The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

DIME Opinion

When a DIME physician issues conflicting or ambiguous opinions concerning MMI, the ALJ may resolve the inconsistency as a matter of fact so as to determine the DIME physician's true opinion. *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002); *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Causation of left shoulder:

As found above, Dr. Steig opined in his initial DIME report and in his supplemental DIME report that Claimant's left shoulder condition was causally related to October 7, 2014 motor vehicle accident. Although Dr. Steig noted in the follow up DIME that he did not believe that all of the changes shown on Claimant's left shoulder MRI were due to the motor vehicle accident, he noted that Claimant was asymptomatic in the left shoulder prior to the motor vehicle accident and opined that Claimant's chronic pain and loss of range of motion in the left shoulder could not be attributed to anything but the motor vehicle accident. In the follow up DIME report, Dr. Steig also noted that he found the opinion of Dr. Sacha that the left shoulder was not work related to be inexplicable.

Dr. Steig opined that Claimant should have the benefit of orthopedic treatment to the left shoulder if Dr. Messenbaugh believed Claimant had a claim related injury, like he did. Dr. Steig did not leave open the question of causation, rather, he opined in both DIME reports that the left shoulder was causally related to the work injury and motor vehicle accident. Dr. Steig also did not defer to Dr. Messenbaugh for a causation determination, but rather noted that Claimant should have treatment if the orthopedic doctor agreed with him on causation. Dr. Steig did not indicate what should be done if an orthopedic doctor disagreed with him on causation of the left shoulder. As found above, after the follow up DIME two orthopedic surgeons had different opinions about Claimant's left shoulder. Dr. Messenbaugh performed a medical records review and opined that the pathology on the MRI of the left shoulder was degenerative in nature and was not caused by the October 7, 2014 motor vehicle accident. Dr. Hatzidakis evaluated Claimant and opined that the left shoulder symptomatology was secondary to the motor vehicle accident and noted that the MRI had shown that there was not significant fatty infiltration for the rotator cuff indicating that Claimant did not have a longstanding chronic extensive rotator cuff tear. The ALJ concludes that the DIME physician's true opinion is that the left shoulder is causally related to the October 7, 2014 motor vehicle accident.

MMI date:

Dr. Steig's opinion on MMI is conflicting. In the initial DIME report, in addition to his opinion that the left shoulder was causally related to the motor vehicle accident, Dr. Steig opined that Claimant had reached MMI on May 7, 2015. However, in that same report Dr. Steig noted that Claimant needed an MRI of the left shoulder to rule out further internal derangement and to rule out the possible need for any interventional treatment including surgery. Dr. Steig opined that if the MRI showed surgically remedial disease in Claimant's left shoulder, then the date of MMI should be rescinded. As found above, an MRI was performed on April 25, 2016 and surgically remedial disease was found. Claimant was sent back to Dr. Steig for a follow up DIME after the MRI was performed. Dr. Steig noted that in the initial DIME report he had some disagreement with Dr. Sacha about maintenance treatment and had suggested an MRI of the left shoulder to rule out further internal derangement and need for more definitive surgical and/or non surgical treatment and that if that were done the date of MMI should be rescinded and an impairment rating recalculated following recovery. Dr. Steig noted that Claimant did have a follow up MRI that was abnormal but that Dr. Sacha did not

recommend specific treatment because of Dr. Sacha's opinion that Claimant's injury was due to an old injury, which Dr. Steig found to be inexplicable. Despite noting in the follow up DIME report that the date of MMI should be rescinded and that the impairment rating should be recalculated following recovery if the MRI showed the need for more definitive surgical and/or non surgical treatment to the left shoulder, Dr. Steig again listed the date of MMI as May 7, 2015. Dr. Steig also recommended that Claimant be sent back to Dr. Messenbaugh noting that Dr. Messenbaugh had never had the opportunity to examine Claimant. The ALJ concludes that Dr. Steig issued conflicting opinions about MMI with both opinions that the May 7, 2015 MMI date should be rescinded and opinions that May 7, 2015 remained the MMI date. After review of all the evidence, the ALJ concludes that the true opinion of the DIME physician is that the May 7, 2015 MMI date should be rescinded and that Claimant is not at MMI due to Claimant's causally related left shoulder condition that requires further treatment and evaluation.

Overcoming DIME on MMI

The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, supra*. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician's finding concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). The question of whether the party challenging the DIME physician's finding regarding MMI has overcome the finding by clear and convincing evidence is one of fact for the ALJ.

MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." *See* § 8-40-201(11.5), C.R.S. Under the statute MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office,* 942 P.2d 1358 (Colo. App. 1997). A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of the claimant's medical condition are causally related to the industrial injury. *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007). A finding that the claimant needs additional medical treatment (including surgery) to improve his injury-related medical condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002); *Reynolds v. Industrial Claim Appeals Office,* 794 P.2d 1090 (Colo. App. 1990); *Sotelo v. National By-Products, Inc.,* W.C. No. 4-320-606 (I.C.A.O. March 2, 2000). Similarly, a finding that additional diagnostic procedures offer a reasonable prospect for defining the claimant's condition or suggesting further treatment is inconsistent with a finding of MMI. *Abeyta v. WW Construction Management,* W.C. No. 4-356-512 (ICAO May 20, 2004); *Hatch v. John H. Garland Co.,* W.C. No. 4-638-712 (ICAO August 11, 2000). Thus, a DIME physician's

findings concerning the diagnosis of a medical condition, the cause of that condition, and the need for specific treatments or diagnostic procedures to evaluate the condition are inherent elements of determining MMI. Therefore, the DIME physician's opinions on these issues are binding unless overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002).

As found above, Claimant's left shoulder is causally related to his October 7, 2014 work related motor vehicle accident. There is further treatment reasonably expected to improve Claimant's left shoulder condition. The opinions of DIME physician Dr. Steig that Claimant is not at MMI and that the left shoulder is causally related is found credible, persuasive, and overall supported by the medical records and the credible testimony of Claimant. Dr. Hatzidakis agreed with Dr. Steig that the left shoulder was related and has recommended surgery to improve Claimant's left shoulder condition and symptomatology. The Respondents have failed to overcome the opinion of Dr. Steig. The opinions of Dr. Sacha are not found persuasive. Nine days after the motor vehicle accident Dr. Sacha evaluated Claimant and opined that Claimant's left shoulder impingement was related to the motor vehicle accident and he sent Claimant for physical therapy for the left rotator cuff. Dr. Sacha also initially rated Claimant's left shoulder as being related to the work injury when he placed Claimant at MMI. Dr. Sacha later issued a report noting that Claimant had denied any previous left shoulder injury and opined that Claimant's shoulder was a chronic, pre-existing rotator cuff tear, not an acute injury based on Claimant's lack of reporting within the first month. However, the records establish that Claimant consistently reported a pre-existing left clavicle surgery to his providers and that there was reporting within 9 days to Dr. Sacha who immediately referred Claimant for physical therapy to the left rotator cuff and assessed left shoulder impingement. Dr. Sacha, in his review, appears to have missed his own medical records showing that Claimant reported the left shoulder well before one month and Dr. Sacha's opinion is not found persuasive. Further, the opinion of Dr. Messenbaugh appears, at most, to be a difference of opinion from the DIME physician Dr. Steig and from Dr. Hatzidakis. The ALJ finds the opinions of Dr. Steig and Dr. Hatzidakis to be more credible and persuasive and overall consistent with the medical records and credible testimony of Claimant. Respondents have failed to meet their burden. Claimant is not at MMI for his related left shoulder condition.

Medical Benefits

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. *See* § 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

As found above, the providers agree that left shoulder surgery is reasonable and necessary for Claimant. There was a disagreement on whether or not the surgery recommended was causally related, but the experts agree the procedure is reasonable and necessary. As the ALJ finds the left shoulder to be causally related to the October 7, 2014 motor vehicle accident and work injury, Claimant has established that the

recommended surgical treatment is reasonable, necessary, and causally related to his work injury and that he is entitled to the surgery.

ORDER

1. The DIME physician's opinion is that Claimant is that Claimant's left shoulder is casually related to the October 7, 2014 work injury and that Claimant is not at MMI for the left shoulder.

2. Respondents have failed to overcome the DIME opinion.

3. Claimant has established that the recommended left shoulder surgery is reasonable, necessary, and related to his October 7, 2014 work injury.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Denver, CO 80203

ISSUE

Whether Claimant has proven by a preponderance of the evidence that she is entitled to receive reasonable, necessary and causally related medical maintenance benefits designed to relieve the effects of her right upper extremity symptoms or prevent further deterioration of her condition pursuant to *Grover v. Industrial Comm'n.,* 759 P.2d 705 (Colo. 1988).

FINDINGS OF FACT

1. On July 28, 2008 Claimant sustained an admitted left ankle injury during the course and scope of her employment with Employer. She was diagnosed with a left ankle sprain/strain. After continued discomfort, Claimant underwent left ankle surgery on July 30, 2010.

2. Claimant subsequently experienced increased pain and decreased function in her left ankle. She thus received physical therapy, acupuncture and injections. On March 7, 2012 Authorized Treating Physician (ATP) Kathy McCranie, M.D. placed Claimant at Maximum Medical Improvement (MMI) with diagnoses of Chronic Regional Pain Syndrome (CRPS) in her left lower extremity and sympathetically mediated pain in her right ring finger. Dr. McCranie assigned Claimant a 15% whole person impairment rating and recommended medical maintenance benefits.

3. On May 23, 2012 Respondent filed a Final Admission of Liability (FAL). The FAL was consistent with Dr. McCranie's MMI and impairment ratings. The FAL also recognized that Claimant was entitled to receive reasonable, necessary and related medical maintenance benefits.

4. On February 20, 2013 Claimant returned to Dr. McCranie for an examination. Dr. McCranie remarked that additional testing had revealed no evidence of CRPS. She specifically noted that "[w]ith a negative bone scan there does not appear to be objective evidence of spreading of her previous history of CRPS and in fact there is no ongoing evidence of this condition in her ankle on her recent bone scan."

5. On November 4, 2014 Claimant visited George Schakaraschwili, M.D. for an examination. Autonomic testing revealed a high probability of CRPS in the left lower extremity but a low probability of CRPS in the right upper extremity. Dr. Schakaraschwili summarized that there was "no objective laboratory evidence and no objective clinical evidence for the spread of [CRPS] to the right upper extremity."

6. Claimant's primary ATP changed from Dr. McCranie to Scott J. Primack, D.O. On August 3, 2016 Dr. Primack determined that Claimant did not have CRPS in her right upper extremity. He also noted that, if Claimant had sympathetically mediated pain, it was not related to her work activities for Employer. Dr. Primack noted that Claimant had CRPS of her left lower extremity that was not spreading.

7. On August 9, 2016 Claimant underwent another bone scan that did not reveal any evidence of CRPS in her right hand. On August 31, 2016 EMG testing reflected electrophysiologic evidence of mild right Carpal Tunnel Syndrome (CTS) in Claimant's right wrist. Dr. Primack remarked that the CTS was not related to Claimant's admitted left ankle injury.

8. On September 27, 2016 Claimant visited Craig A. Davis, M.D. for a second opinion evaluation. Dr. Davis diagnosed Claimant with possible CTS in her right wrist. He administered a steroid injection for both diagnostic and therapeutic purposes.

9. On October 5, 2016 Claimant returned to Dr. Davis for an evaluation. She reported no improvement from the steroid injections. Dr. Davis concluded that, because Claimant did not respond to the steroid injections, she likely did not have "clinically significant [CTS]." He commented that Claimant might be experiencing "some element of CRPS in the right hand, particularly given the hypersensitivity in her ring finger."

10. On November 28, 2016 Claimant returned to Dr. Primack for an evaluation. She attributed her right hand symptoms to using a cane because of her left ankle condition. Claimant also sought a second opinion. Dr. Primack denied Claimant's request for a second opinion because her right upper extremity symptoms were not work-related. He explained that, because Claimant was female and over 40, she was susceptible to the development of CTS.

11. On January 16, 2017 Claimant visited Giancarlo Barolat, M.D. for an evaluation. Dr. Barolat recounted that Claimant had initially visited his office in 2010 with symptoms in her left lower extremity that were consistent with CRPS. Claimant reported that she had experienced a burning and "shocking" sensation in her right hand area over the previous 5-6 years. Dr. Barolat noted that Claimant continued to suffer CRPS in her left foot with "similar symptomatology in her right hand." He remarked that Claimant "clearly has a neuropathic pain condition, which has some of the features consistent with CRPS" in her right wrist. Dr. Barolat explained that Claimant's right wrist symptoms were likely a "permanent neuropathic pain condition" and did not constitute CTS because the pain was inconsistent with the typical distribution for CTS.

12. On February 27, 2017 Claimant underwent an independent medical examination with Henry J. Roth, M.D. Dr. Roth reviewed Claimant's medical records and conducted a physical examination. He determined that Claimant's right upper extremity symptoms were not related to her July 28, 2008 left ankle injury. Dr. Roth explained that Claimant did not have CRPS in her right upper extremity and her symptoms did not reflect a spreading of CRPS from her left ankle. He also agreed with Dr. Primack that Claimant did not have sympathetically mediated pain in her right ring

finger. Dr. Roth did not recommend any additional medical maintenance evaluation, diagnosis or treatment related to Claimant's right upper extremity.

13. Dr. Primack testified at the hearing in this matter. He maintained that Claimant did not have CRPS in her right upper extremity and her right wrist CTS was not related to her work activities for Employer. Dr. Primack recounted that objective testing had consistently revealed that CRPS had not spread to Claimant's right upper extremity. Initial testing for right wrist CTS presented borderline results. Additional testing did not reveal a motor component, but only a sensory component of Claimant's right wrist CTS. Dr. Primack explained that, because Claimant's CTS lacked a motor component, it was unlikely that it was caused by her use of a cane or related to her July 28, 2008 admitted left ankle injury. Dr. Primack summarized that the cause of Claimant's right wrist CTS was likely idiopathic in nature.

14. Claimant has failed to prove that it is more probably true than not that she is entitled to receive reasonable, necessary and related medical maintenance benefits designed to relieve the effects of her right upper extremity symptoms or prevent further deterioration of her condition. She has failed to demonstrate a causal connection between her July 28, 2008 admitted left ankle injury and right upper extremity condition. Claimant initially suffered a left ankle sprain/strain and underwent surgical repair on July 30, 2010. Objective testing subsequently revealed the development of CRPS in Claimant's left lower extremity. Claimant reached MMI on March 7, 2012.

15. Claimant subsequently reported right upper extremity pain and discomfort. Additional testing revealed that Claimant continued to suffer from CRPS in her left lower extremity but the condition had not spread to her right upper extremity. However, Dr. Davis speculated that Claimant might have "some element of CRPS" in her right hand. Moreover, Dr. Barolat remarked that Claimant exhibited "a neuropathic pain condition which has some of the features consistent with CRPS" in her right wrist. He noted that Claimant's right wrist symptoms were unlikely to constitute CTS because the pain was not consistent with the typical symptom distribution for CTS.

16. Although the opinions of Drs. Davis and Barolat suggest that Claimant might have CRPS in her right upper extremity, the persuasive medical records reflect that Claimant does not have CRPS in her right upper extremity but suffers from CTS that is not causally related to her July 28, 2008 admitted left ankle injury. On August 9, 2016 a bone scan did not reveal any evidence of CRPS in Claimant's right upper extremity. However, subsequent EMG testing revealed electrophysiologic evidence of mild right CTS. Dr. Roth determined that Claimant's right upper extremity symptoms were not related to her July 28, 2008 left ankle injury. He emphasized that Claimant did not have CRPS in her right upper extremity and her symptoms did not reflect a spreading of CRPS from her left ankle. Furthermore, Dr. Primack persuasively explained that Claimant did not have CRPS in her right upper extremity and her right wrist CTS was not related to her work activities for Employer. He recounted that objective testing consistently revealed that CRPS had not spread to Claimant's right upper extremity. Instead, Claimant suffered from right wrist CTS that lacked a motor component, but only involved a sensory component. Dr. Primack explained that,

because Claimant's CTS lacked a motor component, it was unlikely that it was caused by her use of a cane or related to her July 28, 2008 admitted left ankle injury. Dr. Primack summarized that the cause of Claimant's right wrist CTS was likely idiopathic in nature.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. To prove entitlement to medical maintenance benefits, a claimant must present substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve the effects of the industrial injury or prevent further deterioration of his condition. *Grover v. Industrial Comm'n.,* 759 P.2d 705, 710-13 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609, 611 (Colo. App. 1995). Once a claimant establishes the probable need for future medical treatment she "is entitled to a general award of future medical benefits, subject to the employer's right to contest compensability, reasonableness, or necessity." *Hanna v. Print Expediters, Inc.*, 77 P.3d 863, 866 (Colo. App. 2003); *see Karathanasis v. Chilis Grill & Bar,* W.C. No. 4-461-989 (ICAP, Aug. 8, 2003). Whether a claimant has presented substantial evidence justifying an award of *Grover* medical benefits is one of fact for determination by the Judge. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 919 P.2d 701, 704 (Colo. App. 1999).

5. As found, Claimant has failed to prove by a preponderance of the evidence that she is entitled to receive reasonable, necessary and related medical maintenance benefits designed to relieve the effects of her right upper extremity symptoms or prevent further deterioration of her condition. She has failed to demonstrate a causal connection between her July 28, 2008 admitted left ankle injury and right upper extremity condition. Claimant initially suffered a left ankle sprain/strain and underwent surgical repair on July 30, 2010. Objective testing subsequently revealed the development of CRPS in Claimant's left lower extremity. Claimant reached MMI on March 7, 2012.

6. As found, Claimant subsequently reported right upper extremity pain and discomfort. Additional testing revealed that Claimant continued to suffer from CRPS in her left lower extremity but the condition had not spread to her right upper extremity. However, Dr. Davis speculated that Claimant might have "some element of CRPS" in her right hand. Moreover, Dr. Barolat remarked that Claimant exhibited "a neuropathic pain condition which has some of the features consistent with CRPS" in her right wrist. He noted that Claimant's right wrist symptoms were unlikely to constitute CTS because the pain was not consistent with the typical symptom distribution for CTS.

7. As found, although the opinions of Drs. Davis and Barolat suggest that Claimant might have CRPS in her right upper extremity, the persuasive medical records reflect that Claimant does not have CRPS in her right upper extremity but suffers from CTS that is not causally related to her July 28, 2008 admitted left ankle injury. On August 9, 2016 a bone scan did not reveal any evidence of CRPS in Claimant's right upper extremity. However, subsequent EMG testing revealed electrophysiologic evidence of mild right CTS. Dr. Roth determined that Claimant's right upper extremity symptoms were not related to her July 28, 2008 left ankle injury. He emphasized that Claimant did not have CRPS in her right upper extremity and her symptoms did not reflect a spreading of CRPS from her left ankle. Furthermore, Dr. Primack persuasively explained that Claimant did not have CRPS in her right upper extremity and her right wrist CTS was not related to her work activities for Employer. He recounted that objective testing consistently revealed that CRPS had not spread to Claimant's right upper extremity. Instead, Claimant suffered from right wrist CTS that lacked a motor component, but only involved a sensory component. Dr. Primack explained that, because Claimant's CTS lacked a motor component, it was unlikely that it was caused by her use of a cane or related to her July 28, 2008 admitted left ankle injury. Dr. Primack summarized that the cause of Claimant's right wrist CTS was likely idiopathic in nature.

ORDER

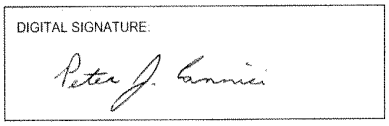
Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request for medical maintenance benefits for her right upper extremity is denied and dismissed.

2. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: April 14, 2017.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Have Respondents overcome the DIME's determination that Claimant is not at MMI?

2. If Claimant is not at MMI, was the treatment she received after being released by Concentra on May 16, 2016 reasonable, necessary, related and authorized?

3. Is Claimant entitled to TPD benefits from March 16, 2016 through May 15, 2016?

4. Is Claimant entitled to TTD benefits commencing May 16, 2016?

FINDINGS OF FACT

1. Claimant sustained an admitted occupational disease involving her bilateral upper extremities on February 3, 2016. Claimant worked as a sterile packager for Employer since 2006. She worked in several departments at Employer's facility, including sterile packaging, boxing, shipping and preparing, and labeling. Typically, the employees rotate through various work areas to minimize their cumulative exposure to any particular activity.

2. Before her date of injury, Claimant was on maternity leave from April through September 2015. Her baby was born in June 2015. When Claimant returned from maternity leave, she was assigned to the boxing area. Claimant remained in the boxing area for several months and did not rotate to other tasks. She worked up to 12 hours per day, 6-7 days per week.

3. Claimant worked an average of 58.11 hours per week from November 1, 2015 through January 31, 2016, including five weeks of more than 74 hours. Her highest number of hours worked was 83.25 hours during the week ending December 6.

4. On February 2, 2016, Claimant went to her primary care physician, Dr. Melissa Devalon, with complaints of pain, numbness, and tingling in her hands. She said the symptoms had been present for approximately two months. She was having difficulty gripping and twisting objects. Dr. Devalon diagnosed tendinitis, which she opined "is clearly related to her work with a repetitive strain injury." She advised Claimant to report a work-related injury.

5. Claimant reported the injury to Employer and was referred to Concentra for authorized treatment. At her initial visit on February 3, 2016, she saw Dr. John Ronning. Claimant described the gradual development of bilateral hand and wrist pain associated with her work. She told Dr. Ronning that her job involves "a lot of repetitive

lifting and hand work." She reported numbness at night. Dr. Ronning diagnosed bilateral de Quervain's tenosynovitis and osteoarthritis. He prescribed a Medrol Dosepak and referred Claimant for physical therapy. Dr. Ronning gave Claimant work restrictions of maximum four-hour shifts, lifting up to 20 pounds, occasional gripping and pinching, and advised her to wear bilateral wrist splints "frequently."

6. Claimant returned to Concentra on February 10 and saw PA-C Shaun Lynch. Her pain was worsening despite therapy and splints. PA-C Lynch opined that Claimant "appears to have tendinitis, likely repetitive and cumulative from her job." He referred Claimant to Dr. Timothy Hart, a hand specialist.

7. Claimant saw Dr. Hart on February 18, 2016, and reported severe bilateral radial-sided wrist pain with swelling. Dr. Hart diagnosed de Quervain's disease and administered bilateral cortisone injections. Dr. Hart wanted to see Claimant again in a few weeks and opined, "if she is not substantially improved, then I think we need to rapidly move toward surgical resolution for her severe bilateral wrist de Quervain's." Dr. Hart further opined "I do think that her work activities are material contributory causative factors in the onset and progression of her severe bilateral de Quervain's."

8. Claimant started seeing Dr. Nicholas Kurz at Concentra on February 18, 2016. She described pain in both arms radiating up to her shoulders. Dr. Kurz also noted neck pain. Claimant's wrist pain had increased following the injections from Dr. Hart earlier that morning. Dr. Kurz took Claimant off work due to the severity of her symptoms.

9. Claimant followed up with Dr. Kurz on March 3, 2016, and reported that her hands were "no better" following the injections. She reported, "she cannot move her hands or grip at all functional [sic]." Dr. Kurz noted Claimant was a difficult historian "due to the language barrier." Dr. Kurz referred Claimant for an EMG, x-rays, and blood work to "clarify" her diagnosis. He released Claimant to work with restrictions of "sedentary/desk type of work only," lifting no more than 5 pounds occasionally, and advised Claimant to wear her splints "continually."

10. Dr. Timothy Sandell performed bilateral EMG/NCV testing on March 9, 2016. Claimant described "pins and needles" and pain in her bilateral wrists, radiating to the elbows. Her symptoms were "worse with activity." The electrodiagnostic testing showed mild right carpal tunnel syndrome and borderline-to-mild left carpal tunnel syndrome. Dr. Sandell opined "it is my suspicion that she is experiencing a combination of nerve entrapment along with some of the musculoskeletal issues that are being addressed by Dr. Hart."

11. Dr. Kurz reviewed the electrodiagnostic test results with Claimant on March 17, 2016. He felt her clinical presentation was consistent with de Quervain's, but not carpal tunnel syndrome. He noted that Claimant was "completely asymptomatic and complains of no numbness or tingling in either hand."

12. The Concentra records reflect that Claimant saw Dr. Hart on March 17, 2016, but Dr. Hart's report is not contained within the parties' exhibit packets. The ALJ infers from the records that Dr. Hart recommended proceeding with bilateral surgery.

13. Claimant returned to Concentra the next day and saw a different physician, Dr. Daniel Peterson. Dr. Peterson recommended a job site analysis "to determine if her de Quervain's is work related or not."

14. Sara Shugars, MS CRC, performed an ergonomic job site analysis ("JSA") on March 30, 2016, and documented her findings in a narrative report dated May 9, 2016. Ms. Shugars interviewed Claimant regarding her work activities and observed various tasks, including boxing. The report states typically 250-550 full boxes are produced per shift. Claimant's duties while boxing required: "Exerting considerable physical effort to complete a motion, doing the same motion over and over again, performing motions constantly without short pauses or breaks in between, maintaining [the] same position or posture while performing tasks, and using hands or body as a clamp to hold objects while performing tasks." The evaluation determined that Claimant is exposed to several primary and secondary risk factors listed in the Cumulative Trauma Disorder MTGs, including prolonged use of hand-held tools and awkward postures with repetition/duration. Since there is no way to modify the essential duties of the job, Ms. Shugars recommended that Claimant "move from packaging areas every 1 to 2 days and not remain in one area for more than two days/shifts at a time."

15. Claimant saw Dr. Kurz on May 16, 2016 to review the JSA. Dr. Kurz noted "discrepancies" between the information in the JSA report and information provided by Employer, including "verbal clarification" he received from Employer's on-site nurse, Andrew Aneson. Dr. Kurz noted Claimant gets two 15 minute breaks and a 30 minute lunch break during an eight-hour shift. Based on the information from Employer, Dr. Kurz determined that the boxing activity requires "minimal force" and primarily involves "clerical" duties of inserting documents into boxes. Dr. Kurz stated Claimant's work "does not meet the CO WC Cumulative injury criteria," and "this patient is advised to follow-up with [her] PCP for this non-work-related condition." He placed Claimant at MMI and released her to return to work with no restrictions.

16. As Dr. Kurz had instructed, Claimant went to see Dr. Devalon on May 18. She reported "worsening tendinitis that is really impeding her work." Claimant explained that Dr. Hart had recommended surgery, but she had been released by Concentra. Until that time, she was working modified duties in another department. Although Dr. Devalon noted "I do not do workers comp," she was willing to address Claimant's situation because "she is in limbo" regarding her claim. Dr. Devalon asked to see copies of Dr. Hart's records and the EMG/NCV report. In the meantime, she gave Claimant work restrictions of "wear your braces all the time," and "no gripping or using your thumbs." Those restrictions are incompatible with Claimant's regular job.

17. Claimant went to her workplace with the restrictions from Dr. Devalon, but Employer was no longer willing to accommodate her. Claimant was told "she does not have a place there." Employer's on-site nurse "suggested she take short-term disability."

18. Claimant followed up with Dr. Devalon on June 6, 2016 and took a copy of Dr. Sandell's report. Dr. Devalon diagnosed bilateral carpal tunnel syndrome, but stated "[the] patient has worsening wrist pain which I believe is tenosynovitis and not as much carpal tunnel syndrome." Dr. Devalon recommended a second opinion from a hand surgeon, and referred Claimant to Dr. Karl Larsen. Dr. Devalon opined "I am not convinced surgery on your carpal tunnels will help you completely. You have other problems going on." Dr. Devalon added, "in the meantime, she is not able to work and disability forms are amended and re-sent."

19. Claimant next saw Dr. Devalon on July 11, 2016. She was still waiting for the second opinion with Dr. Larsen. Dr. Devalon was not certain surgery was necessary, but would defer to the surgeon's recommendation. Dr. Devalon updated Claimant's disability forms.

20. Claimant was evaluated by Dr. Karl Larsen, a hand surgeon, on July 20, 2016. He noted "she is in some type of a legal conflict involving having this taken up by work comp but now she is here under her own insurance." She reported ongoing wrist pain and difficulty gripping. She was experiencing episodic numbness and tingling with gripping and grasping activities during the day, and was also being awakened by numbness and tingling at night. The clinical exam findings were consistent with de Quervain's and carpal tunnel syndrome. Dr. Larsen opined "the indication for surgery is not necessarily unreasonable; however, I do not know that she has had a lot of conservative management for her carpal tunnel syndrome." He felt the carpal tunnel symptoms were more consistent with median neuritis and might respond to conservative measures. He recommended injections and obtaining better fitting braces.

21. Respondents filed a Final Admission of Liability (FAL) on July 21, 2016, based on Dr. Kurz's report. Claimant timely objected to the FAL and requested a DIME.

22. Claimant followed up with Dr. Hart on August 3, 2016. He continued to recommend bilateral de Quervain's and carpal tunnel release surgery. Claimant explained that her workers' compensation claim was being contested. Dr. Hart told Claimant he would request authorization from Respondents first, but "if they deny again, we will perform both surgeries . . . under her regular health insurance."

23. Claimant went to see Dr. Larsen again on August 19, 2016, and asked "if we would be willing to pursue this under work comp or failing that her own insurance." She continued to have positive Finkelstein's, Phalen's, and carpal tunnel compression signs bilaterally. Dr. Larsen opined "I had recommended nonsurgical measures but she seems to be in a hard way, and I think that progressing to surgery is probably reasonable." He stated "it is surprising to me that this has not been accepted under work comp given her work description of working 12-hour shifts with a lot of wrist intensive activities, building boxes. I think it is reasonable to try to pursue this under work comp. . . . We will seek permission through work comp first and then go from there."

24. Dr. Timothy Hall performed the DIME on October 26, 2016. Because causation was a critical issue in the case, Dr. Hall spent significant time investigating Claimant's work activities. He noted that before her onset of symptoms, Claimant "spent two months in the boxing area without rotation." Claimant explained that "the boxing area is one of the more difficult aspects of the job," and involves "the most difficult and hand-intensive pressure, pinching, and squeezing activities." Claimant disputed the job description in Dr. Kurz's May 16, 2016 report. Dr. Hall noted Claimant engages in "no outside activities that might contribute to the situation."

25. Dr. Hall diagnosed bilateral de Quervain's tenosynovitis, lateral epicondylitis, bicipital tendinitis, generalized neuritis without convincing evidence of specific entrapment, and mild proximal myofascial pain related to cumulative trauma. Regarding causation, Dr. Hall opined:

> within a reasonable degree of medical probability [ ] her upper extremity symptoms relate to her work. I can think of no better explanation. . . . When she got back to work after being off for the pregnancy, she was working repetitively without rotation in an environment that involves a great deal of repetitive pinching, gripping, manipulating, and torqueing involving upper extremities.

26. Dr. Hall opined that Claimant met the medical causation guidelines in the CTD MTGs, based on "a combination of force and possible awkward posture and also force and repetition, force in the wrist and hand repetition." Dr. Hall also emphasized the "temporal association" between the work and the onset of her symptoms.

27. Dr. Hall determined Claimant is not at MMI. He recommended further treatment, including surgery if Claimant's surgeon recommended it.

28. Dr. Hart performed de Quervain's surgery and carpal tunnel release on Claimant's right arm on December 13, 2016.

29. Dr. Carlos Cebrian performed an Independent Medical Examination (IME) at Respondents' request on January 11, 2017. He diagnosed bilateral de Quervain's tenosynovitis, mild right median neuropathy and borderline to mild left median neuropathy, bilateral lateral epicondylitis with myofascial complaints including the shoulders and cervical spine. Dr. Cebrian opined that none of these diagnoses are causally related to Claimant's work.

30. Dr. Cebrian opined that Claimant's work did not expose her to any of the primary or secondary risk factors identified in the MTGs. He noted "she engages in many different activities throughout the day," and "does not utilize significant amounts of force." Although her job involved awkward postures, it did not satisfy the minimum durational threshold. Dr. Cebrian felt the JSA "had many errors and it was [ ] poorly performed." Dr. Cebrian opined that Claimant's recent pregnancy and delivery of her child were "the most important factors" in the development of her symptoms. He opined that de Quervain's has a high association with pregnancy, and is also called "mommy

thumb" or "mommy wrist." He opined the suspected mechanism was picking up the baby with both hands on a frequent basis with the thumb in an abducted position." Ultimately, Dr. Cebrian opined "it is not medically probable that [Claimant's] bilateral upper extremity complaints are directly or indirectly related to her work activities." Dr. Cebrian disagreed with Dr. Hall's causation analysis, calling it "inadequate and meaningless."

31. In February 2017, Respondents obtained another JSA from a different evaluator. Specifically, Employer's on-site ergonomist-physical therapist, Rudy Haberzettl, evaluated the boxing task. Mr. Haberzettl documented that the boxing job exposes a worker to numerous "high" risk factors, including frequent, forceful pinch grip, awkward wrist postures, and "excessive repetitive motion at a single joint over a workday." The job requires more than 20,000 repetitive finger movements and more than 6,500 repetitive hand movements per shift. Mr. Haberzettl also noted the high number of overtime hours "greatly increases the risk for injury."

32. Claimant testified credibly at the hearing. She described her work activities consistent with descriptions reflected in the medical records. The baby born in June 2015 was Claimant's fourth child. She had no problems with her wrists or hands with any of the other children. She had no problems with her wrists and hands until after she returned to work from maternity leave and was assigned exclusively to the boxing area. Claimant testified that the right arm surgery in December 2016 improved her symptoms. Dr. Hart performed surgery for de Quervain's and carpal tunnel on her left arm a few days before the hearing, so it was too early to tell how much benefit she would receive.

33. Dr. Hall testified in a deposition on March 2, 2016. Dr. Hall disagreed with Dr. Cebrian's opinions regarding causation. Dr. Hall opined that Claimant's work activities exposed her to a sufficient combination of force and repetition to be considered causative of cumulative trauma disorders. Dr. Hall thought Dr. Cebrian's theory that Claimant has "mommy thumb" was "ridiculous."

34. Dr. Cebrian testified in a deposition on March 3, 2016. Dr. Cebrian opined that Claimant's work does not involve any primary or secondary risk factors under the MTGs causation guidelines. Dr. Cebrian disagreed with Dr. Hall that "mommy thumb" is a rare condition. Regardless, Dr. Cebrian opined the MTGs do not require the physician to establish an alternate causal explanation. Rather, failure to satisfy the MTGs causation requirements is a sufficient basis to determine that a condition is not work-related. Dr. Cebrian conceded that several other physicians opined that Claimant's condition is work-related, but emphasized those physicians did not perform a formal causation analysis consistent with the MTGs. Dr. Cebrian opined that the de Quervain's surgery was reasonable and necessary. He opined that carpal tunnel surgery was not reasonable and necessary.

35. The causation opinions of Dr. Hall, Dr. Devalon, Dr. Larsen and Dr. Hart are more persuasive than medical opinions in the record to the contrary.

36. Respondents have failed to overcome the DIME's determination of MMI by clear and convincing evidence. Claimant is not at MMI.

37. Dr. Devalon became authorized after May 16, 2016. Dr. Larsen is authorized by virtue of the referral from Dr. Devalon.

38. Claimant has proven by a preponderance of the evidence that the surgeries performed by Dr. Hart were reasonable, necessary, and related to her industrial injury.

39. Claimant has been disabled by the effects of her industrial injury since February 3, 2016. Claimant was under work restrictions throughout the time she treated at Concentra, and Employer accommodated the Concentra restrictions with modified duty. Employer was not willing to accommodate Dr. Devalon's restrictions or provide modified duty since Claimant was released by Concentrao. Claimant has not worked since May 16, 2016.

40. Respondents admitted for one closed period of TTD, and two closed periods of TPD. The last admitted period of temporary disability benefits ended March 16, 2016.

41. Claimant had a partial wage loss from March 4, 2016 through May 15, 2016 as a result of her injury. Respondents admitted $818.72 in TPD benefits for the period March 4, 2016 through March 16, 2016. Claimant is entitled to an additional $2,748.68 in TPD benefits through May 15, 2016.

Pay Period		**Earnings**	**Difference from AWW**	**TPD Owed**	
3/4/2016	3/6/2016	$725.20	-$183.42	$0.00	only 3 days
3/7/2016	3/13/2016	$960.28	$303.88	$202.59	
3/14/2016	3/20/2016	$966.63	$297.53	$198.35	
3/21/2016	3/27/2016	$275.33	$988.83	$659.22	
3/28/2016	4/3/2016	$571.23	$692.93	$461.95	
4/4/2016	4/10/2016	$488.04	$776.12	$517.41	
4/11/2016	4/17/2016	$2,215.90	-$951.74	$0.00	
4/18/2016	4/24/2016	$570.33	$693.83	$462.55	
4/25/2016	5/1/2016	$668.83	$595.33	$396.89	
5/2/2016	5/8/2016	$805.56	$458.60	$305.73	
5/9/2016	5/15/2016	$720.10	$544.06	$362.71	

Total TPD Owed: $3,567.40
TPD admitted Paid: $818.72
TPD underpayment: **$2,748.68**

42. Claimant suffered a total wage loss commencing May 16, 2016 as a direct and proximate consequence of her injury.

43. Dr. Kurz and Dr. Devalon issued conflicting opinions regarding Claimant's ability to work in May 2016. Dr. Kurz was Claimant's "attending physician" when he released Claimant to return to regular employment on May 16, 2016. Dr. Devalon was Claimant's "attending physician" when she restricted Claimant from regular work on May 18, 2016. When multiple attending physicians render conflicting opinions regarding a Claimant's ability to work, the ALJ must resolve the conflict. Dr. Devalon's opinions regarding Claimant's ability to work are more persuasive than the contrary opinion of Dr. Kurz.

44. Claimant is entitled to TTD benefits commencing May 16, 2016 and continuing until terminated according to law.

45. Claimant received short-term disability (STD) benefits from May 25, 2016 through September 15, 2016 from an Employer-provided disability policy.

CONCLUSIONS OF LAW

A. Respondents have failed to overcome the DIME regarding MMI.

The DIME's determination regarding MMI is binding unless overcome by clear and convincing evidence. Section 8-42-107(8)(b) and (c), C.R.S.; *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). "Clear and convincing evidence means evidence which is stronger than a mere 'preponderance;' it is evidence that is highly probable and free from serious or substantial doubt." *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). Therefore, the party challenging a DIME physician's conclusion must demonstrate that it is "highly probable" that the MMI determination is incorrect. *Qual-Med*, 961 P.2d at 592.

The DIME physician must engage in a "diagnostic process" when evaluating whether a claimant is at MMI. A determination of MMI inherently involves issues of diagnosis and causation, because the DIME must determine what medical conditions exist and which are causally related to the industrial injury. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Hodges v. ATR Collision, Inc*., W.C. No. 4-751-557 (ICAO, August 24, 2010). Accordingly, the DIME's findings regarding diagnosis and causation are binding unless overcome by clear and convincing evidence. Section 8-42-107(8)(b)(II); *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007).

It is well established held that "mere differences of medical opinion" do not constitute clear and convincing evidence that the DIME's determination is incorrect. *E.g., Gutierrez v. Startek USA, Inc*., W.C. No. 4-842-550-01 (ICAO March 18, 2016); *Javalera v. Monte Vista Head Start, Inc.*, W.C. No. 4-532-166 (ICAO July 19, 2004); *see also Gonzales v. Browning-Ferris Industries of Colorado*, W.C. No. 4-350-356 (ICAO March 22, 2000).

As found, Respondents have failed to overcome the DIME's determination that Claimant is not at MMI by clear and convincing evidence. Claimant clearly required additional treatment for her bilateral upper extremity conditions, and the primary dispute is regarding causation. Dr. Hall persuasively explained the basis for his conclusion that Claimant's bilateral upper extremity diagnoses are causally related to her work duties. He noted that Claimant "was working repetitively without rotation in an environment that involves a great deal of repetitive pinching, gripping, manipulating, and torqueing involving the upper extremities." Dr. Hall explicitly considered the MTGs in assessing causation of Claimant's diagnoses, noting that a combination of force and repetition are risk factors for the development of de Quervain's. Dr. Hall cited the close temporal association between Claimant's work exposure and the development of symptoms, as well as the lack of alternate causal explanations he found plausible. Dr. Hall's opinions regarding causation are supported by the opinions of Dr. Hart, Dr. Larsen, and Dr. Devalon, and the two JSAs. Although Dr. Cebrian disagrees with Dr. Hall's analysis, Dr. Cebrian's opinion does not rise to the level of clear and convincing evidence. Rather, Dr. Cebrian and Dr. Kurz's opinions simply reflect "differences of medical opinion" with Dr. Hall. Dr. Hall's conclusions reflect reasonable interpretations of the evidence, and the DIME's determination trumps other opinions unless it is "highly probably incorrect."

B. Dr. Devalon and Dr. Larsen are authorized providers.

Dr. Devalon and Dr. Larsen are authorized because Dr. Kurz discharged Claimant from care and instructed her to pursue treatment with her personal physicians.

"Authorization" refers to a physician's legal authority to treat the injury at the respondents' expense. *Popke v. Industrial Claim Appeals Office*, 944 P.2d 677 (Colo. App. 1997). A physician who commences treatment upon a referral made in the "normal progression of authorized treatment" becomes an authorized treating physician. *Bestway Concrete v. Industrial Claim Appeals Office*, 984 P.2d 680 (Colo. App. 1999); *Greager v. Industrial Commission*, 701 P.2d 168 (Colo. App. 1985). Once the respondents have exercised their right to select the treating physician in the first instance, the claimant may not change physicians without permission from the insurer or an ALJ. *Giannetto Oil Co. v. Industrial Claim Appeals Office*, 931 P.2d 570 (Colo. App. 1996).

In *Cabela v. Industrial Claim Appeals Office*, 198 P.3d 1277 (Colo. App. 2008), the Court of Appeals held that if an ATP determines that a claimant's condition is not work-related and instructs the claimant to pursue treatment with personal physicians, the treatment will be deemed authorized if it is later determined that the condition was compensable. The court held, "the risk of mistake by an ATP in concluding that an injury is noncompensable lies with the employer" rather than the claimant.

Dr. Kurz placed Claimant at MMI on May 16, 2016 because he believed she did not have a work-related condition. He told Claimant "to follow up with [her] PCP for this non-work related condition." As a result, Claimant sought treatment with Dr. Devalon, who subsequently referred her to Dr. Larsen. Under *Cabela*, Dr. Devalon became authorized as of May 16. Dr. Larsen is authorized by the referral from Dr. Devalon.

C. The December 2016 and March 2017 surgeries were reasonable and necessary.

The respondents are liable for medical treatment which is reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a); *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997); *Country Squire Kennels v. Tarshis*, 899 P. 2d 362 (Colo. App. 1995). Where the respondents dispute a claimant's entitlement to medical benefits, the claimant must prove that an injury directly and proximately caused the condition for which he seeks benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). The claimant must also prove that the requested treatment is reasonable and necessary. Section 8-42-101(1)(a).

As found, the surgeries performed by Dr. Hart were reasonable and necessary. Both Dr. Hart and Dr. Larsen opined Claimant was a candidate for bilateral de Quervain's and carpal tunnel surgery. Dr. Hall opined that surgery was reasonable, but deferred to the ultimate decision to the surgeons. Dr. Cebrian opined that only de Quervain's surgery was reasonable and necessary. The ALJ credits the opinions of the hand surgeons over Dr. Cebrian's contrary opinions and concludes the surgeries were reasonable, necessary, and related, including carpal tunnel surgeries.

D. Claimant is entitled to TPD from March 4, 2016 through May 15, 2016.

A claimant is entitled to TPD benefits if she suffers a partial wage loss as a result of a work-related injury. Section 8-42-103(1). As found, Claimant is entitled to $3,567.40 in TPD benefits from March 4 through May 15, 2016. Although Respondents previously paid $818.72, Claimant is entitled to an additional $2,748.68 in TPD benefits.

E. Claimant is entitled to TTD benefits commencing May 16, 2016.

A claimant is entitled to TTD benefits if the injury causes a disability, the disability causes the claimant to leave work, and the claimant misses more than three regular working days. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The claimant must establish a causal connection between a work-related injury and the subsequent wage loss to obtain TTD benefits. *Id*. The term disability connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

Once commenced, TTD benefits continue until the occurrence of one of the four terminating events specified in § 8-42-105(3). As a general rule, an attending physician's full-duty release is conclusive regarding a claimant's entitlement to ongoing TTD benefits. *Burns v. Robinson Diary*, 911 P.2d 661 (Colo. App. 1995). But if there is a conflict between multiple attending physicians as to whether a claimant can return to

regular employment, the ALJ has jurisdiction to resolve the conflict. *Bestway Concrete v. Industrial Claim Appeals Office*, 984 P.2d 680 (Colo. App. 1999). An attending physician is defined as a physician within the chain of authorization who assumes care of the claimant. *Id*. at 685; *see also Popke v. Industrial Claim Appeals Office*, 944 P.2d 677 (Colo. App. 1997).

Claimant has been unable to return to her regular job, and therefore "disabled" for purposes of entitlement to temporary disability benefits. since her date of injury. Employer generally accommodated Claimant's restrictions with modified duties until Dr. Kurz released her to full duties on May 16. Employer was unwilling to accommodate the restrictions imposed by Dr. Devalon. Claimant was eventually terminated in November 2016 because she could not return to work.

As found, Claimant sustained a total wage loss commencing May 16, 2016 as a direct and proximate consequence of her industrial injury. Furthermore, there are conflicting opinions from two attending physicians regarding Claimant's ability to perform regular employment. Dr. Kurz was unquestionably an attending physician on May 16, 2016. Dr. Devalon also became authorized on May 16, 2016 when Dr. Kurz released Claimant from treatment. Although she did not typically treat workers' compensation patients, Dr. Devalon assumed responsibility for Claimant's care by default. Therefore, Dr. Devalon was Claimant's "attending physician" when she reinstituted work restrictions on May 18.

The ALJ credits Dr. Devalon's opinions over Dr. Kurz's opinions in finding that Claimant was disabled from performing her regular job on and after May 16, 2016. Indeed, Dr. Kurz continuously had Claimant on work restrictions until he released her from his care. Dr. Kurz advised Claimant to follow-up with his PCP, which indicates he believed she needed further treatment. The ALJ interprets Dr. Kurz's rescission of Claimant's work restrictions as a function of his determination that her condition was not work-related, rather than a medical determination she was capable of performing her regular duties. It is not plausible that Claimant was capable of doing her pre-injury job on May 16, 2016.

Accordingly, Claimant is entitled to TTD benefits commencing May 16, 2016, and continuing until terminated according to law.

ORDER

It is therefore ordered that:

1. Respondents' request to overcome the DIME regarding MMI is denied and dismissed.

2. Insurer shall pay for all reasonable, necessary and related medical treatment to cure and relieve the effects of Claimant's industrial injury.

3. Insurer shall pay for medical treatment provided by Dr. Devalon after May 16, 2016.

4. Insurer shall pay for evaluations and treatment provided by Dr. Larsen.

5. Insurer shall pay for Claimant's surgeries with Dr. Hart in December 2016 and March 2017, including all ancillary provider and facility charges.

6. Insurer shall pay additional TPD benefits in the amount of $2,748.68 for the period of March 4, 2016 through May 15, 2016.

7. Insurer shall pay TTD benefits commencing May 16, 2016, and continuing until terminated according to law, subject to any applicable offsets.

8. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

9. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 4-955-901-02

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER ON REMAND

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

,

Claimant,

v.

.,

Employer,

and

Insurer/ Respondents.

No further hearings have been held in the above-captioned matter. On April 10, 2017, the Industrial Claim Appeals Office entered a procedural order pursuant to § 8-43-301 (9), C.R.S., ordering clarification of the ALJ's order of December 15, 2016, concerning who should pay for the CT scan test recommended by

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on November 23, 2016, in Denver, Colorado. The hearing was digitally recorded (reference: 11/23/16, Courtroom 1, beginning at 8:30 AM, and ending at 10:30 AM).

Hereinafter shall be referred to as the "Claimant." shall be referred to as the "Employer." All other parties shall be referred to by name.

Claimant's Exhibits 1 through 8 were admitted into evidence, without objection, with the exception of Claimant's Exhibit 3, whereby Respondents' objection thereto was overruled and the exhibit was admitted into evidence. Respondents' Exhibits A through F were admitted into evidence, without objection. Respondents; Exhibits G and H were withdrawn.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Claimant , which was filed, electronically, on November 30, 2016. On December 2, 2016, the Respondents filed their "Objection to Claimant's Full Findings of Fact, Conclusions of Law and Order," which essentially amount to a counter proposed decision. After a consideration of the proposed decision and the counter proposed decision, the ALJ has modified the proposal submitted by the Claimant and hereby issues the following decision.

ISSUES

The issues to be determined by this decision concern whether the April 13, 2016 Division Independent Medical Examination (DIME) report of Kathy McCranie, M.D. was in error insofar as it did not address and independently assess the Claimant's left foot injury to determine that the Claimant was at maximum medical improvement (MMI) with regard to such injury and all injuries sustained in the admitted injury of July 3, 2014; if not at MMI, whether the Claimant is likely in need of further diagnostic testing and treatment with regard to his left foot injury; and, ultimately whether the Claimant was properly assessed to be at MMI. Alternatively, the issue exists as to whether Claimant is entitled to post-MMI medical maintenance benefits pursuant to *Grover v. Indus. Comm.*, 759 P.2d 705, 710 (Colo. 1988). If the DIME opinion concerning MMI is overcome, the Claimant also designated the issue of temporary total disability benefits (TTD) from September 28, 2015 and continuing.

The Claimant bears the burden of proof, by clear and convincing evidence on overcoming Dr. McCranie's DIME opinions. On all other issues, the Claimant's burden is by preponderant evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant suffered an admitted industrial injury on July 3, 2014 while working for the Employer, when his left foot was run over by a small track hoe. He underwent a course of treatment for such injury (See Claimant's Exhibit. 7).

2. Ultimately, the Respondents filed an Amended Final Admission of Liability (FAL), dated April 22, 2016, admitting for an average weekly wage (AWW) OF $720.00; an MMI date of September 28, 2015; 10% of the left lower extremity (LLE); and, reasonably necessary post-MMI medical maintenance care and treatment. The Amended FAL was filed, based on DIME Dr. McCranie's opinions.

3. The Claimant was placed at MMI by his authorized treating physician (ATP), Gary Zuehlsdorff, D.O., a physiatrist, pursuant to Dr. Zuehlsdorff's report of September 28, 2015 .Dr. Zuehlsdorff had been one of the Claimant's authorized ATPs. At no time did Dr. Zuehlsdorff refer the Claimant to a podiatrist. Dr. Zuehlsdorff rated the Claimant at 10% of the LLE and placed the Claimant at MMI on September 28, 2015. DIME Dr. McCranie's opinions mirror the opinions of Dr. ,Zuehlsdorff.

4. James D. Davis, D.P.M. apparently last saw the Claimant on July 9, 2015, before Dr. Zuehlsdorff placed the Claimant at MMI. He indicated that the Claimant should be seen thereafter as needed.

5. Brett D. Sachs, D.P.M., evaluated the Claimant on June 6, 2016,and issued a report dated July 12, 2016 (Claimant's Exhibit 8). Dr. Sachs was of the opinion that "the Claimant's current symptoms are related to the previous injury and post-traumatic arthritis. At this point, I have recommended a CT scan to further evaluate the extent of the arthritis. [The Claimant] will require further treatment for the foot injury and may ultimately require additional surgery…." The ALJ infers and finds that Dr. Sachs has significantly more expertise than Dr. Zuehlsdorff and/or DIME Dr. McCranie concerning matters related to the feet, and his opinions are accorded more weight than those of Dr. Zuehlsdorff and Dr. McCranie. Indeed, based on Dr. Sachs' opinions, the ALJ infers and finds that it is highly probable, unmistakable and free from serious and substantial doubt that Dr. McCranie was in error by placing the Claimant at MMI.

6. By an email chain of October 4, 2016 (Claimant's Exhibit 3), at 11:20 AM, the insurance adjuster, Llimoni Moten, advised Claimant's counsel: "I've contacted his treating provider, James Davis, DPM, to authorize an initial evaluation. They will contact [the Claimant] for scheduling." On the same date at 11:30 AM, the adjuster

advised Claimant's counsel: "…please disregard the below. {the Claimant's] treating doctor is Dr. Gary Zuehlsdorff…." Subsequently, at 11:37 AM, counsel for the Respondents advised Claimant's counsel: "Yes. The ATP will make the referral back to a specialist if he deems appropriate. The ATP makes the decisions w/regard to future medical care. The adjuster is following the law." The ALJ infers and finds that Dr. Davis was **not** within the chain of authorized referrals and, therefore, not authorized.

The Division Independent Medical Examination (DIME) by Kathy McCranie, M.D.

7. Kathy McCranie, M.D., a physiatrist, was selected as the DIME examiner. The Claimant contends that he would have preferred a podiatrist, but no podiatrists were on the Division of Workers' Compensation (DOWC) list of DIME examiners. Dr. McCranie issued her DIME report on April 13, 2016 (Claimant's Exhibit. 6). The Claimant asserts that Dr. McCranie made no independent assessment of his left foot injury, or the need for further treatment for the left foot injury.

8. The ALJ infers and finds that the DIME report of Dr. McCranie, in fact, makes no reference to a persuasive independent evaluation of the Claimant's left foot injury, but instead is entirely deferential to Dr. Zuehlsdorff's opinions in his report, and in fact merely adopts, without a persuasive independent assessment, Dr. Zuehsldorff's conclusions.

9. In the reports, Dr. Sachs is of the opinion that the Claimant "has developed persistent pain and post-traumatic arthritis of the tarsometatarsal joints," and [u]pon further review of his medical records, [Dr. Sachs] suspect[s] that the current symptoms are related to the previous injury and post-traumatic arthritis." The trauma Dr. Sachs refers to is Claimant's industrial injury. Thus, this is a work-related injury and condition. Based upon this, Dr. Sachs has "recommended a CT scan to further evaluate the extent of the arthritis (post-traumatic)," and that Claimant "will require further treatment for the foot injury and may ultimately require additional surgery." The ALJ infers and finds that Dr. Sachs is recommending the additional test to ascertain whether there is a reasonable prospect that will reveal a course of treatment which may cure and relieve the effects of the admitted injury.

10. According to the Claimant, he desires such an assessment and would undergo any recommended treatment. The Claimant continues to have significant problems with the foot and he believes these injuries are preventing him from working full time. The Claimant's testimony, in this regard, is credible and convincing. Indeed, it is highly probable, unmistakable and free from serious and substantial doubt that the post-traumatic arthritis resulting from the July 3, 2014 "crush-like" injury is the sole cause of the Claimant's continuing LLE problems.

11. Since the originally determined MMI date of September 25, 2015, the Claimant has only been able to engage in part time light duty work, earning on average,

$250-300 per week. His inability to engage in full time work is attributable to his ongoing problems from his admitted, compensable foot injury.

Ultimate Findings

12. The ALJ finds the opinions of Dr. Sachs, D.P.M., significantly more persuasive and credible than the opinions of DIME Dr. McCranie and ATP Dr. Zuehlsdorff because Dr. Sach's possesses more specific expertise concerning feet than the DIME doctor and the ATP; because Dr. Sachs articulates the condition of the Claimant's left foot in a more specific and relevant manner than the DIME and ATP. Further, since the DIME opinion mirrors the ATP opinion, the ALJ finds that it has been undermined by lack of a specific attention to the details of the Claimant's left foot condition. The same is true of Dr. Zuelsdorff's opinions.

13. Between conflicting medical opinions, the ALJ makes a rational choice, based on substantial evidence, to accept the opinions of Dr. Sachs and to reject all opinions to the contrary.

14. The Claimant has demonstrated that it is highly probable, unmistakable and free from serious and substantial doubt that DIME Dr. McCranie erroneously placed the Claimant at MMI. Consequently, the Claimant has sustained his burden by clear and convincing evidence.

15. Based on the pendency of a CT scan test, recommended by Podiatrist Dr. Sachs, to determine if there is a reasonable prospect that a course of treatment can cure and relieve the effects of the admitted injury, the Claimant's condition has not become stable whereby "no further treatment is reasonably expected to improve the condition (of the left foot)." Consequently, the Claimant is not at MMI. If the test reveals that the Claimant was at MMI as of September 28, 2015, then, it would be premature to make any determinations concerning TTD benefits.

16 Dr. Sachs is not within the authorized chain of referrals, nor was he authorized. He performed an evaluation on referral from Dr. Davis. Nonetheless, this does not diminish his opinion, which the ALJ finds persuasive. ATP Dr. Zuehlsdorff did not refer the Claimant to Dr. Davis, D.P.M., or to Dr. Sachs, D.P.M.

Respondents' Arguments

Citing Industrial Clam Appeals Office (ICAO) decisions in their Counter-Findings, the Respondents argue that the recommendation for an additional test is not enough to overcome an MMI finding by a DIME. While this may be true in a vacuum, if the additional test reveals a reasonable prospect of a course of treatment to cure and relieve the effects of an injury, then, opinions of the Court of Appeals trump ICAO decisions. Otherwise, the Respondents' Counter-Findings take issue with the Claimant's

proposed Findings, which the ALJ has substantially modified but, nonetheless, rejects most of the counter proposals.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the opinions of Dr. Sachs, D.P.M., were significantly more persuasive and credible than the opinions of DIME Dr. McCranie and ATP Dr. Zuehlsdorff because Dr. Sach's possesses more specific expertise concerning feet than the DIME doctor and the ATP; and, because Dr. Sachs articulates the condition of the Claimant's left foot in a more specific and relevant manner than the DIME and ATP. Further, since the DIME opinion mirrors the ATP opinion, the ALJ finds that it has been undermined by lack of a specific

attention to the details of the Claimant's left foot condition. The same is true of Dr. Zuehlsdorff's opinions.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting medical opinions, the ALJ made a rational choice, based on substantial evidence, to accept the opinions of Dr. Sachs and to reject all opinions to the contrary.

Overcoming the DIME

c. The party seeking to overcome a DIME physician's opinions bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000). *Also see Leprino Foods Co. v. Indus. Claim Appeals Office,* 134 P.3d 475 (Colo. App. 2005). The DIME physician's determination of MMI is binding unless overcome by "clear and convincing evidence." *Metro Moving & Storage Co. v. Gussert,* 914 P.2d 411 (Colo. App. 1995); *See also Peregoy v. Indus. Claim Appeals Office,* 87 P.3d 261 (2004); and § 8-42-107(b)-(c), C.R.S. *Also see Whiteside v. Smith,* 67 P.3d 1240 (Colo. 2003). Where the threshold determination of compensability is not an issue, a DIME physician's conclusion that an injured worker's medical problems were components of the injured worker's overall impairment constitutes a part of the diagnostic assessment that comprises the DIME process and, as such the conclusion must be given presumptive effect and can only be overcome by clear and convincing evidence. *Qual-Med, Inc. v. Indus. Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998); *Leprino Foods Co. v. Indus. Claim Appeals Office,* 134 P.3d 475, 482 (Colo. App. 2005); *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 400 (Colo. App. 2009). "Clear and convincing evidence" is evidence, which is stronger than preponderance, is unmistakable, makes a fact or facts highly probable or the converse, and is free from serious or substantial doubt. *Metro Moving & Storage*

Co. v. Gussert, supra; Leming v. Indus. Claim Appeals Office, 62 P.3d 1015, 1019 (Colo. App. 2002). In other words, a DIME physician's finding may not be overcome unless the evidence establishes that it is "highly probable" that the DIME physician's opinion is incorrect. *Postelwait v. Midwest Barricade,* 905 P. 2d 21 (Colo. App. 1995). To overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt". *Adams v. Sealy, Inc.,* W.C. No. 4-476-254 [Indus. Claim Appeals Office (ICAO), Oct. 4, 2001]. A mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc.,* W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); *see Shultz v. Anheuser Bush, Inc.,* W.C. No. 4-380-560 (ICAO, Nov. 17, 2000). As found, the Claimant has demonstrated that it is highly probable, unmistakable and free from serious and substantial doubt that DIME Dr. McCranie erroneously placed the Claimant at MMI. Consequently, the Claimant sustained his burden by clear and convincing evidence.

MMI

d. MMI is defined as the point in time when any medically determinable physical or medical impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition. § 8-40-201(11.5), C.R.S. *Donald B. Murphy Contractors, Inc. V. Indus. Claim Appeals Office*, 916 P.2d 611 (Colo. App. 1995). Diagnostic procedures that constitute a compensable medical benefit must be provided prior to MMI if such procedures have a reasonable prospect of diagnosing or defining a claimant's condition so as to suggest a course of further treatment *See In the Matter of the Claim of William Soto, Claimant,* W.C. No. 4-813-582 [Indus. Claim Appeals Office (ICAO), October 27, 2011]. As found, based on the pendency of a CT scan test, recommended by Podiatrist Dr. Sachs, to determine if there is a reasonable prospect that a course of treatment can cure and relieve the effects of the admitted injury, the Claimant's condition has not become stable whereby "no further treatment is reasonably expected to improve the condition (of the left foot)." Consequently, the Claimant is **not** at MMI.

Brett D. Sachs, D.P.M.

e. To be authorized, all referrals must remain within the chain of authorized referrals in the normal progression of authorized treatment. *See Mason Jar Restaurant v. Indus. Claim Appeals Office,* 862 P. 2d 1026 (Colo. App. 1993); *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P. 2d 501 (Colo. App. 1995); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). When an ATP refers an injured worker to his personal physician, under the mistaken belief that the claim was not compensable, the referral was nonetheless within the chain of authorized referrals and, thus, subsequent treatment was authorized. *See Cabela v. Indus. Claim Appeals Office,* 198 P.3d 1277 (Colo. App. 2008). As found, **Dr. Sachs is not within the authorized chain of referrals, nor was he authorized. He performed an evaluation on referral from**

Dr. Davis. Nonetheless, this does not diminish his opinion, which the ALJ finds persuasive. ATP Dr. Zuehlsdorff did not refer the Claimant to Dr. Davis, D.P.M., or to Dr. Sachs, D.P.M.

TTD

e. If the test reveals that the Claimant was at MMI as of September 28, 2015, then, it would be premature to make any determinations concerning TTD benefits.

ORDER ON REMAND

IT IS, THEREFORE, ORDERED THAT:

A. The Claimant has overcome the Division Independent Medical Examiner's (Kathy McCranie, M.D.) opinion by clear and convincing evidence. Therefore, the Claimant is not at maximum medical improvement.

B. The Respondents shall pay the costs of authorized, causally-related and reasonably necessary medical care and treatment for the admitted left lower extremity injury of July 3, 2014, subject to the Division of Workers' Compensation Medical Fee Schedule, **however, since Brett Sachs, D.P.M.. was not within the chain of authorized referrals, the Claimant is liable for the CT scan that Dr. Sachs recommended**

C. Any and all issues, including temporary total disability benefits from September 28, 2015 and continuing, are reserved for future decision.

DATED this_____day of April 2017.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-008-721-04

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

SELF-INSURED
c/o GALLAHER BASSETT SERVICES,
Third-Party Administrator (TPA),

Self-Insured Respondent.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on April 4, 2017, in Denver, Colorado. The hearing was digitally recorded (reference: 4/4/17, Courtroom 3, beginning at 1:30 PM, and ending at 4:30 PM).

Claimant's Exhibits 1 through 5 were admitted into evidence, without objection, with the exception of Claimant's Exhibit 6 to which the respondent objected, however, the objection was overruled and Exhibit 6 was admitted into evidence. Respondent's Exhibits A through L were offered into evidence. Claimant's objections to Respondent's Exhibits B and C were sustained and these Exhibits were rejected. Otherwise, Exhibits A through L were admitted into evidence without objection.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Claimant, which was filed, electronically, on April 11, 2017. The Respondent was given 2 working days within which to file objections. No timely objections were filed. After a consideration of the proposed decision, the ALJ has modified it and hereby issues the following decision.

ISSUE

The sole issue to be determined by this decision concerns an alleged safety violation, thus, entitling the Respondent to a 50% reduction in benefits, pursuant to § 8-42-112, C.R.S. As a collateral issue, the Respondent contends that the Claimant has waived raising this issue because the Claimant accepted reduced benefits under admissions of liability that set forth 50% reduced benefits.

Claimant's designated issue concerning temporary disability benefits is driven by the safety violation issue, whereby the Claimant is requesting that temporary and permanent disability benefits be increased to the statutory maximum for Fiscal Year (FY) 2015/2016 of $914.27 per week for temporary total disability (TTD) benefits and the whole person permanent partial disability (PPD) award be increased to the appropriate amount, based of the admitted average weekly wage (AWW) of $1,555.70, payable at $502.53 per week for injuries occurring in FY 2015/2016, instead of the reduced rate, by virtue of the Respondent exacting the "safety violation" reduction in its admissions of liability.

Ordinarily, the Respondent bears the burden of proof on the above-mentioned issues, by a preponderance of the evidence, however out of caution, the ALJ determines that since the Claimant is allegedly seeking modification of the previously filed admissions, the Claimant bears the burden of proof, by a preponderance of the evidence, which the Claimant has successfully carried.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant suffered an admitted industrial injury to her low back on November 20, 2015, arising out of the course and scope of her employment with the Employer when she was carrying a panel and tripped, falling on a concrete floor causing injury to her low back and left hip.

2. In her position as a foreman, a position the Claimant has held for 10 years with the Employer, she is required to practice "good housekeeping" and to keep the aisles free for safe movement of materials, equipment and employees.

3. Starting with the General Admission of Liability (GAL), dated April 25, 2016 (Respondent's Exhibit D, bates stamp 8); then with the GAL, dated May 31,2016 (Respondent's Exhibit F, bates stamp 10), and ultimately with the Final

Admission of Liability (FAL), dated November 22, 2016 (Claimant's Exhibit 3 bates stamp 6),wherein the Respondents AWW) of $1,555.70, but reduced indemnity benefits by 50%, the Respondent admitted for a temporary total disability (TTD) benefit rate of $457.13 (one-half of the statutorily capped maximum TTD rate of $914.27 for FY 2015/2016)for aggregate TTD benefits of $6,465.12 (one-half of the normal amount based on the Claimant's AWW), aggregate temporary partial disability (TPD) benefits of $3,189.43 (one-half of the normal amount); and, aggregate PPD benefits of $17,773.21, payable at $286.91 per week from the date of maximum medical improvement (MMI) [one-half of the aggregate amount and one-half of the weekly amount, based on the admitted AWW], November 3, 2016; zero percent scheduled disability; and, for post MMI maintenance medical benefits (Claimant's Exhibit 3, bates stamp 6 – 26). The Claimant filed a timely objection to the FAL and a timely Notice and Proposal to Select a Division Independent Medical Examiner (DIME), which is now in progress.

4. On May 6, 2016, the Division of Workers' Compensation (DOWC) sent the Claimant a letter, advising her that if she disagreed with the reduction, she must apply for a hearing. Indeed, applying for a hearing is the only option for resolving a disagreement on an alleged "safety violation."

5. The Claimant first filed an Application for Hearing, on October 28, 2016 and an Amended Application for Hearing 2016, mailed November 18, 2016, which stated there was "no safety violation" (Claimant's Exhibit 1, bates stamp 1).

6. In the Respondent's Response to Amended Application for Hearing, mailed November 23, 2016, the respondent listed 20 witnesses but no issues were designated (Claimant's Exhibit 2, bates stamp 3 and 4).

7. The Respondent now alleges that the Claimant has essentially waived her right to require the Respondent to prove its alleged "safety violation" at hearing by not contesting the 50% reduction in indemnity benefits after each and every admission of liability. For the reasons given herein below and above, the ALJ finds the argument interesting but, essentially, without merit. Nonetheless, the assignment of the burden of proof is a *non sequitur* because the Claimant has proven, by preponderant evidence that she did **not** willfully violate a clear and known safety rule.

The Circumstances of the Injury and the Alleged Safety Violation

8. On October 26, 2015, at approximately 9:45 AM, the Claimant was carrying a panel, approximately 3 feet by 5 feet in size, sideways, to place it on an A-frame. She demonstrated that she had carried the panel in the only feasible way, sideways so that she could see where she was going. As she stepped over material on the side of the floor, she caught the heel of her foot and fell.

9. At the time of the Claimant's injury, she submitted to Gus Davila, the Employer's Safety Director, an "Individual Accident/Incident Report" indicating that she had caught her foot on materials on the floor (*See* Claimant's Exhibit 6). The Claimant was not written up in October 2015 for a safety rule violation by her Employer.

10. The Claimant credibly testified that although the injury occurred on October 26, 2015 all parties were using November 20, 2015 as the date of injury, because that is when she was first evaluated by a medical provider following her October 26, 2015, injury.

Alleged Waiver of the Right to Require Respondent to Prove the Alleged Safety Violation

11. The Respondent's assert that the § 8-43-201(1), C.R.S. controls and the burden is on the Claimant to establish a negative, that is, that she did not deliberately and willfully violate a safety rule of the Employer because the Claimant is seeking to modify the admissions of liability insofar as they unilaterally exact a 50% reduction in indemnity benefits without a hearing. This is analogous to a criminal defendant being required to prove her innocence.

12. § 8-43-201(1), C.R.S., addresses disputes arising under "Workers' Compensation Act of Colorado" and states in pertinent part:

> [A] party seeking to modify an issue determined by a general or final admission, a summary order, or a full order shall bear the burden of proof for any such modification.

13. The ALJ finds that although the Respondent's argument would create an interesting and novel shifting of the burden of proof on an issue to which the Claimant is ordinarily entitled to an evidentiary hearing and require the Respondent to prove the "safety violation" under circumstances where the Respondent has unilaterally exacted a 50% reduction in indemnity benefits, without the benefit of a hearing. The argument disingenuously would uphold the Respondent's unilateral actions and put the Claimant on her proof to establish that she did **not** do what she is charged with having done. The argument, in the final analysis, is a *non sequitur* because the Claimant has proven, by preponderant evidence that she did **not** violate a safety rule.

14. On February 19, 2016, the Employer required the Claimant to fill out another "Individual Accident/Incident Report", where she gave a more detailed account of what occurred, indicating that the material she tripped on was a "C channel" (*See* Claimant's Exhibit A, bates stamp 1-4). After the Claimant filled out for the second time the "Individual Accident/Incident Report," the Claimant again

discussed with Davila how the accident occurred and again was not written up for a safety rule violation or any other infraction by the Employer. Such actions or inactions on Davila's part (the safety Manager) detract from the credibility of the Employer's "safety violation" claim. The ALJ infers and finds that Davila's delayed actions in raising the "safety violation' issue significantly detract from the credibility of Davila's position.

15. On February 22, 2016, the Employer filed the "Employer's First Report of Injury" and did not allege a safety rule violation (*See* Respondent's Exhibit I, bates stamp 33).

16. On April 25, 2016, the Respondent filed the first GAL, accepting responsibility for the Claimant's admitted industrial injury, but alleging a safety rule violation for the first time (*See* Respondent's Exhibit D, bates stamp 8).

17. Thereafter, the Respondent filed another GAL and an FAL as set forth in paragraph 3 above; and, the Claimant filed an Amended Application for Hearing and the Respondent filed a Response thereto as set forth in paragraphs 4 and 5 above.

18. The chronology of the alleged "safety violation" causes the ALJ to infer and find that the Claimant diligently contested the alleged "safety violation," by filing a timely Application for Hearing. Therefore, the Respondent's argument of "waiver" of the Claimant's right to require the Respondent to prove the "safety violation" is without merit.

Safety Rule Violation

19. At hearing, the Respondent relied on the [Employer] Loss Prevention Health and Safety Policy Manual," (hereinafter "the Company Manual") which Davila testified was provided to all employees of the Employer as a basis for their allegation that the Claimant violated a safety rule. He had no knowledge of whether the Company Manual was specifically provided to the Claimant. There was no persuasive evidence that the Claimant acknowledged receipt of the Company Manual, and the Claimant denies having received it.

20. Davila concluded in April of 2016 that the Claimant had violated a safety rule of the Employer in October 2015, as outlined in the Company Manual, which required that she "practice good housekeeping at all times" and that "aisles shall be kept clear to provide free and safe movement of material handling equipment and employees and to provide access to all fire extinguisher" (*See* Respondent's Exhibit L, bates stamp 42 and 43). According to Davila, it was his opinion that the Claimant violated a safety rule by not pushing the C channel material the Claimant tripped on to a safer location. The ALJ infers and finds that part of Davila's opinion is based on his lack of understanding of the immediate circumstances surrounding the Claimant's accident and his interpretation of the vague concept of "good housekeeping." According to the Claimant there was **no** other safer location in their

small and crowded work space. Davila was not there at the time of the Claimant's accident. He did not exhibit familiarity with the scene and circumstances existing at the time and location of the Claimant's accident. Indeed, he came up with safety options that would have been impossible or highly impractical to implement under the circumstances, and get the work done. For these reasons, the ALJ does **not** find Davila's opinion that the Claimant violated a safety rule credible.

21. The Claimant credibly testified there was no place to put the C channel material as she works in a small area and space is at a premium. The ALJ finds the Claimant's testimony in this regard highly persuasive and credible. Further, the ALJ infers and finds that the Claimant, an experienced working Foreman, has proven that it is highly likely that she was working as safely as possible under the constricted circumstances of her work site and a last minute moving of the C-Channel to cause it to stick out further from the side of the aisle caused the Claimant's accident ["accident" is defined as "an unintentional happening "a mishap"—*Webster's New World Dictionary.* In S 8-40-201 (2), C.R.S., "accident means an unforeseen event occurring without the will or design of the person whose act causes it; an unexpected, unusual, or undersigned occurrence….]. The Claimant's accidental injury fits the definition of "accident," contained in the Workers' Compensation Act.

22. Davila, however, maintained that the Claimant violated a general safety rule by stepping over the C channels while performing the job responsibility of putting together the panels and placing them on the A-frame. **Davila testified that there was no specific policy or safety rule that forbade the Claimant for stepping over the C channels, however, there was a general rule to maintain "good housekeeping"** (presumably in Davila's discretion concerning the meaning of "good housekeeping" and to keep the aisles free. According to the Claimant's credible testimony, the C-channel, unbeknownst to her, had recently been moved to stick out on the side of the aisle, a fact which Davila did not adequately appreciate. Davila simply generalized that the Claimant stepping over the C channels, where they were placed, was a safety rule violation, although there was no specific policy covering the situation. Essentially, Davila's position is that he will interpret what amounts to a violation of "good housekeeping. This is hardly consistent with the Workers' Compensation Act provision contained in § 8-42-112 (1) (b), C.R.S., which provides: "Where injury results from the employee's **willful** (emphasis supplied) failure to obey any reasonable rule adopted by the employer for the safety of the employee." Under the circumstances herein the alleged rule, the Claimant denies knowledge of it, it is vague and interpretation is left to the Safety Manager, and the Claimant has established that she was working safely under the circumstances and it is more likely than not that she did **not** violate a safety rule.

23. According to the Claimant, the C channels were 16 feet in length and that the goal was to finish completion of the panels and then move the C channels to the tables for sanding. There was no other place to put the C-Channels in the Claimant's work area. Davila testified that the warehouse had other places the C

channels could be placed, but he did not elaborate. For this reason, the ALJ finds the Claimant more credible than Davila.

24. The Claimant credibly testified she had safely stepped over the C-Channels for two hours and because they had been moved immediately prior to her injury, she caught her heel and fell. The ALJ finds the Claimant's description of the event persuasive and credible. The ALJ further finds that Davila's interpretation of safety policies is arbitrary and, ultimately, left to his discretion on what is safe and what is unsafe. For this reason, the ALJ finds that the Claimant has proven that she did **not** willfully violate a vague safety rule.

25. The ALJ finds the Employer's "Safety Manual" is vague, nebulous and that "good housekeeping" is not defined and the Claimant credibly testified the aisles were clear.

26. The Claimant demonstrated that she carried the panel in the only feasible and safe way possible, sideways, where she could see where she was walking to avoid the C channels.

27. The Claimant credibly testified she had walked over the C channels for approximately two hours and that someone had moved them a small amount shortly before she tripped on them.

28. The Claimant credibly testified that at the time the C channels were on the floor every table had panels being assembled and there was no place for the C channels to be placed.

29. The ALJ infers and finds the timing of the Respondent's safety rule allegation, after the Claimant started missing time from work and approximately 6 months after the injury occurred challenges the Employer's credulity.

Ultimate Findings

30. The ALJ finds that the Claimant's testimony, supporting the fact that she did **not willfully** violate a safety rule is more credible and persuasive than Davila's testimony and any other evidence to the contrary.

31. The ALJ makes a rational choice, based on substantial evidence, to accept the Claimant's testimony and to reject Davila's testimony and any other evidence to the contrary.

32. The ALJ finds that the Claimant acted safely in an efficient manner discharging the employees' mission.

33. The ALJ concludes that Davila erroneously concluded that the C channel was in the aisle, without describing the aisle. In fact, Davila, in his unfettered discretion, determined what was and what was not bad housekeeping or "in the aisle," without describing the aisle. This is not a knowable or reasonable safety rule.

It is analogous to “Caligula’s Laws,” where the Roman Emperor Caligula placed the laws on pillars so high that no one could read them, but when it came to enforcing the laws, he knew what they were.

34. The Claimant has proven by a preponderance of the evidence that she did **not**, with deliberate intent, willfully fail to obey a known safety rule of the Employer.

35. The ALJ finds that the reduction, unilaterally assessed against the Claimant for a 50% reduction in her TTD, TPD and PPD benefits by the Respondents does not have a factual basis and for the period of time the Claimant’s temporary total disability rate should be reinstituted to the State maximum of $914.27 for FY 2015/2016, and $914.27 is the correct formula factor for computing PPD benefits, pursuant to § 8-42-107 (8) (d), C.R.S. Based on 9% whole person PPD, the correct grand total is $32, 913.72 and not $17,773.21 (reduced by approximately one-half), as admitted in the FAL.

DISCUSSION

The legislative declaration of the Workers’ Compensation Act (the “Act”), § 8-40-102 (1), C.R.S., states that the Act is to “assure the quick and efficient delivery of…benefits to the injured worker at a reasonable cost without the necessity of any litigation….” The laws of workers’ compensation should be liberally interpreted to achieve the beneficent purposes of the Act. *See Wolford v. Pinnacol Assurance,* 107 P.3d 947 (Colo. 2005). *Weld County School District re-12 v. Bymer,* 955 P.2d 550 (Colo. 1998). § 8-43-201 (1), C.R.S.., of course, provides that the facts **shall not** be interpreted liberally in favor of either party. This does not conflict with the rule of liberal statutory construction to achieve the beneficent purposes of the Act. *See Anderson v. Longmont Toyota, Inc.,* 102 P.3d 323 (Colo. 2004); *Federal Express v. Indus. Claim Appeals Office,* 51 P.3d 1107 (Colo. App. 2002).

A strained interpretation of the statutes, read *in pari material,* to relieve an employer of the burden of proving a safety violation by invoking the general provisions of § 8-43-201 (1), C.R.S., which provides that a party seeking to modify an admission “shall have the burden of proof for any such modification.” In order to shift the burden of proof on a safety violation to the injured worker to prove a negative and reduce the worker’s indemnity benefits by 50% strikes at the core of the public policy of providing income to injured workers and the principle of liberal construction of the laws to achieve the beneficent purposes of the Act. Nonetheless, the ALJ has found that the Claimant has proven the negative that she did **not** violate a safety rule. On the other hand, the law provides that an employee who deliberately violates a safety rule should not be rewarded with full benefits.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, 2012 COA 85. The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the Claimant's testimony, supporting the fact that she did not willfully violate a safety rule is more credible and persuasive than Davila's testimony and any other evidence to the contrary.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007).

Substantial evidence is “that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence.” *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ’s resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, the ALJ made a rational choice, based on substantial evidence, to accept the Claimant’s testimony and to reject Davila’s testimony and any other evidence to the contrary.

Safety Violation

c. Sections 8-42-112(1) (a) & (b) C.R.S., authorize a 50% reduction in compensation for an employee's "willful failure" to use a safety device or "willful failure to obey any reasonable rule adopted by employer for the safety of the employee." A safety rule does not have to be either formally adopted or in writing to be effective*. Lori's Family Dining v. Indus. Claims Appeals Office*, 907 P. 2d 715, 719 (Colo. App. 1995). To establish that a violation of §§ 8-42-112(1)(a) & (b) has been **willfu**l, the Respondents, ordinarily, must prove by a preponderance of the evidence that a claimant acted with "deliberate intent." In *re Alvarado*, W.C. No. 4-559-275 [Indus. Claim Appeals Office (ICAO), Dec. 10, 2003]. Willful conduct may be proven by circumstantial evidence including evidence of frequent warnings, and the extent of deliberation evidenced by a claimant's conduct. *Id.* As found, there was no persuasive evidence presented at hearing, or in the documentary evidence, that the Claimant **willfully** violated a safety rule. As found, the Claimant was stepping over the C channel, she had stepped over several times before her injury and it was not in the aisle as Davila testified.

