefore finds and concludes Claimant has failed to establish by clear and convincing evidence that the DIME physician was clearly wrong when he assessed Claimant to be at MMI on June 17, 2016. Claimant did not overcome Dr. Finn's opinions that she remains at MMI, and her left shoulder condition is not related to the admitted right shoulder injury.

The ALJ finds and concludes that based on the totality of the evidence in this case, there are no ongoing recommendations for additional treatment from the authorized treating physician at this time. The recommendations made at the time of MMI have been completed. Further, Claimant did not present persuasive evidence as to ongoing maintenance care needed to cure and relieve the effects of the industrial injury. Claimant has not carried her burden of proof to establish by a preponderance of the evidence the need for additional maintenance care related to the admitted injury to her right shoulder.

Claimant is entitled to disfigurement for her right shoulder surgical scars as outlined above.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents shall pay Claimant $500 for permanent disfigurement due to surgical scars related to this injury, with credit allowed for any amount of disfigurement benefits already paid in this claim.

2. Claimant did not overcome the DIME by clear and convincing evidence

    - Claimant remains at MMI.

    - Claimant's left shoulder is not related.

    - Claimant's claim for additional medical benefits is denied and dismissed.

3. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Denver, CO 80203

ISSUES

The issue addressed in this order involves Claimant's entitlement to ongoing medical benefits. The specific question answered is whether Claimant established by a preponderance of the evidence that additional corticosteroid and viscosupplementation, i.e. Supartz injections are reasonable, necessary, and related maintenance treatment to relieve the effects of his left knee injury or to prevent deterioration of his condition.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant sustained an admitted injury to his left knee on August 27, 2014. Claimant underwent extensive medical treatment, including a left knee arthroscopy with medial/lateral meniscus repair, patellar chondroplasty, and plica resection under the direction of Dr. Wiley Jinkins on January 22, 2015.

2. Claimant was ultimately placed at MMI with a 40% lower extremity rating on December 17, 2015 by Dr. Jones. Regarding maintenance care, Dr. Jones recommended three additional visits with Dr. Jinkins over the next six months. Since MMI, Claimant has received extensive maintenance care to include follow-up visits with Dr. Jinkins every four to six weeks, medications, and repeat corticosteroid injections. [Resp. Ex. D, p. 53-61]

3. Per Dr. Jinkins, Claimant's response to the additional injections "generally was somewhat transient." [Deposition of Dr. Jinkins, p. 16 at 12-14] Dr. Jinkins acknowledged that Claimant's response as far as the efficacy of the injections varied. [Deposition of Dr. Jinkins, p. 42 at 21-24]

4. Respondents retained Dr. Eric Ridings to perform an independent medical examination (IME). At the IME, Claimant told Dr. Riding that he had "significant improvement by the third day after each injection, feeling about 95% relief of his pain, but then by one week after each injection, he had returned to his previous baseline with no longer-term benefit. He did not differentiate between the corticosteroid injections and the viscosupplementation injections." [Resp. Ex. H, p. 118]

5. Dr. Ridings opined that Claimant did not require any additional injection therapy for his left knee. According to Dr. Ridings, "[Claimant] does not now, nor has he had documented by Dr. Jinkins any significant findings suggesting ongoing inflammation requiring treatment by corticosteroid injection, nor has he had any significant benefit from the multiple corticosteroid injections he has been receiving every four to six weeks

recently." [Respondents' Ex. H, pg. 120] At hearing, Dr. Ridings testified that in the absence of inflammation steroids won't provide therapeutic benefit.

6. Regarding Claimant's response to continued steroid injections, Dr. Ridings noted: "His reported response to the corticosteroid injections is in my opinion nonphysiologic while also being ineffective. He does not require any additional x-rays of his knee at this time, which he has been receiving about every three months, and which on the last three occasions Dr. Jinkins documented showed minimal arthritis. A reasonable interpretation of these repeated x-rays is that Dr. Jinkins also finds his symptoms to be out of proportion to the objective findings, and continues to look for new objective findings." *Id.*

7. On examination, Claimant stated that he feels the injections help him because they, for a period ranging from a few days to a week or two, reduce his pain from a 2-3 to a 1-2 on the pain scale.

8. Claimant's documented response to the corticosteroid and Supartz injections has been mixed in his reports to Dr. Jinkins. On May 24, 2016, he told Dr. Jinkins "there has not been a great deal of change as far as his knee is concerned following the hyaluronate injections (Supartz). (Resp Ex. F, p. 80) On August 2, 2016, Claimant told Dr. Jinkins "the previous corticosteroid injections did help to some degree, however, he is unsure of whether there was any significant lasting improvement associated with the injections." (Resp. Ex. F, p. 82)

9. Dr. Ridings opined that Claimant's pattern of response to repeated injections was not anticipated in terms of duration and type of relief provided. Specifically, he testified that the relief associated with steroid injections would be expected to last longer than Claimant's reported duration and if effective, Supartz injections would provide several months of relief. Consequently, Dr. Ridings opined that Claimant's reported responses to additional injections were more consistent with a placebo effect. (Resp. Ex. H p. 118)

10. Per Dr. Ridings, "I consider this an entirely negative response to the injection therapy, not only because there was no long-term benefit, but because the pattern he describes is not consistent with the expected response to a local anesthetic and a corticosteroid injection." *Id.*

11. The Division of Workers' Compensation has promulgated the Medical Treatment Guidelines (Guides) for medical treatment in the workers' compensation context. Under Section 6, which pertains to the lower extremity, viscosupplementation is discussed as follows: "Viscosupplementation - There is strong evidence that, in the setting of knee osteoarthritis, the effectiveness of viscosupplementation is clinically unimportant, and may impose a risk of adverse events on the patient. Therefore, it is generally not recommended. It may occasionally be appropriate for patients with significant functional deficits who are not yet eligible for or wish to delay an arthroplasty. Refer to Section F.6.e. Viscosupplementation for more information." Section F.2.vii.I.

12. Section F.6.e of the Guides goes on to say that viscosupplementation is "not recommended" for the knee. It also provides that in cases where it is utilized that the "maximum duration" is "2 series." F.6.e

13. With regard to corticosteroid injections, the Guides state there is good evidence for a small to moderate reduction in pain. However, the maximum duration for this treatment is "3 injections in 1 year spaced at least 4 to 8 weeks apart. No more than 4 steroid injections to all body parts should be performed in one year." F.6.a

14. Dr. Jinkins testified the commentary of the Medical Treatment Guidelines on the frequency of corticosteroid and viscosupplementation injections was dependent on the amount that is given and also the time line. He did not appear to be aware of the provisions in the Guides regarding the limitation of 2 series with respect to viscosupplementation injections or a limitation to 3 injections per year contained within the guides. [Deposition of Dr. Jinkins, p. 49 at 8-14]

15. The medical record evidence persuades the ALJ that that Claimant received eight injections where steroid was introduced into the synovial cavity of the knee sometimes in combination with Supartz in 2016. Moreover, the medical records admitted support a finding that Claimant received eight additional injections into the knee between January 25, 2017 and October 10, 2017. All eight of the injections provided in 2017 included the administration of steroid and three of the eight also included the administration of Supartz. Based upon the evidence presented, the ALJ finds that Claimant has received two series of three Supartz injections for a total of six viscosupplementation shots in addition to 16 injections wherein steroid was introduced into the synovial cavity of the knee.

16. Dr. Jinkins testified, "[w]e always offer patients a repeat injection if it had been helpful and leave it up to them as to whether or not they want this to be done, and invariably on the occasions he was injected, he indicated that he would like to have this done." [Deposition of Dr. Jinkins, p. 49 at 19-23]. While Claimant repeatedly requested that his knee be injected, Dr. Jinkins agreed that the injections provided had not always been beneficial testifying as follows: Some of the times they have not helped, and some of the time they have. You have to take it visit by visit.

17. Claimant apparently reported to Dr. Jinkins that "without the injections his symptoms intensify to the point that he has problems negotiating the duties of his job." Consequently, Claimant asserts that repeat injections have improved his functional capacity. While Claimant reports that recurrent injections have resulted in functional gain, Dr. Jinkins reports fail to detail what gains Claimant enjoys as a direct result of the repeat injections. Moreover, as noted by Dr. Ridings, Claimant continued to work in the same capacity even when the repeat injections failed to produce the desired reduction in his symptoms.

18. Based upon the evidence presented, the ALJ finds that Claimant has failed to

failed to meet his burden to establish that additional Supartz and/or corticosteroid injections constitutes reasonable, necessary maintenance treatment to relieve the effects of his left knee injury or to prevent deterioration of his condition.

19. The ALJ credits the opinions of Dr. Ridings to find Claimant's inconsistent and transient pain response to post MMI steroid injections in combination with the lack of documented functional gain following these injections renders the continued administration of the same unreasonable. Moreover, the evidence presented persuades the ALJ that the number of injections provided in the approximately 22 months since Claimant was placed at MMI is grossly outside the recommendations set forth in the Medical Treatment Guidelines.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

I. General Legal Principals

A. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law, and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the voluminous record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Clam Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. Moreover, the ALJ may accept all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992)(ALJ may credit one medical opinion to the exclusion of a contrary medical opinion).

II. Claimant's Entitlement to Maintenance Medical Treatment

C. The need for medical treatment may extend beyond the point of maximum medical improvement where a claimant requires periodic maintenance care to relieve the effects of the work related injury or prevent further deterioration of his condition. *Grover v. Indus. Comm'n*, 759 P.2d 705 (Colo. 1988). In *Milco Construction v. Cowan,* 860 P.2d 539 (Colo.App. 1992), the Court of Appeals established a two-step procedure

for awarding ongoing medical benefits under *Grover v. Industrial Commission, supra*. The Court stated that an ALJ must first determine whether there is substantial evidence in the record to show the reasonable necessity for future medical treatment "designed to relieve the effects of the injury or to prevent deterioration of the claimant's present condition." If the claimant reaches this threshold, the Court stated that the ALJ should then enter "a general order, similar to that described in *Grover*." Even with a general award of maintenance medical benefits, Respondents retain the right to dispute whether the need for medical treatment was caused by the compensable injury or whether it was reasonable and necessary. *See Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo.App. 2003) (a general award of future medical benefits is subject to the employer's right to contest compensability, reasonableness, or necessity).

D. While a claimant does not have to prove the need for a specific medical benefit, and respondents remain free to contest the reasonable necessity of any future treatment; the claimant must prove the probable need for some treatment after MMI due to the work injury. *Milco Construction v. Cowan*, supra. The question of whether the claimant met the burden of proof to establish an entitlement to ongoing medical benefits is one of fact for determination by the ALJ. *Holly Nursing Care Center v. Industrial* Claim Appeals Office, 992 P.2d 701 (Colo.App. 1999); *Renzelman v. Falcon School District,* W. C. No. 4-508-925 (August 4, 2003). As noted above, the ALJ credits the opinions of Dr. Ridings to find and conclude that the lack significant inflammation in Claimant's left knee coupled with the lack of documented functional gain following injection along with Claimant's transient pain response renders continued steroid injections unreasonable. Moreover, continued steroid and/or viscosupplementation injections fall outside the recommendations set forth in the Medical Treatment Guidelines.

E. The Medical Treatment Guidelines (Guidelines) are regarded as the accepted professional standards for care under the Workers' Compensation Act. *Hernandez v. University of Colorado Hospital*, W.C. No. 4-714-372 (January 11, 2008); see also *Rook v. Industrial Claim Appeals Office*, 111 P.3d 549 (Colo. App. 2005). The Medical Treatment Guidelines, Rule 17-2(A), W.C.R.P. provide: All health care providers shall use the Guidelines adopted by the Division. In spite of this direction, it is generally acknowledged that the Guidelines are not sacrosanct and may be deviated from under appropriate circumstances. *See*, Section 8-43-201(3) (C.R.S. 2014). Nonetheless, they carry substantial weight. An ALJ is allowed to take judicial notice of the contents of the AMA Guides, the Rating Tips, the Director's Level II Curriculum and other documents officially promulgated by the Director pertinent to the interpretation of the AMA Guides regardless of whether a copy of those documents were inserted into the evidentiary record. *Serena v. SSC Pueblo Belmont Op. Co, LLC,* W.C. No. 4-922-344 (December 1, 2015), *aff'd, Serena v. Indus. Claim Appeals Office,* (Colo. App. No. 15CA2095, November 3, 2016) (Not published pursuant to C.A.R. 35(e)). Furthermore, the ALJ may appropriately consider the Medical Treatment Guidelines as an evidentiary tool. *Logiudice v. Siemans Westinghouse,* W.C. 4-665-873 (ICAO January 25, 2011).

F. As provided for under § 8-43-201(3), the ALJ has considered the medical

treatment guidelines adopted under § 8-42-101(3) in determining whether ongoing steroid/Supartz injections are reasonable, necessary, and related to Claimant's industrial injury. While the ALJ concludes that the evidence establishes that Claimant's original need for injection therapy was related to his work injury, continued injections are no longer reasonable or necessary. As noted, the Guides set forth very specific recommendations regarding the number of steroid injections to be provided in any given year. Specifically, the Guides provide that the maximum duration for steroid injection treatment is "3 injections in 1 year spaced at least 4 to 8 weeks apart and no more than 4 steroid injections to all body parts should be performed in one year. In this case, Claimant has received at least 16 steroid injections in the past 22 months with what the ALJ finds has been mixed results at best. In keeping with the Guides, the ALJ rejects the opinions of Dr. Jinkins with respect to continued corticosteroid and Supartz injections. As noted, Dr. Jinkins has not documented the source of Claimant's subjective pain complaints and has inadequately documented the basis for Claimant's continued utilization of injections, particularly when such use exceeds the Medical Treatment Guidelines.

ORDER

It is therefore ordered that:

1. Claimant request for ongoing corticosteroid and Supartz injections is denied and dismissed as this treatment is neither reasonable nor necessary at the current time.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

Did Claimant suffer a compensable injury arising out of and in the course of his employment as a result of a motor vehicle accident on May 10, 2017?

FINDINGS OF FACT

1. Claimant worked for Employer as a utilities inspector.

2. Inspectors spend most of their typical day traveling to various sites within Employer's service area. Employer provides inspectors, including Claimant, with vehicles to use at work.

3. On May 10, 2017, Claimant attended a retirement luncheon for a long-time colleague at a restaurant in Colorado Springs. Claimant was injured in a rear-end motor vehicle accident while leaving the restaurant after the luncheon.

4. Employer arranged the location, date and time of the luncheon, and notified the inspectors via email. The email also said, "we hope to see everyone there." Claimant received a group calendar invitation which, when accepted, put the luncheon on his work calendar. Employer covered the cost for all employees out of a dedicated retirement lunch budget.

5. Employer instructed the employees to pair up and carpool to the restaurant. Employer had two reasons for asking employees to carpool: to reduce congestion at the restaurant's parking lot and to prevent members of the public from seeing such a large number of identifiable Colorado Springs Utilities ("CSU") vehicles gathered at the restaurant.

6. Claimant picked up his co-worker, Patrick Evans, at a CSU facility and drove to the restaurant in Claimant's CSU vehicle.

7. The luncheon lasted from 11:30 AM until approximately 1:00 PM. Claimant normally receives a 30-minute lunch break, but he was paid for the full 90-minute luncheon on May 10.

8. Most of Claimant's managers and fellow inspectors attended the luncheon. Claimant's immediate supervisor noted one or two employees could not attend or arrived late due to other work-related commitments. Several co-workers spoke informally to honor and "roast" the retiring co-worker. There was no "script" or specific agenda, and employees "chatted" about work and nonwork-related topics.

9. Employer perceived several benefits from employees' attendance at the luncheon. The primary purpose was to honor the retiring employee. The luncheon also

boosted the morale of the remaining employees by showing Employer's appreciation of employees who make a long-term commitment to their job. The luncheon promoted "teambuilding" by fostering camaraderie among employees who do not interact with each other on a day-to-day basis.[1]

10. Attendance at the luncheon was not "mandatory" *per se,* but Employer expected employees to be there unless they had a conflict. Claimant's co-worker, Patrick Evans credibly testified:

> [T]he expectation of our job is to attend all meetings that . . . we can make. Basically, unless I have something going on in the field that is a priority emergency, a preconstruction meeting, water chlorination, something that I have scheduled the same time, the expectation is for us to attend all meetings. It's part of the job.
>
> Q: And did you consider this a meeting?
>
> A: Absolutely.
>
> Q: And so you felt there was an expectation for you to . . . be there?
>
> A: Absolutely.

11. Claimant offered similar credible testimony about Employer's expectations regarding attendance at the luncheon.

12. Claimant suffered physical injuries as a result of the accident.

13. After the accident, Employer referred Claimant to its designated provider, Dr. Kyle Akers. Claimant saw Dr. Akers twice, and attended one physical therapy session on Dr. Akers' referral.

14. Claimant proved by a preponderance of the evidence he suffered a compensable injury arising out of and in the course of his employment on May 10, 2017. Claimant was not participating in a voluntary recreational activity at the time of the accident.

15. Claimant proved by a preponderance of the evidence he requires medical treatment to cure and relieve the effects of the May 10, 2017 injury.

16. The office visits with Dr. Akers and the physical therapy session(s) were reasonable, necessary, and causally related to the May 10, 2017 injury.

---

[1] Brian Whitehead, Employer's manager of system extensions, testified "the primary objective [of the luncheon was] to recognize and appreciate the person that left. As a manager I look at any opportunity of employees getting together to be good, to see each other as individuals, understand their strengths, their weaknesses, who they are as a person and the more you understand that they more people work together. That's always a side benefit that I see coming out of any format of meeting."

CONCLUSIONS OF LAW

A. Compensability

To prove a compensable injury, a claimant must prove the injury occurred while performing service arising out of and in the course of his employment. Section 8-41-301(1)(b). The terms "arising out of" and "in the course of" are not synonymous. The "course of employment" requirement is satisfied if the injury occurred within the time and place limits of the employment relationship and during an activity that had some connection with the employee's job-related functions." *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991). The term "arising out of" is narrower, and requires that an injury "has its origin in an employee's work-related functions and is sufficiently related to those functions to be considered a part of the employee's employment contract." *Horodysyj v. Karanian*, 32 P.3d 470, 475 (Colo. 2001 The claimant need not actually be performing work duties at the time of the injury, nor must the activity be a strict employment requirement or confer an express benefit on the employer. *Price v. Industrial Claim Appeals Office*, 919 P.2d 207, 210 (Colo. 1996). Rather, the question is whether the activity is sufficiently "interrelated to the conditions and circumstances under which the employee generally performs the job functions that the activity may reasonably be characterized as an incident of employment." *Id*. at 210. Whether an injury arises out of and in the course of employment are questions of fact for the ALJ. *Dover Elevator Co. v. Industrial Claim Appeals Office*, 961 P.2d 1141, 1143 (Colo. App. 1998).

The Act imposes additional limitations on the compensability of injuries occurring during recreational activities. Section 8-40-201(8) defines "employment" to exclude "the employee's participation in a voluntary recreational activity or program, regardless of whether the employer promoted, sponsored or supported the recreational activity or program." Similarly, § 8-40-301(1) defines the term "employee" as excluding a person "while participating in recreational activity, who at such time is relieved of and is not performing any duties of employment."

In *White v. Industrial Claim Appeals Office,* 8 P.3d 621 (Colo. App. 2000), the court held that the statutory term "recreational activity" should be given its plain and ordinary meaning, which can be "easily discerned by reference to a standard dictionary." The *American Heritage College Dictionary* (3d Ed. 1993) defines "recreation" as "refreshment of one's mind or body through activity that amuses or stimulates; play." In determining whether an activity is "recreational," the ALJ should consider the factors enumerated in *Price v. Industrial Claim Appeals Office, supra*, including whether the activity occurred during working hours, whether the injury occurred on the employer's premises, whether the employer initiated the activity, whether the employer exerted control over the employee's participation in the activity, and whether the employer stood to benefit from the employee's participation in the activity. Whether an activity was "recreational" is a question of fact for determination by the ALJ. *Lopez v. American Lumber Construction,* W.C. No. 4-434-488 (October 29, 2003).

To determine whether the claimant's participation in a recreational activity was "voluntary," the ALJ must assess the claimant's "motive" for participating in the activity. In

making this determination, the ALJ may consider whether the employer initiated, organized, sponsored or financially supported the activity, because the employer has the "power to enlarge the scope of employment by its affirmative act of embracing various recreational or social activities." *Dover Elevator Co. v. Industrial Claim Appeals Office*, 961 P.2d 1141, 1143 (Colo. App. 1998).

After considering the totality of circumstances, the ALJ concludes that Claimant's injuries arose out of and within the course of his employment. The retirement luncheon was not a "recreational activity" within the meaning of § 8-40-201(8). Even if the luncheon were considered a recreational activity, it ended and Claimant had resumed his regular work activity at the time of the accident. Finally, Claimant's attendance at the luncheon was not "voluntary."

In reaching these conclusions, the ALJ finds these factors particularly significant: The accident occurred during the workday while Claimant was "on the clock." The luncheon extended an hour beyond Claimant's normal lunch break and he was paid for the extra time. Employer arranged and paid for the luncheon, and Claimant had no nonwork-related reason to be in that location at the time of the accident. The accident occurred in a vehicle provided by Employer. Employer requested the employees to carpool to the luncheon. At the time of the accident, the luncheon had ended and Claimant was returning to Employer's facility to drop off his co-worker.

Respondent argues the accident cannot give rise to compensable injuries because the luncheon was a "recreational activity" within the meaning of § 8-40-201(8). The ALJ disagrees with this argument. The purpose of the luncheon was not "recreation." Even though the employees performed no work during the luncheon, it was intimately connected to their employment. The purpose was to honor the retiring colleague for his service to Employer. While the employees undoubtedly enjoyed themselves, it was fundamentally a work-related function.

The mere fact that an activity has some tendency to "refresh" the employee or entails some element of enjoyment does not necessarily convert it into a "recreational activity." Actions such as eating, sleeping, resting, washing, toileting, seeking fresh air, getting a drink of water, and keeping warm have been held to be incidental to employment under the "personal comfort" doctrine. *In re Question Submitted by U.S. Court of Appeals*, 759 P.2d 17 (Colo. 1988); *Industrial Commission v. Golden Cycle Corporation*, 246 P.2d 92 (Colo. 1952).

The recreational activity exclusion has primarily been applied to activities such as refereeing a volleyball game, lifting weights, playing sports such as hockey, basketball and volleyball, a weekend camping trip, and skiing. Although a meal-based activity could be "recreational" depending on the circumstances, it is a much less natural fit than games, sports or other activities commonly referred to as recreation.

Moreover, even if the luncheon were considered a recreational activity, the accident occurred after it had ended and Claimant had resumed his work duties. The exclusion in § 8-40-301(1) applies to injuries sustained "***while*** participat***ing*** in recreational

activity who ***at such time*** is relieved of and is not performing any duties of employment." (Emphasis added). This language indicates the accident must occur during the recreational activity for the exclusion to apply. In this sense, the recreational activity exclusion is akin to the "personal deviation" doctrine, under which the employee is deemed to have returned to employment "the moment" the personal deviation ends. *E.g*., *Pat's Power Tongs, Inc. v. Miller*, 474 P.2d 613 (Colo. 1970); *see also Wild West Radio, Inc. v. Industrial Claim Appeals Office*, 905 P.2d 6 (Colo. App. 1995) (injuries that occurred while an intoxicated employee was driving back to his hotel after drinking in a bar were compensable); *Continental Airlines v. Industrial Commission*, 709 P.2d 953 (Colo. App. 1985) (employee slipped while walking out of a grocery store).

Finally, the ALJ credits Claimant's testimony that he was motivated, at least in part, by Employer's "expectation" that he attend the luncheon. Although attendance was not strictly "mandatory," Claimant's supervisors took note of the few employees who did not attend, and would likely have been disappointed had Claimant not been there absent a specific, legitimate scheduling conflict. These factors indicate the activity was not "voluntary."

B. Medical benefits

The respondents are liable for medical treatment which is reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a); *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997); *Country Squire Kennels v. Tarshis*, 899 P. 2d 362 (Colo. App. 1995). Where a claimant's entitlement to medical benefits is disputed, the claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, *supra*.

As found, Claimant proved he is entitled to medical treatment to cure and relieve the effects of the May 10, 2017 compensable injury. Additionally, the two office visits with Dr. Akers and the physical therapy sessions were reasonable, necessary, and causally related to the industrial injury.

ORDER

It is therefore ordered that:

1. Claimant's injuries suffered in the May 10, 2017 motor vehicle accident are compensable.

2. Respondent shall pay for all reasonably necessary medical treatment from authorized providers to cure and relieve the effects of the May 10, 2017 compensable injuries, including, but not limited to the office visits with Dr. Akers and physical therapy sessions.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Administrative Law Judge
Office of Administrative Courts

ISSUES

Did Claimant suffer a compensable injury arising out of and in the course of his employment as a result of a motor vehicle accident on May 10, 2017?

FINDINGS OF FACT

1. Claimant worked for Employer as a utilities inspector.

2. Inspectors spend most of their typical day traveling to various sites within Employer's service area. Employer provides inspectors, including Claimant, with vehicles to use at work.

3. On May 10, 2017, Claimant attended a retirement luncheon for a long-time colleague at a restaurant in Colorado Springs. Claimant was injured in a rear-end motor vehicle accident while leaving the restaurant after the luncheon.

4. Employer arranged the location, date and time of the luncheon, and notified the inspectors via email. The email also said, "we hope to see everyone there." Claimant received a group calendar invitation which, when accepted, put the luncheon on his work calendar. Employer covered the cost for all employees out of a dedicated retirement lunch budget.

5. Employer instructed the employees to pair up and carpool to the restaurant. Employer had two reasons for asking employees to carpool: to reduce congestion at the restaurant's parking lot and to prevent members of the public from seeing such a large number of identifiable Colorado Springs Utilities ("CSU") vehicles gathered at the restaurant.

6. Claimant met his co-worker, Joseph Busemeyer, at a CSU facility and drove to the restaurant in Mr. Busemeyer's CSU vehicle.

7. The luncheon lasted from 11:30 AM until approximately 1:00 PM. Claimant normally receives a 30-minute lunch break, but he was paid for the full 90-minute luncheon on May 10.

8. Most of Claimant's managers and fellow inspectors attended the luncheon. Claimant's immediate supervisor noted one or two employees could not attend or arrived late due to other work-related commitments. Several co-workers spoke informally to honor and "roast" the retiring co-worker. There was no "script" or specific agenda, and employees "chatted" about work and nonwork-related topics.

9. Employer perceived several benefits from employees' attendance at the luncheon. The primary purpose was to honor the retiring employee. The luncheon also

boosted the morale of the remaining employees by showing Employer's appreciation of employees who make a long-term commitment to their job. The luncheon promoted "teambuilding" by fostering camaraderie among employees who do not interact with each other on a day-to-day basis.[1]

10. Attendance at the luncheon was not "mandatory" *per se,* but Employer expected employees to be there unless they had a conflict. Claimant credibly testified:

> [T]he expectation of our job is to attend all meetings that . . . we can make. Basically, unless I have something going on in the field that is a priority emergency, a preconstruction meeting, water chlorination, something that I have scheduled the same time, the expectation is for us to attend all meetings. It's part of the job.
>
> Q: And did you consider this a meeting?
>
> A: Absolutely.
>
> Q: And so you felt there was an expectation for you to . . . be there?
>
> A: Absolutely.

11. Claimant's co-worker, Joseph Busemeyer, offered similar credible testimony about Employer's expectations regarding attendance at the luncheon.

12. Claimant injured his jaw, neck, and back as a result of the accident.

13. After the accident, Employer referred Claimant to its designated provider, Dr. Kyle Akers. Claimant saw Dr. Akers twice, and attended two physical therapy sessions on Dr. Akers' referral.

14. Claimant proved by a preponderance of the evidence he suffered a compensable injury arising out of and in the course of his employment on May 10, 2017. Claimant was not participating in a voluntary recreational activity at the time of the accident.

15. Claimant proved by a preponderance of the evidence he requires medical treatment to cure and relieve the effects of the May 10, 2017 injury.

16. The office visits with Dr. Akers and the physical therapy session(s) were reasonable, necessary, and causally related to the May 10, 2017 injury.

---

[1] Brian Whitehead, Employer's manager of system extensions, testified "the primary objective [of the luncheon was] to recognize and appreciate the person that left. As a manager I look at any opportunity of employees getting together to be good, to see each other as individuals, understand their strengths, their weaknesses, who they are as a person and the more you understand that they more people work together. That's always a side benefit that I see coming out of any format of meeting."

CONCLUSIONS OF LAW

A. Compensability

To prove a compensable injury, a claimant must prove the injury occurred while performing service arising out of and in the course of his employment. Section 8-41-301(1)(b). The terms "arising out of" and "in the course of" are not synonymous. The "course of employment" requirement is satisfied if the injury occurred within the time and place limits of the employment relationship and during an activity that had some connection with the employee's job-related functions." *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991). The term "arising out of" is narrower, and requires that an injury "has its origin in an employee's work-related functions and is sufficiently related to those functions to be considered a part of the employee's employment contract." *Horodysyj v. Karanian*, 32 P.3d 470, 475 (Colo. 2001 The claimant need not actually be performing work duties at the time of the injury, nor must the activity be a strict employment requirement or confer an express benefit on the employer. *Price v. Industrial Claim Appeals Office*, 919 P.2d 207, 210 (Colo. 1996). Rather, the question is whether the activity is sufficiently "interrelated to the conditions and circumstances under which the employee generally performs the job functions that the activity may reasonably be characterized as an incident of employment." *Id*. at 210. Whether an injury arises out of and in the course of employment are questions of fact for the ALJ. *Dover Elevator Co. v. Industrial Claim Appeals Office*, 961 P.2d 1141, 1143 (Colo. App. 1998).

The Act imposes additional limitations on the compensability of injuries occurring during recreational activities. Section 8-40-201(8) defines "employment" to exclude "the employee's participation in a voluntary recreational activity or program, regardless of whether the employer promoted, sponsored or supported the recreational activity or program." Similarly, § 8-40-301(1) defines the term "employee" as excluding a person "while participating in recreational activity, who at such time is relieved of and is not performing any duties of employment."

In *White v. Industrial Claim Appeals Office,* 8 P.3d 621 (Colo. App. 2000), the court held that the statutory term "recreational activity" should be given its plain and ordinary meaning, which can be "easily discerned by reference to a standard dictionary." The *American Heritage College Dictionary* (3d Ed. 1993) defines "recreation" as "refreshment of one's mind or body through activity that amuses or stimulates; play." In determining whether an activity is "recreational," the ALJ should consider the factors enumerated in *Price v. Industrial Claim Appeals Office, supra*, including whether the activity occurred during working hours, whether the injury occurred on the employer's premises, whether the employer initiated the activity, whether the employer exerted control over the employee's participation in the activity, and whether the employer stood to benefit from the employee's participation in the activity. Whether an activity was "recreational" is a question of fact for determination by the ALJ. *Lopez v. American Lumber Construction,* W.C. No. 4-434-488 (October 29, 2003).

To determine whether the claimant's participation in a recreational activity was "voluntary," the ALJ must assess the claimant's "motive" for participating in the activity. In

making this determination, the ALJ may consider whether the employer initiated, organized, sponsored or financially supported the activity, because the employer has the "power to enlarge the scope of employment by its affirmative act of embracing various recreational or social activities." *Dover Elevator Co. v. Industrial Claim Appeals Office*, 961 P.2d 1141, 1143 (Colo. App. 1998).

After considering the totality of circumstances, the ALJ concludes that Claimant's injuries arose out of and within the course of his employment. The retirement luncheon was not a "recreational activity" within the meaning of § 8-40-201(8). Even if the luncheon were considered a recreational activity, it ended and Claimant had resumed his regular work activity at the time of the accident. Finally, Claimant's attendance at the luncheon was not "voluntary."

In reaching these conclusions, the ALJ finds these factors particularly significant: The accident occurred during the workday while Claimant was "on the clock." The luncheon extended an hour beyond Claimant's normal lunch break and he was paid for the extra time. Employer arranged and paid for the luncheon, and Claimant had no nonwork-related reason to be in that location at the time of the accident. The accident occurred in a vehicle provided by Employer. Employer requested the employees to carpool and Claimant would not have even been in the vehicle but for Employer's request. At the time of the accident, the luncheon had ended and Claimant was returning to Employer's facility to retrieve his vehicle.

Respondent argues the accident cannot give rise to compensable injuries because the luncheon was a "recreational activity" within the meaning of § 8-40-201(8). The ALJ disagrees with this argument. The purpose of the luncheon was not "recreation." Even though the employees performed no work during the luncheon, it was intimately connected to their employment. The purpose was to honor the retiring colleague for his service to Employer. While the employees undoubtedly enjoyed themselves, it was fundamentally a work-related function.

The mere fact that an activity has some tendency to "refresh" the employee or entails some element of enjoyment does not necessarily convert it into a "recreational activity." Actions such as eating, sleeping, resting, washing, toileting, seeking fresh air, getting a drink of water, and keeping warm have been held to be incidental to employment under the "personal comfort" doctrine. *In re Question Submitted by U.S. Court of Appeals*, 759 P.2d 17 (Colo. 1988); *Industrial Commission v. Golden Cycle Corporation*, 246 P.2d 92 (Colo. 1952).

The recreational activity exclusion has primarily been applied to activities such as refereeing a volleyball game, lifting weights, playing sports such as hockey, basketball and volleyball, a weekend camping trip, and skiing. Although a meal-based activity could be "recreational" depending on the circumstances, it is a much less natural fit than games, sports or other activities commonly referred to as recreation.

Moreover, even if the luncheon were considered a recreational activity, the accident occurred after it had ended and Claimant had resumed his work duties. The

exclusion in § 8-40-301(1) applies to injuries sustained "***while*** participat***ing*** in recreational activity who ***at such time*** is relieved of and is not performing any duties of employment." (Emphasis added). This language indicates the accident must occur during the recreational activity for the exclusion to apply. In this sense, the recreational activity exclusion is akin to the "personal deviation" doctrine, under which the employee is deemed to have returned to employment "the moment" the personal deviation ends. *E.g*., *Pat's Power Tongs, Inc. v. Miller*, 474 P.2d 613 (Colo. 1970); *see also Wild West Radio, Inc. v. Industrial Claim Appeals Office*, 905 P.2d 6 (Colo. App. 1995) (injuries that occurred while an intoxicated employee was driving back to his hotel after drinking in a bar were compensable); *Continental Airlines v. Industrial Commission*, 709 P.2d 953 (Colo. App. 1985) (employee slipped while walking out of a grocery store).

Finally, the ALJ credits Claimant's testimony that he was motivated, at least in part, by Employer's "expectation" that he attend the luncheon. Although attendance was not strictly "mandatory," Claimant's supervisors took note of the few employees who did not attend, and would likely have been disappointed had Claimant not been there absent a specific, legitimate scheduling conflict. These factors indicate the activity was not "voluntary."

B. Medical benefits

The respondents are liable for medical treatment which is reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a); *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997); *Country Squire Kennels v. Tarshis*, 899 P. 2d 362 (Colo. App. 1995). Where a claimant's entitlement to medical benefits is disputed, the claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, *supra*.

As found, Claimant proved he is entitled to medical treatment to cure and relieve the effects of the May 10, 2017 compensable injury. Additionally, the two office visits with Dr. Akers and the physical therapy sessions were reasonable, necessary, and causally related to the industrial injury.

ORDER

It is therefore ordered that:

1. Claimant's injuries suffered in the May 10, 2017 motor vehicle accident are compensable.

2. Respondent shall pay for all reasonably necessary medical treatment from authorized providers to cure and relieve the effects of the May 10, 2017 compensable injuries, including, but not limited to the office visits with Dr. Akers and physical therapy sessions.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 11, 2017

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-023-439-01

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Respondent.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on November 28, 2017, in Denver, Colorado. The hearing was digitally recorded (reference: 11/28/17, Courtroom 1, beginning at 1:30 PM, and ending at 2:45 PM).

Claimant's Exhibits 1 through 4 were admitted into evidence, without objection. Respondent's Exhibits A through G were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Respondent, which was filed on December 5, 2017. No timely objections thereto were filed. After a consideration of the proposed decision, the ALJ has modified it and hereby issues the following decision.

ISSUES

The issues to be determined by this decision concern whether the Claimant's scheduled right shoulder impairment rating should be converted to a whole person rating. Provided the Claimant accepts the four corners of the Division Independent Medical Examiner's (DIME's) opinion, "lock, stock and barrel." The maximum medical

improvement (MMI) date of March 20, 2017 is undisputed. The additional issue concerns post-MMI medical maintenance benefits (*Grover* medicals).

On both issues, the Claimant's burden of proof is by a preponderance of the evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant is a heavy equipment operator and garbage collector for the Employer. On June 29, 2016, the Claimant suffered a compensable injury while attempting to remove a heavy metal pole with a cement base from a dumpster. While attempting to remove the pole, the Claimant felt a pop and immediate onset of right shoulder pain.

Medical Chronology

2. The Claimant was initially seen by Sadie Sanchez, M.D., the authorized treating physician (ATP), at Denver Health. The Claimant was diagnosed with a sprain of the right shoulder and was referred for an MRI (magnetic resonance Imaging). The MRI was conducted on July 7, 2016 and the findings were: superior and posterosuperior labral tear with associated paralabral gaglion cysts; a paralabral gaglion cyst along the posterosuperior margin of glenoid extending to the spinoglenoid notch). Based on the MRI findings, the Claimant was referred to Michael Hewitt, M.D., for a surgical evaluation.

3. The Claimant was evaluated by Dr. Hewitt on August 3, 2017. At the evaluation, Dr. Hewitt recommended that the Claimant undergo a right shoulder arthroscopic labral repair, cyst decompression, rotator cuff debridement and bursectomy. This procedure was completed by Dr. Hewitt on August 30, 2016.

4. Dr. Hewitt took the Claimant off work beginning August 30, 2016 through September 27, 2016.

5. Postoperatively, the Claimant underwent 30 sessions of physical therapy (PT) and regular evaluations with her ATP. She was reevaluated by Dr. Hewitt on February 1, 2017, and was released from care. In releasing the Claimant from care, Dr. Hewitt noted that the Claimant was progressing well and that her rotator cuff testing was

without pain. Dr. Hewitt also noted that the Claimant would likely not require any permanent work restrictions.

6. The Claimant's final evaluation with her ATP, Dr. Sanchez, took place on March 20, 2017. At this evaluation, Dr. Sanchez noted, "Today, the patient reports no pain in her right shoulder now, but does have "a little bit of pain" at the end of the work day." Dr. Sanchez determined that the Claimant had reached maximum MMI as of March 20, 2017. Dr. Sanchez performed an impairment rating finding that the Claimant had a 4% scheduled impairment for loss or range of motion in her right shoulder [4% right upper extremity (RUE)]. Dr. Sanchez also recommend that the Claimant receive post-MMI maintenance medical care, consisting of a 6-month gym membership and one year follow-up with Dr. Hewitt. At MMI, Dr. Sanchez did not assign any permanent work restrictions and released the Claimant to full duty.

7. Respondent filed a Final Admission of Liability (FAL), consistent with Dr. Sanchez's MMI determination, impairment rating and recommendation on maintenance medical care, on March 31, 2017. The Claimant timely objected to the admission and sought a D IME.

8. A DIME was conducted by Linda Mitchell, M.D., on July 6, 2017. Following her review of the medical records and thorough physical examination, Dr. Mitchell agreed with Dr. Sanchez's determination of MMI-- March 20, 2017. Dr. Mitchell provided the Claimant with a 7% (RUE) scheduled rating for loss of range of motion in the right shoulder and she also recommended maintenance medical care. Dr. Mitchell's physical examination of the Claimant included an evaluation of the right shoulder, the RUE and the cervical spine. In evaluating the cervical spine, Dr. Mitchell found the neck was without spasm, rigidity, tenderness or loss of range of motion. At the conclusion of her DIME report, Dr. Mitchell noted "The prognosis is good given minimal symptoms and excellent functional abilities at this time." The ALJ finds that Dr. Mitchell did not rate the Claimant's cervical spine nor did she rate any portion of the Claimant's body transcending the right shoulder. Although Dr. Mitchell converted her 7% RUE rating to 4% whole person as mandated by the American Medical Association *Guides to the Evaluation of Permanent Impairment,* 3rd ed., Rev., she did not state or imply that the whole person rating was more appropriate than her scheduled rating. . Dr. Mitchell's DIME report also indicates that the Claimant made a good recovery from her surgery with Dr. Hewitt, had minimal symptoms beyond her shoulder on physical examination and did not require work restrictions.

9. On July 26, 2017, the Respondent filed an amended FAL, consistent with Dr. Mitchell's DIME impairment rating and admitting for maintenance medical care. The Claimant timely objected to Respondent's amended admission and sought a hearing on the issue of conversion.

Testimony

10. At hearing, the claimant testified regarding her functional abilities and the location of her pain. The Claimant stated that she continued to feel pain in her shoulder and into her upper back and neck. She testified that she experienced cramping and pain in her right shoulder and into her cervical spine. Claimant testified that, as a result of the work injury, she was unable to complete her assigned job duties in the same way she had prior to the incident. She also testified that her work injury prevented her from throwing a ball in the same manner as prior to the work injury and that she was unable to use the same methods to coach youth football. The ALJ infers and finds that the Claimant's testimony, although illustrating referred pain to the upper back and neck, does not support actual functional limitations transcending the right shoulder. All her limitations are limitations of the RUE.

11. The Claimant also testified that she was able to return to her regular job duties as a heavy equipment operator without restrictions. She stated that she could meet the full criteria for her job as a heavy equipment operator, including lifting up to 50 pounds. She also testified that she had not sought medical treatment since being placed at MMI by Dr. Sanchez nor did she pursue a gym membership as part of her maintenance medical care. The ALJ further infers and finds that the Claimant's testimony in this regard is compelling prof that she does **not** have functional limitations above the RUE.

12. The Claimant's supervisor, Jeremiah Catalano, testified at hearing regarding the Claimant's job duties. He confirmed that a heavy equipment operator was required to lift 50 pounds, climb and descend objects, engage in frequent pushing, pulling and reaching. He also stated that he had not observed the Claimant being unable to complete her assigned duties as a heavy equipment operator, nor had the Claimant made any statement to him regarding an inability to perform her job duties as a result of her work injuries.

Ultimate Findings

13. The ALJ finds that the opinions of Dr. Sanchez and DIME Dr. Mitchell are highly persuasive and credible. Dr. Sanchez's reports indicate that the Claimant was able to return to her regular duties without restriction, indicating no loss of functional ability beyond the RUE. Dr. Mitchell's DIME report also indicates that the Claimant made a good recovery from her surgery with Dr. Hewitt, had minimal symptoms beyond her shoulder on physical examination and did not require work restrictions. The ALJ finds that the Claimant testified credibly regarding her condition, but that her testimony did not prove loss of function beyond the RUE as a result of the work injury. Instead, the Claimant's testimony focused on referred pain and fatigue at the end of the work

day, symptoms which do not equate to loss of function beyond the RUE and into the whole person.

14. To the extent there is a conflict between the medical reports and the Claimant's testimony, the ALJ makes a rational choice, based on substantial evidence, to accept the objective observations of the ATP and DIME physician and to reject any evidence to the contrary.

15. The Claimant has failed to prove by a preponderance of the evidence that her 7% scheduled impairment rating should be converted to whole person impairment.

16. The ALJ finds that the medical opinions of Dr. Sanchez and Dr. Mitchell, both recommending that the Claimant receive maintenance medical care, are credible and persuasive. Although the Claimant may not have pursued maintenance medical care since being placed at MMI, the medical records provide substantial evidence that the Claimant is entitled to maintenance medical care.

17. The Claimant has sustained her burden of proof to show that she requires post-MMI maintenance medical care to maintain her condition at MMI and to prevent a deterioration thereof. Respondent's motion to withdraw their admission for maintenance medical care should be denied.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254

(1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the medical evidence in its silence about the appropriateness or lack thereof of a conversion to a whole person is, essentially, undisputed. *See, Annotation, Comment: Credibility of Witness Giving Un-contradicted Testimony as Matter for Court or Jury,* 62 ALR 2d 1179, maintaining that the fact finder is not free to disregard un-contradicted testimony. As further found, the medical reports of Drs. Sanchez and Mitchell were credible and persuasive on the issue of the Claimant's functional abilities and whether there was loss of function beyond the extremity. Also as found, the Claimant's testimony did not provide evidence sufficient to show loss of function of the whole person. To the extent there is a conflict between the medical reports and claimant's testimony, the objective observations of the ATP and DIME physician and deemed persuasive.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009).As found, to the extent there is a conflict between the medical reports and the Claimant's testimony, the ALJ made a

rational choice , based on substantial evidence, to accept the objective observations of the ATP and DIME physician and to reject any evidence to the contrary.

Conversion

c. The law concerning the conversion of upper extremity ratings to whole person ratings in cases of shoulder injuries is well established. The question of whether a claimant has sustained a scheduled "injury" measured as "loss of an arm at the shoulder" under § 8-42-107(2)(a), C.R.S., or a whole person impairment compensated under § 8-42-107(8)(c), C.R.S., depends on whether the claimant sustained "functional impairment" beyond the arm at the shoulder. This is true because the term "injury," as used in § 8-42-107(1)(a)-(b), C.R.S., refers to the part or parts of the body which have been impaired or disabled, not the situs of the injury itself or the medical reason for the ultimate loss. *Warthen v. Indus. Claim Appeals Office*, 100 P.3d 581 (Colo. App. 2004); *Strauch v. PSL Swedish Healthcare System*, 917 P.2d 366 (Colo. App. 1996). Whether the claimant has sustained functional impairment beyond the arm at the shoulder is a factual question for the ALJ and depends on the particular circumstances of the individual case. *Walker v. Jim Fuoco Motor Co*., 942 P.2d 1390 (Colo. App. 1997). As found, the Claimant failed to show functional impairment beyond the right arm at the shoulder.

d. For a conversion, the party seeking it must accept the four corners of an ATP's or DIME'S opinion letter. The standard of proof is then "preponderance of the evidence."

Maintenance Medical Care

e. A claimant may receive maintenance medical benefits that is reasonably, necessary and causally related to the compensable injury in order to relieve the effects of the industrial injury or to prevent further deterioration of the claimant's condition. *See* § 8-42-101(1)(a), C.R.S.; *Grover Indus. Comm'n,* 759 P.2d 705 (Colo. 1988), The burden of proof to establish entitlement to these benefits, however, is on a claimant. *Id.* In order to receive such benefits, a claimant must present substantial evidence that future medical treatment is or will be reasonably necessary to relieve the claimant from the effects of the injury or to prevent deterioration of the claimant's condition. *See Hanna v. Print Expediters, Inc*., 77 P.3d 863 (Colo. App. 2003); *Stollmeyer v. Indus. Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995). The question of whether a claimant met the burden of proof to establish entitlement to maintenance medical benefits is one of fact for determination by the ALJ. *Holly Nursing Care Center v. Indus. Claim Appeals Office*, 992 P.2d 701 (Colo. App. 1999). As found, the Claimant carried her burden of proof, providing substantial evidence that future medical treatment is or will be reasonably necessary to maintain her condition at MMI.

Burden of Proof

f. For a conversion, the party seeking it must accept the four corners of an ATP's or DIME'S opinion letter. The standard of proof is then "preponderance of the evidence." The injured worker has the burden of proof, by a preponderance of the evidence, to establish entitlement to benefits beyond those admitted.. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has failed to sustain her burden with respect to a conversion. The Claimant has sustained he3r burden with respect to post-MMI medical maintenance benefits.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Respondent's request to withdraw its final admission concerning post-maximum medical improvement medical maintenance benefits is hereby denied and dismissed.

B. Claimant's request for conversion of her admitted 7% of the right upper extremity rating to a 4% whole person rating is hereby denied and dismissed.

C. The Respondent shall pay the costs of all reasonably necessary and causally related post-maximum medical improvement maintenance medical benefits, subject to the Division of Workers' Compensation Medical fee Schedule.

D. The latest Final Admission of Liability, dated July 26, 2017, is hereby adopted and approved.

DATED this_____day of December 2017.

ISSUES

I. Have Respondents, by clear and convincing evidence, overcome the DIME opinion by Dr. Michael Janssen, DO, on the issue of Maximum Medical Improvement?

II. Has Claimant proven, by a preponderance of the evidence, that the SI joint surgery as recommended by Dr. Roger Sung, MD, is reasonable, necessary, and related to her work injury?

III. Did Claimant sustain an intervening event on or about April 18, 2016, which severed the causal connection between her work injury and the need for her SI joint surgery?

FINDINGS OF FACT

Based on the testimony and evidence presented at Hearing, the undersigned ALJ enters the following Findings of Fact:

1. The Claimant sustained an admitted work-related injury on April 15, 2015. The Claimant's injury involves the lumbar spine, including the left sacroiliac (SI) joint.

2. The Claimant was employed as a Registered Nurse. The Claimant's injury occurred while attempting to lift a patient in bed with the assistance of another nurse on the opposite side of the bed, with the use of a draw sheet. While moving the patient, the Claimant experienced a popping sensation in her lower back resulting in immediate low back, low buttock and left thigh pain.

3. The Claimant was referred by Employer/Respondent to CCOM with an initial evaluation date of April 16, 2015. The Claimant was evaluated by Dr. Kathryn Murray. The Claimant presented with ongoing, severe low back pain radiating into the buttocks and the left thigh. Dr. Murray noted a positive Faber test, left side only, with lumbar paraspinal muscle tenderness with chronic decreased sensory in the left lower extremity. Pain level was noted to be 6-8/10, 100% of the time. The initial diagnosis included low back strain with radiculopathy. (Ex. 6, p. 62). The Claimant was prescribed a steroid (Medrol Dose Pak), Flexeril for muscle spasms, and was provided work restrictions, including a 5-pound lifting restriction, no bending at the waist, and alternate sitting and standing every hour. (Ex. 6, pp. 62 -64). X-rays were unremarkable (Ex. B, p. 5)

4. On April 23, 2015, the Claimant presented for follow-up evaluation with Dr. Murray at CCOM. Dr. Murray's neurological evaluation noted "positive for numbness and tingling, joint pain, joint stiffness and muscle pain." (Ex. 6, p. 65). Dr. Murray also noted that the Claimant's pain was so severe that she did not lift her thigh and was experiencing worsening radiculopathy. (Ex. 6, p. 69).

5. A MRI was taken on April 30, 2015, yielding minimal degenerative changes, a minimally diffuse disc bulge at L5-S1, and no significant spinal canal or neural foraminal compromise. (Ex. D, p. 12).

6. On May 4, 2015, the Claimant was evaluated by Joseph Mullen, PA-C, at CCOM. PA-C Mullen noted that Patrick's test was strongly positive on the left. This medical provider also noted that the recent MRI of the lumbar spine showed minimal degenerative changes. PA-C Mullen diagnosed lumbar and sacroiliac sprain, left. PA-C Mullen also indicated that the cause of these problems was related to work activities as had been previously concluded by Dr. Murray. (Ex. 6, pp. 70-72).

7. Dr. Murray's (CCOM) physical examination on May 18, 2015 noted tenderness bilaterally in the paravertebral muscles, worse on the left, with positive FABER test on the left and normal FABER test on the right. Dr. Murray's diagnosis included lumbar and sacroiliac sprain, left, related to work activities. Pain level was 7-10/10, 80% of the time. The Claimant was referred for physical therapy, continued on work restrictions, and medications. Dr. Murray noted that Flexeril was prescribed as needed for muscle spasm. (Ex. 6, pp. 74-76).

8. Dr. Murray's medical report of June 4, 2015 indicates that the Claimant was experiencing improvement as a result of physical therapy and heat and ice to the affected area. Dr. Murray notes that the initial five physical therapy sessions were not helpful, but began helping when the Claimant had her SI joint readjusted. (Ex. 6, p.78). Dr. Murray directed the Claimant to continue physical therapy, with work restrictions. She also prescribed medications, and further identified an ongoing diagnosis of lumbar and left sacroiliac sprain. (Ex. 6, p.79).

9. On July 7, 2015, Dr. Murray referred the Claimant to Dr. Abercrombie for up to six sessions of manipulative treatments. As part of the referral, Dr. Murray notes lumbar and sacroiliac sprain, left. (Ex. 6, p. 86). On this date, the Claimant noted overall improvement in her symptoms to the point (60 to 70% better) where she was exercising. Dr. Murray's physical examination noted pain when palpating the left SI joint and FABER test on the left continued causing SI joint pain. The continuing diagnosis included lumbar and left sacroiliac sprain. (Ex. 6, p. 89).

10. Dr. Murray's medical report of July 22, 2015 notes that the Claimant was experiencing intermittent improvement with physical therapy and Dr. Murray was hopeful that Dr. Abercrombie could help with the ongoing left SI joint pain. If

no improvement was noted, a referral to pain management would be considered. (Ex. K, p. 34).

11. Dr. Abercrombie's medical notes consistently identify involvement of the left SI joint and low back as a result of work-related activity. Dr. Abercrombie's physical examination on July 23, 2015 identified poor motion at the left SI joint that reproduced pain. Cross compression testing, shear and Patrick's maneuver was also identified as positive on the left. Dr. Abercrombie's assessment identified chronic phase of lumbar/lumbosacral strain with facet left SI joint involvement. (Ex. 7, pp. 241-242, 249)

12. By August 14, 2015, the Claimant was experiencing significant improvement as a result of physical therapy and treatment by Dr. Abercrombie. Dr. Murray's physical examination indicated positive FABER test on the left (Patrick's test was negative) and the ongoing diagnosis included lumbar and sacroiliac sprain, left. Pain was down to 4/10, 70 to 80% of the time. No radiation of pain or numbness was noted. Work restrictions were increased to allow up to 25 pounds lifting. (Ex. 6, pp. 97-98).

13. On August 25, 2015, the Claimant returned to Dr. Murray. The Claimant was now experiencing a worsening of her condition. Dr. Murray's report notes positive findings for joint and muscle pain and joint stiffness. Physical examination identified moderate tenderness when palpating the lumbar spinal muscles on the left and moderate pain when palpating the left SI joint. FABER test was positive on the left. The diagnosis continued to include lumbar and left sacroiliac strain. (Ex. 6, pp. 104-105).

14. On September 11, 2015, Dr. Murray referred Claimant to Dr. Scheper for consideration of an epidural steroid injection into the left SI joint area. The Claimant was experiencing a flare in pain, and including episodes of left toe numbness. FABER test was positive on the left. (Ex. 6, pp. 110-112).

15. On September 16, 2016, the Claimant was evaluated by Dr. Scheper of Accelerated Recovery Specialists. Dr. Scheper's physical examination notes focal prominent tenderness of the left sacroiliac joint, with reproduction of concordant symptoms subsequent to sacroiliac compression and shear testing. Pain was now averaging 3-4/10, with about 70% improvement since the injury. Dr. Scheper's diagnostic impression included predominantly left sacroiliitis with secondary myofascial dysfunction with significant hypertonicity and tenderness in the piriformis and left lumbar paraspinals. Dr. Scheper scheduled the Claimant for a left SI joint injection. (Ex. 5, pp. 17-19).

16. PA-C Mullen evaluated the Claimant at CCOM on September 24, 2015. PA-C Mullen noted a mildly positive Patrick's test on the left and diagnosed lumbar and sacroiliac sprain, noting that the Claimant was awaiting an SI joint injection under the direction of Dr. Scheper. (Ex. 6, pp.115-116).

17. On October 14, 2015, Dr. Scheper performed an SI joint injection, consisting of Xylocaine, Marcaine, and Triamcinolone (steroid). (Ex. 5, Pages 20-22). The injection was not performed under fluoroscopy, no dye was injected, and no pain diaries were noted to be kept after that injection (Ex. R, pp.62-63). A pain questionnaire prior to the injections indicate 3-4/10 pain; 80% better since the date of injury. Pain diagrams showed pain on the left and extending into the right SI joint areas (Ex. R, p. 66).

18. A follow-up appointment with Dr. Murray on October 16, 2015 indicated that the Claimant was experiencing a worsening of pain since the injection which had occurred two days prior. The Claimant was referred to Dr. Johnson within the CCOM clinic for evaluation of trigger point injections. Medications were continued, along with physical work restrictions and the continuing diagnosis included lumbar strain and left-side sacroiliitis. (Ex. 6, pp. 119-121).

19. On October 22, 2015, the Claimant was evaluated by Dr. Johnson at CCOM. By this date, the Claimant's symptoms had improved significantly with minimal pain. Her pain was noted as 1/10, 20-30% of the time. As a result, the Claimant requested a release to return to full work. Dr. Johnson accommodated the Claimant's request by releasing her to full duty with no restrictions and provided a diagnosis of sprain of ligaments of lumbar spine and sacroiliitis, left side. Dr. Johnson's physical exam indicated a positive FABER test on the left. (Ex. 6, pp.123-125).

20. On November 12, 2015 Dr. Johnson provided trigger point injections with steroids into the left lower lumbar and gluteus maximus regions. Her pain was noted to be 3/10, 20-30% of the time. Dr. Johnson continued to diagnose a lumbar spine sprain and sacroiliitis, stating that these problems were related to work activities. (Ex. 6, pp.128-129). She was returned to work with no restrictions (Ex. U, pp. 76-80).

21. On January 21, 2016, Claimant was seen by her PCP, outside the Workers Compensation system. Examination showed full range of motion for cervical, thoracic, and lumbar spine and no increased tonicity. (Ex. V, p. 84).

22. The Claimant did not return for Workers Compensation medical evaluation or treatment until April 14, 2016. (Claimant had missed appointments of Dec 1, 2015 and March 16, 2016 (Ex. V, pp. 81-83). On that date, she returned to Dr. Johnson with complaints of intermittent muscle spasms down the left lower extremity that was no longer responding to Flexeril. Pain was now noted to be 3-4/10, 60-70% of the time. Dr. Johnson's physical examination on that date noted a positive FABER test on the left. Dr. Johnson added a diagnosis of myalgia (myofascial pain lumbar region) to the ongoing diagnosis of left-sided sacroiliitis and lumbar spine sprain. This physician recommended further trigger

point injections, followed by deep tissue massage. Dr. Johnson continued Claimant at full work activity with no restrictions. (Ex. 6, pp.132-134).

23. On April 19, 2016 the Claimant received the first set of trigger point injections with steroids. Her pain was now worse, 8-9/10, 70-80% of the time. This report also references that the Claimant stated that "her left lower back pain is worse because she had to shovel snow *yesterday* with the snowstorm" (Ex. 6, pp.136-137)(emphasis added). The report does not indicate that Claimant provided any further detail on the amount of snow to be removed, how long this chore took, or what precautions, if any, were taken, given that she had already reported increasing symptoms two days prior.

24. The Claimant returned to Dr. Johnson on April 20, 2016 because of increasing pain. This report notes that the Claimant had undergone a trigger point injection followed by deep tissue massage on April 19, 2016. Initially, the Claimant experienced some relief from the injections, but her pain became severe by the evening of April 19, 2016. Dr. Johnson's treatment plan included additional trigger point injections followed by deep tissue massage, noting that the Claimant is experiencing a flare of her pain. (Ex. 6, pp.139-141). The Claimant stated that her pain was worse after the injection. Dr. Johnson noted that "The patient is having a flare of her pain. It may be a steroid *surgery* (sic)". (The ALJ notes that in the context of the medical records, "*surgery*" appears to be a typo for "*allergy*"). Claimant was taken off work, at least until her next visit.

25. On April 22, 2016, Dr. Johnson evaluated the Claimant, noting that she was having difficulty working due to increased pain. Dr. Johnson wondered if Claimant had significantly injured her back, noting that her pain was significantly different than a week ago. It was now 9/10, 100% of the time. He recommended an MRI (Ex. AA, pp. 96-99). The ongoing diagnosis remained lumbar spine sprain, sacroiliitis, left side, and myalgia, all related to work activities. (Ex. 6, pp. 143-144).

26. The Claimant testified at hearing that she began experiencing a progressive increase in her pain in the low back and left lower extremity in late January and into February of 2016. The pain was aggravated by physical or exertional activity. It eventually got worse with any kind of activity, to the point that it was difficult for the Claimant to get through her work shift. The Claimant attempted to arrange work shifts that avoided consecutive days. All shifts are 12-hour shifts, and the Claimant was not always able to avoid working consecutive days in her job. The Claimant attempted to self-treat at home with extra rest, stretching, and ice and heat. The Claimant testified that did not want to risk being taken off of work again. The Claimant confirmed that she was placed on restrictions by her Workers' Compensation medical provider, but the Employer would not offer any accommodations due to employer policy.

27. The Claimant testified at hearing that she has a single car garage, and there was a small snow drift on one corner of the garage door. The Claimant indicated this was not a lot of snow and took about two minutes to move out of the way. The Claimant did not have any slip, fall, twist or other injury, nor did she experience any onset of pain during or immediately after moving the snow. The Claimant testified that she did work that weekend and had the typical increase in pain that occurred with working several days in a row. Claimant testified that she did not pick up and move snow, but shoved it out of the way.

28. The Claimant continued treating with Dr. Johnson throughout April and May of 2016. The Claimant presented with significant pain complaints, resulting in increased pain medication prescriptions. She also received a referral for a left hip MRI. The Claimant was also referred back to Dr. Scheper for consideration of another SI joint injection. On May 3, 2016, Dr. Johnson's physical examination indicated positive FABER test on the left with tenderness of the SI joint with palpation. Pain was now 8/10. The left hip MRI demonstrated a left hip labral tear. (Ex. EE, pp. 109-110). Dr. Johnson opined that the Claimant had continuing lower back pain including SI joint pain, all related to work activities. Dr. Johnson concluded that the left hip condition was not work-related. (Ex. 6, p.161).

29. Dr. Scheper evaluated the Claimant again on June 2, 2016 and noted that she had previously experienced significant benefit from the SI joint injection from October 14, 2015. (Ex. 5, pp. 24-25). Dr. Scheper notes that the Claimant's symptoms began returning in January and were aggravated with prolonged standing, sitting, walking, bending and twisting. Occasional relief was noted with using a sacroiliac belt. Dr. Scheper's physical examination identified, "Most severe tenderness right at the left SI joint with provocation through sacroiliac shear, FABER's test, sacroiliac compression." (Ex. 5, pp. 24-25) The diagnostic impression included recurrent left sacroiliitis with overlying myofascial dysfunction to the gluteus medius and piriformis. A repeat SI joint injection was recommended and eventually performed on July 7, 2016. *Id.*

30. The Claimant returned to Dr. Johnson on June 9, 2016. Dr. Johnson opined that the Claimant has continuing lower back pain including SI joint pain and recommended continuing with the injection under the direction of Dr. Scheper. (Ex. 6, p. 166). Pain was listed as 7/10, 80-90% of the time. (Ex. ii, p. 122). Dr. Johnson indicated that a labral tear, demonstrated on recent MRI, was not work-related. (Ex. 6, p. 166). Physical examination on this date identified a positive FABER test on the left and the SI joint was tender to palpation on the left. (Ex. 6, p. 165). Dr. Johnson also referred the Claimant to Falcon Physical Therapy for evaluation and treatment of left SI joint. (Ex. 6, pp.168-169).

31. On June 29, 2016, Dr. Johnson noted that the Claimant was in acute distress because of left leg pain. Again, FABER test was positive on the

left and the SI joint was tender to palpation on the left. (Ex. 6, p. 176). Throughout the Claimant's treatment from April, 2016 through July, 2016, Dr. Johnson identified the Claimant's need for treatment to the SI joint and lumbar spine as work-related. The only matter not considered work-related by Dr. Johnson was the left hip labral tear.

32. The Claimant experienced only temporary relief as a result of the SI joint injection performed by Dr. Scheper on July 7, 2016. This injection was performed under ultrasound, with a hard copy of the ultrasound confirming the position of the needle. No mention of dye or fluoroscope is listed in the record (Ex. 5, p. 27). Dr. Scheper's diagnostic impression included chronic left sacroiliitis with profound diagnostic response after recent joint injection but unfortunately with only modest lasting benefit. When later asked by Respondents to produce this hard copy, Dr. Scheper's office was unable to retrieve it. Dr. Scheper discussed the possibility of radiofrequency for the SI joint subsequent to performing a medial branch block. Dr. Scheper also discussed the possibility of prolotherapy for the sacroiliac ligament complex. (Ex. 5, pp. 31-32).

33. On August 30, 2016, the Claimant had diagnostic blocks under the direction of Dr. Scheper. These were performed at the left L5, S1, S2, and S3 (SI joint). Dr. Scheper's medical report of September 2, 2016 notes that the diagnostic branch block provided a short-lived benefit. Left SI joint was noted as painful with provocative testing. Diagnostic impression included chronic left sacroiliac joint arthritis, without diagnostic response to branch blocks. Dr. Scheper concluded that the Claimant's beneficial therapeutic response from prior intra-articular injection confirmed the sacroiliac origin of the pain. As a result, Dr. Scheper recommended a series of prolotherapy injections into the sacroiliac ligament complex. (Ex. 5, pp. 30-37). Dr. Scheper did not recommend radiofrequency ablation (Ex. SS, p. 152-154). It was also noted at this time that "she [Claimant] would like to try anything other than surgical fusion" *Id.*

34. The Claimant continued seeing Dr. Johnson with little improvement in symptoms related to the lumbar spine and left SI joint. Although Dr. Johnson indicated that prolotherapy may not be helpful, the therapy was approved and provided under the direction of Dr. Scheper. (Ex. 6, p. 203). Dr. Johnson also referred the Claimant to Dr. Sung for a surgical consultation. (Ex. 6, p. 198 and Ex. 5, pp. 40, 43, 48). Dr. Scheper noted that, "Based on her remarkable diagnostic response to intra-articular injections but no substantial relief from anything targeting the posterior nerve innervation or ligament complex, I would recommend a surgical consultation for consideration of SI-bone iFuse implant placement." (Ex. 5, p. 48). On October 28, 2016, Dr. Johnson referred the Claimant to Dr. Sung, orthopedic surgeon, for evaluation of left SI joint and lower back pain. (Ex. 6, p. 209).

35. Dr. Sung evaluated the Claimant on November 3, 2016. Dr. Sung's physical examination demonstrated, "Quite significant tenderness over her left SI

joint," and a positive FABER test and compression and distraction on the left. The diagnostic impression included chronic left sacroiliitis. Dr. Sung recommended a left minimally invasive SI joint fusion with SI-bone, consistent with the recommendation previously made by Dr. Scheper. (Ex. 4, p.15; Ex. 5, p. 48).

36. The proposed surgery by Dr. Sung involves a minimally invasive left SI joint fusion which is a same-day surgery performed in an out-patient setting. Dr. Sung noted that the criteria for this procedure is a physical exam consistent with left sacroiliitis as well as a positive response to an SI joint injection. Dr. Sung stated that chronic SI joint pain does not have significant radiographic findings, in that MRI is not sufficiently sensitive in picking up chronic sacroiliitis. Neither is x-ray, unless the patient has had a significant traumatic injury to the SI joint. Per Dr. Sung's report of May 18, 2017, he has performed approximately 50 of these surgeries with a 90% success rate. Dr. Sung states that there is a strong likelihood that patients who undergo the minimally invasive SI joint fusion are less likely to use opioids. (Ex. 4, p. 12).

37. The Claimant returned to Dr. Johnson for evaluation on November 10, 2016. Dr. Johnson confirmed that Dr. Sung had recommended a left SI joint fusion, noting that this was pending approval. Dr. Johnson noted that the recommended SI joint fusion, "Appears to be the best option for the patient at this time. Will follow orthopedic lead in treatment." (Ex. 6, pp. 212-213). In an additional report prepared by Dr. Johnson on that date, entitled, "Visit Summary for Employer," there is a notation under "Treatment Plan" stating: "Procedures: Dr. Sung recommends SI joint fusion. I agree." (Ex. 6, p. 215). Dr. Johnson requested authorization for the proposed surgical procedure. (Ex. zz, pp. 189-191).

38. In his medical report of November 23, 2016, Dr. Johnson again confirms that he agrees with the proposed surgery by Dr. Sung, stating that the insurance company is requesting an independent medical evaluation, not yet scheduled. (Ex. aaa, pp.194-196).

39. Dr. Johnson also had referred the Claimant to Falcon Physical Therapy. At the initial examination on July 21, 2016, the Claimant presented with left-sided SI joint and low back pain. The assessment/diagnosis included signs and symptoms of left SI joint laxity and secondary muscle tightness due to compensation. (Ex. 10, pp. 254-255). Physical therapy records indicate a consistent diagnosis of sacroiliitis, and involve treatment of the SI joint as well as the lumbar spine. Claimant was provided with an SI belt in an effort to improve stabilization. (Ex. 10, pp. 265-267).

40. Respondents referred the Claimant to Dr. Andrew Castro for an independent medical evaluation ("IME"). This evaluation occurred on February 13, 2017. (Ex. ddd, pp. 201-209). Dr. Castro indicates that it is "not clear to me"

that she has sacroiliac joint dysfunction. In addition, he recommends against the surgical procedure, in part because the Claimant is considered to be of child-bearing age. This IME evaluator did not ask the Claimant whether she intended to have children, or if she had undergone a surgical procedure to prevent further pregnancies. At hearing, the Claimant credibly testified that she had undergone a surgical procedure to avoid future pregnancies. This was done in 2010.

41. In his independent medical evaluation, Dr. Castro refers to an SI joint surgery as debilitating with questionable outcome. This evaluator admitted that he was referring to SI joint fusions involving bone grafts with instrumentation as addressed in the Workers' Compensation *Medical Treatment Guidelines.* This is not the same procedure as recommended by Dr. Sung (and recommended by Dr. Scheper and Dr. Johnson), which is a minimally invasive outpatient surgery. Dr. Castro acknowledges that this is a newer technique and that he has not performed this procedure, other than as an observer.

42. The testimony at hearing shows that Dr. Castro did not actually perform the physical examination to the extent alleged in his February 13, 2017 report. This witness admitted that he uses a template and that some items should have been removed from the template. Dr. Castro, contrary to his report, did not palpate the Claimant's neck to assess bony tenderness or lymphadenopathy. He did not assess the Claimant's neck range of motion. This witness acknowledged that he did not check for bowel sounds, despite a statement to the contrary in his report. No stethoscope was used and he did not touch Claimant's abdomen. He did not look in the Claimant's nose, mouth or ears with any instruments, nor perform any actual physical assessment of the cranial nerves, oropharynx and nasopharynx and external auditory canals.

43. Similarly, with regard to the lumbar spine, Dr. Castro stated in his report that no palpable deformity was appreciated. Upon further cross-examination, it was established that this evaluator did not touch the Claimant's lumbar spine during the IME. He used no inclinometers or instruments to measure range of motion. In his report, Dr. Castro states, "Good lumbar range of motion," and later, on the same page states that, "Dynamic exam reveals limited range of motion in regards to the lumbar spine." (Ex. ddd, Page 203).

44. In his report, Dr. Castro stated that Hoffmann sign is negative and that sensory dermatomes are intact. The Claimant, as a Registered Nurse, is familiar with these tests. Many of these tests have been conducted by evaluating physicians throughout this claim. The Claimant testified that Dr. Castro did not perform a Hoffmann's test and did not test the sensory dermatomes. Further, the Claimant testified that when tested by squatting, that she had limitations, and expressed those during the recorded independent medical evaluation. This does not appear in Dr. Castro's report, in which he states that the Claimant is able to squat down and walk on her heels and toes without deficits. Nowhere in Dr. Castro's report, or his testimony, does he ask Claimant for any details on the

snow shoveling incident: *How much snow was removed, how long did it take her to do so, was she able to complete the task, or what technique did Claimant use to remove the snow?*

45. In nearly every evaluation by every medical provider in this matter, the Claimant underwent compression testing such as FABER or Patrick's tests which are relevant to assessing SI joint involvement. At hearing, Claimant described the FABER and the Patrick tests, and how they are performed. Dr. Castro apparently performed no compression testing when evaluating the Claimant and there is no reference to any such testing in his report. Dr. Castro testified at hearing that he recommended an EMG test. There is no reference in his report to recommending an EMG.

46. Dr. Castro testified that the SI joint injections performed by Dr. Scheper did not meet criteria under the *Medical Treatment Guidelines ("Guidelines')* because it was performed by ultrasound and not with dye. The ALJ takes administrative notice of the *Guidelines*, and concludes that Dr. Castro is correct in this assessment. However, Dr. Castro is the only physician to express concern over the SI joint injections performed by Dr. Scheper. Neither Dr. Janssen nor Dr. Sung commented or expressed concern over how this injection procedure was performed.

47. Dr. Castro also cast doubt on the quality of advice provided Claimant, based upon her insufficient relief from these injections, which he states under the *Guidelines* did not meet the criteria to justify a SI fusion. Further, given the uncertainty of success, the SI fusion is contraindicated in cases like Claimant's, which does not involve significant impact and trauma.

48. Respondents requested an addendum report from Dr. Castro. This was prepared without further evaluation or discussion with the Claimant. (Ex. kkk, pp. 231-232). In his second report, Dr. Castro suggests that the Claimant's work-related injury could not have caused trauma to the SI joint, thereby causing a chronic and permanent problem requiring an SI joint fusion. This conclusion on *causation* was not rendered at the time that he actually met with the Claimant and issued his first report.

49. After the release of Dr. Castro's report, Dr. Johnson released the Claimant with no restrictions and placed her at MMI. (Ex. 6, p. 229). Dr. Johnson, in his report of March 2, 2017, continues to acknowledge that the Claimant's lumbar spine strain, sacroiliitis and myalgia is related to work activities. Dr. Johnson, after the receipt of Dr. Castro's report, had previously submitted a letter dated 2/22/17, concluding that the snow shoveling incident permanently aggravated the condition which was work-related. (Ex. 6, p. 226).

50. In his Report of Maximum Medical Improvement and Impairment, Dr. Johnson acknowledges that Claimant continued in mild distress, had

tenderness over the lumbar spine particularly over the left SI joint. (Ex. 6, pp. 227-229). The Claimant continued with pain in her left buttock with left foot numbness and pain, aggravated with prolonged standing. Up until this point in time, Dr. Johnson, as well as other medical providers at CCOM, had assigned physical restrictions or limitations to the Claimant. On the date of MMI, Dr. Johnson, without further explanation, released the Claimant with no physical restrictions. (Ex. 6, Pages 227-230).

51. Respondents filed a Final Admission of Liability consistent with Dr. Johnson's determination of MMI and impairment. Claimant timely objected and requested a DIME. Dr. Michael Janssen, of the Center for Spine and Orthopedics in Thornton, Colorado was selected to perform the DIME with an evaluation date of June 6, 2017.

52. As part of the physical examination, Dr. Janssen, conducted compression testing, which demonstrated positive Patrick's and FABER test on the left side. Based upon his physical examination of the Claimant, and review of medical records, Dr. Janssen concluded that the Claimant is *not* at maximum medical improvement. Claimant presents with a sacroiliac joint arthropathy on the left side, which has failed to respond with an adequate trial of conservative management. (Ex. 3, p. 8). Dr. Janssen concluded that the Claimant, "**Firmly meets all of the reasonable criteria for consideration for a left sacroiliac joint stabilization.**" *Id.* Dr. Janssen states that Claimant was inappropriately placed at maximum medical improvement, and that the proposed surgery gives her the best chance for her to return to the healthcare profession and activities of daily living. The DIME notes that the Claimant has overcome a variety of other medical and surgical issues in the past with an excellent clinical outcome. (Ex. 3, p. 8).

53. Dr. Sung, Dr. Scheper, the selected DIME evaluator, and, (until receiving Dr. Castro's report), Dr. Johnson all recommended and agreed with the proposed surgery by Dr. Sung.

54. Dr. Castro considers Dr. Janssen to be a well-regarded competent orthopedic surgeon. Dr. Castro acknowledged that he respects Dr. Janssen's abilities. Similarly, Dr. Castro acknowledged that Dr. Sung is a well-regarded, competent orthopedic surgeon.

55. Dr. Scheper was provided with a copy of Dr. Janssen's DIME report along with the reports from Dr. Sung and Dr. Castro. Upon review, Dr. Scheper stated that he agreed with the recommendation of Dr. Sung and Dr. Janssen that the SI joint fusion surgery is a reasonable and necessary medical procedure for the Claimant and that the proposed surgery is related to the work injuries sustained by the Claimant. (Ex. 5, pp. 56-57).

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1).* Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The ALJ, as the fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990) Moreover, the ALJ may accept all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion).

C. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Overcoming the DIME of Dr. Janssen

D. A DIME physician's findings of causation, MMI and impairment are binding on the parties unless overcome by "clear and convincing evidence." Section 8-42-107(8)(b)(III), C.R.S.; *Qual-Med v. Industrial Claim Appears Office*, 961 P.2d 590 (Colo. App. 1998); *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinion concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995) In other words, to overcome a DIME physician's opinion regarding MMI, permanency or the cause of a particular

component of a claimant's medical condition, the party challenging the DIME must demonstrate that the physicians determinations in these regards are highly probably incorrect. Further, this evidence must be "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo. App. 2002). *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appears Office, supra.*

E. "Maximum medical improvement" is defined in Section 8-40-201(11.5), C.R.S. as:

> A point in time when any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition. The requirement for future medical maintenance which will not significantly improve the condition or the possibility of improvement or deterioration resulting from the passage of time shall not affect a finding of maximum medical improvement. The possibility of improvement or deterioration resulting from the passage of time alone shall not affect a finding of maximum medical improvement.

F. In resolving the question of whether the DIME physician's opinions have been overcome, the ALJ may consider a variety of factors including whether the DIME physician properly applied the AMA Guides and other rating protocols. *See Metro Moving and Storage Co. v Gussert,* 914 P.2d 411 (Colo. App. 1995); *Wackenhut Corp. v. Indus. Claim Appeals Office*, 17 P.3d 2002 (Colo. App. 2000); *Aldabbas v. Ultramar Diamond Shamrock*, W.C. No. 4-574-397 (ICAO August 18, 2004). The ALJ should also consider all of the DIME physician's written and oral testimony. *Lambert and Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998).

G. The testimony of the Claimant, the medical records, and other evidence establishes that the ***Claimant has not reached maximum medical improvement*** in regards to her work-related injuries. The Claimant has received extensive treatment and evaluations through CCOM, Dr. Scheper, Dr. Sung, Dr. Abercrombie, Falcon Physical Therapy, and the DIME by Dr. Janssen. Each of these medical providers document that the Claimant sustained SI joint injury or dysfunction as a result of her work injuries. At nearly every medical or therapy appointment, the Claimant was evaluated with compression testing which in nearly every instance was positive on the left for SI joint involvement or injury. The Claimant's pain and functional limitations fluctuated in severity and at times the Claimant's pain medications were increased by her treating physicians with regard to these pain flares. Claimant suffers from this work injury to this day.

H. Claimant experienced beneficial relief from the first SI joint injection provided by Dr. Scheper in October of 2015. Indeed, the Claimant requested a return-

to-work with no restrictions which was authorized by Dr. Johnson. However, over time, and particularly in late January and into February 2016, the Claimant's symptoms and pain began returning particularly during those periods of time where she worked consecutive 12-hour shifts. The Claimant hesitated to return for treatment, believing that she could alleviate the symptoms by self-treating with heat, ice and rest. The Claimant expressed concern that she would be given restrictions, taken off work and would lose her employment. The ALJ finds this explanation plausible.

I. Eventually, the Claimant's symptoms became severe to the point where she did return for treatment to Dr. Johnson on April 14, 2016. At that time, Dr. Johnson recommended trigger point injections followed by deep tissue massage. **Only days *afterward*** did an issue arise as to whether or not a snow shoveling event at home contributed to or caused a significant permanent aggravation to the Claimant's work-related medical condition. There is evidence to suggest that the Claimant experienced a bad reaction to one of the trigger point injections, thereby causing a significant flare in her pain. Dr. Johnson, despite expressing concerns over the snow-shoveling episode, continued to document that the Claimant's lumbar and SI joint diagnoses were due to the Claimant's work-related activities. Dr. Sung, Dr. Scheper and Dr. Janssen all concluded that the SI joint fusion surgery as recommended by Dr. Sung and Dr. Janssen is related to the work injury sustained by the Claimant. The only physician who disagrees with this conclusion is Respondents' IME, Dr. Castro, followed later by Dr. Johnson.

J. The ALJ does not find that the conclusions and opinions of Dr. Castro are sufficient to overcome the DIME. The Claimant saw multiple medical providers throughout this claim, including at least three physicians or physician assistants through CCOM, along with Dr. Scheper, Dr. Abercrombie, physical therapists, and the evaluation by Dr. Janssen. Out of these multiple medical providers, only Dr. Castro opined that the Claimant's mechanism of injury likely would not cause an SI joint injury severe enough to warrant surgery. Dr. Castro admitted that he did not actually perform many of the physical examination tests that were listed in his IME report. The IME did not perform any compression tests such as Patrick's or FABER which are typically used to assess SI joint dysfunction. The medical records establish that these compression tests were generally performed on the Claimant at nearly every visit she had from her evaluating and treating medical providers and therapists.

Reasonable, Necessary and Related SI Fusion Procedure

K. Claimant has the burden of proving by preponderance of the evidence that the SI joint fusion is reasonable and necessary as related to the industrial injury. Respondents contend that Dr. Scheper deviated from the letter of the Guidelines, and the ALJ concurs. The Guidelines are to be used by healthcare practitioners when furnishing medical aid. It is appropriate for an ALJ to consider the Guidelines in deciding whether a certain medical treatment is reasonable and necessary for the claimant's condition. In this case, the ALJ finds that despite the strict wording of the guidelines, with the lack of progress in recovery, the ATP's have acted reasonably in making treatment recommendations.

L. Dr. Castro acknowledged that he has never performed the SI joint surgery as proposed by Dr. Sung, Dr. Janssen and Dr. Scheper. In addition, Dr. Castro, in his independent medical evaluation, expresses concern over the impact of the surgery on an individual of child-bearing age. Dr. Castro admitted that he did not actually discuss this with the Claimant and had he done so, would have been advised that the Claimant had undergone a surgical procedure to avoid future pregnancies in 2010. Dr. Castro agreed that Dr. Janssen and Dr. Sung are well-regarded competent orthopedic surgeons and that he respects Dr. Janssen's abilities. A difference of opinion between medical doctors is not sufficient to establish that a DIME physician's rating is clearly erroneous or highly improbable. *Rodriguez v. Aurora Public Schools*, W.C. No. 4-447-174 (ICAO, January 7, 2002). See also *Lancaster v. Arapahoe County Sheriff's Department*, W.C. No. 4-744-646 and W.C. No. 4-756-515 (Industrial Claim Appeals Office, May 12, 2010) and *Kuykendoll v. Aurora Public Schools*, W.C. No. 4-193-617 (Industrial Claim Appeals Office, June 3, 1998). Nor does a difference in medical opinion mean that Claimant has not met her burden. The ALJ finds that the proposed SI Fusion, as proposed by Dr. Sung, is reasonable, necessary, and related to Claimants work injury. Claimant wanted to avoid surgery for a considerable length of time, in a sincere effort to get better and return to work without restrictions. Ultimately, she and her providers have concluded that this is the best option. Time will tell if Dr. Castro is correct in his assessment of the wisdom of moving forward, but Claimant has earned the right to find out.

Intervening Event- Snow Removal

M. Of great concern to the ALJ is that Dr. Castro appears to have seized upon the language of Dr. Johnson in attaching great significance to the snow shoveling incident. In turn, Dr. Johnson seized on Dr. Castro's report attaching great significance to the shoveling incident, and changed the opinions he had consistently held for months. At no point in the process did either physician bother to ask Claimant, in taking a routine medical history, just how she shoveled the snow. For the first time in the entire process, Claimant was permitted to explain what happened by her attorney at hearing. Claimant credibly described, and the ALJ so finds, that she pushed some snow away from her single car garage door for about two minutes. There is a paucity of evidence in the medical record to impeach her testimony, Claimant's expressed belief at the time notwithstanding. She was in distress. The ALJ concludes that Claimant had already suffered a worsening condition to the point of re-entering the Workers Compensation system on April 14, before she moved a gram of snow on April 18. Her back was already bothering her again; it is reasonable to infer that Claimant exercised reasonable caution in clearing her garage door in the easiest way possible. This minor chore is not an intervening event which severed the causal connection between the work injury and the need for surgery; nor did it significantly aggravate her pre-existing SI injury.

ORDER

It is therefore ordered that:

1. The DIME of Dr. Janssen has not been overcome on the issue of Maximum Medical Improvement.

2. Respondent's shall pay for all reasonable, necessary, and related medical treatment to bring Claimant to MMI, including, but not limited to, the SI joint fusion as proposed by Dr. Sung.

3. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Colorado Springs, Colorado 80906

ISSUES

- Whether claimant has proven by a preponderance of the evidence that she sustained a compensable occupational disease arising out of and in the course of her employment with employer.

- If claimant has proven a compensable occupational disease, whether claimant has proven by a preponderance of the evidence that the medical treatment she received was reasonable and necessary to cure and relieve her from the effects of the work injury.

- If claimant has proven a compensable occupational disease, whether claimant has proven by a preponderance of the evidence that the medical treatment she received following the injury was authorized.

- At hearing, the parties agreed that if a compensable occupational disease is found, they will reach a stipulation on the issues of average weekly wage, temporary total disability benefits, and temporary partial disability benefits.

FINDINGS OF FACT

1. Claimant began her employment with employer in 2002. Claimant worked primarily as a waitress. Claimant testified that she worked eight to nine hours a day, four days per week. Claimant testified that she averaged 36 hours per week. Claimant described the work as "grueling" and "non-stop".

2. Claimant asserts that because of her job duties as a waitress she developed injuries to her low back and feet. Claimant testified that her job duties included lifting racks of drinking glasses and stacks of ceramic dishes. Claimant believes that because she was on her feet during her shift and engaged in lifting and bending, she injured her low back and feet.

3. Claimant testified that she began experiencing these symptoms in 2008 and reported her condition to her manager at that time. Claimant also testified that she reported symptoms to employer in 2009 and 2011. Employer did not provide claimant with a list of medical providers. Claimant did not seek medical treatment for her low back or feet at these times.

4. Claimant quit her employment with employer on August 20, 2016. Claimant testified that she quit because she "had nothing left to give". When claimant initiated her claim for Workers' Compensation benefits on May 18, 2017, she reported her date of injury as August 20, 2016.

5. The medical records entered into evidence indicate that prior to her alleged workplace injury, claimant received medical care through her primary care physician, Dr. Guy Kovacevich. Between April 26, 2010 and June 24, 2016 claimant was seen by Dr. Kovacevich a number of times for various medical issues. These issues included: cough, sore throat, hypercalcemia, high blood pressure, hemorrhoids, an evaluation for carbon monoxide poisoning, palpitations, depression, hypertension, chronic fatigue disorder, and parathyroid disorder. At these various appointments Dr. Kovacevich did not record any complaints of back pain.

6. During this same time period claimant reported a foot related concern to Dr. Kovacevich on one occasion. On October 14, 2013, claimant complained of pain in a toe on her left foot after striking it on a piece of furniture. There is no indication in that medical record that the injury to claimant's toe was work related.

7. Claimant first reported low back pain to Dr. Kovacevich on August 31, 2016. The records from Dr. Kovacevich are silent regarding the cause of claimant's low back pain. Dr. Kovacevich referred claimant to physical therapy at Howard Head Sports Medicine.

8. Claimant was first seen at Howard Head Sports Medicine by Brittney Huntimer, PT on September 15, 2016. At that time, claimant reported to Ms. Huntimer an incident that occurred three weeks prior while claimant was staying at her daughter's house. Claimant described lifting a laundry basket and feeling "immediate low back pain that felt like a jolt of pain all the way into the front of both hips and made her stomach cramp".

9. The medical records entered into evidence indicate that on April 27, 2017 claimant complained of foot issues when she was seen at Mountain Family Health Centers. At that time claimant reported pain in the bottom of her right foot that started "two weeks ago". This is the first instance of a foot related complaint after October 14, 2013 toe incident as described above.

10. Claimant first reported that she believed that her foot pain was work related on June 16, 2017 when she was seen by Noel Armstrong, DPM with Foot and Ankle Center. At that time claimant reported that when she was "on her feet for prolonged periods of time, the pain became excruciating". Dr. Armstrong opined that claimant's foot symptoms were "probably somewhat activity related or totally activity related". This was nine months after claimant left her employment with employer, and approximately one month after she initiated her claim for workers' compensation benefits.

11. Mr. Thompson testified that claimant did not report any low back or foot symptoms during her employment. Mr. Thompson also testified that as evidenced by the payroll records entered into evidence, claimant averaged 30.5 hours per week.

12. The ALJ does not find claimant's testimony to be credible with regard to the onset of her low back and foot symptoms. The ALJ credits the medical records and finds that claimant did not begin to seek treatment for these symptoms until well after her resignation from her employment. The ALJ further credits the medical records and finds that it is more likely than not that claimant injured her back while staying at her daughter's house as claimant reported to the physical therapist on September 15, 2016. Likewise, the ALJ finds that it is more likely than not that claimant injured her right foot in April 2017, months after she quit her employment with employer. The ALJ credits the testimony of Mr. Thompson and finds that claimant did not report low back or foot symptoms during her employment. Based on the foregoing the ALJ finds that claimant has failed to demonstrate that it is more likely than not that she suffered an occupational injury while employed with employer.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2016).

3. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with" a preexisting disease or infirmity to produce disability or need for treatment. *See H & H Warehouse v. Vicory, supra.*

4. The test for distinguishing between an accidental injury and occupational disease is whether the injury can be traced to a particular time, place, and cause. *Campbell v. IBM Corporation*, 867 P.2d 77 (Colo. App. 1993). "Occupational disease" is defined by Section 8-40-201(14), C.R.S. as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

5. A claimant is required to prove by a preponderance of the evidence that the alleged occupational disease was directly or proximately caused by the employment or working conditions. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office,* 989 P.2d 251, 252 (Colo. App. 1999). Moreover, Section 8-40-201(14), C.R.S. imposes proof requirements in addition to those required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819, 824 (Colo. 1993). A claimant is entitled to recovery only if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id.* Where there is no evidence that occupational exposure to a hazard is a necessary precondition to development of the disease, the claimant suffers from an occupational disease only to the extent that the occupational exposure contributed to the disability. *Id.*

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, April 10, 2008). Simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. See *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, October 27, 2008)

7. As found, claimant has failed to demonstrate by a preponderance of the evidence that she suffered a compensable occupational disease arising out of and in the course of her employment with employer. As found, the medical records and the testimony of Mr. Thompson are credible and persuasive.

ORDER

It is therefore ordered that:

1. Claimant's claim for Workers' Compensation benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Whether the Claimant has produced clear and convincing evidence to overcome the Division Independent Medical Examination (DIME) opinion of Dr. Dwight Leggett that the Claimant reached maximum medical improvement on March 24, 2015 and has no ratable impairment from his February 22, 2015 industrial injury.

- If the Claimant is entitled to medical impairment benefits, the average weekly wage that would be applied to the benefit calculation.

- Whether the Claimant is entitled to maintenance medical care.

STIPULATIONS

In the last Final Admission of Liability filed April 4, 2016, Respondents admitted for maintenance medical treatment per the DIME report from Dr. Leggett dated January 19, 2016. Claimant accepted that submission regarding maintenance medical care.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. On February 22, 2015, Claimant suffered an admitted work-related injury while working as an attendant at Employer's convenience store.

2. Claimant fell from a free-step ladder and experienced pain in his lower back on his left side. This occurred at approximately 9:00 p.m. and Claimant worked until his shift ended approximately one hour later.

3. Claimant was sore the next morning. He called Employer who sent him to Concentra the next day. Dr. Rosalinde Pineiro at Concentra in Fort Collins treated Claimant.

4. At the initial visit, Claimant completed a patient information form indicating that his injury was limited to his lower back. He also completed a pain diagram circling the lower back indicating that he had pins and needles symptoms in that area.

5. Dr. Pineiro's February 23, 2015, report noted Claimant's complaints of the following on physical examination: muscle pain, back pain, joint stiffness, muscle weakness, limping and night pain. Claimant did not report no joint pain, neck pain, or joint swelling. On examination, Dr. Pineiro found Claimant's head and face to be atraumatic with no tenderness. She found a normal gait and no tenderness or swelling of the extremities. Dr. Pineiro noted Claimant's range of motion to be within normal

limits as was muscle strength and tone.[1] She noted tenderness in the right shoulder AC joint. There was also some tenderness in the right upper arm. The left shoulder was abnormal due to polio. The right hip showed no tenderness except in the gluteus maximus, minimus, greater trochanter and bursa. The lumbar spine appeared normal with some tenderness and bilateral muscle spasm.

6. Dr. Pineiro x-rayed Claimant's spine during his February 23, 2015 visit. It showed no fracture or subluxation. The disc spaces and heights of Claimant's vertebral bodies were relatively preserved, the spinal rods placed due to Claimant's polio as a child were noted.

7. Dr. Pineiro released the Claimant to return to modified duty as of that date. Claimant returned to work within the restrictions. Claimant did not miss sufficient time to receive temporary total disability benefits.

8. On February 25, 2015, Claimant returned to Dr. Pineiro. She noted that Claimant was working within her restrictions and tolerating the work. However, Claimant had difficulty changing positions, sitting, and placing weight on his right buttock. Dr. Pineiro referred Claimant to physical therapy two to three times a week for four weeks. She continued his work restrictions.

9. Claimant participated in physical therapy with Concentra from February 26, 2015 through March 17, 2015.

10. On March 10, 2015, Claimant reported to Dr. Pineiro that he was improving and could perform his regular job duties. He was motivated to return to full duty at least in part by Employer's ability to employ him only part-time at restricted duty and his thereby becoming ineligible for health insurance benefits. She placed him at regular duty and advised him to report if he did not tolerate it. Dr. Pineiro continued Claimant's physical therapy and refilled his Tylenol No. 3 prescription.

11. Claimant's final visit to Dr. Pineiro was on March 24, 2015. He had been back at regular duty for two weeks. He reported mild back pain and that his symptoms were continuing to improve. He had no abdominal pain, back stiffness, lower extremity numbness, paresthesia, or weakness by history. On examination Dr. Pineiro found Claimant had a normal gait, no tenderness or swelling of his extremities, a range of motion within normal limits and normal muscle strength and tone. Claimant's thoracic and lumbar spine showed no tenderness. Dr. Pineiro noted that Claimant had polio as a child which led to back deformity.

12. On March 24, 2015, Dr. Pineiro released Claimant at maximum medical improvement (MMI) without restrictions. She provided no permanent impairment rating. She continued his home exercise program.

[1] As a result of childhood polio, Claimant had metal rods placed along his spine from T2 through T9, and exhibits extreme scoliosis. Dr. Pineiro did not explain how Claimant's range of motion could be described as normal given those conditions.

13. On September 11, 2015, Respondents filed a Final Admission of Liability regarding Dr. Pineiro's release. Respondents admitted for zero whole person impairment and no maintenance medical treatment.

14. Claimant requested a Division IME which Dr. Leggett performed on January 19, 2016. According to the DIME report, Claimant listed for consideration review of his lumbar spine, thoracic spine, and cervical spine; evaluation for a closed head injury, and any other body parts or conditions related or associated to the injury such as psychiatric, if appropriate. Claimant also requested review of his placement at MMI.

15. At his DIME, Claimant reported multiple areas of pain generation. The primary area concerned Claimant's low back greater on the right than left. This is inconsistent with the pain questionnaire Claimant filled out when placed at MMI when he indicated that his pain 1 on a scale of 1 to 10, with pins and needles pain on his left side. Claimant also complained at the DIME that he had pain traveling down his left leg and into his toe as well as down the right leg into the calf and bottom of his foot. Claimant complained of right elbow pain and snapping in his left knee. Claimant further reported pain coming from his bilateral shoulder blades, a large amount of tenderness and tension in that area which traveled to the base of his neck creating severe headaches. He reported hypersensitivity with any sort of touch over the top and side of his head. Finally, he mentioned cyclic emotional changes at times.

16. Despite all these pain complaints, Claimant acknowledged that he had not sought treatment through the authorized provider subsequent to his discharge, either before the DIME or thereafter, up to the date of the hearing.

17. Claimant disclosed his medical history to Dr. Leggett, including polio affecting his back, lower extremities and left upper extremity. Claimant has severe scoliosis from the polio. He underwent Harrington rod placement from T2 through T9. He also reported a left shoulder arthrodesis, left pronator release and tendon transfer.

18. Claimant continued to work full duty for Employer subsequent to being placed at MMI. Wage records show that Claimant worked more hours after being placed MMI until he left Employer than he had worked prior to the date of injury. Claimant left Employer in June, 2015. He subsequently became employed by another convenience store/gas station in the Fort Collins area and continued to work in that position up to the date of hearing. Claimant works fulltime for similar pay and with job duties similar to those he had at Employer.

19. On examination, Dr. Leggett deferred range of motion measurements in the thoracic spine due to clear limitation caused by the Harrington rods placed in his thoracic spine. Dr. Leggett noted Claimant's altered low back anatomy which caused difficultly in palpating Claimant's thoracic facet joints. Claimant's unique anatomy caused Dr. Leggett to be unable to stabilize Claimant's positioning well enough to obtain a meaningful straight leg test which voided the validity testing.

20. Despite repeated testing and repositioning throughout the examination, Dr. Leggett was unable to produce any paresthesia on examination. After performing his physical examination and reviewing Claimant's medical records, Dr. Leggett determined that the work-related treatment which had targeted Claimant's thoracic and lumbar region appeared to be appropriate. He then addressed the various areas Claimant had requested in the DIME Application. Dr. Leggett indicated that he was unable to find any records supporting an injury to Claimant's head or neck region and that Claimant's initial evaluation showed multiple findings and history that would be inconsistent with a cervical injury.

21. Dr. Leggett found no supporting information to identify a closed head injury and therefore did not relate one to the claim. He found no knee injury or treatment as part of the claim. As to psychological issues, Dr. Leggett found no psychological impairment.

22. Dr. Leggett agreed with Dr. Pineiro that the Claimant reached MMI on March 24, 2015. Dr. Leggett recommended a maintenance program to maintain MMI. Based on Dr. Leggett's report, Respondents filed the last Final Admission of Liability on April 4, 2016. In that Admission, Respondents admitted for zero permanent whole person impairment and maintenance medical benefits per the DIME report.

23. In his initial report, Dr. Leggett found Claimant's loss of range of motion to be 19% whole person. However, Dr. Leggett did not diagnose a specific disorder as required by Table 53 of the AMA Guides. Dr. Leggett apportioned the range of motion measurement attributing 75% to the pre-existing polio and 25% to Claimant's work injury. Thus, Dr. Leggett gave Claimant a 5% whole person impairment rating.

24. The Division of Workers' Compensation DIME unit wrote to Dr. Leggett on February 5, 2016, informing him that he needed to address the Table 53 issue and apportionment if he applied it.

25. Dr. Leggett responded with a final report dated February 16, 2016. Dr. Leggett indicated that upon further review of the AMA Guides, he realized a Table 53 diagnosis must be given in order to give a range of motion impairment rating. Dr. Leggett stated that given Claimant's history of pre-existing polio, he was unable to adequately assign any of the specific disorders identified in Table 53 to the work injury. Absent a Table 53 rating, no range of motion impairment can be given. Claimant's overall impairment rating was assigned at zero. Apportionment was not applied.

26. In addition to the polio references in the medical records, Claimant provided specific information as to his pre-existing polio diagnosis and its impact. Claimant was diagnosed with polio as a child. He wore a brace on his right leg until the age of 5. He had a body brace from his neck down thereafter. He had severe scoliosis/curvature from the polio. Claimant received treatment from the Shiner's Hospital in Salt Lake City from age 10 through 13. He had back surgery and multiple shoulder surgeries on the left side. He had a plate placed in his left shoulder. He also had work done on his left arm muscles, and on his thumb and fingers.

27. Claimant has worked in multiple positions for grocers and convenience stores since age 18. He has worked as a sacker, checker, attendant, and front desk person. Claimant was able to do the work required for these positions and does not consider himself disabled. However, Claimant admitted that polio did limit his bending, caused him to limp, and limited certain ranges of motion. Claimant continues the same type of work without restrictions.

28. Claimant detailed pain complaints ongoing since March 2015. He discussed them with DIME physician, Dr. Leggett, in January 2016. Claimant admitted that his surgeries left him with pain in his shoulder and back. Dr. Leggett testified by deposition that Claimant had a tremendous amount of shoulder blade pain which Claimant attributed to polio. Claimant acknowledged that obvious changes in his gait and his ability to get on and off the examination table also resulted from polio. On examination, Dr. Leggett noted high levels of muscle tension throughout Claimant's mid-back and several other areas into the scapular region. Dr. Leggett attributed Claimant's muscle spasticity as more likely related to polio than a traumatic injury.

29. Dr. Leggett testified that in addition to discussing polio with Claimant, he reviewed clinical notes from 1983 which documented Claimant's treatment and ongoing symptoms. Dr. Leggett also found that because pre-existing polio is a degenerative disease that leads to musculoskeletal problems, he believed it inappropriate to assign a Table 53 impairment rating.

30. Dr. Leggett testified that the range of motion measurements were probably invalid due to abnormal pelvic positioning from the polio and scoliosis. In order to evaluate range of motion in the low back one has to be able to look at the relation of the motion between the low back and the sacral component. In Claimant's case, he had an abnormal rotation of his hips and tightness in one greater than the other. This made doing straight leg raising painful. Claimant had to assume an outward rotation position in order to perform the testing which invalidated the results. Although Dr. Leggett was able to obtain range of motion measurements of the lumbar spine, those measurements were also impacted by the Claimant's underlying polio.

31. The Division challenged Dr. Leggett's report because he assigned a range of motion impairment rating without providing a Table 53 determination. Dr. Leggett responded by making calls to the workers' compensation board and further reviewing the AMA Guidelines. Ultimately, Dr. Leggett determined he was unable to adequately assign any Table 53 disorder to the workers' compensation injury and withdrew the range of motion impairment rating.

32. Dr. Leggett admits Claimant suffered a work-related injury; but attributed, no radicular process to his injury. Also, the majority of Claimant's pain was reproducible soft tissue, and myofascial in nature. Dr. Leggett opined that the significant tightness and rigidity in Claimant's low back related to pre-existing polio.

33. Claimant seeks a higher average weekly wage based on wages paid through the end of his employment. The records do indicate that the Claimant earned

greater wages after maximum medical improvement through the date of his resignation. However, there was no temporary disability or lost time subsequent to Claimant's initial injury or the date of MMI.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. §8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true that not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is within the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008).

The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

In ascertaining a DIME physician's opinion, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998). A DIME physician's determination regarding MMI and permanent impairment consist of his initial report and any subsequent opinions. *In Re Dazzio*, W.C. No. 4-660-149 (ICAP, June 30, 2008); see *Andrade v. Industrial Claim Appeals Office*, 121 P.3d 328 (Colo. App. 2005). An ALJ may consider the DIME physician's deposition testimony as part of his opinion for purposes of determining the DIME physician's opinion. *Lambert & Sons, Inc.* supra at 659.

When a DIME physician issues conflicting or ambiguous opinions, the ALJ may resolve the inconsistency as a matter of fact so as to determine the DIME physician's true opinion. *MGM Supply Co. v. Industrial Claim Appeals Office*, 62 P.3d 1001 (Colo. App. 2002); *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc.,* supra.

Overcoming the DIME

The DIME physician's opinions regarding causality must be overcome by clear and convincing evidence. *Qual-Med, Inc. v. ICAO*, 961 P.2d 590 (Colo. App. 1998). As a matter of diagnosis, the assessment of impairment requires a rating physician to identify and evaluate all losses and restrictions which result from the industrial injury. *Colorado AFL-CIO v. Donlon*, 914 P.2d 396 (Colo. App. 1995); AMA, Guides to the Evaluation of Permanent Impairment ch. 2.1-2.2 (3rd ed. 1990). "Clear and convincing evidence" is evidence, which is stronger than preponderance, is unmistakable, makes a fact or facts highly probable or the converse, and is free from serious or substantial doubt. *Leming v. Indus. Claim Appeals Office*, 62 P.3d 1015 (Colo. App. 2002). In other words, a DIME physician's findings may be not overcome unless the evidence establishes that it is "highly probable" that the DIME physician's opinion is incorrect. *Postelwait v. Midwest Barricade*, 905 P.2d 21 (Colo. App. 1995). To overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc.*, W.C. No. 4-476-254 (ICAO, October 4, 2001).

As a matter of diagnosis, the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office*, 78 P.3d 1150 (Colo. App. 2003). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova,* supra; *Qual-Med, Inc.* supra. The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office*, 17 P.3d 202 (Colo. App. 2000).

In *Wackenhut Corp.,* the court noted that under the AMA Guides, the "evaluation or rating of impairment is an assessment of data collected during a clinical evaluation and the comparison of those data to the criteria contained in the Guides." Consistent with this concept the Industrial Claim Appeals Office has upheld a DIME physician's impairment rating that excluded "valid" range of motion deficits from an impairment

rating based on the determination that the range of motion deficits did not correlate with clinical observations and data. *Adams v. Manpower*, W.C. No. 4-389-466 (I.C.A.O. August 2, 2005); *Garcia v. Merry Maids*, W.C. No. 4-493-324 (I.C.A.O. August 12, 2002).

Claimant has failed to produce clear and convincing evidence to overcome Dr. Leggett's Division IME opinion that Claimant suffered no permanent medical impairment as a result of the admitted February 22, 2015 work injury. Dr. Leggett received substantial information regarding Claimant's underlying pre-existing impairment from childhood polio. Dr. Leggett discussed this information with Claimant and reviewed medical records regarding the prior polio related treatment and limitations. On examination, Dr. Leggett noted substantial physical abnormalities and impairment as a result of the polio. Claimant's pre-existing abnormalities and disabilities impacted Claimant's presentation and range of motion measurements. Dr. Leggett was unable to assign a Table 53 impairment rating for Claimant's work related injury.

The parties do not dispute the compensability of Claimant's February 22, 2015 injury. However, they do dispute the nature and extent of Claimant's permanent impairment and whether that impairment was related to the February, 2015 accident. The DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova,* supra. Claimant has not met his burden to overcome the DIME physician's opinion that Claimant, although injured, did not suffer a ratable impairment under the AMA Guidelines. As such, Claimant is not entitled to a range of motion impairment because he failed to establish a ratable impairment.

In *Marquez v. Americold Logistics*, W.C. No. 4-896-504 (ICAO, August 7, 2014) the claimant challenged a zero impairment rating by a DIME physician. The ALJ determined that the claimant failed to overcome the zero impairment rating and the ICAO affirmed the decission. The DIME physician did perform an impairment analysis and determined that the claimant had an overall impairment of 26% of the whole person. But in her opinion, none of the claimant's impairment was causally related to the industrial injury. As such, the doctor opined that the claimant's impairment was related to a pre-existing industrial injury. Apportionment statutes are to be applied only after a rating physician, including the DIME physician, initially determines that the industrial injury caused ratable impairment under the AMA Guides. *Marquez*, supra; C.R.S. § 8-42-104(5)(a) and (b).

It is well established that the DIME physician's opinion on MMI, just as with a medical impairment rating, is binding unless overcome by "clear and convincing" evidence. § 8-42-107(a)(c) C.R.S. 2017. To overcome a DIME physician's opinion, there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt. *Adams*, supra.

In the present case there is no difference in medical opinion regarding whether the Claimant has reached maximum medical improvement. Dr. Pineiro, Claimant's ATP, placed him at MMI in March 2015. Claimant did not seek maintenance care and made no effort to return to the physician for additional care or reopening. The DIME occurred in January of 2016. Dr. Leggett concluded that Claimant remained at MMI after evaluating all of Claimant's complaints. Dr. Leggett also found that the majority of the body parts which Claimant complained about were not included in the claim and did not form the basis of ratable impairment. Claimant has not sought care or treatment from January of 2016 to the present despite the DIME's recommendations and Insurer's admission.

Claimant has failed his burden to overcome, by clear and convincing evidence, the finding of the Division IME physician that Claimant reached MMI as of March 24, 2015.

Medical Maintenance Treatment

Claimant has raised the issue of entitlement to maintenance medical care. In their April 4, 2016, Admission, Respondents admitted for maintenance medical treatment per the DIME report. Maintenance medical treatment may not be conditioned, thus the Admission results in maintenance treatment being open to the extent the requested care is reasonable, necessary, and related to the industrial injury.

As Claimant has not sought specific care, there is no issue to address as to the reasonableness, necessity or relatedness of any treatment but merely a conclusion that the claim remains open pursuant to Admission.

The ALJ need not address the issue of Average Weekly Wage.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant has failed to meet his burden of proving that the DIME physician, Dr. Dwight Leggett, erred in his DIME report on the issue of MMI or lack of permanent medical impairment. Claimant's request to overcome the DIME as to those two issues is denied and dismissed.

2. Claimant is entitled to maintenance medical treatment that is reasonable, necessary and related to the workers' compensation injury pursuant to Respondents' Admission.

3. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 13, 2017

/s/ Kimberly Turnbow
Kimberly B. Turnbow

Denver, CO 80203

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that his hearing loss arose out of and occurred within the course and scope of his employment with Employer.

2. Whether Claimant has proven by a preponderance of the evidence that he is entitled to receive authorized medical treatment, including hearing aids, which is reasonable and necessary to cure or relieve the effects of his industrial injury.

FINDINGS OF FACT

1. In November 1983 when Claimant was 20 years old he began working for Employer as a Refrigeration Mechanic. Claimant asserts that during his work for Employer over a 33 year period he was continually exposed to loud noises and thus suffered hearing loss.

2. Claimant initially underwent hearing testing in 1984. On August 10, 1994 Claimant again had his hearing evaluated. The testing revealed that Claimant had suffered diminished hearing as documented by a Standard Threshold Shift (STS). Employer monitored Claimant's hearing over the ensuing years.

3. On November 11, 2003 Claimant visited Otolaryngologist Alan Lipkin, M.D. for an examination. Claimant reported that he "has been exposed to pumps, chillers, motors, power tools, and hand tools with a significant noise exposure in spite of using ear protection whenever it is possible." Claimant also reported "a gradual deterioration in hearing, as well as about three years of high-pitched tinnitus, which is bilateral." Claimant denied smoking or taking any medications on a regular basis and remarked that he was "not aware of any family history of tinnitus, ear infections, or major hearing loss." Dr. Lipkin summarized:

> Bilateral sloping high-frequency sensorineural hearing loss is slightly more prominent on the left than the right. It is essentially pure nerve loss. There is excellent word discrimination. It is consistent with his prior screening hearing tests. It is of a pattern most consistent with noise-induced hearing loss.

Dr. Lipkin diagnosed Claimant with work-related noise-induced hearing loss that was present despite hearing protection. Dr. Lipkin noted that Claimant "is not aware of any nonwork-related causes of hearing loss. I, thus, will conclude that it is work-related."

4. On September 1, 2016 Claimant visited Richard Leahy, D.O. for a physical examination. He reported worsening tinnitus and hearing loss. Dr. Leahy referred Claimant to ENT William Dickey, M.D.

5. On October 21, 2016 Claimant visited Dr. Dickey for an evaluation. Dr. Dickey noted that Claimant's audiogram revealed significant presbycusis. He commented that hearing loss is a benign process and recommended hearing aids.

6. On October 21, 2016 Claimant visited audiologist Zachary A. Zells, Au.D. for an evaluation. Claimant reported ringing in both ears and increased difficulties understanding conversations. He noted "extensive occupational noise exposure." Audiological testing revealed severe sensorineural hearing loss in both ears. Dr. Zells noted that Claimant's hearing loss was having a negative impact on his ability to communicate and could not be corrected through medications or surgery. Accordingly, he recommended hearing devices for both ears at a cost of $6,200.00.

7. On November 17, 2016 Claimant visited Andrew Plotkin, M.D. for an examination. He reported that he has worked for Employer for approximately 33 years as a Refrigeration Mechanic. Claimant commented that he has worked around many sources of loud noises including chillers, pumps, motors and power tools. He remarked that his worst noise exposure occurred during the 1980's and 1990's when he less frequently used hearing protection. Claimant explained that he has experienced gradually worsening hearing loss and has difficulties with conversations.

8. Dr. Plotkin reviewed all available documentation including medical records and audiograms. He noted that Claimant's audiograms revealed a steady decline in high frequency hearing. Dr. Plotkin also reviewed ambient noise level sampling data from August 26, 1994 and July 25, 2013. The 1994 data reflected an exposure range of 50.6 dB to 116.2 dB with a 59.2% 8 hour dose at the 90dB threshold and 73.3% 8 hour dose at the 80 dB threshold. Dr. Plotkin added that he "would expect the noise exposure to have been below the OSHA threshold if adequate hearing protection was in use at all times." He recommended evaluation by an otolaryngologist to ascertain the cause of Claimant's hearing loss and tinnitus.

9. On January 4, 2017 Claimant visited ENT Clark Walker, M.D. for an examination. He reported gradual hearing loss over the years that he attributed to his work exposure. Claimant denied any other causes or aggravating factors that contributed to his condition. Dr. Walker diagnosed Claimant with bilateral high frequency sensorineural hearing loss. After conducting an audiogram, Dr. Walker remarked that Claimant's hearing loss was likely work-related. He remarked that Claimant did not suffer any pre-existing conditions that caused or contributed to his hearing loss. Dr. Walker summarized that the "causative agent for progressive hearing loss is, very likely, unprotected hearing while at work." He recommended hearing aids.

10. On February 24, 2017 Employer filed a First Report of Injury. The report specified that on November 26, 2003 Claimant suffered bilateral hearing loss as a result of his cumulative work activities.

11. On September 20, 2017 Claimant underwent an independent medical examination with Allison M. Fall, M.D. Dr. Fall reviewed Claimant's work history and medical records. Claimant reported that he was exposed to noise from chillers, pumps and fans at work for over 30 years. Claimant noted that he usually worked nine hour shifts and experienced noise approximately 80% of the time while performing his job duties. Relying on the noise sampling data reflected in Dr. Plotkin's November 17, 2016 report, Dr. Fall reasoned that Claimant's noise exposure while at work was within OSHA Guidelines. Dr. Fall thus attributed Claimant's hearing loss to age rather than his work exposure.

12. Claimant testified at the hearing in this matter. He explained that he began working for Employer as a Refrigeration Mechanic when he was 20 years old in 1983. He noted that he did not suffer any hearing loss prior to working for Employer. However, his job duties of maintaining the air conditioning for Employer's entire campus required him to work in very loud rooms with large machines that included chillers, pumps, air compressors and fans. Claimant specifically noted that the chillers in the equipment rooms sounded like jet engines. He explained that he would sometimes wear hearing protection during the 1980's and 1990's but often removed it because the equipment rooms were so loud that he had to yell to co-workers to communicate. Claimant remarked that he worked a significant amount of overtime in excess of his 40 hour week during the 1980's and 1990's.

13. Claimant testified that Employer first provided education regarding noise exposure and hearing loss in approximately 2005 or 2006. He has diligently worn hearing protection since he was advised of the dangers of noise exposure. Claimant remarked that Employer's equipment rooms are much quieter than in the 1980's and 1990's because the equipment has been updated.

14. Dr. Fall testified at the hearing in this manner. Although Dr. Fall acknowledged that Claimant suffers from hearing loss, she maintained that his condition was not caused by his work duties for Employer. Dr. Fall explained that Claimant's hearing loss was a progressive, age-related condition that was not related to his work exposure. She detailed that 12% of males over the age of 12 suffer hearing loss and 20% of males over 50 have hearing loss. Relying on the noise sampling data reflected in Dr. Plotkin's November 17, 2016 report, Dr. Fall reiterated that Claimant's noise exposure at work was within OSHA Guidelines. However, Dr. Fall acknowledged that she did not know of the origin of the noise sampling data. Furthermore, Dr. Fall noted that she did not know the percentage of each work day that Claimant spent at the higher decibel levels as opposed to the lower levels referenced in the noise sampling data.

15. Claimant has demonstrated that it is more probably true than not that his hearing loss arose out of and occurred within the course and scope of his employment with Employer. It is undisputed that Claimant began experiencing gradual, bilateral hearing loss in 1994. The critical inquiry is whether Claimant's hearing loss was caused by working for Employer in a noisy environment or a natural age-related process. Claimant credibly explained that his job duties required him to work in very loud rooms with large machines that included chillers, pumps, air compressors and fans. The bulk of the persuasive medical records reflect that Claimant's hearing loss is attributable to his job duties for Employer.

16. After considering Claimant's job history and medical records otolaryngologist Dr. Lipkin determined that Claimant suffered from sensorineural hearing loss. He noted that Claimant's condition was a "pure nerve loss" that was consistent with "noise-induced hearing loss." In the absence of non-work-related factors, Dr. Lipkin concluded that Claimant's hearing loss was work-related. Furthermore, ENT Dr. Walker diagnosed Claimant with bilateral high frequency sensorineural hearing loss. After conducting an audiogram, Dr. Walker remarked that Claimant's hearing loss was likely work-related. He remarked that Claimant did not suffer any pre-existing conditions that caused or contributed to his hearing loss. Dr. Walker summarized that the "causative agent for progressive hearing loss is, very likely, unprotected hearing while at work."