Shifting the Burden of Proof to the Claimant

d. The Respondent asserts that § 8-43-201, C.R.S., has shifted the burden to the Claimant because it has been amended to read:

> [A] party seeking to modify an issue determined by a general or final admission, a summary order, or a full order shall bear the burden of proof for any such modification.

e. The Respondent's theory of the safety violation case is that the Claimant violated a safety rule by not performing good housekeeping or keeping the aisles clear. As found, the Respondent's opinion of whether the Claimant violated this rule relies upon the opinion and unfettered discretion of the Safety Director Gus Davila, which opinion is too vague and tenuous to be consistent with due process and fundamental fairness concepts. Indeed, as found, Davila was not credible. The Respondent cites no written rule, regulation or other document other than the general direction "to perform good housekeeping, and to keep the aisles clear" to support their assertion. As further found, there was no persuasive or credible evidence that the Claimant violated a safety rule when stepping over the C channels to place her panel on the A-frame.

f. Further, "willfulness" is not established if the conduct is the result of thoughtlessness or negligence. In *re Bauer*, W.C. No. 4-495-198 (ICAO, October 20, 2003). 'Willfulness" also does not encompass "the negligent deviation from safe conduct dictated by common sense." In *re Gutierrez*, W.C. No. 4-561-352 (ICAO April 29, 2004). Rather the term "willful" in § 8-42-112(1)(b), C.R.S., "connotes "deliberate intent" and carelessness, [and] negligence, forgetfulness, remissness or oversight do not satisfy that statutory standard." *Miller v. City and County of Denver*, W.C. # 4-658-496 (ICAO, August 31, 2006); *see Bennet Properties v. Indus. Claim Appeals Office*, 437 P.2d 548 (Colo. 1968). Whether an employee has deliberately violated a safety rule is a question of fact to be determined by the ALJ. *Lori's Family Dining, Inc. v. Indus. Claim Appeals Office, supra* at 719. As found, the Claimant established that the she did not willfully violate any Employer's safety rule because it was not establishing what that rule was or how the Claimant violated it.

g. *Stockdale v. Indus. Comm'n of Colorado,* 76 Colo. 494, 232 P 669, 670 (1925), sets forth the definition of willful, setting forth:

> The meaning of the word, as used in this place, is "with deliberate intent." If the employee knows the rule, and yet intentionally does the forbidden thing, he has "willfully failed to obey" the rule.

h. Accordingly, even if the Respondent could establish that there was a specific safety rule that covered the Claimant's conduct, it must also be demonstrated that the Claimant violated the rule willfully. As found, the Claimant demonstrated that she did northing willful. Willfulness is not established if the conduct is the result of thoughtlessness or negligence. Rather the term "willful" in §8-42-112(1)(b), C.R.S., connotes deliberate intent, so that even if the Claimant's conduct were found to be careless, negligent, forgetful or remiss, the statutory standard has not been satisfied. *Miller v. City and County of Denver,* W.C. # 4-658-496, *supra*; *see Bennett Properties v. Indus. Claim Appeals Office*, 437 P .2d 548 (Colo. 1968).

Burden of Proof

i. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). Although the ALJ disagrees that the burden of proof for an alleged "safety violation' should shift to the Claimant, pursuant to the general provisions of § 8-43-201 (1), C.R.S., in the final analysis, the Respondent's theory is a *non sequitur* because the ALJ has found that the Claimant has proven that she did **not** violate a safety rule. A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has satisfied the shifted burden of proof.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. None of the admissions, including the Final Admission of Liability, dated November 22, 2016, are modified per se, they are overridden after an evidentiary hearing on the merits. The amount of the average weekly wage, the periods of temporary disability, the degree of permanent disability, the maximum medical improvement date, and the admission for post-maximum medical improvement are accepted as part of this decision.

B. Independently, after an evidentiary hearing on the merits, the Respondent shall pay the Claimant a grand total of $32, 913.72 in aggregate permanent partial disability benefits. In addition to the aggregate reduced amount of $17, 773.21, the Respondent shall pay the Claimant the additional total amount of $15,140.51payable at the rate of $502.53 per week instead of the admitted reduced amount of $286.91 per week, which is payable retroactively and forthwith.

C. Independently, after an evidentiary hearing on the merits, the Respondent shall pay the Claimant aggregate temporary total disability benefits of $12, 930.24. In addition to the reduced $6,465.12 in temporary total disability benefits, the Respondent

shall pay the Claimant an additional $6,465.12, payable at the rate of $914.27 per week, which is payable retroactively and forthwith.

D. Independently, after an evidentiary hearing on the merits the Respondent shall pay the Claimant aggregate temporary partial disability benefits of $6,378.86, payable at 2/3 of the temporary wage loss. In addition to the aggregate reduced temporary partial amount of $3,189.43, the Respondent shall pay the Claimant the additional aggregate amount of $3,189.43, which is payable retroactively and forthwith.

E. The Respondent is entitled to credit for any payments made pursuant to previous admissions of liability.

G. The Respondent shall continue paying the Claimant's post-maximum medical improvement maintenance medical benefit, subject to the Division of Workers' Compensation Medical Fee Schedule.

H. The Respondent shall pay the Claimant statutory interest at the rate of eight percent (8%) per annum on all amounts of additional indemnity benefits due and not paid when due.

I. Any and all issues not determined herein are reserved for future decision.

DATED this_____day of April 2017.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 4-588-918-17

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

SELF-INSURED
c/o SEDGWICK CLAIMS MANAGEMENT SERVICES, INC.

Third-Party Administrator (TPA),

Self-Insured Respondent.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on April 5, 2017, in Denver, Colorado. The hearing was digitally recorded (reference: 4/5/17, Courtroom1, beginning at 8:30 AM, and ending at 9:45 AM).

Claimant's Exhibits 1 through 7 were admitted into evidence, without objection, Respondents' Exhibits A through D were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Claimant, which was filed, electronically, on April 12, 2017. On April 13, 2017, counsel for the Respondent indicated no objection as to form. After a consideration of the proposed decision, the ALJ has modified it and hereby issues the following decision.

ISSUE

The sole issue to be determined by this decision concerns whether the Claimant is entitled to 24 pool therapy visits as recommended by his authorized treating physician (ATP) David Schneider, M.D., as reasonably necessary to cure and relieve the effects of his admitted left knee injury of July 22, 2003, consisting of an amputation at the left knee.

The Claimant bears the burden of proof, by a preponderance of the evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant suffered an admitted injury to his left ankle in the course and scope of his employment with the Employer on July 22, 2003 (*See* Claimant's Exhibit 4, bates stamp 18).

2. As a result of the admitted injury, the Claimant underwent multiple surgeries including multiple attempts at an ankle fusion. He developed complications with infections and eventually had a below knee amputation of his left leg on May 2, 2012. *Id.*

3. The latest General Admission of Liability (GAL), dated June 4, 2012, admits for temporary total disability (TTD) benefits of $658.84 per week; 7% of the upper extremity; 20% of the left lower extremity (LUE); and, medical benefits.

4. On November 6, 2014, ALJ Michelle E. Jones issued a decision ordering the Respondent to pay for the patellofemoral arthroplasty recommended by ATP Dr. Schneider.

5. On November 18, 2015, ALJ Margot Jones issued a decision ordering the Respondent to authorize and pay for ATP Chris Huser's recommended referral of the Claimant for an ENT evaluation.

6. On May 16, 2016, the Industrial Claim Appeals Office (ICAO) affirmed ALJ Margot Jones' decision of November 18, 2015. There was no timely appeal of ICAO's Final Order

7. The Claimant has treated with many different authorized treating providers (ATPs) from the date of his injury in 2003 until the present and is currently being treated by David J. Schneider, M.D., at Panorama Orthopedics and Spine Center.

8. The Claimant is currently using a prosthetic device below the knee on his left leg and has osteoarthritis, which was asymptomatic prior to his injury, and which is now symptomatic.

9. On May 16, 2014, ATP Dr. Schneider recommended that the Claimant undergo patellofemoral arthroplasty of his left knee, due to the Claimant's severe pain and severe chondromalacia of the patellofemoral joint (*See* Claimant's Exhibit 4, bates stamp 20, paragraph 15).

10. The Respondent challenged that surgery and the matter was heard on October 1, 2014, where the ALJ ordered that the proposed surgery by ATP Dr. Schneider was reasonably necessary to cure and relieve the effects of the Claimant's industrial injury (*See* Claimant's Exhibit 4, bates stamp16-24).

11. On August 24, 2015 the Claimant underwent the patellofemoral arthroplasty.

12. Following that surgery, the Claimant has undergone approximately 24 sessions of physical therapy, but still has pain and weakness deficits in his left knee.

13. At the hearing, the Claimant credibly testified that the physical therapy he had in the pool, with the exception of one visit where the therapist overworked the left knee, has been beneficial because the water supports and provides buoyancy, so as not to overtax his left leg. The Claimant stated that land based therapy caused him pain, that his left knee symptoms were aggravated by dry environment therapy and that he was willing to pursue the pool therapy on a regular basis

ATP Dr. Schneider's Recommendation of 24 Pool Therapy Visits

14. On November 4, 2016, the Respondent sent ATP Schneider's request for the Claimant to have pool therapy out for a "peer review" performed by Frank Polanco, M.D., who stated the opinion that the "pool therapy 3x8 visits" were not medically necessary and in support of his opinion set forth as follows:

> The claimant is two years post knee surgery and has had physical therapy and aqua therapy. There are no clinic notes provided reflecting progress or clinical findings. There are no findings noted that would preclude land based therapy. Thus, at this point the request does not meet criteria of the guidelines as the guidelines do not support

> ongoing therapy beyond the acute to subacute phase of injury and does not support aqua therapy in individuals who can tolerate land based therapy. As well there is no documentation of functional improvement. From the additional information provided to me by Dr. Schneider, he notes he is wanting the claimant to have access to a facility to be able to perform exercise activities and his written request is for a YMCA membership. In that the clamant is post op with residual deficits and requires ongoing independent rehabilitation, the claimant would meet criteria for a 3 month gym membership, however the formal physical therapy as requested above is not indicated. Therefore, physical therapy with pool therapy three times a week for eight weeks for the left knee is not medically necessary.

(*See* Claimant's Exhibit 1, bates stamp 5).

15. Peer review physician Polanco reached his conclusion after discussing the case with ATP Schneider and noting that ATP Schneider was also "requesting a [YMCA] gym membership to maintain fitness and strength." (*See* Claimant's Exhibit 1, bates stamp 5).

16. In support of his conclusion, peer review physician Polanco referenced Colorado Medical Treatment Guidelines Rule 17, Exhibit 6, which sets forth:

> CO Guidelines RULE 17, EXHIBIT 6 Lower Extremity Injury Medical Treatment Guidelines
>
> Aquatic Therapy:
>
> Is a well-accepted treatment which consists of the therapeutic use of aquatic immersion for therapeutic exercise to promote ROM, flexibility, core stabilization, endurance, strengthening, body mechanics, and pain management. Aquatic therapy includes the implementation of active therapeutic procedures in a swimming or therapeutic pool. The water provides a buoyancy force that lessens the amount of force gravity applies to the body. The decreased gravity effect allows the patient to have a mechanical advantage and more likely to have a successful trial of therapeutic exercise. Studies have shown that the muscle recruitment for aquatic therapy versus similar non-

> aquatic motions is significantly less. Because there is always a risk of recurrent or additional damage to the muscle tendon unit after a surgical repair, aquatic therapy may be preferred by surgeons to gain early return of ROM. In some cases the patient will be able to do the exercises unsupervised after the initial supervised session. Parks and recreation contacts may be used to locate less expensive facilities for patients. Indications include:
>
> Post-operative therapy as ordered by the surgeon; or
>
> Intolerance for active land-based or full-weight-bearing therapeutic procedures; or
>
> Symptoms that are exacerbate in a dry environment; and
>
> Willingness to follow through with the therapy on a regular basis. The pool should be large enough to allow full extremity ROM and fully erect posture. Aquatic Vests, belts, snorkels, and other devises may be used to provide stability balance, buoyancy, and resistance.
>
> * * *
>
> There is some evidence that for osteoarthritis of the hip or knee, aquatic exercise probably slightly reduces pain and slightly improve function over 3 months.

(See Claimant's Exhibit 1, bates stamp 6).

17. The Claimant credibly testified and the medical records support the proposition that the post-operative aquatic therapy, recommended by ATP Dr. Schneider, was good for him and that he was intolerant of active land-based or full-weight-bearing therapeutic procedures and that his left knee symptoms were exacerbated by working in a dry environment. The Claimant also testified that he was willing to pursue the 24 pool therapy visits.

Independent Medical Examiner (IME) Nicholas Olsen, D.O.

18. At hearing, the Respondent retained the services of Dr. Olsen to perform a record review. Dr. Olsen concurred with peer review physician Dr. Polanco that aquatic therapy was not reasonably necessary.

19. Dr. Olsen placed a heavy reliance on the Claimant's problems at the first pool therapy, but had not physically examined or spoken to the Claimant since May of 2014. The Claimant had explained the first pool therapy session was an exception of one visit where the therapist overworked the left knee, however, pool therapy has been beneficial because the water supports and provides buoyancy, so as not to overtax his left leg. The Claimant stated that land based therapy caused him pain, that his left knee symptoms were aggravated by dry environment therapy and that he was willing to pursue the pool therapy on a regular basis.

20. Dr. Olsen did not have the benefit of all of the actual facts when he performed his medical record review. Therefore, the ALJ discounts his opinion and finds ATP dr. Schneider's implied opinion, coupled with the Claimant's persuasive and credible testimony, to be more credible. The same is true for Dr. Polanco's "peer review," denial which the ALJ finds less credible than ATP Dr. Schneider's implied opinion and the Claimant's testimony.

The Totality of the Evidence

21. Considering the totality of the evidence, including the medical records and the Claimant's testimony, the ALJ rejects the opinions of Dr. Polanco and Dr. Olsen concerning whether the pool therapy recommended by ATP Dr. Schneider was reasonably necessary to cure and relieve the effects of the Claimant's admitted injury. Instead, the ALJ finds the opinion and recommendation of ATP Schneider is more consistent with the totality of the evidence. The ALJ finds that the Claimant's recurrent left knee pain is related to the injury of July 22, 2003 and the medical care for that injury since that time. The ALJ notes that the Claimant remains under a General Admission of Liability. *See* Claimant's Submission Tab 3, BS 10-15. Further treatment as recommended by ATP Schneider is warranted.

22. The Court rejects the opinions of Dr. Olsen on the issue of whether the 24 pool therapy visits are reasonably necessary to cure and relieve the effects of the Claimant's admitted industrial injury and in support of that rejection notes as follows:

> A. On May 7, 2014, Dr. Olsen performed a Respondent requested medical evaluation of Claimant. Dr. Olsen noted that he agreed with Jared Foran, M.D., and William Peace,

M.D., that the Claimant was not a candidate for surgery on his knee. Dr. Olsen listed the risks of possible infection complications and Claimant's obesity supporting that this conclusion was not a candidate for arthroplasty. Dr. Olsen recommended no other treatment other than losing weight (*See* Claimant's Exhibit 4, bates stamp 16-24). The Claimant has now had the surgery and it has improved his condition,

B. Dr. Olsen had previously stated the opinion, as early as 2014, that the Claimant would be at maximum medical improvement ("MMI") "in a couple of days" following his last scheduled physical therapy (*See* Claimant's Exhibit 4, bates stamp 20, paragraph 19). The Claimant is still not at MMI,

C. Dr. Olsen had previously rendered the opinion that the Claimant's tinnitus was not related to his work-related injury or the medications to treat the symptoms of the injury (See Claimant's Exhibit 5, bates stamp 28, paragraph 12), and

D. Dr. Olsen has only performed a medical record review prior to his **fourth time** testifying **against** Claimant's request for medical benefits in the above-captioned matter.

23. The Claimant's testimony, as well as the medical records, establish the Claimant's need for additional pool therapy as being reasonably necessary to cure and relieve the effects of his admitted injury, and causally related to the admitted injury of July 22, 2003. The ALJ rejects the contrary opinions on reasonable necessity, rendered by Dr. Polanco and Dr. Olsen.

Ultimate Findings

24. For the reasons stated herein above, the ALJ finds the implied opinion of ATP Dr. Schneider, and the Claimant's undisputed testimony, more credible than all other opinions to the contrary.

25. The ALJ makes a rational choice, based on substantial evidence, to accept the implied opinion of ATP Dr. Schneider, and the Claimant's undisputed testimony, and to reject all opinions to the contrary.

26. The Claimant has proven, by a preponderance of the evidence that the 24 pool therapy visits, recommended by his ATP, are causally related to the admitted

injury of July 22, 2003, and reasonably necessary to cure and relieve the effects thereof.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, 2012 COA 85. The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the Claimant's testimony concerning the benefits to him of pool therapy is undisputed other than by physicians who never saw him or spoke with him regarding the pool therapy. *See, Annotation, Comment: Credibility of Witness Giving Un-contradicted Testimony as Matter for Court or Jury,* 62 ALR 2d 1179, maintaining that the fact finder is not free to disregard un-contradicted testimony. As further found, the implied opinion of ATP Dr. Schneider, and the Claimant's undisputed testimony, more credible than all other opinions to the contrary.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, the ALJ made a rational choice, based on substantial evidence, to accept the implied opinion of ATP Dr. Schneider, and the Claimant's undisputed testimony, and to reject all opinions to the contrary.

Causally Related and Reasonably Necessary Medical Care/Ancillary Treatment

c. To be a compensable benefit, medical care and treatment must be causally related to an industrial injury or occupational disease. *Dependable Cleaners v. Vasquez,* 883 P. 2d 583 (Colo. App. 1994). As found, the pool therapy, recommended by ATP Dr. Schneider and wanted by the Claimant is causally related to the admitted injury of July 22, 2003. Also, medical treatment must be reasonably necessary to cure and relieve the effects of the industrial occupational disease. § 8-42-101 (1) (a), C.R.S. *Morey Mercantile v. Flynt,* 97 Colo. 163, 47 P. 2d 864 (1935); *Sims v. Indus. Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). As found, the recommended 24 visits for pool therapy is reasonably necessary to cure and relieve the effects of the Claimant's admitted injury.

d. To be a compensable medical benefit, the service requested must be medical in nature or incidental to obtaining such medical or nursing treatment. *Country Squire Kennels v. Tarshis*, 899 P.2d 362 (Colo. App. 1995). Services that are "medical in nature" include home health services in the nature of "attendant care," if reasonably needed to cure or relieve the effects of the industrial injury. *Atencio v. Quality Care, Inc.*, 791 P.2d 7 (Colo. Ct. App. 1990). The 24 visits for pool therapy, recommended by the Claimant's ATP, Dr. Schneider, are clearly ancillary to medical treatment in the same manner as physical therapy. Therefore, it is a reasonably necessary medical benefit.

Burden of Proof

e. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has proven his entitlement to 24 visits for pool therapy.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Respondent shall pay the costs of the 24 pool therapy visits at a YMCA recommended by ATP Dr. Schneider as reasonably necessary to cure and relieve the effects of the Claimant's industrial injury and the Claimant is entitled to this medical treatment.

B. Any and all issues not determined herein are reserved for future decision.

DATED this_____day of April 2017.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 4-996-220-01

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on April 5, 2017, in Denver, Colorado. The hearing was digitally recorded (reference: 4/5/17, Courtroom 1, beginning at 1:30 PM, and enduing at 5:30 PM). The official Spanish/English Interpreter was Carmen Pedrego.

Claimant's Exhibits 1 through 7 were admitted into evidence, without objection. Respondents' Exhibits A through P were admitted into evidence, without objection. Respondents' Exhibit Q (Interrogatory # 6 and 7 and answers thereto) was admitted into evidence as extrinsic evidence after the Claimant could **not** remember the answers she gave. Respondents' Exhibit R (which was the anatomical chart in Exhibit P but marked by the Respondents' Independent Medical Examiner (IME), I. Stephen Davis, M.D., to illustrate his testimony, was admitted into evidence without objection.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Claimant, which was filed, electronically, on April 12, 2017. On April 13, 2017, counsel for the Respondents indicated no objection to the proposal. After a consideration of the proposed decision, the ALJ has modified it and hereby issues the following decision.

ISSUE

The issue to be determined in this decision concerns the compensability/causal relatedness the Claimant's left shoulder injury, allegedly sustained in the quasi-course of employment on October 7, 2016, while the Claimant was receiving physical therapy for her admitted right hip injury of October 3, 2015.

The Claimant bears the burden of proof, by a preponderance of the evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant sustained admitted injuries to her right hip and back on October 3, 2015. She was authorized to treat with Felix Meza, M.D., at the Boulder, Colorado Concentra Medical Center. Dr. Meza was designated as her authorized treating physician.ATP.

2. The Respondents filed a General Admission of Liability (GAL), dated October 28, 2015, admitting for medical benefits, an average weekly wage (AWW) OF $446.95, and ongoing temporary total disability (TTD) benefits of $297.97 per week from October 4, 2015. The GAL remains in full force and effect.

3. The Claimant was diagnosed with a right hip labral tear, an intra-articular loose body and chondromalacia. Michael B. Ellman, M.D., performed arthroscopic surgery on May 3, 2016 to repair the hip pathology.

4. Authorized treatment post-surgery included physical therapy (PT) at the Boulder Concentra Center with William Dmytriw, P.T. Physical therapy sessions with Dmytriw began on May 20, 2016.

The Left Shoulder Injury

5. On the afternoon of October 6 2016, the Claimant attended a PT session with Dmytriw at the Concentra Medical Center as part of the authorized treatment for her right hip and back. The therapeutic exercises that day included the use of a theraband, an elastic band approximately 5 to 6 inches in width and 4 to 5 feet in length. The exercise required that the theraband be placed over a metal rod above her head. She performed the exercise by pulling one end of the theraband with her arms from overhead, down and behind her hip. When demonstrating the exercise during her

testimony, the Claimant's left arm was at times extended above her head and backward.

6. According to the Claimant, she felt extreme pain in her left shoulder immediately upon completing the exercise and advised her therapist. Dmytriw, however, was in a different area of the exercise room and was not present, or in proximity to the Claimant while she was engaged in the exercise. Dmytriw did not realize that the Claimant may have been injured. Her session was ended and he allowed the Claimant to leave and go home.

7. The Claimant's home was only a few minutes away. When at home, the Claimant laid down because she was in significant pain. Her husband arrived from work at sometime between 6:00 and 6:30 PM Although concerned, the couple believed her left shoulder symptoms would pass.

8. The Claimant's husband left for work at approximately 5:00 AM the next morning, while the Claimant slept. He returned from work the following day, again, between 6:00 and 6:30 PM and found the Claimant still in bed and still complaining of extreme pain in her left shoulder. The Claimant's left shoulder appeared swollen and the couple decided to go to the local hospital.

9. The Claimant and her husband went to the Boulder Community Hospital on October 7, 2016 at 10:01 PM She was seen by Jason E. Rozeski, M.D. and D. Cris Benner, PA-C.

10. The Claimant complained of acute left shoulder pain which she felt while performing PT exercises the previous day. Dr. Rozeski ordered left shoulder x-rays which revealed an anterior dislocation of the left humeral head. The dislocation of the left shoulder was reduced using a traction and counter traction technique. There were no complications and the Claimant was released to home with a sling for comfort and a recommendation for an orthopedic follow up.

11. Jeremiah Cogan, M.D., saw Claimant at Concentra on October 10, 2016. The Claimant reported to Dr. Cogan that she sustained a left shoulder dislocation in her last PT appointment. The Claimant noted some shoulder pain from her use of crutches prior to commencing PT but not like the pain experienced by the dislocation. She denied any previous shoulder injuries. Dr. Cogan deferred any finding concerning causation pending receipt of the hospital ER 9emergency room) records.

12. The Claimant saw Dr. Meza, her ATP, on October 13, 2016. After discussing the manner of injury with her and reviewing the ER records, Dr. Meza recommended the inclusion of the left shoulder into the claim. Dr. Meza also recommended an MRI (magnetic resonance imaging) arthrogram and orthopedic evaluation.

13. The Respondents denied the ATP Dr. Meza's request for authorization of treatment for the left shoulder and instead arranged for an IME with Dr. I. Stephen Davis. Dr. Davis performed the Respondents' IME on January 26, 2017.

Respondents' Independent Medical Examination (IME) by I. Sephen Davis, M.D.

14. After examining the Claimant and reviewing the relevant medical records it was Dr. Davis' opinion, to a reasonable degree of medical probability, that there was no documentation of a reasonable explanation as to the mechanism for the Claimant's left shoulder dislocation. Dr. Davis stated the opinion that the force necessary to tear the ligaments supporting the shoulder joint and cause a dislocation did not occur in the Claimant's October 6, 2016 PT session. Dr. Davis did **not** notice the Claimant demonstrating moving her left arm overhead and behind her. The ALJ, in fact, noticed the Claimant moving her left arm overhead and behind her while demonstrating the theraband exercise before she felt the pain in her left shoulder.

15. Dr. Davis' testimony at the hearing was generally consistent with his IME report. He testified that the Claimant's injury probably occurred within the 24 to 36 hours after the PT session and before responding to the ER. The testimony of the Claimant, and her husband, accounts for nothing happening during this period of time, other than the Claimant remaining in bed.

16. Dr. Davis testified at hearing, however, that an anterior dislocation of the shoulder joint occurs when the arm is extended upward and backward with enough force to cause the humeral head to dislocate from the joint. He also testified that the shoulder joint can become unstable from prior trauma and will therefore be more susceptible to a dislocation. As found, herein above, Dr. Davis did **not** notice the Claimant demonstrating the theraband exercise where she moved her left arm overhead and behind her.

17. Based on the totality of the evidence, the ALJ finds that the therapeutic exercise as demonstrated by the Claimant credibly explains how her injury occurred. Further, even though she did not realize, it is more probable than not that the Claimant had an unstable left shoulder and that the Claimant's activity in physical therapy on October 6, 2016, aggravated, accelerated or exacerbated the underlying instability and caused the dislocation.

18. Dr. Davis explained in his testimony how an anterior shoulder dislocation occurs but seemingly disregarded the Claimant's testimony and demonstration of the activity which probably caused her injury. The ALJ finds the Claimant's testimony more credible than that of Dr. Davis in that regard.

19. Dr. Davis also testified that the Claimant's shoulder dislocation occurred in the 24 to 36 hours after the physical therapy session and prior to her responding to the hospital ER. As found herein above, nothing happened during this period of time, and the ALJ finds Dr. Davis' seemingly alternative explanation unpersuasive in light of the totality of the evidence.

20. Oscar Jaime Segovia, Claimant's husband, testified in rebuttal to Dr. Davis' testimony, that he found his wife in bed and in extreme pain when he arrived at home from work on the evening of October 6, 2016. He spent the night with her and left for work at 5:00 AM the next morning. On the evening October 7, 2016, he arrived at home to find the Claimant still in bed still and still complaining of extreme shoulder pain. He stated that he was compelled to take the Claimant to the hospital for treatment.

21. The ALJ finds that testimony of Oscar Segovia credible and persuasive. The inference that the Claimant was injured after her PT session, while at home, or in some other manner prior to her GOING to the hospital amounts to speculation and the ALJ rejects this inference

Ultimate Findings

22. The ALJ finds the Claimant's testimony, and the testimony of her husband, credible, persuasive and supporting the proposition that nothing happened during the 24 to 36 hours after the Claimant's theraband exercises at her PT session on October 7, 2016, contrary to the speculative explanation of Dr. Davis that something must have happened to dislocate the Claimant's left shoulder. Dr. Davis' opinions support a pre-existing weakness of the left shoulder that could have caused the dislocation with minimum force such as demonstrated by the Claimant at hearing. In this case, the ALJ finds the lay testimony of the Claimant and her husband (that nothing happened in the 24 to 36 hours after the PT session more persuasive and credible than Dr. Davis' speculative opinion, however, Dr. Davis' opinion that the Claimant may have had an unstable left shoulder and did not know it. The ALJ infers and finds that the PT exercises with the theraband, as demonstrated by the Claimant, as an aggravating/accelerating factor is more credible as the cause of the dislocation, in which case lay testimony prevails despite medical opinion seemingly to the contrary.

23. The ALJ makes a rational choice to accept the testimony of the Claimant and her husband that nothing happened in the 24 to 36 hours after the PT event, based on substantial evidence, and to reject Dr. Davis' speculative opinion that the cause must have been some unknown event within 24 to 36 hours after the PT event.

24. The Claimant sustained her left shoulder injury while receiving authorized physical therapy, ordered by ATP Dr. Meza. Consequently, it occurred in the quasi-course of her employment for the Employer.

25. The ALJ infers and finds that the PT exercises with the theraband, as demonstrated by the Claimant, was an aggravating/accelerating factor and a more credible cause of the dislocation, in which case lay testimony prevails despite medical opinion seemingly to the contrary.

26. The Claimant has proven, by a preponderance of the evidence that the theraband exercises, during authorized PT, caused her unknown-as-of-then pre-existing left shoulder instability to become aggravated and accelerated to the point of dislocating her left shoulder.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the Claimant's testimony, and the testimony of her husband, was credible, persuasive and supporting the proposition that nothing happened during the 24 to 36 hours after the Claimant's theraband exercises at her PT session on October 7, 2016, contrary to the speculative explanation of Dr. Davis that something must have happened to dislocate the Claimant's left shoulder. Dr. Davis' opinions support a pre-existing weakness of the left shoulder that could have caused the dislocation with minimum force such as demonstrated by the Claimant at hearing. In this case, the ALJ finds the lay testimony of the Claimant and her husband (that nothing happened in the 24 to 36 hours after the PT session more persuasive and credible than Dr. Davis' speculative opinion, however, Dr. Davis' opinion that the Claimant may have had an unstable left

shoulder and did not know it. As found, the PT exercises with the theraband, as demonstrated by the Claimant, was an aggravating/accelerating factor and more credible as the cause of the dislocation, in which case lay testimony prevailed despite medical opinion seemingly to the contrary.

b. Compensation can be awarded where there is competent evidence other than expert opinion. *Martin Marietta Corp. v. Faulk*, 158 Colo. 441, 407 P.2d 348 (1965). Such competent evidence includes lay testimony. *See Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983); *Colorado Fuel & Iron Corp. v. Alitto*, 130 Colo. 130, 273 P.2d 725 (1954). *Also see Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997) [compensation may be determined on lay testimony despite medical opinion to the contrary].

Substantial Evidence

c. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, the ALJ made a rational choice to accept the testimony of the Claimant and her husband that nothing happened in the 24 to 36 hours after the PT event, based on substantial evidence, and to reject Dr. Davis' speculative opinion that the cause must have been some unknown event within 24 to 36 hours after the PT event.

Quasi-Course of Employment

d. Injuries sustained while a claimant is obtaining authorized medical treatment for an admitted injury are compensable. *See price Mine Service, Inc. v. Indus. Claim Appeals Office,* 64 P.3d 936 (Colo. App. 2003); *Jarosinski v. Indus. Claim Appeals office,* 62 P.3d 1082 (Colo. App. 2002); *Excel Corp. v. Indus. Claim Appeals office,* 860 P.2d 1393 (Colo. App. 1993). As found, the Claimant sustained her left shoulder injury while receiving authorized physical therapy, ordered by ATP Dr. Meza. Consequently, it occurred in the quasi-course of her employment for the Employer.

Aggravation/Acceleration of Pre-Existing Condition

e. An unexplained injury satisfies the "arising out of" employment requirement in § 8-41-301 (1) (c), C.R.S., if the injury would not have occurred but for the fact that the conditions and obligations of employment, and/or quasi-course of employment, placed the employee in the position where she was injured. The phrase "arising out of" calls for an examination of the causal connection or nexus between the conditions and obligations of employment and the employee's injury. This includes an injury during authorized medical treatment for an admitted injury. It is not essential, however, that an employee be engaged in an obligatory job function or in an activity resulting in a specific benefit to the employer at the time of injury. *City of Brighton v. Rodriguez,* 318 P.3d 496, **2014 CO 7.**

f. A compensable injury is one that arises out of and in the course of employment. Section 8-41-301(1) (b), C.R.S. The "arising out of" test is one of causation. If an industrial injury aggravates or accelerates a pre-existing condition, the resulting disability and need for treatment is a compensable consequence of the industrial injury. Thus, a claimant's personal susceptibility or predisposition to injury does not disqualify the claimant from receiving benefits. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). An injured worker has a compensable new injury **if the employment-related activities aggravate, accelerate, or combine with the pre-existing condition to cause a need for medical treatment or produce the disability for which benefits are sought.** § 8-41-301(1) (c), C.R.S. *See Merriman v. Indus. Comm'n,* 120 Colo. 400, 210 P.2d 448 (1949); *Anderson v. Brinkoff,* 859 P.2d 819 (Colo. 1993); *National Health Laboratories v. Indus. Claim Appeals Office,* 844 P.2d 1259 (Colo. App. 1992); *Snyder v. Indus. Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). An injury resulting from the concurrence of a pre-existing condition and a hazard of employment is compensable. *H & H Warehouse v. Vicory*, *supra*. *Duncan v. Indus. Claims App. Office*, 107 P.3d 999 (Colo. App. 2004). Even where the direct cause of an accident is the employee's pre-existing disease or condition, the resulting disability is compensable where the conditions or circumstances of employment have contributed to the injuries sustained by the employee. *Ramsdell v. Horn*, 781 P.2d 150 (Colo.App. 1989). *Also see* § 8-41-301(1) (c), C.R.S; *Parra v. Ideal Concrete,* W.C. No. 4-179-455 [Indus. Claim Appeals Office (ICAO), April 8, 1998]; *Witt v. James J. Keil Jr.,* W.C. No. 4-225-334 (ICAO, April 7, 1998). As found, the theraband exercises, during authorized PT, caused the Claimant's unknown-as-of-then pre-existing left shoulder instability to become aggravated and accelerated to the point of dislocating her left shoulder.

Burden of Proof

g. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App.

2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained her burden that her left shoulder injury was an aggravation/acceleration of her underlying left shoulder instability and it occurred, on October 7, 2016, in the quasi-course of her employment during authorized medical treatment for her admitted right hip injury of October 3, 2015.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Respondents shall pay all of the costs of medical care and treatment for the Claimant's left shoulder injury occurring in the quasi-course of employment, during authorized medical treatment for her admitted right shoulder injury, at the hands of her ATP, Felix, Meza, M.D., AND his referrals, including his referrals for physical therapy, subject to the Division of Workers' Compensation Medical Fee Schedule.

B. The General Admission of Liability, dated October 28, 2015, remains in full force and effect.

C. Any and all issues not determined herein are reserved for future decision.

DATED this_____day of April 2017.

_____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

CERTIFICATE OF SERVICE

I hereby certify that I have sent true and correct copies of the foregoing **Full Findings of Fact, Conclusions of Law and Order** on this_____day of April 2017, electronically in PDF format, addressed to:

Division of Workers' Compensation

ISSUES

I. Whether Claimant demonstrated by a preponderance of the evidence that he sustained a compensable lower back injury on May 18, 2016.

II. If Claimant has sustained a compensable injury, whether Claimant has proven by a preponderance of the evidence that he is entitled to reasonable and necessary medical treatment related to the industrial injury.

I. If Claimant has proven a compensable injury, whether Claimant has established by a preponderance of the evidence that he is entitled to receive Temporary Total Disability (TTD) benefits.

II. If Claimant has proven a compensable injury, whether Claimant has established by a preponderance of the evidence that he is entitled to receive Temporary Partial Disability (TPD) benefits.

III. If Claimant has established he is entitled to TTD or TPD benefits, what was Claimant's average weekly wage (AWW).

IV. If Claimant has established entitlement to TTD or TPD benefits, whether Respondents have demonstrated by a preponderance of the evidence Claimant was responsible for his termination.

FINDINGS OF FACT

1. Claimant sustained a low back injury on October 6, 2005 while working as a bricklayer for a previous employer, Creative Masonry. Claimant underwent an MRI on November 4, 2005. Steven P. Ross, MD noted "Broad-based, central HNP with impression upon the thecal sac and transversing S1 nerve roots bilaterally."

2. Claimant underwent a L5-S1 discectomy and partial left hemilaminectomy at L5 in March 2006. Dr. Ross interpreted a June 12, 2006 MRI, noting inflammation. Dr. Ross remarked that a broad-based posterior disc bulge remained. Dr. Ross also noted Claimant's overall alignment was anatomic and the remaining intervertebral discs of the lumbar spine were normal.

3. Claimant underwent a second MRI on September 20, 2006. Susan Powell Wu, MD interpreted the MRI and documented "residual broad-based diffuse disc bulge at L5-S1 slightly asymmetric to the right. This does result in mild right greater than left lateral

recess stenosis and does abut the descending S1 nerve roots." Dr. Powell Wu also noted bilateral degenerative facet disease at L4-5 and L5-S1.

4. Claimant continued to experience symptoms post-operatively. Sander Orent, MD, referred to the surgery as a failed lumbar disc surgery in a July 27, 2006 medical note. Claimant was placed at maximum medical improvement ("MMI") on October 12, 2006. On November 16, 2006, Dr. Orent placed Claimant on permanent medical restrictions of lifting ten pounds on an occasional basis, floor to knuckle, knuckle to waist and waist to overhead and could carry 20 pounds 100 feet at waist level, and bending kneeling and flexing forward and standing on an occasional basis. Dr. Orent noted Claimant's lifting fell within the sedentary work category. Dr. Orent also noted Claimant should not balance on a scaffold.

5. In an Impairment Rating Report dated December 4, 2016, Dr. Orent assigned Claimant a 20% whole person impairment rating, consisting of a 10% impairment rating under Table 53(2)(E) of the American Medical Association Guides to the Evaluation of Permanent Impairment, Third Edition (Revised), and 12% rating based on range of motion.

6. Claimant testified at hearing he subsequently returned to work as a bricklayer and had no issues performing his job duties until May 18, 2016. There was no evidence in the record that Claimant lost time from work through May 2016. Claimant testified he did not continue to receive treatment for his low back. No evidence was provided indicating Claimant continued to receive ongoing treatment for the October 2005 injury.

7. Claimant testified he initially worked for Employer in approximately 2013, and then returned for a second period of employment beginning in approximately 2015. Claimant stated his job duties for Employer included working with brick, blocks and, occasionally, rocks. Claimant testified the bricks weighed 2 to 45 pounds, with the rocks weighing more. Claimant testified that, in a typical day, he laid 90 to 100 bricks and 180 to 300 blocks per day. Claimant testified he also carried cans of 70 to 80 pound gravel at times. Claimant testified he has 14-15 years of experience as a bricklayer.

8. Claimant testified he sustained an injury on May 18, 2016 while employed as a bricklayer by Employer. Claimant was working on a scaffold laying split-face blocks onto a wall. The blocks weighed approximately 35 pounds each. Claimant testified a co-worker failed to position the scaffold properly, resulting in the scaffold being approximately four to five inches farther away from the wall than it should have been. Claimant also alleged the scaffold was uneven and "bouncy." During the task, Claimant

retrieved a block located to his right and placed the block on the wall to his left. While bending over the wall to ensure the block was properly aligned, Claimant experienced an onset of lower back pain. Claimant testified he felt as though he could not move and he was unable to straighten his back. Upon being able to straighten his back and walk, Claimant reported the back pain to his foreman. Claimant performed lighter tasks for the remainder of the shift.

9. Claimant testified the pain increased later that night and into the following day. Claimant reported continued pain to his foreman on the morning of May 19, 2016. Claimant continued performing light duties until around noon when his pain became unbearable. Claimant again reported to his foreman, who transported Claimant to an Employer-approved Concentra clinic.

10. Janine Boyt, PA-C evaluated Claimant on May 19, 2016. Claimant reported experiencing sharp right lower back pain while working on May 18, 2016. Claimant reported the pain worsened, shooting down his posterior right leg and into his right groin. Claimant also reported some numbness and tingling of his posterior right thigh. Claimant admitted having a prior lumbar disc injury 10 years prior with no subsequent issues. PA-C Boyt noted limited lumbar range of motion. PA-C Boyt assessed lumbar strain and radiculopathy. PA-C Boyt referred Claimant for physical therapy and released Claimant to return to modified duty with restrictions of lifting no more than 15 pounds, pushing/pulling no more than 25 pounds, and bending occasionally. PA-C Boyt noted Claimant "may work their [*sic*] entire shift."

11. On direct examination, when asked if he was able to subsequently return to work activity for Employer, Claimant testified he did not return to work for the remained of the day on May 19, 2016. Claimant then testified "For the next day - I'm not sure - but I returned, they gave me restrictions and the foreman did have the restrictions."

12. PA-C Boyt reevaluated Claimant on May 24, 2016. Claimant reported worsening pain, with a burning pain in his right leg. Claimant reported "he had to leave work early today." PA-C Boyt noted limited lumbar range of motion in all planes and a positive straight leg raise test on the right. PA-C Boyt again assessed lumbar strain and radiculopathy. PA-C Boyt ordered an MRI and released Claimant for modified duty, noting Claimant could work his entire shift.

13. Claimant returned to PA-C for a follow-up evaluation on June 2, 2016. Claimant reported missing work the day prior. Claimant reported pain shooting down his leg and numbness in his right toe when standing more than 10 minutes. PA-C Boyt noted the

same exam findings from the prior evaluation and the same assessment. PA-Boyt again released Claimant to work modified duty for an eight hour shift.

14. On the WC164 form completed by Daniel M. Peterson, MD on June 3, 2016, Dr. Peterson listed the codes for radiculopathy and lumbar strain under work-related medical diagnoses. Dr. Peterson stated the objective findings were consistent with Claimant's injury and/or work related mechanism of injury/illness.

15. PA-C Boyt reevaluated Claimant on June 9, 2016. Claimant reported aching and shooting pain. PA-C Boyt noted the same exam findings from the prior evaluation and the same assessment. PA-Boyt again released Claimant to work modified duty for an eight hour shift.

16. Claimant underwent an MRI of his lumbar spine on June 10, 2016. Kevin Wooley, MD interpreted the MRI. Dr. Wooley compared the MRI to the September 20, 2006 MRI. Dr. Wooley noted, grade 1 retrolisthesis, irregularity of the left lamina, broad-based disc bulge, right-sided paracentral disc herniation (8 x 7 x 6 mm in dimension), "severe spinal stenosis and effacement of the right lateral recess with likely impingement of the right L1 nerve root," and mild left-sided foraminal impingement. Dr. Wooley gave the following impression: (1) minimal grade 1 retrolisthesis of L5 relative to S1, (2) probable previous left laminotomy at the L5-S1 level, (3) mild multilevel degenerative changes, and (4) new right-sided paracentral disc herniation at L5-S1 level with severe spinal stenosis and probable impingement of the right S1 nerve root.

17. Frederic Zimmerman, DO (Physiatry) evaluated Claimant on June 14, 2016. Claimant reported constant right-sided leg pain. Dr. Zimmerman noted Claimant sustained a lumbar spine injury in 2005 and treated with a lumbar decompression/laminectomy on the left side. Upon physical examination, Dr. Zimmerman noted positive straight leg raise and neural tension on the right, paraspinal hypertonicity bilaterally, mild tenderness in the sciatic notch on the right, and no specific tenderness in the SI joints or greater trochanters bilaterally. Dr. Zimmerman assessed lumbosacral displaced disc, right lower extremity radiculitis, and previous lumbar laminectomy on the left, remarking "current symptoms on the right". Dr. Zimmerman ordered a right L5 plus S1 transforaminal ESI, and continued physical therapy.

18. Lloyd Thurston, MD evaluated Claimant on June 20, 2016. Dr. Thurston noted tenderness in Claimant's lumbosacral spine and bilateral muscle spasms. Dr. Thurston also noted the straight leg test, Valsalva test, and Waddell test were negative. Dr. Thurston assessed radiculopathy and lumbar disc herniation. Dr. Thurston

recommended Claimant receive an epidural steroid injection ("ESI"). Dr. Thurston released Claimant to work eight hours/day of modified duty.

19. Claimant continued to treat with Dr. Thurston. During an August 8, 2016 evaluation, Claimant reported pain when standing with pain shooting down his right leg. During an October 6, 2016 evaluation, Claimant reported pain and a burning sensation in his right leg and numbness when sitting or walking for extended periods of time. Dr. Thurston noted numbness in the fourth and fifth toes on Claimant's right foot, tenderness in the lumbar spine, and bilateral muscle spasms. Dr. Thurston referred Claimant back to Dr. Zimmerman and stated, "I think he would benefit greatly from an ESI, he has weakness and continued numbness in the right L5-S1 distribution and this needs to be addressed!" Dr. Thurston again released Claimant to work eight hours/day of modified duty.

20. Dr. Zimmerman reevaluated Claimant on October 11, 2016. Claimant reported right-sided lumbosacral pain radiating down Claimant's right lower extremity. Claimant also reported numbness and tingling in the right foot. Dr. Zimmerman noted straight leg raise and neural tension remained positive on the right side, decreased sensation light to touch in the lateral aspect of Claimant's right leg, and 10-15 degree extension in lumbar range of motion. Dr. Zimmerman provided the same assessment from his prior evaluation. Dr. Zimmerman recommended Claimant reschedule the ESI and restart formal physical therapy.

21. Philip L. Engen, MD evaluated Claimant on February 14, 2017. Claimant reported numbness and pain in his low back and right leg pain and numbness. On physical examination, Dr. Engen noted "marked muscle spasm" in the lumbar spine, restricted range of motion in the lumbar spine, and a positive straight leg test. Dr. Engen noted,

> "The MRI study done on June 10, 2016, compared to the November 20, 2006, demonstrates L5-S1 retrolisthesis with evidence of congenital AP narrowing of the canal due to shortened pedicles. There is evidence of the previous laminectomy in the left at the L5-S1 and the laminotomy at that L5-S1 segment. There is a right-sided paracentral disk herniation 8 x 7 x 6 mm in diameter."

Dr. Engen gave the following impression: (1) recurrent disk herniation at L5-S1, (2) right S1 root compression secondary to recurrent disk herniation, (3) severe spinal stenosis secondary to recurrent disk herniation, and (4) congenitally small canal.

22. Dr. Engen opined Claimant suffered a recurrent disk herniation "emanating from" the October 2005 injury. Dr. Engen concluded it was more likely than not that the the L5-S1 laminotomy and surgical correction of a left L5-S1 radicular pain syndrome caused an instability in the retrolisthesis L5-S1. Dr. Engen remarked Claimant had an "abnormal disk at L5-S1 identified in his previous work-related injury and he now has a recurrent disk herniation at L5-S1 right-sided which impacts the L5 and the S1 roots. It is more likely than not that this is part of his original Worker's Compensation claim."

23. On November 30, 2016, Carlos Cebrian, MD, PC conducted an Independent Medical Evaluation ("IME") at the request of Respondents. Dr. Cebrian issued an IME Report on January 20, 2017. Dr. Cebrian conducted a medical record review and physical examination of Claimant. On physical examination, Dr. Cebrian noted there were no spasms in the lumbar spine, mild discomfort to palpation in the area of the right SI joint and normal pelvic alignment. Dr. Cebrian noted a range of motion of 45 degrees flexion, 20 degrees extension, 25 degrees in the right lateral flexion, and 25 degrees in the left lateral flexion. Dr. Cebrian documented Claimant had pain down the back of his right knee on straight leg raise testing at 45 degrees. Dr. Cebrian concluded there were no claim-related diagnoses. Dr. Cebrian diagnosed the following, characterized as "not claim related, preexisting, concurrent and subsequent:" (1) prior lumbar disc herniation with laminotomy performed, (2) right-sided paracentral disc herniation at L5-S1 with severe spinal stenosis and probable impingement of the right S1 nerve root, (3) minimal Grade I retrolisthesis of L5, and (5) mild multilevel degenerative changes.

24. Dr. Cebrian stated it was his medically probable opinion that Claimant's symptoms are "due to the underlying natural history of his lumbar degenerative disc disease and not due to a new injury, cumulative trauma or due to aggravation of a pre-existing condition." Dr. Cebrian concluded there was not a "mechanism of sufficient force to cause an injury to the lumbar spine or to aggravate an underlying pre-existing condition," nor was there a mechanism to cause a cumulative injury to Claimant's lumbar spine. Referring to the Colorado Division of Workers' Compensation Medical Treatment Guidelines on Low Back Pain (the "Guidelines"), Dr. Cebrian noted the Guidelines indicate the best evidence supports regular heavy lifting (50 or more pounds) combined with flexion as a risk factor for low back pain. Dr. Cebrian also noted the Guidelines refer to studies indicating a BMI greater than 25 acts as a risk factor for low back pain. Dr. Cebrian noted Claimant does not engage in regular heavy lifting as defined in the Guidelines.

25. Dr. Cebrian opined the most recent MRI demonstrated pre-existing, degenerative and "genetically proscribed changes." Dr. Cebrian noted that, in most cases, pain from lumbar degenerative disease and stenosis presents spontaneously.

Dr. Cebrian contended prior surgery "would weaken the existing disc making the opposite side of the disc more likely to herniated." Dr. Cebrian noted Claimant has a prior history of L5-S1 disc herniation, multi-level lumbar spine degenerative disc disease, and a BMI over 25, which he referred to as risk factors for lumbar disc pathology. Dr. Cebrian concluded, "Further evaluation, diagnosis and treatment under workers' compensation is not medically reasonable, necessary, appropriate or related."

26. Dr. Cebrian testified at hearing on behalf of Respondents as an expert in family medicine. Dr. Cebrian is board certified and Level II accredited by the Colorado Division of Workers' Compensation. Dr. Cebrian testified consistent with his IME report. Dr. Cebrian reiterated his opinion that Claimant's condition is unrelated to his employment with Employer and instead represents the natural progression of Claimant's October 2005 injury. Dr. Cebrian contended Claimant experienced right-sided disc issues post-surgery in 2006, as evidenced by the enlarged disc on Claimant's right side revealed in the September 20, 2006 MRI. Dr. Cebrian stated the majority of findings on the 2016 MRI were present on the 2006 MRI, and the other findings represented "slow-process minor changes." Dr. Cebrian contended it was not surprising Claimant is now experiencing symptoms on the right side after having compression on the S1 nerve root on the same side 10 years prior. Dr. Cebrian concluded Claimant's condition is a reflection of underlying pathology that was present 10 years ago, and stated it is normal to see changes over time. Dr. Cebrian reiterated that, per the Guidelines, lifting 50-55 pounds may be a risk factor when combined with flexion and performed 15-20 times per day over cumulative years of exposure. Dr. Cebrian noted the majority of Claimant's job involved lifting under 50 pounds. Dr. Cebrian testified that considering all of the factors, the level of his exposure, his prior history, and the objective evidence from the prior injury, it was his medically probable opinion Claimant's complaints are unrelated to his employment with Employer.

27. Audrey Sevalt testified at hearing on behalf of Respondents. Ms. Sevalt is a Human Resources Consultant for Insurer and has worked in such capacity for Insurer for five years. Ms Sevalt testified Insurer is a professional employer organization ("PEO") that handles payroll and other services for Employer, including providing worker's compensation insurance through their own self-insured plan. Ms. Sevalt testified Insurer began working with Employer in March 2016. Ms. Sevalt contended she became aware of Claimant's alleged work-related injury on May 19, 2016 and that Claimant was offered modified duty on May 19, 2016.

28. Ms. Sevalt testified Insurer did not check Claimant's work status when Employer became a new client in March 2016, as Insurer was not required to do so. Insurer subsequently checked Claimant's work status in August 2016 after an investigation into

Claimant's workers' compensation claim revealed Claimant had used two social security numbers. During the investigation, Insurer also became aware that Claimant's permanent resident card expired in 2014. Ms. Sevalt testified Claimant was asked to provide a new permanent resident card, which Claimant provided the following day. Ms. Sevalt testified she attempted to verify the resident card through the Social Security Administration's E-Verify website. Ms. Sevalt received a letter of non-confirmation from the Social Security Administration indicating Claimant was not authorized to work in the United States under the social security number he provided. Ms. Sevalt testified Claimant was given a letter of an election to contest the notice of non-compliance, which provided detailed instructions on how to resolve the issue with the Social Security Administration. Ms. Sevalt testified Claimant returned the letter and checked the box electing not to contest the determination of non-confirmation. Ms. Sevalt testified Claimant was terminated as of August 8, 2016 because he elected not to contest the letter of non-confirmation and correct his eligibility to work in the United States.

29. Claimant testified he filed a workers' compensation claim in connection with the October 2005 injury under a social security number beginning with 412, using his same name and same birth date. While working for Employer, Claimant used the same name and same date of birth, but a different social security number beginning with 646. Claimant acknowledged Employer asked him to provide a new permanent resident card, which he did. Claimant also acknowledged Employer subsequently provided him a letter of non-confirmation from the Social Security Administration with instructions on how to correct his eligibility to work in the United States. Claimant was aware that his failure to correct the issue would result in termination. Claimant testified he was "not able" to correct the issue. Claimant did not identify any particular reasons preventing his ability to correct the issue.

30. Claimant was paid on a weekly basis. The payroll records demonstrate Employer's pay periods run from Monday to Sunday. Payroll records establish Claimant earned $32.00 per hour and $48.00 for each hour of overtime worked over 40 hours. Payroll records from the pay period ending June 14, 2015 through July 3, 2016 demonstrate Claimant did not consistently work 40 hours each week or earn overtime pay. For the eight-week period from March 21, 2016 through May 15, 2016, Claimant earned a total of $10,072.00 in gross wages, resulting in an average weekly wage of $1,259.00. The ALJ finds an average weekly wage of $1,259.00 to be a fair approximation of Claimant's wages at the time of injury.

31. For the eight-week period from March 21, 2016 through May 15, 2016, Claimant worked a total of 307 hours including 15.5 hours of overtime, averaging 38.38 hours per week. For the six-week period from May 22, 2016 through July 3, 2016, Claimant

worked a total of 183 hours, averaging 30.5 hours per week. Payroll records include two entries that effectively cover the same time period: one entry 24 total hours worked from May 22, 2016 through May 28, 2016, and a second entry of 9 hours total hours worked from May 23, 2016. No evidence was admitted at hearing regarding Claimant's hours worked and earnings subsequent to July 3, 2016.

32. For the four-week period from May 22, 2016 through June 19, 2016, after the injury, Claimant earned a total of $3,552 in gross wages, averaging $888.00 per week.

33. The ALJ finds Claimant's testimony credible and persuasive.

34. The ALJ credits the medical records and opinions of Drs. Wooley and Zimmerman over the contrary opinions of Drs. Engen, Thurston and Cebrian.

35. Claimant sustained a compensable injury to his low back on May 18, 2016 and is entitled to reasonably necessary medical benefits to cure or relieve the effects of the industrial injury.

36. Claimant did not prove by a preponderance of the evidence that he is entitled to TTD benefits.

37. Claimant has proven by a preponderance of the evidence that he is entitled to TPD benefits from May 22, 2016 through June 19, 2016 Claimant has not proven entitlement to TPD benefits beyond June 19, 2016.

38. Respondents have proven by a preponderance of the evidence that Claimant is responsible for his termination.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, Section 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reaso29nable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1), C.R.S. Generally, the claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado*, 717 P.2d 1000 (Colo. App. 1986).

The ALJ's resolution of issues will be affirmed if supported by substantial evidence in the record. Section 8-43-301(8), C.R.S.; *City and County of Denver School District 1 v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). Substantial evidence is that quantum of probative evidence, which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

Compensability

A claimant is required to prove by a preponderance of the evidence that at the time of the injury he was performing service arising out of and in the course of employment, and that the alleged injury was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). The question of whether the claimant met the burden of proof to establish a compensable injury is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

The ALJ concludes Claimant has proven by a preponderance of the evidence he sustained a compensable injury to his low back on May 18, 2016. Although Claimant sustained prior low back injury in October 2005 and underwent a lumbar surgery which was considered "failed", Claimant credibly testified he did not receive ongoing treatment

and he subsequently continued to perform his job duties as a bricklayer without issue until May 18, 2016. The ALJ is persuaded that, while Claimant may have had a preexisting condition or susceptibility to injury due to the prior injury, the employment combined with the condition to produce the need for medical treatment. The ALJ is not persuaded Claimant's condition solely represents the natural progression of Claimant's October 2005 injury. There is objective evidence of pathology in the medical records causing Claimant's new right-sided symptoms. The ALJ is persuaded that, by a preponderance of the evidence, Claimant sustained a new injury arising out of and in the course and scope of his employment on May 18, 2016.

Reasonable, Necessary and Related Medical Treatment

A respondent is liable to provide such medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury." Section 8-42-101(1)(a), C.R.S. *Colorado Compensation Insurance Authority v. Nofio*, 886 P.2d 714 (Colo. 1994). The determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ. *See generally Parker v. Iowa Tanklines, Inc.*, W.C. No. 4-517-537 (May 31, 2006); *Chacon v. J.W. Gibson Well Service Company*, W. C. No. 4-445-060 (February 22, 2002).

As found, Claimant has proven by a preponderance of the evidence he is entitled to reasonable and necessary medical treatment related to the industrial injury. As such, Respondents shall be liable for reasonable and necessary treatment to cure or relieve the effects of the May 18, 2016 industrial injury.

Average Weekly Wage

Section 8-42-102(2), C.R.S., requires the ALJ to calculate the claimant's AWW based on the earnings at the time of injury as measured by the claimant's monthly, weekly, daily, hourly or other earnings. This section establishes the so-called "default" method for calculating the AWW. However, if for any reason the ALJ determines the default method will not fairly calculate the AWW, Section 8-42-102(3), C.R.S. affords the ALJ discretion to determine the AWW in such other manner as will fairly determine the wage. Section 8-42-102(3) establishes the so-called "discretionary exception." *Benchmark/Elite, Inc. v. Simpson,* 232 P.3d 777 (Colo. 2010); *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp., supra.*

Claimant did not regularly work 40 hours per week, nor did Claimant regularly work overtime. As such, Claimant's average earnings during any given period of time fluctuated. As found, the ALJ determines a fair approximation of the Claimant's total wage loss in this case is expressed as an AWW of $1,259.00.

Entitlement to TTD/TPD Benefits

To prove entitlement to TTD benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S., requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). TTD benefits ordinarily continue until one of the occurrences listed in Section 8-42-105(3), C.R.S.; *City of Colorado Springs v. Industrial Claim Appeals Office, supra*. TTD benefits shall continue until the employee returns to regular or modified employment. *See* Section 8-42-105(3)(b), C.R.S.

As found, Claimant did not meet his burden to establish he is entitled to TTD benefits. The payroll records demonstrate Employer's pay periods run from Monday to Sunday. There is insufficient persuasive evidence establishing what days of the week Claimant worked. Claimant testified he worked the remainder of his shift on May 18th, worked a portion of his shift on May 19th, and subsequently returned to work with restrictions. Claimant testified Employer accommodated his restrictions. Claimant did not testify as to what date he returned to work or how many shifts he missed subsequent to the injury. The medical records establish Claimant was released to return to work as of May 19, 2016 to work an entire shift on modified duty.

While the payroll records indicate a decrease in hours occurred during the week following the industrial injury, there is insufficient persuasive evidence establishing Claimant was totally disabled from working for more than three of his regular working days. A paystub for the pay period May 23, 2016 to May 29, 2016 indicates Claimant worked a total of nine hours. A paystub for the pay period May 22, 2016 to May 28, 2016 indicates Claimant worked a total of 24 hours. The paystubs effectively cover the same period of time. As such, while the payroll records establish there was a decrease from Claimant's average hours worked in a week, Claimant has not proven by a preponderance of the evidence that the industrial injury caused a disability lasting more than three work shift. .

Section 8-42-106, C.R.S. provides that in cases of temporary partial disability, the employee shall receive sixty-six and two-thirds percent of the difference between the employee's average weekly wage at the time of the injury and the employee's average weekly wage during the continuance of the temporary partial disability. As found, Claimant has established an entitlement to TPD from May 22, 2016 through June

19, 2016. Claimant was released to work subject to medical restrictions that rendered him unable to perform his regular job duties. During these periods of time Claimant worked less than his average of 38.38 hours per week and earned less than his average weekly wage of $1,259.00. Claimant has established an entitlement to TPD benefits at a rate that is sixty-six and two-thirds percent of the difference between his AWW at the time of injury, $1,259.00 and his AWW during the continuance of TPD, $888.00.

Claimant worked 40 hours and earned gross wages of $1,280.00 during each pay period from June 20, 2016 through June 26, 2016 and June 27, 2016 through July 3, 2016. No payroll records regarding the time period between July 4, 2016 and Claimant's termination date of August 8, 2016 were admitted at hearing. As such, there is insufficient persuasive evidence establishing entitlement to TPD benefits from June 20, 2016, ongoing.

Responsibility for Termination

Sections 8-42-105(4), C.R.S and 8-42-103(1)(g), C.R.S. (the "termination statutes") provide a claimant who is responsible for his termination from regular or modified employment is not entitled to TTD benefits absent a worsening of condition that reestablishes the causal connection between the industrial injury and wage loss. *In re of George,* W.C. No. 4-690-400 (ICAP July 20, 2006). The termination statutes provide that, in cases where an employee is responsible for his termination, the resulting wage loss is not attributable to the industrial injury. *In re of Davis*, W.C. No. 4-631-681 (ICAP Apr. 24, 2006). A claimant does not act "volitionally" or exercise control over the circumstances leading to his termination if the effects of the injury prevent him from performing her assigned duties and cause the termination. *In re of Eskridge,* W.C. No. 4-651-260 (ICAP Apr. 21, 2006). Therefore, to establish that Claimant was responsible for his termination, Respondents must demonstrate by a preponderance of the evidence that Claimant committed a volitional act, or exercised some control over his termination under the totality of the circumstances. *See Padilla v. Digital Equipment*, 902 P.2d 414, 416 (Colo. App. 1994). An employee is thus "responsible" if he precipitated the employment termination by a volitional act that he would reasonably expect to cause the loss of employment. *Patchek v. Dep't of Public Safety,* W.C. No. 4-432-301 (ICAP, Sept. 27, 2001).

The ALJ further concludes Claimant is responsible for his termination, thus severing Claimant's entitlement to TPD benefits as of August 8, 2016. Subsequent to providing Employer an invalid permanent resident card, Claimant was provided a notice of non-compliance including instructions on how to correct the issue with the Social Security Administration. Claimant was aware that failure to correct the issue would result in termination. Claimant elected to not contest the determination of non-

correct the issue; however, Claimant did not testify as to what prevented him from doing so. As such, there is insufficient persuasive evidence Claimant's failure to correct the issue was non-volitional or otherwise due to circumstances outside of Claimant's control. Claimant was aware his failure to correct the issue would result in termination.

Accordingly, by failing to do so, Claimant committed a volitional act he reasonably could expect to cause the loss of his employment. Respondents have demonstrated by a preponderance of the evidence that Claimant is responsible for his termination. Thus, any wages loss subsequent to August 8, 2016 was not attributable to the industrial injury.

ORDER

It is therefore ordered that:

1. Claimant established by a preponderance of the evidence he sustained a compensable lower back injury on May 18, 2016.

2. Respondents shall pay for reasonable medical treatment necessary to cure and relieve Claimant from the effects of the May 18, 2016 industrial injury.

3. Claimant's average weekly wage is $1,259.00.

4. Claimant failed to establish by a preponderance of the evidence he is entitled to TTD benefits. Claimant's request for TTD benefits is denied and dismissed.

5. Claimant established by a preponderance of the evidence he is entitled to TPD benefits. Respondents shall pay claimant TPD benefits from May 22, 2016 through June 19, 2016, based upon an AWW of $1,259.00.

6. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

7. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. I. No. 2016-045

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER GRANTING SUMMARY JUDGMENT IN FAVOR OF DIVISION OF WORKERS' COMPENSATION

IN THE MATTER OF THE APPLICATION OF:

DIVISION OF WORKERS' COMPENSATION,

Applicant,

v.

Employer / Respondent.

On January 24, 2017, the Division of Workers' Compensation (hereinafter the "Division") filed an Application for Hearing in the above-captioned matter, and the Division mailed the Notice of the Hearing set for May 17, 2017, to the Employer at its last known and regular address as follows: xxxxx, the last known address on file with the Division, and the notice was not returned to the sender, by the U.S. Postal Service, as undeliverable. Therefore, there is a legal presumption of receipt and the ALJ finds that the Employer received notice of the hearing.

On March 24, 2017, the Division filed a Motion for Entry of Summary Judgment and Motion for Issuance of Order to Cease and Desist continuing its business operations for failure to maintain workers' compensation insurance as required by §§ 8-44-101 and 8-43-409, C.R.S. The Division's Motion was mailed to the Employer on March 24, 2017, at its last known address on file with the Division, and it was not returned to the sender, by the U.S. Postal Service, as undeliverable. Therefore, there is a legal presumption of receipt and the ALJ finds that the Employer received the Division's Motion for Entry of Summary Judgment and Motion for Issuance of Order to Cease and Desist xxxx (hereinafter "Employer") filed **no** timely response to the Motion nor did it file any response whatsoever. The matter was submitted for decision on April 18, 2017.

The Division is represented by Emmy A. Langley, Esq., Assistant Attorney General, Colorado Office of the Attorney General. There has been no appearance or response by the Employer.

ISSUE FOR SUMMARY JUDGMENT

The issue to be determined by this decision concerns whether the Employer continues business operations without maintaining workers' compensation insurance; and, if so, should the Employer be ordered to cease and desist from continuing to do business.

FINDINGS OF FACT

Based on the undisputed evidence contained in the file, pleadings and exhibits, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. On January 24, 2017, the Division of Workers' Compensation filed an Application for Hearing in this matter pursuant to Office of Administrative Courts Rules of Procedure (OACRP), Rule 8, 1 CCR 104-1 and § 8-43-409(1), C.R.S.. The Division mailed a Notice of Hearing to the Employer/Respondent at its last known address on file with the Division xxxx, and the notice was not returned to the sender, by the U.S. Postal Service, as undeliverable. Therefore, there is a legal presumption of receipt and the ALJ finds that the Employer received notice of the hearing. The hearing has been set for May 17, 2017, at 1:30 PM.

2. On March 24, 2017, the Division filed a Motion for Entry of Summary Judgment and Motion for Issuance of Order to Cease and Desist continuing its business operations for failure to maintain workers' compensation insurance as required by §§ 8-44-101 and 8-43-409, C.R.S. The Division's Motion was mailed to the Employer on March 24, 2017, at its last known address on file with the Division, and it was not returned to the sender, by the U.S. Postal Service, as undeliverable. Therefore, there is a legal presumption of receipt and the ALJ finds that the Employer received the Division's Motion for Entry of Summary Judgment and Motion for Issuance of Order to Cease and Desist. .xxxx (hereinafter "Employer") filed **no** timely response to the Motion nor did it file any response whatsoever. The matter was submitted for decision on April 18, 2017.

3. Pursuant to OACRP, Rule 17, the Employer had 20 days after the date of filing of the Motion to file an objection to the Motion xxxx (hereinafter "Employer") filed **no** timely response to the Motion nor did it file any response whatsoever.

4. The Employer failed to file a Response to the Motion for Summary Judgment. Accordingly, there are no genuine issues of material fact in dispute for hearing. The Employer failed to provide a written response with supporting documentation to the Division's Motion for Entry of Summary Judgment.

Findings

5. It is undisputed, and the ALJ finds, that the Employer employs employees for whom it must carry workers' compensation insurance under the provisions of the Workers' Compensation Act (hereinafter the "Act")..

6. The Employer does not have a policy of workers' compensation insurance in effect.

7. The Employer continues to operate its business in the absence of workers' compensation insurance coverage.

8. The Employer received legal notice of the hearing set before the Office of Administrative Courts, and the Motion for Summary Judgment as herein above detailed.

9. The Employer is in default of its workers' compensation insurance obligations under the Act.

Ultimate Findings

10. There are no genuine disputed issues of material fact concerning the fact that the Employer continues to operate its business without insuring its liability for workers' compensation.

11. The Division has proven, by a preponderance of the evidence that the Employer continues business operations without insuring its liability for workers' compensation.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Jurisdiction and Notice

a. The ALJ has jurisdiction of the subject matter and over the parties to this action pursuant to the Workers' Compensation Act of Colorado.

b. As found, the Division's Motion was mailed to the Employer on March 24, 2017, at its last known address on file with the Division, as herein above detailed, and it was not returned to the sender, by the U.S. Postal Service, as undeliverable. Therefore, there is a legal presumption of receipt and the ALJ finds that the Employer received the Division's Motion for Entry of Summary Judgment and Motion for Issuance of Order to Cease and Desist. *See Olsen v. Davidson,* 142 Colo. 205, 350 P.2d 338 (1960); *Campbell v. IBM Corporation,* 867 P.2d 77 (Colo. App. 1993).

c. As found, the Employer failed to provide a written response with supporting documentation to the Division's Motion for Entry of Summary Judgment. Accordingly, the facts set forth in the Division's Motion and in the supporting affidavits and documents attached to the Motion for Summary Judgment are deemed undisputed. *WRWC, LLC v. City of Arvada*, 107 P.3d 1002, 1006 (Colo. App. 2004).

d. The Employer is in violation of § 8-44-101(1), C.R.S., by failing to maintain workers' compensation insurance for its covered employees, and is therefore subject to a cease and desist order under the provisions of § 8-43-409 (1) (a), C.R.S.

e. . Section 8-43-409(1) (a), C.R.S., provides that an employer in default of its workers' compensation insurance obligations shall be ordered to cease and desist immediately from continuing its business operations during the period such default continues.

f. The issuance of an order requiring the Employer to cease and desist business operations while in default of its workers' compensation insurance obligations is an appropriate penalty for failure to keep workers' compensation insurance in force.

g. Pursuant to Office of Administrative Courts Rules of Procedure (OACP) Rule 17, 1 CCR 1101-3, "any party may file a motion for summary judgment seeking resolution of any endorsed issue for hearing." Summary judgment may be sought in a workers' compensation proceeding. *See Fera v. Indus. Claim Appeals Office,* 169 P.3d 231, 232 (Colo. App. 2007). The OAC Rule allows a party to support its Motion with affidavits, transcripts of testimony, medical reports, or employer records. A motion for summary judgment may be supported by pleadings, depositions, answers to

interrogatories, and admissions on file. C.R.C.P. 56; *See also Nova v. Indus. Claim Appeals Office*, 754 P.2d 800 (Colo. App. 1988) [C.R.C.P. and C.R.E. apply insofar as they are not inconsistent with the procedural or statutory provisions of the Act]. As found, the Motion for Summary Judgment is supported by documents and affidavits. As further found, there were no timely responses to the Motion. 12. Summary judgment is appropriate in this matter because there are no genuine issues of material fact in dispute, and the Division is entitled to entry of judgment as a matter of law. *McCormick v. Union Pacific Resources Co.*, 14 P.3d 346, 348-349 (Colo. 2000); C.R.C.P. 56(c).

h. Summary judgment is appropriate when the pleadings show that there is no genuine issue as to any material fact and that the moving party is entitled to judgment as a matter of law. C.R.C.P. 56(c); *Churchey v. Adolph Coors Co.*, 759 P.2d 1336 (Colo. 1988). This rule allows the parties to pierce the formal allegation of the pleadings and save the time and expense connected with trial when, as a matter of law, based on undisputed facts, one party could not prevail. See *Drake v. Tyner*, 914 P.2d 519 (Colo. Ct. App. 1996). As found, the attachments to the Division's Motion for Summary Judgment support the proposition that there is no genuine issue of disputed material fact exist.

i. Once the moving party shows specific facts probative of a right to judgment, it becomes necessary for the non-moving party to set forth facts showing that there is a genuine issue for hearing. *See Miller v. Van Newkirk*, 628 P.2d 143 (Colo. App. 1980). As found, there were no timely responses to the Division's Motion for Summary Judgment. Therefore, the Division is entitled to Summary Judgment, as a matter of law.

Burden of Proof

j. The burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P. 2d 535 (Colo. App. 1992). That burden is "preponderance of the evidence. A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). As found, the Division has sustained its burden that there is no genuine issue of disputed material fact concerning the Employer continuing to operate a business without insuring its liability for workers' compensation;

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Division of Workers' Compensation's Motion for Summary Judgment is hereby granted.

B. The Employer shall cease and desist immediately from continuing its business operations during the period it remains in default of its mandatory obligation to have workers' compensation insurance in force and effect.

C. The hearing in this matter, May 17, 2017, is hereby vacated.

DATED this_____day of April 2017.

ISSUES

1. Whether Respondents have overcome the opinion of division independent medical examination (DIME) physician Brian Beatty, D.O. on Claimant's permanent partial disability (PPD) impairment rating by clear and convincing evidence.

FINDINGS OF FACT

1. Claimant is employed by Employer as a customer service representative.

2. On January 2, 2015 Claimant was walking into Employer's building when she slipped on water and fell. Claimant landed on her left side. When she fell, she was holding a glass Snapple bottle in her right hand that flew out of her hand and struck her on the right side of her head. Claimant did not striker her head on the ground or any other object.

3. Claimant was evaluated at Concentra. Claimant reported dizziness, nausea, vomiting, and a pressure sensation in the head from her fall earlier that day. At Concentra, Kirk Nelson, M.D. performed an examination and noted right trapezius tenderness and full cervical range of motion without spasms. Dr. Nelson assessed closed head injury and cervical strain.

4. On January 5, 2015 Claimant was evaluated by Dr. Nelson. Claimant reported a continued headache in the front and right occipital region and that her neck was also sore. Dr. Nelson noted a medical history positive for migraines but that treatment had not been required for some time. Dr. Nelson noted tenderness in the right trapezius and paracervical muscles and tenderness across the nuchal line and greater occipital groove on the right. Dr. Nelson noted an unremarkable neurologic exam. Dr. Nelson referred Claimant to physical therapy. Claimant continued to be evaluated at Concentra. *See* Exhibit D.

5. On April 17, 2015 Claimant underwent a neuropsychological evaluation performed by Kevin Reilly, Psy.D. Dr. Reilly opined that the evaluation showed suboptimal effort, magnified memory complaints, and that the obtained measures indicated symptom magnification/response bias. Dr. Reilly noted that Claimant's observed pattern of performance was consistent with non-organic factors influencing the neuropsychometric performance. Dr. Reilly opined that it was likely that psychosocial factors were contributing to delayed recovery/chronic pain syndrome. Dr. Reilly noted that the description of Claimant's injury was consistent with a diagnosis of mild traumatic brain injury and that the natural history of mild traumatic brain injury/postconcussional syndrome is one of steadily resolving symptoms in the hours/days/weeks post injury and that the neurocognitive symptoms are at the worst

immediately after the injury. Dr. Reilly opined that the psychosocial factors likely played a significant role in Claimant's reported cognitive difficulties and that Claimant could potentially benefit from behavioral medicine approaches to her chronic pain. *See* Exhibit B.

6. On November 25, 2015 Claimant was evaluated by her primary care provider. Claimant reported difficulty losing weight despite exercising and eating healthily and a small lump in her left armpit. Claimant denied muscle cramps, joint pain, back pain, stiffness, muscle weakness, and loss of strength or muscle aches. Claimant denied headaches and weakness. *See* Exhibit E.

7. On February 3, 2016 Claimant underwent an independent medical examination (IME) performed by Allison Fall, M.D. Claimant reported that she was walking into work on January 2, 2015 when she slipped on water and fell. Claimant reported that a glass bottle of Snapple was in her hand and that when she fell the bottle hit her on the back of her head on the right side and that she landed on the left side of her body. Claimant reported getting up and that her head was throbbing and felt heavy. Claimant reported feeling nauseous and drowsy and that she started throwing up. Claimant reported leaving work and that when she got home she started feeling neck pain and went to Concentra. Claimant reported that she was now 75% better but that she still had neck muscle soreness and headaches with tightness/stiffness more on the left side of her neck than the right. Dr. Fall reviewed medical records and performed a physical examination. Dr. Fall assessed left upper quadrant myofascial pain. Dr. Fall opined that Claimant was near MMI for the ongoing treatment of myofascial pain. Dr. Fall opined that there was no indication for permanent work restrictions and that there was no indication for any permanent impairment. Dr. Fall opined that maintenance care may include either chiropractic treatment or massage if needed to maintain MMI status but that the focus should be on independent exercise and symptom management. *See* Exhibit 2.

8. On February 29, 2016 Claimant was evaluated by Eric Tentori, D.O. Dr. Tentori noted on examination that Claimant had the persistence of mild tenderness with palpation overlying the paraspinous musculature but with no significant muscle spasm, no midline bony abnormalities, and good active range of motion in all planes. Dr. Tentori opined that Claimant was at MMI and that the injury had not resulted in any permanent physical impairment. Dr. Tentori agreed with Dr. Fall's assessment of the work injury and agreed that the primary ongoing issue appeared to be myofascial pain/irritation. He also agreed that the injury did not result in permanent physical impairment. Dr. Tentori noted that Claimant had been provided with an appropriate course of treatment to address her work related issues. He recommended as maintenance treatment six additional sessions of chiropractic care, six sessions of dry needling, and six sessions of active/therapeutic massage therapy. Dr. Tentori noted that Claimant had no indication for further follow up care/evaluation at Concentra. *See* Exhibit C.

9. On September 12, 2016 Claimant was evaluated by her primary care provider. Claimant reported that when she did pushups she felt some discomfort and a bulging sensation in right lateral umbilical area. *See* Exhibit E.

10. On September 22, 2016 Claimant was evaluated by her primary care provider. On examination Claimant had no neck masses, thyromegaly, or abnormal cervical nodes. It was noted that Claimant had normal full range of motion of all joints and no focal deficits and normal muscle strength and tone. *See* Exhibit E.

11. On October 26, 2016 Claimant underwent a DIME performed by Dr. Beatty. Claimant reported that on January 2, 2015 while walking into the front door of her workplace she slipped on water on the floor. Claimant reported falling on her left side and that a glass bottle of juice that was in her hand flew out of her hand and came down hitting her in the head. Claimant reported that she initially had a headache and some swelling on the left side of her head, felt dizzy and lightheaded, and that an hour later she felt nauseous and vomited. Claimant reported that she continued to have tightness in her neck with pain radiating from her neck into her head. Dr. Beatty reviewed medical records and performed a physical examination. Dr. Beatty noted tenderness to palpation over the paracervical musculature into the trapezius muscles and along the levator scapula bilaterally. Dr. Beatty noted range of motion measurements that were reduced. Dr. Beatty opined that Claimant had reached maximum medical improvement (MMI) on February 29, 2016. Dr. Beatty opined that Claimant had a 7% whole person impairment rating for the cervical spine based on a 3% impairment for loss of range of motion combined with a 4% impairment based on Table 53, and referenced page 80#IIB. *See* Exhibits D, 1.

12. Table 53 (II)(B) on page 80 provides for a Table 53 impairment rating of 4% to the cervical spine for intervetebral disc or other soft tissues lesions that are unoperated, with a medically documented injury and a minimum of six months of medically documented pain and rigidity with or without muscle spasm, associated with non to minimal degenerative changes on structural tests.

13. There is insufficient evidence to establish that Claimant has an intervetebral disc or soft tissue lesion. There is insufficient evidence to establish that Claimant has had six months of rigidity.

14. On November 10, 2016 Claimant was evaluated by her primary care provider. Claimant reported period headaches. On physical examination, Claimant was able to move both upper and lower extremities with no muscle spasms and had no focal or asymmetric muscle weakness or deficits. *See* Exhibit E.

15. On February 1, 2017 Claimant underwent an independent medical evaluation (IME) performed by Carlos Cebrian, M.D. Claimant reported that she was injured on January 2, 2015 when she was walking into a building and slipped on the floor. Claimant reported that a glass bottle of Snapple was in her right hand and came out of her hand and hit her on the right side of her head as she fell down. Claimant

reported that she landed on her left arm and leg and did not hit her head or lose consciousness but felt a flash. Claimant reported having a headache and pain on the right side of her head as well as sensitivity to light that day and that she felt nauseated forty five minutes to an hour later and went home. Claimant reported that at home she started to vomit so was taken to Concentra. Claimant reported that she still had neck pain leading to headaches and that the pain went up the sides of her head. Claimant reported that she had been placed at MMI with maintenance care that she did for the next six months and that once she finished the maintenance visits, she started to have more pain and felt as though she was getting worse. Claimant reported tightness in her neck radiating to her shoulders, primarily the left shoulder and pressure in her head that hurt a lot. Claimant also reported that she still had light sensitivity when she has headaches. *See* Exhibit F.

16. Dr. Cebrian reviewed medical records and performed a physical examination. On examination, Claimant had no spasms, trigger points, or atrophy. Claimant was tender to palpation over the left paracervical muscles into the left trapezius. Claimant reported tenderness to palpation posterior to the left shoulder and a pinching sensation in the posterior left shoulder on movement and into the left trapezius. Dr. Cebrian assessed non claim related migraine headaches and claim related scalp contusion with mild concussive symptoms and cervical strain. Dr. Cebrian opined that Claimant did not require any further treatment related to her January 2, 2015 claim and that she was appropriately placed at MMI by Dr. Tentori on February 29, 2016. Dr. Cebrian noted that the mechanism of injury was a minor slip and fall with a Snapple bottle hitting the parietal aspect of her skull and that she did not hit her head against the ground or other object. Dr. Cebrian noted that Claimant's post-concussive symptoms were minimal with no confusion and no loss of consciousness or amnesia. Dr. Cebrian opined that Claimant's ongoing pain complaints were out of proportion to the objective findings and noted that the cervical MRI findings were unremarkable. Dr. Cebrian opined that there was no objective examination findings or pathology that would explain Claimant's level of ongoing symptomatology and that the neuropsychological evaluation provided an explanation as to why her symptoms have continued to persist. *See* Exhibit F.

17. Dr. Cebrian opined that the injuries Claimant sustained on January 2, 2015 would not be expected to be permanent and that any limited discomfort she had did not lend itself to an impairment rating under the AMA guides. Dr. Cebrian noted that application of medical impairment required that a disorder being rating be identified, accurately treated, reproducible, measurable, permanent, and required a specific diagnosis and objective pathology. Dr. Cebrian opined that there was no such thing as a permanent strain or contusion and that myofascial pain complaints did not lead to a permanent impairment. Dr. Cebrian opined that Claimant did not have a spinal mediated disorder and that Claimant did not have a Table 53 diagnosis and opined that Claimant did not have a claim related impairment of her cervical spine. Dr. Cebrian also opined that the range of motion measurements he took on February 1, 2017 were normal. Dr. Cebrian opined that Dr. Beatty erred in assigning a permanent impairment rating and that Dr. Beatty's assignment of impairment was not in compliance with the

AMA guides or level II accreditation as there was no specific diagnosis or objective pathology correlating with Claimant's ongoing pain complaints. *See* Exhibit F.