17. In contrast, Dr. Fall explained that Claimant's hearing loss was a progressive, age-related condition unrelated to his work exposure. She detailed that 12% of males over the age of 12 suffer hearing loss and 20% of males over 50 have hearing loss. Relying on the noise sampling data from August 26, 1994 reflected in Dr. Plotkin's November 17, 2016 report, Dr. Fall explained that Claimant's noise exposure at work was within OSHA Guidelines. However, Dr. Fall acknowledged that she did not know the origin of the 1994 noise sampling data. Furthermore, Dr. Fall noted that she did not know the percentage of each work day that Claimant spent at the higher decibel levels as opposed to the lower levels referenced in the noise sampling data. Dr. Fall's opinion is strictly based on speculative, sampling data with an unclear origin that the noise levels in Employer's air conditioning facilities are within OSHA limits. However, the persuasive reasoning of ear specialists Drs. Lipkin and Walker suggests that Claimant's hearing loss was not caused by age, but by his occupational exposure over a number of years. Accordingly, Claimant's job duties with Employer aggravated, accelerated or combined with his pre-existing condition to produce a need for medical treatment.

18. Claimant has proven that it is more probably true than not that he is entitled to receive authorized medical treatment, including hearing aids, which is reasonable and necessary to cure or relieve the effects of his industrial injury. Claimant suffered an occupational disease in the form of hearing loss as a result of his work activities for Employer. He has received reasonable medical treatment for his hearing loss from a number of providers over the years. Physicians have recommended hearing aids to cure or relieve the effects of Claimant's work-related

hearing loss. Accordingly, Claimant shall receive reasonable and necessary medical benefits for hearing loss, including hearing aids, designed to cure or relieve his condition.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Compensability

4. The test for distinguishing between an accidental injury and an occupational disease is whether the injury can be traced to a particular time, place and cause. *Campbell v. IBM Corp.*, 867 P.2d 77, 81 (Colo. App. 1993). "Occupational disease" is defined by §8-40-201(14), C.R.S. as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

5. A claimant is required to prove by a preponderance of the evidence that the alleged occupational disease was directly or proximately caused by the employment or

working conditions. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office,* 989 P.2d 251, 252 (Colo. App. 1999). Moreover, §8-40-201(14), C.R.S. imposes proof requirements in addition to those required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819, 824 (Colo. 1993). A claimant is entitled to recovery only if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id.* Where there is no evidence that occupational exposure to a hazard is a necessary precondition to development of the disease, the claimant suffers from an occupational disease only to the extent that the occupational exposure contributed to the disability. *Id.*

6. As found, Claimant has demonstrated by a preponderance of the evidence that his hearing loss arose out of and occurred within the course and scope of his employment with Employer. It is undisputed that Claimant began experiencing gradual, bilateral hearing loss in 1994. The critical inquiry is whether Claimant's hearing loss was caused by working for Employer in a noisy environment or a natural age-related process. Claimant credibly explained that his job duties required him to work in very loud rooms with large machines that included chillers, pumps, air compressors and fans. The bulk of the persuasive medical records reflect that Claimant's hearing loss is attributable to his job duties for Employer.

7. As found, after considering Claimant's job history and medical records otolaryngologist Dr. Lipkin determined that Claimant suffered from sensorineural hearing loss. He noted that Claimant's condition was a "pure nerve loss" that was consistent with "noise-induced hearing loss." In the absence of non-work-related factors, Dr. Lipkin concluded that Claimant's hearing loss was work-related. Furthermore, ENT Dr. Walker diagnosed Claimant with bilateral high frequency sensorineural hearing loss. After conducting an audiogram, Dr. Walker remarked that Claimant's hearing loss was likely work-related. He remarked that Claimant did not suffer any pre-existing conditions that caused or contributed to his hearing loss. Dr. Walker summarized that the "causative agent for progressive hearing loss is, very likely, unprotected hearing while at work."

8. As found, in contrast, Dr. Fall explained that Claimant's hearing loss was a progressive, age-related condition unrelated to his work exposure. She detailed that 12% of males over the age of 12 suffer hearing loss and 20% of males over 50 have hearing loss. Relying on the noise sampling data from August 26, 1994 reflected in Dr. Plotkin's November 17, 2016 report, Dr. Fall explained that Claimant's noise exposure at work was within OSHA Guidelines. However, Dr. Fall acknowledged that she did not know the origin of the 1994 noise sampling data. Furthermore, Dr. Fall noted that she did not know the percentage of each work day that Claimant spent at the higher decibel levels as opposed to the lower levels referenced in the noise sampling data. Dr. Fall's opinion is strictly based on speculative, sampling data with an unclear origin that the noise levels in Employer's air conditioning facilities are within OSHA limits. However, the persuasive reasoning of ear specialists Drs. Lipkin and Walker suggests that Claimant's hearing loss was not caused by age, but by his occupational exposure over a number of years.

Accordingly, Claimant's job duties with Employer aggravated, accelerated or combined with his pre-existing condition to produce a need for medical treatment.

Medical Benefits

9. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAP, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAP, Nov. 13, 2000).

10. As found, Claimant has proven by a preponderance of the evidence that he is entitled to receive authorized medical treatment, including hearing aids, which is reasonable and necessary to cure or relieve the effects of his industrial injury. Claimant suffered an occupational disease in the form of hearing loss as a result of his work activities for Employer. He has received reasonable medical treatment for his hearing loss from a number of providers over the years. Physicians have recommended hearing aids to cure or relieve the effects of Claimant's work-related hearing loss. Accordingly, Claimant shall receive reasonable and necessary medical benefits for hearing loss, including hearing aids, designed to cure or relieve his condition.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant suffered an occupational disease in the form of hearing loss while working for Employer.

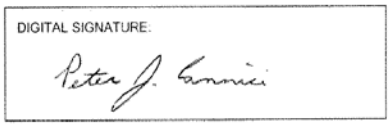
2. Claimant shall receive reasonable and necessary medical benefits for hearing loss, including hearing aids, designed to cure or relieve his condition.

3. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it

within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: December 13, 2017.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

STIPULATION

At the commencement of hearing the parties stipulated that Claimant's average weekly wage (AWW) at the time of her alleged injury was $591.76. The stipulation is approved.

REMAINING ISSUES

I. Whether Claimant established by a preponderance of the evidence that she sustained a compensable injury to her upper extremities as a consequence of falling down some stairs on March 6, 2017.

II. If Claimant sustained a compensable injury, whether she established by a preponderance of the evidence that she is entitled to reasonable, necessary and related medical treatment to cure and relieve her of the effects of that injury.

III. If Claimant sustained a compensable injury, whether she established by a preponderance of the evidence that she is entitled to temporary total disability (TTD) benefits for the period March 7, 2017 through March 14, 2017.

Because the ALJ finds/concludes that Claimant failed to carry her burden to establish that she sustained a compensable injury, this order does not address Issues II and III above.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

I. Claimant's Prior Medical History

1. In 2014 Claimant developed a deep vein thrombosis (DVT) in her right thigh. Claimant's DVT was treated with blood thinners, including Warfarin and Lovenox. Claimant would later injure her right hamstring while receiving anticoagulation therapy. After approximately two weeks of increasing right leg pain and lower extremity swelling, it was discovered that Claimant had suffered a compartmental bleed associated with acute blood loss. According to Claimant, her compartmental bleed resulted in a balance issue necessitating the use of a walker at first and later a cane, which she reportedly did not use after 2014. The medical records admitted into evidence indicate that Claimant developed compartmental syndrome in the calf area and on March 4. 2016, she was told that her right lower extremity "would never be 100% normal again after the bleeding from anticoagulation for the DVT."

2. Claimant also has a long standing history of bilateral knee pain and has been diagnosed with osteoarthritis of the knees which caused a stiff, antalgic gait.[1]

3. On May 24, 2016, Claimant was evaluated by Dr. Lance Farnworth for chronic knee pain. In his report from this date of visit, Dr. Farnworth notes that Claimant presented with complaints of bilateral knee pain which made it "difficult to ascend stairs, descend stairs, walk long distances, sleep at night and progress from sit to stand". Dr. Farnworth diagnosed Claimant with bilateral tricompartmental osteoarthritis and recommended Synvisc injections.

4. On February 2, 2017, Claimant presented to the Arkansas Valley Regional Medical Center for "chronic disease management". In the report from this appointment date, the condition of Claimant's knees is documented as follows: "Knees are about the same, still has swelling at the end of the day, mild decrease in ROM + stiffness, intermittent weakness of knees." During the physical examination conducted on this date, it was noted that Claimant avoided putting pressure on the right leg.

II. Claimant's March 6, 2017 Slip and Fall

5. Claimant fell down some stairs on March 6, 2017. At the time she fell, Claimant was employed with AT&T as a Customer Service Representative. Claimant's primary duties included taking inbound calls, helping customers resolve billing questions and upselling Direct TV internet service.

6. Claimant testified that on the date she fell, she and a co-worker had decided to go to lunch off premises. Claimant exited the building and proceeded to descend a flight of stairs when she fell onto her outstretched hands/arms. According to Claimant's testimony, she made it down about five of the approximately seventeen concrete stairs in the font of the building when she "noticed that [her] left foot slipped and [she] was falling". She landed on her outstretched hands at the bottom of the steps and was assisted off the ground by building security. According to Claimant, there was nothing on the stairs[2] and they were not icy or slick.

7. Claimant testified after falling she lay on the ground for a "minute or two" during which time she did not see any "bones protruding out of her jacket". Consequently, after the security guard helped her to her feet, she and her friend proceeded to lunch.

8. Following lunch, Claimant returned to work and informed Liz Archuleta, her supervisor that she had fallen down the stairs. Claimant took some over-the-counter pain medication and returned to work. She was able to finish her shift and return home for the evening.

[1] See the February 18, 2016 report from Arkansas Valley Regional Medical Center.
[2] See Claimant's recorded statement, Exhibit D, page 14, lines 573-574.

9. Claimant sought medical treatment on the morning of March 7, 2017 with her family nurse practitioner (N.P.), Rebecca Walters. At hearing, Claimant testified that she sought treatment that morning because she was unable to raise her arms to wash her hair or perform basic hygiene, and because her arms were significantly swollen beyond their normal size. Claimant's initial complaints included bilateral wrist and elbow pain, numbness and tingling in bilateral wrists and elbows, and generalized muscle soreness and pain. N.P. Walters advised that x-rays would be ordered if Claimant's condition did not improve within 4 or 5 days.

10. X-rays were performed on March 30, 2017 and revealed minimally displaced radial neck fractures. On April 4, 2017, N.P. Walters referred Claimant to Dr. Farnworth, the same orthopedist who was treating her knees, due to ongoing right hand weakness and bilateral elbow, wrist, and hand pain. N.P. Walters suspected that Claimant suffered from radial head fractures as evidenced by her continued elbow pain when reaching behind herself.

11. Dr. Farnworth examined Claimant on April 21, 2017. He confirmed that she suffered from minimally displaced right and left radial neck fractures. Dr. Farnworth referred Claimant for physical therapy which she attended with some improvement in her symptoms as a result.

12. Claimant testified that she missed two weeks of work on the orders of Dr. Farnworth. However, she did not provide exact dates for the days she missed from work. Claimant's interrogatory responses indicate that she missed work from March 7 to March 14, 2017 due to the injuries she sustained in her fall.

III. Claimant's Recorded Statement

13. On March 8, 2017, two days after her fall, Claimant provided a recorded statement to the claims adjuster investigating the claim.

14. When questioned about her health status, Claimant stated that she had a balance issue with her right leg. Claimant stated that after she completed the treatment associated with her compartmental syndrome, she was informed her balance would be "80 to 90 percent" of what it had been. Claimant acknowledged during her statement that the balance issue with her right leg had been an ongoing problem for the past four years. She also noted that her balance deficit would be a "lifelong thing." The ALJ finds that this comports with the content of the March 4, 2016 medical record from Arkansas Valley Regional Medical Center wherein Claimant was told that her right leg would never again be 100% normal.

15. During her recorded statement, Claimant stated that sometimes her nerves acted up, which caused her to have she good days and bad days and that on "bad days" she would have to use a cane to ambulate. The ALJ interprets this statement to indicate that the nerves in her right leg would cause symptoms resulting in Claimant's need to use a cane as an assistive device to walk. Based upon the evidence presented, the ALJ finds that Claimant's unwillingness to put pressure on her right leg is

a probable consequence of the residual effects of her prior compartmental bleed. Claimant also confirmed that she had to utilize a handicap sticker because of her ongoing conditions.

16. In her recorded statement, Claimant stated that due to her balance issues, when she went down stairs, she typically hung onto the railings and she would "side-step all the way down". She also admitted in the recorded statement that she was not paying attention and that she was "preoccupied with other thoughts" as she was descending the stairs. Finally, Claimant stated that the wind was "whipping"[3] and because of her "balance issue", she "just lost her balance and, um went flying down the stairs". Contrary to the assertion espoused in Claimant's position statement, the recorded statement does not indicate that Claimant endorsed high wind as the proximate cause of her fall. To the contrary, the ALJ finds from the content of the recorded statement that only after the claims adjuster expressed that the claim may not be compensable due to her pre-existing balance issues did Claimant assert that she fell due to a combination of her balance issue and the wind (emphasis added). Prior to this, Claimant's recorded statement indicates that her pre-existing balance problem was the root cause of her fall.

17. Claimant subsequently attended an Independent Medical Examination with Dr. Timothy Hall on September 14, 2017. Dr. Hall performed a physical exam, took a patient history, and reviewed the records associated with Claimant's treatment. Dr. Hall confirmed that Claimant's injuries stemmed from her March 6, 2017 fall, and suggested that her symptoms were not from her radial fractures but from traumatic bilateral epicondylitis associated with bracing her fall with her outstretched arms. Dr. Hall recommended continuing treatment to address this diagnosis.

18. Based upon the evidence presented, including the medical records submitted and Claimant's recorded statement, the ALJ finds that Claimant continues to suffer from residual effects caused by her 2014 DVT/compartmental bleed and the ongoing symptoms associated with significant bilateral arthritis in her knees which impact both her balance and ability to ascend and descend stairs.

IV. Claimant's Hearing Testimony

19. At hearing, Claimant testified that she no longer had any ongoing medical issues from her 2014 DVT condition. Moreover, when questioned directly about the current state of her health, Claimant categorically denied any such issues. Specifically, Claimant testified as follows:

> Q: Do you have any ongoing issues with balance?
> A: No.
> …
> Q: Are you typically able to go up and down stairs without difficulty?
> A: Right.

[3] According to Claimant the wind was blowing approximately 40 miles per hour.

…
Q: Any particular difficulties balancing or walking?
A: No.

20. Claimant's testimony is inconsistent with her prior statement given to the claims adjuster on March 8, 2017. In her own words shortly after this incident, Claimant provided a full description of the effects that her prior DVT and subsequent compartmental bleed had on her balance and ability to walk. She portrayed the residual deficits caused by the compartmental bleed as significant, noting that her nerves would act up requiring her to use a cane to walk and noting further that at full recovery her balance would be 80%-90% of pre-DVT/compartment bleed status. Moreover, she characterized her balance deficit as being a "lifelong thing". During her recorded statement, Claimant suggested that she was still impaired and even attributed her fall to her ongoing balance issues. These statements are supported by the content of the medical records admitted into evidence. Claimant's subsequent testimony that she had no such balance/ambulation issues directly contradicts her statements that she made two days after the injury, when she was not aware that her claim might be denied because her pre-existing balance issues caused her fall. The ALJ finds Claimant's recorded statements and the medical records regarding her ongoing balance/ambulation deficits and the condition of her knees more persuasive and reliable than her subsequent hearing testimony.

21. Claimant also testified that she did not take any special precautions with stairs other than watching where she was going and being cautious. Claimant denied that she typically had to side-step down stairs while holding the railing. In fact, Claimant testified that she did not even know what this meant. Again, Claimant's testimony contradicts the statements she made during the course of her recorded statement. In her recorded statement, Claimant provided a detailed account of how she typically descended stairs, which included hanging onto the rail and "side [stepping] it all the way down". Consequently, the ALJ finds Claimants purported ignorance as to what "sidestepping" meant incredible.

22. Finally, Claimant testified that she did not use a cane and she had not used a cane since 2014. However, in her recorded statement, Claimant conceded that on "bad days" she still utilized a cane to walk. Furthermore, the February 2, 2017 medical report from Arkansas Valley Regional Medical Centers indicates that as a result of Claimant's DVT and subsequent bleed, she "sometimes . . . has to use her cane to get around". Given the balance of the competing evidence, the ALJ finds Claimant's testimony that she had not used a cane since 2014 unpersuasive.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. The purpose of the Workers' Compensation Act of Colorado (Act), §§ 8-40-101, *et seq*., C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1), C.R.S*. The Claimant shoulders the burden of proving by a preponderance of the evidence that he is a covered employee who suffered an "injury" arising out of and in the course of employment. *Section 8-43-301(1), C.R.S.; Faulker v. Industrial Claim Appeals Office, 12 P.3d 844 (Colo.App. 2000); City of Boulder v. Streeb, 706 P.2d 786 (Colo. 1985); Pacesetter Corp. v. Collett, 33 P.3d 1230 (Colo.App. 2001).* A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark, 197 Colo. 306, 592 P.2d 792 (1979)*. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. *Section 8-43-201, C.R.S*. A workers' compensation claim is decided on its merits. *Section 8-43-201, supra.*

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. While the ALJ is convinced that Claimant sustained significant injuries as a consequence of her slip and fall, the cause of her fall is the primary issue for resolution in this case. As found, Claimant's testimony regarding the cause of her fall is generally inconsistent with her prior recorded statement and the content of the medical records admitted into evidence. As noted, the ALJ concludes that the statements Claimant made two days after the event but before being made aware that the claim might be denied due to a concern that the injury was precipitated by a pre-existing condition are the most reliable statements concerning the cause of the fall in this case. Given the inconsistency between Claimant's testimony and balance of the competing evidence, the ALJ finds Claimant's testimony concerning the cause of her fall unpersuasive and unreliable.

C. In accordance with section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo.App. 2000).

Compensability

D. Under the Workers' Compensation Act, an injured employee is entitled to

compensation where the injury or death is proximately caused by an injury or occupational disease arising out of and in the course of the employee's employment. *Section 8-41-301(1), C.R.S.; Horodyskyj v. Karanian* 32 P.3d 470 (Colo. 2001). The phrases "arising out of" and "in the course of" are not synonymous and a claimant must meet both requirements. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 20 (Colo. 1988). The latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d 379, 381 (Colo. 1991). Thus, an injury occurs "in the course of" employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co.,* 38 Colo.App. 48, 51, 552 P.2d 1033, 1036 (1976). Based upon the evidence presented, the ALJ finds that Respondents are not contending that Claimant's alleged injury did not occur in the course of her employment. Rather, the undersigned understands Respondents contention to be that Claimant's asserted injury did not "arise out" of her employment.

E. The term "arises out of" refers to the origin or cause of an injury. *Deterts v. Times Publ'g Co. supra.* There must be a causal connection between the injury and the work conditions for the injury to arise out of the employment. *Younger v. City and County of Denver, supra.* An injury "arises out of" employment when it has its origin in an employee's work-related functions and is sufficiently related to those functions to be considered part of the employee's employment contract. *Popovich v. Irlando supra.*

F. In C*ity of Brighton and Cirsa v. Rodriguez,* 318 P.2d 496, 502 (Colo. 2014), the Colorado Supreme Court set forth the following three categories of risks that cause injury to employees when it addressed the question of whether a fall down a flight of stairs was compensable: (1) employment risks which are directly tied to the work itself; (2) risks which are inherently personal or private to the employee; and (3) neutral risks that are neither employment-related, nor personal. *Id.* at 503.

G. Under the first category, a slip and fall at work is "typically…only attributable to an employment-related risk if it results from tripping on a defect or falling on an uneven or slippery surface on an employer's premises." *Id.* at 501, quoting from *In re Margeson*, 162 N.H. 273, 27 A.3d 663, 667 (2011). Based upon the evidence presented, the ALJ concludes that the record fails to support a finding that an employment-related risk caused Claimant's fall. To the contrary, the overwhelming evidence demonstrates that the stairs were clean, dry and otherwise free from defects or other hazardous conditions at the time of Claimant's fall.

H. The third category includes injuries caused by "neutral risks." *City of Brighton*, *supra* at 503. Such risks are associated neither with the employment itself nor with the employee. *Id.* at 504. As noted in *City of Brighton*, an injury is compensable under the Act if triggered by a neutral force if that force is not "specifically targeted at a particular employee and would have occurred to any person who happened to be in the position of the injured employee at the time and place in question". *Id.* citing *Horodyskyj*,

32 P.3d at 477. Concerning unexplained falls the Court noted that unexplained falls necessarily stem from neutral risks, that is risks "attributable neither to the employment itself nor to the employee him or herself." (318 P. 3d 500) The Court went on to explain that "[u]nder our longstanding 'but-for' test, such an unexplained fall 'arises out of' employment if the fall would not have occurred but for the fact that the conditions and obligations of employment placed the employee in the position where he or she was injured." *City of Brighton* and *Cirsa v. Rodriguez*, 318 P.3d 496 (Colo. 2014). Here, the evidence presented persuades the ALJ that the cause of Claimant's fall is not unexplained nor is it due to a "neutral risk", i.e. wind that blew claimant from the stairs and would have caused injury to any person who happened to be in the position of Claimant at the time and place in question. To the contrary, Claimant herself attributed her fall to a long-standing balance deficit caused by a pre-existing right leg condition rather than being "blown" from the steps by a gust of wind as she now suggests. Based upon the evidence presented, the ALJ finds/concludes that it is unlikely that Claimant was blown down the stairs by winds gusting to 40 miles per hour. The evidence presented persuades the ALJ that Claimant's fall was, more probably than not, caused by preexisting physical infirmities she brought with her to the workplace. Consequently, further analysis under the second category of risks that cause injury to employees as set forth in the *City of Brighton* case is necessary to determine whether Claimant's injuries are compensable.

I. As noted above, the second category of risks that cause injury to employees addresses risks that are entirely personal or private to the employee. Such risks would include an employee's pre-existing or idiopathic condition that is completely unrelated to her employment. Injuries precipitated by pre-existing conditions brought to the workplace are generally not compensable unless an exception applies. *Id.* at 503. As found here, Claimant admitted during her recorded statement that she suffered from ongoing balance issues as a result of her 2014 compartmental bleed and that as a consequence her nerves "act" up occasionally. Moreover the medical record evidence supports a finding that Claimant has significant bilateral arthritis in her knees which affects her strength and ability to ascend and descend stairs. A reasonable interpretation of the recorded statement and the medical records presented supports the ALJ's conclusion that Claimant's pre-existing balance problems along with the condition of her knees likely precipitated her fall from the stairs. Consequently, the ALJ finds/concludes that Claimant's fall and subsequent injuries would not be compensable, unless an exception to the rule that injuries caused by such pre-existing maladies are not compensable applies.

H. One exception is when a pre-existing or idiopathic condition precipitates an accident and combines with a hazardous condition of employment to cause an injury. Referred to as the "special hazard rule", the Colorado Court of Appeals held that a claimant may be compensated if a preexisting injury, infirmity, or disease is exacerbated by "the concurrence of a pre-existing weakness and a hazard of employment." *Ramsdell v. Horn*, 781 P.2d 150 (Colo.App. 1989); *Gates Rubber Co. v. Industrial Comm'n.*, 705 P.2d 6, 7 (Colo. App. 1985). The rationale for this rule is that unless a special hazard of employment increases the risk or extent of injury, an injury due to the

claimant's pre-existing condition does not bear sufficient causal relationship to the employment to "arise out of the employment. *Gates Rubber Co. V. Industrial Commission, supra; Gaskins v. Golden Automotive Group, L.L.C.,* W.C. No. 4-374-591 (August 6, 1999). In such cases, the existence of a special hazard, which elevates the probability of injury or the extent of the injury incurred, serves to establish the required causal relationship between the employment and the injury. *See Ramsdell v. Horn, supra.*

J. In order to be considered a special hazard, the employment condition cannot be a ubiquitous one; it must be a special hazard not generally encountered. *Id.* The rationale for this exception is that unless a special hazard of employment increases the risk or extent of injury, an injury due to a claimant's personal or idiopathic condition does not bear a sufficient causal relationship to the employment to "arise out of" the employment. *Gates, supra* at 7. Courts have previously held that hard level concrete floors, concrete stairs, and a sidewalk curb are not special hazards of employment. *Id.; Alexander v. ICAO*, No. 14CA2122 (Colo.App. June 4, 2015); *Gaskins v. Golden Automotive Group, LLC*, W.C. No. 4-374-591 (ICAO Aug. 6, 2009). Here, Claimant did not testify that any particular flaw in the stairs caused her to fall injuring her wrists/arms. As presented, the stairs Claimant was descending were not a special hazard of employment but rather a ubiquitous condition which she could have encountered off the job. Because Claimant's fall and subsequent injuries were precipitated by her pre-existing balance deficit and the osteoarthritis in her knees rather than the wind as a neutral risk, the ALJ concludes that Claimant bore the burden to establish that there was a concurrence of a pre-existing weakness and a hazard of employment to result in a compensable work injury. *See National Health Laboratories v. Industrial Claim Appeals Office*, 844 P.2d 1259 (Colo. App. 1992); See *also Ramsdell v. Horn*, *supra.* Claimant failed to carry that burden in this case. Accordingly, her claims must be denied and dismissed.

ORDER

It is therefore ordered that:

1. Claimant's claim for benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding

procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-041-216-01

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on December 5, 2017, in Denver, Colorado. The hearing was digitally recorded (reference: 12/5/17, Courtroom 1, beginning at 8:30 AM, and ending at 9:30 AM). No testimony was taken. Oral arguments were made.

Claimant's Exhibits 1 through 7 were admitted into evidence, without objection. Respondents' Exhibits A through C were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Claimant. The Claimant filed a proposed decision on December 12, 2017. Respondents were given two working days, or until the close of business on December 14, 2017, within which to file objections to the proposal. No timely objections were filed. After a consideration of the proposed decision, the ALJ has modified it and hereby issues the following decision.

ISSUE

The sole issue to be determined by this decision is whether the Claimant is entitled to a Division Independent Medical Examination in the absence of any admission

or determination concerning indemnity benefits. Because the Claimant's counsel made a judicial admission that the Claimant was not indigent and the Claimant would be paying for the DIME, any determination of the issue would be interlocutory.

The Claimant bears the burden of proof by a preponderance of the evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

1. The Claimant sustained an admitted compensable injury (within the definition of "sufficiency to be compensable") arising out of the course and scope of her employment on February 16, 2017.

2. The Claimant underwent significant medical treatment at the hands of Henry J. Roth, M.D. (Claimant's Exhibit 7), who was the Claimant's authorized treating physician (ATP). Dr. Roth diagnosed "a whiplash like response involving cervical, thoracic, and lumbar regions, primarily right-sided" (Claimant's Exhibit 7), occurring on February 16, 2017. He released the Claimant to full time work, effective February 21, 2017, with restrictions of "no patient turning, transfers, transport, or boosting." These restrictions continued until May 3, 2017. On May 24, 2017, Dr. Roth gave the Claimant a full release to work, and declared her to be at maximum medical improvement (MMI) with no residual impairment. Dr. Roth was of the opinion that the Claimant's condition was work-related.

3. First, the Respondents filed a General Admission of Liability (GAL) on May 1, 2017. Under the section "Liability is admitted for the following benefits, the box was checked, marking "medical benefits." No other box in that section was checked. In the "remarks" section, Respondents wrote "medical only claim with no lost time….Not at MMI/no PPD owed" (Claimant's Exhibit 1). The ALJ infers and finds that statement "Not at MMI/no PPD owed" a "rush to judgment before a Final Admission of Liability (FAL) was ripe.

4. Next, based on Dr. Roth's opinions, the Respondents ultimately filed an FAL, dated June 15, 2017 (Claimant's Exhibit 2), admitting for an MMI dated of May 24, 2017 and zero permanent partial disability (PPD). There have been no admissions for temporary disability benefits.

5. The Claimant filed a timely objection to the FAL and a Notice and Proposal to Select a DIME.

6. On July 12, 2017, Respondents requested a pre-hearing conference where both attorneys appeared by telephone.

7. A pre-hearing conference was held on July 31, 2017, before Pre-Hearing ALJ (PALJ) Thomas J. DeMarino. Based on the Industrial Claim Appeals Office Order in *Trujillo v. Elwood Staffing,* W.C. No. 4-957-118-02 [Indus. Claim Appeals Office(ICAO), June 22, 2017], PALJ DeMarino granted Respondents' motion to strike the Claimant's Notice and Proposal, articulating the fact that ATP Henry J. Roth, M.D., found zero PPD. This determination will be further discussed in detail herein below under "Conclusions of Law."

8. Thereafter, the Claimant applied for a hearing before the Office of Administrative Courts (OAC) on the issue of whether the Claimant is entitled to a DIME, under the holding in *Whiteside v. Smith,* 67 P.3d 1240 (Colo. 2003).. The hearing was held on December 5, 2017, with no testimony taken –only oral arguments of counsel. Also, Respondents filed a written "Trial Brief Regarding Claimant's Lack of Entitlement to a DIME," which was considered herein.

RESPONDENTS' ARGUMENTS

In a nutshell, Respondents orally argued that its admissions of liability are, essentially, nullities because the case does not involve a compensable "indemnity" claim. This Respondents incorrectly analogize the circumstances in this case to the established law that an employer may pay an injured worker's medical benefits without admitting or denying liability. *See* § 8-43-101, C.R.S. Reading the statutory section *in pari materia,* it is clear that an employer/insurance carrier can pay for an injured worker's medical benefits without taking a position admitting or denying compensability. The underlying purpose of this provision is to encourage the payment of medical bills by an employer without the employer committing to a position on liability. The ALJ concludes that this analogy is misplaced because the Respondents filed **admissions** concerning medical benefits and an FAL for zero PPD. *Black's Law Dictionary,* 10th Ed., defines "admission" as "an acknowledgement that facts are true." In this case, an admission of **liability** is an admission that the fact of liability is true, *i.e.* that the Respondents accept liability for a compensable injury resulting in the need for authorized medical treatment. An **admission of liability** in workers' compensation law is legally binding unless set aside in an adjudicatory proceeding. The ALJ soundly rejects the Respondents analogy to paying medical benefits without admitting or denying liability.

Respondents mechanistically rely of Workers' Compensation Rules of Procedure (WCRP), Rule 5-5 (E) (1) (a) [Trial Brief, p. 2, par. 5], which states"…within 30 days after the date of mailing or delivery of a determination by an authorized treating physician providing primary care that there is **no** (emphasis supplied) impairment, the insurer shall either: (a) file an admission of liability consistent with the physician's

opinion, or ()b) Request a Division Independent Medical Examination (IME) in accordance with…." The ALJ infers and concludes that Respondents must having been laboring under a scotoma (blind spot) with respect to the full import of this rule, which mandates a DIME request if no final admission is filed. Indeed, to accept the respondents' argument in this regard would be to interpret that only respondents, **and not claimants,** could obtain a DIME when there is zero PPD. Such an interpretation would do violence to the plain meaning of the rule.

Respondents, as did PALJ DeMarino in striking the Claimant's request for a DIME, rely heavily on ICAO's Order in *Trujillo v. Elwood Staffing,* W.C. 4-957-118-02 (ICAO, June 22, 2017). *Trujillo* is part of the progeny of *Harman-Bergstedt, Inc. v.* Lo*ofbourrow*, 320 P.3d 327 (Colo. 2014), which applied very narrow, fact specific principles, without establishing a sweeping precedent. *Trujillo* determined that MMI is a term of art, and has no legal significance in a case with no indemnity benefits payable. This makes implicit sense because MMI is the demarcation line between temporary and permanent disability indemnity benefits. In *Loofbourrow* by extension, an FAL is not effective to close a case as to further medical benefits. The Court stated that a claimant could still seek further medical benefits, with the burden of proof as to reasonableness and causal relatedness on the claimant. The holding of the case is that a petition to reopen need not be filed under §8-43-303, if the claimant should seek further medical benefits. The case sets no precedent as to any broader meaning than in the context of reopening for medical benefits, and it does not specify what type of medical benefits it is meant to address (*i.e*. *Grover* or pre-MMI substantive treatment). To accept the Respondents argument that the FAL, admitting for zero PPD is a nullity, would overturn the reasonable expectations of the community of injured workers who received a perfunctory zero impairment rating. It would undermine the DIME process whereby the ATP's opinion of zero PPD would be the end of the line and not subject to challenge.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

COMPENSABILITY

a. An "injury" referred to in § 8-41-301, C.R.S., contemplates a **disabling** injury to a claimant's person, not merely a coincidental and non-disabling insult to the body. *See Henderson v. RSI, Inc.,* 824 P.2d 91 (Colo. App. 1991). *Also see Gaudett v. Stationers Distributing Comp*any, W.C. No. 4-135-027 [Indus. Claim Appeals Office (ICAO), April 5, 1993]. A priori, **the consequences of a work-related incident must require medical treatment or be disabling** in order to be sufficient to constitute a compensable event. If an incident is not a significant event resulting in an injury, claimant is not entitled to benefits. *Wherry v. City and County of Denver*, W.C. No. 4-475-818 (ICAO, March 7, 2002). As found, by admissions of the Respondents and the

medical evidence, the Claimant sustained compensable injuries on February 16, 2017, arising out of the course and scope of her employment.

CLAIMANT'S ENTITLEMENT TO A DIME

Rule 5-5 (E) (1) (a) of the WCRP

b. Rule 5-5 (E) (1) (a), WCRP, allows for a DIME when an ATP rates PPD at zero.

Trujillo v. Elwood Staffing, W.C. 4-957-118-02 (ICAO, June 22, 2017)

c. This case, which was relied upon by PALJ DeMarino in striking the Claimant's request for a DIME at the pre-hearing conference, is part of the progeny of *Loofbourrow*, *supra*. The Supreme Court held in *Loofbourrow* that MMI is a term of art, and has no legal significance a case with no indemnity payable. By extension, a FAL is not effective to close a case as to further medical benefits. This makes implicit sense because MMI is the demarcation line between temporary and permanent disability indemnity benefits. The Court stated that the claimant could still seek further medical benefits, with the burden of proof as to reasonableness and causal relatedness on the claimant. The holding in the case is that a petition to reopen need not be filed under §8-43-303, C.R.S., if the claimant should seek further medical benefits. The case sets no precedent as to any broader meaning than in the context of reopening for medical benefits, and it doesn't specify what type of medical benefits it is meant to address (i.e. Grover or pre-MMI substantive treatment).

d. Additionally, *Trujillo* continues down the path of *Kazazian v. Vail Resorts*, W.C. No. 4-915-969-03 (ICAO, April 24, 2017), in that there is no statutory consequence of MMI unless there is an injury for which disability is payable. ICAO reasoned, "In Loofbourrow, the Court held that a determination of MMI has no statutory significance with injuries that do not result in the loss of no more than three days or shifts of work time or permanent disability, as is the case in this action…." See, *Trujillo v. Elwood Staffing*, *supra.* As stated, extending the *Loofbourrow* case this far was not the Supreme Court's intent. The "unique" circumstances of *Loofbourrow* are distinguishable from both this *Trujillo* case, as well as the present case decided herein. Moreover, this *Trujillo* case involves the limited issues of medical **benefits after a DIME had already occurred.** It is clearly distinguishable on these grounds as well. The case does not stand for the fact that the DIME should never have occurred, or that §8-42-107.2(a)(1)(A) does not apply in these instances. Stretching the rationales of these cases to the present case is an interesting gymnastic devoid of merit as applied herein.

[T]he General Assembly created the DIME System within the Statutory Scheme because of the Potential for Treating Physicians to be Biased

e. The logical result of the Respondents' argument is that if an ATP is allowed to determine whether or not a DIME should occur (if a zero PPD is assessed, there is no right to a DIME), is that it runs afoul of the decision in *Whiteside v. Smith,* 67 P.3d 1240 (Colo. 2003). *Whiteside* stands for the notion that the worker is giving up a lot of common law rights within the Colorado workers' compensation system, and therefore access to the system—including the DIME process—is a substantive due process right. The *Whiteside* Court stated unequivocally that the "substantive right to workers' compensation is a constitutionally protected property interest." Generally, this is true concerning the right to challenge an ATP's zero PPD rating. If not challenged through the DIME process, the ATP's zero PPD rating is final and "supreme." To argue the a request for a DIME is not yet ripe creates a logical fallacy, whereby any challenge or rating other than the ATP's zero PPD rating will, most likely never be ripe unless there's a worsening of condition. There is a missing link in such a notion, *i.e.,* the present right to challenge an ATP's zero PPD rating.

Harman-Bergstedt, Inc. v. Loofbourrow, 320 P.3d 327 (Colo. 2014)

f. The *Loofbourrow* case is distinguishable from the present case. In *Loofbourrow* there *was no* FAL filed. It is clear error to extend this holding to the conclusion that there can be no DIME without a TTD payment. It is a stretched connection, beyond the bounds of reason, with such overwhelming, key distinguishing facts.

g. The Respondents argue that a DIME should not be granted in the absence of PPD or TTD award. The argument relies squarely on the holding in the *Loofbourrow* case and its ICAO progeny. The *Loofbourrow* case did not involve a FAL. The filing of an FAL triggers a claimant's duty to request a DIME. *See*, § 8-42-107.2(a)(1)(A), C.R.S. The only legal remedy for a claimant (or respondent) who disagrees with an ATP's MMI determination is to request a DIME. Thus, the *Loofbourrow* decision does not apply in this instance given the clear factual incongruence. There is also the issue of **due process**, which will be discussed *infra*. In fact, many cases would not be factually similar to *Loofbourrow*, as that case involved "unique circumstances." See, *Harman-Bergstedt, Inc. v. Loofbourrow*, *supra*. For the Respondents' arguments to prevail, *Loofbourrow* must be read in such a way that it tortures the facts and looks nothing like the decision itself. The *Loofborrouw* holding is very narrow and limited. Its progeny have gone far out of bounds. The *Loofbourrow* decision itself concedes how unique the factual situation was. It does not apply to a situation in which an FAL is part of the procedural history (there was no FAL in *Loofbourrow*, *supra*).

h. The *Loofbourrow* Court refers to the "unique circumstances of that case. *See, Harman-Bergstedt, Inc. v. Loofbourrow*, *supra*. Further, the Supreme Court stated: "The **sole** (emphasis supplied) issue before this court is whether Loofbourrow could be entitled to an award of temporary disability benefits without having challenged, by means of a division-sponsored independent medical examination, the initial treating physician's assessment that she had reached maximum medical improvement. The intermediate appellate court found that**, under the unique circumstances of this case,** including particularly her claim of a worsening condition and the **absence of a final admission of liability…**" [emphasis supplied], *Id*. If the Respondents use *Loofbourrow* to skirt the due process import of *Whiteside v. Smith, supra,* they do so in a "circular" way. Specifically, they implicitly argue that the Claimant never had a right to the DIME in the first place. The ALJ concludes that this circuitous argument is a stretch beyond the bounds of reason and without merit.

Setting Aside Pre-Hearing Order Striking DIME

i. The orders of a PALJ are not final for purposes of an appeal. *See Indus. Claim Appeals Office v. Orth,* 965 P.2d 1246 (Colo. 1998). As found and concluded, PALJ DeMarino's pre-hearing conference order misplaced a reliance on ICAO's Order in *Trujillo, supra.* For the reasons articulated herein above, the pre-hearing conference order was in error and should be set aside.

Burden of Proof

j. The burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P.2d 535 (Colo. App. 1992), and it is by a "preponderance of the evidence." A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained her burden that she is entitled to a DIME to challenge ATP Dr. Roth's zero PPD rating.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Claimant is entitled to a Division Independent Medical Examination (DIME) at her own expense.

B. The DIME process shall proceed forthwith. PALJ DeMarino's Pre-Hearing Conference Order is hereby set aside.

C. This order is procedural and interlocutory because it does not award any benefits. Therefore, any and all issues not determined herein are reserved for future decision.

DATED this_____day of December 2017.

ISSUES

- Whether the Claimant has produced clear and convincing evidence to overcome the Division Independent Medical Examination (DIME) opinion of Dr. Dwight Leggett that the Claimant reached maximum medical improvement on March 24, 2015 and has no ratable impairment from his February 22, 2015 industrial injury.

- If the Claimant is entitled to medical impairment benefits, the average weekly wage that would be applied to the benefit calculation.

- Whether the Claimant is entitled to maintenance medical care.

STIPULATIONS

In the last Final Admission of Liability filed April 4, 2016, Respondents admitted for maintenance medical treatment per the DIME report from Dr. Leggett dated January 19, 2016. Claimant accepted that submission regarding maintenance medical care.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. On February 22, 2015, Claimant suffered an admitted work-related injury while working as an attendant at Employer's convenience store.

2. Claimant fell from a free-step ladder and experienced pain in his lower back on his left side. This occurred at approximately 9:00 p.m. and Claimant worked until his shift ended approximately one hour later.

3. Claimant was sore the next morning. He called Employer who sent him to Concentra the next day. Dr. Rosalinde Pineiro at Concentra in Fort Collins treated Claimant.

4. At the initial visit, Claimant completed a patient information form indicating that his injury was limited to his lower back. He also completed a pain diagram circling the lower back indicating that he had pins and needles symptoms in that area.

5. Dr. Pineiro's February 23, 2015, report noted Claimant's complaints of the following on physical examination: muscle pain, back pain, joint stiffness, muscle weakness, limping and night pain. Claimant did not report no joint pain, neck pain, or joint swelling. On examination, Dr. Pineiro found Claimant's head and face to be atraumatic with no tenderness. She found a normal gait and no tenderness or swelling of the extremities. Dr. Pineiro noted Claimant's range of motion to be within normal

limits as was muscle strength and tone.[1] She noted tenderness in the right shoulder AC joint. There was also some tenderness in the right upper arm. The left shoulder was abnormal due to polio. The right hip showed no tenderness except in the gluteus maximus, minimus, greater trochanter and bursa. The lumbar spine appeared normal with some tenderness and bilateral muscle spasm.

6. Dr. Pineiro x-rayed Claimant's spine during his February 23, 2015 visit. It showed no fracture or subluxation. The disc spaces and heights of Claimant's vertebral bodies were relatively preserved, the spinal rods placed due to Claimant's polio as a child were noted.

7. Dr. Pineiro released the Claimant to return to modified duty as of that date. Claimant returned to work within the restrictions. Claimant did not miss sufficient time to receive temporary total disability benefits.

8. On February 25, 2015, Claimant returned to Dr. Pineiro. She noted that Claimant was working within her restrictions and tolerating the work. However, Claimant had difficulty changing positions, sitting, and placing weight on his right buttock. Dr. Pineiro referred Claimant to physical therapy two to three times a week for four weeks. She continued his work restrictions.

9. Claimant participated in physical therapy with Concentra from February 26, 2015 through March 17, 2015.

10. On March 10, 2015, Claimant reported to Dr. Pineiro that he was improving and could perform his regular job duties. He was motivated to return to full duty at least in part by Employer's ability to employ him only part-time at restricted duty and his thereby becoming ineligible for health insurance benefits. She placed him at regular duty and advised him to report if he did not tolerate it. Dr. Pineiro continued Claimant's physical therapy and refilled his Tylenol No. 3 prescription.

11. Claimant's final visit to Dr. Pineiro was on March 24, 2015. He had been back at regular duty for two weeks. He reported mild back pain and that his symptoms were continuing to improve. He had no abdominal pain, back stiffness, lower extremity numbness, paresthesia, or weakness by history. On examination Dr. Pineiro found Claimant had a normal gait, no tenderness or swelling of his extremities, a range of motion within normal limits and normal muscle strength and tone. Claimant's thoracic and lumbar spine showed no tenderness. Dr. Pineiro noted that Claimant had polio as a child which led to back deformity.

12. On March 24, 2015, Dr. Pineiro released Claimant at maximum medical improvement (MMI) without restrictions. She provided no permanent impairment rating. She continued his home exercise program.

[1] As a result of childhood polio, Claimant had metal rods placed along his spine from T2 through T9, and exhibits extreme scoliosis. Dr. Pineiro did not explain how Claimant's range of motion could be described as normal given those conditions.

13. On September 11, 2015, Respondents filed a Final Admission of Liability regarding Dr. Pineiro's release. Respondents admitted for zero whole person impairment and no maintenance medical treatment.

14. Claimant requested a Division IME which Dr. Leggett performed on January 19, 2016. According to the DIME report, Claimant listed for consideration review of his lumbar spine, thoracic spine, and cervical spine; evaluation for a closed head injury, and any other body parts or conditions related or associated to the injury such as psychiatric, if appropriate. Claimant also requested review of his placement at MMI.

15. At his DIME, Claimant reported multiple areas of pain generation. The primary area concerned Claimant's low back greater on the right than left. This is inconsistent with the pain questionnaire Claimant filled out when placed at MMI when he indicated that his pain 1 on a scale of 1 to 10, with pins and needles pain on his left side. Claimant also complained at the DIME that he had pain traveling down his left leg and into his toe as well as down the right leg into the calf and bottom of his foot. Claimant complained of right elbow pain and snapping in his left knee. Claimant further reported pain coming from his bilateral shoulder blades, a large amount of tenderness and tension in that area which traveled to the base of his neck creating severe headaches. He reported hypersensitivity with any sort of touch over the top and side of his head. Finally, he mentioned cyclic emotional changes at times.

16. Despite all these pain complaints, Claimant acknowledged that he had not sought treatment through the authorized provider subsequent to his discharge, either before the DIME or thereafter, up to the date of the hearing.

17. Claimant disclosed his medical history to Dr. Leggett, including polio affecting his back, lower extremities and left upper extremity. Claimant has severe scoliosis from the polio. He underwent Harrington rod placement from T2 through T9. He also reported a left shoulder arthrodesis, left pronator release and tendon transfer.

18. Claimant continued to work full duty for Employer subsequent to being placed at MMI. Wage records show that Claimant worked more hours after being placed MMI until he left Employer than he had worked prior to the date of injury. Claimant left Employer in June, 2015. He subsequently became employed by another convenience store/gas station in the Fort Collins area and continued to work in that position up to the date of hearing. Claimant works fulltime for similar pay and with job duties similar to those he had at Employer.

19. On examination, Dr. Leggett deferred range of motion measurements in the thoracic spine due to clear limitation caused by the Harrington rods placed in his thoracic spine. Dr. Leggett noted Claimant's altered low back anatomy which caused difficultly in palpating Claimant's thoracic facet joints. Claimant's unique anatomy caused Dr. Leggett to be unable to stabilize Claimant's positioning well enough to obtain a meaningful straight leg test which voided the validity testing.

20. Despite repeated testing and repositioning throughout the examination, Dr. Leggett was unable to produce any paresthesia on examination. After performing his physical examination and reviewing Claimant's medical records, Dr. Leggett determined that the work-related treatment which had targeted Claimant's thoracic and lumbar region appeared to be appropriate. He then addressed the various areas Claimant had requested in the DIME Application. Dr. Leggett indicated that he was unable to find any records supporting an injury to Claimant's head or neck region and that Claimant's initial evaluation showed multiple findings and history that would be inconsistent with a cervical injury.

21. Dr. Leggett found no supporting information to identify a closed head injury and therefore did not relate one to the claim. He found no knee injury or treatment as part of the claim. As to psychological issues, Dr. Leggett found no psychological impairment.

22. Dr. Leggett agreed with Dr. Pineiro that the Claimant reached MMI on March 24, 2015. Dr. Leggett recommended a maintenance program to maintain MMI. Based on Dr. Leggett's report, Respondents filed the last Final Admission of Liability on April 4, 2016. In that Admission, Respondents admitted for zero permanent whole person impairment and maintenance medical benefits per the DIME report.

23. In his initial report, Dr. Leggett found Claimant's loss of range of motion to be 19% whole person. However, Dr. Leggett did not diagnose a specific disorder as required by Table 53 of the AMA Guides. Dr. Leggett apportioned the range of motion measurement attributing 75% to the pre-existing polio and 25% to Claimant's work injury. Thus, Dr. Leggett gave Claimant a 5% whole person impairment rating.

24. The Division of Workers' Compensation DIME unit wrote to Dr. Leggett on February 5, 2016, informing him that he needed to address the Table 53 issue and apportionment if he applied it.

25. Dr. Leggett responded with a final report dated February 16, 2016. Dr. Leggett indicated that upon further review of the AMA Guides, he realized a Table 53 diagnosis must be given in order to give a range of motion impairment rating. Dr. Leggett stated that given Claimant's history of pre-existing polio, he was unable to adequately assign any of the specific disorders identified in Table 53 to the work injury. Absent a Table 53 rating, no range of motion impairment can be given. Claimant's overall impairment rating was assigned at zero. Apportionment was not applied.

26. In addition to the polio references in the medical records, Claimant provided specific information as to his pre-existing polio diagnosis and its impact. Claimant was diagnosed with polio as a child. He wore a brace on his right leg until the age of 5. He had a body brace from his neck down thereafter. He had severe scoliosis/curvature from the polio. Claimant received treatment from the Shiner's Hospital in Salt Lake City from age 10 through 13. He had back surgery and multiple shoulder surgeries on the left side. He had a plate placed in his left shoulder. He also had work done on his left arm muscles, and on his thumb and fingers.

27. Claimant has worked in multiple positions for grocers and convenience stores since age 18. He has worked as a sacker, checker, attendant, and front desk person. Claimant was able to do the work required for these positions and does not consider himself disabled. However, Claimant admitted that polio did limit his bending, caused him to limp, and limited certain ranges of motion. Claimant continues the same type of work without restrictions.

28. Claimant detailed pain complaints ongoing since March 2015. He discussed them with DIME physician, Dr. Leggett, in January 2016. Claimant admitted that his surgeries left him with pain in his shoulder and back. Dr. Leggett testified by deposition that Claimant had a tremendous amount of shoulder blade pain which Claimant attributed to polio. Claimant acknowledged that obvious changes in his gait and his ability to get on and off the examination table also resulted from polio. On examination, Dr. Leggett noted high levels of muscle tension throughout Claimant's mid-back and several other areas into the scapular region. Dr. Leggett attributed Claimant's muscle spasticity as more likely related to polio than a traumatic injury.

29. Dr. Leggett testified that in addition to discussing polio with Claimant, he reviewed clinical notes from 1983 which documented Claimant's treatment and ongoing symptoms. Dr. Leggett also found that because pre-existing polio is a degenerative disease that leads to musculoskeletal problems, he believed it inappropriate to assign a Table 53 impairment rating.

30. Dr. Leggett testified that the range of motion measurements were probably invalid due to abnormal pelvic positioning from the polio and scoliosis. In order to evaluate range of motion in the low back one has to be able to look at the relation of the motion between the low back and the sacral component. In Claimant's case, he had an abnormal rotation of his hips and tightness in one greater than the other. This made doing straight leg raising painful. Claimant had to assume an outward rotation position in order to perform the testing which invalidated the results. Although Dr. Leggett was able to obtain range of motion measurements of the lumbar spine, those measurements were also impacted by the Claimant's underlying polio.

31. The Division challenged Dr. Leggett's report because he assigned a range of motion impairment rating without providing a Table 53 determination. Dr. Leggett responded by making calls to the workers' compensation board and further reviewing the AMA Guidelines. Ultimately, Dr. Leggett determined he was unable to adequately assign any Table 53 disorder to the workers' compensation injury and withdrew the range of motion impairment rating.

32. Dr. Leggett admits Claimant suffered a work-related injury; but attributed, no radicular process to his injury. Also, the majority of Claimant's pain was reproducible soft tissue, and myofascial in nature. Dr. Leggett opined that the significant tightness and rigidity in Claimant's low back related to pre-existing polio.

33. Claimant seeks a higher average weekly wage based on wages paid through the end of his employment. The records do indicate that the Claimant earned

greater wages after maximum medical improvement through the date of his resignation. However, there was no temporary disability or lost time subsequent to Claimant's initial injury or the date of MMI.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. §8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true that not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is within the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008).

The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

In ascertaining a DIME physician's opinion, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998). A DIME physician's determination regarding MMI and permanent impairment consist of his initial report and any subsequent opinions. *In Re Dazzio*, W.C. No. 4-660-149 (ICAP, June 30, 2008); see *Andrade v. Industrial Claim Appeals Office*, 121 P.3d 328 (Colo. App. 2005). An ALJ may consider the DIME physician's deposition testimony as part of his opinion for purposes of determining the DIME physician's opinion. *Lambert & Sons, Inc.* supra at 659.

When a DIME physician issues conflicting or ambiguous opinions, the ALJ may resolve the inconsistency as a matter of fact so as to determine the DIME physician's true opinion. *MGM Supply Co. v. Industrial Claim Appeals Office*, 62 P.3d 1001 (Colo. App. 2002); *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc.,* supra.

Overcoming the DIME

The DIME physician's opinions regarding causality must be overcome by clear and convincing evidence. *Qual-Med, Inc. v. ICAO*, 961 P.2d 590 (Colo. App. 1998). As a matter of diagnosis, the assessment of impairment requires a rating physician to identify and evaluate all losses and restrictions which result from the industrial injury. *Colorado AFL-CIO v. Donlon*, 914 P.2d 396 (Colo. App. 1995); AMA, Guides to the Evaluation of Permanent Impairment ch. 2.1-2.2 (3rd ed. 1990). "Clear and convincing evidence" is evidence, which is stronger than preponderance, is unmistakable, makes a fact or facts highly probable or the converse, and is free from serious or substantial doubt. *Leming v. Indus. Claim Appeals Office*, 62 P.3d 1015 (Colo. App. 2002). In other words, a DIME physician's findings may be not overcome unless the evidence establishes that it is "highly probable" that the DIME physician's opinion is incorrect. *Postelwait v. Midwest Barricade*, 905 P.2d 21 (Colo. App. 1995). To overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc.*, W.C. No. 4-476-254 (ICAO, October 4, 2001).

As a matter of diagnosis, the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office*, 78 P.3d 1150 (Colo. App. 2003). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova,* supra; *Qual-Med, Inc.* supra. The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office*, 17 P.3d 202 (Colo. App. 2000).

In *Wackenhut Corp.,* the court noted that under the AMA Guides, the "evaluation or rating of impairment is an assessment of data collected during a clinical evaluation and the comparison of those data to the criteria contained in the Guides." Consistent with this concept the Industrial Claim Appeals Office has upheld a DIME physician's impairment rating that excluded "valid" range of motion deficits from an impairment

rating based on the determination that the range of motion deficits did not correlate with clinical observations and data. *Adams v. Manpower*, W.C. No. 4-389-466 (I.C.A.O. August 2, 2005); *Garcia v. Merry Maids*, W.C. No. 4-493-324 (I.C.A.O. August 12, 2002).

Claimant has failed to produce clear and convincing evidence to overcome Dr. Leggett's Division IME opinion that Claimant suffered no permanent medical impairment as a result of the admitted February 22, 2015 work injury. Dr. Leggett received substantial information regarding Claimant's underlying pre-existing impairment from childhood polio. Dr. Leggett discussed this information with Claimant and reviewed medical records regarding the prior polio related treatment and limitations. On examination, Dr. Leggett noted substantial physical abnormalities and impairment as a result of the polio. Claimant's pre-existing abnormalities and disabilities impacted Claimant's presentation and range of motion measurements. Dr. Leggett was unable to assign a Table 53 impairment rating for Claimant's work related injury.

The parties do not dispute the compensability of Claimant's February 22, 2015 injury. However, they do dispute the nature and extent of Claimant's permanent impairment and whether that impairment was related to the February, 2015 accident. The DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova,* supra. Claimant has not met his burden to overcome the DIME physician's opinion that Claimant, although injured, did not suffer a ratable impairment under the AMA Guidelines. As such, Claimant is not entitled to a range of motion impairment because he failed to establish a ratable impairment.

In *Marquez v. Americold Logistics*, W.C. No. 4-896-504 (ICAO, August 7, 2014) the claimant challenged a zero impairment rating by a DIME physician. The ALJ determined that the claimant failed to overcome the zero impairment rating and the ICAO affirmed the decission. The DIME physician did perform an impairment analysis and determined that the claimant had an overall impairment of 26% of the whole person. But in her opinion, none of the claimant's impairment was causally related to the industrial injury. As such, the doctor opined that the claimant's impairment was related to a pre-existing industrial injury. Apportionment statutes are to be applied only after a rating physician, including the DIME physician, initially determines that the industrial injury caused ratable impairment under the AMA Guides. *Marquez*, supra; C.R.S. § 8-42-104(5)(a) and (b).

It is well established that the DIME physician's opinion on MMI, just as with a medical impairment rating, is binding unless overcome by "clear and convincing" evidence. § 8-42-107(a)(c) C.R.S. 2017. To overcome a DIME physician's opinion, there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt. *Adams*, supra.

In the present case there is no difference in medical opinion regarding whether the Claimant has reached maximum medical improvement. Dr. Pineiro, Claimant's ATP, placed him at MMI in March 2015. Claimant did not seek maintenance care and made no effort to return to the physician for additional care or reopening. The DIME occurred in January of 2016. Dr. Leggett concluded that Claimant remained at MMI after evaluating all of Claimant's complaints. Dr. Leggett also found that the majority of the body parts which Claimant complained about were not included in the claim and did not form the basis of ratable impairment. Claimant has not sought care or treatment from January of 2016 to the present despite the DIME's recommendations and Insurer's admission.

Claimant has failed his burden to overcome, by clear and convincing evidence, the finding of the Division IME physician that Claimant reached MMI as of March 24, 2015.

Medical Maintenance Treatment

Claimant has raised the issue of entitlement to maintenance medical care. In their April 4, 2016, Admission, Respondents admitted for maintenance medical treatment per the DIME report. Maintenance medical treatment may not be conditioned, thus the Admission results in maintenance treatment being open to the extent the requested care is reasonable, necessary, and related to the industrial injury.

As Claimant has not sought specific care, there is no issue to address as to the reasonableness, necessity or relatedness of any treatment but merely a conclusion that the claim remains open pursuant to Admission.

The ALJ need not address the issue of Average Weekly Wage.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant has failed to meet his burden of proving that the DIME physician, Dr. Dwight Leggett, erred in his DIME report on the issue of MMI or lack of permanent medical impairment. Claimant's request to overcome the DIME as to those two issues is denied and dismissed.

2. Claimant is entitled to maintenance medical treatment that is reasonable, necessary and related to the workers' compensation injury pursuant to Respondents' Admission.

3. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 13, 2017

/s/ Kimberly Turnbow
Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he sustained a compensable work related injury on February 25, 2014.

2. Whether Claimant has established by a preponderance of the evidence that he is entitled to a general award of reasonable and necessary medical benefits to treat a February 25, 2014 work injury.

3. Whether Claimant has established by a preponderance of the evidence an entitlement to temporary partial disability benefits from February 25, 2014 through March 13, 2014.

4. Whether Claimant has established by a preponderance of the evidence an entitlement to temporary total disability benefits from March 14, 2014 and ongoing.

5. Whether Claimant is subject to penalties pursuant to § 8-43-304, C.R.S. and § 8-43-305, C.R.S. for violations of the following rules/statutes: OAC Rule 15; OAC Rule 16(b); W.C.R.P. Rule 9-3(A)(C); § 8-43-102, C.R.S. ; or § 8-43-211(B)(3), C.R.S.

STIPULATIONS

1. The parties stipulated that Claimant's average weekly wage is $409.15.

2. The parties stipulated that if the claim is found compensable, Respondents would be entitled to an offset for Social Security Disability Insurance payments received by Claimant.

PRELIMINARY ISSUES

A Motion to Compel answers to interrogatories was filed by Respondents. An Order compelling Claimant to provide responses to interrogatories was issued on September 11, 2017. Claimant provided responses to interrogatories on September 19, 2017. Question 15 asked for information on whether or not Claimant sought agreement from Respondents prior to cancelling the hearing set for September 19, 2016. Claimant did not answer the question indicating it requested an improper admission and sought information not relevant to issues for hearing. Question 17 asked for legal authority supporting the position that the claim was not closed. Again, Claimant indicated that the question requested information not relevant to hearing.

Although Respondents had almost a month before hearing and although they did not seek a motion for more substantial answers and did not file any motions to compel

more complete answers, the ALJ agrees that the questions sought information relevant to the penalty issue and the closure of claim issue and that the questions were not answered completely. The ALJ thus, at the start of hearing, barred Claimant from presenting any testimony or evidence surrounding the penalties for failing to confer with Respondents prior to cancelling the September 19, 2016 hearing and also barred Claimant from presenting any testimony or evidence surrounding claim closure as a sanction for failing to completely and appropriately respond to discovery. Claimant was allowed to make legal arguments as to the issues but could not offer testimony/evidence as a discovery sanction.

FINDINGS RELATED TO PROCEDURAL HISTORY

This case followed a somewhat circuitous course to the issuance of this Order. An Application for Hearing was initially filed by Claimant on February 25, 2016. A Response to Application for Hearing was filed by Respondents on March 17, 2016. The matter proceeded to hearing before ALJ Felter on June 23, 2016. A post hearing deposition was set to take the testimony of Dr. Roth and was completed on July 11, 2016. At hearing, before ALJ Felter, ALJ Felter indicated that the parties needed to set a continuation hearing in the event of rebuttal. ALJ Felter ordered the parties to complete briefs following the deposition of Dr. Roth and set deadlines of August 9th for Claimant's opening brief, August 18th for Respondent's answer brief, and August 22nd for Claimant's reply brief. ALJ Felter also ordered that the continuation hearing in the event of rebuttal be set for a time after September 1st. The parties went directly to the clerk's window following the June 23, 2016 hearing to clear a continuation hearing date which was set for a half day hearing on September 19, 2016.

Claimant submitted an unopposed motion for extension of time to file his opening brief which was granted. Claimant then filed his opening brief and Respondents submitted their response brief. By August 31, 2016, both briefs had been received by the Office of Administrative Courts. On September 1, 2016 Claimant's attorney submitted a hearing cancellation form to cancel the September 19, 2016 continuation hearing. Claimant's attorney checked that he had had conferred with the opposing party and that they agreed to cancel the hearing and checked the reason for cancellation was "application withdrawn." Respondents did not file any objection or response to the hearing cancellation. After the September 19th hearing was cancelled and in October and November, Claimant's attorney contacted the Office of Administrative Courts to find out if ALJ Felter had issued an order yet in the case. In mid-November of 2016 both Claimant and Respondent were informed by the Office of Administrative Courts that the matter was no longer pending and thus no order would be issued by ALJ Felter because the application had been withdrawn.

On March 28, 2017 Claimant filed a new Application for Hearing on the same issues that were heard by ALJ Felter. Claimant also, on the same date, filed a Motion for Post Hearing Conference with ALJ Felter. Claimant indicted that he had mistakenly marked "application withdrawn" on the hearing cancellation form to cancel the continuation hearing set for rebuttal. Claimant requested that the parties be allowed to schedule a post hearing conference with ALJ Felter to determine the best course of action

for this claim. On April 5, 2017 Respondents filed a Response to Claimant's Request for Status Conference. Respondents indicated their belief that the September 19, 2016 continuation hearing was for both possible rebuttal and for closing arguments. Respondents also pointed out that Claimant did not confer with Respondents prior to filing the hearing cancellation as required by rule. Respondents argued that they had filed a response to the application, and that the application therefore could not be withdrawn without either the agreement of the parties or upon the order of a judge and that neither had happened. Respondents argued that they did not agree to cancel the hearing or withdraw the application.

Respondents, in essence, argued that the application was not withdrawn since there had been no agreement to withdraw it and there had been no Order from a Judge withdrawing it. However, despite this argument, Respondents then took the position that the application should be withdrawn. Respondents argued that the case should be "closed" due to Claimant's mistake in marking application withdrawn without the agreement of both parties and Respondents objected to a post hearing conference. Respondents argued that they would be prejudiced in having to address issues on a matter that was clearly closed. From Claimant's filing, the ALJ finds that Claimant was attempting to notify ALJ Felter that checking "application withdrawn" was an inadvertent error and he was simply seeking to cancel the rebuttal hearing and to have the ALJ issue an Order on the evidence and briefs that had been received. Claimant was not intending to withdraw the application and start anew requiring both sides to re-litigate the same case. However, Respondents argued that because the application was withdrawn by Claimant without Respondents consent and in violation of rule, the application should be ordered withdrawn.

On April 7, 2017 ALJ Felter issued an Order Denying Claimant's Motion for Post-Hearing Conference with ALJ Felter and Upholding Withdrawal of Application for Hearing. ALJ Felter sided with Respondents and ordered that the application in this matter was withdrawn. ALJ Felter noted that Claimant had re-filed an Application for Hearing on the same issues he had heard that could proceed de novo to any ALJ. ALJ Felter ordered that the case that he heard was "closed" because Claimant had filed a withdrawal of the application for hearing without the agreement of Respondents and he denied the request for a post hearing conference.

Neither counsel for Claimant nor counsel for Respondent filed a motion for reconsideration of ALJ Felter's April 7, 2017 Order. Neither attorney informed the Court that the matter was ready for an Order based on the evidence, testimony, and briefs that had been submitted nor did they request a follow up hearing to make closing arguments or to submit the matter for an Order.

FINDINGS OF FACT

1. Claimant was employed by Employer as an inventory clerk. Employer was a sub-contractor for the grocery store chain, King Soopers. Claimant would be assigned to go to various King Soopers stores to count/track inventory.

2. On February 25, 2014 Claimant was at a King Soopers location counting/tracking inventory. Claimant alleges that while bending down on his knees and crouching, he felt a sharp pain in his low back that went down into his right leg.

3. Claimant alleges that he informed his supervisor, Nate Williams, that he was having back pain. Claimant took Motrin for the pain and continued to work the remainder of his shift.

4. On February 26, 2014 Claimant worked his regularly scheduled shift but continued to have back pain. Claimant did not work again until March 5.

5. On March 5, 2014 Claimant was unable to work his entire shift due to back pain and he left early. Claimant was driven home that day by his supervisor Mr. Williams.

6. Claimant took a few days off of work due to his back pain and was scheduled to go on a work inventory road trip on March 9, 2014. Claimant went on the road trip with co-workers and performed his normal inventory duties.

7. On March 12, 2014 Claimant was performing his job duties and was sitting on a step stool. Claimant alleges that he fell backwards off the stepstool and landed on his tailbone. Claimant alleges that his low back pain became excruciating and he did not finish his shift, but waited in the company vehicle for his co-workers to finish inventory.

8. Claimant did not return to work after March 12, 2014. Claimant alleges that he contacted Mr. Williams regarding visiting the doctor for the work injury and was told he would be given information from Employer's owner. Claimant alleges that he did not receive any further calls or communication from Employer. The only contact at Employer that Claimant had was Mr. Williams, and despite calling Mr. Williams on several occasions, Claimant never received a call back. Claimant did not file a report of injury or make any further attempt to file a workers' compensation claim other than calling Mr. Williams.

9. On March 14, 2014 Claimant went to the emergency department of Lutheran Medical Center. Claimant reported low back pain in the right lower lumbar area that radiated down the back of the leg into the foot. Claimant reported that his symptoms started about one week prior and got a lot worse after falling off a stool two days prior. Claimant did not report the alleged crouching incident on February 25, 2014. Claimant reported a history of chronic back pain that was usually well controlled with anti-inflammatories. Claimant was found to have right lower lumbar area tenderness. X-rays of the lumbosacral spine showed no evidence of fracture or acute osseous abnormality, but showed moderate chronic spondylosis at the L5-S1 level with narrowing of the disc space and endplate sclerosis. Mild narrowing of the L4-5 disc space was also present. The impression provided was: no acute fracture or alignment abnormality; and chronic lumbar spondylosis at L4-5 and L5-S1. Claimant was discharged with anti-inflammatories, muscle relaxants, painkillers, and was advised to follow up in outpatient. There was a question of back strain or discopathy. *See* Exhibits 1, Z.

10. On March 21, 2014 Claimant was evaluated at Kaiser. Claimant reported that since the emergency department visit his right leg felt weak. Claimant was assessed with lumbar radiculopathy and the plan was to obtain a lumbar spine MRI. Claimant was referred to physical therapy. *See* Exhibits 2, AA.

11. On April 7, 2014 Claimant underwent physical therapy. Claimant reported a history of back problems with a surgery on L4-5 years ago. Claimant reported that his back pain was worsening starting the middle of last month and then he had even more pain and worsening symptoms after falling off a stool. Claimant did not report the alleged crouching incident on February 25, 2014. *See* Exhibits 2, AA.

12. On April 18, 2014 Claimant underwent physical therapy. Claimant reported that he thought his back was moving better with the exercises but that the pain in his leg was unchanged. *See* Exhibit AA

13. On May 14, 2014 Claimant was evaluated by Oscar Sanchez, M.D. Claimant reported having pain beginning in February after being at work. Claimant did not report the alleged crouching incident on February 25, 2014. No major trauma was reported. It was noted that Claimant had a prior hemilaminectomy on L5 in 2001 for a herniated disc. Claimant reported that over time, his pain got worse and he took time off work which did not help. Claimant also reported that after going on a road trip he felt worse. Dr. Sanchez noted that the recent MRI showed post-surgical changes and hemilaminotomy on L5 and also showed a new disc herniation of the L5 disc with a right-sided protrusion and abutment of the right proximal S1 nerve root. On examination, Claimant had a positive straight leg raise test on the right leg. Dr. Sanchez assessed: lumbo-sacral radiculopathy; L5 disc re-herniation; right leg pain; and history of prior microdiscectomy in the past. Dr. Sanchez noted that Claimant had sub-acute radicular pain and that the MRI showed a recurrent herniation in L5, explaining the leg pain. Dr. Sanchez recommended epidural steroid injections at S1 and L5 and noted that if Claimant did not respond to the injection, Claimant may see a surgeon soon. *See* Exhibits 2, AA.

14. On May 16, 2014 Claimant underwent a right S1 transforaminal epidural steroid injection, spread to the L5-S1 lateral recess. It was noted that the post procedure neurologic exam was identical to the pre procedure neurologic exam. *See* Exhibits 2, AA.

15. On June 18, 2014 Claimant was evaluated by Dr. Sanchez. Claimant reported that he had good anesthetic response to the injection but after a few days, he had worsening of the pain. Dr. Sanchez noted that Claimant had persistence of radicular pain despite conservative efforts and that the injection worked only for a week. Dr. Sanchez noted that Claimant could benefit from surgery and surgeon Mark Melton, M.D. discussed re-operative discectomy with Claimant on the dame date. Dr. Sanchez noted that the goal would be to improve the radicular pain but that Claimant likely may continue with axial low back pain. *See* Exhibits 2, AA.

16. On August 4, 2014 Claimant underwent physical therapy. Claimant reported that in February of 2014 he woke up with increased back pain that progressed to right leg pain and weakness. Claimant reported that there was no injury that caused the pain. It was noted that his MRI showed degenerative disc disease and that he was scheduled for surgery on August 11th. *See* Exhibit AA.

17. On August 15, 2014 Claimant underwent surgery performed by Mark Melton, M.D. Dr. Melton noted a pre and post-operative diagnosis of recurrent right L5-S1 disk herniation. In surgery, Dr. Melton noted that the disk annulus at L5-S1 was visualized and had no frank disk herniation, but had a large disk osteophyte complex which was freed and trimmed. Dr. Melton significantly freed the nerve root and freed the S1 nerve root from the undersurface of the prior disk herniation and disk operation. Dr. Melton took down the osteophytic portions of the prior disk and after freeing the osteophytes and resecting them the nerve was checked along it entirety and was decompressed adequately and completely. *See* Exhibit 1.

18. On August 16, 2014 Claimant was discharged following lumbar decompression surgery.

19. On August 28, 2014 in a post-operative follow up, Claimant reported that his right leg pain was somewhat better but that he still had low back and mid back pain. Later that year, Claimant continued to report pain and the possibility of a spinal cord stimulator was discussed. Claimant reported 25% relief in his right lower leg symptoms but continued problems and pain. *See* Exhibit AA.

20. On July 15, 2015 Claimant filed a claim for workers' compensation. Claimant listed the date of injury as February 25, 2014.

21. On May 11, 2016 Claimant underwent an independent medical examination performed by Henry Roth, M.D. Claimant reported low back pain and right leg pain. Claimant reported that in 2000 he lifted a box while working in a warehouse and had the onset of low back pain. Claimant reported that he had surgery, physical therapy, and thereafter had only residual aches and pains with no major pain and was able to return to casual sports activities like basketball and softball league. Claimant reported that from 2000 to 2014 he would take an occasional ibuprofen. Claimant reported that on February 25, 2014 he experienced low back pain while crouching/squatting down at work to check inventory on the lower 2 shelves. Claimant reported that he was on his way down and had not yet gotten into a kneeling position or yet handled any inventory when he felt the pain. Claimant reported that he went to the front of the store to get Ibuprofen and reported the occurrence to his supervisor. Claimant reported that he worked the rest of the day and that his next day at work was not until March 5, 2014 and that he had to leave early that day due to his low back pain. Claimant reported that he went on a work related road trip and while on the road trip on March 12, 2014 he slipped off the back of a stool and the discomfort he already had in his back became worse. Claimant reported that he did not work the rest of the day on March 12 and has not returned to work since. *See* Exhibit BB.

22. Dr. Roth reviewed medical records. Dr. Roth asked why Claimant did not report to the emergency department or Kaiser that he had a work injury. Claimant indicated he was concerned only about his health. Claimant also indicated that he did report it as a work injury to his providers. Claimant reported, however, that it did not cross his mind to file a workers' compensation claim. Claimant reported that in July of 2015 he sought the assistance of an attorney to help him with social security disability and that the attorney recommended he file a workers' compensation claim. Dr. Roth noted that a lumbar MRI performed in April of 2014 showed a new herniated disc at L5-S1 on the right and that Claimant had low back pain, buttock pain, right leg pain, and difficulties with sleep. Claimant repotted no benefit as the result of his surgery and that he had a low standing and sitting tolerance. *See* Exhibit BB.

23. Dr. Roth noted that as a result of Claimant's work related low back injury in 2000, Claimant had received a 15% whole person impairment rating. Dr. Roth assessed chronic low back pain. Dr. Roth opined that it was not medically probable that the activity described on February 25, 2014 resulted in an acute lumbar disc herniation and that it was medically probable that the anatomy seen on the MRI was degenerative and pre-existing. Dr. Roth opined that the MRI findings correlated with potential for right sided sciatica and appeared to have been precipitated by the February 25, 2014 event but that since surgery did not improve the back pain or right leg symptoms, the assumption that the anatomy visualized on MRI was the cause of Claimant's symptoms was not medically confirmed or demonstrated. *See* Exhibit BB.

24. Dr. Roth opined that Claimant's progression of and additional lower lumbar degenerating including a herniated disc conformed to reasonable medical expectation and was a normal occurrence not requiring and not associated with trauma. Dr. Roth opined that it was possible that Claimant's condition was in part work-related but Dr. Roth was uncertain of the accuracy of what was reported to have occurred on February 25, 2014. Dr. Roth noted that there was no mention in multiple reports of an initial work related onset and only reports that he had a worsening of pre-existing pain. Dr. Roth noted that there was reported worsening and more severe pain after slipping off a stool on March 12, 2014 but that March 12, 2014 was not the onset or cause of the pain and did not change the history or medical treatment. *See* Exhibit BB.

25. Dr. Roth opined that when Claimant first filed for workers' compensation on July 15, 2015 Claimant reported an activity on February 25, 2014 that would not be the specific type or mechanism that would medically probably be associated with acute lumbar pathology. Dr. Roth opined that it was more likely than not that the discomfort Claimant claimed to have experienced at work was in its entirety a reflection of the degenerative cascade and commensurate with Claimant's personal illness. Dr. Roth opined, however, that if there was no chronic pain before February 25, 2014 and Claimant made an acute report of pain at work on February 25, 2014, then Claimant would have a compensable event from which he did not recover. *See* Exhibit BB.

26. On March 28, 2016 Claimant received a notice of disposition from social security administration noting a fully favorable decision had been issued in favor of his disability. *See* Exhibit 3.

27. Dr. Roth testified at hearing. Dr. Roth opined that the crouching act on February 25, 2014 that Claimant described would not have caused Claimant's spinal stenosis and that minor strains or events were not probable sources of alteration in lumbar anatomy. Dr. Roth opined that although Claimant may have experienced pain at work while crouching down, crouching did not cause Claimant's underlying condition. He opined that a strain would not cause the anatomy that Claimant had in his back. Dr. Roth opined that Claimant's underlying condition was not changed by a work incident and that the underlying condition was causing the pain and need for treatment.

28. Dr. Roth pointed out that the medical records are devoid of suggestions of a crouching incident at work as the cause. Dr. Roth testified that it was hard to reconcile that Claimant did not report this as a work related injury given Claimant's prior workers' compensation case that involved time off work and a whole person rating. Dr. Roth pointed out that the prior surgery from 2001 was not entirely successful and noted that Claimant had permanent impairment and range of motion limitations back in 2001 from the prior injury.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186

(Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

The claimant was required to prove by a preponderance of the evidence that the conditions for which he seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant has failed to establish by a preponderance of the evidence that he sustained a compensable injury on February 25, 2014. Although Claimant testified that he felt symptoms of low back pain at work, the Claimant has failed to establish that the duties of employment caused his symptoms or aggravated/accelerated an underlying condition. The medical records are inconsistent as to when the low back pain began. The records also do not indicate consistently that it occurred due to a crouching movement at work. At the emergency department on March 14, 2014 Claimant reported that his increased pain started one week prior and got worse two days prior after falling off a stool. This is inconsistent with an acute incident on February 25, 2014. Claimant reported to providers that he had worsening back pain but did not report the specific incident of crouching at work as the event/cause of his pain. Further, at a physical therapy appointment on August 4, 2014 Claimant reported that in February of 2014 he woke up with increased back pain that progressed to right leg pain and weakness and that there was no injury that caused his pain. This also is inconsistent with an acute incident on

February 25, 2014. Claimant also reported a history of chronic back pain usually well controlled by anti-inflammatories.

Although possible that Claimant experienced pain at work on February 25, 2014, Claimant has failed to establish by a preponderance of the evidence that his low back condition was proximately caused by an injury arising out of and in the course of employment. Dr. Roth is credible and persuasive that the mechanism of injury reported (crouching down) would not have caused the pathology in Claimant's low back. Further, Dr. Roth opined that it was more likely that the discomfort Claimant reported was felt at work was a reflection of Claimant's degenerative condition and personal illness. Dr. Roth noted that if Claimant had no chronic pain before February 25, 2014 and if Claimant made an acute report of pain at work on February 25, 2014 then Claimant would have a compensable event. Here, as found above, Claimant reported to providers that he had chronic back pain prior to February 25, 2014. Additionally, although Claimant indicated that he reported an acute event or incident at work on February 25, 2014 to his supervisor, Claimant did not file a claim for workers' compensation until over one year later. When treating, Claimant did not indicate an acute event at work when he crouched down as the initial cause of his low back pain. Further, despite having been through the workers' compensation system before, Claimant did not file any workers' report of injury despite alleging that he initially knew and reported this to be a workers' compensation injury. This is logically inconsistent.

Claimant, overall, is not credible or persuasive and has failed to meet his burden to establish that he sustained an acute work related injury to his low back on February 25, 2014. His claim is denied and dismissed.

Penalties

C.R.S. § 8-43-304(1) provides for the imposition of penalties of up to $1000 per day where an employee "violates any provision of article 40 to 47 of [title 8], or does any act prohibited thereby, or fails or refuses to perform any duty lawfully enjoined within the time prescribed by the director or the panel, for which no penalty has been specifically provided, or fails, neglects or refuses to obey any lawful order made by the director or panel…" An order is defined as including "any decision, finding and award, direction, rule, regulation, or other determination arrived at by the director or an administrative law judge." *See* § 8-40-201(15), C.R.S. Every day during which any employee fails to comply with any lawful order of an administrative law judge, the director, or the panel or fails to perform any duty imposed by articles 40 to 47 of this title shall constitute a separate and distinct violation thereof. *See* § 8-43-405, C.R.S.

Whether statutory penalties may be imposed under § 8-43-304(1), C.R.S. involves a two-step analysis. The ALJ must first determine whether there was conduct that constitutes a violation of the Act, a rule, or an order. Second, the ALJ must determine whether any action or inaction constituting the violation was objectively unreasonable. The reasonableness of the violator's action depends on whether it was based on a rational argument based in law or fact. *Jiminez v. Industrial Claim Appeals Office,* 107 P.3d 965 (Colo. App. 2003); *Gustafson v. Ampex Corp.,* W.C. No. 4-187-261 (I.C.A.O. August 2,

2006), *but see, Pioneers Hospital v. Industrial Claim Appeals Office*, 114 P.3d 97 (Colo. App. 2005) (standard is less rigorous standard of "unreasonableness"). However, there is no requirement that the violator know that its actions were unreasonable. *Pueblo School District No. 70 v. Toth,* 924 P.2d 1094 (Colo. App. 1996).

The question of whether the violator's conduct was objectively reasonable ordinarily presents a question of fact for the ALJ. *Pioneers Hospital v. Industrial Claim Appeals Office,* 114 P.3d 97 (Colo. App. 2005). A party establishes a prima facie showing of unreasonable conduct by proving that an employee violated a rule of procedure. If a party makes such a prima facie showing the burden of persuasion shifts to the opposing party to show their conduct was reasonable under the circumstances. *Pioneers Hospital v. Industrial Claim Appeals Office, supra, Human Resource Co. v. Industrial Claim Appeals Office,* 984 P.2d 1194 (Colo. App. 1999).

Section 8-43-304(4), C.R.S. provides that in "any application for hearing for a penalty pursuant to subsection (1) of this section, the applicant shall state with specificity the grounds on which the penalty is being asserted." The Industrial Claim Appeals Office has held that the purposes of the specificity requirement are to provide notice of the allegedly improper conduct so as to afford the alleged violator an opportunity to cure the violation, and to provide notice of the legal and factual bases of the claim for penalties so that the alleged violator can prepare its defense. *Davis v. K Mart,* W.C. No. 4-493-641 (I.C.A.O. April 28, 2004); *Gonzales v. Denver Public School District Number 1,* W.C. No. 4-437-328 (I.C.A.O. December 27, 2001).

Here, Respondents are seeking a variety of penalties against Claimant for various violations of the Act and of rules of procedure. Each request for penalty is addressed below.

Alleged Violation of OAC Rule 15 (9/1/16 and ongoing)

OAC Rule 15 provides that after a response to an application [for hearing] is filed, the application may not be withdrawn and the hearing may not be vacated except upon the agreement of all parties or upon the order of a judge. If the parties agree to the withdrawal of the application the applicant must promptly notify the OAC of the agreement to vacate the hearing.

Respondents argue a violation of OAC rule 15 beginning on September 1, 2016 and ongoing. As noted in the procedural history above, Claimant filed a Hearing Cancellation form on September 1, 2016. At this time, not only had a response to application for hearing been filed, but the hearing had taken place, an expert deposition had taken place, and the parties had submitted briefs to the presiding ALJ. On the Hearing Cancellation form, Claimant marked that the application was withdrawn. Claimant, per rule, is not allowed to withdraw an application for hearing unless the parties agree or the application is withdrawn by order of a judge.

From the pleadings submitted in evidence by Respondents, it appears that Claimant marked application withdrawn in error and intended only to cancel the hearing

as Claimant had decided not to present rebuttal evidence. As the hearing was set for possible rebuttal testimony, it would be Claimant's decision whether or not the hearing was necessary and ordinarily would not require conferral. However, it would require notice that the hearing was not necessary because Claimant had determined no rebuttal was needed. Claimant, clearly, should have checked the "other" box and listed that rebuttal was not needed and the matter was ready for an order or should have filed a separate motion/status update advising ALJ Felter that a rebuttal hearing was not necessary. The evidence and pleadings suggest that the parties had communicated about the briefs submitted to ALJ Felter during this time and the possible need for rebuttal testimony, however no emails were introduced into evidence to support the content of the communications during this time. Claimant erred and violated the rule by indicating to the court that the application had been withdrawn at the consent of both parties. However, after contacting the court and being advised that there would be no forthcoming order from ALJ Felter because the application had been withdrawn, Claimant attempted to rectify the error by requesting a post hearing conference with ALJ Felter to determine how to proceed. Claimant also filed a new application for hearing.

Although Claimant violated the rule by checking and noting that the parties agreed to vacate the hearing and withdraw the application for hearing, Claimant's actions were not objectively unreasonable and amounted to a clerical error. From the pleadings the ALJ finds that Claimant intended to only cancel the upcoming hearing as Claimant did not intend to submit rebuttal testimony or evidence. Although Respondents argue that the hearing was for both rebuttal and for closing arguments, the hearing recording indicates that it was set only for possible rebuttal. Further, although Claimant violated the rule by checking and noting that the parties agreed to vacate the hearing and withdraw the application for hearing, Claimant attempted to remedy the violation by his subsequent motion to ALJ Felter to have a post hearing conference. Under the circumstances, having been advised that no order was forthcoming on the matter as the application had been marked as withdrawn, Claimant's actions were reasonable. Claimant explained the error in the motion and sought a conference with the ALJ.

The violation of unilaterally marking that an application had been withdrawn, when there was no agreement to withdraw it, could have been easily and quickly remedied by Claimant's subsequent motion and/or any filings or responses by Respondent. Respondents, when they received the hearing cancellation form knew that Claimant had submitted to the Court a form indicating that Respondents agreed to withdraw the application. Respondents did not file an objection or request that the hearing remain set. Additionally, when Claimant attempted to rectify the situation by requesting a post hearing conference, Respondents took the position that the application was withdrawn due to Claimant's error and asked the judge to issue an order that the application was withdrawn despite knowing that a new hearing application had been filed and that they may have to re-litigate the entire case. The ALJ granted Respondents request.

Although a violation of the rule exists in this case, penalties are not appropriate. Under the circumstances, there is at most a clerical error by Claimant when attempting to

cancel a hearing set for rebuttal only, and Claimant made reasonable efforts to correct this error when it was realized.

Alleged Violation of OAC Rule 16(b) (9/1/16 and ongoing)

OAC Rule 16 provides for the requirements when filing motions. It provides that every motion must include a certification by the party or counsel filing the motion that he or she has conferred, or made a good faith effort to confer, with opposing counsel and unrepresented parties, and provides that the motion must also include a statement regarding whether the motion is contested, uncontested, or stipulated. It also provides that the motion conspicuously state in the caption if the motion is unopposed or stipulated. Rule 16 further provides that the responding party shall file a response or objection within 10 days from the date the motion was filed at the OAC.

Respondents are alleging a violation of OAC Rule 16(b) and they list the date of September 1, 2016 and ongoing. Respondents have failed to establish a violation of OAC Rule 16(b) starting September 1, 2016 and ongoing. It is noted that the Respondents have not pled this alleged penalty with enough specificity for the ALJ or Claimant to understand or know what motion was allegedly filed on September 1, 2016. The only document in evidence filed that date is the Hearing Cancellation form. This is not a motion requiring certification of conferral, a statement whether the motion is contested, or a response within 10 days. The requirements for the Hearing Cancellation form – and marking whether or not there is an agreement of parties to vacate the hearing- is addressed above under the penalty section relating to OAC Rule 15. Therefore, the request for penalties under OAC Rule 16 is denied and dismissed.

Alleged Violation of W.C.R.P Rule 9-3(A), Rule 9-3(C) (9/1/16 and ongoing)

W.C.R. P. Rule 9 deals with requirements for motions. It provides under Rule 9-3(A) that all matters for the Director's determination shall be filed with the Division of Workers' Compensation, to the attention of the Director. It also lists what matters may be included as matters for the Director's determination. Respondents have failed to identify, with specificity, which part of 9-3(A) they believe Claimant has violated or explain the basis for alleged penalties under this rule. There was a lack of evidence as to whether or not Claimant filed a specific request for the Director's determination at the Division of Workers' Compensation or whether Claimant was required to. Therefore, the request for penalties under W.C.R.P. 9-3(A) is denied and dismissed.

W.C.R.P. Rule 9-3(C) provides that every motion must include a certification by the party or counsel filing the motion that he or she has conferred, or made a good faith effort to confer, with opposing counsel and unrepresented parties. If no conference has occurred, an explanation must be included in the motion. Again, Respondents are alleging a violation of this rule from September 1, 2016 and ongoing. It is noted that the Respondents have not pled this alleged penalty with enough specificity for the ALJ or Claimant to understand or know what motion was allegedly filed on September 1, 2016. The only document in evidence filed that date is the Hearing Cancellation form. This is not a motion requiring certification of conferral, a statement whether the motion is

contested, or a response within 10 days. The requirements for the Hearing Cancellation form – and marking whether or not there is an agreement of parties to vacate the hearing- is addressed above under the penalty section relating to OAC Rule 15. Therefore, the request for penalties under W.C.R.P. 9-3(C) is denied and dismissed.

Alleged Violation of 8-43-102

This section of the Act requires an employee who sustains an injury resulting from an accident to notify their employee in writing of the injury within four days of the occurrence of the injury. It provides that the failure to report in writing may result in the employee losing up to one day's compensation for each day's failure to so report. Here, the claim has been found not to be compensable. Therefore, Respondents request for penalties and the specific statutory penalty for losing up to one day's compensation for each day's failure to report is deemed moot. No compensation is ordered and the claim is not compensable.

Alleged Violation of 8-43-211(B)(3)

Respondents indicate in filings an alleged violation of 8-43-211(B)(3). It is noted that such a provision does not exist. The ALJ construes this alleged violation to include 8-43-211(2)(b), C.R.S. and 8-43-211(3) C.R.S. These provisions provide that a hearing shall be set after a party requests a hearing on issues ripe for adjudication…and that if an attorney requests a hearing or files a notice to set a hearing on an issue that is not ripe for adjudication at the time the request or filing is made, the attorney may be assessed the reasonable attorney fees and costs of the opposing party in preparing for the hearing or setting. *See* § 8-43-211(2)(b), 8-43-211(3), C.R.S.

Respondents have failed to establish a violation of these provisions. Initially, it is noted that again Respondents failed to plead with enough specificity to allow the ALJ or opposing counsel to understand the basis for penalty under this section. Initially, Respondents listed a provision that does not exist. Further, Respondents failed to specify what issues they believed were unripe. Assuming, arguendo, that Respondents believe the new application for hearing filed March 28, 2017 for compensability was unripe, the ALJ disagrees. The issue of compensability had not been determined and was ripe and fit for adjudication. Generally, the term "ripeness" refers to whether an issue is "real, immediate, and fit for adjudication." Our courts have held that under this doctrine "adjudication should be withheld for uncertain or contingent future matters that suppose a speculative injury which may never occur." *Olivas-Soto v. Industrial Claim Appeals Office,* 143 P.3d 1178 (Colo. App. 2006). Here, the issue of compensability and the application for hearing was on an issue real, immediate, and fit for adjudication. Although the matter had been previously heard by ALJ Felter, there was still a real issue that had not been determined- the compensability of Claimant's alleged injury. Claimant filed both a request for ALJ Felter to conduct a post hearing conference and a new application for hearing as there was no ruling or determination on the ripe issue of compensability. After Respondents' objection and request to "close" the case before ALJ Felter and the ALJ's

ruling that the application was withdrawn, the new application for hearing and the setting of that hearing was on a ripe issue. The application for hearing, in this regard, was proper.

Further, it is noted that penalty sought is Respondent's alleged attorney's fees and expert witness costs. Respondents attached to their position statement an affidavit of attorney's fees and witness costs. Respondents did not submit this evidence at hearing. Respondents did not ask for leave of court to include this late submission of evidence. There was insufficient evidence presented at hearing of any amount of attorney's fees or extra expert witness costs.

Therefore, Claimant's request for attorney's fees/costs and expert witness fees/costs is denied and dismissed. Claimant has failed to establish a violation of § 8-43-211(2)(b), C.R.S. or § 8-43-211(3) C.R.S.

Alleged Violation of order to compel interrogatory responses

Respondents further allege a violation of the Order to Compel answers to interrogatories in this matter. This violation is addressed above in preliminary matters. The appropriate sanction/penalty was exclusion of evidence and testimony.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish by a preponderance of the evidence that he sustained a compensable injury on February 25, 2014. His claim is denied and dismissed.

2. Respondents have failed to establish that any penalties are appropriate. The request for penalties is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

****The ALJ notes that the parties have wasted an inordinate amount of attorney's fees, costs, and judicial resources in re-litigating a matter that was previously litigated and ready for an Order. The hearing before ALJ Felter had been completed, briefs had been submitted, and the case was ready for Order. By arguing "case closure" based on a clerical error instead of working together to either: 1. jointly request ALJ Felter issue an Order based on the completed testimony, expert deposition, and briefs or 2. Jointly request that ALJ Felter allow the parties to re-convene to present closing arguments and then issue an Order on the completed testimony, expert deposition, and briefs, the parties have wasted substantial time engaged in litigation to merely try the same case again. The parties are strongly urged to communicate with one another if ever they are on the same case in the future to avoid this waste of resources. As the parties are well aware, the overarching purpose of the Workers' Compensation Act is the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. The actions of the parties in this case are inconsistent with the purposes of the Act.*

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

SELF-INSURED,

Self-Insured Respondent.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on October 26, 2017 and December 15, 2017, in Denver, Colorado. The hearing was digitally recorded (reference: 10/26/17, Courtroom 1, beginning at 8:30 AM, and ending at 11:30 AM; 12/15/17, Courtroom 1, beginning at 8:30 AM, and ending at 11:00 AM).

Claimant's Exhibits 1 through 25 were admitted into evidence, without objection, with the exception of Exhibits 23 and 24, to which Respondent objected and the objection was sustained. Respondent's objections to Claimant's Exhibits 18 and 19 were overruled and the documents were admitted into evidence. Claimant's Exhibit 25 was a surreptitious audio recording of the Division Independent Medical Examination (DIME) by Jade E. Dillon, M.D., to which Respondent and Dr. Dillon, who was present at the hearing, objected. The Claimant, who is not an attorney, surreptitiously recorded the DIME. If the Claimant were an attorney, the surreptitious recording would violate Colorado Bar Association Formal Ethics opinion 112 (July 19, 2003), however there is no legal prohibition against a non-lawyer party surreptitiously recording a transaction that affects that party. Indeed, the Claimant alleged that recording was a necessary part of her evidence to help prove that the ultimate DIME determination of Dr. Dillon was clearly in error and the ALJ should listen to it. The ALJ, in fact listened to the audio

recording, overruled the objections thereto and admitted Claimant's Exhibit 25 into evidence. Respondent's Exhibits A through I were admitted into evidence, with the exception of Exhibit A (a video surveillance film which was not shown with a fair opportunity for confrontation). Respondent's Exhibit A was rejected. Moreover, Respondent relied of physician's narratives after viewing the surveillance video. The ALJ overruled Claimant's objections to Respondent's Exhibits F and G, and admitted these documents into evidence. At the hearing, the ALJ requested a copy of the follow up report of John Aschberger, M.D., the authorized physician who rated the Claimant upon referral from Lloyd J. Thurston, D.O., Claimant's authorized treating physician (ATP). It was a letter addressed to Respondent's counsel and it was admitted, without objection as Respondent's Exhibit J.

At the conclusion of the hearing, the ALJ took the matter under advisement and hereby issues the following decision.

ISSUES

The issues to be determined by this decision concern the Claimant's request to overcome the DIME of Dr. Dillon on maximum medical improvement (MMI) and degree of permanent medical impairment; and, the Claimant's entitlement to medical benefits, either pre-MMI benefits or post-MMI benefits, depending of the determination of MMI.

The Claimant's burden of proof to overcome the DIME is by clear and convincing evidence. Her burden of proof on either pre or post-MMI medical benefits is by a preponderance of the evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant (d.o.b. December 31, 1962) worked as a Certified Spanish Health Interpreter in June 2015. Her job entailed walking around hospitals, including the Respondent hospital herein, interpreting for those in need of interpretation.

2. Based on the DIME of Dr. Dillon, Respondent filed a Final Admission of Liability (FAL), dated June 29, 2017, admitting for pre-maximum medical improvement (MMI) medical benefits only; for an MMI date of May 3, 2016; for zero permanent partial disability (PPD); an average weekly wage of $909.87 (which would yield a temporary total disability benefit rate of $606.57 per week); and, denying liability for post-MMI medical maintenance benefits (*Grover* medicals).

3. It is undisputed by medical providers that the Claimant reached MMI on May 3, 2016. The Claimant disputes that she reached MMI. The ALJ finds that she reached MMI on May 3, 2016.

4. On June 10, 2015, during the course and scope of her employment, the Claimant tripped on some cable, and sustained injuries to her left knee and ankle. She promptly reported the work-related nature of her injury and was referred to Concentra, where she presented on June 12, 2015. She suffered an abrasion on the anterior aspect of the distal anterior foreleg, with an initial assessment of knee injury and sprain as well as left ankle sprain. Subsequently, she came under the care and treatment of Dr. Thurston at Concentra. Dr. Thurston diagnosed a "tear of tendon of left ankle; left knee injury; and sprain of left knee (Claimant's Exhibit 13). On November 17, 2015, Dr. Thurston released the Claimant to return to work/modified duty. He also referred the Claimant to Daniel Ocel, M.D., at Cornerstone Orthopedics and Sports Medicine. Dr. Ocel assessed an injury of the peroneal tendon of the left foot (Claimant's Exhibit 15).

5. On May 23, 2017, Rebecca Bub, D.O., who had been the Claimant's primary health care provider at Centura Health indicated she had not treated the Claimant for left knee or ankle pain for any pre-existing conditions ()Claimant's exhibit 1).

ATP Dr. Thurston

6. As of March 31, 2016, ATP Dr. Thurston diagnosed a tear of tendon of left ankle; left knee injury; and, sprain of left knee. At this time, the Claimant was given work restrictions of sitting 30 minutes for every two hours.

Independent Medical Examination (IME) by Douglas C. Scott, M.D.

7. Respondent engaged Dr. Scott to perform an IME of the Claimant, which occurred on March 16, 2016 (Claimant's Exhibit 16). Dr. Scott assessed the Claimant with: (1) left knee pain probably due to left knee sprain or **aggravation of underlying and pre-existing chondromalacia patella** [Dorland's Medical Dictionary defines "chondromalacia patella" as a "premature degeneration of the patellar (knee cap) cartilage, the patellar margins being tender so that pain is produced when the patella is pressed against the femur" **;** (2) left ankle abrasion/laceration, now healed; and, (3) reported evidence of a peroneus brevis muscle tendon tear distal to the lateral malleolus and between its insertion over the left fifth metatarsal, symptomatic (Dr. Scott reported that this was the Claimant's primary diagnosis at the time). Dr. Ocel had recommended prolotherapy as had the Claimant's health care provider. Dr. Scott's alternative diagnosis of "**aggravation of underlying and pre-existing chondromalacia** ties into the diagnosis of John J. Aschberger, M.D., who rated the Claimant's permanent disability at the request of her ATP, Dr. Thurston. DIME Dr.

Dillon assumed that the Claimant had the degenerative condition of chondromalacia. She did **not** address whether there was an aggravation and acceleration thereof.

Maria Hopp, M.D., Littleton TLC Clinic.

8 Dr. Hopp, M.D., the Claimant's private health care provider, saw the Claimant on March 30, 2016, and diagnosed: (1) left ankle paid; and, (2) chondromalacia of the left knee. She recommended physical therapy (PT) and prolotherapy.

9. On March 31, 2017, Dr. Hopp saw the Claimant again for her left knee and assessed: (1) other tear of medial meniscus of left knee, unspecified whether old or current tear…; and, (2) chondromalacia. Dr. Hopp's latest evaluation of the Claimant corroborates ongoing pain and symptoms in the LLE as the Claimant testified.

Roger E. Murken, M.D., Panorama Orthopedics and Sports Medicine

10. The Claimant was evaluated by Dr. Murken on August 31, 2016, for a second opinion. Dr. Murken noted that the Claimant's MRI (magnetic resonance imaging) showed a left brevis tear and the Claimant had chronic left knee pain and some mild chondromalacia. He recommended physical therapy (PT) for both sides and "I think if she does not get significantly better, an exploratory arthroscopy and evaluation of the brevis tendon **surgically** (emphasis supplied) would be indicated…. (Claimant's Exhibit 6). It was the Claimant's undisputed testimony that her left lower extremity (LLE) has not only not gotten better, it has worsened.

John J. Aschberger, M.D.

11. ATP Dr. Thurston referred the Claimant to Dr. Aschberger for an impairment assessment. Dr. Aschberger performed a thorough physical examination, review of medical records, and assessment of the Claimant on August 19, 2016 (Claimant's Exhibit 17). He also reviewed the IMEs performed by Dr. Scott, to whom Respondent referred the Claimant. Dr. Aschberger also reviewed an MRI (magnetic resonance imaging) scan of the left knee.

12. Dr. Aschberger assessed a left knee strain with findings of chondromalacia patella on the MRI scan; and, a longitudinal tear of the peroneal tendon. Without the benefit of having watched the video (Claimant's Exhibit 25), Dr. Aschberger rated the Claimant at 22% LLE, with no indication that a whole person rating was appropriate. The ALJ takes administrative notice of the fact that Dr. Aschberger is a fully Level 2 Accredited Physician with the Division of Workers' Compensation, authorized to perform permanent medical impairment (PPD) ratings and, in doing so, uses the American Medical Association *Guides to the Evaluation of Permanent Impairment,* 3rd Ed. Rev. (hereinafter the "Guides").

13. During the hearing, a reference was made to a follow up evaluation by Dr. Aschberger, after he watched the video. It was a letter, dated September 2, 2016, addressed to J.P. Moon, Esq. of Ritsema & Lyon, P.C. Respondent produced the letter and it was admitted into evidence as Respondent's Exhibit J, without objection. After having watched the video (DIME Dr. Dillon has never watched the video), Dr. Aschberger reduced his rating to 11% LLE. The video depicts Claimant doing Zumba steps for a short while; standing on her right leg;, and subsequently climbing the steps to the Mother Cabrini Shrine, near lookout Mountain in Golden, Colorado (Respondent's Exhibit J). Indeed, Dr. Aschberger's findings, as detailed, illustrate a recognition of Dr. Aschberger's use of the "Guides." The ALJ finds that Dr. Aschberger's opinions, plus the aggregate medical evidence spanning two years, make it highly probable, unmistakable and free from serious and substantial doubt that DIME Dr. Jade's zero PPD rating is clearly erroneous as more fully found herein below.

14. For an 11% LLE rating, according to § 8-42-107 (2) (w.5), C.R.S., the formula for an 11% scheduled impairment of a leg above the foot is 208 weeks X the TTD rate of $606.57 X 11%=$13, 878.32.

15. According to the Claimant, she was following ATP Dr. Thurston's advice to "resume her outside activities as much as possible…" at the times she was videotaped doing some Zumba steps and climbing the steps at the Mother Cabrini Shrine. Claimant testified that she took breaks.

Division Independent Medical Examination by Jade E. Dillon, M.D.

16. Dr. Dillon did **not** testify at the hearing. The Respondent rested on her report (Respondent's Exhibit D).

17. Dr. Dillon performed the DIME on June 6, 2017. She concluded that the Claimant had reached MMI on May 3, 2016, which is not disputed by any other medical evidence. The Claimant disputes this MMI date but has failed to show that it is highly probable, unmistakable and free from serious and substantial error that the DIME MMI date is in error. Dr. Dillon went on to State that there was no **ratable** condition with respect to chondromalacia or left knee or ankle strain Without having seen the video, Dr. Dillon went on to render an opinion that "given the level of activity, she has **obviously** (emphasis supplied) regained functionality…." The ALJ finds that this opinion is unsupported by the aggregate medical evidence, the Claimant's testimony. She goes on to render an opinion that the Claimant's symptoms are "well out of proportion to the underlying pathology. Indeed, Dr. Dillon states the categorical opinions that there are no ratable impairments for any of the Claimant's conditions. Dr. Dillon ultimately makes the bald statement that the impairment rating was made in accordance with the Guides and the impairment was zero. She gives no explanation,

other than categorically and consistently stating that there were no “ratable” conditions; or, how her zero PPD rating was made in accordance with the Guides.

18. Dr. Dillon states the opinion that “there is no chronic presentation of strain itself.” The ALJ finds that this opinion is contrary to the significant weight of the evidence. The ALJ infers and finds that the four corners of Dr. Dillon’s DIME letter reflects a bias that the Claimant is either magnifying her symptoms or has functional overlay. This is inconsistent with the weight of medical evidence in the file and the Claimant’s presentation at hearing. Indeed, the ALJ infers and finds that this bias taints and overshadows Dr. Dillon’s ultimate opinions leading to her unexplained rating of zero PPD. Coupled with the weight of other medical evidence as herein above found, especially Dr. Aschberger’s ultimate rating of 11% LLE, after viewing the video of the Claimant doing Zumba steps and climbing the stairs of the Mother Cabrini Shrine the ALJ finds that it is highly probable, unmistakable and free from serious and substantial doubt that DIME Dr. Dillon’s PPD rating is erroneous. This is significantly more than a difference of opinion between Dr. Dillon and Dr. Aschberberger. Dr. Aschberger’s ultimate rating contributes significantly to the fact that DIME Dr. Dillon’s zero impairment rating is clearly wrong.

19. A review of the audiotape of the DIME examination reveals from the beginning that Dr. Dillon was gravitating to an opinion of zero PPD. As more fully found herein above, Dr. Dillon’s rating of zero is not adequately explained or supported, it is contradicted by the weight of the evidence, lay and medical; and, it is clearly erroneous.

20. DIME Dr.Dillon thereupon stated: “Given her level of function, the only ongoing future treatment I recommend is a self-directed exercise and stretching program (Dr. Dillon makes no indication of how these programs would be implemented) and NSAID medication for symptomatic control. The ALJ infers and finds that it is more likely than not that the Claimant requires post-MMI medical maintenance care, based on Dr. Dillon’s statement and the aggregate, credible medical evidence.

Ultimate Findings

21. Based on the aggregate medical evidence, including Dr. Aschberger’s ultimate rating of 11% LLE, the ALJ finds that DIME Dr. Dillon’s ultimate zero PPD rating lacks credibility and Dr. Aschberger’s 11% LLE rating is significantly more credible than DIME Dr. Dillon’s zero rating. Indeed, Dr. Aschberger’s 11% LLE rating significantly contributes to making it highly probable, unmistakable, and free from serious and substantial doubt that DIME Dr. Dillon’s zero rating is clearly erroneous. There is significantly more than a difference of opinion between DIME Dr. Dillon and Dr. Aschberger as herein above found.

22. The Claimant has established that it is highly probable, unmistakable and free from serious and substantial doubt that DIME Dr. Dillon’s zero impairment rating is

wrong. Therefore, the Claimant has overcome DIME Dr. Dillon's zero impairment rating by clear and convincing evidence. Therefore, the ALJ ultimately finds and concludes that the degree of the Claimant's permanent impairment is 11% of the LLE, which equates to 208 weeks X the TTD rate of $606.57 X 11%=$13, 878.32.

23. Based on the totality of the medical evidence, the Claimant has established that it is more likely than not that she requires post-MMI maintenance medical care. Therefore, the Claimant has proven by preponderant evidence that she is entitled to post-MMI maintenance medical care at the hands of an ATP.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found,

the MMI date of May 3, 2016 is undisputed by the medical evidence. Only the Claimant disputes it. *See, Annotation, Comment: Credibility of Witness Giving Un-contradicted Testimony as Matter for Court or Jury,* 62 ALR 2d 1179, maintaining that the fact finder is not free to disregard un-contradicted testimony. As further found, based on the aggregate medical evidence, including Dr. Aschberger's ultimate rating of 11% LLE, DIME Dr. Dillon's ultimate zero PPD rating lacks credibility and Dr. Aschberger's 11% LLE rating is significantly more credible than DIME Dr. Dillon's zero rating. Indeed, Dr. Aschberger's 11% LLE rating significantly contributes to making it highly probable, unmistakable, and free from serious and substantial doubt that DIME Dr. Dillon's rating is clearly erroneous. There is significantly more than a difference of opinion between DIME Dr. Dillon and Dr. Aschberger as herein above found.

Overcoming Dr. Dillon's DIME

b. The party seeking to overcome a DIME physician's opinions bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office***,** 5 P.3d 385 (Colo. App. 2000). *Also see Leprino Foods Co. v. Indus. Claim Appeals Office,* 134 P.3d 475 (Colo. App. 2005). The DIME physician's determination of MMI is binding unless overcome by "clear and convincing evidence." *Metro Moving & Storage Co. v. Gussert,* 914 P.2d 411 (Colo. App. 1995); *See also Peregoy v. Indus. Claim Appeals Office,* 87 P.3d 261 (2004); and § 8-42-107(b)-(c), C.R.S. *Also see Whiteside v. Smith,* 67 P.3d 1240 (Colo. 2003). Where the threshold determination of compensability is not an issue, a DIME physician's conclusion that an injured worker's medical problems were components of the injured worker's overall impairment constitutes a part of the diagnostic assessment that comprises the DIME process and, as such the conclusion must be given presumptive effect and can only be overcome by clear and convincing evidence. *Qual-Med, Inc. v. Indus. Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998); *Leprino Foods Co. v. Indus. Claim Appeals Office,* 134 P.3d 475, 482 (Colo. App. 2005); *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 400 (Colo. App. 2009). "Clear and convincing evidence" is evidence, which is stronger than preponderance, is unmistakable, makes a fact or facts highly probable or the converse, and is free from serious or substantial doubt. *Metro Moving & Storage Co. v. Gussert, supra; Leming v. Indus. Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo. App. 2002). In other words, a DIME physician's finding may not be overcome unless the evidence establishes that it is "highly probable" that the DIME physician's opinion is incorrect. *Postelwait v. Midwest Barricade,* 905 P. 2d 21 (Colo. App. 1995). To overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt". *Adams v. Sealy, Inc.,* W.C. No. 4-476-254 [Indus. Claim Appeals Office (ICAO), Oct. 4, 2001]. A mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. As found, there was significantly more than a difference of opinion between Dr. Aschberger and Dr. Dillon. *See Javalera v. Monte Vista Head Start, Inc.,* W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); *see Shultz v. Anheuser Bush,*

Inc., W.C. No. 4-380-560 (ICAO, Nov. 17, 2000). Also, In *Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997), the Court of Appeals concluded that a medical opinion was not necessary to prove causation because imposing such a requirement would be reading something into the statute that was not there. As observed in *Lymburn*, to require a medical opinion to support a causality determination would be to read something into the statute that does not exist. By analogy, the Claimant's testimony that she continues to suffer from her admitted LLE injuries is sufficient to overcome Dr. Dillon's observations. Further, as found, the Claimant established that it was highly probable, unmistakable and free from serious and substantial doubt that DIME Dr. Dillon's zero impairment rating was in error. Thus, the Claimant overcame DIME Dr. Dillon's zero impairment rating by clear and convincing evidence.

c. Therefore, as found, the degree of the Claimant's permanent impairment is 11% of the LLE. For an 11% LLE rating, according to § 8-42-107 (2) (w.5), C.R.S., the formula for an 11% scheduled impairment of a leg above the foot is 208 weeks X the TTD rate of $606.57 X 11%=$13, 878.32.

Burden of Proof on Post-MMI Medical Maintenance Benefits

d. An employee is entitled to continuing medical benefits after MMI if reasonably necessary to relieve the employee from the effects of an industrial injury. *See Grover v. Indus. Comm'n of Colorado*, 759 P.2d 705 (Colo. 1988). The record must contain substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve a claimant from the effects of an injury or to prevent further deterioration of his condition. *Stollmeyer v. Indus. Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995); *Grover v. Indus. Comm'n, supra*. Such evidence may take the form of a prescription or recommendation for a course of medical treatment necessary to relieve a claimant from the effects of the injury or to prevent further deterioration. *Stollmeyer v. Indus. Claim Appeals Office, supra*. An injured worker is ordinarily entitled to a general award of future medical benefits, subject to an employer's right to contest causal relatedness and reasonable necessity. *See Hanna v. Print Expediters,* 77 P.3d 863 (Colo. App. 2003). Treatment to **improve** a claimant's condition does **not** fall under the purview of *Grover* benefits. *Shalinbarger v. Colorado Kenworth, Inc.,* W.C. No. 4-364-466 [Indus. Claim Appeals Office (ICAO), March 12, 2001]. As found, Claimant is entitled to maintenance medical care, which is reasonably necessary to address her injury. The burden of proof is placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P.2d 535 (Colo. App. 1992). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984).

As found, the Claimant has sustained her burden with respect to post-MMI medical maintenance benefits.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Claimant having overcome the opinion of Jade E, Dillon, M.D., the Division Independent Medical Examiner, by clear and convincing evidence, primarily based of the opinions and rating of authorized treating rater, John J. Aschberger, M.D., the Claimant's degree of permanent impairment is 11% of the left lower extremity. Therefore, the Respondent shall pay the Claimant permanent scheduled disability benefits of 208 weeks X the TTD rate of $606.57 X 11%=$13, 878.32, the grand total of scheduled permanent partial disability benefits, which shall be paid retroactively to May 3, 2016, the date of maximum medical improvement, and forthwith.

B. The Respondent shall pay the Claimant statutory interest at the rate of eight percent (8%) per annum on all amounts of indemnity benefits due and not paid when due.

C.. The Respondent shall pay all the costs of post-maximum medical improvement maintenance treatment, which is authorized, causally related to, and reasonably necessary to cure and relieve the effects of the Claimant's admitted injury of June 10, 2015, subject to the Division of Workers' Compensation Medical Fee Schedule.

DATED this_____day of December 2017.

_____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

ISSUES

- Whether claimant has proven by a preponderance of the evidence that the right sacroiliac (SI) joint fusion recommended by Dr. Kirk Clifford is reasonable medical treatment necessary to cure and relieve claimant from the effects of the admitted February 1, 2013 work injury.

FINDINGS OF FACT

1. Claimant was employed with employer as a mechanic. Claimant suffered an admitted injury to his low back on February 1, 2013. Claimant testified that the injury occurred when he was repairing a set of rear semi wheels. While attempting to move the wheels, claimant felt a "pop" in his low back.

2. Claimant first sought treatment with his primary care provider at the Department of Veterans' Affairs (VA). Claimant then reported his injury to employer and was sent for medical treatment. Claimant was first seen by his authorized treating physician (ATP) Dr. Craig Stagg on February 14, 2013.

3. On February 19, 2013, a magnetic resonance image (MRI) of claimant's lumbar spine showed grade 1 anterolisthesis at L5-S1, a broad based disc bulge at L5-S1, and mild foraminal narrowing at L4-L5 and L5-S1.

4. Dr. Daniel Nelson administered a left L5-S1 epidural steroid injection (ESI) on June 26, 2013 and again on September 20, 2013.

5. Ultimately, Dr. Stagg referred claimant to Dr. Kirk Clifford for consultation. Claimant was first seen by Dr. Clifford on December 4, 2013. Claimant testified that when he first treated with Dr. Clifford his symptoms included stabbing pain in his right buttock, shooting pain down both legs, limited mobility, and difficulty walking.

6. On January 13, 2014, Dr. Clifford performed a fusion at the L4-L5 level with laminectomy and bilateral foraminotomy and decompression.

7. Following the January 13, 2014 surgery claimant pursued physical therapy, but continued to report back pain to his medical providers. Claimant testified that following the January 2014 surgery he noticed a reduction in the radiating pain down his legs. However, he continued to experience stabbing pain in his right buttock and "pressure" and "discomfort" when he would lie down. On July 11, 2014, an MRI of claimant's lumbar spine showed a central disc extrusion at the L5-S1 level.

8. On August 4, 2014, Dr. Clifford administered a right sided L5-S1, S1-S2 transforaminal ESI. On September 3, 2014 claimant reported to Dr. Clifford that he "did not feel like he got a lot of benefit from the injection".

9. On September 10, 2014, Dr. Clifford administered bilateral L3-L4 transforaminal ESIs. On October 22, 2014, claimant reported to Dr. Clifford that these injections provided temporary pain relief. Based upon claimant's limited relief from injections, Dr. Clifford recommended surgery.

10. On December 1, 2014, Dr. Clifford performed a fusion with right sided facetectomy and decompression at the L5-S1 level, and with laminectomy and Coflex instrumentation at the L3-L4 level.

11. Claimant testified that following the December 2014 surgery the radicular symptoms into his legs improved, but he continued to have stabbing pain and discomfort into his right buttock. Claimant also testified that he began to have paralysis in his right leg, culminating in a fall in August 2015 when his "right leg gave out".

12. On December 8, 2015 an MRI of claimant's lumbar spine showed resolution of the central disc protrusion at the L5-L1 level; moderate acquired spinal stenosis at the L3-L4 level; and the instrumental posterior fusion at the L4-S1 level.

13. On January 7, 2016, Dr. Clifford administered right sided L3-L4 and L4-L5 transforaminal ESIs. On February 18, 2016, claimant returned to Dr. Clifford's practice and reported to Todd Ousley, PA-C that the injections did not provide him with any significant improvement in his back pain.

14. On April 14, 2016, Dr. Clifford administered bilateral L3-L4 parafacet injections. Claimant returned to Dr. Clifford on June 9, 2016 and reported "really good results" from those injections. However, claimant reported pain in his lower back across the iliac crest region. Dr. Clifford identified SI joint pain and recommended claimant use pain cream and ice on the problem area. Dr. Clifford indicated at that time that if claimant's lower back pain persisted he would consider administering a right sided SI joint injection.

15. Claimant's low back pain did continue and on July 13, 2016 and September 29, 2016, claimant underwent right-sided SI joint injections. Following each injection claimant felt immediate relief of his symptoms. In each instance this relief lasted approximately seven weeks.

16. Claimant returned to Dr. Clifford on December 7, 2016. At that time, Dr. Clifford noted a positive Fortin finger test of the right sulcus SI joint. Claimant also exhibited positive responses to distraction, thigh thrust, and FABER maneuver. On that date, Dr. Clifford indicated that claimant had right SI joint instability. Based upon claimant's symptoms and the relief he obtained from the SI joint injections, Dr. Clifford recommended that claimant undergo a "minimally invasive" right SI joint fusion.