18. Dr. Cebrian testified by deposition consistent with his written report. Dr. Cebrian opined that Claimant had a zero percent impairment rating because she did not have a spinal mediated condition in her cervical spine and had no objective evidence to support any kind of permanent impairment. Dr. Cebrian noted that Claimant had only tenderness which is a subjective response of a patient when you are palpating various structures where the patient says it hurts. Dr. Cebrian noted that objective findings could include radiographic findings, muscle atrophy, muscle spasms, or other things but that Claimant had no objective findings. Dr. Cebrian noted that the DIME physician Dr. Beatty had only noted subjective findings of tenderness to palpation and decreased range of motion and that Dr. Beatty also had not found anything objective. Dr. Cebrian opined that in the absence of objective findings correlating with subjective complaints, a Table 53 diagnosis is not appropriate and that Claimant did not qualify for a Table 53 rating. Dr. Cebrian also noted that Claimant's range of motion at the IME he performed was normal. Dr. Cebrian noted that even if Claimant qualified for a Table 53 impairment, Claimant would have an additional zero percent impairment for range of motion. Dr. Cebrian noted that Dr. Tentori also had found no objective evidence and rated a zero percent impairment. Dr. Cebrian opined that Dr. Beatty was in error for providing an impairment rating in the absence of objective pathology and that he could not explain why Dr. Beatty did so. Dr. Cebrian also noted that Dr. Reilly's psychological evaluation and opinion provided an explanation for why Claimant's care went on for such a long period of time after such a minor mechanism of injury. *See* Exhibit G.

19. The opinions of Dr. Cebrian are found credible and persuasive. His opinions are consistent with the overall medical evidence and with the opinions of Dr. Tentori and Dr. Fall. His opinions are further supported by the psychological opinions and conclusions of Dr. Reilly.

20. Dr. Beatty erred in assigning a Table 53 impairment.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Overcoming DIME on Impairment Rating

A DIME physician must apply the AMA Guides when determining the claimant's medical impairment rating. *See* § 8-42-101(3.7), C.R.S.; §8-42-107(8)(c), C.R.S. The finding of a DIME physician concerning the claimant's medical impairment rating shall be overcome only by clear and convincing evidence. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). The questions of whether the DIME physician properly applied the AMA Guides, and ultimately whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000). A mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. *Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO March 22, 2000).

Respondents have met their burden by clear and convincing evidence to show that it is highly probable that Dr. Beatty's impairment rating is incorrect. Dr. Beatty opined that Claimant qualified for a Table 53(II)(B) impairment rating for the cervical spine. However, Respondents have shown by clear and convincing evidence that a

Table 53 diagnosis does not exist in this case and that Claimant is not entitled to an impairment rating due to a specific disorder of the spine related to intervertebral disc or other soft tissue lesion. Section II(B) of Table 53 provides for impairments for intervertebral disc or other soft tissue lesions when un-operated with medically documented injury and a minimum of six months of medically documented pain and rigidity with or without muscle spasm associated with none to minimal degenerative changes on structural tests. There is insufficient objective evidence of an intervertebral disc or soft tissue lesion or of six months of rigidity to support the rating provided by DIME physician Dr. Beatty. As found above, a complete review of the medical evidence establishes no credible medical evidence of objective pathology that can reasonably explain Claimant's subjective complaints. Tenderness and reduced range of motion were the main findings. However, the range of motion limitations reported by Claimant varied between different evaluation dates and different providers. Given Claimant's psychological evaluation, her subjective reports of symptoms, tenderness, and limitations in range of motion cannot be relied upon to any degree of certainty.

Although Claimant reports symptoms and limitations in range of motion, there is no objective or organic pathology that exists to qualify her for a Table 53 impairment rating. The opinions of Dr. Tentori, Dr. Fall, and Dr. Cebrian are credible and persuasive that Claimant does not qualify for a permanent impairment rating. Respondents have presented evidence that is highly probable and free from serious or substantial doubt that Dr. Beatty erred in calculating an impairment rating and that Claimant does not qualify for an impairment rating under Table 53. With no Table 53 rating, Claimant does not qualify for a range of motion impairment rating for the cervical spine and the ALJ concludes that the proper impairment rating is 0%.

ORDER

1. Respondents have overcome the DIME physician's opinion on permanent impairment by clear and convincing evidence. Claimant does not qualify for a Table 53 impairment and the proper permanent impairment rating is 0%.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures

to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 19, 2017

Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-003-724-04

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

SELF-INSURED,

Self-Insured Respondent.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on March 30, 2017, in Denver, Colorado. The hearing was digitally recorded (reference 3/30/17, Courtroom 1, beginning at 8:30 AM, and ending at 12:30 PM).

Claimant's Exhibits 1 through 10 were admitted into evidence, without objection. Respondent's Exhibits A through I were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ ruled from the bench and took the matter under advisement in order to prepare a written decision.

ISSUES

The issues to be determined by this decision concern compensability, specifically, whether the Claimant sustained an industrial injury arising out of and in the course of his employment with the Employer, by virtue of an exception to the "going-to and coming-from" exclusion from the course and scope of employment; and, temporary total disability (TTD).

The Claimant bears the burden of proof, by a preponderance of the evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. At the commencement of the hearing, the parties stipulated that if the case is compensable, the Claimant would be entitled to temporary total disability (TTD) benefits from January 6, 2016 through January 26, 2016, and the ALJ so finds, however, employees of the Employer herein are subject to the provisions of § 8-42-124 (20 (a), C.R.S., whereby the Employer continues to pay full wages during periods of TTD, and if a claim is determined to be compensable, the Employer restores the "sick leave" used during disability and changes it to "work injury leave."

2. The Claimant was born on June 8, 1962, and was 54 years of age on the date of the hearing.

3. The Claimant was hired by the Employer on October 13, 2008, where he continues to work as a police officer. He works as a motorcycle patrol officer.

4. The Claimant has served as a police officer for different law enforcement agencies for over 30 years.

5. The Claimant completed the Police Officer Standardized Training (POST) and is a state certified police officer, giving him the authority to make arrests within the State of Colorado. He is also a drug recognition expert and can be called in to perform drug evaluations on parties arrested anywhere in the State of Colorado.

The Injury

6. On January 5, 2016, the Claimant was riding home on a patrol motorcycle issued to him by the Employer, in full uniform with the motorcycle bearing full police regalia, including sirens and flashing red lights (turned off) when he fell and fractured his clavicle and broke three of his ribs. The motorcycle for the trip home was at no cost to the Claimant. The ALJ infers and finds that the Employer considered it a benefit to the Employer for the Claimant to go home, in full uniform, on his official motorcycle.

7. The accident occurred in Thornton, Colorado, at the intersection of North York Street and Signal Creek Boulevard. The Claimant was stopped at a four way

intersection facing southbound, getting ready to make a left turn to eastbound Signal Creek Blvd.

8. When the intersection was clear, the Claimant started making a left turn at approximately five miles per hour, when he lost control of his motorcycle and fell to the roadway. The area was dark and had some icy areas remaining from a previous snowstorm.

9. The Claimant was in full police uniform at the time of the accident. He had all his safety gear on to include his helmet, safety glasses, gloves, jacket, and motorcycle boots. His motorcycle was an un-mistakable police motorcycle.

10. The Claimant was on regular duty from 1PM to 9 PM on the day of the accident. After enforcing the law at a high school, the Claimant rode his motorcycle from Denver and headed to Thornton where he resides. Throughout his drive home the Claimant observed traffic and was on the lookout for any infractions. According to his undisputed testimony, he was required to make arrests, anywhere in the State of Colorado, for observed misdemeanor infractions. For speeding violations, he was required to notify local law enforcement and to assist them.

11. The Employer Police Department is located on West Colfax Avenue in Denver.

Employer Policy History on Commuting Employees

12. On July 9, 2002, an Employee Directive Memo was issued by Chief of Police Gerald R. Whitman. The Directive permitted the Mayor or Manager of Safety to authorize full use of certain public safety vehicles where the employee's assignment requires immediate response to emergency situations on a 24-hour on-call basis. The Directive also states that officers who wish to designate "full-use public safety vehicles must complete a "DPD Authorization for Full-Use Vehicle" form. At the time of his injuries on January 5, 2016, while in full uniform and on his official motorcycle, the Claimant was required to make an immediate response to emergency situations on a 24-hour on-call basis.

13. Officers who signed up for the Full-Use Vehicle program would be able to take their vehicles home and would be covered under Workers' Compensation if an injury occurred on the journey home. Vehicles included motorcycles until the policy was changed in 2006.

14. In 2006, the Worker's Compensation coverage for officers who signed up for the Full-Use Vehicle program **was reduced to exclude motorcycles** (emphasis supplied). No persuasive rationale for this change was given.

15. The Employer has over the years selectively extended Worker's Compensation to include or exclude employees based on the type of City issued vehicle they chose to take home. As of 2009 the coverage was only offered to employees who used City issued cars, specifically excluding employees who took home City issued motorcycles. On June 21, 2016 the Workers' Compensation coverage was enhanced to include employees who took home City issued motorcycles as well.

16. On June 21, 2016, after the Claimant's accident, the Employer's Department of Finance issued a Memo informing employees that although employees are not typically considered to be in the course or scope of employment when taking a City-owned vehicle home, the City will be extending the benefit of Workers' Compensation coverage to employees who drive or ride a City-owned vehicle home (Respondents' Exhibit H). The ALJ finds that the Workers' Compensation Act (the "Act"), and the case law dealing with work-related injuries controls unless the Employer's policies are more generous than the Act and the case law.

17. The Memo also specifies that police officers who ride home on a motorcycle issued by the Employer will be given the benefit of Workers' Compensation, thus, eliminating the distinction between taking vehicles and motorcycles home.

Employer Authorization for Full Use Vehicle

18. On January 7, 2015, the Claimant signed an Authorization for Full Use Vehicle Contract issued by the Employer as a Class II Motorcycle Officer. The contract specifies that Class II Motorcycle Officers **need** to have a take home motorcycle for a 24 hour emergency response throughout the City and County.

19. The Authorization for Full Use Vehicle Contract also specifies that the motorcycle officers provide a "force multiplier" throughout the day and night by providing a visible and active traffic enforcement capability as they travel to and from their home or place of work. The ALJ infers and finds that this means they provide a visible police presence in order to deter traffic infractions and other violations of the law –to and from home or work.

20. Class II (motorcycle) users may operate the vehicle as a full use vehicle **except for personal use.** The ALJ finds that the prohibition of "personal use" is a critical factor underscoring the proposition that the motorcycle patrolman is within the course and scope of employment on the way home from work.

21. The Claimant was subsequently issued an ML 117 Harley Davidson motorcycle.

22. The ALJ infers and finds that part of the Claimant's employment contract with the Employer contemplated the Claimant going home from work, in full uniform, on

an official motorcycle, partially, for legitimate law enforcement objectives, more so than for any personal convenience to the Claimant.

Sergeant Robert Parsons

23. Sergeant Parsons was called to testify on behalf of the Claimant. When the City's policy covered marked police cars while an officer was going home but not marked motorcycles, Sergeant Parsons could not understand the distinction. He stated that if Officer Barnes had an accident on the way home a week before the hearing, he would be covered because of the policy change on June 21, 2016-- to cover motorcycles as well as marked police cars.

Raymond Sibley, Employer's Risk Manager

24. Raymond Sibley, the Employer's Director of Risk Management, testified on behalf of the Respondent. He stated that the Employer's Chief Financial Officer (CFO) makes the policy decisions on what vehicles are covered "going" home from work. Sibley understood that the distinction between patrol cars and motorcycles was that there was less risk of injury involved with patrol cars than motorcycles. He did not mention any objective studies justifying this distinction nor did he further explain his understanding of the distinction. Based on Sibley's testimony, it could be equally likely that the risk of injury on a motorcycle could be the same or less than in a motor vehicle. No plausible inference can be drawn concerning greater or lesser risks of injury on a motorcycle as opposed to a patrol car. Sibley further stated that the policy changed in June 2016 to cover motorcycles on the way home. The ALJ infers and finds that the Employer changed the policy to cover motorcycles on the way home because it could not objectively justify the distinction between patrol cars and motorcycles. The ALJ further infers and finds that Sibley could not persuasively and objectively justify risk factors concerning the distinction between patrol cars and motorcycles on the way home.

Benefits to the Employer

25. Level II Motorcycle officers including the Claimant often make traffic stops on their way to and from work. The Employer requires officers on the way to and from work to fill out a log sheet of any traffic stops effectuated.

26. The Claimant has experienced a slowing down of traffic whenever he travels to and from work when he is on the patrol motorcycle and in full gear. The slowing down occurs within the City and County but also extends to the City of Thornton where the Claimant resides. Indeed, the ALJ infers and finds that a fully equipped police motorcycle is more conspicuous to motorists than an un-marked patrol car.

27. The Claimant is also able to get to a scene of an emergency faster on the take home motorcycle and is on call 24 hours to respond to any emergencies as a condition of taking the motorcycle home.

28. Although the "dual purpose" doctrine applies, the ALJ infers and finds that the benefits of the Claimant going home in full uniform, on his official motorcycle, are greater for the Employer than they are for the Claimant.

29. There is no evidence whatsoever that the Claimant deviated on his trip home for personal reasons, in violation of his agreement with the Employer.

Temporary Total Disability

30. As a result of his injuries on January 5, 2016, the Claimant was temporarily and totally disabled (TTD) from January 6, 2016 through January 26, 2016, however, he was paid full wages during this time, pursuant to § 8-42-124 (2) (a), C.R.S. Because the claim was fully contested, the Claimant was required to use "Sick Leave" during this period of time.

Ultimate Findings

31. The Claimant's overall presentation was persuasive and credible. As found, the testimony of the Claimant concerning the nature of his duties as a police officer travelling to and from work are more credible and persuasive than the testimony of the Respondent's witnesses. Indeed, the Claimant's testimony was essentially undisputed. Sergeant Parsons' testimony-- that he could not understand the distinction between motor vehicles and motorcycles for purposes of workers' compensation coverage, before the June 21, 2016, on the way home, covering patrol cars and not covering motorcycles on the way home. Sergeant Parson's testimony is highly persuasive, credible and, essentially, undisputed. Indeed Sibley did not persuasively and objectively justify the distinction.

32. Between conflicting testimonies, the ALJ makes a rational choice to accept the testimony of the Claimant and Sergeant Parsons and to reject any testimony to the contrary.

33. The injury event of January 5, 2016 constituted a compensable injury arising out of and in the course and scope of the Claimant's employment as a police officer with the Employer, and it falls within a fact specific exception to the "going-to and coming-from" exclusion from the course and scope of employment.

34. At a minimum, as found, the Claimant's trip home on his official motorcycle served a dual purpose of benefiting the Employer and the Claimant; however, there was a greater benefit to the Employer.

35. The Claimant's trip, on his way home from work on January 5, 2016 was in the course of his employment as a police officer with the Employer. He was in full police uniform and was on the lookout for any infractions throughout his travels home as well as illustrating a police presence for motorists on the Claimant's way home. Indeed, the ALJ finds important distinctions between the Claimant's injury and other police injury claims, allegedly compensable on the theory that the officer is on duty 24/7 without more specific facts. These bald theories have been soundly rejected by appellate tribunals. Therefore, under the specific facts of the present case, the ALJ finds that the Claimant sustained compensable injuries on January 5, 2016.

36. As a result of his injuries on January 5, 2016, the Claimant was temporarily and totally disabled (TTD) from January 6, 2016 through January 26, 2016, however, he was paid full wages during this time, pursuant to § 8-42-124 (2) (a), C.R.S. Because the claim was fully contested, the Claimant was required to use "Sick Leave" during this period of time.

DISCUSSION

As found herein above, the Employer has over the years selectively extended Worker's Compensation to include or exclude employees based on the type of City issued vehicle they chose to take home. As of 2009 the coverage was only offered to employees who used City issued cars, specifically excluding employees who took home City issued motorcycles. As of June 21, 2016 the Workers' Compensation coverage was enhanced to include employees who took home City issued motorcycles as well.

The Worker's Compensation coverage does not discriminate between the different types of motor vehicles and, as found, the ALJ rejected the distinction as not objectively supportable. The distinction between patrol vehicles and official motorcycles is not objectively sustainable, based on the totality of the evidence. Indeed, as found, the ALJ plausibly inferred that the Employer changed the policy to include official motorcycles because it could not objectively support the distinction between patrol cars and official motorcycles. The issue that is of importance in this matter is whether the Claimant's journey from work to home on a City issued take home motorcycle is within the course of his employment.

Generally, an employee who is injured while going to or coming from work does not qualify for compensation under the Act because such injuries are not considered to have "arisen out of, or in the course of, employment." *Indus. Comm'n v. Lavach,* 165 Colo. 433, 439 P.2d 359 (1968*); Berry's Coffee Shop, Inc. v. Palomba,* 161 Colo. 369, 423 P.2d 2 (1967). This is known as the "going to and coming from rule". The Colorado Supreme Court, in *Madden v. Mountain West Fabricators,* 977 P.2d 861 (Colo. 1999),

set forth four, non-exclusive variables to be considered in determining whether an exception to the "going to and coming from" rule should apply. 977 P.2d at 864

In *Madden,* citing *Electric Mut. Liab. Ins. Co. v. Indus. Comm'n,* 154 Colo. 491, 495, 391 P.2d 677, 679 (1964), the Supreme Court noted that it had granted recovery when the employee's travel is at the employer's express or implied request or when the travel confers a benefit on the employer beyond the sole fact of the employee's arrival at work. As found, the Claimant's travel home in full uniform, on an official police motorcycle, confers a benefit on the Employer herein, *i.e.,* a police presence encouraging obedience to the law—the "force multiplier.."

In *Warren v. Olson Plumbing & Heating*, W.C.No. 4-701-193 [Indus. Claim Appeals Office (ICAO), August 24, 2007], a plumber was injured in a motor vehicle accident in his company van on his way home from work. The court found that the plumber had not established that his electing to drive the company vehicle home following work established that the travel to and from the job site was a substantial part of his job. *Id.* The present case is distinguishable. The Claimant in the present case was riding home on a police issued motorcycle for multiple purposes. The Claimant signed a vehicle release form that allowed him to take home the motorcycle on the condition that he would be on call 24 hours to respond to emergencies throughout the city and county of Denver. The Claimant also observed his surroundings on his way home, looking for any possible infractions, traffic or otherwise. Being a state certified police officer, the Claimant would be obligated to make an arrest if the need occurred.

In *Rogers v. Indus. Comm'n*, 40 Colo. App. 313, 574 P.2d 116 (1978). a police officer was injured when riding home on his **personal motorcycle**. The officer was not in uniform but carried his service revolver, badge, and police identification card. The court found that the officer was not performing any police duties but merely riding home. *Id.* The present case is distinguishable. Herein, the Claimant here was in full uniform, riding a police issued motorcycle and was acting as a law enforcement agent throughout his journey home. He observed and enforced the law when he came across any infraction. The Employer encourages the use of police issued motorcycles as the officers riding home in full uniform and on a police motorcycle provides a "force multiplier" throughout the day and night (a police presence that encourages motorists to be law abiding)..

The general rule against compensability for travel to and from work is subject to exceptions where there are **special circumstances** bringing the accident within the course of employment. *Madden v. Mountain West Fabricators, supra.* Whether a particular situation warrants an exception to the "going-to and coming from" rule requires a **fact-specific** analysis. Special circumstances include traveling as part of the service the employee provides for the employer. *See Mineral County v. Indus. Comm'n,* 649 P.2d 728 (Colo. App. 1982) [A sheriff was killed while returning to his patrol car after he had stopped at a private club. He was in uniform and was expected to be on

duty 24 hours a day. Death benefits were awarded even though he was planning to go out to dinner with his wife after leaving the club]. The facts in the present case are more compelling for an exception to the "Going-To and Coming-from" Rule than the facts in *Mineral County.* Here, Officer Barnes was in full uniform, riding on an official police motorcycle, and his personal use thereof was prohibited.

As part of the contract of employment, the employer had agreed to provide free transportation to work, thus, the injury en route to the job site was held to be work connected. *See State Compensation Insurance Fund v. Batis,* 117 Colo. 1, 183 P. 2d 891 (1947). As found, in the present case, the Employer provided free transportation home, *i.e.* an official motorcycle, because the Employer considered this a benefit to the Employer.

Where an employer provides transportation to and from work, compensation is appropriate when the employee is killed or injured in a vehicle **used strictly for business** on a direct route to work with no evidence of deviation for **personal purposes.** *Monolith Portland Cement v. Burak,* 772 P.2d 688 (Colo. App. 1989); *Indus. Comm'n v. Lavach, supra.*

The "Dual Purpose" doctrine holds that an injury sustained while the employee is performing an act for the mutual benefit of the employer and the employee is usually compensable. *Berry's Coffee Shop, Inc. v. Palomba, supra*; *Also see Keystone International, Inc. v. Gale,* 33 Colo. App. 216, 518 P.2d 296 (1973). As found, the Claimant's trip home, in full uniform, on an official motorcycle, with personal use prohibited, conferred a benefit on the Employer. Though not strictly in the line of the employee's obligatory duty, it has been held that the employee was doing something incidental to his work when he was injured, thus, the accident causing the injury was held to arise out of the course of employment and was compensable. *See Security State Bank of Sterling v. Propst,* 99 Colo. 67, 59 P.2d 798 (1936).

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990);

Penasquitos Village, Inc. v. NLRB, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the Claimant's testimony was undisputed and the ALJ is not free to disregard any part of it. *See, Annotation, Comment: Credibility of Witness Giving Un-contradicted Testimony as Matter for Court or Jury,* 62 ALR 2d 1179, maintaining that the fact finder is not free to disregard un-contradicted testimony. As further found, the Claimant's overall presentation was persuasive and credible. As found, the testimony of Claimant concerning the nature of his duties as a police officer travelling to and from work are more credible and persuasive than the testimony of the Respondent's witnesses. Sergeant Parsons' testimony that he could not understand the distinction, before the June 21, 2016 policy change, between covering patrol cars on the way home and not covering motorcycles on the way home, is highly persuasive and credible.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985).

It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting testimonies, the ALJ made a rational choice to accept the testimony of the Claimant and Sergeant Parsons and to reject any testimony to the contrary.

Course and Scope of Employment

c. Generally, an employee who is injured while going to or coming from work does not qualify for compensation under the Act because such injuries are not considered to have "arisen out of, or in the course of, employment." *Indus. Comm'n v. Lavach,* 165 Colo. 433, 439 P.2d 359 (1968*); Berry's Coffee Shop, Inc. v. Palomba,* 161 Colo. 369, 423 P.2d 2 (1967). This is known as the "going to and coming from rule". The Colorado Supreme Court, in *Madden v. Mountain West Fabricators, supra*, set forth four, non-exclusive variables to be considered in determining whether an exception to the "going to and coming from" rule should apply. 977 P.2d at 864. As found, in this fact-specific matter, the Employer contemplated the Claimant taking his official motorcycle home in full uniform as a benefit to the Employer. The Claimant could not use the motorcycle for personal use. As further found, the present case involves fact specific circumstances that warrant a compensable exception to the "going-to and coming-from" rule.

d. Citing *Electric Mut. Liab. Ins. Co. v. Indus. Comm'n,* 154 Colo. 491, 495, 391 P.2d 677, 679 (1964), the *Madden* court noted that it had granted recovery when the employee's travel is at the employer's express or implied request or when the travel confers a benefit on the employer beyond the sole fact of the employee's arrival at work. As found, the Claimant's travel home in full uniform, on an official police motorcycle, confers a benefit on the Employer herein, *i.e.,* a police presence encouraging obedience to the law—the "force multiplier.." As found herein above, in this fact-specific matter, the Employer contemplated the Claimant taking his official motorcycle home in full uniform as a benefit to the Employer. The Claimant could not use the motorcycle for personal use. As further found, the present case involves fact specific circumstances that warrant a compensable exception to the "going-to and coming-from" rule.

Exception to the "Going-To and Coming-From" Rule

e. Whether a particular situation warrants an exception to the "going-to and coming from" rule requires a **fact-specific** analysis. Special circumstances include traveling as part of the service the employee provides for the employer. *See Mineral County v. Indus. Comm'n,* 649 P.2d 728 (Colo. App. 1982) [A sheriff was killed while returning to his patrol car after he had stopped at a private club. He was in uniform and was expected to be on duty 24 hours a day. Death benefits were awarded even though

he was planning to go out to dinner with his wife after leaving the club]. The facts in the present case are more compelling for an exception to the "Going-To and Coming-from" Rule than the facts in *Mineral County.* Here, the Claimant was in full uniform, riding on an official police motorcycle, and his personal use thereof was prohibited.

f. As part of the contract of employment in another case, the employer had agreed to provide free transportation to work, thus, the injury en route to the job site was held to be work connected. *See State Compensation Insurance Fund v. Batis,* 117 Colo. 1, 183 P. 2d 891 (1947). As found in the present case, the Employer provided free transportation home, *i.e.* an official motorcycle, because the Employer considered this a benefit to the Employer. Where an employer provides transportation to and from work, compensation is appropriate when the employee is killed or injured in a vehicle **used strictly for business** on a direct route to work with no evidence of deviation for **personal purposes.** *Monolith Portland Cement v. Burak,* 772 P.2d 688 (Colo. App. 1989); *Indus. Comm'n v. Lavach, supra.* As found, the Claimant's trip home in full uniform, on an official police motorcycle benefited the Employer as much as, if not more, than the Claimant.

"Dual Purpose" Analysis

g. The "Dual Purpose" doctrine holds that an injury sustained while the employee is performing an act for the mutual benefit of the employer and the employee is usually compensable. *Berry's Coffee Shop, Inc. v. Palomba, supra*; *Also see Keystone International, Inc. v. Gale,* 33 Colo. App. 216, 518 P.2d 296 (1973). As found, the Claimant's trip home, in full uniform, on an official motorcycle, with personal use prohibited, conferred a benefit on the Employer. Though not strictly in the line of the employee's regular, obligatory duty, it has been held that when the employee was doing something incidental to his work and he was injured, thus, the accident causing the injury was held to arise out of the course of employment and it was held to be compensable. *See Security State Bank of Sterling v. Propst,* 99 Colo. 67, 59 P.2d 798 (1936). As found, the Claimant's trip home in full uniform on an official police motorcycle benefited the Employer as much as it may have benefited the Claimant, if not more.

Compensability

h. In order for an injury to be compensable under the Workers' Compensation Act, it must "arise out of" and "occur within the course and scope" of the employment. *Price v. Indus. Claim Appeals Office,* 919 P.2d 207, 210, 210 (Colo. 1996). An injury "arises out of' employment if it would not have occurred **but for** the fact that the conditions and obligations of employment placed the employee in a position that he or she was injured." *See City of Brighton v. Rodriguez,* 318 P.3d 496, **2014 CO 7.** Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any benefits are awarded. § 8-41-301 (1) (c), C.R.S. *See Faulkner v. Indus. Claim Appeals Office,* 24 P.3d 844 (Colo.

App. 2000)*; Eller v. Indus. Claim Appeals Office*, 224 P.3d 397, 399 (Colo. App. 2009); *Cabela v. Indus. Claim Appeals Office,* 198 P.3d 1277, 1279 (Colo. App. 2008). The question of causation is generally one of fact for determination by an ALJ. *Faulkner* at 846; *Eller* at 399-400. As found, the Claimant sustained injuries on January 5, 2016, arising out of the course and scope of his employment for the Employer.

Temporary Total Disability

i. To establish entitlement to temporary disability benefits, the Claimant must prove that the industrial injury has caused a "disability," as the result of the industrial disability. § 8-42-103(1), C.R.S; *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Disability from employment is established when the injured employee is unable to perform the usual job effectively or properly. *Jefferson Co. Schools v. Headrick*, 734 P.2d 659 (Colo. App.1986). As found, the Claimant has proven TTD from January 6, 2016 through January 26, 2016, however, he was paid full wages during this time, pursuant to the provisions of§ 8-42-124 (2) (a), C.R.S. Because the claim was fully contested, the Claimant was required to use "sick Leave" during this period of time.

Burden of Proof

j. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained his burden of proof on all designated issues.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Claimant sustained compensable injuries on January 5, 2016, arising out of the course and scope of his employment for the Employer, consisting of a fractured clavicle and three broken ribs.

B. Because the Employer paid the Claimant full wages during his period of temporary total disability from January 6, 2016 through January 26, 2016, pursuant to the provisions of § 8-42-124 (2) (a), C.R.S., the Respondent shall restore the "Sick Leave" used by the Claimant during this period of time and convert the leave to "Work Injury Leave."

C. Any and all matters not determined herein are reserved for future decision.

DATED this_____day of April 2017.

ISSUES

- Did Claimant prove by a preponderance of the evidence that she sustained a compensable injury on July 25, 2016 arising out of and in the course of her employment?

- If compensable, did Claimant prove she was entitled to medical benefits?

FINDINGS OF FACT

1. Claimant worked as a groundskeeper for Employer, starting on April 12, 2016. Claimant testified she did not work during the first part of 2016, but previously worked cleaning offices.

2. Claimant's job duties included cleaning the hallways, elevators, play area, pool area and dog area. Claimant described her job at Employer as much harder than her previous position.

3. Claimant testified she had no injuries to her low back before working for Employer. She lost no time from her prior job because of problems with her back. There was no evidence in the record which showed Claimant suffered a previous injury to her low back at work.

4. Claimant's records from Kaiser Permanente were admitted, which documented she treated for low back pain after starting with Employer. In particular, Claimant was evaluated by Ray Howe, M.D. on April 15, 2016. At that time, she was evaluated for low back pain, present at the middle-low back. The pain was described as ongoing for the past 1-2 months and had worsened after starting a new job as a groundskeeper. Dr. Howe diagnosed low back pain with bilateral sciatica. Dr. Howe prescribed Naproxen and Prednisone, as well as ordering physical therapy ("PT").

5. Claimant testified the pain she felt at the time of the April 15, 2016 visit was like a cramp. The pain after her injury was more significant.

6. On June 10, 2016, Claimant returned to Kaiser and was evaluated by Todd Landin, M.D., at which time a lumbar MRI and plain films were ordered.

7. Claimant underwent an MRI on June 20, 2016. The radiologist's impression was: approximately 7 mm chronic spondylolytic anterolisthesis of L5/S1; multilevel degenerative disc disease and facet osteoarthropathy changes throughout the lumbar spine as described above; left lateral recess stenosis at L5/S1 could impinge the left S1 nerve root; moderate stenosis of the neural foramina bilaterally at L5/S1 could impinge the exiting L5 nerve roots on either side.

8. The findings/impression for the x-rays of the lumbar spine were grade one L5-S1 spondylolisthesis, with L5 spondylolyses; marked degenerative disc changes at the L5-S1 level; hypertrophic degenerative joint changes in the articulating facet joints bilaterally at the L4-L5 and L5-S1 levels.

9. Claimant testified she sustained an injury on July 25, 2016. She was cleaning up trash and was in room three. In that room there was a piece of furniture (TV). She retrieved a cart (flat) from downstairs and went to pick up the piece of furniture. No one was helping her at that time. When she lifted the TV stand, it felt like something had pulled in her spine/hip. She felt a bit of pressure on the hip, then continued to work. The ALJ notes there was no contrary evidence in the records to contradict Claimant's testimony this event occurred. Claimant was a credible witness when she described the injury. Claimant testified she did not report the incident that day.

10. On July 27, 2016, Claimant testified she was moving dumpsters, as well as sweeping and mopping. She felt pain in her hip and reported the injury. She reported the injury first to her supervisor (Dion), and then to the manager, Lasarha Pass.

11. Claimant testified she was not referred to an ATP for Employer.

12. Claimant testified she went to the emergency room at North Suburban on July 27, 2016 because of back pain.

13. Claimant was evaluated at Kaiser on August 3, 2016, complaining of back pain. Jennifer Hronkin, M.D. noted Claimant had been at the ER within the past two days and received IV meds. Dr. Hronkin diagnosed lumbar radiculopathy and prescribed Ketorolac and Oxycodone. Claimant was referred to a neurosurgeon for the thoracic and lumbar spine.

14. Claimant returned to Dr. Landin on August 16, 2016. The treatment notes recorded chronic worsening low back pain, with right sided radiation. Dr. Landin's assessment was low back pain with right sciatica. Dr. Landin's notes recorded that Claimant was considered temporarily and totally disabled if Employer could not accommodate the work restrictions. Claimant was advised to follow-up with her employer regarding whether the injury should be treated through workers' compensation. This note leads to the inference by the ALJ that Claimant advised Dr. Landin and/or medical personnel at Kaiser she was injured at work.

15. On August 18, 2016, Claimant was evaluated by Lloyd Thurston, D.O. at Concentra. Dr. Thurston recorded Claimant moved heavy furniture on 7/25 and then had low back pain and radicular symptoms on July 27, 2016. On examination, she had tenderness of the right SI joint, with intact neurovascular function. Dr. Thurston's assessment was: strain of lumbar paraspinal muscle and lumbosacral radiculitis at S1. Dr. Thurston opined he was 51% certain this was a work-related injury, even though

symptoms started two days after the work event. He ordered an MRI and made a referral to a physiatrist. Claimant was given work restrictions of: may lift, push/pull up to 20 pounds up to three hrs./day, occasional bending, may stand and walk frequently. The findings and opinions of Dr. Thurston helped to corroborate Claimant's testimony that she sustained an injury. The ALJ credited Dr. Thurston's opinion.

16. Claimant was offered modified duty on August 19, 2016, which she accepted on August 22, 2016.

17. An MRI was performed on August 31, 2016. The films were read by Robert Leibold, M.D., whose impression was severe right L5-S1 foraminal stenosis; chronic bilateral L5 pars interarticularis defects with grade one anterolisthesis of L5 on S1 and advanced L5-S1 degenerative disc disease.

18. Claimant was evaluated by Frederic Zimmerman, D.O. on September 1, 2016. Her symptoms were right-sided buttock and lumbosacral pain, which radiated down the posterior lateral aspect of her right leg to include her lateral calf. On examination, Dr. Zimmerman noted weakness in the extensor hallucis longi, as well as dorsiflexors and plantar flexors, as demonstrated by rapid fatigue during heel and toe walking. He found decreased sensation to light touch in the right lateral lower leg to include the lateral ankle and foot complex. Dr. Zimmerman's assessment was: lumbosacral spondylolisthesis, grade one with bilateral pars defect; right lower extremity radiculitis; facet arthropathy at the bilateral L5-S one and to a lesser extent L4-L5 levels. His treatment plan was a right L5 plus S1 transforaminal epidural steroid injection ("ESI") and to begin PT.

19. On September 9, 2016, Dr. Thurston evaluated Claimant and continued Claimant's restrictions, as well as beginning her on a course of PT. His assessment was concordant with Dr. Zimmerman's. Claimant returned to Dr. Thurston on October 10, 2016, noting that her symptoms were unchanged. Claimant's lumbar spine had restricted range of motion ("ROM"), but Waddell signs were negative. Dr. Thurston returned Claimant to Dr. Zimmerman for evaluation and treatment.

20. A Worker's Claim for Compensation was prepared by Claimant and signed on October 4, 2016.[1] Claimant testified her daughter helped her complete this form, which described the injury as follows: "I was picking up a TV set from a trash room when I felt pain in lower back". Claimant testified this description was a mistake, as it was a piece of furniture for a T.V.

21. On October 27, 2016, Dr. Zimmerman examined Claimant, who reported a diagnostic response following the ESI. Claimant's pain was essentially resolved other than in the buttock region. She also reported perisacral pain. On examination, Claimant had restrictions in lumbar ROM, along with tenderness directly over bilateral SI joints. Claimant had diffuse myofascial pain in bilateral upper and lower quadrants through the lumbar paraspinals and gluteus media muscles. Claimant also had a positive

[1] Exhibit 1.

fibromyalgia screen. Dr. Zimmerman ordered bilateral SI joints steroid injections for diagnostic and therapeutic purposes, after which time PT would be restarted.

22. Brian Reiss, M.D. testified as an expert in orthopedic surgery, the specialty in which he is board-certified. He is Level II accredited pursuant to the W.C.R.P. Dr. Reiss was present during Claimant's testimony. He reviewed the medical records from Kaiser, as well as Concentra. Dr. Reiss also reviewed the actual films for the MRIs of Claimant's lumbar spine. Dr. Reiss did not examine Claimant and did not prepare a written report.

23. Dr. Reiss opined that while it was possible, it was unlikely Claimant suffered a work-related injury. He based this opinion on the fact the Claimant had back pain prior to working for Employer and the Kaiser Permanente records documented a worsening of her condition. Her symptoms included radiculopathy, which was worsening immediately before her alleged injury. Dr. Reiss testified there was no significant difference between the two MRIs taken. Dr. Reiss believed Claimant's pre-existing low back pain was significant, as evidenced by the fact that both an MRI and plain films were ordered by the physicians at Kaiser. The ALJ credited Dr. Reiss' testimony regarding the condition of Claimant's low back and his opinion regarding similarity in the MRIs. However, Dr. Reiss did not address the potential aggravation of this preexisting condition in Claimant's lumbar spine. More particularly, he did not address whether her work activities could have caused the symptoms as described to Drs. Landin and Thurston. Dr. Reiss also did not discuss the precise mechanism of injury as articulated by Claimant. The ALJ found Dr. Landin's and Dr. Thurston's opinions more persuasive than those of Dr. Reiss, who did not evaluate Claimant.

24. Claimant's testimony that she suffered an injury was credible and persuasive.

25. Claimant proved she sustained an injury to her low back and hip on July 25, 2016 arising out of and in the course of her employment. The injury was caused by her work. Her low back condition was aggravated by her work activities on July 27, 2016.

26. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

General

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Generally, Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. § 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Compensability

The legal standard applicable to the compensability issue is found in § 8-41-301(1)(c), C.R.S., provides as a condition for the recovery of workers' compensation benefits the injury must be "proximately caused by an injury or occupational disease arising out of and in the course of the employment".

A pre-existing condition "does not disqualify a Claimant from receiving workers' compensation benefits". *Duncan v. ICAO*, 107 P.3d 999, 1001 (Colo. App. 2004). Further, if a pre-existing condition is stable but is aggravated by an occupational injury, the resulting occupational injury is still compensable because the incident caused the dormant condition to become disabling. *Siegfried v. Industrial Commission*, 736 P.2d 1262, 1263 (Colo. App. 1986). Thus, if an industrial injury aggravates, accelerates, or combines with a pre-existing condition so as to produce disability and need for treatment, the claim is compensable. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990).

The ALJ determined Claimant met her burden of proof and established she sustained an injury proximately caused by the performance of duties arising out of and in the course of her employment. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000). As a starting point, Claimant's testimony first established her job with Employer was more physically demanding than her previous position. (Finding of Fact 2). The medical records adduced at hearing proved she experienced symptoms within three days of starting her job. (Finding of Fact 5). The ALJ found Claimant to be a credible witness and credited her testimony in which she described the incident. No contrary evidence was introduced by respondent to rebut this testimony.

Second, Dr. Thurston, the occupational medicine physician at Concentra offered his opinion Claimant's injury was work-related and the ALJ credited this opinion. (Finding of Fact 15). The Concentra treatment records evinced the opinion of those providers that Claimant suffered a work-related injury. As found in Findings of Fact 18-19, Drs. Thurston and Zimmerman recorded limitations in ROM of Claimant's lumbar spine, which correlated to the injury. Claimant had objective indicia of an injury, as

documented by these physicians. The ALJ was persuaded that Claimant's job duties while working for Employer aggravated her low back.

Based upon the totality of the evidence, the ALJ concluded Claimant sustained a compensable injury on July 25, 206. Although she had preexisting issues with her lumbar spine, this condition was aggravated by her specific job duties that day. This aggravation caused Claimant to require medical treatment and the treating physicians also issued work restrictions. The ALJ determined Claimant met her burden of proof and established she suffered a compensable injury.

ORDER

It is therefore ordered that:

1. Claimant sustained a compensable injury to her low back and hip arising out of and in the course of her employment on July 25, 2016.

2. Respondents shall provide medical benefits to Claimant.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Denver, CO 80203

ISSUES

- Whether Respondent established by clear and convincing evidence that the DIME physician, Dr. Frederick Scherr, erred by providing Claimant a 7% whole person impairment rating for his lumbar spine.

- To the extent that Respondents overcome the DIME opinion with regard to permanent impairment, whether Claimant established by a preponderance of the evidence that the scheduled rating provided for Claimant's lower extremity should be converted to a whole person impairment rating.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant was working for Labor Ready on February 26, 2013 when he was injured.

2. Claimant was standing on a loading dock and was talking to a coworker on the side of a forklift. Another coworker was driving a forklift and backed into Claimant, while going 15-20 miles per hour, and crushed Claimant's right lower leg between the two forklifts. Claimant was transported to the hospital via ambulance. He sustained a comminuted femur fracture and a bicondylar tibial plateau fracture of the right lower extremity. Claimant spent a few days in the hospital to have the injury stabilized via external fixation. Claimant returned to the hospital the following week for another surgery to have an intramedullary nailing of the right distal femur fracture and open reduction internal fixation of the bicondylar tibial plateau fracture.

3. After the accident, Claimant was non-weight-bearing for approximately 10-12 weeks.

4. Before the work accident, Claimant did not have any back problems.

5. About three weeks after the accident, Claimant started having back pain. Claimant did not, however, report his back pain to his medical providers at this time.

6. On June 19, 2013, Claimant came under the care of Dr. David Yamamoto. As part of his initial evaluation, Claimant completed a pain diagram. On the pain diagram, Claimant noted pain in his right leg and right hip. Claimant did not note any back pain.

7. On September 13, 2013, approximately 7 months after his injury, Claimant reported to Dr. Yamamoto that he was having back pain, which he stated started a few weeks after the injury. Claimant admitted to Dr. Yamamoto that he did not previously report his back pain and did not mark it on the pain diagram he completed on June 19, 2013.

8. On October 1, 2013 Claimant returned to Dr. Yamamoto complaining of ongoing back pain. Dr. Yamamoto indicated Claimant's right leg was 2.5 cm shorter than his left leg and it caused Claimant to have an altered gait. Dr. Yamamoto determined Claimant had low back pain due to his altered gait. Dr. Yamamoto referred Claimant to Eric Graves, D.C., for chiropractic treatment directed towards his low back.

9. Claimant's leg length discrepancy and altered gait was caused by the work accident.

10. On November 1, 2013, Claimant was evaluated by Eric Graves, D.C. for low back pain. Dr. Graves noted spasms, restriction, adhesions and tenderness in Claimant's lumbar region.

11. Claimant returned to Dr. Yamamoto on November 22, 2013. He was still complaining of low back pain.

12. On December 3, 2013, Claimant returned to Dr. Graves, who still noted spasms, restriction, adhesions and tenderness in Claimant's lumbar region.

13. Claimant returned to Dr. Yamamoto on January 20, 2014 with ongoing back pain. At this visit, Dr. Yamamoto's evaluation of Claimant's back revealed Claimant had a mild loss of active range of motion, and some pain with flexion and extension.

14. On February 6, 2014, Claimant was evaluated by Dr. Ksiazek for back pain. Dr. Ksiazek noted a 2 cm difference in leg length, with the right being shorter than the left. Dr. Ksiazek diagnosed Claimant as suffering from a lumbar strain.

15. On February 17, 2014, Claimant returned to Dr. Yamamoto. He still noticed a decrease in active range of motion of Claimant's lumbar spine. Dr. Yamamoto also diagnosed Claimant as suffering from a lumbar strain.

16. Claimant was seen by Dr. Yamamoto on March 3, 2014, April 1, 2014, May 2, 2014, December 8, 2015, and December 16, 2015 and his reports indicate Claimant had good lumbar flexion and could bend forward and touch his fingertips to his ankles. Dr. Yamamoto does not, however, comment on Claimant's lumbar extension.

17. On December 29, 2015, Claimant was seen by Dr. Yamamoto. The report from this visit indicates Claimant continued having low back pain and lower back

spasms. Dr. Yamamoto indicated that he was treating Claimant for a sprain of ligaments of the lumbar spine.

18. Claimant returned to Eric Graves, D.C., on February 10, 2016, complaining of worsening back pain over the past couple of months. Dr. Graves noted spasms in Claimant's lower back. Claimant returned to Dr. Graves on February 24, 2016 and Dr. Graves still noted spasms in Claimant's lumbar spine.

19. On April 27, 2016, Dr. Timothy O'Brien performed an Independent Medical Examination on behalf of Respondents and issued a report. At the time of the IME, Claimant was 23 years old. Dr. O'Brien concluded that based on the magnitude of the mechanism of injury, Claimant suffered a lumbosacral strain/sprain at the time of the accident. He determined the lumbosacral sprain/strain was a minor injury since there was no evidence of an acute disc herniation, sciatica, or neurologic deficit and that Claimant healed within 6 months. He determined that Claimant's ongoing back pain is due to his pre-existing osteoarthritis. He also stated that the vast majority of Americans have a leg length discrepancy of under ¾ of an inch and that a leg length discrepancy in of itself is not a cause for low back pain. Dr. O'Brien concluded that Claimant is not entitled to an impairment rating for his back under the AMA Guides. This ALJ does not find Dr. O'Brien's opinion that Claimant's current back pain is related to his preexisting osteoarthritis to be persuasive.

20. On May 4, 2016, Dr. Yamamoto placed Claimant at maximum medical improvement. He assessed Claimant as suffering from a lumbar strain/mechanical back pain with persistent symptoms caused by both the injury and the leg length discrepancy. Dr. Yamamoto provided claimant a 13% impairment rating for his low back. The rating was comprised of a Table 53,II-B rating of 5% and a loss of range of motion rating of 8%. Dr. Yamamoto also provided Claimant a 15% lower extremity impairment rating, which converts to a 6% whole person impairment. The 13% whole person rating combined with the 6% whole person lower extremity rating equated to an 18% whole person impairment rating.

21. On June 3, 2016, Dr. Yamamoto responded to Dr. O'Brien's April 27, 2016 report in which Dr. O'Brien stated that Claimant is not entitled to an impairment rating for his low back. Dr. Yamamoto stated that "It appears that Dr. O'Brien is not familiar with Table 53,II-B, which states 'Unoperated, with medically documented injury and a minimum of six months of medically documented pain and rigidity with or without muscle spasm, associated with none-to-minimal degenerative changes on structural tests.'" He went on to provide that Claimant "clearly meets the criteria for a Table 53 impairment. It is of no importance that he has no disc herniation, or sciatica, or neurologic deficit. If this were the case, then he would meet criteria for a II-C impairment." Dr. Yamamoto also stated that Claimant had a severe injury that resulted in a significant leg length discrepancy and that he does "NOT" have normal lumbar range of motion. This

ALJ credits Dr. Yamamoto's opinion that Claimant is entitled to an impairment rating under Table 53 II B of the AMA Guides.

22. Dr. O'Brien evaluated Claimant again on November 11, 2016. Dr. O'Brien stated in his report that Claimant is not entitled to a spinal impairment rating pursuant to the AMA Guides. Dr. O'Brien stated in his report that in order to get an impairment rating under Table 53 II-B, Claimant must have a permanent injury with documented pain and rigidity. Dr. O'Brien stated that a Table 53 rating cannot be provided for an injury which has healed and for someone with normal range of motion. Dr. O'Brien also concluded that Claimant's leg length discrepancy is only ½ of an inch and is well within the bell curve of normal for the American population and he did not consider it clinically significant. Dr. O'Brien concluded that Claimant does not have back pain from his work related injury and Claimant has normal range of motion and therefore is not entitled to an impairment rating. Dr. O'Brien testified at hearing and testified consistent with his reports. In essence, Dr. O'Brien testified that Claimant had a minor lumbar sprain due to the initial accident and he has fully recovered and is not entitled to an impairment rating. This ALJ does not find Dr. O'Brien's opinion to be persuasive regarding the application of the AMA Guides and whether Claimant is entitled to an impairment rating for his lumbar spine.

23. On September 6, 2016, Dr. Frederick Scherr performed a Division Independent Medical Examination ("DIME"). Dr. Scherr's assessment included (1) Crush injury with fractured distal femur and tibial plateau with surgical intervention; and (2) Chronic back pain secondary to injury and leg length discrepancy. Dr. Scherr provided Claimant an impairment rating for his low back. Dr. Scherr determined that Claimant qualified for a Table 53 II-B rating of 5% combined with a 2% impairment rating for Claimant's abnormal range of motion of his lumbar spine which resulted in a 7% whole person impairment rating for Claimant's lumbar spine. Dr. Scherr also determined Claimant's right lower extremity had a 13% scheduled impairment, which converted to a 5% whole person rating. Therefore, Dr. Scherr provided Claimant a 12% whole person impairment rating.

24. Dr. Scherr was deposed on February 8, 2017. Dr. Scherr testified as to the anatomical and physiological correlation between the work accident and Claimant's back injury which supports the impairment rating he provided. Dr. Scherr testified that the accident caused Claimant's leg length discrepancy which in turn caused Claimant's altered gait, which in turn caused Claimant's back injury and pain. Dr. Scherr went on to testify that he also found Claimant had decreased range of motion in his lumbar spine. Dr. Scherr further testified that without the initial work injury, Claimant would not be having back problems at this time.

25. Dr. Scherr's DIME report combined with his testimony established that Claimant's work related accident resulted in an injury to Claimant's lumbar spine. His DIME report and testimony also established that Claimant had pain and

rigidity for more than 6 months and that there is anatomical and physiological basis for Claimant's back pain.

26. A review of the American Medical Association Guides to the Evaluation of Permanent Impairment, 3rd Edition Revised, provides that in order to get a Table 53 II-B rating, Claimant must have a medically documented injury and a minimum of six months of medically documented pain and rigidity with or without muscle spasm, associated with none-to minimal degenerative changes on structural tests.

27. This ALJ Finds that there is sufficient evidence to support a finding that Claimant suffered an injury to his back in the form of a lumbar strain/sprain due to his work accident. The trauma related to the injury and Claimant's subsequent altered gait was documented by Claimant's treating physician. This ALJ also finds that there is sufficient evidence to find that Claimant had 6 months of medically documented pain and rigidity in his lumbar spine. Therefore, this ALJ finds that Dr. Scherr properly applied the AMA Guides in rating Claimant's lumbar spine.

28. Dr. Yamamoto was deposed on March 8, 2017. In addition to finding that Claimant suffered a lumbar strain/sprain as set forth in his medical reports, Dr. Yamamoto also testified as to the anatomic and physiologic basis for Claimant's low back pain. Dr. Yamamoto stated that based on Claimant's altered gait: "[T]he pelvis is going to be tilted slightly. And, when the pelvis is tilted, then it's going to start putting an untoward type of load on the lower back because the lower back is not going to be in good alignment. So, there will be pressure on one side and compensatory – there will be compensatory curve, and then, primary curve, and then the body will then compensate for that so that your head and upper body is vertical. So, there's a twisting or bending of the lower back. And, that's going to be all the time that you're walking." In essence, Dr. Yamamoto testified that Claimant's altered gait changed the biomechanics of Claimant's pelvis, which in turn caused a strain/sprain to Claimant's back, which ended up causing Claimant's back pain. This ALJ credits Dr. Yamamoto's testimony and finds that it supports Dr. Scherr's opinion to rate Claimant's lumbar spine.

29. This ALJ finds that Respondents have not overcome Dr. Scherr's opinion by clear and convincing evidence.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Principles

A. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and

actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). A workers' compensation case is decided on its merits. Section 8-43-201, *supra*. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

Overcoming the DIME

B. A DIME physician must apply the AMA Guides when determining the Claimant's medical impairment rating. Section 8-42-101(3.7), C.R.S.; §8-42-107(8)(c), C.R.S. The finding of a DIME physician concerning the claimant's medical impairment rating shall be overcome only by clear and convincing evidence. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

C. As a matter of diagnosis the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office,* 78 P.3d 1150 (Colo. App. 2003). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590 (Colo. App. 1998). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000).

D. The questions of whether the DIME physician properly applied the AMA Guides, and ultimately whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office, supra*. A mere difference of opinion between physicians does not necessarily rise to the level

of clear and convincing evidence. *See Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO March 22, 2000).

E. Dr. Scherr evaluated Claimant and determined that Claimant suffered a crush injury to his right leg and a rateable injury to his low back which was caused by Claimant's altered gait. Regarding Claimant's lower back, Dr. Scherr determined that Claimant met the requirements for a Table 53 II-B diagnosis and rating under the AMA Guides. As set forth above, a review of the AMA Guides provides that in order to get a Table 53 II-B rating, Claimant must have a medically documented injury and a minimum of six months of medically documented pain and rigidity with or without muscle spasm, associated with none-to minimal degenerative changes on structural tests. In this case, Dr. Yamamoto, Dr. O'Brien, and Dr. Scherr all concluded that Claimant suffered an injury to his low back. Therefore, the determination of whether Claimant is entitled to a rating, pursuant to the AMA Guides, turns on whether Claimant has had 6 months of medically documented pain and rigidity.

F. The medical records establish Claimant had 6 months of medically documented pain complaints. The medical records also establish Claimant had 6 moths of rigidity. Dr. Graves evaluated Claimant on October 25, 2013 and found rigidity and spasms in Claimant's low back. Dr. Yamamoto also found decreased range of motion on January 20, 2014, and February 17, 2014. Dr. Yamamoto also evaluated Claimant on May 2, 2014 and found trigger points, bilaterally in the lumbar paraspinous muscles. When Dr. Yamamoto placed Claimant at MMI on May 4, 2016, he found Claimant had a decrease in his lumbar range of motion. When Dr. Scherr performed a Division Independent Medical Examination, ("DIME") and evaluated Claimant, he also found Claimant had decreased range of motion in his lumbar spine. Therefore, Claimant has had 6 months of medically documented pain and rigidity and qualifies for a Table 53 II-B rating of 5%.

G. Respondents contend that even if Claimant has back pain, there is no documented injury, pain, or rigidity that is related to the industrial injury. They support their contention with the opinions of Dr. O'Brien. This ALJ has considered Dr. O'Brien's opinions and does not find them persuasive as to the issue of impairment and application of the AMA Guides. This ALJ concludes that the evidence presented through Dr. O'Brien is merely a difference of opinion as to whether Claimant has a rateable impairment of his lumbar spine. Therefore, Respondents have failed to establish by clear and convincing evidence that Dr. Scherr erred in rating claimant's low back.

H. Respondent's also contend Claimant is not entitled to an impairment rating based on chronic pain, without an anatomic or physiologic correlation pursuant to Section 8-42-107(8)(c). This ALJ does not agree that Section 8-42-107(8)(c) precludes an impairment rating in this case. First, Claimant

suffered a documented injury – disorder - in the nature of a lumbar sprain/strain to his lumbar spine. Therefore, Section 8-42-107(8)(c) does not apply. *See Herrera v. Sturgeon Electric Co*., W.C. No. 4-320-602 (January 8, 1999)(anatomic correlation requirement inapplicable where Claimant is rated for a specific disorder of lumbar spine under AMA Guides.) Second, even if Section 8-42-107(8)(c) does apply, this ALJ finds that Claimant's pain complaints are supported by an anatomic and physiological basis. Claimant had reduced range of motion in his lumbar spine. See *Herrera v. Sturgeon Electric Co*., W.C. No. 4-320-602 (January 8, 1999)(anatomic correlation requirements of Section 8-42-107(8)(c) satisfied where Claimant exhibited reduced movement of the spine.) In addition, Dr. Yamamoto and Dr. Scherr both provided a physiological basis for Claimant's back pain, i.e., his altered gait. Therefore, Section 8-42-107(8)(c) is either inapplicable, or its requirements have been met.

I. Respondents have failed to overcome the DIME.

CONVERSION OF SCHEDULED IMPAIRMENT RATING

J. Section Section 8-42-107(7)(b)(II), C.R.S., governs circumstances where a Claimant sustains both scheduled and nonscheduled injuries from the same industrial accident. Without combining or adding individual impairment ratings, the scheduled injury is compensated as a scheduled disability, and the nonscheduled injury must be compensated as whole person impairment. See also *In the Matter of the Claim of Karl Maldonado v. State of Colorado*, W.C. No. 4-823-986, (ICAO Feb. 17, 2012).

K. Pursuant to the DIME, Claimant has a 7% whole person impairment rating for his lumbar spine and a 13% scheduled injury to his right lower extremity. Each shall be paid separately.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents have failed to overcome the Division IME of Dr. Scherr.

2. Claimant has a 7% whole person impairment rating for his lumbar spine and a 13% extremity impairment rating for his right lower extremity and each shall be paid separately.

3. Insurer shall pay Claimant interest at the rate of 8% per annum on compensation benefits not paid when due.

4. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Did Claimant prove by a preponderance of the evidence that he is entitled to TTD benefits from August 3, 2015 through March 8, 2016?

2. Did Respondents prove by a preponderance of the evidence that Claimant's TTD benefits should be reduced based on the failure to timely report the injury in writing?

3. Did Respondents prove by a preponderance of the evidence that Claimant was responsible for the termination of his employment on October 10, 2015?

FINDINGS OF FACT

1. Claimant worked as a warehouse loader for Employer. The job is physically demanding, requiring heavy lifting and long shifts. His shift started at 2:00 PM and frequently continued into the following morning.

2. Claimant sustained an admitted injury to his right elbow on the morning of August 3, 2015 while wrapping carts of merchandise.[1] While spinning a cart, Claimant felt a pop in his right arm, accompanied by sharp pain and a burning sensation going down to his fingers.

3. Claimant asked his supervisor, Bill MacLean, if he could take a break. Claimant did not specifically inform Mr. MacLean that he suffered an injury while working. Mr. MacLean denied the requested break because the warehouse was already behind schedule and holding up the delivery drivers. Claimant continued working but eventually left because he could no longer tolerate the pain.

4. Claimant called Mr. MacLean the evening of August 3 and stated he was on the way to the Evans Army Hospital Emergency Room for his elbow pain. Claimant did not tell Mr. MacLean that his condition was caused by a work injury.

5. Claimant was evaluated by Dr. Brian Fuller, an orthopedist, on August 4, 2015. He reported "acute-on-chronic right elbow pain following a long shift at the Pepsi warehouse. . . . The patient reports similar symptoms off and on for the previous 7 years; however, it is currently worse in nature than previous, following a recent prolonged shift at the warehouse." On physical examination, Dr. Fuller noted: "the ulnar nerve subluxes over the medial epicondyle with flexion and snaps back with extension." Claimant was instructed to wear a splint for one week, and then transition to an elbow pad.

[1] The injury occurred at the end of the shift which started on August 2, 2015.

6. Claimant went to the workplace on August 4 and told Mr. MacLean he had been put in a sling and could not work. Claimant did not tell Mr. MacLean that his condition was caused by a work injury. Mr. MacLean knew Claimant had prior problems with his right elbow, and Claimant had previously told Mr. MacLean he would eventually need surgery on the right elbow. Given that Claimant did not reference a work-related injury Mr. MacLean reasonably assumed Claimant's elbow symptoms were a manifestation of his pre-existing condition.

7. Mr. MacLean subsequently tried to contact Claimant on more than one occasion regarding his status but received no reply. Although Mr. MacLean knew Claimant was receiving medical treatment and unable to work because of the elbow problems, he did not know the problems were related to a work injury.

8. Claimant had worked for Employer for over 15 months at the time of his injury. Claimant received an employee Guidebook at orientation and underwent training regarding Employer's policies and procedures for reporting work-related injuries. Per Employer's established policies, employees must report injuries to their supervisor within 24 hours. Additionally, Employer uses a third party service, 1-800-JOBHURT, to process initial reports of workplace injuries. Employees must report injuries to 1-800-JOBHURT within 24 hours.

9. Employer has several posters in the facility to inform employees of the obligation to report injuries in writing within four days. The notices are posted in the main employee hallway, the breakroom, and the hallway to the warehouse offices.

10. At the time of his injury, Claimant knew he was required to report injuries to his supervisor and 1-800-JOBHURT. Claimant testified he contacted 1-800-JOBHURT within a day or two of his injury, but there is no documentation or other persuasive evidence to corroborate his testimony.

11. Claimant retained counsel to represent him in connection with his claim on or about August 15, 2015.[2] Claimant's counsel filed an Entry of Appearance and a Workers' Claim for Compensation with the DOWC on August 15, 2015. Claimant's counsel did not send a copy of the entry or claim form to Employer or Insurer. Claimant testified that his counsel advised him not to have direct contact with 1-800-JOBHURT or Employer.

12. Claimant underwent a right elbow ulnar nerve transposition with Dr. Fuller on August 26, 2015.

13. Claimant temporarily exacerbated his elbow pain on September 9, 2015, when his arm was caught in a closing car door. His symptoms returned to baseline by September 16, 2015. The incident with the car door did not cause any new injury or long-term aggravation of Claimant's elbow condition.

[2] Claimant's current attorney is not affiliated with the attorney who previously represented Claimant during the period of time pertinent to this Order.

14. Courtney Archbold works for Employer in an administrative position supporting Health and Wellness, workers' compensation benefits, and other claims for medical leave.

15. Ms. Archbold learned that Claimant was having trouble with his right elbow "a day or two" after the incident. Claimant did not report the condition as work-related, and Ms. Archbold provided Claimant with information about short-term disability (STD) benefits.

16. Ms. Archbold helped Claimant apply for STD benefits. Claimant's STD claim was ultimately denied because he failed to submit required documentation to support his claim. Ms. Archbold learned the STD benefits were denied around August 27 or 28, 2015.

17. Ms. Archbold first learned Claimant was pursuing a workers' compensation claim on September 14, 2015. She received the notification via email from Employer's insurance representative, rather than Claimant or his counsel. Before that time, the information available to Employer would not lead a reasonably conscientious manager to believe or suspect that Claimant had suffered a work-related injury. Although Mr. MacLean and Ms. Archbold knew Claimant was having problems with his elbow, they reasonably assumed it was caused by a non-work-related personal medical condition.

18. Upon receiving notice of the claim, Ms. Archbold spoke with Claimant by phone about the need to report the claim to 1-800-JOBHURT. She also asked Claimant to come to the office to receive a Rule 8 physician designation letter and complete some additional paperwork regarding the claim. Claimant did not follow up on that conversation or take any further action.

19. Ms. Archbold contacted 1-800-JOBHURT on September 16, 2015 and reported a work-related injury on Claimant's behalf. She took it upon herself to report the injury "because I couldn't get him to do it."

20. Ms. Archbold subsequently tried to contact Claimant several times with no response.

21. Claimant did not timely provide Employer documentation regarding his medical condition or work restrictions.

22. Claimant was terminated on October 10, 2015 for "prolonged absence without proper documentation." The Disciplinary Action Report stated "[Claimant] is being terminated . . . due to excessive absences and failure to file STD and important information to Job Hurt within the proper time frame."

23. Claimant was disabled from his regular job and suffered a wage loss as a direct and proximate consequence of his injury commencing August 3, 2015.

24. Employer first received written notice of the injury on September 14, 2015. The delay in reporting was due to circumstances within Claimant's control. A 100% reduction of TTD benefits is warranted through September 13, 2015.

25. Claimant was responsible for the termination of his employment effective October 10, 2015.

CONCLUSIONS OF LAW

A. TTD benefits commencing August 3, 2016

A claimant is entitled to TTD benefits if the injury causes a disability, the disability causes the claimant to leave work, and the claimant misses more than three regular working days. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The claimant must establish a causal connection between a work-related injury and the subsequent wage loss to obtain TTD benefits. *Id*. The term disability connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). Impairment of earning capacity may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

Once the claimant establishes temporary disability, the right to benefits is measured by the degree of the wage loss, not the claimant's willingness to seek employment or the claimant's hypothetical ability to perform modified employment. *See Black Roofing Inc. v. West*, 967 P.2d 195 (Colo. App. 1998); *Denny's Restaurant, Inc. v. Husson*, 746 P.2d 63 (Colo. App. 1987).

The persuasive evidence shows that Claimant was disabled by the effects of his admitted injury and suffered a wage loss as a direct and proximate consequence of his injury. Ordinarily, that would entitle Claimant to an award of TTD benefits commencing August 3, 2015. But Respondents have requested that Claimant's TTD benefits be reduced because he did not timely report his injury in writing.

Section 8-43-102(1)(a) requires an employee who suffers an accidental injury to report the injury in writing within four days of the injury. The required notice may be given by any person with knowledge of the injury. If the employee fails to report the injury in writing, the employee "may lose up to one day's compensation for each day's failure to so report." Because the statute uses the word "may," imposition of a penalty for late reporting is left to the ALJ's discretion. *Emigh v. Wal-Mart Stores, Inc.,* W.C. No. 4-151-148 (ICAO, April 14, 1995); *LeFou v. Waste Management*, W.C. No. 4-519-354 (ICAO, March 6, 2003). Accordingly, the ALJ must determine whether a penalty is warranted under the particular circumstances of each case. Even if a penalty is deemed appropriate, the ALJ has discretion to reduce the TTD benefits by any amount "up to" one day's compensation for each day of late reporting.

As found, a 100% reduction of TTD based on "late reporting" is warranted. Claimant was aware of his obligation to report the injury, but provided no persuasive explanation for his failure to do so. Claimant not only neglected to report the injury in writing, he did not even provide verbal notification. Although he told Mr. MacLean he was having problems with his elbow, he did not state it was due to an injury at work. Claimant filed for STD benefits rather than workers' compensation benefits, which further cemented Employer's impression that his elbow condition was not work-related. The claim form filed by Claimant's former counsel was ineffective notice because he did not send a copy to Employer. In fact, Employer had no knowledge Claimant was alleging a work-related injury until it received notice from its insurance representative on September 14, 2015. The delay in reporting the injury was prejudicial because it prevented Employer from mitigating its liability for TTD benefits with modified duty.

As found, Ms. Archbold received notification of the workers' compensation claim via email on September 14, 2015. The statute provides that the requisite written notice may be given by the claimant or "any other person" with knowledge of the injury. The ALJ concludes that the penalty for late reporting should remain in effect through September 13. Claimant is entitled to TTD benefits commencing September 14, 2015.

B. Responsible for Termination

The termination statutes, § 8-42-103(g) and § 8-42-105(4)(a) C.R.S., provide:

> In cases where it is determined that a temporarily disabled employee is responsible for termination of employment, the resulting wage loss shall not be attributable to the on-the-job injury.

The employer must prove by a preponderance of the evidence that a claimant was terminated for cause or was responsible for the separation from employment. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1132 (Colo. App. 2008).

To establish that a claimant was responsible for termination, the respondents must show the claimant performed a volitional act or otherwise exercised "some degree of control over the circumstances which led to the termination." *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 5 P.3d 1061, 1062 (Colo. App. 2002); *Padilla v. Digital Equipment Corp*., 902 P.2d 414 (Colo. App. 1995); *Velo v. Employment Solutions Personnel*, 988 P.2d 1139 (Colo. App. 1988). The mere fact that the employer discharged the claimant in accordance with its personnel rules does not automatically establish that the claimant acted volitionally or exercised control over the circumstances of the termination. *Gonzales v. Industrial Commission,* 740 P.2d 999 (Colo. App. 1987). The ALJ must consider the totality of the circumstances to determine whether the claimant was responsible for his termination. *Knepfler v. Kenton Manor*, W.C. No. 4-557-781 (March 17, 2004).

As found, Respondents have proven by a preponderance of the evidence that Claimant was responsible for the termination of his employment effective October 10, 2015. Claimant had minimal contact with Employer after his injury and ignored multiple

messages from Mr. MacLean and Ms. Archbold. Claimant failed to follow Employer's well-established policies regarding injuries, of which he was fully aware. Even after Ms. Archbold asked Claimant to come in to the office, he did not comply. Employer gave Claimant the benefit of the doubt by maintaining his position until October 10, even though Employer would have been justified in terminating him sooner. Claimant effectively abandoned his job by failing to communicate with Employer regarding his status. Claimant provided no persuasive explanation for why he did not stay in contact with Employer after the injury. The fact that Claimant may have received bad advice from his former attorney does not excuse his failure to take actions that a reasonable employee would take under the circumstances. Based on the evidence presented, the ALJ concludes that Claimant's termination resulted directly from volitional acts within his control. Consequently, Respondents are entitled to terminate Claimant's TTD benefits on October 10, 2015.

ORDER

It is therefore ordered that:

1. Claimant's claim for TTD benefits from August 3, 2015 through September 13, 2015 is denied and dismissed.

2. Insurer shall pay Claimant TTD benefits from September 14, 2015 through October 9, 2015.

3. Claimant's claim for TTD benefits from October 10, 2015 through March 8, 2016 is denied and dismissed.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 21, 2017

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

The issues presented for hearing involve Claimant's challenge to the impairment rating opinions of the Division Independent Medical Examiner, Dr. Richard Stieg and Respondents contention that Claimant has been overpaid temporary partial disability benefits. The specific questions to be answered are:

I. Whether Claimant has established by clear and convincing evidence that Dr. Stieg's impairment rating opinions are highly probably incorrect and if so what is the correct impairment rating associated with Claimant's industrial injury;

II. Whether Respondents have established by a preponderance of the evidence that they are entitled to credit the value of Claimant's 5% impairment rating against the value of continued TTD payments made to Claimant between the original release at MMI, the DIME and the subsequent FAL as well as any alleged overpayment in temporary disability benefits paid during the time period of October 2, 2014 through November 9, 2015 against wages earned in concurrent employment.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant suffered an admitted injury to his lower back while working for Employer on July 17, 2014.

2. Claimant testified and the initial medical records indicate that he was shoveling sand off a conveyor belt when he felt a pop in his low back. He developed low back pain and difficulty walking prompting him to report the injury and seek treatment.

3. Claimant has had prior back injuries and has been bothered on and off by back pain in the past.

4. On August 29, 2014, an MRI of the lumbar spine was performed which was interpreted as revealing mild degenerative disc disease with facet involvement with mild bilateral neural foraminal narrowing at L2-3 and minimal narrowing at L3-4.

5. A repeat MRI of the lumbar spine was completed on December 10, 2014. The results were compared to the prior MRI, after which it was noted that there was an increase in synovitis with reactive edema around the L4-5 facet joint with soft tissue edema "tracks" into the left L4-5 foramen, as well as borderline L4-5 central canal stenosis.

6. On December 18, 2014, Dr. Michael Sparr issued a report regarding the results of an EMG study which he felt contained findings "consistent with a longstanding sensorimotor axonal and demyelinating peripheral neuropathy and completely unrelated to Claimant's July 17, 2014 work injury.

7. Dr. Sparr saw Claimant on January 26, 2015, at which time Dr. Sparr found:

> "He is diffusely tender to even light touch from L1 through the sacrum bilaterally and over diffuse gluteal muscles. This is evident with only very light skin touch. Waddell's are positive today for axial loading, regional pain complaints, diffuse overreaction. . . ."

Dr. Sparr went on to note that the findings of Claimant's MRI showed mild degenerative findings which were inconsistent with his pain and numbness complaints.

8. Plain view x-rays of the lumbar spine obtained at Penrose hospital obtained February 18, 2015 demonstrated "evidence of moderate multilevel degenerative disc and facet joint changes throughout the lumbar spine, and 2-3mm of anterolisthesis at L4-5."[1]

9. Claimant underwent several injections, but he testified that "they didn't do any good."

10. During Claimant's course of treatment, Dr. Scott Primack authored three separate reports concerning various treatment modalities recommended by some of Claimant's authorized treating physicians. In a report addressing the reasonableness and necessity of continued injections, Dr. Primack opined that additional injections were not warranted since a previous set of injections proved unhelpful, and non-diagnostic. He also recommended a follow up EMG/Nerve conduction study to confirm the results of Dr. Sparr's findings.

11. A follow up EMG/NCS was performed on June 22, 2015, by Dr. William Seybold, which verified that Claimant continued to exhibit signs of polyneuropathy, not radiculopathy.

12. In considering and comparing Claimant's negative diagnostic response to a transforaminal epidural steroid injection along with the objective results of the EMG/nerve conduction studies with his MRI findings, Dr. Primack opined that Claimant's continued pain complaints were more reasonably related to a previously diagnosed peripheral polyneuropathy.

13. Dr. Primack also testified that internal fear constructs, i.e. pain behavior

[1] This information is contained in the Division Independent Medical Examination (DIME) report of Dr. Stieg.

associated with Claimant's documented; pre-existing, non-work related conditions could influence his level of effort during motion testing and thus, the validity of his lumbar range of motion measurements.

14. Claimant underwent a Functional Capacity Evaluation (FCE) at Excel Physical Therapy (Excel) on November 8, 2015. As part of this evaluation, lumbar range of motion testing was performed. Claimant's range of motion loss pursuant to this testing totaled 16% whole person impairment.

15. Claimant returned to Colorado Springs Health Partners, his authorized providers on November 10, 2015 where he was evaluated by Dr. Shireen Rudderow on November 10, 2015. Dr. Rudderow placed Claimant at maximum medical improvement (MMI) after receiving conservative care for more than a year noting further that a permanent impairment rating would be received within fourteen days.

16. Dr. Robert Baptist, revaluated Claimant for permanent impairment on December 10, 2015. In his report generated after this encounter, Dr. Baptist wrote that he spoke with Claimant regarding his care noting further that all other treatment providers had considered Claimant at or near MMI. Consequently he assumed that Claimant's care was complete, a fact which Claimant understood and accepted. As part of his evaluation, Dr. Baptist indicated that Claimant's medical situation presented as "very complex." It was noted that Claimant was "almost totally refractory to any treatment modalities" and that his prognosis for improvement was poor. According to Dr. Baptist, Claimant's only "hope for improved pain relief was an implantable spinal stimulator which he recommended as maintenance care.

17. As part of his impairment rating, Dr. Baptist relied upon, but slightly altered Claimant's impairment for range of motion loss as determined by the physical therapist during the FCE as Excel. Specifically, Dr. Baptist found that Claimant's loss of lumbar extension equated to 6% impairment, not 5% as calculated by the physical therapist. Consequently, the full amount of impairment for range of motion loss totaled 17% rather than 16%.

18. Dr. Baptist would go on to supplement the range of motion impairment with 7% impairment for a Table 53 diagnosis citing "moderate degenerative changes" as the basis despite that the MRI's noting the presence of "mild degenerative changes." Additionally, Dr. Baptist provided a total of 8% whole person impairment for motor and sensory nerve impairment which he admitted was somewhat of an arbitrary calculation given that the Claimant was "very difficult to assess." Dr. Baptist combined the various components of Claimant's impairment rating reach a final combined whole person impairment rating of 29%.

19. The existence of a polyneuropathy would prompt Dr. Primack to opine that Claimant's leg pain was not claim related. Accordingly, Dr. Primack did not consider Claimant to be an appropriate candidate for the placement of a spinal cord stimulator as part of this claim as recommended by Dr. Baptist.

20. Respondents timely challenged the 29% rating and initiated the Division Independent Medical Examination (DIME) process. Dr. Richard Stieg was selected as the DIME physician.

21. On June 21, 2016, Claimant attended the requested DIME with Dr. Stieg.

22. Dr. Stieg undertook a review of Claimant's medical records dating back to 1990. He also performed a physical examination and referenced the amount of motion Claimant had in his lumbar spine. Despite Respondents suggestion otherwise, there is a dearth of evidence to suggest that Dr. Stieg took formal lumbar range of motion measurements. He issued his DIME Report on July 15, 2016. In his DIME report Dr. Stieg agreed with Dr. Rudderow's MMI date of November 10, 2015 and concluded that Claimant was entitled to a Table 53 rating of 5%.

23. As part of his physical examination, Dr. Stieg found that Claimant "tender to some degree over both SI joints, but all provocation testing at the hips [was] negative for the production for radicular pain or SI pain." He also noted that Claimant "[exhibited] 4/5 Waddell's signs with increased back pain being reported on simulated axial load and simulated axial rotation . . . ."

24. Though Dr. Stieg specifically noted that Claimant had "very minimal motions of the lumbar spine in flexion/extension and side bending", he did not include any range of motion measurement worksheets serving to demonstrate that formal "testing" was completed, choosing instead to state:

> I am giving the patient a final impairment rating based on his mild to moderate degenerative lumbar disease. He has no objective evidence of radiculopathy to allow me to offer any impairment for neurological findings. His range of motion testing coupled with Waddell's findings, although technically valid is incompatible with the radiology findings. That coupled with clear cut evidence of symptom magnification (positive Waddell's signs) does not allow for any impairment for loss of range of motion.

25. Based upon the evidence presented, the ALJ finds that Dr. Stieg technically invalidated Claimant's lumbar range of motion measurements secondary to his opinion that the measurements were non-physiologic and incongruent with the objective findings on imaging.

26. Respondents filed a Final Admission of Liability (FAL) based on the DIME report of Dr. Stieg on August 19, 2016. In the FAL, Respondents took credit for the value of Claimant's 5% impairment rating against the value of continued TTD payments made to Claimant between the original release at MMI, the DIME and the subsequent FAL. After taking credit, Claimant was left with an overpayment which, by stipulation of the parties, amounted to $14,709.96. Respondents also reserved the issue of an additional

overpayment noting, “Respondents retain the right to reimbursement of additional overpayment amounts based on claimant’s receipt of TTD benefits while maintaining employment.”

27. Claimant timely objected to the Final Admission and filed an Application for Hearing endorsing the issue of “overcoming DIME.” Respondents timely responded to the application endorsing issues of causation, apportionment, and overpayment.

28. At hearing, Claimant presented the testimony of Dr. John Hughes, who was endorsed as an expert in occupational medicine.

29. Relying primarily on Desk Aid 11, Dr. Hughes testified that Dr. Stieg’s failure to attach range of motion worksheets, whether the range of motion measurements were valid or not, to the DIME report left the report incomplete and fatally flawed. Dr. Hughes also noted that the lack of range of motion worksheets coupled with the content of the DIME raises the appearance that formal range of motion testing was not done. Finally, while he agreed that it was within Dr. Stieg’s discretion to invalidate range of motion secondary to the presence of significant pain behavior and being non-physiologic, Dr. Hughes suggested that Dr. Stieg erred in failing to reference another complete, but invalid range of motion study as the basis for his decision to invalidate subsequent range of motion and have the Claimant return for a second round of range of motion measurements as provided for by Desk Aid 11.

30. Dr. Scott Primack testified at hearing as an expert in physical medicine with a sub-specialty in electro diagnostic medicine. Dr. Primack testified in support of the findings of Dr. Stieg’s DIME report. In his testimony, Dr. Primack explained that Dr. Stieg’s nullification and lack of attachment of range of motion measurement was within his discretion, was in accordance with the Division’s Level II accreditation, and was consistent with the AMA Guides, Third Edition Revised.

31. Specifically, Dr. Primack testified as follows:

> And you know, whether you want to put in the work sheets or not, the work sheets are going to be invalid, so I don’t think that by not having the work sheet it invalidates all of the work that he did, because he went through some pretty extensive notes.

32. After a discussion of the differing reports and findings of the various treatment providers in the record, Dr. Primack testified that the questions concerning validity of Claimant’s pain complaints, range of motion measurements, and diagnosis were nothing more than “physician’s different opinions.”

33. Based upon the evidence presented, the ALJ finds Dr. Hughes’ opinions concerning the validity of Dr. Stieg’s DIME report more persuasive than the contrary opinions of Dr. Primack. While the record evidence supports clear differences of opinion between Dr. Baptist and Dr. Stieg concerning Claimant’s diagnosis, pain

complaints and range of motion measurements, the challenges to Dr. Stieg's DIME opinions are based upon his failure to adhere to established methods/protocols regarding the testing and documentation of range of motion measurements. It is undisputed that Dr. Stieg failed to attach range of motion worksheets to his DIME report. Moreover, the evidence presented persuades the ALJ that Dr. Stieg failed to reference another report wherein range of motion was invalidated or schedule Claimant for a second set of range of motion measurements as referenced by Desk Aid 11.

34. The combination of Dr. Stieg's failure to attach worksheets to his DIME report coupled with his failure to reference/accept another report which invalidated range of motion measurements or bring Claimant back for a second set of measurements constitutes clear and convincing evidence that formal range of motion testing was not done in this case rendering the legitimacy of his opinions concerning the degree of impairment associated with range of motion loss in this case suspect and highly probably incorrect. Consequently, Claimant has met his required legal burden to set Dr. Stieg's opinion regarding impairment associated with range of motion loss aside.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Conclusions of Law

A. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law, and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Clam Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The ALJ, as fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo.

1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion). As found here, Dr. Hughes' opinions are supported by the content of the medical record he reviewed and Desk Aid 11. As such, the ALJ finds Dr. Hughes' opinions credible and convincing. Moreover, there is substantial persuasive evidence to support a conclusion that Dr. Stieg deviated from the accepted methodology of the AMA Guidelines, the tenets set forth by the Division of Worker's Compensation in Desk Aid 11 and the principles of the Level II Accreditation Curriculum when he completed the DIME in this case. Consequently, the ALJ rejects Dr. Stieg's opinions regarding range of motion impairment as unpersuasive and highly probably incorrect.