17. On December 21, 2016, Dr. James Ogsbury performed a review of the recommended SI joint fusion. Dr. Ogsbury opined that the recommended SI joint fusion was "investigational" and therefore not medically necessary. Based upon Dr. Ogsbury's opinion respondents denied the recommended fusion.

18. On January 11, 2017, Dr. Clifford responded to respondent's denial and reasserted his opinion that the recommended SI joint fusion was appropriate treatment for claimant. In his response Dr. Clifford noted that an individual can have sacroiliitis with a normal looking SI joint. In addition, imaging studies will not show an abnormal SI joint. Dr. Clifford further opined that claimant had gone through the appropriate clinical workup with positive provocative maneuvers and diagnostic relief from two SI joint injections to demonstrate that claimant's SI joint is the pain generator.

19. On January 17, 2017, Dr. Michael Janssen also reviewed whether the recommended SI joint fusion was reasonable and necessary medical treatment. Dr. Janssen opined that the Medical Treatment Guidelines do not support SI joint fusion for mechanical low back pain. Dr. Janssen recommended that claimant have his right hip evaluated as a possible pain generator. Based upon Dr. Janssen's opinion, respondents again denied the recommended SI joint fusion.

20. On February 9, 2017, claimant was seen by Dr. Steven Heil. Dr. Heil opined that claimant's hip is not the pain generator of claimant's current symptoms.

21. On May 3, 2017, claimant was again seen by Dr. Clifford. Dr. Clifford again noted a positive Fortin finger test as well as positive SI joint provocative maneuvers including thigh thrust, compression, and FABER maneuver.

22. On July 3, 2017, claimant underwent an independent medical examination (IME) with Dr. Michael Rauzzino. In connection with the IME, Dr. Rauzzino reviewed claimant's medical records, obtained a medical history from claimant and performed a physical examination. Dr. Rauzzino issued an IME report in which he opined that the recommended SI joint fusion is not reasonable or necessary medical treatment and it is not related to claimant's work injury. In support of this opinion, Dr. Rauzzino noted that there is no radiographic evidence of injury to claimant's right SI joint. Dr. Rauzzino also recorded that his physical exam of claimant did not result in any "severe SI joint pain".

23. Dr. Rauzzino testified by deposition in this matter and confirmed his opinion that the recommended SI joint fusion is not reasonable or necessary medical treatment for claimant. Dr. Rauzzino testified that although the procedure recommended by Dr. Clifford is "minimally invasive", the fusion itself is invasive. Dr. Rauzzino also testified that once the instrumentation is surgically placed as part of the SI joint fusion, that instrumentation cannot be removed later.

24. Dr. Rauzzino further testified that he questions claimant's presentation of unilateral rather that bilateral SI joint pain. Dr. Rauzzino also noted that the x-rays of claimant's SI joint show a normal SI joint. Finally, Dr. Rauzzino testified that claimant did not demonstrate SI joint pain responses during the IME.

25. Dr. Clifford testified by deposition in this matter and affirmed his opinion that claimant's right SI joint is a pain generator and an SI joint fusion is appropriate treatment for claimant. Dr. Clifford testified that the SI joint provocative maneuvers (thigh thrust, compression, and FABER maneuver) are indicative of SI joint instability. Dr. Clifford testified that the treatment he has recommended for claimant is "minimally invasive" SI joint fusion and not the SI joint fusion contemplated in the Medical Treatment Guidelines. In his testimony, Dr. Clifford described the advancements that have been made in recent years regarding SI joint fusions, including the development of the less invasive procedure.

26. Dr. Clifford further testified that in his practice he does see a connection between lumbar fusion and SI joint pain. Dr. Clifford also noted in his testimony and the literature recognizes that a large percentage of patients present with unilateral SI joint pain.

27. The ALJ credits the opinion of Dr. Clifford over the conflicting opinion of Dr. Rauzzino and finds that claimant has demonstrated that it is more likely than not that the recommended SI joint fusion is reasonable medical treatment necessary to cure and relieve claimant from the effects of the February 1, 2013 work injury.

28. The ALJ further credits the opinion of Dr. Clifford and finds that the SI joint fusion contemplated by the Guidelines is different from the minimally invasive SI joint fusion recommended by Dr. Clifford.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., (2015). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2012).

4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

5. The Division's Medical Treatment Guidelines (the Guidelines) are generally accepted as professional standards for medical care under the Act and are to be used by health care providers when providing care. Section 8-42-101(3)(b), C.R.S.; *Hall v. ICAO*, 74 P.3d 459 (Colo. App. 2003). The ALJ is not required to grant or deny medical benefits based on the Guidelines and the ALJ's consideration of the Guidelines may include deviations from them where there is evidence justifying the deviations. *Logiudice v. Siemans Westinghouse*, W.C. No. 4-665-873 (January 25, 2011).

6. As found, claimant has proven by a preponderance if the evidence that the recommended right SI joint fusion is reasonable medical treatment necessary to cure and relieve claimant from the effects of the February 1, 2013 work injury. As found, the ALJ is persuaded that the SI joint fusion contemplated by the Guidelines is not the minimally invasive fusion recommended by Dr. Clifford. As found the testimony of Dr. Clifford is credible and persuasive.

ORDER

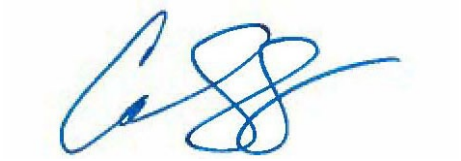
It is therefore ordered that:

1. Respondents shall pay for the recommended minimally invasive right SI joint fusion, pursuant to the Colorado Medical Fee Schedule.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Dated: December 20, 2017



_____

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, CO 81501

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that he suffered a compensable left hip injury during the course and scope of his employment with Employer on May 1, 2015.

2. Whether Claimant has proven by a preponderance of the evidence that he is entitled to receive causally related, reasonable and necessary medical treatment for his May 1, 2015 left hip injury.

FINDINGS OF FACT

1. Claimant is a 35 year old male who worked for Employer as a Firefighter. He testified that on May 1, 2015 he was returning from a fire call wearing his bunker pants and boots. As he was descending from an engine his left foot twisted and he felt an immediate pull or strain to the lateral area of his left hip. Claimant did not fall down. He continued to work regular duty and did not miss any time from work as a result of the incident.

2. Claimant acknowledged that Employer provided training about reporting work injuries within 24 hours. Nevertheless, Claimant recognized that he did not report that he suffered a left hip injury until September or October 2015. Claimant explained that the pain was minor and he had experienced similar pain on other occasions in different body parts while engaged in athletic activities. He remarked that he did not report his symptoms earlier because they were minor and firefighters are expected to work through injuries.

3. In the months subsequent to May 1, 2015 but prior to reporting his work injury, Claimant remained fully functional. He continued to engage in a variety of activities that included plyometrics and running. Claimant's symptoms generally waxed and waned throughout the period. However, he testified that the time interval between symptoms gradually decreased and his pain became sharper. After several months Claimant noticed clicking in his left hip and restricted his activities.

4. In October 2015, after a mandatory physical in which Claimant experienced difficulties with leg raising, he finally reported a work injury that had occurred on May 1, 2015. Claimant acknowledged that he had not previously mentioned a work injury to Employer other than commenting that his hip ached to Lieutenant Mark Evans in September 2015.

5. On October 20, 2015 Claimant visited Lori Long Miller, M.D. for an examination. Claimant reported that he stepped off a fire engine at work and experienced

significant left hip flexion that resulted in pain radiating into his inguinal area. He remarked that the symptoms improved over time so that they only occurred during activities such as running stairs. Because Claimant had not previously suffered left hip symptoms, Dr. Long attributed his condition to his work activities on May 1, 2015. Dr. Long released Claimant to regular duty employment.

6. On October 22, 2015 Employer prepared a First Report of Injury. On November 12, 2015 Respondent filed a Notice of Contest challenging Claimant's claim.

7. On December 4, 2015 Claimant underwent an MRI of the left hip. The MRI reflected mild CAM impingement, a partial labral tear and subchondral cysts in the acetabulum.

8. On January 15, 2016 Claimant visited Brian Joshua White, M.D. for an examination. Dr. White noted that Claimant suffered significant pain in the hip area for a couple of days after running or engaging in similar physical activities. He diagnosed Claimant with an underlying femoral, CAM type acetabular impingement, a labral tear and subchondral cystic degenerative changes in his left hip.

9. On February 3, 2016 Claimant returned to Dr. White for an evaluation. Dr. White determined that "this is likely an acute-on-chronic phenomenon from the chronic underlying CAM, but the acute injury is what made it symptomatic." He recommended "some level of activity modification, moving forward with surgery if he feels that he needs to for work, or for his basic activity and function to get him back to some level of function."

10. On February 28, 2016 Claimant returned to Dr. Miller for an examination. Dr. Miller remarked that Claimant suffers from a pre-existing anatomical problem that was exacerbated by his work activities. Therefore, Claimant's claim "would likely be covered by the Workers' Compensation system."

11. On March 21, 2016 Dr. Miller authored a letter to the claims adjuster for Respondent. She noted that Claimant suffers from a pre-existing anatomical left hip problem. However, "he was not having any difficulties and had never been seen for pain prior to the injury that occurred at work. Therefore, by definition, this is a work-related problem."

12. On August 24, 2016 Claimant returned to Dr. White for an evaluation. Dr. White noted that Claimant had reached a point where he suffered significant pain through the spring and had difficulties working. He concluded that it was "reasonable to move forward with hip arthroplasty."

13. On August 27, 2016 Dr. White requested authorization for left hip surgery. He specifically sought to perform a left hip scope, labral repair, reconstruction and a femoral acetabular osteoplasty.

14. On December 1, 2016 Timothy O'Brien performed a records review of Claimant's case to ascertain the cause of his left hip pain. Dr. O'Brien concluded that Claimant's left hip symptoms were not causally related to the May 1, 2015 incident in

which he descended from a fire truck. He reasoned that the mechanism of injury did not "generate enough energy into the hip joint to cause tissue breakage or yielding. Even if hyperflexion was involved with [Claimant's] stepping down from an engine, this is not the type of event that causes new tissue breakage or yielding." Dr. O'Brien commented that Claimant's history of physical activities, including hiking, biking skiing and running, more likely resulted in tissue breakage or yielding. He remarked that imaging studies revealed early onset, progressive arthritis. Dr. O'Brien summarized that "stepping down from the fire truck did not aggravate or accelerate the pre-existing condition." Finally, he did not agree with Dr. White's surgical recommendation because surgical intervention would not likely be successful in relieving degenerative arthritis.

15. On July 19, 2017 the parties conducted the pre-hearing evidentiary deposition of Dr. White. Dr. White reiterated that Claimant suffered from the underlying conditions of a femoral, CAM type acetabular impingement, a labral tear and subchondral cystic degenerative changes in his left hip. Without performing a causation analysis, he acknowledged that the conditions likely existed prior to Claimant's May 1, 2015 accident. Dr. White explained that impingement abnormalities are either congenital and part of our genetic code from birth or develop as a result of use over time. Nevertheless, Dr. White explained that "based on his story he had no symptoms before. And then when he loaded his hip coming down off the rig, that's when he started having pain. And so that was the precipitant to creating an irritable and painful hip." Accordingly, Dr. White reasoned that Claimant had exhausted conservative treatment and warrants surgery.

16. On October 15, 2017 Dr. O'Brien prepared a report in response to Dr. White's determination that Claimant's left hip symptoms were caused by his May 1, 2015 work accident. He drafted a detailed analysis in which he explained that the proposed hip arthroscopy would not limit or prevent the progression of Claimant's pre-existing osteoarthritis. Dr. O'Brien summarized that surgical intervention in the form of a microfracture procedure would not cure or relieve Claimant's condition.

17. On October 17, 2017 James P. Lindberg, M.D. performed a records review of Claimant's claim. Dr. Lindberg agreed with Dr. O'Brien's determination that Claimant's May 1, 2015 accident was not causally related to his left hip symptoms. He specified that Claimant's underlying left hip osteoarthritis was not caused by stepping off the fire truck on May 1, 2015. Instead, Claimant's underlying pathophysiology in the form of a femoracetabular impingement caused his labral tear through multiple traumatic events. Claimant has subchondral cysts because of his osteoarthritis. His condition preceded the May 1, 2015 incident and stepping off the fire truck did not cause Claimant's labral tear. Dr. Lindberg summarized that "because one suffers the symptoms of an underlying disease at work does not make it a compensable injury." Finally, he noted that Dr. White's proposed surgery would be unsuccessful because Claimant's left hip degenerative, arthritic process has already begun.

18. Claimant testified at the hearing in this matter. He explained that he had never suffered any left hip symptoms prior to May 1, 2015. In fact, he had engaged in numerous physical activities including running, biking, working out and playing tennis.

Claimant remarked that he suffers from clicking of the left hip, has difficulty standing for long periods of time and experiences pain when he overextends his left hip.

19. Claimant has failed to demonstrate that it is more probably true than not that he suffered a compensable left hip injury during the course and scope of his employment with Employer on May 1, 2015. Claimant explained that as he was descending from a fire engine his left foot twisted and he felt an immediate pull or strain to the lateral area of his left hip. Claimant continued to perform his regular job duties and did not miss any time from work as a result of the incident. He subsequently engaged in a variety of activities that included plyometrics and running. Claimant's symptoms generally waxed and waned throughout the period. He ultimately reported a May 1, 2015 work injury in October 2015. However, the persuasive medical records reveal that, although Claimant may have experienced left hip symptoms at work on May 1, 2015, his work activities did not cause his condition.

20. Dr. O'Brien concluded that Claimant's left hip symptoms were not caused by descending from a fire truck. He remarked that Claimant suffered from early onset, progressive arthritis. Dr. O'Brien reasoned that the mechanism of injury did not "generate enough energy into the hip joint to cause tissue breakage or yielding." Stepping down from a fire truck simply did not aggravate or accelerate Claimant's pre-existing hip condition. Instead, Claimant's history of physical activities, including hiking, biking, skiing and running, more likely resulted in tissue breakage or yielding. Moreover, Dr. Lindberg agreed with Dr. O'Brien's determination that Claimant's May 1, 2015 accident was not causally related to his left hip symptoms. He commented that Claimant suffers from subchondral cysts because of his osteoarthritis. Claimant's underlying pathophysiology in the form of a femoracetabular impingement caused his labral tear through multiple traumatic events. Dr. Lindberg summarized that Claimant's left hip condition preceded the May 1, 2015 incident and stepping off the fire truck did not cause his labral tear.

21. In contrast, Drs. Miller and White concluded that stepping off the fire truck on May 1, 2015 precipitated Claimant's left hip symptoms. Although acknowledging that Claimant suffered from a pre-existing, degenerative left hip condition, they reasoned that Claimant had not experienced any left hip symptoms prior to descending from the fire truck. His development of symptoms on May 1, 2015 thus constituted a work-related condition. However, the mere experience of symptoms at work does not warrant the inference that there has been an aggravation or acceleration of a pre-existing condition. Claimant suffered from a pre-existing left hip condition. Stepping down from a fire truck provided insufficient force to cause a labral tear or tissue breakage. Instead, it is more likely that Claimant's waxing and waning left hip symptoms were related to his physical activities of hiking, biking, skiing and running. Accordingly, Claimant's May 1, 2015 work activities did not aggravate, accelerate or combine with his pre-existing left hip condition to produce a need for medical treatment.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers

at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. For an injury to be compensable under the Act, it must "arise out of" and "occur within the course and scope" of employment. *Price v. Industrial Claim Appeals Office*, 919 P.2d 207, 210 (Colo. 1996). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. § 8-41-301(1)(c) C.R.S.; *Faulkner v. Industrial Claim Appeals Office,*12 P.3d 844, 846 (Colo. App. 2000). The question of causation is generally one of fact for determination by the ALJ. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, Oct. 27,

2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

7. As found, Claimant has failed to demonstrate by a preponderance of the evidence that he suffered a compensable left hip injury during the course and scope of his employment with Employer on May 1, 2015. Claimant explained that as he was descending from a fire engine his left foot twisted and he felt an immediate pull or strain to the lateral area of his left hip. Claimant continued to perform his regular job duties and did not miss any time from work as a result of the incident. He subsequently engaged in a variety of activities that included plyometrics and running. Claimant's symptoms generally waxed and waned throughout the period. He ultimately reported a May 1, 2015 work injury in October 2015. However, the persuasive medical records reveal that, although Claimant may have experienced left hip symptoms at work on May 1, 2015, his work activities did not cause his condition.

8. As found, Dr. O'Brien concluded that Claimant's left hip symptoms were not caused by descending from a fire truck. He remarked that Claimant suffered from early onset, progressive arthritis. Dr. O'Brien reasoned that the mechanism of injury did not "generate enough energy into the hip joint to cause tissue breakage or yielding." Stepping down from a fire truck simply did not aggravate or accelerate Claimant's pre-existing hip condition. Instead, Claimant's history of physical activities, including hiking, biking, skiing and running, more likely resulted in tissue breakage or yielding. Moreover, Dr. Lindberg agreed with Dr. O'Brien's determination that Claimant's May 1, 2015 accident was not causally related to his left hip symptoms. He commented that Claimant suffers from subchondral cysts because of his osteoarthritis. Claimant's underlying pathophysiology in the form of a femoracetabular impingement caused his labral tear through multiple traumatic events. Dr. Lindberg summarized that Claimant's left hip condition preceded the May 1, 2015 incident and stepping off the fire truck did not cause his labral tear.

9. As found, in contrast, Drs. Miller and White concluded that stepping off the fire truck on May 1, 2015 precipitated Claimant's left hip symptoms. Although acknowledging that Claimant suffered from a pre-existing, degenerative left hip condition, they reasoned that Claimant had not experienced any left hip symptoms prior to descending from the fire truck. His development of symptoms on May 1, 2015 thus constituted a work-related condition. However, the mere experience of symptoms at work does not warrant the inference that there has been an aggravation or acceleration of a pre-existing condition. Claimant suffered from a pre-existing left hip condition. Stepping down from a fire truck provided insufficient force to cause a labral tear or tissue breakage. Instead, it is more likely that Claimant's waxing and waning left hip symptoms were related to his physical activities of hiking, biking, skiing and running. Accordingly, Claimant's May 1, 2015 work activities did not aggravate, accelerate or combine with his pre-existing left hip condition to produce a need for medical treatment.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's claim for Workers' Compensation benefits for his left hip symptoms is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: December 20, 2017.

W.C. No. 5-048-407-01

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

SELF-INSURED,

Self-Insured Respondent.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on December 12, 2017, in Denver, Colorado. The hearing was digitally recorded (reference: 12/12/17, Courtroom 1, beginning at 1:30 PM, and ending at 2:30 PM).

Claimant's Exhibits 1 through 9 were admitted into evidence, without objection. Respondent accepted the Claimant's exhibits as its own.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Claimant, which was filed, electronically, on December 18, 2017. On December 19, 2017, Respondent filed an objection to the proposal. After a consideration of the proposed decision and the objections thereto, the ALJ has modified the proposal and hereby issues the following decision.

ISSUES

The issues designated for hearing concerned compensability; if compensable, medical benefits, average weekly wage (AWW), and temporary total disability benefits (TTD) from May 24, 2017, and continuing. At the commencement of the hearing, it was agreed that the Claimant was paid full wages during temporary disability. Therefore, TTD was stricken as an issue, without objection.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Finding

1. At the commencement of the hearing, the parties stipulated and that should the claim be found compensable, medical benefits rendered to date for the Claimant, including treatment by Mark Failinger, M.D., and his surgical recommendation, are reasonably necessary, and causally-related to Claimant's industrial injury. The claim having been found compensable (Finding No. 2 below), the ALJ finds the medical treatment to be causally-related to the May 24, 2017, injury and reasonably necessary to cure and relieve the effects thereof.

Findings

2. The Claimant suffered injury to his right shoulder while performing work duties for the Employer on May 24, 2017, specifically, he was lifting bulky items and felt a pain in his right shoulder, which got worse. He immediately reported the work-related nature of his injury to his supervisor and was referred for authorized medical treatment at Concentra Medical Centers.

3. Concentra later referred the Claimant to. Mark Failinger, M.D., an orthopedic specialist. Dr. Failinger has recommended that the Claimant undergo rotator cuff surgery to address his symptoms and limitations.

4. Dr. Failinger credibly testified that Claimant's injury was causally-related by his work activities on May 24, 2017, and the Claimant is in need of further medical treatment, including surgical intervention, and the ALJ so finds.

5. The Claimant desires to undergo the right shoulder surgery recommended by Dr. Failinger.

Ultimate Findings

6. Both the Claimant's and Dr. Failinger's testimonies were credible, undisputed and dispositive of the compensability and medical benefits issues.

7. The Claimant has proven, by a preponderance of the evidence, that he sustained a compensable injury to his right shoulder on May 24, 2017, arising out of the course and scope of his employment for the Employer.

8. The Claimant has proven by preponderant evidence that all of his medical care and treatment for his compensable right shoulder injury, including Dr. Failinger's surgical recommendation, was and is authorized, causally-related, and reasonably necessary to cure and relieve the effects of his compensable right shoulder injury.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof).

See Young v. Burke, 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, both the Claimant's and Dr. Failinger's testimonies were credible, undisputed and dispositive of the compensability and medical benefits issues. *See, Annotation, Comment: Credibility of Witness Giving Un-contradicted Testimony as Matter for Court or Jury,* 62 ALR 2d 1179, maintaining that the fact finder is not free to disregard un-contradicted testimony

Compensability

b. In order for an injury to be compensable under the Workers' Compensation Act, it must "arise out of" and "occur within the course and scope" of the employment. *Price v. Indus. Claim Appeals Office,* 919 P.2d 207, 210, 210 (Colo. 1996). An injury "arises out of' employment if it would not have occurred **but for** the fact that the conditions and obligations of employment placed the employee in a position that he or she was injured." *See City of Brighton v. Rodriguez,* 318 P.3d 496, **2014 CO 7.** There is, essentially, a presumption that an injury arises out of employment when an unexplained injury occurs during the course of employment. Thereupon, it is incumbent on the claimant to show proximate causation to job related factors; and, on the employer to show that non-work related factors caused the injury. Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any benefits are awarded. § 8-41-301 (1) (c), C.R.S. *See Faulkner v. Indus. Claim Appeals Office,* 24 P.3d 844 (Colo. App. 2000)*; Eller v. Indus. Claim Appeals Office*, 224 P.3d 397, 399 (Colo. App. 2009); *Cabela v. Indus. Claim Appeals Office,* 198 P.3d 1277, 1279 (Colo. App. 2008). The question of causation is generally one of fact for determination by an ALJ. *Faulkner* at 846; *Eller* at 399-400. As found, the Claimant has proven, by a preponderance of the evidence, that he sustained a compensable injury to his right shoulder on May 24, 2017, arising out of the course and scope of his employment for the Employer.

Medical Benefits

c. The parties stipulated, and the ALJ found, that all medical benefits for the Claimant's compensable right shoulder, including Dr. Failinger's surgical recommendation were authorized, causally related to the compensable injury, and reasonably necessary to cure and relieve the effects thereof. Therefore, the ALJ concludes that respondent is liable for this care and treatment.

Burden of Proof

d. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained his burden of proof on compensability and medical benefits.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Respondent shall pay the costs of all medical care and treatment for the Claimant's compensable right shoulder injury, including the surgery recommended by Mark Failinger, M.D., subject to the Division of Workers' Compensation Medical Fee Schedule.

B. Any and all issues not determined herein are reserved for future decision.

DATED this_____day of December 2017.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-009-779-02

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

,

Employer,

and

Insurer/Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on December 12, 2017, in Denver, Colorado. The hearing was digitally recorded (reference: 12/12/17, Courtroom 1, beginning at 9:”00 AM, end ending at 10:00 AM).

Claimant’s Exhibits 1 through 9 were admitted into evidence, without objection. Respondents’ Exhibits A through E were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Claimant, which was filed, electronically, on December 20, 2017. On the same date, counsel for the Respondents indicated, electronically, that the Respondents had no objections to the proposed decision. After a consideration of the proposed decision, the ALJ has modified the proposal and hereby issues the following decision.

ISSUE

The sole issue to be determined by this decision concerns the Claimant's entitlement to post-maximum medical improvement (MMI) medical maintenance benefits as recommended by Theodore Villavicencio, M.D., one of the Claimant's authorized treating physicians (ATPs).

The Claimant bears the burden of proof, by a preponderance of the evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant sustained an admitted injury to her neck, upper back, and right hand on March 9, 2016. She reported the incident to her Employer and was referred to Concentra for medical treatment of her injuries.

2. The Claimant presented to Concentra for treatment on March 10, 2016. (Claimant's Exhibit 6, pp. 38-140). She was diagnosed with cervical and lumbar strain, a sprained ligament of the right ankle, and a strain of the left knee. She was seen first by Scott Richardson, M.D., and subsequently by Steven Abrams, M.D. and Theodore Villavicencio, M.D., all ATPs.

3. During her treatment with Concentra, the Claimant underwent physical therapy (PT) that was largely effective at reducing her symptoms (Claimant's. Exhibit 6, pp. 38-140). According to the Claimant, her symptoms, especially in the cervical spine, were controlled as long as she received regular therapy, especially when she had multiple sessions per week. The Claimant's symptoms in her lumbar spine, right ankle, left knee, and right hand dissipated entirely during the course of her treatment, although the symptoms recurred in her wrist and lumbar spine after she was placed at MMI. Throughout her treatment, the Claimant reported a waxing and waning of the symptoms in her cervical spine, often manifesting as tenderness and pain in her left trapezius.

4. Ultimately, the Respondents filed a Final Admission of Liability (FAL), dated February 10, 2017, admitting for medical benefits; an average weekly wage

(AWW) of $288.48; temporary total disability (TTD) benefits of $192.31 per week from March 10, 2016 through March 20, 2016; permanent medical impairment of 15% whole person, with an MMI date of August 17, 2016; and, an ambiguous statement (admission or denial) concerning post-MMI medical maintenance (*Grover* medicals) benefits.

Findings

5. The Claimant presented to Patrick O'Malley, M.D., on July 18, 2016 for an MRI (magnetic resonance imaging) of her cervical spine (Claimant's Exhibit 5, pp. 36-37). Dr. O'Malley found degenerative disc disease of the cervical spine, especially at C4-5, C5-6, and C6-7. Such disc degeneration predated the Claimant's March 9, 2016 admitted injury.

6. ATP Dr. Villavicencio referred the Claimant to Samuel Chan, M.D., for EMG testing of her right upper extremity (RUE), which was performed on July 21, 2016. (Claimant's Exhibit 7, pp. 141-148). The EMG findings were unremarkable, but Dr. Chan noted that the Claimant had continuing left-sided cervical spine pain. He recommended that the Claimant continue with an active exercise program as already planned for her cervical symptoms.

7. Dr. Chan subsequently examined the Claimant on July 26, 2016. (Claimant's Exhibit 6, pp. 106-109). At that time, Dr. Chan recommended that the Claimant consider facet injections to address the ongoing symptoms in her cervical spine. The Claimant declined, preferring to first discuss the issue with her friends in order to weigh the benefits and risks. Dr. Chan found this request to be reasonable. Dr. Chan was of the opinion that "[i]f the patient is not interested in any further therapeutic measures, the patient should definitely continue to follow through with an active exercise program on an individualized basis and she most likely would be at maximal medical improvement." *Id*. at p. 109.

8. The Claimant returned to Dr. Chan on August 16, 2016, for a recheck of her ongoing cervical symptoms (Claimant's. Exhibit 6, pp. 114, 115). At that time, the Claimant reported that her ongoing pain was roughly six out of ten, and had remained at that level since the time of her last visit. She described the pain, however, as no longer constant, although a hard day at work would increase her reported pain level. Dr. Chan noted that the Claimant decided against pursuing facet injections, having done research and decided against invasive therapeutic intervention. Dr. Chan concluded that the Claimant had reached MMI, and that her "prognosis is ultimately good if she does follow through with active exercise program." *Id*.

9. Dr. Villavicencio remained the Claimant's ATP until August 20, 2016, when he placed the Claimant at MMI as of August 16, 2016, the date of Claimant's last visit with Dr. Chan (Claimant's Exhibit 3, pp. 11-14). Dr. Villavicencio assigned the

Claimant a zero percent impairment rating at that time. Dr. Villavicencio also did not recommend that the Claimant receive maintenance care going forward.

10. The Claimant challenged Dr. Villavicencio's report and sought a Division Independent Medical Examination (DIME).

11. J. Stephen Gray, M.D., performed the DIME on December 19, 2016. (Claimant's Exhibit 4, pp. 18-32). Dr. Gray reviewed the medical records, took a patient history, and performed a physical examination. He assigned the Claimant a 15% whole person rating based on impairment to her cervical spine. He additionally agreed with Dr. Villavicencio that Claimant had reached MMI, however, he erroneously assigned an MMI date of August 17, 2016, one day later than ATP Dr. Villavicencio. The ALJ finds that the Claimant reached MMI on August 16, 2016.

12. Dr. Gray, however, disagreed with Dr. Villavicencio as to maintenance care. *Id*. At the time of Dr. Gray's examination, the Claimant's symptoms had increased from the level she had presented to Dr. Villavicencio in August 2016 – as of December 19, 2016, the Claimant presented with pain at a level of nine out of ten, worsened by a variety of basic physical activities such as standing, sitting, and walking, as well as by cold weather. As such, Dr. Gray concluded that due to the Claimant's ongoing pain symptomology, **maintenance care was indicated** in her case. Specifically, Dr. Gray recommended that the Claimant follow up with Dr. Chan quarterly, who could in turn refer the Claimant for PT, steroid injections, and appropriate medications to control her pain.

13. The Claimant subsequently returned to Dr. Villavicencio's office on May 8, 2017 and June 28, 2017 (Respondents' Exhibit D, pp. 5-8). Dr. Villavicencio examined the Claimant at the May 8, 2017 visit, but he did not personally examine her on June 28, 2017; the latter exam was conducted by Dr. Villavicencio's physician's assistant (PA), Casey McKinney. On May 8, 2017, the Claimant reported persistent pain with no new injury or job duties, centered on her left trapezius, cervical and lumbar spine, and right wrist. Dr. Villavicencio recommended re-opening the Claimant's case for a physiatry reevaluation, restarting physical therapy, and possible facet injections. On June 28, 2017, PA McKinney restated Dr. Villavicencio's opinion that the Claimant receive ongoing maintenance care with Dr. Chan.

14. Dr. Villavicencio's evidentiary deposition was taken on October 20, 2017 (and filed on December 12, 2017) in his capacity as an expert in the field of family medicine, as well as the Claimant's ATP (Villavicencio Deposition, pp. 1-27). Dr. Villavicencio testified that the Claimant still experienced pain symptoms when he placed her at MMI, and that he did not initially think that she would require maintenance care. Dr. Villavicencio reviewed Dr. Gray's DIME report and Dr. Villavicencio agreed with Dr. Gray's conclusions as to maintenance care, specifically that Claimant be allowed to follow-up with Dr. Chan.

15. Dr. Villavicencio testified that the Claimant was no longer at MMI with respect to her cervical spine as of his most recent examination dated May 8, 2017. *Id*. He stated that he related her reported pain in May 2017 back to her March 9. 2016 admitted injury because he had been presented with an identical pattern of worsening pain, with no evidence of a new injury or increased job duties. Finally, Dr. Villavicencio concluded that, to a reasonable degree of medical probability, the Claimant should follow up with Dr. Chan for maintenance care, and this would be reasonably necessary to address her ongoing and worsening symptoms.

The Claimant

16. The Claimant testified live at hearing. She stated that her symptoms follow a cyclical pattern of increase and decrease, with increases often associated with greater levels of activity. She indicated that after Dr. Villavicencio placed her at MMI, her pain level steadily increased despite her attempts to control the pain with at-home exercises and over-the-counter medication. She further testified that she sought follow-up appointments with Dr. Villavicencio when it became clear that she could not control her symptoms on her own. According to the Claimant, she began working a new job in June 2017, but that her increase in pain pre-dated her starting work with the new employer.

Ultimate Findings

17. Based on the medical record and the opinions of her treating physicians, the Claimant's present symptoms are identical to those immediately seen after her March 9, 2016 admitted injury. The Claimant testified credibly that she has persistently experienced increases and decreases in her level of pain, and that keeping her pain to a manageable level is only accomplished by access to PT. Further, ATP Dr. Villavicencio's ultimate opinion that the Claimant needs post-MMI medical maintenance care and treatment was persuasive and credible. Also, both the Claimant's testimony and the ultimate opinion of ATP Dr. Villavicencio are undisputed.

18. The ALJ finds that the Claimant has proven, by a preponderance of the evidence that maintenance medical care, as recommended by ATP Dr. Villavicencio, is reasonably necessary to address the ongoing symptoms she experiences as a result of her March 9, 2016 admitted injury and it is causally related thereto.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the Claimant's testimony, as well as the ultimate opinion of ATP Dr. Villavicencio, concerning Claimant's need for post-MMI maintenance medical care and treatment was persuasive and credible. As further found, both the Claimant's testimony and the ultimate opinion of ATP Dr. Villavicencio are undisputed. *See Annotation, Comment: Credibility of Witness Giving Un-contradicted Testimony as Matter for Court or Jury,* 62 ALR 2d 1179, maintaining that the fact finder is not free to disregard un-contradicted testimony.

Post Maximum Medical Improvement (MMI) Maintenance Medical Care

b. An employee is entitled to continuing medical benefits after MMI if reasonably necessary to relieve the employee from the effects of an industrial injury. *See Grover v. Indus. Comm'n of Colorado*, 759 P.2d 705 (Colo. 1988). The record must contain substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve a claimant from the effects of an injury or to prevent further deterioration of his condition. *Stollmeyer v. Indus. Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995); *Grover v. Indus. Comm'n, supra*. Such evidence may take the form of a prescription or recommendation for a course of medical treatment necessary to relieve a claimant from the effects of the injury or to prevent further deterioration. *Stollmeyer v. Indus. Claim Appeals Office, supra*. An injured worker is ordinarily entitled to a general award of future medical benefits, subject to an employer's right to contest causal relatedness and reasonable necessity, at any time. *See Hanna v. Print Expediters,* 77 P.3d 863 (Colo. App. 2003). As found, the Claimant is entitled to maintenance medical care, which is reasonably necessary to address the admitted injuries.

Burden of Proof

c. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained her burden of proof with respect to post-MMI medical maintenance benefits.

ORDER

IT IS, THEREFORE, ORDERED THAT:

Respondents shall pay all of the costs of post-maximum medical improvement maintenance medical care and treatment for the Claimant's admitted injuries of March 9, 2016, subject to the Division of Workers' Compensation Medical Fee Schedule.

DATED this_____day of December 2017.

_____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

STIPULATIONS

Prior to the commencement of hearing, the parties stipulated that Claimant's average weekly wage at the time of her injury was equal to $508.72. They also stipulated that if Claimant is determined to be at maximum medical improvement (MMI), an overpayment in benefits paid to Claimant in the amount of $2,215.87 exists in favor of Respondents. Finally, Claimant agreed to withdraw the issues of permanent total disability (PTD) and conversion of her scheduled impairment rating to impairment of the whole person as being premature based upon her contention that she is not at MMI. Respondents voiced no objection. The stipulations are hereby approved.

REMAINING ISSUES

I. Whether Claimant established by clear and convincing evidence that Dr. Tyler erred in concluding that her left shoulder condition was not causally related to her May 13, 2015 admitted work related injury.

II. If Claimant established that Dr. Tyler's causality opinion regarding the left shoulder is highly probably incorrect, whether she also produced clear and convincing evidence that she not at MMI for the work related aspects of her left shoulder condition.

III. If Claimant established that she was not properly placed at MMI, whether she established by a preponderance of the evidence that Respondents are liable for additional treatment related expenses to cure and relieve Claimant of her left shoulder injury.

IV. If Claimant established that she is not at MMI, whether she established by a preponderance of the evidence presented that she is entitled to additional temporary total disability (TTD) benefits.

V. If Claimant failed to overcome the DIME opinions of Dr. Tyler by clear and convincing evidence, whether she established by a preponderance of the evidence that she is entitled to maintenance medical benefits.

VI. Whether Respondents have proven by a preponderance of the evidence that they are entitled to recovery of the stipulated $2,215.87 overpayment of indemnity benefits.

VII. Whether Claimant suffered permanent disfigurement to a part of the body normally exposed to public view entitling her to additional benefits pursuant to C.R.S. §8-42-108(1).

Because the undersigned ALJ finds and concludes that Claimant failed to overcome the causality opinion of Dr. Tyler regarding the relatedness of Claimant's shoulder joint pathology and associated symptoms to her May 13, 2015 trip and fall, this Order does not address Issues II-IV outlined above.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Respondent-Employer operates an assisted living facility known as the Florence Veterans Nursing Home. Claimant is a former certified nursing assistant (CNA) who was injured in the course and scope of her employment On May 13, 2015, when she fell to the floor after becoming tangled in a bed alarm cord.

2. According to Claimant's "injury/Exposure on the Job (IOJ) Form", as she was leaving a patient's room to retrieve a clean gown, her foot "caught in the bed alarm string/cord and [she] fell to the ground on her left leg area/knee." Per Claimant, the area was bruised and swollen.

3. Claimant presented to the Centura Centers for Occupational Medicine (CCOM) on May 14, 2015 where she was evaluated by Physician Assistant (PA), Steven Quakenbush. During this initial appointment, Claimant reported that she fell onto her left knee and outstretched left hand and wrist. She reported having "instant" pain in the left knee and "minimal discomfort" involving her left shoulder, hand and wrist. Physical examination revealed an "obvious" antalgic gait and a palpable hematoma in the left lower leg downward to the knee, but no "obvious swelling or effusion of the left knee." No pain was reported during palpation of the left shoulder and Claimant demonstrated "full abduction above shoulder height, full internal and external rotation, cross chest reach, above head reach and posterior reach without significant pain." Claimant also demonstrated full range of motion of the left wrist and no "swelling or discoloration of the left hand and wrist." Claimant was assessed with a left knee contusion, left shoulder strain and left hand and wrist strain.

4. Between Claimant's May 13, 2015 date of injury and July 15, 2015, she continued to complain of pain and dysfunction in the left knee but not the left shoulder, wrist or hand. Review of the treatment records from CCOM for this same time frame reflects that Claimant's physical examination and treatment was limited to and focused on the left knee. However, on July 15, 2015, Claimant presented with a new complaint of neck pain and headaches. A pain diagram completed by Claimant on July 15, 2015 depicts aching pain in the back of the neck, the trapezius musculature bilaterally, the front and back of the upper arms and the upper chest area. PA Quakenbush reserved the question of whether Claimant's new neck and headache pain was causally related to her May 13, 2015 injury to Dr. Nanes.

5. On July 16, 2015, Dr. Nanes noted that Claimant had been treated for "many

years for headaches and has had previous MRI studies and . . . physical therapy and is taking a muscle relaxer at nighttime." After review of Claimant's pain diagrams, which did not document any complaint of headaches, Dr. Nanes opined that Claimant's headaches and neck pain were not related to the May 13, 2015 trip and fall.

6. On July 23, 2015, Dr. Nanes noted that Claimant's primary care physician (PCP) would not treat her headaches or neck complaints as she felt that these conditions were work related. After noting that Claimant had retained an attorney "over this whole matter." Dr. Nanes reiterated his opinion that Claimant's headaches and neck pain were unrelated to her May 13, 2015 work injury.

7. On September 24, 2015, four months after her trip and fall, Claimant returned to CCOM with a primary complaint of left arm pain. According to the treatment note authored by Dr. Nanes from this date, Claimant reported that she had been having increasing left shoulder pain for several weeks and was concerned that this was related to her original injury. Dr. Nanes informed Claimant that he did not see a causal relationship given the length of time that had elapsed since her May 13, 2015 injury. Claimant was informed to initiate treatment for her left shoulder with her PCP.

8. On October 5, 2015, Claimant presented to Valley Wide Health Systems where she was evaluated by PA Robert Dawson. PA Dawson noted that Claimant presented with "musculoskeletal pain", specifically left shoulder pain in the area of the rotator cuff that was occurring "intermittently and [was] worsening." He noted further that Claimant's shoulder pain was aggravated by "lifting and movement" and that Claimant was told she had bursitis which was unrelated to her fall for which she should pursue an injection. PA Dawson mistakenly identified Dr. Timothy Hall as Claimant's primary workers' compensation doctor noting further that she had an upcoming appointment with him in two weeks. According to PA Dawson's note, Claimant wanted to wait on the injection until she saw Dr. Hall because if she had a "small labral tear from the fall, having [PA Dawson] treat her for bursitis could void her claim." Finally, PA Dawson advised Claimant that if Dr. Hall declined to inject her shoulder she could return to the clinic and he would.

9. Dr. Hall evaluated Claimant at the request of her attorney on November 3, 2015. Historically, Dr. Hall documented that Claimant's shoulder symptoms were present early on, improved for a time and then worsened. She denied any history of prior shoulder problems. Dr. Hall also noted that Claimant's worsening shoulder symptoms were associated with her return to light duty work "feeding clients" as this activity involved "a lot of reaching and twisting, which flared most all of her symptoms." He indicated that Claimant's shoulder did not hurt a "great deal" and that she did not have substantial trouble when functional activities were limited to the "ergonomic box." However, any activity requiring reaching, excessive internal rotation and/or activity at or above shoulder level was painful.

10. Physical examination of the left shoulder and upper back during Dr. Hall's November 3, 2015 IME revealed the following:

> There are active trigger points noted in the left parascapular area and left trapezius. Her left shoulder is forward and elevated compared to the right. No significant AC joint tenderness with the shoulder. There is some pulling/discomfort in the parascapular area and trapezius area with internal as well as external rotation. She has difficulty with weighted abduction with the arm extended. This is through the shoulder generally. No cepitus with range of motion. No evidence of instability on stressing the left shoulder. Her range of motion is actually pretty good, just with discomfort at extremes. . . . No weakness about the shoulder girdle.

11. Based upon the information gathered during his IME, including Claimant's report of having no "previous problems" with her left shoulder, Dr. Hall opined that Claimant's left shoulder symptoms were causally related to her May 13, 2015 trip and fall. According to Dr. Hall, Claimant was likely "dealing with bursitis/tendonitis" of the shoulder. He did not suspect a tear. He recommended a steroid injection into the bursa and an orthopedic referral if that did not improve her situation. Dr. Hall also related Claimant's neck pain and headaches to her fall. In doing so, Dr. Hall theorized that the abnormal mechanics and "postural distortion created by the shoulder sprain, as well as the direct trauma to the upper back area and potential whiplash-type injury created by the inertia of the fall could certainly have brought on an increase in her neck pain and headache." While he related Claimant's headaches and upper back/neck pain to the May 13, 2015 fall, Dr. Hall noted that the symptoms associated with these injuries were "under better control." Consequently, he did not recommend additional treatment for these conditions.

12. In contrast to the denial of previous left shoulder problems Claimant conveyed to Dr. Hall, her medical records substantiate the existence of a lengthy history of left shoulder complaints/symptoms predating her May 13, 2015 fall. The first notation in Claimant's medical records of left shoulder pain dates back to June 19, 2008.[1] While many of Claimant's prior complaints were associated with her neck and trapezius area, the records also contain specific reference to left shoulder pain with treatment directed to this area. Indeed, the records submitted at hearing include an August 28, 2014 note, which outlines referrals to Caring Hands Physical Therapy for treatment for "left shoulder pain with rotator cuff symptoms", to St. Thomas More radiology regarding the need for an MRI and to Dr. Keith Minihane secondary to a "failed sub-acromial injection done under ultrasound guidance."

13. Review of Claimant's physical therapy records supports a finding the she has been treated for symptoms consistent with fibromyalgia affecting her neck, upper back and shoulders. On October 23, 2014, Claimant reported shooting pain in her left shoulder extending into her left arm. On December 15, 2014, physical examination revealed moderately increased muscle tone in the shoulders bilaterally. On March 19, 2015, Claimant reported bilateral shoulder pain. On April 14, 2015, Claimant reported

[1] See Dr. Tyler's Division Independent Medical Examination (DIME) report dated March 15, 2017. (Exhibit M, bate stamp 91)

that her shoulders were "bothering her more lately." During Claimant's April 21, 2015 appointment, Claimant reported increased pain throughout her left shoulder after lifting a patient. Just 6 days prior to her fall or May 7, 2015, Claimant was still complaining of left shoulder pain.

14. Dr. Daniel Olson placed Claimant at MMI on October 5, 2016 with 13% scheduled impairment of the left knee. Claimant requested a DIME, which would be completed by Dr. John Tyler on March 15, 2017.

15. Prior to undertaking the requested DIME, an MRI of Claimant's left shoulder was completed on December 9, 2016. Imaging demonstrated a small rim rent tear in the supraspinatus tendon and possible intrasubstance tear or a partial tear to the subscapularis tendon or rotator cuff.[2]

16. Claimant's MRI results were discussed at a December 12, 2016 follow-up appointment. It was noted during this appointment that an injection had provided no significant relief. Consequently, surgery was also discussed.

17. As noted, Dr. Tyler completed a DIME on March 15, 2017. As part of his DIME, Dr. Tyler undertook an exhaustive review (in excess of 5 hours) of a "copious" amount of medical records dating back to March 19, 2007. Dr. Tyler's records review identified a report from June 19, 2008 noting complaints of numbness in the hands in addition to left shoulder and arm pain. He also made mention of a May 26, 2009 report wherein Claimant reported chronic pain and waking with painful swollen hands and feet as well as painful shoulders. Additional records reviewed revealed a diagnosis of fibromyalgia and chronic pain of the neck, upper back, shoulders and knees.

18. During her DIME, Claimant identified two primary problems that she associated with her trip and fall. These were labeled 1A and 1B by Dr. Tyler. Problem 1A was noted as left shoulder pain/tightness that Claimant reported limited her ability to flex and abduct the shoulder beyond 90 degrees. Abduction beyond 100 degrees reportedly resulted in popping of the shoulder joint. Claimant also described an aching sensation in the top and front aspects of the left shoulder occurring 4 to 5 times per week, which Claimant reported was associated with prolonged activity/use of the left arm.

19. Examination of the left shoulder revealed "significant myofascial trigger point sites . . . within the right posterolateral neck extending into the region of the infraspinatus." Dr. Tyler noted that Claimant's trigger point sites "may be a component of some of [Claimant's] ongoing complaints of shoulder pain but not within the shoulder." Based on the content of the medical records and his clinical examination, Dr. Tyler opined that there was no definitive evidence that would directly relate any internal shoulder pathology directly to her May 13, 2015 trip and fall. Dr. Tyler agreed that Claimant had reached MMI on October 5, 2016. He assigned 5% lower extremity impairment for Claimant's left knee injury.

[2] See Dr. Hall's IME report dated September 27, 2017. (Claimant's Exhibit 4, bate stamp page 42)

20. Dr. Hall competed a follow-up IME at Claimant's request on September 27, 2017. In a report authored by Dr. Hall following his follow-up examination, he attributed the "potential intrasubstance tear involving the subscapularis and supraspinatus" to Claimant's May 13, 2015 trip and fall. Because Claimant had failed to benefit from a local injection, Dr. Hall opined that arthroscopic intervention was appropriate. Given the need for additional treatment to address her ongoing left shoulder complaints, Dr. Hall concluded that Claimant was not at MMI.

21. Dr. Hall testified at hearing. He opined that while Claimant had treated on a number of occasions for issues related to her left shoulder, those complaints could not be definitely linked to Claimant's left shoulder joint. Rather, he testified that Claimant's prior left shoulder symptoms were more probably related to muscular issues in Claimant's upper back between the neck and the shoulder joint itself, supporting the diagnosis of fibromyalgia. Dr. Hall testified that the shoulder consists of a number of different components, and thus a general shoulder complaint could refer to either joint issues or more wide spread problems involving the area of the neck and upper back. Dr. Hall testified that he had reviewed records of Claimant's prior shoulder complaints before hearing, and had to conclude that they related to a soft tissue (muscular) condition encompassing the trapezius between Claimant's shoulder/upper back and her neck, rather than symptom producing condition in the joint itself.

22. Based upon his subsequent review of the medical records pertaining to the condition of Claimant's left shoulder prior to her trip and fall, Dr. Hall testified that Claimant's current shoulder complaints are, more probably than not, causally related to internal pathology, i.e. a rim rent tear in the shoulder. Moreover, he testified that this tear is causally related to her fall rather than a chronic, preexisting degenerative condition. In reaching this opinion, Dr. Hall noted that when an injured party falls onto their outstretched arm as Claimant did in this case, pain complaints somewhere along the length of the arm, whether they be in the hand, wrist, elbow, or shoulder, are expected.

23. Dr. Hall's opinions regarding causality of Claimant's left shoulder condition/complaints places significant weight on his review of the left shoulder MRI report. In suggesting that Dr. Tyler's causality opinion concerning the left shoulder was erroneous, Dr. Hall noted that Dr. Tyler did not review the MRI. Rather, Dr. Hall testified that Dr. Tyler's causality opinion was based primarily upon a records review and his physical examination. According to Dr. Hall, physical examination of the shoulder is very limited in its ability to catch internal pathology of the shoulder.[3] Thus, Dr. Hall testified that imaging, including MRI is necessary to determine the nature and extent of pathology. Because Dr. Tyler did not review the left shoulder MRI demonstrating the existence of "potential" tears and because physical examination has limited diagnostic

[3] The ALJ notes that as far back as May 14, 2015, one day after her trip and fall, Claimant's shoulder examination was essentially normal. Multiple examinations after that date, including those by Dr. Hall himself were also benign.

capabilities, Claimant submits that Dr. Tyler erred in failing to relate Claimant's left shoulder condition to her May 13, 2015 fall.

24. While Dr. Hall testified that the MRI imaging obtained in this case is critical to the analysis of whether Claimant's left shoulder condition and current symptoms are related to her May 13, 2015 trip and fall, he conceded that there is no way to tell from the MRI when the potential tears identified on MRI occurred and such tears can be caused from lifting and/or motor vehicle accidents. The ALJ notes that the MRI in this case was obtained in excess of sixteen months following Claimant's May 13, 2015 fall and that Claimant was involved in a car accident on January 7, 2015 and subsequently complained of increased pain in the left shoulder on April 21, 2015, after lifting a patient.

25. Claimant testified at hearing. She explained that she had indeed treated for problems with both shoulders, her present complaints related to pain within the shoulder joint while her complaints before her fall related to the portions of her shoulder that connected to her upper back and neck. Claimant testified that before her fall she was experiencing neither pain within the shoulder joint itself nor any loss of range of motion. Rather, those problems arose solely after Claimant's May 13, 2015 admitted injury.

26. While the evidence presented persuades the ALJ that Claimant likely has internal pathology in the left shoulder, the ALJ is not convinced that this pathology is related to the May 13, 2015 trip and fall. Claimant has failed to carry her burden to establish by clear and convincing evidence that Dr. Tyler's DIME opinion regarding the relatedness, i.e. the cause of Claimant's "joint" pathology and associated symptoms to her May 13, 2015 trip and fall is highly probably incorrect.

27. The ALJ finds that as a result of her May 13, 2015 work injury, Claimant has a visible disfigurement to the body consisting of a total of two (2), 3/8 inch, light red arthroscopic surgical scars located on either side of the left leg in the area of the knee. In addition to these scars, there is mild swelling of the left knee when compared to the right.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to Assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A Claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197

Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

B. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law, and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Clam Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968). In this case, the ALJ concludes that Dr. Tyler's opinions are supported by the content of the medical records he reviewed. They are also supported by the fact that it is impossible to determine whether the "potential" tears noted on MRI occurred before or after the fall in question. As such, the ALJ finds Dr. Tyler's opinions credible. There is also a lack of persuasive evidence to support a conclusion that Dr. Tyler deviated from the accepted methodology of the AMA Guidelines when he completed his DIME in this case. Indeed, Claimant makes no such assertion. Rather, Claimant contends that the DIME has been overcome based upon the fact that Dr. Tyler relied solely on his physical examination of Claimant's shoulder without reviewing the results of the MRI study. For the reasons enumerated below, the evidence presented fails to persuade the undersigned ALJ that Dr. Tyler's opinion regarding the relatedness of Claimant's need for surgery to her industrial injury is "clearly erroneous."

Overcoming the DIME

D. A DIME physician's findings of causation, MMI and impairment are binding on the parties unless overcome by "clear and convincing evidence." Section 8-42-107(8)(b)(III), C.R.S.; *Qual-Med v. Industrial Claim Appears Office*, 961 P.2d 590 (Colo. App. 1998); *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinion concerning MMI and/or causation is incorrect.

Metro Moving and Storage Co. v. Gussert, 914 P.2d 411 (Colo. App. 1995) In other words, to overcome a DIME physician's opinion regarding MMI and/or the cause of a particular condition asserted to be related to Claimant's industrial injury, the party challenging the DIME must demonstrate that the physicians determinations in these regards are highly probably incorrect and this evidence must be "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo. App. 2002). *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appears Office, supra.*

D. In resolving the question of whether the DIME physician's opinions have been overcome, the ALJ may consider a variety of factors including whether the DIME physician properly applied the AMA Guides. *See Metro Moving and Storage Co. v Gussert,* 914 P.2d 411 (Colo. App. 1995); *Wackenhut Corp. v. Indus. Claim Appeals Office*, 17 P.3d 2002 (Colo. App. 2000); *Aldabbas v. Ultramar Diamond Shamrock*, W.C. No. 4-574-397 (ICAO August 18, 2004). The ALJ should also consider all of the DIME physician's written and oral testimony. *Lambert and Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998).

E. MMI is defined, in part, as the "the point in time . . . when no further treatment is reasonably expected to improve the condition. Section 8-40-201(11.5), C.R.S. Here, the weight of the persuasive evidence demonstrates that Claimant's need for additional left shoulder treatment, including surgical intervention is related to a condition that cannot be definitively traced to her industrial injury. Because physical examination is limited in its ability to identify internal joint pathology and because the only MRI evidence actually presented at hearing cannot tell us when the tear occurred, there is no way of knowing when the "potential" tears in the rotator cuff tear actually occurred. Here it is equally likely that the tear was present before Claimant's trip and fall or occurred sometime after based on Claimant's failure to report increased left shoulder symptomatology until 4 months after her fall. While Dr. Hall surmised that since Claimant underwent surgery and the surgery helped, her fall must have caused the joint pathology noted on MRI, this theory does not constitute clear and convincing evidence that Dr. Tyler's causality assessment was highly probably incorrect. Simply because the surgery that Claimant underwent reduced her pain that does not correlate the onset of Claimant's left shoulder pain due to suspected internal pathology to her May 13, 2015 fall. As explained by a Panel of the Industrial Claims Appeals Office in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (October 27, 2008), a coincidental correlation between a claimant's work and his symptoms does not mean there is a causal connection between a claimant's injury and his/her work. To the contrary, as noted by the Panel in *Scully* "correlation is not causation."

F. After considering the totality of the evidence presented, including the DIME reports and testimony of Dr. Hall, the ALJ concludes that Claimant has failed to produce unmistakable evidence establishing that the Dr. Tyler's determination regarding causality and MMI is highly probably incorrect. Rather, the ALJ concludes that the

evidence presented establishes a mere difference of opinion regarding causation between the DIME physician and the medical expert (Dr. Hall) retained by Claimant. A professional difference of opinion does not rise to the level of clear and convincing evidence that is required to overcome Dr. Tyler's opinions concerning causality and MMI. *See generally, Gonzales v. Browning Farris Indust. of Colorado, W.C. No. 4-350-356 (ICAO March 22, 2000),* Consequently, Claimant has failed to meet her required legal burden to set Dr. Tyler's causality and MMI determination aside.

Maintenance Medical Benefits

G. The need for medical treatment may extend beyond the point of maximum medical improvement where a claimant requires periodic maintenance care to relieve the effects of the work related injury or prevent further deterioration of his condition. *Grover v. Indus. Comm'n*, 759 P.2d 705 (Colo. 1988). In *Milco Construction v. Cowan,* 860 P.2d 539 (Colo.App. 1992), the Court of Appeals established a two-step procedure for awarding ongoing medical benefits under *Grover v. Industrial Commission, supra*. The Court stated that an ALJ must first determine whether there is substantial evidence in the record to show the reasonable necessity for future medical treatment "designed to relieve the effects of the injury or to prevent deterioration of the claimant's present condition." If the claimant reaches this threshold, the Court stated that the ALJ should then enter "a general order, similar to that described in *Grover*." Even with a general award of maintenance medical benefits, respondents still retain the right to dispute whether the need for medical treatment was caused by the compensable injury or whether it was reasonable and necessary. *See Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo.App. 2003) (a general award of future medical benefits is subject to the employer's right to contest compensability, reasonableness, or necessity).

H. While a claimant does not have to prove the need for a specific medical benefit, and respondents remain free to contest the reasonable necessity of any future treatment; the claimant must prove the probable need for some treatment after MMI due to the work injury. *Milco Construction v. Cowan*, supra. The question of whether the claimant met the burden of proof to establish an entitlement to ongoing medical benefits is one of fact for determination by the ALJ. *Holly Nursing Care Center v. Industrial* Claim Appeals Office, 992 P.2d 701 (Colo.App. 1999); *Renzelman v. Falcon School District,* W. C. No. 4-508-925 (August 4, 2003). In this case, Claimant has failed to prove entitlement to medical maintenance benefits. Here, Dr. Olson, the authorized provider, Dr. Tyler, the DIME physician, and Dr. Hall, Claimant's own IME physician, all opined that there is no need for medical maintenance benefits. (Exhibit L, bate stamp 74, Exhibit M, bate stamp 102, and Exhibit 4, bate stamp 44) Consequently, Claimant's request for medical maintenance benefits is denied and dismissed.

Repayment of Overpayment

I. Section 8-40-201(15.5), C.R.S. provides as follows:

> "Overpayment" means money received by a claimant that exceeds the amount that should have been paid, or which the claimant was not entitled to receive, or which results in duplicate benefits because of offsets that reduce disability or death benefits payable under said articles. For an overpayment to result, it is not necessary that the overpayment exist at the time the claimant received disability benefits under said articles.

Thus, §8-40-201(15.5), C.R.S. provides for three categories of possible overpayment: (1) a claimant receives money "that exceeds the amount that should have been paid"; (2) money received that a "claimant was not entitled to receive"; and (3) money received that "results in duplicate benefits because of offsets that reduce disability or death benefits" payable under articles 40 to 47 of Title 8. *See Simpson v. Industrial Claim Appeals Office,* 219 P.3d 354 (Colo. App. 2009), *rev'd in part on other grounds, Benchmark/Elite, Inc. v. Simpson,* 232 P.3d 777 (Colo. 2010).

J. Respondents bear the burden, by a preponderance of the evidence that Claimant received an overpayment of indemnity benefits. Respondents' assertion of the right to recover an overpayment is a factual matter for determination by the ALJ. *Karyn Milazzo v. Total Long-term Care*, *Inc.*, W.C. No. 4-852-795-02, (ICAP Jun. 11, 2014). In this case, the parties stipulated that the Final Admission of Liability accurately reflects an overpayment to Claimant in the amount of $2,215.87. Consequently, Respondent are entitled to recover $2,215.87 from Claimant.

Disfigurement

K. In *Arkin v. Industrial Commission*, 145 Colo. 463, 358 P.2d 879 (1961), the Court held that the term "disfigurement" as used in the statute, contemplates that there be an "observable impairment of the natural person." As found in this case, Claimant has surgical scarring located on the left leg on either side of the knee, which alters the natural appearance of skin in these areas. Consequently, the ALJ concludes that Claimant has suffered a visible disfigurement entitling her to additional benefits as provided for by Section 8-42-108 (1), C.R.S.

ORDER

It is therefore ordered that:

1. Claimant's request to set aside the DIME opinion of Dr. Tyler regarding the cause of Claimant's left shoulder condition/symptoms and MMI is denied and dismissed.

2. Claimant's request for maintenance medical benefits is denied and dismissed.

3. Claimant shall repay Respondents the stipulated $2,215.87 overpayment in benefits.

4. Claimant is entitled to disfigurement benefits in the amount of $800.00.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 22, 2017

/s/ Richard M. Lamphere

Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that she sustained a compensable injury to her lower back while working for Employer on July 18, 2016?

II. Has Claimant shown, by a preponderance of the evidence, that the surgery performed by Dr. Toby Moore, to include the L4-L5 and L5-S1 fusion, was reasonable, necessary, and related to Claimant's compensable condition?

III. Has Claimant shown, by a preponderance of the evidence, that she is entitled to Temporary Total Disability Payments, beginning August 3, 2016 and ongoing?

STIPULATIONS

I. The parties stipulated that Claimant's Average Weekly Wage is $550.80. This stipulation was accepted by the ALJ.

FINDINGS OF FACT

Based upon the evidence received at hearing, the ALJ makes the following Findings of Fact:

1. Claimant asserts that she sustained an injury to her back while working for Taylor Farms on July 18, 2016.

2. Claimant worked for Taylor Farms from 2002-2003, and then again from 2008-2016. She worked on the trim deck at the production line for cabbage. Claimant testified that on July 18, 2016, she was handling the controls of the conveyor belt that moves the cabbage.

3. Claimant testified that began work at 7:30 a.m. on July 18, 2016 and that when she started work, she did not have any pain. She estimated that she began experiencing pain at around 8:30 a.m. or 9:00 a.m. She testified that she had bent down to pick up a cabbage that was clogging the conveyor belt, and that is when she experienced pain in her waist, right leg, and right arm.

4. Claimant testified that when this occurred, there was no one across from her on the conveyor belt, and that there were only three other people working on the conveyor belt line. She said that they could not keep up with how fast the cabbage were being loaded onto the conveyor belt. Because there was no one on the other side of the conveyor belt, and because the cabbages were coming so fast, cabbage was getting stuck and clogging the conveyor belt and falling to the floor.

5. Claimant testified that in order to clear the cabbage, she held on to a piece of equipment on the conveyor belt, bent forward and then twisted so she could reach under the conveyor belt to the other side and stab the cabbage that had fallen to the floor with her cabbage knife and put it onto the trash conveyor that is directly under the production conveyor belt.

6. Claimant also demonstrated this in court, showing specifically that she reached under the conveyor belt to the other side of the belt in order to reach the cabbage that had fallen to the floor.

7. Claimant stated that she did not report her pain to the employer, but instead she continued to work until the lunch break, at around 12:30 p.m. She attempted to walk it off prior to this time, to no avail. Her supervisor, Lupita Pelayo asked her if she was feeling alright. Ms. Pelayo asked if Claimant had fallen or hurt herself at work. Claimant responded no, that she just had a strong pain.

8. Ms. Pelayo took Claimant to the office to speak with Operations Manager, Troy Janzer. Ms. Pelayo accompanied Claimant to the office in order to provide translation between Claimant, who is a Spanish speaker, and Mr. Janzer, who is an English speaker.

9. Claimant contends that she told Mr. Janzer that she had injured herself while working with the cabbage. She said that Mr. Janzer asked her what she wanted to do and that she said she wanted to go home. Claimant also testified that Mr. Janzer told her to go to her own doctor to find out what kind of treatment she needed, to bring that information back to him, and that he would then help her to get the recommended treatment.

10. Claimant went to Emergicare later that same day, and was assessed by Dr. Joseph Zaremba. She reported right leg pain and told Dr. Zaremba that she had not suffered any kind of trauma. Claimant did not complain of any back pain or arm pain. (Ex. E, p. 16). The intake report from Emergicare states that Claimant reported "She was at work today when the pain happened, she was *picking up a box at work*". *Id* (emphasis added).

11. Dr. Zaremba conducted a physical examination and specifically documented that Claimant had a normal musculoskeletal exam to the lumbar spine and that she had normal musculoskeletal posture. (Ex. E, p. 18). Dr. Zaremba diagnosed Claimant with right sided sciatica and recommended that Claimant receive a steroid injection. (Ex. E, p. 19). Claimant was advised to return to Emergicare within 3 to 4 days for a recheck, but the records do not reflect that this occurred.

12. Dr. Zaremba also took Claimant off work from July 18-20, 2016. Claimant did not return to work following these dates. Claimant had begun a vacation which had been previously scheduled to begin on July 20, 2016. Claimant was already scheduled to return to work from her vacation on August 3, 2016.

13. On August 3, 2016, Claimant returned to Taylor Farms. Claimant testified that she spoke with Mr. Janzer on that day, with translation again provided by Ms. Pelayo, regarding the physical therapy she asserts he told her he would help her with. Claimant testified that Mr. Janzer told her he could not help her and that she should go to her own doctor.

14. Claimant reported to the Emergency Room at Penrose St. Francis on August 10, 2016. She reported at this visit that she had no prior significant lumbar condition, but it was suggested by hospital personnel that she might have a herniated disc. At this visit, Claimant reported pain radiating into the right leg slightly, but now seems worse on the left leg. Her range of motion in lower back was minimal due to pain. (Ex. 6, p. 17).

15. Claimant went to Dr. Amir Salek with Briargate Medical Associates on August 22, 2016 as a new patient. (Ex. G, p. 57). Claimant complained of pain in her low back radiating down into her right leg. (Ex. G, p. 58). Upon completion of the physical examination, Dr. Salek diagnosed her with sciatica. (Ex. G, p. 61).

16. Dr. Salek referred Claimant for an MRI of her lumbar spine, which she underwent on September 1, 2016. The MRI showed moderate to severe canal stenosis and moderate degenerative disc disease of the lower lumbar region. (Ex. C, p. 3).

17. On September 7, 2016, Dr. Salek reviewed the MRI findings with Claimant, and continued her diagnosis of sciatica. He added the diagnoses of spinal stenosis of lumbar region and lumbar disc disease with radiculopathy. Claimant was referred for an orthopedic consult. (Ex. G, p. 68).

18. Claimant subsequently treated with Dr. Toby Moore at Front Range Orthopedics. Her first appointment was on or about October 31, 2016. (Ex. F, p. 23). In describing the mechanism of injury, Claimant reported that she bad bent over to pick up cabbage. When she stood up, she had a sharp pain shoot down her legs. She did not describe any kind of twisting, lifting, or any other motion other than simply bending over. (Ex. F, pp. 23, 28).

19. Dr. Moore referred Claimant for lumbar spine physical therapy, and also recommended that she undergo a lumbar epidural steroid injection. (Ex. F, p. 25). There are no medical records that Claimant ever participated in or received the physical therapy recommended by Dr. Moore; however, Dr. Moore's records occasionally reference that Claimant 'continue' her physical therapy.

20. At Claimant's appointment on January 9, 2017, Dr. Moore documented that on examination, she had normal alignment of the lumbar spine, with normal active and passive range of motion on both flexion and extension. Despite these findings, Dr. Moore recommended to Claimant that she undergo surgery in the form of a two level fusion at L4-L5 and L5-S1. Claimant underwent this surgery on January 26, 2017. (Ex. H, p. 97).

21. In a follow-up visit with Dr. Moore on April 24, 2017, Claimant reported considerable improvement, post-surgery. She reported only "modest" lower back pain on this visit, and no more radicular symptoms. (Ex. 11, p. 109).

22. Claimant testified that the surgery helped to resolve her leg pain. She testified that she still experiences significant waist and low back pain. She further testified that because she still experiences pain in her waist and low back, she is still undergoing medical treatment.

23. Claimant testified that she is fully aware of the sanitation policies at Taylor Farms. She knows that she is not supposed to pick produce up from the floor by hand, or with her cabbage knife.

24. When asked why she didn't turn off the conveyor belt so that she and her coworkers could catch up with the cabbage production, Claimant testified that she was not permitted to turn the conveyor belt off "all the time."

25. Claimant had previously been injured while working for Taylor Farms, after she had fallen from a ladder. She testified that Taylor Farms referred her for care through a workers' compensation doctor. She was also provided light duty while she was still on work restrictions.

26. Claimant also admitted on cross examination that when she met with Mr. Janzer and others at Taylor Farms on August 3, 2016 that she did not state that she hurt herself at work. She only told Mr. Janzer that she could not come back to work because of the pain.

27. When Claimant informed Employer on August 3, 2016 that she would be unable to return to work, she did not have any written excuse from any healthcare provider taking her off work.

28. On cross examination, Claimant agreed that bending over is an everyday activity in which most people engage. She further specifically agreed that in her activities of daily living, she was often required to bend over.

29. Claimant's son, Eric Sanchez, testified that on July 18, 2016, Claimant appeared to him to be without pain when they both left their home that morning. He testified that he was notified by his father later that morning to pick up Claimant from work, as she was experiencing pain.

30. Mr. Sanchez testified that when he arrived at Taylor Farms to pick up Claimant, she told him that she had bent forward to pick up cabbage, and that she felt pain. Mr. Sanchez did not testify that Claimant described to him any kind of twisting, lifting, or other mechanism other than simply bending forward.

31. Claimant also called Dr. Timothy Hall to testify in her case in chief. Dr. Hall is licensed in the State of Colorado and practices in the field of Physical Medicine & Rehabilitation. He has been Level II accredited since the mid-1990s. Dr. Hall is not an

orthopedist, nor does he specialize in disorders of the spine.

32. Dr. Hall testified that he reviewed Claimant medical records and spoke with her at her IME appointment. He did not conduct a physical examination of Claimant because "he did not see the point." Dr. Hall also did not view the actual MRI scan taken on September 1, 2016; he did review the narrative report of the MRI findings.

33. Dr. Hall testified that Claimant demonstrated to him how she bent forward to reach the cabbage on the other side of the conveyor belt with her cabbage knife. He feels that Claimant's description of the mechanism of injury is consistent with the injury she sustained.

34. Dr. Hall testified to his belief that the surgery performed on Claimant by Dr. Moore was causally related to the mechanism of injury, and is therefore reasonable, necessary and related. He further testified that the surgery was necessary to relieve Claimant's symptoms.

35. Dr. Hall testified that he relied on Claimant's self-report that the surgery helped her, and used as an example to demonstrate Claimant's improvement her report that after the surgery, she is now able to walk for up to 10 minutes. However, on cross examination, Dr. Hall was forced to admit that prior to the surgery, claimant reported that she was able to walk up to 10 minutes, which demonstrated no post-operative improvement. Furthermore, Dr. Hall also admitted that, as he documented in his IME report and also by claimant's own testimony at hearing, claimant still experiences considerable waist and back pain, and that the pain is not much improved in these areas from the surgery. CE 14, Bates 216.

36. On cross examination, Dr. Hall agreed that the Medical Treatment Guidelines ("Guidelines") had not been followed. According to the Guidelines, Claimant did not meet the criteria for a two level fusion, as she was not a surgical candidate.

37. Respondents called Guadalupe "Lupita" Pelayo to testify. Ms. Pelayo worked at Taylor Farms for eight years as a production supervisor. She was working on July 18, 2016.

38. Ms. Pelayo testified that she was approached by Claimant's husband a few minutes before the lunch break. He informed her that Claimant was not feeling well, and that she was experiencing pain. Mr. Pelayo further testified that Claimant's husband told her that Claimant had awakened with the pain.

39. After speaking with Claimant's husband, Ms. Pelayo sought out Claimant to ask how she was feeling. Claimant told her that she was having some pain and that she woke up that morning feeling that way.

40. Ms. Pelayo testified that she immediately asked Claimant if she had hurt herself at work. Claimant responded that she had not hurt herself at work.

41. Ms. Pelayo stated that Claimant then told her that she wished to go home. Ms. Pelayo then accompanied Claimant to the office to speak with the Operations Supervisor, Troy Janzer. Ms. Pelayo then provided translation from English to Spanish for Mr. Janzer and Claimant.

42. Ms. Pelayo testified that Mr. Janzer asked Claimant three times whether she had hurt herself at work. Each time, Claimant responded that she had not. She further testified that Claimant simply asked to go home, and that Claimant did not ask to seek a workers' compensation doctor.

43. As a production supervisor, Mr. Pelayo testified that if she even only suspects that an employee is injured at work, the employee is immediately provided with what help is necessary. She then completes an accident report, and the injured worker is sent to the workers' compensation doctor. If a worker states that they have been injured at work, Ms. Pelayo testified that the employee would certainly be sent to the workers' compensation doctor.

44. Ms. Pelayo testified that in her experience as a production supervisor, if an employee is suspected of having been injured at work, there has never been a time when Employer did not send the injured worker to the workers' compensation doctor.

45. Ms. Pelayo testified that on August 3, 2016, when Claimant returned to Taylor Farms to inform Employer that she could not work, that she participated in that meeting, once again providing translation assistance.

46. Claimant said during the August 3, 2016 meeting that she thought now that she had hurt herself at work on July 18, 2016. Ms. Pelayo testified that she reminded Claimant that on July 18, 2016, Claimant had been asked three times if she'd hurt herself at work and each time, Claimant had said 'no'. Ms. Pelayo testified that in response, Claimant then told her that she wasn't sure how she'd hurt herself.

47. Ms. Pelayo testified that during the July 18, 2016 meeting, neither Mr. Janzer nor any other Employer representative, told Claimant to go to her own doctor and then to come back with a note about what she needs, and that the Employer would help her.

48. Ms. Pelayo also testified that at any time that the production line becomes full, employees are permitted to turn off the conveyor belt as many times as necessary, so that they can catch up.

49. Ms. Pelayo further testified that Claimant's testimony that no one was across from her on the conveyor belt did not make sense. The requirement on the production floor is that there is always someone on both sides of the conveyor belt.

50. When asked about Claimant's assertion that the cabbage was clogging the conveyor belt, Ms. Pelayo testified that this does not make sense either. In all her time as a production supervisor, she has never seen cabbage clog the conveyor belt.

51. Respondents also called Troy Janzer to testify at hearing. Mr. Janzer is the Operations Manager for Taylor Farms. He has worked at Taylor Farms for 21 years, and has been the Operations Manager for 10 years.

52. Mr. Janzer testified that he was working on July 18, 2016 when Ms. Pelayo brought Claimant to the office. He agreed that Ms. Pelayo provided translation assistance for him and Ms. Sanchez.

53. Ms. Janzer testified that Claimant reported to him that she was not feeling well, and that she was having some pain. Claimant did not specify where she was having pain, or what type of pain she was experiencing.

54. Upon hearing that Claimant was experiencing pain, Ms. Janzer testified that he asked her at least twice if she had hurt herself at work. Each time, Claimant responded no, that she did not get hurt at work.

55. Mr. Janzer testified that if he had any reason at all to believe that Claimant had injured herself at work, he would have immediately sent her to HealthQuest, which is the workers' compensation facility utilized by Taylor Farms. He further testified that he would have begun an accident investigation, to include completing an accident report, viewing the video footage form the production floor, and address and correct any safety hazards that might be identified. He testified that he did not undertake any of these actions because Claimant told him that she was not injured at work.

56. Mr. Janzer testified that safety in the workplace at Taylor Farms is "Job One." As the Operations Manager, Mr. Janzer testified that safety is of the utmost importance, and that he strives for every employer to go home safely at the end of the day. He testified that if he had any reason to suspect or belief that a work injury had occurred, he would require the employee to go to HealthQuest for evaluation and treatment.

57. Mr. Janzer was asked to recall the testimony and demonstration by Claimant of how she reached under the conveyor belt to stab a cabbage that had fallen to the floor. He testified that Claimant's description of the MOI was completely implausible, as it is impossible to reach under the conveyor from one side to the other due to a stainless steel divider under the conveyor belt that blocks to two sides of the belt from each other.

58. Mr. Janzer also testified that an employee would not be in trouble for turning off a conveyor belt so that the workers can get caught up. Employees are encouraged to do so in order to avoid damaging the produce. Moreover, he testified that Claimant was well aware of this, as she had been doing it for years while working for Taylor Farms.

59. Mr. Janzer testified that in the entire time he has worked for Taylor Farms, he has never seen cabbage clog a production line such as Claimant described. Mr. Janzer added that Claimant's version of the MOI is implausible, because Taylor Farms has a strict sanitation policy that employees are not allowed to touch anything on the

floor with their hand *or any utensils*, including a cabbage knife. He testified that Claimant is also fully aware of this sanitation policy, as this has been the policy for as long as he has worked there for 21 years.

60. Mr. Janzer denied that he ever told Claimant to see her own doctor, then return to him for help in obtaining medical services that may be required.

61. Mr. Janzer testified that at the meeting with Claimant on August 3, 2016, he offered for her to go to HealthQuest for evaluation, even though she had said that did not injure herself at work. However, Claimant never went to HealthQuest. The first time Mr. Janzer became aware that Claimant was even alleging a work injury was during the meeting on August 3, 2016.

62. Respondents called medical expert, Dr. Brian Reiss, to testify via post-hearing evidentiary deposition on November 7, 2017.

63. Dr. Brian Reiss conducted a medical records review at Respondents' request. The purpose for the records review IME was to determine whether or not there was a consistent injury, whether Claimant's symptoms were related to any particular injury at all, and whether or not Claimant's treatment, including the fusion surgery, was reasonable and necessary. (Depo p. 8, ll. 18-25; p. 9, l. 1).

64. Dr. Reiss is an orthopedic surgeon. He has practiced in Colorado since 1988 and specializes in disorders of the spine. (Depo p. 5, ll. 1-4). He has a Fellowship in spine surgery and is Board certified in orthopedics. He is a Level II accredited physician, and has been so accredited since the beginning of the Workers' Compensation accreditation program. (Depo. p. 5, ll. 3-4, p. 6 ll. 3-14).

65. Dr. Reiss reviewed 362 pages of Claimant's medical records. He testified that there were no physical therapy notes. Dr. Reiss also testified that he had reviewed not only the MRI report, but that he had reviewed the actual film of the MRI scan as well.

66. After his review of Claimant's medical records, Dr. Reiss concluded that there was no good documentation that Claimant had injured herself at work. The description of her work injury, based on what was documented in the medical records, was that of simply bending over, which would not have caused a work injury. (Depo p. 9, ll. 6-10).

67. Dr. Reiss testified that simply because one develops pain at work does not mean work is responsible. In Claimant's case, Dr. Reiss specifically opined that there was no unique activity at work which required her to bend over any differently than she would have bent over at home doing anything else. (Depo p. 9, ll. 15-20).

68. Dr. Reiss testified that Claimant's medical records documented that she simply bent over to pick up a cabbage, and that there was no reference in her medical records to any kind of twisting while bending. (Depo. p. 10, ll. 13-25, p. 11, l. 1).

69. Dr. Reiss testified that he reviewed the MRI scan and report of Claimant's spine. The MRI scan did reveal some positive findings; however, he further testified that there was nothing in the medical records and the description of the mechanism of injury that Claimant gave to multiple providers that anything she did at work *caused* those findings. (Depo. p. 11, ll. 5-17). Instead, Dr. Reiss concluded, after his review of the MRI scan and report, that the positive findings were likely pre-existing, and were a normal degenerative finding that occurs over time. (Depo. p. 11, ll. 16-19).

70. Dr. Reiss testified that back pain does not require any injury; that a person can wake with back pain, stand up from sitting and have back pain, walk down the street and have back pain. (Depo. p. 13, ll. 2-5). He testified that Claimant's report to Ms. Pelayo that she had awakened with back pain on the morning of July 18, 2016 is consistent with this. (Depo., p. 13, ll. 12-21).

71. Dr. Reiss also testified regarding the inconsistencies regarding Claimant's reports of pain to her medical providers, specifically noting that Claimant initially reported only pain down into the right leg, but no back pain. (Depo. p. 15, ll. 23-25, p. 16, ll. 1-5).

72. Dr. Reiss opined that the surgery performed by Dr. Moore was not reasonable or necessary. (Depo. p. 16, ll. 22-25, p. 17, ll. 1-2).

73. Dr. Reiss noted that Claimant's major complaint was back pain. He described that the treatment for back pain should be a core strengthening program, aerobic conditioning, stretching, and time. Fusion procedures do not work well for complaints of back pain without instability. (Depo. p. 17, ll. 6-11). Dr. Reiss further testified that even if all conservative measures as described fail, the likelihood of the fusion surgery such as Dr. Moore performed of being helpful is dismal. Specifically, Dr. Reiss explained that when there are multiple levels of degeneration with no instability and all a person has is back pain-which was the situation for Claimant-a fusion is an act of desperation, and it should not be done. (Depo, p. 17, ll. 12-22).

74. Moreover, as Dr. Reiss testified, the Guidelines also support his expert opinion that the fusion surgery was not reasonable or necessary. He noted that there was no pain generator identified, as required by the Guidelines, and explained that the presence of more degeneration at one level than another is not an indication of a pain generator. (Depo. p. 18, ll. 2-6). He also testified that pursuant to the Guidelines, before a two level fusion should occur, the injured worker needs to have completed conservative care. As Dr. Reiss testified, there is no objective medical evidence that Claimant went through appropriate physical therapy, whether she even went to physical therapy, and if she did, for how long and with what result. (Depo. p. 18, ll. 20-25, p. 76, ll. 8-12, 15-24). Additionally, the Guidelines require that Claimant undergo a psychological evaluation, which Dr. Reiss testified did not occur. Lastly, the surgery that is being proposed should be more likely to provide a positive result than continued non-surgical treatment. (Depo. p. 19, ll. 1-6). In Claimant's case, Dr. Reiss testified that a fusion surgery to address degenerative change and back pain without instability had a very poor likelihood of being helpful.

75. Dr. Reiss testified that merely because claimant experienced back pain at work does not mean that anything claimant did at work caused the back pain. Reiss Depo., p. 21, l. 14-17.

76. Dr. Reiss explained in testimony that an epidural steroid injection is not diagnostic for the location or the source of claimant's back pain. (Depo., p. 23, ll. 16-25, p. 24, ll.1-5). Even if claimant had experienced some relief from the lumbar epidural steroid injection, Dr. Reiss advised that this is not an indication in any way that claimant would get the same relief from a fusion surgery. (Depo. p. 24, ll. 3-5).

77. Dr. Reiss agrees that claimant had some stenosis in the area of the L5 nerve root but explained that this would be the cause only for the leg symptomatology, and that it would not be a cause for back pain symptomatology. (Depo. p. 24, ll. 6-12).

78. Dr. Reiss was asked on cross examination whether bending and twisting would be more likely to have caused an injury to claimant's low back than simply bending. In response, Dr. Reiss testified that generally, just bending and twisting wouldn't necessarily be much different than just bending over. Instead, Dr. Reiss testified that the most likely cause of an injury to a disc would be a loading action – like lifting and twisting. (Depo., p. 25, ll. 17-25, p. 26, ll. 1).

79. On redirect, Dr. Reiss reiterated that Claimant never reported that she was lifting anything as part of the MOI and also that she not report any kind of twisting to any of her medical providers. Claimant reported only that she had been bending forward. (Depo. p. 26, ll. 16-22).

80. Dr. Reiss offered his expert medical opinions based upon a reasonable degree of medical probability.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved

essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the ALJ. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

Compensability

D. Claimant must prove by a preponderance of the evidence that she is a covered employee who suffered an injury arising out of and in the course of employment. C.R.S. § 8-41-301(1); *See*, *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett, 33 P.3d 1230* (Colo. App. 2001). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark,* 197 592 P.2d 792 (Colo. 1979).

E. An injury occurs "in the course of" employment where Claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991). The "arising out of" requirement is narrower and requires claimant to show a causal connection between the employment and injury such that the injury has its origins in the employee's work-related functions and is sufficiently related to those functions to be considered part of the employment contract. *Id.* The determination of whether there is a sufficient "nexus" or causal relationship between a claimant's employment and the injury is one of fact which the ALJ must determine based on the totality of the circumstances. *In Re Question Submitted by the United States Court of Appeals,* 759 P.2d 17 (Colo. 1988); *Moorhead Machinery & Boiler Co. v. Del Valle,* 934 P.2d 861 (Colo. App. 1996).

F. The mere fact that a Claimant experiences pain at work does not necessarily require a finding of a compensable injury. In *Miranda v. Best Western Rio Grande Inn*, W.C. No. 4-663-169 (ICAO April 11, 2007), the panel stated "[p]ain is a typical symptom caused by the aggravation of pre-existing condition. However, an incident which merely elicits pain symptoms caused by a pre-existing condition does not compel a finding that the claimant sustained a compensable injury." The occurrence of symptoms may represent the result of a natural progression of a pre-existing condition that is unrelated to the industrial injury or employment. See *F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995).

G. Taken as a whole, the evidence does not support a finding of compensability. While it is certainly possible that certain details can literally become lost in translation, Claimant had the benefit of interpreters throughout the process which she, and the ALJ, could have confidence in. Claimant was familiar with her work station, her duties and obligations, and policies and procedures to complete her daily tasks. She was at least generally familiar with the Workers Compensation process, having been through it on a prior occasion. The ALJ finds that both Troy Janzer and Guadalupe Pelayo are credible, both in describing sanitation and safety procedures of Employer, as well as their interactions with Claimant surrounding this claim.

H. It is entirely unclear *when* Claimant's symptoms began. While Claimant testified at hearing that she felt this sudden onset of pain at work while retrieving a wayward cabbage from the floor, she told both her husband, and Ms. Palayo that her back had been hurting since she awoke that morning. This threshold discrepancy has not been satisfactorily explained. It has, therefore, not been shown by a preponderance of the evidence that Claimant's symptoms began at work, instead of at home.

I. The record is also unclear *where* Claimant was injured. In contrast to Claimant's position at hearing, she was insistent, on the date in question, to two different co-workers that she was not injured at work. Employer has protocols in place, and the ALJ so finds, which satisfactorily address addressing safety reviews when an employee reports an injury, and referral to Workers Compensation physicians. The ALJ cannot conclude that Employer's representatives chose to ignore such protocols by sending her to a private physician, and not performing a safety review. The location of Claimant's injury has not been shown by a preponderance of the evidence.

J. Assuming, arguendo, that such initial matters have been satisfied, Claimant has not shown *why* she was injured. At her first visit to the Emergency Room, medical personnel reported that she was picking up a box at work. Claimant testified at hearing, that Employer was so short-staffed on the date of injury that no one was across from Claimant at the conveyor, that she was not comfortable in hitting the "off" button, so she

resorted to stabbing a cabbage on the floor to dispose of it. While it is theoretically possible that Claimant did not want to admit to her superiors that she violated company policy in so doing, the ALJ is not now persuaded that she then told a series of prevarications, all against her own medical interests, in order to avoid the consequences of a work infraction. Nor has Claimant herself advanced that argument.

K. It is also unclear from the record *how* Claimant might have been injured. The theoretical chances of such an injury occurring are increased somewhat with a contemporaneous *twisting* motion, in addition to bending straight over. Claimant reported to Dr. Hall that she was engaging in this twisting motion *repetitively.* She denied it outright to her supervisors. Had she told them, safety video could have been reviewed for verification. Presumably, Claimant was aware of on-premise video capabilities, which could have corroborated her account. If her current account is accurate, she knowingly violated company policy *while being filmed*. She testified at hearing that she reached over towards the other side of the conveyor on a *single occasion*- an action which is not possible due to a steel barrier, according to credible testimony. Claimant reported an *acute, repetitive* (no mention of twisting) to Dr. Moore, who classified it as work-related. Curiously, Dr. Moore's notes do not reference advising Claimant to inquire about the Workers Compensation system.

L. Lastly, assuming one accepts at face value Claimant's testimony at hearing (which the ALJ does not), there is insufficient evidence that Claimant herniated her disc in this singular event at work. There was no loading on the spine from lifting anything. Claimant suffered from pre-existing, degenerative changes to her lower back. The mere act of bending over, even if twisting, would not cause this condition, according to the persuasive opinion of Dr. Reiss. Instead, Claimant's condition and symptoms could arise as a result of everyday activities, not unique to her work environment.

Reasonable and Necessary Surgery by Dr. Moore

M. One might reasonably argue that since Claimant reported significant benefits from her surgery, it demonstrates that, *ipso facto,* it was reasonable and necessary to perform it. However, since Claimant's condition was not related to a compensable work injury, the ALJ declines to address this issue.

Temporary Total Disability

N. Since Compensability has not been established, Temporary Total Disability benefits are likewise denied.

ORDER

It is therefore ordered that:

1. Claimant's request for Workers Compensation benefits is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 22, 2017

/s/ William G. Edie
William G. Edie
Administrative Law Judge
Office of Administrative Courts
2864 south Circle Drive, Suite 810
Colorado Springs, Colorado 80906

ISSUES

I. Whether Claimant established by a preponderance of the evidence that he is entitled to medical benefits for his low back condition.

II. Whether Claimant established by a preponderance of the evidence that he is entitled to temporary disability benefits.

III. Determination of Claimant's average weekly wage ("AWW").

FINDINGS OF FACT

1. Claimant has a pre-existing history of low back problems. Claimant was involved in a motor vehicle accident in 2006 and subsequently underwent a lumbar spine fusion from L4-S1. Claimant was involved in another motor vehicle accident in February 2008 and presented to the Medical Center of Aurora on February 25, 2008 complaining of lumbar and low back pain. An x-ray of his lumbar spine evidenced the prior lumbar fusion surgery and degenerative joint disease.

2. On March 23, 2015, Claimant sustained a work injury to his low back while working for a different employer. Claimant was diagnosed with a lumbar strain and lumbar radiculopathy. It was noted that Claimant had spinal stenosis of the lumbar region.

3. Claimant treated with Rick Zimmerman, D.O. and Bryan Castro, M.D. for the March 2015 work injury. A June 9, 2015 MRI of Claimant's lumbar spine demonstrated chronic extensive degenerative disc changes. Claimant underwent epidural steroid injections.

4. On August 23, 2016, Claimant sustained a work injury while working for Employer.

5. Claimant presented to the Emergency Department at Littleton Adventist Hospital on August 23, 2016 with a left leg laceration. It was noted that a double pane glass window fell onto Claimant's left posterior calf. Claimant reported that he also twisted his back and complained of diffuse lower back pain. An x-ray of Claimant's lumbar spine revealed degenerative changes with no acute abnormalities. Dr. Gary Witt's impression was a left leg laceration and lumbar strain. Claimant underwent a laceration repair and received a splint.

6. On August 30, 2016, Claimant saw Michael Fuller, D.O. at Panorama Orthopedics & Spine Center. Claimant reported 8/10 pain and sensory deficits in the

back of his left leg. No low back complaints were noted. Dr. Fuller recommended Claimant begin strengthening and range of motion exercises.

7. Claimant attended a physical therapy evaluation on September 14, 2016 and complained of left leg and back problems. He reported falling during the August 23, 2016 incident and alleged that he hyperextended his back.

8. A November 2, 2016, a lumbar spine CT and myelogram demonstrated Claimant's prior L4-S1 fusion as well as significant degenerative changes throughout the lumbar spine with severe central canal stenosis.

9. On November 10, 2016, Dr. Fuller assessed a medial and lateral meniscus tear of left knee and peroneal nerve injury. He recommended Claimant undergo a knee arthroscopy.

10. Thomas Puschak, M.D. evaluated Claimant on November 11, 2016. Dr. Puschak reviewed Claimant's CT myelogram and recommended Claimant undergo a laminectomy from L1-L4. There is no indication in Dr. Puschak's medical notes that he reviewed Claimant's prior medical records demonstrating pre-existing low back issues. Dr. Puschak did not include a causation analysis regarding the work-relatedness of Claimant's low back condition or need for low back treatment.

11. Claimant's authorized treating physician, Dr. Kirk Holmboe, referred Claimant to Dr. Castro for a second opinion. Dr. Castro evaluated Claimant on December 9, 2016. Claimant reported low back pain as his primary complaint. Dr. Castro's impression was a lumbar sprain/strain. He noted that he previously treated Claimant for a March 2015 work injury, and that Claimant's complaints of radiculopathy were greater at that time compared to now. Dr. Castro opined that the changes seen on imaging are pre-existing and not related to the August 23, 2016 injury. He discussed the possibility of a Claimant undergoing a lumbar decompression, with the following caveat: "All of this, however, should be viewed within the prism of causality. Certainly, there are significant concerns in this patient as to what injury caused his symptoms, as I have seen him for very similar findings approximately one year ago in a previous injury."

12. Dr. Castro ultimately performed a partial laminectomy with revision and decompression on April 20, 2017.

13. In a September 11, 2017 response to Respondents' counsel, Dr. Castro opined that Claimant's low back condition and need for low back treatment was unrelated to the August 23, 2016 work injury. Dr. Castro noted that the MRI findings did not demonstrate any significant changes from March 2015 to August 23, 2016. He further opined that Claimant had pre-existing severe stenosis at L3-4, and his low back problems were the progression and natural consequence of the March 2015 work injury. Dr. Castro stated that the lumbar surgery he performed in April 2017 was to address Claimant's severe stenosis at L3-L4 and unrelated to the August 23, 2016 work injury.

14. In a September 14, 2017 letter to Dr. Holmboe, Respondents' counsel made multiple inquiries as to Claimant's status in light of Dr. Castor's opinion that the April 20,

2017 lumbar surgery was not related to the August 23, 2016 work injury. Dr. Holmboe did not indicate he disagreed with Dr. Castro's opinion on the relatedness of Claimant's low back condition. However, he opined that Claimant was not at maximum medical improvement ("MMI") for the knee injury and that Claimant required an EMG of his left lower extremity to check the status of the nerve potentially injury by broken glass.

15. One of the questions read, "Considering that the April 20, 2017 lumbar surgery is not related to the subject claim of August 23, 2016, does the claimant have any restrictions that are currently attributable to the August 23, 2016 accident? If so, what are those restrictions?" Dr. Holmboe listed the following restrictions: limited standing/walking, no kneeling, squatting, crawling or climbing. Referring to Dr. Holmboe's May 4 and June 1, 2017 reports, Respondents' counsel asked, "Was your opinion that the claimant was unable to work based on the fact that he had undergone surgery on April 20, 2017?" Dr. Holmboe circled both "Yes" and "No" and wrote, "In part but also due to knee injury."

16. Respondents accepted the claim and filed a General Admission of Liability on July 6, 2017 admitting for medical benefits only.

17. Respondents do not contest Claimant's knee injury.

18. Claimant testified on his own behalf at hearing. Claimant believes his condition, including his low back problems and the need for low back treatment, is the result of the August 23, 2016 work incident. He testified that he requested and required medical treatment and lost wages as a result of his injury. He further testified that he has not returned to work since the date of his injury.

19. Claimant's pay records for the weekly pay periods ending May 29, 2016 to May 14, 2017 were admitted into evidence at hearing. For the pay period ending May 29, 2016 through July 31, 2016, Claimant earned between $430.00 and $1,734.00 a week for working anywhere between 21.50 and 48 hours of work. Claimant's hours and pay varied prior to August 1, 2016. The pay records reflect that as of August 1, 2016, Claimant earned $20.00 per hour. Claimant did not offer any testimony or other evidence regarding his rate of pay or AWW.

20. Based on the totality of the evidence, the ALJ finds that $800.00 is a fair approximation of Claimant's AWW at the time of injury.

21. The pay records further reflect Claimant continued to receive full wages at $800.00 per week from the date of injury through May 14, 2017. Claimant has since separated from Employer.

22. The ALJ credits the opinion of Dr. Castro and finds that Claimant's low back condition and need for low back treatment is not related to the August 23, 2016 industrial injury.

23. Claimant failed to establish by a preponderance of the evidence that he is entitled to medical benefits for his low back condition.

24. The ALJ credits Dr. Holmboe's opinion regarding Claimant's current restrictions and inability to work as a result of the knee injury sustained on August 23, 2016. The ALJ finds that Claimant's knee injury caused a disability lasting more than three work shifts, that Claimant left work as a result of the disability, and that the disability resulted in an actual wage loss.

25. Claimant established by a preponderance of the evidence that he is entitled to temporary total disability benefits from May 15, 2017 and ongoing.

26. Claimant failed to establish by a preponderance of the evidence that he is entitled to temporary disability benefits from the date of injury through May 14, 2017, as Claimant was paid his full wages during such time period.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, Section 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1), C.R.S. Generally, the claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968).

Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado*, 717 P.2d 1000 (Colo. App. 1986).

The ALJ's resolution of issues will be affirmed if supported by substantial evidence in the record. Section 8-43-301(8), C.R.S.; *City and County of Denver School District 1 v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). Substantial evidence is that quantum of probative evidence, which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

Compensability and Medical Treatment

A claimant is required to prove by a preponderance of the evidence that at the time of the injury he was performing service arising out of and in the course of employment, and that the alleged injury was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). The question of whether the claimant met the burden of proof to establish a compensable injury is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

A respondent is liable to provide such medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury." Section 8-42-101(1)(a), C.R.S. *Colorado Compensation Insurance Authority v. Nofio*, 886 P.2d 714 (Colo. 1994). The determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ. *See generally Parker v. Iowa Tanklines, Inc.*, W.C. No. 4-517-537 (May 31, 2006); *Chacon v. J.W. Gibson Well Service Company*, W. C. No. 4-445-060 (February 22, 2002).

As found, Claimant failed to establish that his low back condition and low back treatment are related to the August 23, 2016 industrial injury. Claimant has a well-documented history of pre-existing low back issues. Dr. Castro, who is familiar with Claimant's 2015 back injury, credibly opined that Claimant's current low back issues are pre-existing and represent the natural progression of his low back condition. Dr. Castro also credibly opined that Claimant's need for low back treatment is unrelated to the August 23, 2016 industrial injury. Thus, the treatment Claimant received for his low back, including the April 20, 2017 lumbar surgery, was not related to the August 23, 2016 industrial injury. Dr. Castro's opinion is supported by objective x-ray, CT and MRI

findings. Dr. Holmboe was notified of Dr. Castro's opinion and did not indicate any disagreement as to the relatedness of the low back condition. While Dr. Puschak recommended low back surgery, there is no indication Dr. Puschak was aware of Claimant's pre-existing low back issues. Based on the totality of the evidence, Claimant failed to prove by a preponderance of the evidence that he is entitled to medical treatment for his low back condition.

Temporary Disability Benefits

To prove entitlement to temporary disability benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S., requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain temporary disability benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

Respondents contend Dr. Holmboe did not determine or indicate which restrictions were due to Claimant's lumbar condition as opposed to his knee condition, and that Dr. Holmboe failed to determine if Claimant's off-work status was the result of the unrelated lumbar condition. The ALJ disagrees. Each question asked of Dr. Holmboe in the September 14, 2017 letter was prefaced with the qualification that the April 20, 2017 lumbar surgery was not related to the August 23, 2016 industrial injury. Dr. Holmboe opined that Claimant was not at MMI for the August 23, 2016 industrial because of Claimant's knee injury. Respondents' counsel specifically asked what current restrictions were related to the August 23, 2016 considering the April 20, 2017 lumbar surgery was not related. In response, Dr. Holmboe listed multiple restrictions. Dr. Holmboe clearly stated that his opinion Claimant was unable to work was based in part on the fact Claimant underwent lumbar surgery in April 2017, but also due to the knee injury.

Based on Dr. Holmboe's responses, Claimant is subject to restrictions due to the knee injury sustained on August 23, 2016 and is unable to work due to such knee injury. Claimant has not worked since the date of the industrial injury. Accordingly, it is more probably true than not that Claimant's knee injury caused a disability that resulted in Claimant missing more than three work shifts. Claimant is thus entitled to temporary total disability ("TTD") benefits for the time period in which he experienced actual wage loss as a result of the disability.

As found, Claimant failed to establish that he is entitled to temporary disability benefits from the date of injury through May 14, 2017. Claimant's disability did not result in actual wage loss during such time period. However, Claimant has established entitlement to TTD benefits from May 15, 2017 and ongoing. Claimant suffered wage loss subsequent to May 15, 2017. No evidence was presented establishing that Claimant was placed at MMI, has returned to employment, or that he has been given a written release to return to regular or modified duty. No evidence was presented establishing that Claimant was responsible for his termination. Based on the totality of the evidence, Claimant has established by a preponderance of the evidence that he is entitled to TTD disability benefits beginning May 15, 2017 and ongoing, until terminated by law.

Average Weekly Wage

Section 8-42-102(2), C.R.S., requires the ALJ to calculate the claimant's AWW based on the earnings at the time of injury as measured by the claimant's monthly, weekly, daily, hourly or other earnings. This section establishes the so-called "default" method for calculating the AWW. However, if for any reason the ALJ determines the default method will not fairly calculate the AWW, § 8-42-102(3), C.R.S., affords the ALJ discretion to determine the AWW in such other manner as will fairly determine the wage. Section 8-42-102(3), C.R.S. establishes the so-called "discretionary exception." *Benchmark/Elite, Inc. v. Simpson,* 232 P.3d 777 (Colo. 2010); *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp., supra.*

As found, Claimant's AWW is $800.00, based on Claimant earning $20.00 per hour and working 40 hours per week at the time of injury. Although the pay records reflect variances in Claimant's rate of pay and hours in certain weeks leading up to the industrial injury, the ALJ is persuaded that $800.00 as an AWW is a fair approximation of Claimant's wage loss and diminished earning capacity.

ORDER

1. Claimant failed to prove by a preponderance of the evidence that his low back condition and low back treatment are related to the August 23, 2016 industrial injury. Claimant's claim for medical benefits for his low back condition is denied and dismissed.

2. Claimant's AWW is $800.00.

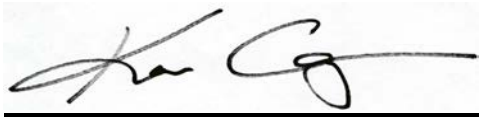
3. Claimant has established entitlement to TTD benefits beginning May 15, 2017 and ongoing. Claimant failed to establish entitlement to TTD benefits from August 23, 2016 through May 14, 2017. Respondents shall pay TTD benefits from May 15, 2017 and ongoing until terminated by operation of law, subject to any applicable offsets.

4. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 20, 2017



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has overcome by clear and convincing evidence the opinion of the Division Independent Medical Examination (DIME) physician Brian Mathwich, M.D. regarding Claimant's permanent impairment rating.

FINDINGS OF FACT

1. Claimant worked for Employer as a dental technician with duties including installing and maintaining dental equipment in various dental offices.

2. On February 8, 2016 Claimant was involved in a work related motor vehicle accident. Claimant was hit from behind by another vehicle after traffic suddenly came to a stop on Highway 225.

3. Claimant's air bags did not deploy. The company vehicle that Claimant was driving had some minor damage to the rear and the lift gait was slightly bent. There was no other damage to the vehicle that Claimant was driving.

4. Claimant was able to drive the vehicle home.

5. Later that day Claimant began having increasing pain in his low back radiating into his neck and he went to the Veterans Administration emergency department.

6. On February 8, 2016 Claimant was evaluated at the Denver VA Medical Center. Claimant reported being rear ended earlier that day and that he had a headache, neck pain, back pain, and left wrist and thumb pain. A CT of the cervical spine and head were taken and showed no acute osseous abnormality and no acute intracranial process. An x-ray of Claimant's left wrist showed no acute fracture or dislocation. Claimant was assessed with neck strain, headache/TBI, and left wrist sprain. Claimant was noted to be stable with only mild 1-2/10 pain scale headache and neck pain and was discharged. *See* Exhibit C.

7. On February 9, 2016 Claimant was evaluated at Mountain View Pain Center by chiropractor Matthew Usel, D.C. Claimant reported being rear ended the day prior while in his work van and on the highway. Claimant reported that since the crash he had been experiencing pain with stiffness in his neck, low back, and shoulders and that the neck pain radiated into his left hand. Claimant reported severe symptoms of low back pain on both sides with ache and tightness. Claimant reported severe neck pain

symptoms on both sides with radiating pain and tightness. Dr. Usel found muscle spasms bilaterally at Occ, C1, C5-7, T1-3, L2-4, and in the sub-occipital region. Cervical radiology was completed that showed mild degenerative joint disease at C4-5 and moderate disc thinning at C6-7. Dr. Usel noted that Claimant's objective findings correlated with subjective complaints and provided a reasonable medical probability that the symptomatology that Claimant presented with was in large part musculoskeletal in origin. Dr. Usel diagnosed: cervicalgia, cervical segmental and somatic dysfunction, muscle spasm of neck, sprain of ligaments of cervical spine, low back pain, lumbar segmental and somatic dysfunction, muscle spasm of back, and sprain of ligaments of lumbar spine. *See* Exhibit 3.

8. On April 28, 2016 Claimant was evaluated by Dr. Usel. Claimant reported that he was doing better but still had some tension in his neck and shoulders. Claimant reported minimum symptoms of pain in his neck bilaterally that included dull ache and tightness. Claimant also reported mild symptoms of low back pain bilaterally that included dull ache and tightness. Dr. Usel found tautness and tenderness bilaterally at C5-7, T7-9, and L2-4. Dr. Usel continued to assess cervicalgia, cervical segmental and somatic dysfunction, muscle spasm of neck, sprain of ligaments of cervical spine, low back pain, lumbar segmental and somatic dysfunction, muscle spasm of back, and sprain of ligaments of lumbar spine. *See* Exhibit 3.

9. On June 2, 2016 Claimant was evaluated by Hugh Macaulay, M.D. Claimant reported that he was driving his company vehicle when he was struck from the rear while stuck in traffic on 225. Claimant reported that his vehicle moved approximately one half to one car length forward on impact. Claimant reported being in shock and nervous after being struck. Claimant reported that he was able to drive home and noted that his neck was stiff and his back was starting to hurt so he decided to go to the VA Hospital. Claimant reported the next day he decided to see a chiropractor. Claimant reported pain that was making it difficult to do his normal activities including work, personal care, traveling, sitting/standing, lifting bending stooping and squatting, and running/walking. Claimant reported that he was well up until the February 8, 2016 accident. Claimant reported problems with his neck, upper back, low back, and shoulder. Claimant reported two prior motor vehicle accidents, one where he was taken out of a vehicle by the jaws of life and had his right femur rodded and performed 3 months of physical therapy. Claimant also reported that he sustained a prior back injury while serving in the United States Marine Corps when he was doing a swimming qualification with a weighted pack on his back. Claimant reported that he had a pop in his back while jumping off the diving board and had to be pulled out of the pool. Claimant reported that the physician at the VA was going to give him an 80% disability. *See* Exhibits 2, D.

10. On examination, Dr. Macaulay noted that Claimant had relatively good neck range of motion and tenderness to palpation about C4-5 on the right side. Claimant also had para-cervical muscular tenderness. Dr. Macaulay noted good range of motion in the lumbar spine with tenderness over the right SI joint. Dr. Macaulay noted a minimally positive faber's test on the right. Dr. Macaulay noted that pelvic compression showed relative stiffness of the right himi-pelvis. Dr. Macaulay noted that Claimant had done well

despite the injury and that the mechanism of injury indicated moderate contact. Dr. Macaulay noted that Claimant had gone through a long course of chiropractic and physical therapy along with massage therapy with no beneficial response. Dr. Macaulay noted that Claimant still had mechanical issues in both the cervical and lumbar spines that needed to be treated with physical therapy and osteopathic manual therapy but opined that Claimant's condition was not surgical. Dr. Macaulay opined that Claimant did not appear to have foraminal neural compromise and that it was unlikely that Claimant had a significant discogenic lesion. Dr. Macaulay opined that with a several week course of physical therapy and osteopathic manual therapy, Claimant should return to baseline and be able to develop his normal activities. Dr. Macaulay assessed: mechanical cervical spine dysfunction- C4-5 right and mechanical lumbar spine dysfunction- right SI joint hypomobility. *See* Exhibits 2, D.

11. On June 2, 2016 Claimant underwent physical therapy. Claimant reported neck pain and low back pain. Claimant reported that he had low back pain forever but that it had been worse than usual with tightness, pressure, and pain following a motor vehicle collision in February. Claimant's lumbar range of motion was noted to be impaired. The physical therapist noted that Claimant had right S1 dysfunction and limitation in movement at L3/4. It was noted that Claimant probably had some neck impairments too, but that the evaluation was focused on the lumbar spine.

12. On June 21, 2016 Claimant was evaluated by Dr. Macaulay. Claimant reported significant improvement in his low back and modest improvement in his cervical spine. Claimant denied any upper or lower extremity paresthesias. Claimant reported some stiffness and pain in the neck. Dr. Macaulay found some modest tightness in the cervical spine along the upper margins of the cape musculature of the trapezius and found that range of motion of the cervical spine was quite good. Dr. Macaulay found a small mechanical deficit at C4-C5 on the right and found no para-cervical muscle spasm. With the lumbar spine, Dr. Macaulay found a right sacroiliac joint hypomobility, less significant than at the last visit, positive march and forward flexion tests. Dr. Macaulay opined that Claimant was doing quite well and could continue with regular work. *See* Exhibit D.

13. On July 7, 2016 Claimant was evaluated by Christopher Lafontano, D.O. Claimant reported neck and back pain, more neck than back. Claimant reported that his neck and shoulder seemed to be the worst and that his low back was sore and stiff. Dr. Lafontano found the cervical axial compression test positive, eliciting radicular symptoms on the right side and the spurlings test positive, also eliciting or aggravating radicular pain symptoms on the right. Dr. Lafontano found the slump test positive, eliciting shooting pain radiating down the leg along the distribution of the sciatic nerve on the right side. Dr. Lafontano assessed acute cervical radiculopathy, acute cervicalgia, acute lumbar radiculopathy, and acute low back pain. Dr. Lafontano recommended MRI studies of the cervical spine and lumbar spine. *See* Exhibit E.

14. On July 14, 2016 Claimant was evaluated by Dr. Macaulay. Dr. Macaulay noted that Claimant continued to have modest improvement in symptoms with less low

back pain, no radiculitic pain in the lower extremities, and no discomfort in the upper extremities. Claimant reported continued issues with mobility of the cervical spine and that looking to the left was a problem. On examination, Dr. Macaulay noted subjective tenderness in the cervical spine with palpation of the musculature and some limitation in range of motion particularly with left rotation and right side bend. In the lumbar spine, Dr. Macaulay noted right sacroiliac joint hypomobility and tenderness over the right SI joint though less than on previous examinations. Dr. Macaulay noted that Dr. Lafontano had recommended an MRI of both the cervical and lumbar spines. Dr. Macaulay opined that the studies would not offer a great deal of information and expected that they would show some osteoarthritic change in the low back, disc dessication, and changes attended with age. Nevertheless, Dr. Macaulay noted that they would do the studies. *See* Exhibit D.

15. On July 22, 2016 Claimant underwent an MRI of his cervical spine and lumbar spine. The cervical spine MRI showed multilevel cervical disc degeneration at C3-4, C4-5, C5-6, and C6-7 with no cervical spinal stenosis evident. Broad based disc bulges were seen at C3-4, C5-6, and C6-7. A minimal focal central disc bulge was seen at C4-5. The lumbar spine MRI showed L5-S1 disc degeneration with broad based disc bulge and focal central annular tear causing moderate bilateral lateral recess stenosis with contact of bilateral descending S1 nerve roots. *See* Exhibit H.

16. On July 27, 2016 Claimant was evaluated by Dr. Usel. Claimant reported bilateral neck pain rated as minimum and described as a dull ache with pain at a 1/10. Claimant reported minimum bilateral low back pain also described as a dull ache and rated at a pain level of 1/10. Dr. Usel indicated that Claimant's condition was stabilizing with continued treatment. *See* Exhibits 3, F.

17. On August 1, 2016 Claimant was evaluated by Dr. Lafontano. Claimant reported continued low back and neck pain and reported that he woke up sore and stiff and ended his day in pain. Dr. Lafontano discussed options and planned to try oral prednisone and aggressive physical therapy. Dr. Lafontano discussed options that included: doing nothing; physical therapy; injections; and surgery. *See* Exhibit E.

18. On August 2, 2016 Claimant was evaluated by Dr. Macaulay. Claimant reported that overall, he felt better and that both his neck and low back were better. Claimant reported a feeling of slight tightness in the upper cape musculature but reported no limitation in range of motion of his cervical spine. Claimant reported some soreness in the sacral area of his lower back. On examination, Dr. Macaulay found good range of motion in the lumbar spine and normal march and forward flexion tests. Dr. Macaulay noted that the MRI of the cervical spine showed mild multilevel cervical disc degeneration with no cervical spinal stenosis and that the lumbar spine MRI showed L5-S1 disc degeneration with broad based disc bulge and focal central annular tearing causing moderate bilateral lateral recess stenosis with contact of bilateral descending S1 nerve roots. Dr. Macaulay opined that Claimant was doing well clinically. Dr. Macaulay opined that Claimant's' cervical spine issues were "back to par." Dr. Macaulay noted that Claimant still had some tenderness over the upper trapezial and paracervical

musculature which he opined was probably due to the significant amount of stress Claimant was feeling related to his job and litigation circumstances. Dr. Macaulay noted that in the lumbar spine Claimant continued to have an ache in the low back that Claimant referenced in relation to the Marines. Dr. Macaulay noted that Dr. Lafontano had recommended a Medrol Dosepak and the possibility of interventional treatment and that his opinion was different. He therefore recommended that Claimant have another opinion with Dr. Bart Goldman. Dr. Macaulay opined that the changes evident in both the cervical and lumbar spines were normal degenerative changes and that the function of Claimant's upper and lower extremities did not reflect a problem with neural impingement. *See* Exhibit D.

19. On September 16, 2016 Claimant was evaluated by L. Barton Goldman, M.D. Claimant reported neck pain and mid-back/upper thoracic pain, as well as low back pain. Claimant reported a prior low back injury while in the military from 1993-1997. Claimant reported that he had seen a chiropractor for the low back complaint years ago. Claimant reported that his low back pain from the military comes and goes but had been improving over the last two years and that at the time of this new work injury, his low back pain symptoms averaged a 1-2/10 on the pain scale. Claimant reported that on the day in question he was rear ended after his vehicle came to a complete stop in traffic and that he believed it was a high impact rear end collision at 45-50 miles per hour. Claimant reported that he began noticing waxing and waning pain in his wrist shortly after the accident and that after he got home that evening his neck and upper back began to hurt. Claimant reported seeing a chiropractor and later Dr. Macaulay. Claimant reported that his back and shoulder were a little bit better but that he had no change in his neck symptoms with treatment. Claimant reported that Dr. La Fontana had recommended injections followed by more physical therapy but that Dr. Macaulay was skeptical as to how much injections or steroids would help and that Dr. Macaulay referred him for this second opinion. Claimant reported that his symptoms interfered with his activities. Dr. Goldman opined that Claimant's cervical MRI from July 22, 2016 showed mild diffuse spondylosis but nothing traumatic and no nerve root impingement and opined it was normal for age. Dr. Goldman opined that the lumbar MRI showed L5/S1 degenerative disc with a broad based bulge and focal central annular tear resulting in bilateral lateral recess stenosis contacting the descending S1 nerve roots. Dr. Goldman opined that Claimant had a chronic thoracic strain due to the work related motor vehicle accident and a chronic lumbosacral strain that was pre-existing but exacerbated by the work related motor vehicle accident. *See* Exhibits 4, G.

20. Dr. Goldman opined that chronic thoracic strain patterns were unusual with rear end motor vehicle accidents unless there was a medium to high velocity impact and noted that he did not have the accident report, engineering report, damage estimates, or pictures but that if it was a medium to high G force, then the thoracic strain symptoms would be considered accident related. Dr. Goldman also opined that the lumbosacral strain may make sense in Claimant's case one way or the other and even if it were a low velocity impact, as Claimant was somewhat predisposed from an "eggshell" perspective. Dr. Goldman opined that Claimant's pain pattern was primarily axial, diffuse in a very myofascial and primarily myogenic and musculoskeletal pattern. Dr. Goldman opined

that the pain would perhaps respond briefly and partially to a steroid injection but that the injections recommended by Dr. La Fontana were probably not necessary at this time. Dr. Goldman opined that the cervical MRI was normal for age with findings seen in more than 50 percent of individuals Claimant's age or older who do not have back pain. Dr. Goldman suggested core strength endurance and thyroid level checks. Dr. Goldman opined that it may or may not be the case that Claimant would have a mild residual impairment involving the upper back if indeed the mechanism of injury was confirmed to be a medium to high velocity range. Dr. Goldman opined that Claimant would most likely continue to work full time and full duty with no significant disability. *See* Exhibits 4, G.

21. On September 29, 2016 Claimant was evaluated by Dr. Macaulay. Claimant reported that he had "no real problems." Claimant reported that his neck and shoulders were doing well and that he had periodic discomfort in his low back where he felt a pressure sensation. Claimant reported that he had a service connected issue with his back and that he was trying to get into the VA for evaluation of his back. Claimant reported that he had not been able to engage in his normal activities such as track and tennis since he got out of the military and that his back had been weak since he left the military. Dr. Macaulay found good range of motion in the lumbar spine with little para-lumbar tenderness and no spasm. Dr. Macaulay found some mild tenderness over the right sacroiliac joint and motion in that joint less brisk than that of the unaffected left side. Dr. Macaulay noted that he would wait for Dr. Goldman's report but that from what Claimant reported, the treatment recommended was activity based and not interventional. *See* Exhibit D.

22. On September 29, 2016 Claimant attended physical therapy and it was noted that Dr. Macaulay and Dr. Goldman wanted Claimant to have a more rigorous stabilization program. Claimant was again diagnosed with low back pain and cervicalgia. *See* Exhibit 5.

23. On October 17, 2016 Claimant was evaluated by Dr. Macaulay. Claimant reported no issues with the cervical spine. Claimant reported an aching sensation in his mid-low back that did not radiate and some difficulty with mechanics with bending, stooping, and twisting. Dr. Macaulay noted no significant tenderness over either SI joint and that functionally Claimant appeared to be doing very well. Dr. Macaulay opined that there was nothing from an interventional standpoint that would offer Claimant improvement in function and recommended transitioning from physical therapy to a gym-based program to maximum strength and flexibility. Dr. Macaulay believed that Claimant was approaching MMI and anticipated doing an impairment rating at the next visit. *See* Exhibit D.

24. On October 24, 2016 Claimant attended physical therapy. Claimant reported general low back pain and stiffness. Claimant's active range of motion and passive range of motion was tested. It was found that Claimant had no impairment of range of motion in: lumbar lateral flexion-left; lumbar flexion; lumbar lateral flexion-right; and lumbar rotation-right. The lumbar extension was noted to be impaired but more

posturally related and not a specific segmental restriction. The therapist noted that Claimant could continue the stabilization program independently. *See* Exhibit 5.

25. On October 31, 2016 Claimant attended physical therapy. It was noted that Claimant was able to go and gamble and didn't complain of back pain with the weekend. It was noted that Claimant's lumbar extension was impaired with it being more posturally related than a specific segmental restriction. The diagnosis of low back pain and cervicalgia continued. *See* Exhibit 5.

26. On November 8, 2016 Claimant was evaluated by Dr. Macaulay. Dr. Macaulay noted that after the July, 2016 MRI, there was a disagreement over whether or not surgical evaluation and consultation was needed. Dr. Macaulay felt Claimant was progressing satisfactorily and did not need a surgical consultation with the absence of true radiculitic issues. Dr. Macaulay noted that Claimant had continued with manual physical therapy and had done quite well. Dr. Macaulay noted that Claimant had little discomfort in either the cervical or lumbar spine and was able to engage in most activities of daily living without limitation. On physical examination, Dr. Macaulay noted good range of motion of the cervical spine with some decrease on the left side bend and extension. Dr. Macaulay found mild left para-cervical tenderness but no evidence spasm. In the lumbar spine, Dr. Macaulay found good range of motion with mild para-lumbar tenderness. Dr. Macaulay used an electronic dual inclinometer to take range of motion measurements for the cervical spine and lumbar spine. *See* Exhibits 2, D.

27. Dr. Macaulay opined that Claimant's cervical spine fell under Table 53, Section II(B) of the AMA Guides and qualified for a 4% whole person impairment. Dr. Macaulay also found a 6% whole person range of motion impairment of the cervical spine and opined that the cervical spine impairment was 10%. Dr. Macaulay also opined that Claimant's lumbar spine fell under Table 53, Section II(B) of the AMA Guides and qualified for a 5% whole person impairment. Dr. Macaulay found a 8% range of motion impairment in the lumbar spine and opined the total lumbar spine impairment was 13% whole person. Dr. Macaulay used the combined values chart to arrive at a rating for Claimant of 22% whole person permanent impairment. Claimant was found to be at maximum medical improvement and was discharged from care with no restrictions. *See* Exhibits 2, D.

28. The range of motion measurements that Dr. Macaulay performed on Claimant's lumbar spine and cervical spine on November 8, 2016 were invalid. The cervical flexion and extension angles did not consistently measure within 10% or 5 degrees. For the lumbar spine measurements, the right lateral flexion and left lateral flexion were not consistently measured within 10% or 5 degrees. Dr. Macaulay noted that that sum of sacral flexion and extension (45 degrees plus 4 degrees) equaled 49 degrees and noted the measurement had to be within 10 degrees when subtracted from the straightest straight leg raise which was 59 degrees. He opined thus, with it being at 10 degrees, the measurements for lumbar flexion were validated. However, the criteria requires that if the tightest range of motion value exceeds the sum of the sacral flexion and sacral extension by greater than 10% (not 10 degrees), then the lumbar range of

motion is invalid. Here, the 59 degree value exceeds the 49 degree value by greater than 10%.

29. On December 20, 2016 Claimant underwent an independent medical examination performed by John Aschberger, M.D. Claimant reported most of his pain was in the low back across the lumbosacral area with no radiation, numbness, or tingling to the lower extremities. Claimant also reported some stiffness at the upper back with irritation predominantly in the upper back musculature with no significant cervical irritation and no radiation of pain, numbness, or tingling to the upper extremities. Claimant reported a prior back injury with the military and that he had some residual low back pain that was worsened by the motor vehicle collision. On examination, Claimant had full range of motion in the cervical spine and was non tender at the cervical levels at the midline and paraspinal musculature. Claimant was also non tender at the subocciput. Claimant was tight at the trapezial musculature with reported tenderness. Claimant was also mildly tender at the infraspinatus with identified trigger points. Dr. Aschberger found good lumbosacral flexion of 90 degrees with fingers within a couple of inches of the toes, full extension, and straight leg raises supine at 70 degrees bilaterally with no pain and no radicular symptoms. *See* Exhibit B.

30. Dr. Aschberger reviewed the July 22, 2016 MRIs and noted the cervical MRI showed mild multilevel degenerative changes without any evident spinal stenosis and the lumbar MRI showed disc degeneration and broad based disc bulge at L5-S1 with a focal central annular tear and some bilateral lateral recess stenosis and encroachment of the S1 nerve roots. Dr. Aschberger reviewed medical records. Dr. Ashberger noted Dr. Macaulay's opinion that Claimant was doing quite well and that the cervical spine issues were back to par on August 2, 2016 and that Claimant's continued low back achiness was in relation to the marines. Dr. Aschberger assessed: cervical strain, resolved; upper back/trapezial myofascial pain and tightness complicated with postural issues; cervical degenerative changes of doubtful clinical significance; pre-existing chronic low back pain; lumbosacral strain; and lumbar degenerative changes, likely pre-existing. Dr. Aschberger opined that Claimant may reasonably have suffered some aggravation or an injury of the neck and low back with the described motor vehicle collision and that Claimant had some residual upper back myofascial irritation. Other than the residual myofascial irritation, Dr. Aschberger opined that there were not significant findings on Claimant's presentation that he would attribute to the motor vehicle collision. Dr. Aschberger opined that although Claimant may have had some cervical irritation, there was no residual based on Claimant's current physical examination and that the cervical degenerative changes identified on MRI were likely pre-existing. Dr. Aschberger also opined that although Claimant was described to have had some SI restriction, which would be reasonable following the described motor vehicle collision, Claimant had no current residual and no radicular abnormality affecting the cervical or lumbar region. Dr. Aschberger noted that the residual myofascial irritation at the upper back could be followed up with trigger point injections, deep tissue massage, and review with physical therapy. Dr. Aschberger opined that no permanent impairment would be anticipated for the residual myofascial irritation at the upper back. *See* Exhibit B.

31. Dr. Aschberger opined that Claimant had no impairment and that there was no functional limitation regarding the neck and no residual pain with provocative maneuvers. Dr. Ashberger opined that although there was myofascial irritation affecting the upper back and trapezial musculature with some tightness there was no intrinsic cervical abnormality as a result of the motor vehicle collision. Dr. Aschberger opined that for the lumbar region, Claimant had a pre-existing and chronic back condition and that although Claimant reported intermittent symptomatology, the records indicate something more persistent and chronic issues with worsening over the previous 5 years. Dr. Aschberger opined that there was no permanent impairment for the lumbar region as a result of the motor vehicle accident. Dr. Aschberger noted that if a lumbar impairment was felt to be related to the motor vehicle collision, he would recommend apportioning out 7% for specific disorders given the degenerative changes. Dr. Ashberger opined that there were undoubtedly going to be restrictions regarding range of motion for Claimant, but that he did not consider the restrictions attributable to the motor vehicle collision based on the current presentation, records, and Dr. Macaulay's reports. *See* Exhibit B.

32. On February 21, 2017 Claimant underwent a Division Independent Medical Evaluation (DIME) performed by Brian Mathwich, M.D. Claimant reported stiffness and pain in his low back and upper back/shoulders and neck generally after sitting for 3-4 hours. Claimant reported that after sitting or lying down for extended periods of time he had increased stiffness and pain in the low back and upper neck. Claimant reported that he was taking Motrin once or twice per week when his back was stiff. Dr. Mathwich reviewed medical records and performed a physical exam. Claimant reported in the medical records that his low back pain had begun in 1994 during military training and that he had back spasms, not improved, over the last 20 years. Claimant also reported in the medical records that he had back pain since getting out of the service, but that from 2010 to 2015 it had been worse. On physical examination, Dr. Mathwich found that Claimant had no pain on palpation throughout the para-cervical muscles, minor discomfort in the right mid trapezius, and several small trigger points in the mid bodies of the trapezius bilaterally and in the levator scapulae muscles. Dr. Mathwich found full range of motion in all planes of the cervical spine including flexion, extension, side bending, and rotation with no pain during range of motion. In the lumbar spine, Dr. Mathwich found no tenderness and no trigger points. On range of motion, Dr. Mathwich noted that Claimant was able to flex placing his hands well below his knees almost to the feet and that extension side bending and rotation were normal. *See* Exhibits 1, A.

33. Dr. Mathwich diagnosed myofascial pain of the lumbar spine and bilateral trapezius. Dr. Mathwich opined that Claimant had undergone appropriate and necessary conservative treatment for the myofascial injury sustained in the motor vehicle accident and recommended no further treatment. Dr. Mathwich opined that no impairment rating was given and that Claimant's complaint of stiffness and occasional pain was myofascial in nature and the underlying spinal abnormalities were not contributors to Claimant's current pain complaints. Dr. Mathwich opined that the underlying spinal issues shown on MRI were pre-existing and were not Claimant's current pain generators. Dr. Mathwich opined, therefore, that without a Table 53 diagnosis no impairment was given. Dr. Mathwich noted that Claimant had a long-standing history of chronic low back pain well

documented in the records and that the motor vehicle accident resulted in myofascial injuries. Dr. Mathwich opined that the ongoing minor myofascial discomfort would improve and resolve with activity and exercise and that no further medical treatment was recommended or warranted. *See* Exhibits 1, A.

34. Dr. Mathwich testified by deposition. Dr. Mathwich opined that there was not a documented injury to the cervical spine in this case, but that there was a neck strain and a documented injury to the neck. Dr. Mathwich opined that there was six months of medically documented pain and rigidity without muscle spasm following Claimant's injury. Dr. Mathwich noted that he measured Claimant's range of motion objectively without using inclinometers.

35. Dr. Mathwich testified that there was a documented injury to Claimant's low back as a result of the work related motor vehicle accident and that claimant had six months of medically documented pain and rigidity with or without spasm in the lower back. Dr. Mathwich noted that he measured Claimant's range of motion but not using an inclinometer.

36. Dr. Mathwich testified that he referred to Table 53 of the AMA Guides during his examination. Dr. Mathwich testified that his opinion that Claimant had an overall 0 impairment rating remained the same. Dr. Mathwich testified that at the time of evaluation, Claimant had no significant cervical complaints, had functional range of motion, had no activities of daily living issues, and did not have any permanent impairment to the cervical spine so Table 53 was not used. Dr. Mathwich opined that Claimant had no specific impairment under Table 53 for the cervical spine or the lumbar spine and that therefore there could not be an impairment for range of motion deficits which is why he did not perform full range of motion testing with inclinometers. Dr. Mathwich opined that he had to look at the time the examination was done in conjunction with the historical records and make a determination of all the facts together. Dr. Mathwich opined that Table 53 in isolation, applied to Claimant's case, did not support a 0 percent rating. However, Dr. Mathwich opined that Claimant had no significant impairment of his functional abilities, had pain within a reasonable degree for a person his age and physical condition, and was back to his baseline prior to the injury so that there were no functional or pain issues justifying the use of an impairment rating. Dr. Mathwich testified that he used Claimant's VA records to determine the baseline prior to the work injury and that he took the entire picture into conjunction rather than a vacuum view. Dr. Mathwich noted the accident was very low speed, Claimant was returned to full duty work at the first visit, and that he did not feel that Claimant had a permanent impairment. Dr. Mathwich opined that Claimant had consistent treatment to the low back and cervical spine and objective findings in both the cervical and lumbar spine. However, he opined that nothing found in his DIME physical examination indicated a basis for a Table 53 impairment and that Claimant had full and functional range of motion.

37. Claimant has a significant pre-existing history of low back problems. He also has had prior problems with his neck.

38. On May 7, 2009 Claimant was evaluated at the VA hospital emergency room. Claimant reported that he had been in a motor vehicle accident last Friday and that he had pain in his left wrist and left shoulder. Claimant reported feeling sore in his neck and left shoulder and that he sometimes felt numb when laying on his left side. *See* Exhibit C.

39. On May 26, 2009 Claimant was evaluated at the VA medical center in follow up. Claimant reported numbness in his left arm when sleeping on the left side, left shoulder tenderness with movement, and neck and upper back pain when he moved or lifted things. Claimant reported injuring his back while in the military during a swim test and that while on the diving board with bricks in his backpack, he felt a pop in his back. On review of symptoms, neck pain and chronic low back pain were listed. Claimant was found to have good range of motion in the cervical and lumbar spines with probable muscle tension in the left lumbar muscles. The plan was to continue to monitor joint and musculoskeletal pain. It was noted that Claimant appeared to have a musculoskeletal neck injury and an acute exacerbation of his chronic low back pain. It was recommended that Claimant continue to wear his back brace while working. *See* Exhibit C.

40. On August 6, 2009 Claimant called the VA to report numbness in his side and hip that he had been having for about a month. Claimant also reported that his left hand was bothering him. An attempt was made to contact Claimant but no contact was made. *See* Exhibit C.

41. On August 3, 2011 Claimant was evaluated at the VA medical center. Claimant's active problems were noted to include low back pain, shoulder arthralgia, and neck pain. Claimant reported numbness in his right thigh/groin several weeks ago after sitting on a court bench for a long period. Claimant also reported chronic low back pain since the military after swimming with a heavy back pack with symptoms by straightening his back. Claimant was assessed with paresthesis due to prolonged sitting and chronic low back pain. A recommendation on the back pain was to continue conservative treatment. *See* Exhibit C.

42. On June 30, 2015 Claimant was evaluated at the VA emergency department. Claimant reported bilateral lower back pain and sciatica with shooting pains. Claimant also reported mild lumbar spasm. Claimant denied any trauma. Claimant was found to have paraspinal tenderness at L2. X-rays of Claimant's lumber spine were completed. They were noted to show mild degenerative change of the SI joints, mild wedging of the T11 and T12 vertebral bodies, a 6 mm retrolisthesis L5 on S1, minimal corner osteophytosis at L4-5 and L5-S1, and possible mild congenital canal stenosis. Claimant was assessed with low back pain and advised to see his primary care provider. *See* Exhibit C.

43. On July 8, 2015 Claimant was evaluated at follow up by the VA. Claimant reported an acute exacerbation of chronic low back pain. Claimant reported that on June 27, 2015 he woke up and felt like he had pulled a muscle in his back with tightness and pain from the lower back up to the shoulders at a 10/10. Claimant reported that he went

to the emergency department on June 30 and was sent home. Claimant reported that he had improved significantly but continued to have lower back tenderness and intermittent tightness in his back. Claimant reported that his lower back pain began while conducting military training in 1994 when he experienced a popping sensation in his back while carrying a backpack weighing over 150 pounds and that he was diagnosed with a back strain and had been taking ibuprofen since 1994 with mild relief. Claimant reported that he never had physical therapy or home exercises. Claimant reported that he had never had numbness/weakness in the legs. Claimant reported that the pain always started in his lower back and went up to the back of his shoulders. Claimant reported bilateral hand numbness/weakness getting worse over the past 5-6 months and that it occurred when working with his hands, laying on his arm, and working on the computer. The provider noted that Claimant had a history of chronic low back pain and an acute exacerbation without trauma, likely due to muscle spasm. Concern was noted about the long history of chronic low back pain that had not improved over the last 20 plus years. The provider noted that Claimant's pain was likely a combination of degenerative joint disease, SI arthritis and muscle strain. It was noted that the one concerning feature from the June 30, 2015 images was the mild wedging of the T11 and T12 vertebral bodies which was usually caused by a compression fracture. It was noted that Claimant was not in a demographic prone to osteoporosis (young, athletic, African American, male) but that the vertebral changes were concerning for osteoporosis. The plan was to do a physical therapy consultation, heat/cold on the chronic low back pain, and to complete a bone density scan. *See* Exhibit C.

44. On July 15, 2015 Claimant underwent a bone density scan of both his hips and lumbar spine. The impression was no osteopenia and his results were at 104 percent of young adult value. *See* Exhibit C.

45. On July 20, 2015 Claimant was evaluated at the VA. Claimant reported low back pain and trouble sleeping due to the pain. Claimant reported the pain was at the midline L2-5 with no radiation to his legs. Claimant reported that he had the back pain since getting out of the service, but that it had been worse the last 5 years.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Overcoming DIME on Permanent Impairment Rating

A DIME physician must apply the AMA Guides when determining the claimant's medical impairment rating. *See* § 8-42-101(3.7), C.R.S.; §8-42-107(8)(c), C.R.S. The finding of a DIME physician concerning the claimant's medical impairment rating shall be overcome only by clear and convincing evidence. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). The questions of whether the DIME physician properly applied the AMA Guides, and ultimately whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000). A mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. *See Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO March 22, 2000).

As a matter of diagnosis the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office,* 78 P.3d 1150 (Colo. App. 2003). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002);

Qual-Med, Inc. v. Industrial Claim Appeals Office, 961 P.2d 590 (Colo. App. 1998). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000).

Claimant has failed to meet his burden to overcome DIME physician Dr. Mathwich's opinion on permanent impairment by clear and convincing evidence. Claimant has failed to show that it is highly probable that Dr. Mathwich's opinion that he has no permanent impairment causally related to the February 8, 2016 motor vehicle accident is incorrect. Rather, Dr. Mathwich's opinion is consistent with the opinion of Dr. Aschberger and consistent with the overall weight of the evidence. Although the ATP, Dr. Macaulay provided an impairment rating, and it is inferred that Dr. Macaulay believed the impairment was related to the motor vehicle accident, there is at best a difference of opinion on the causation between the two physicians. The weight of the evidence supports the causal opinion given by the DIME physician that Claimant did not have any qualifying Table 53 diagnoses related to the February 8, 2016 motor vehicle accident. Table 53 provides for impairments due to specific disorders of the spine. Under II(B), the section at issue, Claimant would have to have either an intervertebral disc lesion or a soft tissue lesion causally related to the work injury to qualify for permanent impairment.

Dr. Mathwich opined that although Clamant had a neck strain, Claimant did not have a qualifying Table 53 impairment to the cervical spine. Despite any documented pain or rigidity, the opinion of the DIME physician on the causal relationship has to be overcome by clear and convincing evidence. As found above, Claimant had numerous findings on his cervical MRI that would, in a vacuum, put him into qualification as having a cervical spine disorder. However, the MRI findings were opined by multiple physicians to be degenerative and not acutely caused by the work related motor vehicle accident. On the date of the motor vehicle accident, a CT of Claimant's neck was performed and revealed no acute findings. The opinion of Dr. Mathwich that Claimant did not have permanent impairment or a qualifying Table 53 cervical spine disorder due to the motor vehicle accident is credible, persuasive, and consistent with the weight of the evidence. The opinion is consistent with the opinion of Dr. Goldman on September 16, 2016 that Claimant had no cervical trauma and the MRI of the cervical spine was normal for age. It also is consistent with Claimant's reports to Dr. Macaulay on October 17, 2016 that he had no issues with his cervical spine. Dr. Aschberger also opined on December 20, 2016 that Claimant had full range of motion in the cervical spine and that the cervical spine changes on MRI were likely pre-existing.

At the DIME, Dr. Mathwich was able to review Claimant's pre-existing medical records from the VA. Despite reporting to Dr. Aschberger that he had intermittent low back symptoms, the records showed persistent and chronic issues of low back pain with worsening over the five years prior to the February 8, 2016 motor vehicle accident. The MRI of Claimant's lumbar spine showed L5-S1 disc degeneration with broad based disc bulge and focal central annular tear causing moderate bilateral recess stenosis with

contact of bilateral descending S1 nerve. However, Dr. Mathwich opined that the findings related to the lumbar spine pre-existed the motor vehicle accident. This is supported by a similar opinion from Dr. Aschberger that Claimant had no permanent impairment for the lumbar spine as a result of the motor vehicle accident. As found above, x-rays of the lumbar spine taken at the VA prior to the motor vehicle accident showed retrolisthesis and backward slipping of the vertebrae at L5-S1, ostophytosis and bone spurs at L4-5 and at L5-S1, and a compressed T-11 and T-12 with wedging. Further, at the initial visit at the emergency department of the VA on the date of the motor vehicle accident, Claimant was assessed only with neck strain, headache, and left wrist sprain. This is logically inconsistent with an acute lumbar spinal injury or spinal impairment causally related to the motor vehicle accident. The opinions that there are no intervertebral disc lesions or soft tissue lesions causally related to the motor vehicle accident to support the application of Table 53 for Claimant's lumbar spine is credible, persuasive, and consistent with the weight of the evidence.

The DIME physician had significant records of pre-existing chronic low back pain that had been worsening in recent years. The DIME physician's opinion that Claimant had no ratable permanent impairment causally related to the motor vehicle accident on February 8, 2016 is credible, persuasive, supported by the opinion of Dr. Aschberger, and consistent with the overall weight of the evidence. Although Claimant has findings on his cervical and lumbar MRI that could potentially put him into a Table 53 rating if the findings were related to his industrial injury, in this case the objective findings and any intervertebral disc lesions or soft tissues lesions were opined to be pre-existing. Thus, Table 53 does not apply.

Claimant has had years of medically documented pain and rigidity in his lower back prior to his work related motor vehicle accident. Claimant has significant chronic low back pain that has existed since 1994. Any claims that Claimant was fine and not having low back pain symptoms or problems prior to the work related motor vehicle accident are incredible given the extensive medical history documenting chronic low back pain. On August 2, 2016 Claimant reported to Dr. Macaulay that his continued ache in the lumbar spine was related to the Marines. Dr. Macaulay also opined on this date that the changes evident in both the cervical and lumbar spines were normal degenerative changes. Claimant has only degenerative changes on his cervical MRI and no acute findings. The lumbar spine MRI findings also were opined to be pre-existing which is consistent with Claimant's history of significant chronic low back pain. Claimant has failed to meet his burden to show by clear and convincing evidence that the DIME opinion was in error or that he qualifies for a table 53 impairment rating causally related to his industrial injury.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant has failed to overcome DIME physician Dr. Mathwich's permanent impairment rating. Claimant has no permanent impairment causally related to the February 8, 2016 motor vehicle accident.

2. Any issues not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 21, 2017,

/s/ Michelle E. Jones

_____

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-046-205-01

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on December 14, 2017, in Denver, Colorado. The hearing was digitally recorded (reference: 12/14/17, Courtroom 1, beginning at 8:30 AM, and ending at 10:30 AM). The official Spanish/English Interpreter was Jessie Lemmon.

Claimant's Exhibits 1 through 3 were admitted into evidence, without objection. Respondents' Exhibits A through I were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Claimant, which filed, electronically, on December 19, 2017. Respondents were given 2 working days within which to file objections. No timely objections were filed. After a consideration of the proposed decision, the ALJ has modified the proposal and hereby issues the following decision.

ISSUES

The issues to be determined by this decision concern compensability and, if compensable: medical benefits, average weekly wage (AWW). The parties agreed to defer the issue of temporary disability benefits.

The Claimant bears the burden of proof, by a preponderance of the evidence on all issues.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. At the outset of the hearing, the parties stipulated that the AWW is $393.43, and the ALJ so finds. The parties also stipulated that if the claim was found compensable, all medical benefits rendered by Concentra and any of its referrals that have accrued and all future medical benefits are causally related to t5he injury of December 15, 2016 to the Claimant's right ring finger and are reasonably necessary to cure and relieve the effects of the injury, and the ALJ so finds. Further, the surgery recommended by Tracy Wolf, M.D., for a right ring finger trigger release is reasonably necessary and causally related to the work injury of December 15, 2016.

Findings—Compensability

2. While in the course and scope of her employment as a housekeeper for the Employer, the Claimant suffered a work injury to her right ring finger on December 15, 2016, while pushing a housekeeping cart into an elevator.

3. According to the Claimant, the cart got stuck and started to tip as she was pushing it into the elevator. She thrusted her right arm out to keep from falling and grabbed the hand rail inside the elevator. Her right ring finger got jammed on the rail and went inwards causing severe pain. There were no witnesses present at the time of the injury.

4. According to the Claimant she reported her injury on the day of occurrence to her direct supervisor, Sandra Gutierrez. According to the Claimant, Gutierrez told her that she would report the injury to Isabela Gonzales and write a report. Isabela Gonzales was not there that day and the Claimant continued to work that day in pain. Gutierrez was not called to testify nor is there any recorded statement of Gutierrez. The Claimant version of events, including the reporting to Gutierrez on the

day of the occurrence is undisputed by any non-hearsay evidence [in Respondents' Exhibit A, the January 23, 2017 memorandum, Danielle Zayatz, the hotel's general manager, and Isabela Gonzales, the assistant general manager, recite: "[Claimant] mentioned on January 12, 2017 to her supervisor, Sandra Gutierrez, that approximately 30 days ago she her finger…."] The ALJ finds Gutierrez's apparent delay in reporting to be at odds with the Zayatz's and Gonzales' harmonious versions that there was no reporting until January 23, 2017. Indeed, the ALJ infers and finds that the Claimant's version of reporting to her immediate supervisor on the day of the incident to be more credible than the hearsay versions of Zayatz and Gonzales, and the hearsay-upon-hearsay version of Gutierrez as told by Zayatz and Gonzales. Indeed, the Respondents did **not** endorse "late reporting" as an issue.

5. The Claimant was off work on Saturday, December, 16, Sunday, December 17 and Monday, December 18.

6. On December 19, 2016, the Claimant again told Sandra Gutierrez that she had injured her finger at work. The Claimant continued to complain to Gutierrez. On January 23, 2017, the Claimant told Isabela Gonzales and Gutierrez that she was going to go to her own doctor if they were not going to send her to a clinic. According to the Claimant, Gonzales told her that she would take care of this and inform Danielle Zayatz. In fact, Zayatz signed off on the memorandum, admitted into evidence as Respondents' Exhibit A. On January 23, 2017, the Employer referred the Claimant to Concentra. Thereafter, Concentra and its referrals provided treatment for the Claimant

Isabela Gonzales and Danielle Zayatz

7. Isabela Gonzales and Danielle Zayatz testified for the Respondents. Gonzales is the direct supervisor of Sandra Gutierrez. Gonzales stated that she was first informed of the Claimant's work injury on January 23, 2017. The ALJ infers and finds that Gonzalez's late knowledge of the Claimant's work injury was due to Gutierrez's (Claimant's immediate supervisor) delay in reporting the Claimant's injury to her supervisor, Gonzales.

8. Zayatz is the General Manager of the Employer and the direct supervisor of Isabela Gonzales. Zayatz is the person who completes the injury reports. Zayatz stated that she observed the Claimant at work and the Claimant did not appear to have been injured. Based on Zayatz limited opportunity to observe t5he Claimant at work, the ALJ places minimal weight upon this testimony of Zayatz. From the time of the injury until January 23, 2017, Zayatz stated that the Claimant had the opportunity to report the injury to herself or to Gonzales but did not do so. The ALJ finds this testimony to be a considerable stretch, analogous to a Capitol groundskeeper having the opportunity to report his injury to the Governor. Neither Zayatz nor Gonzalez are Claimant's direct supervisors, nor did they have the intensive contact with the Claimant had by Gutierrez. Zayatz stated that the Employers' policy requires an injured employee to report their

injury to their supervisor within 24 hours of occurrence. As found herein above, the Claimant reported her work injury to her **direct** supervisor, Gutierrez, on the day of the occurrence (within 24-hours) as required by the "Policy." According to Zayatz, the first time she was made aware of the Claimant's work injury was on January 23, 2017.

9. Respondents' Exhibit A, the Employment File, which is untitled, but states in part that "[Claimant] mentioned on January 12, 2017 to her supervisor, Sandra Gutierrez, that approximately 30 days ago she injured her finger." The context of this exhibit acknowledges that. Gutierrez knew of the Claimant's injury at least by January 12, 2017. The exhibit is dated January 23, 2017 and is signed by Zayatz, Gonzales and the Claimant. The letter was not signed by Gutierrez. Gonzales signed it as "translator." Further, the Exhibit A states that all injuries are to be reported within 24 hours of the event. According to Gonzales, she translated the letter for the Claimant, and the Claimant signed it. The Claimant disputes that the letter was translated for her and testified that the letter was not translated for her and she was told by Gonzales that she was required to sign the letter as authorization to go to the doctor. The ALJ infers and finds, in the Claimant's eagerness to see a doctor, there was a misunderstanding at best.

Medical

10. The Claimant was sent to Concentra on January 23, 2017 and was seen by Jonathan Bloch D.O. The recorded history taken by Dr. Bloch on January 23, 2017 as to how the injury occurred is consistent with the mechanism of injury and consistent with the presenting symptoms and physical examination (Claimants' Exhibit 3, p. 5-6). Dr. Bloch rendered a diagnosis of crushing injuring to the right finger and referred the Claimant to a hand specialist for a trigger finger injection (Claimants' Exhibit 3, p.6).

11. The Claimant was seen by Tracy Wolf, M.D., a hand specialist, on February 3, 2017, and the Claimant received an injection into her right ring finger (Claimants' Exhibit 3, p.9). On March 3, 2017, Dr. Wolf performed a second injection to the Claimants' right ring finger (Claimants' Exhibit 3, p.17). On April 10, 2017 a surgery request/authorization/notification form was sent by Dr. Wolf's office to Patty Button for prior authorization to perform a right ring finger trigger release (Claimants' Exhibit 3, p. 38). In a May 26, 2017 medical report, Dr. Wolf notes that in regard to the request for surgery, "I do not have the letter to look why this was denied and we will look at appealing. However to note, she never had any problems with her hand prior to her injury with the cart. Since then she developed the problem, so it does appear to be work relate." (Claimants' Exhibit 3, p.70).

Ultimate Findings

12. Based on the totality of the evidence, the ALJ finds the Claimant's recounting of the work-related injury to her right ring finger to be credible and corroborated by medical evidence with respect to the mechanism of injury as described by the Claimant. Further, the ALJ finds the Claimant's testimony with respect to reporting her work injury, on the day of the occurrence, to her immediate supervisor. Sandra Gutierrez, to be credible and undisputed by competent non-hearsay evidence. The medical opinions concerning the condition of the Claimant's right ring finger are credible and undisputed.

13. Between conflicting evidence, the ALJ makes a rational choice, based on substantial evidence, to accept the Claimant's version of events, including the same-day reporting to her immediate supervisor, Sandra Gutierrez, and to reject any evidence to the contrary.

14. The Claimant has proven, by a preponderance of the evidence that she sustained a compensable injury to her right ring finger, arising out of the course and scope of her employment, on December 15, 2016.

15. Based in the stipulation of the parties and the ALJ's finding thereon, the Claimant's AWW is $393.43.

16. Based on the stipulation of the parties, and the ALJ's findings thereon, all of the Claimant's medical care and treatment for the December 15, 2016 right ring finger injury was authorized, within the chain of authorized referrals, causally related to the compensable injury, and reasonably necessary to cure and relieve the effects thereof.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines

the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the Claimant's recounting of the work-related injury to her right ring finger was credible and corroborated by medical evidence with respect to the mechanism of injury as described by the Claimant. Further, as found, the Claimant's testimony with respect to reporting her work injury, on the day of the occurrence, to her immediate supervisor. Sandra Gutierrez, was credible and undisputed by competent non-hearsay evidence. As found, all of the medical opinions and observations were undisputed by any competent evidence. As further found, the medical opinions were credible. *See, Annotation, Comment: Credibility of Witness Giving Un-contradicted Testimony as Matter for Court or Jury,* 62 ALR 2d 1179, maintaining that the fact finder is not free to disregard un-contradicted testimony.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co .v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions

in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting evidence, the ALJ made a rational choice, based on substantial evidence, to accept the Claimant's version of events, including the same-day reporting to her immediate supervisor, Sandra Gutierrez, and to reject any evidence to the contrary.

Compensability

c. In order for an injury to be compensable under the Workers' Compensation Act, it must "arise out of" and "occur within the course and scope" of the employment. *Price v. Indus. Claim Appeals Office,* 919 P.2d 207, 210, 210 (Colo. 1996). An injury "arises out of' employment if it would not have occurred **but for** the fact that the conditions and obligations of employment placed the employee in a position that he or she was injured." *See City of Brighton v. Rodriguez,* 318 P.3d 496, **2014 CO 7.** Somewhat of a presumption that an injury arises out of employment is the starting point when an unexplained injury occurs during the course of employment. Thereupon, it is incumbent to show that non-work related factors caused the injury. Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any benefits are awarded. § 8-41-301 (1) (c), C.R.S. *See Faulkner v. Indus. Claim Appeals Office,* 24 P.3d 844 (Colo. App. 2000)*; Eller v. Indus. Claim Appeals Office*, 224 P.3d 397, 399 (Colo. App. 2009); *Cabela v. Indus. Claim Appeals Office,* 198 P.3d 1277, 1279 (Colo. App. 2008). The question of causation is generally one of fact for determination by an ALJ. *Faulkner* at 846; *Eller* at 399-400. As found, the Claimant sustained a compensable injury to her right ring finger on December 15, 2016.

Average Weekly Wage (AWW)

d. As stipulated and found, the Claimant's AWW is $393.43.

Medical

e. Based on the stipulation findings, all of the Claimant's medical care and treatment for the December 15, 2016 right ring finger injury was authorized, within the chain of authorized referrals, causally related to the compensable injury, and reasonably necessary to cure and relieve the effects thereof.

Burden of Proof

f. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d

786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained her burden with respect to Compensability, AWW, and medical benefits,

ORDER

IT IS, THEREFORE, ORDERED THAT:

DATED this_____day of December 2017.

A. Respondents shall pay all of the costs of medical care and treatment for the Claimant's compensable right ring finger injury of December 15, 2016, subject to the Division of Workers' Compensation Medical Fee Schedule.

B. The Claimant's average weekly wage is $393.43.

C. Any and all issues not determined herein are reserved for future decision.

_____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-046-205-01

CORRECTED FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on December 14, 2017, in Denver, Colorado. The hearing was digitally recorded (reference: 12/14/17, Courtroom 1, beginning at 8:30 AM, and ending at 10:30 AM). The official Spanish/English Interpreter was Jessie Lemmon.

Claimant's Exhibits 1 through 3 were admitted into evidence, without objection. Respondents' Exhibits A through I were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Claimant, which filed, electronically, on December 19, 2017. Respondents filed an objection on December 21, 2017, objecting to any references to a Division Independent Medical Examination (DIME), which has not occurred. Any references to a DIME have been extricated during the ALJ's substantial modifications of the proposed decision. After a consideration of the proposed decision. After a consideration of the proposal and objection, the ALJ hereby issues the following decision.

ISSUES

The issues to be determined by this decision concern compensability and, if compensable: medical benefits, average weekly wage (AWW). The parties agreed to defer the issue of temporary disability benefits.

The Claimant bears the burden of proof, by a preponderance of the evidence on all issues.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. At the outset of the hearing, the parties stipulated that the AWW is $393.43, and the ALJ so finds. The parties also stipulated that if the claim was found compensable, all medical benefits rendered by Concentra and any of its referrals that have accrued and all future medical benefits are causally related to t5he injury of December 15, 2016 to the Claimant's right ring finger and are reasonably necessary to cure and relieve the effects of the injury, and the ALJ so finds. Further, the surgery recommended by Tracy Wolf, M.D., for a right ring finger trigger release is reasonably necessary and causally related to the work injury of December 15, 2016.

Findings—Compensability

2. While in the course and scope of her employment as a housekeeper for the Employer, the Claimant suffered a work injury to her right ring finger on December 15, 2016, while pushing a housekeeping cart into an elevator.

3. According to the Claimant, the cart got stuck and started to tip as she was pushing it into the elevator. She thrusted her right arm out to keep from falling and grabbed the hand rail inside the elevator. Her right ring finger got jammed on the rail and went inwards causing severe pain. There were no witnesses present at the time of the injury.

4. According to the Claimant she reported her injury on the day of occurrence to her direct supervisor, Sandra Gutierrez. According to the Claimant, Gutierrez told her that she would report the injury to Isabela Gonzales and write a report. Isabela Gonzales was not there that day and the Claimant continued to work

that day in pain. Gutierrez was not called to testify nor is there any recorded statement of Gutierrez. The Claimant version of events, including the reporting to Gutierrez on the day of the occurrence is undisputed by any non-hearsay evidence [in Respondents' Exhibit A, the January 23, 2017 memorandum, Danielle Zayatz, the hotel's general manager, and Isabela Gonzales, the assistant general manager, recite: "[Claimant] mentioned on January 12, 2017 to her supervisor, Sandra Gutierrez, that approximately 30 days ago she her finger…."] The ALJ finds Gutierrez's apparent delay in reporting to be at odds with the Zayatz's and Gonzales' harmonious versions that there was no reporting until January 23, 2017. Indeed, the ALJ infers and finds that the Claimant's version of reporting to her immediate supervisor on the day of the incident to be more credible than the hearsay versions of Zayatz and Gonzales, and the hearsay-upon-hearsay version of Gutierrez as told by Zayatz and Gonzales. Indeed, the Respondents did **not** endorse "late reporting" as an issue.

5. The Claimant was off work on Saturday, December, 16, Sunday, December 17 and Monday, December 18.

6. On December 19, 2016, the Claimant again told Sandra Gutierrez that she had injured her finger at work. The Claimant continued to complain to Gutierrez. On January 23, 2017, the Claimant told Isabela Gonzales and Gutierrez that she was going to go to her own doctor if they were not going to send her to a clinic. According to the Claimant, Gonzales told her that she would take care of this and inform Danielle Zayatz. In fact, Zayatz signed off on the memorandum, admitted into evidence as Respondents' Exhibit A. On January 23, 2017, the Employer referred the Claimant to Concentra. Thereafter, Concentra and its referrals provided treatment for the Claimant

Isabela Gonzales and Danielle Zayatz

7. Isabela Gonzales and Danielle Zayatz testified for the Respondents. Gonzales is the direct supervisor of Sandra Gutierrez. Gonzales stated that she was first informed of the Claimant's work injury on January 23, 2017. The ALJ infers and finds that Gonzalez's late knowledge of the Claimant's work injury was due to Gutierrez's (Claimant's immediate supervisor) delay in reporting the Claimant's injury to her supervisor, Gonzales.

8. Zayatz is the General Manager of the Employer and the direct supervisor of Isabela Gonzales. Zayatz is the person who completes the injury reports. Zayatz stated that she observed the Claimant at work and the Claimant did not appear to have been injured. Based on Zayatz limited opportunity to observe t5he Claimant at work, the ALJ places minimal weight upon this testimony of Zayatz. From the time of the injury until January 23, 2017, Zayatz stated that the Claimant had the opportunity to report the injury to herself or to Gonzales but did not do so. The ALJ finds this testimony to be a considerable stretch, analogous to a Capitol groundskeeper having the opportunity to report his injury to the Governor. Neither Zayatz nor Gonzalez are Claimant's direct

supervisors, nor did they have the intensive contact with the Claimant had by Gutierrez. Zayatz stated that the Employers' policy requires an injured employee to report their injury to their supervisor within 24 hours of occurrence. As found herein above, the Claimant reported her work injury to her **direct** supervisor, Gutierrez, on the day of the occurrence (within 24-hours) as required by the "Policy." According to Zayatz, the first time she was made aware of the Claimant's work injury was on January 23, 2017.

9. Respondents' Exhibit A, the Employment File, which is untitled, but states in part that "[Claimant] mentioned on January 12, 2017 to her supervisor, Sandra Gutierrez, that approximately 30 days ago she injured her finger." The context of this exhibit acknowledges that. Gutierrez knew of the Claimant's injury at least by January 12, 2017. The exhibit is dated January 23, 2017 and is signed by Zayatz, Gonzales and the Claimant. The letter was not signed by Gutierrez. Gonzales signed it as "translator." Further, the Exhibit A states that all injuries are to be reported within 24 hours of the event. According to Gonzales, she translated the letter for the Claimant, and the Claimant signed it. The Claimant disputes that the letter was translated for her and testified that the letter was not translated for her and she was told by Gonzales that she was required to sign the letter as authorization to go to the doctor. The ALJ infers and finds, in the Claimant's eagerness to see a doctor, there was a misunderstanding at best.

Medical

10. The Claimant was sent to Concentra on January 23, 2017 and was seen by Jonathan Bloch D.O. The recorded history taken by Dr. Bloch on January 23, 2017 as to how the injury occurred is consistent with the mechanism of injury and consistent with the presenting symptoms and physical examination (Claimants' Exhibit 3, p. 5-6). Dr. Bloch rendered a diagnosis of crushing injuring to the right finger and referred the Claimant to a hand specialist for a trigger finger injection (Claimants' Exhibit 3, p.6).

11. The Claimant was seen by Tracy Wolf, M.D., a hand specialist, on February 3, 2017, and the Claimant received an injection into her right ring finger (Claimants' Exhibit 3, p.9). On March 3, 2017, Dr. Wolf performed a second injection to the Claimants' right ring finger (Claimants' Exhibit 3, p.17). On April 10, 2017 a surgery request/authorization/notification form was sent by Dr. Wolf's office to Patty Button for prior authorization to perform a right ring finger trigger release (Claimants' Exhibit 3, p. 38). In a May 26, 2017 medical report, Dr. Wolf notes that in regard to the request for surgery, "I do not have the letter to look why this was denied and we will look at appealing. However to note, she never had any problems with her hand prior to her injury with the cart. Since then she developed the problem, so it does appear to be work relate." (Claimants' Exhibit 3, p.70).

Ultimate Findings

12. Based on the totality of the evidence, the ALJ finds the Claimant's recounting of the work-related injury to her right ring finger to be credible and corroborated by medical evidence with respect to the mechanism of injury as described by the Claimant. Further, the ALJ finds the Claimant's testimony with respect to reporting her work injury, on the day of the occurrence, to her immediate supervisor. Sandra Gutierrez, to be credible and undisputed by competent non-hearsay evidence. The medical opinions concerning the condition of the Claimant's right ring finger are credible and undisputed.

13. Between conflicting evidence, the ALJ makes a rational choice, based on substantial evidence, to accept the Claimant's version of events, including the same-day reporting to her immediate supervisor, Sandra Gutierrez, and to reject any evidence to the contrary.

14. The Claimant has proven, by a preponderance of the evidence that she sustained a compensable injury to her right ring finger, arising out of the course and scope of her employment, on December 15, 2016.

15. Based in the stipulation of the parties and the ALJ's finding thereon, the Claimant's AWW is $393.43.

16. Based on the stipulation of the parties, and the ALJ's findings thereon, all of the Claimant's medical care and treatment for the December 15, 2016 right ring finger injury was authorized, within the chain of authorized referrals, causally related to the compensable injury, and reasonably necessary to cure and relieve the effects thereof.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines

the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the Claimant's recounting of the work-related injury to her right ring finger was credible and corroborated by medical evidence with respect to the mechanism of injury as described by the Claimant. Further, as found, the Claimant's testimony with respect to reporting her work injury, on the day of the occurrence, to her immediate supervisor. Sandra Gutierrez, was credible and undisputed by competent non-hearsay evidence. As found, all of the medical opinions and observations were undisputed by any competent evidence. As further found, the medical opinions were credible. *See, Annotation, Comment: Credibility of Witness Giving Un-contradicted Testimony as Matter for Court or Jury,* 62 ALR 2d 1179, maintaining that the fact finder is not free to disregard un-contradicted testimony.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co .v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions

in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting evidence, the ALJ made a rational choice, based on substantial evidence, to accept the Claimant's version of events, including the same-day reporting to her immediate supervisor, Sandra Gutierrez, and to reject any evidence to the contrary.

Compensability

c. In order for an injury to be compensable under the Workers' Compensation Act, it must "arise out of" and "occur within the course and scope" of the employment. *Price v. Indus. Claim Appeals Office,* 919 P.2d 207, 210, 210 (Colo. 1996). An injury "arises out of' employment if it would not have occurred **but for** the fact that the conditions and obligations of employment placed the employee in a position that he or she was injured." *See City of Brighton v. Rodriguez,* 318 P.3d 496, **2014 CO 7.** Somewhat of a presumption that an injury arises out of employment is the starting point when an unexplained injury occurs during the course of employment. Thereupon, it is incumbent to show that non-work related factors caused the injury. Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any benefits are awarded. § 8-41-301 (1) (c), C.R.S. *See Faulkner v. Indus. Claim Appeals Office,* 24 P.3d 844 (Colo. App. 2000)*; Eller v. Indus. Claim Appeals Office*, 224 P.3d 397, 399 (Colo. App. 2009); *Cabela v. Indus. Claim Appeals Office,* 198 P.3d 1277, 1279 (Colo. App. 2008). The question of causation is generally one of fact for determination by an ALJ. *Faulkner* at 846; *Eller* at 399-400. As found, the Claimant sustained a compensable injury to her right ring finger on December 15, 2016.

Average Weekly Wage (AWW)

d. As stipulated and found, the Claimant's AWW is $393.43.

Medical

e. Based on the stipulation findings, all of the Claimant's medical care and treatment for the December 15, 2016 right ring finger injury was authorized, within the chain of authorized referrals, causally related to the compensable injury, and reasonably necessary to cure and relieve the effects thereof.

Burden of Proof

f. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained her burden with respect to Compensability, AWW, and medical benefits,

ORDER

IT IS, THEREFORE, ORDERED THAT:

DATED this_____day of December 2017.

A. Respondents shall pay all of the costs of medical care and treatment for the Claimant's compensable right ring finger injury of December 15, 2016, **provided by Concentra doctors and physician assistants and their referrals, including the surgery recommended by Tracy Wolf, M.D**., subject to the Division of Workers' Compensation Medical Fee Schedule.

B. The Claimant's average weekly wage is $393.43.

C. Any and all issues not determined herein are reserved for future decision.

ISSUE

Whether Claimant has demonstrated by a preponderance of the evidence that a total right knee replacement as recommended by Geoffrey Patrick Doner, M.D. is reasonable, necessary and causally related to his April 28, 2016 admitted industrial injury.

FINDINGS OF FACT

1. Claimant is a 54 year old male who works for Employer as a Police Chief. On April 28, 2016 Claimant responded to the Conejos County Hospital to assist the Conejos Sheriff's Department with an inmate who had escaped from custody while undergoing an evaluation at a hospital. Claimant became involved in a struggle while the fugitive attempted to flee in a patrol car. Claimant eventually became entangled with the inmate's leg irons and fell onto the pavement. He injured his left shoulder and right knee during the altercation.

2. On April 28, 2017 Claimant sought medical treatment for his injuries from the Conejos County Hospital. Claimant reported that, while apprehending an inmate he "sustained a scrape to his right knee on the pavement." He did not "break the material of his jeans." Physician's Assistant Linda Lee noted that Claimant's extremities were non-tender and he exhibited full range of motion. PA-C Lee discharged Claimant with no work restrictions or recommendations for additional treatment.

3. On May 4, 2016 Claimant visited the Jackson Medical Clinic for an examination. He explained that he struck his right knee and twisted his left shoulder while wrestling an escaped prisoner. Vaughn D. Jackson, M.D. diagnosed Claimant with a left rotator cuff strain and a right knee strain with contusion. Dr. Jackson recommended x-rays.

4. A May 4, 2016 x-ray of Claimant's right knee reflected small, loose bodies in the posterior aspect of the right knee joint as well as small ossification due to an old avulsion injury. There was no evidence of joint effusion. The x-ray also revealed degenerative arthritis of the patellofemoral joint.

5. On May 24, 2017 Claimant returned to Dr. Jackson for an evaluation. Claimant reported severe left shoulder pain and was walking with a limp. Dr. Jackson suspected a meniscal tear and requested an MRI.

6. On June 29, 2016 Claimant underwent a right knee MRI. The MRI revealed findings consistent with a prior injury and surgical involvement. The diagnostic testing also reflected a possible meniscal tear. Dr. Jackson referred Claimant to Geoffrey Patrick Doner, M.D. for an orthopedic evaluation.

7. On July 14, 2016 Claimant underwent an evaluation with Dr. Doner. Based on a left shoulder rotator cuff tear, Dr. Doner recommended surgical intervention. In addressing Claimant's right knee, Dr. Doner remarked that Claimant suffered "an acute injury with some fat pad inflammation" as well as chronic osteoarthritis. He recommended an intra-articular injection of the right knee if Claimant failed to improve.

8. After Claimant underwent rehabilitation for his left shoulder injury, Dr. Doner recommended surgery for his right knee meniscal tear. Claimant specifically exhibited a bucket handle tear that displaced into the notch and a grade IV cartilage loss of the medial facet of the patella and medial trochlea. On November 28, 2016 Dr. Doner performed a right medial and lateral meniscectomy and chondroplasty.

9. On February 2, 2017 Claimant returned to Front Range Orthopedics for an evaluation. Claimant reported muscle aches, weakness and joint pain. Physician's Assistant Mitchell Dawson observed right knee tenderness, pain with motion and crepitus behind the patellofemoral joint. He determined that most of Claimant's pain was caused by his patellofemoral osteoarthritis. PA-C Dawson administered an intra-articular corticosteroid injection.

10. On March 13, 2017 Claimant again visited Front Range Orthopedics. He was evaluated by Edward Szuszczewicz, M.D. Claimant reported burning right knee pain since April 2016. Dr. Szuszczewicz recounted that Claimant had undergone a meniscectomy with Dr. Doner in December that had revealed significant cartilage defects. A physical examination did not reveal any tenderness or swelling in the right knee area. Dr. Szuszczewicz diagnosed Claimant with end-stage osteoarthritis of the right knee. Intraoperative pictures of the right knee arthroscopy in 2016 revealed advanced chondromalacia. Dr. Szuszczewicz recommended a total right knee arthroplasty.

11. On May 18, 2017 Claimant underwent an independent medical examination with Timothy S. O'Brien, M.D. Claimant reported that on April 28, 2016 he was apprehending an escaped prisoner, became involved in an altercation and fell to the ground. Claimant struck and twisted his right knee. He also injured his left shoulder. Dr. O'Brien concluded that Claimant's minor right knee contusion that healed by May 24, 2016. He remarked that Claimant's pain symptoms continued to increase in the absence of a physiologic or anatomic explanation. Dr. O'Brien also noted that Claimant's full range of motion in his right knee during examination on April 28, 2016 was inconsistent with a meniscal tear. He reasoned that the November 28, 2016 right knee arthroscopy did not improve Claimant's symptoms but instead introduced surgical trauma. The procedure "awakened quiescent areas of osteoarthritis and created an intractable synovitis that resulted in the progression of Claimant's symptomology and underlying disease." Dr. O'Brien concluded that Claimant remained a candidate for a total right knee arthroplasty just as he had been prior to the April 28, 2016 incident and the need for the surgery was not related to the altercation.

12. On September 19, 2017 the parties conducted the post-hearing evidentiary deposition of Dr. O'Brien. Dr. O'Brien maintained that Claimant's mechanism of injury on April 28, 2016 was insufficient to cause the need for a total right knee replacement. He

remarked that Claimant only suffered a superficial abrasion and contusion of the right knee that healed. Dr. O'Brien specified that there was insufficient stress on Claimant's knee during the April 28, 2016 altercation to cause a meniscal tear.

13. Dr. O'Brien commented that Claimant did not display any symptoms consistent with a meniscal tear at his examinations on April 28, 2016 and May 4, 2016. He explained that an acute injury to the meniscus would produce immediate symptoms rather than a delayed onset until approximately four weeks later. Dr. O'Brien summarized that Claimant's delayed report of right knee symptoms until May 24, 2016 was due to non-organic factors.

14. Dr. O'Brien explained that Claimant's right knee MRI findings were not related to his April 28, 2016 work incident. He noted that over 60% of men in their mid-50's have similar MRI findings. Claimant's findings were thus consistent with normal age-related degeneration that was not caused by an acute incident. Dr. O'Brien summarized that Claimant's right knee injury on April 28, 2016 was limited to a minor contusion that did not mandate surgical intervention.

15. Claimant testified at the hearing in this matter. He explained that he actually damaged his right knee three times during the April 28, 2016 altercation with the escaped prisoner. Claimant remarked that he struck his right knee on the ground when he became entangled with the fugitive's leg irons, he injured his right knee when another officer was removing the prisoner from the patrol car and he again struck his right knee when all three of the parties fell to the ground. Although Claimant denied that he exhibited full range of right knee motion during a physical examination on April 28, 2016 he acknowledged that he did not suffer any swelling.

16. On November 14, 2017 the parties conducted the post-hearing evidentiary deposition of Dr. Doner. Dr. Doner concluded that Claimant's altercation with the prisoner on April 28, 2016 caused his right knee meniscal tear and warranted a total right knee arthroplasty. He specifically noted that Claimant was functioning and performing his job duties prior to apprehending the prisoner. Claimant tore his meniscus on April 28, 2016 and underwent a right knee meniscectomy. The partial removal of the meniscus caused Claimant's symptoms to accelerate and progress to the extent that he now requires a total right knee replacement.

17. Claimant has demonstrated that it is more probably true than not that a total right knee replacement as recommended by Dr. Doner is reasonable, necessary and causally related to his April 28, 2016 admitted industrial injury. Initially, the record reveals that Claimant suffers from pre-existing degenerative osteoarthritis of the right knee. While apprehending an escaped prisoner on April 28, 2016 Claimant became entangled with the inmate's leg irons, fell onto the pavement and injured his right knee. Dr. Doner emphasized that Claimant was functioning and performing his job duties normally prior to apprehending the prisoner. After receiving conservative medical treatment Claimant underwent an MRI that revealed a possible meniscal tear. On November 28, 2016 Dr. Doner performed a right knee procedure in which he removed a portion of the meniscus. Dr. Doner persuasively concluded that Claimant's altercation with the prisoner on April

28, 2016 caused his right knee meniscal tear. The partial removal of the meniscus caused Claimant's symptoms to accelerate and progress to the extent that he now requires a total right knee replacement.

18. In contrast, Dr. O'Brien maintained that Claimant's mechanism of injury on April 28, 2016 was insufficient to cause the need for a total right knee replacement. He remarked that Claimant only suffered a superficial abrasion and contusion of the right knee that healed. Dr. O'Brien specified that there was insufficient stress on Claimant's knee during the April 28, 2016 altercation to cause a meniscal tear. Furthermore, Claimant did not display any symptoms consistent with a meniscal tear at his examinations on April 28, 2016 and May 4, 2016. Dr. O'Brien explained that an acute injury to the meniscus would produce immediate symptoms rather than a delayed onset until approximately four weeks later. Nevertheless, the record reflects that, although Claimant suffered from right knee osteoarthritis, he was functional, could perform his job duties and did not experience right knee pain prior to his altercation with the prisoner on April 28, 2016. However, Claimant required medical treatment after the incident and subsequent diagnostic testing revealed a right knee meniscal tear. As Drs. Doner and O'Brien recognized, the partial removal of the meniscus caused Claimant's symptoms to accelerate and progress to the extent that he now requires a total right knee replacement. Accordingly, Claimant's employment activities on April 28, 2016 aggravated, accelerated or combined with his preexisting condition to produce a need for medical treatment in the form of a right knee replacement.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and

bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAP, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAP, Nov. 13, 2000).

5. As found, Claimant has demonstrated by a preponderance of the evidence that a total right knee replacement as recommended by Dr. Doner is reasonable, necessary and causally related to his April 28, 2016 admitted industrial injury. Initially, the record reveals that Claimant suffers from pre-existing degenerative osteoarthritis of the right knee. While apprehending an escaped prisoner on April 28, 2016 Claimant became entangled with the inmate's leg irons, fell onto the pavement and injured his right knee. Dr. Doner emphasized that Claimant was functioning and performing his job duties normally prior to apprehending the prisoner. After receiving conservative medical treatment Claimant underwent an MRI that revealed a possible meniscal tear. On November 28, 2016 Dr. Doner performed a right knee procedure in which he removed a portion of the meniscus. Dr. Doner persuasively concluded that Claimant's altercation with the prisoner on April 28, 2016 caused his right knee meniscal tear. The partial removal of the meniscus caused Claimant's symptoms to accelerate and progress to the extent that he now requires a total right knee replacement.

6. As found, in contrast, Dr. O'Brien maintained that Claimant's mechanism of injury on April 28, 2016 was insufficient to cause the need for a total right knee replacement. He remarked that Claimant only suffered a superficial abrasion and contusion of the right knee that healed. Dr. O'Brien specified that there was insufficient stress on Claimant's knee during the April 28, 2016 altercation to cause a meniscal tear. Furthermore, Claimant did not display any symptoms consistent with a meniscal tear at his examinations on April 28, 2016 and May 4, 2016. Dr. O'Brien explained that an acute injury to the meniscus would produce immediate symptoms rather than a delayed onset until approximately four weeks later. Nevertheless, the record reflects that, although Claimant suffered from right knee osteoarthritis, he was functional, could perform his job duties and did not experience right knee pain prior to his altercation with the prisoner on April 28, 2016. However, Claimant required medical treatment after the incident and subsequent diagnostic testing revealed a right knee meniscal tear. As Drs. Doner and O'Brien recognized, the partial removal of the meniscus caused Claimant's symptoms to accelerate and progress to the extent that he now requires a total right knee replacement. Accordingly, Claimant's employment activities on April 28, 2016 aggravated, accelerated or combined with his preexisting condition to produce a need for medical treatment in the form of a right knee replacement.

ORDER

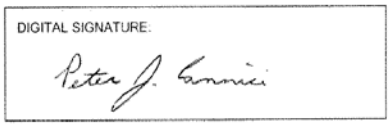
Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request for a total right knee arthroplasty is reasonable, necessary and causally related to his April 28, 2016 industrial right knee injury.

2. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: December 27, 2017.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that she sustained a compensable work related injury on October 23, 2016.

2. Whether Claimant has established by a preponderance of the evidence an entitlement to reasonable and necessary medical benefits to treat her October 23, 2016 injury.

3. Whether Claimant has established by a preponderance of the evidence an entitlement to temporary partial disability (TPD) benefits from October 23, 2016 through December 14, 2016.

STIPULATIONS

1. Claimant's average weekly wage is $944.32.

2. If the claim is found compensable, Claimant is entitled to temporary total disability (TTD) benefits from December 15, 2016 through February 19, 2017.

3. If the claim is found compensable, Banner Occupational Health and Sterling Medical Center are authorized providers.

FINDINGS OF FACT

1. Claimant is a 66 year old female employed as a Correction Officer 1 for Respondent. Claimant has been employed by Respondent for approximately 4 years.

2. As part of her duties, Claimant oversees inmates at the Sterling Correctional Facility. Claimant works full time and overtime as needed. Claimant is required as part of her duties to perform rounds every 30 minutes to check on the inmates. The rounds involve walking and going up and down stairs. Claimant estimated that during each shift she spends approximately 4 hours performing rounds, walking, and going up and down stairs.

3. In the fall of 2016 Claimant reported that she was working a lot of overtime. Claimant reported that before October 23, 2016 she had a catch in her right knee and thought it was due to all the overtime work and the amount she was going up and down stairs on her rounds. Claimant reported she didn't know what was wrong with her knee and that she had made an appointment with a doctor to get it evaluated. Claimant testified that she did not make it to the appointment because of an injury on October 23, 2016.

Claimant reported that she had taken one of her husband's prednisone steroid pills hoping it would help her inflammation before October 23 but that it did not help. Claimant reported telling Officer Magelssen that her knee felt weird and had a catch before October 23 and that she also told Officer Coonrod that she had taken one of her husband's steroid pills that did not help and told Officer Coonrod that she was going to make an appointment with the doctor to check out her right knee.

4. On October 23, 2016 Claimant alleges that she was performing her normal rounds to check on inmates. She alleges that she turned and felt a click in the right knee, that she walked over to the stairs, and that she couldn't put her foot down because it was so painful. Claimant alleges that it felt like she had stepped on a taser. Claimant reported that before October 23 she had no problems performing rounds.

5. Security video of the date and location of the alleged injury shows Claimant performing rounds. Claimant is seen on video walking on the floor while peering into various rooms. Claimant then walks to the stairs and ascends half way up the stairs before stopping to rub her right knee. Claimant does not appear to walk with a limp either before ascending the stairs or while on the stairs. In the video, Claimant stops approximately 1-2 steps from the top of the stairs, pauses, and appears to crouch/stretch before going up the last couple of steps. Claimant then walks the upstairs corridor, peers into three rooms, and again pauses. Claimant is seen on video bending over and rubbing her right knee for several seconds. Claimant then continues walking down the upstairs corridor peering into windows, walks back to the top of the stairs, and descends the stairs before walking out of camera view. *See* Exhibit 15.

6. Claimant alleges that before October 23, 2016 she could do her job and that she was good enough to work. She alleges, however, that after October 23, 2016 she couldn't even walk or put her foot down because it was so bad.

7. Claimant filled out a first report of injury on October 23, 2016. Claimant reported that while making rounds she was going from the 1st tier to the 2nd tier when her knee locked up and pain shot down her leg into her knees. Claimant reported sharp pain in her knee and that she was not able to put weight on her right foot. *See* Exhibits A, 7.

8. On October 23, 2016 Claimant was evaluated at the Sterling Regional MedCenter by Brook Wager, M.D. Claimant reported that she was at work doing her rounds and that her knee locked up while she was coming down the stairs. Claimant reported that she felt like she had hyperextended her knee. Claimant reported pain behind the knee and that she could not put weight on her leg. On examination, Claimant had tenderness and swelling in her right knee with minimal tenderness over the anterior aspect of the patella and minimal tenderness at the medial collateral ligament and lateral collateral ligament. X-rays of Claimant's right knee showed no acute fracture or dislocation and no definite knee joint effusion. Claimant was discharged as stable and was recommended to follow up with Craig Van Schooneveld. *See* Exhibits B, 1.

9. On October 23, 2016 Correctional Officer Launa Coonrod sent an email to Captain Carol Thomas indicating that Claimant was sent home at approximately 3:00 a.m. that day after becoming unable to put weight on her knee. Officer Coonrod reported that Claimant had called her to report that her knee locked up and that she was unable to put any weight on it. Claimant reported that she had taken some prednisone earlier in the day and that since it wore off Claimant believed it caused her the inability to continue. Claimant reported to Officer Coonrod that she had an appointment set for Thursday for her knees but didn't think she would be able to wait. Officer Coonrod reported that Claimant did not make a claim of work injury until she was wheeled to her vehicle and the person picking her up asked if had had made a first report of injury and that then Claimant asked if workers' compensation would cover her. Officer Coonrod also reported that Claimant did not attend roll call on October 20 because of her knee bothering her and that on October 21 Claimant told Officer Coonrod that she was given steroid shots for her knees and was doing better. *See* Exhibits A, 12.

10. On October 23, 2016 Correctional Officer Neal Magelssen sent an email to Captain Carol Thomas. Officer Magelssen noted that he had just filled out a report of injury for Claimant due to Claimant's claim that she injured her right knee after starting her 2:30 round. Officer Magelssen noted that Clamant claimed that her right knee locked up and pain started shooting through her right leg. Officer Magelssen noted that Claimant had worked Thursday, but missed roll call due to her knee hurting. Officer Magelssen noted his belief that Claimant injured herself prior to the Thursday incident and was now trying to get the state to pay for whatever may need corrected. *See* Exhibits A, 12.

11. On October 24, 2016 Claimant was approved for transitional duty assignment working her normal graveyard shift, full schedule, from 10 p.m. to 6:00 a.m. Monday through Friday. This approval was through October 31, 2016 and was noted that the assignment and work restrictions were related to a work related injury and were for main entry duties. It was noted that Claimant could not participate in any physical/dynamic training. Claimant's transitional duty assignment for full schedule graveyard shifts was extended on October 27, 2016 to go through November 15, 2016. *See* Exhibit 9.

12. Claimant testified that she was not allowed to work overtime at the transitional duty job assignment and that she sustained wage loss while in the transition job due to the lack of overtime.

13. On October 25, 2016 Claimant was evaluated by Bonnie Hablutzel, NP. Claimant reported shooting pains down the back of her legs. Claimant reported walking up steps at work when she felt pain in her knee that radiated down the back of the knee to her foot on the right. Claimant reported no specific injury, that she went to the emergency department that day, and that x-rays were negative. It was noted that Claimant was wearing a right knee brace and using crutches. On examination, Claimant had right knee pain on range of motion flexion. Claimant was found to have moderate pain around the front and medial knee. Claimant was found to have no edema and no bruising. Claimant was assessed with right knee pain. Work restrictions of no lifting

greater than 10 pounds, no kneeling, no crawling, no squatting, and no climbing ladders or stairs were provided. Physical therapy, muscle rub, neoprene sleeve, and crutches as needed were planned. *See* Exhibits B, 2.

14. On November 30, 2016 Claimant underwent physical therapy. Claimant reported that while at work at the prison her right knee collapsed and the back of her calf got real tight. Claimant reported the pain went into the buttocks and that she was unable to put her foot down. Claimant reported that she got a lot of swelling in the knee. Claimant continued to undergo physical therapy with sessions on December 5, 2016, December 7, 2016, December 12, 2016, December 14, 2016, and December 19, 2016. *See* Exhibits B, 13.

15. On December 14, 2016 Claimant's claim was denied. Claimant continued to seek care on her own for her right knee.

16. On January 5, 2017 Claimant was evaluated by Kirk Kindsfater, M.D. Claimant reported ongoing right knee pain for the last four months that began originally in October when she was walking up some stairs and felt something shift inside of her knee. Claimant reported that since then she has had pain over the anteromedial and posterior aspect of her knees. Claimant reported that prior to this injury, she was having no pain or discomfort in the knee. On examination, Claimant had moderate effusion and a positive McMurray's test. Dr. Kindsfater provided the impression of right knee likely medial meniscal tear. Dr. Kindsfater recommended a right knee MRI to dictate further treatment. *See* Exhibit 3.

17. On January 19, 2017 Dr. Kindsfater called Claimant regarding Claimant's right knee MRI. Dr. Kindsfater noted that Claimant had a posterior horn medial meniscal tear, a radial tear, and a horizontal cleavage tear. He also noted that Claimant had minimal chondrosis in the tibiofemoral joint and significant patellofemoral disease. He noted that Claimant's symptoms were mostly along the medial joint line and he opined they were due to the meniscal tear and that it was reasonable to consider arthroscopic debridement of the knee. He noted that Claimant's knee had been unresponsive to conservative measures and that Claimant's symptoms had continued to progress. *See* Exhibit 3.

18. On February 6, 2017 Claimant underwent right knee surgery performed by Dr. Kindsfater. The pre-operative diagnosis was right knee posterior horn medial meniscal tear. The post-operative diagnoses were: right knee posterior horn medial meniscal tear; right knee posterior horn root attachment lateral meniscus; right knee grade II/III chondrosis patella and trochlea; and right knee grade II and grade III chondrosis medial femoral condyle. Dr. Kindsfater noted significant degenerative tearing of the posterior horn medical meniscus that was resected back to stable tissue using a combination of biters and shavers. Dr. Kindsfater also found some grade II and early grade II chondrosis with some chondral flaps in the medial femoral condyle that were resected using a shaver. Dr. Kindsfater found tearing of the posterior horn of the lateral

meniscus root attachment and he debrided it back to stable tissue using a combination of biters and shavers. *See* Exhibit B.

19. On February 16, 2017 Claimant was evaluated by Dr. Kindsfater. Claimant reported overall that she was doing well. Claimant reported still having a hard time with stairs. Dr. Kindsfater noted that at the time of surgery it was revealed that Claimant had a large tear in the medial meniscus as well as a smaller tear in the lateral meniscus and tri-compartmental arthritis. It was noted that Claimant still had mild effusion but that the incisions were healing well. Claimant was released to return to work but limited restrictions to avoid stair climbing were given. *See* Exhibits B, 3.

20. On March 28, 2017 Claimant underwent an independent orthopedic evaluation performed by Stephen Davis, M.D. Claimant reported that she sustained an injury to her right knee at work on October 23, 2016 and that she sprained/twisted her right knee on the stairs at the prison. Claimant reported concern with the frequency of stairs during the course of her daily duties and that the constant up and down contributed to her problem. Claimant reported persistent right knee pain and swelling. Dr. Davis reviewed medical records and performed a physical examination. Dr. Davis opined that Claimant sustained a work related injury to the right knee and opined that Claimant's description was a cumulative problem with an acute aggravation on October 23. Dr. Davis noted that examination findings included an acute medial meniscal tear as well as degenerative joint disease. *See* Exhibits C, 4.

21. Officer Magelssen testified at hearing. He reported that Claimant missed roll call on October 20, 2016 and that he called to ask her why she missed. He testified that Claimant said she had hurt her knee at home and did not want to walk all the way to roll call. Officer Magelssen testified that this stuck out in his mind because he was new to the position and was worried about staffing and workers' compensation issues.

22. Officer Coonrod testified at hearing. She reported that on October 20, 2016 Claimant missed roll call and that she went to the unit and called Claimant. She testified that Claimant reported that her knees were bothering her and she didn't want to walk to roll call. The next day, on October 21, 2016, Officer Coonrod testified that she talked to Claimant as they were walking into roll call. Officer Coonrod testified that she asked Claimant how her knee was doing and that Claimant indicated she had gotten a steroid shot and that she was feeling better. Officer Coonrod testified that she recalled responding as to how she heard those shots hurt. On October 23, 2016 Officer Coonrod testified that Claimant called her on the phone at the facility to report that she had hurt her knee and could no longer do rounds. Claimant reported that her knee locked up and that she had pushed through and finished but couldn't do it anymore. Officer Coonrod testified that she got Claimant a desk office chair and wheeled Claimant out to the parking lot. Officer Coonrod testified that Claimant did not report a work related injury, but just said her knee had locked up during rounds until they got to Claimant's car.

23. Claimant testified at hearing. She reported that prior to October 23, 2016 she had a catch in her right knee and some pain and had scheduled a doctor's

appointment to see what was wrong with it. Claimant testified that she continued to work her regular schedule and overtime which involved a lot of stairs. Claimant testified that on October 21, 2016 she took one of her husband's prednisone pills, but that it didn't help and that she told others about the catching in her knee. Claimant testified that on October 23, 2016 when the alleged injury happened she turned, felt something like a click and something strange in her knee, and then walked over to the stairs. Claimant testified that she started going up the stairs but couldn't put her foot down. Claimant reported that after the incident she couldn't even step down on her foot and couldn't even walk. Claimant testified that she called Officer Coonrod and reported that something had happened to her knee and that she started up the stairs and could no longer hardly walk up the stairs. Claimant indicated she told Officer Coonrod that she was having to pull herself up the stairs and was rubbing her knee. Claimant testified that she reported to Officer Magelssen that she was going up the stairs when she suddenly couldn't walk on her right knee anymore or put pressure on that leg and that she couldn't get up the stairs.

24. Claimant's testimony at hearing is inconsistent with the security video. The Although the video shows her stopping while ascending the stairs and while walking the upstairs corridor to rub her knee and/or stretch, it does not show her suddenly being unable to walk or bear weight. Rather, it shows her rubbing/stretching and continuing her duties. Claimant walks the upstairs corridor, descend the stairs, and walks out of view of the camera. The video does not show an acute incident or an immediate inability to bear weight. It does not show her pulling herself up the stairs or failing to be able to get up the stairs.

25. Although Dr. Scott opined that the right knee was work related, he did not address the surgical findings of degenerative tearing. His report and opinion are not found persuasive as they fail to explain the pre-existing symptoms and the degenerative surgical findings and instead note that examination findings included an acute medial meniscus tear and degenerative joint disease.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. (2014), is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. (2014). The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. (2014). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even

if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

Claimant is required to prove by a preponderance of the evidence that the conditions for which she seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. *See* § 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant has failed to establish by a preponderance of the evidence that she sustained a compensable work related injury. As found above, the surgical findings included significant degeneration. Claimant’s symptoms were opined by Dr. Kindsfater

to be related to a medial meniscal tear and in surgery Dr. Kindsfater found significant degenerative tearing of the posterior horn medial meniscus. Claimant had catching and trouble with her right knee prior to the alleged injury and the surgical report showed degenerative tearing as opposed to an acute tear. Due to the pain and catching that she had in her right knee prior to October 23, Claimant had already scheduled a doctor's appointment to evaluate her right knee and had taken one of her husband's prednisone pills to try to alleviate her symptoms. Claimant had symptoms of pain and catching prior to October 23 and on October 23. Claimant has failed to establish she sustained an acute work related injury or that her employment aggravated, accelerated, or combined with her pre-existing right knee problems to produce a disability or the need for medical treatment. Rather, Claimant had right knee disability and had the need for medical treatment prior to October 23. It is just as likely that Claimant merely had symptoms at work on October 23 as a result of the progression of her pre-existing condition that is unrelated to her employment. Further, Claimant's testimony about the acute incident is not consistent with the security video. Claimant also reported inconsistently to medical providers and on October 23, 2016 reported her knee locked up when she was walking down the stairs and on October 25, 2016 reported no specific injury. Overall, Claimant is not found credible or persuasive.

ORDER

It is therefore ordered that:

1. Claimant has failed to meet her burden to show she sustained a compensable injury on October 23, 2016. Her claim is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 27, 2017

/s/ Michelle E. Jones

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUES

1. Did Claimant prove entitlement to a general award of medical benefits after MMI by a preponderance of the evidence?

2. The parties stipulated to an average weekly wage of $591.20.

3. At the commencement of the hearing, Claimant argued he suffered a whole person impairment, and Respondents were bound by the DIME rating because they filed a Final Admission of Liability rather than requesting a hearing after receiving the completed DIME report. The ALJ concluded Claimant properly preserved that issue by endorsing "PPD" on his Application for Hearing, but did not give Respondents sufficient notice of his intent to try that issue through discovery. Respondents elected to reserve that issue for future determination.

FINDINGS OF FACT

1. Claimant suffered admitted injuries to his left leg on April 8, 2015 while working for Employer as a plumber. He was stepping up onto a scaffold and his left foot slipped into a gap between the ground and the front step of the scaffold, causing him to fall backward onto the ground. In the process of falling, he twisted his left leg and ankle.

2. Claimant's boss took him to Concentra, where he saw Dr. Walter Larimore. Claimant reported pain in the left ankle and left calf, and had difficulty bearing weight on the left leg. His left ankle was swollen and tender with limited range of motion. Dr. Larimore diagnosed a moderate left ankle sprain, splinted the ankle and gave Claimant crutches. He advised Claimant to remain nonweightbearing and released him to sedentary duties only.

3. Claimant returned to Concentra on April 13, 2015 and reported minimal improvement. He was not using crutches but was limping due to lateral ankle and calf pain. His left ankle remained swollen and painful. Examination of the left calf showed tenderness at the gastrocnemius and Achilles junction. Dr. Larimore added the diagnosis of gastrocnemius tendon strain. Ibuprofen was not helping, so Dr. Larimore prescribed naproxen instead. He also referred Claimant for physical therapy.

4. Claimant's ankle steadily improved over the next several weeks, but his calf remained painful with minimal relief from medication and therapy. Dr. Larimore referred Claimant for a lower leg MRI and an orthopedic consultation with Dr. Michael Simpson.

5. Claimant saw Dr. Simpson on May 18, 2015. Dr. Simpson reviewed the MRI and described it as "completely normal" with no evidence of a muscle tear. He saw no surgical pathology and expected Claimant's pain to resolve with time. He also stated, "if

he continues to have pain, it may be prudent to have him evaluated by a pain management specialist to determine whether or not he has any neuropathic pain."

6. Claimant did not improve, and on June 8 he told Dr. Peterson at Concentra he was "becoming worse." Dr. Peterson ordered a "STAT" ultrasound which ruled out DVT and referred Claimant to Dr. Jeffrey Jenks for electrodiagnostic testing.

7. Claimant had a repeat MRI on June 30 due to imaging artifact in the first MRI. The second MRI showed "minimal Achilles tendinosis."

8. Dr. Jenks performed a left leg EMG on July 8, 2015, which showed peroneal neuropathy at the left fibular head. Testing of the lumbar paraspinals was normal with no evidence of denervation or motor changes. Dr. Jenks started Claimant on Neurontin and prescribed a topical compound analgesic cream.

9. Claimant began treating with Dr. Shimon Blau, a physiatrist, on July 20, 2015. He described ongoing left leg pain and weakness, aggravated by walking. The Neurontin was not helping, so Dr. Blau switched him to Lyrica.

10. In late October 2015, Claimant reported the pain had "started working its way up into his posterior thigh and buttocks."

11. Dr. Blau administered an ultrasound-guided injection of steroid and lidocaine on November 3, 2015. On follow up in December, Claimant told Dr. Blau the injection "did not help at all."

12. Claimant started experiencing low back pain in approximately November 2015. Claimant never noted low back pain on the pain diagrams he completed at Concentra. Claimant has admitted he first developed back pain "eight or nine months" after the injury.

13. In January 2016, Dr. Blau discontinued Lyrica and started Claimant on Cymbalta. He also refilled trazodone and referred Claimant back to Dr. Jenks for a repeat lower extremity EMG.

14. Dr. Albert Hattem took over as Claimant's primary ATP on January 14, 2016 due to "delayed recovery." Claimant told Dr. Hattem "overall since his injuries . . . he is unchanged despite considerable time and treatment." The physical examination was largely normal, except slight tenderness on the lateral aspect of the ankle and lower leg. Dr. Hattem advised Claimant if the repeat EMG was unchanged or improved, he would be at MMI.

15. Claimant saw Dr. Jenks for the repeat EMG on February 16, 2016. Although Dr. Jenks' report is not in evidence, Dr. Blau described it in his March 7, 2016 report. According to Dr. Blau, the EMG showed "findings and symptoms potentially consistent with a left L5 radiculopathy. This was based on _____ peroneus longus muscle."

16. Dr. Blau's March 7, 2016 report also contains what appears to be the first mention of low back pain in the Concentra records. He described the back pain as "constant, aching and throbbing." Claimant also described ongoing leg pain which was "more sharp in nature." He rated his pain at 7.5-9/10, but it is unclear whether he was referring to his back pain, leg pain, or both. Dr. Blau noted "he has tried Lyrica, Cymbalta, and trazodone in the past . . . and states these were not helping very much." Dr. Blau ordered a lumbar MRI.

17. Claimant followed up with Dr. Hattem on March 24. Dr. Hattem noted the repeat EMG "demonstrated no evidence of left peroneal neuropathy. This condition is now resolved and is at maximum medical improvement." He also opined the potential L5 radiculopathy was a "new finding" not causally related to the industrial accident. Dr. Hattem placed Claimant at MMI with no impairment, no restrictions, and no maintenance care. He advised Claimant to "consult with his personal physician outside of workers' compensation for non-claim-related lumbosacral radiculopathy."

18. Claimant has been treating with his primary care providers for leg pain since March 2016. The working diagnosis throughout the PCP records is "left L5 radiculopathy."

19. Claimant saw Dr. Stephen Gray for a Division Independent Medical Examination ("DIME") on April 11, 2017. Claimant complained of intermittent "severe" sharp, shooting, and stabbing pain across his entire lumbosacral region. Dr. Gray noted none of the Concentra pain diagrams identified low back pain. Claimant stated the back pain did not develop until "8 or 9 months after the original injury." He described stabbing pains and tingling in the posterior aspect of the left leg from the buttock into the heel. He complained of numbness laterally over the left thigh and calf area, and weakness "in the entire left leg." On exam, he was tender over the left iliac crest and iliolumbar ligament, and the left SI joint. Straight leg raise and tension signs were "equivocally positive" on the left. He had decreased sensation over the left L5 dermatome "consistent with L5 radiculopathy." Strength testing was "difficult to evaluate as there was a rather extreme breakaway weakness in testing dorsiflexion and left knee extension. Left leg range of motion testing showed difficulty with eversion "consistent with his previous peroneal nerve palsy." He had significant difficulty with dorsiflexion, and his EHL was weak.

20. Dr. Gray agreed Claimant was at MMI on March 24, 2016. Dr. Gray's diagnoses included "left peroneal neuropathy, probably secondary to 4/8/15 work-related incident," and "lumbosacral radiculopathy, unclear relationship to [the industrial accident]." Dr. Gray struggled to sort out which symptoms were injury-related:

> This case proved to be quite difficult in regards to causation of the late complaint of low back pain and the late findings of the L5 radiculopathy. It seems reasonably clear that the left lower extremity peroneal neuropathy is related to the strain/sprain injury of the left lower extremity that occurred on 4/8/15. The late finding of an L5 radiculopathy throws a wrench or red herring into the thought process. To this examiner's knowledge an MRI scan was not obtained. Even if an MRI scan of the lumbar spine showed a corresponding disc lesion at the left L5 area, it would not answer whether

> there was ever a low back injury. [Claimant] was quite frank about the fact that his complaints of low back pain did not manifest until long after the initial injury. The first mention of back injury in the medical records occurred almost ½ a year after the injury . . . . Nevertheless, we have the electrodiagnostic studies that show a left leg peroneal neuropathy and then a later electrodiagnostic study that shows an L5 radiculopathy. This examiner did not have the benefit of reviewing a complete set of notes on the electrodiagnostic studies that were performed. . . . Even if this examiner did have complete raw data on the electrodiagnostic studies, it would require the input of Dr. Jenks to help answer the following question. Is it possible that the early study showing a peroneal neuropathy was limited by how far of the exam was done? Is it possible that what we are seeing is the result of a "double crush" phenomena? Is it possible that, if the earlier study had been performed all the way up into the proximal right lower extremity and pelvis, would this have shown an L5 radiculopathy?

21. Dr. Gray opined "there ***may*** have been a relationship between the peroneal nerve injury and electrodiagnostic changes proximal to that, in the L5 spinal nerve root, which is partially where the peroneal nerve comes from." (Emphasis added). Ultimately, Dr. Gray assigned a 14% lower extremity impairment rating based on range of motion deficits and impairment of the common peroneal nerve. He indicated the neurological rating addressed "***both*** the L5 radiculopathy and peroneal nerve changes." (Emphasis added). He did not assign a lumbar spine rating.

22. Dr. Gray recommended maintenance care in the form of quarterly visits with Dr. Hattem for pain management and medication refills. He also opined Dr. Hattem should have the option to refer Claimant for brief courses of physical therapy for flare-ups, and ESIs "if Dr. Hattem thinks that injections might help him control his pain." Dr. Gray did not specify what "pain" the recommended treatment was intended to address; i.e., the peroneal nerve pain or the unrelated back pain and L5 radiculopathy? He recommended a follow-up visit with Dr. Jenks for "an opinion on the relationship of the L5 and peroneal nerve changes." Finally, he recommended a follow-up visit with Dr. Simpson, despite opining Claimant "does not appear to be a surgical candidate for his current work-related condition."

23. Claimant underwent a lumbar MRI on April 21, 2017, which was essentially normal.

24. Claimant's PCP referred him to Dr. Christopher Malinky, an interventional pain management specialist, in May 2017. Claimant's primary complaint was left-sided low back pain radiating down his left leg. Dr. Malinky administered an L4-5 transforaminal ESI, which gave Claimant "0 relief." Dr. Malinky recommended a spinal cord stimulator trial since no previous treatment had helped Claimant's leg pain.

25. Claimant saw Dr. Mark Paz for an IME at Respondents' request in October 2017. Dr. Paz opined the left peroneal neuropathy had resolved per the EMG, and the L5 radiculopathy was not injury-related. Dr. Paz pointed out that Claimant did not complain

of low back pain until several months after the original injury, and opined the mechanism of injury does not correlate to an L5 radiculopathy. Dr. Paz agreed Claimant was at MMI as of March 24, 2016, and requires no additional treatment for any injury-related condition. He disagreed with Dr. Gray's rating because it was based on conditions that are not related to the April 2015 accident.

26. Dr. Hattem testified in a deposition for Respondents on September 15, 2017. He does not believe Claimant's low back pain is work-related, as it did not manifest until well after the original injury. He also noted Claimant's pain from the work injury originated in the lower leg and radiated at times *upward*, which is not consistent with the later onset of L5 radiculopathy radiating from the back *downward*.

27. Dr. Paz testified at hearing on behalf of Respondents. He reiterated and expanded on the opinions expressed in his IME report. He explained that symptoms of peroneal neuropathy are similar to those of L5 radiculopathy, but they are distinct entities and peroneal neuropathy would not evolve into an L5 radiculopathy. He maintained the peroneal neuropathy has resolved and the L5 radiculopathy is not related to Claimant's industrial injury. Dr. Paz agreed with Dr. Hattem that Claimant requires no additional treatment for any injury-related condition.

28. The opinions of Dr. Hattem and Dr. Paz are more persuasive than opinions in the record to the contrary.

29. Claimant failed to prove by a preponderance of the evidence that his low back pain and L5 radiculopathy is causally related to the April 8, 2015 industrial accident.

30. Claimant failed to prove by a preponderance of the evidence that the industrial accident proximately caused the need for ongoing medical treatment.

CONCLUSIONS OF LAW

Respondents are liable for medical treatment from authorized providers that is reasonably necessary to cure or relieve the employee from the effects of the injury. Section 8-42-101(1)(a); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Medical benefits may extend beyond MMI if the claimant requires maintenance care to relieve symptoms or prevent deterioration of their condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). If the claimant establishes the probability of a need for future treatment, he is entitled to a general award of medical benefits after MMI, subject to the employer's right to dispute compensability, reasonableness, or necessity of any particular treatment. *Hanna v. Print Expediters, Inc.*, 77 P.3d 863 (Colo. App. 2003).

A claimant must prove entitlement to medical benefits after MMI by a preponderance of the evidence, and the mere occurrence of a compensable injury does not compel the ALJ to find that all subsequent medical treatment was caused by the industrial injury. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997); *McIntyre v. KI, LLC*, W.C. No. 4-805-040 (ICAO, Jul. 2, 2010). The DIME's opinion regarding medical treatment after MMI is not entitled to any special weight but is simply another medical

opinion for the ALJ to consider when evaluating the preponderance of the evidence. *See Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Story v. Industrial Claim Appeals Office*, 910 P.2d 80 (Colo. App. 1995).

As found, Claimant failed to prove by a preponderance of the evidence that the industrial accident proximately caused the need for ongoing medical treatment. Claimant simply did not present sufficient evidence for the ALJ to tease out the degree to which the industrial accident "more likely that not" caused a need for treatment. Dr. Hattem and Dr. Paz provided well-reasoned arguments and Claimant has no persuasive countervailing opinion evidence. No treating providers have recommended further treatment on a work-related basis, and Claimant is primarily relying on Dr. Gray's opinions. But Dr. Gray did not differentiate treatment intended to address injury-related peroneal nerve pain versus nonindustrial back pain and L5 radiculopathy. As Dr. Gray pointed out, the assessment of causation is "difficult" due to the conflicting EMG findings and evolving symptomatology. Claimant has some symptoms consistent with peroneal neuropathy, but no corresponding current EMG findings. He also has symptoms consistent with L5 radiculopathy and positive EMG findings, but no apparent spinal pathology per the lumbar MRI. Dr. Gray raised several valid questions in his report but failed to answer them. Ultimately, Dr. Gray "punted" on the causation question, conflated the conditions and calculated a rating which covers both the peroneal neuropathy and the nonindustrial L5 radiculopathy. It is reasonable to assume he applied similar reasoning to his recommendations for maintenance care. Therefore, the ALJ concludes there is insufficient persuasive evidence for Claimant to carry his burden.

ORDER

It is therefore ordered that:

1. Claimant's request for medical benefits after MMI is denied and dismissed.

2. Any issues not decided herein, or otherwise closed by operation of law, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 27, 2017

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-004-801-02

CORRECTED FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

SELF-INSURED,

Self-Insured Respondent.

No further hearings have been held in the above-captioned matter. On December 27, 2017, counsel for the Respondent filed a Motion for a Corrected Order, based on an error in the ALJ's calculation of the aggregate benefits due for 11% permanent scheduled disability of the left lower extremity (LLE). The Motion is well taken and the decision is hereby corrected accordingly.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on October 26, 2017 and December 15, 2017, in Denver, Colorado. The hearing was digitally recorded (reference: 10/26/17, Courtroom 1, beginning at 8:30 AM, and ending at 11:30 AM; 12/15/17, Courtroom 1, beginning at 8:30 AM, and ending at 11:00 AM).

Claimant's Exhibits 1 through 25 were admitted into evidence, without objection, with the exception of Exhibits 23 and 24, to which Respondent objected and the objection was sustained. Respondent's objections to Claimant's Exhibits 18 and 19 were overruled and the documents were admitted into evidence. Claimant's Exhibit 25 was a surreptitious audio recording of the Division Independent Medical Examination (DIME) by Jade E. Dillon, M.D., to which Respondent and Dr. Dillon, who was present at the hearing, objected. The Claimant, who is not an attorney, surreptitiously recorded

the DIME. If the Claimant were an attorney, the surreptitious recording would violate Colorado Bar Association Formal Ethics opinion 112 (July 19, 2003), however there is no legal prohibition against a non-lawyer party surreptitiously recording a transaction that affects that party. Indeed, the Claimant alleged that recording was a necessary part of her evidence to help prove that the ultimate DIME determination of Dr. Dillon was clearly in error and the ALJ should listen to it. The ALJ, in fact listened to the audio recording, overruled the objections thereto and admitted Claimant's Exhibit 25 into evidence. Respondent's Exhibits A through I were admitted into evidence, with the exception of Exhibit A (a video surveillance film which was not shown with a fair opportunity for confrontation). Respondent's Exhibit A was rejected. Moreover, Respondent relied of physician's narratives after viewing the surveillance video. The ALJ overruled Claimant's objections to Respondent's Exhibits F and G, and admitted these documents into evidence. At the hearing, the ALJ requested a copy of the follow up report of John Aschberger, M.D., the authorized physician who rated the Claimant upon referral from Lloyd J. Thurston, D.O., Claimant's authorized treating physician (ATP). It was a letter addressed to Respondent's counsel and it was admitted, without objection as Respondent's Exhibit J.

At the conclusion of the hearing, the ALJ took the matter under advisement and hereby issues the following decision.

ISSUES

The issues to be determined by this decision concern the Claimant's request to overcome the DIME of Dr. Dillon on maximum medical improvement (MMI) and degree of permanent medical impairment; and, the Claimant's entitlement to medical benefits, either pre-MMI benefits or post-MMI benefits, depending of the determination of MMI.

The Claimant's burden of proof to overcome the DIME is by clear and convincing evidence. Her burden of proof on either pre or post-MMI medical benefits is by a preponderance of the evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant (d.o.b. December 31, 1962) worked as a Certified Spanish Health Interpreter in June 2015. Her job entailed walking around hospitals, including the Respondent hospital herein, interpreting for those in need of interpretation.

2. Based on the DIME of Dr. Dillon, Respondent filed a Final Admission of Liability (FAL), dated June 29, 2017, admitting for pre-maximum medical improvement (MMI) medical benefits only; for an MMI date of May 3, 2016; for zero permanent partial disability (PPD); an average weekly wage of $909.87 (which would yield a temporary total disability benefit rate of $606.57 per week); and, denying liability for post-MMI medical maintenance benefits (*Grover* medicals).

3. It is undisputed by medical providers that the Claimant reached MMI on May 3, 2016. The Claimant disputes that she reached MMI. The ALJ finds that she reached MMI on May 3, 2016.

4. On June 10, 2015, during the course and scope of her employment, the Claimant tripped on some cable, and sustained injuries to her left knee and ankle. She promptly reported the work-related nature of her injury and was referred to Concentra, where she presented on June 12, 2015. She suffered an abrasion on the anterior aspect of the distal anterior foreleg, with an initial assessment of knee injury and sprain as well as left ankle sprain. Subsequently, she came under the care and treatment of Dr. Thurston at Concentra. Dr. Thurston diagnosed a "tear of tendon of left ankle; left knee injury; and sprain of left knee (Claimant's Exhibit 13). On November 17, 2015, Dr. Thurston released the Claimant to return to work/modified duty. He also referred the Claimant to Daniel Ocel, M.D., at Cornerstone Orthopedics and Sports Medicine. Dr. Ocel assessed an injury of the peroneal tendon of the left foot (Claimant's Exhibit 15).

5. On May 23, 2017, Rebecca Bub, D.O., who had been the Claimant's primary health care provider at Centura Health indicated she had not treated the Claimant for left knee or ankle pain for any pre-existing conditions ()Claimant's exhibit 1).

ATP Dr. Thurston

6. As of March 31, 2016, ATP Dr. Thurston diagnosed a tear of tendon of left ankle; left knee injury; and, sprain of left knee. At this time, the Claimant was given work restrictions of sitting 30 minutes for every two hours.

Independent Medical Examination (IME) by Douglas C. Scott, M.D.

7. Respondent engaged Dr. Scott to perform an IME of the Claimant, which occurred on March 16, 2016 (Claimant's Exhibit 16). Dr. Scott assessed the Claimant with: (1) left knee pain probably due to left knee sprain or **aggravation of underlying and pre-existing chondromalacia patella** [Dorland's Medical Dictionary defines "chondromalacia patella" as a "premature degeneration of the patellar (knee cap) cartilage, the patellar margins being tender so that pain is produced when the patella is pressed against the femur" **;** (2) left ankle abrasion/laceration, now healed; and, (3)

reported evidence of a peroneus brevis muscle tendon tear distal to the lateral malleolus and between its insertion over the left fifth metatarsal, symptomatic (Dr. Scott reported that this was the Claimant's primary diagnosis at the time). Dr. Ocel had recommended prolotherapy as had the Claimant's health care provider. Dr. Scott's alternative diagnosis of "**aggravation of underlying and pre-existing chondromalacia** ties into the diagnosis of John J. Aschberger, M.D., who rated the Claimant's permanent disability at the request of her ATP, Dr. Thurston. DIME Dr. Dillon assumed that the Claimant had the degenerative condition of chondromalacia. She did **not** address whether there was an aggravation and acceleration thereof.

Maria Hopp, M.D., Littleton TLC Clinic.

8 Dr. Hopp, M.D., the Claimant's private health care provider, saw the Claimant on March 30, 2016, and diagnosed: (1) left ankle paid; and, (2) chondromalacia of the left knee. She recommended physical therapy (PT) and prolotherapy.

9. On March 31, 2017, Dr. Hopp saw the Claimant again for her left knee and assessed: (1) other tear of medial meniscus of left knee, unspecified whether old or current tear…; and, (2) chondromalacia. Dr. Hopp's latest evaluation of the Claimant corroborates ongoing pain and symptoms in the LLE as the Claimant testified.

Roger E. Murken, M.D., Panorama Orthopedics and Sports Medicine

10. The Claimant was evaluated by Dr. Murken on August 31, 2016, for a second opinion. Dr. Murken noted that the Claimant's MRI (magnetic resonance imaging) showed a left brevis tear and the Claimant had chronic left knee pain and some mild chondromalacia. He recommended physical therapy (PT) for both sides and "I think if she does not get significantly better, an exploratory arthroscopy and evaluation of the brevis tendon **surgically** (emphasis supplied) would be indicated…. (Claimant's Exhibit 6). It was the Claimant's undisputed testimony that her left lower extremity (LLE) has not only not gotten better, it has worsened.

John J. Aschberger, M.D.

11. ATP Dr. Thurston referred the Claimant to Dr. Aschberger for an impairment assessment. Dr. Aschberger performed a thorough physical examination, review of medical records, and assessment of the Claimant on August 19, 2016 (Claimant's Exhibit 17). He also reviewed the IMEs performed by Dr. Scott, to whom Respondent referred the Claimant. Dr. Aschberger also reviewed an MRI (magnetic resonance imaging) scan of the left knee.

12. Dr. Aschberger assessed a left knee strain with findings of chondromalacia patella on the MRI scan; and, a longitudinal tear of the peroneal

tendon. Without the benefit of having watched the video (Claimant's Exhibit 25), Dr. Aschberger rated the Claimant at 22% LLE, with no indication that a whole person rating was appropriate. The ALJ takes administrative notice of the fact that Dr. Aschberger is a fully Level 2 Accredited Physician with the Division of Workers' Compensation, authorized to perform permanent medical impairment (PPD) ratings and, in doing so, uses the American Medical Association *Guides to the Evaluation of Permanent Impairment,* 3rd Ed. Rev. (hereinafter the "Guides").

13. During the hearing, a reference was made to a follow up evaluation by Dr. Aschberger, after he watched the video. It was a letter, dated September 2, 2016, addressed to J.P. Moon, Esq. of Ritsema & Lyon, P.C. Respondent produced the letter and it was admitted into evidence as Respondent's Exhibit J, without objection. After having watched the video (DIME Dr. Dillon has never watched the video), Dr. Aschberger reduced his rating to 11% LLE. The video depicts Claimant doing Zumba steps for a short while; standing on her right leg;, and subsequently climbing the steps to the Mother Cabrini Shrine, near lookout Mountain in Golden, Colorado (Respondent's Exhibit J). Indeed, Dr. Aschberger's findings, as detailed, illustrate a recognition of Dr. Aschberger's use of the "Guides." The ALJ finds that Dr. Aschberger's opinions, plus the aggregate medical evidence spanning two years, make it highly probable, unmistakable and free from serious and substantial doubt that DIME Dr. Jade's zero PPD rating is clearly erroneous as more fully found herein below.

14. For an 11% LLE rating, according to § 8-42-107 **(6) (b),** C.R.S**., for fiscal year 2014/2015,** the formula for an 11% scheduled impairment of a leg above the foot is 208 weeks **X $277.03** X 11**%=$6,338.45 .**

15. According to the Claimant, she was following ATP Dr. Thurston's advice to "resume her outside activities as much as possible…" at the times she was videotaped doing some Zumba steps and climbing the steps at the Mother Cabrini Shrine. Claimant testified that she took breaks.

Division Independent Medical Examination by Jade E. Dillon, M.D.

16. Dr. Dillon did **not** testify at the hearing. The Respondent rested on her report (Respondent's Exhibit D).

17. Dr. Dillon performed the DIME on June 6, 2017. She concluded that the Claimant had reached MMI on May 3, 2016, which is not disputed by any other medical evidence. The Claimant disputes this MMI date but has failed to show that it is highly probable, unmistakable and free from serious and substantial error that the DIME MMI date is in error. Dr. Dillon went on to State that there was no **ratable** condition with respect to chondromalacia or left knee or ankle strain Without having seen the video, Dr. Dillon went on to render an opinion that "given the level of activity, she has **obviously** (emphasis supplied) regained functionality…." The ALJ finds that this

opinion is unsupported by the aggregate medical evidence, the Claimant's testimony. She goes on to render an opinion that the Claimant's symptoms are "well out of proportion to the underlying pathology. Indeed, Dr. Dillon states the categorical opinions that there are no ratable impairments for any of the Claimant's conditions. Dr. Dillon ultimately makes the bald statement that the impairment rating was made in accordance with the Guides and the impairment was zero. She gives no explanation, other than categorically and consistently stating that there were no "ratable" conditions; or, how her zero PPD rating was made in accordance with the Guides.

18. Dr. Dillon states the opinion that "there is no chronic presentation of strain itself." The ALJ finds that this opinion is contrary to the significant weight of the evidence. The ALJ infers and finds that the four corners of Dr. Dillon's DIME letter reflects a bias that the Claimant is either magnifying her symptoms or has functional overlay. This is inconsistent with the weight of medical evidence in the file and the Claimant's presentation at hearing. Indeed, the ALJ infers and finds that this bias taints and overshadows Dr. Dillon's ultimate opinions leading to her unexplained rating of zero PPD. Coupled with the weight of other medical evidence as herein above found, especially Dr. Aschberger's ultimate rating of 11% LLE, after viewing the video of the Claimant doing Zumba steps and climbing the stairs of the Mother Cabrini Shrine the ALJ finds that it is highly probable, unmistakable and free from serious and substantial doubt that DIME Dr. Dillon's PPD rating is erroneous. This is significantly more than a difference of opinion between Dr. Dillon and Dr. Aschberberger. Dr. Aschberger's ultimate rating contributes significantly to the fact that DIME Dr. Dillon's zero impairment rating is clearly wrong.

19. A review of the audiotape of the DIME examination reveals from the beginning that Dr. Dillon was gravitating to an opinion of zero PPD. As more fully found herein above, Dr. Dillon's rating of zero is not adequately explained or supported, it is contradicted by the weight of the evidence, lay and medical; and, it is clearly erroneous.

20. DIME Dr.Dillon thereupon stated: "Given her level of function, the only ongoing future treatment I recommend is a self-directed exercise and stretching program (Dr. Dillon makes no indication of how these programs would be implemented) and NSAID medication for symptomatic control. The ALJ infers and finds that it is more likely than not that the Claimant requires post-MMI medical maintenance care, based on Dr. Dillon's statement and the aggregate, credible medical evidence.

Ultimate Findings

21. Based on the aggregate medical evidence, including Dr. Aschberger's ultimate rating of 11% LLE, the ALJ finds that DIME Dr. Dillon's ultimate zero PPD rating lacks credibility and Dr. Aschberger's 11% LLE rating is significantly more credible than DIME Dr. Dillon's zero rating. Indeed, Dr. Aschberger's 11% LLE rating significantly contributes to making it highly probable, unmistakable, and free from

serious and substantial doubt that DIME Dr. Dillon's zero rating is clearly erroneous. There is significantly more than a difference of opinion between DIME Dr. Dillon and Dr. Aschberger as herein above found.

22. The Claimant has established that it is highly probable, unmistakable and free from serious and substantial doubt that DIME Dr. Dillon's zero impairment rating is wrong. Therefore, the Claimant has overcome DIME Dr. Dillon's zero impairment rating by clear and convincing evidence. Therefore, the ALJ ultimately finds and concludes that the degree of the Claimant's permanent impairment is 11% of the LLE, which equates to 208 weeks **X $277.03 X 11%=$6,338.45.**

23. Based on the totality of the medical evidence, the Claimant has established that it is more likely than not that she requires post-MMI maintenance medical care. Therefore, the Claimant has proven by preponderant evidence that she is entitled to post-MMI maintenance medical care at the hands of an ATP.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo.

275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the MMI date of May 3, 2016 is undisputed by the medical evidence. Only the Claimant disputes it. *See, Annotation, Comment: Credibility of Witness Giving Un-contradicted Testimony as Matter for Court or Jury,* 62 ALR 2d 1179, maintaining that the fact finder is not free to disregard un-contradicted testimony. As further found, based on the aggregate medical evidence, including Dr. Aschberger's ultimate rating of 11% LLE, DIME Dr. Dillon's ultimate zero PPD rating lacks credibility and Dr. Aschberger's 11% LLE rating is significantly more credible than DIME Dr. Dillon's zero rating. Indeed, Dr. Aschberger's 11% LLE rating significantly contributes to making it highly probable, unmistakable, and free from serious and substantial doubt that DIME Dr. Dillon's rating is clearly erroneous. There is significantly more than a difference of opinion between DIME Dr. Dillon and Dr. Aschberger as herein above found.

Overcoming Dr. Dillon's DIME

b. The party seeking to overcome a DIME physician's opinions bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000). *Also see Leprino Foods Co. v. Indus. Claim Appeals Office,* 134 P.3d 475 (Colo. App. 2005). The DIME physician's determination of MMI is binding unless overcome by "clear and convincing evidence." *Metro Moving & Storage Co. v. Gussert,* 914 P.2d 411 (Colo. App. 1995); *See also Peregoy v. Indus. Claim Appeals Office,* 87 P.3d 261 (2004); and § 8-42-107(b)-(c), C.R.S. *Also see Whiteside v. Smith,* 67 P.3d 1240 (Colo. 2003). Where the threshold determination of compensability is not an issue, a DIME physician's conclusion that an injured worker's medical problems were components of the injured worker's overall impairment constitutes a part of the diagnostic assessment that comprises the DIME process and, as such the conclusion must be given presumptive effect and can only be overcome by clear and convincing evidence. *Qual-Med, Inc. v. Indus. Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998); *Leprino Foods Co. v. Indus. Claim Appeals Office,* 134 P.3d 475, 482 (Colo. App. 2005); *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 400 (Colo. App. 2009). "Clear and convincing evidence" is evidence, which is stronger than preponderance, is unmistakable, makes a fact or facts highly probable or the converse, and is free from serious or substantial doubt. *Metro Moving & Storage Co. v. Gussert, supra; Leming v. Indus. Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo. App. 2002). In other words, a DIME physician's finding may not be overcome unless the evidence establishes that it is "highly probable" that the DIME physician's opinion is incorrect. *Postelwait v. Midwest Barricade,* 905 P. 2d 21 (Colo. App. 1995). To overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable

and free from serious or substantial doubt". *Adams v. Sealy, Inc.,* W.C. No. 4-476-254 [Indus. Claim Appeals Office (ICAO), Oct. 4, 2001]. A mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. As found, there was significantly more than a difference of opinion between Dr. Aschberger and Dr. Dillon. *See Javalera v. Monte Vista Head Start, Inc.,* W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); *see Shultz v. Anheuser Bush, Inc.,* W.C. No. 4-380-560 (ICAO, Nov. 17, 2000). Also, In *Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997), the Court of Appeals concluded that a medical opinion was not necessary to prove causation because imposing such a requirement would be reading something into the statute that was not there. As observed in *Lymburn*, to require a medical opinion to support a causality determination would be to read something into the statute that does not exist. By analogy, the Claimant's testimony that she continues to suffer from her admitted LLE injuries is sufficient to overcome Dr. Dillon's observations. Further, as found, the Claimant established that it was highly probable, unmistakable and free from serious and substantial doubt that DIME Dr. Dillon's zero impairment rating was in error. Thus, the Claimant overcame DIME Dr. Dillon's zero impairment rating by clear and convincing evidence.

c. Therefore, as found, the degree of the Claimant's permanent impairment is 11% of the LLE. For an 11% LLE rating, according to **§ 8-42-107 (6) (b), C.R.S., for FY 2014/2015, the formula for an 11% scheduled impairment of a leg above the foot is 208 weeks X $277.03 X 11%=$6,338.45.**

Burden of Proof on Post-MMI Medical Maintenance Benefits

d. An employee is entitled to continuing medical benefits after MMI if reasonably necessary to relieve the employee from the effects of an industrial injury. *See Grover v. Indus. Comm'n of Colorado*, 759 P.2d 705 (Colo. 1988). The record must contain substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve a claimant from the effects of an injury or to prevent further deterioration of his condition. *Stollmeyer v. Indus. Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995); *Grover v. Indus. Comm'n, supra*. Such evidence may take the form of a prescription or recommendation for a course of medical treatment necessary to relieve a claimant from the effects of the injury or to prevent further deterioration. *Stollmeyer v. Indus. Claim Appeals Office, supra*. An injured worker is ordinarily entitled to a general award of future medical benefits, subject to an employer's right to contest causal relatedness and reasonable necessity. *See Hanna v. Print Expediters,* 77 P.3d 863 (Colo. App. 2003). Treatment to **improve** a claimant's condition does **not** fall under the purview of *Grover* benefits. *Shalinbarger v. Colorado Kenworth, Inc.,* W.C. No. 4-364-466 [Indus. Claim Appeals Office (ICAO), March 12, 2001]. As found, Claimant is entitled to maintenance medical care, which is reasonably necessary to address her injury. The burden of proof is placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P.2d 535 (Colo. App. 1992). A "preponderance of the evidence" is that quantum of evidence that makes a

fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained her burden with respect to post-MMI medical maintenance benefits.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Claimant having overcome the opinion of Jade E, Dillon, M.D., the Division Independent Medical Examiner, by clear and convincing evidence, primarily based of the opinions and rating of authorized treating rater, John J. Aschberger, M.D., the Claimant's degree of permanent impairment is 11% of the left lower extremity. Therefore, the Respondent shall pay the Claimant permanent scheduled disability benefits of **208 weeks X $277.03 X 11%=$6,338.45**, the grand total of scheduled permanent partial disability benefits, which shall be paid retroactively to May 3, 2016, the date of maximum medical improvement, and forthwith.

B. The Respondent shall pay the Claimant statutory interest at the rate of eight percent (8%) per annum on all amounts of indemnity benefits due and not paid when due.

C. The Respondent shall pay all the costs of post-maximum medical improvement maintenance treatment, which is authorized, causally related to, and reasonably necessary to cure and relieve the effects of the Claimant's admitted injury of June 10, 2015, subject to the Division of Workers' Compensation Medical Fee Schedule.

DATED this_____day of December 2017.

_____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

ISSUES

I. Whether Claimant has established by a preponderance of the evidence that she sustained a compensable occupational disease to her right upper extremity as of April 21, 2016.

II. Whether Claimant has established by a preponderance of the evidence that she is entitled to a general award of all reasonable and necessary medical benefits.

III. Whether the right to selection of an authorized treating provider has passed to claimant.

IV. Whether Claimant has established by a preponderance of the evidence that she is entitled to temporary total disability benefits.

V. Whether Respondents have established by a preponderance of the evidence that they are entitled to penalties pursuant to C.R.S. Section 8-43-102 for failure to report the injury.

STIPULATION

At the commencement of hearing, the parties stipulated to an average weekly wage of $578.06. The stipulation is approved.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

Background/Procedural History

1. On April 20, 2017, Claimant filed a claim for compensation in which she alleged an injury to her right shoulder, right elbow, and right wrist from "repetitive and overuse—lifting overhead and felt pop in shoulder". Respondents denied the claim on May 23, 2017.

2. Claimant filed a hearing application dated June 2, 2017 in which she endorsed the issues of compensability, average weekly wage (AWW), medical benefits (authorized physician and reasonably necessary), and temporary total disability (TTD) benefits from April 21, 2016 onward. Respondents filed a response on June 26, 2017, which endorsed those issues as well as statutory offsets and a penalty against Claimant for failure to report an injury pursuant to section 8-43-102, C.R.S. from April 21, 2016 onward. A hearing was scheduled for September 28, 2017 in Pueblo.

3. While the September 28th hearing was pending, the parties had a dispute as to discovery which resulted in a motion to compel which was denied as moot on August 28, 2017. Shortly thereafter, the hearing was continued from September 28th and rescheduled as noted above for November 16, 2017.

Lay Testimony/Evidence

4. Claimant is a 52-year old former female factory worker for Employer. She is a Mexican citizen who is working legally in the United States under a green card. She worked on Employer's tortilla production line for 10 years, starting her employment in July 2006 and ending the same in April 2016.

5. Claimant testified as to the specifics of employer's tortilla production process. She reported that production occurs on an assembly line and that there are three basic jobs on the line. The three jobs are packager, sealer, and boxer.

6. As a tortilla packager, Claimant described that she would use her hand to grab a stack of tortillas at the end of the line with a pinching motion. She would then turn that hand over and with the use of her other hand, shuffle the tortillas before placing them into a bag. She would then place the bagged tortillas onto a conveyer belt where they would travel down the line. According to Claimant, the process of grabbing, shuffling and bagging the tortillas took seconds. Claimant testified that she would perform these same packaging steps repeatedly while working as a packager.

7. Employer's job description for a tortilla packager was admitted into evidence. It establishes that the job of packager requires constant repetitive hand and wrist motions. The job description defines constant as 67% to 100% of the scheduled shift. The job description also establishes that the job requires frequent forearm rotation defined as 34% to 66% of the scheduled shift. Finally, occasional reaching above shoulder height defined as 1-33% of the scheduled shift is referenced in the physical demands section of the job description.

8. Claimant also described the position of sealer. According to Claimant, a sealer would pick up the bagged tortillas using a pinching motion with the hands, pinch the bag of tortillas using both hands, and feed the top end of the bag through a machine that seals the bag. After sealing the bag, Claimant testified that the sealer would place the bag back on the conveyer where it would travel down the line. Again, Claimant described a process which she maintained took a matter of seconds and which was repeated over and over during the work shift.

9. Claimant testified that the third job on the line was caser/boxer. Claimant testified that the caser collects the sealed bags of tortillas at the end of the line with their hands using a pinching motion. The caser would then put the bagged tortillas in a box, tape the box, and place the box on a pallet. Claimant testified that this job was also highly repetitious and required some heavy lifting.

10. Claimant testified that the packagers and sealers would rotate every hour. She testified that there were two packagers for every sealer. She testified that the general rotation was packager for an hour, then packager for an hour, then sealer for an hour. Claimant testified that the rotation would then repeat. Claimant testified that while she primarily performed as a packager and sealer, one person on the line was assigned to be the caser and that this person generally did not rotate as described above. Claimant testified that she would occasionally be assigned the job of caser if someone called off. Claimant testified that the vast majority of time she was packaging and sealing for 8 to 12 hours a day 6-7 days per week. She also testified that once or twice a week she would grind defective tortillas for 8-9 hours. On rare occasions when the line was down, Claimant testified she would be called upon to clean the machinery, sweep, and perform other similar tasks sometimes requiring heavy lifting.

11. Video demonstrating the packager and sealer positions was admitted into evidence. The recording shows packers working three distinct lines, a small flour tortilla line, a small corn tortilla line and a large flour tortilla line. The compact disc also contains video of a worker performing two different sealing positions.

12. In the first clip, 4 minutes and 12 seconds of video was obtained. This video demonstrates a line with three packing positions, one seated and two standing. The seated position is stationed such that the packager reaches out with the left hand to grab tortillas being routed to him/her from a large oven. Moving counterclockwise from the seated position is the next station. At this station, a packager stands directly in front of the oven and reaches directly out in front of her to grab tortillas coming out of the oven. An additional move counterclockwise places the viewer at the final station where the packager stands with the aforementioned oven to the right. In the video presented, the packager at this station reaches out with her right hand to retrieve the tortillas moving out of the oven. In all positions at this line, the ALJ observed the packagers to grab and pinch a stack of tortillas with one hand in a supinated position. The packagers then pronated the forearm and used their other hand to shuffle the stack before placing them into a plastic bag. The packagers then supinated the forearm once again to place the bags on a conveyer belt for sealing. The video also shows white plastic totes resembling trashcans on the floor into which the packer would occasionally toss defective tortillas for reprocessing. Neither bagging (packing) of nor removal of defective tortillas involved a significant amount of shoulder range of motion. Moreover, the ALJ did not observe any of the packagers to engage in any overhead activity during the 4 minutes and 12 seconds of video submitted for review. The ALJ also observed that the packager in the center position processed 26 bags of tortillas during the 4 minutes and 12 seconds of video obtained or roughly one bag every 9.7 seconds. Based upon the video observed, the ALJ finds the finger, hand, wrist and forearm movements associated with the position of packager highly repetitive.

13. The second video clip demonstrates a worker seating on a stool in front of a sealing machine. The video is 2 minutes 15 seconds long and reveals the worker quickly passing bags of tortillas through a sealing machine by repeatedly deviating the wrist in an ulnar and radial fashion. Repeated gripping is involved to position the bags on the conveyer so as to guide the bags through the sealer with the hands and fingers. The worker sealed 36

bags in 2 minutes 15 seconds or 1 bag every 3.75 seconds. While there is little shoulder motion involved in the sealing process, the video presented persuades the ALJ that the sealing position involves highly repetitive gripping and constant movement of the fingers, hands and wrists.

14. The third video clip contains footage of two workers operating the small corn tortilla line. The video obtained demonstrates upper extremity movements very similar to the small flour line as described. In the video footage, the seated worker packaged 21 bags of tortillas in 2:01 or one bag every 5.76 seconds. Again, the ALJ finds the finger, hand, wrist and forearm movements depicted in the video to be highly repetitive in nature.

15. The fourth video clip includes footage of the sealer position for the large flour tortillas. The worker in the video demonstrating this position is seated and manipulates the bags for sealing by gripping them with the fingers and hands. There is very little movement of the shoulder outside of occasional slight shoulder abduction to reach for a bag on the conveyer belt. Thirty-eight (38) bags were sealed in 2 minutes during the video. This equates to one bag every 3.1 seconds, which the ALJ finds requires quick repetitive gripping and movement of the fingers, hands and wrists to accomplish.

16. The fifth video clip demonstrates a worker packing large flour tortillas into plastic bags for sealing. Similar to the other packer positions this position involves repetitive use of the fingers, hands, wrist and forearms to pinch, grab and fold tortillas. Although repetitive pronation and supination of the forearms is apparent in the video, there is little movement of the shoulder required and the ALJ never observed the worker to reach above her shoulder while preforming this job.

17. No video footage depicting the caser/boxer position was submitted for review.

18. Claimant testified that in 2009 she was asked to clean some equipment. Claimant testified that she was cleaning what amounts to a large mixer and when she attempted to lift the lid on the mixing bowl, she heard a “pop” in her right shoulder and felt an immediate onset of pain. Claimant did not seek medical attention, did not report the alleged injury in writing, and did not notify anyone in human resources about the injury. Rather, Claimant continued to work unrestricted full duty for employer. According to Claimant, all of her subsequent right upper extremity problems began with the 2009 incident and have continued from that date forward.

19. Claimant testified that as time went on, she continued to have right shoulder pain and she began to develop right elbow and wrist pain. Claimant testified that she continued to work unrestricted full duty and that her right upper extremity symptoms continued to worsen.

20. In April 2016, Claimant went to human resources and spoke with Hubert Murias regarding the condition of her right shoulder/arm. Mr. Murias is the Director of Human Resources and in charge of processing workers’ compensation claims and assisting employees with other insurance and employment related matters. During a meeting with

Mr. Murais in April 2016, Claimant told him "[She] couldn't work" as her arm hurt. She could not recall telling him anything else. According to Claimant, she was instructed by Mr. Murias to take a few days off to let her right arm rest. Claimant testified that she did so but the symptoms did not resolve. Consequently, she sought medical treatment with her primary care physician (PCP) on April 26, 2016.

21. Claimant testified that shortly after her April 26, 2016 medical appointment, she returned to Employer and informed Mr. Murias of the physical restrictions given to her by her PCP. Claimant testified, and Hubert Murias confirmed, that the employer was unable to accommodate these physical limitations. Consequently, Claimant was instructed to file for short-term disability benefits. In a Disability Insurance Employer's Statement form completed by Mr. Murias, it was represented that Claimant's disability was not work related. Claimant disputes telling Mr. Murias that her upper extremity condition was not work related. However, in a statement provided by her to the Standard Insurance Company (SIC), Employer's long/short term disability carrier, Claimant represented that her right arm disability was not work related. Based upon the materials submitted by Claimant, SIC awarded her short-term disability of $200.00 beginning May 5, 2016 and continuing through July 5, 2016.