Overcoming the DIME Physician's Impairment Rating

C. A DIME physician's findings of causation, MMI and impairment are binding on the parties unless overcome by "clear and convincing evidence." Section 8-42-107(8)(b)(III), C.R.S.; *Qual-Med v. Industrial Claim Appears Office*, 961 P.2d 590 (Colo. App. 1998); *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinion concerning impairment is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995) In other words, to overcome a DIME physician's opinion regarding impairment, the party challenging the DIME must demonstrate that the physicians determinations in these regards are highly probably incorrect and this evidence must be "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo. App. 2002). *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appears Office, supra.*

D. In resolving the question of whether the DIME physician's opinions have been overcome, the ALJ may consider a variety of factors including whether the DIME physician properly applied the AMA Guides. *See Metro Moving and Storage Co. v Gussert,* 914 P.2d 411 (Colo. App. 1995); *Wackenhut Corp. v. Indus. Claim Appeals Office*, 17 P.3d 2002 (Colo. App. 2000); *Aldabbas v. Ultramar Diamond Shamrock*, W.C. No. 4-574-397 (ICAO August 18, 2004). The ALJ should also consider all of the DIME physician's written and oral testimony. *Lambert and Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998). As found here, the ALJ concurs with Claimant's expert (Dr. Hughes) that Dr. Stieg's failure to follow accepted rating protocols regarding the testing and documentation of range of motion loss/impairment renders the his report incomplete and his opinions regarding range of motion impairment fatally flawed.

E. Desk Aid 11, paragraph 5 reminds providers evaluating range of motion impairment to "attach all applicable work sheets to the narrative report and include this information to all legally concerned parties." More importantly, paragraph 10 provides that "[t]o invalidate spinal range of motion impairment, claimants must have two visits"

where “[t]wo sets of three measurements must be taken on each visit (12 measurements total)(emphasis in original). However the tip provides that if a “physician performing a Division IME finds range of motion measurements invalid (due to SLR check or for physiologic reasons) such physician may fulfill this requirement by accepting invalidated measurements from other reports in lieu of bringing the claimant back for a second set of measurements.” Nonetheless, the tip notes that the “physician must, however, report his/her own initial sets of measurements”, referencing the Level II Accreditation Curriculum for range of motion testing for the spine. As found, Dr. Stieg failed to actually reference any formal range of motion testing measurements in his DIME report or follow any of the aforementioned protocols encouraged by the Division of Worker’s Compensation and referenced in the AMA Guides and/or Level II Accreditation Curriculum. Respondents’ suggestion that Dr. Stieg’s explanation of the reasoning he invalidated the range of motion makes the need to attach worksheets “extraneous and immaterial” is unconvincing as it assumes that formal range of motion testing was done in this case and completely ignores the need to cite to a previous report invalidating range of motion or have the claimant return for a second set of measurements. Here, the convincing evidence presented persuades the undersigned that Dr. Stieg did neither. Consequently, the ALJ concludes the DIME in this case is fatally flawed and the opinion of Dr. Stieg regarding range of motion impairment highly probably incorrect.

F. Where the ALJ determines that the DIME physician's opinion has been overcome, the question of the claimant's correct medical impairment rating then becomes a question of fact for the ALJ. The only limitation is that the ALJ's findings must be supported by the record and consistent with the AMA Guides and other rating protocols. Thus, once the ALJ determines that the DIME's opinion has been overcome in any respect, the ALJ is free to calculate the claimant's impairment rating based upon the preponderance of the evidence. *Garlets v. Memorial Hospital,* W.C. No. 4-336-566 (September 5, 2001). In this case, the undersigned concludes that Dr. Baptist’s impairment rating for spinal disorders, i.e. 7% from Table 53 of the AMA Guides to the Evaluation of Permanent Impairment, Third Edition (*Revised*), hereinafter the “AMA Guides”, is supported by the record. The written record is replete with reference to moderate degenerative changes revealed by imaging study, including x-ray. Even Dr. Stieg provides the following impression of the lumbar spine: “[m]ild to <u>moderate</u> disc and joint degenerative disease of the lumbar spine without evidence of specific radiculopathy” (emphasis added). Moreover, Dr. Stieg rated Claimant for “mild to moderate degenerative lumbar disease. Regarding the spinal range of motion impairment as determined by Dr. Baptist along with his Table 49 nerve rating is supported by the content of the medical records associated with Claimant’s injury, the undersigned concludes that these aspects of Claimant’s impairment rating are also supported by the record. While Dr. Baptist calculated 17% impairment for range of motion loss and Claimant has polyneuropathy, Claimant’s range of motion measurements were valid and Respondents failed to present evidence of a specific error committed by Dr. Baptist in assigning Table 49 spinal nerve root impairment. Indeed, Dr. Stieg did not opine that Claimant’s leg pain was exclusively caused by his polyneuropathy. Rather, he noted simply that the “majority” of Claimant’s leg pain was

related to polyneuropathy and that while there was a suggestion that Claimant may have radiculitis there was no evidence of radiculopathy. Consequently, he elected not to rate Claimant's leg pain. On the other hand, Dr. Baptist felt that Claimant's imaging supported a finding inflammation and fluid accumulation sufficient to produce an acute radiculopathy. Thus, he elected to rate Claimant's leg pain. Based upon the evidence presented, the ALJ concludes only that there is a difference of opinion between Dr. Baptist and Dr. Stieg as it pertains to these aspects of Claimant's impairment. A mere difference of opinion between physicians fails to constitute error. *See Gonzales v. Browning Farris Indust. of Colorado*, W.C. No. 4-350-356 (ICAO March 22, 2000). Accordingly, the ALJ concludes that Claimant's true impairment ratings causally related to his July 17, 2014 industrial injury is 29% as calculated by Dr. Baptist.

Credits & Overpayments

G. Section 8-40-201(15.5), C.R.S. provides as follows:

> "Overpayment" means money received by a claimant that exceeds the amount that should have been paid, or which the claimant was not entitled to receive, or which results in duplicate benefits because of offsets that reduce disability or death benefits payable under said articles. For an overpayment to result, it is not necessary that the overpayment exist at the time the claimant received disability benefits under said articles.

Thus, §8-40-201(15.5), C.R.S. provides for three categories of possible overpayment: (1) a claimant receives money "that exceeds the amount that should have been paid"; (2) money received that a "claimant was not entitled to receive"; and (3) money received that "results in duplicate benefits because of offsets that reduce disability or death benefits" payable under articles 40 to 47 of Title 8. *See Simpson v. Industrial Claim Appeals Office,* 219 P.3d 354 (Colo. App. 2009), *rev'd in part on other grounds, Benchmark/Elite, Inc. v. Simpson,* 232 P.3d 777 (Colo. 2010).

H. Respondents bear the burden, by a preponderance of the evidence that Claimant received an overpayment of TTD benefits. Respondents' assertion of the right to recover an overpayment is a factual matter for determination by the ALJ. *Karyn Milazzo v. Total Long-term Care*, *Inc.*, W.C. No. 4-852-795-02, (ICAP Jun. 11, 2014). In this case, the ALJ agrees that Respondents properly preserved the issue of an additional overpayment in their Final Admission and in Response to Claimant's Application for Hearing for Claimant receipt of wages while working concurrent employment at Specialty Sports. Nonetheless, the ALJ concludes that Insurer is not entitled to any credit for any alleged overpayment in temporary disability benefits for wages earned while working at Specialty Sports. Claimant's AWW is $1,459.71. This amount exceeds the TTD cap of $881.65. Two thirds of $1,459.71 is $972.16. This is $90.51 over the TTD cap. Thus, any money received by Claimant for any wage loss is what he was entitled to because even with any offset from his previous gross wage he is still due $881.65. Respondents assert that as Claimant was employed in a modified duty role at Specialty Sports he was entitled to receive TPD benefits, not TTD during the time frame

of October 2, 2014 through November 9, 2015. For the reason outlined above, the ALJ is not persuaded. While Respondent is entitled to recover the remaining overpayment of $14,709.96, Respondents request to credit an additional overpayment of $13,752.61 against the value of his 29% impairment rating is denied and dismissed.

ORDER

It is therefore ordered that:

1. The DIME opinions of Dr. Stieg regarding impairment have been overcome and are hereby set aside.

2. Respondents shall pay permanent partial disability benefits to Claimant in accordance with a whole person impairment of 29% as calculated by Dr. Baptist.

3. The stipulation of the parties that Claimant has been overpaid by $14,709.96 is approved. Respondents are entitled to take a credit against the value of additional permanent partial disability benefits due and owing to Claimant based upon the 29% whole person rating to which he is entitled.

4. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

STATE OF COLORADO

W.C. No. 5-025-409-02 and 5-025-140-01

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer/Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on April 19, 2017, in Denver, Colorado. The hearing was digitally recorded (reference: 4/19/17, Courtroom 1, beginning at 8:30 AM, and ending at 11:30 AM).

By Order, dated January 28, 2017, W.C. No. 5-025-140-01 (involving an alleged neck injury of October 30, 2011) and W.C. No. 5-025-409-02 (involving an alleged neck injury of January 14, 2012) were consolidated for hearing. The primary reference file is W.C. No. 5-025-409-02.

Claimant's Exhibits 1 through 4 were admitted into evidence, without objection, Respondents' Exhibits A through S were admitted into evidence, without objection, with the exception of Exhibit F to which there was an objection that was sustained, however, it is identical to Claimant's Exhibit 4, which was admitted into evidence without objection. Claimant's exhibit 4 is an incomplete Employer's First Report of Injury in W.C. No. 5-025-409-02, which was only filed with the insurance carrier and not the Division of Workers' Compensation (DOWC) because the Employer was taking the position that it concerned an alleged "no lost time" injury.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Respondents to be filed, electronically, within 6 working days, ,giving the Claimant 2 working days within which to file objections. After the referral, the ALJ decided to take the matter under advisement in order to prepare the written decision himself without a proposed decision. The ALJ hereby issues the following decision.

ISSUES

The issues to be determined by this decision concern compensability of an October 30, 2011, alleged neck injury (W.C. No. 5-025-140-01) and a January 14, 2012, alleged neck injury (W.C. No. 5-025-409-02); and, if compensable, the Respondents have raised the affirmative defense of "statute of limitations."

The Claimant bears the burden of proof, by a preponderance of the evidence, on the threshold issues of compensability on each claim. The Respondents bear the burden of proof, by preponderant evidence on the 'statute of limitations" affirmative defense as it pertains to each claim.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant was drafted by the Employer in 2011. Prior to being drafted, he had a physical examination at the Columbine facility, including an MRI (magnetic resonance imaging) on February 27, 2011. The cervical MRI showed disc degeneration at C3-4, a slight bulge at C4-5 and a more prominent diffuse annular bulge at C6-7. Prior to being drafted, the Claimant had been involved in a rollover motor vehicle accident with neck pain. Prior to the rollover accident, he had two injuries in college with neck pain.

2. When the Claimant was drafted by the Employer, a physical examination completed by Theodore F. Schlegel, M.D., noted that the Claimant's February 27, 2011 MRI demonstrated C3-4 degeneration and foraminal narrowing.

COMPENSABILITY

W.C. No. 5-025-140-01

3. On October 30, 2011, the Claimant alleges a neck injury when he was struck on the right side of his helmet while playing football. He was evaluated by Alan H. Weintraub, M.D., on October 31, 2011. Dr. Weintraub's impression was a "probable concussion, migraines exacerbated by **trauma** (emphasis supplied) and cervigogenic (neck) **sprain/strain.**" Three days later, on November 3, 2011, Dr. Weintraub noted that the Claimant had been asymptomatic for the last two days. In a report, dated November 28, 2011, Dr. Weintraub noted a complete resolution of all posttraumatic concussive symptoms by November 3, 2011. Nonetheless, the Claimant required medical attention and Dr. Weintraub diagnosed and treated the Claimant for a traumatic injury, the effects of which were of two day's duration.

4. According to the Claimant's undisputed telephone testimony, he sought out and required some medical treatment, from Employer doctors on hand, for the October 30, 2011 traumatic incident. The ALJ infers and finds that but for the October 30, 2011 incident, the Claimant would not have otherwise sought and received the short-lived medical care that he received.

5. The ALJ infers and finds that the totality of the evidence supports the proposition that the Claimant experienced an aggravation/acceleration of his underlying degenerative C-Spine condition, by virtue of the traumatic event of October 30, 2011, as opposed to a temporary exacerbation along the path of a natural progression of his underlying neck condition. Although the effects thereof were of a temporary duration (two days) at the time, the Claimant was required to seek medical attention because of the incident of October 30, 2011.

6. The Employer had no notice of a claimed "lost time" or "permanently impairing" injury in W.C. No. 5-025-140-01.

7. The ALJ finds the Claimant to be credible on the issue of "compensability" of the October 30, 2011 incident. Indeed, Dr. Weintraub's impressions corroborate a traumatic event on October 30, 2011, the effects of which were of a short duration.

W.C. No. 5-025-409-02

8. On January 14, 2012, the Claimant alleges another injury to his neck. This was the end of the season. During the end of the season physical examination, the next day, January 15, 2012, Martin Boublik, M.D., noted that the Claimant had two right-sided" stingers" in the game the day before. On examination, the Claimant reported no symptoms related to the stingers Nonetheless, Dr. Boublik recommended a cervical MRI of the neck and he declared the Claimant fit to play According to the

Claimant, he was experiencing neck pain at the time but did not say so because if he did, he knew that he'd risk losing his job. The Claimant did, in fact, seek medical treatment from staff doctors on hand. The Employer filed a First Report of Injury with the insurance carrier but not with the Division of Workers' Compensation (DOWC) because the Employer was taking the position that the matter was a "medical only-no lost time" alleged injury, stating that the "Claimant sustained right cervical nerve root C6-7 irritation after tackling a runner with his head (Claimant's Exhibit 4). The document corroborates a traumatic event on January 14, 2012 for which the Claimant sought and required medical attention. The ALJ finds that the position the Employer was taking did not require the Employer to admit or deny liability for an alleged work-related injury for the January 14, 2012 incident.

9. According to the Claimant's undisputed testimony, after the January 14, 2012 incident, he sought medical treatment in the form of soft tissue massage from Dr. Leahy on the same day. January 14, 2012, was the end of the season and the Claimant was supposed to keep in shape with unsupervised exercises that were **not** under the watchful eye of the Employer. The Claimant testified that he had physical problems doing these exercises because of his neck condition.

10. The ALJ infers and finds that the totality of the evidence supports the proposition that the Claimant experienced an aggravation/acceleration of his underlying degenerative C-Spine condition, as opposed to a temporary exacerbation along the path of a natural progression of his underlying neck condition, because of the incident of January 14, 2012. Although the effects thereof were of a temporary duration at the time (one day), the Claimant was required to seek medical attention because of the incident of January 14, 2012.

11. Six months later, on June 11, 2012, the Claimant underwent a pre-season physical, the Claimant was asymptomatic, and he was declared fit to play.

12. Although of a very short duration, the incident of January 14, 2012, required the Claimant to seek medical attention and receive some treatment from Dr. Leahy. But for the January 14, 2012 incident, the Claimant would not have otherwise sought and received the medical care that he received. According to the Claimant, however, he realized that the effects of both the January 14, 2012 and October 30, 2011 incidents would most likely be permanent. According to his undisputed testimony, he made this realization before his October 2012 left knee surgery (unrelated to the two claims herein), but the Employer was not made aware of this until the Claimant testified at the April 19, 2017 hearing.

13. The Employer had no notice of a claimed "lost time" or "permanently impairing" injury in W.C. No. 5-025-409-02 until the Claimant filed his Worker's Claims for Compensation on September 7, 2016, and until he testified at the April 19, 2017 hearing..

14. The ALJ finds the Claimant to be credible on the issue of "compensability" of the January 14, 2012 incident. Dr. Boublik corroborates the fact of a traumatic event on January 14, 2012, that required medical attention, albeit of short-lived duration.

The Left Knee Injury of July 26, 2012 (Unrelated to Present Claims)

15. On July 26, 2012, the Claimant sustained a left knee injury. Claimant did not play most of 2012 and 2013 because of the left knee injury. This claim was previously resolved by the parties. The Claimant underwent left knee surgery in October of 2012. According to his undisputed testimony, he knew, prior to the left knee surgery the neck problems caused by the October 30, 2011 and the January 14, 2012 incidents were likely to be permanent.

16. The Claimant knew, or should have known, of the nature, serious and probable compensable nature of his injuries as of February 28, 2014, the date he states that he could not continue to play football. According to his undisputed testimony, he knew that the effects of the October 30, 2011 and the January 14, 2012 neck injuries would likely be permanent. He had this realization prior to the October 2012 left knee surgery.

17. On February 4, 2014, the Claimant had an end of season physical, which cleared him for full participation. There was no discussion of neck injuries. Five months later, on July 23, 2014, the Claimant had another physical and was declared fit to play. Although the Claimant continued to have problems with his left knee, there were no medical notations of ongoing neck problems, however, the Claimant testified that he continued to have neck problems but did not want to mention this because he was afraid of being "fired." The ALJ finds the Claimant credible in this regard.

18. The Claimant became a free agent on March 10, 2015. Claimant did not return to play football because of his left knee.

Ultimate Findings, W.C. No. 5-025-409-02 and 5-025-140-01 on Compensability

19. The ALJ finds that the incidents of October 30, 2011, and January 14, 2012, aggravated and accelerated the Claimant's underlying, degenerative neck condition to the point that the Claimant sought and required medical attention. But for these two incidents, the Claimant would not have otherwise sought and required the medical attention that he actually received shortly thereafter.

20. Therefore, the ALJ finds that the Claimant has proven, by a preponderance of the evidence that he sustained two compensable neck injuries on October 30, 2011 and January 14, 2012, respectively, of a "no lost time" nature.

Statute of Limitations

21. As a reasonable person, the Claimant knew, or should have known, the nature and serious compensable nature of his neck injuries of October 30, 2011 and January 14, 2012, prior to his October 2012 left knee surgery. As found herein above, he testified that he believed the effects of his two neck injuries would be permanent, prior to his October 2012 left knee surgery. He stated, however, that he did not "really, really" appreciate how serious his neck condition was until he saw an un-named specialist in Los Angeles in 2016. The ALJ infers and finds that this 2016 heightened awareness does **not** negate the fact that the Claimant first knew the serious compensable nature of his neck injuries prior to his October 2012 left knee surgery.

22. The Claimant first filed a Worker's Claim for Compensation in W.C. No. 5-025-409-02 and 5-025-140-01 on September 7, 2016, more than three years after the Claimant, as a reasonable person knew, or should have known the serious and compensable nature of his October 30, 2011 and January 14, 2012, neck injuries.

23. The Employer did not know that the Claimant was claiming permanent physical impairment, or allegedly sustained "lost time" injuries until September 7, 2016, at the earliest. With regard to the alleged October 30, 2011 injury, there are scant medical records that reflect an injury to the neck on or about October 30, 2011. The only record is a notation by Dr. Wientraub that Claimant may have sustained a cervicogenic sprain/strain on October 31, 2011. There was no further medical evaluation for the alleged October 30, 2011 C-spine injury. Claimant continued to play football for the Employer as evidenced by his second claim of injury on January 14, 2012. There is no record declaring the Claimant unfit to play after the alleged October 30, 2011 injury. The end of season physical completed on January 15, 2012 noted that the Claimant's neck complaints had resolved and the Claimant was declared fit to play pending an MRI for a separate knee injury. The Claimant also participated in a pre-season physical on June 11, 2012 and reported no issues with his neck. The Claimant was again declared fit to play. In the end of season physical completed on February 4, 2014, there was no discussion of Claimant's neck injuries, and the Claimant was again declared fit to play. The Claimant participated in another physical on July 23, 2014 and was again declared fit to play with no mention of his alleged neck injuries. Thus, the Employer had no knowledge of a physical permanent impairment, or a "lost-time' injury as a result of his alleged October 31, 2011 and January 14, 2012 C-spine injuries.

24. The Respondents have proven, by a preponderance of the evidence that the Claimant failed to file his claims for workers' compensation benefits until September 7, 2016) for more than three years after he, as a reasonable person, knew, or should have known, the serious and compensable nature of the two neck injuries. He knew this prior to his October 2012 left knee surgery.

25. The Employer had no notice of a “lost time’ or “permanently impairing injury in both neck cases until September 7, 2016, at the earliest.

26. Although the Claimant alleges that he sustained an injury preventing him from playing football on February 28, 2014, he continued to receive his full salary,

27. The Claimant has failed to prove, by preponderant evidence that there was a tolling of the Statute of Limitations by any “reasonable excuse” or any other tolling exceptions to the two-year statute of limitations.

28. Indeed, the Claimant’s credibility was enhanced when he admitted that he realized the serious and compensable nature of his two knee injuries before the October 2012 left knee surgery. This was more than three years before his Worker’s Claims for Compensation were filed.

DISCUSSION OF STATUTE OF LIMITATIONS

Section 8-43-103(2), C.R.S., provides that the right to workers’ compensation benefits is barred unless a formal claim is filed within two years of the injury. The statute of limitations does not begin to run until a claimant, as a reasonable person, knows, or should have known, the “nature, seriousness and probable compensable character of his injury.” *City of Boulder v. Payne,* 426 P.2d 194 (Colo. 1967) at 197. In order to recognize the probable compensable character of the injury, “the injury must be of sufficient magnitude that it causes a disability which would lead a reasonable person to recognize that he may be entitled to compensation benefits.” *Choi v. Colo. Architectural Mills Works Supply*, W.C. No. 4-794-282 [Indus. Claim Appeals Office (ICAO), October 14, 2010]. As found, the Claimant, as a reasonable person, knew the serious and compensable nature of his neck injuries prior to his October 2012 left knee surgery.

As found, the Claimant had knowledge of the serious and probable compensable nature of his injuries as early as February 28, 2014, the date he alleges that he could not continue to play football, and no later than before his October 2012 left knee surgery. Despite this knowledge of his inability and realization that his neck injuries may be permanent, he did not file his claims with the DOWC until September 7, 2016. This is over two years from the date the Claimant knew, or should have known, of the serious and compensable nature of his neck injuries. Therefore, because the Claimant had knowledge of his two neck injuries more than two years prior to the date he filed the the two claims herein, his claims are barred by the statute of limitations under the provisions of § 8-43-103(2), C.R.S.

There are exceptions to the two-year statute of limitations under § 8-43-103(2), but they do not apply in this case. For instance, § 8-43-103(2), C.R.S. provides: “In all cases in which the employer has been given notice of an injury and fails, neglects, or

refuses to report said injury to the division as required by the provisions of [the Workers' Compensation Act], this statute of limitations shall not begin to run against the claim of the injured employee … until the required report has been filed with the division. *Likens v. Dep't of Corrs*, W.C. No. 4-560-107 (ICAO Feb. 10, 2004). This applies to alleged "lost time" or "permanently disabling injuries of which an employer has notice. As found, the Employer had **no** notice of "lost time' injuries in either W.C. No. 5-025-140-01 or W.C. No. 5-025-409-02.

Finally, § 8-43-103(2), C.R.S., indicates that the statute of limitations will not apply to a claimant "if it is established to the satisfaction of the director within three years after the injury…that a reasonable excuse exists for the failure to file such notice claiming compensation and if the employer's rights have not been prejudiced."' As found, the Claimant's claims were filed more than three years after he, as a reasonable person, knew or should have known, of the serious and probable compensable nature of his claims.

There was **no** tolling of the statute of limitations due to any failure to report the injury on the part of Employer. § 8-43-102(2), C.R.S., provides that the statute of limitations is tolled where an employer does not "report said injury to the division as required by the provisions of [the Workers' Compensation Act]." Thus, where no report was required to be filed, the statute of limitations is not tolled. As found, the Employer herein did not know of a claimed "lost time" injury until September 7, 2016 or thereafter.

The statutory reporting requirements are set out in § 8-43-101, C.R.S. *See Grant v. Indus. Claim Appeals Office*, 740 P.2d 530 (Colo. App. 1987). § 8-43-101(1), C.R.S., requires that the within ten days after notice of knowledge that an employee had contracted a permanently physically impairing injury or lost-time injury, the employer shall file a report with the division. *Pierce-Kouyate v. Wilson's of Colo. Ltd.*, W.C. No. 4-717-784 (ICAO Nov. 21, 2007). A "lost time injury" is defined as one that causes the claimant to miss more than three work shifts or three calendar days of work, and the employer's notice is measured by the "reasonably conscientious manager" standard. *Grant,* 740 P.2d at 531. There is no requirement to file a First Report of Injury, however, where the employer has no notice or knowledge that a claimant had a lost-time injury or permanent physical impairment. *Pierce-Kouyate v. Wilson's of Colo. Ltd., supra.* The claimant bears the burden of establishing the tolling of the statute of limitations. Regardless, there was no persuasive evidence of the tolling of the Statute of Limitations. *Grant*, 740 P.2d at 532. As found, the Claimant failed to prove that there was a tolling of the statute of Limitations.

Here, it is undisputed that Employer did not report the incidents of October 30, 2011 and January 14, 2012 to the DOWC. Because the Employer did not have knowledge or notice that the accidents caused a permanent physical impairment or lost-time, the Employer was under no duty to report the accident to the DOWC under § 8-43-101(1), C.R.S.

As found, the Employer did not know that the Claimant was claiming that he sustained a permanent physical impairment until more than three years after the Claimant knew, or reasonably should have known, that he believed he had sustained permanent impairment of his neck as a result of the October 30, 2011 and January 14, 2012, neck injuries. With regard to the alleged October 30, 2011 injury, there are scant medical records that reflect an injury to the neck on or about October 30, 2011. The only record is a notation by Dr. Wientraub that Claimant may have a cervicogenic sprain/strain on October 31, 2011. This corroborates that the Claimant sought and obtained medical treatment for this injury. There was no further medical evaluation for the alleged October 30, 2011 C-spine injury. Claimant continued to play football for the Employer as evidenced by his second claim of injury on January 14, 2012. There is no record declaring Claimant unfit to play for the alleged October 31, 2011 injury. The end of season physical completed on January 15, 2012 noted that Claimant's neck complaints had resolved and declared Claimant fit to play pending an MRI for a separate knee injury. Claimant also participated in a pre-season physical on June 11, 2012 and reported no issues with his neck. Claimant was again declared fit to play. In the end of season physical completed on February 4, 2014, there was no discussion of Claimant's neck injuries, and Claimant was again declared fit to play. Claimant participated in another physical on July 23, 2014 and was again declared fit to play with no mention of his alleged neck injuries. Thus, the Employer had no knowledge of a claimed permanent physical impairment as a result of his alleged January 14, 2012, C-spine injury.

Further, although the Claimant alleges that he was unable to play football after February 28, 2014, the Respondents contend that he did not lose any time from his employment with Employer as he was continuing to receive his full salary pursuant to his contract. A similar situation occurred in *Cooper v. Bowlen*, W.C. Nos. 4-189-488 & 4-189-486 (ICAO Jan. 26, 1996). In that case, the claimant sustained injuries while employed as a professional football player, but failed to file a claim for compensation until after the statute of limitation had run. He argued the statute was tolled due to the employer's failure to report the injury to the division, reasoning that he sustained a "lost-time injury" because he was physically unable to engage in full, physical practices for more than three days. The ALJ determined there were other requirements of employment the claimant fulfilled for which he received his regular pay, and concluded the claimant did not miss more than three days of work as a result of his injuries. The Panel agreed, stating that "'modified' employment without a loss of wages is not a "lost-time injury" for purposes of triggering the employer's statutory obligation under 8-43-101(1)." The Panel went on to state that "the claimant's temporary inability to perform the 'essential functions' of his employment is not dispositive of whether the claimant has lost more than three days of work."

As found, although the Claimant alleges that he sustained an injury preventing him from playing football as of February 28, 2014, he continued to receive his full salary,

as did the claimant in *Cooper*. Claimant's temporary inability to play football is not dispositive of whether he lost more than three days of work. Thus, the Employer's duty under § 8-43-101(1), C.R.S., to report the injury to the DOWC was never triggered.

Because the Employer did not have notice or knowledge that the Claimant was claiming a permanent physical impairment or a "lost-time" injury until September 7, 2016, at the earliest, the Employer did not have a duty to report the injury to the DOWC.. Therefore, there was no tolling of the statute of limitations.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, *See, Annotation, Comment: Credibility of Witness Giving Un-contradicted Testimony as Matter for Court or Jury,* 62 ALR 2d 1179, maintaining that the fact finder is not free to disregard un-contradicted testimony. As found, the Claimant's testimony was credible, concerning the medical treatment he received after the October 30, 2011 and the January 24, 2012 incidents, and it was corroborated by the two physicians who attended him for the October 30, 2011 and January 14, 2012, neck injuries. Further, the Claimant's testimony that he first believed that the effects of the 2011 and 2012 neck injuries would be permanent was prior to his October 2012 left knee surgery.

Sufficiency of an Injury or Injuries to be Compensable

b. The conventional view maintains that an "injury" referred to in § 8-41-301, C.R.S., contemplates a **disabling** injury to a claimant's person, not merely a coincidental and non-disabling insult to the body. *See Henderson v. RSI, Inc.,* 824 P.2d 91 (Colo. App. 1991). *Also see Gaudett v. Stationers Distributing Comp*any, W.C. No. 4-135-027 [Indus. Claim Appeals Office (ICAO), April 5, 1993]. For example, paper cuts, may be insults to the body of an office worker, but they are not sufficient to be compensable unless medical attention is sought and required therefore. The consequences of a work-related incident must require **medical treatment or** be disabling in order to be sufficient to constitute a compensable event. "Or" is the critical connecting word. The Industrial Claim Appeals Office (ICAO) decision does not state "and/or," and it does not state "and." It states "or," by itself. If an incident is not a significant event resulting in an injury, a claimant is not entitled to benefits. *Wherry v. City and County of Denver*, W.C. No. 4-475-818 (ICAO, March 7, 2002). As found, the neck injuries of October 30, 2011 and January 14, 2012 were sufficient to be compensable because they required medical attention, however minimal and however briefly furnished.

Compensability/Aggravation/Acceleration

c. A compensable injury is one that arises out of and in the course of employment. § 8-41-301(1) (b), C.R.S. The "arising out of" test is one of causation. If an industrial injury aggravates or accelerates a preexisting condition, the resulting disability and need for treatment is a compensable consequence of the industrial injury. Thus, a claimant's personal susceptibility or predisposition to injury does not disqualify the claimant from receiving benefits. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). An injured worker has a compensable new injury if the employment-related activities aggravate, accelerate, or combine with the pre-existing condition to **cause a need for medical treatment or produce the disability** for which benefits are sought. § 8-41-301(1) (c), C.R.S. *See Merriman v. Indus. Comm'n,* 120 Colo. 400, 210 P.2d 448 (1949); *Anderson v. Brinkoff,* 859 P.2d 819 (Colo. 1993); *National Health Laboratories v. Indus. Claim Appeals Office,* 844 P.2d 1259 (Colo. App. 1992); *Snyder v. Indus. Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). An injury resulting from the concurrence of a preexisting condition and a hazard of employment is compensable. *H & H Warehouse v. Vicory*, *supra*. *Duncan v. Indus. Claims App. Office*, 107 P.3d 999 (Colo. App. 2004). Even where the direct cause of an accident is the employee's preexisting disease or condition, the resulting disability is compensable where the conditions or circumstances of employment have contributed to the injuries sustained by the employee. *Ramsdell v. Horn*, 781 P.2d 150 (Colo.App. 1989). *Also see* § 8-41-301(1) (c), C.R.S; *Parra v. Ideal Concrete,* W.C. No. 4-179-455 (ICAO, April 8, 1998); *Witt v. James J. Keil Jr.,* W.C. No. 4-225-334 (ICAO, April 7, 1998). As found, the Claimant's neck injuries of October 30, 2011 and January 14, 2012 were compensable

aggravations/accelerations of his underlying, pre-existing neck condition.

Statute of Limitations

d. The Statute of Limitations is an affirmative defense and unless raised, it is waived. *See Kersting v. Indus. Comm'n,* 30 Colo. App. 297, 567 P.2d 394 (1977). To paraphrase the late U.S. Supreme Court Justice Oliver Wendell Holmes, Jr: "It has nothing to do with justice. It is a housekeeping device of the law to clean out old cases." When the time specified in a statute of limitations has passed, it could be conceptualized that there is a conclusive presumption that there will be prejudice to the side on the receiving end of the lawsuit. As found, herein above, the Respondents raised this affirmative defense and fully litigated it.

e. Although the Claimant established that he sustained two compensable neck injuries on October 30, 2011 and January 14, 2012, respectively, his claims are barred by the statute of limitations. § 8-43-103(2), C.R.S., provides that the right to workers' compensation benefits is barred unless a formal claim is filed within two years of the injury. The statute of limitations does not begin to run until the claimant, as a reasonable person, knew or should have known the "nature, seriousness and probable compensable character of his injury." *City of Boulder v Payne,* 162 Colo. 345, 426 P.2d 194 (1967) at 197. In order to recognize the probable compensable character of the injury, "the injury must be of sufficient magnitude that it causes a disability which would lead a reasonable person to recognize that he may be entitled to compensation benefits." *Choi v. Colo. Architectural Mills Works Supply*, W.C. No. 4-794-282 (ICAO Oct. 14, 2010). Therefore, the statute of limitations does not begin to run until a claimant knows, or reasonably should know of the serious and compensable nature of the claimed injuries. As found, the Claimant had knew, or reasonably should have known, of the probable compensable nature of his injuries prior to his October 2012 left knee surgery, according to his undisputed testimony at hearing This is over two years from the date Claimant had knowledge of his inability to play. Therefore, because Claimant had knowledge of the believed permanent nature of his neck injuries more than two years (actually more than three years) prior to the date he filed his two claims, his claims are barred by the statute of limitations under § 8-43-103(2), C.R.S.

Tolling of the Statute of Limitations

f. There are exceptions to the two-year statute of limitations under § 8-43-103(2), but they do not apply in this case. For instance, § 8-43-103(2), C.R.S. provides that: "In all cases in which the employer has been given notice of an injury and fails, neglects, or refuses to report said injury to the division as required by the provisions of [the Workers' Compensation Act], this statute of limitations shall not begin to run against the claim of the injured employee … until the required report has been filed with the division." *Likens v. Dep't of Corrs.*, W.C. No. 4-560-107 (ICAO Feb. 10, 2004).

g. Section 8-43-103(2), C.R.S.,further states that the two-year statute of limitations for filing a claim is tolled if the employer pays "compensation" to the claimant. *Bonazzo v. J.A. Jones Const.*, W.C. No. 4-241-121 (Sept. 24, 1998). Finally, § 8-43-103(2), C.R.S. indicates that the statute of limitations will not apply to a claimant "if it is established to the satisfaction of the director within three years after the injury…that a reasonable excuse exists for the failure to file such notice claiming compensation and if the employer's rights have not been prejudiced."' As found, no "reasonable excuse" or any other tolling exception to the statute of limitations has been established.

h. The Employer's non-reporting did not toll the statute of limitations because there was no tolling of the statute of limitations due to any failure to report the injuries on the part of Employer. § 8-43-102(2), C.R.S. , provides that the statute of limitations is tolled where an employer does not "report said injury to the division as required by the provisions of [the Workers' Compensation Act]." Thus, where no report was required to be filed, the statute of limitations is not tolled. The statutory reporting requirements are set out in § 8-43-101, C.R.S. *See Grant v. Indus. Claim Appeals Office*, 740 P.2d 530 (Colo. App. 1987). § 8-43-101(1), C.R.S. requires that the within ten days after notice of knowledge that an employee had contracted a permanently physically impairing injury or lost-time injury, the employer shall file a report with the division. *Pierce-Kouyate v. Wilson's of Colo. Ltd.*, W.C. No. 4-717-784 (ICAO Nov. 21, 2007). A "lost time injury" is defined as one that causes the claimant to miss more than three work shifts or three calendar days of work, and the employer's notice is measured by the "reasonably conscientious manager" standard. *Grant,* 740 P.2d at 531. There is no requirement to file a First Report of Injury where the employer has no notice or knowledge that the claimant had a lost-time injury or permanent physical impairment. *Pierce-Kouyate v. Wilson's of Colo. Ltd., supra.* The claimant bears the burden of establishing that there was a tolling of the statute of limitations. *Grant*, 740 P.2d at 532. As found, the Employer did not report the incidents of October 30, 2011 and January 14, 2012 to the DOWC because the Employer did not have knowledge that the accidents caused a permanent physical impairment or lost-time, The Employer was under **no** duty to report the accidents to the DOWC under § 8-43-101(1), C.R.S.

Burden of Proof

i. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). Also, the burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P.2d 535 (Colo. App. 1992). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979).

People v. M.A., 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant sustained his burden with respect to the compensability of the injuries of October 30, 2011 and January 214, 2012. As further found, the respondents sustained their burden with respect to the applicability of the Statute of Limitations to both claims. Also, it has been established by preponderant evidence that none of the tolling exceptions to the Statute of Limitations apply to either claim.

ORDER

IT IS, THEREFORE, ORDERED THAT:

Both claims in W.C. Nos. 5-025-409-02 and 5-025-140-01 are barred by the Statute of limitations and are, therefore, denied and dismissed.

DATED this_____day of April 2017.

ISSUES

1. Whether Respondents have overcome the opinion of division independent medical examination (DIME) physician Dr. Henke on maximum medical improvement (MMI) by clear and convincing evidence.

FINDINGS OF FACT

1. Claimant is employed by Employer as a full time housekeeper. On July 30, 2014 Claimant sustained an admitted industrial injury to her right shoulder after a hospital attendant pulled her cart out of her grasp to move it out of the way. Claimant reported a pop in her right shoulder and immediate pain.

2. Claimant was evaluated at Concentra on August 5, 2014 and was assessed as having a right shoulder strain. On August 8, 2014 Claimant was evaluated again and was referred for a right shoulder MRI.

3. On August 13, 2014 Claimant underwent an MRI of her right shoulder that was interpreted by Craig Stewart, M.D. The impression was: severe tendinosis of the supraspinatus tendon with moderate grade partial thickness tearing of the undersurface fibers anteriorly and no full thickness tendon tear and mild tendon retraction of the torn undersurface fibers; multiple small cysts within the greater tuberosity adjacent to the anterior insertion of the supraspinatus tendon; and small amount of subacromial/subdeltoid bursal fluid and moderate subaracoid bursal fluid. *See* Exhibit E.

4. On August 19, 2014 Claimant was evaluated at Concentra and was referred to an orthopedic surgeon for a consultation of her right shoulder due to the MRI results. *See* Exhibit C.

5. On September 4, 2014 Claimant was evaluated by orthopedic surgeon Mark Failinger, M.D. Dr. Failinger found on examination no increased warmth or redness of the shoulder, no skin discoloration or changes, and light touch intact. Dr. Failinger noted that the MRI showed some significant supraspinatus and anterior cuff tendinosis with a high grade partial thickness tear. Dr. Failinger performed a cortisone shot and noted that it would hopefully help but, if not, Claimant knew the options of living with the high grade partial thickness tear or performing surgery. *See* Exhibit D.

6. On September 25, 2014 Claimant was evaluated by Dr. Failinger. Claimant reported that the injection did not really help, that she continued to have pain, and that she had some burning at night. Claimant reported on and off tingling to her right upper extremity all the way down to her fingers. Dr. Failinger noted on

examination no increased warmth or redness, pain with range of motion, and no skin discoloration or changes. Dr. Failinger provided the impression of right shoulder probable high grade partial thickness supraspinatus tear and recommended ruling out radiculopathy to see if Claimant had radiculopathy contributing to her problems. *See* Exhibit D.

7. On October 23, 2014 Claimant underwent NCV and EMG testing performed by Robert Kawasaki, M.D. to rule out cervical radiculopathy, compression neuropathy, and brachial plexopathy. Dr. Kawasaki opined that the right upper extremity nerve tests were all within normal limits and that all examined muscles showed no evidence of electrical instability. *See* Exhibit F.

8. On November 13, 2014 Claimant was evaluated by Dr. Failinger. Claimant reported continued pain at the side and top of her right shoulder. Dr. Failinger noted pain in range of motion, some AC joint pain, and some mild bicipital pain. Dr. Failinger noted no fever, chills, warmth, or redness and that Claimant's EMG and nerve conduction study showed no obvious neurologic abnormalities. Dr. Failinger noted that Claimant wanted to push on with surgery and went through the risks and alternatives with her. *See* Exhibit D.

9. On December 10, 2014 Claimant was evaluated at Concentra by Theodore Villavicencio, M.D. Claimant reported having two episodes of transient (25-30 seconds) right arm stiffness from the hand to the shoulder with no precipitating events, no other involved areas, and no residual neurological issues. On examination Dr. Villavicencio noted that Claimant's right upper arm, elbow, forearm, wrist and skin were normal. He found no problems with range of motion, strength, deformity, or tenderness. Dr. Villavicencio also found her skin to be normal and that her upper extremity reflexes were symmetric bilaterally. *See* Exhibit C.

10. On February 5, 2015 Claimant was evaluated by Dr. Villavicencio. Claimant reported having some transient right hand edema upon awakening last week that had resolved. Claimant had continued right shoulder pain and was awaiting surgery. *See* Exhibit C.

11. On February 10, 2015 Claimant underwent right shoulder surgery performed by Dr. Failinger. Dr. Failinger performed right shoulder arthroscopic subacromial decompression, mini-open rotator cuff repair, and distal clavicle resection. *See* Exhibit D.

12. On June 1, 2015 Claimant was evaluated at Concentra by Christine O'Neal, PA-C. Claimant was referred for an additional MRI of the right shoulder. Claimant reported pain at a 5/10 worse with movement in her right shoulder. *See* Exhibit C.

13. On June 10, 2015 Claimant underwent an MRI of her right shoulder interpreted by Robert Liebold. The impression provided was supraspinatus tendinosis

with evidence of prior rotator cuff tear and no full thickness tear, and mild to moderate subacromial bursitis. *See* Exhibit E.

14. On June 15, 2015 Claimant was evaluated by PA O'Neal. Claimant was advised that the MRI showed supraspinatus tendinosis and no structural defects. Claimant reported that she continued to have pain at the superior shoulder and lateral shoulder and was still having strength problems. On examination PA O'Neal noted tenderness in the anterior glenohumeral joint, trapezius muscle, and supraspinatus muscle. She found limited range of motion in all planes, neurovascular function of the right upper arm to be normal, and the skin to be normal. *See* Exhibit C.

15. On June 26, 2015 Claimant was evaluated by PA O'Neal. Claimant reported pain in her entire right shoulder and down to her right elbow. Claimant also felt like her right hand was slightly swollen. PA O'Neal noted that Claimant was having diffuse right shoulder tenderness to palpation due to a cortisone injection received the prior day. *See* Exhibit C.

16. On July 6, 2015 Claimant was evaluated by PA O'Neal. Claimant reported that she had minimal pain that day in the middle of her biceps body and that her shoulder joint was feeling good. Claimant reported normal sensation in her right hand and that she had no more swelling. *See* Exhibit C.

17. On August 4, 2015 Claimant was evaluated at Concentra by Craig Hare, PA-C. Claimant reported that her right arm felt like it was swelling and that she had increased discomfort in her right forearm for the last five days with no numbness or weakness. PA Hare noted no noticeable change in circumference of right forearm compared to the left. Claimant underwent an ultrasound of her right arm for the pain and swelling that was found to be normal with no evidence of deep venous thrombosis. *See* Exhibits C, E.

18. On August 17, 2015 Claimant was evaluated by PA O'Neal. Claimant reported continued swelling in her arm with any movement that extended down to her finger. On examination, PA O'Neal noted diffuse swelling of Claimant's right forearm and minimal tenderness due to the tightness from swelling. PA O'Neal referred Claimant to a delayed recovery specialist physician. *See* Exhibit C.

19. On September 14, 2015 Claimant was evaluated by PA O'Neal. Claimant reported that two days prior her right hand was very shaky. Claimant also reported that swelling was continuing in her right arm with any movements. On examination, PA O'Neal noted that Claimant's right shoulder was diffusely tender to palpation over the glenohumeral joint and that Claimant had a mild tremor in her right hand when her arm was extended. PA O'Neal noted no tremor in the left arm. *See* Exhibit C.

20. On September 24, 2015 Claimant was evaluated by Dr. Failinger. Dr. Failinger noted that Claimant had done pretty well in the shoulder in terms of motion, strength, and had pain when she got back to work and a little fine tremor in her hands at

times. Dr. Failinger noted that Claimant was going to see Dr. Burris soon. Dr. Failinger noted that an MRI had shown an intact surgical repair of Claimant's right shoulder and that she had a well healed surgical incision with no warmth or redness. Dr. Failinger provided the impression of right shoulder status post rotator cuff repair with what appeared to be a healed repair on MRI, and recommended ruling out neurologic abnormality. Dr. Failinger opined that there was little else for him to do in Claimant's shoulder and deferred a physiatry evaluation o Dr. Burris. *See* Exhibit D.

21. On October 8, 2015 Claimant was evaluated by Concentra delayed recovery specialist John Burris, M.D. Claimant reported diffuse pain in the right shoulder, 5/10 in severity and pain throughout the right arm in a glove type distribution circumferentially throughout. Claimant also reported some shaking in her right hand particularly when she tried to perform a forceful grasping maneuver. Claimant denied neck pain, numbness, or weakness. On examination Dr. Burris opined that clear psychosomatic overlay was present and that Claimant was tearful throughout the examination because of persistent pain. Dr. Burris opined that Claimant was neurovascularly intact throughout the right upper extremity and that Claimant had normal color, temperature, and muscle tone. Dr. Burris found 5/5 motor strength throughout the right upper extremity with normal grip and normal interosseous strength distally. Dr. Burris found normal sensation, normal capillary refill, normal hair and nail growth, and no unusual tenderness to light touch. Dr. Burris opined that Claimant was likely at an endpoint for active care. *See* Exhibit C.

22. On November 19, 2015 Claimant was evaluated by Dr. Burris. Claimant reported persistent pain in her right shoulder region. Claimant reported no periscapular pain and that the tingling in her right upper extremity had resolved. Claimant reported no neck pain, numbness or weakness, and no associated symptoms. Dr. Burris opined that Claimant continued to have psychosomatic overlay present. On examination, Dr. Burris noted full range of motion in all planes and that her right upper extremity was neurovascularly intact throughout with normal color, temperature, and muscle tone throughout the extremity. Dr. Burris noted that the surgical scars at the shoulder were well healed with no unusual swelling, erythema, or tenderness and that the functional range of motion at the shoulder was near full. Dr. Burris noted normal sensation and capillary refill throughout and noted normal hair and nail growth. Dr. Burris diagnosed right shoulder strain. Dr. Burris noted that Claimant continued to have pain 9 months after surgical repair and that she had completed postoperative rehabilitation and had been released by the treating specialist. Dr. Burris opined that Claimant was at MMI. Dr. Burris provided an impairment rating of 5% upper extremity. Dr. Burris released Claimant from care and opined that no follow up was required. For maintenance treatment, Dr. Burris provided some continued massage therapy and one final prescription of methaxalone and opined that no other formal maintenance was required. *See* Exhibit C.

23. On July 13, 2016 Claimant underwent a Division Independent Medical Examination (DIME) performed by Clarence Henke, M.D. Claimant reported that she was using a mobile cart with cleaning supplies when another hospital employee coming

down the hall moved the cart while her am was holding on to cleaning supplies inside the cart causing immediate right shoulder pain and a pop in her shoulder. Claimant reported that her current symptoms included constant aching pain extending from the right shoulder down to her hand, numbness in the right hand, and tingling in her fingers when doing any activities of lifting, pushing, or extending her arm overhead. Dr. Henke reviewed medical records and performed a physical examination. On physical examination Dr. Henke noted localized tenderness present over the right lateral posterior cervical muscles that extended into the deltoid muscle and increased when Claimant attempted to perform right shoulder active ranges of motion. Dr. Henke also noted hand grip strength, measured with dynamometer, to be right grip 20 pounds and left grip 42 pounds. He noted pinwheel testing of the right upper extremity showed decreased sensation over the right posterior hand and thumb and positive tinel's sign in the right wrist. *See* Exhibit B.

24. Dr. Henke noted that Claimant's complaints currently included constant right upper extremity pain, hand tingling, cramping, and that Claimant had weak right grip strength. Dr. Henke opined that Claimant was not at MMI for her injury. Dr. Henke recommended a thermo graphic examination for reflex sympathetic dystrophy which he opined was strongly suspected clinically. He also recommended follow up with orthopedic surgeon Dr. Failinger for consideration of any further surgical procedures that might be recommended. Dr. Henke did not perform an impairment rating. *See* Exhibit B.

25. On October 4, 2016 Claimant underwent an Independent Medical Evaluation (IME) performed by Lawrence Lesnak, D.O. Claimant reported while attempting to move her housekeeping cart another employee grabbed and quickly pulled the cart and that her right arm was pulled and she felt an acute pop in her right shoulder and also developed acute pain. Claimant reported that she had constant diffuse right shoulder, suprascapular, and right upper arm pains with associated weakness. Claimant reported no right elbow, forearm, wrist, hand, or finger symptoms. Claimant reported that her pain level was 70/100. Dr. Lesnak reviewed medical records and performed a physical examination. On examination, Dr. Lesnak found absolutely no evidence of any type of abnormal skin temperature, skin color, skin hair, or nail changes throughout the bilateral upper extremities. Dr. Lesnak noted passive range of motion of Claimant's right shoulder was difficult to assess because of her significant guarding with any attempts of flexion or extension greater than 50 degrees. Dr. Lesnak noted that Claimant was able to perform greater active range of motion measurements than was seen during his attempts at active range of motion of the right shoulder. Dr. Lesnak found no trigger points or muscle spasms and no evidence of any specific soft tissue or bony abnormalities. *See* Exhibit A.

26. Dr. Lesnak provided impressions including: subjective complaints of constant diffuse right shoulder, suprascapular, and right upper arm pains and weakness without any symptoms radiating at or involving below the right elbow; no current clinical evidence of right rotator cuff impingement signs, cervical or thoracic radiculitis, radiculopathy, or myelopathy, neurogenic or vascular thoracic outlet syndrome, or right

elbow or wrist joint pathology; and probable residual right shoulder girdle/upper arm myalgias. Dr. Lesnak opined that there was absolutely no current clinical evidence of sympathetic dysautonomia, including CRPS type 1. Dr. Lesnak opined that Claimant's self-reported functional abilities absolutely did not correlate with any clinical exam findings or with Claimant's medical history. Dr. Lesnak noted that despite extensive treatments Claimant had not had any significant improvements of her pre-operative right shoulder symptoms. *See* Exhibit A.

27. Dr. Lesnak noted that Dr. Henke at the DIME had suggested that Claimant may have some type of ongoing neurologic condition such as sympathetic dysautonomia/CRPS type 1 but opined that during his examination Claimant had absolutely no clinical findings of sympathetic dysautonomia. He noted no skin color, temperature, hair, or distal upper extremity nail changes whatsoever as compared to the left upper extremity and that Claimant had symmetrical and normal capillary refill throughout her upper extremities bilaterally as well as no evidence of any type of peripheral edema or swelling involving her right upper extremity. He noted that the Medical Treatment Guidelines, Rule 17, Exhibit 7 for CRPS/RSD noted that specific criteria must be met to provide a diagnosis of CRPS and that although Claimant had ongoing pain complaints, Claimant would need one symptom in three out of four categories: sensory, vasomotor, pseudomotor/edema, and motor/trophic. Dr. Lesnak opined that Claimant had zero out of four of the symptom categories. Dr. Lesnak opined that without meeting any of the diagnostic component criteria to provide a diagnosis of CRPS, Claimant was not a candidate for any diagnostic testing and that diagnostic testing was not indicated whatsoever. *See* Exhibit A.

28. Dr. Lesnak opined that Dr. Henke's opinion that Claimant may have sympathetic mediated pain/sympathetic dysautonomia/CRPS type 1 was incorrect. Dr. Lesnak noted that although Claimant had ongoing complaints of pain involving her right shoulder, suprascapular, and right upper arm, the components appeared to be stemming purely from a myofascial etiology involving her right shoulder girdle musculature. Dr. Lesnak opined that without any current diagnostic criteria to support the diagnosis of sympathetic dysautonomia/CRPS, Claimant required no further diagnostic testing whatsoever, including tomography. Dr. Lesnak also opined that the recommendation to return to the treating surgeon Dr. Failinger was completely inconsistent with the medical records. Dr. Lesnak opined that it was quite clear that Claimant remained at MMI and concurred with Dr. Burris' MMI date of November 19, 2015. *See* Exhibit A.

29. As part of the IME, Claimant underwent a computerized outcome assessment that included a psychosocial evaluation and a self-reported functional evaluation. Claimant scored in the distressed somatic category for psychosocial functioning and scored in the worst level of 0/12 for self-reported perceived function. Dr. Lesnak opined that the results suggested that there were significant psychosocial factors present and affecting Claimant's symptoms, recovery, and perceived function. Dr. Lesnak noted that Claimant viewed herself as being completely unable to perform any significant activities with her right upper extremity whatsoever and unable to

perform normal work activities. Dr. Lesnak noted, however, that Claimant had been performing normal work activities for nearly the past one year. Dr. Lesnak opined that based on the results, Claimant's subjective complaints were unreliable at best and that one had to rely solely on reproducible objective findings rather than Claimant's complaints. *See* Exhibit A.

30. Both Dr. Henke and Dr. Lesnak provided testimony in this matter.

31. Dr. Lesnak opined that Claimant's care had been appropriate and that after her surgery she did not recover as expected and was treated until she reached a point of stability. Dr. Lesnak opined that Claimant was at MMI. He noted that her orthopedic surgeon Dr. Failinger had discharged her from treatment with no ongoing recommendations and that the delayed recovery specialist Dr. Burris believed she was at MMI. He testified that Claimant had a lot of somatic pain complaints and he questioned the reliability of Claimant's subjective reports and opined that you couldn't diagnose based just on Claimant's complaints but needed to rely on the objective in Claimant's case. He noted that Claimant's physical examination and active versus passive range of motion did not make sense. Dr. Lesnak noted that Claimant's EMG had showed no neurologic abnormality. Dr. Lesnak testified that he disagreed with Dr. Henke and that his exam had showed no evidence of CRPS or reason to do further testing. Dr. Lesnak testified that Claimant had no indications consistent with the Medical Treatment Guidelines for possible CRPS and that there was no indication for CRPS testing.

32. Dr. Lesnak testified that Claimant's somataform, complaints out of proportion to objective findings, lack of criteria per the Medical Treatment Guidelines, and lack of physical findings showed that Claimant did not have CRPS. Dr. Lesnak noted that none of Claimant's providers before the DIME even speculated about CRPS and that Dr. Henke was not correct and erred. Dr. Lesnak also opined that Claimant did not need to go back to surgeon Dr. Failinger and that she had been released as no further surgical treatment was needed and that there was no need to go back to the surgeon. Dr. Lesnak noted that Dr. Henke did not perform a preliminary rating as required and did not follow the DIME rules.

33. Dr. Lesnak testified that a right shoulder joint replacement was never mentioned by Dr. Failinger as a recommendation, remote recommendation, or even a possibility. Dr. Lesnak opined that the MRI from June of 2015 showed that the rotator cuff was intact with no recurrent full thickness tears. Dr. Lesnak opined that any tremor Claimant had would not be associated with a shoulder abnormality.

34. Dr. Henke testified that a shoulder injury doesn't cause the type of reaction Claimant has had and that he recommended thermographic testing to evaluate and rule out CRPS. Dr. Henke opined that CRPS was unpredictable and that symptoms can vary. Dr. Henke noted that the Medical Treatment Guidelines are very broad and that symptoms of this condition can vary. Dr. Henke testified that a patient with early signs of CRPS may have days where they have very little clinical findings and

that in the first phase of dystrophy condition it is varied. Dr. Henke opined that only when a patient gets to the second or third stages are symptoms constant. Dr. Henke testified that thermography would be of help in trying to determine if CRPS was the condition causing Claimant's hand tremor or constant pain.

35. Dr. Henke testified that Claimant had an EMG test which was quite different than a thermography test. Dr. Henke opined that an EMG is for peripheral nerves when the thermography is for sympathetic nerves and opined that the EMG test cannot identify RSDS conditions. Dr. Henke noted that the Medical Treatment Guidelines indicate some of the clinical findings that may be present in the very early stages but that the symptoms are not consistent and that it is conceivable that on the day Claimant was examined by Dr. Lesnak, she didn't have any of the findings. Dr. Henke opined that the thermogram was necessary.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Overcoming DIME on MMI

The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, supra*. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician's finding concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). The question of whether the party challenging the DIME physician's finding regarding MMI has overcome the finding by clear and convincing evidence is one of fact for the ALJ.

MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." *See* § 8-40-201(11.5), C.R.S. Under the statute MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office,* 942 P.2d 1358 (Colo. App. 1997). A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of the claimant's medical condition are causally related to the industrial injury. *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007). A finding that the claimant needs additional medical treatment (including surgery) to improve his injury-related medical condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002); *Reynolds v. Industrial Claim Appeals Office,* 794 P.2d 1090 (Colo. App. 1990); *Sotelo v. National By-Products, Inc.,* W.C. No. 4-320-606 (I.C.A.O. March 2, 2000). Similarly, a finding that additional diagnostic procedures offer a reasonable prospect for defining the claimant's condition or suggesting further treatment is inconsistent with a finding of MMI. *Abeyta v. WW Construction Management,* W.C. No. 4-356-512 (ICAO May 20, 2004); *Hatch v. John H. Garland Co.,* W.C. No. 4-638-712 (ICAO August 11, 2000). Thus, a DIME physician's findings concerning the diagnosis of a medical condition, the cause of that condition, and the need for specific treatments or diagnostic procedures to evaluate the condition are inherent elements of determining MMI. Therefore, the DIME physician's opinions on these issues are binding unless overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002).

Respondents have failed to meet their burden to overcome the opinion of DIME physician Dr. Henke that Claimant is not at MMI. As found above, DIME physician Dr. Henke opined that Claimant was not at MMI and believed that Claimant's continued symptoms were consistent with potential CRPS and that Claimant had not been sufficiently worked up. Dr. Henke opined that an additional diagnostic procedure (thermogram) offered a reasonable prospect to further define Claimant's condition or suggest further treatment. It is unclear whether Claimant has CRPS. Claimant does not meet all of the diagnostic criteria for CRPS pursuant to the Medical Treatment Guidelines. However, Dr. Henke is credible and persuasive that the symptoms can be present at times and not present at other times. As found above, at different points in her treatment after her right shoulder surgery, Claimant has had decreased grip strength in her right hand, fine tremors in her right arm/hand, and swelling in her right arm/hand. Claimant also has symptoms that are not easily explained. The symptoms Claimant has displayed intermittently have been noted by multiple providers including Dr. Henke, Dr. Failinger, and PA O'Neal. As found above, Dr. Failinger noted the tremors at his final examination of Claimant. Dr. Failinger also recommended ruling out a neurologic abnormality.

Although Claimant's symptoms were not present on some examination dates, including at the IME performed by Dr. Lesnak, Dr. Henke credibly explained that they might not be present at times. Dr. Lesnak opined that Claimant did not have any diagnostic criteria to support the diagnosis of CRPS and therefore required no further diagnostic testing, however, his opinion was largely based on the belief that Claimant had no criteria on the date of his exam. His opinion also noted that Claimant's subjective reports could not be relied upon due to Claimant's high degree of somatization. Although Claimant may have psychosocial issues and somatization disorder, there is also a possibility that she may have early stage CRPS. The testing recommended by DIME physician Dr. Henke offers a reasonable prospect to further define Claimant's condition. Respondents have failed to show that Dr. Henke erred in determining that Claimant is not at MMI. Rather, Dr. Henke has recommended additional diagnostic testing that is supported by some of Claimant's intermittent symptoms and unexplained pain levels. Although the thermography testing might ultimately rule out CRPS, the testing offers a reasonable prospect to further define Claimant's condition or suggest further treatment. Dr. Lesnak's opinions are, at best, a difference of opinion and Respondents have failed to overcome Dr. Henke's opinions by clear and convincing evidence. Claimant is not at MMI. Respondents shall authorize thermography testing.

Dr. Henke also recommended a referral back to Dr. Failinger for further evaluation. This is found to be in error. Dr. Failinger indicated in his last examination of Claimant that there was nothing further he could do for her shoulder, that she had an intact repair, and he recommended ruling out a neurologic abnormality. Nothing further has been done to rule out a neurologic abnormality and there is no indication of new injury or trauma to Claimant's right shoulder that would necessitate a new evaluation with Dr. Failinger. Essentially, he opined that her shoulder repair was intact and that he couldn't do anything more and couldn't explain her pain. There is no reason that

sending Claimant back to Dr. Failinger would assist in any neurologic evaluation (he is an orthopedic surgeon) and there is no evidence/indication to support the need for a further orthopedic evaluation. Although Claimant is not at MMI due to the thermography recommendation, the referral to Dr. Failinger is in error. Claimant does not need to be evaluated again by Dr. Failinger prior to a determination of MMI as Dr. Failinger has released her with no further orthopedic recommendations.

ORDER

1. Respondents have failed to overcome the DIME physician's opinion on MMI by clear and convincing evidence. Claimant is not at MMI.

2. Respondents shall authorize and pay for the recommended thermography testing.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 24, 2017

Denver, CO 80203

ISSUES

I. Whether Respondent established by a preponderance of the evidence that they are entitled to withdraw their March 30, 2016 General Admission of Liability (GAL) which admitted liability for a December 25, 2015 injury and payment of medical and temporary partial disability (TPD) benefits.

II. If Claimant did suffer a compensable injury on December 25, 2015, whether she established by a preponderance of the evidence that the left knee surgery proposed by Dr. Steven Side is reasonable, necessary and related to said December 25, 2015 injury.

FINDINGS OF FACT

Based upon the evidence presented, including the deposition testimony of Drs. O'Brien and Smith, the ALJ enters the following findings of fact:

1. On December 25, 2015, Claimant was getting out of her car in the parking lot of her employer. As she exited her car, she stepped on an uneven icy patch just outside the car door. She twisted her knee, heard a pop and experienced pain behind her knee and calf. Claimant was able to catch herself against the car door and steering wheel arresting her fall to the ground.

2. Claimant reported to work. As her shift wore on, Claimant's knee and calf pain gradually worsened throughout the evening. At approximately 12:35 am, she sent an email to her supervisor, Joy Anderson, the Director of Nursing reporting that she twisted her left knee while getting out of her car to report to work. Claimant indicated that her left knee was tender but not swollen. She also reported that she had a discolored bump on her right hand from hitting it on the steering wheel when she slipped.

3. A few days later, on December 28, 2015, Claimant presented to Dr. Courtney Isley, her primary care physician at Banner Health in follow-up for her diabetes, hyperlipidemia, a screening for colon cancer, and the persistent pain in left calf following the December 25, 2015 slip and twist incident. Claimant, who is a nurse, was concerned that she had a blood clot in her left calf due to the swelling. Claimant testified that she did not attribute the potential blood clot to the December 25, 2015 incident.

4. Dr. Isley noted that Claimant's left leg started hurting constantly three days ago. Claimant reported that she was experiencing pain in addition to aching and burning behind the knee which radiated down into the calf and up into the groin. Dr. Isley referred Claimant for an ultrasound to rule out a deep vein thrombosis ("DVT").

5. Claimant underwent an ultrasound which was negative for DVT.

6. On January 4, 2016, Claimant reported the Dr. Cathy Smith (at Banner Occupational Health Clinic. Dr. Smith noted that after Claimant saw her primary care physician she continued to work but the pain did not subside. She reported that she had to change shifts with coworkers for shorter shifts because of her inability to stand and walk a full shift. She rated her pain at a 9/10. Physical examination revealed that Claimant complained of significant discomfort with direct palpation over the popliteal area and tenderness with direct palpation of the upper calf; however, Claimant did not report swelling in the rest of the calf. *Id*.

7. Dr. Smith noted that Claimant suffered from a slip and twist at work resulting in left knee and calf strain, Baker's cyst in left knee, and contusion of right hand. Dr. Smith placed Claimant on restricted duty. Claimant was referred for an x-ray of the left knee to rule out bony abnormality, referred for physical therapy to address continued discomfort in the posterior knee, and given crutches due to her gait abnormality. Dr. Smith noted that at that time that it appeared Claimant had a deep upper calf strain that was aggravated by her abnormal gait over the week.

8. On January 4, 2016, Claimant underwent an x-ray of her left knee that revealed mild to moderate lateral compartment joint space loss but not acute injury.

9. On January 20, 2016, Claimant returned to Dr. Smith for follow-up. During this visit, Claimant reported that her left knee had improved with physical therapy. Nonetheless, Claimant reported constant fullness under the kneecap.

10. By February 9, 2016, Claimant was reporting to Dr. Smith that she can do about five steps before she develops a severe pressure sensation under the knee cap and in the popliteal area. It was noted that while her calf pain had improved, she still had pain with deep palpation therapy. Claimant was instructed to continue physical therapy.

11. On March 8, 2016, Claimant returned to Dr. Smith reporting that her left knee pain had improved in some ways. Regardless, she reported continued pain while descending stairs, standing for too long and prolonged walking. Dr. Smith also noted that Claimant's physical therapist had indicated that since Claimant's swelling and muscular pain had subsided, her examination revealed what he felt was suspicious for meniscal involvement. Consequently, Dr. Smith referred Claimant for an MRI of her left knee.

12. On March 15, 2016, Claimant underwent an MRI of her left knee which revealed:

- Abnormal signal and morphology of the posterior horn root attachment of the medial meniscus, concerning for fraying vs. ill-defined tearing at this site. Posterior horn of the medial meniscus peripheral to this site demonstrates abnormal intrasubstance signal concerning for

intrasubstance tearing, without definite extension to an articular surface.

- Mild to moderate chondral degenerative changes involving articular cartilage over the inferior aspect of the lateral patellar facet. There is also evidence of a mild degree of Hoffa's disease (impingement of the superolateral aspect of Hoffa's fat). This constellation of findings raises suspicion for a possible patellar tracking disorder.

- Small joint effusion, and mild synovitic changes.

13. On March 28, 2016, Claimant was examined by Dr. Linda Young. Dr. Young performed a Kenalog injection on Claimant's left knee.

14. On March 30, 2016, Respondents filed a General Admission of Liability (GAL) admitting liability for medical and temporary partial disability benefits associated with Claimant's December 25, 2015, slip and twist injury.

15. On April 25, 2016, Claimant returned to Dr. Young reporting improved general pain levels after her injection four weeks prior. Nonetheless, Claimant continued to complain of pain more laterally in the band across the patella than elsewhere in the knee.

16. On May 4, 2106, Claimant returned to Dr. Smith reporting continued sharp pain if stepping wrong. Dr. Smith noted that Dr. Young did not feel that Claimant had a surgical problem and that with strengthening the problem would resolve. Continued physical therapy was recommended.

17. On June 14, 2016, Respondents retained Dr. Timothy O'Brien to perform an independent medical evaluation (IME) of Claimant. Dr. O'Brien opined that there is no medical documentation that supported a conclusion that Claimant sustained a work injury on December 25, 2015. Dr. O'Brien indicated that "his examination revealed that Claimant's knee as was still inflamed and symptomatic but this was to be expected given her long-standing, pre-existing, moderately-to-severely advanced osteoarthritis of the lateral compartment of her knee."

18. On July 5, 2016, Claimant returned to Dr. Smith. Dr. Smith referred Claimant back to an orthopedic specialist for possible repeat injection. She was also instructed to continue physical therapy.

19. On August 15, 2016, Claimant was examined by orthopedic surgeon, Dr. Steven Sides. Dr. Sides noted that Claimant had an acute medial meniscus tear of the left knee. He noted that Claimant had not improved with conservative management. Accordingly, Claimant recommended considering diagnostic arthroscopy opining further that he would not continue to inject Claimant's knee due to the paucity of other findings by exam and MRI.

20. On August 25, 2016, Claimant was examined by Dr. Smith who instructed Claimant to follow up with Dr. Side for arthroscopic surgery. In her report generated as part of this visit, Dr. Smith noted:

> We discussed the mechanism of injury with twisting of the knee while falling backwards does explain not only the muscle injury, but also the posterior medial meniscus injury. She was counseled that I am not surprised that pain did not seem to be localized over the posterior medial meniscus until the muscle pain had subsided; therefore, I agree with Dr. Sides' assessment and recommendations for the surgery since she has exhausted all conservative care at this point. We also reviewed the IME report from Dr. O'Brien. [Claimant] is adamant that she did not have an injury to the knee in November of 2015 as reported by Dr. O'Brien… She states that at her regular visit, she was concerned about the calf pain and possible DVT, so did not think about the slip and twist being the cause of the symptoms. We reviewed the MRI report and that the radiologist report does not in any way agree with Dr. O'Brien's interpretation of the MRI. They are so radically different that he is suspicious that they were not looking at the same MRI.

21. On September 26, 2016, Claimant returned to Dr. Smith in follow-up. Dr. Smith noted that they were waiting to hear from Respondents as to whether or not the surgery recommended by Dr. Sides was approved.

22. On September 29, 2016, Respondents retained Dr. Timothy O'Brien to perform a follow-up IME of Claimant. Dr. O'Brien opined that the arthroscopic surgery recommended by Dr. Sides was "contraindicated, not reasonable and [would] not relieve the claimant's symptomatology." He also opined that Claimant had a non-work related onset of left knee pain and that Claimant did not sustain a work-related injury.

23. Dr. O'Brien based his opinions on his interpretation of the MRI of Claimant's left knee. Regarding the MRI, Dr. O'Brien opined that it demonstrated osteoarthritis of the patellofemoral joint. Dr. O'Brien also felt that Claimant's age and weight were contributing factors in causing her symptoms. Finally, Dr. O'Brien cited a journal from the New England Journal of Medicine released 2002 as evidence that the proposed surgery is contradicted to treat osteoarthritis.

24. On October 24, 2016, Claimant returned to Dr. Smith for examination. Dr. Smith noted that she was concerned about the "severe quadriceps atrophy and how this will delay recovery once she has surgery." Dr. Smith started Claimant back on physical therapy and fitted her for a new hinge brace.

25. Dr. Smith testified by deposition as a Level II Accredited expert in Occupational medicine on December 7, 2016. Dr. Smith testified that Claimant was initially assessed with a strain to the knee along with a muscular strain in the upper calf in the posterior

portion of the knee. According to Dr. Smith, the upper-calf strain resolved with time and as the muscular pain subsided, the continued pain was consistent with a possible meniscus injury. Dr. Smith clarified that Claimant complained of posterior knee pain where the upper calf muscles attach to the back of the knee from the beginning, that is right after the December 25, 2015 incident and after the swelling had abated her continued pain in the back of the knee raised suspicion that something was going on with the medial meniscus.

26. Dr. Smith testified that findings on Claimant's MRI were acute in origin or sub-acute rather than degenerative in nature. She felt Dr. O'Brien's interpretation of the MRI was "significantly different" that than the findings of the interpreting orthopedic radiologist in that there was no mention by the radiologist of severe osteoarthritis anywhere in the knee causing her to question why Dr. O'Brien would recommend a total knee replacement procedure. She also took exception to Dr. O'Brien's suggestion that Claimant suffered an injury to the knee on November 15, 2016, indicating that the medical records fail to substantiate any such injury. Finally, Dr. Smith explained that she also questioned Dr. O'Brien's description of the mechanism of injury (MOI) and his conclusion that it was not consistent with a meniscus tear explaining that the described MOI would stress the "posterior horn of the medial meniscus where the tear is located and also explain the significant strain to the upper calf. Dr. Smith testified that Claimant's meniscal injury was overshadowed by her calf injury suggesting that as the calf injury resolved Claimant's meniscal tear became more apparent as it remained symptomatic.

27. Dr. Smith testified that in her opinion, based upon a reasonable degree of medical probability that the arthroscopic knee surgery recommended by Dr. Sides is reasonable, necessary and related to the injury that occurred on December 25, 2016. During cross examination, Respondents counsel questioned Dr. Smith about journal articles tending to establish that arthroscopic surgery for osteoarthritis is unsuccessful in abating symptoms associated with the disease. While she agreed with this principal, Dr. Smith clarified that Claimant did not have severe osteoarthritis and that the surgery recommended by Dr. Sides was to address a meniscus tear.

28. Dr. O'Brien's deposition was taken on January 9, 2017. The transcript was lodged with the Office of Administrative Courts on April 6, 2017. Dr. O'Brien testified consistent with his IME reports reiterating that Claimant's MRI demonstrated arthritis in the knee and that this arthritis was deteriorating the backside of the kneecap and the lateral compartment of the knee between the femur and the tibia. He also testified that Claimant's arthritis affects the meniscal cartilage suggesting then that the tear in the meniscus is degenerative in nature rather than acute. Dr. O'Brien would go on to testify that the condition of Claimant's knee is a "personal health issue that's due to the following factors. No 1, her genetic makeup. No. 2, her age. No.3, her gender, which is a subset of her—of No. 1, genetics. No. 4, obesity. No. 5, diabetes.

29. Dr. Sides testified via post hearing deposition on February 13, 2017. Dr. Sides

was admitted as an expert in the field of orthopedic surgery. Dr. Sides testified that he met with Claimant one time and that during that visit he took a history from Claimant regarding the injury. He testified that Claimant reported slipping on ice and twisting her knee. Dr. Sides testified that he reviewed both x-ray and MRI images of Claimant's left knee and although the x-rays were not weight bearing both the x-rays taken, along with the MRI, failed to demonstrate any "significant" arthritis.

30. Dr. Sides testified that he reviewed the actual films from the MRI and x-ray and then correlated it with what the radiologist report reads. He testified that based on Claimant's x-ray, MRI, and his physical examination he was suspicious about meniscal involvement as Claimant's main problem.

31. Dr. Sides testified that Claimant has "already had a good trial of nonoperative treatment. So he thought it would be reasonable to do a knee scope and to address what he felt like was going on inside the knee. Dr. Sides testified that based upon his experience of performing perhaps a thousand knee arthroscopies for meniscus tears, the surgery tends to have good success rates. He testified, "it's minimally invasive. So if you have a small meniscus tear like hers appears, you can usually perform a partial medial meniscectomy and it will help their symptoms and they can get back to being more active after a brief recovery period."

32. Dr. Sides testified that Claimant does not suffer from advanced osteoarthritis in the left knee and while it is difficult to say "completely" that the findings on MRI was acute, there's not any chronic arthritis in the knee on MRI, so the "signal change in the meniscus would be more acute than chronic."

33. Addressing what Respondents believe was a delay in seeking treatment, Dr. Sides testified in contrast to Dr. O'Brien that many people wait longer than three days to seek treatment. According to Dr. Sides some people "gimp" around and sometimes don't present to treatment for "several weeks." Consequently, Dr. Sides did not believe the fact that Claimant did not seek treatment for three days following the inciting event "unusual". Moreover, Dr. Sides responded to the suggestion that Claimant did not complain of swelling in the knee upon initial presentation to Dr. Isley by indicating that the report generated after the initial visit is devoid of any indication that a physical examination was completed. Thus, while the ALJ is persuaded by Dr. O'Brien's testimony that it would be unusual for a patient with an acutely torn meniscus to have no objective findings of a traumatic injury at the initial visit, the ALJ finds the lack of objective findings attributable to Dr. Isley's failure to document the same in her report of December 28, 2015, rather than the suggestion that Claimant did not report swelling.

34. Regarding the MRI, Dr. Sides testified that Dr. O'Brien was overstating what was present on imaging and what Dr. Fuller, the interpreting radiologist included in his report. According to Dr. Sides, the MRI and Dr. Fuller's report support a finding of "one area of lateral patellar condromalacia" rather than "mild-to-moderate osteoarthritis in the patellofemoral joint as well as mild-to-moderate chondromalacia" as testified to by Dr. O'Brien. Moreover, even if Claimant had the "makings of early arthritis" under the

kneecap, Dr. Sides testified that the proposed surgical intervention would be focused to her medial meniscus where there is no evidence of chondromalacia and where Claimant's symptoms were probably coming from per his examination.

35. The ALJ finds the opinions of Dr. Smith and Sides to be supported by the record evidence submitted, including the MRI and x-ray imaging. Conversely, the ALJ finds the testimony and opinions of Dr. O'Brien speculative and overstated. Accordingly, the ALJ finds the opinions of Dr. Smith and Sides more persuasive than the contrary opinions of Dr. O'Brien.

36. The evidence presented convinces the ALJ that Claimant likely injured her left calf and knee during the December 25, 2015, twisting incident and that she only became aware of the meniscal tear when the effects of the calf injury resolved and the knee remained symptomatic. While the ALJ is persuaded that Claimant likely had pre-existing degenerative changes behind the kneecap and in the lateral compartment of the left knee, the proposed surgery is necessary to address probable pathology in the posterior aspect of the medial meniscus where Claimant's symptoms are likely emanating from and where there is no evidence of chondromalacia. Consequently, the ALJ finds ample evidence to support a finding that this meniscal pathology (tear) is acute and likely caused by Claimant's sudden and unexpected December 25, 2015 twisting event as described. Accordingly, the ALJ is persuaded that Claimant sustained a compensable left knee injury resulting in her need for treatment, including meniscal surgery.

37. To the extent that Respondent's seek to withdraw the March 30, 2016 GAL on the grounds that Claimant did not suffer a compensable injury resulting in the need for treatment and payment of temporary partial disability benefits, the evidence presented persuades the ALJ otherwise. In this case, the evidence presented establishes that the GAL was filed approximately three months after Claimant provided a statement to her supervisor regarding the MOI and nature of the injuries sustained and after substantial treatment and diagnostic testing had been received. Based upon the evidence presented, the ALJ finds that Respondent had the information necessary to admit to liability and initiate payment of benefits. Given that they had substantial information regarding the incident in question along with the treatment received therefore and still took approximately three months to consider it before filing their GAL, the ALJ finds any assertion that the GAL was filed improvidently unpursuasive.

38. Respondent has failed to establish by a preponderance of the evidence that Claimant did not sustain a compensable left calf and knee injury on December 25, 2015 entitling them to withdraw their March 30, 2016 General Admission of Liability (GAL).

39. Based upon the evidence presented, the ALJ finds that Claimant has failed conservative treatment and that the surgery recommended by Dr. Sides will probably help cure and relieve her of the ongoing symptoms associated with her left posterior medial meniscal tear. Consequently, the ALJ finds the proposed surgery reasonable and necessary.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

I. General Legal Principals

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo.App. 2000).

C. In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensecki v. ICAO*, 183 P.3d 684 (Colo.App. *2008).* In short, the ALJ determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo.App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo.App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo.App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). As found, both Dr. Smith and Dr. Sides agree that Claimant does not have severe osteoarthritis. Their opinions in this regard are supported by the record evidence as a whole and in particular by the x-rays and MRI images obtained. Since Dr. O'Brien's opinion regarding the reasonableness, necessity and relatedness of surgery revolves around an "overstated" theory that Claimant suffers from advanced osteoarthritis while ignoring evidence that there is no chondromalacia in the medial compartment where the surgery will be focused, the ALJ concludes that Dr. O'Brien's opinions are unpersuasive. Moreover, for the reasons cited above, the ALJ is also unpersuaded by Dr. O'Brien's opinion that Claimant did not suffer a compensable injury to the left knee

because she waited three days to seek care and because the initial examination report failed to document evidence of swelling consistent with an acute injury.

II. Respondents' Request to Withdraw the March 30, 2016 General Admission of Liability

D. Pursuant to § 8-43-201(1), C.R.S., Respondents bear the burden of proof regarding any attempt to modify an issue that previously has been determined by an general or final admission of liability or an order. *Section 8-43-201(1), C.R.S*.; *Dunn v. St. Mary Corwin Hospital*, W.C. No. 4-754-838 (Oct. 1, 2013); *see also Salisbury v. Prowers County School District*, W.C. No. 4-702-144 (June 5, 2012); *Barker v. Poudre School District*, W.C. No. 4-750-735 (July 8, 2011). Section 8-43-201(1), C.R.S. was added to the 8-43-201 in 2009 and provides, in pertinent part:

> …a party seeking to modify an issue determined by a general or final admission, a summary order, or a full order shall bear the burden of proof for any such modification. (2) The amendments made to subsection (1) of this section by Senate Bill 09-168, enacted in 2009, are declared to be procedural and were intended to and shall apply to all workers' compensation claims, regardless of the date the claim was filed.

E. The principal aim of the 2009 amendment to § 8-43-201(1), C.R.S. was to reverse the effect of *Pacesetter Corp. v. Collett*, 33 P.3d 1230 (Colo.App. 2001). That decision held that while the respondents could move to withdraw a previously filed admission of liability, the respondents were not actually assessed the burden of proof to justify that withdrawal. The amendment to § 8-43-201(1), C.R.S. placed that burden on the respondents and made such a withdrawal the procedural equivalent of a reopening. In this case, Respondents, relying principally on the opinions of Dr. O'Brien are seeking to modify an issue determined by the March 30, 2016 GAL, specifically compensability. Therefore, the burden is on Respondents to prove that Claimant did not sustain a compensable injury. In this case, the evidence presented convinces the undersigned ALJ that Claimant, more probably than not, suffered an acute tear to the posterior horn of the medial meniscus of the left knee due to a sudden and unexpected twisting after slipping on icy while exiting her car to report to work. Moreover, the evidence persuades the ALJ that while Claimant likely had pre-existing degenerative changes behind the left kneecap and in the lateral compartment of the left knee, the proposed surgery is necessary to address the probable pathology in the posterior aspect of the medial meniscus where Claimant's symptoms are likely emanating from and where there is no evidence of chondromalacia. Based upon the evidence presented as a whole, the ALJ is persuaded that Claimant sustained a compensable left knee injury resulting in her need for treatment, including meniscal surgery. Consequently, Respondents have failed to prove, by a preponderance of evidence, that they are entitled to withdraw the GAL filed March 30, 2016.