22. Claimant testified that since leaving work on April 26, 2016, she has not been able to perform her pre-injury job of a packager and that she has not performed any other type of work.

23. During cross-examination, Claimant testified that she is not diabetic and has never taken medication for diabetes, including Metformin. She also testified that she was never told how to report work-related injuries[1] by HR but inexplicably testified during cross-examination that she told Hubert Murias, the HR Director that she had been hurt on the job. She did not refer to the alleged 2009 injury in her interrogatory responses nor her 2017 workers' claim for compensation. She also admitted that she never reported the injury forming the basis for this claim in writing to Employer.

24. Mr. Murias recorded the above-described video. He testified at hearing as Employer's Human Resources Director. Aside from the worker's claim for compensation filed in 2017, Mr. Murias testified that Employer never received any report of a 2009 shoulder or any other work related injury to Claimant. He testified that Employer instructs employees to report work injuries to supervisors or department managers who will sit down with the employee to complete accident paperwork, which is then submitted to himself. According to Mr. Murias, Claimant did not tell him she had been injured on the job when they met in April 2016. To the contrary, she simply told him she was unable to work and he assisted her by giving her the paperwork necessary to file for FMLA and completing Employer's short-term disability statement as he had done previously in 2014 and 2015. According to Mr. Murias, short-term disability was not available for those claiming to have suffered a work related injury. Mr. Murias testified that if Claimant had put him on notice that she was injured on the job, he would have responded by giving Claimant a "Rule 8 letter".

[1] Claimant's report in this regard is inconsistent with her her report to Dr. Scoot that she "attended meetings where the employer told employee how to report a work injury."

25. Mr. Murias testified that he is familiar with Claimant's job duties. Per Mr. Murias, as a packer, Claimant would have lifted, at most, stacks of tortillas weighing between 1 and 2 pounds. She would have lifted even less as a sealer. As a caser, Mr. Murias testified that Claimant would have had no overhead lifting. After careful review, the ALJ finds that the video submitted supports Mr. Murias' testimony regarding the lifting required of a packer and sealer. As noted, no video depicting the physical demands of a caser was introduced into evidence.

26. Mr. Murias testified that he has observed the job duties associated with the grinder position and was present in court when Claimant testified as to the items she lifted. He testified that Employer's mixers, as described by Claimant, weighed tons and that it was unlikely that Claimant lifted the lid as she testified. At most, she would have lifted plastic totes containing dry flour from reprocessing, but would not have lifted them overhead. To the contrary, the operator would lift and deposit dry flour so as to manage the nutritional content of the tortillas.

27. Claimant testified in rebuttal. During her rebuttal testimony, she reported that during the 2009 incident wherein she felt a pop in her shoulder, she was lifting a bin of dry tortilla ingredients near the area of the grinder. According to Claimant, multiple bins were stacked up and she had to lift the one she was holding overhead to place it on top of the others when she felt a pop and pain. The ALJ finds this version of the 2009 incident to be materially inconsistent with her earlier testimony that she injured her shoulder lifting a heavy lid while cleaning one of Employers industrial mixers.

Medical Evidence

28. Claimant's prior medical history reveals that she has treated with Emergi Medical Centers (EMC) since March 3, 2010 when she presented to the clinic for a routine female examination along with a request to be screen for diabetes. Despite her claimed 2009 injury and report of worsening symptoms, Claimant provided no history of a 2009 shoulder injury and the report from this date of visit is devoid of any upper extremity complaints.

29. On September 11, 2013, Claimant presented to EMC with complaints of left wrist pain of two weeks duration. The record from this date of visit notes that while Claimant could "not recall an injury to her wrist"; she worked "a lot" with her hands. Claimant wrist was swollen and painful with certain movements and with "gripping/lifting." Claimant was assessed with suspected osteoarthritis and overuse of the left wrist. Again, Claimant did not provide any history of right shoulder or upper extremity problems/symptoms. Claimant's Hgb A1C was read as high normal at 5.8%. Claimant was instructed to "rest her left wrist and apply ice to the affected area for 15 minutes, 2-3 times daily. She was also encouraged to wear a wrist brace while working with her hands.

30. Claimant returned to EMC on October 30, 2015 with a report of joint pain. She stated that "since her rash" her fingers felt swollen with tender joints and had a family history of arthritis. On examination of her musculoskeletal system, she had "tender but not inflamed

or boggy DIP, PIP, MCP joints of hands bilaterally". There was no history of right wrist, elbow or shoulder complaints and no history of a 2009 shoulder injury provided. Her complaints appeared "allergic, [and] could be secondary to prior medications". She was assessed with among others things, pain in her hand joints bilaterally.

31. On March 23, 2015, Claimant was evaluated in the Emergency Room of Parkview Medical Center (PVMC) for complaints of abdominal pain. During this visit, a physical examination of Claimant's upper extremities revealed normal range of motion in the upper extremities. Furthermore, the records from this date are devoid of any history of a 2009 shoulder injury or any other work related injuries/conditions.

32. Claimant returned to EMC on April 26, 2016. On history, she presented for evaluation of shoulder pain of one year in duration and worsening for the past few weeks. Her pain radiated to the posterior shoulder, upper neck and elbow. No recent shoulder injury was recalled. No prior right shoulder injury was recalled. She stated that she worked in a factory and lifted heavy weight frequently, greater than 8 hours per day. There were no wrist or hand complaints. The right shoulder was injected with steroid and Claimant was advised to rest the shoulder and not engage in any heavy lifting in flexion and/or abduction until her symptoms improved.

33. Claimant returned on May 4, 2016 for treatment of the shoulder and did not raise any elbow, hand or wrist complaints. She provided no additional history. An MRI of the shoulder was ordered given her persistent pain and inability to perform activities of daily living. She also requested that FMLA paperwork be completed.

34. Claimant suffered from substantial anxiety regarding completion of the requested MRI necessitating the extension of her FMLA. On July 20, 2016, an MRI under general anesthesia was ordered.

35. On July 28, 2016, Claimant presented to EMC with continued right shoulder pain. She also reported right-sided neck and right and left wrist pain in addition to right thumb stiffness. According to the report from this date of visit, Claimant reported that she had been unable to flex her thumb for about two weeks. The thumb was injected with Lidocaine and Depo-medrol. It was also noted that Claimant's MRI under general anesthesia was scheduled for August 19, 2016.

36. Claimant's right shoulder MRI was completed as scheduled on August 19, 2016. Imaging revealed a small articular tear of the anterior supraspinatus insertion, a small interstitial tear of the superior infraspinatus tendon and rotator cuff tendinopathy.

37. On September 1, 2016, Claimant returned to EMC where she reported that she had been referred to physical therapy for evaluation and treatment of her right shoulder. She requested new FMLA paperwork and was excused from work until November 11, 2016. There was no additional history as to the etiology of her complaints and no mention of other right upper extremity complaints.

38. Claimant reported for initial physical therapy evaluation on September 2, 2016. As part of her evaluation, Claimant completed an Outpatient Therapy Health History Form wherein she reported that the condition she was referred to therapy for was work related. Claimant would go on to report having shoulder pain for a year in duration. She reported that while she did not have a specific injury, her work duties consisted of reaching and packing/moving of heavy boxes. There was no mention of elbow complaints or a 2009 shoulder injury.

39. Claimant reported persistent right shoulder, elbow and wrist pain when she returned to EMC on November 8, 2016. An EMG of the right upper extremity was suggested to "rule out other etiologies of her pain."

40. On November 10, 2016, Claimant appeared to EMC to have her FMLA paperwork completed. She was assessed as having dysfunction of the rotator cuff muscle group, suspected carpal tunnel syndrome, and unspecified pain in the right elbow. She was excused from work until January 2, 2017. EMG results were noted to be pending.

41. EMG was completed on November 10, 2016. The stated reason for the test was "[p]ain and numbness from the right arm and shoulder down to the fingers for many years." Testing demonstrated "[m]oderate slowing of the right median motor and sensory potentials consistent with a moderate right carpal tunnel syndrome."

42. Claimant returned to EMC on May 23, 2017. She complained of right elbow, right wrist, and right shoulder pain. She was diagnosed with lateral epicondylitis, carpal tunnel syndrome, and an incomplete tear of the right rotator cuff. There was no additional history as to the etiology of her complaints.

43. Claimant's final documented visit at EMC came on June 8, 2017. She presented with abnormally high liver enzymes, increased cholesterol, and a report of presently taking Metformin 500 mg and Rosuvastatin 20 mg QD. She was diagnosed with mixed hyperlipidemia, abnormal liver functions, and "metabolic syndrome."

44. In preparation for hearing, both Claimant and Respondents obtained independent medical opinions. Claimant was first examined by Dr. Miguel Castrejon on August 24, 2017 and later at Respondents' request by Dr. Douglas Scott on October 16, 2017.

45. Dr. Castrejon is a level II accredited physician and a diplomat of the American Board of Physical Medical and Rehabilitation. His credentials are otherwise absent from the record. Dr. Castrejon obtained a history from Claimant in Spanish, as he is fluent in the same. During her independent medical examination (IME) with Dr. Castrejon, Claimant described her employment as being 8-12 hours per day with two 15-minute breaks and one 30-minute lunch. She reported that her work duties involved rare sitting, rare reaching up, rare kneeling, rare climbing, occasional walking, occasional reaching out or down, occasional climbing, occasional overhead work, occasional pushing/pulling, constant standing, constant bending, and constant gripping/grasping. She reported "frequently" lifting forty pounds.

46. Claimant told Dr. Castrejon that she injured her shoulder while lifting a heavy container, which was higher than she was. She said that after the 2009 popping sensation, she experienced an onset of pain, which gradually worsened as time progressed. As to right hand pain, she stated that her initial pain with numbness began approximately five years before April 21, 2016 (2011) and that she reported it to her primary care physician. She admitted to being diagnosed with diabetes and being prescribed medication, but stated that she "did fine with diet that allowed for discontinuation of medication until more recently". She described pain in the right shoulder, numbness in the hand and all fingers. There was no mention of right elbow problems. In terms of past medical history, Dr. Castrejon noted that Claimant was taking both Metformin and Rosuvastatin as on June 8, 2017.

47. Dr. Castrejon assessed Claimant with a right shoulder partial rotator cuff tear, right elbow medial epicondylitis, moderate right carpal tunnel syndrome, and mild right DeQuervain's tenosynovitis and reactive depression/anxiety.

48. After taking a history, completing his physical examination and reviewing the available medical records, Dr. Castrejon reached the following opinions:

- It appears that prior to June 8, 2017 there is no documentation for a diagnosis or treatment of diabetes, merely a marginal Hb A1c. In my professional opinion the medical file does not support the presence of a metabolic condition that could be associated with the development of the claimant's presenting complaints. Furthermore, I remind the reader that electrodiagnostic testing failed to demonstrate the presence of a "polyneuropathy" which would typically be seen in cases of longstanding diabetes. Instead, the study revealed very specific changes consistent with a moderate median nerve entrapment at the right wrist.

- With regard to the right shoulder, the claimant described a specific injury, in 2009, when she lifted a heavy object at work. She continued working and has noticed persistent and gradual worsening of symptoms over time attributed to her work activities. The medical file supports the presence of right shoulder symptoms prior to April 26, 2016 however there is no description as to etiology of onset.

49. In performing a W.C.R.P., Rule 17 causation analysis, Dr. Castrejon considered the repetitive flexion/extension of the elbow along with the forceful grasping of tortillas associated with Claimant's position as a packer to reach the conclusion that her hand, wrist and elbow pain were occasioned by Claimant's cumulative exposure to repetitive activity. Consequently, Dr. Castrejon opined that the hand, wrist and elbow conditions constituted work related injuries thereby rejecting any relationship between these conditions and Claimant's subsequently diagnosed diabetes.[2] Based upon the evidence presented, the

[2] As noted, Dr. Castrejon rejected the suggestion that there was a causal connection between Claimant's upper extremity conditions and her diabetes based upon the results of the EMG study.

ALJ is persuaded that Claimant's diabetes is not a causative factor with respect to her hand/wrist pain.

50. Even though the medical records made no mention of a 2009 or other specific shoulder injury, Dr. Castrejon accepted Claimant's report as to cause and onset of shoulder symptoms. In this regard, Dr. Castrejon opinioned as follows: The development of right shoulder impingement arose as a specific event and was aggravated by the work activities that she continually performed.

51. Dr. Douglas Scott performed an IME at the request of Respondents on October 16, 2017. Dr. Scott is board certified in occupational medicine, level II accredited by the Division of Workers' Compensation, and a former assistant clinical professor at the University of Colorado School of Medicine, Department of Preventive Medicine. During the IME, Luis Saldarriaga, served as Dr. Scott's Spanish interpreter. As part of his IME, Dr. Scott viewed what he described were photographs of the packing process. Dr. Scott's description of the imagines he viewed are consistent with what the undersigned ALJ saw is the video tape submitted for review.

52. Claimant reported persistent right shoulder pain, pain from the right side of her neck down to the right upper trapezius, nocturnal pain/tingling in the right hand and pain around the right lateral elbow.

53. Regarding her right shoulder, Claimant reported that her pain began in 2009. She thought it was from a work related cause. Concerning the cause of her shoulder pain, Claimant told Dr. Scott that while she was working for Employer she "lifted a plate of tortillas above her head to place on a shelf and she noted a 'cracking noise' in the right shoulder without pain. This purported mechanism of injury is inconsistent with either of the other reported causes of Claimant's 2009 shoulder pain.

54. In his review of medical records, Dr. Scott noted that Claimant was seen by a physician assistant on September 11, 2013, but did not report right shoulder pain. He also interpreted the findings outlined in the radiologist's report regarding Claimant's right shoulder MRI as suggestive of chronic degenerative change.

55. In terms of medical history, Claimant told Dr. Scott that she had been diagnosed as diabetic and prescribed metformin 500 mg for that condition. She took the medication, but discontinued it due to the absence of health insurance.

56. As did Dr. Castrejon, Dr. Scott reviewed the Colorado Medical Treatment Guidelines (CMTG). He noted that per Rule 17, Exhibit 4, work related shoulder injuries might occur from a specific incident, aggravation of a pre-existing condition, or a work related exposure that renders a previously asymptomatic condition symptomatic and requires treatment. He also noted that the Guidelines referenced heavy lifting (of 20 kilograms or greater) or repetitive overhead work for at least thirty minutes a day for a minimum of five years would be considered risk factors for developing shoulder disorders. Per Rule 17, Exhibit 5, the identification of work related risk factors was based on a

comparison of work tasks and a determination of whether a temporal association existed between work place risk factors and the onset of symptoms. In making this determination, the physician needs to identify nonoccupational diagnoses such as rheumatoid arthritis, obesity, diabetes, and avocational activities.

57. Dr. Scott stated that Claimant alleged a specific injury to the right shoulder during 2009, but found no supporting documentation of or reference to such an event in the medical records. While he referenced objective testing results consistent with a diagnosis of moderate right median nerve neuropathy at the right carpal tunnel, Dr. Scott found no evidence of lateral epicondylitis, medial epicondylitis, or other elbow problems. He also found no evidence of cubital tunnel syndrome or Dequervain's tenosynovitis. Finally, he assessed Claimant with a history of non-insulin dependent diabetes, which was probably poorly controlled, as Claimant was not taking prescribed metformin.

58. Dr. Scott was asked to address the compensability or work relatedness of Claimant's various complaints. In doing so, he noted:

- If Ms. Desanchez experienced an injury to her right shoulder as she alleges in 2009 while lifting overhead, and citing the CMTG for shoulder injury, then it is possible that she had a compensable injury to her right shoulder in 2009.[3]

- In my opinion Ms. Desanchez (sic) alleged 2009 injurious right shoulder incident possibly aggravated a pre-existing and progressively deteriorating right shoulder condition beyond the normal progression.

- In my opinion there is some work job factor evidence to support her median nerve neuropathy at the right carpal tunnel as a compensable injury to her right wrist, but only if documentation can be found of this complaint before she left employment at Mission Foods in 4/2016 and before she was noted to be pre-diabetic from the 9/11/2013 laboratory testing with elevated HbH1C (sic).

- Per Ms. Desanchez the cause of her right median nerve neuropathy at the carpal tunnel developed from grabbing tortillas with her right hand repetitively and stuffing them into bags. This work activity is supported by the CMTG on Cumulative Trauma Conditions as a risk factor in the development of the carpal tunnel syndrome. Her development of a pre-diabetes from 9/11/2013 laboratory testing and her later Type II diabetes may have been a non-work related risk factor, which served to accelerate her carpal tunnel syndrome.

[3] He did not otherwise state that her work activities on an ongoing basis caused or contributed to her shoulder problems.

59. Based upon the evidence presented, the ALJ finds that Claimant has failed to prove, by a preponderance of credible evidence, that she developed a compensable occupational disease involving her right shoulder as a consequence of her position as packer, sealer or caser for Employer. To the contrary, the evidence presented persuades the ALJ that Claimant's testimony regarding the cause of her right shoulder symptoms is unreliable and the remaining evidence does not support that she suffered an aggravation of a pre-existing injury occurring in 2009. Nonetheless, the ALJ finds substantial record evidence to support Claimant's assertion that her hand/wrist complaints are related to the repetitive nature of her job.

CONCLUSIONS OF LAW

Based upon the forgoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1), C.R.S.* Claimant must prove that he is a covered employee who suffered an injury arising out of and in the course of employment. *Section 8-41-301(1), C.R.S.; See, Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). Claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997), *cert. denied* September 15, 1997. Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968). In this case, the ALJ finds Claimant's testimony regarding the cause of her right shoulder symptoms unreliable. Claimant saw several medical providers for a host of conditions between 2010

and 2017, yet never mentioned a 2009 shoulder pop connected to her work duties. Moreover, she failed to mention it in her discovery responses but astonishingly remembered to mention it to Drs. Castrejon and Scott. Claimant also testified that the company never told her what to do in the event of a work injury, contradicting Employer's records and her statement to Dr. Scott. She varied in her account, depending upon the medical provider, as to the amount of lifting, which was done, and the weights lifted. She denied dealing with Standard Insurance yet the Standard records submitted establish the she stated that her condition was not work related. Finally, but importantly, she gave varying accounts of the alleged 2009 shoulder injury. She told the forensic examiners about lifting a plate overhead. She told the ALJ it came from lifting the lid of a mixer "taller" than herself. On rebuttal, after she had a chance to listen to the testimony of Hubert Murias, she modified her story again to say that she had been lifting plastic bins or totes containing flour product. Such inconsistences cannot be reconciled with the balance of the competing evidence rendering Claimant's testimony regarding her right shoulder condition unpersuasive.

C. In accordance with § 8-43-215, C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, *84 P.3d 1023 (Colo. 2004).* This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, 5 P.3d 385 (Colo. App. 2000).*

Compensability

D. Under the Workers' Compensation Act, an employee is entitled to compensation where the injury is proximately caused by an injury or occupational disease arising out of and in the course of the employee's employment. *Section 8-41-301(1), C.R.S.; Horodyskyj v. Karanian* 32 P.3d 470 (Colo. 2001). The phrases "arising out of "and "in the course of" are not synonymous and a claimant must meet both requirements. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 20 (Colo. 1988). The latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d 379, 381 (Colo. 1991). Thus, an injury occurs "in the course of" employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co.,* 38 Colo. App. 48, 51, 552 P.2d 1033, 1036 (1976). Here there is little question that Claimant produced sufficient evidence to support a conclusion that her symptoms occurred in the scope of employment. Rather, the question for determination here is whether Claimant's right upper extremity conditions arise out of her employment.

E. The term "arises out of" refers to the origin or cause of an injury. *Deterts v.Times Publ'g Co. supra.* There must be a causal connection between the injury and the work conditions for the injury to arise out of the employment. *Younger v. City and County of*

Denver, supra. An injury "arises out of" employment when it has its origin in an employee's work-related functions and is sufficiently related to those functions to be considered part of the employee's employment contract. *Popovich v. Irlando supra.* In this regard, there is no presumption that an injury which occurs in the course of a worker's employment also arises out of the employment. *Finn v. Industrial Commission,* 165 Colo. 106, 437 P.2d 542 (1968); *see also, Industrial Commission v. London & Lancashire Indemnity Co.,* 135 Colo. 372, 311 P.2d 705 (1957) (*mere fact that the decedent fell to his death on the employer's premises did not give rise to presumption that the fall arose out of and in course of employment*). Rather, it is the Claimant's burden to prove by a preponderance of the evidence that there is a direct causal relationship between the employment and the injuries. § 8-43-201, C.R.S. 2013; *Ramsdell v, Horn,* 781 P.2d 150 (Colo. App. 1989).

F. The determination of whether there is a sufficient "nexus" or causal relationship between Claimant's employment and the injury is one of fact which the ALJ must determine based on the totality of the circumstances. *In Re Question Submitted by the United States Court of Appeals,* 759 P.2d 17 (Colo. 1988); *Moorhead Machinery & Boiler Co. v. Del Valle,* 934 P.2d 861 (Colo. App. 1996). Proof by a preponderance of the evidence requires the proponent to establish the existence of a "contested fact is more probable than its nonexistence." *Page v. Clark, supra.* Whether Claimant sustained her burden of proof is a factual question for resolution by the ALJ. *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997). In this claim, Claimant alleges two distinct but related injuries to her right upper extremity caused by the repetitive nature of her work. First, she contends that she suffered a compensable aggravation of a right shoulder condition caused by 2009 injury. Secondly, she asserts that she developed hand, wrist and elbow problems because of the repetitive gripping and handling required to bag tortillas moving on Employers assembly line. She did not allege the occurrence of a discrete injury, even a specific shoulder injury despite her claim of having sustained the same in 2009. Rather, she is alleging that she sustained an occupational disease as a result prolonged exposure occasioned by her work activities for Employer.

G. Section 8-40-201(14), C.R.S. defines "occupational disease" as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

This section imposes additional proof requirements beyond that required for an accidental injury. An occupational disease is an injury that results directly from the employment or conditions under which work was performed and can be seen to have followed as a natural incident of the work. Section 8-40-201(14), C.R.S.; *Climax Molybdenum Co. v. Walter*, 812 P.2d 1168 (Colo. 1991); *Campbell v. IBM Corporation*, 867 P.2d 77 (Colo. App. 1993). On the other hand, an accidental injury is traceable to a particular time, place and cause. *Colorado*

Fuel & Iron Corp. v. Industrial Commission, 154 Colo. 240, 392 P.2d 174 (1964); *Delta Drywall v. Industrial Claim Appeals Office*, 868 P.2d 1155 (Colo. App. 1993). An occupational disease arises not from an accident, but from a prolonged exposure occasioned by the nature of the employment. *Colorado Mental Health Institute v. Austill*, 940 P.2d 1125 (Colo. App. 1997). The failure to satisfy each element by a preponderance of credible evidence is fatal to an occupational disease claim. *Kinninger v. Industrial Claim Appeals Office*, 759 P.2d 766 (Colo. App. 1988). Here, two forensic experts, Dr. Scott and Dr. Castrejon, addressed compensability. Dr. Scott was cautious. He noted Claimant's prior medical history, particularly with regard to the suspect 2009 shoulder injury and diabetes. He set forth a very reasoned opinion and stated that if there was proof or medical documentation of certain factors, Claimant's complaints might be work related. Implicitly, Dr. Scott opined that the absence of such proof or documentation would mean that Claimant's complaints were non-occuptional in nature. Moreover, while he testified that Claimant may have suffered a discrete shoulder injury in 2009, he did not otherwise state that her work activities on an ongoing basis caused, aggravated or contributed in any way to her current shoulder problems.

H. In constrast, Dr. Castrejon seemingly accepted Claimant's account of the cause of her right shoulder condition in concluding that the conditions under which her work was preformed aggravated, accelerated, and/or combined with her pre-existing conditions to cause her symptoms, her disability and her need for medical treatment, for which benefits are sought. Based upon the totality of the evidence presented, the ALJ is not persuaded. Here, Dr. Castrejon did not view the video tape, which the ALJ concludes fails to support that any substantial shoulder movement or overhead lifting is requires a packer or sealer. Moreover, while the position of caser was not depicted in the video, the ALJ finds, as credible and persuasive, the testimony of Mr. Murias that no overhead lifting is required in this position. Dr. Castrejon's willingness to accept Claimant's version of the cause of Claimant's shoulder condition without viewing the video and/or explaining the discrepancies in the record regarding the absence of reports of a 2009 shoulder injury or the varied causes of the same adversely affect the persuasiveness of his opinion. The totality of the evidence presented persuades the ALJ that Claimant's right shoulder symptoms, more probably than not, are emanating from the natural progression of a pre-existing degenerative condition as suggested by Dr. Scott.

I. To the extent that Claimant asserts that she developed carpal tunnel syndrome from repetitively grabbing and stuffing tortillas into plastic bags, the ALJ concludes the record supports this claim. As noted by Dr. Scott, this work activity is supported by the CMTG on Cumulative Trauma Conditions as a risk factor in the development of the carpal tunnel syndrome. As suggested by Dr. Scott, the undersigned poured over the record evidence in an effort to locate any documentation that Claimant complained of hand/wrist pain before she left employment at Mission Foods in 4/2016. As noted, Claimant was evaluated on September 11, 2013, for complaints of left wrist pain of two weeks duration. The record from this date of visit notes that while Claimant could "not recall an injury to her wrist"; she worked "a lot" with her hands. Claimant wrist was swollen and painful with certain movements and with "gripping/lifting." Moreover, the record supports that Claimant returned to her PCP on October 30, 2015 with a report of joint pain. As found, she stated that "since her rash" her fingers felt swollen with tender

joints and had a family history of arthritis. On examination of her musculoskeletal system, she had "tender but not inflamed or boggy DIP, PIP, MCP joints of hands bilaterally". While the note suggests that her complaints appeared "allergic, [and] could be secondary to prior medications," the ALJ finds it probable, based upon the totality of the evidence presented, that Claimant's hand symptoms were probably related to her repetitive work. The undersigned ALJ, having carefully reviewed the evidentiary record and the IME reports from both doctors, finds that the opinions of Dr. Castrejon regarding the cause of Claimant's wrist symptoms to be credible and persuasive. Claimant has proven the request causal connection between the repetitive nature of her employment and her finger/wrist, i.e. carpal tunnel syndrome. Regardless, there is no record support for a similar finding concerning her elbow.

Claimant's Request for Medical Benefits

J. Once a Claimant has established the compensable nature of his/her work injury, he/she is entitled to a general award of medical benefits and respondents are liable to provide all reasonable and necessary and related medical care to cure and relieve the effects of the work injury. Section 8-42-101, C.R.S.; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). However, a claimant is only entitled to such benefits as long as the industrial injury is the proximate cause of his/her need for medical treatment. *Merriman v. Indus. Comm'n*, 210 P.2d 448 (Colo. 1949); *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970)*;* § 8-41-301(1)(c), C.R.S., Contending that Claimant's current symptoms represent the effects of a non-work related condition, Respondents urge the ALJ to conclude that Claimant's need for ongoing treatment should be denied. As found and concluded above, as it pertains to the shoulder and elbow, Respondents' implication is compelling. Nonetheless, the evidence presented, persuades the ALJ that Claimant requires treatment to cure and relieve her of the ongoing effects of her compensable finger/wrist conditions. Consequently, Respondents are liable for this treatment.

Claimant's Right to Select a Treatment Provider to Attend to her Hand/Wrist Injuries

K. Authorization refers to a physician's legal status to treat the industrial injury at the respondents' expense. *Bunch v. Industrial Claim Appeals Office*, 148 P.3d 381 (Colo. App. 2006); *Popke v. Industrial Claim Appeals Office*, 944 p.2d 677 (Colo. App. 1997). Under §8-43-404(5)(a)(I)(A), C.R.S. 2014 the employer has the right in the first instance to designate the authorized provider to treat the claimant's compensable condition. The rationale for this principle is that the respondents may ultimately be liable for the claimant's medical bills and, therefore, have an interest in knowing what treatment is being provided. *Andrade v. Industrial Claim Appeals Office*, 121 P.3d 328 (Colo. App. 2005). Consequently, if the claimant obtains unauthorized medical treatment, the respondents are not required to pay for it. Section 8-43-404(7), C.R.S. 2005; *Yeck v. Industrial Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999); Pickett v. Colorado State Hospital, 32 Colo. App. 282, 513 P.2d 228 (1973).

L. In order to assert the statutory right to designate a provider in the first instance, the employer has an obligation to name the treating physician forthwith upon receiving notice of the compensable injury. *Rogers v. Industrial Claim Appeals Office*, 746 P.2d 545 (Colo. App. 1987). The employer's failure to designate the authorized treating physician results in the right of

selection passing to the claimant. *Id*. The employer's duty is triggered once the employer or insurer has some knowledge of facts that would lead a reasonably conscientious manager to believe the case may involve a claim for compensation. See *Jones v. Adolph Coors Co*., 689 P.2d 681 (Colo. App. 1984). Based upon the evidence presented, the ALJ concludes that Respondents failed to designate a provider to attend to Claimant's compensable hand/wrist injuries. Here the evidence establishes that after the claim was reported in writing on April 20, 2017, Respondents did not assign Claimant an authorized treating provider. Consequently, the right of selection passed to Claimant. Claimant has selected Dr. Douglas Bradley at Emergicare in Pueblo, CO. Dr. Bradley is authorized to treat Claimant for the compensable occupational disease she has developed involving the right hand/wrist.

Claimant's Entitlement to Temporary Total Disability & Respondents Request for Penalties

M. To receive temporary disability benefits, the claimant must prove the injury caused a disability, he/she leaves work as a consequence of the injury, and the disability is total and lasts more than three regular working days. *C.R.S. § 8-42-103(1); PDM Molding, Inc. v. Stanberg,* 898 P.2d 542 (Colo. 1995). As stated in *PDM Molding*, the term "disability" refers to the claimant's physical inability to perform regular employment. *See also McKinley v. Bronco Billy's,* 903 P.2d 1239 (Colo. App. 1995). Once the claimant has established a "disability" and a resulting wage loss, the entitlement to temporary disability benefits continues until terminated in accordance with C.R.S. § 8-42-105(3)(a)-(d). Here, the evidence presented persuades the ALJ that Claimant was excused from work due to the effects of her compensable hand/wrist injury in addition to her shoulder condition. Consequently, Claimant is "disabled" within the meaning of section 8-42-105, C.R.S. and is entitled to TTD benefits. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999); *Hendricks v. Keebler Company*, W.C. No. 4-373-392 (Industrial Claim Appeals Office, June 11, 1999). Respondents shall pay TTD in accordance with C.R.S. § 8-42-103(1)(b), for the period beginning April 21, 2017 and ongoing until terminated by operation of law at a rate of sixty-six and two-thirds percent of the stipulated AWW, but not to exceed a maximum of ninety-one percent of the state average weekly wage per week. C.R.S. § 8-42-105(1). Because Claimant's period of disability has lasted longer than two weeks from the date she filed her claim as a consequence of her injury, TTD is recoverable to April 21, 2017. See C.R.S. § 8-42-103(1)(b).

N. Respondents seek a penalty against the claimant for Claimant's failure to timely to report the injury in writing as required by § 8-43-102(1)(a), C.R.S. Section 8-43-102(1)(a) provides that an employee that sustains an injury from an accident "shall notify the said employee's employer in writing of the injury within four days of the occurrence of the injury." If the employee fails to report the injury in writing, "said employee may lose up to one day's compensation for each day's failure to so report." Because the statute uses the word "may," imposition of a penalty for late reporting is left to the discretion of the ALJ. *LeFou v. Waste Management*, W.C. No. 4- 519-354 (I.C.A.O. March 6, 2003). In this case, Claimant admits that no written report of the injury was filed until April 20, 2017. Moreover, the ALJ is persuaded that Claimant was educated on the method/requirements to report injuries. Here, the employment records submitted contain instructions to employees to report injuries and Claimant's acknowledgement of same. Claimant testified that she only said she could not work and does not recall what else she may have said. She admitted that she did not report the injury in writing. Mr. Murias testified that there was no report of a work injury in writing

prior to receipt of the claim for compensation. Accordingly, the ALJ concludes that it is appropriate to impose a penalty against Claimant in this case, disqualifying her from the receipt of temporary disability benefits before April 20, 2017.

ORDER

It is therefore ordered that:

1. Claimant failed to established by a preponderance of the evidence that she sustained a compensable occupational disease to her right elbow and shoulder.

2. Claimant has proven by a preponderance of the evidence that she developed an occupational disease to her right hand/wrist as a consequence of the repetitive nature of her employment related duties.

3. Claimant has established by a preponderance of the evidence that she is entitled to a general award of all reasonable and necessary medical benefits to cure and relieve her of the ongoing effects of her compensable occupational disease involving her right hand/wrist.

4. The right to select a physician to attend to the effects of her compensation hand/wrist condition passed to Claimant. She has selected Dr. Douglas Bradley at Emergicare in Pueblo, CO. Dr. Bradley is authorized to treat Claimant for her compensation hand/wrist condition.

5. Respondents have proven by a preponderance of the evidence that they are entitled to a penalty of one day's compensation for each day's failure to report the injury pursuant to C.R.S. Section 8-43-102. Claimant's request for temporary total disability benefits for the time period extending from April 21, 2016 to April 20, 2017, is denied and dismissed.

6. Claimant has established by a preponderance of the evidence that she is entitled to temporary total disability benefits from April 21, 2017 ongoing until terminated by operation of law.

7. All matters not determined herein are reserved for future determination.

DATED: December 29, 2017

/s/ Richard M. Lamphere

Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service

of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that the trial spinal cord stimulator, as recommended by Dr. Barolat, is reasonable and necessary to treat Claimant's admitted injury?

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following Findings of Fact:

1. Claimant sustained an admitted injury on December 11, 2014 while working for Employer as a police detective. She was participating in a department mandated physical agility test ("PAT") when, while doing pushups to meet department criteria, she felt a sudden burning pain in her lower back that continued down into both legs. Claimant reported that the pain was concentrated first on the left, then largely on the right side. She attempted to continue the PAT, but could not complete the following sit-up portion, after which notified her sergeant that she was unable to continue.

2. Claimant has a history of injury to her lumbar spine. (Ex. 5, p. 108). Claimant has a history of two lumbar discectomies, after which an L5-S1 fusion surgery was performed in July 2003. Claimant sought intermittent maintenance treatment for these procedures continuing through 2014. Claimant's follow-ups focused primarily upon occasional flare-ups of left leg radiculopathy stemming from the fusion. (Ex. L). As of June 17, 2014, she was seen by Jeffrey Jenks, M.D., who commented that she would need continuing use of Naprosyn and Topamax to maintain her well controlled minimal low back and leg pain. Dr. Jenks recommended that she receive follow-up care a year after that appointment.

3. The records from City of Colorado Springs Occupational Health Clinic from December 11, 2014 document that Claimant complained of acute low back pain immediately after the incident, with pain radiating down her left buttock into her left leg to the knee. (Ex. 4, p. 9). Miguel Castrejon, M.D. examined Claimant, finding largely full range of motion in Claimant's lumbar spine. Claimant reported pain at a level of 6 or 7 out of 10. Dr. Castrejon prescribed Percocet, Flexeril, and ibuprofen to help control her symptoms. Claimant was also referred for a course of physical therapy.

4. Claimant was referred to Stephen Ford, M.D. for bilateral piriformis injections on March 30, 2015. Following this procedure, she reported pain reduction from 4/10 to 2/10. (Ex. 7, p. 123). She received Sacroiliac ("SI") joint injections of April 17, 2015, after which she noted a reduction in pain from 5/10 to 3/10 (Ex. 7, p.124).

Claimant returned to Dr. Ford for a second round of SI injections on June 19, 2015 and for L4-5 facet injections on July 14, 2015. *Id*. at 125-26. Each injection gave Claimant a mild reduction in reported pain.

5. Upon Dr. Castrejon's referral, Michael Rauzzino, M.D. examined Claimant on June 8, 2015. (Ex. 9, pp. 144-50). Dr. Rauzzino noted that conservative care had afforded Claimant no relief from her symptoms. While he recommended that Claimant receive an additional injection to the SI joint, Dr. Rauzzino noted that Claimant's prior injection had been largely without effect. Dr. Rauzzino reviewed Claimant's January 28, 2015 MRI, and concluded that her fusion surgery was well done, and he did not attribute her present concerns to the prior procedure. Dr. Rauzzino further noted in his report:

> She has had an EMG which shows a left sensory *radiculopathy* without polyneuropathy or plexopathy. Id at 150, (emphasis added).

6. While walking down a flight of stairs on June 11, 2015, Claimant fell due to *numbness* in her right foot. (Ex. J, p. 147). Claimant reported to Colorado Springs Occupational Health Clinic later that day for treatment. Claimant's fall resulted in contusions to the right wrist and right knee, as well as mild aggravation of her lumbar pain. Paula Hornberger, PA-C, who examined Claimant on that day, noted that Claimant had suffered from ongoing pain and *numbness* in both feet, but especially the right.

7. Claimant was then referred to Roger Sung, M.D. on June 25, 2015. (Ex.8, pp. 128-43). Dr. Sung had performed Claimant's 2003 spinal fusion, and made note of it in his report. Dr. Sung described Claimant as essentially asymptomatic from her 2003 fusion. Dr. Sung noted that she had received appropriate conservative care but so far had seen no appreciable relief in her pain. Dr. Sung recommended that Claimant be referred for pain management, including the possibility of a spinal cord stimulator ("SCS"). Dr. Sung discussed SCS hesitantly, as Claimant had previously been quite functional in daily life, and as such he recommended observing how Claimant would respond to injection treatment before recommending proceeding with SCS. Dr. Sung also noted:

> EMG report shows chronic S1 *radiculopathy* but no other obvious pathology. *Id* at 130 (emphasis added).

8. A subsequent MRI taken on July 28, 2015, and interpreted by Tanweer Khan, M.D. revealed mild post-operative changes to Claimant's L5-S1 fusion, consistent with Claimant's prior imaging. (Ex. H, p. 116). This MRI found Claimant's bilateral SI joints to be within normal limits.

9. On August 18, 2015, Claimant was examined by George Schakaraschwili, M.D. (Ex. 11, pp. 153-55). Dr. Schakaraschwili reviewed the results of Claimant's May 7, 2015 electrodiagnostic testing, which showed a distal tibial *neuropathy* and an *S1 sensory radiculopathy.*

10. Dr. Schakaraschwili noted that, as of his exam, Claimant suffered from burning pain extending down the back of her right thigh, as well as numbness and pain

as far down as her right heel, although her pain diagram largely focused upon her right buttock and thigh. Dr. Schakaraschwili performed an autonomic testing battery of Claimant's lower extremities, but found no evidence of CRPS. Dr. Schakaraschwili concluded that Claimant might benefit from a right lumbar sympathetic block, but if that procedure proved ineffective she could benefit from a SCS.

11. Claimant presented to Bert T. Willman, M.D. on September 9, 2015 so she could be evaluated as a candidate for SCS. (Ex. 12, pp. 156-58). Dr. Willman summarized Claimant's prior ineffective treatment and concluded that she was a prime candidate for SCS: "All physicians have involved (sic) at this point in time that consideration of spinal cord stimulator trial is reasonable and appropriate. I would agree" *Id* at 156. Dr. Willman explained the procedure to Claimant, who was enthusiastic to proceed as her symptoms had continued to worsen since her date of injury.

12. Claimant returned to Dr. Jenks on October 1, 2015 for a second opinion. (Ex. 5, p. 108-114). Dr. Jenks, who noted: "Terry's symptoms and exam are very consistent with *an L5 or S1 radiculitis*" *Id* at 109 (emphasis added). He recommended that she receive diagnostic and possibly therapeutic epidural injections to address this condition. Claimant subsequently returned to Dr. Jenks on August 16, 2016, having received such injections, which had given her roughly two weeks of relief as a result. As had Dr. Sung, Dr. Jenks reported that he had no other ideas for further treatment.

13. Dr. Willman referred Claimant to Dale Mann, Ph.D. for a pre-operative SCS psychological evaluation. (Ex. 13, pp.159-62). Dr. Mann performed a standard psychological testing battery and concluded that Claimant was ready to proceed with the trial stimulator.

14. Nicholas Olsen, D.O. performed an IME on behalf of Respondents on October 26, 2015. (Ex. A, pp. 11-35). Dr. Olsen reviewed the medical record, took a patient history, and performed a physical exam. On this date, Claimant's reported 90% of her pain centered around the right buttock, while roughly ten percent radiated into the right lower leg. Dr. Olsen emphasized Claimant's reported left lower extremity pain stemming from her 2003 spinal fusion. Dr. Olsen ultimately concluded, to the extent Claimant's symptoms did not stem from her prior spinal fusion, that Claimant suffered from a mechanical problem in the SI joint and thus was not a good candidate for SCS. While he indicated that physical therapy would be the best treatment for such a condition, he did not explain why Claimant saw no relief in her symptoms after having received extensive physical therapy already.

15. Upon Respondents' notice and proposal, Claimant was referred for a Division Independent Medical Examination with Joseph Morreale, M.D. (Ex. N, pp. 245-51). The examination took place on April 25, 2016. Dr. Morreale reviewed the medical record, took a patient history, and performed a physical exam. Dr. Morreale noted Claimant's bilateral lower extremity pain terminating in her posterior thigh. Dr. Morreale found Claimant *not at MMI* and recommended that she undergo an additional right SI joint injection. However, Dr. Morreale did not comment upon Claimant's lower leg pain

in his report, nor did he comment upon the source of this problem. He did not recommend in his proposed treatment plan the use of a SCS.

16. Dr. Castrejon referred Claimant to Giancarlo Barolat, M.D., who examined Claimant on April 20, 2017. (Ex. 17, pp. 218-220). Dr. Barolat concluded that Claimant suffers from a chronic, severe, and likely permanent neuropathic pain syndrome. Dr. Barolat reviewed the medical record and concluded that while Claimant had received extensive management, her only likely option remaining was a neurostimulation procedure. Dr. Barolat concluded that this was the best option to significantly reduce Claimant's chronic pain.

17. On December 14, 2015, Claimant saw Dr. Castrejon for another monthly visit. (Ex. E, p. 81). On this date, he diagnosed her with:

- Acute lumbar strain with primarily right piriformis involvement.

- Right piriformis injection per Dr. Wilman (sic) 2/18.

- Exam findings consistent with SI joint dysfunction

- Neuropathic pain right knee strain/sprain

-Right elbow strain/contusion, resolved

He placed her at MMI on this date, assigned an 11% whole person impairment rating, gave no work restrictions, and prescribed maintenance care for her pain, to be reviewed after one year.

18. Claimant continued treating with Dr. Castrejon through July 2017. (Ex. 4, p. 105). In his June 27, 2017 treating physician's progress report, Dr. Castrejon reviewed the findings of an MRI taken on January 28, 2015 which indicated post-operative changes to her L5-S1 fusion without evidence of recurrent or residual disc herniation, as well as a lack of nerve impingement from that prior surgery. (Ex. E, p. 52). Dr. Castrejon specifically noted that Claimant had no marked improvement from her symptoms when she received SI and piriformis injections. Dr. Castrejon ultimately requested that Claimant be referred back to Dr. Barolat for the proposed SCS, although that procedure was not yet approved. Dr. Castrejon finally noted that although he, Dr. Sung, Dr. Rauzzino, Dr. Ford, Dr. Willman, and Dr. Barolat had recommended that Claimant receive SCS, the procedure nonetheless remained denied.

19. Dr. Castrejon was subsequently deposed on June 26, 2017, in his capacity as an expert in physical medicine and rehabilitation. (Castrejon Depo., pp. 1-35). Dr. Castrejon summarized Claimant's treatment to that point, ultimately concluding that such treatment was on the whole ineffective, and that Claimant had failed conservative treatment. *Id*. at 10-11. Dr. Castrejon reviewed Dr. Olsen's October 26, 2015 IME report but did not entirely agree with Dr. Olsen's findings. *Id*. at 15. This was primarily for two reasons: (1) the Medical Treatment Guidelines recognize that treatment

may deviate from dictated policy as individual cases dictate, and (2) that Claimant clearly suffered from radicular nerve pain. *Id*.

20. Dr. Castrejon also noted, in response to assertions of Dr. Olson:

> I also want to state that Dr. Olson has indicated that there is no true definable lesion.
>
> Well, neuropathic pain, in and of itself, is somewhat of a non-definable process. It is a chronic pain as a result of some element of tissue damage that has occurred that then typically results in symptoms that distribute over….a certain….anatomical area that may or may not coincide with dermatomal distribution.
>
> This process is usually chronic, and ….typically does not respond to conservative treatment measures. And that's what she's experiencing. Id at 16.

21. Dr. Castrejon indicated that while Dr. Olsen had examined Claimant on only one occasion, Dr. Castrejon had treated Claimant for three years and was more acutely aware of her symptoms. *Id*. at 16. As such, Dr. Olsen's assertion that Claimant's pain was overwhelmingly located in her right buttock might be accurate as of the date of Dr. Olsen's examination, but inaccurate as to Claimant's symptoms over a longer time frame. *Id*. Dr. Castrejon testified that Claimant's symptoms were absolutely reflective of a neuropathic, radicular condition. *Id*. at 17-18. In Dr. Castrejon's opinion, Claimant is a good candidate for SCS both because of her reported symptoms, and because other treatment methods have been exhausted. *Id*. at 18.

22. Dr. Olsen performed a follow-up IME on Respondents' behalf on August 9, 2017. (Ex. A, pp. 1-10). Dr. Olsen discussed the possibility of SCS with Claimant, emphasizing the risk of paralysis as a side-effect of the procedure. *Id*. at 2. Dr. Olsen noted from Dr. Castrejon's report that, as of October 28, 2015, Claimant had no referred lower limb pain and that there was no present electrodiagnostic evidence of S1 nerve root involvement. *Id*. at 4. Dr. Olsen concluded that Claimant had pain isolated over the right SI joint, and that there was no evidence of radiculopathy. *Id*. at 8. Dr. Olsen concurred with Dr. Morreale's DIME report, especially with respect to Claimant receiving additional treatment centered around the SI joint. *Id*. at 9. Dr. Olsen concluded, consistently with his prior IME report, that Claimant was not a candidate for SCS, as her complaints were mechanical in nature. *Id*. at 10.

23. Claimant testified live at hearing. She described how her injury occurred, and the treatment she subsequently received. She indicated that her pain requires her to take a significant amount of medication, and that she sought an alternative that would allow her to reduce consumption of prescription drugs over the long term. Claimant expressed an understanding that SCS would plausibly meet this criterion. Claimant testified that since her date of injury she has been unable to exercise at the level to which she had been accustomed, and that her injury had completely changed her

formerly active lifestyle. The ALJ finds Claimant to be credible, not only in her testimony, but in reporting her symptoms to all medical professionals she has encountered. Claimant has been fully compliant with all recommended treatment, and is not motivated by any secondary gain. In fact, she knows that permanent placement of this device could spell the end of a career she enjoys. Claimant simply wants her pain to be mitigated, and she is psychologically prepared to accept less than perfection. She's had three years of practice at that already.

24. The post-hearing deposition of Dr. Barolat was taken on November 1, 2017 in his capacity as an expert in neurosurgery and the surgeon recommending Claimant receive a trial stimulator. Dr. Barolat testified that the recommended SCS would consist of an operation to install an electrode in Claimant's lower thoracic and upper lumbar spine. (Barolat Depo. P. 10). This electrode would stimulate Claimant's S1-S2 nerve root. *Id*. If the trial stimulator was to remove as much as half of Claimant's reported pain, the trial would be considered a success and Dr. Barolat would install a device similar to a pacemaker allowing the stimulator to be fully contained within Claimant's body. *Id*.

25. Dr. Barolat testified that this procedure did carry with it risks and potential drawbacks. *Id*. As the surgery would implicate Claimant's spinal column, the procedure would come with the possibility of permanent paralysis, as well as infection and pain associated with the procedure. *Id*. at 12-13. However, Dr. Barolat testified that in his practice no patient had suffered these effects after the procedure was performed. *Id*. at 14. Dr. Barolat was confident that, given Claimant's condition, the benefits of the procedure strongly outweighed the risks. *Id*. He emphasized that Claimant's condition is one that would typically make her a prime candidate for a trial stimulator. *Id*. at 16.

26. When asked about Dr. Olsen's opinion that Claimant did not present the necessary neurologic symptoms to make her a candidate for SCS, Dr. Barolat strongly disagreed. *Id*. at 17. Dr. Barolat testified that Claimant's chronic burning pain along the distribution of the S1 and S2 nerve roots clearly indicated radiculitis, which he defined as neuropathic damage to the nerve root. *Id*. at 18. When asked about Dr. Olsen's opinion that Claimant's complaints stem from a mechanical rather than neuropathic issue, Dr. Barolat testified that the ineffective injection Claimant received in the SI joint ruled out a mechanical issue as the primary cause of her reported symptoms, although he conceded that the SI joint could also constitute a lesser, contributing source of pain. *Id*. Additionally, Dr. Barolat noted that Claimant was examined by two spine surgeons, neither of whom recommended a spinal surgery to correct a mechanical issue in the lumbar spine. *Id*. at 19. Rather, Dr. Barolat described Claimant's stated complaints as stemming from nerve damage. *Id.* Dr. Barolat concluded that, based on Claimant's subjective complaints and the lack of positive effect obtained by her prior treatment, Claimant would benefit strongly from a trial stimulator.

27. The post-hearing deposition of Nicholas Olsen, D.O. was taken on November 13, 2017, in his capacity as an expert in physical medicine and rehabilitation. (Olsen Depo. pp. 1-35). Dr. Olsen commented on Dr. Barolat's recommendation that Claimant receive a trial stimulator. In regard to the Claimant's symptoms, he stated:

> The pain Ms. Thrumston documents, she draws a circle around her right buttock, which we consider the piriformis/SI joint area and into the posterior thigh. And there are no symptoms starting below the knee to the lateral foot. The S1 nerve root emerges in the lateral calf and out of the foot. And there is no indication of any pain, numbness, or tingling, or any other symptoms in the right calf or foot.

28. Rather, Dr. Olson attributed Claimant's complaints to a mechanical issue rooted in the SI joint. *Id*. at 20-21. Dr. Olsen noted the potential drawbacks involved in implanting SCS, as well as what he defined as the lack of a clearly defined pain generator in Claimant's case. *Id*. at 23-26. He ultimately concluded that SCS would not be considered reasonable treatment in Claimant's case. *Id*. at 30-31.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

A. The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. § 8-40-101, *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1).

B. The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. *Section 8-43-201*, *supra*. A Workers' Compensation case is decided on its merits. *Section 8-43-201, supra*.

C. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16.

D. Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. *C.R.S. Section 8-42-101.* The right to workers' compensation benefits, including medical benefits, however, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment is proximately caused by an injury arising out of an in the course of employment. *C.R.S. Section 8-41-301(1)(c); Faulkner v. Industrial Claim Appeals Office, 12 P.3rd 844 (Colo. App. 2000).* In addition, Respondents are free to challenge the reasonableness and necessity of current or newly requested treatment notwithstanding its position regarding previous medical care on a case. *See Kroupa v.*

Industrial Claim Appeals Office, 53 P.3rd 192 (Colo. App. 2002). The question of whether a particular medical treatment is reasonable and necessary and/or related to the claim is one of fact for determination from the ALJ. Id.; *Walmart Stores Inc. v. Industrial Claim Appeals Office, 989 P.2d 251 (Colo. App. 1999).* Claimant continues to bear the burden to prove her right to specific medical benefits. *HLJ Management Group, Inc. v. Kim, 804 P.2d 250 (Colo. App. 1990).*

E. Pursuant to *W.C. Rule of Procedure 17-2 (A), 7 Code Colo. Regs. 1101-3,* health care practitioners are to use the Medical Treatment Guidelines referenced as Exhibits at W.C. Rule of Procedure 17-7, 7 Code Colo. Regs. 1101-3 (the "Medical Treatment Guidelines") when furnishing medical aid under the Workers' Compensation Act. The ALJ may also appropriately consider the Medical Treatment Guidelines as an evidentiary tool. *Logiudice v. Siemans Westinghouse,* W.C. 4-665-873 (ICAO January 25, 2011). However the ALJ is not required to grant or deny medical benefits based upon the Medical Treatment Guidelines. *Thomas v. Four Corners Health Care,* W.C. 4-484-220 (ICAO April 27, 2009). The Medical Treatment Guidelines are not definitive, but merely guidelines, and the ALJ has the discretion to make findings and orders which follow or deviate from the Medical Treatment Guidelines depending upon the evidence presented in a particular case. *Jones v. T.T.C. Illinois, Inc.,* W.C. 4-503-150 (ICAO May 5, 2006), *aff'd Jones v. Industrial Claims Appeals Office,* N. 06CA1053 (Colo. App. March 1, 2007)(not selected for official publication); *Nunn v. United Airlines,* W.C. 4-785-790 (ICAO September 9, 2011).

F. While the Medical Treatment Guidelines do call for failed lumbar surgical intervention prior to implantation of a neurostimulator under *Rule 17-7, Exhibit 1,* Claimant received such a surgical intervention in 2003 when she underwent an L5-S1 spinal fusion. Several surgeons have examined Claimant and identified no surgical procedure, with the exception of SCS, that would be effective in controlling her symptoms. While *Rule 17-7, Exhibit 9* warns that *permanent* implantation is suitable solely for "patients [who] meet all of the indications," Dr. Barolat and Dr. Castrejon testified that Claimant would absolutely not receive a permanent neurostimulator unless she saw a marked decrease in her pain symptoms, hopefully by as much as half, during the trial period.

G. Dr. Olson repeatedly emphasizes that there is not sufficient objective evidence of a lesion that is a specific pain generator. While he opines on several occasions to point out the insufficiency of evidence for an *S1 or S2* radiculopathy, on others occasions he opines that he believes it is a mechanical issue, to the *exclusion of a radicular pathology altogether.* The ALJ is not persuaded by Dr. Olson. The records are replete with references, by most of Claimant's attending physicians, to radicular symptoms, going all the way into Claimant's foot. On one occasion, her foot was so numb she fell down some stairs. There is no other explanation for this numbness. On two discrete occasions-almost two years apart-Claimant reported to Dr. Olson pain centered on her buttock region. This is not surprising. Claimant's symptoms vary in intensity from day to day, and vary with her activity level. The precise location of her symptoms has been a moving target. She just reports what she feels when asked on the day in question. The truth is that the pain comes and goes- but mostly it stays-and it

has wreaked havoc. This has confounded her providers at times, who have nobly sought the least invasive alternatives, but to no avail. The ALJ finds more persuasive Dr. Castrejon's explanation at his deposition, to wit: neuropathic pain is a process that is hard to define; while it may not lend itself well to pigeonholing, it has not made itself any less real to Detective Thrumston for over three years.

H. The Guidelines are, as indicated by their title, meant to guide treatment of patients and not dictate their care to the letter. *See Jones, supra.* The medical record shows clearly that Claimant has tried and failed conservative treatment over several years, and her authorized treating physician has indicated that further conservative treatment is highly unlikely to improve her condition. A very experienced neurosurgeon has concluded that SCS will likely result in a significant decrease in Claimant's symptoms over the long term. While the Guidelines recommend caution with respect to SCS, upwards of eight physicians have examined Claimant, and all but Dr. Olsen have concluded that Claimant would benefit from SCS. The DIME physician did not render an opinion specific to this device. Those doctors who treated her have all agreed that Claimant is a prime candidate for SCS, and by a preponderance of the evidence, the ALJ agrees with their conclusion. The ALJ concludes that the proposed trial stimulator is reasonable and necessary to address Claimant's ongoing radicular symptomology.

ORDER

It is therefore ordered that:

1. Respondents shall pay for the trial spinal cord stimulator as recommended by Dr. Barolat.

2. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 2, 2018

Colorado Springs, Colorado 80906

ISSUES

I. Whether Claimant as proven by the preponderance of the evidence that he sustained a compensable injury to his low back and lumbar spine arising out of, and in the course and scope of, his employment with Respondent sometime in May or June of 2016.

II. Whether, if the Court concludes claimant has proven that he did sustain a compensable injury, Claimant has proven by a preponderance of the evidence that the need for medical benefits directed to his low back and lumbar spine, are causally related to, and authorized for, this injury.

III. Whether, if the ALJ concludes that Claimant has proven that he did sustain a compensable injury, neurosurgeon Todd Thompson is an authorized treating physician.

IV. Whether, if the Court concludes claimant has proven that he sustained a compensable injury arising out of the in the course and scope of his employment with King Soopers in May or June of 2016, Claimant has proven he is entitled to temporary total disability ("TTD") benefits beginning when Claimant first missed time from work after he had surgery on August 19, 2016, or if those TTD benefits are barred with Claimant's release to full duty given by his medical provider on August 17, 2016;

V. Whether, if the Court concludes Claimant has proven that he sustained a compensable injury arising out of the in the course and scope of his employment with King Soopers in May or June of 2016, Claimant should be penalized the amount equal to one day's temporary total disability payment for each day he failed to report this alleged injury to King Soopers pursuant to C.R.S. § 8-43.102 (1.5) (a), beginning June 22, 2016, and ending July 21, 2016; and

VI. What is Claimant's Average Weekly Wage.

STIPULATIONS

1. Respondent reserved the Workers' Compensation medical fee schedule to apply to any medical benefit awarded or ordered; and

2. The parties reserved the issue of offsets for future determination if necessary.

These stipulations were accepted by the Court.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following Findings of Fact:

1. Claimant was working as a meat cutter in the King Soopers meat department sometime in May or June of 2016 when he was using hand Jack to unload pallets from a semi-truck. Claimant does not remember the exact date of the injury. Unloading semi-trucks is a frequent occurrence at work. Claimant does recall an evening where Claimant was unloading the semi-truck as usual. He was using a hand-jack, as opposed to the motorized jack, to move pallets of food products. In order to get heavy pallets moving, Claimant sometimes had to lean away from the pallet, which was loaded onto the pallet jack, and give a strong yank to get the pallet jack rolling. Pallets would be filled with various items, such as dairy, meat, or flowers, and would have to be delivered to its specific department. Occasionally there was only one person unloading the truck, but usually there were at least couple of employees, sometimes more.

2. On the night of the alleged injury, Claimant was unloading a pallet of chicken. Claimant was moving pallets with the hand Jack when he began to feel cramps and stiffness in both legs, but primarily the right. When he returned to the meat department he began feeling specific cramping in his legs so he sat down to relax and massage them for a minute. He subsequently returned and finished unloading the semi-truck.

3. Once the semi-truck was unloaded Claimant returned to the meat department and "broke down" the pallet. He had to separate products, such as chicken, red meat, or product that needed to be prepared for the next morning. As Claimant continued this process his legs began to “really cramp up.” The cramping began in the back of Claimants upper thighs, just below his gluteus muscles. Before he left work they were significantly tighter with continued cramping. Claimant did not report an injury before he left work because he felt he just had a “Charlie horse” in both legs. By the time Claimant got home the he developed some numbness in his right leg and the cramping extended to the bottom of his legs, as well as the front and sides. His right foot got tight to the point where he had to push it against a wall to return his foot to a normal position. At this point time Claimant did not have any back pain.

4. The next day Claimant worked his normal shift in job duties. His legs were tight with some cramping, but not as bad as the previous evening. Claimant testified at hearing that he had felt cramping in his legs before the evening in question, but the cramping he experienced on this occasion was of a different character and intensity. He testified he would address those cramps with rest and stretching, the same methods he employed after this alleged injury occurred.

5. Claimant testified at hearing that does not know what date he was allegedly injured in this claim. As he and Mr. Milligan testified at hearing, when claimant first informed King Soopers of this alleged claim on July 21, 2016, claimant said he did not know what day the alleged injurious traumatic event occurred. It could have been in May or June. Mr. Milligan testified that claimant did not know when he was injured, and

claimant selected June 22, 2016, not because he recalled that date but because his best guess at that meeting with Mr. Milligan was that his symptoms had been present for a month. Claimant appeared at King Soopers to report this incident right after he had left from an emergency visit at Memorial Hospital, where it was recommended he undergo emergency surgery on his lower lumbar region.

6. Claimant testified that he felt tightness in his thighs and the back of both his right and left legs going down to his knees after pulling this manual pallet jack loaded with boxes of frozen chicken from the loading area of the store to the meat department, and that those symptoms of tightness increased as he unpacked the boxes from the pallet in the meat department. He testified that he did this work regularly as a part of his job at employer's store, and had done so since he was hired in 2009. He was accustomed to this job task. Claimant testified that his symptoms were only in his lower extremities, and not his lower back. He did not trip, stumble, twist, fall, or do anything out of the ordinary other than pull the pallet jack when the symptoms first arose. There were no impediments to the pallet jack's movement beyond the weight of the product, and he pulled the pallet jack as he always did without anything unusual occurring as he traveled through the store with the pallet jack.

7. Claimant testified that once the jack was moving it would move with minimal effort or force. Claimant testified that these symptoms went away after they arose, would come back "a little bit" claimant testified, and went away again the rest of his shift. He worked the rest of his scheduled shift doing all his usual job tasks, and went home without significant symptoms. He took a shower at home, went to bed, and testified that then he felt cramps again in his right and left legs while resting at home that night. Claimant testified that cramps were around his entire right and left legs and into his feet. Claimant was able to stretch his legs to alleviate those cramps and the cramps disappeared.

8. Claimant had no significant symptoms in his low back or lumbar spine regions at any time on the alleged date of injury, while he was at his home that evening, or in the days following the alleged date of injury. He testified he had no back pain.

9. Claimant testified that he was able to alleviate these cramps in his right and left legs in the days after his alleged injury date. He worked full duty, without any limitations or lost time, and he did not discuss these cramps with anyone working at or for King Soopers at any time before July 21, 2016.

10. On June 22, 2016, Claimant received a comprehensive examination and evaluation at the Veteran's Administration Clinic for disability benefits (Resp. Ex. B, pgs. 35-54). There is no mention of this alleged injury, leg cramping, leg symptoms, low back symptoms, lumbar spine problems, or any other condition or symptoms allegedly related to this claim's injury in this thorough exam and history done at this appointment.

11. Claimant testified that when his legs' symptoms of tightness and cramping did not dissipate, he decided to see a chiropractor on his own volition on July 20, 2016.

Claimant testified that the chiropractor referred him to an emergency room for further evaluation. Claimant presented to the Memorial Hospital emergency room on July 20, 2016. He testified, and the medical records reveal, that he had no symptoms in his lower back or lumbar spine when he was examined in the emergency room on July 20, 2016. To discover the cause of claimant's bilateral lower extremity symptoms, a lumbar spine MRI was done. No acute findings were noted in the MRI.

12. Claimant also testified that he sometimes suffers from PTSD, and sometimes has issues with memory and recall. The ALJ finds Claimant to have been *sincere* and *consistent* in his reporting of his symptoms to his employer and medical providers, as well as during his testimony in court. Claimant did not exaggerate or embellish the events he describes in pulling the heavy manual pallet jack.

13. At one point in time he sought treatment with the Veterans' Administration, where he was instructed to take vitamin D and calcium for the leg cramps. Claimant's wife recommended he see a chiropractor. On July 20, 2016 Claimant went to a chiropractor who refused to treat him because of his foot drop and referred Claimant to the emergency room.

14. On July 20, 2016 Claimant went to the emergency room at Memorial Hospital in Colorado Springs. He was given an MRI, which reflected a herniation of right side of L4–L5 intervertebral disc, weakness of right foot, acute back pain and elevated blood pressure. Claimant was referred to neurosurgeon Todd Thompson and given an appointment for July 21, 2016 at 1:00 PM. (Claimant's Ex. 2, p. 37).

15. The history recorded by the emergency department physician, Christopher A Souder, M.D., states:

> "This patient presents emergency department with ongoing right back pain radiating down his right leg. It is 7 out of 10 intensity. He does not when he pain medication [sic]. "He states it's been there since he strained his back and right leg while moving and lifting a pallet for work about a month ago. He has not sought medical attention yet for this. He reports that initially he had numbness of the right leg. That since resolved has recurred a few times ever since. He has no numbness now. He states his right leg is becoming progressively weaker. He is having difficulty lifting of his foot when he walks. He's had no incontinence of stool or urine. He denies fever. He denies direct trauma or fall. The pain is worse with certain movements. He states when the pain is really bad in his right leg his right calf swells up." (Claimant's Exhibit 2, p. 43).

Because Claimant was released from the emergency department sometime after midnight, he reported the injury to his assistant store manager, Patrick Milligan, on July 21, 2016.

16. Claimant was given a list of designated providers. He selected and treated with Concentra Medical Center on S. Academy Blvd. in Colorado Springs. However, prior to his appointment with physician's assistant Kenneth Ginsberg, Claimant was

evaluated by neurosurgeon Dr. Todd Thompson at 12:45 PM on July 21, 2016. Dr. Thompson's notes reflect that Claimant has had pain in his right leg since "May of this year". (Claimant's Ex. 5, p. 72). The history was recorded as:

> "He has had pain in his right leg since May of this year. He works at King Soopers in the meat department. He pushes a heavy pallet of supplies regularly and unloads it. One day in May, he was doing this and felt an unusual pain in his right leg. That evening he had some cramps in his right leg. Since that time, he has had right-sided sciatica. He describes a foot drop when he walks. Yesterday, he felt that his weakness was getting worse so he presented to the emergency department. He had tried calling the VA several different times and they gave him numerous recommendations from changing his diet to taking calcium, to calling an ambulance with the belief that he was having a heart attack." (Claimant's Ex. 5, p. 72).

17. Dr. Thompson diagnosed radiculopathy, lumbar region and lumbar disc herniation. He noted that Claimant has right-sided sciatica with a partial foot drop, due to a lateral disc herniation at L4-5. The disc herniation at L5–S1 may be partly contributory. Claimant was given the option of surgery. (Claimant's Ex. 5, p. 71).

18. On that same day, July 21, 2016 Claimant went to the first visit with the authorized treating provider at Concentra, physician's assistant Ginsberg. The same history is reported by Mr. Ginsberg that is recorded in the emergency department notes and Dr. Thompson's notes.

19. Concentra medical records reflect: "Truck unloader stocker for meat department at King Soopers for 7 years states that sometime towards the end of May of this year he was pulling a pallet with the pallet jack off of the truck and had some discomfort to his right leg but finished his shift. That evening he had much pain in this leg radiating all the way to down to his toes which he attributed to having a leg cramp. He continued to work, but would get bilateral leg cramps every evening, right greater than left. Then, yesterday, the pain became severe to his low back and both legs, right greater than left so he went to the emergency room… Today he states that his symptoms are improving, he can now raise his right foot partially. He denies any prior back problems." (Claimant's Ex.1, p. 1).

20. During this first visit to Concentra Claimant also completed a "Front Office Symptom Screening Questionnaire." Claimant wrote that he was "at work" when the injury occurred. He further stated, "unloading semi-trailer pulling a full pallet of chicken off trailer through back rooms into meat department staging area." He described the injury as "cramps numbness hip and right upper leg down to foot." (Claimant's Ex. 1, p. 12).

21. When Claimant was treated at Concentra medical centers on July 21, 2016 he was given restrictions and referred to Dr. Shimon Blau with an appointment date of August 1, 2016. (Claimant's Ex. 1, pp. 3, 7, 8). Claimant has not returned to work since that time.

22. On August 1, 2016 Claimant was evaluated by Dr. Blau, who is a physiatrist. The same history is noted in the medical records. “The patient states that a few weeks prior to this, he started feeling cramping in the back of his right lower extremity after pulling a pallet of chicken. He went home and had an increase in the cramping, it also started affecting both legs. This lasted for about 20 to 30 minutes. He was out of work for a few days and had no further pain symptoms. However, he started working again and started having ongoing cramping in his legs for several weeks. He thinks that this may have started about a month before his case date.” (Claimant’s Exhibit 6, page 85). Dr. Blau recommended that Claimant undergo surgery as soon as possible given the severity of his symptoms and the right foot drop. (Claimant’s Ex. 6 at p. 86).

23. Claimant was seen for a follow-up visit with physician’s assistant Ginsberg on August 17, 2016. Under “Plan,” Claimant was “advised to see primary provider or go to emergency room right away for further evaluation and treatment.” (Claimant’s Exhibit 1 at page 33). Dr. Randall Jones, a physician at the South Academy Concentra Medical Center completed a WC164 on August 20, 2016. On that form Dr. Jones noted “released from care, denied by workers compensation carrier, further treatment and work restrictions per primary or treating provider.” (Claimant’s Ex. 1, p. 36). Claimant was released from care for nonmedical reasons.

24. Claimant underwent surgery on August 20, 2016 with Dr. Todd Thompson. (Claimant’s Ex. 5, pp. 82–84). As noted, Claimant has not returned to work since that time.

25. Henry Roth, M.D. performed an independent medical examination ("IME") at the request of Respondent's. Dr. Roth is the only medical provider who has reviewed and considered all of Claimant’s medical records, examined claimant, and taken claimant’s medical history with the specific goal of addressing the causation and relatedness of claimant’s alleged lumbar spine injury to this claim’s allegedly injurious event of pulling a pallet jack from May or June of 2016. Dr. Roth stated it is very significant that claimant appreciated only lower extremity symptoms in the weeks after the claim’s injury as that is entirely consistent with and proof of a degenerative condition in claimant’s lumbar spine, and not any traumatic injury. Had claimant sustained an *injury* to his lumbar spine while pulling the pallet jack, he would have felt pain and symptoms in his lumbar spine/lower back region. Claimant is older, and at an age when symptoms for this degenerative process claimant might be expected to arise.

26. As Claimant testified, he had no low back symptoms at the time of or in the weeks after this claim’s alleged injury event. Dr. Roth further testified that the fact claimant’s symptoms were simultaneously in both his lower extremities, were appreciated to be cramping by Claimant, and that his symptoms involved his entire lower extremities, is more consistent with spinal stenosis than the herniated disc.

27. Claimant's lumbar MRI on July 20, 2016, showed no traumatic injury signs, findings, or conditions attributable to a traumatic event. Instead, it showed an entirely degenerative condition and disease process. There was no acute condition or

injury revealed by the MRI. This MRI, Dr. Roth stated, would likely have been exactly the same had it been taken on May 1, 2016, before claimant's report of symptoms. Dr. Roth wrote in his report that Claimant only related his symptoms in his legs to this alleged injury after he because his lower extremity symptoms were emanating from his lumbar spine on July 20, 2016, when he was evaluated at Memorial Hospital. Dr. Roth stated in his report:

> In my opinion, the history provided [by Claimant] is not that of a specific injury occurring at a specific time and place at work. Rather, the history is that Mr. Rucker reports he had the onset of discomfort while engaged in his ordinary work related material handling. There was no specific work incident or event….
>
> The MRI findings noted on 7/20/16 are ordinary degenerative changes. I agree that the degenerative findings are likley causal of his lower extremety symptoms. MRI's of ths degree occur in asymptomatic persons as well. (Resp. Ex A, p. 6)

28. There was, as Dr. Roth testified, no injurious event that gave rise to Claimant's symptoms. Claimant symptoms are consistent with the spontaneous onset of symptomatic spinal stenosis. They could well have arisen when they did, how they did, whether or not Claimant had been working or pulling the pallet jack. This claim's symptoms involve only a degenerative, non-industrial disease process.

29. Also noted in Dr. Roth's report is a detailed timeline of Claimant's medical history. On 3/16/16, weeks before this reported injury, VA records reveal that Claimant was suffering from depression to include:

> …negative mood, discourage (sic.) thinking, irritability, sleep problems, lowered motivation and decreased interest.
> Goal of treatment is to……make healthy interpretations of events and set realistic expectations. (Resp. Ex A, p. 10)

An entry from 5/4/16 notes:

Depressive disorder. Alcohol abuse and remission. Hypertension. Hyperlipidemia. OCCUPATIONAL STRESS (Resp. Ex A, p. 10) (emphasis not added).

Dr. Roth's report mentions that he "Strongly suspects psychological factors affecting physical condition. Clinical presentation is atypical. MRI pathology is not explaining symptoms distribution. (Resp. Ex. A, p. 6).

30. While the ALJ finds Claimant to be *sincere* and *consistent*, that does not render him entirely *credible*, nor can *causation* be inferred from the events as Claimant describes.

31. The ALJ finds that the opinions of Dr. Roth are credible and persuasive. There is no sufficient evidence to rebut or refute his opinions that the cause of claimant's symptoms and need for medical treatment including surgery is not causally related to the alleged incident in this claim. Claimant sustained no *injury* to his low back or lumbar spine when he pulled the pallet jack in May or June of 2016.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Generally

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. § 8-40-102(1), C.R.S.

2. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved. The ALJ need not address every piece of evidence or every inference that might lead to conflicting conclusions. Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, 5 P. 3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things: the consistency or inconsistency of a witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. Prudential Insurance Co. v. Cline, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

4. Where a party presents expert opinions, the weight, and credibility, of the opinions are matters exclusively within the discretion of the ALJ as the fact-finder. Cordova v. Industrial Claim Appeals Office, P.3d (Colo. App. No. 01CA0852, February 28, 2002); Rockwell International v. Turnbull, 802 P.2d 1182 (Colo. App. 1990). To the extent that expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. Colorado Springs Motors, Ltd. v. Industrial Commission, 441, P.2d 21 (Colo. 1968).

Compensability

5. "Claimant in a workers' compensation claim shall have the burden of proving entitlement to benefits by a preponderance of the evidence; the facts in a workers' compensation case shall not be interpreted liberally in favor of either the rights of the injured worker or the rights of the employer; and a workers' compensation case shall be decided on its merits." Qual-Med, Inc. v. Industrial Claim Appeals Office, 961 P.2d 590, 592 (Colo. App. 1998) ("Claimant has the burden of proving an entitlement to benefits by a preponderance of the evidence."); Lerner v. Wal-Mart Stores, Inc., 865

P.2d 915, 918 (Colo. App. 1993) (“The burden is on the claimant to prove his entitlement to benefits by a preponderance of the evidence.”). Proof by a preponderance of the evidence requires claimant to establish that the existence of a contested fact is more probable than its nonexistence. Hoster v. Weld County Bi-Products, Inc., W.C. No. 4-483-341 (ICAO March 20, 2002).

6. The phrases "arising out of” and "in the course of" are not synonymous and claimant must meet both requirements for the injury to be compensable. Younger v. City and County of Denver, 810 P.2d 647, 649 (Colo. 1991); In re Question Submitted by U.S. Court of Appeals, 759 P.2d 17, 20 (Colo. 1988). The latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. Popovich v. Irlando, 811 P.2d 379, 381 (Colo. 1991). An injury occurs "in the course of" employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co., 38 Colo. App. 48, 51, 552 P.2d 1033, 1036 (1976). In this regard, there is no presumption that injuries which occur in the course of a worker's employment arise out of the employment. Finn v. Industrial Commission, 165 Colo. 106, 437 P.2d 542 (1968); *see also*, Industrial Commission v. London & Lancashire Indemnity Co., 135 Colo. 372, 311 P.2d 705 (1957).

7. Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. C.R.S. § 8-41-301(1) (c); Faulkner v. ICAO, 12 P.3d 844 (Colo. App. 2000). In other words, claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. Wal-Mart Stores v. Industrial Claim Appeals Office, 989 P.2d 521 (Colo. App. 1999); Snyder v. Industrial Claim Appeals Office, 942 P.2d 1337 (Colo. App. 1997).

8. A compensable industrial accident is one which results in an injury requiring medical treatment or causing disability. H & H Warehouse v. Vicory, 805 P.2d 1167, 1169 (Colo. App. 1990). To satisfy her burden of proof on compensability, claimant must prove that the industrial accident is the proximate cause of claimant's need for medical treatment or disability. § 8-41-301 (1) (c), C.R.S. An industrial accident is the proximate cause of a claimant's disability if it is the necessary precondition or trigger of the need for medical treatment. Subsequent Injury Fund v. State Compensation Insurance Authority, 768 P.2d 751 (Colo. App. 1988) The question of whether claimant had proven a causal relationship between employment and the alleged injury or disease is one of fact for determination of the ALJ. City of Durango v. Dunagan, 939 P.2d 496 (Colo. App. 1997); Metro Moving & Storage v. Gussert, 914 P.2d 411 (Colo. App. 1995)

9. The "arising out of" test is one of causation. It requires that the injury have its origins in an employee's work related functions, and be sufficiently related thereto so as to be considered part of the employee's service to the employer. Horodyskyj v. Karanian, 32 P.3d 470, 475 (Colo. 2001). The fact that Claimant may have experienced an onset of pain or symptoms while or shortly after performing job duties does not mean

he sustained a work-related injury. An incident which merely elicits symptoms without a causal connection to the industrial activities does not compel a finding that the claim is compensable. F.R. Orr Construction v. Rinta, 717 P.2d 965 (Colo. App. 1985); Parra v. Ideal Concrete, W.C. No. 3-963-659 and 4-179-455 (April 8, 1988); Barba v. RE1J School District, W.C. No. 3-038-941 (June 28, 1991); Hoffman v. Climax Molybdenum Company, W.C. No. 3-850-024 (December 14, 1989).

10. Under the Act, there is a distinction between the terms "accident" and "injury". An "accident" is defined under the Act as an "unforeseen event occurring without the will or design of the person whose mere act causes it; an unexpected, unusual or undersigned occurrence." § 8-40-201(1), C.R.S. In contrast, an "injury" refers to the physical trauma caused by the accident. City of Boulder v. Payne, 162 Colo. 345, 426 P.2d 194 (1967); see also, § 8-40-201 (2) (injury includes disability resulting from accident). Consequently, a "compensable injury" is one which requires medical treatment or causes disability. Id.; Romero v. Industrial Commission, 632 P.2d 1052 (Colo. App. 1981); Aragon v. CHIMR, et al., W.C. No. 4-543-782 (ICAO, Sept. 24, 2004); H & H Warehouse v. Vicory, 805 P.2d 1167, 1169 (Colo. App. 1990). No benefits flow to the victim of an industrial accident unless the accident results in a compensable "injury." Romero, supra; § 8-41-301, C.R.S.

11. Given the distinction between the terms "accident" and "injury" an employee can experience symptoms, including pain during, or from an event or incident, at work without sustaining a compensable "injury." As explained in Scully v. Hooters of Colorado Springs, W.C. No. 4-745-712 (October 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in Scully noted, "[C]orrelation is not causation." Thus, merely because there may be a coincidental correlation between claimant's work activities and his bilateral leg symptoms exists in this case does not mean there is a causal connection between claimant's alleged injury and his work duties.

12. The ALJ concludes that the fact Claimant's symptoms arose while working is not dispositive. As Dr. Roth explained credibly, Claimant's symptoms are the result of a degenerative process that was ongoing. The symptoms he experienced in May or June of 2016 while pulling this pallet jack were likely to arise as the inevitable outcome of that disease process. The fact that the symptoms arose at work is coincidental only, and does not prove a compensable injury occurred in this claim. The ALJ concludes that the symptoms Claimant experienced while pulling this pallet jack are not the result of any work-related *injury* or *incident.* The ALJ concludes Claimant's lumbar spine and low back pathology did not arise out of or in the course and scope of his employment with Respondent on June 22, 2016, or any other time surrounding it.

13. Because this claim is not compensable, the issues of medical benefits, authorized treating provider, temporary total disability, penalties, and average weekly wage are not addressed further.

ORDER

It is therefore ordered that:

1. Claimant has not proven a compensable claim. His claim for Workers Compensation benefits is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 4-744-551-06

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

SELF-INSURED,

Self-Insured Respondent.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on March 23, 2017, in Denver, Colorado. The hearing was digitally recorded (reference: 3/23/17, Courtroom 1, beginning at 1:30 PM, and ending at 2:45 PM).

Claimant's Exhibits 1 through 7 were admitted into evidence, without objection. Respondents' Exhibits A through L were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ established a post-hearing briefing schedule. Before the Claimant's opening brief was due, the ALJ informed the parties that briefs need not be filed and that the ALJ decided to take the matter under advisement and issue the following decision.

ISSUE

The issue to be determined by this decision concerns whether surgery recommended by Mark Conklin, M.D. (a Division of Workers' Compensation (DOWC) Level 2 Accredited Physician, limited in Orthopedics and Lower Extremity Only), for the Claimant's increasing left foot pain, hammertoes, other diagnoses of the Claimant's left

foot, including fusion of the great toes MTP joint of the left foot, including reconstruction of the angular deformity of the toes of the Claimant's left foot and a lengthening/shortening of the tendons, is causally related to an aggravation/acceleration of the Claimant's admitted low back injury of November 21, 2007, and reasonably necessary to cure and relieve the proximate effects of that injury.

The Claimant bears the burden of proof, by a preponderance of the evidence on the designated issue and on collateral issues relative thereto.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

i. The Respondent filed a Final Admission of Liability (FAL), dated September 11, 2011, ultimately admitting for a date of maximum medical improvement (MMI) of June 1, 2011; permanent medical impairment (PPD) of 28% whole person for the Claimant's low back injury of November 21, 2007; and post-MMI medical maintenance benefits.

ALJ Krumreich Decision of 2010

ii. ALJ Ted A. Krumreich, on January 19, 2010, issued the following decision (Claimant's Exhibit 4), which was not appealed, with the following Findings of Fact relevant to the Claimant's bilateral foot condition:

1. Claimant was employed as an aircraft mechanic for Employer. Claimant had been employed by Employer for 19 years as of the time of her injury on November 21, 2007.

2. Claimant sustained an admitted injury to her low back on November 21, 2007. On that date, Claimant was working to repair a seat in an airplane and became caught up in the framework of the seat while working underneath the seat. As Claimant twisted to remove herself, she felt a sharp pain in her low back.

3. Following her injury, Claimant was referred to Concentra Medical Center for treatment. Dr. Darrell Quick, M.D. of Concentra assumed Claimant's care beginning February 6, 2008 and became an authorized treating physician. Dr. Quick referred Claimant to Dr. Robert Kawasaki, M.D., a physical medicine and rehabilitation physician, and to Dr. Brian Reiss, M.D., an orthopedic surgeon.

4. Dr. Reiss performed surgery on Claimant on June 9, 2008 consisting of discectomy and fusion from L4 to L5-S1. Prior to that surgery, Dr. Kawasaki on January 28, 2008 had noted that Claimant had "somewhat of a right foot slap". (Dr. Jacobs' report, Exhibit 11, page four).

5. **Following surgery, Dr. Kawasaki noted on October 16, 2008 that Claimant ambulated with evidence of a foot drop and a steppage type gait pattern with significant foot slap. On November 14, 2008 Dr. Kawasaki noted that Claimant continued with foot slap and occasional toe drag and that she "occasionally trips on her toes" (Dr. Jacobs' report, Exhibit 11, page six)** (emphasis supplied).

6. Prior to her injury on November 21, 2007 Claimant had developed a left foot drop condition as the result of several surgeries on her left lower leg. Claimant did not have a right foot drop condition prior to the injury of November 21, 2007. **Prior to the injury of November 21, 2007 Claimant was not on any work restrictions for her left foot drop condition and did not have problems with walking or stumbling while walking** (emphasis supplied)**.**

7. Claimant's right foot drop condition prevents her from lifting the toes of her right foot and lifting her foot at the ankle. Claimant has weakness in the muscles of the right foot and ankle and loses her balance as a result. Claimant will catch her feet on the floor because of her abnormal gait. Claimant did not have any problems with her balance or with abnormal gait prior the injury of November 21, 2007.

8. On December 24, 2008 Claimant was at home and was walking from the family room area to the kitchen. While walking, Claimant fell because of her inability to pick up her feet due to the foot drop condition. Claimant fell on her outstretched right arm injuring her right shoulder.

9. Claimant was evaluated by Dr. Quick on December 31, 2008. **Dr. Quick noted that Claimant had elements of bilateral ankle weakness and foot drop that had developed since her injury and surgery, with some difficulty with her gait. Dr. Quick further stated that Claimant had developed some progressive foot drop that had been observed by Dr. Kawasaki and himself. Dr. Quick opined, and it is found, that Claimant's symptoms of bilateral foot drop were substantially related to the surgery for Claimant's compensable low back injury** (emphasis supplied).

10. Dr. Quick again evaluated Claimant on January 14, 2009 and noted a history that she had fallen and injured her right shoulder 2 –3 weeks ago.

11. Claimant was evaluated by her primary care physician, Dr. Jennifer Mix, D.O. on January 16, 2009. Dr. Mix obtained a history that Claimant had fallen on her outstretched right arm on Christmas Eve and now had shoulder pain. Dr. Mix further

noted that Claimant had drop foot bilaterally and at times has difficulty walking. Dr. Mix suspected a Grade 2 injury of the right shoulder and referred Claimant for an MRI.

12. Claimant was re-evaluated by Dr. Reiss on February 6, 2009. Dr. Reiss noted that Claimant had dropped foot bilaterally with inability to raise her foot against gravity. Dr. Reiss obtained a history that because of her dropped foot Claimant had tripped over her foot and hit her shoulder and that Claimant questioned if this was related to her work injury due to the fact that her fall was caused by her foot being weak.

13. [Omitted as not relevant to bilateral foot condition].

14. Claimant underwent a Division-sponsored independent medical examination [DIME] with Dr. Matthew Brodie, M.D. on July 16, 2009. Dr. Brodie noted on physical examination that Claimant had a substantial gait disorder with difficulty standing, walking and that Claimant stumbles when she walks. Dr. Brodie further noted that Claimant had substantial drop foot bilaterally and cannot actively extend her ankles or her great toes against gravity. Dr. Brodie noted Claimant's right shoulder problem but did not provide an opinion on its causal relationship to the admitted low back injury. Dr. Brodie noted that Claimant had constant right shoulder symptoms with worsening pain with movement of the shoulder [Dr. Brodie's DIME was for the purpose of determining permanent medical impairment (PPD) and maximum medical improvement (MMI) and as herein below argued, the Respondent contends that Dr. Brodie's determination that the Claimant's foot condition was not causally related to the admitted injury of November 21, 2007 has issue preclusive effect)].

15. At the request of Respondent, Claimant was evaluated by Dr. Alexander Jacobs, M.D. Dr. Jacobs performed a review of medical records provided to him regarding Claimant's work injury and her pre-existing left leg and foot drop conditions. With regard to the pre-existing left leg conditions, Dr. Jacobs stated, and it is found, that "After multiple surgeries, and with the consequent left foot drop, the patient continued to function and to work." Dr. Jacobs did not provide an opinion on whether Claimant's right shoulder injury was caused by a fall due to right foot drop, left foot drop or foot drop at all.

16. The ALJ finds Claimant's testimony, including her testimony regarding the circumstances and cause of her fall on December 24, 2008, to be credible and persuasive. Claimant has proven by a preponderance of the evidence that her fall on December 24, 2008 injuring her right shoulder is causally related to the effects of her admitted compensable low back injury on November 21, 2007 with Employer.

17. The treatment provided by Dr. James P. Lindberg, M.D. from February 9 through May 5, 2009 was reasonable and necessary to treat Claimant's right shoulder injury and Dr. Lindberg is found to be an authorized treating physician.

Recent Procedural History

18. On September 1, 2016, Kristin D. Mason, M.D., the Claimant's authorized treating physician (ATP), among other things, assessed the Claimant with "progressive neuropathic foot deformities causing increasing dysfunctional gait." Thereafter, Dr. Mason referred the Claimant to Dr. Conklin for a surgical evaluation. Dr. Mason is a Level 2 Accredited physician with the Division of Workers' Compensation (DOWC). She made a referral to Dr. Conklin for consideration of surgery for what she considered a work-related condition—not for an opinion on causal relatedness. Indeed, the ALJ infers and finds that Dr. Mason was considering an aggravation/acceleration of the Claimant's left foot condition as work-related. Otherwise, the ALJ draws a plausible inference that Dr. Mason, as a Level 2 Accredited physician, would have advised the Claimant to see her private, healthcare physician. This did not happen. The Claimant remained within the chain of authorized workers' compensation referrals.

19. On November 15, 2016, Mark Conklin, M.D. (a Division of Workers' Compensation (DOWC) Level 2 Accredited Physician, Limited in Orthopedics and Lower Extremity Only, filed a Request for Prior Authorization for the Claimant's increasing left foot pain, hammertoes, other diagnoses of the Claimant's left foot, including fusion of the great toes MTP joint of the left foot, including reconstruction of the angular deformity of the toes of the Claimant's left foot and a lengthening/shortening of the tendons (Claimant's Exhibit 6).. Because Dr. Conklin is Level 2 Accredited by the DOWC, the ALJ infers and finds that he is of the opinion that the need for the recommended surgery is causally related to the admitted injury of November 21, 2007, and reasonably necessary to cure and relieve the effects thereof. It is clear from Dr. Conklin's request for prior authorization (Claimant's Exhibit 6) that he is of the opinion that the need for his recommended left foot surgery is related to the admitted back injury of November 21, 2007 and the proximately related back surgeries that followed over the next few years. Indeed, the ALJ draws a plausible inference and finds that any ancillary surgeries, recommended by Dr. Conklin, are in his opinion causally related to the original back injury of November 21, 2007, and designed to address the Claimant's escalating left foot pain and difficulty walking. The ALJ infers and finds that Dr. Conklin substantially included his reasoning and underlying documentation concerning why the requested surgery was causally related to the Claimant's claim at hand, as required by Rule 16-11, WCRP (Workers' Compensation Rules of Procedure), 7 CCR 12101-3.

20. By letter from Respondent's counsel, dated November 28, 2016, to Dr. Conklin's Office, the request for prior authorization was denied because the Respondent was filing an Application for Hearing to contest Dr. Conklin's recommended surgery as "not causally related" nor "reasonably necessary," and indicating that the Respondent would be seeking an Independent Medical Examination (IME) [Claimant's Exhibit 7], which ultimately occurred on January 6, 2017, and was performed by Alexander H. Zimmer, M.D.

21. The Respondent filed an Application for Hearing on November 28, 2016, designating the issue of whether surgery recommended by Mark Conklin, M.D., for the

Claimant's left foot pain, hammertoes, other diagnoses of the Claimant's left foot, including fusion of the great toes MTP joint of the left foot, including reconstruction of the angular deformity of the toes of the Claimant's left foot and a lengthening/shortening of the tendons, is causally related to the Claimant's admitted low back injury of November 21, 2007, and reasonably necessary to cure and relieve the proximate effects of that injury (Claimant's Exhibit 1)..

22. The Claimant filed a Response to Application for Hearing on December 2, 2016, designating the same issue designated by the Respondent.

23. The matter was heard on March 23, 2017.

Respondent's Independent Medical Examination (IME) by Alexander H. Zimmer, M.D.

24. On January 6, 2017, Dr. Zimmer performed an IME at the Respondent's request. He was of the opinion that the surgery recommended by Dr. Conklin, involving the left foot procedures on all of the toes as well as lengthening the Achilles' tendon "would appear to be reasonable." He was of the opinion, however, that the Claimant's left foot drop was related to an original femur fracture in 1989 and "subsequent complex surgeries to that area at that time." He observed that Matthew Brodie, M.D., documented in his Division Independent medical Examination (DIME) in this case that on September 23 1993, "Dr. Murphy documented past medical history of femur fracture with foot drop and multiple surgical procedures. On July 22, 1997, Dr. Caskey documented that [the Claimant] was unable to wiggle the toes of the left foot….On July 23, 1997, Dr. Passeur documented left foot drop, lack of significant union of the left foot and being unable to stand on her left toes. She was noted in those records to have left hammertoes and bilateral bunions." Dr. Zimmer noted that his examination showed a left foot drop. Dr. Zimmer did not indicate that he had reviewed, or had access to any other medical records for over ten years, from July 23, 1997 through the date of the admitted injury herein, November 21, 2007. He offered no explanation or consideration of the fact that the Claimant was able to work full duty as an aviation mechanic during this period as established by the Claimant's undisputed testimony, and the fact that the Claimant could no longer work as an aviation mechanic after the proximately caused back surgeries.

25. IME Dr. Zimmer was ultimately of the opinion that any left foot surgeries were not causally related to the Claimant's admitted injury of 2007. Dr. Zimmer is of the opinion that none of the Claimant's lower extremity conditions are causally related to the admitted injury of November 21, 2007. He did not persuasively address whether or not the Claimant's back surgeries set in motion a proximate chain of causation that aggravated/accelerated the Claimant's pre-existing left foot condition. Dr. Zimmer's ultimate IME opinion is at odds with the opinions of the Claimant's treating physician,

Dr. Mason, and surgeon, Dr. Conklin. The ALJ makes a rational decision, based on substantial evidence, to resolve this conflict in favor of Dr. Mason, Dr. Conklin, and the Claimant's credible and compelling testimony, which creates a circumstantial before-and-after (the back surgeries) picture of an aggravation/acceleration of the Claimant's left foot condition resulting from the back surgeries necessitated by the original admitted injuries, and not by the 1989 femur fracture and "complex surgeries to that area around 1989 (as is Dr. Zimmer's IME opinion). Dr. Zimmer concedes that the recommended surgery is reasonably necessary.

26. Against a backdrop of the totality of the evidence, the ALJ does **not** find Dr. Zimmer's IME opinion credible or persuasive.

2011 Division Independent Medical Examination by Matthey Brodie, M.D. for the Purpose of Evaluating MMI AND PPD

27. Dr. Brodie performed a follow up DIME on August 1, 2011, and he issued his DIME report on August 21, 2011. The purpose of the Dr. Brodie's DIME was to rate the Claimant's permanent medical impairment and to determine MMI within the confines of the procedures outlined in § 8-42-107 (8), C.R.S., not to render an opinion controlling whether or not the work-related surgeries would cause an aggravation/acceleration of the Claimant's bilateral foot problems. The Respondent filed an FAL, dated September 11, 2011, based on Dr. Brodie's DIME opinion. The FAL admitted for post-MMI medical maintenance benefits. The issue at hand concerns admitted post-MMI maintenance medical benefits. Consequently, there is **not** an identity of issues between Dr. Brodie's DIME and the issue at hand today. Indeed, exactly as a DIME opinion on post-MMI maintenance treatment stands on the level playing field of "preponderance of the evidence" so does Dr. Brodie's opinion concerning the left foot, without the benefit of the progression of the Claimant's left foot condition over the next five years." Therefore, as of today, Dr. Brodie's opinion on lack of causal relatedness of the left foot is entitled to less weight than the current medical opinions of Dr. Mason and Dr. Conklin. The evidence establishes that the Claimant's left foot problems today have progressed to more severity than as of Dr. Brodie's 2011 DIME opinion. Consequently, the ALJ does not find Dr. Brodie's opinion concerning the Claimant's left foot credible in terms of addressing the Claimant's present left foot condition.

28. The Respondent now argues that Dr. Brodie's collateral opinion in his DIME report that the Claimant's foot condition is not related creates an issue preclusion situation, and the Claimant is now barred from raising the issue concerning a subsequent causally work-related aggravation/acceleration of her left foot condition. The ALJ finds that at the time of Dr. Brodie's DIME, five years ago, the issues differed from today's maintenance medical issues. Consequently, there was not an identity of issues, nor did the Claimant have an opportunity to litigate the then unanticipated need for left foot surgery because of an aggravation/acceleration of her left foot condition, caused by the back surgeries. The Claimant's left foot condition grew progressively

worse after Dr. Brodie's DIME. Dr. Brodie's DIME opinion cannot "reach out from the grave" (of an admitted MMI date and 28% whole person permanent impairment) and control the new issue of causal relatedness of the need for left foot surgery today. Indeed, there is **no** indication that Dr. Brodie had the ability to foresee the future.

The Claimant's Testimony

29. According to the Claimant, before the admitted injury of November 21, 2007she could walk "just fine," despite her left foot drop. The Claimant's testimony in this regard is undisputed. Indeed, she was able to work full duty as an aviation mechanic (but for brief periods connected to her "complex" left foot surgeries) until the admitted back injury of November 21, 2007, despite her left foot drop. After the back surgeries, following the admitted injury of November 21, 2007, the Claimant's left foot condition grew worse where she sometimes stumbled and fell. Her testimony in this regard was highly persuasive, credible and essentially undisputed. Her testimony paints a compelling before-and-after picture (after the back surgeries) of the causal relatedness of the need for the left foot surgery recommended by Dr. Conklin. Indeed, coupled with recent medical records of her ATPs, the ALJ draws a plausible inference and finds that the progression of the aggravation/acceleration of the Claimant's left foot condition paints a compelling circumstantial picture that the present need for left foot surgery is within the proximate chain of causation from the admitted injury of 2007. the Claimant's testimony renders it more likely than not that the present need for Dr. Conklin's recommended surgery is attributable to the back surgeries, and left foot worsening thereafter, that resulted from the admitted injury of July 21, 2007, and not from the "ancient" and complex foot surgeries around 1989, as opined by IME Dr. Zimmer.

Ultimate Findings

30. The Claimant's credible and undisputed lay testimony plays a significant role in determining the proximate causal relatedness of the Claimant's need for the surgery recommended by Dr. Conklin, despite Dr. Zimmer's opinion to the contrary. The ALJ finds the opinions of Dr. Mason, Dr. Conklin, and other treating and consulting physicians credible and persuasive for the reasons herein above stated. The ALJ does not find Dr. Zimmer's ultimate IME opinion credible or persuasive for the reasons herein above stated.

31. Between conflicting medical opinions, including the circumstantial evidence created by the Claimant's lay testimony, the ALJ makes a rational decision, based on substantial evidence, to accept these opinions and the plausible inferences derived from the Claimant's testimony, and to reject Dr. Zimmer's ultimate IME opinion, and Dr. Brodie's five year old collateral DIME opinion, rendered under a different set of issues.

32. At the time of Dr. Brodie's 2011 DIME, he was dealing with permanent disability and MMI and not with a progressively worsening aggravation/acceleration of the Claimant's left foot condition, proximately attributable to the back surgeries resulting from the admitted injury of November 21, 2007. Consequently, there is not an identity of issues regarding Dr. Brodie's collateral DIME opinion and the causal relatedness of the need for left foot surgery today. Also, the Claimant did not have a full and fair opportunity to litigate the future worsening and aggravation/acceleration of her left foot condition to the point of Dr. Conklin's recommended left foot surgery.

33. Although there is medical corroboration by the Dr. Mason and Dr. Conklin, the Claimant's lay testimony, coupled with an analysis of the deficiencies in Dr. Zimmer's IME opinion, the Claimant's undisputed lay testimony and the compelling circumstantial picture it creates, could be sufficient by itself despite IME Dr. Zimmer's opinion to the contrary. The ALJ finds IME Dr. Zimmer's opinion that the recommended surgery is "reasonable" credible and supporting the proposition that it is reasonably necessary to cure and relieve the effects of the admitted injury of 2007.

34. The Claimant has proven, by a preponderance of the evidence that the foot surgery recommended by Dr. Conklin is because of an aggravation/acceleration of the Claimant's left foot condition with the proximate chain of causation from the Claimant's admitted back injury of November 21, 2007.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or

inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the Claimant's lay testimony concerning the worsening progression of her left foot problems is undisputed and it paints a compelling circumstantial picture that the current need for left foot surgery is due to an aggravation/acceleration of her left foot condition, within the proximate chain of causation from the admitted November 21, 2007 injury. *See, Annotation, Comment: Credibility of Witness Giving Un-contradicted Testimony as Matter for Court or Jury,* 62 ALR 2d 1179, maintaining that the fact finder is not free to disregard un-contradicted testimony. As further found, the Claimant's credible and undisputed lay testimony plays a significant role in determining the proximate causal relatedness of the Claimant's need for the surgery recommended by Dr. Conklin, despite Dr. Zimmer's opinion to the contrary. The ALJ finds the opinions of Dr. Mason, Dr. Conklin, and other treating and consulting physicians credible and persuasive for the reasons herein above stated. The ALJ does not find Dr. Zimmer's ultimate IME opinion credible or persuasive for the reasons herein above stated, nor does the ALJ find DIME Dr. Brodie's five-year old opinion, arising out of different issues, credible for today's situation. Indeed, it is highly probable, unmistakable and free from serious and substantial error that Dr. Brodie's five-year old DIME opinion is not relevant to today's issues nor is it credible for today's issues.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An

ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting medical opinions, including the circumstantial evidence created by the Claimant's lay testimony, the ALJ made a rational decision, based on substantial evidence, to accept these opinions and the plausible inferences derived from the Claimant's testimony, and to reject Dr. Zimmer's ultimate IME opinion, and Dr. Brodie's five year old collateral DIME opinion, rendered under a different set of issues.

Issue Preclusion/The Effect of Dr. Brodie's Five-year Old Collateral DIME Opinion on Lack of Causal Relatedness of Left Foot

c. The doctrine of issue preclusion "may bind the parties to an administrative agency's findings of fact or conclusions of law." The criteria for the application of the doctrine of issue preclusion are: (1) the issue sought to be precluded is identical to an issue actually determined in a prior proceeding; (2) the party against whom estoppel is asserted has been a party to or is in privity with a party to the prior proceeding; (3) there is a final judgment on the merits in the prior proceeding; (4) the party against whom the doctrine is asserted had a full and fair opportunity to litigate the issue in the prior proceeding. *Sunny Acres Villa, Inc. v. Cooper,* 25 P.3d 44 (Colo. 2001). *See also Holnam, Inc. v. Indus. Claim Appeals Office,* 159 P.3d 795 (Colo. App. 2006). The doctrine of issue preclusion or *res judicata* also prohibits re-litigation of issues that **might** have been decided. *Metcalfe v. Bruning Division of AMI,* 866 P.2d 877 (Colo. App. 1993). *Also see Feeley v. Indus. Claim Appeals Office,* 195 P.3d 1154 (Colo. App. 2008). As found, at the time of Dr. Brodie's 2011 DIME, he was dealing with permanent disability and MMI, within the context of § 8-42-107 (8), C.R.S., and not with a progressively worsening aggravation/acceleration of the Claimant's left foot condition, proximately attributable to the back surgeries resulting from the admitted injury of November 21, 2007. Consequently, there is not an identity of issues regarding Dr. Brodie's collateral DIME opinion and the causal relatedness of the need for left foot surgery today. Also, the Claimant did not have a full and fair opportunity to litigate the future worsening and aggravation/acceleration of her left foot condition to the point of Dr. Conklin's recommended left foot surgery.

Effect of Claimant's Lay Testimony

d. In *Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997), the Court of Appeals dealt with a situation wherein the injured worker could proceed no further with medical treatment and evaluations because the employer and the treating physician took the position that because the claimant had resigned her employment, she was **not** entitled to further evaluations. Ultimately, the Court of Appeals concluded that a medical opinion was not necessary to prove causation because imposing such a requirement would be reading something into the statute that was not there. *See Jacoby v. Metro Taxi, Inc.,* 851 P.2d 245 (Colo. App. 1993). § 8-41-301, C.R.S., which

specifies the conditions necessary for a compensability determination (this would include the compensability of a medical procedure or diagnostic tests) does **not** provide that a medical opinion is necessary to make such a determination. As observed in *Lymburn*, to require a medical opinion to support a causality determination would be to read something into the statute that does not exist. Consequently, *Lymburn* remains good law today. As found, although the Claimant's undisputed testimony was corroborated by the opinions of ATP Dr. Mason and Surgeon Dr. Conklin, the Claimant's lay testimony alone paints a compelling circumstantial picture that the need for the present recommended left foot surgery is attributable to an aggravation/acceleration of her left foot condition, in the proximate chain of causation from the admitted November 21, 2007 back injury and the back surgeries that ensued.

Aggravation/Acceleration

e. A claimant's personal susceptibility or predisposition to injury does not disqualify the claimant from receiving benefits. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). An injured worker has a compensable new injury **if the employment-related activities aggravate, accelerate, or combine with the pre-existing condition to cause a need for medical treatment or produce the disability for which benefits are sought.** § 8-41-301(1) (c), C.R.S. *See Merriman v. Indus. Comm'n,* 120 Colo. 400, 210 P.2d 448 (1949); *Anderson v. Brinkoff,* 859 P.2d 819 (Colo. 1993); *National Health Laboratories v. Indus. Claim Appeals Office,* 844 P.2d 1259 (Colo. App. 1992); *Snyder v. Indus. Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). An injury resulting from the concurrence of a preexisting condition and a hazard of employment is compensable. *H & H Warehouse v. Vicory*, *supra*. *Duncan v. Indus. Claims App. Office*, 107 P.3d 999 (Colo. App. 2004). Even where the direct cause of an accident is the employee's pre-existing disease or condition, the resulting disability is compensable where the conditions or circumstances of employment have contributed to the injuries sustained by the employee. *Ramsdell v. Horn*, 781 P.2d 150 (Colo.App. 1989). *Also see* § 8-41-301(1) (c), C.R.S; *Parra v. Ideal Concrete,* W.C. No. 4-179-455 [Indus. Claim Appeals Office (ICAO), April 8, 1998]; *Witt v. James J. Keil Jr.,* W.C. No. 4-225-334 (ICAO, April 7, 1998). As found, the Claimant's back surgeries resulting from the admitted 2007 injury aggravated and accelerated her left foot condition to the point that Dr. Conkin was recommending left foot surgery.

Causal Relatedness/Reasonable Necessity of Medical Treatment

f. An employer must provide an injured employee with reasonably necessary medical treatment to "cure and relieve the employee from the effects of the injury." § 8-42-101(1) (a), C.R.S. The employee must prove a causal relationship between the injury and the medical treatment for which the worker is seeking benefits. *Snyder v. Indus. Claim Appeals Office*, 942 P.2d 1337, 1339 (Colo. Ct. App. 1997). Treatments for a condition not caused by employment are not compensable. *Owens v. Indus. Claim Appeals Office*, 49 P.3d 1187, 1189 (Colo. Ct. App. 2002). An industrial accident is the

proximate cause of a claimant's disability if it is the necessary precondition or trigger of the need for medical treatment. *Subsequent Injury Fund v. State Compensation Insurance Authority,* 768 P.2d 751 (Colo. App. 1988). In order to prove that an industrial injury was the proximate cause of the need for medical treatment, an injured worker must prove a causal nexus between the need for treatment and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). It is for the ALJ, as the fact-finder, to determine whether a need for medical treatment is caused by the industrial injury, or some other intervening injury. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985). Respondents are liable for the "direct and natural consequences" of a work-related injury, including consequential injuries caused by the original compensable injury. *See Travelers Ins. Co. v. Savio*, 806 P.2d 1258 (Colo. 1985). The chain of causation, however, can be broken by the occurrence of an independent intervening injury. *See* 1 A. *Larson, Workers' Compensation Law,* section 13.00 (1997). As found, the aggravation/acceleration of the Claimant's left foot condition is in the direct, proximate chain of causation from the admitted injury of November 21, 2007, thus, the Claimant's need for the surgery is causally related to the admitted injury.

g. Medical treatment must be reasonably necessary to cure and relieve the effects of the industrial occupational disease. § 8-42-101 (1) (a), C.R.S. *Morey Mercantile v. Flynt,* 97 Colo. 163, 47 P. 2d 864 (1935); *Sims v. Indus. Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). As found, Dr. Conklin's recommended left foot surgery is reasonably necessary to cure and relieve the effects of the November 21, 2007 admitted injury.

Maintenance Medical Care/Treatment of Related Conditions to Treat the Effects of the Admitted Injury

h. An employee is entitled to continuing medical benefits after MMI if reasonably necessary to relieve the employee from the effects of an industrial injury. *See Grover v. Indus. Comm'n of Colorado*, 759 P.2d 705 (Colo. 1988). The record must contain substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve a claimant from the effects of an injury or to prevent further deterioration of his condition. *Stollmeyer v. Indus. Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995); *Grover v. Indus. Comm'n, supra*. Such evidence may take the form of a prescription or recommendation for a course of medical treatment necessary to relieve a claimant from the effects of the injury or to prevent further deterioration. *Stollmeyer v. Indus. Claim Appeals Office, supra*. Services that are "medical in nature" include home health services in the nature of "attendant care," if reasonably needed to cure or relieve the effects of the industrial injury. *Atencio v. Quality Care, Inc.*, 791 P.2d 7 (Colo. Ct. App. 1990). As found, the surgeries recommended by Dr. Conklin are reasonably necessary and causally related to the admitted injury and, although some of the recommended surgeries encompass the pre-existing left foot condition and hammertoes, it is reasonably necessary to address the

Claimant's increasing left foot pain which is proximately caused by the original admitted injury.

Burden of Proof

i. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained her burden of proof on the causal relatedness and reasonable necessity of the left foot surgery recommended by Dr. Conklin.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Respondent shall pay the costs of the surgery recommended by Mark Conklin, M.D. on November 16, 2016 for left foot pain, hammertoes, and other diagnoses of the left foot, including fusion of the great toe MTP joint, correction of the hammertoe, capsulotomy of the MTP joint, with or without tenorrhaphy of each joint, an osteotomy with or without lengtening/shortening/angular correction, reconstruction of the angular deformity of the toes, and a lengthening/shortening of the tendon of the left leg/ankle, subject to the Division of Workers' Compensation Medical Fee Schedule. The recommended surgery is medical maintenance treatment to prevent the deterioration of the Claimant's condition and to maintain her at maximum medical improvement.

B. Any and all issues not determined herein are reserved for future decision.

DATED this_____day of April 2017.

ISSUES

1. Has Claimant proven by a preponderance of the evidence that her claim should be reopened based on a change in condition of her left shoulder?

FINDINGS OF FACT

1. Claimant suffered an admitted industrial injury to her bilateral shoulders on December 3, 2010. Claimant worked for Employer performing production work for approximately 12 years. She had various assignments, but typically her work involved assembling small products, inspecting tools, and stamping tool parts.

2. She began experiencing pain in her bilateral shoulders in December 2010. There was no specific accident, and her injury was accepted as an occupational disease.

3. Claimant reported symptoms to her supervisor in January 2011 and was referred to CCOM for authorized treatment. Shoulder MRIs revealed bilateral rotator cuff tears, worse on the right, consistent with her symptoms. She was referred to an orthopedic surgeon, Dr. John Redfern.

4. Dr. Redfern performed arthroscopic rotator cuff surgery on Claimant's right shoulder in December 2011. Following the surgery, she developed a "frozen shoulder" on the right, for which she underwent a manipulation under anesthesia (MUA) on March 30, 2012. Dr. Redfern suggested surgery on the left shoulder, but Claimant declined.

5. She was placed at MMI in July 2012 by her ATP and released to return to work with restrictions.

6. On December 19, 2012, Claimant underwent a DIME with Dr. Eric Ridings. By the time of the DIME, she had decided that she wanted to have surgery on the left shoulder. As a result, Dr. Ridings determined that Claimant was not at MMI. Dr. Ridings opined "within a reasonable degree of medical probability her rotator cuff tears are work-related." Respondents accepted the results of the DIME and authorized further treatment.

7. Dr. Redfern performed arthroscopic surgery on her left shoulder on June 14, 2013. He performed a left biceps tenotomy and repaired a full-thickness tear of the supraspinatus tendon.

8. Claimant did not have a good response to surgery. She participated in extensive physical therapy, without significant benefit. On November 12, 2013, she told Dr. Redfern that "she was in physical therapy and as they were stretching her, she felt a pop with intense, immediate pain. The pain has not been relieved the past three weeks."

She had very limited range of motion. In light of her symptoms, Dr. Redfern recommended a repeat MRI.

9. Claimant had the MRI on November 22, 2013. The MRI showed supraspinatus tendinopathy, but the repair was intact, with no evidence of a re-tear. There was mild infraspinatus insertional tendinosis, and mild subacromial subdeltoid bursitis. Dr. Redfern diagnosed adhesive capsulitis and recommended an MUA procedure.

10. Claimant had the MUA on January 21, 2014. Dr. Redfern broke up some scar tissue and achieved "excellent" passive range of motion. Claimant followed up with Dr. Redfern the next day and reported that the procedure had improved her range of motion. Dr. Redfern opined that "she has reached maximum medical improvement and has no anticipated future intervention regarding her shoulder."

11. Dr. Johnson at CCOM referred Claimant for a functional capacity evaluation (FCE), which was conducted on February 20, 2014. The FCE was invalid due to numerous inconsistencies, symptom exaggeration, and poor effort. Dr. Johnson opined Claimant had reached MMI. He stated that "the objective findings do not match the subjective complaints. I believe she's exaggerating her pain. However, I think that she does not tolerate pain well." He gave Claimant a permanent 10-pound lifting restriction and recommended maintenance medications for pain management.

12. Claimant attended a follow-up DIME with Dr. Ridings on February 14, 2014. Dr. Ridings agreed that Claimant had reached MMI on February 20, 2014. Dr. Ridings felt that Claimant's residual complaints were "out of proportion to objective findings." He agreed with the recommendation for maintenance medications. Dr. Ridings assigned impairment ratings of 9% for the right upper extremity and 12% for the left upper extremity.

13. Respondents filed an FAL on June 23, 2014 based on Dr. Ridings' DIME report. Respondents denied medical benefits after MMI "on the grounds that it is not reasonable, necessary, or related to the compensable injury."

14. Claimant timely objected to the FAL in July 2014 and requested a hearing. Subsequently, several hearings were scheduled and vacated. Eventually, the matter was set for hearing on January 8, 2016. The parties participated in a settlement conference with PALJ De Marino on December 11, 2015. Settlement negotiations were unsuccessful, and the parties stipulated that PALJ De Marino could rule on a stipulated motion to vacate the January 8, 2016 hearing. PALJ De Marino allowed Claimant to withdraw the Application for Hearing without prejudice and gave her 60 days to file a successor Application on the same issues. PALJ De Marino further ordered that "the failure to do so [will result] in the issues being withdrawn and dismissed with prejudice."

15. On that same date, Claimant's counsel filed a Motion to Withdraw. Claimant subsequently retained new counsel on January 21, 2016.

16. On March 24, 2016, Claimant applied for a hearing on the previously endorsed issues, and two other issues that Claimant had not preserved in her prior Applications. Respondents moved to strike the Application because it was not filed within 60 days of PALJ De Marino's order. Respondents also argued that the two additional issues were closed because they had not been endorsed within 30 days of the June 2014 FAL. PALJ Goldstein agreed with Respondents' arguments and struck Claimant's March 24, 2016 Application.

17. Claimant filed another Application on August 19, 2016 endorsing reopening and some other issues. Claimant eventually filed a new Application dated September 14, 2016 on the sole issue of Petition to Reopen. That Application was the basis for the March 6, 2017 hearing before the undersigned ALJ.

18. In the summer of 2016, Claimant pursued treatment for her left shoulder through her personal physicians. On July 26, 2016, she saw Eileen Johnson, NP at Peak Vista Community Health Center. She reported a three-year history of bilateral shoulder pain. Claimant told NP Johnson "[this] is a work-related injury from overuse. States still having pain but her case has been dropped." NP Johnson recommended Claimant follow up "with her workman's comp. doctor."

19. Claimant returned to NP Johnson on August 26, 2016 and reported that her lawyer was trying to "reopen" her claim. In the meantime, she wanted to pursue treatment under Medicaid. NP Johnson ordered x-rays and prescribed medication.

20. On September 2, 2016, Claimant told NP Johnson that her shoulder pain "occurs constantly and is worsening." Claimant reported her pain level was 10/10. NP Johnson ordered an MRI.

21. Claimant had the MRI on September 28, 2016. The radiologist opined that the supraspinatus tendon was "markedly attenuated, which may represent sequelae of prior rotator cuff tearing and subsequent debridement." He also saw "a new partial-thickness bursal-sided tear of the posterior supraspinatus tendon." The imaging was also "suspicious for subacromial-subdeltoid bursitis." Based on the MRI results, NP Johnson referred Claimant to an orthopedic surgeon.

22. Claimant saw PA-C Eve Turkington at the St. Thomas More Orthopedic Services clinic on November 3, 2016. Claimant reported "left shoulder pain since December 2010." She told PA-C Turkington that "she has never really been better since the surgery. However, she had an incident in physical therapy where she felt a pop and she reports that has been worse since then." PA-C Turkington initially proposed a cortisone injection. However, Claimant reported an allergic reaction to cortisone. Previous physical therapy had made her worse, so PA-C Turkington recommended surgery.

23. Claimant underwent arthroscopic shoulder surgery on December 13, 2016 with Dr. Keith Minihane. Visual inspection of the rotator cuff tendons showed no tear. Dr. Minihane debrided some "degenerative fraying" of the superior labrum and the

superior aspect of the anterior labrum. The rotator cuff insertion was intact, but there were some "attenuated" fibers. Dr. Minihane debrided "some mild frayed edges." The bursal side of the rotator cuff had similar "attenuated" fibers but was overall "intact." Dr. Minihane stated "this was just debrided. No takedown or repair was performed." Dr. Minihane performed a subacromial arthroplasty and a distal clavicle resection.

24. Respondents sought expert medical opinions from Dr. Jon Erickson several times during this claim. Dr. Erickson initially performed an Independent Medical Examination (IME) for Respondents on January 12, 2015. Dr. Erickson opined that Claimant's bilateral shoulder problems were simply degenerative, and were not caused or aggravated by her work. He noted there was no specific accident and did not believe her work activities were sufficient to cause an occupational disease. Nevertheless, he acknowledged that Respondents had admitted liability for the injury and provided treatment, including multiple surgeries. Dr. Erickson diagnosed Claimant with "bilateral moderate to severe pain in both shoulders following surgery, work-related, but not explained by any documented pathology." Dr. Erickson felt that Claimant's "shoulder pain is excessive and out of proportion, considering the lack of objective evidence of pathology. I seriously doubt that either shoulder would respond positively to any additional surgery." Although he found Claimant to be "pleasant and cooperative," but felt her examination was "very inconsistent and not reproducible, exhibiting a lack of effort and exaggerated pain."