* * *

F. A pre-existing condition "does not disqualify a claimant from receiving workers compensation benefits." *Duncan v. Indus. Claims Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004). To the contrary, a claimant may be compensated if his or her employment "aggravates, accelerates, or "combines with" a pre-existing infirmity or disease "to produce the disability and/or need for treatment for which workers' compensation is sought". *H & H Warehouse v. Vicory*, 805 P.2d 1167, 1169 (Colo. App. 1990). Even temporary aggravations of pre-existing conditions may be compensable. *Eisnack v. Industrial Commission*, 633 P.2d 502 (Colo.App. 1981). Pain is a typical symptom from the aggravation of a pre-existing condition. Thus, a claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by the employment–related activities and not the underlying pre-existing condition. *See Merriman v. Industrial Commission*, 120 Colo. 400, 210 P.2d 488 (1940).

G. While pain may represent a symptom from the aggravation of a pre-existing condition, the fact that Claimant may have experienced an onset of pain while performing job duties does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of the natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo.App. 1995); *Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (August 18, 2005). As found in this case, the totality of the evidence presented persuades the undersigned ALJ that Claimant's current symptoms and need for treatment, i.e. an arthroscopic partial medial meniscectomy is causally related to an acute tear caused by an unexpected twisting injury sustained on December 25, 2015. In so concluding, the undersigned ALJ rejects Dr. O'Brien's contrary opinions as unpursuasive.

H. Once a claimant has established the compensable nature of his/her work injury, as in this case, he/she is entitled to a general award of medical benefits and respondents are liable to provide all reasonable, necessary and related medical care to cure and relieve the effects of the work injury. *Section 8-42-101, C.R.S*.; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo.App. 1990). However, a claimant is only entitled to such benefits as long as the industrial injury is the proximate cause of his/her need for medical treatment. *Merriman v. Indus. Comm'n*, 210 P.2d 448 (Colo. 1949); *Standard Metals Corp. v. Ball, 172 Colo. 510, 474 P.2d 622 (1970); § 8-41-301(1)(c), C.R.S.* Ongoing benefits may be denied if the current and ongoing need for medical treatment or disability is not proximately caused by an injury arising out of and in the course of employment. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo.App. 1997). In other words, the mere occurrence of a compensable injury does not require an ALJ to find that all subsequent medical treatment and physical disability was caused by the industrial injury. To the contrary, the range of compensable consequences of an industrial injury is limited to those which flow proximately and naturally from the injury. *Standard Metals Corp. v. Ball*, *supra*. As found, Claimant has established that her need

for arthroscopic surgery is directly related to her compensable left knee injury. Nonetheless, the question of whether the arthroscopy is reasonable and necessary must be addressed.

The question of whether a particular medical treatment is reasonably necessary to cure and relieve a claimant from the effects of the injury is a question of fact. *City & County of Denver v. Industrial Commission*, 682 P.2d 513 (Colo.App. 1984). As found here, Claimant has proven by a preponderance of the evidence that the left partial medial meniscectomy is reasonable and necessary. The medical reports submitted and testimony generated outline persistent pain and functional decline in the face of failed conservative treatment leading Dr. Sides to recommend surgery which he testified has "good success rates" in reliving the symptoms associated with small meniscal tears such as the one suffered by Claimant in this case. Dr. O'Brien disagrees, citing concerns that surgical intervention will only serve to introduce additional trauma that will "awaken quiescent areas of osteoarthritis and result in an intractable synovitis that actually results in more pain rather than less pain." While Dr. Sides generally agreed that performing surgery on patients with severe osteoarthritis is generally contraindicated, he concluded that Claimant does not have osteoarthritis and as such the opinions espoused by Dr. O'Brien do not apply in the instant case. Taken in its entirety, the ALJ concludes that the evidentiary record contains substantial evidence to support a conclusion that the left knee arthroscopy presents as a reasonable and necessary procedure to cure and relieve Claimant of the ongoing effects of her December 25, 2015 industrial injury.

ORDER

It is therefore ordered that:

1. Respondents have failed to establish by a preponderance of the evidence that the Claimant did not suffer a compensable injury while in the course and scope of her employment on December 25, 2015. Therefore, Respondents request to withdraw the March 30, 2016 General Admission of Liability is denied and dismissed.

2. Respondent-Insurer shall pay for all medical expenses to cure and relieve Claimant from the effects of her December 25, 2015 left knee injury, including but not limited to the arthroscopic surgery recommended by Dr. Sides.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For

statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 25, 2017

/s/ Richard M. Lamphere_____
Richard M. Lamphere
Administrative Laws Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

ISSUES

I. Whether Claimant has proven, by a preponderance of the evidence, she sustained an occupational disease arising out of and in the course and scope of her employment with Employer.

II. If Claimant has proven she sustained an occupational disease, whether Claimant has proven by a preponderance of the evidence that she is entitled to reasonable, necessary and related medical treatment.

III. Whether UC Health (Tracey Stefanon, D.O.) remains an Authorized Treating Physician ("ATP").

STIPULATIONS

At hearing, the parties stipulated that if the claim is found compensable, Claimant's average weekly wage ("AWW") is $2,445.00, the time periods of temporary total disability benefits ("TTD") are August 8, 2016 through November 21, 2016 and November 28, 2016 through December 11, 2016, and the time periods of temporary partial disability benefits ("TPD") from November 22, 2016 through November 27, 2016, and December 12, 2016 onward.

FINDINGS OF FACT

1. Claimant worked as a pharmaceutical sales representative for Employer. Claimant worked in such capacity for Employer since 2012, relocating from Alaska to Colorado in August 2015 for a promotion. Claimant testified that, while working in Alaska, she primarily flew to different locations for work purposes and her job duties did not involve much driving.

2. Claimant testified she was promoted in approximately February 2016. Claimant spent approximately one month studying at home and then began field work in approximately March 2016. Claimant's job duties required Claimant to drive to various medical offices throughout her territory of Colorado and Wyoming. Claimant drove a company vehicle. Claimant testified that, after the promotion, her driving time increased from approximately three hours per day to six or seven hours per day.

3. Claimant testified she began noticing discomfort in her tailbone in late March 2016. Claimant testified the pain became "excruciating" approximately one month later, which caused her to visit her personal chiropractor.

4. Claimant first treated with her personal chiropractor, John H. Zimmerman, D.C., on April 29, 2016. Claimant reported tailbone and sacral pain that had been occurring

for two months, with right-sided sacral pain for a longer, unspecified amount of time. Dr. Zimmerman assessed an ongoing S-1 problem. Claimant attended seven additional sessions with Dr. Zimmerman from May 6, 2016 to July 22, 2016.

5. Claimant notified her supervisor, Donald Cleveland, that she was experiencing back pain and that she believed the amount of time spent driving contributed to the pain. Mr. Cleveland recommended an ergonomic assessment of the company vehicle, which occurred at some point after Claimant went on a leave of absence in August 2016. Claimant testified she was informed she "already had the ergonomic vehicle choice" and there was nothing further that could be done. Claimant last worked for Employer on August 8, 2016. Claimant ceased working due to the pain.

6. Donald Cleveland testified at hearing on behalf of Respondents. Mr. Cleveland testified Claimant reported to him that she was experiencing back pain as a result of spending too much time in the car. Mr. Cleveland initially did not consider Claimant to have reported a work injury and believed Claimant's complaints necessitated an ergonomic evaluation of the company vehicle.

7. The First Report of Injury or Illness Form notes the date of injury as March 28, 2016, and the date employer notified of the injury as August 8, 2016.

8. On August 5, 2016, Claimant was evaluated by her personal physician, Vincent J. Ross, M.D., of the Orthopaedic & Spine Center of the Rockies. Claimant reported sitting and driving as the main causes of aggravation. On examination, Dr. Ross noted tenderness at the tip of Claimant's coccyx. Dr. Ross read radiology reports of Claimant's lumbar spine and noted Claimant's tailbone tipped anteriorly, taking "an angulated turn on the tip of the tailbone." Dr. Ross noted there were no acute findings and gave an impression of pain in the coccyx/tailbone. Dr. Ross recommended Claimant reduce the amount of hours she drove per day, getting a different seat, or getting a different vehicle. Dr. Ross did not address work-relatedness in his August 5, 2016 medical notes.

9. On August 16, 2016, Claimant was evaluated by Tracey L. Stefanon, D.O., of University of Colorado Health. Claimant reported that her tailbone pain developed in late February 2016. Claimant denied sustaining any prior injury to the area. Claimant reported doing five weeks of home study where she sat for approximately 10 hours per day, and that she then began driving for six to six-and-a-half hours per day in mid-April 2016, and sitting in medical offices for up to eight hours a day. Claimant reported experiencing pressure on her tailbone when sitting in the car seat. Claimant reported having a prior "history of SI pain in the past since the birth of her son." On examination, Dr. Stefanon noted full range of motion in the lumbar spine with no tenderness over the SI joints and or over the sacrum. Dr. Stefanon further noted focal tenderness over the coccyx, greatest at the tip. During the evaluation, Dr. Stefanon observed Claimant sitting in the seat of the company vehicle. Dr. Stefanon noted Claimant's sacrum contacted the back of the seat while Claimant was sitting, but that her coccyx did not contact the seat while in the seated position. Dr. Stefanon remarked, "I could not

appreciate any direct pressure over the coccyx itself. The seat does appear to be somewhat small compared to the patient's build." Dr. Stefanon assessed coccydynia. Dr. Stefanon opined that, "although possible, it is more medically probably than not Claimant did not have a work caused injury/condition." Dr. Stefanon concluded Claimant had "at least a variant in her coccygeal alignment," but that such findings were not caused by Claimant's sitting. Dr. Stefanon referred Claimant to a primary care manager for further evaluation and treatment.

10. At the request of Claimant, Dr. Stefanon reviewed Claimant's record and added an addendum to her August 16, 2016 record dated October 5, 2016. Dr. Stefanon stated she believed Claimant's chart and record were accurate and correct, and noted that viewing Claimant's x-rays would not have changed her opinion regarding the work-relatedness of the condition.

11. On August 22, 2016, Claimant attended an evaluation with Robert Nystrom, D.O., of Concentra Medical Centers. Claimant reported experiencing tailbone pain as of March 28, 2016, which she associated with sitting while driving. Claimant reported driving approximately five to six hours per day and sitting all day. Claimant reported that the driving and sitting increased approximately four to five months prior, and since then she experienced a progressive increase in pain. Dr. Nystrom noted Claimant reported Dr. Ross "told her she had a very angulated sacrum that would predispose her to sacral contusion/pressure with prolonged sitting." On examination, Dr. Nystrom noted normal gait, muscle strength, muscle tone, and range of motion. Dr Nystrom also noted tenderness over the distal end of the sacram. Dr. Nystrom assessed contusion of the sacram and referred Claimant to physical medicine and rehabilitation and physical therapy. Dr. Nystrom opined there is "a greater than 50% probability that this is a work-related injury."

12. Respondents filed a Notice of Contest on August 23, 2016.

13. Dr. Nystrom reevaluated Claimant on September 6, 2016. Claimant reported no significant improvement in her symptoms. Dr. Nystrom noted the same physical examination findings as the August 22, 2016 evaluation. Dr. Nystrom again assessed contusion of the sacram.

14. On September 12, 2016, Tashof Bernton, M.D. conducted an Independent Medical Evaluation ("IME") at the request of Respondents. Dr. Bernton reviewed Claimant's medical records and physically examined Claimant. Dr. Bernton noted Claimant had good range of motion in the lumbar spine with no tenderness of the SI joints, but mild tenderness over the trochanteric bursal area and at the base of the sacrum over the coccyx. Dr. Bernton assessed coccydynia. Dr. Bernton opined Claimant's condition is not work-related and is most likely idiopathic. Dr. Bernton explained that, generally, coccydynia is caused by direct trauma, pregnancy, or is idiopathic. Dr. Bernton opined it is unlikely Claimant's condition was caused by pregnancy because Claimant had a cesarean section. Dr. Bernton also noted Claimant had no trauma to the coccyx. Dr. Bernton opined Claimant's sitting at work did not

reasonably act as a primary causative factor. Dr. Bernton stated, "There is a difference between a condition, which hurts while performing a specific activity, and the specific activity causing or empirically exacerbating the problem." Dr. Bernton noted, "Although (as with any cause of coccydynia) she will experience greater symptoms while sitting, there is not a sound objective medical basis for the determination that, to a reasonable degree of medical probability, the sitting itself is the cause or substantial aggravation of the problem." Dr. Bernton opined Claimant did not require treatment or result in impairment on a work-related basis. On a non-work-related basis, Dr. Bernton recommended using a donut cushion, avoiding prolonged sitting, and a trial of injection therapy.

15. Claimant participated in physical therapy with Orthopaedic Center of the Rockies from September 7, 2016 through September 20, 2016. September 20, 2016 evaluation note documents Claimant reporting "having pain with sitting and driving after her baby was born," and "having a lot of pain with any sitting position now."

16. On September 27, 2016, Claimant was evaluated by Shimon Blau, M.D. (Physiatry) of US MedGroup. Claimant reported an onset of pain in late March 2016 after sitting for about 10 hours per day while studying, then driving for increased periods of time. Claimant reported pain at a 4/10, reaching an 8/10, worsening with sitting and driving. Dr. Blau noted tenderness along the sacrococcygeal joint with good range of motion. Negative straight leg raise test bilaterally and negative neural tension bilaterally. Dr. Blau gave an impression of low back pain. Dr. Blau stated, "I agree with Dr. Nystrom that even though she may have an existing angulated sacrum, this may predispose her to pain in this area with prolonged sitting, which was then caused by her job. As such, I would consider this work-related." Dr. Blau recommended bilateral ultrasound-guided sacroiliac joint steroid/lidocaine injections.

17. Dr. Ross reevaluated Claimant on November 15, 2016. Claimant reported she was able to walk, climb, and hike, but that she could not sit without increasing discomfort. Dr. Ross noted Claimant was tender at the sacrum and the coccyx. Dr. Ross again noted Claimant's coccyx curves anteriorly. Dr. Ross recommended limiting extended sitting periods to 20 minutes.

18. Dr. Ross reevaluated Claimant on December 2, 2016. Claimant reported that she was not experiencing any relief. Dr. Ross noted tenderness around the coccyx and distal aspect of the sacrum. Dr. Ross gave an impression of sacrococcygeal pain/strain.

19. Dr. Bernton testified at hearing as an expert in internal medicine and occupational medicine. Dr. Bernton is board certified in internal medicine and occupational medicine and Level II accredited by the Colorado Division of Workers' Compensation. Dr. Bernton testified consistent with his IME report, opining Claimant's occupational duties did not cause or aggravate Claimant's condition. Dr. Bernton testified that coccydynia may occur with blunt trauma or childbirth but, in large part, the cause of coccydynia is unknown. Dr. Bernton opined Claimant's pregnancy was more

than likely not the cause of Claimant's condition, and noted Claimant did not have a history of trauma to the coccyx. Dr. Bernton testified there is no causal medical connection between sitting and coccydynia.

20. Dr. Bernton noted Claimant's coccyx curves anteriorly, which is uncommon. Dr. Bernton noted the curvature of Claimant's coccyx likely puts "unusual stress" on the area and may be associated with Claimant's pain; however, Dr. Bernton noted sitting does not cause curvature of the coccyx. When asked if Claimant's angulated coccyx predisposed Claimant to having symptoms when pressure is applied to the coccyx, Dr. Bernton responded, "I don't think there's enough information to be able to answer that in the affirmative. All we can say is that it may be associated with coccydynia, but it doesn't mean if you apply pressure and you have an angulated coccyx, you're going to be more likely to develop coccydynia. We don't have that information." Dr. Bernton further testified, "The coccydynia predisposed her to developing the symptoms and requiring treatment. And the coccydynia is idiopathic, and it's not due to the environmental situation." Dr. Bernton testified that experiencing pain at a certain time is not dispositive of an occupational injury, and that it "simply means you have an abnormal condition which lowers your tolerance for the activities you're performing, and they therefore hurt when otherwise they wouldn't." Dr. Bernton testified that, if Claimant's condition was work-related, Claimant would see improvement in her symptoms once she ceased performing her occupational duties. Dr. Bernton opined that the lack of improvement in Claimant's condition after Claimant ceased performing her occupational duties indicates Claimant's condition is idiopathic, and not caused by her work.

21. Claimant testified Employer gave her a list of physicians sometime after she reported the injury. Claimant testified she chose UC Health as a provider and was treated by Dr. Stefanon.

22. A WC164 form Physician's Report of Worker's Compensation Injury dated February 7, 2017, Rosalina Pineiro, MD, noted a report type of "closing", stating no exam- case denied and released from care.

23. Claimant testified she did not experience coccyx pain prior to the onset of pain in approximately March 2016. Claimant testified she gave birth to her son via cesarean section in March 2015 and did not have any issues subsequent to his birth. Claimant later testified she had experienced some low back pain and discomfort since her pregnancy, but the pain was not consistent. Claimant testified that, prior to the onset of pain, she had been very athletic and had no issues performing physical activities. Claimant testified she has since ceased her involvement in sports and cannot sit without being in pain. Claimant testified she continues to experience intense pain when sitting for multiple hours at a time.

24. The ALJ credits the medical records and opinions of Drs. Bernton and Stefanon over the contrary opinions of Drs. Nystrom and Blau and finds Claimant did not sustain a work-related occupational disease or injury.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, Section 8-40-101, *et seq.*, C.R.S. (the "Act"), is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1), C.R.S. Generally, the claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado*, 717 P.2d 1000 (Colo. App. 1986).

The ALJ's resolution of issues will be affirmed if supported by substantial evidence in the record. Section 8-43-301(8), C.R.S.; *City and County of Denver School District 1 v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). Substantial evidence is that quantum of probative evidence, which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

Compensability

A claimant is required to prove by a preponderance of the evidence that at the time of the injury he was performing service arising out of and in the course of employment, and that the alleged injury was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). The question of whether the claimant met the burden of proof to establish a compensable injury is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

A claimant seeking benefits for an occupational disease must establish the existence of the disease and that it was directly and proximately caused by the claimant's employment or working conditions. *See, Cowin & Co. v. Medina*, 860 P.2d 535 (Colo. App. 1992). The test for distinguishing between an accidental injury and occupational disease is whether the injury can be traced to a particular time, place, and cause. *Campbell v. IBM Corporation*, 867 P.2d 77, 81 (Colo. App. 1993). "Occupational disease" is defined by Section 8-40-201(14), C.R.S. as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

This section of the Act imposes additional proof requirements beyond that required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819 (Colo. 1993). A claimant is entitled to recovery only if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the condition for which compensation is sought. *Id.* Where there is no evidence that occupational exposure to a hazard is a necessary precondition to development of the disease, the claimant suffers from an occupational disease only to the extent that the occupational exposure contributed to the disability. *Id.*

The ALJ concludes Claimant has not proven by a preponderance of the evidence she sustained a compensable occupational disease or injury. While Dr. Bernton testified the coccydynia "predisposed" Claimant to developing symptoms and requiring treatment, Dr. Bernton credibly established Claimant's coccydynia is idiopathic. Dr.

Bernton credibly opined there is insufficient medical information affirmatively establishing Claimant's angulated coccyx predisposed Claimant to having symptoms when pressure was applied to the coccyx. Moreover, Dr. Stefanon observed Claimant positioned in the company vehicle and credibly noted there was no pressure applied to Claimant's coccyx. Dr. Bernton credibly opined there is not an objective medical basis to determine, within a reasonable degree of medical probability, that sitting caused or aggravated Claimant's condition. While Claimant credibly testified the onset of pain occurred after increased hours of driving, there is insufficient persuasive evidence establishing more than a temporal connection. Dr. Stefanon credibly opined that, while possible, it is more likely than not Claimant's condition is not work-related. Based on the totality of evidence, Claimant has failed to demonstrate by a preponderance of the evidence that her work activities for Employer caused an occupational disease or injury, or aggravated, accelerated or combined with an underlying condition to produce the need for medical treatment.

As Claimant failed to establish a compensable occupational disease or injury, the other issues for determination are moot.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish, by a preponderance of the evidence, that he suffered an occupational disease or injury. Claimant's claim for benefits is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that he suffered compensable injuries during the course and scope of his employment on September 26, 2014.

2. Whether Claimant has proven by a preponderance of the evidence that he is entitled to receive reasonable, necessary and causally related medical benefits for his industrial injuries.

3. Whether Claimant has established by a preponderance of the evidence that he is entitled to receive Temporary Total Disability (TTD) benefits for the period October 9, 2014 until terminated by statute.

4. A determination of Claimant's Average Weekly Wage (AWW).

5. Whether Claimant has demonstrated by a preponderance of the evidence that Eco Roof and Solar is a statutory employer pursuant to §8-41-401(2), C.R.S.

FINDINGS OF FACT

1. Claimant worked for Jose Lopez as a roofer. On September 2, 2014 Claimant was working on a project located at 4400 South Fox in Englewood, Colorado. He was walking on a roof carrying shingles on his shoulder when the roof collapsed under his left leg. Claimant's left leg plunged into a hole up to his hip area.

2. Eco Roof and Solar obtained the contract for roofing work at 4400 South Fox in Englewood, Colorado but subcontracted the work to Davie Roofing. Davie Roofing is operated by Victor Lopez Zapata. Claimant's Employer Mr. Lopez then obtained the roofing work from Davie Roofing.

3. Claimant testified that when his left leg plunged into the hole he experienced pain in his left knee and waist. After a short break he was able to complete his work for the day. At the end of his shift Claimant reported his injury to Mr. Lopez. However, because Mr. Lopez did not have Workers' Compensation insurance, he reported Claimant's injuries to Mr. Zapata of Davie Roofing.

4. Because Claimant's pain worsened when he arrived home on September 26, 2014 he did not work on the following Saturday and Sunday. When he returned to work on Monday he learned that Mr. Zapata of Davie Roofing was reviewing his insurance coverage. Claimant subsequently worked through October 9, 2014 but had to cease employment because of his injuries. He experienced significant pain and had difficulty walking because of his left knee injury.

5. Claimant's co-worker Axel Laredo testified that he did not directly witness Claimant's September 26, 2014 accident because he was not on the roof. However, he heard someone yelling, went up to the roof and saw Claimant's left leg in a hole. He subsequently observed Claimant's inability to properly use his left leg and shoulder over the following two weeks..

6. Claimant did not obtain medical treatment for his injuries during his last two weeks of work. After Claimant ceased working on October 9, 2014 he waited for an additional two weeks while Mr. Zapata checked his insurance status.

7. On October 28, 2014 Claimant visited the Denver Health Medical Center Emergency Room with complaints of neck, back, left knee, left foot and right foot pain. He was diagnosed with a non-displaced, comminuted fracture of the left knee patella, a thoracic strain and a foot strain. Claimant received a knee immobilizer, crutches and pain medications.

8. On November 21, 2014 Claimant visited the Denver Health Medical Center Orthopedic Clinic for an evaluation. He explained he had been injured at work and had a Workers' Compensation claim but had not sought treatment beyond the emergency room because he was without insurance or funds to pay for medical care. Philip Frank Stahel, M.D. diagnosed Claimant with a non-displaced horizontal patellar fracture of the left knee that did not require surgical intervention. He also questioned whether Claimant's neck and lower back pain were associated with the mechanism of injury on September 26, 2014. Dr. Stahel remarked that Claimant could "resume full activity without restrictions" but also instructed him to follow up with the Spine Clinic if his neck and lower back pain continued.

9. On February 3, 2015 Claimant returned to the Orthopedic Clinic. Claimant's knee fracture had healed and his pain decreased, but he continued to experience difficulty bending his knee. Because he continued to complain of back and neck pain he was referred to the Spine Clinic.

10. On March 24, 2015 Claimant visited the Denver Health Medical Center Spine Clinic. He explained that approximately three days after the September 26, 2014 incident he began experiencing neck pain, lower back pain, mid-back pain and left knee pain. The left knee pain was the most severe of all his symptoms. Physicians noted that Claimant's condition had improved considerably and they recommended conservative treatment that included physical therapy.

11. On June 2, 2015 Claimant returned to the Spine Clinic with persistent back pain. He had not attended physical therapy but had been doing his home exercises for his back.

12. On October 28, 2016 Claimant returned to the Denver Health Medical Center. He was diagnosed with chronic right shoulder pain most consistent with rotator cuff tendinopathy as well as anxiety and depression. Claimant reported that he had

experienced aching and burning in his right shoulder as well as weakness with lifting since the accident. He received medications for his symptoms.

13. On November 29, 2016 Claimant again visited the Denver Health Medical Center. He received additional medications for his symptoms.

14. Claimant testified that, because of his September 26, 2014 industrial injuries, he has been unable to return to full-time employment as a roofer. He has occasionally helped his cousin in performing landscaping duties. However, he only worked for his cousin approximately two days per week and he last worked in October 2016. Claimant explained that he did not have a specific salary arrangement with is cousin and earned between $50.00-$120.00 each day.

15. Claimant explained that he worked six days per week and earned $200.00 each day while working for Mr. Lopez as a roofer. He only did not work six days each week when it rained or snowed. An Average Weekly Wage (AWW) of $1200.00 thus constitutes a fair approximation of Claimant's wage loss and diminished earning capacity.

16. Owner of Davie Roofing Mr. Zapata testified at the hearing in this matter. He explained that he began his roofing business in Texas and expanded his operations into Colorado in 2013. Mr. Zapata explained that he purchased a Workers' Compensation Insurance Policy from Texas Mutual Insurance on approximately June 25, 2014 to cover his Texas and Colorado operations. He purchased the policy under his business name Davie Roofing, LLC. and submitted a payment of $2,600.00.

17. Owner of Eco Roof and Solar Dylan Lucas explained that the company required all subcontractors to carry both Workers' Compensation insurance and liability insurance. The requirement of Workers' Compensation and liability insurance is part of the agreement Eco Roof and Solar establishes with all subcontractors. Subcontractors are hired on a per job basis. Mr. Lucas remarked that Eco Roof and Solar requires subcontractors to provide Workers' Compensation insurance because it does not insure the employees of its contractors for injuries at work. He commented that Eco Roof and Solar employs sales staff and managers but does not perform actual roofing work. In order to enter into a contract with Eco Roof and Solar the contracting roofers must provide proof of Workers' Compensation and liability insurance. Eco Roof and Solar is insured by Pinnacol Assurance for Workers' Compensation claims.

18. Davie Roofing provided Eco Roof and Solar with a certificate of Workers' Compensation and a certificate of liability insurance. Before he received any work from Eco Roof and Solar Mr. Zapata contacted Texas Mutual Insurance and spoke with a representative in order to confirm that he was covered for Workers' Compensation injuries while performing contract work for Eco Roof and Solar in Colorado. He provided the representative of Texas Mutual Insurance with the address and FAX number of Eco Roof and Solar in Colorado. Mr. Lopez commented that he would not receive any work from Eco Roof and Solar unless there was confirmation that he had coverage for work injuries for contracts provided by Eco Roof and Solar to Davie

Roofing. A representative of Eco Roof and Solar subsequently confirmed to Mr. Zapata that she had received notice that Davie Roofing was insured for workplace injuries. Davie Roofing then received work from Eco Roof and Solar.

19. Mr. Zapata's testimony is supported by the Certificate of Liability Insurance issued by Texas Mutual Insurance through Northwest Insurance Agency of Dallas, Texas. The Certificate of Liability Insurance "certifies the policies of [Workers' Compensation] insurance . . . have been issued to . . . [Davie Roofing, LLC] for the policy period indicated." Davie Roofing, LLC is listed as the insured and Eco Roof and Solar is listed as the certificate holder. The policy includes Workers' Compensation and Employer liability limits of $1,000,000. The dates of coverage for the Workers' Compensation insurance policy are June 26, 2014 through June 26, 2015. Claimant's injuries that occurred on September 26, 2014 are within the period listed by the Certificate of Liability Insurance.

20. There was no evidence presented at the hearing in this matter that Texas Mutual Insurance withdrew, recanted or denied the Certificate of Liability Insurance issued to Eco Roof and Solar on behalf of Davie Roofing. That Certificate of Liability Insurance acknowledged and affirmed there was coverage in place on the date of Claimant's injuries. Texas Mutual Insurance received notice and an opportunity to defend its position at hearing but chose not to appear for the matter.

21. Claimant produced a Workers' Compensation and Employers Liability Insurance Policy issued by Texas Mutual Insurance to Victor Lopez Construction, Inc. The policy covered Workers' compensation claims in Texas for the period October 2, 2014 through October 2, 2015, but was cancelled on August 14, 2015. Because Claimant's injuries occurred on September 26, 2014 in Colorado, the Workers' Compensation and Employers Liability Insurance Policy would not have covered Claimant's claim. However, the Policy is inconsistent with Mr. Zapata's testimony that he procured Workers' Compensation insurance in June 2014 under the name Davie Roofing. Mr. Zapata explained that he never conducted business under the name Victor Lopez Construction. Moreover, the Policy is inconsistent with the testimony of Mr. Lucas that all subcontractors must carry both Workers' Compensation insurance and liability insurance. The requirement of Workers' Compensation and liability insurance is part of the agreement Eco Roof establishes with all subcontractors. The Workers' Compensation and Employers Liability Insurance Policy thus does not appear to be the document that is pertinent to the Workers' Compensation coverage for Claimant's September 26, 2014 injuries.

22. Claimant has demonstrated that it is more probably true than not that he suffered compensable injuries during the course and scope of his employment on September 26, 2014. Claimant credibly explained that on September 26, 2014 he was working on a roofing project located at 4400 South Fox in Englewood, Colorado. He was walking on a roof carrying shingles on his shoulder when the roof collapsed under his left leg. Claimant's left leg plunged into a hole up to his hip area. He remarked that when his left leg plunged into the hole he experienced pain in his left knee and waist.

Claimant subsequently worked through October 9, 2014 but ceased employment because of his injuries.

23. Claimant's co-worker Mr. Laredo corroborated Claimant's account of the incident. Although Mr. Laredo did not directly witness Claimant's September 26, 2014 accident because he was not on the roof, he heard someone yelling, went up to the roof and saw Claimant's left leg in a hole. He subsequently worked with Claimant for two weeks and observed Claimant's inability to properly use his left leg and shoulder. Based on the credible, uncontroverted accounts of Claimant and Mr. Laredo, Claimant suffered compensable Workers' Compensation injuries on September 26, 2014.

24. Claimant has proven that it is more probably true than not that he is entitled to receive reasonable, necessary and causally related medical benefits for his industrial injuries. On October 28, 2014 Claimant visited the Denver Health Medical Center Emergency Room with complaints of neck, back, left knee, left foot and right foot pain. He was diagnosed with a non-displaced, comminuted fracture of the left knee patella, a thoracic strain and a foot strain. Claimant subsequently received periodic medical treatment from the Denver Health Center Orthopedic and Spine Clinics. He continues to receive medications for his symptoms. Based on the medical records and Claimant's credible testimony Claimant is entitled to receive reasonable, necessary and causally related medical benefits to cure or relieve the effects of his September 26, 2014 industrial injuries.

25. Claimant has established that it is more probably true than not that he is entitled to receive TTD benefits for the period October 9, 2014 until terminated by statute. Claimant credibly explained that, because of his September 26, 2014 industrial injuries, he has been unable to return to full-time employment as a roofer. He has occasionally helped his cousin in performing landscaping duties. However, he only worked for his cousin for approximately two days per week and he last worked in October 2016. Claimant explained that he did not have a specific salary arrangement with is cousin and earned between $50.00-$120.00 each day.

26. On November 21, 2014 Dr. Stahel remarked that Claimant could "resume full activity without restrictions" but also instructed him to follow up with the Spine Clinic if his neck and lower back pain continued. Nevertheless, Dr. Stahel's comment did not constitute an event that would terminate Claimant's TTD benefits. Claimant has not reached MMI, he has not returned to regular or modified employment, he has not received a written release to return to regular employment, and he has not received a written offer to return to employment and failed to begin the employment. Accordingly, based on Claimant's credible testimony and the medical records, Claimant is entitled to receive TTD benefits for the period October 9, 2014 until terminated by statute minus any earnings he received while sporadically working for his cousin.

27. Claimant has failed to demonstrate that it is more probably true than not that Eco Roof and Solar is a statutory employer. Initially, the record reveals that Mr. Lopez lacked Workers' Compensation insurance coverage. Mr. Lopez thus sought coverage for Claimant's industrial injuries from Mr. Zapata through Davie Roofing.

Claimant has failed to demonstrate that Davie Roofing, as a subcontractor of Eco Roofing and Solar, lacked Workers' Compensation insurance.

28. The record demonstrates that, because Davie Roofing possessed a valid Colorado Workers' Compensation insurance policy through Texas Mutual Insurance on September 26, 2014, Davie Roofing is Claimant's statutory employer. Owner of Eco Roof and Solar Mr. Lucas explained that the company required all subcontractors to carry both Workers' Compensation insurance and liability insurance. The requirement of Workers' Compensation and liability insurance is part of the agreement Eco Roof establishes with all subcontractors. Mr. Lucas remarked that Eco Roof and Solar requires subcontractors to provide Workers' Compensation insurance because it does not insure the employees of its contractors for injuries at work. In order to enter into a contract with Eco Roof and Solar the contracting roofers must provide proof of Workers' Compensation and liability insurance.

29. Mr. Zapata credibly explained that he purchased a Workers' Compensation Insurance Policy from Texas Mutual Insurance on approximately June 25, 2014 to cover his Texas and Colorado operations. He purchased the policy under his business name Davie Roofing, LLC. and submitted a payment of $2,600.00. Davie Roofing provided Eco Roof and Solar with a certificate of Workers' Compensation and a certificate of liability insurance. Before he received any work from Eco Roof and Solar Mr. Zapata contacted Texas Mutual Insurance and spoke with a representative in order to confirm that he was covered for Workers' Compensation injuries while performing contract work for Eco Roof and Solar in Colorado. He provided the representative of Texas Mutual Insurance with the address and FAX number of Eco Roof and Solar in Colorado. Mr. Zapata commented that he would not receive any work from Eco Roof and Solar unless there was confirmation that he had coverage for work injuries for contracts provided by Eco Roof and Solar to Davie Roofing. A representative of Eco Roof and Solar subsequently confirmed to Mr. Zapata that she had received notice that Davie Roofing was insured for workplace injuries. Davie Roofing then received work from Eco Roof and Solar.

30. Mr. Zapata's testimony is supported by the Certificate of Liability Insurance issued by Texas Mutual Insurance through Northwest Insurance Agency of Dallas, Texas. The Certificate of Liability Insurance "certifies the policies of [Workers' Compensation] insurance . . . have been issued to . . . [Davie Roofing, LLC] for the policy period indicated." Davie Roofing, LLC is listed as the insured and Eco Roof and Solar is listed as the certificate holder. The policy includes Workers' Compensation and Employer liability limits of $1,000,000. The dates of coverage for the Workers' Compensation insurance policy are June 26, 2014 through June 26, 2015. Claimant's injuries that occurred on September 26, 2014 are within the period listed by the Certificate of Liability Insurance.

31. Claimant produced a Workers' Compensation and Employers Liability Insurance Policy issued by Texas Mutual Insurance to Victor Lopez Construction, Inc. The policy covered Workers' compensation claims in Texas for the period October 2, 2014 through October 2, 2015, but was cancelled on August 14, 2015. Because

Claimant's injuries occurred on September 26, 2014 in Colorado, the Workers' Compensation and Employers Liability Insurance Policy would not have covered Claimant's claim. However, the Policy is inconsistent with Mr. Zapata's testimony that he procured Workers' Compensation insurance in June 2014 under the name Davie Roofing. Mr. Zapata explained that he never conducted business under the name Victor Lopez Construction. Moreover, the Policy is inconsistent with the testimony of Mr. Lucas that all subcontractors are required to carry both Workers' Compensation insurance and liability insurance. The requirement of Workers' Compensation and liability insurance is part of the agreement Eco Roof establishes with all subcontractors. The Workers' Compensation and Employers Liability Insurance Policy thus does not appear to be pertinent to determining Workers' Compensation coverage for Claimant's September 26, 2014 injuries.

32. Based on the credible testimony of Mr. Zapata and Mr. Lucas, as well as the persuasive documentary evidence, Davie Roofing possessed a valid Colorado Workers' Compensation insurance policy through Texas Mutual Insurance on September 26, 2014, Davie Roofing is Claimant's statutory employer. Accordingly, Eco Roof and Solar is not Claimant's statutory employer and its insurer Pinnacol Assurance is not liable for Claimant's September 26, 2014 industrial injuries.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Compensability

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAP, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

7. As found, Claimant has demonstrated by a preponderance of the evidence that he suffered compensable injuries during the course and scope of his employment on September 26, 2014. Claimant credibly explained that on September 26, 2014 he was working on a roofing project located at 4400 South Fox in Englewood, Colorado. He was walking on a roof carrying shingles on his shoulder when the roof collapsed under his left leg. Claimant's left leg plunged into a hole up to his hip area. He remarked that when his left leg plunged into the hole he experienced pain in his left knee and waist. Claimant subsequently worked through October 9, 2014 but ceased employment because of his injuries.

8. As found, Claimant's co-worker Mr. Laredo corroborated Claimant's account of the incident. Although Mr. Laredo did not directly witness Claimant's September 26, 2014 accident because he was not on the roof, he heard someone

yelling, went up to the roof and saw Claimant's left leg in a hole. He subsequently worked with Claimant for two weeks and observed Claimant's inability to properly use his left leg and shoulder. Based on the credible, uncontroverted accounts of Claimant and Mr. Laredo, Claimant suffered compensable Workers' Compensation injuries on September 26, 2014.

Medical Benefits

9. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAP, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAP, Nov. 13, 2000).

10. Authorization to provide medical treatment refers to a medical provider's legal authority to treat the claimant with the expectation that the insurer will compensate the provider. *Bunch v. Industrial Claim Appeals Office,* 148 P.3d 381, 383 (Colo. App. 2006); *One Hour Cleaners v. Industrial Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). Authorized providers include those to whom the employer directly refers the claimant and those to whom an ATP refers the claimant in the normal progression of authorized treatment. *Town of Ignacio v. Industrial Claim Appeals Office,* 70 P.3d 513 (Colo. App. 2002); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). Whether an ATP has made a referral in the normal progression of authorized treatment is a question of fact for the ALJ. *Suetrack USA v. Industrial Claim Appeals Office,* 902 P.2d 854 (Colo. App. 1995).

11. As found, Claimant has proven by a preponderance of the evidence that he is entitled to receive reasonable, necessary and causally related medical benefits for his industrial injuries. On October 28, 2014 Claimant visited the Denver Health Medical Center Emergency Room with complaints of neck, back, left knee, left foot and right foot pain. He was diagnosed with a non-displaced, comminuted fracture of the left knee patella, a thoracic strain and a foot strain. Claimant subsequently received periodic medical treatment from the Denver Health Center Orthopedic and Spine Clinics. He continues to receive medications for his symptoms. Based on the medical records and Claimant's credible testimony Claimant is entitled to receive reasonable, necessary and causally related medical benefits to cure or relieve the effects of his September 26, 2014 industrial injuries.

Temporary Total Disability Benefits

12. Section 8-42-103(1), C.R.S. requires a claimant seeking temporary disability benefits to establish a causal connection between the industrial injury and

subsequent wage loss. *Champion Auto Body v. Industrial Claim Appeals Office*, 950 P.2d 671 (Colo. App. 1997). To demonstrate entitlement to TTD benefits a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability and the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The term "disability," connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by the claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). A claimant suffers from an impairment of earning capacity when he has a complete inability to work or there are restrictions that impair his ability to effectively and properly perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

13. As found, Claimant has established by a preponderance of the evidence that he is entitled to receive TTD benefits for the period October 9, 2014 until terminated by statute. Claimant credibly explained that, because of his September 26, 2014 industrial injuries, he has been unable to return to full-time employment as a roofer. He has occasionally helped his cousin in performing landscaping duties. However, he only worked for his cousin for approximately two days per week and he last worked in October 2016. Claimant explained that he did not have a specific salary arrangement with is cousin and earned between $50.00-$120.00 each day.

14. As found, on November 21, 2014 Dr. Stahel remarked that Claimant could "resume full activity without restrictions" but also instructed him to follow up with the Spine Clinic if his neck and lower back pain continued. Nevertheless, Dr. Stahel's comment did not constitute an event that would terminate Claimant's TTD benefits. Claimant has not reached MMI, he has not returned to regular or modified employment, he has not received a written release to return to regular employment, and he has not received a written offer to return to employment and failed to begin the employment. Accordingly, based on Claimant's credible testimony and the medical records, Claimant is entitled to receive TTD benefits for the period October 9, 2014 until terminated by statute minus any earnings he received while sporadically working for his cousin.

Average Weekly Wage

15. Section 8-42-102(2), C.R.S. requires the Judge to determine a claimant's AWW based on his earnings at the time of injury. The Judge must calculate the money rate at which services are paid to the claimant under the contract of hire in force at the time of injury. *Pizza Hut v. ICAO,* 18 P.3d 867, 869 (Colo. App. 2001). However, §8-

42-102(3), C.R.S. authorizes a Judge to exercise discretionary authority to calculate an AWW in another manner if the prescribed methods will not fairly calculate the AWW based on the particular circumstances. *Campbell v. IBM Corp.,* 867 P.2d 77, 82 (Colo. App. 1993). The overall objective in calculating an AWW is to arrive at a fair approximation of a claimant's wage loss and diminished earning capacity. *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO May 7, 1997). Therefore, §8-42-102(3), C.R.S. grants an ALJ substantial discretion to modify the AWW if the statutorily prescribed method will not fairly compute a claimant's wages based on the particular circumstances of the case. *In Re Broomfield,* W.C. No. 4-651-471 (ICAP, Mar. 5, 2007). As found, an AWW of $1200.00 constitutes a fair approximation of Claimant's wage loss and diminished earning capacity.

Statutory Employer

16. Section 8-41-401(1)(a), C.R.S. creates a statutory employment relationship when a company contracts out part or all of its work to any subcontractor. Under the preceding circumstances, the contracting company "shall be liable" to pay compensation for injuries to employees of subcontractors. *In Re Trujillo,* W.C. No. 4-537-815 (ICAP, Mar. 12, 2004). The purpose of the statute is to prevent employers from "avoiding responsibility under the workers' compensation act by contracting out their regular business to uninsured independent contractors." *Finlay v. Storage Technology Corp*., 764 P.2d 62 (Colo. 1988). The burden is on the party seeking to establish a statutory employer relationship to demonstrate that the subcontractor is uninsured. *Mendez v. Interstate Van Lines,* W.C. No. 4-330-270 (ICAP, Jan. 19, 2001).

17. As found, Claimant has failed to demonstrate by a preponderance of the evidence that Eco Roof and Solar is a statutory employer. Initially, the record reveals that Mr. Lopez lacked Workers' Compensation insurance coverage. Mr. Lopez thus sought coverage for Claimant's industrial injuries from Mr. Zapata through Davie Roofing. Claimant has failed to demonstrate that Davie Roofing, as a subcontractor of Eco Roofing and Solar, lacked Workers' Compensation insurance.

18. As found, the record demonstrates that, because Davie Roofing possessed a valid Colorado Workers' Compensation insurance policy through Texas Mutual Insurance on September 26, 2014, Davie Roofing is Claimant's statutory employer. Owner of Eco Roof and Solar Mr. Lucas explained that the company required all subcontractors to carry both Workers' Compensation insurance and liability insurance. The requirement of Workers' Compensation and liability insurance is part of the agreement Eco Roof establishes with all subcontractors. Mr. Lucas remarked that Eco Roof and Solar requires subcontractors to provide Workers' Compensation insurance because it does not insure the employees of its contractors for injuries at work. In order to enter into a contract with Eco Roof and Solar the contracting roofers must provide proof of Workers' Compensation and liability insurance.

19. As found, Mr. Zapata credibly explained that he purchased a Workers' Compensation Insurance Policy from Texas Mutual Insurance on approximately June 25, 2014 to cover his Texas and Colorado operations. He purchased the policy under

his business name Davie Roofing, LLC. and submitted a payment of $2,600.00. Davie Roofing provided Eco Roof and Solar with a certificate of Workers' Compensation and a certificate of liability insurance. Before he received any work from Eco Roof and Solar Mr. Zapata contacted Texas Mutual Insurance and spoke with a representative in order to confirm that he was covered for Workers' Compensation injuries while performing contract work for Eco Roof and Solar in Colorado. He provided the representative of Texas Mutual Insurance with the address and FAX number of Eco Roof and Solar in Colorado. Mr. Zapata commented that he would not receive any work from Eco Roof and Solar unless there was confirmation that he had coverage for work injuries for contracts provided by Eco Roof and Solar to Davie Roofing. A representative of Eco Roof and Solar subsequently confirmed to Mr. Zapata that she had received notice that Davie Roofing was insured for workplace injuries. Davie Roofing then received work from Eco Roof and Solar.

20. As found, Mr. Zapata's testimony is supported by the Certificate of Liability Insurance issued by Texas Mutual Insurance through Northwest Insurance Agency of Dallas, Texas. The Certificate of Liability Insurance "certifies the policies of [Workers' Compensation] insurance . . . have been issued to . . . [Davie Roofing, LLC] for the policy period indicated." Davie Roofing, LLC is listed as the insured and Eco Roof and Solar is listed as the certificate holder. The policy includes Workers' Compensation and Employer liability limits of $1,000,000. The dates of coverage for the Workers' Compensation insurance policy are June 26, 2014 through June 26, 2015. Claimant's injuries that occurred on September 26, 2014 are within the period listed by the Certificate of Liability Insurance.

21. As found, Claimant produced a Workers' Compensation and Employers Liability Insurance Policy issued by Texas Mutual Insurance to Victor Lopez Construction, Inc. The policy covered Workers' compensation claims in Texas for the period October 2, 2014 through October 2, 2015, but was cancelled on August 14, 2015. Because Claimant's injuries occurred on September 26, 2014 in Colorado, the Workers' Compensation and Employers Liability Insurance Policy would not have covered Claimant's claim. However, the Policy is inconsistent with Mr. Zapata's testimony that he procured Workers' Compensation insurance in June 2014 under the name Davie Roofing. Mr. Zapata explained that he never conducted business under the name Victor Lopez Construction. Moreover, the Policy is inconsistent with the testimony of Mr. Lucas that all subcontractors are required to carry both Workers' Compensation insurance and liability insurance. The requirement of Workers' Compensation and liability insurance is part of the agreement Eco Roof establishes with all subcontractors. The Workers' Compensation and Employers Liability Insurance Policy thus does not appear to be pertinent to determining Workers' Compensation coverage for Claimant's September 26, 2014 injuries.

22. As found, based on the credible testimony of Mr. Zapata and Mr. Lucas, as well as the persuasive documentary evidence, Davie Roofing possessed a valid Colorado Workers' Compensation insurance policy through Texas Mutual Insurance on September 26, 2014, Davie Roofing is Claimant's statutory employer. Accordingly, Eco

Roof and Solar is not Claimant's statutory employer and its insurer Pinnacol Assurance is not liable for Claimant's September 26, 2014 industrial injuries.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant suffered compensable Workers' Compensation injuries on September 26, 2014.

2. Claimant shall receive reasonable, necessary and related medical benefits designed to cure and relieve the effects of his September 26, 2014 industrial injuries.

3. Claimant shall receive TTD benefits for the period October 9, 2014 until terminated by statute minus any earnings he received while sporadically working for his cousin.

4. Claimant earned an AWW of $1,200.00.

5. Davie Roofing is Claimant's statutory employer and Texas Mutual Insurance is liable as its insurer.

6. Eco Roof and Solar and Pinnacol Assurance are dismissed as parties from this matter.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

Denver, CO 80202

STATE OF COLORADO OFFICE OF ADMINISTRATIVE COURTS 1525 Sherman Street, 4th Floor, Denver, CO 80203	
In the Matter of the Workers' Compensation Claim of: **KRIS MIDDLEDORF,** Claimant, vs. **STATE OF COLORADO,** Employer, and **STATE OF COLORADO C/O BROADSPIRE,** Insurer, Respondents.	▲ **COURT USE ONLY** ▲ **CASE NUMBER:** **WC 5-004-887-02**

SUMMARY ORDER

Hearing was held before Margot W. Jones, Administrative Law Judge (ALJ), on January 27, 2017, in Denver, Colorado.

The following issues were raised for consideration at hearing:

a. Whether Claimant established by a preponderance of the evidence that he suffered an occupational disease or acute injury to his lumbar spine in the course and scope of his employment for Employer;

b. If Claimant established an occupational injury, whether Claimant has established by a preponderance of the evidence that he is entitled to medical care as a result of the injury; and

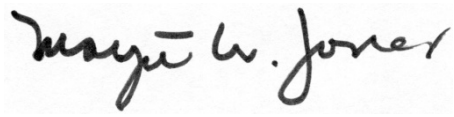
c. Whether Claimant established by a preponderance of the evidence that he is entitled to an order awarding indemnity benefits from October 1, 2015, and continuing until terminated by law.

Based on the evidence presented at hearing, the ALJ orders as follows:

1. The ALJ finds and concludes that Claimant failed to establish by a preponderance of the evidence that he suffered an occupational disease or acute low back injury in the course and scope of his employment for Employer. Further, it was not established that Claimant's condition was aggravated, accelerated or combined with a pre-existing condition so to produce disability. Based on credible and persuasive testimony and evidence, it is equally likely that Claimant's non-work activities caused Claimant's condition.

2. Claimant's claim is denied and dismissed.

DATED: April 26, 2017



Margot W. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

This decision is final and not subject to appeal unless a full order is requested. The request shall be made at the Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203 within ten working days of the date of service of this Summary Order. Section 8-43-215 (1), C.R.S. Such a Request is a prerequisite to review under Section 8-43-301, C.R.S.

If a party makes a request for a full order both parties shall submit a proposed full order containing specific findings of fact and conclusions of law within five working days from the date of the request. The proposed full order must be submitted by e-mail in Word or Rich Text format to oac-dvr@state.co.us. The proposed order shall also be submitted to opposing counsel and unrepresented parties by e-mail, facsimile, or same day or next day delivery.

CERTIFICATE OF SERVICE

I hereby certify that true and correct copies of the above **SUMMARY ORDER** was served by placing same in the U.S. Mail, or by e-mail to:

Court Clerk

ISSUES

- Did Claimant prove by a preponderance of the evidence that her condition has worsened warranting reopening under § 8-43-303(1), C.R.S.

- If Claimant proved a worsening of condition, was the surgery performed by ATP orthopedic surgeon (Brian White, M.D.) reasonable, necessary, and related?

- Whether the Claimant has shown that she is entitled to temporary disability from the date of filing of the Petition to Reopen on March 22, 2016, ongoing.

- Whether sanctions should be imposed against Claimant for spoliation of evidence.

FINDINGS OF FACT

1. Claimant suffered an admitted right hip injury on October 28, 2010 while working for Employer. A baggage cart pinned Claimant against a belt loader and she suffered injuries to her right hip and lower extremity.

2. Claimant has been treated by doctors at OccuMed Colorado ("Occumed") throughout the claim, including John J. Raschbacher, M.D., Greg Smith, D.O. and Jonathon Bloch, D.O.

3. Claimant received extensive treatment for the right hip injury, including four (4) surgeries. The first surgery was an arthroscopic labral repair, acetabuloplasty and femoral osteoplasty performed by Derek Johnson, M.D. on May 18, 2011.

4. On May 30, 2012, Claimant was initially evaluated by Brian White, M.D. On examination, she had significant pain with the anterior impingement maneuver on the right side. The x-rays showed evidence of reactive Cam morphology on the proximal femur. Dr. White's assessment was incomplete healing of labral repair, with some residual impingement and potentially early avascular necrosis. The ALJ noted this was an indication that the avascular necrosis developed following the arthroscopy, suggesting a causal link. He postulated that Claimant's pain was coming from the incomplete healing of her labral repair. He referred Claimant to Cynthia Kelly, M.D.

5. On July 11, 2012, Claimant was re-evaluated by Dr. White, whose assessment was avascular necrosis, with failed previous hip arthroscopy and residual

impingement. Dr. White noted Dr. Kelly would proceed with the avascular necrosis procedure, to be followed by the hip arthroscopy and femoracetabular osteoplasty and labral reconstruction.

6. The second procedure was a right femoral head decompression and attempted vascularized free fibula flap performed by Cynthia Kelly, M.D. on October 12, 2012. This procedure was done to address osteonecrosis of the right femoral head. This procedure could not be completed because the blood vessels were different sizes.

7. On January 24, 2013, Dr. White performed a third procedure, which was a revision-right hip arthrosopy, including acetabular rim trimming, labral reconstruction and injection of platelet rich plasma.

8. After her third surgery, Claimant underwent a course of physical therapy ("PT") and was followed by the physicians at Occumed. Dr. White evaluated Claimant at regular intervals.

9. On January 8, 2014, Dr. White evaluated Claimant for a follow up visit. On examination, he noted that Claimant's overall range of motion was good, but painful, particularly with both internal and external rotation. A review of the x-rays showed no evidence of progression of the avascular process, however, there was cloudiness to the femoral head. Dr. White's assessment was failed revision hip arthroscopy, as well as a vascular salvage procedure. Claimant was noted to have progressive pain. Dr. White did not think there was much to be done for Claimant, with the most efficient treatment being a total hip replacement. He described this procedure as sub optimal given her age. Claimant testified that they discussed the total hip replacement, but Dr. White didn't want her to have it at age 30.

10. On April 20, 2015, Claimant was evaluated by Douglas Scott, M.D. At the time, she noted her right hip popped and was painful. She also had pain in her left hip because she favored her right hip. Dr. Scott prepared a comprehensive review of Claimant's treatment records. On examination, right hip flexion was limited by pain to 100° and right hip abduction was decreased compared to the left. Right hip adduction and extension were also decreased compared to the left, as was external rotation. Dr. Scott commented that in many respects Claimant appeared to have failed surgical treatment of her right hip condition. She had partly failed to respond to therapeutic measures and he opined she needed a full psychological assessment before proceeding with any type of further surgical procedures.

11. In Dr. Scott's opinion, Claimant's condition was probably stable and it was appropriate to consider whether she was at MMI. He recommended Claimant be referred to a 24 month Division IME to address MMI, ratable impairment, maintenance treatment, whether a total hip arthroplasty was reasonable and necessary; an evaluation of the ongoing prescription-pain medication and benzodiazepamines, as well as whether continued massage therapy was reasonable and necessary. The ALJ noted Dr. Scott, at least in this report, did not offer a definitive opinion regarding whether Claimant was at MMI or whether a total hip replacement, reasonable and necessary and

related to the injury.

12. Dr. Scott issued an addendum report on May 23, 2015.[1] He opined Claimant had reached maximum medical improvement and her hip was stable. He believed she had probable permanent medical impairment of the right hip pursuant to the AMA Guides to the Evaluation of Permanent Impairment (3rd Ed. Rev.).

13. On July 7, 2015, Respondents filed a Final Admission of Liability ("FAL"), admitting Claimant had a 17% scheduled medical impairment related to her hip, as found by Dr. Bloch. However, no PPD benefits were paid, as Claimant received in excess of the $75,000.00 statutory cap. Respondents claimed an overpayment of $79,137.79 against future benefits.

14. The FAL admitted for maintenance medical benefits based upon the recommendations of Dr. Bloch. In his June 18, 2015 report[2], Dr. Bloch stated Claimant was to follow up with her surgeon as regularly scheduled, although there was no active management and really just post surgical follow-ups. Claimant was noted to continue to take reasonable amounts of narcotics and controlled benzodiazepine type substances which were to be managed by a pain management specialist.

15. Claimant returned to Dr. Smith, on September 11, 2015. She had a great deal of pain in her left hip, lumbar region and right calf, most likely due to antalgic gait. Her pain level was 6-7/10. Claimant had been experiencing these symptoms for two weeks. Dr. Smith's assessment was status post-hip reconstruction. He prescribed additional massage therapy twice a week for 4 to 6 weeks and plan to see Claimant in follow up in 3 to 4 weeks. Dr. Smith stated he did not know that he was not sure when Claimant would be at MMI, which led the ALJ to infer that he did not believe she was at MMI at the time of this appointment. On the WCM164 form, no notation was made about MMI.

16. Claimant returned to Occumed on October 5, 2015 and was evaluated by Kevin Page, PA-C. At that time, Claimant was noted to have an antalgic gait, but no detailed evaluation took place. PA-C Page thought Claimant was at MMI and should be under maintenance for pain management.

17. Claimant returned to Dr. Smith, on October 27, 2015 and the WCM164 noted she was at MMI, with a neurological evaluation, EMG and MRI of the right leg ordered.

18. On October 27, 2015 Claimant was evaluated by Dr. Bloch. Claimant reported ongoing pain. Dr. Bloch opined that her case required more workup including: an EMG of the right lower extremity, a repeat hip MRI for stability, a three-phase bone

[1] As found infra, Dr. Scott testified he issued this supplemental report upon receipt of additional medical records. However, those documents were not in the record.

[2] Dr. Bloch referred to an addendum report from the physician who performed the DIME. However, that report was not introduced into evidence.

scan to make sure there was no CRPS, and a neuropsychological evaluation. Dr. Bloch noted he would be hard pressed to say that Claimant needed a hip replacement without any current imaging. Dr. Bloch opined that otherwise, Claimant was still at MMI and would have ongoing tests while at MMI, but should the tests show anything positive it could change the MMI status. Dr. Bloch requested referrals for Claimant to have neuropsychological testing, an MRI of her right hip, an EMG of her right leg, and massage therapy.[3]

19. On November 10, 2015 Claimant was evaluated by Dr. Bloch. Claimant reported not doing well and having increased pain. Dr. Bloch opined that Claimant was still at MMI, that he would refer Claimant for pain management, and noted that they had asked for an EMG, a repeat MRI, and a neuropsychiatric evaluation as testing post MMI to make sure that none of the findings would change Claimant's MMI status. The inference drawn from this report and the one from 10-27-15, is that Dr. Bloch questioned whether Claimant was still at MMI.

20. Evidence of Claimant's physical activity level in November 2015 was admitted at hearing. This evidence was in the form of video surveillance, which documented Claimant shopping at Costco and performing various tasks. Claimant also shoveled snow the next day. The ALJ notes this raised the question whether Claimant exaggerated her physical capabilities when she was being evaluated by physicians during this period of time. The ALJ also notes there was no evidence admitted hearing as to Claimant's exact physical restrictions during this time.

21. Claimant testified that she went to the emergency room because of pain in her hip a couple of days before the prior hearing (mid-December 2015),. Pain was radiating down the right side of her leg. Claimant testified the pain was much worse than in June 2015, when she was placed at MMI.

22. Claimant testified in the December 10, 2015 hearing before ALJ Jones that she wanted the hip replacement done to be able to stop taking pain pills and be more of a mom to her daughter.[4] Claimant also testified when the symptoms were bad, her foot would go numb, she would experience burning pins and needles and it felt like someone was taking an ice pick to her hip. She could not get comfortable.

23. Claimant returned to Dr. White on December 23, 2015. She was described as getting progressively worse. Claimant had pain with range of motion of the hip, which did not move well. Dr. White noted nerve pain going down her distal fibula and leg. The ALJ found this was evidence of a worsening of Claimant's condition. Some narrowing was also noted on x-rays which were taken at that evaluation. Dr. White's assessment was failed revision hip arthroscopy, as well as core decompression. He stated the only option was a total hip replacement and discussed all the risks,

[3] These medical benefits were denied by ALJ Jones' Findings of Fact, Conclusions of Law and Order, dated March 28, 2016-Claimant's Exhibit 7; Respondents' Exhibit A.

[4] Exhibit 13.

benefits and alternatives of the surgery. The decision was made to proceed with the total hip replacement.

24. On March 22, 2016, Claimant filed a Petition to Reopen, as well as an Application for Hearing. The Petition to Reopen alleged a worsening of condition and attached the request for authorization of proposed right total hip arthroplasty.

25. Respondents scheduled a follow-up IME for June 28, 2016. Claimant failed to appear for this appointment.

26. Claimant testified she was out of town attending her daughter's graduation immediately before the appointment with Dr. Scott was set to take place. Claimant testified the letter was sent on the June 15, 2016 to her attorney's office and then sent to her the next day. The fax confirmation reflected the letter was faxed June 14, 2016. Claimant learned of the IME two hours after she was supposed to be there. Claimant testified she called her attorney's office to inquire what to do.

27. Under these facts, the ALJ determined Claimant did not engage in intentional conduct which led to her missing the appointment with Dr. Scott.

28. Claimant testified that prior to the hip replacement surgery, she was in a lot of pain. She had difficulty walking. The injection done by Dr. White provided relief, but her pain got worse after the injection began wearing off. Claimant decided to undergo the total hip replacement because her symptoms had gotten to a point that she could not tolerate.

29. On July 5, 2016, Dr. White performed a right hip total arthroplasty. In the indications for the surgery, he noted that after Claimant's initial hip arthroscopy, she developed avascular necrosis. An attempted joint salvage, with a combination of hip arthroscopy conversion to labral reconstruction, as well as cord compression was tried. A vascularized free fibula was tried, but the vessel size was not appropriate proximally for this and could not be completed. Even after these procedures, Claimant continued to have pain, although she had short-term relief from a steroid injection. The pre-operative and post-operative diagnosis was: right hip failed attempted salvage from a vascular necrosis and to hip arthroscopy, with continued hip pain, no other joint salvage solution. Claimant testified the surgery has provided her relief.

30. The ALJ credited the opinions of Dr. White, who has treated Claimant since 2012. Dr. White's records documented a worsening of Claimant's condition.

31. On August 12, 2016, letters were sent by counsel for Respondent-Insurer to Porter Hospital and ATI Physical Therapy denying liability for medical expenses from July 5-8, 2016.

32. There was no evidence in the record that Claimant was placed at MMI after the surgery.

33. On August 17, 2016, Dr. Scott reviewed additional medical records at the request of Respondents. The question posed to Dr. Scott was whether the July 5, 2016 right total hip replacement (arthroplasty) was reasonable, necessary and related to Claimant's October 28, 2010 work injury. Dr. Scott opined the July 5, 2016 right total hip arthroplasty (per the Colorado Medical Treatment Guidelines) was probably reasonable and necessary to treat Claimant's osteonecrosis of the right femur. If the osteonecrosis resulted from May 18, 2011 right hip arthroplasty and the procedure was performed to address her work injury related labral tear, then it was related to the work injury. Dr. Scott stated: if the osteonecrosis did not result from the May 18, 2011 right hip arthroplasty, it was not related to the work injury. The ALJ noted there was no evidence in the record that Claimant had a diagnosis of avascular necrosis prior to the 2011 arthroplasty. The arthroscopy caused the avascular necrosis. Based on the totality of the medical evidence, including Dr. Scott's opinion, the ALJ found the total hip arthroplasty was reasonable, necessary and related to Claimant's industrial injury.

34. Dr. Scott testified at hearing as an expert in occupational medicine. He is also Level II accredited pursuant to the WCRP. Dr. Scott stated he first examined Claimant on April 20, 2015 and issued a report. After receiving additional medical records, he opined that Claimant was at MMI, which was actually before Dr. Bloch concluded Claimant was at MMI.

35. Dr. Scott noted that since he was not able to examine Claimant on June 28, 2016, he could not determine whether there was actually a worsening of her condition. However, he reviewed the medical records and opined that there was nothing specific about March 22, 2016, which showed a worsening of Claimant's condition. This is because the doctors had previously discussed a total hip replacement with her. Dr. Scott concluded Claimant knew by the December 10, 2015 hearing that she needed a hip replacement. Dr. Scott also noted that she was taking medications, including Percocet and had continuing pain complaints and her hip. Dr. Scott characterized this process as osteoarthritis after Claimant developed avascular necrosis. Dr. Scott never testified that the avasular necrosis was not related to Claimant‘s industrial injury and the first surgical procedure. On cross-examination, Dr. Scott admitted he did not know whether Claimant had numbness and tingling down her leg\ prior to December 2015. The ALJ finds this was a new symptom.

36. Claimant's hip arthroplasty was reasonable, necessary and related to her industrial injury.

37. Claimant's hip arthroplasty was required to prevent a deterioration of her condition.

38. There was no evidence of increased work restrictions or wage loss tied to Claimant's worsening of condition. As of the date of hearing, Claimant has not worked for five years.

39. Evidence and inferences inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), §§ 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S. Generally, the Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. § 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). In this case, the credibility of Claimant, as well as the various health care providers, bore directly on the issue of reopening.

Reopening

Section 8-43-303(1), C.R.S. authorizes an ALJ to reopen any award within six years after the date of injury on a number of grounds, including error, mistake, or a change in condition. *Heinicke v. Industrial Claim Appeals Office*, 197 P.3d 220 (Colo. App. 2008); *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). A change in condition refers either "to a change in the condition of the original compensable injury or to a change in Claimant's physical or mental condition which can be causally connected to the original compensable injury". *Chavez v. Industrial Comm'n*, 714 P.2d 1328, 1330 (Colo. App. 1985).

The reopening authority granted ALJs by § 8-43-303, C.R.S. "is permissive, and whether to reopen a prior award when the statutory criteria have been met is left to the

sound discretion of the ALJ". *Cordova v. Industrial Claim Appeals Office*, 55 P.3d at 189. The party seeking reopening bears "the burden of proof as to any issue sought to be reopened". § 8-43-303(4), C.R.S.

The medical evidence before the Court led to the conclusion that Claimant's symptoms worsened after MMI. As a starting point, the evidence established her 2011 hip arthroscopy did not resolve her symptoms. (Finding of Fact 3). Dr. White described this as "incomplete healing" of her labral repair. (Finding of Fact 4). The evidence also showed Claimant developed avascular necrosis a short time after the first surgery and required surgery performed by Dr. Kelly. (Findings of Fact 4-6). The ALJ concluded the avascular necrosis developed as a result of the injury and the initial surgery because of its proximity in time, the inferences drawn from the medical records and the lack of contrary evidence. (Finding of Fact 33).

Claimant then underwent two surgical procedures to try to resolve the avascular necrosis, which were not successful and her symptoms persisted. Evidence of Claimant's worsening condition post-MMI was admitted at hearing. Dr. Smith noted worsening symptoms on September 11, 2015. (Finding of Fact 15). Additional evidence of increased came in the form of Dr. Bloch's evaluations on October 27, and November 10, 2015 wherein Dr. Bloch raised the issue of whether Claimant remained at MMI. (Findings of Fact 18-19).

As found, Claimant then returned to Dr. White, who noted worsening of symptoms, including radiating pain down the right leg. (Finding of Fact 23). He performed an injection, which provided symptom relief. Claimant experienced a recrudescence of the symptoms after the injection was performed. The ALJ credited Claimant's testimony that her pain was worsened, which necessitated a trip to the emergency room.

In coming to this conclusion, the ALJ considered Respondents' contention that the medical evidence of worsening was simply based on Claimant's subjective report of increased symptoms. Respondents urged the ALJ to find Claimant not to be credible as a witness with regard to pain complaints, pointing to the video evidence before the Court. Respondents also cited the determination previously made by ALJ Jones with regard to Claimant's credibility.

The ALJ declines to reach the conclusion that because Claimant did not credibly report her symptoms, there was insufficient evidence of a worsening of condition. As noted above, physicians including Drs. Bloch, Smith, and White made treatment recommendations based upon Claimant's report of symptoms. In addition, there was objective evidence of avascular necrosis, which ATPs identified as a cause of Claimant's symptoms. This led to treatment these ATPS provided to Claimant. The conclusion to be drawn from the doctor's recommendations is that they were concerned about a worsening of Claimant's condition. In addition, Claimant's testimony supports the conclusion that her condition had worsened. She had previously declined to undergo an arthroplasty, however, her symptoms reach the point that she opted for this procedure.

Therefore, based on the evidence before the ALJ, including the foregoing medical records and Claimant's testimony, Claimant met her burden of proof and established her condition worsened.

Medical Benefits

Whether Claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). In order to determine this question, the ALJ considered whether Claimant was no longer at MMI and, thus the total hip replacement was treatment to cure and relieve the effects of Claimant's industrial injury or whether this was post-MMI treatment to prevent deterioration of Claimant's condition. The ALJ determined this condition fell within the latter category. First, there was no evidence in the form of a report from an ATP which conclusively said Claimant was no longer at MMI.

Second, surgical procedures can be considered post-MMI treatment to prevent deterioration. As found, Claimant met her burden of proving the surgery was required to prevent a deterioration of her symptoms. As the Colorado Court of Appeals articulated in *Milco Construction v. Cowan*, 860 P.2d 539, 542 (Colo. App. 1992):

> "If the evidence in a particular case establishes that, but for a particular course of medical treatment, a claimant's condition can reasonably be expected to deteriorate, so that he will suffer a greater disability than he has sustained thus far, such medical treatment, irrespective of its nature, must be looked upon as treatment designed to relieve the effects of the injury, or to prevent deterioration of the Claimant's present condition. "

Milco Construction v. Cowa, supra, was followed by *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609, 611 (Colo. App. 1995), which reaffirmed the principle that a particular course of treatment can be ordered following MMI to prevent deterioration of Claimant's condition. See also *Sanchez v. Lafarge Corporation,* 2004 WL 1944689 (ICAO August 27, 2004).

Here, substantial evidence supported the conclusion that the hip replacement was required to prevent the deterioration of Claimant's condition. As found, the surgical recommendation was made after Claimant had reached MMI, but Dr. White was not initially inclined to recommend the procedure and Claimant followed that recommendation. (Finding of Fact 23). Claimant's symptoms worsened as reflected the medical records, including a new symptom of radiating pain down the right leg. This culminated in Claimant undergoing the total hip arthroplasty.

The ALJ notes that Dr. Scott's testimony at hearing did not refute that the hip replacement surgery was reasonable and necessary. Dr. Scott also noted in his August 17, 2016 report that if the avascular necrosis resulted from May 18, 2011 right hip arthroplasty and the procedure was performed to address her work injury related labral tear, then it was related to the work injury. The ALJ concluded there was a causal

relationship between the arthroscopy and Claimant's development of avascular necrosis. The medical evidence showed that Claimant underwent treatment, including surgeries, because of the failed labral repair. She ultimately underwent the total hip arthroplasty because of her continued symptoms. Thus, the ALJ concluded the medical evidence admitted at hearing supported the conclusion the hip replacement was required to prevent further deterioration of Claimant's condition. Respondents are liable for said treatment.

Temporary Total Disability

Claimant alleges she is entitled to TTD benefits as a result of her worsened condition. In *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997), the Court held that in order to receive TTD benefits after reopening based on a change of condition, the Claimant must show increased restrictions that result in "greater impact on the Claimant's temporary work capacity than he had originally sustained as a result of the" industrial injury. 954 P.2d at 639-640.

The question of whether Claimant proved a worsened condition and whether this caused increased impairment of earning capacity presents a question of fact for the ALJ. *Giammarino v. Contemporary Services Corp.,* W.C. No. 4-546-027 (ICAO November 22, 2006). There is no requirement that Claimant produce evidence of medical restrictions imposed by an ATP, or by any other physician. Rather, lay evidence alone may be sufficient to establish disability. *Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997). However, the ALJ may consider whether the worsened condition has resulted in the imposition of additional medical restrictions. *Giammarino v. Contemporary Services Corp., supra.*

In the case at bench, the ALJ determined Claimant's condition had worsened and her testimony supported this conclusion. However, there was no evidence before the ALJ which documented Claimant's work restrictions had increased after MMI or when the Petition to Reopen was filed. In fact, there was no evidence concerning post-MMI Claimant's restrictions in the record at all.[5] Even though Claimant was arguably restricted from work after the total hip replacement, she had not been working for five years. (Finding of Fact 38). Thus, there was no evidence which established a link between her latest surgery and a loss of wages. This lack of direct evidence of a wage loss attributable to the worsening of condition leads to the ALJ's conclusion Claimant is not entitled to wage benefits. Accordingly, the ALJ determined Claimant failed to establish an entitlement to TTD benefits as a result of the Petition to Reopen and/or worsening of condition.

Spoliation

[5] Dr. Bloch issued restrictions as of June 18, 2015.

Respondents seek sanctions for Claimant's alleged spoliation of evidence. More particularly, Respondents alleged Claimant's failure to attend the June 28, 2016 IME with Dr. Scott deprived them of the opportunity to examine Claimant before she had the total hip replacement. Respondents argued this constituted spoliation of evidence, as her condition was changed after the surgery. Response requested an adverse inference to be drawn from the claimed spoliation of evidence.

The Colorado Supreme Court articulated the legal standard for evaluating a claim of spoliation in *Aloi v. Union Pacific Railroad Corporation*, 129 P.3d 999 (2006). In that case, Plaintiff, who was a conductor, was injured when he tripped and fell while descending interior stairs on the locomotive. There was a loose rubber mat, which he identified as a tripping hazard on an engineering report. Plaintiff notified Defendant that a personal injury claim was going to be filed within one week of the accident and thus, Defendant knew a claim was going to be pursued. In the course of discovery, Plaintiff requested documents related to inspections and maintenance, however, Defendant failed to retain the relevant report, which was destroyed.

The trial court granted Plaintiff's request for an instruction to the jury that it could draw an adverse inference that the evidence contained in the missing documents was unfavorable to Defendant. The Colorado Supreme Court considered whether in order to receive the adverse instruction, the proponent had to demonstrate the evidence was destroyed in bad faith, as opposed to willfully. The Court held that it was not necessary for the trial court to make a finding that the evidence was destroyed in bad faith, rather a showing of willful conduct was required. 129 P.3d at 1003. See also W*estern Fire Truck v. Emergency One*, 134 P. 3d 570, 576 (Colo. App. 2006).

As determined in Findings of Fact 25-26, Respondents failed to make the requisite showing of willful or intentional conduct on the part of Claimant. Accordingly, the ALJ declined to draw an adverse inference against Claimant that the IME would have provided contrary evidence to the claim that her condition worsened.

ORDER

It is therefore ordered that:

1. Respondents are liable for the treatment provided by Dr. White and Porter Hospital, including the total hip arthroplasty. These shall be paid pursuant to the Workers' Compensation Fee Schedule.

2. Respondents shall provide medical benefits to Claimant through authorized treating physicians until she is released from care. These medical benefits are to be provided as post-MMI maintenance benefits.

3. Claimant's request for TTD benefits is denied and dismissed.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm

ISSUES

The issues raised by Respondents' Partial Motion for Summary Judgment was whether there are disputed issues of fact between the parties and whether judgment should be entered for Respondents as a matter of law with regard to the overpayment of temporary total disability benefits (TTD). Respondents contend that Claimant was overpaid TTD and that an order should be entered in favor of Respondents as a matter of law finding Claimant is liable to Respondents for overpaid TTD totaling $10, 718.39 at the rate of $25.00 per week. Claimant contends the Partial Motion for Summary Judgment should be denied because there remain disputed issues of fact and summary disposition of this matter is not appropriate.

UNDISPUTED FACTS

1. This matter arises out of an admitted work-related injury on May 8, 2015, to Claimant's right wrist.

2. Claimant received TTD for the time period of 5/12/15 through 5/14/15, and again beginning on 5/22/15. See Exhibit B and Exhibit I.

3. Claimant has an AWW of $425.03, and a TTD benefit rate of $283.35. See Exhibit B and Exhibit I.

4. On February 12, 2016, Respondents filed a Petition to Modify, Terminate, or Suspend Compensation (Petition to Terminate). Claimant returned to regular employment on or about December 4, 2015. See Exhibit C.

5. The Department of Labor and Employment approved Respondents' Petition to Terminate on March 17, 2016, stating Respondents were permitted to terminate benefits as of the date of their petition. See Exhibit D.

6. Contained in the Findings of Fact, Conclusions of Law, and Order dated March 31, 2016, was a stipulation from the parties that Claimant returned to work on December 2, 2015. The Order further held that benefits for Claimant's left upper extremity were denied and dismissed. See Exhibit E.

7. On April 5, 2016, the authorized treating physician, Davis Hurley, M.D., wrote a letter stating Claimant reached MMI on her right wrist and hand on July 2, 2015, with a 0% impairment rating, and no need for maintenance care. See Exhibit F.

8. On May 4, 2016, Respondents filed an Amended Final Admission of Liability stating Claimant was entitled to TTD for 5/22/15 thru 7/1/15. The cutoff for TTD was changed to 7/1/15, pursuant to Dr. Hurley's report placing Claimant at MMI on July 2, 2015, and the

Amended FA showed an overpayment of $10,718.39. See Exhibit G. On December 6, 2016, Respondents filed an Application for Hearing. Among other issues raised are, Respondents endorsed overpayment and recovery of overpayment. See Exhibit A.

10. The amount of TTD owed for 5/12/15 through 5/14/15 is $121.44, and the amount owed for 5/22/15 through 7/2/15 is $1,700.10. See Exhibit I.

11. Claimant has been paid a total of $12,548.36 in TTD to date. See Exhibit H and I.

CONCLUSIONS OF LAW

General Legal Principles

Under C.R.C.P. 56, an ALJ may enter summary judgment where there are no disputed issues of material fact and the moving party is entitled to judgment as a matter of law. *See e.g. Nova v. Industrial Claim Appeals Office*, 754 P.2d 800 (Colo.App. 1988). The C.R.C.P. is applicable to Workers' Compensation proceedings to the extent that they are not inconsistent with applicable Workers' Compensation statutes. *Renaissance Salon v. Industrial Claim Appeals* Office, 994 P.2d 447 (Colo. App. 1999); *Nova, supra*. (C.R.C.P. apply in WCA proceedings insofar as it is not inconsistent with the Act's procedural or statutory provisions); *Cf. In re Rivera*, W.C. No. 4-574-706 (ICAO, 1/22/04).

Pursuant to C.R.C.P. Rule 56(c), summary judgment is proper where the pleadings, depositions, answers to interrogatories, and admissions on file, together with the affidavits, if any, show that there is no genuine issue as to any material fact and that the moving party is entitled to judgment as a matter of law. *McCormick v. Union Pacific Res. Co*., 14 P.3d 346, 349 (Colo. 2000)(citing, *Bebo Contsr. Co. v. Mattox & O'Brien, P.C.*, 990 P.2d 78, 83 (Colo. 1999)).

The purpose of a Motion for Summary Judgment is to pierce through the formal allegations of the pleadings and save the time and expense connected with a trial, when, as a matter of law, based on undisputed facts, one party could not prevail. *Ginter v. Palmer and Co*., 196 Colo. 203, 205, 585 P.2d 583, 584 (1978)(citing, *Abrahamsen v. Mountain States Telephone & Telegraph Corp*., 177 Colo. 422, 494 P.2d 1287 (1972)).

The burden of establishing that there is no triable issue of material fact is on the moving party. *McCormick, supra* (*citing Greenwood Trust v. Conley*, 938 P.2d 1141, 1149 (Colo. 1997). The moving party meets its burden by identifying those parts of the record to demonstrate the absence of genuine issue of material fact. *Id*. Once the moving party establishes that no material fact is in dispute, the burden of proving the existence of an issue of material fact for trial shifts to the opposing party. *Id*. If the opposing party fails to satisfy its burden of proof, the moving party is entitled to summary judgment. *Id*.

Summary judgment is a drastic remedy and is not warranted unless the moving party demonstrates it is entitled to judgment as a matter of law. *Van Alstyne v. Housing*

Authority of Pueblo, 985 P.2d 97 (Colo.App. 1999). All doubts as to the existence of disputed facts must be resolved against the moving party, and the party against whom judgment is to be entered is entitled to all favorable inferences that may be drawn from the facts. Furthermore, failure to file an affidavit or other documentary evidence in opposition to a motion for summary judgment does not relieve the moving party of its burden to establish entitlement to summary judgment. *People v. Hernandez and Associates*, 736 P.2d 1238 (Colo.App. 1986); *Cf. Division of Workers' Comp. v. Sundance*, W.C. No. 2002-110238 (ICAO, 1/13/04).

A "material fact" is simply a fact that will affect the outcome of the case. *In re Water Rights of the United States*, 854 P.2d 791 (Colo. 1993). Where there are disputed issues of material fact, due process requires the parties be afforded a reasonable opportunity to present evidence and confront adverse evidence. *Hendricks v. Industrial Claim Appeals Office*, 809 P.2d 1076 (Colo.App. 1990).

Denial of the Motion for Summary Judgment

Respondents alleged entitlement to recover of an overpayment in the amount of $10,718.39. Respondents seek an order granting Summary Judgment in favor of them finding Claimant is liable to Respondents for the $10,718.39 overpayment. Claimant contends Respondents' Partial Motion for Summary Judgment should be denied and that a hearing should be held because Claimant took no action that contributed to or brought about the overpayment and thus she contends she is not liable for repayment of the overpaid TTD. Neither party cites authority for their position.

The undisputed evidence established that Claimant received TTD in excess of the amount she might have been entitled to if the authorized treating physician had timely made the MMI determination or if Respondents had learned of Claimant's return to work in December 2015. However, since Respondents continued to pay TTD until advised that its Petition to Terminate benefits was granted on March 17, 2016, no overpayment for which Respondents were entitled to recovery arose. *See United Airlines v. Industrial Claims Appeals Office,* 312 P.3d 235 (Colo. App. 2013), cert. denied, 2013 5797529 (Colo. 2013); *Rocky Mountain Cardiology v. Industrial Claims Appeals Office,* 94 P.3d 1182 (Colo. App. 2004).

Therefore, Respondents are not entitled to judgment as a matter of law. The undisputed facts do not support the conclusion that Respondents are entitled to recover an overpayment.

ORDER

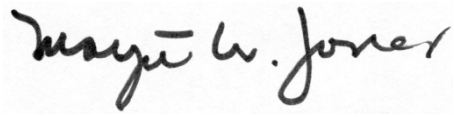
It is therefore ordered that:

Respondents Motion for Partial Summary Judgment is denied.

All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 26, 2017



Margot W. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Has Claimant overcome the DIME's finding of no impairment by clear and convincing evidence? If so, what is the proper impairment rating?