25. On February 24, 2015, Dr. Erickson issued an addendum report based on review of a May 30, 2014 MRI report that had been interpreted as showing a partial-thickness supraspinatus tear. Dr. Erickson opined the tear was degenerative, and "this minor tear, still more likely caused by non-occupational risk factors, is not the cause of the severe pain that [Claimant] is now experiencing. . . . I seriously doubt that a surgical repair would have a beneficial effect."

26. Respondents asked Dr. Johnson at CCOM to review and comment on Dr. Erickson's report. Dr. Johnson agreed with Dr. Erickson's opinions. Dr. Johnson opined Claimant remained at MMI, and her ongoing shoulder symptoms were no longer causally related to the work-related injury. Dr. Johnson further opined that a further surgery to Claimant's left shoulder was not causally related to her work activities.

27. Dr. Erickson subsequently authored two additional addendum reports, based on review of additional records. None of the additional information he reviewed changed any of his opinions. Dr. Erickson opined there was no medical justification for reopening Claimant's claim.

28. NP Johnson testified on behalf of Claimant at the March 2017 hearing. NP Johnson testified she referred Claimant for a surgical evaluation based on the September 28, 2016 MRI report, which showed a tear of the supraspinatus tendon. NP Johnson testified that Claimant reported her shoulder problems were related to a work-related injury. NP Johnson had no opinion regarding causation of Claimant's shoulder pathology.

29. Dr. Erickson testified at hearing. He reiterated and expounded on the opinions previously expressed in his reports. Dr. Erickson persuasively opined that the December 2016 surgery was not causally related to the original industrial injury.

30. Claimant has failed to prove a justification for reopening her claim.

31. Under the circumstances, allowing Claimant to reopen her claim based on a change of condition that occurred before MMI would allow Claimant to circumvent the heightened standard of proof attendant to challenging a DIME.

32. The pathology that Dr. Minihane addressed with surgery in December 2016 was not proximately caused by Claimant's admitted 2010 industrial injury. The changes in Claimant's left shoulder between the June 14, 2013 surgery and the December 13, 2016 surgery was due to non-occupational factors, primarily age-related degeneration.

CONCLUSIONS OF LAW

Section 8-43-303 authorizes an ALJ to reopen any award on the grounds of error, mistake, or a change in condition. The reopening authority reflects a "strong legislative policy" that the goal of achieving a fair and just result overrides the interests of litigants in obtaining final resolution of their dispute. *Padilla v. Industrial Commission*, 696 P.2d 273, 278 (Colo. 1985). Thus, a "final" award means only that the matter has been concluded subject to reopening if warranted under the applicable statutory criteria. *Renz v. Larimer County School District Poudre R-1*, 924 P.2d 1177 (Colo. App. 1996). The authority to reopen a claim is permissive, and the decision whether to reopen a claim when the statutory criteria have been met is left to the ALJ's discretion. *Id*. The party requesting reopening bears the burden of proof on any issue sought to be reopened. Section 8-43-304(4).

Claimant is seeking to reopen her case based on a change in condition. In the reopening context, a change in condition refers "to a change in the condition of the original compensable injury or to a change in the claimant's physical or mental condition which can be causally connected to the original compensable injury." *Chavez v. Industrial Commission*, 741 P.2d 1328, 1330 (Colo. App. 1985). If a claimant's condition is shown to have changed, the ALJ should consider whether the change represents the natural progression of the industrial injury, or results from an intervening cause. *Goble v. Sam's Wholesale Club*, W.C. No. 4-297-675 (ICAO, May 3, 2001). If an industrial injury leaves the body in a weakened condition, and that weakened condition is a proximate cause of further injury to the claimant, the additional injury is a compensable consequence of the original industrial injury. *Standard Metals Corp. v. Ball*, 474 P.2d 622 (Colo. 1970). But, if the claimant sustains an additional injury as a result of an efficient intervening cause, the mere fact that the additional injury would not have occurred had the employee retained all of his former physical powers does not render the additional injury compensable. *Post Printing and Publishing Co. v. Erickson*, 30 P.2d 327 (Colo. 1934).

Reopening a closed claim is appropriate when the degree of permanent disability has changed, or when additional medical or temporary disability benefits are warranted. *Richards v. Industrial Claim Appeals Office*, 996 P.2d 756 (Colo. App. 2000). When a claimant alleges a worsening of condition after reaching MMI, the claimant is not entitled to additional temporary disability benefits unless the claimant proves the worsening has caused additional restrictions resulting in additional temporary wage loss. *City of Colorado Springs v. Industrial Claim Appeals Office*, 954 P.2d 637 (Colo. App. 1987).

Claimant was placed at MMI by the DIME on February 10, 2014. A DIME's determination that a claimant is at MMI is binding unless overcome by clear and convincing evidence. Section 8-42-107(8)(b)(III). On the other hand, a previous determination of MMI is not presumptive or conclusive where a claimant is alleging a change of condition after MMI. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002).

There is a tension in the law between the reopening authority and the provisions giving presumptive or conclusive effect to the determinations of a DIME. This tension is exemplified by *Berg v. Industrial Claim Appeals Office*, 128 P.3d 270 (Colo. App. 2005). In *Berg*, the employer had filed a final admission of liability based on a DIME report. The claimant timely objected to the FAL but did not request a hearing. As a result, the claim closed. Subsequently, the claimant filed a petition to reopen alleging the treating physicians and the DIME were mistaken regarding his diagnosis and the cause of his symptoms. The ALJ granted the petition to reopen, finding that the physicians were mistaken both about MMI and about the causal relationship between the claimant's condition and the industrial injury. The ICAO reversed the ALJ, concluding that allowing a claimant to reopen based on a "mistake" of an uncontested DIME would subject the DIME's determination of MMI to collateral attack under a diminished burden of proof. But the Court of Appeals set aside the panel's order, holding that nothing in the statutory DIME scheme limits the reopening provisions. The court noted the reopening statute applies even in circumstances where the determination of a DIME is questioned. The court emphasized that the ALJ's discretionary authority regarding reopening serves as "an inherent protection against improper collateral attacks on a DIME determination of MMI. If a claimant files a petition to reopen in an attempt to circumvent the DIME process and gain the advantage of a lower burden of proof, the ALJ has authority to deny it." *Id*. at 273-74.

A critical fact in *Berg* was that the claimant did not know of the mistake until after the claim had closed. Since the claimant was unaware of the issue during his window of opportunity to challenge the DIME, the court reasoned that he could not have been strategically attempting to circumvent the DIME procedures. The court further noted there was no evidence that the claimant "made the tactical decision to let his claim close to avail himself of the lower burden of proof." The court concluded that the decision to reopen the claim under those circumstances was within the ALJ's discretion.

The Court of Appeals recently revisited this issue in *Justiniano v. Industrial Claim Appeals Office*, ___ P.3d ___, 2016 COA 83 (Colo. App. 2016). In *Justiniano*, a DIME determined the claimant had reached MMI. Shortly after the DIME, the claimant

underwent surgery for the injury-related condition. The respondents subsequently filed an FAL based on the DIME report. The claimant did not object to the FAL, but instead filed a petition to reopen based on a change in condition, as evidenced by the post-MMI surgery. The ALJ found that the claimant was attempting to circumvent the "clear and convincing evidence" standard to overcome a DIME, and denied the petition to reopen. The claimant appealed, arguing she had a "right to reopen" her claim under *Berg*. The Court of Appeals affirmed the ALJ, reasoning that the claimant knew about the asserted change of condition *before* the claim closed. The court agreed that the evidence supported the ALJ's finding that the claimant was trying to avoid the heightened burden of proof attendant to challenging a DIME. Therefore, the ALJ had appropriately exercised her discretionary authority to deny the request to reopen the claim.

Berg and *Justiniano* show that the timing of the alleged change in condition or mistake in relation to the date the claim closed is not necessarily dispositive, but is a relevant factor for the ALJ to consider. The ALJ should evaluate the totality of the circumstances in the individual case when deciding whether to exercise the discretionary authority to reopen a claim.

The ALJ concludes Claimant's case is more akin to the circumstances in *Justiniano*, rather than *Berg*. The DIME determined Claimant reached MMI on February 20, 2014. Although Claimant timely objected to the FAL and requested a hearing to challenge the DIME's finding, she ultimately failed to pursue the issue in a timely manner. On December 11, 2015, PALJ de Marino ordered that if Claimant did not apply for a hearing by February 9, 2016, the issues would be closed and dismissed "with prejudice." Claimant did not pursue her claim within that window, so her claim closed.

Claimant is now asking the ALJ to reopen the claim based on an alleged re-injury that occurred in physical therapy in November 2013. The alleged re-injury occurred *before* the DIME and *well before* the claim closed. Had claimant properly pursued her challenge to the June 23, 2014 FAL, she would have had to overcome the DIME's MMI date by clear and convincing evidence. The ALJ concludes it would be inappropriate to reopen Claimant's case under the preponderance standard based on circumstances that existed before her claim closed, and of which she was aware.

The remaining question is whether there has been a change of condition after the claim closed that would justify reopening the claim. Although Claimant had left shoulder surgery on December 13, 2016, the surgery was not causally related to the admitted industrial injury.

Admittedly, the radiologist interpreted the September 28, 2016 MRI as showing "a new, partial-thickness, bursal-sided tear of the posterior supraspinatus tendon." But the December 13, 2016 operative report shows no tear. Dr. Minihane observed that the bursal side of the rotator cuff had some "attenuated fibers," but was "intact . . . overall." He specifically noted that "no takedown or repair was performed." Therefore, it does not appear that the previous surgical repair had significantly changed as to warrant surgery. Dr. Minihane debrided some degenerative labral fraying which was new since the previous surgery, but degenerative changes to the labrum are not causally related to

Claimant's employment or original injury. While Claimant's symptoms may have increased to some degree since her claim closed, the ALJ is not persuaded that any worsening of her symptomatology was proximately caused by the 2010 industrial injury.

ORDER

It is therefore ordered that:

1. Claimant's request to reopen her claim is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 3, 2017

Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

I. Whether Claimant has established by a preponderance of the evidence that she suffered a compensable industrial injury arising out, and in the course of, her employment with Employer.

II. If Claimant has shown a compensable injury, is Claimant entitled to continued medical treatments for the injuries she received.

FINDINGS OF FACT

Based upon the evidence received at hearing, the ALJ makes the following Findings of Fact:

1. Claimant testified that in August of 2016 she was working for Verizon through Xerox. She worked in customer service. This job required her to "go over people's billing with them, activate phones," and discuss data issues.

2. Claimant testified that she was not completely certain whether she was injured on August 30, or August 31. On cross, she testified she was sure it was August 30, 2016. Claimant testified that her shift began at 6:00 AM and she always showed up early so she could be ready to start at 6:00 AM. Her injury occurred upon exiting her car right after arriving at work.

3. Claimant testified that when she got out of her car, she took about four or five steps and fell after stepping into a pot hole. She landed on her right knee and she felt something pop in her right shoulder. She also landed on her right hand.

4. Claimant testified credibly regarding her parking arrangements on the date of her injury, and the ALJ makes the following findings in paragraphs 5, 6, 7, 8:

5. Claimant was not required to drive her car to work; she was free to use whatever forms of transportation she needed to commute. Xerox did not supply a car, nor did Xerox make ownership of a car a condition of employment. Claimant did not have to use her car for work errands during her work day. She was not reimbursed mileage, gasoline, or insurance on her car by Xerox.

6. There were several businesses in the building where Claimant worked for Xerox. There was parking supplied by the building's owner, which was for the benefit and convenience of the employees of the various business housed there, including Xerox. There was not a specifically designated parking lot for "Xerox

personnel only". Claimant was not assigned a particular parking spot within the lots available; such lots were, unless otherwise marked, "first come, first served". There was no fee, gate, or parking attendant.

7. On the date of her Injury, Claimant arrived to find traffic cones, marking off the parking area she usually used, which was on the campus of the aforementioned building complex where Xerox was housed. There was repair work being performed in this lot, so Claimant reasonably went to a different parking lot, still on the same campus, and still existing for the benefit and convenience of Claimant, as well as for Xerox itself. She was not specifically directed to this secondary lot by a person in authority; rather Claimant made the reasonable supposition that she should find the closest allowable lot and park her car. This was not the lot where she normally parked, and it was further from the entrance to the building. Any reasonable person in Claimant's position would have done the same thing.

8. Claimant arrived in time for her assigned work shift, and upon exiting her car, was intending to report on foot to her work station; there was no frolic or detour upon exiting her car. It was after a few steps that she stepped into this pothole.
9. Claimant testified that after her injury, she sat on the curb for a few minutes and then was able to get up. Claimant testified that she went home and called the sick line. She left a message. After she cleaned herself up she went back to talk to her supervisor. She testified she was told he was in Denver. She testified she went back the next day to report it.

10. Claimant testified that she had to wait for her boss to tell her where to go for treatment. Claimant testified that her supervisor gave her the phone number for Concentra.

11. Claimant saw Kenneth Ginsburg, PA, at Concentra on September 1, 2016. Mr. Ginsburg noted difficulty with Claimant's right shoulder. Specifically, he noted "Forward Flexion: AROM 75 degrees with pain with pain. Extension: AROM. Abduction: AROM 70 degrees. Motor strength is normal bilaterally. Motor tone is normal. Neurovascular function intact. Rotator Cuff Test(s): positive Painful Arc and positive Empty Can test. He also noted trouble with her lumbar spine, including "tenderness in the right paraspinal" and "right-sided muscle spasms." *Id.* at 11. He diagnosed her with "thoracic myofascial strain," "strain of right shoulder," lumbosacral strain," and "contusion of right knee." Mr. Ginsburg ordered pain medication, x-rays, and physical therapy. Claimant was thereafter limited to working four hour days. She was to change body positions as needed, and was not to bend, squat, kneel, climb stairs, climb ladders, work at heights, lift/push/pull more than five pounds, or walk on even terrain.

12. A x-ray of Claimant's shoulder showed no fractures—only mild-moderate degeneration in her acromioclavicular joint.

13. Claimant returned to Concentra on September 6, 2016. She began physical therapy for her injuries. She continued physical therapy for several visits.

14. On September 9, 2016, Mr. Ginsburg noted that Claimant was having a "poor response to treatment," and he referred her to Dr. Albert Hattem.

15. Claimant agreed on cross-examination that she fell getting out of her shower on September 10, 2016. She reported to Daniel Edwards that she had some light bruising on her arm after this incident, and her back was worse.

16. Claimant was seen by Dr. Daniel Peterson on September 16, 2016. Dr. Peterson noted that she "likely has a RTC tear in right shoulder," and that her "knee and back are strained and need more time to recover with PT" (Cl's Exh. 4, 44). He wanted her to continue physical therapy and noted he would provide her with a handicapped parking application.

17. Imaging of her right knee on September 16, 2016 showed no fractures, and mild degenerative changes (Cl's Exh. 4, 47). Imaging of her spine showed "Grade 1 anterolisthesis of L5 on S1" and "grade 1 retrolisthesis of L3 and L4" (Cl's Exh. 4, 48). She had multilevel degenerative changes.

18. A Notice of Contest was filed in this claim on September 22, 2016. The reason given was, "Injury/Illness Not Work-Related."

19. On September 28, 2016, Claimant was seen by Dr. Nicholas Kurz. Dr. Kurz noted she needed to schedule MRIs with Valium as quickly as possible (Cl's Exh. 4, 61). He noted an anticipated MMI date of October 30, 2016 (Cl's Exh. 4, 62).

20. Dr. Timothy O'Brien performed an independent medical examination on Claimant on January 9, 2016. Dr. O'Brien's report stated that he found "no medical record documentation that supports Ms. Seymour's allegation that she sustained a work-related injury on August 31, 2016". Dr. O'Brien stated he did not think Claimant needed any medical treatment for her injury, as "no untoward event occurred." *Id.* However, he also noted he only had three medical records, and all of them were from October or later. *Id.* He also noted that two records noted acute knee pain, but none mentioned a "work injury" per se. *Id.* He noted pre-existing osteoarthritis.

21. However, these records are in the record at Claimant's Exhibit 5. The October 4, 2016 note specifically references "Workmen's Comp" (Cl's Exh. 5, 64). It specifically mentions that physical therapy had ended on the claim. *Id.* It specifically mentions that she had fallen in a pothole in the Xerox parking lot (Cl's Exh. 5, 65). It specifically mentions that she was having knee, shoulder and back pain, which she had been treating for at "Concerta (sic)." *Id.* While "arthritic manifestations" were listed in November of 2016, no examination is listed or testing done to support that assertion (Cl's Exh. 4, 70). Dr. O'Brien's opinion that

her pain was from pre-existing arthritis appears to be based wholly on the two words "arthritic manifestations."

22. Dr. O'Brien also testified at a deposition held on January 30, 2017. Dr. O'Brien testified that he would have expected bruises to have been noted if she had fallen (O'Brien Depo. 7). He felt Mr. Ginsburg's note that she suffered a "contusion of right knee" was not supported. *Id.* at 11. He agreed that this was his belief because Mr. Ginsburg *might* just be referring to pain because he wrote the medical term "contusion" and not the lay term "bruise." *Id.* at 31. He testified that while Mr. Ginsburg had made findings including reduced range of motion and positive rotator cuff tests, this did not mean Mr. Ginsburg's findings were directly related to the alleged fall. *Id.* at 14.

23. However, Dr. O'Brien also testified that he had no objective evidence that the arthritic changes noted in her knee x-rays were anything more than "mild." *Id.* at 29. He testified he would expect an MRI to show a rotator cuff tear purely due to her age, again with no objective evidence. *Id.* at 30. He testified that he had found no evidence to suggest pre-existing pain in her shoulder, knee, or lower back. *Id.* Dr. O'Brien also testified that "95 to 100 percent of folks who are in their seventh decade of life" have arthritis, but this would not always be the cause of their pain. *Id.* at 31.

24. Dr. Timothy Hall also completed a records review in this claim (Cl's Exh. 7). Dr. Hall was in possession of records from Peak Vista and also from Concentra (Cl's Exh. 7, 80). Dr. Hall noted that he felt Dr. O'Brien "did not have sufficient records when he did his evaluation" (Cl's Exh. 7, 81). Dr. Hall felt there was a temporal connection between the alleged fall and the development of symptoms. *Id.* He noted that she had "the sort of symptoms one would expect from a fall, that being the knee, back, shoulder, and arm. I do not see anything out of the ordinary about her presentation that would be inconsistent with trauma from a fall" (Cl's Exh. 7, 82). It was his opinion "within a reasonable degree of medical probability that Nancy Seymour's present symptoms involving the knee, shoulder, and back are directly related to the August 31, 2016 fall." *Id.*

25. Claimant testified that she has trouble sitting for long at work. She testified that she has trouble with her shoulder at work. Claimant testified that she has difficulty because of her symptoms outside of work as well.

26. Claimant testified she is still having symptoms. Her knee buckles. She has problems with her shoulder. She has trouble sleeping.

27. Claimant testified that she used a cane occasionally before the incident due to dizziness from medicine. She did not need it for her knee. She testified that she used a cane after the injury due to buckling in the knee.

28. Claimant testified that she has not returned for treatment because she cannot afford it. She testified that she wants to see a doctor, and she wants to get better.

29. Despite inferences by Dr. O'Brien that Claimant's symptoms were "psychosomatic," the ALJ finds no evidence to support a non-physiological cause. It should be noted that Kenneth Ginsburg noted Claimant had normal "judgment and insight," and she was "oriented to person, place and time" on September 9, 2016 (Cl's Exh. 4, 30). He noted her "speech is appropriate in content and delivery," her "recent and remote memory is intact," and her "mood and affect are appropriate." *Id.* While Dr. O'Brien testified that it was possible "psychologic effect" was "coloring" her complaints of pain, there simply is no medical evidence in the record to support this inference (O'Brien Depo. 22). Dr. O'Brien agreed on cross that he is not a psychologist, he performed no mental exam on her, and he found no mental health exam in the record. *Id.* at 37.

30. The ALJ finds that Claimant testified credibly about the fall she experienced. As is almost always the case with falls, Claimant was not expecting it until it happened, which likely took less than a second or two. While the precise sequence of events in that brief interval cannot be articulated in detail, Claimant fell, and hurt herself in that parking lot. The event itself, and symptoms she describes, are possible without bruising to her hand being specifically noted in the reports. She is credible in describing the symptoms she has experienced since the fall. After this fall, she has experienced pain in her right shoulder, right knee, and lower back.

31. The ALJ finds, based upon the evidence received, including Claimant's credible testimony of the mechanism of injury and symptoms suffered, that the medical opinions of Dr. Hall are more persuasive than those of Dr. O'Brien.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Generally

1. The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither

in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

2. Claimant must prove that she is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301 (1), C.R.S.; see, *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett*, 33 P.3d 1230 (Colo.App. 2001).

3. An injury occurs "in the course of' employment where claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. See *Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991). The "arising out of' requirement is narrower and requires claimant to show a causal connection between the employment and injury such that the injury has its origins in the employee's work-related functions and is sufficiently related to those functions to be considered part of the employment contract. See *Id*.

4. Section 8-41-301(1)(c), C.R.S., provides as a condition for the recovery of workers ' compensation benefits that the injury be "proximately caused by an injury or occupational disease arising out of and in the course of the employment." Under the statute the requirement that the employment be the proximate cause of the "injury" exists whether the claimant is alleging an "accidental injury" or an "occupational disease." See *CF & I Steel Corp. v. Industrial Commission*, 650 P.2d 1333 (Colo. App. 1982); § 8-40-201(2), C.R.S. (term "injury" includes disability resulting from accident or occupational disease); § 8-40-201(14) (occupational disease is one occasioned by the nature of the employment and can be traced to the employment as a proximate cause).

5. The question of whether the claimant proved an injury or occupational disease proximately caused by the performance of service arising out of and in the course of employment is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000) (proof of causation is threshold requirement that must be established before any compensation is awarded); *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999) (claimant seeking benefits for occupational disease must establish existence of the disease and that it was directly and proximately caused the conditions of employment).

6. Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence.

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. C*olorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968); *Robinson v. Youth Track*, W.C. No. 4-649-298 (ICAO May 15, 2007).

Compensability

7. An injury in a parking lot can be compensable. See *Campbell v. Gates Rubber Co.,* 526 P.2d 679 (Colo. App. 1974)(claimant who, while leaving work, fell and injured wrist in parking lot owned and maintained by employer for employees' convenience had compensable injury); *Woodruff World Travel v. Industrial Commission,* 554 P.2d 705 (Colo. App. 1976)(employee suffered compensable injury while crossing parking lot provided by employer's landlord for employees, where employer was aware of employee use and where parking privileges were an obvious fringe benefit).

8. Generally, an injury received by an employee outside the employers' premises is not compensable, if the injury happens outside work hours, and while coming from or going to work. *Woodruff World Travel v. Industrial Commission,* 554 P.2d 705 (Colo. App. 1976). There is an established exception to this rule "if special circumstances surrounding the employee's injury reflect a causal connection between the conditions under which the work is to be performed and the resulting off-premises injury." *Id.* at 707. In *Woodruff,* the court found special circumstances: "Space in the parking lot was afforded Woodruff for the use of its employees, and Woodruff was aware that its employees used the lot. Parking privileges constituted an obvious fringe benefit to claimant. Claimant was injured while in the act of enjoying that benefit." *Id.* at 707.

9. Claimant was not injured during travel to work. She was not injured leaving her house. She was not injured while driving her car. She was injured after she arrived in the employer-supplied parking lot, parked, and exited her vehicle. She was walking straight into the building to report to work. Special circumstances exist in this claim. Claimant, like the claimant in *Woodruff,* was injured while using an obvious fringe benefit in parking at the building. Arriving at work and entering the building are necessary to performing one's duties. The ALJ finds that Claimant's injury occurred within the course of her employment.

Medical Benefits

10. For a compensable injury, Respondents must provide all medical benefits that are reasonably necessary to cure and relieve the injury. C.R.S. § 8-42-101 (2010). Respondents are liable for reasonable and necessary medical treatment by a physician to whom a claimant has been referred by an authorized treating provider. *Rogers v. Industrial Commission*, 746 P.2d 565 (Colo. App. 1987). The claimant has the burden of proving entitlement to specific medical benefits. See § 8-43-201(1), C.R.S; *Lutz v. Industrial Claim Appeals Office*, 24 P.3d 29, 31 (Colo. App. 2000). Whether the claimant sustained her burden of proof is a factual question for resolution by the ALJ. *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997).

11. The ALJ gives greater weight to the medical opinion of Dr. Hall than that of Dr. O'Brien. Dr. Hall's opinion that Claimant's symptoms are consistent with her alleged mechanism of injury is reasonable, and well supported by the record.

12. The ALJ finds that Claimant has consistently reported pain and symptoms from her injury, and no evidence in the record exists to support pre-existing complaints. While she may have had pre-existing degenerative *conditions*, there is no evidence that Claimant was having any *symptoms* before the August 2016 injury.

13. For a compensable injury, Respondents must provide all medical benefits that are reasonably necessary to cure and relieve the injury. C.R.S. § 8-42-101 (2010). Respondents are liable for reasonable and necessary medical treatment by a physician to whom a claimant has been referred by an authorized treating provider. *Rogers v. Industrial Commission*, 746 P.2d 565 (Colo. App. 1987). The claimant has the burden of proving entitlement to specific medical benefits. See § 8-43-201(1), C.R.S; *Lutz v. Industrial Claim Appeals Office*, 24 P.3d 29, 31 (Colo. App. 2000). Whether the claimant sustained her burden of proof is a factual question for resolution by the ALJ. *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997).

14. Claimant was not at maximum medical improvement when her treatment with Concentra ended. Dr. Nicholas Kurz was predicting MMI a month in the future at her last appointment (Cl's Exh. 4, 62). She had not yet finished physical therapy, and had been referred for MRIs. *Id.* Dr. Peterson had noted a probable rotator cuff tear, but this had not been fully evaluated. The ALJ finds that Claimant requires additional medical treatment to reach MMI.

ORDER

It is therefore ordered that:

1. Because Claimant suffered a compensable injury on or about August 30 or 31, 2017, Respondents shall provide all reasonably necessary and related medical treatment.

2. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 5, 2017

Colorado Springs, Colorado 80906

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 4-998-215-02

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insure/ Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on March 23, 2017, in Denver, Colorado. The hearing was digitally recorded (reference: 3/23/17, Courtroom 1, beginning at 1:30 PM, and ending at 5:00 PM). Jorge Espinosa and Milton A. Roman served as the official Spanish/English interpreters.

Claimant's Exhibits 1 through 14 were admitted into evidence, without objection. Respondents' Exhibits A through L were admitted into evidence, without objection. The evidentiary depositions of Kirk Holmboe, D.O., the Claimant's authorized treating physician (ATP) [who is level 2 Accredited by the Division of Workers' Compensation (DOWC)]; and, Lawrence Lesnak, D.O., were filed and included as part of the testimonial evidence at hearing.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to Claimant's counsel, giving Respondents' counsel three working days after receipt thereof within which to file electronic objections as to form. The proposed decision was filed, electronically, on April 4, 2017. After a consideration of the proposed decision and any objections thereto, the ALJ has modified the proposal and hereby issues the following decision. Contrary to the ALJ's bench ruling, the ALJ hereby determines that the Respondents' non-compliance with

Rule 10 (A), WCRP (Workers' Compensation Rules of Procedure), 7 CCR 1101-3 (in effect at the time in question), rendered the request for prior authorization, made by Douglas Foulk, M.D., on October 26, 2016 automatically approved by operation of Rule 10 (E).

ISSUE

The issue to be determined by this decision concerns whether the Respondents timely complied with the provisions for contesting a request for prior authorization made by Douglas Foulk, M.D. and, if not, did the recommended right shoulder surgery automatically become authorized by operation of Rule 16-10, WCRP in effect at the time of the request; and, if an automatic authorization has not occurred by operation of the rule in effect at the time of the request, is the right shoulder surgery recommended by Dr. Foulk causally related to the admitted injury and reasonably necessary to cure and relieve the effects thereof.

The Claimant bears the burden of proof on all issues, by a preponderance of the evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings and Stipulations

1. The Claimant sustained an admitted injury to his right shoulder on September 25, 2015. The Respondents filed a general Admission of liability (GAL), dated October 6, 2016, admitting for medical benefits only.

2. At the commencement of the hearing, the parties stipulated that Dr. Foulk's October 26, 2016 surgery authorization request complied with WCRP 16-9 and was a completed request for surgery. The parties also stipulated that this surgery authorization request was properly submitted to Respondents and that Respondents wrote a letter to Dr. Foulk denying the surgery request within seven business days of October 26, 2016. The ALJ finds accordingly.

3. On September 25, 2015, the Claimant injured his head, neck, right shoulder and arm when he was struck by an eight-foot ladder while he was kneeling and lifting 20-25 pounds of materials. The Respondents initially denied compensability, and on January 27, 2016, filed a Notice of Contest (Claimant's Exhibit 3). On October 6, 2016, the Respondents filed a General Admission of Liability (GAL) for medical benefits only (Claimant's Exhibit 5). On November 29, 2016, Claimant applied for a hearing (Claimant's Exhibit 6). On November 30, 2016, the Respondents filed a Response to

Claimant's Application for Hearing (Claimant's Exhibit 7). The hearing occurred on March 28, 2017.

Kirk Holmboe, DO, and Lon Noel M.D. - Claimant's Authorized Treating Physicians (ATPs)

4. On September 25, 2015, the Claimant treated at Midtown Occupational Health Services (hereinafter Midtown) with Dr. Holmboe (Claimant's Exhibit 10, pages 41-43) The Claimant reported neck pain and other symptoms and was diagnosed with a right shoulder contusion and a cervical strain and he was given work restrictions. *Id*. On September 29, 2015, the Claimant again treated with Dr. Holmboe and reported right posterolateral neck and trapezius pain with some soreness radiating down to his right forearm (Claimant's Exhibit 10, pages 44-46). On October 6, 2015, the Claimant again treated with Dr. Holmboe and reported increased pain on the right side of his neck and along the superior aspect of his right shoulder and upper back. Dr. Holmboe noted limited cervical and right shoulder range of motion. Dr. Holmboe maintained the Claimant's work restrictions (Claimant's Exhibit 10, pages 47-49).

5. On October 20, 2015, the Claimant treated at Midtown with Lon Noel, M.D., who examined the Claimant's right shoulder and noted that the Claimant had decreased active range of motion, decreased strength, positive anterior and posterior impingement signs, and pain to direct palpation of the AC joint and long head of the biceps. Dr. Noel referred the Claimant for a right shoulder MRA (magnetic resonance angiogram) and cervical MRI (magnetic resonance imaging) and maintained the Claimant's work restrictions (Claimant's Exhibit 10, pages 50-52).

6. On October 26, 2015, the Claimant treated with Dr. Noel, who noted the abnormal right shoulder MRA findings, and referred Claimant to Douglas Foulk, M.D., and continued to maintain the Claimant's work restrictions (Claimant's Exhibit 10, pages 53-55).

7. On December 22, 2015, the Claimant treated with Dr. Holmboe, who noted that he reviewed the Claimant's mechanism of injury, history, the MRI findings, and Dr. Erickson's IME (independent medical examination) report. Dr. Holmboe added that the Claimant's history suggests he did **not** have any pre-existing shoulder problems. Dr. Holmboe is of the opinion that based on Claimant's history, he has an acute rotator cuff tear and that it should be treated as such (Claimant's Exhibit 10, pages 58-60). In response to a letter from Respondents regarding Dr. Erickson's November 16, 2015 report and whether the Claimant's injuries are work-related, Dr. Holmboe stated, "[Claimant] denied any prior shoulder injury and mechanism of injury consistent with [rotator cuff] injury" (Claimant's Exhibit 10, page 57).

8. On January 12, 2016, the Claimant again treated with Dr. Holmboe and reported ongoing neck and right shoulder pain with some radiating pain down his right

arm and into his fingers. The Claimant reported that he continues to work light duty, which involves sweeping and other lighter activities, but he still finds the duties difficult and painful (Claimant's Exhibit 10, pages 61-62).

9. On January 22, 2016, the Claimant treated with Dr. Holmboe, who noted that he reviewed Dr. Lesnak's report. Dr. Holmboe also noted that he "cannot reconcile [Claimant's] statement that he has never had symptoms or problems before this injury with the evidence of the MRI and the EMG suggesting chronic pathology." Dr. Holmboe maintained the Claimant's treatment plan and work restrictions (Claimant's Exhibit 10, pages 63-64).

10. On October 4, 2016, the Claimant returned to see Dr. Holmboe, who noted that the Claimant had not been to see him since January 2016 when his claim was denied. The Claimant reported that he had continued to work light duty since January 2016. The Claimant further reported that he continued to have neck and right shoulder pain and limited range of motion and some radiating pain down his arm into his fingers. Dr. Holmboe noted that he was referring the Claimant back to Dr. Foulk and to a physiatrist, Robert Kawasaki, M.D. Dr. Holmboe added that he disagreed with Dr. Lesnak's opinion that Claimant's symptoms are pre-existing and unrelated to the work injury. Dr. Holmboe maintained Claimant's work restrictions (Claimant's Exhibit 10, pages 65-69).

11. On November 23, 2016, Claimant treated with Dr. Holmboe, who noted THAT the right shoulder surgery was denied. Dr. Holmboe recommended that the Claimant follow-up with Dr. Kawasaki (Claimant's Exhibit 10, pages 72-73). On December 14, 2016, the Claimant again treated with Dr. Holmboe, who noted the Claimant's ongoing symptoms, recommended that the Claimant continue with Dr. Kawasaki, and maintained the Claimant's work restrictions (Claimant's Exhibit 10, pages 74-75). On January 6, 2017, the Claimant again treated with Dr. Holmboe, who maintained the Claimant's treatment plan and work restrictions. As of January 6, 2017, Dr. Holmboe had not placed Claimant at maximum medical improvement (MMI) [Claimant's Exhibit 10, pages 76-77].

12. On September 26, 2016, the Respondents took the evidentiary deposition of Dr. Holmboe. Dr. Holmberg testified consistently with the above-mentioned reports. Dr. Holmboe stated that his opinion was "that the mechanism of injury of the blow to the shoulder area certainly could have led to a rotator cuff injury" (Dr. Holmboe's Deposition Transcript page 23, lines 15-17 (hereinafter Tr. 25:15-17). The ALJ infers and finds that this opinion, against a backdrop of Dr. Holmboe's previous reports referred to herein above, is an opinion to a reasonable degree of medical probability. Dr. Holmboe testified that Dr. Lesnak's opinion really does not change his opinion regarding causality Holmboe Depo., pp. 23:20-25; 24:1-3). Dr. Holmboe reviewed the Claimant's right shoulder MRI and found Claimant "had both findings that could have been acute, the rotator cuff tearing, in addition to the chronic, which would be AC joint arthritis, and the

tendinopathy of the rotator cuff muscles" (Holmboe Depo., p. 32:2-6). Dr. Holmboe stated that he is familiar with construction work and treats construction workers and that they are often required to work overhead and with their arms extended away from their body 9Holmboe depo. p. 38:16-25; p. 39:1-22). Dr. Holmboe testified that it is his understanding that leading up to his injury, Claimant was working full duty without restrictions and has no history of right shoulder injuries, treatment, restrictions, or limitations(Holmboe Depo., pp.. 40 41). There is no persuasive evidence contradicting that prior to the admitt5ed right shoulder injury, the Claimant was working full duty without restrictions.

Douglas Foulk, M.D. – The Claimant's Surgeon

13. On November 10, 2015, Claimant treated with Dr. Foulk and reported his mechanism of injury, including the fact that it occurred at work, pain and other symptoms, and the treatment he has undergone. Dr. Foulk noted that he reviewed the right shoulder MRA and recommended that the Claimant undergo surgery, specifically a right shoulder arthroscopy, subacromial decompression, AC joint debridement, extensive debridement, biceps tenotomy, and rotator cuff repair. Dr. Foul added that Claimant should continue under Dr. Noel's work restrictions. On November 11, 2015, Dr. Foulk submitted a surgery authorization request to Respondents (Claimant's Exhibit 9, pages 24-32).

14. On October 24, 2016, the Claimant returned to Dr. Foulk and reported ongoing and worsening right shoulder symptoms. The Claimant reported that he had been sent home from work due to his increased pain and functional limitations, which rendered him unable to do his light duty work. Dr. Foulk recommended right shoulder surgery, the same surgery he recommended back in November 2015. Even if part of Dr. Fouok's recommended surgery is to address ancillary conditions of the Claimant's right shoulder, it is causally related to an aggravation/acceleration of the consequences of the original admitted injury and is reasonably necessary to cure and relieve the effects thereof.

Request for Prior Authorization by Dr. Foulk

15. The Claimant's ATP, Dr. Holmboe referred the Claimant to Dr. Foulk for consideration of right shoulder surgery. The ALJ draws a plausible inference and finds that Dr. Holmboe is of the opinion that the mechanism of the Claimant's admitted right shoulder injury warranted a referral to Dr. Foulk for consideration of right shoulder surgery for the first time in November 2015 and subsequently in 2016, which is the request in issue herein. Dr. Holmboe is of the opinion that a referral for a surgical evaluation is causally related to the admitted injury herein.

16. Dr. Holmboe referred the Claimant to Dr. Foulk and on October 24, 2016 for evaluation of right shoulder surgery.

17. On October 24, 2016, Dr. Foulk faxed a request for prior authorization to Pinnacol, indicating that the Claimant's condition had worsened since his first visit in 2015. The ALJ infers and finds that at the November 2015 visit with Dr. Foulk, Dr. Foulk was of the opinion that the need for his recommended surgery was work related. Essentially, Dr. Foulk re-affirmed this opinion in his October 24, 2016 request for prior authorization and he recommended right shoulder arthroscopy, subacromial decompression, AC joint debridement, biceps tenotomy, and rotator cuff repair. The ALJ finds that Dr. Foulk, in his October 24, 2016 request for prior authorization indicated in writing, including his reasoning and prior documentation (referring to his prior November 2015 request for prior authorization), his belief that the requested treatment is related to the **admitted** workers' compensation claim.

18. On October 28, 2016, Jason Trujillo, Senior Claims Representative at Pinnacol sent a denial of the request for prior authorization, stating as follows: "The condition for which this care is requested **is not related (emphasis supplied)** to the injury/illness for which **we have admitted liability** (emphasis supplied). There was no timely medical review of the request for prior authorization within the seven (7) days prescribed by Rule 16-10, WCRP, in effect at the time. Thereafter, the Claimant filed an Application for Hearing on November 29, 2016, endorsing medical benefits (surgery) and penalties (which was mis-characterized since the Claimant only seeks automatic authorization for the alleged non-compliance with Rule 16-10, WCRP, in effect at the time. In his denial, Trujillo attached a pre-dated independent medical evaluation (IME) report of Jon M. Erickson, dated August 15, 2016, in which Dr. Erickson had expressed the opinion that Claimant's right shoulder condition was pre-existing and not related "to this claim." Dr. Erickson's opinion of non-work relatedness was superseded by the GAL, dated October 16, 2016, which admitted compensability. The ALJ finds that Dr. Erickson's IME opinion principally addressed "compensability." It did serve as a current medical review of Dr. Foulk's request for prior authorization sent to Pinnacol on October 24, 2016, as required by Rule 16-10 (A), WCRP (in effect at the time in question).

19. The Respondents did not request a hearing within seven business days and notify the requesting provider that the matter was going to hearing within seven business days as required by Rule 16-10 (E) [in effect at the time in question]. The first request for a hearing was the Claimant's Application for Hearing, filed one month later on November 29, 2016. The Respondents filed a Response to Application for Hearing on November 30, 2016, asserting, *inter alia,* that the requested surgery is not reasonably necessary or related to the **admitted** claim. Respondents further asserted that with respect to the "penalty" claims of the Claimant, Respondents' conduct was "objectively reasonable." At the commencement of the hearing, the ALJ determined that the "penalty" claim was mis-characterized since all the Claimant sought was automatic authorization of the surgery recommended by Dr. Foulk because the Respondents had not timely complied with Rule 16-10 (in effect at the time].

Right Shoulder MRA (Magnetic Resonance Angiogram)

20. On October 21, 2015, the Claimant had a right shoulder MRA, which revealed:

a) Full thickness complete supraspinatus tendon tear with minimal retraction of the torn fibers and a near full thickness, near complete subscapularis tendon tear sparing a few of the bursal surface fibers of the central tendon;

b) Long head of the biceps tendon is perched at the medical bicipital groove with mild tendinosis of its proximal extraarticular segment;

c) Moderate to severe AC joint arthropathy with mild to moderate mass effect upon the myotendinous junction of the supraspinatus;

d) Lateral downsloping of the acromion, undersurface spurring, and coracoacromial ligament ossification likely contribute to lateral outlet stenosis; however, this is likely overestimated due to superior subluxation of the humeral head secondary to loss of the depressor mechanism; and

e) Mild to moderate volumetric and grade 1 fatty metamorphosis of the supraspinatus, infraspinatus, and subscapularis tendons.

(Claimant's Exhibit 11, pages 78-79).

Lawrence Lesnak, D.O.

21. Dr. Lesnak saw the Claimant on January 7, 2016, January 14, 2016, and for the third time on February 11, 2016. Dr. Lesnak reviewed some medical records, including notes from ATP Dr. Holmboe. He also reviewed reports from the Respondents' independent medical examiner (IME) Jon M. Erickson, M.D., who ultimately testified on the Respondents' behalf at the hearing.

22. On January 7, 2016, Claimant treated with Dr. Lesnak, and reported his mechanism of injury, pain and other symptoms, and treatment to date. Dr. Lesnak noted that he reviewed the right shoulder MRA and cervical MRI and examined the Claimant. He noted that Claimant exhibited multiple pain behaviors and non-physiologic findings, however, he offered no further persuasive explanation concerning how he arrived at these behavioral conclusions. Dr. Lesnak stated that the right shoulder MRA findings are not consistent with an eight-foot ladder falling and striking his right shoulder and that the findings show chronic changes that likely have been present for many years. Dr. Lesnak offered no further or persuasive explanation concerning this conclusion. Dr.

Lesnak recommended a cervical and right arm EMG (Claimant's Exhibit 13, pages 82-85).

23. On January 14, 2016, the Claimant returned to see Dr. Lesnak, who performed the EMG and rendered the opinion that it showed chronic abnormalities unrelated to Claimant's work-related injury. Dr. Lesnak added that the "EMG findings could certainly explain [Claimant's] subjective complaints*" (*Claimant's Exhibit 13, pages 86-91).

24. On February 11, 2016, the Claimant treated with Dr. Lesnak and confronted Dr. Lesnak regarding his opinion that none of Claimant's injuries, symptoms, complaints, etc., is related to the September 25, 2015 work-injury. Dr. Lesnak notes Claimant was upset and blamed Dr. Lesnak for having his claim closed. Dr. Lesnick quoted Claimant, "You told the insurance company that I had not injury and that I was faking it." Dr. Lesnick noted that the Claimant thereupon refused to do a physical exam. Dr. Lesnak maintained his opinion that the Claimant's symptoms and need for treatment are unrelated to the September 25, 2015 injury (Claimant's Exhibit 13, pages 92-94). The ALJ infers and finds that Dr. Lesnak should have realized at this point that the Claimant did not trust him.

25. On September 6, 2016, Respondents took the evidentiary deposition of Dr. Lesnak. Dr. Lesnak testified consistently with his reports that Claimant's right shoulder MRA revealed chronic degeneration (Lesnak Depo., p. 10, lines 22-23). Dr. Lesnak speculated that based on the Claimant's right shoulder MRA findings, it is unlikely that the Claimant did not have any symptoms prior to his work-related injury (Lesnak Depo., p.12:lines11-25). Dr. Lesnak testified "the MRI findings did not correlate with the reported mechanism of injury at all" (Lesnak Depo., p. 15: lines 1-3). **Dr. Lesnak testified he has no information to indicate Claimant had any problems doing his job prior to the September 25, 2015 work-related injury (**Lesnak Depo., p. 38:lines 3-8).. Dr. Lesnak testified he has no records that indicate Claimant had any prior right shoulder or neck issues or treatment Lesnak Depo., p. 38:lines18-19). Dr. Lesnak stated that to his knowledge Claimant was working full duty without restrictions prior to his September 25, 2015 work-related injury (Lesnak Depo., p.39: lines 20-25; p. 40: lines 1-5). According to Dr. Lesnak, he was not aware that Dr. Foulk recommended that the Claimant undergo right shoulder surgery (Lesnak Depo., p. 52: lines 16-18). Based on the totality of Dr. Lesnak's opinions, the ALJ finds his opinions neither credible nor persuasive. Indeed, for the reasons state herein below, the ALJ finds the opinions of Dr. Holmboe and Dr. Foulk considerably more credible and persuasive than the opinions of Dr. Lesnak.

Jon M. Erickson, M.D. – Respondents' Independent Medical Examiner

26. On November 16, 2015, Dr. Erickson, Respondents' retained IME expert witness, performed a records review and opined, "It is unclear in this MRI as to whether

this is an acute rotator cuff tear or a pre-existing injury. The only way to settle this dilemma is to obtain a very accurate and detailed description of how this shoulder was injured." Dr. Erickson recommended denying the surgery until this issue is addressed (Respondents' Exhibit E, pp. 18-19).

27. On August 15, 2016, Dr. Erickson performed a physical IME concerning the Claimant. Dr. Erickson was of the opinion that the Claimant sustained multiple soft tissue injuries to his neck, upper back, and right shoulder and arm. Dr. Erickson rendered the opinion that the Claimant's cervical and right shoulder MRIs demonstrated chronic, pre-existing issues and no evidence of any acute injury. Dr. Erickson recommended that the Claimant undergo a psychological evaluation and then he could be placed at MMI. Dr. Erickson added that he found the Claimant pleasant, cooperative, as honest as possible, and a fair historian (Respondents' Exhibit F, pp. 20-32), contrary to Dr. Lesnak's findings.

28. On August 16, 2016, Dr. Erickson wrote a supplemental note and stated that the Claimant's injuries were minor and should have resolved in a few weeks and that Claimant is at MMI (Respondents' Exhibit F, p. 33). The ALJ does not find this opinion credible because it conflicts with the opinions of the Claimant's ATPs and seemingly conflicts with Dr. Erickson's earlier suspicions.

29. On February 20, 2017, Dr. Erickson issued an addendum report. He was of the opinion that the Claimant's mechanism of injury would be unlikely to cause a rotator cuff tear. Dr. Erickson did not render an opinion concerning whether or not the admitted injury of September 25, 2015 aggravated/accelerated the Claimant's pre-existing degenerative condition. He further opined that Dr. Foulk's surgery authorization request was not reasonable, necessary, or causally related to the Claimant's work-related injury and that it is addressing pre-existing issues. Again, Dr. Erickson did **not** persuasively deal with whether or not the admitted injury aggravated/accelerated the Claimant's pre-existing condition. His opinions are in conflict with the opinions of the Claimant's ATPs, and the ALJ resolves this conflict in the evidence in favor of Dr. Holmboe and Dr. Foulk. Dr. Erickson recommended that the Claimant undergo a forensic psychological/psychiatric evaluation (Respondents' Exhibit G, pp. 34-38). The ALJ infers and finds that Dr. Ericikson believes that the Claimant's manifestation of chronic pain may be related to psychological factors. Dr. Erickson does not persuasively explain why the Claimant's present debilitated condition is not "real."

30. At hearing, Dr. Erickson testified consistently with his reports. He stated that the Claimant definitely sustained an injury, is severely impaired, and that the Claimant is getting worse. Dr. Erickson testified that he does not believe the requested surgery is related to Claimant's work injury but that the surgery request is reasonable and indicated based on the pathology found on the MRI. Dr. Erickson testified that there is nothing to indicate that the Claimant had any right shoulder pain or other symptoms, treatment, restrictions, limitations, or difficulties doing his job prior to the September 25,

2015 work-related injury. In this regard, the ALJ finds Dr. Erickson's testimony concerning the fact that the Claimant sustained an injury and is severely impaired credible and corroborating the opinions of the ATPs in part, however, based on the totality of the evidence, the ALJ does **not** find Dr. Erickson's ultimate opinion that the requested surgery is **not** causally related credible or persuasive. The opinions of Dr. Holmboe and Dr. Foulk are more credible and persuasive than Dr. Erickson's ultimate opinion concerning lack of causal relatedness.

Request for Prior Authorization

31. The Claimant's ATP, Dr. Holmboe, referred the Claimant to Dr. Foulk for consideration of right shoulder surgery. The ALJ draws a plausible inference and finds that Dr. Holmboe is of the opinion that the mechanism of the Claimant's admitted right shoulder injury warranted a referral to Dr. Foulk for consideration of right shoulder surgery for the first time in November 2015 and subsequently in 2016, which is the request in issue herein. Dr. Holmboe is of the opinion that a referral for a surgical evaluation is causally related to the admitted injury herein.

32. Dr. Holmboe referred the Claimant to Dr. Foulk for evaluation of right shoulder surgery on October 24, 2016.

33. On October 24, 2016, Dr. Foulk faxed a request for prior authorization to Pinnacol, indicating that the Claimant's condition had worsened since his first visit in 2015. The ALJ infers and finds that at the November 2015 visit with Dr. Foulk, Dr. Foulk was of the opinion that the need for his recommended surgery was work related. Essentially, Dr. Foulk re-affirmed this opinion in his October 24, 2016 request for prior authorization and he recommended right shoulder arthroscopy, subacromial decompression, AC joint debridement, biceps tenotomy, and rotator cuff repair. The ALJ finds that Dr. Foulk , in his October 24, 2016 request for prior authorization indicated in writing, including his reasoning and prior documentation (referring to his prior November 2015 request for prior authorization), his belief that the requested treatment is related to the **admitted** workers' compensation claim.

34. On October 28, 2016, Jason Trujillo, Senior Claims Representative at Pinnacol, sent a denial of the request for prior authorization, stating as follows: "The condition for which this care is requested **is not related (emphasis supplied)** to the injury/illness for which **we have admitted liability** (emphasis supplied). There was no timely medical review of the request for prior authorization within the seven (7) days prescribed by Rule 16-10, WCRP, in effect at the time. Thereafter, the Claimant filed an Application for Hearing on November 29, 2016, endorsing medical benefits (surgery) and penalties (which was mis-characterized since the Claimant only seeks automatic authorization for the alleged non-compliance with Rule 16-10, WCRP, in effect at the time. In his denial, Trujillo attached a pre-dated independent medical evaluation (IME) report of Jon M. Erickson, dated August 15, 2016, in which Dr. Erickson had expressed

the opinion that Claimant's right shoulder condition was pre-existing and not related "to this claim." Dr. Erickson's opinion of non-work relatedness was superseded by the GAL, dated October 16, 2016, which admitted compensability. The ALJ finds that Dr. Erickson's IME opinion principally addressed "compensability." It did **not** serve as a current medical review of Dr. Foulk's request for prior authorization sent to Pinnacol on October 24, 2016, as required by Rule 16-10 (A), WCRP (in effect at the time in question).

35. The Respondents did not request a hearing within seven business days and notify the requesting provider that the matter was going to hearing within seven business days as required by Rule 16-10 (E) [in effect at the time in question]. The first request for a hearing was the Claimant's Application for Hearing, filed one month later on November 29, 2016. The Respondents filed a Response to Application for Hearing on November 30, 2016, asserting, *inter alia,* that the requested surgery is not reasonably necessary or related to the **admitted** claim. Respondents further asserted that with respect to the "penalty" claims of the Claimant, Respondents' conduct was "objectively reasonable." At the commencement of the hearing, the ALJ determined that the "penalty" claim was mis-characterized since all the Claimant sought was automatic authorization of the surgery recommended by Dr. Foulk because the Respondents had not timely complied with Rule 16-10 (in effect at the time].

Ultimate Findings

36. Based on the findings herein above, the ALJ finds the Claimant's ATPs and surgeon, Dr. Holmboe and Dr. Foulk more credible than Dr. Lesnak and Dr. Erickson on the issue of causal relatedness of the need for the surgery recommended by Dr. Foulk. Also, the ALJ finds that the Claimant's decrepit condition is genuine and his lay testimony at hearing plays a significant role in discrediting Dr. Lesnak's opinions, as well as rendering Dr. Erickson's ultimate opinion concerning lack of causal relatedness not credible. The ALJ finds the Claimant's presentation and testimony credible.

37. The ALJ makes a rational choice, based on substantial evidence, to accept the opinions of the Claimant's ATPs, Dr. Holmboe and Dr. Foulk, and to reject the opinions of Dr. Lesnak and Dr. Erickson.

38. The Claimant has proven, by a preponderance of the evidence that his present need for the surgery recommended by Dr. Foulk is within the proximate chain of causation from the admitted injury, resulting from an aggravation/acceleration thereof.

39. The ALJ finds that the Respondents failed to comply with the appropriate provisions for contesting a request for prior authorization, as found in Findings Nos. 34 and 35 herein above. Consequently, authorization of Dr. Foulk's recommended surgery is automatic by operation of Rule 16-10 (E) [in effect at the time in question].

DISCUSSION OF REQUEST FOR PRIOR AUTHORIZATION

Citing the Industrial Claim Appeals Office (ICAO) decision in *Flanagan v. Brookdale Senior Living,* W.C. No. 4-948-599-02 (ICAO, May 24, 2016, the Respondents argue that a denial without a medical review is appropriate when medical and **non-medical** reasons are stated in the denial. Essentially, the Respondents argue that the general provisions of Rule 16-11, "Payment of Medical Benefits", applies. In *Flangan,* ICAO noted that the denial of the request for prior authorization was made in a **fully contested case**, not an admitted case such as the present case. ICAO held that the denial in *Flanagan* was for **non-medical** reasons because the case was fully contested. A close analysis of *Flanagan* reveals that "compensability" is a **non-medical** reason for a denial, thus, Rule 16-11 (in effect at the time), concerning the "general payment of medical bills" applied in *Flanagan.*.

The present case is clearly distinguishable from *Flanagan*. As found, a GAL, dated October 6, 2016 (that pre-dated Dr. Foulk's request for prior authorization) was filed in the present case. As further found, the denial letter from Pinnacol, dated October 28, 2016, explicitly refers to the "admitted" case. Consequently, the explicit language of Rule 16-10 (A) [Contest of a Request for Prior Authorization—in effect at the time in question) applies, and not the general provisions of Rule 16-11 [Payment of Medical Bills –in effect at the time in question].

The rules of statutory construction are applicable to the proper construction of rules. First, statutory (rule) provisions are to be construed according to their plain meaning and should not be subjected to strained or forced interpretation. *People v. Browning,* 809 P.2d 1086 (Colo. App. 1990); *People v. Thomas,* 867 P.2d 880 (Colo. 1994). In interpreting a comprehensive legislative (rule) scheme, meaning must be given to all portions thereof. *A.B. Hirschfeld Press v. Denver,* 806 P.2d 917 (Colo. 1991). Statutes (rules) are to be construed *in pari material* so as to give effect to the legislative intent to avoid inconsistencies and absurdities. *Whisler v. Kuckler,* 36 Colo. App. 200, 538 P.2d 477 (1975) *rev'd on other grounds,* 191 Colo. 260, 552 P.2d 18 (1976). A well established rule of statutory construction is that the entire statute (rule scheme) is intended to be effective. *People v. Phillips,* 652 P.2d 575 (Colo. 1982); *In re Estate of Hill,* 713 P.2d 928 (Colo. App. 1985). It is a well settled principle of law that the" specific" controls over the "general." *See City of Littleton v. Indus. Claim Appeals Office,* 2012 COA 187. It is clear that the legislative intent of Rule 16-10 (requests for prior authorization in admitted cases) was to get medical treatment by an ATP on a fast track, thus, the seven-day medical review requirement. § 8-40-102 (1), C.R.S., declares that the Workers' Compensation Act be interpreted so as to assure the quick and efficient delivery of disability and **medical** benefits. The "medical review" provision (within seven business days) in Rule 16-10 (in effect at the time in question) is designed to eliminate litigation in admitted cases, where appropriate. Rule 16-11(in effect at the

time in question) of necessity contemplates the resolution of the "compensability" issue before an insurer is obliged to pay medical benefits.

In the present case, the Respondents' argument pushes an interpretation of applicable rule [Rule 16-11—general payment of medical bills] beyond any principle of plain meaning and reasonable interpretation of the applicability of the appropriate rule to a request for prior authorization, by a physician, in an admitted case. Respondents argue that a medical review, as required by Rule 16-10 (A) is not required because their denial in an admitted case was based on Rule 16-11, arguing that the denial was for non-medical reasons. The fallacy in this argument is that the denial was made in an **admitted** case. Rule 16-10 (a) explicitly states that the "insurer cannot deny (in an admitted case) based solely on relatedness **without a medical review as required by section 16-10 (B)** [within seven business days]. Such review did not occur. Rule 16-10 (a) is specific in requiring a medical review in seven business days. Rule 16-11 is general and, by its terms, refers to denials of causal relatedness in terms of fully contested cases. The ALJ concludes that the specific rule, Rule 16-10, applies to a proper contest of Dr. Foulk's request for prior authorization, and since there was no timely medical review, the Respondents failed to comply with the specific rule applicable. The consequences of not obtaining the medical review in seven business days are that the request for prior authorization "shall be deemed authorized for payment of the requested treatment," under the provisions of Rule 16 (E) [in effect at the time in question].

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App.

2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, *See, Annotation, Comment: Credibility of Witness Giving Un-contradicted Testimony as Matter for Court or Jury,* 62 ALR 2d 1179, maintaining that the fact finder is not free to disregard un-contradicted testimony. As found, the Claimant's ATPs and surgeon, Dr. Holmboe and Dr. Foulk, were more credible than Dr. Lesnak and Dr. Erickson on the issue of causal relatedness of the need for the surgery recommended by Dr. Foulk. Also, the Claimant's decrepit condition is genuine and his lay testimony at hearing plays a significant role in discrediting Dr. Lesnak's opinions, as well as rendering Dr. Erickson's ultimate opinion concerning lack of causal relatedness not credible. The ALJ finds the Claimant's presentation and testimony credible. *See Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997) [compensability may be decided on lay testimony alone despite medical opinions to the contrary].

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, the ALJ made a rational choice, based on substantial evidence, to accept the opinions of the Claimant's ATPs, Dr. Holmboe and Dr. Foulk, and to reject the opinions of Dr. Lesnak and Dr. Erickson.

Aggravation/Acceleration of Pre-Existing Condition

c. A claimant's personal susceptibility or predisposition to injury does not disqualify the claimant from receiving benefits. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). An injured worker has a compensable new injury **if the employment-related activities aggravate, accelerate, or combine with the pre-existing condition to cause a need for medical treatment or produce the disability for which benefits are sought.** § 8-41-301(1) (c), C.R.S. *See Merriman v. Indus. Comm'n,* 120 Colo. 400, 210 P.2d 448 (1949); *Anderson v. Brinkoff,* 859 P.2d 819 (Colo. 1993); *National Health Laboratories v. Indus. Claim Appeals Office,* 844 P.2d 1259 (Colo. App. 1992); *Snyder v. Indus. Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). An injury resulting from the concurrence of a preexisting condition and a hazard of employment is compensable. *H & H Warehouse v. Vicory*, *supra*. *Duncan v. Indus. Claims App. Office*, 107 P.3d 999 (Colo. App. 2004). Even where the direct cause of an accident is the employee's pre-existing disease or condition, the resulting disability is compensable where the conditions or circumstances of employment have contributed to the injuries sustained by the employee. *Ramsdell v. Horn*, 781 P.2d 150 (Colo.App. 1989). *Also see* § 8-41-301(1) (c), C.R.S; *Parra v. Ideal Concrete,* W.C. No. 4-179-455 [Indus. Claim Appeals Office (ICAO), April 8, 1998]; *Witt v. James J. Keil Jr.,* W.C. No. 4-225-334 (ICAO, April 7, 1998). As found, the Claimant's present need for the right shoulder surgeries recommended by Dr. Foulk results from an aggravation/acceleration of his condition within the proximate chain of causation.

Causal Relatedness and Reasonable Necessity of Surgery Recommended by Dr. Foulk

d. An employer must provide an injured employee with reasonably necessary medical treatment to "cure and relieve the employee from the effects of the injury." § 8-42-101(1) (a), C.R.S. The employee must prove a causal relationship between the injury and the medical treatment for which the worker is seeking benefits. *Snyder v. Indus. Claim Appeals Office*, 942 P.2d 1337, 1339 (Colo. Ct. App. 1997). Treatments for a condition not caused by employment are not compensable. *Owens v. Indus. Claim Appeals Office*, 49 P.3d 1187, 1189 (Colo. Ct. App. 2002). An industrial accident is the proximate cause of a claimant's disability if it is the necessary precondition or trigger of the need for medical treatment. *Subsequent Injury Fund v. State Compensation Insurance Authority,* 768 P.2d 751 (Colo. App. 1988). In order to prove that an industrial injury was the proximate cause of the need for medical treatment, an injured worker must prove a causal nexus between the need for treatment and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). It is for the ALJ, as the fact-finder, to determine whether a need for medical treatment is caused by the industrial injury, or some other intervening injury. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985). Respondents are liable for the "direct and natural consequences" of a work-related injury, including consequential injuries caused by the original

compensable injury. *See Travelers Ins. Co. v. Savio*, 806 P.2d 1258 (Colo. 1985). The chain of causation, however, can be broken by the occurrence of an independent intervening injury. *See* 1 A. *Larson, Workers' Compensation Law,* section 13.00 (1997). As found, the aggravation/acceleration of the Claimant's right shoulder condition condition is in the direct, proximate chain of causation from the admitted injury of September 25, 2015, thus, the Claimant's need for the surgery is causally related to the admitted injury.

e. Medical treatment must be reasonably necessary to cure and relieve the effects of the industrial occupational disease. § 8-42-101 (1) (a), C.R.S. *Morey Mercantile v. Flynt,* 97 Colo. 163, 47 P. 2d 864 (1935); *Sims v. Indus. Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). As found, Dr. Foulk's recommended right shoulder surgery is reasonably necessary to cure and relieve the effects of the admitted injury of September 25, 2015.

Request for Prior Authorization

f. the surgery recommended by Dr. Foulk should be automatically authorized under Rule 16-10(E), WCRP [in effect at the time] because the Respondents failed to obtain a medical review to support the surgery denial within seven business days of Dr. Foulk's October 26, 2016 surgery authorization request.

g. Rule 16-9(F), WCRP, provides:

> To complete a prior authorization request, the provider shall concurrently explain the reasonableness and the medical necessity of the services requested, and shall provide relevant supporting documentation. Supporting medical documentation is defined as documents used in the provider's decision-making process to substantiate the need for the requested service of procedure.

The issue of whether a provider has submitted a "completed request" for purposes of WCRP 16-9(B) is a question of fact for the Administrative Law Judge. *Lichtenberg v. J.C. Penney*, W.C. Nos. 4-814-897 & 4-842-012 [Industrial Claim Appeals Office (ICAO), July 19, 2012]; *see Skelly v. Wal-Mart*, W.C. No. 4-632-887 (ICAO, July 31, 2008). At the outset of the hearing, the parties stipulated that Dr. Foulk's October 26, 2016 surgery authorization request complied with WCRP 16-9 and was a valid request for surgery, and the ALJ so found.

h. As outlined in WCRP 16-9(G), after receipt of a completed request for prior authorization, the insurer must then comply with WCRP 16-10(A) (non-medical reasons) or (B) (medical reasons) for the contest. WCRP 16-11(B)(1) outlines examples of non-medical reasons, including the billed services are not related to the admitted

injury. Respondents denied Dr. Foulk's surgery authorization for alleged nonmedical reasons, specifically that the surgery is not related to the work injury, thus WCRP 16-10(A) applies. *See Respondents' Exhibit D, page 17*.

i. Rule 16-10(A), WCRP applies to admitted cases, and it provides, "If an ATP requests prior authorization and indicates in writing, including their reasoning and relevant documentation, that they believe the requested treatment is related to the admitted workers' compensation claim, the insurer cannot deny based solely on relatedness without a medical review as required by 16-10(B)." WCRP 16-10(B) provides that if the payer is contesting a request for prior authorization for medical reasons, the payer shall, within seven (7) business days of the completed request, have the request reviewed by a physician and "furnish the provider and the parties with a written contest that sets forth" specific information. Claimant argues Dr. Foulk's October 26, 2016 surgery authorization request complied with WCRP 16-10(A), and Respondents violated WCRP 16-10(A) because Respondents did not obtain a medical review within seven business days of Dr. Foulk's October 26, 2016 surgery authorization request. On October 28, 2016,

j. As further found, Jason Trujillo, Senior Claims Representative at Pinnacol sent a denial of the request for prior authorization, stating as follows: "The condition for which this care is requested **is not related (emphasis supplied)** to the injury/illness for which **we have admitted liability** (emphasis supplied). There was no timely medical review of the request for prior authorization within the seven (7) days prescribed by Rule 16-10, WCRP, in effect at the time. Thereafter, the Claimant filed an Application for Hearing on November 29, 2016, endorsing medical benefits (surgery) and penalties (which was mis-characterized since the Claimant only seeks automatic authorization for the alleged non-compliance with Rule 16-10, WCRP, in effect at the time.

k. Also as found, the Respondents did not request a hearing within seven business days and notify the requesting provider that the matter was going to hearing within seven business days as required by Rule 16-10 (E) [in effect at the time in question]. The first request for a hearing was the Claimant's Application for Hearing, filed one month later on November 29, 2016. The Respondents filed a Response to Application for Hearing on November 30, 2016, asserting, *inter alia,* that the requested surgery is not reasonably necessary or related to the **admitted** claim. Respondents further asserted that with respect to the "penalty" claims of the Claimant, Respondents' conduct was "objectively reasonable." At the commencement of the hearing, the ALJ determined that the "penalty" claim was mis-characterized since all the Claimant sought was automatic authorization of the surgery recommended by Dr. Foulk because the Respondents had not timely complied with Rule 16-10 (in effect at the time].

l. Respondents cite an ICAO opinion, *Flanagan v. Brookdale Senior Living, Inc.*, W.C. No. 4-948-599 (ICAO, May 24, 2016) to support their position that Dr. Foulk's that Respondents denial was proper. In *Flanagan*, an ATP requested authorization for

surgery while the claim was still under a notice of contest; Respondents denied the surgery request for non-medical reasons, *i.e.,* that "compensability" was being contested.

m. The present case is clearly distinguishable from *Flanagan*. As found, a GAL, dated October 6, 2016 (**pre-dated** Dr. Foulk's request for prior authorization) was filed. As further found, the denial letter from Pinnacol, dated October 28, 2016, explicitly refers to the **"admitted**" case. Consequently, the explicit language of Rule 16-10 (A) [Contest of a Request for Prior Authorization—in effect at the time in question) applies, and not the general provisions of Rule 16-11 [Payment of Medical Bills –in effect at the time in question].

n. Section 8-40-102 (1), C.R.S., declares that the Workers' Compensation Act be interpreted so as to assure the quick and efficient delivery of disability and **medical** benefits. The "medical review provision (within seven business days) in Rule 16-10 (in effect at the time in question) is designed to eliminate litigation in admitted cases, where appropriate. Rule 16-11(in effect at the time in question) of necessity contemplates the resolution of the "compensability" issue before an insurer is obliged to pay medical benefits.

o. The rules of statutory construction are applicable to the proper construction of rules. First, statutory (rule) provisions are to be construed according to their plain meaning and should not be subjected to strained or forced interpretation. *People v. Browning,* 809 P.2d 1086 (Colo. App. 1990); *People v. Thomas,* 867 P.2d 880 (Colo. 1994). In interpreting a comprehensive legislative (rule) scheme, meaning must be given to all portions thereof. *A.B. Hirschfeld Press v. Denver,* 806 P.2d 917 (Colo. 1991). Statutes (rules) are to be construed *in pari materia* so as to give effect to the legislative intent to avoid inconsistencies and absurdities. *Whisler v. Kuckler,* 36 Colo. App. 200, 538 P.2d 477 (297) *rev'd on other grounds,* 191 Colo. 260, 552 P..2d 18 (1976). A well established rule of statutory construction is that the entire statute (rule scheme) is intended to be effective. *People v. Phillips,* 652 P.2d 575 (Colo. 1982); *In re Estate of Hill,* 713 P.2d 928 (Colo. App. 1985). It is a well settled principle of law that the" specific" controls over the "general." *See City of Littleton v. Indus. Claim Appeals Office,* 2012 COA 187. In the present case, the Respondents' argument pushes an interpretation of the applicability of the wrong rule [Rule 16-11—general payment of medical bills] beyond any principle of plain meaning and reasonable interpretation of the applicability of the appropriate rule to a request for prior authorization, by a physician, in an admitted case. Respondents argue that a medical review, as required by Rule 16-10 (A) is not required because their denial was based on Rule 16-11, arguing that the denial was for non-medical reasons. The fallacy in this argument is that the denial was made in an **admitted** case. Rule 16-10 (a) explicitly states that the "insurer cannot deny (in an admitted case) based solely on relatedness **without a medical review as required by section 16-10 (B)** [within seven business days]. Such review did not occur. Rule 16-10 (a) is specific in requiring a medical review in seven business days.

Rule 16-11 is general and, by its terms, refers to denials of causal relatedness in terms of fully contested cases. The ALJ concludes that the specific rule, Rule 16-10 (in effect at the time in question), applies to a proper contest of Dr. Foulk's request for prior authorization, and because there was no timely medical review. The Respondents failed to comply with the specific rule applicable. The consequences of not obtaining the medical review in seven business days, or otherwise complying with Rule 16-10 (a), WCRP, are that the request for prior authorization "shall be deemed authorized for payment of the requested treatment," under the provisions of Rule 16 (E) [in effect at the time in question].

Burden of Proof

p. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has met his burden on all of the designated issues.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Respondents shall pay for the right shoulder surgery recommended by Dr. Foulk on October 26, 2016, subject to the Division of Workers' Compensation Medical Fee Schedule.

B. All matters not determined herein are reserved for future decision.

DATED this_____day of April 2017.

_____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

W.C. No. 4-974-311-04

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer/Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on March 29, 2017, in Denver, Colorado. The hearing was digitally recorded (reference: 3/29/17, Courtroom 1, beginning at 1:30 PM, and ending at 3:30 PM).

Claimant's Exhibits 1 through 9 were admitted into evidence without objection. Respondents' Exhibits A through Y were admitted without objection. Respondents submitted the evidentiary deposition of Mark Paz M.D., taken on March 13, 2017. The ALJ took administrative notice of WCRP (Workers' Compensation Rules of Procedure) Rule 17, Exhibit 8 (Cervical Spine Injury Medical Treatment Guidelines), 7 CCR 1101-3.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Claimant, which was filed, electronically, on April 5, 2017. On April 7, 2017, Respondents filed an objection "to the language contained in the proposed order. I do not believe the ALJ made a determination the (*sic*) Dr. Higginbotham was incorrect in his diagnosis." As found herein below, the ALJ determines that Dr.Higginbotham was correct in determining that the Claimant's shoulder and cervical spine conditions are work-related (Finding No. 35, but incorrect in diagnosing the Claimant's "neurotic discomfort" is due to soft tissue problems and 'does not appear to have a complete base and analysis.'" As found

herein below, five physicians, including Dr. Macaulay, attribute the Claimant's left upper extremity (LUE) pain secondary to radiculitis or radiculopathy (Finding no. 41.vi through 41. Ix. After a consideration of the proposed decision and the objections thereto, the ALJ has modified the proposal and hereby issues the following decision.

ISSUES

The issues to be determined by this decision are whether the Claimant has overcome the opinion of Division Independent medical examiner (DIME), Thomas Higginbotham, D.O. , that the Claimant was at maximum medical improvement (MMI); if Claimant is not at MMI, what treatment is reasonably necessary and causally related to the admitted cervical/left shoulder injury of February 4, 2015; if the Claimant is not at MMI, is he entitled to temporary total disability (TTD) benefits from April 19, 2016 and continuing; and, what is the extent of his bodily disfigurement attributable to his industrial accident.

To overcome the DIME OF Dr. Higginbotham on the issue of MMI, the Claimant bears the burden of proof, by clear and convincing evidence. On all other issues the Claimant's burden is by a preponderance of the evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Procedural Posture/Findings

1. The Claimant was born on December 26, 1968 and was 49 years old at time of hearing.

2. The Claimant was injured on February 5, 2015 in the course and scope of his employment as automotive mechanic for the Employer. On that date, he was twisting a fuel filter from the diesel truck engine when he felt a pop in his left shoulder and experienced sharp and burning pain in the shoulder. After a short time, the pain subsided. He then lifted a 70-pound tire when he felt further pain in his left shoulder with pain extending to the left side of his neck.

3. The Claimant timely reported the injury, which was admitted by the Respondents. Ultimately, the Respondents filed the latest Final Admission of Liability (FAL) dated September 14, 2016, admitting for TTD through April 18, 2016; admitted; for the 7% whole person cervical rating and the 2% scheduled rating given by Dr. Higginbotham in his DIME report (Claimant's Exhibit 5); denying post-MMI medical

maintenance benefits; and, agreeing with the MMI date assigned by authorized treating physician (ATP), Robert Dixon, M.D.

4. Based on Dr. McCranie's one page record review and Respondents' choice not to authorize a third injection, Dr. Dixon placed the Claimant at maximum medical improvement (MMI) on April 22, 2016, giving the Claimant a 6% impairment range of motion of the shoulder, which converted to a 4% whole person impairment (the conversion is mandated by the *American Medical Association Guides to the Evaluation of Permanent Impairment,* 3rd Ed., Rev. He expressed no opinion concerning whether it was appropriate to convert to LUE rating to a whole person rating. Dr. Dixon did not give the Claimant a rating for his neck condition, noting that "In March 2016, a peer review was performed and it was felt that that the neck injury was not related to his original left shoulder injury and no further treatment for the neck work was approved" (Respondents' Exhibit Y, bates stamp, pp. 318-319). Dr. Dixon did not explain why the neck condition was no longer injury related after he had sanctioned extensive conservative care for the neck condition. The ALJ infers and finds that with regard to the Claimant's neck, Dr. Dixon relied entirely on the hearsay conclusion of the peer review, which did not persuasively explain the reasons for their conclusion that the neck was not related.

5. The Claimant filed a timely objection to the FAL, along with a timely Notice and Proposal for Selection of a DIME. Dr. Higginbotham was selected as the DIME, which he performed and issued a DIME Report, dated August 15, 2016. DIME Dr. Higginbotham agreed with ATP Dr. Dixon and placed the Claimant at MMI on April 19, 2016. Thereafter, the Claimant filed an Application for Hearing to challenge Dr. Higginbotham's DIME opinion concerning MMI.

Preliminary Findings

6. On the day of the admitted injury, the Claimant sought care at Littleton Adventist Hospital where he was seen by Michael Anderson, M.D. Dr. Anderson noted a prior injury to the Claimant's rotator cuff, and he assessed "left shoulder pain." Reviewing films of the shoulder, Dr. Anderson noted that the Claimant had previously undergone a Bankart repair. Dr. Anderson recommended follow up with an orthopedic surgeon (Respondents' Exhibit P, bates stamp.106).

7. The Claimant followed up with John S. Hughes, M.D., on February 17, 2015, and dr. Hughes agreed with the findings of Dr. Anderson in the Emergency Room (ER) and referred the Claimant to Michael Fuller, D.O.., for orthopedic surgical evaluation (Claimant's Exhibit 7, bates stamp167-68).

8. An MRI (magnetic resonance imaging) of the left shoulder on February 16, 2015 showed: 1. Superior labral tear of the left shoulder; 2. Small high-grade partial thickness tear at the junction of the infraspinatus and supraspinatus tendons with a full-

thickness perforation in the area, and 3. moderate osteoarthritis of the acromioclavicular joint Respondents' (Exhibit T, bates stamp 178-79).

9. In his report dated February 17, 2015, Dr. Fuller, noted that the injury "was caused by twisting motion while lifting", and he recommended surgery (Respondents' Exhibit S, bates stamp 120).

10. On March 13, 2015, Dr. Fuller performed a biceps tendon release, a labral repair and subacromial decompression (Respondents' Exhibit P, bates stamp 109).

11. On March 20, 2015, ATP Dr. Dixon assumed post-operative care of the Claimant's left shoulder condition (respondents' Exhibit Y, bates stamp 251-253). Dr. Dixon, however, did not specifically identify left neck symptoms until his report of July 2, 2015 (Respondents' Exhibit Y, bates stamp 266).

12. The Claimant credibly testified that he experienced pain from his left shoulder to the left side of his neck from the date of the injury through date of surgery. While he acknowledged that available medical records do not reflect complaints of neck pain during that period, he credibly testified that he uniformly reported problems in his left neck region in the pain diagrams submitted to his treating providers, and some pain diagrams reflect reported neck problems.

13. After surgery, the Claimant wore a sling for about six weeks. He noted that the sling "pulled" on the left side of his neck causing increased pain in that area.

14. On August 18, 2015, Dr. Fuller indicated an assessment of cervical nerve root compression and referred the Claimant to Michael n. Horner, D.O.., for a cervical evaluation (Respondents' Exhibit S, bates stamp 140-143).

15. By report dated September 10, 2015, Dr. Horner assessed cervical radiculopathy, cervicalgia, and symptomatic cervical degenerative disc disease. He recommended continued physical therapy, medication and MRI of the cervical spine pending the outcome of physical therapy and medication trial (Respondents' Exhibit S, bates stamp 146).

16. The Claimant received conservative therapy for his left shoulder and neck pain after surgery, which included physical therapy, medications, and chiropractic care with Dr. Patrick Noel, D.C., on September 3, 2015 and on September 29, 2015 (See Respondents' Exhibit R). None of this conservative therapy reduced the Claimant's neck pain significantly.

17. An MRI of the Claimant's cervical spine was performed on October 9, 2015, and it showed foraminal stenosis at C4-C5 level on the left and bilaterally at the

C5-C6 level. Prominent facet arthropathy changes were seen at the C4-C5 level on the left (respondents' Exhibit T, bates stamp 175-176).

18. The Claimant complained of neck pain to Dr. Dixon on September 1, 2015; September 11, 2015, September 22, 2015 and again on October 14, 2015, when Dr. Dixon wrote that the Claimant "returns for recheck of left shoulder injury, [status post-surgery] and left neck pain" (Respondents' Exhibit Y, bates stamp 274-286).

19. Dr. Horner recommended an epidural steroid injection (ESI), which was approved by the Respondents and performed by Dr. Horner on November 25, 2015. That injection, which was a C7-T1 interlaminar ESI, reportedly worsened the neck discomfort and dysthesias (Respondents' Exhibit N, bates stamp 76-77).

20. Because of the failure of conservative measures, Dr. Dixon referred the Claimant to Andrew Castro, M.D., a surgeon, for an orthopedic surgical evaluation for the neck (Respondents' Exhibit Y, bates stamp 291; Respondents' Exhibit M, bates stamp 36).

21. In a report dated December 14, 2015, Dr. Castro noted a history of neck complaints and that the Claimant was wearing a sling "for several weeks after surgery and noticed some pain into the neck running down the arm after the sling was placed". He encouraged conservative treatment prior to consideration of surgery; recommended a TESI at C4-C5 and C5-C6 and, if that failed, surgical intervention might be considered, specifically an anterior cervical fusion at C4-C6. Dr. Castro referred the Claimant to J. Scott Bainbridge, M.D., for the injection (Claimant's Exhibit 7, bates stamp106-109).

22. On February 5, 2016, the Claimant underwent a C4-C6 medial branch block administered by Dr. Bainbridge (Respondents' Exhibit M, bates stamp. 55-57), which resulted in no clinical improvement.

23. On February 22, 2016, Dr. Castro recommended a TESI at C4-C5 and C5-C6 and suggested that if the injection was beneficial, a second injection should be considered. Failing any benefit, Dr. Castro was of the opinion that, a cervical fusion would be reasonable treatment (Claimant's Exhibit 7, bates stamp 102-104).

24. By report dated March 3, 2016, after a record review only, Kathy McCranie, M.D., recommended denial of a TESI at C4-C5 and C5-C6. She stated that she could not correlate the MRI findings with his sling usage, and stated the opinion that the Claimant's degenerative disc disease and spinal stenosis should be treated outside of the workers' compensation arena (a legal conclusion on Dr. McCranie's part). She believed that it was reasonable to treat the Claimant's soft tissue complaints through the workers' compensation system, but she made no specific recommendations for such treatment (Respondents' Exhibit Q).

25. Thereafter, the Respondents denied authorization of a TESI at C4-C5 and C5-C6 recommended by Dr. Castro.

26. As previously noted in the Procedual Posture/Findings section of this decision, based on Dr. McCranie's one page record review and Respondents' choice not to authorize a third injection, Dr. Dixon placed the Claimant at MMI on April 22, 2016, giving the Claimant a 6% impairment range of motion of the shoulder, which converted to a 4% whole person impairment (the conversion is mandated by the *American Medical Association Guides to the Evaluation of Permanent Impairment,* 3rd Ed., Rev.. He expressed no opinion concerning whether it was appropriate to convert to LUE rating to a whole person rating. Dr. Dixon did not give the Claimant a rating for his neck condition, noting that "In March 2016, a peer review was performed and it was felt that that the neck injury was not related to his original left shoulder injury and no further treatment for the neck work was approved" (Respondents' Exhibit Y, bates stamp, pp. 318-319). Dr. Dixon did not explain why the neck condition was no longer injury related after he had sanctioned extensive conservative care for the neck condition. The ALJ infers and finds that with regard to the Claimant's neck, Dr. Dixon relied entirely on the hearsay conclusion of the peer review, which did not persuasively explain the reasons for the peer review conclusion that the neck was not related.

Division Independent Medical Examination (DIME) by Thomas Higginbotham, D.O

27. Dr. Higginbotham performed a DIME on August 15, 2016. He disagreed with Dr. Dixon about the causality of the cervical condition, and he assigned a whole person rating of 7% for the cervical spine, finding a 4% Specific Disorders for "myofascial pain" and 3% range of motion of impairment. For the shoulder, Dr. Higginbotham assigned a 2% impairment rating of the LUE, which converted to a 1% whole person rating but he did not express an opinion concerning whether a conversion of the LUE rating to a whole person rating was appropriate or not.. He agreed with Dr. Dixon's MMI date of April 22, 2016, and stated the opinion that the Claimant did not need any maintenance medical care for the neck other than self-care such as a concerted stretching/strength exercise program and auto-massage (Claimant's Exhibit 8).

28. It is highly likely, unmistakable and free from serious and substantial doubt that DIME Dr. Higginbotham is in error in concluding that the Claimant was at MMI on April 19, 2016. Also, it is highly likely that diagnosis that the Claimant's neurotic discomfort is due to soft tissue problems and "does not appear to have a complete base and analysis" is clearly erroneous. As found herein below, five physicians, including Dr. Macaulay, attribute the Claimant's left upper extremity (LUE) pain secondary to radiculitis or radiculopathy (Finding no. 35.vi through 35. Ix). It is also highly likely that Dr. Higginbotham is in error in concluding that the Claimant needs no further medical treatment or tests. It is an anomaly that DIME Dr. Higginbotham seemingly adopted

ATP Dr. Dixon's MMI date, mechanistically, when ATP Dr. Dixon did not rate the Claimant's cervical spine and DIME Dr. Higginbotham rated it.

29. In the latest FAL, dated September 14, 2016, the Respondents admitted for TTD through April 18, 2016; admitted; for the 7% whole person cervical rating and the 2% scheduled rating given by Dr. Higginbotham in his DIME report (Claimant's Exhibit 5); denying post-MMI medical maintenance benefits; and, agreeing with the MMI date assigned by authorized treating physician (ATP), Robert Dixon, M.D.

30. The Claimant timely objected to the FAL and applied for hearing to challenge Dr. Higginbotham's DIME determination of MMI on April 19, 2016 and his characterization of his neck problems as "myofascial in nature." However, the Claimant does not challenge Dr. Higginbotham's permanent impairment ratings, including the overall rating for the neck condition

Respondents' Independent Medical Examiner (IME), Mark Paz, M.D.

31. Dr. Paz performed an IME for the Respondents on March 3, 2017. In a report of that date, Dr. Paz stated the opinion that the Claimant's cervical spondylosis was not caused, aggravated or accelerated as a result of the February 5, 2015 injury. He explained that the long-standing cervical spondylosis symptoms have naturally "evolved", despite treatment and no reported recurrent exposures, and therefore they are "idiopathic in nature". He rejected the theory that sling usage aggravated or accelerated the underlying cervical spondylosis. He concluded that Claimant would have required treatment for neck symptoms with or without the industrial injury (Respondents' Exhibit W). Dr. Paz testified in his evidentiary deposition consistently with his report. Dr. Paz categorically uses all the key phrases to support his ultimate opinion. Indeed, his categorical denial of any causal relatedness of the neck is contrary to the DIME's rating of the neck and the Respondents' FAL regarding the neck. For the reasons given herein above and below and considering the totality of the evidence, the ALJ does not find Dr. Paz's ultimate opinions credible and hereby rejects his opinions.

32. The Claimant testified credibly that he had no neck pain or treatment prior to his industrial injury. This lay testimony is essentially undisputed

33. The Claimant testified credibly that his left neck pain, which started after his industrial injury, worsened after his left shoulder surgery, and it has never been improved by any conservative treatment to date. His testimony in this regard is corroborated by the weight of the credible medical evidence.

Maximum Medical Improvement (MMI)

34. The Claimant is not at MMI; he has not been released to his regular job by Dr. Dixon, his primary authorized treating physician; he has not worked anywhere since his date of injury; he credibly testified that he cannot perform the lifting requirements of his regular job as an auto mechanic. He needs an evaluation by surgeon Dr. Castro in order to determine a future course of treatment.

Temporary Disability

35. The Claimant received TTD between February 6, 2015 and April 18, 2016, both dates inclusive (Respondents' Exhibit H, FAL).

36. While Claimant's last day of working was February 5, 2016, he was terminated in September 2016 and he has not worked anywhere since, nor has he earned any wages since being terminated.

37. At present, the Claimant can lift only about 20 pounds he cannot perform the duties of his regular job as an auto mechanic, which involve lifting tires and equipment weighing as much as 70 pounds or more.

38. The admitted TTD rate in this case of $771.13 per week, which equals to $110.16 per day (*See* Claimant's Exhibit 5, FAL, dated September 14, 2016).

39. The Claimant has been temporarily and totally disabled since the date of the admitted injury and continuing. He should receive $110.16 per day in TTD benefits ($771.13 weekly TTD rate divided by 7 days) beginning April 19, 2016 through March 23, 2017, both dates inclusive, a total of 345 days, for the sum of $38,005.20, less all permabnent partial disability payments made through that period, pursuant to previous admissions of liability. TTD benefits from March 30, 2017 and continuing are appropriate unless cessation thereof is warranted by law.

Present Medical Opinions Corroborating Claimant's Testimony and Refuting DIME Opinion of MMI

40. Claimant testified credibly that he experiences shocks from his left neck area down his left arm. This testimony is consistent with various medical reports including, but not limited to:

i. Dr. Fuller opined on August 18, 2015 that Claimant has nerve root compression (Claimant's Exhibit 7, bates stamp 126).

ii. On September 10, 2015, Dr. Horner opined that Claimant has cervical radiculopathy (Exhibit 7, bates stamp 124-125).

iii. On December 14, 2015, Dr. Castro noted that Claimant "has some intermittent radicular type symptoms" and recommended a TESI (Claimant's Exhibit 7, bates stamp 106-109).

iv. On December 17, 2015, Dr. Bainbridge's physician assistant, Jadon Redington, PA-C, noted that Claimant has spondylosis with radiculopathy. (Respondents' Exhibit M, bates stamp 36).

Claimant's IME, Hugh Macaulay, M.D.

41. Hugh Macaulay, III, M.D. performed an IME on behalf of the Claimant on January 30, 2017. In a report of that date, Dr. Macaulay noted as follows:

i. Claimant's subjective complaints include pain in his neck, inability to look up, lift heavy objects, jog, exercise, sit, stand or sleep for any prolonged time; significantly worsening symptoms; radiation of his discomfort from his neck into his left arm with numbness at times; pain ranging from level 4 to 10;

ii. Pain medicines, heat, ice, physical therapy, chiropractic manipulation and injections have not resolved his neck pain;

iii. Claimant worked for Respondent-Employer from 1996 until he was terminated in September 2015;

iv. Claimant has not been able to return to work because of his neck pain;

v. Dr. Macaulay agrees with Dr. Higginbotham that the shoulder and cervical spine conditions are work-related;

vi. He disagrees with an opinion that Claimant's neuritic discomfort is due to soft tissue problems and "does not appear to have a complete base and analysis." On the contrary, other physicians including Drs. Fuller, Horner, Castro and Bainbridge, have all considered the left upper extremity pain secondary to radiculitis or radiculopathy;

vii. His objective findings include tenderness in the lateral aspect of the cervical spine segments C5-C7 on the left side, difficulty extending the cervical spine with neuritic pain developing as he performs the

maneuver, a significantly positive Spurling's maneuver, and pressure over C5-C7 on the left side "literally brings him to tears";

viii. While the cervical spondylosis was not caused by his industrial accident, as Drs. Fuller, Horner, Castro and Bainbridge have opined, Claimant reasonably, medically probably has an aggravation of his cervical spine condition resulting in radiculitis of the left upper extremity;

ix. Citing page 8 of the Cervical Spine Medical Treatment Guidelines, of which the ALJ takes administrative notice, he opined that Claimant meets the criteria for surgical intervention and he should have a TESI on C4-C5 and C5-C6 and an EMG and NCVS for evaluation of neural integrity for nerve roots C6-C8;

x. He recommends a weight lifting maximum of 15 pounds and that Claimant should not look upwards or extend his neck on a chronic basis;

xi. Claimant will not be able to return to work as an auto mechanic at this time because of the lifting requirements of that job;

xii. Dr. Macaulay is of the opinion that the Claimant is not at MMI.

42. The ALJ finds the opinions expressed by Dr. Macaulay in his January 30, 2017 report to be highly persuasive and credible. In particular, this ALJ finds and concludes that Dr. Macaulay's diagnosis of aggravation of an underlying non-injury-related cervical spondylosis is correct since it is supported by the findings of four **treating** physicians, the credible testimony of Claimant, and a cervical MRI.

43. Dr. Macaulay's opinion that Claimant's continuing left arm symptoms are due to radiculitis is substantially more persuasive than the IME opinions of **independent medical examiners** Drs. McCranie, Paz, and Dr. Higginbotham who all have erroneously concluded that Claimant's injury-related neck condition is myofascial in nature, and that his current symptoms are due to his non-injury related cervical spondylitis. Dr. McCranie gave her "peer review" without the benefit of a physical examination. She, like Drs. Paz and Higginbotham, improperly ignored or disregarded the evidence of radiculopathy documented by Drs. Fuller, Horner, Castro and Bainbridge. This ALJ finds that Dr. Paz's opinion that Claimant's continuing problems are "idiopathic" is not credible since four **treating doctors,** and Dr. Macaulay, have documented radiculopathy that did not exist before the industrial accident. This ALJ rejects Dr. Paz's opinion as not credible that Claimant would need treatment for his cervical and left upper extremity complaints whether or not he had an industrial injury in light of the complete absence of any evidence that Claimant had any neck or left

extremity symptoms or needed any treatment before his industrial accident. This ALJ finds particularly persuasive the fact that Claimant was able to work as an auto mechanic for nineteen years for the same employer without apparent difficulty, but since the industrial accident he has not been able to work in that position. In light of this evidence, this ALJ rejects a conclusion that Claimant's left neck and left arm symptoms developed "coincidently" and "independently" of the industrial accident. On the contrary, the testimony of Claimant and the reports of four treating physicians point to left-sided neck problems, which correlate with the cervical MRI performed on October 9, 2015.

Bodily Disfigurement Examination

44. After an examination of Claimant without his shirt as witnessed by counsel, this ALJ finds that Claimant has three small, whitish, round scars on his left shoulder and back which are due to his shoulder surgery performed on March 13, 2015. This ALJ finds and concludes that these scars constitute bodily disfigurement pursuant to Section 8-42-108(1), C.R.S.

Ultimate Findings

45. Dr. Macaulay's opinion that Claimant's continuing left arm symptoms are due to radiculitis is substantially more persuasive than the IME opinions of respondents' IMEs, Dr. McCranie, Dr. Paz, and DIME Dr. Higginbotham who all erroneously concluded that Claimant's injury-related neck condition is myofascial in nature, and that his current symptoms are due to his non-injury related cervical spondylitis. Dr. McCranie gave her "peer review" without the benefit of a physical examination. She, like Drs. Paz and Dr. Higginbotham, improperly ignored or disregarded the evidence of radiculopathy documented by Drs. Fuller, Horner, Castro and Bainbridge. Dr. Paz's opinion that the Claimant's continuing problems are "idiopathic" is highly **incredible** since four **treating doctors,** and Dr. Macaulay, have documented radiculopathy that did not exist before the admitted industrial accident. The ALJ rejects Dr. Paz's opinion as not credible that the Claimant would need treatment for his cervical and left upper extremity complaints whether or not he had an industrial injury in light of the complete absence of any evidence that Claimant had any neck or left extremity symptoms or needed any treatment before his industrial accident. This opinion is contrary to the weight of the evidence. The ALJ finds particularly persuasive the fact that Claimant was able to work as an auto mechanic for nineteen years for the same employer without difficulty, but since the admitted industrial accident he has not been able to work in that position. In light of this evidence, this ALJ rejects a conclusion that Claimant's left neck and left arm symptoms developed "coincidently" and "independently" of the industrial accident. On the contrary, the testimony of Claimant and the reports of four treating physicians point to left-sided neck problems, which correlate with the cervical MRI performed on October 9, 2015. Consequently, the ALJ finds the Claimant's testimony credible and persuasive, as well as the opinions of the four treating physicians and

Claimant's IME, Dr. Macaulay. The ALJ specifically finds opinions to the contrary as lacking in credibility.

46. The ALJ makes a rational decision, based on substantial evidence to accept the opinions of the Claimant's four treating physicians and the carefully reasoned and articulated opinion of Dr. Macauley, and to reject all opinions to the contrary.

47. Dr. Higginbotham erred not only because he failed to recognize the mechanical explanation for radiculopathy present in this case, but also because he did not refer Claimant back to Dr. Castro for surgical recommendation in light of the apparent failure of two injections. In this regard, he failed to follow the requirements of the Colorado Medical Treatment Guidelines, Rule 17, Exhibit 8, pp.7-8. As Dr. Macaulay opined, since Claimant's radiculopathy meets all the criteria found on those pages, invasive procedures should be considered. While it is true that Claimant underwent evaluation with Dr. Castro prior to the DIME, Dr. Castro did not meet with him after the injection and medication trials for a final recommendation after exhaustion of conservative treatment. Dr. Higginbotham should have recognized this fact and found that Claimant was not at MMI until after a repeat evaluation with Dr. Castro. MMI exists when "any medically determinable physical or mental impairment as a result of an injury has become stable and when no further treatment is reasonably expected to improve the condition." In this regard, the ALJ finds that it is highly probable, unmistakable and free from serious and substantial error that DIME Dr. Higginbotham erred in placing the Claimant at MMI on April 19, 2016, in apparent mechanistic agreement with ATP Dr. Dixon. It is an anomaly that DIME Dr. Higginbotham seemingly adopted ATP Dr. Dixon's MMI date, mechanistically, when ATP Dr. Dixon did not rate the Claimant's cervical spine and DIME Dr. Higginbotham rated it.

48. The Claimant has overcome DIME Dr. Higginbotham's opinion that the Claimant reached MMI on April 19, 2016, by clear and convincing evidence.

49. The Claimant has proven, by a preponderance of the evidence that he is entitled to a further evaluation by Dr. Castro and further medical care and treatment to improve his work-related condition.

50. The Claimant is not at MMI; he has not been released to his regular job by Dr. Dixon, his primary authorized treating physician; he has not worked anywhere since his date of injury; he credibly testified that he cannot perform the lifting requirements of his regular job as an auto mechanic. He needs an evaluation by surgeon Dr. Castro in order to determine a future course of treatment.

51. The Claimant, by virtue of the FAL, has established that he is entitled to a TTD rate of $771.13 per week, which equals to $110.16 per day.

52. The Claimant has proven, by a preponderance of the evidence that he has been temporarily and totally disabled since the date of the admitted injury and continuing. He should receive $110.16 per day in TTD benefits ($771.13 weekly TTD rate divided by 7 days) beginning April 19, 2016 through March 239, 2017, both dates inclusive, a total of 345 days, for the sum of $38,005.20, less all permabnent partial disability payments made through that period, pursuant to previous admissions of liability. TTD benefits from March 30, 2017 and continuing are appropriate unless cessation thereof is warranted by law.

53. the Claimant has sustained bodily disfigurement because of the admitted injury, plainly visible to public view, which entitles him to an $800.00 award, in addition to all other benefits due and payable.

DISCUSSION

As found, the ALJ finds and concludes that Claimant has met his burden to prove, by clear and convincing evidence, that Dr. Higginbotham has committed error by finding Claimant is at MMI and failing to recommend that he return to Dr. Castro for further evaluation, as recommended. Dr. Higginbotham's primary error is an incorrect diagnosis: myofascial pain of the cervical and left upper extremity regions. It is highly probable, unmistakable and free from serious and substantial error that this diagnosis is incorrect based on a review of the weight of the medical evidence. The question of whether a DIME physician's opinion concerning MMI has been overcome is one of fact for determination by the ALJ. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

As found, the opinions expressed by Dr. Macaulay in his January 30, 2017 report are highly persuasive and credible. In particular, as found, Dr. Macaulay's diagnosis of aggravation of an underlying non-injury-related cervical spondylosis is correct since it is supported by the findings of four **treating** physicians, the credible testimony of Claimant, and a cervical MRI.

Further, this ALJ finds and concludes that Dr. Macaulay's opinion that Claimant's continuing left arm symptoms are due to radiculitis is substantially more persuasive than the IME opinions of **independent medical examiners** Drs. McCranie, Paz, and Dr. Higginbotham who all have erroneously concluded that Claimant's injury-related neck condition is myofascial in nature, and that his current symptoms are due to his non-injury related cervical spondylitis. Dr. McCranie gave her "peer review" without the benefit of a physical examination. She, like Drs. Paz and Higginbotham, improperly ignored or disregarded the evidence of radiculopathy documented by Drs. Fuller, Horner, Castro and Bainbridge. This ALJ finds that Dr. Paz's opinion that Claimant's continuing problems are "idiopathic" is not credible since four **treating doctors,** and Dr. Macaulay, have documented radiculopathy that did not exist before the industrial

accident. This ALJ rejects Dr. Paz's opinion as not credible that Claimant would need treatment for his cervical and left upper extremity complaints whether or not he had an industrial injury in light of the complete absence of any evidence that Claimant had any neck or left extremity symptoms or needed any treatment before his industrial accident. This ALJ finds particularly persuasive the fact that Claimant was able to work as an auto mechanic for nineteen years for the same employer without apparent difficulty, but since the industrial accident he has not been able to work in that position. In light of this evidence, this ALJ rejects a conclusion that Claimant's left neck and left arm symptoms developed "coincidently" and "independently" of the industrial accident. On the contrary, the testimony of Claimant and the reports of four treating physicians point to left-sided neck problems, which correlate with the cervical MRI performed on October 9, 2015.

Dr. Higginbotham erred not only because he failed to recognize the mechanical explanation for radiculopathy present in this case, but also because he did not refer Claimant back to Dr. Castro for surgical recommendation in light of the apparent failure of two injections. In this regard, he failed to follow the requirements of the Colorado Medical Treatment Guidelines, Rule 17, Exhibit 8, pp.7-8. As Dr. Macaulay opined, since Claimant's radiculopathy meets all the criteria found on those pages, invasive procedures should be considered. While it is true that Claimant underwent evaluation with Dr. Castro prior to the DIME, Dr. Castro did not meet with him after the injection and medication trials for a final recommendation after exhaustion of conservative treatment. Dr. Higginbotham should have recognized this fact and found that Claimant was not at MMI until after a repeat evaluation with Dr. Castro. MMI exists when "any medically determinable physical or mental impairment as a result of an injury has become stable and when no further treatment is reasonably expected to improve the condition." Section 8-40-201(11.5), C.R.S. The ICAO has held that reasonable and necessary diagnostic procedures are a prerequisite to MMI if they have a prospect "of defining a claimant's condition and suggesting further treatment." *Hatch v. John H. Harland Co.,* W.C. No. 4-368-712 (August 11, 2000); *Villela v. Excel Corporation*, W.C. Nos. 4-400-281, 4-410-547, 4-410-551 (February 1, 2001); *cf. Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1948). Here, Dr. Higginbotham erred by failing to refer Claimant back to Dr. Castro for a repeat surgical evaluation and consideration of other conservative treatment modalities. As such, he erred by finding Claimant was at MMI. This ALJ finds and concludes that Claimant is not MMI at this time.

The ALJ accepts Dr. Macaulay's recommendation for additional surgical evaluation and further finds that Respondents should be liable for a repeat visit with Dr. Castro for further recommendations regarding Claimant's aggravation of a pre-existing cervical spondylosis.

Claimant is not at MMI; he has not been released to his regular job by Dr. Dixon, his primary authorized treating physician; he has not worked anywhere since his date of injury; he credibly testified that he cannot perform the lifting requirements of his regular job as an auto mechanic; and he has been terminated by Respondent-Employer.

Accordingly, he is entitled to TTD beginning April 19, 2016, when Respondents terminated TTD, less any credits for permanent partial disability benefits paid, to continue ongoing until further Order or by operation of law.

As stated above, this ALJ finds and concludes that Claimant's surgical scars constitute bodily disfigurement pursuant to Section 8-42-108(1), C.R.S., and that Claimant should be awarded benefits for such disfigurement in the amount of $800.00.

Because this ALJ finds that Claimant is not MMI, he does not need to rule about the correctness of Dr. Higginbotham's permanent impairment ratings. The issue of permanent partial disability is not ripe at this time.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's

knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, *See, Annotation, Comment: Credibility of Witness Giving Un-contradicted Testimony as Matter for Court or Jury,* 62 ALR 2d 1179, maintaining that the fact finder is not free to disregard un-contradicted testimony. As found, Dr. Macaulay's opinion that Claimant's continuing left arm symptoms are due to radiculitis is substantially more persuasive than the IME opinions of respondents' IMEs, Dr. McCranie, Dr. Paz, and DIME Dr. Higginbotham who all erroneously concluded that Claimant's injury-related neck condition is myofascial (soft tissue according to DIME Dr. Higginbotham) in nature, and that his current symptoms are due to his non-injury related cervical spondylitis.

b. As further found, Dr. McCranie gave her "peer review" without the benefit of a physical examination. She, like Drs. Paz and Dr. Higginbotham, improperly ignored or disregarded the evidence of radiculopathy documented by Drs. Fuller, Horner, Castro and Bainbridge. Dr. Paz's opinion that the Claimant's continuing problems are "idiopathic" is highly **incredible** since four **treating doctors,** and Dr. Macaulay, have documented radiculopathy that did not exist before the admitted industrial accident. The ALJ rejects Dr. Paz's opinion as not credible that the Claimant would need treatment for his cervical and left upper extremity complaints whether or not he had an industrial injury in light of the complete absence of any evidence that Claimant had any neck or left extremity symptoms or needed any treatment before his industrial accident. This opinion is contrary to the weight of the evidence. The ALJ finds particularly persuasive the fact that Claimant was able to work as an auto mechanic for nineteen years for the same employer without difficulty, but since the admitted industrial accident he has not been able to work in that position. In light of this evidence, this ALJ rejects a conclusion that Claimant's left neck and left arm symptoms developed "coincidently" and "independently" of the industrial accident. On the contrary, the testimony of Claimant and the reports of four treating physicians point to left-sided neck problems, which correlate with the cervical MRI performed on October 9, 2015. Consequently, the ALJ finds the Claimant's testimony credible and persuasive, as well as the opinions of the four treating physicians and Claimant's IME, Dr. Macaulay. The ALJ specifically finds opinions to the contrary as lacking in credibility.

Substantial Evidence

c. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial**

evidence which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, the ALJ made a rational decision, based on substantial evidence to accept the opinions of the Claimant's four treating physicians and the carefully reasoned and articulated opinion of Dr. Macauley, and to reject all opinions to the contrary.

Maximum Medical Improvement (MMI)

d. MMI is defined as the point in time when any medically determinable physical or medical impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition. § 8-40-201(11.5), C.R.S. *Donald B. Murphy Contractors, Inc. V. Indus. Claim Appeals Office*, 916 P.2d 611 (Colo. App. 1995). Diagnostic procedures that constitute a compensable medical benefit must be provided prior to MMI if such procedures have a reasonable prospect of diagnosing or defining a claimant's condition so as to suggest a course of further treatment *See In the Matter of the Claim of William Soto, Claimant,* W.C. No. 4-813-582 [Indus. Claim Appeals Office (ICAO), October 27, 2011]. As found, the Claimant is not at MMI; he has not been released to his regular job by his ATP, Dr. Dixon; he has not worked anywhere since his date of injury; he credibly testified that he cannot perform the lifting requirements of his regular job as an auto mechanic; and, he needs an evaluation by surgeon Dr. Castro in order to determine a future course of treatment. Reasonable and necessary diagnostic procedures are a prerequisite to MMI if they have a prospect "of defining a claimant's condition and suggesting further treatment." *Hatch v. John H. Harland Co.,* W.C. No. 4-368-712 (August 11, 2000); *Villela v. Excel Corporation*, W.C. Nos. 4-400-281, 4-410-547, 4-410-551 (February 1, 2001); *cf. Merriman v. Indus. Comm'n*, 210 P.2d 448 (Colo. 1948). As found, Dr. Higginbotham clearly erred by failing to refer Claimant back to Dr. Castro for a repeat surgical evaluation and consideration of other conservative treatment modalities. As such, he clearly erred by finding Claimant was at MMI. Therefore, the ALJ concludes that Claimant is not MMI at this time.

Overcoming Dr. Higginbotham's DIME

e. Clear and convincing evidence is established by showing that the truth of a contention is highly probable, *Askew v. Sears Roebuck & Co*., 914 P.2d 1049 (Colo. App. 1983), and free from substantial or serious doubt, *Metro Moving & Storage Co. v. Gussert*, 914 P. 2d 411 (Colo. App. 1995). The question of whether a party meets the "clear and convincing" burden of proof is a question of fact for the administrative law judge. *McLane Western, Inc. v. Indus. Claim Appeals Office*, 906 P. 2d 263 (Colo. App. 1999). In order to overcome a DIME opinion, there must be evidence which proves that it is highly probable that the DIME physician's opinions are incorrect. *Metro Moving &*

Storage Co. v. Gussert, 914 P2d 411 (Colo. App. 1995). As found, it is highly likely, unmistakable and free from serious and substantial doubt that Dr. Higginbotham's DIME opinion that the Claimant reached MMI when ATP Dr. Dixon declared the Claimant to be at MMI on April 19, 2016. It is an anomaly that DIME Dr. Higginbotham seemingly adopted ATP Dr. Dixon's MMI date, mechanistically, when ATP Dr. Dixon did not rate the Claimant's cervical spine and DIME Dr. Higginbotham rated it.

Pre-MMI Medical Treatment

f. To be a compensable benefit, medical care and treatment must be causally related to an industrial injury or occupational disease. *Dependable Cleaners v. Vasquez,* 883 P. 2d 583 (Colo. App. 1994). As found, Claimant's medical treatment is causally related to the aggravation/acceleration of his LUE and cervical condition set in motion by the admitted injury of February 4, 2015. Also, medical treatment must be reasonably necessary to cure and relieve the effects of the industrial occupational disease. § 8-42-101 (1) (a), C.R.S. *Morey Mercantile v. Flynt,* 97 Colo. 163, 47 P. 2d 864 (1935); *Sims v. Indus. Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). As found, the Claimant's medical care and treatment was and is reasonably necessary. As found, reasonable and necessary diagnostic procedures are a prerequisite to MMI if they have a prospect "of defining a claimant's condition and suggesting further treatment." *Hatch v. John H. Harland Co.,* W.C. No. 4-368-712 (August 11, 2000); *Villela v. Excel Corporation*, W.C. Nos. 4-400-281, 4-410-547, 4-410-551 (February 1, 2001); *cf. Merriman v. Indus. Comm'n*, 210 P.2d 448 (Colo. 1948). As found, Dr. Higginbotham clearly erred by failing to refer Claimant back to Dr. Castro for a repeat surgical evaluation and consideration of other conservative treatment modalities. As such, he clearly erred by finding Claimant was at MMI. Therefore, the ALJ concludes that any medical treatment, at this time, is for the purpose of curing and relieving the effects of the Claimant's February 4, 2015 admitted injuries.

Temporary Disability

g. To establish entitlement to temporary disability benefits, a claimant must prove that the industrial injury has caused a "disability," and that he has suffered a wage loss that, "to some degree," is the result of the industrial disability. § 8-42-103(1), C.R.S; *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). When a temporarily disabled employee loses his employment for other reasons which are not his responsibility, the causal relationship between the industrial injury and the wage loss necessarily continues. Disability from employment is established when the injured employee is unable to perform the usual job effectively or properly. *Jefferson Co. Schools v. Headrick*, 734 P.2d 659 (Colo. App.1986). This is true because the employee's restrictions presumably impair his opportunity to obtain employment at pre-injury wage levels. *Kiernan v. Roadway Package System*, W.C. No. 4-443-973 (ICAO, December 18, 2000). Claimant's termination in this case was not his fault but as a result of his inability to perform his job duties. There is no statutory requirement that a

claimant must present medical opinion evidence from of an attending physician to establish her physical disability. See *Lymburn v. Symbois Logic*, 952 P.2d 831 (Colo. App. 1997). Rather, the Claimant's testimony alone would be sufficient to establish a temporary "disability." *Id*. As found, the Claimant is not at MMI; he has not been released to his regular job by Dr. Dixon, his primary authorized treating physician; he has not worked anywhere since his date of injury; he credibly testified that he cannot perform the lifting requirements of his regular job as an auto mechanic; and, he has earned no wages since the admitted injury. He needs an evaluation by surgeon Dr. Castro in order to determine a future course of treatment.

h. Once the prerequisites for TTD are met (*e.g.,* no release to return to full duty, MMI has not been reached, a temporary wage loss is occurring in modified employment or modified employment is not made available, and there is no actual return to work), TTD benefits are designed to compensate for a 100% temporary wage loss. *See Eastman Kodak Co. v. Indus. Comm'n,* 725 P. 2d 107 (Colo. App. 1986); *City of Aurora v. Dortch,* 799 P. 2d 461 (Colo. App. 1990). As found, the Claimant has been sustaining a 100% temporary wage loss since the date of the admitted injuries. Therefore, he has been temporarily and totally disabled since April 19, 2015 and continuing. He should receive $110.16 per day in TTD benefits [(the admitted TTD rate) is $771.13 weekly TTD rate divided by 7 days], beginning April 19, 2016 through March 29, 2017, both dates inclusive, a total of 345 days, for the gand total sum of $38,005.20, less all permanent partial disability payments made through that period, pursuant to previous admissions of liability. TTD benefits from March 30, 2017 and continuing are appropriate unless cessation thereof is warranted by law.

Burden of Proof

i. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained his burden with respect to all designated issues.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Claimant has overcome the Division Independent Medical Examination of Thomas Higginbotham, D.O., by clear and convincing evidence concerning maximum medical improvement. Therefore, the Claimant is **not** at maximum medical improvement.

B. Respondents shall pay the costs of a repeat evaluation by Andrew Castro, M.D., and any recommendations concerning a course of medical treatment to cure and relieve the effects of the Claimant's admitted injury of February 4, 2015, subject to the Division of Workers' Compensation Medical Fee Schedule.

C. The Respondents shall pay the Claimant temporary total disability benefits at the admitted rate of $771.13 per week, or $110.16 per day from April 19, 2016 through March 29, 2017, both dates inclusive, a total of 345 days, in the gand total sum of $38,005.20, less all permanent partial disability payments made through that period, pursuant to previous admissions of liability, which is payable retroactively and forthwith.

D. The Respondents shall continue paying the Claimant temporary total disability benefits of $%771.13 per week from March 30, 2017 and continuing until cessation thereof is warranted by law.

E. The Respondents shall pay the Claimant statutory interest at the rate of eight percent (8%) per annum on all amounts of indemnity benefits due and not paid when due.

F. Any and all issues not determined herein are reserved for future decision.

DATED this_____day of April 2017.

_____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

CERTIFICATE OF SERVICE

I hereby certify that I have sent true and correct copies of the foregoing **Full Findings of Fact, Conclusions of Law and Order** on this_____day of April 2017, electronically in PDF format, addressed to:

STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-979-208-04

ISSUES

- As a factual matter, whether Claimant's ATP, Dr. Brian Williams, made a valid MMI determination under C.R.S. § 8-40-201(11.5) and *Town of Ignacio v. ICAO,* 70 P.3d 513 (Colo. App. 2002);

- Should the ALJ find that the ATP did not make a valid MMI determination, whether Respondents' June 3, 2016 FAL based upon the invalid MMI determination should be stricken;

- Whether the MMI/*Town of Ignacio* issue was ripe and the ALJ had jurisdiction to resolve that issue;

- Whether Claimant waived her right to request a hearing by filing her application before the DIME process terminated; and

- Whether PALJ Barbo's August 29, 2016 PHO properly held the DIME process in abeyance.

- The ALJ denied Respondents' oral motion to add the affirmative defense of intervening event on grounds that the defense was asserted against TTD benefits and neither party endorsed TTD as an issue for the December 6, 2016 hearing.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant suffered a compensable work injury to her left knee on or about 3/20/15. In addition, the parties stipulated that Dr. Brian Williams and Dr. Nemesh Patel and their referrals are authorized providers in this claim.

2. Claimant is a package driver for employer, UPS, and had worked in this position for 18 years as of the date of injury.

3. Claimant's usual delivery truck had an automatic transmission. At the time of her injury, her truck was in the shop and she was using a replacement vehicle with a manual clutch transmission. Claimant made approximately 320 stops over a two day period ending March 20, 2015, requiring repetitive clutching. Afterwards she experienced significant pain and swelling in her left knee. Claimant had no prior history of left knee pain or swelling.

4. Initially, Claimant went to urgent care and took a week off of work. She returned to work on March 30, 2015, but the knee pain returned. Employer sent claimant to Dr. Brian Williams, M.D., MPH, for medical treatment. Claimant saw Dr. Williams on April 2, 2015.

5. Dr. Williams is board certified in Occupational and Environmental Medicine as well as Family Medicine. He also has Level II accreditation with the Colorado Division of Workers' Compensation. At hearing, without objection, Dr. Williams was qualified and testified as an expert in Occupational and Environmental Medicine as well as Family Medicine.

6. Dr. Williams diagnosed a medial meniscal tear and "reactive arthritis from clutching repetitively over 2 days." His diagnoses were based upon the mechanism of injury (repetitive clutching), Claimant's symptoms, age and work history, as well as the clinical findings of his examination of Claimant. He noted that Claimant had no prior history of knee pain or swelling. Dr. Williams opined that the acute work activity of repetitive clutching likely caused her meniscal tear and also caused a flare of her significant but asymptomatic pre-existing arthritis. Dr. Williams further explained that Claimant's previously non-symptomatic arthritis had reacted to the aggravation of the repetitive clutching.

7. Respondents' RIME, Dr. John Schwappach, agreed that the acute work activity on March 20, 2015 aggravated Claimant's pre-existing arthritis: "The temporal relationship between the onset of her pain and the March 2015 event indicate an exacerbation of the pre-existing degenerative changes in her left knee."

8. Dr. Williams prescribed a course of conservative treatment including physical therapy, anti-inflammatories, rest, and work restrictions.

9. About three weeks after her first examination with Dr. Williams, Claimant's physical therapist noticed unusual swelling in Claimant's left thigh. Dr. Williams testified that the thigh swelling was very different, as the original knee swelling he observed was discrete and confined to the knee joint itself. An MRI was performed revealing a large lipoma, a benign fatty tumor.

10. Dr. Williams found the lipoma unrelated to the work injury, and it was treated outside of the workers compensation system. Treatment for Claimant's work injury was temporarily suspended until after the lipoma was surgically removed and rehab of Claimant's thigh was completed.

11. An MRI was performed on Claimant's knee on July 20, 2015, while she was still rehabilitating from the lipoma surgery. The MRI confirmed Dr. Williams' original diagnosis, finding a large medial meniscus tear as well as chondromalacia with "reactive marrow changes" and "[s]ubperiosteal fluid along the anterior cortex of the patella probably related to stress reaction." Chondromalacia is an arthritic condition of the knee that involves thinning of the cartilage caps of the bones in the knee over time.

12. Dr. Williams opined that the stress reaction indicated by the MRI was consistent with a new activity which caused swelling to the pre-existing, but previously non-symptomatic, chondromalacia. He further opined that the "new activity" was the March 20, 2015 work injury, which had aggravated or accelerated the pre-existing arthritic condition.

13. Dr. Williams resumed conservative treatment of Claimant's knee at the conclusion of her lipoma rehab in early August of 2015. However, conservative therapy ultimately failed to improve Claimant's condition. Dr. Williams concluded that the aggravation of the previously non-symptomatic chondromalacia had not subsided with conservative treatment and eventually became permanent.

14. Dr. Williams concluded that the work activity of clutching on March 20, 2015 caused Claimant's meniscal tear and aggravated or accelerated her chondromalacia to the point that it had become permanent.

15. Dr. Williams referred Claimant to an orthopedic surgeon, Dr. Mitchell Robinson. Dr. Robinson advised against proceeding with arthroscopic surgery to address the torn meniscus alone, because of the "accelerated arthritis." Instead, he provided a steroid injection, which was ineffective, and counseled that knee replacement surgery may be necessary in the future.