2. Has Claimant proven by a preponderance of the evidence that he is entitled to medical benefits after MMI?

STIPULATIONS

1. The parties stipulated Claimant's average weekly wage (AWW) is $334.62, with a corresponding TTD rate of $223.08.

2. With regard to the video surveillance, the parties stipulated the video does not depict continuous filming of the Claimant, the video was turned off between frames when the Claimant was not bowling, and the video does not show Claimant's activities when he was not bowling on the days that the surveillance was undertaken.

FINDINGS OF FACT

1. Claimant performs security monitoring and light maintenance for Employer. On January 28, 2014, he sustained an admitted injury to his neck as a result of a motor vehicle accident. Claimant was performing "security rounds" at one of Employer's properties when his vehicle slid off a snowy road into a snowbank. He was traveling approximately 10 mph at the time of the accident.

2. Employer referred Claimant to Woodland Park Family Medicine for authorized medical treatment. At his initial visit on February 4, 2014, Claimant saw NP Stacy Concelman. Physical examination revealed spasm of the bilateral trapezius muscles extending over the shoulders and midway to the scapula, worse on the right. Nurse Concelman diagnosed cervicalgia, and headache related to muscle spasm. She prescribed Valium for muscle spasm, Percocet, and meloxicam.

3. Claimant had x-rays and an MRI of his cervical spine on February 14, 2014. The MRI showed an eccentric C3-C4 disk bulge making minimal contact with the exiting left nerve root, moderate facet hypertrophy and arthritis at C4-C5, and mild central canal stenosis at C5-C6 related to posterior disk osteophyte formation.

4. Claimant followed up with Nurse Concelman after the MRI exam. She documented spasm of the paraspinal muscles in the cervical region extending to the trapezius across the shoulders.

5. On February 21, 2014, Nurse Concelman referred Claimant to physical therapy for his neck pain and muscle spasms.

6. Claimant participated in physical therapy over the next few months with moderate improvement. Nurse Concelman documented cervical muscle spasm at more than one visit.

7. Claimant began treating with Dr. Matthew Young on July 18, 2014. He reported aching neck pain and right upper extremity numbness and paresthesias affecting his fingers. Physical examination revealed spasm throughout the cervical region extending laterally to the trapezius on the right side. Claimant was not interested in epidural steroid injections because he had a bad experience with steroid injections for a previous shoulder injury. Dr. Young recommended nerve conduction studies to investigate his radicular-type upper extremity symptoms.

8. Claimant saw Dr. Thomas Bowser on August 8, 2014 for EMG/NCV testing. The electrodiagnostic testing showed moderate bilateral carpal tunnel syndrome, but no evidence of cervical radiculopathy.

9. After reviewing Dr. Bowser's report, Dr. Young referred Claimant to Dr. Christopher Malinky for consideration of injections. He also referred Claimant back to physical therapy because "he was having efficacy with less pain while he was in physical therapy."

10. On September 19, 2014, Dr. Young noted Claimant was experiencing "mild to moderate [neck pain] most of the time with severe pain occasionally." Physical therapy was helping, and he was taking Percocet "occasionally."

11. Respondents obtained video surveillance footage of Claimant on November 20, 2014. The video showed Claimant bowling and interacting with family members with no apparent difficulty or pain.

12. Claimant saw Dr. Young on November 21, 2014, the day after he was video-recorded bowling. Claimant reported "severe" neck pain, at a level of 8/10. Physical activity aggravated the pain. Dr. Young noted Claimant's cervical range of motion was "markedly diminished." He refilled Claimant's medications and referred him to Dr. Todd Thompson for a neurosurgical consultation.

13. In December 2014, Claimant started chiropractic treatment, which was reportedly helpful.

14. Respondents obtained additional video surveillance of Claimant on January 15, 2015 that showed Claimant bowling for an extended period. Claimant was able to move his neck freely and fluidly, without apparent limitation. Claimant demonstrated no apparent limitation or pain in the video.

15. On April 3, 2015, Claimant saw Dr. Scott Primack for an Independent Medical Examination (IME) at Respondents' request. Dr. Primack concluded

> Based upon the history, clinical examination, review of the medical records, and the surveillance tapes, I do believe that the patient is

> consciously misrepresenting his physical capabilities. At best, there may have been a cervical strain on 01/28/2014. However, if the patient has any pain at all, it has absolutely nothing to do with his auto accident, but has everything to do with his cervical spondylosis. The cervical spondylosis may well be periodic. This could occur from extensive bowling or lifting of his granddaughter.

16. Dr. Primack opined that any treatment after November 2014 should not be considered work-related.

17. On May 27, 2015, Dr. Young opined Claimant had reached MMI. Claimant was still suffering from chronic neck pain with some radicular symptoms to the upper extremities. He referred Claimant for an FCE and asked him to return for an impairment rating.

18. Claimant saw Dr. Young on June 12, 2015 to review Dr. Primack's IME report. Dr. Young disagreed with Dr. Primack's opinions. Regarding the video of Claimant's bowling activities, Dr. Young noted "I currently have [the] patient without restrictions. He has no restrictions on lifting, and whether or not he can bowl has nothing to do with his case. I do believe that [this] patient has pain and he demonstrates decreased ROM on exam and has evidence of palpable cervical spasm on exam." On physical examination that day, Claimant demonstrated reduced range of motion, and "significant paraspinal muscle spasm."

19. Claimant completed the FCE on August 6, 2015. The FCE was considered valid based on internal consistency criteria. The therapist opined that Claimant gave reliable and maximal effort. Claimant demonstrated the ability to work at a modified light level of exertion, with maximum lifting of 30 pounds.

20. Dr. Young saw Claimant on August 10, 2015 to review the FCE and complete an impairment rating. Dr. Young opined there was "clear correlation" between Claimant's symptoms and his industrial injury. Dr. Young assigned 6% whole person specific disorder impairment under Table 53 II-C of the *AMA Guides*. Range of motion measurements showed an additional 9% impairment, for an overall combined whole person cervical rating of 15%.

21. Respondents requested a DIME, and Dr. Miguel Castrejon was selected as the DIME physician. Dr. Castrejon evaluated Claimant on November 11, 2015.

22. On physical examination, Claimant demonstrated "diffuse" tenderness involving the lower paracervical muscles. Dr. Castrejon appreciated no palpable muscle spasm. Facet loading was negative. Dr. Castrejon concluded the upper extremity symptoms were caused by carpal tunnel syndrome, unrelated to the industrial injury. Dr. Castrejon diagnosed "temporary exacerbation of long-standing pre-existing multilevel cervical degenerative disk and joint disease with no acute changes as a result of the event of January 28, 2014." Dr. Castrejon opined that Claimant's mechanism of injury was "relatively minor," and the physical examination findings were "only minimally

abnormal." Dr. Castrejon opined that Claimant's cervical range of motion measurements were significantly more limited than the motion demonstrated on casual observation and in the surveillance video. Dr. Castrejon thought the video footage demonstrated "no apparent limitation in terms of cervical range of motion nor use of the upper limbs when carrying out bowling activities." Dr. Castrejon concluded:

> the mechanics of the injury for the event of January 28, 2014 would be consistent with the development of neck pain on the basis of a cervical straining injury. This condition was adequately and appropriately treated. This condition resulted in a temporary exacerbation of the claimant's pre-existing long-standing cervical degenerative changes.

23. Dr. Castrejon determined Claimant was at MMI as of the IME with Dr. Primack and sustained no permanent impairment under Table 53. Dr. Castrejon further opined Claimant requires no maintenance treatment after MMI.

24. Although Dr. Castrejon's narrative report referenced April 30, 2015 as the MMI date, the ALJ concludes that is a typographical error. Dr. Castrejon explicitly stated he assigned MMI as of Dr. Primack's IME, which took place on April 3, 2015. Moreover, Dr. Castrejon's handwritten notation on the Division IME Examiner's Summary Sheet states MMI was "4-3-15." Therefore, Claimant's MMI date is April 3, 2015.

25. Dr. Linda Mitchell performed an IME for Respondents on March 18, 2016. Dr. Mitchell's physical examination found no spasm, tenderness, or rigidity in Claimant's cervical spine. Dr. Mitchell reviewed the surveillance video, which shows Claimant moving his neck through a nearly full range of motion quickly, freely, and with no evidence of discomfort. Dr. Mitchell opined Claimant reached MMI on August 10, 2015 as determined by Dr. Young. Dr. Mitchell opined Claimant's ongoing symptoms are related to his underlying preexisting degenerative changes rather that the industrial injury. Dr. Mitchell agreed with Dr. Castrejon that Claimant has no injury-related permanent impairment and requires no further medical treatment for the work injury.

26. Dr. David Yamamoto performed an IME at Claimant's request on April 7, 2016. Dr. Yamamoto diagnosed a cervical strain with persistent symptoms, and chronic degenerative changes in the cervical spine. On physical examination, Claimant had tenderness in the posterior neck without appreciable spasm. His range of motion was reduced in all directions. Dr. Yamamoto opined that Claimant "DID INJURE HIS NECK on 01/28/2014 and certainly qualifies for a table 53, II-B impairment." (Capitals in original). Dr. Yamamoto used category II-B because "it is my opinion that the [degenerative] changes seen [on MRI] were primarily chronic in nature." Dr. Yamamoto did not assign a range of motion rating because the measurements he obtained were inconsistent with the video surveillance and the prior measurements by Dr. Young.[1]

27. Dr. Young testified in a deposition on August 23, 2016. Dr. Young disagreed with Dr. Castrejon's determination that Claimant's ongoing symptoms are

[1] The cervical ROM measurements obtained by Dr. Yamamoto would correlate to an 18% rating, double Dr. Young's ROM rating.

related to pre-existing degenerative changes. Dr. Young opined Claimant's symptoms are causally related to his industrial injury. Dr. Young testified Claimant has repeatedly demonstrated muscle spasm on multiple examinations. Dr. Young did not believe the surveillance video was inconsistent with Claimant's injury or negated his impairment rating.

28. Dr. Mitchell testified at hearing on behalf of Respondents. Dr. Mitchell testified Claimant has degenerative joint disease in his cervical spine, unrelated to his work injury, and this condition can progress over time, causing symptoms and restricted range of motion. Dr. Mitchell opined Claimant has a "chronic pre-existing condition [cervical spondylosis] that would account for his ongoing symptomatology, regardless of whether the work injury had occurred." Dr. Mitchell opined that, if Claimant qualified for a permanent impairment rating, Table 53 II-C was the most appropriate section. But Dr. Mitchell did not believe Claimant had any permanent impairment as a proximate result of his industrial injury.

29. Claimant was an avid bowler for many years before his industrial injury, and at one point even considered turning professional. As a result of his injury, Claimant gradually cut back on his bowling, and eventually stopped bowling entirely in the spring of 2015.

30. Claimant continued to work for Employer throughout his course of treatment after the injury.

31. Dr. Young's notes consistently document that medication improves Claimant's quality of life and ability to perform activities of daily living, with low suspicion for abuse and no side effects.

32. Claimant has overcome the DIME's determination of no impairment by clear and convincing evidence.

33. Dr. Young's opinion regarding Claimant's entitlement to a rating under Table 53 II-C is credible and persuasive.

34. Claimant has proven by a preponderance of the evidence that he is entitled to a 6% whole person cervical rating under Table 53 II-C.

35. Dr. Castrejon, Dr. Mitchell, and Dr. Yamamoto's opinions that Claimant's cervical ROM measurements are inconsistent with his clinical presentation and the video surveillance are credible and persuasive.

36. Claimant has failed to prove by a preponderance of the evidence he is entitled to a rating for cervical ROM deficits.

37. Dr. Young's opinions regarding Claimant's need for medical treatment after MMI are credible and persuasive.

38. Claimant has proven by a preponderance of the evidence that he requires medical treatment after MMI to relieve the effects of his injury and prevent deterioration of his condition.

CONCLUSIONS OF LAW

A. Claimant has overcome the DIME by clear and convincing evidence

The DIME's determination regarding whole person impairment is binding unless overcome by clear and convincing evidence. Section 8-42-107(8)(c); *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). "Clear and convincing evidence means evidence which is stronger than a mere 'preponderance;' it is evidence that is highly probable and free from serious or substantial doubt." *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). Therefore, the party challenging a DIME physician's conclusion must demonstrate that it is "highly probable" that the MMI determination is incorrect. *Qual-Med*, 961 P.2d at 592.

The DIME physician must engage in a "diagnostic process" when evaluating whether a claimant is at MMI. A determination of MMI inherently involves issues of diagnosis and causation, because the DIME must determine what medical conditions exist and which are causally related to the industrial injury. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Hodges v. ATR Collision, Inc*., W.C. No. 4-751-557 (ICAO, August 24, 2010). Accordingly, the DIME's findings regarding diagnosis and causation are binding unless overcome by clear and convincing evidence. Section 8-42-107(8)(b)(II); *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007).

As found, Claimant has overcome Dr. Castrejon's determination of no impairment by clear and convincing evidence. The crux of Dr. Castrejon's determination is his opinion that Claimant suffered a "temporary exacerbation of long-standing pre-existing multilevel cervical degenerative disk and joint disease." The problem with that opinion is that the degenerative changes in Claimant's neck were entirely asymptomatic before the admitted industrial injury, but Claimant has been continuously symptomatic and required ongoing treatment since the injury. He has never returned to his pre-injury baseline status, which was a nonpainful neck requiring no medical treatment. Dr. Castrejon agrees Claimant suffered a compensable injury and did not reach MMI until he received 15 months of treatment. Claimant's treating providers have repeatedly documented muscle spasm, which is an objective finding. Based on the evidence presented, the ALJ concludes that Claimant's injury was not "temporary," because it continues to affect him to this day. The ALJ concludes Dr. Castrejon is highly probably incorrect that all of Claimant's symptoms after April 2015 are causally related to underlying degenerative changes, which were entirely asymptomatic before the industrial injury.

B. Claimant sustained a 6% whole person impairment to his cervical spine

Once the ALJ determines that a DIME rating has been overcome in any respect, the proper rating becomes a question of fact for the ALJ under the preponderance standard. *Paredes v. ABM Industries*, W.C. No. 4-862-312-02 (ICAO, April 14, 2014); *Garlets v. Memorial Hospital*, W.C. No. 4-336-566 (ICAO, September 5, 2001). The only limitation is that the ALJ's findings must be supported by the record and consistent with the *AMA Guides* and other rating protocols. *Newsome v. King Soopers*, W.C. No. 4-941-297-02 (ICAO, October 14, 2016). A finding that the DIME's rating has been overcome does not require the ALJ to reject the DIME's opinions in their entirety. Rather, the DIME's findings can be considered with all other evidence when evaluating the preponderance of persuasive evidence. *Paredes, supra*.

The *AMA Guides* require the rating physician to conduct a clinical and historical evaluation of the claimant's health status and compare the results to the rating criteria in the *AMA Guides*. *Wackenhut Corporation v. Industrial Claim Appeals Office*, 17 P.3d 202 (Colo. App. 2000). A rating physician is not required to award impairment under Table 53 merely because a claimant reports pain and rigidity, or merely because the claimant's medical records document pain and rigidity of six months' duration. To the contrary, a physician may conclude the claimant's overall clinical picture is inconsistent with impairment under Table 53 and decline to assess such impairment. *Marquez v. Inverness Hotel & Golf Club*, W.C. No. 4-498-415 (ICAO, March 25, 2003). *Wilson v. Qwest Communications, Inc.,* W.C. No. 4-846-802-01 (ICAO, January 12, 2012). The same logic applies to ratings based on ROM deficits, and exclusion of otherwise "valid" ROM measurements may be appropriate where the measured impairment does not correlate with the rating physician's clinical observations or other persuasive evidence of function. *Garcia v. Merry Maids*, W.C. No. 4-493-324 (ICAO, August 12, 2002). The above-stated principles apply equally when the ALJ is determining the claimant's impairment rating under the preponderance standard because the ALJ assumes the role of the rating physician. *Serena v. SSC Pueblo Belmont OP Co. LLC.*, W.C. No. 4-922-344-01 (ICAO, December 1, 2015).

As found, the preponderance of persuasive evidence demonstrates that Claimant suffered a 6% whole person cervical impairment under Table 53 II-C as a result of his industrial injury. Dr. Young persuasively opined that Claimant's condition most closely approximates the criteria in section II-C, based on "moderate to severe" degenerative changes on structural tests. Dr. Mitchell agreed that, if Claimant were entitled to a rating, he should be rated under section II-C. The ALJ is not persuaded by Dr. Yamamoto's decision to apply section II-B, because that section refers to "none-to-minimal" degenerative changes. Based on the degree of degenerative changes demonstrated on Claimant's MRI, the ALJ agrees with Dr. Young and Dr. Mitchell that section II-C is most appropriate.

The ALJ is not persuaded that Claimant has demonstrated ROM deficits with sufficient consistency and reliability to support a ROM-based rating. Claimant has shown substantial variability of cervical ROM with multiple providers. The ALJ acknowledges many of the measurements were "valid" under the *AMA Guides'*

reproducibility criteria. But with the exception of Dr. Young, all Level II examining physicians — *including Claimant's IME* — agreed the cervical ROM measurements are inconsistent with Claimant's clinical presentation and the mobility demonstrated on the surveillance video. In light of the numerous inconsistencies and the activities depicted in video footage, the ALJ has no confidence that any cervical ROM measurements contained in the record accurately reflect true permanent impairment. Based on the totality of evidence presented, the ALJ concludes that Claimant has no ratable impairment related to cervical ROM deficits.

C. Claimant is entitled to a general award of medical benefits after MMI

The respondents are liable for medical treatment from authorized providers that is reasonably necessary to cure or relieve the employee from the effects of the injury. Section 8-42-101(1)(a); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). The need for medical treatment may extend beyond MMI if the claimant requires further treatment to relieve the effects of the injury or prevent deterioration of their physical condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). Where the respondents dispute a claimant's entitlement to medical benefits after MMI, the claimant must prove entitlement to those benefits by a preponderance of the evidence. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). If the claimant establishes the probability of a need for future treatment, the claimant is entitled to a general award of future medical benefits, subject to the employer's right to contest compensability, reasonableness, or necessity. *Hanna v. Print Expediters Inc*., 77 P.3d 863 (Colo. App. 2003).

As found, Claimant has proven by a preponderance of the evidence that he requires further medical treatment to relieve the effects of his injury and prevent deterioration of his condition. Claimant has continued to receive maintenance-type treatment from Dr. Young since he was placed at MMI. Dr. Young's records consistently document that the medications improve Claimant's quality of life and ability to engage in activities. Dr. Young regularly reviews the PDMP, and there is no persuasive evidence Claimant has abused his medications or violated his narcotics contract. Dr. Young's opinions regarding Claimant's need for ongoing treatment are credible and persuasive. The contrary opinions of Dr. Castrejon and Dr. Mitchell are primarily based on their opinions that Claimant's ongoing symptoms are not causally related to the industrial injury. The ALJ has rejected this reasoning by finding that Claimant overcame the DIME by clear and convincing evidence.

ORDER

It is therefore ordered that:

1. Respondents shall pay Claimant PPD benefits based on a 6% whole person rating.

2. Respondent shall pay statutory interest of 8% per annum on all compensation not paid when due.

3. Claimant's claim for additional PPD benefits based on cervical ROM deficits is denied and dismissed.

4. Respondents shall pay for reasonable, necessary, and related medical treatment after MMI from authorized providers to relieve the effects of Claimant's industrial injury and/or prevent deterioration of his condition.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 27, 2017

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

The issue presented involves Claimant's entitlement to additional medical benefits. The specific question to be answered is:

I. Whether Dr. Mark Meyer's request for additional physical therapy and dry needling is "deemed authorized" for Respondents' failure to contest his request for prior authorization in compliance with WCRP 16-9 and 16-10.

II. If Claimant failed to establish that the additional physical therapy and dry needling should be deemed authorized, whether Claimant is nevertheless entitled to said physical therapy and dry needling on the grounds that it is otherwise reasonable, necessary and related to his January 6, 2000 industrial injury.

III. Whether Claimant established by a preponderance of the evidence that repeat medial branch blocks and a repeat MRI as recommended by Dr. Mark Meyer is reasonable, necessary and related to Claimant's January 6, 2000, admitted industrial injury.

FINDINGS OF FACT

Based upon the evidence presented, including the deposition testimony of Dr. Allison Fall, the ALJ enters the following findings of fact:

1. On January 6, 2000, Claimant injured his low back in the produce department for Employer while attempting to charge an electric pallet jack. Claimant experienced immediate, debilitating pain in his lumbar spine and bilateral legs. Claimant undertook a protracted course of conservative care which failed to provide lasting relief of his symptoms. Eventually Claimant underwent lumbar spine fusion surgery with Dr. Roger Sung on January 15, 2002. The surgery was ineffective in relieving Claimant's pain, and in fact, his pain was worse after the surgery. Consequently, Claimant has received wide-ranging post surgical maintenance medical treatment.

2. As part of his post surgical treatment, Claimant came under the care of Dr. Mark Meyer on July 16, 2003. When Dr. Meyer first evaluated the claimant, the claimant described a "throbbing, constant, sharp, burning pain ranging from an 8/10 at rest to a 10/10 with activity predominantly in the mid area of the back and radiating into the left side and leg." According to Dr. Meyer, Claimant had tried "nonsteroidals, muscle relaxants, Tylenol, physical therapy, chiropractic, acupuncture, opioids and massage over time with varying degrees of temporary benefit." It was also noted that Claimant had received two nerve blocks from Dr. Benecke, which Claimant reportedly could not recall were of particular benefit in providing lasting symptom relief. .

3. On October 28, 2003, Dr. Meyer performed a selective nerve root block at L5 on the left. The block was not of any help in relieving Claimant's pain complaints.

4. On April 4, 2004, Dr. Jeffrey Jenks evaluated Claimant and performed EMG testing. The EMG was read as showing "[n]o obvious evidence of left lumbosacral radiculopathy." According to Dr. Jenks' report, The absent motor unit on testing "may be secondary to a lack of voluntary effort of the muscles tested." Dr. Jenks reported that "[t]t is unusual to see complete lack of motor units without evidence of membrane irritability in the context of a lumbosacral radiculopathy." Given these findings, Dr. Jenks suggested the potential for functional overlay and symptom magnification.

5. On May 14, 2004, Insurer filed an Amended Final Admission f Liability (FAL) admitting liability for 33 percent whole person impairment in addition to reasonable, necessary and related post maximum medical improvement (MMI) treatment benefits.

6. On June 10, 2005, Dr. Jeffrey Sabin evaluated Claimant at the request of Insurer. Based on his independent medical evaluation (IME), which included an extensive review of Claimant's medical records, Dr. Sabin diagnosed chronic low back pain and left leg pain and weakness of unknown etiology. Dr. Sabin opined that Claimant's left leg weakness went beyond any particular nerve root finding on examination. Specifically he noted: "[h]e is physically weak in a number of areas, which simply does not make sense and it hurts when he puts any weight whatsoever on the left lower extremity, which is difficult to support on the basis of the x-ray and MRI reports".

7. On April 25, 2006, Dr. Meyer evaluated Claimant in follow-up during which visit Claimant was requesting a stair lift in his house. Dr. Meyer indicated he is not supportive of Claimant having a lift, as "this is allowing him to take on the role of a more debilitated person." Dr. Meyer went on to opine, "I would like to see him become more active and proactive in his rehabilitation".

8. On August 15, 2006, Dr. Meyer opined that Claimant was not likely to have significant improvement with pain management "over time regardless of any interventions, based on his psychiatric profile."

9. Dr. Meyer reevaluated Claimant on October 10, 2006. He recommended L5-S1 medial branch blocks. Claimant underwent the recommended blocks; however, his pain did not improve, but rather worsened to a level 10/10. Despite Dr. Meyer's extensive treatment, Claimant continued to report a very poor quality of life and very limited abilities.

10. On July 29, 2010, Dr. Meyer opined, "the only thing which [he] would consider for [Claimant] . . . would be the possibility of a left sacroiliac joint (SI) injection diagnostically. Nonetheless, Dr. Meyer did not think it would "realistically . . . address a significant portion of [Claimant's] pain".

11. On November 8, 2010, Claimant underwent repeat L5-S1 transforaminal epidural steroid injections, which again provided no benefit and actually worsened his pain.

12. On September 12, 2011, Dr. Meyer performed bilateral SI joint injections. Claimant reported no benefit from the procedure. Rather, he complained of new and worsening right-sided radiculopathy and weakness.

13. Claimant underwent repeat L5-S1 transforaminal ESIs on November 19, 2012, which Claimant reported for a third time in a follow-up visit on December 10, 2012, caused worsening symptoms. During his December 10, 2012 visit, Claimant reported to physician assistant (PA), David Faron that he was willing to try an additional injection if Dr. Meyer "though there was a reasonable chance for improvement."

14. On November 6, 2013, Dr. Meyer drafted a letter, "To Whom It May Concern", in which he opined: "The only thing that has really provided him any significant benefit over the last couple of years has been some occasional chiropractic treatments/manipulations which do tend to help the severe spasm in his back". Dr. Meyer also recommended repeat diagnostic SI joint injections. The repeat SI joint injections were performed on November 18, 2013, with no reported benefit.

15. Claimant continued his maintenance treatment with Dr. Meyer for many months without reported improvement in symptoms. On May 5, 2016, Dr. Meyer reevaluated Claimant for complaints of increasing low back pain and spasms in the anterior thigh. Dr. Meyer's "plan" was to "request authorization for repeat MRI, with and without contrast, and resume PT with dry needling since [Claimant] has increased LBP and radicular symptoms."

16. On May 11, 2016, Dr. Meyer's office drafted a facsimile cover sheet wherein he indicated that he was seeking authorization for a repeat lumbar MRI with and without contrast along with dry needling and physical therapy. This cover sheet along with a copy of the May 5, 2016 treatment note was faxed to the adjuster assigned to the case on May 17, 2016, and was purportedly received by Insurer on May 18, 2016. Claimant contends that the cover sheet and May 5, 2016 report faxed to the claims representative constitutes a completed request for prior authorization pursuant to WCRP 16-10.

17. Respondents took no action concerning the request for physical therapy and dry needling; however, a repeat MRI, with and without contrast, was performed on May 30, 2016. The images from this MRI were compared to one performed May 9, 2011. A reported generated thereafter indicates that the May 30, 2016 MRI was read as a "stable, but abnormal MRI." Although opposing counsel suggests Dr. Meyer continued to request another MRI after that performed May 30, 2016, there has been no subsequent request for prior authorization and there seems to be some confusion on Dr. Meyer's part. Dr. Meyer is apparently unaware the May 30, 2016, MRI was performed. In response to opposing counsel's correspondence regarding the repeat MRI, on December 18, 2016, Dr. Meyer indicated:

> Yes, I do think it is appropriate to repeat the lumbar MRI given the fact that the patient has not had one for four to five years as increasing weakness and severity of the radiculopathy on EMG as well as increasing pain all evident…..

18. On July 5, 2016, Claimant returned to Dr. Meyer for evaluation. Dr. Meyer documented a normal gait pattern and graded Claimant's strength as "good" [4/5] in all the major muscle groups tested in both the upper and lower extremities. Moreover, Claimant's straight raise leg testing was noted to be negative. Claimant's lumbar exam was only a positive left quadrant loading test. Under "Plan", Dr. Meyer noted: "Bilateral L5S1MBB" and "Repeat EMG/NCV Dr. Scott or Dr. Sandell". The note fails to provide an explanation of the reasonableness or medical necessity of either procedure.

19. On July 12, 2016, Dr. Meyer requested "repeat EMG testing of Claimant's lower extremities. The EMG testing was authorized and would be performed by Dr. Timothy Sandell on July 26, 2016.

20. On July 18, 2016, the carrier received a request for prior authorization of the bilateral medial branch blocks recommended by Dr. Meyer during Claimant's July 5, 2016 appointment. Respondents denied the request on July 22, 2016 and filed choosing to set the matter for hearing pursuant to WCRP 16.

21. As noted, the EMG testing requested by Dr. Meyer was authorized and performed by Dr. Sandell on July 26, 2016, and was read as being abnormal. Specific findings included:

> Electrodiagnostic evidence suggestive of severe bilateral motor and sensory peripheral neuropathy.
>
> Electrodiagnostic evidence of multilevel radiculopathy involving the left L4, L5 and S1 levels and the right L5 and S1 levels.

22. At Respondents' request, Dr. Allison Fall preformed a fourth IME of Claimant on August 24, 2016.[1] Dr. Fall was asked to address Dr. Meyer's request for prior authorization of dry needling/physical therapy and repeat bilateral L5-S1 medial branch blocks. Dr. Fall opined that dry needling "would not lead to any long-term benefit and would likely increase [Claimant's] pain." According to Dr. Fall is thought to "affect muscle relaxation" and as such would not be expected to "do anything for his pain and chronic deconditioning." She also opined that there was "no indication for epidural

[1] Dr. Fall preformed an IME of Claimant on November 1, 2007 to address questions regarding the reasonableness, necessity and relatedness of the request for a stair glide. She also completed a records review request and a follow-up IME on January 27, 2009 and October 8, 2009 to answer questions regarding whether Claimant presented as a good candidate for spinal cord stimulation, whether a trial of spinal cord stimulation was reasonable and necessary and Claimant's need for a lightweight manual wheelchair. Finally, Dr. Fall conducted a third IME on March 6, 2013, to address questions surrounding whether physical therapy modalities were reasonable and necessary.

steroid injections due to the non-physiologic findings and chronicity of the symptomatology and a chronic pain syndrome."

23. By letter dated December 18, 2016, Dr. Meyer responded to interrogatories propounded by Claimant's counsel. In his letter report, Dr. Meyer indicates he recommends physical therapy and/or dry needling. However, Dr. Meyer noted that there are no guarantees with any benefit in dry needling in patients such as Claimant. He also noted that it "should be recognized that [dry needling/physical therapy] will not play a role in likely changing any of [Claimant's] radiculopathy pain or weaknesses as this is a chronic and permanent problem for him." Dr. Meyer also addressed the request for MRI and additional medial branch blocks stating:

> I do continue to recommend an [sic] lumbar medial branch blocks. Reason for this if [sic] the patient carries a diagnosis now 14 years after an L4-L5 decompression fusion with progressive changes over the years of L5-S1 degenerative disease, the MRI from 2011 clearly reports advanced L5 and S1 bilateral arthropathy of the facet joints as well as severe degenerative disc disease, which would be quite common this time duration after a fusion with the caudal transition levels being involved."
>
> "Mr. Mascotti has pain across his low back, increased with standing, bad when he first gets up from a sitting or lying down position and is consistent with elements of facet arthropathy given his pain complaints in his back as well as down into his left leg. I believe there are significant components likely attributable to the facet arthropathy post fusion at degenerative disc at the L5-S1 level, to me it has clearly indicated to proceed with medical branch blocks and if positive, move forward radiofrequency rhizotomy, which certainly could not only help his pain, but improve his ability to stand, ambulate, and maintain his ability to work."

24. The claimant testified that it is his hope the requested dry needling/physical therapy will reduce his pain and weakness, the two symptoms Dr. Meyer specifically concedes are "unlikely" to change with dry needling.

.

25. Dr. Fall testified by deposition on February 8, 2017. She testified that the results of the May 30, 2016, MRI were very positive or reassuring in that there was no significant interval change compared to the May 9, 2011, MRI. There is no recurrent stenosis and there is a stable fusion. Consequently, Dr. Fall opined that a repeat MRI some nine months was not reasonable and necessary.

26. Based upon the evidence presented, the ALJ finds that Claimant has failed to prove that Dr. Meyer requested prior authorization of a repeat MRI after the May 30, 2016, MRI was performed or that repeating this diagnostic study a mere nine months after it was last performed is reasonable and necessary to maintain his condition at MMI.

27. Dr. Fall also testified that additional physical therapy is not warranted in this case explaining that Claimant's activity level is so minimal currently that he simply needs to "start doing more." According to Dr. Fall, there has been an over reliance on passive modalities in treating Claimant in this case. The ALJ infers and finds from Dr. Fall's testimony and the report of Dr. Meyer that she does not believe Claimant will benefit from additional therapy. Even Dr. Meyer agrees that Claimant presents with signs of functional overlay and symptom magnification. Moreover, multiple psychologists and evaluating physicians have opined Claimant is not likely to improve with any interventional modalities.

28. According to the testimony of Dr. Fall, dry needling is included within the Medical Treatment Guidelines as a modality that can be performed as part of physical therapy, but in this case it is not reasonable or necessary as it will not "change any underlying . . . anatomy or physiologic problem." Dr. Fall testified that dry needling will likely cause Claimant more pain since it involves "[sticking] needles in the muscles to try to alleviate increased muscle tension and spasm." Based upon the record evidence presented, the ALJ credits the opinion of Dr. Fall to find that Claimant's demonstrated poor response to prior injection therapies renders the request of dry needling unreasonable. While the undersigned is acutely aware of the fact that dry needling is very different than ESI and/or medial branch blocks, it is nonetheless invasive and involves the introduction of a needle into the body which has been poorly tolerated by Claimant in the past. Moreover, the evidence presented persuades the ALJ that dry needling is unnecessary as it is unlikely to play a role in "changing any of [Claimant's] radiculopathy pain or weaknesses [which] is a chronic and permanent problem for him" according to Dr. Meyer.

29. Based upon the evidence presented, the ALJ finds that Claimant has failed to prove, by a preponderance of the evidence that the requested physical therapy/dry needling is reasonable and necessary to maintain MMI. Furthermore, the evidence presented persuades the ALJ that Dr. Meyer's failed to present a completed request for prior authorization to the adjuster for dry needling.

30. To complete a prior authorization request under WCRP 16-10, the provider shall concurrently explain the reasonableness and the medical necessity of the services requested, and shall provide relevant supporting medical documentation. Supporting medical documentation is defined as documents used in the provider's decision-making process to substantiate the need for the requested service or procedure.

> (1) When the indications of the Medical Treatment Guidelines are met, no prior authorization is required. When prior authorization for payment is indicated, the following documentation is required:
>
> (a) An adequate definition or description of the nature, extent, and necessity for the procedure;
>
> (b) Identification of the appropriate Medical Treatment Guideline applicable to the requested service, if applicable; and

(c) Final diagnosis.

In this case, the ALJ finds that documentation sent to the adjuster consisting of a cover sheet and Dr. Meyer's May 5, 2016 treatment note is missing information required by Rule 16-10(F(1)(b), W.C.R.P. to make it a completed request for prior authorization for dry needling.

31. As noted at paragraph 23 above, Dr. Meyer, believes that Claimant, "has pain across his low back which is consistent with elements of facet arthropathy rendering the recommendation to proceed with medical branch blocks diagnostically and if positive, to radiofrequency rhizotomy a reasonable and necessary treatment modality to help, not only with pain, but to improve Claimant's ability to stand, ambulate, and maintain his ability to work." Claimant returned to work for Employer approximately 8 weeks after surgery and is currently working, albeit in a different section of the store from his wheelchair.

32. Regarding the recommendation for additional medical branch blocks, Dr. Fall testified that Claimant's reported leg pain is not consistent with facet arthropathy. Dr. Fall explained that facet joint arthropathy does not cause numbness and tingling or pain distal to the knee, "all of which is present in [Claimant's] leg pain." Moreover, Dr. Fall testified that simply having low back pain does not necessarily prove the existence of facet arthropathy. Rather, Dr. Fall testified that in this case she has not seen objective evidence of pain caused by facet arthropathy during examinations she's completed. She went on to explain that Claimant is fused at the level which Dr. Meyer believes is causing pain associated with facet arthropathy. According to Dr. Fall, symptoms from facet arthropathy are elicited with hyperextension and rotation. As noted, Claimant's low back has been fused and does not move at the level where Dr. Meyer believes his pain is emanating from. Consequently, Dr. Fall does not believe that the records clearly defines Claimant's facet joints as his pain generator as suggested by Dr. Meyer. Moreover, Dr. Fall testified that it was not medically probable that Claimant's response to an additional set of medical branch blocks would be different than that he demonstrated previously which in this case was counterproductive in that it increased Claimant's pain levels considerably. Finally, Dr. Fall explained that it was not medically appropriate to perform an invasive procedure without an expected improvement in function. Based upon the evidence presented, the ALJ finds that Claimant did not experience any meaningful improvement in his function following any of the blocks administered by Dr. Meyers. Rather, the ALJ finds that medical records support a conclusion that Claimant experienced increased pain levels without any improvement in function following ESI and SI joint injection as well as medial branch blocks. Consequently, the ALJ finds that the requested repeat medial branch blocks are not in accordance with Colorado's Medical Treatment Guidelines.

33. The ALJ finds the opinions of Dr. Fall to be credible, persuasive, and supported

by the evidence presented as a whole. Accordingly, the ALJ finds Dr. Fall's opinions more persuasive and entitled to greater weight than the contrary opinions issued by Dr. Meyer.

34. Claimant has failed to prove the requested repeat L5-S1 medial branch blocks are reasonable and necessary to maintain MMI.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

B. In accordance with *Section 8-43-215, C.R.S.,* this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. In deciding whether a party has met their burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensecki v. ICAO*, 183 P.3d 684 (Colo.App. *2008).* In short, the ALJ determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo.App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo.App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo.App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's

testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). As found, the ALJ credits the opinions of Dr. Fall as persuasive regarding the reasonableness, necessity and relatedness of Claimant's need for additional physical therapy, dry needling and repeat medical branch blocks to his January 6, 2000 industrial injury.

Medical Benefits

The Requested Dry Needling/Physical Therapy, MRI and Repeat L5-S1 Medial Branch Blocks

D. A claimant is entitled to medical benefits that are reasonably necessary to cure or relieve the effects of the industrial injury. *See* § 8-42-101(1), C.R.S. 2003; *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). The question of whether the need for treatment is causally related to an industrial injury is one of fact. *Walmart Stores, Inc. v. Industrial Claims Office, supra*. Similarly, the question of whether medical treatment is reasonable and necessary to cure or relieve the effects of an industrial injury is one of fact. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). Where the relatedness, reasonableness, or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc*., W.C. No. 4-117-758 (ICAO April 7, 2003). Based upon the evidence presented, the ALJ concludes that Claimant has failed to prove that the request for additional physical therapy and dry needling is authorized because Respondents failed to comply with Rule 16-10(F), W.C.R.P.[2] In this case, the ALJ concludes that the request for prior authorization for additional physical therapy/dry needling dated May 11, 2016 was incomplete as it did not contain information required by Rule 16-10(F(1)(b), W.C.R.P. to make it a completed request. While the "request" did include a copy of the May 5, 2016 treatment note, the ALJ concludes that the note itself does not contain an adequate description of the nature, extent, and necessity for authorizing dry needling and/or additional physical therapy. Moreover, to the extent that dry needling is included within the Medical Treatment Guidelines as a modality that can be performed as part of physical therapy, as testified to by Dr. Fall, the May 5, 2016 report fails to identify the appropriate Medical Treatment Guideline applicable to the requested service.

E. The evidence presented also persuades the ALJ that Claimant failed to prove, by

[2] As found, the requested MRI was authorized and completed May 30, 2016. Thus, this order does not address the request for a repeat MRI in so much as Dr. Meyer did not submit a follow-up request for a repeat MRI following the May 30, 2016 study. Nonetheless, to the extent that Dr. Meyer made a follow-up request, the ALJ concludes that the results of the May 30, 2016 study render a follow-up MRI unnecessary and unreasonable.

a preponderance of the evidence, that the requested dry needling/physical therapy, repeat bilateral L5-S1 medial branch blocks and to the extend requested a follow-up MRI after May 30, 2016 are reasonable and necessary to maintain Claimant's MMI status.

F. Here, the evidence presented persuades the ALJ that the testimony and opinions of Dr. Fall are the most credible and persuasive. In the instant claim, the Claimant has undergone repeat EMG testing. The court accepts the testimony of Dr. Fall that the EMG shows a worsening peripheral neuropathy attributable to Claimant's 26-year history of diabetes, requiring the use of oral and injectable medications. Regardless of the cause of the peripheral neuropathy, Claimant presented no credible evidence that any of Dr. Meyer's treatment recommendations are designed to treat any of the findings on EMG. Rather, Dr. Meyer specifically stated the dry needling/physical therapy would likely *not* address the claimant's radiculopathy and lower extremity weakness, as these are chronic and permanent conditions. Furthermore, the ALJ accepts the testimony of Dr. Fall that repeat MRI is currently not reasonable and necessary given the results of the pre and post-contrast MRI that was authorized and performed on May 30, 2016. This MRI was read as "stable" when compared to the May 9, 2011, MRI. Finally, the court finds the request for prior authorization to perform repeat bilateral L5-S1 medial branch blocks similarly incomplete as the May 11, 2016 request for authorization for additional physical therapy and dry needling. Nonetheless, Respondents timely denied this request on July 18, 2016 and the ALJ is persuaded by the testimony of Dr. Fall that medical branch blocks were previously performed on October 6, 2010, with poor, nondiagnostic outcome. Given Claimant's prior response to medial branch blocks along with Dr. Fall's credible and convincing testimony, the ALJ concludes that such repeat intervention is unlikely to result in a different outcome. Consequently, the ALJ concludes that the request to repeat bilateral L5-S1 medial branch blocks is neither reasonable nor necessary.

ORDER

It is therefore ordered that:

1. Dr. Meyer's request for prior authorization for dry needling/physical therapy is denied and dismissed.

2. Dr. Meyer's request for a repeat lumbar MRI is denied and dismissed.

3. Dr. Meyer's request for repeat bilateral L5-S1 medial branch blocks is denied and dismissed.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the

Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that he injured his right arm during the course and scope of his employment with Employer on November 20, 2016.

2. Whether Claimant has proven by a preponderance of the evidence that he is entitled to receive reasonable, necessary and causally related medical benefits for his industrial injury.

FINDINGS OF FACT

1. Employer operates a casino in Colorado. Claimant works for Employer as an Assistant Chef on a buffet line. On November 20, 2016 Claimant completed his shift and clocked out for the day at 10:00 p.m. He left his station at Employer's first floor kitchen to wait for his friend Edward Kemp at Employer's Fireside Kitchen on the second floor of the facility.

2. Claimant waited for approximately 30 minutes until Mr. Kemp completed his work shift. At 10:30 p.m. Mr. Kemp clocked out. He planned to meet Claimant so they could drive back to Denver, Colorado from Employer's casino.

3. Claimant explained that he subsequently played a prank on Mr. Kemp. As Claimant was walking behind Mr. Kemp while on the second floor of Employer's casino, he popped a small creamer container at Mr. Kemp's back. The popping sound startled Mr. Kemp. As Mr. Kemp turned around, a knife from his knife bag struck Claimant in the right arm. Claimant suffered a laceration in his right elbow area.

4. Mr. Kemp initially reported that he and Claimant were turning a corner from opposite directions. They collided and Claimant suffered a right elbow laceration. However, he corrected his initial statement because the facts were incorrect. Mr. Kemp testified that, after he clocked out from work, he was walking ahead of Claimant. He heard a load popping sound that startled him. As he spun around, a serrated knife from his knife bag cut Claimant in the right elbow area.

5. Claimant remarked that he was not involved in any work activities when he popped the creamer container at Mr. Kemp. He acknowledged that the activities causing his right arm laceration on November 20, 2016 could be characterized as horseplay. Claimant noted that the event constituted an isolated prank and was not the type of activity that occurred regularly throughout the casino. He did not observe other employees engaging in horseplay while working for Employer. Claimant explained that

he had been trained and advised that he would be coached by a supervisor if he engaged in horseplay.

6. A Supervisor's Accident Investigation Report reflects that Claimant was engaged in horseplay with another employee after the completion of his shift. A knife came through the other employee's knife bag and cut Claimant's right arm. The Report reflects that Claimant would receive training and continued coaching from Chef de Cuisine J. David Stenborg.

7. Employer's Risk and Safety Manager Lorry Mooney testified that she conducted an investigation of the November 20, 2016 accident. She reviewed notes, statements and surveillance footage regarding the event. Ms. Mooney remarked that the incident occurred at 10:33 p.m. Claimant had clocked out from his shift at 10:00 p.m. Ms. Mooney explained that Claimant popped a creamer container at Mr. Kemp's back and was then cut by a knife in Mr. Kamp's bag. She confirmed that Mr. Stenborg coached Claimant and Mr. Kemp regarding horseplay at Employer's casino.

8. Ms. Mooney commented that an ambulance arrived at Employer's casino after the November 20, 2016 incident. Claimant received treatment for his right arm laceration in the ambulance.

9. Ms. Mooney presented Claimant with a designated provider list so that he could choose an Authorized Treating Physician (ATP). Claimant selected Occupational Medicine Physicians and received medical care from ATP Dee Jay Beach, D.O. and other authorized providers.

10. Claimant has failed to demonstrate that it is more probably true than not that he injured his right arm during the course and scope of his employment with Employer on November 20, 2016. Claimant explained that after he completed his work shift and clocked out he went up to Employer's second floor kitchen to wait for Mr. Kemp to finish his shift so they could travel together back to Denver. As Claimant was walking behind Mr. Kemp he popped a small creamer container at Mr. Kemp's back. Mr. Kemp became startled and twisted around. A serrated knife from his knife bag cut Claimant in the right elbow area. Although Mr. Kemp initially provided a different version of the November 20, 2016 incident, he subsequently corroborated Claimant's account. After conducting a comprehensive investigation, Ms. Mooney also confirmed Claimant's account. She remarked that the November 20, 2016 accident occurred at 10:33 p.m. in Employer's casino. Claimant had clocked out from his shift at 10:00 p.m. He was cut by a knife in Mr. Kamp's bag after he had popped a creamer container at Mr. Kemp's back. Ms. Mooney commented that Mr. Stenborg coached Claimant and Mr. Kemp regarding horseplay at Employer's casino.

11. The record reveals that the November 20, 2016 incident constituted a deviation from employment so substantial as to remove it from the employment relationship. The deviation from employment activities was significant because Claimant had completed his shift and clocked out about 30 minutes prior to popping the creamer container. The activity of popping a creamer container at Mr. Kemp did not

constitute an employment duty. Instead, Claimant engaged in an activity outside of his employment duties that caused his injury. Moreover, Claimant remarked that he was not performing any job duties when he popped the creamer container at Mr. Kemp. He acknowledged that the activities causing his right arm laceration on November 20, 2016 could be characterized as horseplay. Claimant noted that the November 20, 2016 event constituted an isolated prank and was not the type of activity that regularly occurred throughout the casino. Furthermore, Employer provided Claimant with training and coaching regarding horseplay after the incident. Therefore, Claimant's deviation constituted horseplay and removed the activity from the employment relationship. Accordingly, Claimant's right arm injury did not arise out of his job duties for Employer on November 20, 2016.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. §8-41-301(1)(b), C.R.S. (2006); *see City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has

its “origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee’s service to the employer.” *Popovich v. Irlando,* 811 P.2d 379, 383 (Colo. 1991).

5. Regardless of the theoretical framework that is applied, the issue is whether the “claimant’s conduct constitutes such a deviation from the circumstances and conditions of the employment that the claimant stepped aside from his job and was performing activity for his sole benefit.” *In Re Laroc,* W.C. 4-783-889 (ICAP, Feb. 1, 2010); *see Panera Bread, LLC v. Industrial Claim Appeals Office,* 141 P.3d 970 (Colo. App. 2006). It is thus not essential that the activities of an employee emanate from an obligatory job function or result in a specific benefit to the employer for a claim to be compensable. *City of Boulder v. Streeb,* 706 P.2d 786 (Colo. 1985).

6. When the employer asserts a personal deviation from employment activities “the issue is whether the activity giving rise to the injury constituted a deviation from employment so substantial as to remove it from the employment relationship.” *Roache v. Industrial Commission,* 729 P.2d 991 (Colo. App. 1986); *In Re Laroc,* W.C. 4-783-889 (ICAP, Feb. 1, 2010). If an employee substantially deviates from the mandatory or incidental duties of employment so that he is acting for his sole benefit at the time of injury, his claim is not compensable. *Kater v. Industrial Commission,* 729 P.2d 746 (Colo. App. 1986). However, ministerial actions for an employee’s personal comfort do not constitute a substantial deviation from employment unless the personal need being met or the means chosen by the employee to satisfy his personal comfort is unreasonable. *In Re Rodriguez,* W.C. 4-705-673 (ICAP, Apr. 30, 2008); *see Larson’s Workers’ Compensation Law,* §21.00. In assessing if a particular activity has sufficient connection with the circumstances under which the employee usually performs his job so as to be "incidental" to the employment depends on whether the activity is a common, customary and accepted part of the employment instead of an isolated incident. *In Re Rodriguez*, W.C. 4-911-673 (ICAP, Jan. 21, 2016).

7. In *Lori’s Family Dining, Inc. v. Industrial Claim Appeals Office*, 907 P.2d 715, 718 (Colo.App. 1995), the court announced the following four part test to analyze whether an activity constitutes a deviation or horseplay: (1) the extent and seriousness of the deviation; (2) the completeness of the deviation; (3) the extent to which the practice of horseplay had become an accepted part of the employment; and (4) the extent to which the nature of the employment may be expected to include some horseplay. The question of whether a deviation is significant enough to remove the claimant from the course and scope of employment is a factual determination for the ALJ. *Id.*

8. As found, Claimant has failed to demonstrate by a preponderance of the evidence that he injured his right arm during the course and scope of his employment with Employer on November 20, 2016. Claimant explained that after he completed his work shift and clocked out he went up to Employer’s second floor kitchen to wait for Mr. Kemp to finish his shift so they could travel together back to Denver. As Claimant was walking behind Mr. Kemp he popped a small creamer container at Mr. Kemp’s back.

Mr. Kemp became startled and twisted around. A serrated knife from his knife bag cut Claimant in the right elbow area. Although Mr. Kemp initially provided a different version of the November 20, 2016 incident, he subsequently corroborated Claimant's account. After conducting a comprehensive investigation, Ms. Mooney also confirmed Claimant's account. She remarked that the November 20, 2016 accident occurred at 10:33 p.m. in Employer's casino. Claimant had clocked out from his shift at 10:00 p.m. He was cut by a knife in Mr. Kamp's bag after he had popped a creamer container at Mr. Kemp's back. Ms. Mooney commented that Mr. Stenborg coached Claimant and Mr. Kemp regarding horseplay at Employer's casino.

9. As found, the record reveals that the November 20, 2016 incident constituted a deviation from employment so substantial as to remove it from the employment relationship. The deviation from employment activities was significant because Claimant had completed his shift and clocked out about 30 minutes prior to popping the creamer container. The activity of popping a creamer container at Mr. Kemp did not constitute an employment duty. Instead, Claimant engaged in an activity outside of his employment duties that caused his injury. Moreover, Claimant remarked that he was not performing any job duties when he popped the creamer container at Mr. Kemp. He acknowledged that the activities causing his right arm laceration on November 20, 2016 could be characterized as horseplay. Claimant noted that the November 20, 2016 event constituted an isolated prank and was not the type of activity that regularly occurred throughout the casino. Furthermore, Employer provided Claimant with training and coaching regarding horseplay after the incident. Therefore, Claimant's deviation constituted horseplay and removed the activity from the employment relationship. Accordingly, Claimant's right arm injury did not arise out of his job duties for Employer on November 20, 2016.

ORDER

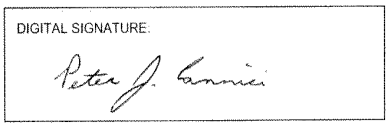
Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's request for Workers' Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

#LPG4ZL7M0D1EMEv 2

DATED: April 28, 2017.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

#LPG4ZL7M0D1EMEv 2

ISSUES

1. Determination of authorized treating physician and whether or not Claimant is entitled to a change of physician.

2. Whether Claimant has overcome by clear and convincing evidence the opinion of the Division Independent Medical Examination (DIME) physician Stephen Lindenbaum M.D. regarding maximum medical improvement (MMI).

3. Determination of Claimant's permanent partial disability (PPD) impairment rating.

4. Determination of Claimant's average weekly wage (AWW).

FINDINGS OF FACT

1. Claimant is employed by Employer as a part time EMT on ski patrol and also as a part time ski instructor.

2. Claimant's hours and wage rates vary. In 2015, Claimant earned total wages from Employer of $874.10. *See* Exhibit 9.

3. Claimant also works at additional mountains, has her own business, and does bookkeeping work. In 2014, Claimant earned $10,204.71 from Clear Creek Skiing Corp., $4,428.00 from Loveland Basin Racing Club, and $1,008.00 from Cindy Sterling, CPA INC. Claimant also reported on her 2014 tax returns a net profit of $4,020.00 for her own business. *See* Exhibits 6, 7, 8.

4. In 2015, Claimant reported on her tax returns a net profit of $174.00 for her business. She also earned $1,120.80 from Clear Creek Skiing Corp. *See* Exhibits 10, 11, 14.

5. Claimant did not submit a W-2 for 2014 from Employer. Claimant also did not submit any wages for 2015 beyond Employer, Clear Creek Skiing, and her business net profit. Claimant testified credibly at hearing regarding her total wages. Claimant's goal is to earn $500 per week so that she has enough money to live on.

6. On February 4, 2015 Claimant was volunteering at Beaver Creek Resort and was not working for Employer. Claimant was skiing when another skier came at her out of control. Claimant tried to immediately react and stopped quickly on the

downhill edge of her right ski to avoid a collision. Claimant felt a snap on the inside of her right knee. Claimant's knee was weak and swollen.

7. On February 8, 2015 Claimant worked her scheduled shift for Employer and felt like her knee was good enough to work. Claimant had no issues working that day.

8. On February 9, 2015 Claimant was working her scheduled shift for Employer at Vail Mountain Resort. Claimant unclipped from her skis and was in her ski boots unloading fencing supplies from the basket of a snow cat. Claimant twisted to throw fencing out of the basket and felt a snap across her right knee and her right knee gave way a little bit.

9. Claimant did not fall and was able to finish unloading the fencing and was able to ski down the hill. Claimant advised her supervisor about her knee issues and that she would most likely not be able to work the next day.

10. Claimant's knee continued to be swollen and painful after February 9, 2015 and she approached Employer regarding workers' compensation. Claimant testified credibly that Employer did not provide her with a choice of physicians but told her to go to Vail Valley Medical Center. Claimant testified credibly that she decided to go to Vail Summit Orthopedics and set up an appointment with them shortly after her injury.

11. In a February 18, 2015 email to Employer's Occupational Health Specialist, Claimant reported that her injury for Employer happened on February 9, 2015 and was not the same injury as on February 4, 2015. Claimant reported that both injuries involved the right knee but that the mechanism of injury was different and that different parts of the knee were injured in each incident. *See* Exhibit 16.

12. On February 19, 2015 Claimant was evaluated by Lucia London, NP at Vail Valley Medical Center. Claimant reported a snap across her right knee when she twisted to throw a fence out of the basket of a snow cat. Claimant reported that one week prior while volunteering for the Vail Valley Foundation, she had injured her right knee while skiing and that it had swelled considerably and was painful but felt strong and solid. Claimant reported that on April 9 when the second incident occurred she was still experiencing swelling but that the pain had improved somewhat. Claimant reported it was probably a mistake to have continued with her work shifts for Employer and that she was likely partially responsible for the April 9 incident. Claimant reported knee pain of 5/10 to the medial aspect of the knee worse when she walked and with lateral movements. Claimant also reported an intermittent shooting pain over the anterior aspect of her knee. Claimant had a knee brace that she purchased on eBay and also indicated that she had an appointment set up with Vail Summit Orthopedics for the following day. NP London ordered an MRI of Claimant's right knee and provided a referral to Vail Summit Orthopedics. *See* Exhibit AA.

13. On February 20, 2015 Claimant underwent an MRI of her right knee that was interpreted by Vincent Herlihy, M.D. The impression provided was: acute full-thickness tear of the proximal anterior cruciate ligament; grade 1 sprain of the superficial medical collateral ligament with mild underlying ligament scarring from prior injury; diffuse longitudinal tearing throughout the medial meniscus with a prominent bucket-handle type meniscal flap displaced into the intercondylar notch with displaced meniscal tissue involving 60 percent of the body segment, 50 percent of the anterior horn, and 40 percent of the posterior horn; small non displaced kissing subchondral impaction fractures in the posterior lateral tibial plateau and the periphery of the anterior weightbearing lateral femoral condyle, moderate surrounding bone marrow edema without chondral injury, and small bone contusion in the inferomedial aspect of the medial tibial plateau without chondral injury; and mild grade II and III chondromalacia patella. *See* Exhibit Z.

14. On March 3, 2015 Claimant underwent surgery performed by Peter Janes, M.D. of Vail Summit Orthopaedics. He performed an arthroscopic medial meniscus repair and an arthroscopic assisted anterior cruciate ligament reconstruction. *See* Exhibit Y.

15. On June 8, 2015 Claimant underwent an MRI of her right knee interpreted by Trystain Johnson, M.D. Dr. Johnson found that since the prior MRI, Claimant had undergone surgery and that the ACL graft was intact but that there was some developing fluid signal along the tibial tunnel and surrounding prominent bone edema in the proximal tibia suggestive of reactive edema. Dr. Johnson found persistent vertical signal in the posterior horn of the medical meniscus that may represent incomplete vertical tear, partially healing and interval resection of bucket handle fragment. Dr. Johnson also found moderate to high grade area of chondral fibrillation and thinning in the upper medial facet of the patella that was new/increased. *See* Exhibit X.

16. On June 16, 2015 Claimant underwent a second surgery performed by Dr. Janes of Vail Summit Orthopaedics. He performed an arthroscopic anterior notch debridement, debridement of the anterior cruciate ligament grafting, and shrinkage and resection of the radial tear of the medial meniscus of the right knee. He removed scar tissue and meniscal tissue. *See* Exhibit W.

17. On July 9, 2015 Claimant was evaluated by Frederick Scherr, M.D. at Vail Valley Medical Center. Claimant reported concern with the pain in her right medial lower leg due to varicosities or nerve pain. Dr. Scherr noted that she was status post ACL repair and meniscus repair and planned to get an EMG to rule out any nerve pain. *See* Exhibit U.

18. On September 15, 2015 Claimant was evaluated by Dr. Scherr. Claimant reported that her right knee was doing well. Claimant reported needing sclerosing of the veins in her right lower leg and that she believed the surgery on her right knee exacerbated her veins. Dr. Scherr noted no swelling or effusion in the right knee and that Claimant had good range of motion and strength. Dr. Scherr noted that Claimant

had a normal EMG and that he did not believe the vein vacriosities were work related and that it was not probable that the right knee surgery contributed to the inflammation. Dr. Scherr opined that Claimant was approaching MMI. *See* Exhibit T.

19. On November 6, 2015 Claimant underwent another MRI of her right knee that was interpreted by Kelly Lindauer, M.D. The impression provided was: interval arthroscopy; moderate degeneration of the ACL graft which was intact with buckling of the graft in the intercondylar notch; bandlike scar tissue confluent with the anterior margins of the ACL near the tibial tunnel, anterior horn segment of the lateral meniscus, in the deep margins of Hoffa's fat pad along the spectrum of arthrofibrosis and could be a source of impingement or tethering; possible interval medial meniscal surgery with a new vertically oriented tear extending to the body and posterior horn segments with a tear site intermediate in signal suggestive of granulation tissue with the longitudinal signal possibly representing sequel of meniscal repair or a new meniscal tear with some granulation tissue repair; mild to moderate chondromalacia involving the patella manifested by chondral softening and fibrillation similar to previous exam; and moderate effusion with synovitis. *See* Exhibit R.

20. On November 23, 2015 Claimant was evaluated by William Sterett, M.D. at Vail Summit Orthopaedics. Claimant reported wanting a second opinion on her right knee. Claimant reported two right knee surgeries both done with Dr. Janes and that she had plateaud and felt her issues were different now than before the first surgery. On exam Dr. Sterett noted mild effusion, pain with flexion and extension, positive mcmurrays, pain with deep weighted squat, and antalgic gait. X-rays performed showed moderate patellafemoral and medial joint osteoarthritis with ACL reconstructive hardware in excellent position. Dr. Sterett recommended continued conservative treatment to allow meniscus time to heal and recommended re-evaluation in 8 weeks and opined that if there was no improvement, likely a repeat arthroscopy would be indicated to address the arthrofibrosis and meniscal issues. *See* Exhibit Q.

21. On December 7, 2015 Claimant was evaluated by Dr. Scherr. Claimant reported that she was doing better and that her right knee was getting stronger but taking longer than expected. Dr. Scherr noted Dr. Sterett's plan to consider arthroscopic surgery if Claimant did not improve. *See* Exhibit P.

22. On January 26, 2016 Claimant was evaluated by Dr. Scherr. Claimant reported that she was doing better but that Dr. Janes had recommended another right knee scope based on her symptoms and the MRI. Claimant was uncertain and wanted another opinion. Dr. Scherr referred Claimant to Dr. Laprade at the Steadman Clinic. Claimant was returned to full duty work with no restrictions. Dr. Scherr opined that if surgery was not indicated by Dr. Laprade or if Claimant did not want to undergo addition surgery then Claimant would be at MMI. *See* Exhibit N.

23. On February 17, 2016 Claimant was evaluated by Robert Laprade, M.D. at the Steadman Clinic. Claimant reported continuing to struggle with her right knee with pain on the medial aspect that was occasional and up to 5/10 on the pain scale at

its worst. Claimant reported that the pain was recently improving. Dr. Laprade noted on examination that Claimant had tenderness to palpation over the medial joint line and that the medial meniscus appeared extruded on physical examination. He found a grade 2 lachman and grade 2 pivot shift. Dr. Laprade reviewed the MRI report from November, 2016. Dr. Laprade noted that Claimant had evidence on physical exam that the ACL graft was not functioning properly and that she was having medial joint line pain. Dr. Laprade recommended getting the MRI images from the November, 2016 scan and noted that it might be necessary to get a new MRI and CT scan. He opined that once he had reviewed the images, he could discuss a further treatment plan. *See* Exhibit M.

24. On February 23, 2016 Dr. Laprade had a telephone conversation with Claimant. He had reviewed the MRI images that Claimant brought in. Dr. Laprade explained to Claimant that the MRI showed that her ACL graft had failed and that she had a medial meniscus tear. Dr. Laprade recommended a CT scan of the knee to determine the size of the bone tunnels and the need for bone grafting prior to revision ACL reconstruction. Dr. Laprade opined that Claimant would likely require 2 stage procedures with bone grafting and medical meniscal repair versus debridement followed by ACL revision reconstruction. *See* Exhibit K.

25. On February 26, 2016 Claimant underwent a CT of her right knee interpreted by Vincent Herlihy, M.D. The impression provided was: femoral tunnel without significant ossification; tibial tunnel without significant ossification, with an interference screw without appreciable bony incorporation; minimal medial and patellofemoral compartment osteoarthritis with a small joint effusion. *See* Exhibit J.

26. On February 29, 2016 Dr. Laprade had a telephone conversation with Claimant after he reviewed her CT scan. He noted that the CT had showed tunnel widening and that he recommended proceeding with right knee arthroscopy with bone grafting and meniscal repair versus debridement as needed. He recommended that once the bone grafting of the tunnels had healed 4-6 weeks later, that Claimant should undergo revision ACL reconstruction. Claimant expressed reservations about another repair of the medial meniscus since it had likely failed from prior surgery and Dr. Leprade explained that depending on the pattern at her arthroscopy the decision would be made for debridement versus repair but that at Claimant's young age, repair would be favored. *See* Exhibit H.

27. On March 7, 2016 Claimant was evaluated by Dr. Janes. Claimant reported intermittent pain reproducible with some pivoting and rotation motions and that she was very frustrated with the work comp bureaucracy and hoping to move forward without work comp. Claimant reported that she had a second opinion with Dr. Leprade who recommended a repeat ACL reconstruction via staged procedures with bone grafting ACL tunnels and examining her meniscus arthroscopically and wondered if Dr. Janes agreed. Claimant also reported that she had not had her left ACL reconstruction and did not have feelings of instability or pain and she questioned the need for ACL reconstruction on her right knee. Dr. Janes agreed that a repeat arthroscopy to

evaluate her medial meniscus may benefit her, but was hesitant about the recommended ACL procedure as the ACL graft was intact. Dr. Janes agreed with Claimant's transfer of care to Dr. Leprade at the Steadman clinic and noted that due to her transfer of care he did not anticipate her returning for further treatment. *See* Exhibit I.

28. Claimant underwent physical therapy on March 22, 2016 at Axis Sports Medicine. Claimant reported subjectively on how her knee affected her ability to do a number of activities with a total score on ability as 31/36. *See* Exhibit 2.

29. On April 26, 2016 Claimant was evaluated by Dr. Scherr. Claimant reported that Dr. Laprade wanted to do a scope and see how the meniscus looked and decide at that time whether to repair or remove it and then proceed later with the ACL revision. Claimant reported that she just wanted Dr. Laprade to remove the meniscus and that because he wanted to look first, she was unwilling to proceed with the surgery and did not have the time to be on crutches for three months if he repaired the meniscus. Claimant reported that she just wanted the meniscus removed and wanted to have a 4th opinion in regards to her right knee. Dr. Scherr had a long discussion with Claimant that they had gone to Dr. Laprade at Claimant's request and that because she didn't like his recommendation, she had chosen not to proceed with surgery which was her choice. Dr. Scherr opined that Claimant's right knee was functional. Dr. Scherr explained the concept of MMI to Claimant and because she had three opinions already and had elected not to proceed with surgery, Dr. Scherr opined that Claimant was at MMI. He noted that Claimant disagreed. *See* Exhibit E.

30. On examination, Dr. Scherr opined that there was no swelling, effusion, or tenderness. He noted full range of motion without difficulty or pain and that Claimant had good strength and gait that was not hindered by pain. Dr. Scherr performed an impairment rating for the right knee and opined that her Table 40 diagnosis for the ACL repair warranted a 10% impairment, medial meniscectomy x2 for a 6% rating and arthritic changes of 3% along with a 4% impairment for flexion range of motion and opined that Claimant's total Table 40 diagnosis impairment was 19% and combined with the range of motion came to a 22% impairment of the right lower extremity. Dr. Scherr opined that apportionment was not applicable. Dr. Scherr opined that Claimant was at MMI after electing not to have surgery and that a fourth opinion was not warranted and opined that additional physical therapy would not improve Claimant's condition. Dr. Scherr opined that Claimant required no permanent restrictions. *See* Exhibit E.

31. After disagreeing with Dr. Scherr, Claimant sought treatment on her own with Charles Gottleib, M.D. Claimant was not referred to Dr. Gottleib by anyone and went to him on her own. Dr. Gottleib referred Claimant to physical therapy for dynamic stability exercises to compensate for ACL insufficiency. *See* Exhibits 25, D.

32. On October 7, 2016 Claimant underwent a Division Independent Medical Evaluation performed by Stephen Lindenbaum, M.D. Claimant reported two injuries in this case, the first on February 4, 2015 while Claimant was volunteering for the Vail

Valley Foundation while skiing, trying to avoid another skier, and twisting in a funny manner. Claimant reported feeling immediate pain and a popping sensation in her knee and felt like this initial injury caused her ACL problem because of a similar ACL injury she had in her left knee. Claimant reported after the February 4 incident, her right knee swelled considerably and was painful but was strong enough and solid to ski and that she felt she could continue to work on it. Claimant reported that the following week on February 9 she was unloading a basket from a snow cat and while throwing fencing out twisted her right knee and felt a sudden snap and her felt her knee giving way. Claimant reported after being done with work, she skied down the hill and was seen at Vail Valley Medical Center. Dr. Lindenbaum noted that Claimant had an MRI done on February 20, 2015 and opined that based on the MRI the likelihood is that the first injury on February 4 was the cause of the ACL injury and that the second injury on February 9 most likely caused a displacement of the medical meniscal tear from the first injury to become symptomatic with the twisting injury. *See* Exhibit C.

33. On examination, Dr. Lindenbaum noted no antalgic gait, no evidence of atrophy, full range of motion of both knees, no effusion, and mild crepitus on range of motion. Dr. Lindenbaum opined that there was not any pain on subluxation of the patella on medial or lateral excursion and no gross instability. Dr. Lindenbaum noted that Claimant's pain on range of motion was below the joint line and over the area which most likely represented a remaining button from the cruciate repair. Dr. Lindenbaum opined that Claimant had 0 percent impairment for range of motion, 5 % impairment for the chondromalacia involving the medial patellar facet, 10% impairment for that ACL, and 5% for the meniscal injury. Combining the three ratings provided for a 19% impairment to the lower extremity. Dr. Lindenbaum concurred with the MMI date provided by Dr. Scherr of April 26, 2016. Dr. Lindenbaum also opined that there was no evidence of apportionment if both of the injuries occurred while working for Vail Associates. Dr. Lindenbaum opined that further physical therapy was not indicated and that Claimant could do exercises on an independent basis. Dr. Lindenbaum opined that the pain on the inferior medial aspect of the knee represented a painful piece of hardware that could be removed under maintenance and that Claimant would not require physical therapy after that procedure. Claimant reported not being interested in ACL reconstruction and Dr. Lindenbaum opined that based on the fact that Claimant was doing well, no further surgical intervention was indicated. *See* Exhibit C.

34. Claimant continued seeing Dr. Gottleib on her own without any referral and outside the workers' compensation system. On November 16, 2016 Claimant underwent right knee surgery performed by Dr. Gottleib. Dr. Gottleib performed an arthroscopic partial medial meniscectomy, chondroplasty of the patella and medial femoral condyle, and removal of deep bone staple of the proximal tibia. Dr. Gottleib noted that Claimant's medial compartment had a small recurrent complex flap meniscus tear in the region of the prior partial meniscectomy. Dr. Gottleib noted that overall Claimant had lost approximately 65% of the posterior half of her meniscus primarily from the prior surgery and he removed only the small recurrent flap tear and left Claimant with as much meniscus as possible. *See* Exhibits 24, B.

35. Respondent sent the records of Dr. Gottleib to Dr. Scherr and asked for his opinion on several items. Dr. Scherr opined that Claimant currently had no symptoms, that only the hardware removal performed by Dr. Gottleib was reasonable, necessary, and related to her industrial injury, and that the surgery performed by Dr. Gottleib did not change his opinion on the date of MMI. Dr. Scherr continued to opine that Claimant required no maintenance treatment. *See* Exhibit A.

36. Dr. Scherr also evaluated Claimant on February 28, 2017. Claimant reported that she was doing much better after the surgery performed by Dr. Gottleib with little to no pain. Claimant also reported having better range of motion. Dr. Scherr noted on examination full range of motion without difficulty or pain and very good strength. *See* Exhibit A.

37. Claimant underwent physical therapy at Axis sports medicine both prior to and following her surgery with Dr. Gottleib. Claimant reported subjectively that her functionality with various activities and her total functional score on June 8, 2016 was 70/80. On October 17, 2016 her score was 76/80. Following her surgery with Dr. Gottleib and on December 30, 2016 Claimant reported very slight subjective improvement with a score of 73/76 (did not check one four point scoring area). *See* Exhibit 1.

38. Claimant testified at hearing that she was off work due to her injury until August of 2015 and that she began earning regular wages again in August of 2015. Claimant argued that Dr. Scherr was not her authorized treating provider and that she never selected him but only continued to see him due to the workers' compensation bureaucracy. Claimant also argued that she was not at MMI on April 26, 2016 because she kept improving after that date. Claimant argued that her impairment rating should be adjusted for her meniscus rating to include the surgery performed in November of 2016.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for

the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Authorized Treating Provider

Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of the industrial injury. *Yeck v. Industrial Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). "Authorization" refers to the physician's legal status to treat the injury at the respondents' expense. *Popke v. Industrial Claim Appeals Office*, 944 P.2d 677 (Colo. App. 1997). Whether or not a provider is an authorized treating provider is generally a question of fact for the ALJ which must be upheld if supported by substantial evidence in the record. *Blue Mesa Forest v. Lopez*, 928 P.2d 831 (Colo. App. 1996); *Popke v. Industrial Claim Appeals Office, supra*. Section 8-43-404(5)(a)(I)(A), C.R.S., provides, in pertinent part: [t]he employer or insurer has the right in the first instance to select the physician who attends said injured employee. If the services of a physician are not tendered at the time of injury, the employee shall have the right to select a physician or chiropractor." WCRP 8-2(A), provides a framework for providing the required list of physician and similarly states that "[w]hen an employer has notice of an on the job injury, the employer or insurer shall provide the injured worker with a written list ...." WCRP 8-2(D) further provides that if the employer fails to comply with this Rule 8-2, the injured worker may select an authorized treating physician of the workers' choosing.

Claimant is credible and persuasive that Employer did not provide her with a written list of physicians after she reported her injury. Rather, Employer directed her to treat with Vail Valley Medical Center. Claimant, as found above, scheduled an appointment with Vail Summit Orthopaedics prior to her first visit with Vail Valley Medical Center and testified that she intended to choose Vail Summit Orthopaedics as

her authorized treating provider since she was not provided a list or choice. At her first visit with Vail Valley Medical Center, Claimant was referred to Vail Summit Orthopaedics. Claimant treated both with Vail Valley Medical Center and with Vail Summit Orthopaedics from February of 2015 to April of 2016. During this time she underwent three MRIs of her right knee, one CT scan of her right knee, two right knee surgeries, was evaluated by three different orthopedic surgeons including two at Vail Summit Orthopaedics and one at Steadman Clinic, and she received extensive physical therapy.

Claimant's testimony that she only continued going to Vail Valley Medical Center because of workers' compensation bureaucracy is not found credible or persuasive. Rather, the ALJ concludes that she continued to treat with Vail Valley Medical Center because she was receiving extensive treatment including multiple referrals both to doctors Janes and Starett at Vail Summit Orthopaedics (the exact practice she chose to treat with) and to Dr. Laprade at Steadman Clinic. Claimant treated extensively through Vail Valley Medical Center until she was placed at MMI and disagreed with the determination. Claimant argues, at that point, that she was free to choose Dr. Gottleib as her own physician since she was never provided a designated provider list by Employer. This argument is not found persuasive.

Here, the choice of physician had passed to Claimant as a consequence of Employer's failure to comply with § 8-43-404(5)(a)(I)(A). C.R.S. and the application of WCRP Rule 8-2 (E). Claimant, however, signified through her conduct of continuing to treat extensively with Vail Valley Medical Center for over one year that she had chosen them. Further, Vail Valley Medical Center referred Claimant to the exact practice and to two doctors in that practice that Claimant testified she wanted or intended to choose initially. Vail Valley Medical Center thus made Dr. Janes and Dr. Starett of Vail Summit Orthopaedics authorized providers within the chain of referral. Claimant, essentially, treated with the exact practice that she had chosen. Claimant received extensive care during this period of time and only after she was placed at MMI, with which she disagreed, did she argue that she required a change of physician or a change in authorized provider.

When a claimant has signified by words or conduct that he has chosen a physician to treat the industrial injury he has made a physician 'selection'. *Pavelko v. Southwest Heating and Cooling*, W.C. No. 4-897-489 (Sept. 4, 2015), *Tidwell v. Spencer Technologies*, W.C. No. 4-917- 514 (March 2, 2015); *Loy v. Dillon Companies*, W.C. No. 4-972-625 (February 19, 2016); *Miller v. Rescare*, Inc., W.C. No. 4-761-223 (Sept. 16, 2009); *Squittieri v. Tayco Screen Printing, Inc*., W.C. No. 4-421-960 (September 18, 2000). Here, the ALJ concludes that the conduct of Claimant leads to the conclusion that she selected Vail Valley Medical Center and their referrals. Although Claimant was referred to three orthopedic surgeons during her treatment, she was never referred to Dr. Gottleib and he was not in the chain of referral from Dr. Janes or any other treating provider. Claimant has failed to establish that Dr. Gottlieb is an authorized provider. The authorized providers include Dr. Scherr, Dr. Janes, Dr. Starett, and Dr. Laprade.

Claimant's request also can be treated as a request to change physicians. Upon a proper showing to the division, the employee may procure its permission at any time to have a physician of the employee's selection attend said employee. *See* § 8-43-404(5)(a)(VI), C.R.S. Because the statute does not contain a specific definition of a proper showing, the ALJ has broad discretionary authority to determine whether the circumstances justify a change of physician. *Loza v. Ken's Welding,* WC 4-712-246 (ICAO January 7, 2009). The claimant may procure a change of physician where she has reasonably developed a mistrust of the treating physician. *See Carson v. Wal-Mart,* W.C. No. 3-964-07 (ICAO April 12, 1993). The ALJ may consider whether the employee and physician were unable to communicate such that the physician's treatment failed to prove effective in relieving the employee from the effects of his/her injury. *See Merrill v. Mulberry Inn, Inc.*, W.C. No. 3-949-781 (ICAO November 1995). But, where an employee has been receiving adequate medical treatment, courts need not allow a change in physician. *Greenwalt-Beltmain v. Department of Regulatory Agencies*, W.C. No. 3-896-932 (ICAO December 5, 1995). Here, Claimant has received adequate and extensive medical treatment from her authorized treating physicians. Claimant has failed to show that a change of physician to Dr. Gottleib is appropriate. Although Claimant disagreed with the MMI determination of Dr. Scherr, the ALJ finds no reasonable mistrust of his care or failure to communicate. Rather, throughout her treatment, Claimant received extensive treatment and referrals that relieved her from the effects of her injury. A change of physician has not been shown to be appropriate.

Overcoming DIME on MMI

MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." *See* § 8-40-201(11.5), C.R.S. A DIME physician's finding that a party has or has not reached MMI is binding on the parties unless overcome by clear and convincing evidence. *See* § 8-42-107(8)(b)(III), C.R.S.; *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Under the statute MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office,* 942 P.2d 1358 (Colo. App. 1997). A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of the claimant's medical condition are causally related to the industrial injury. *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007). A finding that the claimant needs additional medical treatment (including surgery) to improve his injury-related medical condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002); *Reynolds v. Industrial Claim Appeals Office,* 794 P.2d 1090 (Colo. App. 1990); *Sotelo v. National By-Products, Inc.,* W.C. No. 4-320-606 (I.C.A.O. March 2, 2000). Similarly, a finding that additional diagnostic procedures offer a reasonable prospect for defining the claimant's condition

or suggesting further treatment is inconsistent with a finding of MMI. *Abeyta v. WW Construction Management,* W.C. No. 4-356-512 (ICAO May 20, 2004); *Hatch v. John H. Garland Co.,* W.C. No. 4-638-712 (ICAO August 11, 2000). Thus, a DIME physician's findings concerning the diagnosis of a medical condition, the cause of that condition, and the need for specific treatments or diagnostic procedures to evaluate the condition are inherent elements of determining MMI. Therefore, the DIME physician's opinions on these issues are binding unless overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002).

The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, supra*. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician's finding concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). The question of whether the party challenging the DIME physician's finding regarding MMI has overcome the finding by clear and convincing evidence is one of fact for the ALJ.

Here, Claimant has failed to meet her burden to show that DIME physician Dr. Lindenbaum erred in opining that Claimant reached MMI on April 26, 2016. At the DIME, Dr. Lindenbaum noted how well Claimant was doing, that she had no limitations in range of motion, and that she was not interested in ACL reconstruction. Dr. Lindenbaum opined that no further surgical intervention was indicated to improve Claimant's condition. His opinion that no treatment was necessary to reduce pain or improve function is consistent with his finding of MMI. Although he noted that removal of hardware could be performed under maintenance treatment, the ALJ does not find this to be inconsistent with a MMI determination. The opinion of DIME physician Dr. Lindenbaum is consistent with and supported by the opinions of Dr. Scherr. Additionally, although Claimant sought treatment and additional surgery on her own with Dr. Gottleib after the DIME, records show that following surgery with Dr. Gottleib Claimant was not functionally better. Physical therapy notes indicate an extremely slight subjective improvement in functional ability with a score before the surgery with Dr. Gottleib of 76/80 and after the surgery at 73/76. This further supports the DIME physician's opinion that additional surgery was not indicated to improve Claimant's condition. Clamant has failed to meet her burden to show that Dr. Lindenbaum erred in assigning an MMI date of April 26, 2016.

Permanent Partial Disability (PPD) Impairment Rating

The increased burden of proof required by the DIME procedures is not applicable to scheduled injuries. Section 8-42-107(8)(a), C.R.S. states that "when an injury results in permanent medical impairment not set forth in the schedule in subsection (2) of this section, the employee shall be limited to medical impairment benefits calculated as provided in this subsection (8)." Therefore, the procedures set forth in §8-42-107(8)(c),

C.R.S., which provide that the DIME findings must be overcome by clear and convincing evidence, are applicable only to non-scheduled injuries. The court of appeals has stated in this respect that: scheduled and non-scheduled impairments are treated differently under the Act for purposes of determining permanent disability benefits. In particular, the procedures of § 8-42-107(8)(c), which states that a DIME finding as to permanent impairment can be overcome only by clear and convincing evidence and that such finding is a prerequisite to a hearing on permanent impairment, have been recognized as applying only to non-scheduled impairments. *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1998); *Delaney v. Industrial Claim Appeals Office*, 30 P.3d 691, 693 (Colo. App. 2000).

Claimant has the burden of showing the extent of her scheduled impairment by a preponderance of the evidence. *Maestas v. American Furniture Warehouse and G.E. Young and Company*, W.C. No. 4-662-369 (2007); *Burciaga v. AMB Janitorial Services, Inc. and Indeminity Care ESIS Inc*., W.C. No. 4-777-882 (2010).