16. Dr. Williams referred Claimant to Dr. Nemesh Patel, another orthopedic surgeon, for a second opinion. Dr. Patel concurred with Dr. Robinson and recommended a series of synthetic cartilage injections as a means to stave off knee replacement. The injections did not work and Claimant's condition worsened. Having exhausted more conservative measures, Dr. Patel requested authorization for knee replacement surgery because arthroscopic surgery alone "would not provide long term benefit."

17. Respondents denied Dr. Patel's request for authorization to perform the knee replacement by the letter from counsel dated April 13, 2016. Counsel informed Dr. Patel that Respondents intended to file an application for hearing to challenge his request.

18. Dr. Williams saw Claimant on May 17, 2016, after surgery had been denied. Upon examination he found

> [Claimant h]as had no interval improvement. She is not making any gains for her left knee. She was unable to complete work hardening, so she has not been able to return to work.

19. In completing the Division's Physician's Report, Dr. Williams checked the MMI box (*id.,* p. 60), but explained in his narrative report:

> No further conservative treatments indicated. ***I do not think she will have reasonable recovery until such time as she***

> ***completes knee replacement surgery on the left.*** She and her attorney will continue moving forward with their claim against the insurance carrier. In the meantime, I feel she is a MMI ***because no further recovery is expected without surgery.***
>
> . . .
>
> Additionally, she was unable to complete work hardening, and could not overcome her current temporary work restrictions. Therefore, I feel she has permanent work restrictions. ***These could perhaps be rescinded after knee replacement surgery and subsequent rehabilitation.***

20. The ALJ finds that Dr. Williams' May 17, 2016 note indicates that he believed that further treatment, specifically knee replacement surgery, would likely improve Claimant's condition resulting from her work injury.

21. Dr. Williams explained at hearing that he considered Claimant at MMI only with respect to conservative treatment, which was all that had been approved by Respondents. Ex. 2, p. 64b (12/2/16 email from Brian Williams to Brittany Pintor (Liberty Mutual) subject: RTW for Sandra Arnhold) ("I placed her at MMI with impairment since she was failing conservative care."). He testified that, on May 17, 2016, he reasonably expected the surgery would improve Claimant's condition. He explained the surgery would give her the best chance for a reasonable recovery from her work injury because she was a good candidate from an age and fitness perspective and because the surgery would likely extend her work life and enable her to do the things she wanted in a pain-free or -reduced fashion. He testified that surgery was a better alternative than recurrent temporary measures, such as injections and physical therapy, all of which had failed to get her back to work.

22. In light of Respondents' denial of the requested surgery, however, he felt "My hands were tied." He placed her at MMI for conservative care only, hoping she could get the surgery she needed outside the workers' compensation system since Respondents had denied it.

23. On June 3, 2016, Respondents filed an FAL attaching Dr. Williams' May 17, 2016 note. On June 16, 2016, Claimant filed an objection and notice and proposal.

24. Claimant went forward with the knee replacement surgery outside of the workers compensation system in August of 2016. Her surgeon, Dr. Patel, released her for work with no restrictions starting December 1, 2016.

25. Dr. Williams examined Claimant at Respondents' request on December 2, 2016. Asked at hearing to opine on her post-surgical condition, he testified:

> She did remarkably well after her knee replacement surgery and she's done very well with her rehab and has progressed to the point in both her strength and range of motion with the

> knee arthroplasty and the joint replacement that her surgeon Dr. Patel cleared her to return to work full duty, no restrictions. And I agree with his assessment.

26. At hearing, Respondents' counsel asked Dr. Williams to speculate as to whether Claimant had attained MMI by the December 2, 2016 examination. On re-direct he clarified that he had not been asked to make an MMI determination at the time and to do so he would have had to perform procedures which he did not perform.

27. The ALJ finds Dr. Williams' opinions and conclusions credible, persuasive and supported by the medical records.

28. The ALJ finds that Dr. Williams did not determine Claimant was at MMI on December 2, 2016.

Additional Procedural History

29. As discussed above, prior to Dr. Williams' May 17 2016 note, on March 13, 2016, Respondents filed an application for hearing in response to Dr. Patel's request for authorization for the knee replacement surgery. A hearing on Respondents' application was set for August 11, 2016 on medical benefits, reasonable and necessary, and relatedness, among other issues. In response to and predicated upon Dr. Williams' May 17 2016 note, Respondents filed a final admission on June 3, 2016. Claimant filed an objection and notice and proposal on June 16, 2016.

July 27, 2016 PHO

30. At a July 27, 2016 pre-hearing conference, Respondents moved to hold in abeyance the August 11, 2016 hearing they had requested on medical benefits pending completion of the DIME process. Claimant argued that because Dr. Williams' MMI determination was ambiguous, the hearing should go forward for a factual determination as to whether Claimant was actually at MMI, pursuant to *Town of Ignacio v. ICAO*, 70 P.3d 513 (Colo. App. 2002). In his July 27, 2016 pre-hearing order (PHO), PALJ Gallivan found that "[a]mbiguity in the medical report provides a basis for an objection to the FAL and a hearing regarding the factual issues raised by such ambiguity." *Id.* However, because the *Town of Ignacio* issue had not been endorsed, he held the August 11, 2016 hearing in abeyance with regard to medical benefits, finding that issue was not ripe "unless and until this is a finding that Claimant is not at MMI (either via a DIME or an order finding the ATP did not actually place Claimant at MMI)." *Id.*

31. In response to the July 27, 2016 PHO, on July 28, 2016 Claimant filed an application for hearing, which was amended on August 18, 2016 to limit the hearing to the *Town of Ignacio* issue, consistent with Judge Gallivan's PHO. The hearing on Claimant's application was originally set for December 1, 2016, but was continued to December 6, 2016.

8/29/16 PHO

32. On August 12, 2016, Claimant filed an Opposed Motion to Hold the DIME Process in Abeyance until the factual question of Claimant's MMI status was resolved at hearing by an OAC ALJ. A pre-hearing conference was held before PALJ Barbo on August 25, 2016. He granted Claimant's motion, holding:

> The DIME process contemplates that an authorized treating physician has made an appropriate definitive determination of maximum medical improvement. If the determination [of] maximum medical improvement is ambiguous, then the DIME process cannot proceed until it is determined whether the claimant is actually at maximum medical improvement.

9/13/16 PHO

33. At the September 13, 2016 PHC before PALJ Steninger, Respondents moved to strike the MMI/*Town of Ignacio* issue from Claimant's hearing application. Respondents asserted that the MMI ambiguity issue was not ripe, arguing the DIME has exclusive jurisdiction to resolve ambiguities in the ATP's report once the DIME process starts. Judge Steninger rejected this argument, holding that under *Town of Ignacio* an OAC merits judge has jurisdiction to resolve factual ambiguities in an ATP's MMI determination. "Once Claimant exercised her right to challenge the ambiguity of the MMI finding through a *Town of Ignacio* based hearing, the issue became ripe and ready for determination."

34. Respondents also argued Claimant had waived the right to a hearing by filing her application more than 30 days after the FAL. Judge Steninger rejected this argument based upon the express language of C.R.S. § 8-43-203(b)(II)(A), which states that "the claimant is not required to file a request for hearing on disputed issues that are ripe for hearing until the division's independent medical examination process is terminated for any reason." *Id.* (emphasis added by PALJ Steninger). Because Claimant timely filed her objection and notice and proposal, he found:

> [t]he statute states that Claimant is not "required" to file an application for hearing on ripe issues until the DIME process is concluded, but does not state that Claimant is prohibited from filing such application prior to the DIME process being terminated.

Accordingly, he held that Claimant's application was timely and that she had not waived her right to apply for hearing.

35. At the September 13, 2016 PHC, Respondents also challenged Judge Barbo's order holding the DIME process in abeyance. PALJ Steninger confirmed Judge Barbo's order, holding that an OAC merits judge had jurisdiction to resolve the factual issue of whether Claimant had reached MMI.

36. Respondents did not endorse review of PALJ Steninger's September 13, 2016 PHO for the December 6, 2016 hearing.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the "Workers' Compensation Act of Colorado" is to insure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. C.R.S. § 8-40-102(1).

A workers' compensation case is decided on its merits. C.R.S. § 8-43-201. The requirements of proof for civil non-jury cases in the district courts apply in workers' compensation hearings. C.R.S. § 8-43-210. The ALJ's factual findings concern only evidence that is dispositive of this issues involved; the ALJ has not addressed every piece of evidence that may lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering Inc. v. Industrial Claims Appeals Office*, 5 P. 3d 385 (Colo. App. 2000).

C.R.S. § 8-42-101(1)(a), provides:

> Every employer, regardless of said employer's method of insurance, shall furnish such medical, surgical, dental, nursing, and hospital treatment, medical, hospital, and surgical supplies, crutches, and apparatus as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee from the effects of the injury.

C.R.S. § 8-40-201(11.5), defines "[m]aximum medical improvement" as:

> [A] point in time when any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition.

"An authorized treating physician shall make a determination as to when the injured employee reaches maximum medical improvement as defined in section 8-40-201(11.5)." C.R.S. § 8-42-107(8)(b)(I).

A DIME "is not a prerequisite to the ALJ's resolution of a factual dispute concerning . . . the issuance of conflicting or ambiguous opinions concerning whether the claimant has reached MMI." *Blue Mesa Forest v. Lopez*, 928 P.2d 831, 833 (Colo. App. 1996) (ATP retracted initial MMI determination).

OAC merits judge must resolve factual questions raised by ATP's ambiguous opinion as to whether Claimant is at MMI

Where an ATP's report is ambiguous with respect to MMI that issue "must be remanded [to the ALJ] for a factual determination as to whether the [physician] found the claimant to be at MMI." *Town of Ignacio v. ICAO,* 70 P.3d 513, 515 (Colo. App. 2002).

In *Town of Ignacio*, a treating physician (hand specialist) checked the "MMI" box on the Physician's Report form, but stated in his narrative that the claimant might seek surgery "if she could not live with the pain." 70 P.3d at 515, *see also id.* at 516 ("implying that claimant was not at MMI"). The court of appeals found this ambiguity created a factual dispute as to whether the ATP had determined that C was at MMI. As a factual dispute, it was remanded to the ALJ to be resolved. *See also Blue Mesa Forest v. Lopez*, 928 P.2d at 833 (ATP issued two conflicting opinions on MMI creating factual dispute for ALJ to decide) and *Magnetic Eng'g, Inc. v. ICAO,* 5 P. 3d 385, 387 (Colo. App. 2000) (DIME's ambiguous report on MMI presented factual issue).

Similar to the facts in *Town of Ignacio,* Dr. Williams' May 17, 2016 note created a factual ambiguity by both checking the "MMI box" in the Division's Physician's Report form and by opining in his narrative report that knee replacement surgery was necessary for Claimant to obtain full recovery from her work injury. Under *Town of Ignacio*, ambiguity in an ATP's MMI determination raises a factual question that must be resolved by a merits ALJ. *Town of Ignacio,* 70 P.3d at 515.

Jurisdiction/Ripeness/Collateral attack on DIME process

Respondents' argue that the ALJ has no jurisdiction to resolve the MMI issue in this case because issue is the sole province of the DIME and therefore is not ripe. In their response to Claimant's application, Respondents make the same argument in various ways by endorsing the issues of jurisdiction, ripeness and collateral attack on DIME process. This argument conflicts with the relevant case law. The court of appeals has specifically held that a DIME "is not a prerequisite to the ALJ's resolution of a factual dispute concerning . . . the issuance of conflicting or ambiguous opinions concerning whether the claimant has reached MMI." *Blue Mesa Forest*, 928 P.2d at 833. Accordingly, under *Town of Ignacio* and *Blue Mesa Forest*, the merits ALJ in this case clearly has jurisdiction to resolve the factual ambiguities raised by Dr. Williams' May 17, 2016 note.

Further, the *Town of Ignacio* issue became ripe once Dr. Williams issued his ambiguous note and Respondents filed their FAL predicated upon it. Respondents have conceded as much by arguing that the MMI issue is ripe for determination by the DIME. Respondents' arguments are not supported by the facts or the law and are rejected.

Dr. Williams' May 17, 2016 note did not make a valid MMI determination under the Act

As discussed above, in relevant part, the Act defines MMI as that point in time when both (1) Claimant's work-related condition "has become stable;" and "when no further treatment is reasonably expected to improve the condition." C.R.S. § 8-40-201 (11.5). Dr. Williams' note and hearing testimony indicate that further treatment – *i.e.,* the knee replacement surgery recommended by Dr. Patel – was reasonably expected to improve Claimant's condition. He explained at hearing that, in his mind, his "MMI" determination applied only to conservative care because Respondents had denied authorization for the surgery that was needed to enable Claimant to recover from her work injury. Dr. Williams specifically testified that knee replacement surgery offered the best alternative for Claimant to have a reasonable recovery from her work injury. His opinion was confirmed by his December 2, 2016 examination of Claimant, after the surgery performed byDr. Patel in August of 2016 outside the workers' compensation system. Dr. Williams concluded that the surgery and subsequent rehabilitation had successfully enabled Claimant to return to work full duty.

Based upon substantial evidence on the record, the ALJ concludes Claimant had not reached MMI on May 17, 2016 and that such determination has not yet been made by her ATP.

Respondents' FAL was premature and must be stricken

Respondents filed their June 3, 2016 FAL predicated upon the assumption that Dr. Williams' May 17, 2016 note constituted a valid MMI determination under the Act. Based on substantial evidence in the record, discussed above, the ALJ concludes Dr. Williams May 17, 2016 note did not constitute a valid MMI determination under the Act. *See* C.R.S. § 8-40-201 (11.5). As a consequence, Respondents' FAL was premature and must be stricken.

Medical Benefits: knee replacement surgery was related to and reasonably necessary

Respondents endorsed the issue of medical benefits in their response to Claimant's application for hearing. Respondents are required to furnish medical benefits and all other compensation provided for under the Act, "[w]here the injury or death is proximately caused by an injury or occupational disease arising out of and in the course of the employee's employment and is not intentionally self-inflicted." C.R.S. § 8-41-301. In particular, Respondents must furnish all medical treatment and supplies "reasonably needed . . . to cure and relieve the employee from the effects of the injury." *Id.* § 8-42-101(1)(a).

Here, substantial evidence proves that, while performing her duties as a package driver in the course of her employment with UPS, Claimant tore her left medial meniscus and aggravated a previously non-symptomatic arthritic condition. Dr. Williams determined that repetitive clutching likely caused meniscal tear and flare up of pre-

existing arthritis. He later noted that Claimant's work injury aggravated her previously asymptomatic chondromalacia "which had never previously bothered her." Even Respondents' RIME agreed that the March 20, 2015 acute work activity aggravated the pre-existing degenerative condition of Claimant's knee. Further, the evidence demonstrates that the aggravation and acceleration of Claimant's arthritic condition did not resolve with conservative treatment and eventually became permanent, requiring surgery. Respondents presented no persuasive evidence to the contrary.

A pre-existing condition "does not disqualify a claimant from receiving workers' compensation benefits." *Duncan v. Indus. Claim Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004). An otherwise compensable injury does not cease to arise out of a worker's employment simply because it is partially attributable to the worker's pre-existing condition. *See Subsequent Injury Fund v. Thompson*, 793 P.2d 576, 579 (Colo. 1990); *Seifried v. Indus. Comm'n*, 736 P.2d 1262, 1263 (Colo. App. 1986) ("[I]f a disability were 95% attributable to a pre-existing, but stable, condition and 5% attributable to an occupational injury, the resulting disability is still compensable if the injury has caused the dormant condition to become disabling.").

A claimant must be compensated if a work-related injury "aggravates, accelerates, or combines with" a worker's pre-existing infirmity or disease "to produce the disability for which workers' compensation is sought." *H & H Warehouse v. Vicory*, 805 P.2d 1167, 1169 (Colo. App. 1990). The evidence clearly established that the March 20, 2015 work injury aggravated, accelerated or combined with Claimant's previously non-symptomatic arthritis to become disabling and that the knee replacement surgery performed by Claimant's authorized surgeon, Dr. Patel, was reasonably necessary to cure or relieve its effects.

For the reasons set forth above, The ALJ concludes that Respondents are liable for the knee replacement surgery performed by Dr. Patel and related treatment, medication, supplies and equipment because they were related to and reasonably necessary to cure or relieve the effects of Claimant's March 20, 2015 work injury.

In addition to the issues discussed above, Respondents also endorsed the issue of waiver and sought review of PALJ Barbo's August 29, 2016 PHO holding the DIME process in abeyance.

Claimant did not waive her right to request a hearing

Respondents previously raised the waiver issue at the September 13, 2016 prehearing conference before PALJ Steninger. Judge Steninger denied Respondents' oral pre-hearing motion to strike the MMI/*Town of Ignacio* issue from Claimant's hearing application on the grounds stated in his order and summarized above.

Respondents argue here, as they did before PALJ Steninger, that Claimant waived the MMI/*Town of Ignacio* issue by failing to file an application for hearing within 30 days after the date of the final admission, selectively citing the first sentence of C.R.S. § 8-43-203(2)(b)(II)(A). Respondents fail to consider the next sentence,

however, which expressly states: “If an independent medical examination is requested pursuant to section 8-42-107.2, the claimant is not required to file a request for hearing until the divisions independent medical examination process is terminated for any reason.” C.R.S. § 8-43-203(2)(b)(II)(A) (emphasis added). Once a claimant requests a DIME, she is not required to file an application for hearing until that process is terminated – essentially tolling the 30 deadline.

Here, Claimant filed a timely objection and notice and proposal, tolling the 30 day hearing request deadline. Her application was filed July 28, 2016, prior to the completion of the DIME process. At that time, the parties had not even selected a DIME physician. For these reasons, The ALJ concludes that Claimant timely filed her hearing application and did not waive her right to a hearing. To the extent Respondents sought review of PALJ Steninger’s September 13, 2016 PHO on this issue, their arguments are rejected and Judge Steninger’s order is affirmed.

The August 29, 2016 PHO properly held the DIME process in abeyance

Respondent’s seek review of PALJ Barbo’s August 29, 2016 PHO holding the DIME process in abeyance pending resolution of the MMI issue at a *Town of Ignacio* hearing. Respondents argue that in making his ruling, Judge Barbo made a prohibited factual finding. The ALJ is not persuaded. In pertinent part, Judge Barbo found:

> The DIME process contemplates that an authorized treating physician has made an appropriate definitive determination of maximum medical improvement. If the determination [of] maximum medical improvement is ambiguous, then the DIME process cannot proceed until it is determined whether the claimant is actually at maximum medical improvement.
>
> Here the authorized treating physician’s statements do not make it clear that the claimant is unambiguously at maximum medical improvement.

The ALJ concurs with and affirms PALJ Steninger’s interpretation of Judge Barbo’s pre-hearing conference order:

> A careful reading of Judge Barbo’s order shows that he did not find that the MMI determination was ambiguous or unambiguous; rather, he implicitly held that the MMI issue requires facts to found by a merits-judge.

Once Claimant raised the ambiguity of the MMI determination by filing an application for hearing on the issue, the question had to be resolved by a merits judge. If an ALJ determines that the Claimant was not at MMI, the DIME process is not ripe and cannot proceed.

For the reasons discussed above, the ALJ affirms PALJ Barbo’s August 29, 2016 order holding the DIME process in abeyance.

ORDER

IT IS THEREFORE ORDERED THAT:

1. The factual issue raised by the ATP's May 17, 2016 note as to whether Claimant had reached MMI was ripe and the ALJ has jurisdiction to resolve it;

2. The ATP's May 17, 2016 note does not make an MMI determination consistent with the Act and the ALJ finds and concludes that Claimant had not been placed at MMI at that time and that the ATP has yet to make that determination consistent with the Act;

3. Claimant's application for hearing was timely and her right to assert the issue of whether Claimant had reached MMI was not waived;

4. The June 3, 2016 FAL, predicated upon the ATP's May 17, 2016 note is stricken because Claimant had not reached MMI at that time;

5. Respondents are liable for the knee replacement surgery performed in August of 2016 by Claimant's authorized surgeon, Dr. Patel, and for related treatment and other medical benefits because they were related to and reasonably necessary to cure or relieve the effects of Claimant's March 20, 201616 work injury;

6. PALJ Barbo's July 29, 2016 pre-hearing order holding the DIME process in abeyance is affirmed; and

7. All other issues are reserved for later determination.

DATED: April 10, 2017

/s/ Kimberly Turnbow
Kimberly Turnbow
Administrative Law Judge
Office of Administrative Courts
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

The issues presented for determination include: 1) Claimant's entitlement to temporary total disability benefits, 2) average weekly wage and, 3) whether Respondents established, by a preponderance of the evidence, that Claimant was responsible for the termination of her employment precluding entitlement to TTD benefits after July 21, 2016.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. On May 17, 2016 Claimant, who works as a housekeeper for Employer sustained an injury to her low back after falling backwards and landing on her right buttock. Said injury was admitted and Claimant has received medical benefits pursuant to the Workers' Compensation act of Colorado.

2. Claimant's duties as a housekeeper included mopping, sweeping, dusting, and other tasks associated with cleaning hospital rooms. In performing these tasks, Claimant testified that she spent approximately one-half of her work days walking and bending at the waist. In addition Claimant would have to lift, push and pull items weighing more than 10 pounds on a regular basis.

3. After she was injured, Claimant was directed by Employer to Concentra Medical Center for treatment. Claimant came under the care of Dr. Walter Larimore and Dr. Randall Jones who provided medications, and referrals to physical therapy. Claimant was also referred to Dr. Wiley Jenkins and Dr. Shimon Blau who provided injection therapy.

4. Claimant was first seen at Concentra by Walter Larimore on May 18, 2016. On this date, Claimant gave Dr. Larimore a history of being startled while cleaning and then falling backwards landing on her right buttock. Claimant told Dr. Larimore that the fall knocked the breath out of her for a moment and the pain was such she required assistance to get to a chair. Claimant further told Dr. Larimore that while the pain was better, it hurt to sit or stand too long. Dr. Larimore diagnosed Claimant with multiple buttock contusions. He imposed work restrictions of lifting up to ten pounds constantly, occasional bending, standing, and walking, occasional work requiring trunk rotation, and no driving the company vehicle. In his initial treatment note, Dr. Larimore specifically noted that Claimant's English, "is not great" and so her history may be inaccurate. Under the section of the note titled "Plan" Dr. Larimore referred Claimant to a Korean Interpreter.

5. Claimant testified that she has a limited ability to speak, read, and write English. Claimant testified at hearing, through a translator, that she can understand small words in English; mainly those associated with cleaning.

6. Claimant was next seen at Concentra by Dr. Randall Jones on May 20, 2016. On this date, Claimant was having low back and hip pain with some intermittent pain down her right leg. Following this appointment, Dr. Jones removed Claimant from work entirely until she was cleared to return by Dr. Larimore. Dr. Jones noted that Claimant's husband was there to help interpret, but hoped that there would be a professional interpreter at the follow up visit. Dr. Jones also noted on this date that she is concerned about driving, "as her husband is unable to take her to work."

7. On May 23, 2016, Claimant was reevaluated by Dr. Larimore. Dr. Larimore again noted that he was hampered by Claimant's limited English and that communication is difficult. During this appointment, Claimant was still experiencing low back, SI, and buttock pain radiating down the right leg. Dr. Larimore prescribed medication and recommended physical therapy. Dr. Larimore assigned the same work restrictions that he had imposed on May 18, 2016.

8. Claimant was provided with an offer of modified duty approved by Dr. Larimore on May 23, 2016. Claimant's modified duty involved cleaning and disinfecting room keys by dipping the keys in a bucket of pre-mixed chemical and then rinsing the keys with fresh water while seated at a table. Claimant responded to this offer of modified employment by returning to work on May 24, 2016. Claimant testified that she was able to stand while cleaning the keys and that she wore gloves and goggles.

9. Claimant worked her modified duty position on May 24, 2016 from 3:30 p.m. to 6:30 p.m. She testified that she could not continue beyond the three hours worked as she began to experience severe pain in her hip and back. She also testified that her eyes starting hurting, she got a headache and got dizzy. Claimant was sent home by her supervisor after these three hours of modified duty work. During her testimony, Claimant noted that she could smell the chemical used to disinfect the keys and suggested that it irritated her eyes and nose.

10. Upon Claimant's return to work on May 24, 2016, Barbra Curd, Employer's Director of Safety and Loss Control called Dr. Larimore indicating that Clamant had returned to work with crutches indicating that her symptoms were worse. Ms. Curd raised several concerns about the claim with Dr. Larimore prompting Dr. Larimore to indicate that he did not prescribe the crutches and that Claimant had reported to him that she was improved. Apparent discussion was had regarding Claimant's need for an interpreter to which Ms. Curd replied that Claimant was "totally fluent in English, but sometimes is nervous around folks she does not know." Ms. Curd's statement contradicts Claimant's testimony that her English skills are substantially limited.

11. In an office note dated May 25, 2016, from Physician Assistant (PA) Kenneth

Ginsberg it was noted that Claimant was given a cane at physical therapy, but was too unsteady and therefore got a crutch from a neighbor. PA Ginsburg noted that Claimant was not allowed to use the crutches at work without clearance. PA Ginsburg advised Claimant that she should use the crutches as needed for comfort.

12. Claimant was seen on June 1, 2016 by PA Ginsberg. On this day, PA Ginsberg assigned the same restrictions as on Claimant's May 23, 2016 appointment, noting that Claimant should "change positions periodically to relieve discomfort" and that she should "sit, stand or walk as needed for comfort." He also noted that Claimant "may not drive company vehicle due to functional limitations", noting further that Claimant should not drive at all. Regarding work, it was noted that Claimant was returned to modified duty and could work her entire shift.

13. Claimant was seen in follow up by PA Ginsberg on June 13, 2016 with complaints of persistent pain in her hips and low back. Claimant told PA Ginsberg that she was not working as she did not have transportation and that she did not feel she could do modified duty." PA Ginsberg referred Claimant to Dr. Wiley Jinkins for further evaluation and treatment. PA Ginsberg also continued the same work restrictions as imposed at her previous office visit.

14. Claimant returned to Concentra Medical Centers (Concentra) on June 20, 2016, for an initial physiatry evaluation by Dr. Blau. Claimant told Dr. Blau that her pain was worse with walking and sitting and that because of the pain she sits leaning to the left. Documentation from this date of visit reflects that Claimant presented to Concentra at 10:55 am and left at 11:56 am. Plans were made to initiate injection therapy.

15. Claimant's Pay Detail Reports admitted into evidence reflect that after she was evaluated by Dr. Blau she worked from 4:00 pm to 7:00 pm and from 7:30 pm to 11:30 pm on June 20, 2016. It is not clear what duties Claimant performed on this date; however, as Claimant remained restricted, the ALJ finds that she, more probably than not, performed the modified duty approved by Dr. Larimore, i.e. cleaning keys. The record is also not clear on how Claimant got to work on this date. Based upon the evidence presented, it is likely that her husband took her or she took a cab. Regardless, the record is clear that Claimant completed a seven hour shift.

16. On June 23, Claimant was seen in follow up appointment by Dr. Larimore. Claimant told Dr. Larimore that she has not returned back to modified duty due to transportation issues. She went on to tell Dr. Larimore that workers' compensation is "asking her to prepay for transportation which [she was] told would be reimbursed but [she] cannot afford this" as she is not receiving any "pay" from workers' compensation. Dr. Larimore indicated in this same note that communication with Claimant, even with an interpreter, is prolonged and difficult. Dr. Larimore assigned the same restrictions as on the previous visit and reiterated that claimant should not drive at all.

17. An addendum to the June 23, 2016, treatment note reflects that Ms. Curd called and reported that the Claimant had not "returned to work even though her

restrictions [could] be accommodated and she [was] wanted back at work as a valuable employee." The record also reflects that Ms. Curd notified Dr. Larimore that "transportation [had] been offered by the carrier."

18. Claimant was evaluated by orthopedic surgeon Dr. Jinkins on June 28, 2016. Dr. Jinkins felt that Claimant could not work if she had to work on her feet and use crutches but should be able to work part time sitting. In his office note, Dr. Jinkins wrote that Claimant does not have transportation to work and would have to take a taxi which would cost approximately $30.00 each way.

19. On July 21, 2016, Claimant returned to the modified duty position of cleaning and disinfecting keys as approved by Dr. Larimore on May 23, 2016. Claimant testified that she was prompted to return to work after receiving a phone call from someone at her employer informing her that if she did not return she would not have a job. Claimant testified that after approximately three hours of cleaning keys, she developed nausea and a headache. She alerted her supervisor and was sent home. The Pay Detail Report submitted in to evidence reflects that Claimant was paid for two hours and forty-five minutes of work on this date. She has not returned to work since.

20. Claimant was seen by Dr. Albert Hattem on August 2, 2016. During this visit Claimant was noted to ambulate with the aid of a wheeled walker. Dr. Hattem was concerned about Claimant presentation considering her "unrevealing MRI." He ordered an EMG study which was subsequently performed and interpreted to be normal. Given Claimant's persistent complaints and normal EMG, consideration was given toward the possibility that she had a subacute cervical myelopathy. Consequently, a cervical MRI was obtained which was unremarkable.

21. On August 23, 2016, Claimant was reevaluated by Dr. Jinkins who noted that Claimant was still having significant issues with pain. He felt that there was a "significant myofascial component to her . . . symptomatology" and that surgery was not indicated as the same would not "correct her problem." Dr. Jinkins noted that Claimant reported that she was not working and that there was no work available to her. Dr. Jinkins would go on to indicate after this report that he really did not see how Claimant could work at that time.

22. Claimant was seen in follow-up by Dr. Hattem on September 8, 2016. During this visit Claimant reported that her condition was "unchanged." She continued to complain of low back and right hip pain with radiation into the right leg. It was noted further that Claimant had been evaluated by Dr. Blau, Dr. Jenkins, Dr. Brinley and Dr. Scott and none of them had been able to discern a cause for her ongoing pain and functional limitations. An additional short course of physical therapy was scheduled after which Dr. Hattem anticipated performing an impairment rating. Dr. Hattem continued Claimant's restrictions, which the ALJ notes were previously accommodated by Employer.

23. Claimant presented to Dr. Hattem on October 13, 2016 with persistent low

back and right leg pain. On this date, Claimant was accompanied by a translator. Dr. Hattem noted that Claimant's persistent pain behaviors coupled with the negative diagnostic studies suggest that there were behavioral factors contributing to her pain complaints. Consequently, Dr. Hattem noted that he would schedule a psychological evaluation prior to claim closure. Dr. Hattem also recommended that Claimant proceed with one trial of a sacroiliac injection. Claimant's work restrictions remained unchanged.

24. On October 18, 2016, Claimant presented back to Dr. Jinkins with her husband and an interpreter. At this visit, Claimant was still ambulating with a walker. Claimant's husband advised Dr. Jinkins that Claimant is able to ambulate around the house occasionally without the walker or crutches but has fallen multiple times. In addition, Claimant's husband told Dr. Jinkins that Claimant seems to be significantly depressed. Dr. Jinkins opined that Claimant appears to have significant psychological depression which quite conceivably is affecting her recovery. Dr. Jinkins wrote in his report that based on Claimant's fairly profound depressive state and the fact she has fallen multiple times it would not be in Claimant's best interest to return to work. He did not feel that Claimant was employable.

25. On October 18, 2016 Employer sent Claimant a letter terminating her employment for job abandonment effective October 17, 2016.

26. Claimant was next seen by Dr. Jinkins on November 15, 2016, with her husband and an interpreter. At that time, Claimant was still experiencing pain in her back and legs. In addition, Claimant was not sleeping well; having crying spells, had no energy, and overall felt generally "listless." Dr. Jinkins raised concern that Claimant was psychologically depressed and was probably "somatizing" some of her mental and physical symptoms. Moreover, Dr. Jinkins noted Claimant's report that she was not working in so much as "she did not return to work and has had her job suspended." Claimant also informed Dr. Jinkins that as far as she knew, she had not been "officially" terminated. The ALJ interprets the exchange between Dr. Jinkins and Claimant regarding the status of her job evidence of Claimant's conscious decision not to return to work which she likely knew had affected the status of her continued employment with PCSI, especially since the termination letter had been sent approximately one month earlier.

27. On December 23, 2016, Claimant was placed at maximum medical improvement by Dr. Nicholas Kurz without impairment or restrictions.

28. Throughout the course of her treatment, Claimant's treating physicians approved various modified jobs for Claimant. Indeed, her physicians signed off on modified duty jobs on June 1, 2016, June 23, 2016, August 4, 2016, September 9, 2016, and October 17, 2016. Claimant testified that she did not receive any offers of modified employment. Nonetheless, she was provided with and started modified duty on May 24, 2016. She then completed a 7 hour shift on June 20, 2016 and returned to work again in a modified capacity on July 21, 2016. Consequently, the ALJ finds that Claimant accepted and began modified duty on May 24, 2016. In review of the

evidence presented, the ALJ is also mindful that Claimant's restrictions were largely unchanged throughout her course of care. While Claimant was later prohibited from driving, the evidence presented does not establish that her driving restriction precluded the performance of modified duty as approved by Dr. Larimore on May 23, 2016, as evidenced by the work she performed on June 20th and July 21st, 2016.

29. Mitchell Delduca, quality control manager/safety coordinator at Respondent-Employer testified that he would coordinate the modified job offers to Claimant. He further testified that he personally had her sign the modified job offers which led to her subsequent work on May 24th, June 20th and July 21, 2016. Mr. Delduca also testified that the job of cleaning keys included the use of an odorless chemical cleaner (Vinex) which is mixed with water in a bucket in which the keys are dipped. While Mr. Delduca did not offer persuasive testimony as to whether or not Vinex is irritating to the nose, throat, or respiratory tract, his testimony that Vinex is odorless contradicts Claimant's testimony that she could smell chemicals. He also testified that the use of goggles was to prevent any chemical from getting splashed into the eyes. According to Mr. Delduca, Claimant could alternate between sitting and standing while cleaning keys. He explained that Claimant's modified work station included an office chair with a reclining feature so as to accommodate Claimant with extending her leg.

30. Mr. Delduca also testified that after July 21, 2016, he attempted to get Claimant to return to modified duty by calling her at home and leaving messages on her voice mail. He also testified that he was unaware of whether Claimant received the additional aforementioned modified job duty offers or if she received his voice messages because no return phone calls were received from her. Mr. Delduca testified that after July 21, 2016, he never personally spoke with Claimant regarding modified job offers. Mr. Delduca testified that Claimant never used an interpreter at work and that part of Claimant's training as a housekeeper included watching videos, taking proficiency tests and participating in in-services presented in English. Regarding Claimant's command of English, Mr. Delduca testified that her skills were sufficiently proficient to answer phones and communicate with co-workers.

31. During her testimony, Claimant admitted that she received telephone messages from work at home but claimed that she did not understand what the messages meant. She also testified that she understood that messages left for her by someone at work were important. If Claimant did not understand the messages left for her, the evidence presented persuades the ALJ that she took no action to determine the significance of the messages. Finally she admitted that Employer had contacted her by phone previously regarding returning to work, testifying that after discussing her need to return to work, she went back on two occasions.

32. Macellino Perra, site director for Respondent-Employer, testified that he assists corporate management in coming up with modified jobs for injured employees. He testified that he had minimum contact with Claimant before her industrial injury and no direct contact with Claimant after. He testified that he was unsure if Claimant ever received any offers of modified employment after July 21, 2016.

33. Barbara Curd testified by telephone as to the corporate procedures for offering modified duties to injured workers. Ms. Curd testified that both a DOWC Rule 6-1 letter and the offers of modified duty were sent directly to Claimant until she retained counsel after which the same were sent to her counsel of record.

34. At the time she was injured, Claimant was earning $14.78 per hour. The wage records indicate that for the period January 1, 2016, through May 15, 2016, Claimant earned $10,564.13. Dividing this figure by the 135 day time period referenced above and multiplying by seven gives an average weekly wage (AWW) of $547.79. Under the circumstances presented here, this is the fairest way to determine Claimant's AWW.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with § 8-43-215, C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, *84 P.3d 1023 (Colo. 2004).* This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, 5 P.3d 385 (Colo. App. 2000).*

C. Assessing the weight, credibility and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo.App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence presented. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of

the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo.App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo.App. 2002). Based upon the evidence presented, the ALJ concludes that Claimant's professed inability to effectively understand and communicate in English is overstated. As noted, Claimant functioned at work without the assistance of an interpreter and according to Mr. Delduca her training during "Zero Week" was presented in English and consisted of watching videos, participating in in-services and taking proficiency tests. Moreover, she was noted in a report from Dr. Staudenmayer to converse with her husband in English and is, according to Ms. Curd, fluent in English. Claimant did not present convincing evidence to the contrary. Finally and most importantly, Claimant returned to work in a modified capacity after speaking with Mr. Delduca in English during which he explained the modified duty position approved by Dr. Larimore. Consequently, the ALJ finds unpursuasive, Claimant's assertion that she did not know what the messages left on her voice mail meant. Even if she did not know, Claimant, who admitted that the messages were important, no took action to determine what they meant in an effort to protect her position.

Claimant's Entitlement to Temporary Total Disability & Termination for Cause

D. To prove entitlement to temporary total disability (TTD) benefits, Claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that she left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg,* 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo.App. 1997). A claimant must establish a causal connection between the industrial injury and the subsequent wage loss in order to be entitled to TTD benefits. Section 8-42-103, C.R.S.; *Liberty Heights at Northgate v. Industrial Claim Appeals Office,* 30 P. 3d 872 (Colo. App. 2001).

E. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by Claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of the earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the Claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo.App. 1998). TTD benefits ordinarily continue until the first occurrence of any one of the following: the employee reaches maximum medical improvement; the employee returns to regular or modified employment; the attending physician gives the employee a written release to return to regular employment; or the attending physician gives the employee a written release to return to modified employment, such employment is offered to the employee in writing, and the employee fails to begin such employment. § 8-42-105(3), C.R.S.

F. As found above, Employer made a modified employment offer to Claimant

in writing on May 23, 2016. Claimant accepted this offer and returned to modified work on May 24, 2016 after being off work entirely due to the effects of her industrial injury. Consequently, Claimant has proven by a preponderance of the evidence that she was temporarily totally disabled and entitled to indemnity benefits beginning May 20, 2016; however, on May 24, 2016, the provisions of § 8-42-105(3)(b), C.R.S. were met, and Claimant's entitlement to TTD properly terminated.

G. As Claimant's injury was after July 1, 1999, sections 8-42-105(4) and 8-42-103(1)(g), C.R.S. apply regarding her continued entitlement to TTD benefits. These identical provisions state, "In cases where it is determined that a temporarily disabled employee is responsible for termination of employment, the resulting wage loss shall not be attributable to the on-the-job injury." Sections 105(4) and 103(1)(g) bar reinstatement of TTD benefits when, after the work injury, claimant causes his/her wage loss through his/her own responsibility for the loss of employment. *Colorado Springs Disposal d/b/a Bestway Disposal v. Industrial Claim Appeals Office*, 58 P.3d 1061 (Colo. App. 2002). Simply put, if the claimant is responsible for his/her termination of employment, the wage loss which is the consequence of claimant's actions shall not be attributable to the on-the-job injury. *Anderson v. Longmont Toyota, Inc.,* W.C. No. 4-465-839 (ICAO February 13, 2002). Respondents shoulder the burden of proving by a preponderance of the evidence that Claimant was responsible for her termination. *Colorado Compensation Insurance Authority v. Industrial Claim Appeals Office,* 20 P. 3d 1209 (Colo.App. 2000).

H. The concept of "responsibility" is similar to the concept of "fault" under the previous version of the statute. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). "Fault" requires a volitional act or the exercise of some control in light of the totality of the circumstances. *Padilla v. Digital Equipment Corp.*, 902 P.2d 414 (Colo. App. 1994). An employee is "responsible" if the employee precipitated the employment termination by a volitional act that an employee would reasonably expect to result in the loss of employment. *Patchek v. Colorado Department of Public Safety*, W.C. No. 4-432-301 (September 27, 2001). "Fault" does not require "willful intent" on the part of the Claimant. *Richards v. Winter Park Recreational Association*, 919 P.2d 933 (Colo.App. 1996)(unemployment insurance); *Harrison v. Dunmire Property Management, Inc.,* W.C. no. 4-676-410 (ICAO, April 9, 2008). In this case, Claimant asserts primarily that a communication barrier precluded her from understanding and asking questions about her modified duty and the messages left on her voice mail. Respondents contend that Claimant voluntarily quit her job and as such committed a volitional act barring her entitlement to TTD benefits. Even assuming that Claimant voluntarily quit her job, *Blair v. Art C. Klein Construction Inc.,* W.C. No. 4-556-576 (ICAO, November 3, 2003), held that a claimant's voluntary resignation is not dispositive of the issue of whether he is responsible for termination of his employment. The *Blair* Court held that the pertinent issue is the reason claimant quit because the claimant is not "responsible" where the termination is the result of the injury. *See Colorado Springs Disposal v. Industrial Claim Appeals Office, supra; Gregg v. Lawrence Construction Co.,* W.C. No. 4-475-888 (ICAO, April 22, 2002); *Bonney v. Pueblo Youth Service Bureau,* W.C. No. 4-485-720 (ICAO, April 24, 2002). According to *Blair,* "if the claimant was compelled to resign from

. . . employment such that it can be said the termination was a necessary and a natural consequence of the injury, rather than the claimant's subjective choice, the claimant would not be at fault for the termination." Here Claimant argues that her English speaking abilities prevented her from understanding the messages left on her voice mail and further, that she was subsequently removed from work by Dr. Jinkins. As such, that she was not responsible for her wage loss. As noted, concerning Claimant's argument that her English speaking capabilities precluded her from understanding the voice mail left for her encouraging her to return to work, the ALJ is not persuaded. Regarding Claimant's assertion that she was incapable as supported by the October 18, 2016 report, the ALJ is also unconvinced. Dr. Jinkins in his report of October 18, 2016, indicated that it would not be in Claimant's best interest to work. It is well established law that if the record contains conflicting opinions from attending physicians as to Claimant's ability to work the ALJ must resolve the conflict. *Bestway Concrete v. Industrial Claim Appeals Office,* 984 P. 2d 680 (Colo.App. 1999). Considering the entire evidentiary record, the ALJ concludes that Dr. Larimore's and Dr. Hattem's opinions regarding Claimant's restrictions and ability to return to modified duty work are more persuasive than the contrary opinions of Dr. Jinkins as of October 18, 2016. These opinions are supported by the November 3, 2016 report of Dr. Staudenmayer who opined that Claimant was somatizing her "emotional dysfunction" and that given her "psychological overlay . . . and given the lack of objective evidence from multiple specialist examinations, she [did] not appear to be a good candidate for further intervention." Dr. Jenkins appeared to give these opinions credence when he opined on November 15, 2016, that Claimant was not working in so much as she did not return to work and not that she was incapable of working.

I. In this case, there is a dearth of evidence to establish that Claimant's injury is the reason she did not return to work after July 21, 2016. Indeed, Claimant worked, by her testimony and the evidentiary records on three occasions after being cleared to modified duty and she presented no evidence to establish that Employer made Claimant's working conditions so difficult that a reasonable person in Claimant's position would feel compelled to resign. *Derr v. Gulf Oil Corp*., 796 F.2d 340, 344 (10th Cir. 1986). *Evenson v. Colorado Farm Bureau*, 879 P.2d 402 (Colo.App. 1993). Rather, the convincing evidence establishes that Claimant's persistent conscious refusal to respond to and otherwise communicate with Employer after being placed on modified duty explains her wage loss. In short, Claimant ignored Employers efforts to get her to return to modified work. The decision to ignore her Employer, despite knowing that such communication efforts were "important" was volitional and within Claimant's control. Moreover, by admitting that she knew that Employer's pains to reach out to her were important and nevertheless choosing to disregard those efforts persuades the ALJ that Claimant knew or reasonably should have known that refusing to communicate with the employer would result in her termination. Here, the ALJ is convinced that Claimant simply abandoned her job. Because her termination was not compelled by the natural consequence of the work injury, Claimant is "responsible" for her job separation and her claim for TTD benefits is permanently barred. *Blair v. Art C. Klein Construction Inc., supra.; Longmont Toyota, Inc.*, *supra*.

Claimant's Average Weekly Wage (AWW)

J. The overall purpose of the average weekly wage (AWW) statute is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity resulting from the industrial injury. *See Campbell v. IBM Corp., 867 P.2d 77 (Colo.App. 1993); National Fruit Prod. v. Crespin, 952 P.2d 1207 (Colo.App. 1997).*

K. Section 8-42- 102(2), C.R.S., sets forth certain methods of calculating the average weekly wage. Section 8-42-102(2)(d) provides that "[w]here the employee is being paid by the hour, the weekly wage shall be determined by multiplying the hourly rate by the number of hours in a day during which the employee was working at the time of the injury or would have worked if the injury had not intervened, to determine the daily wage; then the weekly wage shall be determined from the daily wage in a manner set forth in paragraph (c) of this subsection (2).

L. Section 8-42-102(3), C.R.S., permits the ALJ discretion in the method of calculating the average weekly wage if the nature of the employment or the fact that the injured employee has not worked a sufficient length of time, has been ill or self-employed, or for any other reason, the specific methods do not fairly compute the average weekly wage. *Benchmark/Elite Inc. v. Simpson*, 232 P.3d 777 (Colo. 2010); *Avalanche Industries, Inc. v. Clark*, 198 P.3d 589 (Colo. 2008). Here, the evidence presented demonstrates that at the time of the injury Claimant was being paid $14.78 per hour. In review of the payroll records, Claimant's hours fluctuated; however, for the twelve week time period January 1, 2016 through May 15, 2016, Claimant earned a total of $10,564.13. Dividing this figure by this 135 day time period and multiplying by seven gives an AWW of $547.99. Because of the fluctuation of hours it would not be fair to "cherry pick" Claimant's highest earning weeks or her lowest earning weeks to determine the AWW. The ALJ concludes that the fairest way to determine Claimant's AWW is to use total wages for time period from January 1, 2016 through May 15, 2016 and then average it out as it takes into account the various fluctuations in Claimant's wages over a longer period of time. Based on the above, Claimant has proven by a preponderance of the evidence that her AWW is $547.79.

.

ORDER

It is therefore ordered that:

1. Claimant is entitled to TTD disability benefits beginning May 21, 2016 and continuing through May 23, 2016. Respondents may take credit for TTD benefits paid during this time frame.

2. Respondents have proven, by a preponderance of the evidence, that Claimant was responsible for her termination of employment and her resulting wage loss, as such Claimant's request for TTD benefits after July 21, 2016 is denied and dismissed.

3. Claimant has proven, by a preponderance of the evidence an AWW of

$547.79.

4. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUE

Whether Claimant has demonstrated by a preponderance of the evidence that he suffered injuries to his knees and hips during the course and scope of his employment with Employer on July 10, 2016.

FINDINGS OF FACT

1. Employer is a large department store. Claimant began working for Employer on June 20, 2016 as a Customer Service Associate.

2. Claimant asserts that he sustained injuries to his knees and hips while performing his job duties for Employer on July 10, 2016. He specifically contends that he sustained his injuries as a result of prolonged standing, walking and lifting in excess of six hours with only one 15 minute break in the Customer Service area. Claimant does not claim that he sustained his injuries as a result of a fall or other traumatic event. His wage records reflect that he did not work for Employer in excess of 12.45 hours per week prior to July 10, 2016.

3. On July 12, 2016 Claimant visited Denver Health Medical Center for an examination. He reported that he has suffered a long-history of knee osteoarthritis that he attributed to serving in the army for eight years. Claimant noted that he had undergone arthroscopic knee surgery a few years earlier but his symptoms were slowly worsening. He reported that he had a long day at work without a break and his knees had become more swollen and painful. Upon physical examination Lucy W. Loomis, M.D. commented that Claimant exhibited decreased range of motion, swelling and effusion in both knees. Dr. Loomis diagnosed Claimant with "primary osteoarthritis of both knees" and recommended MRI's. She noted that Claimant could return to light duty employment with the restriction that he was only permitted to sit at work because of a "recent flare of his knee arthritis."

4. On July 26, 2016 Claimant visited Martin Kalevic, D. O. for an evaluation. Claimant reported that he had been working for Employer for two months in customer service and is often on his feet. He commented that by July 10, 2016 his knees had become so sore and swollen that he sought medical treatment. Claimant acknowledged that "there was no specific trauma. No falls. Nothing struck his knees." Dr. Kalevic noted that Claimant's right knee MRI revealed ""marked degenerative medial meniscal tearing and meniscal body extrusion" and the left knee MRI reflected "severe degenerative medial meniscus tearing and severe medical compartment osteoarthrosis." He questioned the causality of Claimant's injuries and specifically commented that "I do not feel that two months of working [for Employer] with no trauma caused any permanent damage to these knees." Specifically, in the three weeks

preceding the July 10, 2016 injuries, Claimant had worked 7.78, 9.6, and 5.60 hours respectively, each week. Dr. Kalevic diagnosed Claimant with bilateral knee pain with evidence of "severe degeneration." He concluded that Claimant was "heading toward knee replacement."

5. On October 4, 2016 Claimant visited Donald G. Eckhoff, M.D. for an examination. Dr. Eckhoff noted that Claimant had a three year history of bilateral knee pain that had progressively worsened over the previous six months. He noted that Claimant had undergone bilateral knee arthroplasty in 2013 and his symptoms had been fairly well-controlled with synvisc injections. Dr. Eckhoff explained that Claimant had recently started working for Employer and was on his feet for several hours. Claimant's work activities significantly aggravated his knee condition. Dr. Eckhoff diagnosed Claimant with bilateral knee osteoarthritis.

6. On December 1, 2016 Claimant underwent an independent medical examination with Eric O. Ridings, M.D. Dr. Ridings reviewed Claimant's medical records and conducted a physical examination. He concluded that Claimant's work activities for Employer for approximately 23 hours over a three week period did not "cause, aggravate or accelerate any medical condition." Dr. Ridings noted that Claimant has suffered a long history of severe, bilateral knee pain due to osteoarthritis since at least 2002 and bilateral knee replacements had been recommended by two orthopedic surgeons in 2013.

7. Dr. Ridings remarked that Claimant had been receiving viscosupplementation injections every six months since 2013 when he had his knee arthroscopies. By July 10, 2016 Claimant was overdue for his injections. Dr. Ridings commented that having increased knee pain when overdue for injections is entirely expected.

8. Upon examination, Dr. Ridings noted that Claimant had hypertropic osteoarthritis of each knee, but no acute inflammation. While performing straight leg raises Claimant lifted each leg only a few millimeters. Claimant exhibited pain behaviors as a result of the slightest pressure placed on his knees. He did not tolerate flexing either knee enough for ligament testing and did not tolerate any passive range of motion.

9. Dr. Ridings explained that Claimant had no evidence of acute inflammation, but exhibited ongoing bilateral osteoarthritis in his knees. He remarked that Claimant's "demonstrated abnormalities on physical examination today were wildly out of proportion to what would be medically expected and were entirely inconsistent with his observed ambulation in and out of the clinic. Additionally, if the patient were having the symptoms that he stated that he had during the physical examination, he would not have been able to walk at all."

10. Dr. Ridings noted that Claimant's claim was "entirely without merit from a medical standpoint." He explained that, although Claimant's work activities of standing, walking and carrying merchandise may have caused him to experience increased

symptoms because of his end-stage arthritis in both knees, his activities did not cause any worsening of his condition. Dr. Ridings summarized that Claimant has had a long history of bilateral knee complaints and required knee replacements for a number of years. A connection between Claimant's work activities for Employer for 23 hours during a three week period was thus "a highly improbable etiology for any significant increase" in pain to his knees or hips. Accordingly, Claimant's work activities on July 10, 2016 did not aggravate, accelerate or combine with his pre-existing condition to produce a need for medical treatment.

11. On January 31, 2017 Dr. Loomis authored a note regarding Claimant's bilateral knee condition. She stated that Claimant suffers from severe osteoarthritis of the knees. His symptoms remained stable until he began working for Employer in June of 2016. Dr. Loomis concluded that Claimant's "condition was aggravated after repeatedly carrying a lot of heavy loads."

12. Employer's Store Manager Brad Benson testified at the hearing in this matter. He explained that Claimant's position as a Customer Service Associate did not require him to restock merchandise and rarely required him to lift anything heavy.

13. Dr. Ridings testified at the hearing in this matter. He maintained that Claimant suffers from significant end-stage osteoarthritis in both knees and has received recommendations for total knee replacements. Dr. Ridings commented that Claimant remained symptomatic after knee surgeries in 2013 because he required synvisc injections every six months. He summarized that standing, walking, and lifting would not aggravate or accelerate Claimant's underlying degenerative knee and hip conditions.

14. Claimant has failed to demonstrate that it is more probably true than not that he suffered injuries to his knees and hips during the course and scope of his employment with Employer on July 10, 2016. Claimant asserts that he sustained injuries to his knees and hips while performing his job duties for Employer on July 10, 2016. He specifically contends that he sustained his injuries as a result of prolonged standing, walking and lifting in excess of six hours with only one 15 minute break in the Customer Service area. However, the record reveals that Claimant has suffered an extensive history of severe, degenerative, end-stage osteoarthritis and his work activities as a Customer Service Associate for Employer did not aggravate, accelerate or combine with his pre-existing condition to produce a need for medical treatment.

15. Dr. Ridings persuasively explained that, although Claimant's work activities of standing, walking and carrying merchandise may have caused him to experience increased symptoms because of his bilateral, end-stage knee arthritis, his activities did not cause any worsening of his condition. He summarized that Claimant has had a long history of bilateral knee complaints and required knee replacements for a number of years. A connection between Claimant's work activities for Employer for 23 hours during a three week period was thus "a highly improbable etiology for any significant increase" in pain to his knees or hips. Accordingly, Claimant's work activities

on July 10, 2016 did not aggravate, accelerate or combine with his pre-existing condition to cause a need for medical treatment.

16. Dr. Kalevic questioned the causality of Claimant's injuries and specifically commented that "I do not feel that two months of working [for Employer] with no trauma caused any permanent damage to these knees." Specifically, in the three weeks leading up to the July 10, 2016 injuries, Claimant had worked 7.78, 9.6, and 5.60 hours respectively, each week. Dr. Kalevic diagnosed Claimant with bilateral knee pain with evidence of "severe degeneration" as reflected on the MRI's. He concluded that Claimant was "heading toward knee replacement."

17. In contrast, Dr. Loomis acknowledged that Claimant suffers from severe osteoarthritis of the knees. However, she noted that his condition was stable but became aggravated after repeatedly carrying heavy loads while working for Employer. Moreover, Dr. Eckhoff determined that Claimant's work activities significantly aggravated his pre-existing knee condition. However, the overwhelming medical records and the persuasive opinions of Drs. Ridings and Kalevic demonstrate that Claimant's work activities for Employer on July 10, 2015 did not aggravate, accelerate or combine with his pre-existing condition to produce a need for medical treatment. Claimant's symptoms constituted the natural progression of his pre-existing condition.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and

bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAP, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

7. As found, Claimant has failed to demonstrate by a preponderance of the evidence that he suffered injuries to his knees and hips during the course and scope of his employment with Employer on July 10, 2016. Claimant asserts that he sustained injuries to his knees and hips while performing his job duties for Employer on July 10, 2016. He specifically contends that he sustained his injuries as a result of prolonged standing, walking and lifting in excess of six hours with only one 15 minute break in the Customer Service area. However, the record reveals that Claimant has suffered an extensive history of severe, degenerative, end-stage osteoarthritis and his work activities as a Customer Service Associate for Employer did not aggravate, accelerate or combine with his pre-existing condition to produce a need for medical treatment.

8. As found, Dr. Ridings persuasively explained that, although Claimant's work activities of standing, walking and carrying merchandise may have caused him to experience increased symptoms because of his bilateral, end-stage knee arthritis, his activities did not cause any worsening of his condition. He summarized that Claimant has had a long history of bilateral knee complaints and required knee replacements for a number of years. A connection between Claimant's work activities for Employer for 23 hours over a three week period was thus "a highly improbable etiology for any significant increase" in pain to his knees or hips. Accordingly, Claimant's work activities on July 10, 2016 did not aggravate, accelerate or combine with his pre-existing condition to cause a need for medical treatment.

9. As found, Dr. Kalevic questioned the causality of Claimant's injuries and specifically commented that "I do not feel that two months of working [for Employer] with no trauma caused any permanent damage to these knees." Specifically, in the three weeks leading up to the July 10, 2016 injuries, Claimant had worked 7.78, 9.6, and 5.60 hours respectively, each week. Dr. Kalevic diagnosed Claimant with bilateral knee pain with evidence of "severe degeneration" as reflected on the MRI's. He concluded that Claimant was "heading toward knee replacement."

10. As found, in contrast, Dr. Loomis acknowledged that Claimant suffers from severe osteoarthritis of the knees. However, she noted that his condition was stable but became aggravated after repeatedly carrying heavy loads while working for Employer. Moreover, Dr. Eckhoff determined that Claimant's work activities significantly aggravated his pre-existing knee condition. However, the overwhelming medical records and the persuasive opinions of Drs. Ridings and Kalevic demonstrate that Claimant's work activities for Employer on July 10, 2015 did not aggravate, accelerate or combine with his pre-existing condition to produce a need for medical treatment. Claimant's symptoms constituted the natural progression of his pre-existing condition.

ORDER

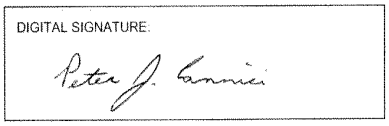
Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's request for Workers' Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to*

Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 4, 2017.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
633 17th Street Suite 1300
Denver, CO 80202

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that she should be permitted to reopen her May 5, 2015 Workers' Compensation claim in case number 4-992-278.based on a worsening of condition pursuant to §8-43-303(1), C.R.S.

2. Whether Claimant has demonstrated by a preponderance of the evidence that she suffered a cervical spine injury during the course and scope of her employment with Employer on August 3, 2016 in case number 4-993-931

3. Whether Claimant has proven by a preponderance of the evidence that she is entitled to receive reasonable, necessary and causally related medical benefits for her industrial injuries.

FINDINGS OF FACT

1. Claimant worked for Employer performing a variety of tasks. Her job duties specifically involved selling auto parts, answering telephones, typing orders, sending out orders, checking-in freight, removing auto parts from shelves, restocking auto parts and unloading trucks.

2. On May 5, 2015 Claimant was unloading a truck. As she was pulling a tote filled with starters, alternators, brake pads and rotors she experienced a "pop" in her neck area. Claimant immediately suffered pain and tightness in her neck and shoulders. Employer directed Claimant to Concentra Medical Centers for an evaluation. The May 5, 2015 matter was assigned Workers' Compensation case number 4-992-278.

3. On May 6, 2015 Claimant visited Concentra. A physical examination of Claimant's cervical spine revealed tenderness and muscle spasms. Claimant received physical restrictions including no lifting, pushing, pulling in excess of 10 pounds or reaching above the shoulders. Medical providers referred Claimant to three sessions of physical therapy for two weeks.

4. On May 11, 2015 Claimant returned to Concentra for an examination. The medical records reflect that Claimant's neck pain had resolved and she was released to regular duty. However, Claimant testified that she was "doing about the same" and continued to experience neck pain and right arm tingling. She explained that she was not truthful with medical providers because she could perform physical therapy exercises at home and was unable to miss work because of her financial circumstances. Claimant thus returned to regular duty employment.

5. On May 21, 2015 Claimant returned to Concentra for an examination. She reported that she had experienced a 95% improvement, was performing her physical therapy exercises at home and was working without restrictions. Physicians released Claimant to Maximum Medical Improvement (MMI) with no permanent impairment.

6. Claimant testified that her symptoms worsened after she reached MMI and returned to regular duty employment. She detailed that her right arm tingling worsened and she developed left arm tingling. Claimant also noted constant neck pain and stiffness.

7. On August 20, 2015 Claimant visited personal physician Thomas J. Allen, M.D. for an examination. She reported hand pain over the prior two weeks. Claimant noted that her job duties involved significant typing and ordering parts. Dr. Allen diagnosed Claimant with work-related Carpal Tunnel Syndrome (CTS).

8. On August 20, 2015 Claimant completed an Injury Report for Employer. She explained that she was experiencing pain in her wrists from picking up items, holding merchandise and typing. Claimant remarked that she did not suffer a traumatic injury. She selected August 3, 2015 as her date of injury. Employer again referred Claimant to Concentra for medical treatment. The August 3, 2015 matter was assigned Workers' Compensation case number 4-993-931.

9. On September 1, 2015 Claimant returned to Concentra for an examination. Claimant reported bilateral wrist pain, sharp shooting pains and tingling from lifting heavy truck parts. Medical providers diagnosed Claimant with CTS and assigned physical restrictions.

10. On September 24, 2016 Claimant returned to Concentra for an evaluation. Claimant reported a lack of movement in her neck area. Treatment thus focused on her neck instead of her bilateral wrists.

11. On October 8, 2015 Claimant again visited Concentra for an examination. She continued to report neck pain radiating into her shoulders and decreased range of motion.

12. On November 3, 2015 Respondents filed a Final Admissions of Liability (FAL) in Workers' Compensation claim number 4-992-931 acknowledging that Claimant reached MMI on May 21, 2015 with no permanent impairment. Claimant did not object to the FAL and her claim closed by operation of law.

13. On February 8, 2016 Claimant underwent a cervical spine MRI. The MRI revealed degenerative changes at C4-C5 and C5-C6. There was also a central and left recess disc extrusion at the C6-C7 level.

14. On March 1, 2016 Claimant visited Shimon Blau, M.D. at Concentra for an evaluation. Dr. Blau noted that the cervical spine MRI revealed a herniated disc, cervicalgia and cervical radiculopathy.

15. On March 4, 2016 Claimant visited Douglas W. Beard, M.D. of the Front Range Center for Brain & Spinal Surgery. Dr. Beard remarked that principle complaints involved neck and shoulder pain. He diagnosed Claimant with a herniated nucleus pulposus on the left side at C6-C7 and an intermittent left C7 radiculopathy.

16. Claimant testified that she continues to experience pain and stiffness in her neck area as well as tingling in her left and right arms. She commented that, although her symptoms are similar to when she reached MMI, they have worsened. Claimant specifically detailed that she is suffering constant neck pain, limited neck motion and constant tingling in her arms. Nevertheless, Claimant acknowledged that she did not suffer an acute injury to her neck on August 3, 2015. Instead, she contends that her symptoms are related to the May 5, 2015 incident.

17. On September 6, 2016 Claimant filed a Petition to Reopen case number 4-992-278. She asserted that her condition has worsened since she reached MMI.

18. Claimant acknowledged that she has suffered a history of cervical spine injuries as a result of motor vehicle accidents and sports injuries. Claimant was involved in a motor vehicle accident in 1997 when she was 16 years old and developed ongoing neck pain. She also suffered neck pain as a result of playing sports as a teenager. A December 20, 2011 MRI revealed degenerative changes at the C4-C5, C5-C6 and C6-C7 levels. Moreover, in 2012 Claimant underwent nerve blocks for neck pain but the symptoms failed to resolve. She thus received additional treatment in the form of radiofrequency ablation. Finally, in 2013 Claimant strained her neck while playing football with her children.

19. On November 22, 2016 Claimant underwent an EMG of her left upper extremity. The EMG was normal with no evidence of acute or chronic cervical radiculopathy, brachial plexopathy, peripheral neuropathy, CTS or ulnar neuropathy.

20. On July 30, 2016 Claimant underwent an independent medical examination with Kathleen D'Angelo, M.D. Dr. D'Angelo reviewed Claimant's medical records, conducted a physical examination and prepared a detailed report. She also testified through an evidentiary deposition in this matter on February 24, 2017. Dr. D'Angelo concluded that Claimant has not suffered a worsening of her cervical spine injury since she reached MMI on May 21, 2015. She also determined that Claimant did not suffer a new cervical spine injury during the course and scope of her employment with Employer on August 3, 2015.

21. Dr. D'Angelo explained that Claimant suffered a cervical spine injury that resolved with conservative treatment. Claimant reached MMI on May 21, 2015. Claimant reported to Dr. D'Angelo that she returned to full duty work and continued until she began to experience bilateral arm pain in August 2015. Claimant maintained that she did not suffer pain for the period May until August, 2015. However, Dr. D'Angelo noted that, if Claimant had sustained a herniated disc as reflected on the MRI, she would have suffered her worst pain at the time of the injury. She commented that Claimant would have experienced a gradual decrease in pain as the disc was re-

absorbed into the body. Claimant also would have suffered radicular symptoms into her arms and hands at the time of the cervical spine injury. However, Dr. D'Angelo remarked that Claimant did not mention radicular symptoms until she visited personal physician Dr. Allen on August 20, 2015.

22. Dr. D'Angelo summarized that a worsening of an underlying condition is typically not characterized by intermittent periods without symptoms. She reiterated that with any type of a spinal injury individuals suffer the most pain at the time of injury with a gradual decrease in symptoms. Dr. Dangelo determined that "[i]t does not make medical sense" that Claimant was injured in May, had no symptoms by September and then had increased symptoms in October. Dr. D'Angelo remarked that Claimant had full range of motion in her neck area when she visited her personal physician in September 2015. There was simply no "linear relationship" between Claimant's initial injury in May 2015 and symptoms that manifested several months later. Finally, Dr. D'Angelo explained that Claimant's February 8, 2016 MRI as well as her November 22, 2016 EMG did not support Claimant's subjective complaints of worsening symptoms.

23. Dr. D'Angelo also explained that Claimant did not suffer a new industrial injury to her cervical spine on August 3, 2015. She remarked that when Claimant visited Concentra on September 1, 2015 she only reported bilateral wrist pain, shooting pain and tingling. Claimant did not report any neck pain. Furthermore, on September 3, 2015 Claimant visited her personal physician for sore throat symptoms. Claimant underwent a neck evaluation, did not have any difficulties in moving her neck and demonstrated full range of motion. Dr. D'Angelo reasoned that the lack of physical findings during the September 3, 2015 examination revealed that Claimant did not suffer a neck injury on August 3, 2015. Finally, Dr. D'Angelo commented that there was no mechanism for a cervical spine injury and no causality analysis that linked Claimant's cervical spine symptoms to an August 3, 2015 incident. Accordingly, Dr. D'Angelo could not causally connect Claimant's subsequent cervical spine complaints with an August 2015 industrial incident.

24. Claimant testified that she has been experiencing cervical spine symptoms since she was unloading a truck on May 5, 2015. She maintained that her cervical spine symptoms did not improve during her short course of conservative treatment in May 2015. Claimant remarked that she sought to return to regular duty employment because of financial concerns. She thus stated on May 21, 2015 that her symptoms had resolved. Claimant also maintained that her strenuous job duties caused a worsening of her cervical spine symptoms during the summer and fall of 2015.

25. Claimant has failed to establish that it is more probably true than not that she should be permitted to reopen her May 5, 2015 Workers' Compensation claim in case number 4-992-278 based on a worsening of condition pursuant to §8-43-303(1), C.R.S. On May 21, 2015 Claimant reached MMI with no permanent impairment. Claimant testified that she continues to experience pain and stiffness in her neck area as well as tingling in her left and right arms. She commented that, although her symptoms are similar to when she reached MMI, they have worsened. Claimant specifically detailed that she is suffering constant neck pain, limited neck motion and

constant tingling in her arms. Claimant's attributes her continuing neck symptoms to her May 5, 2015 industrial injury.

26. In contrast, Dr. D'Angelo persuasively explained that, if Claimant had sustained a herniated disc as reflected on the MRI, she would have suffered her worst pain at the time of the injury. She commented that Claimant would have experienced a gradual decrease in pain as the disc was re-absorbed into the body. Claimant also would have suffered radicular symptoms into her arms and hands at the time of the cervical spine injury. Dr. D'Angelo reasoned that the worsening of an underlying condition is typically not characterized by intermittent periods without symptoms. She reiterated that with any type of a spinal injury individuals suffer the most pain at the time of injury with a gradual decrease in symptoms. Dr. Dangelo determined that "[i]t does not make medical sense" that Claimant was injured in May, had no symptoms by September and then had increased symptoms in October. She persuasively summarized that there was simply no "linear relationship" between Claimant's initial injury in May 2015 and symptoms that manifested several months later. Finally, Dr. D'Angelo explained that Claimant's February 8, 2016 MRI as well as her November 22, 2016 EMG did not support Claimant's subjective complaints of worsening symptoms.

27. Dr. D'Angelo persuasively concluded that Claimant has not suffered a worsening of her cervical spine injury since she reached MMI on May 21, 2015. Moreover, the record reveals that Claimant has suffered an extensive history of degenerative changes to her cervical spine. Claimant's medical history and the persuasive testimony of Dr. D'Angelo reflect that she has not suffered a change in condition that entitles her to additional medical benefits. Accordingly, Claimant's request to reopen her May 5, 2015 Workers' Compensation claim in case number 4-992-278 based on a worsening of condition is denied and dismissed.

28. Claimant has also failed to demonstrate that it is more probably true than not that she suffered a cervical spine injury during the course and scope of her employment with Employer on August 3, 2016 in case number 4-993-931. Initially, Claimant acknowledged that she did not suffer an acute injury to her neck on August 3, 2015. Instead, she contends that her symptoms are related to the May 5, 2015 incident. Furthermore, Dr. D'Angelo reasoned that Claimant did not suffer a new industrial injury to her cervical spine on August 3, 2015. She remarked that when Claimant visited Concentra on September 1, 2015 she only reported bilateral wrist pain, shooting pain and tingling. Claimant did not report any neck pain. Furthermore, on September 3, 2015 Claimant visited her personal physician for sore throat symptoms. She did not have any difficulties in moving her neck and demonstrated full range of motion. Dr. D'Angelo reasoned that the lack of physical findings during the September 3, 2015 examination revealed that Claimant did not suffer a neck injury on August 3, 2015. Finally, Dr. D'Angelo commented that there was no mechanism for a cervical spine injury and no causality analysis that connected Claimant's cervical spine symptoms to an August 3, 2015 incident. Accordingly, Claimant as failed to demonstrate that her August 3, 2015 work activities aggravated, accelerated or combined with her pre-existing cervical spine condition to cause a need for medical treatment.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Worsening of Condition

4. Section 8-43-303(1), C.R.S. provides that a Worker's Compensation award may be reopened based on a change in condition. In seeking to reopen a claim the claimant shoulders the burden of proving his condition has changed and he is entitled to benefits by a preponderance of the evidence. *Osborne v. Industrial Commission*, 725 P.2d 63, 65 (Colo. App. 1986). A change in condition refers either to a change in the condition of the original compensable injury or to a change in a claimant's physical or mental condition that is causally connected to the original injury. *Jarosinski v. Industrial Claim Appeals Office,* 62 P.3d 1082, 1084 (Colo. App. 2002). A "change in condition" pertains to changes that occur after a claim is closed. *In re Caraveo,* W.C. No. 4-358-465 (ICAP, Oct. 25, 2006). The determination of whether a claimant has sustained his burden of proof to reopen a claim is one of fact for the ALJ. *In re Nguyen,* W.C. No. 4-543-945 (ICAP, July 19, 2004).

5. As found, Claimant has failed to establish by a preponderance of the evidence that she should be permitted to reopen her May 5, 2015 Workers' Compensation claim in case number 4-992-278 based on a worsening of condition pursuant to §8-43-303(1), C.R.S. On May 21, 2015 Claimant reached MMI with no

permanent impairment. Claimant testified that she continues to experience pain and stiffness in her neck area as well as tingling in her left and right arms. She commented that, although her symptoms are similar to when she reached MMI, they have worsened. Claimant specifically detailed that she is suffering constant neck pain, limited neck motion and constant tingling in her arms. Claimant's attributes her continuing neck symptoms to her May 5, 2015 industrial injury.

6. As found, in contrast, Dr. D'Angelo persuasively explained that, if Claimant had sustained a herniated disc as reflected on the MRI, she would have suffered her worst pain at the time of the injury. She commented that Claimant would have experienced a gradual decrease in pain as the disc was re-absorbed into the body. Claimant also would have suffered radicular symptoms into her arms and hands at the time of the cervical spine injury. Dr. D'Angelo reasoned that the worsening of an underlying condition is typically not characterized by intermittent periods without symptoms. She reiterated that with any type of a spinal injury individuals suffer the most pain at the time of injury with a gradual decrease in symptoms. Dr. Dangelo determined that "[i]t does not make medical sense" that Claimant was injured in May, had no symptoms by September and then had increased symptoms in October. She persuasively summarized that there was simply no "linear relationship" between Claimant's initial injury in May 2015 and symptoms that manifested several months later. Finally, Dr. D'Angelo explained that Claimant's February 8, 2016 MRI as well as her November 22, 2016 EMG did not support Claimant's subjective complaints of worsening symptoms.

7. As found, Dr. D'Angelo persuasively concluded that Claimant has not suffered a worsening of her cervical spine injury since she reached MMI on May 21, 2015. Moreover, the record reveals that Claimant has suffered an extensive history of degenerative changes to her cervical spine. Claimant's medical history and the persuasive testimony of Dr. D'Angelo reflect that she has not suffered a change in condition that entitles her to additional medical benefits. Accordingly, Claimant's request to reopen her May 5, 2015 Workers' Compensation claim in case number 4-992-278 based on a worsening of condition is denied and dismissed.

Compensability

8. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAP, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

9. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing

condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

10. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

11. As found, Claimant has also failed to demonstrate by a preponderance of the evidence that she suffered a cervical spine injury during the course and scope of her employment with Employer on August 3, 2016 in case number 4-993-931. Initially, Claimant acknowledged that she did not suffer an acute injury to her neck on August 3, 2015. Instead, she contends that her symptoms are related to the May 5, 2015 incident. Furthermore, Dr. D'Angelo reasoned that Claimant did not suffer a new industrial injury to her cervical spine on August 3, 2015. She remarked that when Claimant visited Concentra on September 1, 2015 she only reported bilateral wrist pain, shooting pain and tingling. Claimant did not report any neck pain. Furthermore, on September 3, 2015 Claimant visited her personal physician for sore throat symptoms. She did not have any difficulties in moving her neck and demonstrated full range of motion. Dr. D'Angelo reasoned that the lack of physical findings during the September 3, 2015 examination revealed that Claimant did not suffer a neck injury on August 3, 2015. Finally, Dr. D'Angelo commented that there was no mechanism for a cervical spine injury and no causality analysis that connected Claimant's cervical spine symptoms to an August 3, 2015 incident. Accordingly, Claimant as failed to demonstrate that her August 3, 2015 work activities aggravated, accelerated or combined with her pre-existing cervical spine condition to cause a need for medical treatment.

ORDER

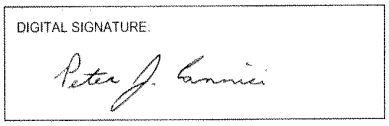
Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request to reopen her Workers' Compensation claim in case number 4-992-278 is denied and dismissed.

2. Claimant's request for Workers' Compensation benefits in case number 4-993-931 is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: April 3, 2017.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
633 17th Street Suite 1300
Denver, CO 80202

ISSUES

- Whether Respondent overcame the Division IME which found Claimant not at MMI?

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. On June 23, 2015, Claimant suffered a work related accident when she tripped over a floor mat at work and fell. Claimant was 62 at the time of the accident.

2. On June 26, 2015, Claimant was evaluated by Dr. Martin Kalevik. Dr. Kalevik reported that Claimant tripped on a rubber floor mat and fell forward on her hands and knees. Claimant complained of soreness in her neck, back, and shoulders. Claimant also presented with an abrasion on her right elbow, soreness of her left palm, and a contusion on her left lower shin. Dr. Kalevik assessed Claimant with cervical, thoracic, and posterior shoulder strains and muscle tightness, left wrist contusion, a right elbow superficial abrasion, and a left shin contusion.

3. On July 17, 2015, Claimant returned to Dr. Kalevik. He stated that Claimant presented with radicular symptoms going down both arms. He also noted that although Claimant stated that she could not turn her neck to the right unless she turned her entire body, he noticed she was able to turn and look to her right. Claimant underwent a cervical spine x-ray. Dr. Kalevik stated that the x-ray showed cervical disk disease at C4-5-6-7, with bone-to-bone contact and severe joint narrowing. Due to Claimant's presentation, Dr. Kalevik prescribed physical therapy and ordered an MRI of Claimant's cervical spine.

4. According to Dr. Kalevik's July 23, 2015 report, Claimant's MRI demonstrated moderate to severe degenerative disk disease and spondylosis throughout the cervical spine, predominately from the C4 down to C7. Dr. Kalevik stated that although this was preexisting and not caused by her accident, "[H]er neck is not forgiving. It does not have the cushion or the mobility to take shots." He was hopeful that her neck pain would settle down within the next couple of months and with the help of physical therapy.

5. On August 5, 2015, Claimant returned to Dr. Kalevik. Claimant was complaining of numbness down her right arm.

6. On August 18, 2015, Dr. Kalevik stated in his report that Claimant continued to improve, however, due to ongoing radicular complaints, she was referred to Dr. Samuel Chan for an EMG.

7. On October 16, 2015, Claimant was evaluated by Dr. Chan. Dr. Chan stated that Claimant complained of pain over the left side of her neck which radiated into her left shoulder, shooting pain into her left hand, and some left handed grip weakness. Dr. Chan stated that based on Claimant's pain complaints, he thought an EMG was appropriate. He also stated that injection therapy of the cervical spine might be appropriate if the EMG was normal and Claimant still had pain complaints.

8. On November 6, 2015, Claimant presented to Dr. Kalevik and complained of left arm weakness and that she was dropping things.

9. On November 6, 2015, Claimant returned to Dr. Chan and underwent an EMG and electrodiagnostic study of her left arm. The test was normal. Dr. Chan stated that the normal test results completely ruled out a frank neuropathic lesion. Dr. Chan recommended Claimant continue with her self-directed exercise program and that she should consider acupuncture.

10. Claimant returned to Dr. Chan on December 4, 2015. According to Dr. Chan's report, Claimant still had cervical spine pain and pain over the left shoulder girdle. Dr. Chan concluded that Claimant's findings were most consistent with musculoskeletal pain. He stated that Claimant will begin a trial of acupuncture. He also stated Claimant might want to consider facet injections under fluoroscopic guidance if she continues to be symptomatic and the clinical examination continues to demonstrate findings consistent with facetogenic pain.

11. Claimant returned to Dr. Kalevik on December 30, 2015. She complained of ongoing pain in her neck and back and numbness down her left arm. She also complained about feeling depressed.

12. On December 30, 2015, Claimant was again seen by Dr. Chan. Claimant complained of ongoing pain which was rather severe. Dr. Chan also noted Claimant presented with a rather flat affect. Dr. Chan was concerned that there were underlying psychological factors such as stress and depression which might account for some of Claimant's ongoing symptoms. Dr. Chan indicated Cymbalta might be considered at some point to see if that might give Claimant some relief from her pain. Dr. Chan did not refer Claimant to a psychologist.

13. On January 29, 2016, Claimant returned to Dr. Chan with ongoing pain complaints. Although she no longer complained of radiating pain or

numbness and tingling down her left arm, she complained of pain in her right trapezious region. Dr. Chan indicated that he still thought her pain was myofascial. He also stated that Claimant had "inherent underlying depression which mainly impacts the patient's presentation as well as recovery process." Despite his concerns, Dr. Chan did not refer Claimant to a psychologist.

14. On February 10, 2016, Claimant returned to Dr. Chan. She rated her pain at 6 out of 10. Dr. Chan also noted Claimant had a very flat affect and that she was almost on the verge of tears during the entire interview part of the examination. In his assessment and recommendations, Dr. Chan stated Claimant appeared "rather clinically depressed" and that her depression was contributing to her ongoing symptomatology and presentation. Despite thinking Claimant was clinically depressed, Dr. Chan did not refer Claimant to a psychologist. He did, however, think Claimant was reaching a plateau regarding her treatment and would be at MMI after the completion of her acupuncture.

15. On February 24, 2016, Claimant was evaluated by Dr. Chan. He again stated that although Claimant continued to have complaints of pain, he thought that there was an underlying psychological disorder, such as depression, that was impacting Claimant's presentation and her ability to respond to treatment. He also stated that upon completion of acupuncture, Claimant would most likely be at MMI without any impairment. He also stated that upon being placed at MMI, maintenance medical treatment in the form of four to six sessions of acupuncture might be appropriate.

16. On March 3, 2016, Claimant was evaluated by Dr. Chan and Dr. Kalevik. Dr. Chan concluded Claimant was at MMI. Dr. Kalevik agreed and placed Claimant at MMI. In his report of March 3, 2016, Dr. Kalevik stated that Claimant was complaining of spasm and a numbing sensation down her right arm and into her palm. Regardless, Claimant was placed at MMI and determined to have zero impairment. Dr. Kalevik recommended maintenance medical treatment in the form of acupuncture. He also refilled a prescription for chlorzoxazone and wrote a prescription for massage therapy.

17. Claimant did not have the facet injections previously suggested by Dr. Chan. Claimant had right upper extremity symptoms, but yet Dr. Chan did not perform an EMG of her right upper extremity. Moreover, Claimant's symptoms of depression seemed to become inextricably intertwined with her physical complaints, but neither Dr. Kalevik nor Dr. Chan referred Claimant for a psychological evaluation and possible treatment.

18. Claimant requested a Division IME ("DIME"). On June 22, 2016, Dr. Striplin performed the DIME. Dr. Striplin determined Claimant was not at MMI. Dr. Striplin recommended a psychological evaluation, with psychological testing, to determine whether Claimant has a defined psychological disorder, whether the disorder is likely to have been caused or exacerbated by the fall at work,

and whether any psychological treatment is recommended. Dr. Striplin also recommended electrodiagnostic testing of both upper extremities to determine if there has been any interval change compared to the prior testing, which just evaluated Claimant's left upper extremity. Dr. Striplin stated in his report that "depending on the results of the psychological testing and the repeat electrodiagnostic studies, consideration could then be given to cervical injections for diagnostic, if not therapeutic purposes." The ALJ finds Dr. Striplin's opinion regarding MMI persuasive.

19. The ALJ finds that the additional diagnostic evaluations recommended by Dr. Striplin have a reasonable prospect of diagnosing or defining Claimant's condition so as to suggest a course of further treatment. This course of additional treatment might include cervical injections, psychological treatment, and additional medication, such as Cymbata, which was previously suggested by Dr. Chan.

20. Dr. Wallace Larson testified on behalf of Respondent. Dr. Larson is an orthopedic surgeon and performed an Independent Medical Examination ("IME"). Dr. Larson opined that Claimant was at MMI. He testified that the additional electrodiagnostic testing and psychological evaluation recommended by Dr. Striplin is not medically indicated. Dr. Larson testified that Claimant does not have any objective findings to support her symptoms. He also stated that Claimant's presentation is non-physiologic. For example, the prior electrodiagnostic testing of Claimant's left upper extremity was negative. Dr. Larson testified that Claimant's presentation regarding the alleged weakness and lack of sensation in her left upper extremity would involve 2-3 nerve levels and the degree of impairment described by Claimant would have shown up on the electrodiagnostic testing. Dr. Larson also testified that even if the electrodiagnostic testing came back positive with minimal findings, the rest of Claimant's exam would not support any additional treatment. Dr. Larson is of the opinion that even if the testing was positive, additional treatment would not be reasonable and necessary. Regarding the psychological testing, Dr. Larson summarily stated that the accident is not the type of accident that causes a psychological injury or condition. For example, according to Dr. Larson, seeing someone get hurt really bad, or getting hurt really bad, would be the type of situation that could cause a psychiatric condition that might need treatment.

21. The ALJ does not find Dr. Larson's opinion regarding MMI to be persuasive. The ALJ finds that the results of the electrodiagnostic studies combined with the psychological evaluation will help determine whether additional treatment is reasonable and necessary.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000). Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician's finding concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). Where the evidence is subject to conflicting inferences a mere difference of opinion between qualified medical experts does not necessarily rise to the level of clear and convincing evidence. Rather it is the province of the ALJ to assess the weight to be assigned conflicting medical opinions on the issue of MMI. *Oates v. Vortex Industries,* WC 4-712-812 (ICAO November 21, 2008). The ultimate question of whether the party challenging the DIME physician's finding of MMI has overcome it by clear and convincing evidence is one of fact for the ALJ. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

Diagnostic procedures constitute a compensable medical benefit which must be provided prior to MMI if such procedures have a "reasonable prospect" of diagnosing or defining Claimant's condition so as to suggest a course of further treatment. Section 8-42-101(1)(a); *Villela v. Excel Corp*., W.C. No. 4-400-281 (February 1, 2001); *Hatch v. John H. Garland Co*., W.C. No. 4-368-712 (August 11, 2000); cf. *Merriman v. Industrial Commission*, 120 Colo. 400, 210 P.2d 448 (1949); *Gonzales v. Industrial Claim Appeals Office*, 905 P.2d 16 (Colo. App. 1995); *Reynolds v. Industrial Claim Appeals Office*, 794 P.2d 1080 (Colo. App. 1990). A finding that additional diagnostic procedures offer a reasonable prospect for defining Claimant's condition or suggesting further treatment is inconsistent with a finding of MMI. *Patterson v. Comfort Dental East Aurora,* WC 4-874-745-01 (ICAO February 14, 2014); *Hatch v. John H. Garland Co.,* W.C. No. 4-638-712 (ICAO August 11, 2000). Thus, a DIME physician's findings concerning the diagnosis of a medical condition, the cause of that condition, and the need for specific treatments or diagnostic procedures to evaluate the condition are inherent elements of determining MMI. Therefore, the DIME physician's opinions on these issues are binding unless overcome by clear and convincing evidence. *See Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002).

The ALJ finds Dr. Striplin's opinion to be credible and persuasive. In this case, Dr. Striplin, the Division Examiner, is of the opinion that Claimant needs to undergo additional diagnostic evaluations to evaluate her work related injury. Dr. Striplin is of the opinion that Claimant needs to undergo additional electrodiagnostic testing to determine whether there has been any change from the prior testing of Claimant's left upper extremity and to test the right upper extremity. The results of the electrodiagnostic

testing will determine what additional treatment might be appropriate. Additional treatment might include the facet injections which were previously recommended, but never performed. In addition, Dr. Striplin is of the opinion that Claimant needs to undergo a psychological evaluation, including testing, to determine whether Claimant's work related accident has caused or aggravated a psychological condition, and if so, whether treatment is appropriate. This ALJ concludes that the additional evaluations recommended by Dr. Striplin have a reasonable prospect of diagnosing or defining Claimant's condition so as to suggest a course of further treatment.

Dr. Larson is of the opinion that Claimant's pain complaints are not supported by any objective evidence and that any additional testing or treatment is not reasonable or necessary. This ALJ does not find Dr. Larson's opinion to be persuasive.

There is merely a difference of opinion between Dr. Striplin and Dr. Larson as to whether Claimant is at MMI. This ALJ concludes that Dr. Larson's opinion does not provide the clear and convincing evidence necessary to overcome Dr. Striplin's opinion. Therefore, Respondent has failed to overcome the opinion of Dr. Striplin. Accordingly, the ALJ concludes that Claimant is not at MMI.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondent has failed to overcome the Division IME regarding MMI. Therefore, Claimant is not at MMI.

2. Issues not expressly decided herein are reserved to the parties for future determination.

3. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: 4-5-17

/s/ *Glen B. Goldman*
Glen B. Goldman
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that she should be permitted to reopen her September 28, 2010 Workers' Compensation claim involving her left knee based on a worsening of condition pursuant to §8-43-303(1), C.R.S.

2. Whether Claimant has demonstrated by a preponderance of the evidence that she suffered a left knee injury during the course and scope of her employment with Employer on July 25, 2016.

3. Whether Claimant has proven by a preponderance of the evidence that she is entitled to receive reasonable, necessary and causally related medical benefits for her left knee injury.

4. Whether Claimant has established by a preponderance of the evidence that she is entitled to receive Temporary Total Disability (TTD) benefits for the period December 16, 2016 until terminated by statute.

5. A determination of Claimant's Average Weekly Wage (AWW).

FINDINGS OF FACT

1. Claimant has worked for Employer as a Customer Service Agent for the past 16 years. As a part of her work-related duties, Claimant is required to squat down to pick up and tag luggage and other carry-on items on a regular basis. Claimant is also required to pick up and move luggage for customers to appropriate conveyor belts. The average piece of luggage weighs approximately 50 pounds. Claimant squats down and lifts luggage hundreds of times each day.

2. Claimant testified that she normally works 36 to 48 hours per week for Employer and is paid on an hourly basis. Since her date of hire almost 16 years ago Claimant has received raises in her hourly rate of pay at least once per year. Claimant's most recent raise in her hourly pay occurred in November of 2016. Wage records reveal that she began earning $29.88 per hour.

3. On September 28, 2010 Claimant sustained an admitted industrial injury to her left knee while working for Employer. A suitcase struck Claimant's kneecap. Claimant was diagnosed with chondromalacia of the patella and patella maltracking.

4. On August 20, 2012 Claimant underwent a left knee arthroscopy and lateral release with Carrie Motz, M.D. Following post-surgical rehabilitation Claimant was released from care. On November 2, 2012 Deborah Moore, M.D. determined that

Claimant had reached Maximum Medical Improvement (MMI) with no restrictions and no permanent impairment. Claimant subsequently returned to full-duty employment.

5. On November 12, 2012 Respondents filed a Final Admission of Liability (FAL) consistent with Dr. Moore's MMI and impairment determinations. Claimant did not object to the FAL and her claim closed by operation of law.

6. On March 19, 2014 Claimant sustained an injury to her right knee when she squatted down to put a tag on a stroller. Claimant received medical treatment for her right knee through Authorized Treating Physician (ATP) Matthew Lugliani, M.D. at HealthOne. She was diagnosed with an acute chondral defect of the patella with patellofemoral pain syndrome. Claimant initially underwent an arthroscopic debridement and lateral release with James W. Genuario, M.D. on May 9, 2014 and underwent additional right knee surgery in late 2015. Claimant's Workers' Compensation claim for her right knee was initially denied. However, she established the compensability of her right knee injury in Findings of Fact, Conclusions of Law and Order dated February 2, 2015 by Administrative Law Judge Broniak. Respondents subsequently filed a FAL.

7. Claimant testified at the hearing in the present matter that, following a second surgery on her right knee, she experienced intermittent pain and swelling in her left knee. Claimant noted that her late 2015 left knee symptoms persisted into early 2016. However, her symptoms were relatively minor and did not preclude her from performing her typical activities of daily living.

8. Claimant visited Dr. Lugliani for a left knee evaluation. On March 10, 2016 Claimant underwent a left knee MRI. The MRI revealed a chondral defect.

9. In May of 2016 Claimant returned to regular, full-duty employment with Employer. Between May of 2016 and July of 2016 Claimant's left knee occasionally swelled, but the symptoms were never severe enough to prevent her from working. Claimant testified that at no point in time between May of 2016 and July of 2016 did she have to call in sick due to left knee pain and she was able to successfully complete all of her required job duties.

10. On July 25, 2016, while performing her job duties, Claimant squatted down to lift a heavy piece of luggage and move it to a conveyor belt. While standing up and pivoting toward the conveyor belt Claimant felt the sudden onset of intense pain and swelling in her left knee. Claimant testified that the pain and swelling she felt after the July 25, 2016 incident was significantly worse than the intermittent symptoms she had experienced during the prior year. She reported the injury to her supervisors and was instructed to return to HealthOne for treatment.

11. At Claimant's first return visit to HealthONE on July 26, 2016 Dr. Lugliani was not available. She thus visited Paul Raford, M.D. for an evaluation. The notes from Dr. Raford's initial visit reflect that, if Claimant's new, worsened symptoms persisted, more imaging would be necessary. Dr. Raford also remarked that Claimant

clearly had degenerative changes in her left knee in addition to any acute changes and "symptoms and functional issues related solely to degeneration [would] likely be non-occupational." Nevertheless, Dr. Raford commented on his July 26, 2016 Physician's Report of Worker's Compensation Injury that his objective findings were consistent with a work-related mechanism of injury.

12. Claimant subsequently resumed treatment with Dr. Lugliani. On August 17, 2016 Claimant underwent a left knee MRI. The MRI again revealed a chondral defect near the patella. Dr. Lugliani referred Claimant to Dr. Genuario for a surgical evaluation.

13. On August 24, 2016 Claimant visited Dr. Genuario for an examination. Dr. Genuario diagnosed Claimant with a left knee chondral defect of the patella with associated patellefemoral pain. He initially recommended conservative medical treatment. Although Claimant received injections and physical therapy she did not obtain significant relief. Nevertheless, Claimant continued to complete her job duties for Employer.

14. On November 30, 2016 Dr. Lugliani issued a causality report in response to an inquiry from Claimant's counsel. He maintained that Claimant's left knee injury was caused by her work activities for Employer. Dr. Lugliani detailed:

> [Claimant] has a history of a previous work-related injury in 2011 and is status post lateral release. This injury was exacerbated on July 26, 2016 while [Claimant] was moving luggage and twisted her knee, sustaining an exacerbation of degenerative changes involving her left knee, more specifically attenuation of the cartilage, involving the inferior third of the lateral patellar facet. It is my professional opinion, with greater than 50% medical probability, that [Claimant's] current complaints and presentation are consistent with a work-related injury, and, as such, should be surgically treated.

15. On December 16, 2016 Claimant underwent left knee surgery with Dr. Genuario. Claimant testified that she has been unable to work since the December 16, 2016 surgery because of her left knee limitations and the work restrictions assigned by Drs. Lugliani and Genuario. She noted that her left knee condition has significantly improved and continues to progress over time.

16. On February 2, 2017 the parties conducted the pre-hearing evidentiary deposition of Dr. Genuario. Dr. Genuario confirmed that Claimant suffered from a chondral defect of the left patella. He explained that a chondral defect is damage to the cartilage cap at the end of a bone. Essentially, a piece of cartilage had been "sheared off." Chondral defects can be either chronic or acute in nature. Chronic chondral defects caused by degeneration are often simply referred to as "arthritis." However, Dr. Genuario determined that Claimant's chondral defect was focal rather than degenerative or chronic based on the MRI findings and a visual examination of the area surrounding the chondral defect during surgery.

17. While Dr. Genuario testified that the chondral defect in Claimant's left knee was focal rather than chronic or degenerative in nature, he also emphasized that the chondral defect had existed prior to Claimant's July 25, 2016 incident at work. Dr. Genuario noted that the chondral defect had been present as far back as the March 10, 2016 MRI. Nevertheless, he explained that chondral defects are often asymptomatic but can suddenly become symptomatic because of an aggravation or exacerbation. Dr. Genuario thus determined to a reasonable degree of medical certainty that Claimant had a pre-existing chondral defect of the patella that was once asymptomatic. Claimant then aggravated the pre-existing chondral defect in late 2015 to early 2016 by putting extra weight on her left leg following her right knee surgery. However, the aggravation was relatively minor and temporary.

18. Dr. Genuario explained that on July 25, 2016 Claimant once again aggravated her pre-existing condition by pivoting out of a squat while lifting a heavy piece of luggage at work. The incident caused "significant swelling and disability." Dr. Genuario suggested that the swelling in late 2015 and early 2016 and the more significant pain and swelling Claimant experienced in July of 2016 were likely caused by the same chondral defect with different exacerbating or aggravating factors. He summarized that the July 25, 2016 incident aggravated the underlying chondral defect that had been detected on the left knee MRI.

19. Dr. Genuario acknowledged that, if the chondral defect he surgically repaired in 2016 was not present during the 2010 arthroscopy, the July 25, 2016 incident constituted a new injury. After reviewing the left knee surgical record from 2012 Dr. Genuario testified that the arthritic findings during that surgery were in a different location than reflected on the March 2016 MRI and observed during surgery. He also explained that the 2012 MRI did not reflect the chondral defect that he addressed during surgery. Dr. Genuario later clarified that the cartilage defect revealed in 2012 as a result of Claimant's 2010 work injury was different than Claimant's 2016 condition.

20. On November 11, 2016 Claimant underwent an independent medical examination with Timothy O' Brien, M.D. Dr. O'Brien also testified at the hearing in this matter. He determined that "standing and pivoting is not an injury mechanism" and attributed Claimant's symptoms to degenerative arthritis.

21. Dr. O'Brien detailed that Claimant's March 2016 MRI revealed extensive arthritis on both sides of the facet joint of the patella. He confirmed that there was no difference in the MRI scans from March 2016 and August 2016 other than significant improvement in the swelling of the joint. There was no evidence of any acute or structural injury consistent with the July 25, 2016 work incident.

22. Dr. O'Brien explained that Claimant's left knee MRI in March of 2016 reflected a new chondral defect. The chondral defect thus appeared after Claimant's September 28, 2010 industrial injury but before the July 25, 2016 work incident. Dr. O'Brien testified that there was "no relationship" between the current chondral defect described by Dr. Genuario in his surgical report and the 2010 injury. He explained that, if the chondral defect had existed in 2012, it would have been seen and recorded by the

surgeon and been evident in the 2012 MRI. Dr. O'Brien concluded that the new finding of the chondral defect was not causally connected with the 2010 injury.

23. Dr. O'Brien also explained that Claimant's 2012 knee surgery did not cause degeneration and result in her current condition. He detailed that the 2012 surgery did not

> debride any viable tissue that the knee needs to avoid the progression of arthritis. So it didn't take out meniscal tissue. It didn't take out anything other than frayed cartilage. And it performed a lateral release that didn't overcorrect. It just didn't work. So there was no untoward effect from the surgery that could have contributed to the acceleration of an – preexisting arthritic condition.

24. Based on his review of the medical records, Dr. O'Brien testified that the July 25, 2016 incident did not injure Claimant's left knee. He specifically remarked that, if there had been an injury, it would have been seen both on the MRI and during physical examination. However, Dr. O'Brien commented that the post-incident MRI did not reflect any new tissue breakage or yielding as compared to the pre-incident MRI. He further explained that the exam findings from July 25, 2016 did not document objective findings suggesting a substantial acute event.

25. Dr. O'Brien testified that Claimant's need for the December 16, 2016 surgery performed by Dr. Genuario was not causally related to the July 25, 2016 work injury. Rather, he reasoned that the procedure performed addressed structural findings and symptoms that were present prior to July 25, 2016. Dr. O'Brien specifically remarked that the chondral defect that was the focus of the December 12, 2016 surgery was both present and symptomatic as early as March of 2016 and continued to cause symptoms until the July 25, 2016 incident.

26. Claimant has failed to establish that it is more probably true than not that she should be permitted to reopen her September 28, 2010 Workers' Compensation claim involving her left knee based on a worsening of condition. On November 2, 2012 Claimant reached MMI with no restrictions and no permanent impairment. Claimant testified that, following a second surgery on her right knee, she experienced intermittent pain and swelling in her left knee. She noted that her late 2015 left knee symptoms persisted into early 2016. However, her symptoms were relatively minor and did not preclude her from performing her typical activities of daily living.

27. The medical records reveal that Claimant did not suffer a worsening of her September 28, 2010 left knee condition warranting reopening. Initially, Dr. Genuario acknowledged that, if the chondral defect he surgically repaired in 2016 was not present during the 2010 arthroscopy, the July 25, 2016 incident constituted a new injury. After reviewing the left knee surgical record from 2012 Dr. Genuario testified that the arthritic findings during that surgery were in a different location than reflected on the March 2016 MRI and observed during surgery. Dr. Genuario also explained that the 2012 MRI did not reveal the chondral defect that he surgically repaired. He later clarified that the

cartilage defect revealed in 2012 as a result of Claimant's 2010 work injury was different than Claimant's 2016 condition.

28. Dr. O'Brien also explained that Claimant's left knee MRI in March of 2016 revealed a new chondral defect. The chondral defect thus appeared after Claimant's September 28, 2010 industrial injury but before the July 25, 2016 work incident. Dr. O'Brien testified that there was "no relationship" between the current chondral defect described by Dr. Genuario in his surgical report and the 2010 injury. He explained that, if the chondral defect had existed in 2012, it would have been seen and recorded by the surgeon and evident in the 2012 MRI. Dr. O'Brien concluded that the new finding of the chondral defect had no relationship with the 2010 injury.

29. Claimant's medical history and the persuasive medical opinions of Drs. Genuario and O'Brien reflect that she has not suffered a change in condition that entitles her to additional medical benefits. Although Claimant experienced left knee symptoms in 2015 there is no causal or temporal connection between her symptoms and the admitted September 28, 2010 industrial injury. Accordingly, Claimant's request to reopen her September 28, 2010 Workers' Compensation claim based on a worsening of condition is denied and dismissed.

30. Claimant has demonstrated that it is more probably true than not that she suffered a left knee injury during the course and scope of her employment with Employer on July 25, 2016. Claimant explained that while working for Employer on July 25, 2016 she squatted down to lift a heavy piece of luggage and move it to a conveyor belt. While standing up and pivoting toward the conveyor belt, Claimant felt the sudden onset of intense pain and swelling in her left knee. Claimant commented that the pain and swelling she experienced after the July 25, 2016 incident was significantly worse than the intermittent symptoms she had suffered in the prior year.

31. Dr. Lugliani persuasively explained that the July 25, 2016 incident constituted the exacerbation or aggravation of Claimant's pre-existing, degenerative left knee condition. He summarized that Claimant's complaints and presentation were consistent with a work-related mechanism of injury. Dr. Genuario detailed that on July 25, 2016 Claimant aggravated her pre-existing condition by pivoting out of a squat while lifting a heavy piece of luggage at work. The activity caused "significant swelling and disability." Dr. Genuario suggested that the swelling in late 2015 and early 2016 and the more significant pain and swelling Claimant experienced in July of 2016 were likely caused by the same chondral defect with different exacerbating or aggravating factors. He summarized that the July 25, 2016 incident aggravated the underlying chondral defect that had been detected on the left knee MRI. Finally, even though Dr. Raford expressed concerns regarding the causation of Claimant's July 25, 2016 symptoms, he ultimately concluded that Claimant's condition was caused by the work event.

32. In contrast, Dr. O'Brien testified that the July 25, 2016 incident did not cause an injury to Claimant. He specifically remarked that, if there had been an injury, evidence should have been revealed both on the MRI and during physical examination. However, Dr. O'Brien commented that the post-incident MRI did not show any new

tissue breakage or yielding as compared to the pre-incident MRI. He further explained that the exam findings from July 25, 2016 did not document objective findings that would suggest a substantial acute event. However, Dr. O'Brien did not adequately address the aggravation of Claimant's pre-existing left knee condition. The persuasive medical records and opinions of Drs. Lugliani and Genuario reflect that the July 25, 2016 incident caused Claimant's pre-existing chondral defect to become symptomatic and warrant medical treatment. Accordingly, Claimant has demonstrated that her employment activities on July 25, 2016 aggravated, accelerated, or combined with her pre-existing left knee condition to produce a need for medical treatment.

33. Claimant has proven that it is more probably true than not that she is entitled to receive reasonable, necessary and causally related medical benefits for her left knee injury. The medical treatment Clamant received through HealthOne was designed to treat her July 25, 2016 left knee injury. Dr. Lugliani's referral to Dr. Genuario was performed in the normal progression of treatment to obtain a surgical consultation. Dr. Genuario determined that the July 25, 2016 industrial incident aggravated Claimant's pre-existing chondral defect. He initially recommended conservative medical treatment but injections and physical therapy did not provide significant relief. Dr. Genuario thus determined that Claimant warranted surgical intervention.

34. In contrast, Dr. O'Brien testified that Claimant's need for the surgery performed by Dr. Genuario was not causally related to the July 25, 2016 work injury. Rather, he reasoned that the procedure addressed structural findings that were present and symptomatic prior to July 25, 2016. Dr. O'Brien specifically remarked that the chondral defect, which was the focus of the December 12, 2016 surgery, was both present and symptomatic as early as March of 2016 and continued to cause symptoms until the July 25, 2016 work incident. However, the persuasive medical opinion of Dr. Genuario reflects that his December 12, 2016 surgery was designed to address an aggravation of Claimant's underlying chondral defect as a result of the July 25, 2016 incident. Accordingly, Claimant's medical treatment, including her December 12, 2016 left knee surgery, was reasonable, necessary and causally related to her July 25, 2016 industrial incident.

35. Claimant has established that it is more probably true than not that she is entitled to receive TTD benefits for the period December 16, 2016 until terminated by statute. On December 16, 2016 Dr. Genuario performed surgery on Claimant's left knee. Claimant credibly testified that she has been unable to work since December 16, 2016 because of her left knee limitations and the work restrictions assigned by Drs. Lugliani and Genuario. Claimant's July 25, 2016 industrial injury and subsequent surgery caused a disability lasting more than three work shifts, she left work as a result of the disability and the disability resulted in an actual wage loss. Claimant is thus entitled to receive TTD benefits for the period December 16, 2016 until terminated by statute.

36. Claimant suffered a compensable left knee injury on July 25, 2016. Relying on Claimant's 12 weeks of pay prior to her injury date, Respondents contend

that she earned an AWW of $1,106.96. However, Claimant credibly testified that she normally works 36 to 48 hours per week for Employer and is paid on an hourly basis. Since her date of hire almost 16 years ago Claimant has received raises in her hourly rate of pay at least once per year. Claimant's most recent raise occurred in November of 2016. Wage records reveal that she began earning $29.88 per hour. Because Claimant was not precluded from performing her job duties until after her December 16, 2016 surgery, her raise became effective before her disability period began. A calculation of Claimant's AWW based on periods prior to her November 2016 pay raise would not constitute an accurate approximation of her wage loss. Accordingly, relying on Claimant's pay raise in November 2016, an AWW of $1,122.41 constitutes a fair approximation of Claimant's wage loss and diminished earning capacity.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Worsening of Condition

4. Section 8-43-303(1), C.R.S. provides that a Worker's Compensation award may be reopened based on a change in condition. In seeking to reopen a claim the claimant shoulders the burden of proving his condition has changed and he is entitled to benefits by a preponderance of the evidence. *Osborne v. Industrial Commission*, 725 P.2d 63, 65 (Colo. App. 1986). A change in condition refers either to

a change in the condition of the original compensable injury or to a change in a claimant's physical or mental condition that is causally connected to the original injury. *Jarosinski v. Industrial Claim Appeals Office,* 62 P.3d 1082, 1084 (Colo. App. 2002). A "change in condition" pertains to changes that occur after a claim is closed. *In re Caraveo,* W.C. No. 4-358-465 (ICAP, Oct. 25, 2006). The determination of whether a claimant has sustained his burden of proof to reopen a claim is one of fact for the ALJ. *In re Nguyen,* W.C. No. 4-543-945 (ICAP, July 19, 2004).

5. As found, Claimant has failed to establish by a preponderance of the evidence that she should be permitted to reopen her September 28, 2010 Workers' Compensation claim involving her left knee based on a worsening of condition. On November 2, 2012 Claimant reached MMI with no restrictions and no permanent impairment. Claimant testified that, following a second surgery on her right knee, she experienced intermittent pain and swelling in her left knee. She noted that her late 2015 left knee symptoms persisted into early 2016. However, her symptoms were relatively minor and did not preclude her from performing her typical activities of daily living.

6. As found, the medical records reveal that Claimant did not suffer a worsening of her September 28, 2010 left knee condition warranting reopening. Initially, Dr. Genuario acknowledged that, if the chondral defect he surgically repaired in 2016 was not present during the 2010 arthroscopy, the July 25, 2016 incident constituted a new injury. After reviewing the left knee surgical record from 2012 Dr. Genuario testified that the arthritic findings during that surgery were in a different location than reflected on the March 2016 MRI and observed during surgery. Dr. Genuario also explained that the 2012 MRI did not reveal the chondral defect that he surgically repaired. He later clarified that the cartilage defect revealed in 2012 as a result of Claimant's 2010 work injury was different than Claimant's 2016 condition.

7. As found, Dr. O'Brien also explained that Claimant's left knee MRI in March of 2016 revealed a new chondral defect. The chondral defect thus appeared after Claimant's September 28, 2010 industrial injury but before the July 25, 2016 work incident. Dr. O'Brien testified that there was "no relationship" between the current chondral defect described by Dr. Genuario in his surgical report and the 2010 injury. He explained that, if the chondral defect had existed in 2012, it would have been seen and recorded by the surgeon and evident in the 2012 MRI. Dr. O'Brien concluded that the new finding of the chondral defect had no relationship with the 2010 injury.

8. As found, Claimant's medical history and the persuasive medical opinions of Drs. Genuario and O'Brien reflect that she has not suffered a change in condition that entitles her to additional medical benefits. Although Claimant experienced left knee symptoms in 2015 there is no causal or temporal connection between her symptoms and the admitted September 28, 2010 industrial injury. Accordingly, Claimant's request to reopen her September 28, 2010 Workers' Compensation claim based on a worsening of condition is denied and dismissed.

Compensability

9. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAP, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

10. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

11. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

12. As found, Claimant has demonstrated by a preponderance of the evidence that she suffered a left knee injury during the course and scope of her employment with Employer on July 25, 2016. Claimant explained that while working for Employer on July 25, 2016 she squatted down to lift a heavy piece of luggage and move it to a conveyor belt. While standing up and pivoting toward the conveyor belt, Claimant felt the sudden onset of intense pain and swelling in her left knee. Claimant commented that the pain and swelling she experienced after the July 25, 2016 incident was significantly worse than the intermittent symptoms she had suffered in the prior year.

13. As found, Dr. Lugliani persuasively explained that the July 25, 2016 incident constituted the exacerbation or aggravation of Claimant's pre-existing, degenerative left knee condition. He summarized that Claimant's complaints and presentation were consistent with a work-related mechanism of injury. Dr. Genuario detailed that on July 25, 2016 Claimant aggravated her pre-existing condition by pivoting out of a squat while lifting a heavy piece of luggage at work. The activity

caused "significant swelling and disability." Dr. Genuario suggested that the swelling in late 2015 and early 2016 and the more significant pain and swelling Claimant experienced in July of 2016 were likely caused by the same chondral defect with different exacerbating or aggravating factors. He summarized that the July 25, 2016 incident aggravated the underlying chondral defect that had been detected on the left knee MRI. Finally, even though Dr. Raford expressed concerns regarding the causation of Claimant's July 25, 2016 symptoms, he ultimately concluded that Claimant's condition was caused by the work event.

14. As found, in contrast, Dr. O'Brien testified that the July 25, 2016 incident did not cause an injury to Claimant. He specifically remarked that, if there had been an injury, evidence should have been revealed both on the MRI and during physical examination. However, Dr. O'Brien commented that the post-incident MRI did not show any new tissue breakage or yielding as compared to the pre-incident MRI. He further explained that the exam findings from July 25, 2016 did not document objective findings that would suggest a substantial acute event. However, Dr. O'Brien did not adequately address the aggravation of Claimant's pre-existing left knee condition. The persuasive medical records and opinions of Drs. Lugliani and Genuario reflect that the July 25, 2016 incident caused Claimant's pre-existing chondral defect to become symptomatic and warrant medical treatment. Accordingly, Claimant has demonstrated that her employment activities on July 25, 2016 aggravated, accelerated, or combined with her pre-existing left knee condition to produce a need for medical treatment.

Medical Benefits

15. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAP, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAP, Nov. 13, 2000).

16. Authorization to provide medical treatment refers to a medical provider's legal authority to treat the claimant with the expectation that the insurer will compensate the provider. *Bunch v. Industrial Claim Appeals Office,* 148 P.3d 381, 383 (Colo. App. 2006); *One Hour Cleaners v. Industrial Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). Authorized providers include those to whom the employer directly refers the claimant and those to whom an ATP refers the claimant in the normal progression of authorized treatment. *Town of Ignacio v. Industrial Claim Appeals Office,* 70 P.3d 513 (Colo. App. 2002); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). Whether an ATP has made a referral in the normal progression of authorized treatment is a question of fact for the ALJ. *Suetrack USA v. Industrial Claim Appeals Office,* 902 P.2d 854 (Colo. App. 1995).

17. As found, Claimant has proven by a preponderance of the evidence that she is entitled to receive reasonable, necessary and causally related medical benefits for her left knee injury. The medical treatment Clamant received through HealthOne was designed to treat her July 25, 2016 left knee injury. Dr. Lugliani's referral to Dr. Genuario was performed in the normal progression of treatment to obtain a surgical consultation. Dr. Genuario determined that the July 25, 2016 industrial incident aggravated Claimant's pre-existing chondral defect. He initially recommended conservative medical treatment but injections and physical therapy did not provide significant relief. Dr. Genuario thus determined that Claimant warranted surgical intervention.

18. As found, in contrast, Dr. O'Brien testified that Claimant's need for the surgery performed by Dr. Genuario was not causally related to the July 25, 2016 work injury. Rather, he reasoned that the procedure addressed structural findings that were present and symptomatic prior to July 25, 2016. Dr. O'Brien specifically remarked that the chondral defect, which was the focus of the December 12, 2016 surgery, was both present and symptomatic as early as March of 2016 and continued to cause symptoms until the July 25, 2016 work incident. However, the persuasive medical opinion of Dr. Genuario reflects that his December 12, 2016 surgery was designed to address an aggravation of Claimant's underlying chondral defect as a result of the July 25, 2016 incident. Accordingly, Claimant's medical treatment, including her December 12, 2016 left knee surgery, was reasonable, necessary and causally related to her July 25, 2016 industrial incident.

Temporary Total Disability Benefits

19. Section 8-42-103(1), C.R.S. requires a claimant seeking temporary disability benefits to establish a causal connection between the industrial injury and subsequent wage loss. *Champion Auto Body v. Industrial Claim Appeals Office*, 950 P.2d 671 (Colo. App. 1997). To demonstrate entitlement to TTD benefits a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability and the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The term "disability," connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by the claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). A claimant suffers from an impairment of earning capacity when he has a complete inability to work or there are restrictions that impair his ability to effectively and properly perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written

release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

20. As found, Claimant has established by a preponderance of the evidence that she is entitled to receive TTD benefits for the period December 16, 2016 until terminated by statute. On December 16, 2016 Dr. Genuario performed surgery on Claimant's left knee. Claimant credibly testified that she has been unable to work since December 16, 2016 because of her left knee limitations and the work restrictions assigned by Drs. Lugliani and Genuario. Claimant's July 25, 2016 industrial injury and subsequent surgery caused a disability lasting more than three work shifts, she left work as a result of the disability and the disability resulted in an actual wage loss. Claimant is thus entitled to receive TTD benefits for the period December 16, 2016 until terminated by statute.

Average Weekly Wage

21. Section 8-42-102(2), C.R.S. requires the Judge to determine a claimant's AWW based on his earnings at the time of injury. The Judge must calculate the money rate at which services are paid to the claimant under the contract of hire in force at the time of injury. *Pizza Hut v. ICAO,* 18 P.3d 867, 869 (Colo. App. 2001). However, §8-42-102(3), C.R.S. authorizes a Judge to exercise discretionary authority to calculate an AWW in another manner if the prescribed methods will not fairly calculate the AWW based on the particular circumstances. *Campbell v. IBM Corp.,* 867 P.2d 77, 82 (Colo. App. 1993). The overall objective in calculating an AWW is to arrive at a fair approximation of a claimant's wage loss and diminished earning capacity. *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO May 7, 1997). Therefore, §8-42-102(3), C.R.S. grants an ALJ substantial discretion to modify the AWW if the statutorily prescribed method will not fairly compute a claimant's wages based on the particular circumstances of the case. *In Re Broomfield,* W.C. No. 4-651-471 (ICAP, Mar. 5, 2007).

22. As found, Claimant suffered a compensable left knee injury on July 25, 2016. Relying on Claimant's 12 weeks of pay prior to her injury date, Respondents contend that she earned an AWW of $1,106.96. However, Claimant credibly testified that she normally works 36 to 48 hours per week for Employer and is paid on an hourly basis. Since her date of hire almost 16 years ago Claimant has received raises in her hourly rate of pay at least once per year. Claimant's most recent raise occurred in November of 2016. Wage records reveal that she began earning $29.88 per hour. Because Claimant was not precluded from performing her job duties until after her December 16, 2016 surgery, her raise became effective before her disability period began. A calculation of Claimant's AWW based on periods prior to her November 2016 pay raise would not constitute an accurate approximation of her wage loss. Accordingly, relying on Claimant's pay raise in November 2016, an AWW of $1,122.41 constitutes a fair approximation of Claimant's wage loss and diminished earning capacity.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request to reopen her September 28, 2010 Workers' Compensation claim is denied and dismissed.

2. Claimant suffered a compensable Workers' Compensation injury to her left knee on July 25, 2016.

3. Respondents are financially responsible for all of Claimant's reasonable, necessary and related medical benefits, including her December 16, 2016 left knee surgery, designed to cure and relieve the effects of her July 25, 2016 left knee injury.

4. Claimant shall receive TTD benefits for the period December 16, 2016 until terminated by statute.

5. Claimant earned an AWW of $1,122.41.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-023-311-01

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer/Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on March 1, 2017 and April 3, 2017, in Denver, Colorado. The hearing was digitally recorded (reference: 3/1/17, Courtroom 1, beginning at 1:30 PM, and ending at 4:30 PM; and, 4/3/17, Courtroom 1, beginning at 1:30 PM, and ending at 2:30 PM).

Claimant's Exhibits 1 through 10 were admitted into evidence, without objection. Respondents' Exhibits A through T were admitted into evidence, without objection. The evidentiary deposition of Jeremy Howard, taken on January 20, 2017, was admitted into evidence in lieu of his live testimony at hearing (hereinafter referred to as Howard Depo., followed by a page number and line numbers).

At the conclusion of the last session of the hearing on April 3, 2017, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Respondents, which was filed, electronically, on April 7, 2017. On April 10, 2017, counsel for the Claimant stated that he had no objections as to form of the proposal. After a consideration of the proposed decision, the ALJ has modified it and hereby issues the following decision.