As found above, the DIME physician Dr. Lindenbaum assigned a PPD impairment rating of 19% for the lower extremity. Dr. Lindenbaum opined that Claimant had no impairment for range of motion. Claimant testified consistently with this determination. He also provided a 5 % impairment for the chondromalacia involving the medial patellar facet, 10% impairment for that ACL, and 5% for the meniscal injury. When Dr. Scherr performed an impairment rating, he also came to a total impairment rating of 19% lower extremity. However, at the earlier date of Dr. Scherr's examination, Dr. Scherr did find impairment in range of motion of 4% and using the combined valued table, Dr. Scherr found a total impairment rating of 22% lower extremity. The ratings of both physicians are very similar. The lack of range of motion rating by the DIME physician at a later date is consistent with the objective medical evidence and with Claimant's testimony. Further, although a range of impairment under Table 40 exists for the meniscal injury, Claimant has failed to establish by a preponderance of the evidence why she is entitled to a rating higher than the rating provided by Dr. Lindenbaum or Dr. Scherr. In fact, the ratings provide for a range starting at zero. Both physicians who rated her came to similar results within the acceptable range and Claimant has failed to establish that a certain number in that range is more appropriate or probable for her condition. The ALJ finds credible and persuasive the rating of 19% lower extremity provided by DIME physician Dr. Lindenbaum, which is consistent with the rating provided by Dr. Scherr.

Average Weekly Wage

Section 8-42-102(2), C.R.S., requires the ALJ to base the claimant's AWW on his earnings at the time of injury. However, under certain circumstances the ALJ may determine the claimant's AWW from earnings received on a date other than the date of injury. *Avalanche Industries, Inc. v. Clark,* 198 P.3d 589 (Colo. 2008); *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). Specifically, § 8-42-102(3), C.R.S., grants the ALJ discretionary authority to alter the statutory formula if for any reason it will not fairly determine the claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo.

1993). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp., supra.*

The average weekly wage admitted by Respondents in this matter included only Claimant's wages from Employer. As found above, Claimant works for Employer in addition to several other concurrent employers. Claimant has established that her average weekly wage should be adjusted to include concurrent employment. Claimant's credible testimony leads the ALJ to believe that Claimant's goal is to earn $500 per week to live, pay rent, etc. However, Claimant's wage records, W-2's, and tax returns demonstrate that her average weekly wage and a fair approximation of her wage loss is closer to $400 per week. The ALJ determines that Claimant's credible testimony combined with the records that have been submitted indicate that, on average, Claimant earns approximately $400 per week and that ALJ concludes this to be a fair approximation of Claimant's wage loss and diminished earning capacity due to her injury.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish that Dr. Gottleib is an authorized treating provider or that a change of physician to Dr. Gottleib is appropriate.

2. Claimant has failed to overcome by clear and convincing evidence the opinion of DIME physician Dr. Lindenbaum regarding maximum medical improvement. Claimant reached MMI for her work injury on April 26, 2016.

3. Claimant is entitled to a permanent partial disability impairment rating of 19% lower extremity. Claimant has failed to establish an entitlement to a higher rating.

4. Claimant's average weekly wage is $400.00.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures

to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 27, 2017,

/s/ Michelle E. Jones

ISSUES

I. Whether Claimant proved by a preponderance of the evidence that the left shoulder surgery recommended by Dr. Stewart Weinerman is reasonable, necessary and related to cure or relieve the effects of Claimant's April 8, 2015 industrial injury.

FINDINGS OF FACT

1. Claimant worked for Employer for two years stocking drywall materials. Claimant sustained an admitted work injury to his left shoulder on April 8, 2015 while pulling drywall through a window.

2. Matthew Lugliani, M.D. evaluated Claimant on April 9, 2015. Claimant reported left shoulder pain at an 8/10 in severity. Dr. Lugliani assessed acute shoulder strain and tendonitis. Dr. Lugliani noted Claimant had been prescribed Percocet from a recent dental procedure and had two Percocets remaining. Dr. Lugliani referred Claimant to physical therapy and prescribed Claimant ibuprofen, robaxin and Percocet.

3. Dr. Lugliani reevaluated Claimant on April 16, 2015. Claimant rated his pain at an 8/10 in severity. Dr. Lugliani again assessed acute shoulder strain and tendinitis. Dr. Lugliani noted he declined Claimant's request for a refill of narcotics because Claimant should have a two-week supply. Dr. Lugliani recommended Claimant continue taking ibuprofen and robaxin.

4. Claimant underwent an MRI of his left shoulder on April 30, 2015. Charles Wennogle, M.D. gave the following impression: (1) stable osteochondral injury of the humeral head with associated marrow edema, (2) moderate to severe AC joint osteoarthritis with subacromial spurring and impingement, (3) subacromial/subdeltoid bursitis, (4) distal supraspinatus tendinosis with interstitial tearing of the distal supraspinous tendon insertional footplate, (5) SLAP tear of the superior labrum, and (6) increased signal and caliber of the inferior glenohumeral ligament.

5. Dr. Lugliani reevaluated Claimant on May 4, 2015. Dr. Lugliani reviewed the April 30, 2015 MRI and assessed chronic left shoulder pain, moderate-to-severe AC joint arthritis, distal supraspinatus tear, and SLAP tear of the superior labrum. Dr. Lugliani referred Claimant to an orthopedic surgeon.

6. Cary Motz, M.D. evaluated Claimant on May 21, 2015. Dr. Motz assessed shoulder joint pain, partial thickness left rotator cuff tear, left shoulder impingement syndrome, left SLAP tear, and left osteoarthrosis AC joint. Dr. Motz noted evidence of a partial tear of the rotator cuff. Dr. Motz concluded the SLAP tear was degenerative and Claimant's pain was related to the partial thickness rotator cuff tear. Dr. Motz administered 1 cc of Betamethasone and 5 ccs of Marcaine. Dr. Motz noted the injection did not improve Claimant's pain.

7. Dr. Lugliani reevaluated Claimant on June 15, 2015. Claimant reported persistent left shoulder pain rated at a 6/10 in severity, worse with over-the-shoulder reaching or movement. Claimant reported the "only thing that helps with his pain is Percocet." Dr. Lugliani noted tenderness at the biceps tendon and subacromial bursa. Dr. Lugliani assessed chronic left shoulder pain, moderate-to-severe AC joint arthritis, distal supraspinatus tear, and SLAP tear of the superior labrum of the left shoulder. Dr. Lugliani noted he would not provide Claimant any Percocet at that time. Dr. Lugliani remarked Claimant failed conservative management and was a candidate for surgery.

8. Dr. Motz reevaluated Claimant on June 25, 2015. Dr. Motz ordered arthroscopy with left rotator cuff repair, subacromial decompression, biceps tenodesis and distal clavicle resection. Claimant indicated he wished to proceed with surgical intervention.

9. Claimant underwent surgery on August 3, 2015. Dr. Motz performed the following procedures: left shoulder arthroscopy with arthroscopic rotator cuff repair, arthroscopic biceps tenodesis, arthroscopic distal clavicle excision, and arthroscopic subacromial decompression. Dr. Motz noted no complications with the procedures. Dr. Motz' post-operative diagnosis was: left shoulder grade A3 partial-thickness supraspinatus tear; SLAP tear; impingement syndrome; and degenerative joint disease of the acromiclavicular joint.

10. Claimant continued to treat with Dr. Lugliani and continued reporting persistent pain ranging from a 6/10 to 8/10 in severity. Claimant reported his current medication regimen had little impact on his pain control, and that Percocet was the only thing that assisted with the pain.

11. Dr. Motz reevaluated Claimant on September 3, 2015. Dr. Motz noted Claimant's pain "is more significant than would be expected…" Dr. Motz remarked Claimant did not seem motivated. Dr. Motz recommended weaning from the sling and continuing physical therapy.

12. In a September 10, 2015 medical note, Dr. Lugliani remarked, “I believe this patient is prone to symptom magnification. We are multiple weeks out from his surgery. He has showed (*sic*) minimal improvement. He continues to be dependent on narcotics.”

13. Dr. Motz reevaluated Claimant on October 1, 2015. Dr. Motz noted Claimant was slowly progressing and having more pain than expected. Dr. Motz assessed left rotator cuff tear (traumatic), left impingement syndrome shoulder, and left bicipital tenosynovitis. Claimant was to discontinue his use of the sling.

14. Dr. Lugliani reevaluated Claimant on October 1, 2015. Claimant reported persistent pain at a 6/10 in severity. Claimant requested a refill of Percocet, alleging he dropped an entire bottle down the sink. Dr. Lugliani assessed chronic left shoulder pain, opioid dependence, moderate-to-severe AC joint arthritis, distal supraspinatus tear, and SLAP tear. Dr. Lugliani commented “I am concerned in regard to drug-seeking behavior with this patient. He will not be receiving any Percocet from me.”

15. Claimant returned to Dr. Lugliani for a follow-up evaluation on October 15, 2015. Dr. Lugliani noted Claimant continued to use an arm sling. Claimant reported persistent pain at an 8/10 in severity. Dr. Lugliani assessed chronic left shoulder pain and opioid dependence. Dr. Lugliani referred Claimant to pain management.

16. On October 27, 2015, David L. Reinhard, M.D. conducted a Distress Risk and Assessment Method Evaluation of Claimant’s psychosocial functioning. Dr. Reinhard noted Claimant scored at the worst level of function. Dr. Reinhard concluded Claimant was in the distressed/somatic category of psychosocial functioning, and “There could be significant psychological factors which would preclude a good outcome.” Dr. Reinhard recommended psychological counseling for pain management and a psychology pain evaluation.

17. Dr. Motz reevaluated Claimant on October 29, 2015. Dr. Motz noted Claimant continued to have more pain than expected and ordered an MRI.

18. Claimant underwent a second MRI on November 5, 2015. Bao Nguyen, M.D. interpreted the MRI and gave the following impression: (1) “interval central rotator cuff repair with suspected double row technique, with a suggestion of a recurrent partial tear of the distal conjoined cuff region,” and (2) “abnormal marrow changes across the central dome of the humeral head, worrisome for potential early AVN, as yet, without subchondral collapse or osteochondral separation.”

19. Dr. Lugliani reevaluated Claimant on November 9, 2015. Claimant reported persistent pain rated at an 8/10 in severity. Dr. Lugliani reviewed the November 5th MRI. Dr. Lugliani remarked Claimant is opioid-dependent and advised Claimant to follow-up with Mr. Motz and continue medications as prescribed.

20. On November 11, 2015, Mary W. McCord, M.D. of University of Colorado Hospital, Internal Medicine, evaluated Claimant. Claimant reported he smoked a half-pack of cigarettes per day and consumed one to two 40-ounce beers daily. Referring to Claimant's common-law wife Dr. McCord documented, "Mary pulled me aside at the end of the visit to privately address the patient's depression and alcohol abuse, which she reports are bigger problems than he admits to me." Dr. McCord also noted, "Per patient's partner, he admits he is an alcoholic. He reports drinking 2-4 40oz beers nightly. He is a recovered drug user as well."

21. Dr. Motz reevaluated Claimant on November 12, 2015. Dr. Motz noted the November 5, 2015 MRI revealed the rotator cuff was healing well but there was also an area of bone edema/avascular necrosis ("AVN") in the humeral head. Dr. Motz assessed pain in Claimant's joint and shoulder, impingement syndrome in the left shoulder, and adhesive capsulitis of the shoulder. Dr. Motz remarked she could not explain the appearance of the edema/AVN in the humeral head. Dr. Motz ordered Claimant to cease physical therapy.

22. Dr. Reinhard reevaluated Claimant on November 17, 2015. Dr. Reinhard noted Claimant was exceeding two Percocet per day at times. Dr. Reinhard reviewed the narcotic agreement with Claimant and increased Claimant's doses for pain.

23. Claimant returned to Dr. Motz for a follow-up on December 10, 2015. Claimant reported continued pain at a 5-6/10 in severity. Dr. Motz assessed shoulder joint pain, left shoulder impingement syndrome, adhesive capsulitis of the shoulder, injury of right rotator cuff (subsequent encounter), and AVN of the left humeral head. Dr. Motz referred Claimant to Cindy Kelly, M.D. for an evaluation of the AVN.

24. Dr. McCord reevaluated Claimant on December 16, 2015. Dr. Motz remarked, "Strongly advised him to cut back to no more than 24oz of beer per day. He reports he is not an alcoholic, but discussed that he is drinking too much given his lab results." Dr. McCord noted she encouraged Claimant to cease tobacco use.

25. On January 4, 2016, Jon M. Erickson, M.D. performed an Independent Medical Examination ("IME") at the request of Respondents. Dr. Erickson issued an IME report on January 11, 2016. Dr. Erickson remarked that, when he evaluated Claimant,

Claimant was "upset that he has not been able to get adequate pain medication…" Claimant reported no history of substance or recreational drug use. Claimant reported smoking up to cigarettes per day for 20 years, and drinking one to two beers per day. Dr. Erickson documented weakness in Claimant's left upper extremity and reduction of grip strength. Dr. Erickson noted there no atrophy in the left upper extremity and no tenderness over the acromioclavicular joint. Dr. Erickson remarked he could not evaluate the rotator cuff due to Claimant's pain and limited range of motion.

26. Dr. Erickson reviewed the April 30, 2015 MRI and noted a 1.1 cm cystic lesion in the subscapularis recess anteriorly, cortical edema over the greater tuberosity, and arthritic changes in the acromioclavicular joint. Dr. Erickson reviewed the November 5, 2015 MRI and noted anchors in the greater tuberosity, thinning of articular cartilage in the glenohumeral joint, and an area of subcortical scarring over the apex of the humeral head. Dr. Erickson noted there was no evidence of cuff muscle atrophy in either MRI scan.

27. Dr. Erickson gave the following impression: work-related left shoulder injury status post arthroscopic acromioplasty, rotator cuff repair, biceps tenodesis, and distal clavicle resection. Dr. Erickson opined, within a reasonable degree of medical probability, there was no reasonable explanation for Claimant's continued severe pain and limited function of the left shoulder. Dr. Erickson noted the medical records contained drug seeking behavior and symptom magnification, remarking Claimant had a tendency to exaggerate his responses and maximize abnormalities on his physical examination. Dr. Erickson questioned whether the lesion seen in the superior humeral head on the November 2015 MRI was, in fact, avascular necrosis. Dr. Erickson remarked, "I am assuming Dr. Kelly, an expert in this area, will perform appropriate studies…to confirm or rule out this diagnosis." Dr. Erickson explained avascular necrosis is not usually associated with trauma and opined the lesion was likely not related to Claimant's work injury. Dr. Erickson opined there was no physiologic cause for Claimant's symptoms and that surgical procedures would not benefit Claimant. Dr. Erickson recommended a thorough evaluation of the humeral head lesion and an assessment of Claimant's psychological issues.

28. Stewart Weinerman, M.D. evaluated Claimant for a second opinion on January 5, 2016. Dr. Weinerman noted the MRI demonstrated avascular necrosis "of about 50% of the humeral head" with no collapse. Dr. Weinerman also noted a subchondral fracture above the area of the rotator cuff repair. Dr. Weinerman remarked Dr. Motz did an "excellent job repairing the rotator cuff" and that it was healing adequately, but "I am worried about the AVN of the left humeral head." Dr. Weinerman recommended a repeat MRI in two months. Dr. Weinerman suggested Claimant would be a good

candidate for a “subchondroplasty type of procedure done arthroscopically” if the AVN continued to be a problem at that time.

29. Dr. Lugliani reevaluated Claimant on January 6, 2016 and concurred with Dr. Weinerman’s treatment plan.

30. Cynthia M. Kelly, M.D. evaluated Claimant on January 22, 2016. Claimant reported smoking three to four cigarettes per day and drinking two beers per day. Dr. Kelly reviewed the prior MRIs and noted the most recent MRI demonstrated “changes suggestive of osteonecrosis of the humeral head.” Dr. Kelly reviewed radiographs taken the day of the evaluation and concluded the x-rays showed “an osteonecrotic segment of the humeral head with no evidence of subchondral collapse.” Dr. Kelly recommended decompression of the area of osteonecrosis and injection of autologous stem cells.

31. Dr. McCord reevaluated Claimant on February 3, 2016. Dr. McCord noted she would not refill Claimant’s Percocet prescription and that he should not be due for refill until February 14, 2016.

32. On February 10, 2016, Dr. Kelly performed a decompression of left humeral head osteonecrosis, bone marrow harvest, and autologous stem cell injection. Dr. Kelly noted there were no complications with the procedure.

33. In a letter to Dr. Kelly from Respondents’ counsel dated February 18, 2016, Respondents’ counsel inquired as to the cause of the osteonecrosis and how it was causally connected to Claimant’s April 8, 2015 injury or subsequent medical treatment. Dr. Kelly responded on March 4, 2016, stating there were injury pattern findings on the April 30, 2015 MRI that could have predisposed Claimant to development of AVN of the humeral head. Dr. Kelly further stated the subchondral fracture was from the AVN and not from the placement of suture anchors.

34. Claimant continued to treat with Dr. Lugliani and continued report pain. Dr. Lugliani ordered a repeat MRI on June 16, 2016.

35. Claimant attended a post-operative follow-up evaluation with Dr. Kelly on July 7, 2016. Claimant reported significant global pain in his shoulder. Dr. Kelly noted there was no significant muscle atrophy. Regarding radiographs, Dr. Kelly noted two views of Claimant’s left shoulder did not demonstrate any evidence of subchondral collapse of the humeral head. Dr. Kelly remarked the decompression had been an effective procedure.

36. Claimant underwent a third MRI on July 11, 2016. Andrew Sonin, M.D. read the films and his impression was:

> (1) Previous rotator cuff repair with possible linear nondisplaced full-thickness defect in the distal posterior fibers, (2) subscapularis tendinopathy without tear, (3) previous biceps tenotomy and tenodesis, with marrow edema around the associated soft tissue anchor, and (4) osteonecrosis of the superior aspect of the left humeral head with no collapse or associated joint effusion.

37. Dr. Sonin remarked, "A small full-thickness linear defect could be present on sagittal image 19 of series 5." Dr. Sonin noted there was no retraction of cuff musculature and no significant atrophy.

38. Dr. Weinerman reevaluated Claimant on July 19, 2016. Claimant reported being a former smoker with no alcohol use. Dr. Weinerman reviewed the July 11, 2016 MRI and noted acute rotator cuff tear, glenohumeral joint arthritis, shoulder bursitis, and a "small but significant area of osteonecrosis superiorly to the humeral head." Dr. Weinerman diagnosed osteonecrosis and rotator cuff tear supraspinatus. Dr. Weinerman recommended and submitted a request for "left shoulder arthroscopy with rotator cuff repair and possibly a subchondroplasty to treat the area of osteonecrosis."

39. Dr. Erickson reviewed additional medical records and issued a report dated July 27, 2016. Dr. Erickson opined the surgery recommended by Dr. Weinerman is not reasonable or necessary. Dr. Erickson referred to Claimant as a "pain outlier" and recommended Claimant undergo a forensic psychological evaluation before additional surgery is considered, per Exhibit 9 of the Colorado Division of Workers' Compensation Medical Treatment Guidelines ("MTG"). Dr. Erickson contended the July 11, 2016 MRI did not show clear evidence of a surgical lesion stating, "A possible short segment linear tear is not a likely cause of pain." Dr. Erickson further opined, within a reasonable degree of medical probability, Claimant's pain and disability are not related to Claimant's April 8, 2015 industrial injury. Dr. Erickson concluded the injuries Claimant sustained on April 8, 2015 were present on the April 30, 2015 MRI and were "appropriately addressed with two surgical procedures." Dr. Erickson contended the July 11, 2016 demonstrated the lesions healed and were stable. Dr. Erickson explained a cause cannot be determined in the majority of AVN cases, and that AVN was not seen secondary to trauma with the exception of "severely displaced humeral head fractures." Regarding Dr. Kelly's March 4, 2016 statement that the injury pattern could have caused development of AVN in the humeral head, Dr. Erickson remarked, "I do believe

Dr. Kelly was more concerned about providing appropriate treatment than addressing the issue of causality."

40. On August 9, 2016, William Boyd, Ph.D. conducted a psychological evaluation of Claimant. Dr. Boyd issued a report dated August 17, 2016. Claimant reported smoking one pack of cigarettes per day and drinking six beers per day. Dr. Boyd noted there was no meaningful interpretation possible from Claimant's testing based on the Validity Index score. Dr. Boyd noted Claimant had high levels of depression and anxiety, and indicated his scores classified Claimant as having a high probability of substance abuse disorder. Dr. Boyd diagnosed pain disorder with related psychological factors and adjustment disorder with mixed anxiety and depressed mood. Dr. Boyd recommended, in part, Claimant attend eight sessions of cognitive-behavioral treatment, consult with his physician regarding smoking cessation and alcohol issues. Dr. Boyd concluded Claimant "may be at risk of overusing healthcare services because of his psychological profile." Dr. Boyd remarked, "At the present time, [Claimant] is a poor candidate from a psychological perspective for invasive medical procedures. It is important for him to complete the recommended cognitive behavioral treatment before considering invasive medical procedures."

41. Dr. Lugliani reevaluated Claimant on August 15, 2016. Claimant reported pain at a 9/10 in severity. Dr. Lugliani noted the July 11, 2016 MRI showed osteonecrosis of the superior aspect of the left humeral head with no collapse or associated joint effusion, subscapularis tendinopathy without tear, and previous cuff repair. Dr. Lugliani agreed Claimant requires surgery.

42. In a letter dated September 5, 2016, Dr. Lugliani opined, within a reasonable degree of medical probability, the surgery requested by Dr. Weinerman was reasonable and necessary, stating surgery was the "only viable option." Dr. Weinerman further opined Claimant did not need counseling for chronic pain because he had already undergone counseling. Dr. Weinerman remarked Claimant's pain complaints were real, and concluded the torn rotator cuff and avascular necrosis were the pain generators.

43. In a letter dated September 6, 2016, Dr. Weinerman stated he agreed Claimant had pain and was requiring a lot of pain medication, however, "…given his exam and his MRI scan, I think it is reasonable to assume that at least some if not most or all of the pain is coming out from his continued rotator cuff problems." Dr. Weinerman stated Claimant was a reliable patient and was not malingering. Dr. Weinerman opined Claimant would not improve with conservative treatment and that Claimant's condition would be permanent if he did not undergo the surgery. Dr. Weinerman stated, "Certainly, performing this arthroscopic procedure will resolve a lot of issues including

the torn rotator cuff and evaluation of the repair, as well as evaluating the reason why his is having so much pain in the shoulder, and possibly resolving all of the above issues at the time of surgery."

44. In an October 10, 2016 medical note, Dr. Boyd noted Claimant denied a history of problems with alcohol and drug abuse.

45. Claimant returned to Dr. Reinhard for a follow-up evaluation on October 12, 2016. Dr. Reinhard documented Claimant "states that the oxycodone 'works real good,' however, the last UDT showed no oxycodone in his system. On the previous urine drug test, on 07/16/2016, he states he ran out early, which is plausible. The urine drug test on 09/14/2016 showed no oxycodone either. This is somewhat concerning, as I discussed with him monitoring and utilizing drugs as prescribed. The PDMP shows no red flags as he has been getting these prescribed monthly, and he has been complaint." Dr. Reinhard assessed left shoulder pain with avascular necrosis.

46. At the request of Respondents, James Piko, M.D. reviewed Claimant's MRIs and reported his findings in a letter dated November 26, 2016. Dr. Piko gave the following overall impressions of the April 30, 2015 MRI: (1) high grade partial thickness tear of the distal supraspinatus tendon, (2) 1 cm loose body within the biceps tendon sheath, (3) SLAP tear, (4) osteochondral lesion of the greater tuberosity, (5) joint effusion, (6) osteoarthrosis and subacromial arch stenosis, and (7) infraspinatus tendon undersurface low grade partial tear. Regarding the November 5, 2015 MRI, Dr. Piko impressed, in part: (1) AVN of the superior humeral head, (2) increased partial thickness tearing of the infraspinatus tendon, and (3) interval rotator cuff repair and SLAP repair. Regarding the July 11, 2016 MRI Dr. Piko impressed: (1) persistent AVN of the humeral head, (2) posterior partial tearing of the distal supraspinatus repaired tendon, (3) subdeltoid/subacromial bursitis, and (4) post surgical biceps tenodesis.

47. Referring to the AVN of the humeral head, Dr. Piko remarked, "This can be potentially be a complication of microtrauma or surgery, possible steroid use, or from alcohol abuse. Indeed, alcohol abuse is a well-known risk factor for AVN." Dr. Piko opined the July 11, 2016 MRI did not "convincingly show any significant changes to the humeral head," and that "Any further need for surgery would have to be based on functional evaluation of the rotator cuff." Dr. Piko stated there were multiple reasons for Claimant's pain symptoms, including the AVN.

48. Claimant's counsel authored a January 3, 2017 letter to Dr. Boyd asking, "Do you believe that [Claimant] is now a good candidate, from a psychological perspective, for an invasive medical procedure (specifically orthoscopic surgery with rotator cuff

repair?" Dr. Boyd replied "Yes." Dr. Boyd further indicated Claimant was equipped to follow doctor's orders regarding dosage and use, and that he does not envision any issues with prescribing pain medication for Claimant post-surgery. Dr. Boyd indicated he believes Claimant is motivated to get better as opposed to being motivated to obtain narcotic pain medication. In response to the question "Do you believe that it is now an appropriate time, from a psychological perspective, to move forward with the surgery recommended by Dr. Lugliani (Authorized Treating Physician) and Dr. Weinstein (*sic*)?" Dr. Boyd replied "Yes."

49. The medical records indicate Claimant attended seven cognitive-behavioral treatment sessions with Dr. Boyd, from August 2016 to December 2016.

50. Dr. Weinerman testified by deposition on February 10, 2017. Dr. Weinerman testified as an expert in orthopedic surgery. Dr. Weinerman opined the proposed surgery is reasonable, necessary and related. Dr. Weinerman contended Claimant's condition would not improve with conservative treatment and would be permanent without surgery. Dr. Weinerman contended there is "very little downside while the upside could be favorable." Dr. Weinerman initially testified he felt Claimant was honest and reliable in his examinations and he did not observe any drug seeking behavior.

51. On cross-examination, Dr. Weinerman acknowledged that, when he recommended the surgery in July 2016, he was not aware Claimant had undergone a prior procedure to treat the AVN or that Claimant had any active history of alcohol abuse. When asked by Claimant's counsel, "So would that call into question, as of July 2016, your opinion about that procedure because you were kept in the dark?" Dr. Weinerman replied, "Yes, that's correct."

52. Dr. Weinerman testified alcohol abuse is a significant risk factor for avascular necrosis and stated,"…I think if you knew that he was an alcoholic, and you could make the connection between the AVN and alcohol, you probably wouldn't do anything about the AVN. You would probably just look at the rotator cuff, make a decision about that, and leave the humeral head alone." Dr. Weinerman acknowledged it is important to know if a patient uses tobacco because smokers have a harder time healing. Dr. Weinerman stated, "…if you know he's had two operations and he hasn't gotten better, and he's a big smoker, you might be a little reluctant to do a third operation." Dr. Weinerman conceded Claimant was not a reliable historian.

53. Dr. Weinerman acknowledged smoking a pack of cigarettes a day, drinking six-pack of beer a day and not taking pain medications as prescribed increases surgical risks. Dr. Weinerman concluded, "I don't know if it would keep me from doing it, but it

makes me nervous that a patient isn't being really straight with the surgeon, you know." Dr. Weinerman testified Claimant needed a support system and stated, "So I think, knowing all this, it's not that I absolutely wouldn't do it, but you have to be reassured that he's on the right track if you were actually going to do it." Dr. Weinerman further testified, "So if we can be assured that he's not going to have a lot of problems afterwards handling it, that's his really only chance to get better."

54. Claimant testified at hearing he continues to experience symptoms since undergoing surgery and the symptoms have worsened. Claimant testified that he is unable to work, lift more than five pounds, throw, or perform overhead activities. Claimant alleged he currently drinks two 12-ounce alcoholic beverages every other day, which Claimant testified is "way less" than in the past. Claimant testified he does not have a drug or alcohol problem and has not received any drug or alcohol treatment. Claimant contended he is not addicted to pain medications and takes his medications as prescribed. Claimant testified he is psychologically ready for surgery and will take medications as prescribed. Claimant stated his common-law wife will assist him post surgery and that he needs the surgery to "get rid of the pain and get on with his life."

55. On cross-examination, Claimant disputed telling Dr. McCord he drank two 40-ounce beers nightly and that he smokes one pack of cigarettes per day. Claimant testified he reported drinking two to three beers per day. Claimant stated he smokes one cigarette per day. Claimant testified he is not a recovered drug user. When questioned regarding his use of Percocet, Claimant first testified he ran out of Percocet, then testified he misplaced the Percocet. When questioned regarding how he ran out of Percocet early, Claimant was unable to give an explanation.

56. Claimant's common-law wife, Mary Williams testified at hearing on behalf of Claimant. Ms. Williams testified she has known Claimant for seven years and lives with Claimant. Ms. Williams alleged Claimant is not and has never been an alcoholic or a drug addict. Ms. Williams testified Claimant cut back on his alcohol consumption and has a support group. Including herself, to assist him. Ms. Williams denied pulling Dr. McCord aside to speak with her privately.

57. Dr. Erickson testified at hearing as an expert in orthopedic surgery. Dr. Erickson is board certified and level II accredited with the Colorado Division of Workers' Compensation. Dr. Erickson testified consistent with his reports. Dr. Erickson opined, within a reasonable degree of medical probability, the recommended surgery is not reasonable or necessary. Dr. Erickson opined there is no objective evidence of a surgical lesion, and the July 2016 MRI demonstrated a healed rotator cuff and stable AVN. Dr. Erickson stated that if there is a tear, the tear would be approximately 2 mm

in length and would not be large enough to cause the pain Claimant alleges. Dr. Erickson stated his physical examination of Claimant did not produce objective findings. Dr. Erickson noted Claimant's use of alcohol and tobacco can have deleterious effects. Regarding the AVN, Dr. Erickson referred to a study indicating 22% of AVN cases are associated with some form of alcohol abuse, while 40% of AVN cases are idiopathic. Dr. Erickson testified he did not know if Claimant's alcohol use is a significant issue at this point. Dr. Erickson opined surgery is not indicated in Claimant's circumstances under the MTG for chronic pain, and the recommended approach would be to conduct a forensic evaluation.

58. The ALJ credits the medical records and opinions of Drs. Lugliani, Weinerman, Kelly and Boyd over the contrary opinion of Dr. Erickson.

59. Claimant has proven by a preponderance of the evidence that the recommended left shoulder surgery is reasonable, necessary and related to the April 8, 2015 industrial injury.

CONCLUSIONS OF LAW

The purpose of the Workers' Compensation Act of Colorado, Section 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1), C.R.S. Generally, the claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and

bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's resolution of issues will be affirmed if supported by substantial evidence in the record. Section 8-43-301(8), C.R.S.; *City and County of Denver School District 1 v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). Substantial evidence is that quantum of probative evidence, which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

Reasonable, Necessary and Related Medical Treatment

A respondent is liable to provide such medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury." Section 8-42-101(1)(a), C.R.S. *Colorado Compensation Insurance Authority v. Nofio*, 886 P.2d 714 (Colo. 1994). The determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ. *See generally Parker v. Iowa Tanklines, Inc.*, W.C. No. 4-517-537 (May 31, 2006); *Chacon v. J.W. Gibson Well Service Company*, W. C. No. 4-445-060 (February 22, 2002).

When determining the issue of whether proposed medical treatment is reasonable and necessary the ALJ may consider the provisions and treatment protocols of the MTG because they represent the accepted standards of practice in workers' compensation cases and were adopted pursuant to an express grant of statutory authority. However, evidence of compliance or non-compliance with the treatment criteria of the MTG is not dispositive of the question of whether medical treatment is reasonable and necessary. Rather the ALJ may give evidence regarding compliance with the MTG such weight as he determines it is entitled to considering the totality of the evidence. *See Adame v. SSC Berthoud Operating Co., LLC.*, WC 4-784-709 (ICAO January 25, 2012); *Thomas v. Four Corners Health Care*, WC 4-484-220 (ICAO April 27, 2009); *Stamey v. C2 Utility Contractors, Inc.*, WC 4-503-974 (ICAO August 21, 2008); Section 8-43-201(3), C.R.S.

The ALJ concludes Claimant has established by a preponderance of the evidence the left shoulder surgery recommended by Dr. Weinerman is reasonable, necessary and related to the April 8, 2015 industrial injury. As found, the ALJ credits the medical records and opinions of Drs. Weinerman, Lugliani, Kelly and Boyd. The ALJ is persuaded there is objective evidence of a recurrent rotator cuff tear and AVN. Despite Claimant's history of alcohol use, objective evidence of the AVN did not appear in the medical records until the November 2015 MRI, subsequent to Claimant's first left shoulder surgery. Dr. Weinerman credibly testified that the recurrent tear and AVN are related to the April 8, 2015 injury. Moreover, Dr. Kelly indicated there were injury pattern findings on the April 30, 2015 MRI that could have predisposed Claimant to development of AVN, and Dr. Piko stated microtrauma or surgery can be one of the causative factors of AVN.

Both Dr. Weinerman and Dr. Lugliani credibly opined the recommended procedure is the only option for curing or relieving Claimant's condition. Although Dr. Weinerman indicated there are potential concerns in light of Claimant's alcohol and tobacco use, Dr. Weinerman did not withdraw his recommendation for the surgery, but instead testified there should be reassurance Claimant is on the "right track." While Claimant's testimony cannot be relied upon with certainty, Dr. Boyd, who counseled Claimant over multiple sessions, credibly opined Claimant is now a good candidate for the recommended surgery. Given the time that has elapsed since he last evaluated Claimant, it is reasonable for Claimant to return to Dr. Weinerman for an evaluation of his left shoulder to be cleared for surgery. Based on the totality of the evidence, Claimant has proven by a preponderance of the evidence that the left shoulder surgery recommended by Dr. Weinerman is related to the April 8, 2015 industrial injury, and is reasonable and necessary to cure and relieve Claimant from the effects of the industrial injury.

ORDER

It is therefore ordered that:

1. The request for the left shoulder surgery recommended by Dr. Weinerman is found to be reasonable, necessary and related to Claimant's April 8, 2015 industrial injury. Insurer shall authorize the proposed left shoulder surgery.

2. Respondents shall pay for an appointment with Dr. Weinerman to clear Claimant for the proposed left shoulder surgery.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 7, 2017

Denver, CO 80203

STATE OF COLORADO OFFICE OF ADMINISTRATIVE COURTS 2864 South Circle Drive, Suite 810, Colorado Springs, CO 80906	
In the Matter of the Workers' Compensation Claim of: **RICK FRANKLIN,** Claimant, vs. **PUEBLO CITY SCHOOLS,** Self- Insured Employer, **c/o FCC SERVICES,** Respondent.	▲ **COURT USE ONLY** ▲ **CASE NUMBER:** **WC 4-988-862-03**

FINDINGS OF FACT, CONCLUSIONS OF LAW, AND ORDER

A hearing in this matter was held on March 2, 2017 before Administrative Law Judge Patrick C.H. Spencer II.

Claimant was present and represented by Lawrence D. Saunders, Esq. Respondents were represented by Frank M. Cavanaugh, Esq. The hearing was digitally recorded in the CMHIP Courtroom in Pueblo, Colorado from 10:52 AM to 11:31 AM.

The following exhibits were admitted into evidence: Claimant's Exhibits 1 and Respondents' Exhibits A-F. Claimant testified live at hearing. Ray Wilber testified via telephone. The ALJ gave the parties until March 20, 2017 to submit written closing arguments, at which time the matter became ready for an order.

In this order, Rick Franklin will be referred to as "Claimant," Pueblo County Schools will be referred to as "Employer" or "Respondent."

Also in this order, "Judge" or "ALJ" refers to the Administrative Law Judge, "ATP" refers to authorized treating physician, "C.R.S." refers to Colorado Revised Statutes (2016); "OACRP" refers to the Office of Administrative Courts Rules of Procedure, 1 CCR 104-1, and "WCRP" refers to Workers' Compensation Rules of Procedure, 7 CCR 1101-3.

CERTIFICATE OF MAILING OR SERVICE

I hereby certify that I have served true and correct copies of the foregoing **FINDINGS OF FACT, CONCLUSIONS OF LAW, AND ORDER** by U.S. Mail, or by e-mail addressed as follows:

ISSUES

1. Is Respondent entitled to apportionment of Claimant's PPD award under 8-42-104(5)(a) for a previous 5% impairment rating Claimant received in a 1998 claim?

FINDINGS OF FACT

1. Claimant worked for Employer as an irrigation maintenance technician. On May 20, 2015, he injured his low back while lifting a heavy backflow device.

2. Claimant had a prior work-related injury to his low back on October 10, 1998, while working for Employer. He was placed at MMI for that injury on April 10, 1999. He received a 5% whole person impairment rating from a DIME, Dr. Thomas Higginbotham. Employer admitted liability for the 5% rating with a Final Admission of Liability (FAL) dated December 30, 1999.

3. Claimant had a lumbar MRI on June 18, 2015, which showed multilevel degenerative disk disease with a large left disc extrusion at L4-5, severe left neural foraminal narrowing and severe bilateral neural foraminal narrowing at L5-1.

4. Claimant received authorized medical treatment at Southern Colorado Clinic Occupational Medicine. At his initial visit, he described ongoing "waxing and waning" low back pain and left lower extremity weakness. Claimant reported a prior back injury as a result of a 1996 motor vehicle, for which he underwent chiropractic treatment and an injection with Dr. Hess. Claimant said he had "been well since then." Claimant did not disclose the 1998 injury or the prior impairment rating.

5. Claimant underwent chiropractic care and therapeutic massage. He was also referred to Dr. Michael Sparr, a physical medicine and rehabilitation specialist. Under Dr. Sparr's direction, Claimant had multiple trigger point injections with myofascial release. He subsequently underwent radiofrequency ablation (rhizotomy) at L3, L4, and L5.

6. The rhizotomy was helpful, and Claimant was able to return to his regular work duties. Ultimately, Claimant underwent an FCE and was placed at MMI on August 25, 2016.

7. Dr. Terrance Lakin provided a permanent impairment rating on August 25, 2016. Dr. Lakin calculated a 15% whole person impairment rating for the lumbar spine, based on specific disorders and range of motion deficits.

8. Respondent filed an FAL on October 5, 2016 based on Dr. Lakin's MMI report. The FAL referenced Dr. Lakin's 15% rating, but only admitted for PPD benefits based on a 10% rating. Respondent "apportioned" out the prior 5% rating attributable to

the 1998 injury. Respondent attached the first page of the December 30, 1999 FAL to document the previous PPD award.

9. Mr. Ray Wilber of FCC Services is the adjuster handling Claimant's current claim. Mr. Wilber has adjusted several injury claims for Claimant, including three lumbar injuries.

10. At the time of Claimant's 1998 injury, Mr. Wilber was adjusting Employer's claims for a different third party administrator, SCA Claims Management Services ("SCA"). In 2008, FCC Services took over adjusting responsibility for Employer's claims, and Mr. Wilber continued handling Employer's claims with FCC Services.

11. When he received Dr. Lakin's rating report, Mr. Wilber tried to locate the medical records associated with Claimant's 1998 injury. However, the physical file was not transferred to FCC Services when it took over from SCA. Mr. Wilbur contacted SCA about the claim, but they could not locate the old file. He also contacted the previous ATP to request a copy of the rating, but was told those patient records had been destroyed. Respondents' counsel contacted Dr. Higginbotham's office, and was informed that Claimant's "records have been purged."

12. Mr. Wilber credibly testified that he remembers the 1998 claim involved a lumbar injury. He also credibly testified that the prior injury is coded in his computer system as a "lumbar strain," which matches his recollection. On cross-examination regarding how he could recall that information after so many years, Mr. Wilber credibly testified that people with more than three claims "tend to stick out in my memory," and "there were enough things that happened in that claim that I do remember it."

13. Claimant did not testify at hearing or otherwise present persuasive evidence to rebut the adjuster's recollection that the 1998 claim involved a lumbar injury.

14. Respondent has proven by a preponderance of the evidence that Claimant previously received a PPD award based on a 5% impairment of his lumbar spine. Therefore, Respondent has proven the requirements of § 8-42-104(5)(a), that Claimant had a prior "permanent medical impairment to the same body part and has received an award" for that impairment.

15. Respondent is entitled to apportion Claimant's PPD award based on the prior 5% rating.

16. Claimant is entitled to PPD benefits for his 2015 industrial injury calculated on the basis of a 10% whole person impairment rating.

CONCLUSIONS OF LAW

A. The ALJ can decide the issue of apportionment absent a DIME.

Respondent is not challenging Dr. Lakin's rating, and agrees that Claimant's current overall permanent impairment rating is 15%. Respondent asserts it is only required to compensate Claimant for 10% because he was previously compensated for the remaining 5% in a different claim.

The critical legal issue is whether Respondent is entitled to apportion Claimant's rating under § 8-42-104(5)(a) when the ATP did not apportion the rating and neither party requested a DIME. Based on the version of the apportionment statute in effect on the date of Claimant's injury, the ALJ concludes that apportionment premised on a prior "award or settlement" is a factual/legal issue for the ALJ to determine under the "preponderance of the evidence" standard. The ATP's decision whether or not to apportion the rating is not "binding" in the absence of a DIME. Application of the apportionment statute is an affirmative defense, and therefore, the burden of proof is on Respondent.

Apportionment of permanent medical impairment is governed by § 8-42-104 (the "apportionment statute").[1] The legal standards governing apportionment have changed several times since the passage of SB 91-218. Under the version of the apportionment statute in effect from 1991-1999, apportionment was limited to cases where the claimant had a "previous disability." As interpreted by *Askew v. Industrial Claim Appeals Office*, 927 P.2d 1333 (Colo. 1996), the term "previous disability" was not synonymous with "medical impairment." *Askew* held that apportionment was only appropriate if the pre-existing impairment hindered the claimant's ability "to meet personal, social, or occupational demands" at the time of the subsequent injury. In *Askew*, the pre-existing condition was dormant and asymptomatic at the time of the industrial injury, and therefore did not constitute a "previous disability" as a matter of law.

The Court of Appeals later extended *Askew* to cases where the claimant had a previous permanent impairment rating, but had improved and was not "disabled" at the time of a subsequent injury. See *Lambert & Sons, Inc. v. Industrial Claim Appeals Office*, 984 P.2d 656, 658 (Colo. App. 1998) ("if a claimant has a prior impairment rating, but is asymptomatic at the time of the subsequent injury, apportionment is not appropriate."); *Public Service Co. v. Industrial Claim Appeals Office*, 40 P.3d 68, 71 (Colo. App. 2001) (apportionment "is appropriate only when the impairment rises to the level of a disability and continues to affect the claimant at the time of the subsequent injury").

The Court of Appeals also determined that whether a claimant's prior injuries were "disabling" for purposes of apportionment was a question of fact to be determined

[1] There have been several iterations of the apportionment statute since 1991. From July 1, 1991 to June 30, 1999, apportionment of PPD was codified in § 8-42-104(2). From July 1, 1999 to June 30, 2008, apportionment of PPD was codified in § 8-42-104(2)(b). Effective July 1, 2008, apportionment of PPD is governed by § 8-42-104(5).

by the ALJ under the preponderance of the evidence standard. *Public Service Co., supra*. Therefore, the parties were not required to submit the issue to a DIME, and a DIME's opinion regarding apportionment was not entitled to any special weight.

In 1999, the General Assembly amended the apportionment statute to legislatively overrule *Askew* and its progeny. The amended statute provided that PPD benefits "shall exclude any previous impairment to the same body part." See § 8-42-104(2)(b), C.R.S. (2006). It was immaterial whether the prior impairment was "disabling" at the time of the subsequent injury. As a result of the statutory change, apportionment became "a pure medical determination" for the rating physician, rather than a question for the ALJ. *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826, 828 (Colo. App. 2007). As a consequence, the ALJ did not have jurisdiction to consider apportionment absent a DIME, and a DIME's apportionment determination was subject to the clear and convincing evidence standard.

In 2008, the General Assembly amended the apportionment statute again, with the passage of SB 08-241. The current statute now distinguishes work-related and nonwork-related prior impairments. *Compare* § 8-42-104(5)(a) & (b). In cases involving a prior nonwork-related impairment, the statute tracks the *Askew* standard, and only allows apportionment where the prior impairment was "independently disabling." On the other hand, if the prior impairment was work-related, apportionment is mandatory if the prior impairment involved "the same body part," and resulted in "an award or settlement" in a workers' compensation claim.

The ALJ concludes that apportionment under § 8-42-104(5)(a) is a factual question which the ALJ has jurisdiction to decide without a DIME. The 2008 amendments reflect a legislative compromise to restore the *Askew* apportionment standard, but with a provision to limit awards when a claimant has previously been paid for an impairment to the same body part. Under the *Askew* regime, apportionment was a factual question for the ALJ. It naturally follows that apportionment under the current statute is again a factual question.

Logically, whether a claimant was previously compensated for a permanent impairment with an "award" or "settlement" is a question most appropriately answered by an ALJ. It involves no significant medical determination and primarily turns on information a rating physician would not be expected to have. *See* WCRP 11-3(K) (setting forth requirements and restrictions on the contents of the DIME records package). The point is well-illustrated by Claimant's case because the prior rating was proved at hearing, not by reference to medical reports, but by reviewing an FAL, claim history data, and the claims adjuster's memory. In other cases, the decision to apportion a PPD award may hinge on interpretation of a settlement agreement or stipulation.

The plain language of the statute supports the interpretation that apportionment is a question for the ALJ. § 8-42-104(5) states that a claimant's "award or settlement" shall be reduced by the prior rating. Thus, the statute does not apportion the <u>rating</u>; it apportions the PPD <u>award</u>. Although Claimant correctly notes that Dr. Lakin's rating is "binding" under § 8-42-107.2(2)(b), the apportionment statute has no impact on

Claimant's rating. It simply limits the benefits payable to Claimant based on the rating. The overall rating is assigned by the ATP or DIME, *as a medical determination*. Once the overall permanent medical impairment rating has been determined, § 104(5)(a) reduces the "award" payable to the claimant for that rating. The apportionment statute thus operates as a statutory offset, much like the offset for SSDI or unemployment benefits. In essence, § 104(5)(a) gives Respondent a credit for the amount of the PPD award attributable to the prior 5% rating. Consequently, there was no need for Respondent to request a DIME before taking the credit to which it is entitled under the statute.

B. Respondents proved the requirements to apportion Claimant's PPD award.

As found, Claimant was previously compensated for a 5% lumbar spine rating in connection with his October 10, 1998 injury. Although the original rating report was lost, the ALJ is persuaded by Mr. Wilber's credible testimony that the prior rating was based on the lumbar spine. Although the prior impairment report would be the most desirable evidence to establish the prior rating, Respondent is entitled to rely on any competent and probative evidence to sustain its burden, including sworn testimony. There is no dispute that Claimant received an "award" of PPD benefits based on that prior rating, as evidenced by the December 30, 1999 FAL. Therefore, all the elements of § 8-42-104(5)(a) are satisfied.

The statute explicitly provides that if the factual predicates are established, a claimant's PPD award "shall be reduced." The term "shall" connotes a mandatory requirement. The purpose of § 8-42-104(5)(a) is to prevent a claimant from receiving a "double recovery" and being compensated repeatedly for the same impairment. *Pederson v. Jonathan P. Bayne DDS*, W.C. No. 4-894-819-02 (ICAO, May 19, 2015). Accordingly, Respondent is entitled to apportionment as a matter of law.

Dr. Lakin assessed a 15% whole person impairment, before apportionment. The ATP's pre-apportionment rating is binding because neither party requested a DIME. Section 8-42-107(8)(c). Therefore, Claimant's overall impairment is 15%, from which the prior 5% must be subtracted, pursuant to § 8-42-104(5)(a). For PPD purposes, Claimant's compensable impairment rating is 10% whole person.

ORDER

It is therefore ordered that:

1. Claimant's claim for PPD benefits based on a 15% whole person rating, without apportionment, is denied and dismissed.

2. Respondent shall pay PPD benefits calculated based on a 10% whole person rating. Respondent may take credit for any PPD benefits previously paid to Claimant in this matter.

3. Respondent shall pay statutory interest of 8% per annum on any benefits not paid when due.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Office of Administrative Courts

ISSUES

1. Has Claimant proven by a preponderance of the evidence that she suffered a compensable work-related injury on May 10, 2016?

FINDINGS OF FACT

1. Claimant works as a merchandise receiver for Employer. Her job duties include scanning inventory at a warehouse and completing related paperwork.

2. On May 10, 2016, Claimant was pushed from behind by a stack of pallets on a moving forklift. Claimant fell to the ground on her left side. She testified that she could not recall where the pallets struck her: "I really don't know because, all I know is it pushed – it pushed me and I fell. . . . I don't know where they hit me. I wasn't bruised by them on the right side."

3. A coworker called a "code blue," which refers to a "minor incident" in the warehouse. Claimant's supervisor came over and discussed the incident with her. Claimant did not request medical treatment, and her supervisor simply recommended that she go home.

4. Claimant was scheduled off the next day. When she went to work on May 12, she was still having pain in her hip and legs. Claimant asked if she could see a doctor, so Employer referred her to Dr. Frank Polanco for evaluation.

5. Dr. Polanco documented a comprehensive physical examination, including Claimant's head, neck, thoracic spine, lumbar spine, bilateral upper extremities, and bilateral lower extremities. Although Claimant reported hand pain, neck pain, bilateral shoulder pain, lower back pain, and left thigh pain, the examination findings were entirely normal without evidence of any acute injury. Dr. Polanco diagnosed a headache for which he recommended OTC ibuprofen. Aside from the headache, she had no clinical findings to support any specific diagnosis. Dr. Polanco opined Claimant was at MMI with no impairment and required no further treatment.

6. On May 23, 2016, Claimant returned to Dr. Polanco, now complaining of abdominal pain, low back pain, and groin pain. Based on her pain diagram, the neck, shoulder, left thigh, and right hand pain she was having at the initial visit had apparently resolved. The physical examination was again entirely normal, except for left lower quadrant tenderness. There were no musculoskeletal findings to suggest that her pain was related to the reported injury of May 10, 2016. Dr. Polanco opined that Claimant remained at MMI and recommended that she follow up with her primary care physician for her non-work-related symptoms.

7. At Claimant's request, Employer referred her for a second opinion with Dr. Jay Neubauer at CCOM. When she saw Dr. Neubauer on July 7, 2016, her symptoms had changed again. Claimant reported aching and stabbing left chest and abdominal pain, bilateral thigh pain, and "rare" right low back pain. She felt her pain was not improving. On physical examination, she had "slight" pain to palpation of the Trapezius muscles, tenderness around the left lateral ribcage at the bra line, "slight" left lower quadrant tenderness with deep palpation, and tenderness of the bilateral iliotibial bands. Dr. Neubauer opined that "some of the current complaints have objective findings consistent with injury related to a fall. Specifically, left chest pain and left thigh pain." But he also noted that the "chest pain did not start until a week or two[1] after the initial fall." Dr. Neubauer offered no explanation for why Claimant would still be experiencing pain from minor contusions and strains that happened nearly 2 months prior. The "minimal" exam findings relating to her abdominal pain made definitive diagnosis "difficult." Dr. Neubauer stated "if this was related to the fall, it would be a muscular injury that would have resolved quickly. Physical examination today suggests something other than a muscular injury." He opined that the bilateral thigh pain was more consistent with an overuse injury as opposed to a fall. Dr. Neubauer recommended a trial of physical therapy for left thigh and chest wall pain.

8. Claimant saw Dr. Polanco again on August 1, 2016. She reported pain in the left rib area, left lower abdominal area, and bilateral thighs. Once again, a comprehensive physical examination showed no significant abnormalities. Dr. Polanco diagnosed abdominal pain of "undetermined etiology" and "musculoskeletal pain with no significant clinical findings." Dr. Polanco opined that Claimant's presentation "is unusual for a work-related injury. While she did have a pallet strike on May 10, her clinical examination was unremarkable for any specific bruising or abnormal musculoskeletal findings. Subsequently approximately 13 days later she developed left lower quadrant pain. At that time she did not report rib cage pain or leg pain or radicular symptoms."

9. Dr. Polanco stated, "[a]t this time she has no musculoskeletal findings, but as the second opinion physician recommends physical therapy, we will proceed to provide this treatment." He also recommended an abdominal ultrasound to rule out a hernia. The subsequent ultrasound revealed no evidence of hernia or other abnormality in Claimant's left lower quadrant.

10. On August 19, 2016, Claimant saw Dr. Richard Rivera, her primary care physician. She reported left rib pain and pain at the insertion of the abdominal wall musculature into the left iliac crest. Dr. Rivera opined that Claimant "appears to have a chronically symptomatic strain at the insertion of the abdominal wall musculature into the left iliac crest accounting for her chronic pain in the area." Dr. Rivera gave Claimant injections at the costochondral joint and the rim of the iliac crest.

11. On August 25, 2016, Claimant returned to Dr. Rivera's office. She reported improvement of her pain and requested additional injections in her ribs and

[1] In fact, Dr. Neubauer's report contains the first mention of "chest pain," which is actually two **months** post-accident.

sacroiliac joint. She also requested clarification of her diagnosis so she could apply for short-term disability.

12. At a September 2, 2016 follow-up appointment with Dr. Rivera's office, Claimant reported the injections were only helpful for 3-4 days. PA-C Lindsay Goetzmann opined "at this time there are no further interventions as there seems to be no clear etiology of [the] patient's pain. She was given [a] work note for one more week off to determine if these injections helped. After discussion with Dr. Rivera, patient will be advised this will be her final work excuse from this office. . . . Patient's current condition is as optimized as we believe she will be and does not warrant restrictions at work." The note is cosigned by Dr. Rivera, indicating his agreement with its content.

13. On September 9, 2016, Claimant saw PA-C Lindsay Stringer at Dr. Rivera's office. She was still complaining of chronic pain in her abdomen and left ribs. PA-Stringer advised Claimant that Dr. Rivera's office would "no longer manage her left sided pain as there is no etiology and all interventions have failed; she will need to seek treatment elsewhere along with short-term disability." PA-C Stringer referred Claimant to Dr. Hess for "pain management." The note is cosigned by Dr. Rivera, indicating his agreement with its content.

14. Dr. Eric Ridings performed an Independent Medical Examination (IME) at Respondents' request on September 21, 2016. Dr. Ridings opined that Claimant's abdominal pain was "most consistent with an intra-abdominal source, not a musculoskeletal source." He could not relate any of her ongoing complaints to the May 10, 2016 incident within a reasonable degree of medical probability. Dr. Ridings agreed that "Dr. Polanco correctly placed the patient at maximum medical improvement without the need for treatment or work restrictions at the time of her initial evaluation on May 12, 2016." Her only work-related diagnoses were "minor contusions which did not cause any injury."

15. Dr. Timothy Hall performed an Independent Medical Examination (IME) at Claimant's request on January 6, 2017. Dr. Hall diagnosed: traumatic trochanteric bursitis with secondary iliotibial band pain and tightness; psoas spasm/ trauma, leading to groin pain/lower abdominal symptoms likely radiating symptoms into the anterior thigh; pelvic obliquity related to the trauma with quadratus lumborum spasm and local pain; and similar symptoms on the right, but not as severe.

16. Dr. Hall opined "there is no reason to even question the work-relatedness of the symptoms. I do not see how anyone who is looking at this situation reasonably could come to any other conclusion." Dr. Hall stated "the problem here is that she has not been treated. She has not been treated because Dr. Polanco decided she was not going to get any treatment right off the bat. Now, we have a problem of chronic pain, which is going to be very difficult to overcome."

17. Dr. Ridings testified at the February 16, 2017 hearing to expound upon the opinions expressed in his IME report. Dr. Ridings disagreed with Dr. Hall's assessment. Dr. Ridings explained that Dr. Hall's diagnoses were not consistent with the physical

examinations documented in Claimant's medical records or the mechanism of injury reported by Claimant. Additionally, Dr. Hall's conclusions were inconsistent with Dr. Ridings' examination of Claimant. Dr. Ridings noted inconsistencies in the location of Claimant's pain complaints throughout the course of treatment, with no significant musculoskeletal abnormalities documented. Accordingly, he concluded Claimant did not sustain a compensable injury as a result of the May 10, 2016 incident.

18. Dr. Polanco testified in an evidentiary deposition on February 28, 2016. Dr. Polanco explained that, contrary to Claimant's testimony, he performed a thorough physical examination at the initial appointment on May 12 2016, as documented in his report. He placed Claimant at MMI that same day because she presented with no musculoskeletal injuries and her primary complaint was a non-disabling headache.

19. Dr. Polanco saw Claimant a second time 11 days later, at which time she reported new symptoms of lower abdominal pain and urethral burning. She no longer complained of headache, neck pain, shoulder pain, right hand pain, or left thigh pain. Dr. Polanco concluded Claimant's new symptoms were unrelated to the work incident and recommended she seek treatment from her primary care provider.

20. On August 1, 2016, Claimant presented to Dr. Polanco with a new set of complaints. She complained of front and back rib pain with bilateral thigh pain. She was still complaining of lower abdominal pain, so Dr. Polanco ordered a left-side ultrasound. The ultrasound was normal, which Dr. Polanco believed showed Claimant's complaints were disproportionate to her clinical and diagnostic findings.

21. Dr. Polanco concluded, based on the medical evidence and his examinations, that Claimant sustained only minor contusions on May 10, 2016 which were not even clinically evident. He maintained his opinion that Claimant was at MMI as of May 12, 2016 with no impairment, work restrictions, or need of maintenance care.

22. Dr. Polanco's opinions are credible and more persuasive than medical opinions in the record to the contrary.

23. Claimant has failed to prove by a preponderance of the evidence that she suffered a compensable injury as a result of the May 10, 2016 incident at work. Although the incident caused transient symptoms, the symptoms did not require any medical treatment or cause any disability.

CONCLUSIONS OF LAW

To receive compensation or medical benefits, Claimant must prove that she is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1), C.R.S.; *see, Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). Claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App.

1997), *cert. denied* September 15, 1997. The claimant must prove entitlement to benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case are not interpreted liberally, in favor of either claimant or respondents. Section 8-43-201.

The respondents are liable for medical treatment which is reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a); *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997); *Country Squire Kennels v. Tarshis*, 899 P. 2d 362 (Colo. App. 1995). Where a claimant's entitlement to medical benefits is disputed, the claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, *supra*.

The Workers' Compensation Act recognizes a distinction between an "accident" and an "injury." The term "accident" refers to an "unexpected, unusual, or undesigned occurrence," whereas an "injury" is the physical trauma caused by the accident. Section 8-40-201(1). In other words, an "accident" is the cause, and an "injury" is the result. *City of Boulder v. Payne*, 426 P.2d 194 (Colo. 1967). Workers' compensation benefits are only payable if an accident results in a compensable "injury." The mere fact that an incident occurred at work and caused symptoms does not necessarily establish a compensable injury. Rather, a compensable injury is one that requires medical treatment or causes a disability. *E.g., Montgomery v. HSS, Inc*., W.C. No. 4-989-682-01 (ICAO Aug. 17, 2016).

As found, Claimant has failed to prove that she suffered a compensable "injury" on May 10, 2016. Although she was involved in an "incident" at work on that date, the incident did not proximately cause any disability or a need for medical treatment. Claimant did not request medical treatment immediately following the injury. When Dr. Polanco examined her two days later, he found no abnormalities and no persuasive evidence of any medical condition that required treatment. Claimant did not even have any abrasions or visible bruising. As Dr. Polanco noted in his deposition "I didn't see any musculoskeletal injuries to treat." Two of Claimant's most significant current concerns — abdominal pain and chest/rib cage pain — were not even present at the initial evaluation. The rib pain did not manifest until two months after the injury. The ALJ acknowledges that Claimant has subsequently undergone evaluations and received treatment from multiple providers, but none of that treatment was proximately caused by the incident on May 10, 2016. The persuasive evidence shows that the abnormalities appreciated by Dr. Rivera and Dr. Hall are new and unrelated to the May 10, 2016 incident.

ORDER

It is therefore ordered that:

1. Claimant's claim for workers' compensation benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 17, 2017

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

1. Has Claimant proven entitlement to temporary total disability (TTD) and/or temporary partial disability (TPD) benefits between August 9, 2016 and August 29, 2016?

2. Has Claimant proven entitlement to temporary total disability (TTD) benefits from August 30, 2016 through November 16, 2016?

STIPULATIONS

1. The parties stipulated to an average weekly wage (AWW) of $572.34.

FINDINGS OF FACT

1. Claimant worked for Employer in several positions, including assistant manager, trainer and closing server.

2. Claimant sustained an admitted injury on August 9, 2016 lifting water jugs in the "dish pit." She reported the injury to her supervisor, but was able to finish her shift. Claimant was not scheduled to work the following day, August 10, 2016.

3. Claimant's pain was worse the next day, so she went to the Memorial Hospital emergency room that evening. She reported flank pain, hip pain, and leg pain. On physical examination, she had bilateral SI joint tenderness and tenderness over the bilateral IT bands and adductors. Her discharge diagnoses were lumbar strain, muscle spasm, and acute sciatica. The ER physician prescribed a muscle relaxer, Norco, and NSAIDs. The ER physician took Claimant off work until August 14, 2016.

4. Claimant called Employer and emailed the documentation from the ER, including the "off work" note.

5. Upon receipt of the information, Employer referred Claimant to Concentra. Claimant was evaluated by Dr. Randall Jones on Monday, August 15, 2016. He noted that she was "scheduled to work doubles this next week." He noted her average work shift was 6-8 hours, and she averaged 30 hours per week. The ALJ infers from this information that Claimant typically worked 4-5 days per week.

6. On physical examination, Claimant had tenderness in the lumbar spine, the bilateral paraspinal musculature, and bilateral sciatic notches. Dr. Jones diagnosed lumbosacral strain and sciatica, for which he prescribed medication and physical therapy. Dr. Jones released Claimant to return to work the next day with restrictions of: maximum four-hour shifts, 10 pounds lifting, limited bending, and postural shifts as needed.

7. Dr. Jones advised Claimant that Concentra would notify Employer about her restrictions. Shortly thereafter, Claimant's manager, Jimmy Campos, contacted her to discuss modifying her schedule to accommodate the work restrictions. Mr. Campos told Claimant he had received notification from Concentra regarding Claimant's work restrictions.

8. Claimant's wage records show she earned $252.12 in the week ending August 14, 2016. The following week, she earned $162.59. Her earnings in those weeks are substantially less than the stipulated AWW of $572.35. The ALJ infers from Claimant's wage records, in conjunction with the evidence regarding her typical work hours, that Claimant suffered a wage loss immediately after being taken off work by the ER physician on August 11, 2016. The ALJ further infers from the evidence presented that Claimant returned to modified duty on August 16, 2016.

9. On August 25, 2016, Claimant told Dr. Jones she was "a little better," but had experienced some minor issues of incontinence. As a result, Dr. Jones referred Claimant for a "stat" lumbar MRI.

10. Claimant had the MRI the next day, on August 26, 2016. The MRI showed a diffuse disc bulge at L4-5, with moderate to severe central canal stenosis, and mild to moderate neuroforaminal stenosis.

11. On August 30, 2016, Claimant returned to Concentra on an emergent basis due to worsening pain and incontinence. Dr. Jones referred Claimant to the Memorial Hospital ER "stat" for further evaluation. Because of her worsening symptoms, Dr. Jones took Claimant off work. Subsequently, another manager at the restaurant, Justin Dorman, called Claimant and told her Concentra had notified Employer she was taken off work.

12. Claimant had the second lumbar MRI on August 30, 2016. At L4-5, there was a small broad-based disk bulge with resulting mild spinal canal stenosis, and bilateral L5 nerve root impingement, right greater than left.

13. Claimant returned to Concentra on September 30, 2016, and was seen by a new physician, Dr. Nicholas Kurz. Dr. Kurz released Claimant to return to "sedentary type work only," with a 5 pound lifting restriction, occasional standing and walking and postural shifts as needed.

14. During the appointment, Dr. Kurz did not tell Claimant he was releasing her to return to work, nor was she given any documentation when she left the office. She received an email from Concentra later that evening with her new restrictions. Claimant did not contact Employer, because she assumed Concentra had notified Employer, as it had done previously.

15. Claimant saw Dr. Kurz a few more times in October and November 2016. On each occasion she was released to work with restrictions. Claimant continued to assume that Concentra was sending reports to Employer regarding her status.

16. Dr. Kurz placed Claimant at MMI on November 17, 2016, with no impairment and no restrictions.

17. Claimant did not contact Employer between September 30, 2016 and November 17, 2016. Employer did not contact Claimant either. As a result, Claimant did not return to work, even though Employer could have accommodated her restrictions.

18. Janine Akerman, an injury coordinator at Concentra, testified credibly at the hearing regarding Concentra's procedures for notifying employers about their injured workers' restrictions. Ms. Akerman explained that employers have the option of setting up "what is called auto comm — auto communication. Things go to the employer automatically." The employer may receive information via fax, email, or signing into an internet portal. Concentra's system automatically notifies the employer via the designated method, without requiring any action by a Concentra employee. Ms. Akerman verified that Employer was set up for automatic notification via email. Ms. Akerman could not verify that Employer received the emails, only that they were sent.

19. Shannon Moore, the managing partner for Employer, testified at hearing. Ms. Moore was on maternity leave from July 12, 2016 through September 30, 2016. During that period, other managers were filling in for her. Ms. Moore did not communicate with Claimant regarding her work status between September 30 and November 17, 2016. Ms. Moore did not know about Claimant's restrictions after September 30, but testified Claimant could have worked modified duty at the host stand.

20. Ms. Moore received an email from Concentra dated September 30, 2016, the day Dr. Kurz released Claimant to return to restricted duty. The email header did not specifically identify to whom it pertained. A link in the email took Ms. Moore to a web page that required a user name and password. Ms. Moore could not access the link, because she did not know the user name or password.

21. Based on the stipulated AWW of $572.35, Claimant's weekly TTD rate is $381.57. The daily TTD rate is $54.51 ($572.35 x 2/3 = $381.57 ÷ 7 = $54.51).

22. Claimant is not entitled to TTD benefits on August 10, 2016 because she was not scheduled to work on that date. Accordingly, Claimant's injury did not cause a wage loss on August 10, 2016.

23. Claimant has proven entitlement to TTD benefits from August 11, 2016 through August 15, 2016, in the amount of $272.55 ($54.51 x 5 days = $272.55).

24. Claimant has proven entitlement to TPD benefits from August 16, 2016 through August 29, 2016.

25. Claimant has proven entitlement to TTD benefits from August 30, 2016 through November 16, 2016 in the amount of $4,306.29 ($54.51 x 79 days = $4,306.29)

CONCLUSIONS OF LAW

As of August 11, 2016, Claimant could not return to her pre-injury job due to the effects of the work injury. Consequently, Claimant was "disabled" for purposes of entitlement to temporary disability benefits. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999); *Hendricks v. Keebler Company*, W.C. No. 4-373-392 (ICAO, June 11, 1999).

A claimant is entitled to TTD benefits if the injury causes a disability, the disability causes the claimant to leave work, and the claimant misses more than three regular working days. Once commenced, TTD benefits continue until the occurrence of one of the four terminating events specified in § 8-42-105(3). *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995).

Claimant was restricted from all work from August 11 through August 15, 2016. Nevertheless, Respondents argue she is not entitled to TTD benefits because she did not prove she was scheduled to work during that period. Based on the evidence presented, the ALJ is persuaded that Claimant likely lost wages as a result of her injury during that window of time. Claimant's August 14, 2016 pay stubs shows she earned less than half of her AWW for that week. The next pay stub shows even lower earnings. Claimant typically worked four to five days per week, and near the time of her injury, she was working some "double" shifts. The ALJ finds no persuasive reason to conclude Claimant would have been off work for five consecutive days if she had not been injured. Therefore, Claimant is entitled to TTD benefits from August 11 through August 15, 2016.

Claimant returned to work on August 16, 2016 and worked modified duties through August 29. Respondents' counsel conceded at hearing that Claimant is entitled to TPD benefits during that time. Claimant's counsel asked for a general award regarding TPD, and stated the parties could "figure out" the specific amount. Based on the evidence presented, the ALJ concludes that Claimant is entitled to TPD benefits from August 16 through August 29, 2016.

Dr. Jones took Claimant off work on August 30, and she did not return to work after that date. As a result, Claimant became entitled to TTD benefits commencing August 30, 2016.

Having determined that Claimant was entitled to TTD benefits commencing August 30, 2016, the next question is whether her TTD benefits should be terminated on September 30 when she was released to restricted duty. The ALJ finds no basis to terminate Claimant's TTD benefits, for several reasons. First, none of the terminating events enumerated in § 8-42-105(3) had occurred by September 30. Second, Claimant had no affirmative obligation to notify Employer of her restrictions. Third, Claimant reasonably relied on Concentra to notify Employer of her status after each appointment, and Concentra did so. Employer's inability to access the transmission from Concentra was Employer's own fault.

Once commenced, TTD benefits "shall continue" until the occurrence of one of the events enumerated in § 8-42-105(3)(a)-(d). None of the listed events had occurred by September 30, 2016. Consequently, there is no statutory authority for terminating Claimant's TTD benefits on that date.

Moreover, it is well established that a temporarily disabled claimant has no affirmative duty to seek work within her restrictions. *Denny's Restaurant, Inc. v. Husson*, 746 P.2d 63 (Colo. App. 1987); *Schlage Lock v. Lahr*, 870 P.2d 615 (Colo. App. 1993); *Vigil v. Denver Catholic Community Services*, W.C. No. 3-796-867 (ICAO, April 29, 1993). A claimant's willingness to seek work "is irrelevant to the issue of entitlement to temporary disability benefits." *Cobb v. Terry Personnel Service*, W.C. No. 3-970-262 (ICAO, October 22, 1991). The onus is on the employer to offer the claimant modified duty within her restrictions.

Respondents argue Employer would have offered modified duty had it known Claimant was released to work. Therefore, Respondents argue Claimant created her own wage loss by failing to inform Employer of her restrictions. But Respondents' argument ignores Employer's failure to communicate with Claimant. There was no reason Employer could not have contacted Claimant regarding her work status. Ultimately, the failure of communication cuts both ways in this case.

In any event, the ALJ is persuaded that Claimant had a reasonable excuse for failing to notify Employer regarding her restrictions. She was under the impression that Concentra sent notice to Employer. In fact, Concentra emailed the information to Employer, but Ms. Moore could not access the documentation because she did not know the password.

ORDER

It is therefore ordered that:

1. Insurer shall pay Claimant $272.55 for TTD benefits from August 11, 2016 through August 15, 2016.

2. Insurer shall pay Claimant $4,306.29 for TTD benefits from August 30, 2016 through November 16, 2016.

3. Insurer shall pay Claimant TPD benefits from August 16, 2016 through August 29, 2016. The parties shall confer regarding the exact amount of TPD benefits to which Claimant is entitled. Either party may request a hearing if the parties cannot resolve the issue by agreement.

4. Insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 7, 2017

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

I. Are Respondents entitled to withdraw all Admissions of Liability because they have now proven, by a preponderance of the evidence, that on or about November 2, 2015 Claimant did not sustain a compensable injury to her **right** knee, arising out of, and in the course of, her employment?

II. If the evidence establishes that Claimant suffered a compensable injury to her **right** knee, has Claimant proved, by a preponderance of the evidence, that her need for medical benefits for the **left** knee is causally related to the injury to her **right** knee?

FINDINGS OF FACT

Based upon the evidence admitted at hearing, the ALJ makes the following Findings of Fact:

1. Claimant was employed by the Gymboree Corporation in November, 2015 as a "manager of sorts". Her duties included helping customers and putting out a new line [of clothing].

2. On November 2, 2015, Claimant testified that she was "maneuver[ing] around boxes and twisted [her] knee". She testified that she injured her right knee, and she told "everybody I worked with". She also described herself as "hurrying".

3. Claimant testified that she first sought medical treatment on November 9, 2015. She went to Penrose Community Urgent Care. She was given crutches and an immobilizer. She did not seek immediate medical care after the injury, because "we all get aches and pains, and they get better". She finally went on this day because the pain was so bad.

4. An x-ray of Claimant's right knee on November 9, 2015 showed only *mild* tibiofemoral and patellofemoral arthritis. (Ex. 7, p. 53).

5. Claimant began treating with Higgins Family Practice on or about December 1, 2015.

6. An MRI was taken on December 4, 2015, and was interpreted by Vincent Herlihy, M.D. His pertinent findings, were, in summary:

> 1….There is a macerated flap *tear* of the intercondylar aspect of the posterior horn and the posterior root insertion with moderate free edge truncation and an *irregular meniscal flap* displaced superiorly.

2. …There is *mild* degenerative fraying of the posterior root insertion of the lateral meniscus *without evidence of discrete tear*.
3. There is *moderate* grade 2-4 patellofemoral chondromalacia.
4. There is *mild* grade 2 and 3 chondromalicia in the central lateral tibial plateau. (emphasis added).

7. Claimant began treating with Dr. Ronald Royce on January 8, 2016. Dr. Royce noted a positive McMurray's test, and limited passive range of motion due to pain. She had "swelling and warmth" in the right knee. Inspection and testing of the left knee was totally normal. Dr. Royce noted that Claimant had "failed nonsurgical care," and would proceed with a knee arthroscopy.

8. The knee arthroscopy was completed on January 21, 2016.

9. The post operative surgical findings from Dr. Royce confirmed the chondromalacial findings on the MRI, indicating the presence of chronic arthritis. Additionally, however, it was noted that "The medical meniscus had a *tear* at the posterior horn. The *tear involved 20% of the meniscal tissue.* (emphasis added).

10. The repair then consisted of a partial meniscectomy for the aforementioned tear. The chondromalacia was then addressed by smoothing it with an arthroscopic shaver.

11. Overall, the medical records indicate that Claimant responded well to the arthroscopic surgery to her right knee.

12. Claimant testified that later in her treatment, her left knee began to hurt as well She reported the left knee pain to her boss and her doctors.

13. On March 30, 2016, Claimant reported the left knee pain to Dr. Royce (Cl's Exh. 7, 80). He noted "Patient returns for orthopedic clinic complaining of left greater than right knee pain. She's had a prior work-related injury to the right knee requiring treatment and because she has not mailed [sic] to walk on her right knee it's aggravated her opposite left knee." He noted an essentially normal right knee upon examination, but "limited flexion" and "pain elicited by motion" in the left knee. He provided an injection.

14. In April of 2016, Claimant reported her left knee pain to Higgins Family Practice (Cl's Exh. 5, 52).

15. An MRI was performed on May 3, 2016. The pertinent findings of the MRI were:
3. *Moderate to advanced* chondromalacia involving the medial patellar facet, trochlear cartilage, and medical compartment of the knee. There is a small focal area of osteochondrial irregularity involving the medial femoral condyle measuring 4.4 x 6

mm with adjacent marrow edema. The edema is *likely degenerative* or bone contusion…..

5. …*Meniscal degeneration is favored.* (emphasis added).

16. On review of the MRI, Dr. Royce and Claimant opted to move forward with an arthroscopic procedure on the left knee as well (Cl's Exh. 7, 91).

17. Dr. Adam Farber issued an opinion for Insurer stating surgery for the left knee would not be related to the November 2015 work injury (Cl's Exh. 11, 112).

18. Claimant testified that she had never had knee pain before her injury. Her left knee never hurt before her right knee surgery.

19. Claimant had prior nerve pain in her legs, but it had resolved. She also suffered from restless leg syndrome. However, she had never had knee trouble.

20. Despite Claimant's documented episode of mental health issues dating to 2007, the ALJ is persuaded that Claimant is sincere, to the best of her ability, in describing the events which she attributes to her injuries, and the symptoms she felt. An "inconsistencies" in her described mechanism of injury to her right knee are not of sufficient materiality to affect her sincerity.

21. Dr. Timothy Hall performed an independent medical examination on this claim on September 29, 2016 (Cl's Exh. 12, 113). Dr. Hall noted,

> "…the right Work Comp injury/event goes beyond the injury date of November 2, 2015 when she felt significant symptoms at the right knee. The work injury/event encompasses all subsequent interventions and associated consequences, which obviously includes increased stress on the opposite knee. She went from November to January limping, on crutches, all involving the left leg/knee. She then had a postoperative situation which further increased weightbearing and load on the left knee. She began to develop symptoms while still in rehabilitation for the right knee" (Cl's Exh. 12, 114).

22. Dr. Hall noted that while there are degenerative changes in Claimant's left knee, they "had been asymptomatic for years" (Cl's Exh. 12, 114). He stated, "In my opinion, this left knee degenerative situation would not evolve to a point of pain when it did if not for the problems with the right." *Id.* at 115.

23. Dr. Timothy O'Brien performed a records review for Respondents on November 16, 2016. He indicated that he felt her pain was due to arthritis, and he commented on inconsistent injury reports (Cl's Exh. 13, 124). He also stated that any problems with her left knee could not be "because she was compensating for the right." *Id.* at 126.

24. Dr. Hall reviewed additional records on January 18, 2017. He was critical of Dr. O'Brien's report, noting,

> "Certainly, arthritic patients can overtime become more symptomatic due to these chronic degenerative changes. It is also the case that they can have injuries superimposed on the arthritic changes. The arthritic changes make them more susceptive to local injuries due to reduced tissue tolerances and reduced healing capability. This is the case in this situation where the patient has had meniscal injury superimposed on her chronic degenerative arthritis. For Dr. O'Brien to flatly state that pain in an arthritic joint is not because of new tissue breakage or yielding is simply not the case" (Cl's Exh. 12, 116).

25. Dr. Hall also testified. He testified that the twisting injury Claimant described to him was a "common meniscal injury… rotating on a fixed extremity".

26. Dr. Hall also testified that he disagreed with Dr. O'Brien's statement that Claimant's pain was just arthritis. Dr. Hall testified that it was his opinion that "something needed to occur on top of those degenerative changes in order to make them that symptomatic at that particular moment." He testified that degenerative changes "absolutely" make a joint more susceptible to injury. Dr. Hall felt Dr. O'Brien's report accurately described what happens in arthritis, but noted that Claimant "didn't have waxing and waning pain in her knee joints." He noted that "it seems awfully coincidental to me that she has this event at work, and then, all of a sudden for the first time she has this waxing knee pain, which did not wane until somebody did a surgery on her…. I don't think her pain is from the osteoarthritis." Additionally, Dr. Hall noted that any pain from chondromalacia would not have been resolved by an arthroscopic surgery to repair a meniscus.

27. Dr. Hall testified that it appeared Claimant "had a similar meniscal event" in her left knee. He felt the left knee was related to the right knee. He testified that the "left knee injury comes from abnormal weight-bearing, abnormal mechanics when she was on the crutches, in rehab, post-operatively. That's an awful lot of load on the opposite leg." He testified that it wasn't "much of a stretch" to think she injured her left knee by overusing it after her right knee injury, "especially with her preexisting degenerative disease predisposing her to this sort of thing." Dr. Hall was clear that he did not think Claimant injured her left knee at the same time as the right knee, however.

28. Dr. Hall testified that pain from CRPS is very different than joint injury pain, and he would not expect a patient to confuse the two.

29. Dr. Hall testified that medical records tend to be "inconsistent," and in this case the injury was "described differently by different people". Despite these differences, Dr. Hall saw no indication to make him think Claimant wasn't telling him the truth.

30. Dr. Hall testified that additional treatment was needed for Claimant's left knee, but Claimant is at MMI for the right knee.

31. Dr. O'Brien also testified by deposition in the claim. Dr. O'Brien testified that he believed "there was a fall that predated her alleged work incident by one month" (O'Brien Depo. 8). He testified that he did not feel the pre-surgery MRI Claimant underwent showed any acute injury (O'Brien Depo. 18).

32. Dr. O'Brien also testified that even though there were inconsistencies in the records that could have been elucidated through a conversation with Ms. Harrison, he had no need to see her before making his opinions (O'Brien Depo. 48). He also testified that even though he found no documentation in the records that Ms. Harrison was having pain in her knees before the injury, he was certain she was.

33. Dr. O'Brien noted that Respondents' Exhibit I was not necessarily a good source of information on Claimant's credibility as, "…you have to interpret a report that was that far in the past with a certain amount of caution relative to her truthfulness or lack thereof eight years later."

34. Dr. O'Brien agreed that falling on a knee was not a normal mechanism of injury for tearing a meniscus, and that twisting a knee can tear a meniscus.

35. The ALJ finds that while both Drs Hall and O'Brien are learned, experienced, credible, and sincere, they both bring their respective biases into the hearing. Neither are persuasive in their entirety.

36. Jeannie Gerardo, senior resolution manager for Gallagher Basset Services also testified in this claim. She testified that had Insurer had the report from Dr. O'Brien, they would not have filed a general admission on this claim (Hrg. Trans. 81). However, Ms. Gerardo had only been with Gallagher Bassett for eight months when she testified. Additionally, her familiarity with this case stems wholly from notes she read, which were not made available to the court or to opposing counsel. Ms. Gerardo testified that she'd been on the case for only a few weeks.

37. Ms. Gerardo also testified that based on the notes she reviewed, there was absolutely no indication that the general admission on this claim should be withdrawn until Dr. O'Brien's report, which Insurer commissioned. Ms. Gerardo testified that it is the practice of Insurer to regularly obtain medical records during the claim, and to review them. She testified that she saw no notes that any prior adjuster noted a good faith basis to withdraw the general admission. Respondents had no reason to believe the general admission might have been improvidently filed until they hired Dr. O'Brien and he issued a report providing such an opinion.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

1. The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

2. Claimant must prove that she is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301 (1), C.R.S.; see, *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett*, 33 P.3d 1230 (Colo.App. 2001).