ISSUES

The primary issue to be determined by this decision concerns whether the Claimant sustained a compensable injury to his low back on March 27, 2016. If so, additional issues designated concern whether he is entitled to temporary total disability (TT) benefits; average weekly wage (AWW); reasonably necessary medical benefits; the right to choose his authorized treating provider (ATP); and, whether the Claimant was responsible for his termination, through a volitional act, and thus not entitled to temporary disability benefits. Because the ALJ hereby determines that the Claimant did **not** sustain a compensable injury as claimed, the other issues are moot. "Responsibility for termination" is considered only insofar as it sheds light on whether the Claimant sustained a compensable back injury on March 27, 2016, as he claims.

Claimant bears the burden of proof, by a preponderance of the evidence on all issues with the exception of "responsibility for termination," for which Respondents bear the burden of proof by preponderant evidence, however, this issue is moot in light of the fact that the Claimant did **not** sustain a compensable injury.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Procedural Findings

1. On July 20, 2016, the Claimant filed a worker's claim for compensation, alleging he suffered a low back injury on his delivery run to Casper on March 27, 2016 (Respondents' Exhibit A).

2. The Claimant then filed an Application for Hearing on September 16, 2016, endorsing issues of compensability, medical benefits, temporary indemnity benefits, AWW, medical benefits, and authorized treating physician (ATP) [Respondents' Exhibit B).

3. The Respondents filed a Notice of Contest on October 7, 2016 (Respondents' Exhibit C).

4. On October 20, 2016, Respondents filed a Response to Claimant's Application for Hearing, endorsing the same issues as well as applicable defenses, including termination for cause and voluntary resignation (Respondents' Exhibit E).

Preliminary Findings

5. At the commencement of the hearing, the parties stipulated that Claimant's average weekly wage (AWW) is $1,275.19 if the claim is found compensable. Because the claim is not compensable, as found herein below, the stipulation is now moot.

6. The Claimant was hired by the Employer on or about February 24, 2016, as an over-the-road truck driver [Hearing Transcript (hereinafter "Tr.") p. 11:lines13-19—Respondents'. Exhibit G]. The Claimant's job primarily included delivering mattresses to stores across the Western region of the United States (Tr., p. 11: lines 20-25, p. 12: lines17-25, p.13: lines 1-4).

The Alleged Injury of March 27, 2016

7. On or about March 27, 2016, the Claimant made a delivery to Casper, Wyoming. (Claimant's Exhibit 9; Tr., p. 14: lines19-25). Casper, Wyoming, is about a four-and-a-half-hour drive from the Employer's site in Aurora, Colorado (Tr., p. 31: lines 6-10 and 23-25).

8. According to the Claimant, before he left for Casper, he was attempting to latch the trailer or fifth wheel and pulled on it when he fell backwards onto his tail bone (Tr., p. 15: lines 1-21). The Claimant alleged that initially he did not feel any pain when he hit the ground and "didn't really think [he] was injured at that time" (Tr., p. 15: lines 22-25; p. 16: lines 1-4). He said that he returned from Casper the next day, on March 28, 2016 (Claimant's Exhibit 9).

9. The Claimant never reported to anyone with the Employer on either March 27, 2016 or March 28, 2016 that he had injured himself on the delivery run (Tr., p. 16: lines 24-25, p.17: lines 1-3). He said that he did not report his injury then because he "still wasn't hurting that much" (Tr., p. 17: lines 4-10).

10. The Claimant never showed up for work after his Casper delivery run (Respondents' Exhibit R; Howard Depo., p 48: lines 19-25, p. 49: line 1).

Medical

11. The first time the Claimant saw a doctor for his alleged work injury was on July 5, 2016, about four months after the alleged injury.(Respondents' Exhibit Q, bates stamp 258). The Claimant presented to James J. Williams, M.D., at Clinica Colorado for a follow-up appointment regarding his diabetes mellitus and right sacroilitis. The Claimant mentioned that he had been taking ibuprofen for low back pain, but he never told Dr. Williams he had suffered a work injury. The ALJ finds this omission detracts

from the credibility of the Claimant's alleged on-the-job injury. Clinica Colorado is the Claimant's primary health care provider and not an Employer-authorized workers' compensation medical provider.

12. On August 2, 2016, the Claimant returned to Dr. Williams, complaining of "right SI pain and right leg weakness" (Respondents' Exhibit Q, bates stamp 261). The Claimant, however, still did not tell Dr. Williams about a work injury.

13. Instead of meeting with Dr. Williams on August 24, 2016, the Claimant met with physician assistant Victoria Chazin, PA-C, at Clinica Colorado (Respondents' Exhibit Q, bates stamp 263). He complained of "low back pain and right leg pain and weakness [from a slip and] fall **2 months** ago while at work." (*Id*.) (Emphasis supplied). Claimant reported no numbness or tingling. (*Id*.). He told Chazin that he was terminated after he had requested to be seen by a workmen's compensation doctor (*Id*.). His stated reasons for his termination were **not** true and contradicted by all of the Employer witnesses. His reported alleged work injury to PA-C Chazin would be in June 2016 (three months after his alleged injury). These statements cause the ALJ to infer and find that the Claimant, essentially, has not been truthful about his alleged injury.

Respondent's Independent Medical Examination (IME) with Robert L. Messenbaugh, M.D.

14. At the Respondents' request, the Claimant underwent an IME with Dr. Messenbaugh (Respondents' Exhibit S).

15. The Claimant reported "severe, constant, debilitating low back pain, poor balance, entire right lower leg numbness and weakness" due to his alleged slip and fall (Respondents' Exhibit S, bates stamp 276). The Claimant said that he started feeling pain two weeks after the date of injury; the pain started at a level of 3 out of 10 but later escalated to a 7 out of 10 (Tr., p. 27: lines 8-12; p. 28: lines 5-9).

16. Dr. Messenbaugh found the Claimant's story of injury "to be rather unbelievable" and the Claimant's subjective symptoms "to be in all probability exaggerated and … magnified" (Respondents' Exhibit S, bates stamp 277).

17. The Claimant reported a pain level of 8 out of 10 about 90% of the time, a 10 out of 10 present 50% of the time, and 7 out of 10 present 50% of the time (Respondents' Exhibit S, bates stamp. 274). The Claimant understood a 10 out of 10 was the most severe pain imaginable (*Id*.). The Claimant stated he was unable to walk, stand, sit for long periods of time, or keep his body balanced because of the pain (*Id.).*

18. Dr. Messenbaugh, however, observed that the Claimant sat comfortably in the exam chair, moved about the exam room rather freely, and did not lose his

balance while walking (Respondents' Exhibit S, bates stamp. 275-76). The ALJ infers and finds that the Claimant's reported pain levels, under the circumstances, significantly detract from the overall credibility of his claim.

19. Nonetheless, the Claimant told Dr. Messenbaugh he was incapable of walking upon his tip-toes and heels because it would cause him too much pain (Respondents' Exhibit S, bates stamp. 275-76; Tr., p. 96: lines 1-4). Upon physical examination, Dr. Messenbaugh noted that the Claimant exhibited "excellent quad and hamstring strength bilaterally" (Respondents' Exhibit S, bates stamp 276). The ALJ infers and finds that the Claimant's symptoms reported to Dr. Messenbaugh are inconsistent with Dr. Messenbaugh's actual physical examination of the Claimant.

20. At hearing, Dr. Messenbaugh explained that the Claimant's reports appeared inconsistent, that is "[neurologically] ... his symptoms didn't correlate with his physical findings" (Tr., p. 97: lines 3-4).

21. The Claimant also complained of right knee pain in his medical records. (Respondents' Exhibit S, bates stamp. 276). At hearing, the Claimant testified that the alleged fall caused numbness in his right knee and right leg that starts from the small of his back (Tr., p. 26: lines 17-25; p. 27: lines 1-3). Dr. Messenbaugh, however, found no evidence of pathology or atrophy of the Claimant's right knee (Respondents' Exhibit S, bates stamp. 277; Tr., p. 108: lines 15-17).

22. The Claimant described "numbness radiating from his right lower back into his right buttock down his entire right leg, both anteriorly and posteriorly, both above his knee and below his knee" (Respondents' Exhibit S, bates stamp 276). In his report, Dr. Messenbaugh explained: "In my experience, such a description of complete lower extremity numbness is inconsistent with human anatomy, except in cases of severe spinal cord nerve injury, an injury not suspected in [Claimant's] situation as a result of his reported fall" (*Id*.).

23. At hearing, Dr. Messenbaugh testified consistently with his report: "[T]o have pain in your entire lower extremity means that you have to involve a multitude of spinal nerves from the lumbar spine. You have to involved [sic] those that involve the musculature and sensation to the anterior part of the leg, to the posterior part of the leg, to the anatomic sites that would relate to above the knee as well as below the knee." Tr., p. 95: lines 15-24). Dr. Messenbaugh found no objective evidence to support the Claimant's assertion that he had numbness in his right leg (Tr., p. 100: lines 3-6).

24. Dr. Messenbaugh also took issue with the fact that the Claimant did not report his symptoms in a prompt and usual fashion, especially in a workers' compensation environment (Respondents' Exhibit S, bates stamp 276; Tr. , pp.12-15).

25. Dr. Messenbaugh found it "most unusual in [his] experience" that Claimant fell and did not experience pain for "a fairly lengthy period of time" (Tr., p. 94: lines 12-15). The Claimant said it took two weeks for any numbness to set in (Tr., p. 111: lines 17-21). Dr. Messenbaugh testified, however, that "two weeks would be delayed" and "on the far side of the curve" (Tr., p. 112: lines 8-16).

26. Dr. Messenbaugh was of the opinion that the Claimant's subjective symptoms were "disproportionate to his accident as he described" (Respondents'. Exhibit S, bates stamp 276). Dr. Messenbaugh elaborated in his report: "It is possible that [Claimant] does have the diagnosis of lumbar strain, but his subjective symptoms seem to be magnified beyond what I would expect from an accident as he describes, particularly when he reported that initially he experienced very little discomfort, reports getting up after his fall, reports continuing his driving activities to Casper, reports assisting in the unloading of his truck, sleeping in his truck that night, and then driving his truck back to Denver that next morning" (Respondents' Exhibit S, bates stamp 276). Based on the Claimant's overall statements, actions, and inactions, the ALJ infers and finds that it is unlikely that the Claimant sustained a "lumbar strain" at work.

27. Based on his "experience over 50 years of dealing with orthopedic back and lower extremity injuries," Dr. Messenbaugh ultimately concluded that it was medically improbable that the Claimant suffered a work injury that caused his self-reported symptoms (Tr., p. 96: lines 11-20). The ALJ finds the ultimate opinion of Dr. Messenbaugh that the Claimant did not sustain a work-related injury highly persuasive and credible, against a backdrop of the numerous improbabilities that are replete throughout the Claimant's testimony, plus the Claimant's actions and inactions, which make it improbable that he sustained a work-related injury as he claims.

Claimant Never Returned to Work After His Alleged Injury

28. Jeremy Howard, the Employer's human resource business partner, testified that he did not know the Claimant was claiming an alleged work injury until he received notice from the State of Colorado after July 20, 2016 (Howard Depo., p. 53: lines 16-19).

29. Howard testified that after the Claimant did not show up for work after the Casper delivery run, he tried calling the Claimant on March 28, 2016, March 29, 2016, and March 30, 2016 (Howard Depo., p. 44: lines 12-18; p. 46: lines 10-11). Howard also tried to reach the Claimant on March 29, 2016 and March 30, 2016 via email:

> [Claimant], I have been unable to contact you via phone. When you get a chance please give me a call on Wednesday at any of the numbers below…

> [Claimant], I was unable to contact you today via phone and want to check in with you. Please call me on my cell phone at your earliest convenience. (Respondents' Exhibit I, bates stamp 118).

30. Howard knew other co-workers had also tried to get in touch with the Claimant but to no avail (Howard Depo., p. 48: lines 5-18).

31. The Claimant never responded to Howard's calls or emails (Howard Depo., p. 46: lines 20-21).

32. According to Howard, he tried calling the Claimant's personal number, which was the number listed in the Claimant's Employee File (Howard Depo, p. 44: lines 19-25). Also, Howard emailed the email address Claimant used to apply for the job (Howard Depo., p. 61: lines11-18). Howard testified that he never received an "undelivered message" stating his emails were not delivered to the Claimant. (Howard Depo., pp. 14-19).

33. At hearing, the Claimant testified that he never received Howard's calls or emails (Tr. 53:15-24). The Claimant admitted, however, that his cell phone number was the same number dispatchers would call to contact him for deliveries (Tr., p. 61: lines 3-12). The fact that the Claimant, an employee of the Employer with an Employee File with contact information for the Claimant, denies ever receiving contact by Howard defies probability, reason and common sense in light of the fact that the Employer's dispatchers could contact the Claimant to assign jobs to the Claimant. The ALJ does **not** find that Claimant credible in stating that he never got had any messages from Howard. On the other hand, the ALJ finds Howard's testimony highly persuasive, credible, and consistent with the actions of an Employer attempting "to bend over backwards) to salvage the Claimant's job.

Job Abandonement and the Claimant's Testimony

34. On April 4, 2016, the Claimant was terminated for job abandonment (Respondents' Exhibit J, bates stamp 32).

35. The Employer has a policy stating, "Absences of three (3) consecutive workdays without notifying the Company within the first hour (no call/no show) of scheduled start time shall be interpreted by the Company as a voluntary quit" (Respondents' Exhibit M, bates stamp. 54).

36. The Claimant understood this policy because he received a copy of the Employee Handbook and signed the acknowledgement form (Respondents' Exhibit M; Tr., p. 51: lines 2-9). The Employer gave the Claimant an ample opportunity to salvage his job, and the ALJ infers and finds that the Claimant did not respond.

37. At hearing, the Claimant testified that on or about March 29, 2016, he called and left a message for Cecilia Deal, who is responsible for hiring truck drivers. (Tr., p. 121: lines 20-22). The Claimant explained, "there was something kind of bothering me" and "I wasn't going to be working for a while" (Tr. , p. 17: lines13-25; p. 18: lines 1-9; p. 39: lines 5-24). The Claimant testified that he did not indicate in his message that he was injured at work (Tr., p. 18: lines 2-9). According to the Claimant, he did not actually speak with Deal at this time. He just left a voicemail message. This statement of the Claimant, alone, substantially detracts from credibility of the Claimant's claim that he injured his back in Casper, Wyoming, on March 27, 2016. Cecilia Deal, as found herein below, contradicts the Claimant's testimony in this regard, and the ALJ finds Deal significantly more credible than the Claimant.

38. The Claimant's representations to Dr. Messenbaugh that he experienced pain and numbness two weeks after the slip and fall injury and that his pain remained at a level of 7 or 8 out of 10 since its onset, are not credible. The Claimant's representations were discredited by his own medical records. The Claimant did not seek treatment until July 5, 2016, almost four months after his work injury. The ALJ finds it highly unlikely that the Claimant felt a pain level of 7 or 8 out of 10 and did not seek treatment for many months. Essentially, Dr. Messenbaugh corroborates the fact that this would be highly unlikely. Also, medical records reveal that the Claimant did not tell a doctor about his work-related injury until August 24, 2016, which is five months after his alleged injury, and only one month after he filed a Worker's Claim for Compensation. Additionally, on August 24, 2016, the Claimant told his physician that he had a slip and fall at work *two* months prior. Claimant was not working for the Employer in June 2016. The ALJ finds it very doubtful Claimant could not remember if his injury happened in March or June, three months apart. Indeed, this further detracts from the overall credibility of the Claimant's claim.

39. The Claimant's testimony is also contradicted by the highly credible and persuasive testimony of Dr. Messenbaugh. Dr. Messenbaugh testified he that he found the Claimant's story and reported symptoms to be incredible and "exaggerated." Importantly, Dr. Messenbaugh testified it was *medically improbable* that the Claimant sustained the injuries he did based on the type of accident he described. The opinions of Dr. Messenbaugh are un-contradicted by any other credible medical opinions.

Cecilia Deal

40. At hearing, Cecilia Deal testified that, contrary to the Claimant's claims, she never received a call or voice message from the Claimant in March 2016 or April 2016. (Tr., p. 124: lines 19-25; p. 125: lines 6-11). Deal denies this and the ALJ finds her significantly more credible than the Claimant. Deal testified that the only time she had spoken to the Claimant was on May 20, 2016, about two months after the alleged injury. (Tr., p. 124: lines 19-22; p. 127: lines 23-25,; p.128: lines 1-4). On that date, the Claimant called and left a message asking for his Union Representative's number

(Respondents' Exhibit. I, bates stamp 33). Deal returned his phone call a day or two later (Tr., p. 125: lines 6-15).

41. In the phone call to Deal of May 20, 2016, the Claimant did not report that he had a work-related injury (Tr., p. 132: lines 10-13). Instead, he claimed "he was out for a kidney infection that he's still recovering from" (*Id*.). He asked for the number of his Union representative. Deal did not know the number so she directed him to contact the local plant or talk to Howard (Tr. p. 126: lines 21-25). The ALJ finds the Claimant's actions and words, in this regard, inconsistent with a claimed work-related injury, thus, rendering the overall credibility of the Claimant's claim unworthy of belief. Indeed, Deal has no interest in the outcome of this case, whereas the Claimant has an interest in the outcome. Consequently, the ALJ finds Deal highly credible and the Claimant **not** credible in this regard.

42. Howard testified that he never heard from the Claimant in either written correspondence or by phone after their meeting on March 25, 2016 (Howard Depo. p. 48: lines 19-25; p. 49: line 1), which was before the alleged injury.

43. The Claimant's consistent failure to respond to his Employer, when he was aware of the Employer's policy concerning no call/no show, in the face of his claimed back injury, makes no sense. His cavalier attitude about contacting his Employer, or responding to his Employer, makes the validity of his claimed injury incredible.

Ultimate Findings

44. Overall, for the reasons stated in Finding No. 38 herein above, the ALJ finds that the Claimant actions and testimony are not credible. For the reasons stated in Finding No. 39 herein above, the ALJ finds IME Dr. Messenbaugh's opinion that it is highly unlikely that the Claimant sustained a work-related injury on March 27, 2016, in Casper, Wyoming, as the Claimant claims, highly persuasive, credible and, un-refuted by any other credible medical evidence.

45. Claimant's representations to Dr. Messenbaugh that he experienced pain and numbness two weeks after the slip and fall injury and that his pain remained at a level of 7 or 8 out of 10 since its onset, are not credible. The Claimant's representations were discredited by his own medical records. The Claimant did not seek treatment until July 5, 2016, almost four months after his work injury. The ALJ finds it highly unlikely that the Claimant felt a pain level of 7 or 8 out of 10 and did not seek treatment for many months. Essentially, Dr. Messenbaugh corroborates the fact that this would be highly unlikely. Also, medical records reveal that the Claimant did not tell a doctor about his work-related injury until August 24, 2016, which is five months after his alleged injury, and only one month after he filed a worker's claim for compensation. Additionally, on August 24, 2016, Claimant told his physician that he had a slip and fall at work *two*

months prior. Claimant was not working for the Employer in June 2016. The ALJ finds it doubtful that the Claimant could not remember if his injury happened in March or June, three months apart. Indeed, the ALJ finds this statement of the Claimant undermines the overall credibility of his claim.

46. The Claimant's testimony is also contradicted by the highly credible and persuasive testimony of Dr. Messenbaugh. Dr. Messenbaugh testified he found Claimant's story and reported symptoms to be incredible and "exaggerated." Importantly, Dr. Messenbaugh testified it was *medically improbable* Claimant sustained the injuries he did based on the type of accident he described. Significantly, Claimant did not present any evidence refuting the opinion of Dr. Messenbaugh.

47. The ALJ finds that the Claimant has failed to prove, by a preponderance of the evidence that he sustained a work-related injury arising out of the course and scope of his employment for the Employer, as he alleges.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo.

275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, *See, Annotation, Comment: Credibility of Witness Giving Un-contradicted Testimony as Matter for Court or Jury,* 62 ALR 2d 1179, maintaining that the fact finder is not free to disregard un-contradicted testimony. As found, IME Dr. Messenbaugh's highly persuasive and credible ultimate opinion that the Claimant did not sustain a work-related injury on March 27, 2016, in Casper, Wyoming, as the Claimant claims is un-refuted by any other credible medical evidence. As further found, the Claimant's testimony and actions are replete with inconsistencies, contractions, and improbabilities that defy reason and common sense. For these reasons, the ALJ finds that the Claimant's claimed injury is **not** credible.

Compensability

b. An alleged injury must occur within the "course and scope of employment" in order to be a compensable injury. "Course and scope of employment" deals with the time, place and circumstances of an employee's injury. *See General Cable Co. v. Indus. Claim Appeals Office,* 878 P.2d 118 (Colo. App. 1994). As found, the Claimant did not sustain an injury within the course and scope of his employment for the Employer herein.

c. Also, in order for an injury to be compensable under the Workers' Compensation Act, it must "arise out of" and "occur within the course and scope" of the employment. *Price v. Indus. Claim Appeals Office,* 919 P.2d 207, 210, 210 (Colo. 1996). An injury "arises out of' employment if it would not have occurred **but for** the fact that the conditions and obligations of employment placed the employee in a position that he or she was injured." *See City of Brighton v. Rodriguez,* 318 P.3d 496, **2014 CO 7.** While there may be an initial presumption that an injury arises out of employment when an unexplained injury occurs during the course of employment, it is still the injured worker's burden to prove that the injury arose out of work-related duties. Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any benefits are awarded. § 8-41-301 (1) (c), C.R.S. *See Faulkner v. Indus. Claim Appeals Office,* 24 P.3d 844 (Colo. App. 2000)*; Eller v. Indus. Claim Appeals Office*, 224 P.3d 397, 399 (Colo. App. 2009); *Cabela v. Indus. Claim Appeals Office,* 198 P.3d 1277, 1279 (Colo. App. 2008). The question of causation is generally one of fact for determination by an ALJ. *Faulkner* at 846; *Eller* at 399-400. As found, the Claimant failed to prove that he sustained an industrial injury, arising out of the course and scope of his employment for the Employer.

Burden of Proof

d.. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant failed to prove that he sustained a compensable injury on March 27, 2016, in Casper, Wyoming, as he alleges.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Any and all claims for workers' compensation benefits are hereby denied and dismissed.

B. Resolution of the other designated issues is moot.

DATED this_____day of April 2017.

_____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

CERTIFICATE OF SERVICE

I hereby certify that I have sent true and correct copies of the foregoing **Full Findings of Fact, Conclusions of Law and Order** on this_____day of April 2017, electronically in PDF format, addressed to:

Division of Workers' Compensation
cdle_wcoac_orders@state.co.us

_____
Court Clerk

Wc.ord

ISSUES

The following issues were raised for consideration at hearing:

1. Whether Claimant proved by a preponderance that he suffered a compensable injury to his right knee in the course and scope of his employment on February 10, 2016, and

2. Whether the referral by authorized treating physician, Lori Szczukowski, M.D., to Michael Hewitt, M.D., for a determination regarding the etiology of the pain in Claimant's right knee is a reasonable, necessary and related medical benefit.

STIPULATIONS

The parties stipulated that,

1. Indemnity benefits are not due and payable, and

2. Claimant's average weekly wage was $660.80.

FINDINGS OF FACT

Having considered the evidence presented at hearing, the following Findings of Fact are entered.

1. Claimant is a 59 year old man who is employed by Employer at the Denver Public Library as a custodian.

2. Claimant has been employed by Employer for 16 years, 5 years of which were as a security guard and the remaining years as a custodian. As a custodian, Claimant credibly testified he maintains the Denver Public Library by cleaning toilets, polishing floors, and other custodial services.

3. Claimant credibly testified that he underwent right knee surgery in approximately 2001 and has had no symptoms, pain complaints or problems in his right knee since that time. Claimant also testified, however, that he has had ongoing pain complaints and symptoms in his left knee, which has also been previously operated upon. Claimant credibly testified that he was not alleging a left knee injury because he had symptoms in his left knee prior to bringing the electric wheelchair down the stairs, but did not have symptoms in his right knee prior to that event and after his 2001 surgery.

4. On February 10, 2016, there was a power outage at the Denver Public Library. A patron was upstairs in a stainless steel electric wheelchair and was unable to use the elevators to get to the ground level. The patron's husband assisted the patron to walk the approximate 20 steps on the circular staircase from the second story to the ground floor, while Claimant and James Cohen, a security guard at the facility, carried the patron's electric wheelchair from the second floor to the first floor.

5. James Cohen prepared a memorandum following the event which described what occurred as follows:

> On Feb. 10, 2016 the power went off in the Bear Valley branch and with no reasonable time frame for its resumption it was decided to close the branch. With no power the elevator would not function. There was a customer in an electric wheel chair on the second floor. I contacted her and asked if she wanted to have paramedics come to assist her getting to the first floor so she could exit. She said that her husband had come to the branch and that if he could come in he could help her down the stairs without her chair. I let her husband in the branch and he came upstairs. She was able to walk down the stairs with his assistance. We needed to get her wheel chair down the stairs and Tony Garcia [Claimant] volunteered to help me carry it down. The chair itself was very heavy. I would estimate it weighed between 200 to 250 lbs. I took one side and Tony took the other and we managed to carry it down the steps. A day or so later Tony mentioned to me that he hurt his knee while we carried the chair. He said he was going to file a report.

6. Claimant credibly testified he did not immediately report the right knee injury as he has had aches and pains over the course of working for Employer which eventually subsided, but that when his right knee condition did not improve he reported the injury. Claimant also testified he did not report a left knee injury because the symptoms he was having in his left knee were present prior to lifting the wheelchair.

7. On February 17, 2016, Claimant was evaluated at the Centers for Occupational Safety and Health at OHSC (OHSC) by authorized treating physician (ATP) Ann Dickson, M.D., who diagnosed Claimant as having a right knee strain and took a history of present illness. Dr. Dickson's history of present illness indicates that Claimant had a right knee injury when he was carrying an electric wheelchair down a flight of stairs on his job for Employer at a library.

8. Dr. Dickson assessed the following:

> ASSESSMENT: Right knee strain (583.91XA). At present his symptoms are intermittent and brief but they have been persistent for a week. This is a new injury superimposed upon a previously operated knee.

9. Claimant had not been on any temporary or permanent work restrictions for his right knee since 2001. Claimant credibly testified that he had no medical treatment or care since approximately 2001 on his right knee, prior to the events of February 10, 2016. For the 2016 injury, following the evaluation by ATP Dickson on February 16, 2016, she placed him on a temporary work restriction of "no standing, no walking, no bending and no stooping."

10. Claimant credibly testified, and the medical records support his testimony, that his right knee condition and painful symptoms waxed and waned after his February 10, 2016, injury, but that he had no such problems or symptoms before lifting the electric wheelchair.

11. On March 21, 2016, ATP Lori Szczukowski, M.D., who had taken over from ATP Dickson at OHSC submitted a request for Claimant to be evaluated by Michael Hewitt, M.D., as to "the etiology of pain in both knees." That request was denied by Respondent.

12. On April 21, 2016, ATP Szczukowski again recommended a consultation with a "qualified orthopedic surgeon to determine the etiology of patient's knee pain and to address causality."

13. Respondent refused to authorize the referral and, on July 1, 2016, Claimant filed an Application for Hearing alleging a compensable right knee injury and requesting authorization for a one time visit to Michael Hewitt, M.D.

14. Claimant was seen by Respondent's independent medical examiner, James P. Lindberg, M.D. Dr. Lindberg testified consistent with his report that:

> At this point, in the right knee, I do not have an opinion, but the right knee really was never very symptomatic after the surgery, and I would recommend an MRI be obtained and I could opine whether there is any aggravation, acceleration or exacerbation of the right knee preexisting patellar femoral disease. With his preexisting patellar femoral disease, one would expect him to have some pain going down 20 stairs. Whether or not there is any permanent injury or new injury is unknowable at this time.

15. Claimant testified and the medical records reflect that Claimant has remained on temporary work restrictions since his evaluation on February 17, 2016, by ATP Dickson and the subsequent medical providers.

CONCLUSIONS OF LAW

Having entered the foregoing Findings of Fact, the following Conclusions of Law are entered.

General Legal Principles

1. The purpose of the Workers' Compensation Act of Colorado (the Act), Sections 8-40-101, et seq., C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case must be interpreted neutrally, neither in favor of either the rights of the claimant or nor in favor of the rights of the respondents and a workers' compensation claim shall be decided on its merits. Section 8-43-201, C.R.S.

2. Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of the ALJ. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *Robinson v. Youth Track*, 4-649-298 (ICAO May 15, 2007).

3. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability/Medical benefits

4. Claimant has the burden of proving by a preponderance of the evidence that his accidental injury arose out of the course and scope of his employment. *See City of Boulder v. Streeb,* 706 P.2d 786 (Colo. 1985). The facts in a workers' compensation case may not be interpreted liberally in favor of either claimant or respondents. Section 8-43-201. C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979).

5. Claimant sustained his burden of proving by a preponderance of the evidence that he sustained a right knee strain on February 10, 2016, and, therefore, Claimant is entitled to benefits under the Act.

6. Once compensability is established, respondents are liable for medical treatment that is reasonably necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. *See Colorado Compensation Insurance Authority v. Nofio,* 886 P.2d 714 (Colo. 1994); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). A determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ, and an ALJ's resolution should not be disturbed if supported by substantial evidence in the record. Section 8-43-301(8), C.R.S. *See City and County of Denver School District 1 v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). Substantial evidence is that quantum of probative evidence that a rational fact finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence. *Durocher v. Industrial Claim Appeals Office*, 905 P.2d 4 (Colo. App. 1995).

7. Medical treatment rendered by the Employer's designated physicians at the OHSC and thereafter, including ATP Szczukowski's referral to Dr. Hewitt, are reasonable, necessary and the responsibility of Respondent.

8. ATP Dickenson's medical records reflect the Claimant suffered an acute injury. The medical records are devoid of any symptoms in Claimant's right knee after 2001. Claimant's description of injury was consistent on all medical evaluations, including that with Respondent's selected physician James P. Lindberg. Further, Dr. Lindberg has opined that without an MRI it is impossible to determine whether Claimant suffered a substantial and permanent aggravation of a preexisting underlying asymptomatic condition.

ORDER

It is therefore ordered that:

1.Claimant established by a preponderance of the evidence that he suffered a right knee strain while carrying an electric wheelchair a distance of 20 steps in the course and scope of his employment on February 10, 2016.

2.All medical care rendered by medical providers at the Center for Occupational Safety and Health, including the referral to ATP Michael Hewitt, M.D., is reasonable, necessary and related to Claimant's February 10, 2016 injury.

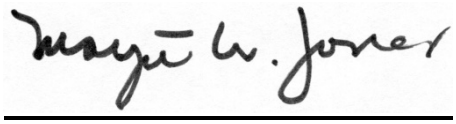
3.The referral by ATP Szczukowski to ATP Hewitt for an evaluation is reasonable, necessary and related and shall be paid for by Respondent.

4.Respondent shall pay to Claimant interest at the rate of 8% per annum on all amounts of compensation not paid when due.

5.Any issues not determined in this decision are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: _April 12, 2017_



Margot W. Jones, Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Whether claimant has shown by a preponderance of the evidence that he is incapable of earning wages in the same or other employment as a result of the July 12, 2012 industrial injury and entitled to an award of permanent total disability ("PTD") benefits.

- Whether claimant has shown by a preponderance of the evidence that he is entitled to an award of penalties pursuant to Section 8-43-304, C.R.S. for violation of the April 12, 2016 order of Prehearing Administrative Law Judge Goldstein.

- If claimant proves that he is entitled to a penalty, whether respondents have shown by a preponderance of the evidence that any potential violation was cured pursuant to Section 8-43-304(4), C.R.S.

- If respondents prove they cured the violation pursuant to Section 8-43-304(4), C.R.S., whether claimant has shown by clear and convincing evidence that respondents knew or reasonably should have known that respondents were in violation of an order.

- Whether claimant has shown that he sustained a serious permanent disfigurement to areas of his body normally exposed to public view, resulting in additional compensation under the Colorado Workers' Compensation Act.

FINDINGS OF FACT

1. Claimant resides in Dolores, Colorado and at the time of the hearing was 56 years old. Claimant suffered an admitted injury to his low back on July 12, 2012 while employed in employer's restaurant. Claimant testified that the injury occurred when he lifted a five gallon bucket full of water and lettuce and felt tightness in his legs. Claimant timely reported the incident to employer and on July 13, 2012, an Employer's First Report of Injury was completed.

2. Following the July 12, 2012 injury, employer referred claimant to La Plata Family Medicine for treatment. On July 17, 2012, claimant was seen at La Plata Family Medicine by Dr. Victor Lopez and complained of low back and right leg pain. Dr. Lopez diagnosed an acute lumbar strain.

3. Following the initial appointment with Dr. Lopez, claimant was also seen by Dr. Jordan Loftis with La Plata Family Medicine. During that time claimant underwent conservative treatment including physical therapy and steroid injections. On July 22, 2013 claimant underwent medial branch blocks at the L5-S1 level. Claimant testified that he may have an allergy to the steroids in these injections because the injections caused him to have nausea and headaches that lasted for several days.

4. On January 13, 2014, claimant underwent an anterior lumbar discectomy with arthrodesis at L5-S1, performed by Dr. Jim Youssef and Dr. Mark Stern with Spine Colorado.

5. On June 18, 2014, claimant returned to Dr. Youssef for post-surgical follow up. In his report of that date, Dr. Youssef noted that claimant was recovering well and released him to return to full duty with no work restrictions. On that same date, Dr. Youssef recommended that claimant undergo an impairment rating with Dr. Loftis within 20 days.

6. On September 10, 2014, claimant underwent a functional capacity evaluation ("FCE") with Integrated Physical Therapy. The report issued by the FCE evaluator, Charles Alexander, indicated that claimant had the ability to perform medium level work.

7. Claimant testified that during the FCE he told the evaluator that items he was asked to lift were too heavy, but he was instructed to "just try" to lift the items. Claimant testified that following the FCE he felt "beat up" and the next morning he was unable to walk.

8. On October 13, 2014, claimant reported to Dr. Loftis that he was sore from the FCE. Claimant's symptoms on that date included right sciatic radiation pain and tingling. Dr. Loftis chose to postpone the impairment evaluation because he felt that claimant was presenting with new symptoms following the FCE and referred claimant to physical therapy.

9. On November 10, 2014, claimant returned to Dr. Loftis and reported that he had numbness into his right leg and that physical therapy was not helping. Dr. Loftis referred claimant to Spine Colorado for evaluation.

10. On December 11, 2014, a magnetic resonance image ("MRI") was taken of claimant's lumbar spine and showed a new left paracentral disc protrusion at the L4-5 level. On that same date, claimant was seen by Lance Hamlin, PA-C with Spine Colorado, who diagnosed an L4-5 herniated disc with bilateral recess stenosis. Mr. Hamlin referred claimant to physical therapy and ordered an L4-5 interlaminar injection, which was administered by Dr. Cyril Bohachevsky on December 30, 2014. On March 10, 2015, Dr. Bohachevsky administered a right-sided sacroiliac ("SI") joint injection.

11. On June 18, 2015, claimant underwent an L4-5 bilateral microdiscectomy, medial facetectomy and foraminotomy at the L4-5 level. This surgery was also performed by Dr. Youssef.

12. On July 1, 2015, claimant reported to Dr. Loftis that following the surgery he had "sore pain" that was moderate. Then on October 1, 2015 claimant reported to Dr. Loftis that he was experiencing "horrible" pain, that nothing was helping with his pain and physical therapy was difficult.

13. On November 18, 2015, Dr. Youssef noted that claimant had reached maximum medical improvement ("MMI") and recommended maintenance medical treatment in the form of physical therapy, pain medication, and possible future injections. Dr. Youssef also noted it was possible that claimant would need revision decompression and fusion at the L4-5 level if he developed instability at that level in the future.

14. Dr. Youssef has recommended that claimant undergo a third surgery. Claimant testified that he does not want the third surgery given his negative experience following the June 18, 2015 surgery.

15. On January 11, 2016, Dr. Loftis opined that claimant was at MMI as of that date and assessed an impairment rating of 35% whole person. At that time, Dr. Loftis determined a number of work restrictions for claimant. These restrictions include: a lifting restriction of 10 pounds for frequent lifting; and 20 pounds for occasional lifting; walking no more than 500 feet per day; driving no more than two hours per day; and changing position between sitting and standing every 30 minutes. Dr. Loftis also determined that claimant is able to reach frequently; and bend, stoop, crawl and kneel occasionally; but he is prohibited from climbing.

16. On September 30, 2016, respondents sent claimant for an independent medical examination ("IME") with Dr. George Schakaraschwili. Dr. Schakaraschwili reviewed claimant's medical records, obtained a history from claimant and performed a physical examination in connection with the IME. Dr. Schakaraschwili issued a written report and opined that claimant is capable of working in at least a sedentary position and his work restrictions indicate that he falls within the light duty to medium duty work categories.

17. In his report, Dr. Schakaraschwili assigned a permanent impairment rating of 33% whole person. With regard to work restrictions, Dr. Schakaraschwili assigned a maximum lift of no more than 30 pounds, with no more than 20 pounds for frequent lifting, and claimant should be allowed to shift positions every 30 minutes. Dr. Schakaraschwili also opined in his IME report that within these restrictions, claimant could tolerate an eight hour work day, but would need to begin at four hours per day and gradually increase to eight hours per day.

Claimant's Work History

18. Claimant testified that he graduated from Paradise High School in 1978 or 1979 and took "special education" courses. Claimant also testified that he attended Devereux Day School which he describes as a "school for disabled kids". Claimant testified that he has been diagnosed with attention deficit hyperactivity disorder ("ADHD") and anxiety. Claimant also asserts that he has a learning disability that causes him to have difficulty with reading and math.

19. With regard to his prior work experience, claimant testified that he has experience working in the restaurant industry for employer and for another restaurant, Francisco's, which is located in Cortez, Colorado. During his employment with employer claimant worked as a manager and cook. Prior to working for employer,

claimant owned and operated employer's restaurant with his spouse. During that time claimant oversaw the kitchen and front of the house staff, prepared food, and interacted with customers. Prior to owning employer's restaurant, claimant and his spouse also owned and operated The Wild Bunch Deli, where claimant prepared food and baked cakes and bread.

20. Claimant testified that he obtained a commercial drivers license ("CDL") when he was 20 years old and recently let the license expire. Claimant testified that he has prior experience working in construction as a laborer and doing carpentry and worked in the oil and gas industry as a roustabout. At one time claimant operated his family's horse and cattle ranch. Claimant testified that he is unable to return to any of these prior positions.

21. Claimant also testified that he is the owner of SIM Investment Corporation, which owns three rental properties. Claimant testified that prior to the work injury and the related surgeries he performed all of the maintenance at these rental properties. Since his injury, claimant hires others to perform this maintenance work. This includes assessing that there is a maintenance need, contacting the appropriate service provider and scheduling the repair or service. Claimant also then pays the service provider once the service or repair is completed. In 2012, claimant reported earnings of $24,000.00 from his employment with SIM investment Corporation.

Vocational Evaluations

22. At the request of his attorney, claimant underwent a vocational evaluation by vocational expert, Robert Van Iderstine. Mr. Van Iderstine met with claimant on March 2, 2016 and August 10, 2016. On October 21, 2016, Mr. Van Iderstine issued a written report in which he opined that based upon claimant's vocational profile (which includes claimant's age, education, prior work history, and physical limitations); claimant is precluded from returning to employment in his commutable labor market, even on a part-time basis. Mr. Van Iderstine considered claimant's commutable labor market to be the Montezuma County area including Dolores, Colorado; Dove Creek, Colorado; and Cortez, Colorado. Mr. Van Iderstine's testimony at hearing was consistent with his report.

23. At the request of respondents, on August 25, 2016 claimant underwent a vocational evaluation by respondent's vocational expert, Torrey Kay Beil. On October 6, 2016, Ms. Beil issued a written report in which she opined that claimant is employable in his commutable labor market. Ms. Beil reviewed job opportunities in the Durango, Colorado and Cortez, Colorado area. In her report, Ms. Beil listed a number of transferrable skills that claimant obtained during his prior work experience that he can

apply in new employment. These transferrable skills include following instructions, performing basic math calculations, planning and scheduling necessary maintenance, and communicating with members of the public.

24. Based upon claimant's transferrable skills and his current physical limitations, Ms. Beil listed five vocational categories that she believes claimant is able to

perform. The listed categories were collections agent; receptionist; plant trimmer; customer service clerk; and property leasing agent.

25. On October 24, 2016, Ms. Beil issued an addendum to her report in which she specifically identified three employers hiring positions that Ms. Beil believes claimant would be able to perform. The first position she identified was that of a trimmer/harvester at Durango Organics located in Durango, Colorado. Ms. Beil also identified the position of check cashing clerk with the employer Check Into Cash, located in Durango, Colorado. The third position identified by Ms. Beil was Domino's Pizza delivery driver in Cortez, Colorado. Ms. Beil testified at hearing and also by deposition in this matter confirming her opinion that claimant is employable.

26. Claimant testified that he does not possess a number of the transferrable skills identified by Ms. Beil. Claimant also provided testimony that he has limited math and reading skills and pointed to his special education classes as an indication that he lacks the skills necessary to find new employment. The ALJ is not persuaded by this testimony. It is clear from claimant's own testimony regarding his prior work experience that he has developed a number of skills that are transferrable to positions that comply with his physical limitations, including managing a restaurant and operating rental properties.

27. Claimant testified that after receiving Ms. Beil's report, he applied for work with Durango Organics, Check Into Cash, and Domino's Pizza and in each instance he was not offered employment because he was either physically unable to perform these jobs or lacked the necessary math and reading skills. With regard to a "trimmer" position with a marijuana operation, claimant testified that he does not hold the required "med license" and would have to travel to either Grand Junction, Colorado or Denver, Colorado to take the appropriate testing.

28. Scott Holland, Director of Operations with Durango Organics, provided testimony by deposition regarding the physical requirements of positions available with his company. Mr. Holland testified that members of the Grow Team work in very physical jobs. With regard to individuals working on the Post Harvest Team, Mr. Holland testified that these employees must sit for extended periods of time.

29. Terri Woodard, Manager with Check Into Cash, provided testimony by deposition regarding job duties at her location, specifically those of a Customer Service Representative ("CSR"). Ms. Woodward testified that there are days when a CSR does not sit at their desk at all.

30. Greg Lindus, Area Supervisor with Pecos Valley Pizza Incorporated, testified by deposition. Pecos Valley Pizza Incorporated operates a Domino's Pizza franchise in Cortez, Colorado. Mr. Lindus' provided testimony regarding delivery driver positions at his franchise. Mr. Lindus testified that delivery drivers are expected to perform various duties beyond delivering pizzas, including cleaning and carrying items for food preparation.

31. Dr. Schakaraschwili's testimony by deposition in this matter was consistent with his IME report. During his deposition Dr. Schakaraschwili was asked his opinion regarding claimant's ability to perform specific jobs identified by Mr. Van Iderstine and Ms. Beil in their reports. Dr. Schakaraschwili testified that it is his opinion that if the job duties are within claimant's work restrictions, claimant would be able to work in maintenance, as a front desk clerk, as a sales associate, and in the specific positions identified at Durango Organics, Check into Cash, and Domino's Pizza.

32. The ALJ credits the opinion of Ms. Beil and finds that claimant possesses a number of transferrable skills from his prior work experience. The ALJ further credits Ms. Beil's opinions and finds that claimant's commutable labor market includes Cortez, Colorado and Durango, Colorado.

33. The ALJ further credits the tax information entered into evidence and finds that claimant has some amount of earnings from his employment with SIM Investment Corporation. Although this evidence only addresses the year 2012, the ALJ finds that this is credible evidence of claimant's transferrable skills.

34. The ALJ credits the opinions of Dr. Schakaraschwili and Ms. Beil over the contrary opinion of Mr. Van Iderstine and finds that claimant is able to earn wages in various types of employment in his commutable labor market. The ALJ finds that claimant has failed to demonstrate that it is more likely than not that he is unable to earn any wages.

35. The ALJ notes the individual testimony of Mr. Holland, Ms. Woodard, and Mr. Lindus, regarding the physical demands of positions at their various companies. However, the ALJ finds that this testimony is neither persuasive nor demonstrative of all employment opportunities available in claimant's commutable area.

Penalties

36. On March 8, 2016, respondents filed a Notice and Proposal to Select an Independent Medical Examiner ("Notice and Proposal"). Claimant objected to respondents' Notice and Proposal on the basis that the notice was untimely filed.

37. On April 12, 2016 the parties attended a pre-hearing conference before PALJ Jeffrey Goldstein on claimant's motion to strike respondents' Notice and Proposal. On that same date, PALJ Goldstein granted claimant's motion and ordered respondents to issue a Final Admission of Liability ("FAL") consistent with Dr. Loftis's January 11, 2016 report. Respondents were ordered to do so within seven days of PALJ Goldstein's order, which would have been April 19, 2016.

38. As indicated by evidence entered into the record at hearing, on April 18, 2016 respondents completed the required FAL and placed it in the U.S. Mail to claimant's counsel and the Division of Workers' Compensation ("the Division"). However, for unknown reasons claimant's counsel and the Division did not receive the FAL.

39. It is undisputed that on June 17, 2016, a copy of the FAL was received by the Division. It is also undisputed that on June 28, 2016, respondents' counsel learned that the FAL had not been received by claimant's counsel and took steps to provide a copy to claimant's counsel on that same date. Claimant requests penalties for the period of April 19, 2016 to June 17, 2016 for what claimant argues is respondents' failure to comply with PALJ Goldstein's April 12, 2016 order.

40. Jaclyn Grandgeorge, former claims representative with insurer, testified by deposition in this matter. Ms. Grandgeorge testified that on April 18, 2016 she completed the FAL and envelopes for mailing the FAL to claimant's attorney and the Division. Ms. Grandgeorge further testified that it was her normal practice to then place the envelopes in an outgoing mail location for others to place in the U.S. Mail. Ms. Grandgeorge believed that the FAL was successfully mailed on April 18, 2016.

41. The ALJ credits the testimony of Ms. Grandgeorge and finds that respondents completed and attempted to properly file the FAL on April 18, 2016, as ordered. The ALJ also finds that upon learning that the FAL was not received by claimant and the Division, respondents immediately provided copies to claimant's counsel and the Division.

42. The ALJ finds that claimant has failed to demonstrate that it is more likely than not that respondents violated PALJ Goldstein's order. The ALJ also finds that claimant has failed to demonstrate that it is more likely than not that respondents' behavior was unreasonable. Therefore, claimant has failed to demonstrate that penalties are appropriate in this matter.

43. Based upon the above findings that no penalty is appropriate, the ALJ need not consider respondents' affirmative defense of cure.

Disfigurement

44. Claimant has a well healed surgical scar on his abdomen from the January 13, 2014 surgery. This abdominal scar is approximately five inches long and ¼ of an inch wide. Claimant also has a well healed surgical scar on his lower back from the June 18, 2015 surgery. This second scar is three inches long and ¼ of an inch wide.

45. The ALJ finds claimant has proven that it is more likely than not that he is entitled to an award of disfigurement benefits pursuant to Section 8-42-108, C.R.S.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197

Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., (2012). A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2012).

Permanent Total Disability

3. In order to prove permanent total disability, claimant must show by a preponderance of the evidence that he is incapable of earning any wages in the same or other employment. Section 8-40-201(16.5)(a), C.R.S. (2012). A claimant therefore cannot receive PTD benefits if he is capable of earning wages in any amount. *Weld County School Dist. RE-12 v. Bymer*, 955 P.2d 550, 556 (Colo. 1998). The term "any wages" means more than zero wages. *Lobb v. ICAO,* 948 P.2d 115 (Colo. App. 1997); *McKinney v. ICAO*, 894 P.2d 42 (Colo. App. 1995). In weighing whether claimant is able to earn any wages, the ALJ may consider various human factors, including claimant's physical condition, mental ability, age, employment history, education, and availability of work that the claimant could perform. *Weld County School Dist. R.E. 12 v. Bymer*, 955 P.2d at 550, 556, 557 (Colo. 1998). The critical test is whether employment exists that is reasonably available to claimant under his particular circumstances.

4. The claimant is not required to establish that an industrial injury is the sole cause of his inability to earn wages. Rather the claimant must demonstrate that the industrial injury is a "significant causative factor" in his permanent total disability. *Seifried v. Industrial Commission,* 736 P.2d 1262 (Colo. App. 1986). Under this standard, it is not sufficient that an industrial injury create some disability which ultimately contributes to permanent total disability. Rather, *Seifried* requires the claimant to prove a direct causal relationship between the precipitating event and the disability for which the claimant seeks benefits. *Lindner Chevrolet v. Industrial Claim Appeals Office,* 914 P.2d 496 (Colo. App. 1995), *rev'd on other grounds, Askew v. Industrial Claim* Appeals Office, 927 P.2d 1333 (Colo. 1996).

5. The respondents are not required to prove the existence of a job offer to refute a claim for permanent total disability benefits. *Black v. City of La Junta Housing Authority*, W.C. No. 4-210-925 (ICAO, December 1998) (claimant is not permanently totally disabled even though respondents' vocational expert was unable to identify a single job opening available to claimant); *Beavers v. Liberty Mutual Fire Ins. Co.,* (Colo. App. No. 96 CA0275, September 5, 1996) (not selected for publication); *Gomez v. Mei*

Regis, W.C. No. 4-199-007 (September 21, 1998). Rather, the claimant fails to prove permanent total disability if the evidence establishes that it is more probable than not that the claimant is capable of earning wages. *Duran v. MG Concrete Inc.,* W.C. No. 4-222-069 (September 17, 1998).

6. As found, claimant has failed to demonstrate by a preponderance of the evidence that he is incapable of earning wages in the same or other employment in his commutable labor market. As found, claimant's commutable labor market includes Cortez, Colorado and Durango, Colorado. The ALJ is persuaded that with his prior work experience and the work restrictions determined by Drs. Loftis and Schakaraschwili, claimant is able to work in sedentary to light duty type work. As found, the testimony of Ms. Beil that claimant has prior training in a variety of jobs resulting in a number of transferrable skills, is likewise persuasive.

Penalties

7. Section 8-43-304, C.R.S., governs when penalties may be imposed in a workers' compensation matter and provides, in relevant part, that any employer or insurer:

> "who violates any provision of [the Workers' Compensation Act], or does any act prohibited thereby, or fails or refuses to perform any duty lawfully enjoined within the time prescribed by the director or panel…, or fails, neglects, or refuses to obey any lawful order…, shall be subject to … a fine of not more than one thousand dollars per day for each such offense."

This provision has been construed as applying to violation of an order issued by an administrative law judge. *Giddings v. Industrial Claim Appeals Office,* 39 P.3d 1211 (Colo. App. 2001).

8. Before penalties may be assessed the ALJ must first determine whether a party has violated any provision of the Workers' Compensation Act or an order. If the ALJ finds such a violation, penalties may be imposed if it is also found that the employer's actions were objectively unreasonable. Section 8-43-304, C.R.S*.; City Market, Inc. v. Industrial Claim Appeals Office*, 68 P.3d 601 (Colo. App. 2003); *Pioneers Hospital of Rio Blanco County v. Industrial Claim Appeals Office*, 114 P.3d 97 (Colo. App. 2005); *Jimenez v. Industrial Claim Appeals Office*, 107 P.3d 965 (Colo. App. 2003). The "objective standard" is measured by reasonableness of the insurer's action and does not require knowledge that the conduct was unreasonable." *Colorado Compensation Insurance Authority v. Industrial Claim Appeals Office*, 907 P.2d 676 (Colo. App. 1995). In addition, Section 8-43-305, C.R.S. provides that each day a party engages in the violation is construed as a separate offense.

9. In this case, the Claimant seeks penalties for respondents' failure to file the FAL with the Division within seven days of PALJ Goldstein's April 12, 2016 order.

10. Generally, the question of whether notice was mailed is a question of fact. *See Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). When a letter is properly addressed, stamped and mailed, there is a rebuttable presumption that it was received by the addressee. However, when the evidence is conflicting as to whether the letter was mailed initially, the presumption does not arise and the conflict must be resolved by the trier of fact. *Id., citing National Motors, Inc v. Newman*, 29 Colo. App. 380, 484 P.2d 125 (Colo. App 1971).

11. With regard to calculating dates and date of filing, W.C.R.P. 1-2, provides, in pertinent part:

> "Unless a specific rule or statute states to the contrary, the date a document or pleading is filed is the date it is mailed or hand delivered to the Division of Workers' Compensation or the Office of Administrative Courts. Computation of days is consistent with Rule 6 of the Colorado Rules of Civil Procedure."

12. Pursuant to Colorado Rules of Civil Procedure ("C.R.C.P.") 5(b)(2)(B) service under C.R.C.P. 5(a) is properly made by mailing a copy to the last known address of the person served. The Rules of Civil Procedure note that service by mail is complete on mailing.

13. As found, claimant has failed to demonstrate by a preponderance of the evidence that respondents violated PALJ Goldstein's April 12, 2016 order. Respondents reasonably believed they had complied with the order by following the normal business practice of mailing the FAL to the Division and opposing counsel. The insurer's reliance of the U.S. Postal Service was also reasonable, under the circumstances.

14. Upon learning that the FAL had not been received respondents' counsel took immediate steps to deliver copies of the FAL to claimant's counsel and the Division on June 28, 2016. During the period between April 19, 2016 and the date of "cure" of June 28, 2016, respondents were not aware that there was an issue with the filing of the FAL.

15. As found, respondents did not violate PALJ Goldstein's order as they reasonably believed that they had filed the FAL within seven days. Therefore, no order was violated. However, the ALJ also notes that even if the order had been violated, the insurer's behavior was reasonable at the time of the initial attempt to file the FAL on April 18, 2016.

Disfigurement

16. Section 8-42-108 (1), C.R.S. provides that claimant may be entitled to additional compensation if, as a result of the work injury, he has sustained a serious permanent disfigurement to areas of the body normally exposed to public view.

17. As found, claimant has a visible disfigurement to his body consisting of a surgical scar on his abdomen and a surgical scar on his low back. Therefore, claimant has sustained a serious permanent disfigurement to areas of the body normally exposed to public view. In addition, this disfigurement is the result of claimant's July 12, 2012 work injury. Respondent shall pay claimant $1,800.00 for his disfigurement.

ORDER

It is therefore ordered that:

1. Claimant's claim for permanent total disability benefits is denied and dismissed.

2. Claimant's claim for penalties is denied and dismissed.

3. Respondent shall pay claimant $1,800.00 for his disfigurement. Respondent shall be given credit for any amount previously paid for disfigurement in connection with this claim.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 12, 2017

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

I. Whether Claimant proved by a preponderance of the evidence that he sustained a compensable work injury to his hearing on February 25, 2016.

II. If Claimant proved he sustained a compensable work injury, whether Claimant is entitled to reasonably necessary and related medical benefits, specifically, treatment of hearing loss and tinnitus.

FINDINGS OF FACT

1. Claimant works for Employer as a police officer. While responding to a call on February 25, 2016, 9-12 gun rounds were fired approximately eight inches from Claimant's face, causing Claimant to become disoriented. Claimant testified his hearing became muffled and he began hearing high-pitched ringing. Claimant was not wearing hearing protection at the time.

2. Claimant reported the incident to his direct supervisor, Sergeant Frazen. Claimant went to the emergency room for testing of his hearing. Claimant returned to work on approximately March 3, 2016.

3. On March 24, 2016, Leann Johnson, Au.D., CCC-A, conducted a hearing evaluation of Claimant and issued a report. Dr. Johnson stated test results revealed Claimant had bilateral moderate high frequency sensorineural hearing loss. Dr. Johnson noted a decrease in hearing thresholds from a pre-employment baseline audiogram obtained on June 14, 2013. Dr. Johnson noted Distortion Product Evoked Otoacoustic Emissions were "present and robust from 1000 Hz to 4000 Hz and reduced or absent from 6000 Hz to 8000 Hz, bilaterally, consistent with damage to the hearing organ at these frequencies…" Dr. Johnson recommended binaural amplification to assist with speech discrimination, tinnitus sound therapy, binaural custom hearing protection, custom in-ear monitor for his radio car and custom electronic hearing protection for the non-radio ear, and a recheck of Claimant's hearing in six months.

4. Alan F. Lipkin, M.D. reviewed the March 24, 2016 audiogram and addressed his findings in a letter dated April 8, 2016. Dr. Lipkin did not physically examine Claimant. Dr. Lipkin noted he was not provided with any previous audiograms to review and, as such, concluded he could not determine changes in hearing loss based on the single, March 24, 2016 audiogram. Dr. Lipkin agreed with Dr. Johnson's recommendations

regarding the use of hearing protection; however, Dr. Lipkin concluded "The recommendations for hearing aids and tinnitus sound therapy seem excessive at this point." Dr. Lipkin recommended a period of observation. Dr. Lipkin further stated, "In any event, it is debatable as to whether amplification, i.e., hearing aids, would be appropriate in somebody whose hearing is so normal in the usual speech frequencies. Likewise, tinnitus sound/biodfeedback therapy is an area of some controversy and whether this expensive treatment would be worthwhile at this point is not clear." Dr. Lipkin remarked that it was debatable if the recommended treatment was needed at that time. Dr. Lipkin recommended noise protection, sodium/caffeine reduction, and a recheck of an audiogram with clinical monitoring in three months.

5. Tracey L. Stefanon, D.O. evaluated Claimant on April 27, 2016. Claimant reported a total of 12 rounds were discharged 8-10 inches away from him within a few seconds. Claimant reported he was not wearing hearing protection, and immediately experienced ringing in his ears and subsequent difficulty hearing. Claimant denied prior hearing problems, prior military service, and prior weapon use in his previous position as a police officer in Fort Lupton, Colorado. Claimant complained of ringing in his ears and headaches. Dr. Stefanon noted full visualization of the right tympanic membrane and partial visualization of the left tympanic membrane, noting both were normal in appearance. Dr. Stefanon remarked that the evaluation was conducted in a quiet room with normal conversation levels, and Claimant did not have difficulty hearing. Dr. Stefanon assessed bilateral high frequency hearing loss and tinnitus. Dr. Stefanon remarked that she believed the condition "is possibly related to the normal scope and duties of the patient's employment. However, it is unclear at this time whether the injury/condition is more medically probable than not related to their employment." Dr. Stefanon stated she needed to review prior audiograms to make a causality determination. Dr. Stefanon noted, "There is some inconsistency between the report to the emergency department in the patient's rapport today including date of injury an exposure to weapon discharge vs blast exposure." Dr. Stefanon requested prior audiograms and referred Claimant to the ear, nose and throat department. Dr. Stefanon recommended Claimant continue full duty work with use of hearing protection.

6. On August 10, 2016, Roger M. Traynor, Ed.D., FAAA conducted a hearing evaluation of Claimant and issued a report. Claimant reported high pitched tinnitus and a decrease of hearing. Dr. Traynor noted a pre-employment hearing test demonstrated "mild hearing loss at 6Hz of about 35 dBHTL bilaterally." Dr. Traynor assessed moderate high frequency sensori-neural hearing loss bilaterally. Dr. Traynor noted the results from his evaluation are similar to the results from the pre-employment baseline hearing evaluation and the March 2016 evaluation. Dr. Traynor recommended reduction of sodium/caffeine and the use of hearing protection. Dr. Traynor opined

hearing instruments "will not be of much benefit for everyday communication." Dr. Traynor further opined, "A demonstration of hearing devices, however, did suggest that he will obtain some tinnitus masking effects and probably some residual inhibition from the use of hearing devices." Dr. Traynor stated he agreed with Dr. Lipkin as to whether amplification would be appropriate, as Claimant had "almost normal hearing for speech communication." Dr. Traynor concluded, "I do, however, feel that the tinnitus is a handicapping disorder for this patient and he appears to be among the 53% of patients that greatly benefit from tinnitus masking and the possible residual inhibition that may be part of that treatment program."

7. Dr. Stefanon reevaluated Claimant on September 8, 2016. Claimant reported no change since his last evaluation and continued to complain of tinnitus. Comparing the June 14, 2013 audiogram to the August 10, 2016 audiogram, Dr. Stefanon noted no significant change in the right ear, except for at the 8000 Hz range, where Claimant's 2013 hearing level was 0 and the 2016 hearing level was 35. Dr. Stefanon further noted no change in left ear except at the 8000 Hz range, where Claimant's 2013 level was 20 and the 2016 level was 45. Dr. Stefanon also noted a change in the left ear at the 4000 Hz range, from level 0 in 2013 to level 20 in 2016. Dr. Stefanon opined that a trial of hearing aids to try to modulate the tinnitus was reasonable to see how Claimant responded. Dr. Stefanon further opined that she was not convinced custom earplugs and custom ear piece would modulate Claimant's tinnitus. Dr. Stefanon stated, "In looking at his hearing loss it is unusual that he'll be reporting the level of disruption in his hearing and the fact that the abnormalities are only noted in the 6000 and 8000 Hz range." Indicating the only frequency that was significantly affected was the 8000Hz range, Dr. Stefanon commented, "Again it is somewhat difficult to explain the level of hearing difficulty that the patient reports based on the data available regarding the audiograms. However it may be that the tinnitus is more of the issue." Dr. Stefanon opined Claimant would not qualify for a hearing impairment or a tinnitus impairment, but that he may require maintenance care for the tinnitus if the hearing aids were successful in modulating the tinnitus.

8. On the WC164 form completed by Dr. Stefanon on September 8, 2016, Dr. Stefanon listed "Bilateral high frequency hearing loss" and "Tinnitus" under work-related medical diagnoses. Dr. Stefanon stated her objective findings were consistent with Claimant's injury and/or work related mechanism of injury/illness.

9. At Respondents' request, Jeff Raschbacher, M.D. reviewed the request for the authorization for hearing aids and authored a letter dated September 13, 2016. Dr. Raschbacher reviewed audiograms, a follow-up note from Dr. Stefanon, notes from the audiologist and a note from Dr. Lipkin. Dr. Raschbacher noted Claimant had

abnormality only at the 6,000 Hz range. Dr. Raschbacher stated it was not clear that Claimant's hearing loss and/or tinnitus is work-related. Dr. Raschbacher remarked,"…it does not appear with respect to a causation analysis that his 6,000 Hz isolated hearing loss is work-related in causation given in particular its bilaterally symmetric nature and it is not clear that he has tinnitus, as this is not measureable." Dr. Raschbacher did not recommend authorizing any masking devices or hearing aids on a work-related basis.

10. Respondents filed a Notice of Contest on October 11, 2016.

11. Claimant testified at hearing he continues to experience constant ringing in both ears that varies in pitch and volume. Claimant indicated the ringing has resulted in severe headaches and difficulty sleeping. Claimant testified he cannot hear like he once could, and it is difficult to hear conversations when background noise is present. Claimant testified he did not have issues with his ears or hearing prior to the February 25, 2016 incident. Claimant stated the issues with his hearing have caused disorientation at times, and affected his work due to the difficultly in discerning the source or location of sounds.

12. Claimant testified he desperately wants the hearing aids. Claimant testified Dr. Traynor provided Claimant hearing devices for a period of approximately two-to-three months. Claimant stated the hearing devices reduced the tinnitus such that he no longer suffered headaches and the ringing was almost nonexistent. Claimant indicated the hearing devices assisted Claimant in hearing conversations in the presence of background noise, and in falling asleep.

13. Claimant's testimony is found credible and persuasive.

14. The ALJ credits the medical records and the opinions of Drs. Johnson, Stefanon and Traynor over the conflicting opinion of Dr. Raschbacher.

15. Claimant has established by a preponderance of the evidence that he sustained an industrial injury arising out of and in the course and scope of his employment on February 25, 2016.

16. Claimant has established by a preponderance of the evidence that he is entitled to reasonable and necessary medical treatment related to the industrial injury.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, Section 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1), C.R.S. Generally, the claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado*, 717 P.2d 1000 (Colo. App. 1986).

The ALJ's resolution of issues will be affirmed if supported by substantial evidence in the record. Section 8-43-301(8), C.R.S.; *City and County of Denver School District 1 v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). Substantial evidence is that quantum of probative evidence, which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

Compensability

Claimant is required to prove by a preponderance of the evidence that at the time of the injury she was performing service arising out of and in the course of employment, and that the alleged injury was proximately caused by the performance of such service.

Section 8-41-301(1)(b) & (c), C.R.S. A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). The question of whether the claimant met the burden of proof to establish a compensable injury is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

The ALJ concludes Claimant has proven by a preponderance of the evidence he sustained a compensable injury on February 25, 2016. The industrial injury occurred while Claimant was on duty performing his work-related functions responding to a service call. No contrary evidence was admitted at hearing. Claimant credibly testified multiple gun shots were fired inches from his face, causing his hearing to become muffled and ringing in his ears. Claimant was not wearing hearing protection at the time. Both Dr. Johnson and Dr. Stefanon noted hearing loss in the 6000-8000 Hz range when comparing Claimant's 2013 pre-employment test to the tests taken post-injury in 2016. As indicated by Dr. Stefanon in the form WC164, her objective findings of bilateral high frequency hearing loss and tinnitus are work-related and consistent with Claimant's mechanism of injury. Claimant credibly testified he did not have hearing issues, including ringing, prior to the industrial injury. The ALJ is persuaded the industrial injury produced Claimant's need for treatment.

Reasonable, Necessary and Related Medical Treatment

A respondent is liable to provide such medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury." Section 8-42-101(1)(a), C.R.S. *Colorado Compensation Insurance Authority v. Nofio*, 886 P.2d 714 (Colo. 1994). The determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ. *See generally Parker v. Iowa Tanklines, Inc.*, W.C. No. 4-517-537 (May 31, 2006); *Chacon v. J.W. Gibson Well Service Company*, W. C. No. 4-445-060 (February 22, 2002).

The ALJ further concludes Claimant has proven by a preponderance of the evidence he is entitled to receive reasonable and necessary medical treatment related to the February 25, 2016 industrial injury. Drs. Lipkin, Traynor and Stefanon noted Claimant has almost normal hearing for speech communication which does not necessitate amplification devices. Nonetheless, Drs. Traynor and Stefanon credibly opined tinnitus is an issue for Claimant and Claimant could benefit from devices used to mask or modulate the tinnitus. Claimant credibly testified the hearing devices significantly reduced his tinnitus and that, without the hearing devices, he continues to experience tinnitus which affects both his personal and professional life. As such, Respondents shall be liable for reasonable and necessary treatment to cure or relieve the effects of Claimant's tinnitus.

ORDER

It is therefore ordered that:

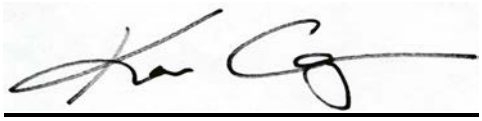
1. Claimant has established by a preponderance of the evidence that he suffered a compensable injury to his hearing on February 25, 2016.

2. Respondents shall pay for reasonable and necessary medical treatment related to the February 25, 2016 industrial injury, including treatment of Claimant's tinnitus.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 12, 2017



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Whether Respondents have produced clear and convincing evidence to overcome Dr. Castrejon's Division IME opinion that Claimant has not reached maximum medical improvement (MMI).

II. If Respondents failed to prove by clear and convincing evidence that Dr. Castrejon's opinion regarding MMI is clearly erroneous, whether Claimant established, by a preponderance of the evidence, that the need for additional low back treatment is causally related to his admitted June 17, 2015 industrial injury.

III. If Respondents presented clear and convincing evidence to overcome the Dr. Castrejon's determination concerning MMI, whether Claimant's 15% whole person impairment rating as calculated by Dr. Castrejon is appropriate.

Because the undersigned ALJ concludes that Respondents have failed to overcome Dr. Castrejon's determination concerning MMI, this order does not address the question concerning permanent impairment.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant works as a ranch laborer for Employer. He was hired by Employer in March 2015. At the time of hearing, Claimant was 71 years of age. He has a seventh grade education and has been working as a ranch hand since he was 16 years old. Claimant is primarily Spanish speaking but does speak and understand English. He does not require the assistance of an interpreter to converse with others in English.

2. On June 17, 2015, Claimant was asked to roundup a bull that had escaped its enclosure. Claimant testified that he got onto a small motorcycle and proceeded into the pasture to locate the animal and bring it back to the corral.

3. Claimant found the bull, got off the motorcycle and attempted to roust it out from behind a tree. As he approached, the bull started moving so Claimant attempted to herd the animal by running toward it. As he advanced in the direction of the bull, Claimant failed to appreciate an irrigation ditch that was covered by tall weeds. Claimant noticed the ditch at the last moment and attempted to jump the channel. Claimant landed on an extended left leg on the upslope on the far side of the ditch. As he hit the upslope with his left leg, Claimant "popped something" in his left calf and was pitched backward coming down hard on his right foot and falling backward on the

upslope on his back. According to Claimant he experienced immediate pain his right and left leg as well as his back.

4. Claimant testified that his injury occurred between 9:00 and 10:00 AM. He testified that he continued working despite his pain. He was able to complete the balance of the work day but as he was in substantial pain at the end of the day, he reported the injury to the ranch foreman. He then returned home and retired for the evening. Claimant testified that he continued to have considerable pain in his legs (calves/thighs) and low back the following morning. Consequently, he called the foreman asking permission to see a medical provider. Claimant was referred to Rio Grande Hospital Clinic (RGHC) in Del Norte, Colorado.

5. Claimant was evaluated on June 18, 2015 at RGHC. The documentation form this date of visit documents that Claimant "hurt his left calf yesterday chasing a bull." According to the report Claimant "stepped in a hole and stepped down on his leg really hard" resulting in left leg pain extending to the left hip. Claimant reported that he felt like he had stretched "something" too far. Claimant was assessed with a likely calf strain and instructed to ice and rest the leg for the weekend.

6. Claimant testified that he was evaluated initially by a medical student who really did not examine him completely. According to Claimant, after a cursory examination, this student left the exam room to speak with a doctor about the possibility that he had sustained a tendon injury to his left calf. The report from this date of visit does not specifically reference complaints of low back pain or treatment recommendations for the same. According to Claimant he informed both the medical student and the examining physician that he had both leg and back pain only to be told that treatment would be focused on his left calf and that if he continued to have symptoms in other body parts attention to be turned there.

7. Claimant testified that he was disappointed in the level of attention/care he received during his initial examination. Accordingly, he advised his foreman that he wanted to see a different provider. Claimant was referred to San Luis Valley (SLV) Regional Medical Center where he was likely seen by Physician Assistant (PA) Howard Cox. The history of injury as documented in the report from this visit notes that Claimant was "chasing a bull and while running inadvertently fell into a hole, injuring both legs." On examination, Claimant's left calf was significantly swollen, tender and bruised (ecchymotic). Concern was raised for the potential of a deep vein thrombosis (DVT). Consequently, a Doppler study was performed and an MRI scheduled. Claimant's Doppler study was negative; however, the MRI demonstrated a rupture of the plantaris tendon of the left lower leg.

8. On June 25, 2015, Claimant was placed in a full cast boot and advised to elevate and ice his left leg. He was taken off work and referred to physical therapy.

9. In a return visit to SLV Regional Medical Center on July 20, 2015, Claimant reported that his cast boot had interrupted his gait and caused pain in his legs and back. According to the report from this date of visit, Claimant reportedly informed PA Cox that

he had not had back pain before. Claimant disputes this, testifying that the boot made his back pain worse and that once he was able to discontinue the boot his low back pain never went away. Claimant was referred for chiropractic care for treatment of his back and was to continue off work.

10. On August 4, 2015, Dr. Susan Geiger documented complaints of diffuse tenderness of the thoracolumbar region with palpation. Claimant's gait was documented as being "normal." Claimant was to continue chiropractic treatment.

11. On August 13, 2015, Claimant was evaluated by Dr. Kevin Rice who documented Claimant's complaint of persistent low back pain with radiation into both thighs. According to Dr. Rice's report this pain had begun approximately one month earlier. Dr. Rice obtained x-rays which revealed moderate multilevel lumbar spondylosis without instability on flexion/extension views prompting Dr. Rice to request and MRI of the lumbar spine.

12. An MRI of the lumbar spine was completed on August 17, 2015, demonstrating multilevel degenerative changes in the lumbar spine, including: mild to moderate facet arthropathy along with a disc bulge and right foraminal nerve root impingement at L1-2, a disc bulge at L2-3 a diffuse disc bulge at L3-4 with moderate facet arthropathy, and severe left foraminal narrowing along with impingement of the left L3 nerve root. At L4-5 a diffuse disc bulge with central disc protrusion and impingement of the bilateral L4 and L5 nerves roots secondary to severe foraminal narrow along with osteophyte formation was present. Similar findings of severe foraminal narrowing and bilateral nerve root impingement as well as moderate facet arthropathy were noted at the L5-S1 spinal level. The degree of changes noted on MRI lead to a the radiologist reading it as demonstrating impingement of the right L1, left L3, bilateral L4 and bilateral L5 nerve roots.

13. On August 19, 2015, Dr. Rice opined that Claimant's back pain emanated from Claimant's arthritic spine which was exacerbated during his June 17, 2015 work related injury. He planned to proceed with electrodiagnostic (EMG) testing.

14. On August 20, 2015, Dr. Rice forwarded correspondence to Liz Bivens, a senior claims representative for Insurer. In his letter, Dr. Rice would answer Ms Bivens question about the relatedness of Claimant's low back symptoms to his June 17, 2015 industrial injury. In his response, Dr. Rice reiterated that Claimant had lumbar stenosis which was exacerbated by his fall of June 17, 2015. He also opined that Claimant needed to see a neurosurgeon and proceed through electrodiagnostic (EMG) testing. Dr. Rice would go on to perform EMG testing on this date which demonstrated polyradicular changes he felt were related to the degenerative change noted on MRI of the lumbar spine.

15. On August 27, 2015, Claimant returned to Dr. Rice for follow-up. Dr. Rice recommended neurosurgical consultation for Claimant's persistent low back pain complaints.

16. On September 3, 2015, Dr. Robert Davis, an orthopedic surgeon completed the recommended surgical consultation. Dr. Davis noted complaints of low back and bilateral leg pain along with altered sensation throughout the L5-S1 dermatomes.

17. On September 17, 2015, Claimant returned to Dr. Davis who recommended lumbar epidural steroid injections at the two lowermost segments of the lumbar spine and raised consideration for a right L4-5 and L5-S1 hemilaminectomy should injection therapy fail. Claimant would later see Dr. Rice this same day who documented that the complexity of Claimant's low back condition warranted Dr. Davis' involvement to direct Claimant's proposed injections. It was noted that Claimant would proceed with injections though a physiatric partners of Dr. Davis in Durango.

18. Claimant was evaluated by Dr. Patrick McLaughlin in Durango on September 25, 2015. Following examination, Dr. McLaughlin recommended both facet blocks and transforaminal epidural steroid injections to be completed on the same visit given the distance of Claimant's residence from the clinic. Dr. McLaughlin's request for authorization to perform the aforementioned injections prompted Insurer to seek a physician advisor opinion from Dr. Kathy McCranie.

19. On October 1, 2015, Dr. McCranie noted that Claimant's history of injury documented that he stepped into a hole injuring his left calf without other body part involvement. She would go on to note that Claimant did not "fall" into a hole and that his complaints of back pain arose, from review of the records, on July 20, 2015. She opined that the mechanism of injury (MOI) was "inconsistent with the development of spinal stenosis, severe lumbar degenerative disc disease, and/or lumbar radiculopathy." Consequently, while she agreed that Claimant's calf injury could cause muscular pain in the lumbar spine due to an altered gait, the anatomic changes in the lumbar spine were not caused by Claimant's temporary changes in his gait pattern. She recommended treatment for Claimant's spinal stenosis and possible radiculopathy outside the workers' compensation system. Accordingly, the request for authorization to proceed with injection therapy was denied.

20. On October 16, 2015, Dr. Rice wrote a letter to Ms. Bivens. In his letter, Dr. Rice addressed the concern raised by Dr. McCraine regarding the inconsistent history of Claimant's injury as documented in the medical record as a whole. In this regard, Dr. Rice noted that whether Claimant stepped into a hole or fell into one was "inconsequential to the issue of whether Claimant's low back symptoms were related to his June 17, 2015 injury. According to Dr. Rice, the "incident resulted in a rapid deceleration injury which caused a situation which jarred [Claimant's] entire lower body and consequently aggravated pre-existing lumbar spinal stenosis resulting in symptoms that he continues to suffer with on a daily basis." Accordingly, Dr. Rice opined that Claimant's current status was attributable to his June 17, 2015 work injury.

21. Despite Dr. Rice's October 16, 2015 letter, Respondents stood on their denial regarding injections. On December 14, 2015, Claimant returned to Dr. Rice who documented that Claimant's treatment "seems to have come to a stop" and that he had

nothing else to offer expect supportive care. A return appointment was schedule for four weeks.

22. On January 14, 2016, Claimant returned for follow-up. Dr. Rice documented that Claimant's condition was stable and unchanged subjectively. He noted further, that Insurer had denied the requests for injections because the "condition for which care [was] requested [was] not compensable." Finally he noted that Claimant was scheduled for an independent medical examination (IME) and a hearing.

23. Claimant attended an IME with Dr. Eric Ridings at the request of Respondents on January 18, 2016. Dr. Ridings took a history and completed a physical examination. Dr. Ridings would go on to opine that it was "not at all medically probable that an acute injury to the patient's low back on 06-17-15 would not cause any symptoms (or increased symptoms over baseline) until about a month later, but would rather be expected to have presented themselves within the first 24 hours. In so concluding, the ALJ finds that Dr. Ridings does not believe that Claimant reported back pain to any of his providers prior to July 20, 2015. Indeed, Dr. Ridings noted that it was not "reasonable that the [Claimant] would have complained of low back pain to multiple providers prior to 07-20-15 and yet none of them documented [it] in the medical record." While Dr. Ridings agreed with Dr. McCranie that being in a cast boot would likely cause an altered gait, he felt any muscular low back pain caused thereby would be temporary. He also assumed that Claimant was out of the cast boot by July 20, 2015. Consequently, Dr. Ridings opined that it was not reasonable to assume that the cast boot would explain Claimant's low back pain early on in the course of recovery and that persistent back pain after getting out of the cast boot would be related to the degenerative changes noted in the lumbar spine. Rather, Dr. Ridings opined that all of Claimant's low back symptoms and ongoing lower extremity complaints were related to non-work causes.

24. On April 18, 2016, Claimant returned to Dr. Rice for follow-up. During this appointment, Claimant reported that his legs were "getting worse" and that he was tired of "waiting around" to obtain treatment. Thus, Claimant reported to Dr. Rice that he was going to pursue treatment "under his own medical insurance" in Durango. DR. Rice instructed Claimant that he would defer further treatment for his low back/legs to his personal care physician (PCP) and that his case was closed from the perspective of his plantaris rupture without impairment or restriction on his work.

25. Insurer filed a Final Admission of Liability (FAL) based upon Dr. Rice's April 18, 2016 note on May 18, 2016. Claimant objected to the FAL and requested a Division Independent Medical Examination (DIME).

26. The requested DIME was completed by Dr. Miguel Castrejon on August 2, 2016. Dr. Castrejon obtained a history of the injury and a listing of Claimant's present complaints. Claimant reported a history consistent with that he testified to. He also reported during the DIME that he had "constant, sharp stabling pain that extends across [his] lower back and into both legs posteriorly and anteriorly, right worse than left, to below the knee level." Claimant reported that his back pain was worsening with the

passage of time and that it was limiting his ability to stand, walk or sit for prolonged periods of time.

27. Dr. Castrejon reviewed Claimant's medical records noting that the August 20, 2015 EMG study performed by Dr. Rice demonstrated fibrillation potentials in the muscles of the extremities (lower) and positive sharp waves which were indicative of an acute or subacute process which was, in his opinion, "temporally consistent" with an inciting event occurring one to two months previously, i.e. around June 2015. Dr. Castrejon also noted that Claimant likely minimized his low back symptoms focusing instead on the pain in his leg. According to Dr. Castrejon, Claimant was "used to experiencing intermittent low back pain as a natural consequence of the work activities that he performed." These prior symptoms were temporary and did not require ongoing care and did not result in lost work time. Thus, when the low back pain associated with his June 17, 2015 injury did not resolve and began to impair his function, Claimant began to report it.

28. Dr. Castrejon also reviewed Dr. Ridings IME report carefully. He was critical of the opinions reached by Dr. Ridings noting that he (Dr. Ridings) was "quick" to discuss comments raised by Dr. McCranie regarding the possible association between the onset of low back pain and Claimant's altered gait caused by the cast boot. The ALJ infers from Dr. Castrejon's report that he feels that Dr. Ridings' decision to focus on this association was an intentional attempt to place distance between Claimant's date of injury and his reports of low back in an effort to discredit him and confuse the issue of whether Claimant's low back pain was related to the June 17, 2015 incident. Dr. Castrejon also took exception with Dr. Ridings suggestion that the failure of the medical record to document complaints of pain prior to July 20, 2015 meant that there "could not possibly be an association between the mechanics of the injury and the claimant's presentation." Dr. Castrejon explained that Claimant is Hispanic and primarily Spanish speaking and that the individuals who treated him likely provided care through "some form of interpretation". He also noted that persons of Hispanic descent typically respond "differently" during examination and that often their complaints are minimized and seen as signs of malingering. Based upon his review of the medical record and his physical examination Dr. Castrejon found Claimant, in contradistinction to Dr. Ridings, to be very credible and without "pain behaviors" that could not be explained anatomically. Consequently, Dr. Castrejon opined that Claimant, in all medical probability, sustained an injury to his lumbar spine and left lower extremity during the incident occurring June 17, 2015. According to Dr. Castrejon, Claimant has not reached MMI for his work related low back condition and is in need of additional treatment, including a repeat electrodiagnostic study, additional facet injections, potential nerve root blocks and a repeat neurosurgical consultation.

29. Dr. Ridings testified at hearing. Dr. Ridings testified that Claimant's suffers from biomechanical low back pain secondary to degenerative changes in the lumbar spine and that Claimant's current symptoms are related to the natural and probable progression of this pre-existing condition. According to Dr. Ridings, Claimant would have needed low back treatment despite the incident that occurred on June 17, 2015.

30. Dr. Ridings reiterated that Claimant did not report back pain at the time he initially sought treatment and that the delay in reporting is critical to the question of relatedness of his slow back symptoms to his work injury because the MOI in this case would be expected to cause pain immediately.

31. Dr. Ridings testified that he has treated hundreds of Hispanic patients over time and that he recognizes that there are cultural differences in the presentation of Hispanic and non-Hispanic patients. However, Dr. Ridings maintained that the differences in Claimant's presentation were outside the known cultural norms and as such, Dr. Castrejon was clearly wrong in relating Claimant's low back pain to the June 17, 2015 industrial injury. Moreover, because Dr. Castrejon opined that Claimant was not at MMI for a condition that was unrelated to the industrial injury, the opinion that Clamant was not at MMI was also erroneous.

32. Based upon the evidence presented, the ALJ finds the opinions expressed by Dr. Castrejon are generally supported by the content of the medical records presented to him for review. Moreover, the ALJ finds a paucity of evidence to suggest that Dr. Castrejon erred in the completion of his DIME, including his opinions concerning MMI and/or the methodology he employed to reach a total combined whole person impairment rating of 15%. To the contrary, the evidence presented persuades the ALJ that there is a mere difference of opinion between the Dr. Castrejon as the division independent medical examiner and Respondent's retained medical expert, Dr. Ridings. Consequently, Respondents have failed to meet their required legal burden to set Dr. Castrejon's opinion regarding MMI aside.

33. Claimant has proven by a preponderance of the evidence presented that his need for additional treatment concerning the low back is causally related to his June 17, 2015 industrial injury.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law, and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Clam Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

B. In determining credibility, the ALJ should consider the witness' manner and

demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968). As found here, Dr. Castrejon's opinions are supported by the content of the medical records he reviewed. As such, the ALJ finds Dr. Castrejon's opinions credible and convincing. There is also a lack of persuasive evidence to support a conclusion that Dr. Castrejon deviated from the accepted methodology of the AMA Guidelines when he completed his DIME in this case. Indeed, Respondent makes no such assertion. Rather, Respondents contend that the DIME has been overcome based upon inconsistencies in the record regarding the MOI and the opinions Dr. Ridings regarding the pre-existing nature of Claimant's low back condition. As found, the evidence presented fails to persuade the undersigned ALJ that Dr. Castrejon's opinion regarding the relatedness of Claimant's low back condition and his current need for treatment to his June 17, 2015 is "clearly erroneous." The ALJ credits Dr. Castrejon's opinion as more persuasive than the contrary opinions of Dr. Ridings.

Overcoming the DIME

C. A DIME physician's findings of causation, MMI and impairment are binding on the parties unless overcome by "clear and convincing evidence." Section 8-42-107(8)(b)(III), C.R.S.; *Qual-Med v. Industrial Claim Appears Office*, 961 P.2d 590 (Colo. App. 1998); *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinion concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995) In other words, to overcome a DIME physician's opinion regarding MMI, the party challenging the DIME must demonstrate that the physicians determinations in these regards are highly probably incorrect and this evidence must be "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo. App. 2002). *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appears Office, supra.*

D. In resolving the question of whether the DIME physician's opinions have been overcome, the ALJ may consider a variety of factors including whether the DIME physician properly applied the AMA Guides. *See Metro Moving and Storage Co. v Gussert,* 914 P.2d 411 (Colo. App. 1995); *Wackenhut Corp. v. Indus. Claim Appeals Office*, 17 P.3d 2002 (Colo. App. 2000); *Aldabbas v. Ultramar Diamond Shamrock*, W.C.

No. 4-574-397 (ICAO August 18, 2004). The ALJ should also consider all of the DIME physician's written and oral testimony. *Lambert and Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998).

E. MMI is defined, in part, as the "the point in time . . . when no further treatment is reasonably expected to improve the condition. Section 8-40-201(11.5), C.R.S. Here, the weight of the persuasive evidence demonstrates that Claimant's need for additional treatment is directly related to an aggravation of a pre-existing condition resulting from Claimant's attempt to jump an irrigation ditch while in the course and scope of his duties as a ranch hand. Because this treatment presents a reasonable prospect for curing and relieving Claimant of the ongoing effects caused by the aggravation of his pre-existing degenerative disc disease, Claimant is not at MMI. See *Eby v. Wal-Mart Stores, Inc.*, W.C. No. 4-350-176 (February 14, 2001), *aff'd. Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, (Colo. App. No. 01CA0401, February 14, 2002)(*not selected for publication)* (citing *PDM Molding v. Stanberg,* 898 P.2d 542 (Colo. App. 1995*)* and *Colorado AFL-CIO v. Donlon*, 914 P.2d 396 (Colo. App. 1995)]; *Hatch v. John H. Harland Co.,* W.C. No. 4-368-712 (August 11, 2000).

F. After considering the totality of the evidence presented, including the DIME report of Dr. Castrejon and the conflicting report and testimony of Dr. Ridings, the ALJ concludes that Respondent has failed to produce unmistakable evidence establishing that the Dr. Castrejon's determination regarding MMI is highly probably incorrect. Rather, the ALJ concludes that the evidence presented establishes a mere difference of opinion regarding causation between Dr. Castrejon and Dr. Rice and the contrary opinions of Dr. Ridings. A professional difference of opinion does not rise to the level of clear and convincing evidence that is required to overcome Dr. Castrejon's opinion concerning MMI. *See generally, Gonzales v. Browning Farris Indust. of Colorado, W.C. No. 4-350-356 (ICAO March 22, 2000),* Consequently, Respondents have failed to meet their required legal burden to set his MMI determination aside.

Relatedness of Claimant's Need for Low Back Treatment to his June 17, 2015 Work Injury

G. Claimant bears the burden of establishing entitlement to medical treatment. *See Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997); *Sims v. Industrial Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). Once a claimant has established a compensable work injury, he/she is entitled to a general award of medical benefits and respondents are liable to provide all reasonable and necessary medical care to cure and relieve the effects of the work injury. *Section 8-42-101, C.R.S.*; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

H. Regardless, a claimant is only entitled to such benefits as long as the industrial injury is the proximate cause of his/her need for medical treatment. *Merriman v. Indus. Comm'n*, 210 P.2d 448 (Colo. 1949). Moreover, a pre-existing condition "does not disqualify a claimant from receiving workers compensation benefits." *Duncan v. Indus. Claims Appeals Office*, 107 P.3d 999, 1001 (Colo.App. 2004). To the contrary, a

claimant may be compensated if his or her employment "aggravates, accelerates, or "combines with" a pre-existing infirmity or disease "to produce the disability and/or need for treatment for which workers' compensation is sought". *H & H Warehouse v. Vicory*, 805 P.2d 1167, 1169 (Colo.App. 1990). Pain is a typical symptom from the aggravation of a pre-existing condition. Thus, a claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by the employment–related activities and not the underlying pre-existing condition. *See Merriman v. Industrial Commission*, 120 Colo. 400, 210 P.2d 488 (1940). Here, the evidence presented supports a conclusion that Claimant likely had pre-existing degenerative disc disease in his lumbar spine. Indeed the MRI demonstrates substantial changes which were probably long standing in nature. Nonetheless, the record evidence fails to demonstrate that Claimant was actively symptomatic, was in need of or had recently received low back treatment prior to the June 17, 2015 incident or that his pre-existing condition was functionally limiting to him. While Dr. Ridings concludes that Claimant's current symptoms are related to the natural and probable progression of his pre-existing degenerative disc disease, the ALJ is not persuaded. Rather, the ALJ credits the opinion of Dr. Rice to conclude that Claimant's attempt to jump the ditch likely "resulted in a rapid deceleration injury which caused a situation which jarred [Claimant's] entire lower body and consequently aggravated pre-existing lumbar spinal stenosis resulting in symptoms that he continues to suffer with on a daily basis." Consequently, the ALJ concludes that Claimant has established a causal connection between his admitted June 17, 2015 work injury and his need for additional low back treatment. Thus, Respondents are liable to provide payment for such treatment.

ORDER

It is therefore ordered that:

1. Respondents request to set aside the DIME opinion of Dr. Castrejon regarding MMI is denied and dismissed.

2. Respondents shall pay for all reasonable, necessary and related medical expenses to cure and relieve the Claimant from the effects of his low back injury, including but not limited to the treatment recommended by Dr. Rice and Dr. Castrejon.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding

procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Colorado Springs, CO 80906

ISSUES

1. Determination of the Division independent medical evaluation (DIME) physician's true opinion on causality and maximum medical improvement (MMI) of Claimant's left shoulder.

2. Whether the DIME physician's opinion has been overcome.

3. Whether left shoulder surgery is reasonable, necessary, and causally related to the October 7, 2014 work injury.

STIPULATIONS

1. Dr. Hatzidakis is an authorized treating provider.

2. If the left shoulder is found not to be causally related to the October 7, 2014 work injury, Claimant is not be entitled to a permanent partial disability rating for the left shoulder. If the left shoulder is found to be causally related, Claimant will be referred for additional treatment and other issues will be reserved for future determination.

FINDINGS OF FACT

1. Claimant is a 62 year old male employed by Employer as an HVAC technician and has been so employed for approximately 26 years. Claimant services various HVAC units in properties used by Employer. Claimant's job can be physical at times and includes climbing ladders, working on roofs, and carrying tools.

2. On October 7, 2014 Claimant was so employed. Claimant was working on a roof that day when he needed to make a run to pick up parts. Claimant took Employer's truck to get parts.

3. Claimant was stopped at a red light and had the window down and his left arm out the window with his left elbow sitting on the window opening when he was rear-ended by another vehicle.

4. Claimant did not hear the other vehicle coming and the strike from behind was sudden and unexpected. Claimant was thrown backward 8-10 inches and struck his head against the headrest. Claimant's knee hit the steering wheel. Claimant's left arm that had been sitting on the open window remained on the window opening when he went backward. Claimant's car was pushed approximately 8-10 feet. Claimant's head and neck hurt and he saw stars.

5. Claimant pulled off of the road to get out of the way of traffic and got out of his work truck to talk to the other vehicle that had been involved. The other vehicle left the scene of the accident. Claimant called 911 and followed the other vehicle until the other vehicle drove up onto a bicycle path. Claimant then pulled over and waited for the police and ended up stopping approximately 12 blocks from the location of the accident.

6. Claimant's adrenaline was pumping and his heart was racing during this period of time. Claimant called his boss to report what had happened. Claimant met with police officers (both from Denver police department and Lakewood police department) and then drove himself to the doctor.

7. Claimant was evaluated by Clarence Ellis, M.D. at approximately 3:30 p.m. that day. Claimant testified that he wanted to go home, lay down, and get lunch because he had not yet eaten lunch that day. Claimant reported hitting his head with no loss of consciousness, a headache, and a stiff neck. Claimant reported mild spasm of the paralumbar muscles and that he thought his left knee hit the steering wheel and that it was stiff. Dr. Ellis noted mild decreased range of motion of the neck in all planes, mild parathoracic muscle tenderness, and mild paralumbar muscle tenderness. Dr. Ellis noted tenderness to palpation over the dorsal spinous process of C7 to very light palpation and some tenderness to very light palpation throughout the lumbar spine. Dr. Ellis noted that the left knee appeared normal without abrasion, bruising, or swelling. Dr. Ellis assessed motor vehicle accident with cervical and lumbar strains and a minor left knee contusion and advised Claimant to use ice packs. Dr. Ellis prescribed Mobic and Robaxin and opined that Claimant could return to light duty work the next day. *See* Exhibit A.

8. On October 9, 2014 Claimant was evaluated by Dr. Ellis. Claimant reported that generally all of his discomfort was improved but that he continued to have some neck and back stiffness. Dr. Ellis noted that Claimant's neck range of motion was slow with the appearance of discomfort but was much improved. Dr. Ellis noted that cervical spine x-rays showed some generalized degenerative disc disease and no acute abnormalities. Dr. Ellis noted that Claimant was quite concerned still and that it was reasonable for Claimant to see physiatry for another opinion. *See* Exhibit A.

9. On October 16, 2014 Claimant was evaluated by John Sacha, M.D. Claimant reported being rear ended in a motor vehicle accident on October 7 and that he hit his head with no loss of consciousness. Claimant reported acute onset of pain in the neck with radiation to the bilateral periscapular area and left proximal arm, some blurry vision, and some left knee pain that had since resolved. Claimant reported pain localized to the bilateral neck and bilateral periscapular areas and that he got headaches that started in the occipital and radiated into the periorbital area. Claimant reported a prior left clavical fracture with open reduction internal fixation. Dr. Sacha noted no pain behaviors and 0/5 Waddell signs. Dr. Sacha noted that an examination of the neck, shoulders, and upper extremities showed paraspinal spasm and segmental dysfunction in the mid to upper cervical spine. Dr. Sacha noted pain with extension and

extension rotation on the left greater than right side and a positive Hawkins and Neer test on the left side. Dr. Sacha assessed cervical facet syndrome status post motor vehicle accident and left shoulder impingement. Dr. Sacha opined that they were secondary to the motor vehicle accident and recommended a trial of chiropractic and acupuncture as well as some physical therapy for the rotator cuff as well as for strengthening the cervical spine. *See* Exhibit B.

10. On November 3, 2014 Claimant was evaluated by Donald Aspegren, D.C. Claimant reported that he had been rear ended by another vehicle and that he sustained injuries to the cervical region and left shoulder. Claimant reported a prior left clavicle fracture and surgery. Dr. Aspegren examined and treated Claimant and provided the impression of cervical facet syndrome and left shoulder impingement. *See* Exhibit C.

11. On November 6, 2014 Claimant was evaluated by Dr. Sacha. Claimant reported significant improvement with some temporary relief and some lasting relief with his neck pain, headaches, and shoulder pain. Claimant reported much better range of motion of the left shoulder. Dr. Sacha noted negative Hawkins and Neers tests in the left shoulder on exam which he opined was marked improvement. Dr. Sacha noted that Claimant still had some paraspinal spasm, segmental dysfunction, and pain with extension and extension rotation of the cervical spine. Dr. Sacha assessed cervical facet syndrome and left shoulder impingement. *See* Exhibit B.

12. On November 22, 2014 Claimant was evaluated by Dr. Ellis. Claimant reported that his headaches were better but that he still had pretty consistent pressure on the top of his head and felt like he was wearing a lead hat. Claimant reported continued neck pain and being concerned about a cracking and crunching in his neck. Claimant also reported decreased sensation in the total of his left arm. Dr. Ellis assessed neck and shoulder discomfort following a motor vehicle accident and recommended Claimant continued to follow up with Dr. Sacha. *See* Exhibit A.

13. On December 4, 2014 Claimant was evaluated by Dr. Sacha. Claimant reported that he was doing great with chiropractic and acupuncture care and physical therapy and that his neck and shoulders were about 80% improved and headaches were about 50% improved. Claimant reported some ongoing numbness and tingling in the left hand and some diminished range of motion. Dr. Sacha noted on exam paraspinal spasm and segmental dysfunction in the mid to upper cervical spine and a positive thoracic outlet test on the left. Dr. Sacha assessed cervical facet syndrome with headaches, and numbness and tingling in the left upper extremity due to the cervical facet syndrome. Dr. Sacha noted that Claimant was still having symptoms from the cervical spine and recommended an MRI. Dr. Sacha noted that there was no evidence of carpal tunnel syndrome or cervical radiculopathy. *See* Exhibit B.

14. On December 30, 2014 Claimant was evaluated by Dr. Sacha. Claimant reported that he was doing great with neck pain, was not having any scapular pain, and was not having any shoulder pain. Dr. Sacha noted that an MRI showed evidence of

multilevel degenerative disc disease and facet spondylosis from C4-5 and C5-6 into the C6-7 levels with significant canal and foraminal stenosis as multiple levels. Dr. Sacha noted some diminished range of motion in the cervical spine, but that it was markedly improved. Dr. Sacha assessed cervical facet syndrome, left shoulder impingement, and pre-existing cervical spinal stenosis. *See* Exhibit B.

15. On January 22, 2015 Claimant was evaluated by Dr. Sacha. Dr. Sacha noted a flare in symptoms from an exacerbation at work on January 5 when Claimant was working on a boiler valve that blew hot water causing Claimant to jump back and hit a control panel. Claimant reported flared neck pain, left shoulder, and left scapular pain all in the same distribution as previously. Claimant reported his symptoms were significantly elevated. Dr. Sacha noted positive pain with extension and extension rotation to the left. Dr. Sacha provided the impression of cervical facet syndrome, cervical radiculopathy, and history of pre-existing cervical spinal stenosis. Dr. Sacha provided an oral steroid. Dr. Sacha opined that it was likely just an exacerbation of pre-existing problems. *See* Exhibit B.

16. On February 18, 2015 Claimant was evaluated by Dr. Ellis. Dr. Ellis noted that as usual, Claimant had a long list of vague complaints. Dr. Ellis noted that day the complaints centered on weakness and paresthesias in the left arm and vague symptoms of poor concentration and memory difficulties. Dr. Ellis noted that when checking neck range of motion and asking Claimant to flex as far as possible, Claimant scrunched up his nose and didn't move his head even one degree forward. Dr. Ellis assessed continued complaints of neck and shoulder and arm difficulties post what initially seemed like a relatively minor motor vehicle accident. *See* Exhibit A.

17. On March 5, 2015 Claimant was evaluated by Dr. Sacha. Claimant reported that he was doing somewhat better. Dr. Sacha noted some pain with extension and extension rotation of the cervical spine. Dr. Sacha also noted some increased left shoulder pain and opined that it was likely a secondary area of symptoms due to the neck issues. Dr. Sacha noted some positive Hawkins and Neer testing on the left side and performed a left shoulder corticosteroid injection. Dr. Sacha noted that Claimant reported 100% temporary relief of the shoulder pain. Dr. Sacha noted that Claimant was likely approaching an endpoint for treatment. *See* Exhibit B.

18. On March 26, 2015 Claimant was evaluated by Dr. Sacha. Dr. Sacha noted that following the steroid injection in the left shoulder Claimant was markedly better and that the shoulder pain was gone. Claimant reported just having neck pain and intermittent pain down the left arm that was improving nicely. Dr. Sacha noted that Claimant should finish physical therapy, chiropractic, and acupuncture and that prognosis for complete recovery was excellent. *See* Exhibit B.

19. On April 16, 2015 Claimant was evaluated by Dr. Ellis. Claimant reported that since having been placed on medical leave he had noted other areas of his body that had problems including some upper back pain, increased left arm symptoms, increasing headaches, poor focus, and worsening of sleep. Claimant reported feeling

weak and shaky particularly in the left arm and that the neck and left shoulder continued to bother him. Dr. Ellis assessed motor vehicle accident with worsening of all symptoms. *See* Exhibit A.

20. On April 23, 2015 Claimant was evaluated by Dr. Sacha. Claimant reported a slight flare in symptoms for the last two weeks and that he had a marked increase in stress levels after being placed on medical leave on April 4 and that he felt that was creating some difficulties and higher stress levels. Claimant reported neck pain, periscapular pain, and left shoulder pain. Dr. Sacha noted mild pain behaviors. Dr. Sacha noted some pain with Hawkins testing on the left side and some mild paraspinal and segmental dysfunction in the cervical spine. Dr. Sacha provided the impression of cervical facet syndrome and shoulder pain and noted that Claimant would return for MMI and case closure and that a functional capacity evaluation (FCE) may be needed. *See* Exhibit B.

21. On May 7, 2016 Claimant was evaluated by Dr. Sacha. Dr. Sacha opined that Claimant was at MMI. Dr. Sacha noted that Claimant was still doing some maintenance chiropractic and acupuncture treatment that provided some benefit. Dr. Sacha noted that they had ordered an FCE and that Claimant planned on returning to full duty work. Dr. Sacha noted that Claimant had pain behaviors in the severe category. On examination, Dr. Sacha noted positive Hawkins and Neer test on the left shoulder, some paraspinal spasm and pain with extension and extension rotation to the left on the neck, and some diminished range of motion and segmental dysfunction in the mid cervical spine. Dr. Sacha provided the impression of cervical facet syndrome and shoulder impingement. Dr. Sacha noted that work restrictions would be assessed after the FCE and that maintenance care was recommended for medications, gym/pool pass for 6-12 months, a couple of follow ups, and 6-8 visits of chiropractic and acupuncture. Dr. Sacha provided a 9% whole person impairment rating for the cervical spine and a 2% whole person impairment rating for the shoulder and combined them for a total of 11% whole person permanent impairment rating due to the injury. *See* Exhibit B.

22. On May 18, 2016 Claimant was evaluated by Dr. Ellis. Claimant was concerned that Dr. Ellis didn't understand the seriousness of the car accident. Claimant reported some improvement in all of his symptoms. Claimant reported his neck was still stiff and that he was dropping things with his left arm and felt weak in the left arm but was determined to work through it and get back to work. Dr. Ellis noted that Claimant's range of motion was as bad as it ever had been. Dr. Ellis assessed motor vehicle accident with little subjective improvement in symptoms. *See* Exhibit A.

23. On June 11, 2015 Claimant was evaluated by Dr. Sacha. Dr. Sacha noted that the FCE had been completed and that Claimant did quite well, was valid and consistent, and could perform full duty work based on the results of the FCE. Claimant reported some increased pain and stiffness following the FCE, but overall felt pretty good. Dr. Sacha cleared Claimant for full duty work. Dr. Sacha also performed a left shoulder subacromial bursa injection with ultrasound guidance. *See* Exhibit B.

24. On June 24, 2015 Dr. Ellis noted that Claimant had been placed at MMI by Dr. Sasha on May 7, 2015 with a 9% rating for the low back and a 2% rating for the shoulder. Dr. Ellis noted that Claimant had passed the functional capacities evaluation (FCE) with flying colors and that no restrictions were necessary. Dr. Ellis provided maintenance meds, a gym and pool pass for 6-12 months, 2 visits with Dr. Sasha if necessary, and 6-8 chiropractic or acupuncture sessions if needed. Dr. Ellis noted that the case was closed and that Claimant was not expected to need follow up at the clinic. *See* Exhibit A.

25. On July 30, 2015 Claimant was evaluated by Dr. Sacha for a maintenance follow up visit. Claimant reported doing fairly well with full duty work with some pain that was tolerable. Claimant reported that the shoulder injection helped but that he still had left shoulder pain with overhead activities. Claimant reported an issue with dropping objects that Dr. Sacha opined did not correlate with cervical facet syndrome or shoulder impingement. On examination Dr. Sacha noted that there was evidence of a fine motor tremor, worse on the left than the right side but definitely present and extremely fine in nature. Dr. Sacha opined that the new onset of essential tremor was not work related, that the shoulder impingement was work related, and that the cervical facet syndrome was work related. Dr. Sacha planned to get a one-time EMG/nerve conduction study because of the neurological complaints of dropping objects to make sure there was nothing going on that was work related. *See* Exhibit B.

26. Dr. Sacha performed an EMG on September 22, 2015 and concluded that it was a normal study with no evidence of neuropathy, plexopathy, or radiculopathy. *See* Exhibit B.

27. On December 8, 2015 Claimant underwent a Division independent medical evaluation (DIME) performed by Richard Stieg, M.D. Claimant reported that he was rear ended and that his work truck was pushed forward about 10 feet into an intersection. Claimant reported that he was whiplashed hard and struck the back of his head. Claimant reported he was still experiencing 1-4 level pain in the neck with sharp exacerbations that last a few minutes at a time. Claimant also reported intermittent left arm numbness involving all five fingers and residual weakness in his left arm. Dr. Stieg performed a physical examination noting some impingement signs on flexion and abduction over the shoulder and some limitations in shoulder range of motion with pain on abduction/adduction and over the infraspinatus tendon on extension. Dr. Stieg provided the impression of: chronic neck pain in association with cervical spondylosis, symptomatic since the September 7, 2014 motor vehicle accident; and impingement syndrome and myogenic thoracic outlet syndrome of the left shoulder with persistent pain and crepitus, rule out internal derangement of the left shoulder joint. *See* Exhibit E.

28. Dr. Steig opined that Claimant had reached MMI on May 7, 2015. Dr. Steig suggested that during maintenance Claimant undergo an MRI of the left shoulder to rule out further internal derangement and the need for any possible interventional treatment, including surgery. Dr. Steig opined that if an MRI was performed and surgically remedial disease was found in the shoulder, then the date of MMI should be

rescinded and impairment rating recalculated following recovery. Dr. Steig opined that if the MRI showed no internal derangement requiring any other maintenance treatment then the current maintenance treatment program was reasonable and appropriate and should be continued. Dr. Steig provided a permanent partial disability impairment rating of 24% whole person based on a 9% whole person rating of the left upper extremity and a 16% rating of the cervical spine. *See* Exhibit E.

29. On April 21, 2016 Claimant was evaluated by Dr. Sacha. Dr. Sacha noted that a DIME had been performed and that an MRI of the left shoulder had been recommended. Dr. Sacha opined that was reasonable. Dr. Sacha noted on examination pain with Hawkins and Neer testing and some mild pain with extension and extension rotation. Dr. Sacha noted that he still had to comment on diagnosis and causality depending on the findings of the MRI and that he would have to go through all of the medical records before commenting on causality. *See* Exhibit B.

30. On April 25, 2016 Claimant underwent an MRI of his left shoulder interpreted by Craig Stewart, M.D. Dr. Stewart provided the impression of: large full thickness tear involving the majority of supraspinatus tendon with mild tendon retraction and very mild muscular volume loss; acromioclavicular joint osteoarthritis and old postoperative changes of the distal clavicle and coracoclavicular ligaments; mild bony remodeling of the superiorlateral aspect of humeral head, query old Hill-Sachs deformity. *See* Exhibit H.

31. On April 28, 2016 Claimant was evaluated by Dr. Sacha. Dr. Sacha noted that the MRI showed evidence of a full thickness tear at the supraspinatus with retraction, arthritis of the AC joint, and old distal clavicle and coracoacromial surgery. Dr. Sacha also noted that it showed evidence of some degenerative changes at the humeral head consistent with an old Hill-Sachs lesion. Dr. Sacha opined that Claimant had a very unusual looking shoulder consistent with old trauma and that with the history of old shoulder surgery it was difficult to state whether it was related. Since causality was an issue, Dr. Sacha noted that he would obtain all of the medical records including Dr. Ellis' records and the initial reports of injury to assess whether the shoulder should be included in the claim. Dr. Sacha assessed shoulder pain with evidence of a full thickness rotator cuff tear and severe degenerative changes and cervical facet syndrome. Dr. Sacha again noted that it was unclear whether the shoulder should be related as it looked like there was old trauma predating the date of injury and that the mechanism of having a motor vehicle accident and being rear ended should not be sufficient enough to injure the left shoulder. Claimant reported his arm was hanging out the window when he was rear ended and was not on the steering wheel. Dr. Sacha noted he wanted to review the records before commenting and that he could not rule out the possibility of an orthopedic shoulder specialist evaluating for causality as well. *See* Exhibit B.

32. On August 2, 2016 Dr. Sacha issued a special report noting that he had received the medical records including the initial report of injury and intake forms. Dr. Sacha noted that there was no evidence of shoulder complaints at the initial evaluation.

Dr. Sacha also noted that the MRI showed evidence of AC arthritis which would cause a chronic tear, a full thickness tear with loss of muscular volume consistent with a chronic tear, and an old Hills-Sachs deformity consistent with prior dislocation. Dr. Sacha opined that none of those would be related to the claim and opined that Claimants' shoulder was not work related from a causality standpoint and that no further care should be done under workers' compensation. Dr. Sacha believed that no one who had seen Claimant including any independent medical examiner had seen all of the initial questionnaire and pain intake forms when assessing causality. *See* Exhibit B.

33. On October 18, 2016 Dr. Stieg performed a follow up independent medical evaluation. Dr. Steig noted that Claimant had a follow up MRI of his left shoulder like he had recommended during the initial DIME. Dr. Stieg noted that the follow up MRI was abnormal but that Dr. Sacha did not recommend specific treatment allegedly because Dr. Sacha felt Claimant's problems were due to an old 1985 injury to the left clavicle. Claimant reported sharply rejecting Dr. Sacha's opinion and that his shoulder was asymptomatic for almost 30 years before the current claim. Dr. Stieg reviewed additional medical records and performed a physical examination. Dr. Stieg provided the impression of chronic neck pain with cervical spondylosis more symptomatic since his previous examination in December of 2015 and left shoulder impingement syndrome with persistent pain and crepitus and MRI evidence of considerable joint degenerative disease and history of old left clavicular fracture. Dr. Stieg opined that he concurred with Dr. Sacha that it was difficult to attribute all of the MRI changes to the most recent accident in October of 2014, however, Dr. Stieg found that to be a moot point and opined that since Claimant was asymptomatic in the left shoulder prior to the accident on October 7, 2014 the chronic pain and loss of range of motion could not be attributed to anything but the accident. *See* Exhibits 1, E

34. Dr. Steig again concurred that Claimant reached MMI on May 7, 2015. For maintenance treatment, Dr. Steig recommended that Claimant be sent back to Dr. Messenbaugh who did a medical file review but never examined Claimant. Dr. Steig opined that Claimant should have the benefit of orthopedic treatment to the left shoulder if Dr. Messenbaugh believed Claimant had a claims related injury, as he did. Dr. Steig provided a 25% whole person impairment rating and noted that Claimant's left shoulder impairment was at 5% whole person compared to 9% in his prior report and that the spinal impairment was now at 21% instead of 16% from 2015. *See* Exhibits 1, E.

35. On November 30, 2016 Robert Messenbaugh, M.D. performed a medical records review. Dr. Messenbaugh opined that the pathology noted on Claimant's radiographs/MRI was degenerative in nature, predated Claimant's October 7, 2014 accident, and was not caused by the October 7, 2014 accident. Dr. Messenbaugh agreed that Claimant's shoulder condition was degenerative. *See* Exhibit F.

36. On December 15, 2016 Claimant was evaluated by Armodios Hatzidakis, M.D. Claimant reported that he was rear ended by another car on October 7, 2014 and that his left arm was on the console of the window in an abducted position with the window down when he was struck. Claimant reported continued pain and difficulties

with his range of motion and that his shoulder was 100% of normal before the injury. Claimant reported a prior clavicle open reduction in 1985. Dr. Hatzidakis noted that the MRI of the left shoulder from April of 2016 showed a full thickness anterosuperior rotator cuff tear with lateral down slope to the acromion, noted AC joint arthrosis, and degeneration. Dr. Hatzidakis assessed left shoulder work related strain with resultant full thickness anterosuperior rotator cuff tear, long head of biceps strain, and continued pain with noted acromioclavicular joint arthrosis. Dr. Hatzidakis discussed left shoulder arthroscopic rotator cuff repair with subacromial decompression surgery and noted that Claimant wanted to proceed with surgery since conservative measures over the past several years had failed. *See* Exhibits 2, G.

37. On December 15, 2016 Dr. Hatzidakis submitted a letter to Respondent's adjuster. The letter noted that Claimant had no symptoms in the left shoulder before the accident and that very soon after the accident, Claimant had significant pain and weakness in the shoulder. Dr. Hatzidakis opined that Claimant's currently left shoulder symptomatology was secondary to the motor vehicle accident and noted that prior to the accident Claimant had no symptoms whatsoever referable to the left shoulder and that Claimant now had significant weakness and dysfunction of the left shoulder with significant rotator cuff tear that explained the weakness. Dr. Hatzidakis opined that there was not significant fatty infiltration of Claimant's rotator cuff on the MRI that would indicate that Claimant had a longstanding chronic extensive rotator cuff tear. Dr. Hatzidakis opined that if Claimant quit smoking, Claimant would be a reasonable candidate to proceed with arthroscopic rotator cuff repair and opined that there was a good chance Claimant would have significant improvement with the left shoulder symptomatology. Dr. Hatzidakis requested authorization for surgery. *See* Exhibits 2, G.

38. On January 24, 2017 Claimant was evaluated by Dr. Sacha. Claimant provided records regarding left shoulder complaints documented in the past and was somewhat irritated that the left shoulder was not work related. Dr. Sacha noted moderate to severe pain behaviors. On examination, Claimant had some paraspinal spasms and pain with extension and extension rotation bilaterally. The shoulder showed Hawkin's and Neer testing positive bilaterally. Dr. Sacha assessed shoulder impingement bilaterally and neck pain and noted that he would review the records Claimant brought in and issue a special report. *See* Exhibit B.

39. On January 30, 2017 Dr. Sacha issued a special report. Dr. Sacha noted he received the medical records including the request for surgery from Dr. Hatzidakis in detail. Dr. Sacha noted that one month after the onset of injury, Claimant had left shoulder complaints with chiropractor Dr. Aspegren but that Claimant also had full range of motion of the left shoulder that continued in follow-ups. Dr. Sacha also noted a full thickness rotator cuff tear, a lateral downslope of the acromion, AC arthrosis, and degeneration. Dr. Sacha noted that although Claimant denied any previous left shoulder injury that Claimant clearly had trauma to the shoulders in the past including Hill-Sachs deformity as well as clavicular fracture and subacromial surgery all consistent with prior trauma. Dr. Sacha noted that Dr. Hatzidakis had stated that Claimant was asymptomatic with the shoulder before the accident, then symptomatic after and

therefore it should be related to the motor vehicle accident but that Dr. Hatzidakis did not give specifics. Dr. Sacha noted that after reviewing everything, what he could tell from Claimant was: 1. Claimant did not have any complaints of the shoulder pain for approximately one month after the injury. Dr. Sacha opined that with a post-traumatic full thickness rotator cuff tear, Claimant would have had immediate pain and symptomatologic and very little movement. Dr. Sacha noted that instead, Claimant had full range of motion of the shoulder immediately after the injury. 2. Claimant had evidence of what appeared to be old trauma to the shoulder and that it was very likely that it was a chronic pre-existing rotator cuff tear not an acute injury based on Claimant's lack of reporting it within the first month, lack of findings on physical exam, and evidence of pre-existing trauma. *See* Exhibit B.

40. Dr. Messenbaugh testified at hearing consistent with his medical records review report. Dr. Messenbaugh opined that acute injury to the rotator cuff from trauma was exquisitely rare. He opined that a dislocation or fracture of the shoulder could cause an acute rotator cuff tear and that it would be a significant injury with severe pain that was immediately recognizable. Dr. Messenbaugh opined that the medical records were not consistent with an acute rotator cuff tear and that there was no mechanism of injury to support an acute tear and that there was no initially reported acute and severe shoulder pain. He opined that Claimant had not sustained a shoulder dislocation, fracture, and that Claimant did not report any shoulder pain to Dr. Ellis at the first two visits. Dr. Messenbaugh opined that an acute rotator cuff tear would be so painful that it would have overshadowed Claimant's minor cervical sprain and knee contusion complaints. Dr. Messenbaugh agreed that Claimant has a rotator cuff that requires surgery but opined that it was not related to the October 7, 2014 motor vehicle accident.

41. Dr. Messenbaugh noted that Claimant has a downsloping acromion and that impingement is commonly seen where the overhanging and downsloping acromion narrows the space for the rotator cuff to pass through, rubs and frays the rotator cuff over time, and can cause a degenerative tear due to the wearing and impingement.

42. Claimant testified credibly at hearing. Claimant testified consistent with the medical records that at his first visit to Dr. Sacha, 9 days after the accident a left shoulder diagnosis was made and that he was referred for treatment that included acupuncture in his left arm and shoulder and physical therapy for his left arm and shoulder. Claimant testified credibly that he had several fractures as a child and a surgery in 1985 on his left collarbone where a plate was put in and that he had no problems following recovery from that surgery 30+ years ago. Claimant had no problems with his left shoulder or left collarbone before the motor vehicle accident, no treatment in 30+ years, and no limitations in performing his normal job duties. At the initial appointments the day of the accident and two days later, Claimant was focused on his head and neck.

CONCLUSIONS OF LAW

Generally