3. An injury occurs "in the course of' employment where claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. See *Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991). The "arising out of' requirement is narrower and requires claimant to show a causal connection between the employment and injury such that the injury has its origins in the employee's work-related functions and is sufficiently related to those functions to be considered part of the employment contract.

4. Section 8-41-301(1)(c), C.R.S., provides as a condition for the recovery of workers ' compensation benefits that the injury be "proximately caused by an injury or occupational disease arising out of and in the course of the employment." Under the statute the requirement that the employment be the proximate cause of the "injury" exists whether the claimant is alleging an "accidental injury" or an "occupational disease." See *CF & I Steel Corp. v. Industrial Commission*, 650 P.2d 1333 (Colo. App. 1982); § 8-40-201(2), C.R.S. (term "injury" includes disability resulting from accident or occupational disease); § 8-40-201(14) (occupational disease is one occasioned by the nature of the employment and can be traced to the employment as a proximate cause).

5. The question of whether the claimant proved an injury or occupational disease proximately caused by the performance of service arising out of and in the

course of employment is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000) (proof of causation is threshold requirement that must be established before any compensation is awarded); *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999) (claimant seeking benefits for occupational disease must establish existence of the disease and that it was directly and proximately caused the conditions of employment).

6. Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. C*olorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968); *Robinson v. Youth Track*, W.C. No. 4-649-298 (ICAO May 15, 2007).

Claimant's Right Knee

7. An employer must continue to pay on an admission of liability unless sufficient evidence exists to "permit withdrawal of the admission." *Rocky Mountain Cardiology v. ICAO,* 93 P.3d 1182 (Colo. App. 2004) (citing *Pacesetter Corp. v. Collett,* 33 P.3d 1230 (Colo. App. 2001); *Arenas v. ICAO,* 8 P.3d 558 (Colo. App. 2000).

8. The burden of proof regarding the **left** knee lies with Claimant. The burden of proof on compensability of the **right** knee, however, lies with Respondents. This is in large part because in failing to contest Claimant's entitlement to benefits, Respondents have, "'in effect, admitted that the claimant has sustained the burden of proving entitlement' to benefits." *City of Brighton v. Rodriguez,* 318 P.3d 496, 507 (Colo. 2014) (quoting *Rocky Mountain Cardiology v. ICAO,* 94 P.3d 1182, 1184 (Colo.App.2004)). A party seeking to modify an issue determined by a general or final admission, a summary order, or a full order shall

bear the burden of proof for any such modification. C.R.S. § 8-43-201(1). The court in *Brighton* determined that the burden in such a situation was a preponderance of the evidence.

9. Respondents infer that Claimant did not suffer a compensable injury on November 2, 2015 because “changing directions” is a normal part of life. While changing directions while walking is certainly a ubiquitous component of daily life, the ALJ finds that this particular movement, on that date and at that time, *caused* her meniscal tear. Claimant maneuvered around these boxes as part of her job duties with Gymboree. As she testified, she was "just hurrying", and got careless. Dr. Hall testified that the twisting injury Claimant described to him was a “common meniscal injury… rotating on a fixed extremity”. On cross, Dr. O’Brien even agreed that twisting a knee can tear a meniscus. It does not require a stretch of the imagination to conclude that Claimant, stepping awkwardly around boxes in the aisle, tore her fragile right meniscus, if a professional athlete in his 20s, untouched by an opponent, can tear a meniscus on an open field by simply changing direction-albeit at much higher speeds.

10. There is no evidence that Claimant ever had pain in her right knee before the date of injury. Claimant did not damage the meniscus which was repaired when she fell onto her knee about one month prior. While she did have other problems in her legs (CRPS, restless leg syndrome), none of the medical records indicate right knee pain. Claimant’s CRPS was in her **left** leg, and she testified that it is resolved. Claimant explained credibly that her right knee hurt when it happened, but she expected it to resolve with time, just like aches and pains usually do. When the pain persisted, she sought help.

11. The pertinent findings on Claimant's *right* knee MRI-and post surgical confirmations- are suggestive of two conclusions. First, her degenerative condition, while plainly evident, was *mild to moderate* in severity. Secondly, there is a large torn flap- which was repaired successfully- suggestive of trauma, especially in combination with the concurrent onset of pain Claimant could no longer ignore.

12. The adjuster for Respondents testified credibly about the *reasons* that they now wish to withdraw their admission for Claimant's right knee. That does not mean that the burden of proof was met which would enable Respondents to do so. Respondents have not proven by a preponderance of the evidence that they are entitled to withdraw the general admission admitting for compensability of her right knee. The ALJ finds that Claimant suffered a compensable injury to her right knee. Dr. O'Brien's report and testimony does not change that.

Claimant's Left Knee

13. Subsequent injuries are “compensable under the quasi-course of employment doctrine” when they are “the ‘direct and natural’ consequence of an original injury which itself was compensable.” *Travelers Ins. Co. v. Savio*, 706 P.2d 1258, 1265 (Colo. 1985). Relatedness is subject to a “but for” test, in which Claimant is entitled to compensation under the doctrine if he would not have received the injury ‘but for’ the fact that he had a prior compensable injury.” *Turner v. Indus. Claim Appeals Office of State of Colo.,* 111 P.3d 534, 537 (Colo. App. 2004).

Reasonable and Necessary

14. Dr. O’Brien’s opinion that Claimant is not a surgical candidate for her left knee issues is not persuasive. The ALJ finds that the opinion of Dr. Royce is more credible regarding the need for surgery. Dr. Royce is a treating physician, who has already performed surgery on one of Claimant’s knees. He is well aware of her ability to undergo surgery, and her ability to heal. If Dr. Royce believed Claimant would not be a good candidate for another surgery, he would not have recommended it. Dr. O'Brien is unnecessarily overreaching in opining that Claimant is not a candidate for arthroscopic surgery to safely improve her quality of life.

Causation

15. Even if the proposed surgery is reasonable and necessary to alleviate the pain in Claimant's left knee, the analysis does not end there. Claimant still bears the burden of proof that her admitted injuries to her right knee *caused* her left knee injuries.

16. Once again, the pertinent findings of her left knee MRI are helpful. Her chondromalacia is described as *moderate to advanced.* The edema is *likely degenerative* **or** a bone *contusion.* The bone contusion- if it exists- is more suggestive of a trauma- and a trauma is not advanced by Claimant's narrative of her left knee. The overall state of her left meniscus is "favored" to be *degenerative* in nature, per her MRI. While small tears are noted, there is insufficient evidence that these tears- if they caused the pain she reported- came into being due to simple overuse during her brief recovery period.

17. In this instance, the ALJ does credit Dr. O'Brien's opinion, as well as that of Dr. Farber, on the causation issue; Claimant has not shown, by a preponderance of the evidence, that her increased reliance upon her left knee, during the recovery period for the right knee, *caused an injury* to her left knee. Any *injuries* to Claimant's left knee, and pain she experienced, are more likely the result of chronic degenerative conditions, and are not compensable.

ORDER

It is therefore ordered that:

1. Claimants suffered a compensable injury to her right knee on or about November 2, 2015. Claimant is entitled to all reasonable and necessary medical benefits in connection therewith.

2. Claimant did not suffer a compensable injury to her left knee. Her claim for Workers Compensation benefits for her left knee is denied and dismissed.

3. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 26, 2017

Colorado Springs, Colorado 80906

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that her case should be reopened, based upon one or more mistakes by one of her Authorized Treating Physicians in placing her at Maximum Medical Improvement?

FINDINGS OF FACT

Based upon the evidence presented, the ALJ enters the following Findings of Fact:

1. Claimant was employed as a school principal for the Harrison School District. While on an assignment off campus, she sustained an admitted back injury on August 11, 2014, after falling onto some bleachers, striking her back and buttocks.

2. Claimant testified that she had not experienced back pain from 2012 until this work injury.

3. Claimant was involved in a motor vehicle accident on June 17, 2010. The details of her treatment are scant, but indicate it occurred in a parking lot. She was struck the passenger side of the car she was driving. She reported neck and back pain at the time, and was diagnosed with muscle strain and spasms. She was prescribed flexeril and ibuprofen, and cleared. (Ex. L, p. 277). No follow up for this injury is noted in the records.

4. Claimant's medical records show visits to the Dressen Spine Center for back pain in both 2005 and 2008, with lumbar strain and spasm. (Ex Q.). No long term follow up is noted. Claimant also had a long history of depression dating back to 2003.

5. On August 14, 2014, three days after her fall, Claimant was seen at Concentra by Dr. Randall Jones who diagnosed a contusion to the back wall of her thorax, and lumbar contusion and strain. She also suffered a knee sprain and a right ankle strain. Dr. Jones prescribed physical therapy ("PT") 3 times per week and Naproxen. Claimant was given temporary work restrictions. (Ex. K, pgs. 202-204). At this very first visit, Dr. Jones notes state " The patient presents today with a new injury, pt states while walking down the bleachers, she fell injuring her left knee, **neck,** low back, left hip, and right ankle" (emphasis added). Later medical entries from Concentra note that Claimant denies actually *landing on or striking* her neck. No further diagnosis or treatment of her neck appears in the records, but Claimant does complain of pain in her upper back.

6. Also on August 14th, thoracic spine x-rays showed minimal degenerative changes at multiple levels and lumbar spine x-rays showed minimal degenerative changes at L2 through L4 with osteophytosis. (Ex. H, pg. 147)

7. By September 24, 2014 following several visits to Dr. Jones and physical therapy, Claimant was seen by Brian Polvi, D.C. Claimant's low back pain was sharp and severe and Dr. Polvi referred Claimant for acupuncture and dry needling. (Ex. R, pg. 434). He also noted that Claimant has returned to full duty employment. (*Id.*)

8. After dry needling, Claimant was evaluated by physiatrist Jeffrey Jenks, M.D., on October 1, 2014, and he noted that PT had not helped Claimant but chiropractic seemed to be helping. He diagnosed thoracic myofascial pain and bilateral sacriolitis and recommended bilateral sacroiliac joint injections. (Ex. K, pgs. 216-217).

9. By December 16, 2014, after chiropractic care and manipulation, physical therapy and dry needling, Claimant was seen again at Concentra where she had full lumbar range of motion. (Ex. K, pg. 225). She was referred to Albert Hattem, M.D., a delayed recovery specialist. (*Id*. at 226)

10. On February 12, 2015, she was seen by Dr. Hattem, and told him that overall she was improved but still had hip stiffness and some upper back discomfort. She had not followed up with Dr. Jenks because she had decided to not undergo the injections at that time, citing a mistaken belief that once she began injections, she would be required to continue them indefinitely. Dr. Hattem noted an essentially normal exam and that Claimant denied radiating leg pain or numbness and was continuing to work full duty. Under "Impression", Dr. Hattem noted "*likely* bilateral sacroiliac dysfunction". He recommended continued chiropractic care. (Ex. K, pg. 232).

11. On February 25, 2015, Claimant underwent her ninth chiropractic visit with Terrence Thomas, D.C. (Ex. H, pg. 144). On March 11, 2015, Dr. Polvi reported that Claimant had been non-compliant with the recommended acupuncture visits. (Ex, S, pg. 456). By May 18, 2015, Claimant had her 6th visit with Dr. Polvi, focusing on acupuncture and manipulation for low back pain. Claimant indicated 75 percent overall improvement. (Ex. R, pg.468).

12. On May 21, 2015, Claimant followed-up with Dr. Hattem. She expressed concerned that nobody had treated her upper back or neck. She then wanted to undergo the SI injections which she had previously declined. Dr. Hattem diagnosed a new onset of neck pain and told Claimant that he did not feel that was related to her work injury and *she had not complained of neck pain* ***previously****.* (emphasis added). Dr. Hattem noted that Claimant had a pattern of "very severe" non-compliance resulting in difficulty to him managing her case. Dr. Hattem noted that Claimant returned to see him because of a demand appointment made by Respondents. Claimant requested additional chiropractic care. Dr. Hattem referred Claimant back to Dr. Jenks for his opinion regarding injections. (Ex. K, pgs. 244-245). Dr. Hattem went on to state that if Claimant continued to be non-compliant that she would be placed at MMI. (*Id.* at 245).

13. However, Claimant had been seeing her previous ATP, Randall Jones. In his notes from a 4/16/15 visit, Dr. Jones notes that "she [Claimant] missed her f/u (follow-up) appt dr hattem 4-2 as 'I though (sic) it was the next day'….she has not heard when f/u appt dr hattem is….I will have Kristina set up appt for her asap".

14. Claimant underwent the bilateral SI injections on June 12, 2015 by Dr. Jenks. (Ex. Q, pg. 411).

15. On July 7, 2015, Claimant saw Dr. Hattem and reported that the injections were somewhat helpful. Given that Claimant was one year post injury, Dr. Hattem recommended further work-up with thoracic and lumbar MRI and laboratory work-up. He also felt that given Claimant's various pain complaints, ***there is likely "behavioral issues impeding her recovery."*** (Ex. K, pgs. 248-249) (emphasis added).

16. Claimant was not referred for any psychiatric or psychological treatment or diagnosis until her IME with Dr. Gutterman in December of 2016.

17. There is no evidence in the record of any missed appointments or noncompliance by Claimant since her visit with Dr. Hattem on 5/21/2015.

18. A July 15, 2015, lumbar MRI showed mild degenerative changes at L5-S1 without nerve root impingement. A thoracic MRI revealed minimal spondylosis and moderate changes at C5 through C7. (Ex. H, pg. 147).

19. On August 6, 2015, Claimant continued to complain to Dr. Hattem of persistent, unchanged, diffuse back pain from the base of her neck to the lumbar spine. She indicated that Dr. Jenks had also discharged her from his care earlier that month. Dr. Hattem noted that Claimant presented in no distress. Her gait was normal and she moved across the room without difficulty. (*Id*. at 251)

20. Dr. Hattem's impressions were that Claimant had had normal lumbar and thoracic x-rays. The recent lumbar and thoracic MRIs showed mild degenerative changes. A chemistry panel was normal. An arthritis panel demonstrated a rheumatoid factor of 108. Dr. Hattem went on to state that Claimant "has variously complained of neck, diffuse spine, and bilateral hip pain. ***It is my opinion that these migrating pain complaints are more likely related to rheumatoid arthritis or to behavioral issues rather than to the 8/2014 [work injury]."*** (Ex. K, pg. 252) (emphasis added).

21. On August 9, 2015, Dr. Hattem completed the WC form, placing Claimant at MMI on August 6, 2015, with no impairment, no restrictions and no need for medical maintenance care. (*Id.* at 254).

22. In his final visit with Claimant, Dr. Hattem lists three Impressions which provide his basis for placing Claimant at MMI. In summary, they state, in pertinent part:

> 1. "Today, I informed Geraldine that her ongoing migrating pain complaints are *more likely related to rheumatoid arthritis* than to the work injury that occurred one year earlier." (emphasis added).

2. "I informed Geraldine that her neck pain was not causally related to the 8/11/2014 work injury *because* she did not report neck pain *until* one month afterwards." (emphasis added).

3. "Pattern of noncompliance. In 02/2015, I instructed Geraldine to return in one month. She did not return again until three months later on 05/021/2015 (sic). Since 05/2015, her compliance has been more appropriate." (emphasis added).

Later in the report, Dr. Hattem notes diffuse pain complaints, then elaborates, "It is my opinion that these migrating pain complaints are more likely related to rheumatoid arthritis *or* to behavioral issues rather than the 08/2014 fall she work injury" (sic).

23. On August 18, 2015, Respondents filed a final admission of liability consistent with the opinions of Dr. Hattem that Claimant reached MMI on August 6, 2015, with no impairment and on medical maintenance. (Ex. B, pg. 4).

24. Up through August 18, 2015 Claimant was unrepresented by counsel.

25. Claimant did not file an objection to the final admission of liability. Claimant did not apply for a Division IME, challenging Dr. Hattem's findings on MMI and impairment.

26. On May 12, 2016, Claimant, apparently still unrepresented, filed a Petition to Reopen. The initial bases for the petition were both change of condition for Claimant's back and neck and error/mistake. (Ex. C, pg. 10). Multiple medical records, receipts, emails and other records were attached to Claimant's petition. (*Id.* at 13 to 45).

27. On September 15, 2016, Claimant, now represented by counsel of record herein, filed an Application for Hearing on the issues of petition to reopen for worsening of condition. (Ex. D, pg. 47).

28. On November 7, 2016, a Prehearing Conference was held whereby Respondents sought to pursue attorney's fees against Claimant for trying to challenge both the admitted MMI date and the admitted work-related medical conditions (by trying to include Claimant's neck), without applying for a Division IME. During that prehearing, Claimant withdrew the claim that her neck problems were work-related and also withdrew the petition to reopen based upon worsening of condition. The PALJ ordered that Claimant's petition to reopen was restricted to an alleged mistake and not any change of condition. Respondents, therefore, withdrew their request to purse attorneys' fees against Claimant for applying for hearing without obtaining a DIME.[1]

29. Claimant contends that when he placed her at MMI, Dr. Hattem told Claimant that if it turned out she did not have rheumatoid arthritis, "then you simply give

[1] Respondents submitted a copy of PALJ De Marino's November 9, 2016, PHC order at the hearing in this claim and Claimant did not object.

documentation to that and your case will be re-opened." (Ex. C, pg. 14). Dr. Hattem's records do not reflect that he ever made such a statement to Claimant. To the contrary, Dr. Hattem's MMI report expressly states that: "***[i]t is my opinion that these migrating pain complaints are more likely related to rheumatoid arthritis or to behavioral issues rather than to the 8/2014 [work injury]."*** (Ex. K, pg. 252) (emphasis added). The ALJ is unable to conclude that such a conversation actually occurred as understood by Claimant; however, Claimant believed (reasonably or not) that her RA would be seen by the WC system as an issue unrelated to her back pain.

30. Claimant was seen by Austin J. Corbett, M.D., a rheumatologist, outside of the workers' compensation claim. On January 13, 2016, Dr. Corbett documented that Claimant presented for joint pain and that her "symptom's and history are consistent with rheumatoid arthritis ("RA") and rheumatoid factor is significantly positive at 60 units." (Ex. Q, pg. 339) Dr. Corbett also documented Claimant's self-report that as a result of the work injury, Claimant had "debilitating neck and back pain since then, and right lateral hip pain." (*Id*. at 337) On February 17, 2016, Dr. Corbett reported that: "I do believe the patient has rheumatoid arthritis, but the fairly minimal abnormalities on joint exam is a little troubling." (*Id.* at 343) On March 28, 2016, Dr. Corbett took a history from Claimant that Claimant "was told [by her ATP] that she does not have a work-related injury causing pain but rather that all her symptoms could be attributed to rheumatoid arthritis." (*Id.* at 344)

31. On April 27, 2016, Dr. Corbett wrote a "To Whom it May Concern" letter stating that Claimant has seropositive rheumatoid arthritis. "However, she also has disabling chronic back pain related to a work-related injury. Chronic back pain, hip pain, pelvic and neck pain *cannot be attributed to the newly established diagnosis of rheumatoid arthritis.* In my opinion [Claimant] should continue to be followed up for her work-related injury by workers' compensation. This problem should be considered completely independent of the newly diagnosed problem of rheumatoid arthritis." (Ex. Q, pg. 345). Dr. Corbett also noted that her back pain predated any symptoms of RA.

32. Further, in a medical summary dated July 28, 2016, Dr. Corbett notes *"Rheumatoid arthritis typically does not cause lower back pain.* It is typically most active in extremity joints, especially the small joints of the hands and feet. Therefore, I do not think that the patient's preexisting and debilitating problems with neck and back pain should be attributed to the diagnosis of rheumatoid arthritis. (Ex O, p. 349).

33. No evidence was presented that Dr. Corbett is Level II accredited by the Division of Workers' Compensation or that he conducted a causality determination as required by Level II accredited teachings. The record is unclear whether Dr. Corbett reviewed any medical or records of any kind concerning the admitted work injury. Dr. Corbett may well have obtained all of his information regarding Claimant's work injury solely from Claimant.

34. On December 6, 2016, Claimant underwent an IME with Level II accredited and physical medicine and rehabilitation expert Brian Lambden, M.D. Dr. Lambden also conducted a medical records review and causality determination. Dr.

Lambden testified that he agreed with Dr. Hattem that Claimant reached MMI on August 6, 2015 for the work injury. According to Dr. Lambden's testimony, there was no error or mistake with the MMI date given by Dr. Hattem.

35. Dr. Lambden opined that Claimant's back complaints are likely multi-factorial, including obesity, history of pre-existing lumbar and thoracic disc disease, significant deconditioning, diabetes and arthritis and depression. (Ex. H and Dr. Lambden testimony). Dr. Lambden expressed some familiarity with rheumatoid arthritis, and opined that Dr. Corbett's opinions regarding Claimant's work injury were not reliable because the assumptions underlying those opinions (*i.e.,* that Claimant suffered from chronic neck and back pain from the work injury) were simply not true.

36. On December 16, 2016, Claimant underwent a psychiatric IME with Gary S. Gutterman, M.D. A report was then generated on January 23, 2017. He reviewed Claimant's medical records and ultimately opined that Claimant has a non-work-related "somatic symptom disorder" due to various psychological stressors as outlined in his IME report. He felt that this disorder was contributing to Claimant's current pain complaints.

37. Dr. Gutterman testified at hearing that he was aware that when Dr. Hattem placed Claimant at MMI on August 6, 2015, Dr. Hattem stated that: "*It is my opinion that these migrating pain complaints are more likely related to rheumatoid arthritis or to behavioral issues rather than to the 8/2014 [work injury]"* (emphasis added)*.* According to Dr. Gutterman, Dr. Hattem was correct. Claimant's migrating pain complaints, including back pain that she had at MMI were, in fact, related to "behavioral issues" rather than to the work injury. Those behavioral issues, as Dr. Gutterman explained, were not conscious. Claimant, he said, is not consciously embellishing pain complaints. In fact, Dr. Gutterman found Claimant to be "pleasant, likeable and forthcoming." (Ex. I pg. 175)

38. Nonetheless, Dr. Gutterman explained that when she was placed at MMI by Dr. Hattem, Dr. Hattem was correct when opining that Claimant's continued migrating pain complains were more likely related to "behavioral issues", *i.e*., non-work-related somatic symptom disorder, rather than the work injury.

39. No treating physician diagnosed Claimant with a work-related psychological condition of any kind. The purpose of Dr. Gutterman's IME was to assess whether or not Dr. Hattem's opinion that Claimant's continued back complaints at MMI were "more likely related to behavioral issues" rather than the work injury, was accurate and correct. Dr. Gutterman opined that Dr. Hattem was, indeed, correct.

40. The more appropriate avenue for Claimant to challenge Dr. Hattem's August 6, 2015 MMI date was to apply for a Division IME within 20-days from the date of the filing of the Final Admission of Liability. Claimant admitted that when Dr. Hattem placed her at MMI on August 6, 2015, she disagreed with him then and believed ***at that time*** that he was mistaken. The ALJ finds that this alleged error/mistake could possibly

have been rectified or avoided by the timely exercise of Claimant's right to apply for a Division IME to challenge MMI prior to the closure of the claim.

41. However, the ALJ further finds that Claimant, who remained unrepresented until a new Application was filed on her behalf, was not well versed in the Workers Compensation process when she failed to request a DIME. There is no evidence that this erstwhile pro se claimant intended to use the reopening process in order to circumvent the DIME process, in order to benefit from a reduced burden of proof. Indeed, it remains unknown at this time what result such a DIME process might have yielded. The ALJ finds that such circumvention was not a motive of Claimant.

42. The ALJ finds that while Dr. Corbett is not Level 2 accredited, and did not perform a causation analysis as contemplated by Workers Compensation standards, he does possess far greater knowledge of the diagnosis, cause, and treatment of RA than Drs. Hattem and Lambden. The ALJ especially finds the opinion of Dr. Corbett to be more persuasive that *RA does not ordinarily cause lower back pain*- especially lower back pain-which began on the date of Claimant's injury, and before her symptoms or RA appeared in her lower extremities. Without more evidence in support, Dr. Hattem was mistaken in attributing her back pain to RA.

43. The ALJ further finds that Dr. Hattem was mistaken in his assumption that Claimant had not reported neck pain, either for one month after the fall, or "previously", (i.e., at all) as he alternately stated in his reports. Claimant reported it as soon as she could have.

44. While Claimant missed at least one appointment with Dr. Hattem, and plainly showed overt irresponsibility in the spring of 2015, the file indicates she may have been confused about her April appointment with Dr. Hattem. She reported to Dr. Jones in April, continuing to seek help. It then appears from the record that she made every appointment with each provider from May 21, 2015 onwards. As Dr. Hattem notes himself when he placed her at MMI in August of 2015, her compliance of late has been 'more' appropriate. While no doubt frustrating to the providers concerned, it there could be said to be a "pattern of noncompliance", such pattern no longer existed when Dr. Hattem placed her at MMI on August 6, 2015, after 3 months of no missed appointments. The ALJ finds this to have been an additional mistake by Dr. Hattem in placing her at MMI, using noncompliance as a basis.

45. While the ALJ finds Dr. Gutterman to be highly qualified professionally, and sincere in his assessment of Claimant's condition, the ALJ is not persuaded that this after-the-fact IME justifies Dr. Hattem's final reason for placing Claimant at MMI, to wit: his belief, wholly unsupported by medical evidence *at the time*, that there was a behavioral component to explain Claimant's symptoms of pain. Having Dr. Gutterman's diagnosis in hand in August, 2015 would have rendered Dr. Hattem's (behavioral component) opinion far more persuasive.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

a. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. (2007), *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. In general, the Claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

b. A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved. The ALJ need not address every piece of evidence or every inference that might lead to conflicting conclusions. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P. 3d 385 (Colo. App. 2000).

c. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of a witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

The requirement of a DIME to contest a finding of MMI by the ATP

d. A Division IME is ordinarily a prerequisite to any hearing concerning the validity of an authorized treating physician's finding of MMI, and, absent such a DIME, an ALJ lacks jurisdiction to resolve a dispute concerning that determination. *Story v. Industrial Claim Appeals Office*, 910 P.2d 80, 82 (Colo. App. 1995); *Town of Ignacio v. ICAO*, 70 P.3d 513, 515 (Colo. App. 2002). Due process requires that party have the opportunity of a DIME report before issues of permanency are resolved. *Delaney v. ICAO*, 30 P.3d 691 (Colo. App. 2000). Section 8-42-108(8)(b)(I) & (II), C.R.S. 2013 provides that if either party disputes an MMI finding by an authorized treating physician, a Division IME may be requested and the opinion of the DIME physician will carry presumptive effect unless overcome by clear and convincing evidence. *See Magnetic Eng'g. Inc. v. ICAO,* 5 P.3d 385, 388 (Colo. App. 2000). An ALJ lacks jurisdiction in the absence of a Division IME to resolve conflicts in opinions as to whether Claimant reached MMI. Absent a reopening, a Division IME is a prerequisite to any hearing

concerning the validity of an authorized treating physician's finding that Claimant reached MMI. *See Story v. ICAO,* 910 P.2d 80, 82 (Colo. App. 1995).

Reopening when no DIME is requested

e. Pursuant to §8-43-303, C.R.S., any award may be reopened on the grounds of error, mistake, or a change in the claimant's condition. The intent of the reopening statute is to provide relief to claimants who are entitled to awards of any type of benefits. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). The ALJ has wide discretion to determine whether a mistake has occurred that justifies reopening the claim. *Osborne v. Industrial Commission,* 725 P.2d 63 (Colo. App. 1986). The standard for reopening a claim is an abuse of discretion by the ALJ. The standard on review of an alleged abuse of discretion is whether the ALJ's order exceeds the bounds of reason, as where it is not supported by the evidence or the law. *Coates, Reid & Waldron v. Vigil,* 856 P.2d 850 (Colo. 1993); *Rosenberg v. Board of Education of School District* #1, 710 P.2d 1095 (Colo. 1985).

f. Respondents argue here that the claimant was required to timely request a DIME or file an application for hearing to determine the compensability of the claimant's shoulder condition, and the claimant's failure to do so deprived the ALJ of jurisdiction to address the claimant's petition to reopen.

g. As the Court of Appeals recognized in *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005), the statutory authority to reopen "any award" is broad and nothing in the subsequently enacted DIME procedures was intended to restrict that authority. The issues inherent in challenging a DIME report are not identical to those regarding reopening and, therefore, the ALJ has jurisdiction to address the claimant's request to reopen her claim.

h. In *Berg* the respondents filed a final admission of liability based on a DIME report. The claimant objected, seeking surgery for his back, but failed to file an application for hearing in conjunction with the objection. The claimant subsequently filed a petition to reopen alleging that the claimant's treating physicians and the DIME physician were mistaken regarding the cause of his back symptoms. The ALJ granted the petition to reopen, finding that the doctors had been mistaken both about MMI and about the relatedness of the claimant's back condition to his industrial injury. The Industrial Claims Appeals Panel ("ICAP") set aside the ALJ's order, reasoning that permitting reopening based upon the "mistake" of an uncontested DIME report would subject a DIME physician's determination of MMI to collateral attack under a diminished burden of proof. The Colorado Court of Appeals, however, set aside the panel's order, holding that there is nothing in the statutory DIME procedures that limits the reopening provisions. The court also rejected the panel's reasoning that permitting reopening

under these circumstances encouraged efforts to circumvent the DIME procedures, with the attendant higher burdens of proof. The court noted the reopening statute was designed to apply even in these circumstances where the determination of the DIME physician is sought to be questioned.

i. A recent case from ICAP demonstrates the breadth of the discretion that an ALJ must exercise when considering a motion to reopen. In re *Claim of Jaterka, WC- 4-984-216-02*, the pro se Claimant, as here, failed to timely request a DIME, instead filing an Application for Hearing, requesting to reopen. ICAP stated, in *Jaterka:*

> The principles announced in *Berg* are applicable to the facts of this case. Although the respondents in *Berg* had obtained a DIME and argued that the claimant "circumvented" it through reopening, the court's reasoning is equally applicable to the present case, where the claimant failed to obtain a DIME prior to reopening. We are bound by the published authority issued by the court of appeals. *C.A.R. 35(f)*.
>
> A review of the record here indicates that the claimant raised factual issues concerning whether her claim should be reopened under §8-43-303, C.R.S., and the ALJ erred by not making corresponding findings to address the issue of reopening. It is therefore necessary to remand this matter to the ALJ for further proceedings to determine the issue of reopening. The ALJ must first determine whether there has been an error or mistake or change of condition. If there is, then the ALJ must determine whether it is the type of error, mistake or change of condition which warrants a reopening. *See Klosterman v. Industrial Commission,* 694 P.2d 873 (Colo. App. 1984). For example, when determining whether a mistake warrants reopening, the ALJ may consider whether it could have been avoided by the timely exercise of appropriate procedural or appellate rights. *Industrial Commission v. Cutshall,* 164 Colo. App. 240, 433 P.2d 765 (1967); *Klosterman v. Industrial Commission, supra.* The failure to exercise procedural or appellate rights, however, is not dispositive of whether the claimant has established an error or mistake which justifies reopening the claim. *Renz v. Larimer County School District Poudre R-l, supra.* To the contrary, the ALJ may exercise his discretion to reopen a claim if he determines that the overall circumstances warrant reopening. *Standard Metals Corp. v. Gallegos,* 781 P.2d 142 (Colo. App. 1989). In reaching this result, we should not be understood as expressing any opinion on the resolution of the reopening issue. The ALJ retains the discretion to grant or deny the petition to reopen. The ALJ, however, must exercise that discretion and not forgo the determination because of a perceived lack of jurisdiction. *See Justiniano v. Industrial Claim Appeals* Office, 83 COA 2016. Whether the ALJ needs to consider any additional issues for hearing endorsed by the parties depends on his resolution of the reopening issue.

j. In this case, Claimant could have exercised her procedural rights by timely requesting a DIME. This did not occur. Claimant believed at the time she was placed at MMI that Dr. Hattem was wrong on this issue. A petition to reopen need not be granted where it is used as a method of circumventing the ordinary adjudicative and appellate processes available prior to closure. *ICAO v. Cutshall*, 433 P.2d. 765 (Colo. 1967); *Klosterman v. ICAO,* 694 P.2d 873 (Colo. App. 1984). However, Claimant was unrepresented at this time, and nothing suggests that Claimant was even aware of her ability to circumvent the DIME procedure, thus lessening her burden of proof. There is no evidence of a willful attempt to "back door" the process. Indeed, if a future DIME (which Respondent argues should have been the procedure) were to find Claimant to be at MMI, Claimant would still have this enhanced burden to overcome after all.

k. Further, while the record is unclear exactly what was meant, and mutually understood, between Claimant and Dr. Hattem regarding the ability to reopen on the interplay between RA and causation, the case was certainly delayed for a time by Claimant's (mis)understanding of the process. This is so, even if Dr. Hattem had no intention of misleading her during this alleged conversation.

Mistakes by Dr. Hattem in placing Claimant at MMI

l. In this case, Dr. Hattem's decision to place Claimant at MMI when he did was based upon several mistakes; indeed, each reason he lists for doing so is mistaken in some fashion. First, while Claimant (suffering from depression, by all accounts) missed some appointments in the spring of 2015, she continued to seek help from her original ATP, and reported some ongoing benefit from chiropractic care. At least one missed appointment stemmed from a likely confusion in dates and times. Taken as a whole, it cannot be concluded, as Dr. Hattem did, that Claimant was so noncompliant that further treatment would be of no avail. Second, Dr. Hattem is factually incorrect in stating that Claimant failed to report neck pain, either "previously", or for at least one month after the fall. Perhaps most importantly, Dr. Hattem mistakenly attributed her ongoing back pain to RA, without having medical evidence in support. Alternatively, he attributed her pain to behavioral issues-once again, with no medical evidence in support *at the time* he drew this conclusion.

m. Taking the evidence as a whole, Claimant has met her burden, by a preponderance of the evidence, that sufficient mistakes were made in her MMI determination by the delayed recovery specialist which now warrants a reopening of her case.

ORDER

It is therefore ordered that:

1. The case is reopened for a further determination of reasonably needed medical benefits.

2. The case is reopened for a further determination of Maximum Medical Improvement.

3. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 18, 2017

/s/ William G. Edie
William G. Edie
Administrative Law Judge
Office of Administrative Courts
2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

ISSUES

1. Did Claimant prove by a preponderance of the evidence that Respondent should be subject to penalties under § 8-43-304(1) for violating § 8-43-503(3)?

2. Did Respondent prove by a preponderance of the evidence that Claimant should be subject to penalties under § 8-43-304(1) for violating § 8-43-503(3)?

FINDINGS OF FACT

1. Claimant works for Respondent as a correctional officer. He suffered an admitted injury to his low back on December 6, 2016 when he was involved in a takedown and restraint of an inmate.

2. Respondent referred Claimant to CCOM for authorized treatment. He saw Steven Byrne, PA-C on December 6, 2016, who diagnosed a lumbar strain and imposed work restrictions of no lifting/pushing/pulling/carrying greater than 10 pounds, no repetitive twisting at the waist, and no direct physical management of inmates.

3. On December 9, 2016, Claimant saw Dr. Thomas Centi, who changed Claimant's restrictions to no more than 5 pounds lifting, minimal bending, sitting 75% of the time, no standing/walking more than 15 minutes per hour, and no direct interaction with inmates.

4. Respondent offered Claimant modified duty in the control center. Although tasks in the control center were within the restrictions, the work required Claimant to look up at monitors, which exacerbated his pre-existing migraine condition.

5. On December 12, 2016, Claimant saw his personal physician, Dr. Arline, who completed FMLA paperwork relating to Claimant's pre-existing migraine condition. Claimant requested FMLA accommodation to avoid prolonged viewing of monitors while he got back on his migraine medication.

6. Claimant returned to CCOM on December 14, 2016 and told PA-C Byrne about the restrictions imposed by Dr. Arline relating to viewing monitors. As a result, PA-C Byrne added the restriction of "should not be placed in a duty area where he is required to constantly observed monitors due to a pre-existing medical condition."

7. After receiving a copy of Claimant's restrictions from CCOM, Arlene Castro, Employer's risk management specialist, contacted Sheila Phillips, a nurse case manager at CCOM, to clarify Claimant's work restrictions as they related to his December 6, 2016 injury. Ms. Castro must document and track FMLA and workers' compensation leave separately. Ms. Phillips clarified that the restriction on viewing monitors was related to Claimant's pre-existing condition, rather than the admitted

injury. Ms. Castro asked Ms. Phillips if PA-C Byrne was willing to amend the paperwork to reflect only those restrictions related to the injury. Ms. Castro did not direct or command Ms. Phillips to change the restrictions.

8. Following the December 14, 2016 telephone conversation between Ms. Castro and Ms. Phillips, PA-C Byrne crossed out the restriction relating to observing monitors.

9. Employer accepted Claimant's medical restriction on viewing monitors but treated it as an FMLA-related accommodation.

10. Ms. Castro's testimony is credible and persuasive.

11. Respondent did not dictate the type or duration of medical treatment to any physician.

12. Claimant did not dictate the type or duration of medical treatment to any physician.

13. Claimant failed to prove that any penalty should be imposed on Respondent.

14. Respondent failed to prove that any penalty should be imposed on Claimant.

CONCLUSIONS OF LAW

Claimant and Respondent seek penalties under the "general penalty" provision at § 8-43-304(1), which provides:

> Any employer or insurer . . . or any other person who violates any provision of [the Workers' Compensation Act], or does any act prohibited thereby, or fails or refuses to perform any duty lawfully enjoined within the time prescribed by the director or panel, for which no penalty has been specifically provided, or fails, neglects, or refuses to obey any lawful order made by the director or panel or any judgment or decree made by any court as provided by said articles shall be . . . punished by a fine or not more than one thousand dollars per day for each such offense . . . .

Penalties are only available for violation of an express duty or prohibition established by a statute, rule, or an order. Section 8-43-304(1) does not refer to any implied duties or prohibitions, and the ALJ cannot read non-existent provisions into the Act. Therefore, if a party's action is not specifically prescribed or proscribed by a statute, rule or order, there can be no penalty. *Reves v. McCormick Excavation & Paving*, W.C. No. 4-835-166-04 (ICAO, July 19, 2012).

The assessment of penalties is governed by an objective standard of negligence and turns on a two-step analysis. The ALJ must first determine whether the insurer's

conduct constitutes a violation of the Act, a rule, or an order. Second, the ALJ must determine whether the violation was objectively unreasonable. *Pioneers Hospital v. Industrial Claim Appeals Office*, 114 P.3d 97 (Colo. App. 2005); *Diversified Veterans Corporate Center v. Hewuse*, 942 P.2d 1312 (Colo. App. 1997); *City Market, Inc. v. Industrial Claim Appeals Office*, 68 P.3d 601 (Colo. App. 2003).

Whether the insurer's conduct was objectively reasonable ordinarily presents a question of fact for the ALJ. *Pioneers Hospital v. Industrial Claim Appeals Office,* 114 P.3d 97 (Colo. App. 2005). A party establishes a prima facie showing of unreasonable conduct by proving that an insurer violated a rule of procedure. If the claimant makes such a prima facie showing the burden of persuasion shifts to the respondents to show their conduct was reasonable under the circumstances. *Pioneers Hospital v. Industrial Claim Appeals Office, supra*; *Human Resource Co. v. Industrial Claim Appeals Office,* 984 P.2d 1194 (Colo. App. 1999).

Claimant has failed to show that Respondent violated any specific provision of the Act. Claimant's penalty claim is predicated on an alleged violation of § 8-43-503(3), which prohibits an employer or insurer from "dictating" to any physician "the type or duration of treatment or the degree of physical impairment." This section prohibits a representative of the employer or insurer from issuing commands to a treating physician about the type or duration of treatment to be provided to the claimant. *Casillas v. Bemas Construction, Inc*., W.C. No. 4-777-652 (ICAO, May 24, 2010). But there is no persuasive evidence that Respondent attempted to direct any of Claimant's "treatment." Rather, the issue involves Claimant's *work restrictions*. Although a claimant's work restrictions may reasonably be considered an adjunct to medical treatment, they do not constitute a form of "treatment" per se.

Even if the ALJ were to construe Claimant's work restrictions as a form of treatment, penalties are not appropriate because Employer did not direct or command the ATP to change Claimant's restrictions. Ms. Castro merely asked if Emergicare was willing to amend the WC 164 form to remove the restrictions that were not related to Claimant's injury. That is fundamentally different from a command because PA-C Byrne was free to decline the request.

Applying similar reasoning set forth above regarding the acts prohibited by § 8-43-503(3), the ALJ concludes Respondent failed to prove that a penalty should be imposed against Claimant.

ORDER

It is therefore ordered that:

1. Claimant's claim for penalties is denied and dismissed.

2. Respondent's claim for penalties is denied and dismissed.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 1, 2017

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

- Whether claimant has demonstrated by a preponderance of the evidence that the scheduled impairment rating of 18% for claimant's right ring finger should be converted to a 2% impairment of claimant's right upper extremity.

- Whether claimant has demonstrated by a preponderance of the evidence that the admitted average weekly wage ("AWW") of $1,061.65 should be increased.

- Whether claimant sustained a serious permanent disfigurement to areas of his body normally exposed to public view, resulting in additional compensation pursuant to Section 8-42-108(1), C.R.S.

FINDINGS OF FACT

1. Claimant suffered an admitted injury to his right ring finger on April 14, 2016. The injury occurred when the drill claimant was operating twisted and broke claimant's right hand. Following the injury claimant underwent two surgeries on his right hand.

Conversion

2. On October 18, 2016, Dr. Frederick Scherr placed claimant at maximum medical improvement ("MMI") and did not assign any- work restrictions. Dr. Scherr assessed an impairment rating of 18% for claimant's right ring finger; (which equates to a 2% impairment of the right hand and a 2% impairment of the right upper extremity).

3. Respondents filed a Final Admission of Liability ("FAL") on March 14, 2017 in which they admitted for the MMI date of October 18, 2016 and the 18% impairment rating for claimant's right ring finger.

4. Claimant testified that his current symptoms include pain in his ring and middle fingers, with pain that travels up his arm and into his right shoulder. Claimant also testified that he is currently working as an electrician and often operates a screwdriver with his right hand. However, claimant has no current work restrictions.

5. With regard to impairment of claimant's right ring finger, the ALJ credits the medical records over claimant's testimony and finds that claimant has failed to demonstrate that it is more likely than not that he has suffered a functional impairment that would necessitate a conversion to a right upper extremity impairment rating.

Average Weekly Wage

6. In the March 14, 2017 FAL respondents admitted to an AWW of $1,061.65 based upon claimant's hourly rate of pay. Claimant testified that when he was hired he was paid a per diem of $40.00 for each 8 hour day he worked. However, in early April 2016 claimant's per diem was increased to $80.00. Claimant testified that he paid taxes on this per diem pay. Claimant argues that his AWW should be increased to reflect the per diem rate.

7. Based upon the payroll records entered into evidence, the ALJ finds that claimant earned different per diem totals because he did not work 40 hours each week. The payroll records indicate that claimant earned at total of $10,680.18 during the eight weeks prior to the work injury. These earnings were as follows:

For the pay period ending February 21, 2016, earnings of $631.96 and $80.00 per diem for 19 hours worked (at the $40.00 per diem rate).

For the pay period ending February 28, 2016, earnings of $1,089.60 and $160.00 per diem for 32 hours worked (at the $40.00 per diem rate).

For the pay period ending March 6, 2016, earnings of $544.80 and $80.00 per diem for 16 hours worked (at the $40.00 per diem rate).

For the pay period ending March 13, 2016, earnings of $1,750.60 and $200.00 per diem for 40 hours worked (at the $40.00 per diem rate).

For the pay period ending March 20, 2016, earnings of $1,362.01 and $200.00 per diem for 40 hours worked (at the $40.00 per diem rate).

For the pay period ending March 27, 2016, earnings of $1,089.61 and $160.00 per diem for 32 hours worked (at the $40.00 per diem rate).

For the pay period ending April 3, 2016, earnings of $1,362.00 and $400.00 per diem for 40 hours worked (at the $80.00 per diem rate).

For the pay period ending April 10, 2016, earnings of $1,249.60 and $320.00 per diem for 32 hours worked (at the $80.00 per diem rate). The ALJ calculates claimant's AWW to be $1,335.02.

8. The ALJ credits the payroll records and claimant's testimony regarding the per diem rate he was paid by employer. The ALJ finds that claimant has demonstrated that it is more likely than not that his AWW should be increased to include the per diem rate.

Disfigurement

9. As a result of two hand surgeries, claimant has a well healed surgical scar on his the back of his right hand that is a different color than the surrounding skin. The scar is approximately 1 and 1/2 of an inch long and less than 1/16 of an inch wide. Claimant testified that the scarring is "connected to the bone" and causes him pain.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2012).

Conversion

3. Section 8-42-107(1) states in pertinent part:

> (a) When an injury results in permanent medical impairment and the employee has an injury or injuries enumerated in the schedule set forth in subsection (2) of this section, the employee shall be limited to medical impairment benefits as specified in subsection (2) of this section.
>
> (b) When an injury results in permanent medical impairment and the employee has an injury or injuries not on the schedule specified in subsection (2) of this section, the employee shall be limited to medical impairment benefits as specified in subsection (8) of this section.

4. The question of whether the claimant has sustained an "injury" which is on or off the schedule of impairment depends on whether the claimant has sustained a "functional impairment" to a part of the body that is not contained on the schedule. *Strauch v. PSL Swedish Health Care System*, 917 P.2d 366 (Colo. App. 1996). Functional impairment need not take any particular impairment. Discomfort which interferes with the claimant's ability to use a portion of his body may be considered "impairment." *Mader v. Popejoy Construction Company, Inc.*, W.C. No. 4-198-489, (ICAO August 9, 1996). Pain and discomfort which limits a claimant's ability to use a portion of his body may be considered a "functional impairment" for determining whether an injury is on or off the schedule. *See, e.g., Beck v. Mile Hi Express Inc.*, W.C. No. 4-238-483 (ICAO February 11, 1997).

5. It is the claimant's burden of proof by a preponderance of the evidence to establish both that he suffered a permanent impairment and that the permanent impairment is either contained on the schedule set forth at subsection (2) or not on the schedule specified in subsection (2). Further, it is the claimant's burden to prove by a preponderance of the evidence the extent of the permanent impairment.

6. As found, claimant has failed to demonstrate by a preponderance of the evidence that he suffered a functional impairment that would necessitate a conversion of his scheduled impairment rating. As found, the medical records are credible and persuasive on this issue.

Average Weekly Wage

7. The ALJ must determine an employee's AWW by calculating the monetary rate at which services are paid to the employee under the contract of hire in force at the time of the injury, which must include any advantage or fringe benefit provided to the Claimant in lieu of wages. Section 8-42-102(2), C.R.S.; *Celebrity Custom Builders v. Industrial Claim Appeals Office*, 916 P.2d 539 (Colo. App. 1995).

8. As found, claimant has demonstrated by a preponderance of the evidence that his AWW should be increased to $1,335.02 to reflect the per diem pay. As found, the payroll records and claimant's testimony are credible and persuasive on this issue.

Disfigurement

9. Section 8-42-108 (1), C.R.S. provides that at claimant may be entitled to additional compensation if, as a result of the work injury, he has sustained a serious permanent disfigurement to areas of the body normally exposed to public view.

10. As found, claimant has sustained a permanent disfigurement to an area of the body normally exposed to public view. Therefore, respondents shall pay claimant $750.00 for that disfigurement.

ORDER

It is therefore ordered that:

1. Claimant's request to convert his scheduled impairment rating is denied and dismissed.

2. Claimant's AWW shall be increased to $1,335.02.

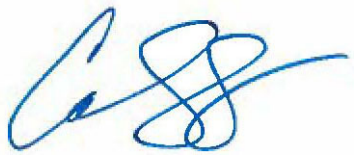
3. Respondents shall pay claimant $750.00 for his disfigurement. Respondents shall be given credit for any amount previously paid for disfigurement in connection with this claim.

4. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 3, 2017



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

I. Whether Claimant produced clear and convincing evidence to overcome the Division Independent Medical Examiner's opinion that Claimant is at maximum medical improvement for her work injury.

II. Whether Respondent produced clear and convincing evidence to overcome the Division Independent Medical Examiner's opinion that Claimant sustained a 7% whole person permanent impairment to her lumbar spine.

FINDINGS OF FACT

1. Claimant sustained an admitted industrial injury on February 19, 2015. Claimant testified at hearing that, while seated in an office chair, she reached for the lever to adjust the height of the chair seat. The hydraulics of the chair malfunctioned causing the chair to crash to the floor. Claimant testified that her leg was bent back when she touched the lever, and that she experienced an immediate onset of pain in her right knee, right thigh and lower back.

2. Claimant sought initial treatment the following day at NextCare Urgent Care. Claimant presented with right knee pain. Claimant reported that she twisted her right knee. Rick Eaton, PA-C noted Claimant's symptoms were negative for back pain. PA-C Eaton assessed right leg pain.

3. Claimant subsequently came under the care of Concentra as her authorized treating providers ("ATP"). Claimant's initial evaluation at Concentra occurred on February 27, 2015. Claimant presented with a knee injury. Claimant complained of diffuse right knee pain and radiating symptoms in her lateral buttock down her leg. On physical examination of the right knee, Allison Hedien, NP noted diffuse tenderness in the lateral right knee, no crepitus or warmth, normal strength bilaterally, and full but painful range of motion. NP Hedien further noted full range of motion in Claimant's lumbosacral spine, tenderness in L4-S1 right paraspinal and right sciatic notch, and right-sided muscle spasms. Slump test and straight leg raise tests were positive. NP Hedien assessed sacroiliac pain, lumbar radicular pain and right knee sprain and referred Claimant for physical therapy for the right knee sprain.

4. NP Hedien reevaluated Claimant on March 6, 2015. Claimant continued to complain of low back and radicular symptoms but reported the symptoms had improved. Claimant complained of her right knee catching without warning. On examination, NP Hedien noted diffuse lateral tenderness in the right knee with painful full flexion, tenderness at L1-S1 right paraspinal and right sciatic notch, right sided muscle spasms,

and full lumbar range of motion. NP Hedien again assessed sacroiliac pain, right knee sprain, and lumbar radicular pain.

5. On March 19, 2015, Sharon O'Connor, MD evaluated Claimant at Concentra. Claimant reported right knee pain with a locking sensation and tingling in her right leg. On examination of the right knee, Dr. O'Connor noted tenderness along the lateral joint line with full range of motion. Regarding the lumbar spine, Dr. O'Connor noted Claimant was non-tender but tender in the right paraspinous, with full but painful range of motion. Dr. O'Connor commented, "I feel patient does have mechanism of injury that is consistent with knee injury and possible disc herniation." Dr. O'Connor assessed lumbar radicular pain and a right knee sprain, and ordered MRIs of Claimant's lumbar spine and right knee.

6. On March 25, 2015, Claimant underwent MRIs of her right knee and lumbar spine, both without contrast. The MRI of Claimant's right knee revealed a tear of the medial meniscus, degenerative tearing of the lateral meniscus, mild-to-moderate grade 2 through 4 chondromalacia in the patella and lateral tibial plateau, and a poorly defined mass. The lumbar spine MRI revealed degenerative changes, most significant at L3-4 and L4-5, with mild right and moderate-to-severe left foraminal stenosis at L3-4, and moderate-to-severe right and mild left foraminal stenosis at L4-5.

7. NP Hedien reevaluated Claimant on April 2 and April 30, 2015. Claimant continued to report right knee pain with radiating symptoms into her leg. Claimant reported that her lower back pain had improved with physical therapy. On examination at both visits, NP Hedien noted diffuse tenderness in the right knee with full range of motion, L3-S1 right paraspinal and right sciatic notch tenderness, right-sided spasms, full lumbar range of motion, positive facet loading, and a negative straight leg raise test. NP Hedien referred Claimant to Martin Boublik, MD for an orthopedic evaluation.

8. On May 29, 2015, Bryan Counts, MD evaluated Claimant at Concentra. Claimant presented for a recheck of her right knee. On examination, Dr. Counts noted no effusion or tenderness in the right knee, and full range of motion. Dr. Counts further noted that there was no lumbosacral spine tenderness.

9. On June 17, 2015, Claimant underwent right knee surgery for removal of the mass identified on the March 25, 2015. The mass was determined to be unrelated to her work injury of February 19, 2015.

10. Claimant continued to treat with Concentra. Evaluations conducted on June 24, July 22, August 11, September 23, and November 10, 2015 focused on Claimant's right knee. The medical records continue to note tenderness of the right knee and painful range of motion, ranging from limited to full. Concentra's assessment was a meniscus tear and right knee sprain. Claimant's lumbosacral spine range of motion was not discussed or measured, nor were there any physical examination findings regarding the lumbosacral spine, with the exception of August 11, 2015, when NP Hedien noted that all other systems were reviewed and found to be negative.

11. As part of her treatment at Concentra, Claimant completed pain diagrams on ten separate visits. The diagrams include a drawing of both the front and the back of the body with instructions to Claimant to mark the areas on her body where she felt pins and needles, burning, pain, or aches. Claimant completed pain diagrams on March 20, April 30, May 21, May 29, June 24, July 22, August 11, September 23, November 10, and December 15, 2015. Claimant did not indicate any symptoms or sensations in her lower back on any of these ten pain diagrams.

12. On July 27, 2015, Claimant attended a physical therapy session at Concentra. Claimant rated her lumbar spine pain at a 5-6/10. The physical therapist noted tenderness to palpation and normal range of motion in the lumbar spine. Seated straight leg raise test was negative, while the supine straight leg raise test was positive.

13. Claimant also established care with a personal physician, Joan Song-Nichols, DO on July 27, 2015. Claimant denied back pain, but did discuss her February 2015 knee injury, along with other unrelated conditions. Claimant treated with Dr. Song-Nichols on eight occasions between July 27, 2015 and April 20, 2016. Dr. Song-Nichols did not note any back symptoms during those visits. There is no mention of back symptoms in Dr. Song-Nichols' medical notes until October 5, 2016, when Claimant reported having back pain. There is again no mention of back symptoms in the medical notes of Dr. Song-Nichols until April 4, 2017, when Claimant reported experiencing an exacerbation of chronic back pain.

14. On September 10, 2015, Martin Boublik, MD performed partial lateral and medial meniscectomies and debridement on Claimant's right knee. The preoperative and postoperative diagnoses were lateral meniscus tear, medial meniscus tear, and degenerative joint disease.

15. On November 10, 2015, NP Hedien referred Claimant to a massage therapist for her lower back pain. Claimant attended 15 massage therapy sessions at Concentra from December 16, 2015 through June 8, 2016. At the initial session on December 16, 2015, Claimant reported numbness in her right lower leg and a burning sensation in her right lower leg, and low back and hip pain, which Claimant rated at a 2/10. Claimant continued to report back pain and leg/foot numbness. On May 5 and May 11, 2016, Claimant also reported lumbar tightness. The massage therapist noted Claimant's condition was "consistent with the medical diagnosis of lumbar strain." The massage therapist noted hypertension in the lumbar paraspinals on May 11, June 1 and June 8, 2016.

16. On December 15, 2015, Claimant reported improved right knee pain and continuing low back pain. On examination, NP Hedien noted diffuse tenderness in the right knee with full but painful range of motion, and tenderness in the L5-S1 left paraspinal, right paraspinal, right sciatic notch and left sciatic notch. NP Hedien noted Claimant had full range of motion in the lumbosacral spine with no bilateral muscle spasms. NP Hedien referred Claimant for an EMG with Marc Triehaft, MD. NP Hedien also referred Claimant to a chiropractor for her low back pain, and recommended Claimant continue physical therapy for her right knee and low back.

17. Claimant began chiropractic care with Richard Mobus, DC on January 14, 2016. Claimant presented with regional right low back pain with pain into her right hip and lateral thigh, as well as paresthesias of right foot. Claimant rated her back pain at a 3/10. On examination, Dr. Mobus noted "Lumbar active range of motion notable for aggravation of right low back pain with right side bending 20 degrees, extension 20 degrees, forward bending 40 degrees caused by aggravation of her right lower extremity pain…Supine passive straight leg raise is somewhat equivocal, mildly positive on the right, end range for aggravation of right low back pain, lower extremity symptoms not elicited." The FABER maneuver was positive on the right. By February 18, 2016, Claimant was rating her back pain at a 1-2/10 and denying radiation and radicular complaints. Dr. Mobus noted normal, pain-free active range of motion in the lumbar spine and documented that all orthopedic/neurological tests on his examination were unremarkable. As of April 15, 2016, Claimant was reporting low back pain at a 3-4/10 and continuing to deny radiation. Dr. Mobus noted that the lumbar range of motion was "Notable for mild aggravation of right low back pain with extension 20 degrees, mild aggravation of right hip joint pain with right-side bending 20 degrees. All other motions normal and pain-free to end range." Dr. Mobus further noted that the FABER maneuver was positive on the right for mild aggravation of right low back pain.

18. On February 3, 2016, Claimant presented to John Burris, MD at Concentra. Claimant reported right-sided low back pain with occasional pain down her right leg, and right knee pain. Claimant denied any persistent numbness or weakness. Dr. Burris noted that an EMG of Claimant's right lower extremity performed by Dr. Treihaft on January 15, 2016 was normal. Regarding Claimant's low back, Dr. Burris noted that the March 25, 2015 MRI did not evidence any acute abnormalities and was normal with the exception of degenerative changes, which were consistent with age. On physical examination, Dr. Burris noted full range of motion of the lumbar spine remarking, "She can easily touch her toes on forward flexion, full extension without pain." Dr. Burris further noted tenderness to palpation of the right lower lumbar region, negative seated straight leg raise results to 90 degrees bilaterally, and full range of motion in the right knee with no localized tenderness over the medial and lateral joint lines. Dr. Burris diagnosed a right knee strain, low back strain, and low back pain. Dr. Burris referred Claimant for 12 additional physical therapy sessions, six additional massage therapy sessions, six additional chiropractic sessions, and a six-month gym membership. Dr. Burris also noted the importance of Claimant participating in an aggressive home exercise program.

19. Claimant underwent a second MRI of her right knee on February 24, 2016, which was compared to the March 25, 2015 MRI. The MRI revealed degenerative tears of the medial and lateral meniscus.

20. During a consultation with Dr. Burris on March 9, 2016, Claimant reported 2/10 right-sided low back pain. Dr. Burris noted Claimant underwent a second MRI of her right knee in February 2016 which revealed degenerative changes. Dr. Burris remarked, "She does have a fair amount of degenerative changes, which are unrelated to the work event." Dr. Burris deferred a formal physical examination and diagnosed a right knee

strain and low back pain. Dr. Burris noted Claimant was approaching the endpoint with conservative management.

21. Dr. Burris placed Claimant at maximum medical improvement ("MMI") on April 20, 2016. Claimant reported some ongoing pain along the lateral aspect of her right leg, which she rated 3/10. Dr. Burris documented, "This does not interfere with her normal activities. She continues to work her normal job, which is administrative in nature. No other complaints on today's visit. Denies any numbness or weakness in the extremity, low back pain, locking of the right knee or instability with ambulation." On physical examination, Dr. Burris noted that there was no palpable tenderness in the lumbar spine and full range of motion in all planes, remarking that Claimant "easily touches the floor on forward flexion." Dr. Burris further noted full range of motion of the right knee and negative seated straight leg raise findings to 90 degrees bilaterally. Dr. Burris diagnosed a right knee strain and low back pain. Dr. Burris opined that Claimant completed all reasonable and necessary care.

22. Dr. Burris further opined that there was no ratable condition of Claimant's lumbar spine stating, "With regards to her low back complaints, her examination is benign with negative diagnostic workup. She has nonspecific complaints, which are not present today." Dr. Burris concluded that there was no ratable condition of Claimant's right knee, noting that the mechanism of injury would be reasonably expected to cause only a minor strain, the MRI identified only degenerative changes and an unrelated mass, and that his examination of Claimant was benign with no objective findings. For maintenance care, Dr. Burris recommended continuing a home exercise program and referred Claimant to six additional sessions each of massage therapy, dry needling and chiropractic care, noting that no other formal maintenance care or follow-up would be required.

23. On June 6, 2016, Claimant returned to Dr. Boublik for a follow-up evaluation. Claimant reported continuing numbness on the medial plantar aspect of her foot, with a burning pain along the lateral aspect of her leg and low back. Claimant also reported occasional sharp shooting pains in the knee. On examination, Dr. Boublik noted right knee range of motion at 0-140 degrees with mild medial and lateral pain on forced flexion, and some mild medial and lateral joint line tenderness to palpation. Dr. Boublik further noted paresthesias on the medial and plantar aspect of the right foot and that straight leg raise caused increased numbness in the great toe and burning in the lateral thigh and calf. Dr. Boublik gave an impression of right knee moderate degenerative joint disease. Dr. Boublik noted that Claimant's overall complaint was of burning pain radiating from her back into her foot and recommended a referral to a spine physician for discussion of a possible lumbar spine injection.

24. Claimant began chiropractic care with her personal chiropractor, Aaron Johnson, DC, on June 7, 2016. Claimant attended approximately 58 sessions with Dr. Johnson from June 7, 2016 through February 21, 2017. Claimant complained of low back throughout her care with Dr. Johnson. Dr. Johnson's medical notes document "multiple segmental dysfunctions with spasm, hypomobility and end point tenderness" in

multiple levels of Claimant's spine, including L1, L2, L3, L4, as well as Claimant's sacrum, left pelvis and right pelvis.

25. Dr. Boublik reevaluated Claimant on September 12, 2016. Dr. Boublik noted Claimant was doing reasonably well overall and had been working. Claimant reported some continuing pain in the anterolateral and peripatellar aspects of her right knee. On physical examination of the right knee, Dr. Boublik noted trace joint line tenderness, good strength, and range of motion of 0-150 degrees. Regarding Claimant's back, Dr. Boublik documented, "The patient's back examination shows good range of motion without discomfort. She is nontender to palpation of her lumbar spine. Straight leg raising is negative." Dr. Boublik did not further address Claimant's back. Dr. Boublik opined that Claimant's right knee was at MMI. Dr. Boublik remarked, "[Claimant] continues to have some symptoms, but is working. She does feel like she has plateaued and is not improving at this point." Dr. Burris assigned a combined 19% lower extremity rating using the AMA Guides, consisting of a 12% lower extremity impairment rating for "loss of lateral greater than medial meniscus" under Table 40, and an 8% lower extremity impairment rating "due to the arthritis/chondral changes."

26. Brain Beatty, DO, conducted a Division Independent Medical Examination ("DIME") of Claimant on October 4, 2016. Dr. Beatty reviewed Claimant's medical records and physically examined Claimant. Dr. Beatty noted that Claimant's pre-existing medical records he reviewed were limited to handwritten notes from Ronald Malpiede, D.C. Dr. Beatty deemed the records illegible. Dr. Beatty did not list any records from Kaiser in the preexisting records he reviewed. Claimant reported intermittent discomfort with continuing numbness and tingling into her right calf and right foot. Claimant rated the pain at a 3-5/10. Dr. Beatty documented,

> The patient notes that her activities are not restricted despite her symptoms. During a 24-hour day she sleeps or lays down 6 hours, stands or walks 7 hours and sits approximately 11 hours. She would rate her physical activity as moderately active. She enjoys hobbies in sports including hiking and biking which are unrestricted but she has difficulty with bowling.

27. On examination of the lumbar spine, Dr. Beatty noted mild tenderness with no tightness or apparent spasms. Dr. Beatty measured Claimant's lumbar range of motion using the two-inclinometer method and documented the following measurements: "Flexion 50 degrees, extension 25 degrees, side bending right 25 degrees and side bending left 25 degrees." Negative straight leg raise was to 70 degrees on the right and 65 degrees on the left. Dr. Beatty noted sensory deficits to pinprick over the right medial ankle and foot and along the mid-calf. On examination of the right knee, Dr. Beatty noted tenderness around the patella with no swelling or effusion. Dr. Beatty further noted that the right knee was stable to varus and valgus stress, with negative anterior and posterior drawer signs, Lachman's test and McMurray's test. Dr. Beatty noted Claimant had full extension of the right knee and flexion at 145 degrees.

28. Dr. Beatty diagnosed Claimant with a lumbar strain and right knee meniscus tear. Dr. Beatty opined that Claimant was at MMI as of April 20, 2016, the MMI date determined by Dr. Burris. Dr. Beatty noted that Claimant was concerned about persistent numbness in her leg, but stated that the EMG/nerve conduction study was negative. Dr. Beatty suggested that Claimant pursue any further desired care through her personal physician. Dr. Beatty further noted that the new meniscus tears in Claimant's right knee were degenerative and unrelated to the February 19, 2015 work injury. Dr. Beatty recommended a one-year gym membership for maintenance care.

29. Based on the AMA Guides, Dr. Beatty assigned a total combined 10% whole person impairment rating. Dr. Beatty assigned a 7% impairment rating for the lumbar spine, consisting of a 2% impairment for loss of range of motion and a 5% rating based on Table 53(II)(B). Dr. Beatty assigned a 7% lower extremity impairment (3% whole person) for the right knee consisting of a 2% impairment for loss of range of motion combined with a 5% impairment for a torn meniscus, meniscectomy or partial meniscectomy under Table 40(2).

30. On February 6, 2017, Scott Primack, DO, performed an IME of Claimant at the request of Respondent. Dr. Primack performed a medical records review and physically examined Claimant. Dr. Primack noted that he reviewed medical records dating back to 2012/2013 indicating Claimant had issues with low back pain, right-sided hip pain, sacroiliac joint discomfort, and right leg pain.

31. A Kaiser medical record dated March 12, 2011 indicates Claimant reported right hip pain. Kaiser medical records from February 2013 noted Claimant complained of lower back pain over the right sacroiliac joint area and right hip pain. Claimant was diagnosed with strain of the hip on June 7, 2013.

32. Dr. Primack noted that Dr. Beatty did not take a history of Claimant's previous problems of the sacroiliac joint and spine. Claimant reported achiness at the right iliolumbar area at the level of the sacroiliac joint and burning and achiness of the right knee. On physical examination, Dr. Primack noted the following lumbar range of motion measurements: flexion 45 degrees, extension 25 degrees, right lateral sidebending 30 degrees, and left lateral sidebending 25 degrees, with rotation giving "some discomfort." Dr. Primack further noted full knee flexion at 144 degrees and full knee extension, and no evidence of clonus. Vaglus and varus stress testing, Lachman maneuver, and straight leg raise tests were negative.

33. Dr. Primack opined that Claimant did not sustain a permanent injury to her back. Dr. Primack noted that Claimant had issues with her lumbar spine, right hip and sacroiliac joint going back to 2012/2013 and received chiropractic care from Dr. Malpiede for the lumbar spine prior to the February 19, 2015 work injury. Dr. Primack noted that he reviewed Dr. Beatty's DIME report and, while Dr. Beatty utilized the "apportionment guidelines," Dr. Primack disagreed that the mechanism of injury was sufficient to intensify, aggravate, exacerbate, accelerate or cause Claimant's back problems. Dr. Primack remarked, "This was classic multilevel degenerative disk disease

which does correlate with her most recent objective findings on MRI, as well as her clinical examination."

34. Dr. Primack did, however, opine that Claimant sustained a permanent impairment to her right knee and assigned 5% lower extremity impairment for a meniscus tear under Table 40 of the AMA Guides. Dr. Primack declined to assign an impairment rating for loss of range of motion, opining that Claimant had full range of motion. Dr. Primack noted that he had "no issues" with a gym membership for a year, but stated that any further treatment for the right knee would be secondary to Claimant's tricompartmental osteoarthritis and not work-related.

35. On May 22, 2017, John Hughes, MD performed an IME at the request of Claimant. Dr. Hughes performed a medical records review and physically examined Claimant. Claimant reported experiencing an achy, burning pain in her right lateral knee and right low back, which she rated at rated at 2-3/10. Claimant also reported experiencing improved numbness in her right foot. Claimant reported not being able to sleep for more than two hours at a time, and that her right leg was not as strong as it once was. On physical examination, Dr. Hughes noted the following lumbar range of motion measurements: "Maximum true lumbar flexion is 40 degrees, sacral flexion is 63 degrees, lumbar spine extension 15 degrees, right and left lateral flexion of the lumbar spine 15 degrees and 19 degrees respectively." Dr. Hughes noted straight leg raise testing in the supine position was 45 degrees on the right and 55 degrees on the left. Dr. Hughes further noted global atrophy of the right leg compared to the left and diminished sensation over the right first and second toes and the right plantar foot. Dr. Hughes also noted right knee flexion was at 145 degrees with extension at 0 degrees over both knees. McMurray's and Lachman's tests were negative.

36. Dr. Hughes made the following work-related assessments: a right knee sprain/strain with development of medial and lateral meniscus tears; residual right knee arthritis post resection of the synovial chondromatosis mass and medial/lateral meniscectomies; and lumbar spine sprain/strain with development of symptomatic facet joint arthropathy and right lower extremity radiculitis.

37. Dr. Hughes opined that Claimant is not at MMI regarding her back issues. Dr. Hughes agreed with Dr. Boublik's recommendations regarding assessment by a spine physician and undergoing right-sided transforaminal epidural injections "in an effort to assess pain generation in [Claimant's] right low back and leg."

38. Dr. Hughes offered an estimate of permanent impairment under the AMA Guides. Dr. Hughes opined that the MRI findings revealed at least moderate pathology in the lumbar spine and merited a 7% whole person impairment under Table 53(II)(C), combined with a 10% impairment for loss of range of motion, for a total lumbar spine regional whole person impairment of 16%. Dr. Hughes further opined that Claimant's right knee is "probably stable" and assigned a Table 40 impairment rating of 15%, combined with a 2% impairment for loss of range of motion, for a 17% lower extremity (7% whole person) impairment. Dr. Hughes combined the lumbar spine regional

impairment of 16% with the 7% whole person knee impairment for a 22% total combined whole person impairment.

39. Dr. Primack testified at hearing on behalf of Respondent as an expert in physical medicine and rehabilitation and occupational medicine. Dr. Primack is board certified in physical medicine and rehabilitation and neurology and rehabilitation, and is Level II accredited by the Colorado Division of Workers' Compensation. Dr. Primack testified consistent with his IME report. Dr. Primack opined that Claimant sustained a work-related meniscus tear, but did not sustain a work-related injury to her back. Dr. Primack opined that Claimant has a non-work-related personal diagnosis of lumbar spondylosis with dextroscolisis at L3-4.

40. Dr. Primack reviewed the March 25, 2015 MRI. He explained that the L3 labral body has rotated on L4, which is associated with degenerative changes as Claimant's disc has narrowed. Dr. Primack further explained that Claimant has a disc bulge with facet arthropathy, which is arthritis of the small joints in the back, and restrolisthesis, or misalignment, of L2 and L3. Claimant also has facet and ligamentous hypertrophy, which are degenerative changes of the spine, which Dr. Primack testified has caused spurring and, in turn, stenosis. Dr. Primack further testified that Claimant also has curvature at L3 and L4, which has caused a right lateral disc protrusion with facet and ligamentous hypertrophy, which are degenerative changes with some degenerative discogenic changes. Dr. Primack testified that the lumbar MRI findings were degenerative in nature and that none of the lumbar MRI findings were causally related to the work injury of February 19, 2015.

41. Dr. Primack discussed Dr. Burris' April 20, 2016 MMI report. Dr. Primack contended that Dr. Burris' assessment of "low back pain" is not a diagnosis stating, "In fact, within the medical treatment guidelines as well as the third edition revised guidelines, you can't rate pain. That's not a diagnosis, it's a symptom." Dr. Primack agreed with Dr. Burris' assessment that Claimant had a benign low back examination and a negative diagnostic work-up, with no ratable condition of her back. Dr. Primack disagreed with Dr. Burris' assessment that Claimant did not sustain a right knee impairment.

42. Regarding Dr. Beatty's DIME report, Dr. Primack disagreed with the diagnosis of a lumbar strain. Dr. Primack testified that Dr. Beatty's own clinical examination does not support his diagnosis of a lumbar strain. Dr. Primack explained that Dr. Beatty noted that there was no tightness or apparent spasms in Claimant's back on his examination. Dr. Primack further explained that Claimant had "excellent motion" with "normal extension, normal side bending, and a negative straight leg raise," which was not consistent with a lumbar strain.

43. Dr. Primack further testified that you can have some loss of range of motion with lumbar spondylosis. Dr. Primack stated that Claimant's complaints of low back pain were more inconsistent than consistent in her medical records. Dr. Primack contended that Claimant's intermittent back problems were more consistent with a patient with lumbar spondylosis, and meant that "there can't be a permanent impairment, because

it's intermittent at best." Dr. Primack further contended that, if Claimant did sustain a lumbar strain, lumbar strains are not permanent.

44. Dr. Primack also disagreed with Dr. Beatty's assessment of a lumbar spine impairment rating under Table 53(II)(B) of the AMA Guides. Dr. Primack stated that Table 53(II)(B) requires a medically documented injury, which requires analysis of the mechanism of injury and the "consistency of the specific injury." Dr. Primack opined that Claimant does not have a medically documented injury to her low back as a result of the February 19, 2015 work injury. Dr. Primack explained that Claimant has lumbar spondylosis and dextroscoliois. Dr. Primack opined that, while Claimant may have pain in her back, she did not sustain a specific injury.

45. Dr. Primack testified that Claimant also lacks the required six months of medically documented pain and rigidity to qualify for a rating under Table 53(II)(B). Dr. Primack testified that there needs to be pain documented in the medical records consistent over six months. Dr. Primack testified that the ATP records from February 2015 to April 2016 did not document Claimant complaining of low back pain for a minimum of six months. Dr. Primack testified that Claimant also lacked six months of medically documented rigidity. Dr. Primack explained that rigidity refers to a spastic or tight quality to the paraspinous muscles, and that rigidity should correlate with loss of range of motion. Dr. Primack testified that Claimant's ATP records from the date of injury to MMI consistently note full range of motion in the lumbar spine, which indicates Claimant a lack of rigidity, and is inconsistent with a permanent impairment to the low back.

46. Dr. Primack testified that Claimant's complaints of leg pain would not be radicular pain coming from the back, as Claimant's EMG ruled out radiculopathy. Dr. Primack stated that there are two nerves at the location of Claimant's meniscus tear, the fibular and tibial nerves, which can also give symptoms to the leg.

47. Dr. Primack testified that Claimant also did not qualify for an impairment rating for loss of range of motion in her low back. Dr. Primack stated,

> You cannot render loss of motion unless you initially fulfilled criteria for Table 53. So you have to meet Table 53 first, not the other way around. And that's why you can't just render motion as a permanent impairment, because that's almost just like a clinical finding. You have to have an associate diagnosis…That's in the medical treatment guidelines as well as within the third edition revised. It's both.

Dr. Primack testified that Dr. Beatty's 2% impairment rating for lumbar range of motion was consistent with the AMA Guides if Claimant had a work-related diagnosis.

48. Dr. Primack agreed with Dr. Beatty's impairment rating for Claimant's right knee.

49. Dr. Primack discussed Dr. Hughes' IME report. He disagreed with Dr. Hughes that Claimant is not at MMI because she needs further work-up of the spine. He testified

that Dr. Hughes' conclusion was not consistent with Dr. Hughes' own exam, stating that Dr. Hughes' exam indicated that there were no paraspinal spasms of the spine, with a negative straight leg raising sign. Dr. Primack contended that these findings are inconsistent with a recommendation for further treatment stating, "How you leap to recommend an epidural steroid injection—that's what I do for my living—I would not be doing an epidural steroid injection for someone who has no paraspinous tone, a negative straight leg raise and degenerative changes on the spine." Dr. Primack further explained that Dr. Hughes' conclusions and recommendations were inconsistent with claimant's functioning per the DIME report, which indicated Claimant can stand or walk for seven hours and can sit for approximately 11 hours, and rated Claimant's physical activity as moderately active.

50. Dr. Primack also discussed Dr. Hughes' diagnosis of symptomatic facet joint arthropathy. He explained that symptomatic facet joint arthropathy cannot be diagnosed without facet joint loading with extension and rotation. Dr. Primack testified that Dr. Hughes did not load Claimant's facet joints as part of his clinical examination. He further explained that symptomatic facet joint arthropathy would be accompanied by paraspinal spasms or tone, which Dr. Hughes did not find on clinical examination. Dr. Primack further stated that he would not perform an epidural steroid injection on a patient who had not had a consistent facet loading exam.

51. Dr. Primack stated that the treatment Claimant has been obtaining from her personal physicians, including chiropractic and massage, would not be related to the work injury of February 19, 2015. Dr. Primack contended that these treatments would only control symptoms of Claimant's degenerative changes of the spine.

52. Claimant testified that, at the time she was placed at MMI, she was still experiencing back and knee pain, as well as numbness in her foot. Claimant testified that her back pain was fairly constant throughout her treatment and that she continued to experience numbness as well as knee and back pain. Claimant testified that she felt her condition regressed during the approximately four to six weeks she did not undergo any treatment.

53. Claimant further testified that she had not sustained a prior injury to her low back, but simply had "normal" low back aches and pains prior to the February 19, 2015 injury. Claimant testified that she is interested in receiving epidural steroid injections. Claimant stated that she currently experiences some numbness in her foot and pain in her right knee, right thigh and lower back. Claimant testified that she can perform limited activities such as house cleaning, but cannot perform "normal activities" like bowling, hiking, or biking for long distances.

54. At hearing, Respondent acknowledged that Dr. Beatty's 5% rating of the knee under Table 40 of the AMA Guides was proper, but challenged the 2% range of motion rating for the knee, and the low back rating in its entirety. In its post-hearing position statement, Respondent's only challenge was to the 7% low back rating.

55. The ALJ credits the opinions of Drs. Beatty, Burris and Primack on the issue of MMI over the conflicting opinions of Drs. Boublik and Hughes and finds that Claimant has failed to overcome the DIME physician on the issue of MMI by clear and convincing evidence.

56. The ALJ credits the opinions of Drs. Beatty and Hughes on the issue of permanent impairment over the conflicting opinions of Drs. Burris and Primack and finds that Respondent has failed to overcome the DIME physician on the issue of permanent impairment by clear and convincing evidence.

57. The evidence and inferences inconsistent with these findings were not credible and persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Maximum Medical Improvement

MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." Section 8-40-201(11.5), C.R.S. The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, supra*. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician's finding concerning MMI is incorrect. Where the evidence is subject to conflicting inferences a mere difference of opinion between qualified medical experts does not necessarily rise to the level of clear and convincing evidence. Rather, it is the province of the ALJ to assess the weight to be assigned conflicting medical opinions on the issue of MMI. *Oates v. Vortex Industries,* WC 4-712-812 (ICAO November 21, 2008). The ultimate question of whether the party challenging the DIME physician's finding of MMI has overcome it by clear and convincing evidence is one of fact for the ALJ. *Metro Moving and Storage Co. v. Gussert*, *914 P.2d 411 (Colo. App. 1995).*

Claimant contends that she is not at MMI because she has not received complete treatment for her lumbar spine injury to date and continues to experience pain, aching, burning and numbness. Claimant relies on the opinions of Drs. Boublik and Hughes, who recommended of a spinal assessment and epidural steroid injections.

As found, Claimant has failed to overcome the DIME physician's finding of MMI by clear and convincing evidence. The DIME physician, Dr. Beatty, found Claimant was at MMI as of the date Dr. Burris placed Claimant at MMI. As one of Claimant's ATPs, Dr. Burris was familiar with Claimant's symptoms, treatment and prognosis. At the time he placed Claimant at MMI, Dr. Burris noted that benign diagnostic workup of Claimant's back on examination. Dr. Beatty considered Claimant's concern over numbness in her leg, but credibly determined that further care should be sought with her personal physician, as there were no positive EMG findings. Further, Dr Primack credibly testified that Dr. Hughes' diagnosis of symptomatic facet arthropathy was not supported by the requisite testing, and that epidural steroid injections were contraindicated under the circumstances.

The ALJ concludes that the opinions of Drs. Boublik and Hughes that Claimant is not at MMI represent a mere difference of opinion, which is insufficient to overcome the DIME. Based on the totality of evidence, there is insufficient persuasive and credible

evidence establishing that the DIME's determination of MMI was highly probably incorrect.

Permanent Impairment

A DIME physician must apply the AMA Guides when determining the claimant's medical impairment rating. Section 8-42-101(3.7), C.R.S.; Section 8-42-107(8)(c), C.R.S. The finding of a DIME physician concerning the claimant's medical impairment rating shall be overcome only by clear and convincing evidence. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, *supra*.

In *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000), the court noted that under the AMA Guides the "evaluation or rating of impairment is an assessment of data collected during a clinical evaluation and the comparison of those data to the criteria contained in the Guides." Consistent with this concept the Industrial Claim Appeals Office has upheld a DIME physician's impairment rating that excluded "valid" range of motion deficits from an impairment rating based on the determination that the range of motion deficits did not correlate with clinical observations and data. *Adams v. Manpower,* W.C. No. 4-389-466 (I.C.A.O. August 2, 2005); *Garcia v. Merry Maids,* W.C. No. 4-493-324 (I.C.A.O. August 12, 2002).

Ultimately, the questions of whether the DIME physician properly applied the AMA Guides, and whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office, supra*. Not every deviation from the rating protocols of the AMA Guides requires the ALJ to conclude that the DIME physician's rating has been overcome as a matter of law. Rather, deviation from the AMA Guides constitutes evidence that the ALJ may consider in determining whether the DIME physician's rating has been overcome. *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117 (Colo. App. 2003); *Logan v. Durango Mountain Resort,* W.C. No. 4-679-289 (ICAO April 3, 2009). Moreover, a mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. *See Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO March 22, 2000).

Respondent contends that Dr. Beatty erred in assigning a 7% permanent impairment rating for the lumbar spine, relying on the opinions of Drs. Burris and Primack that Claimant does not have a ratable lumbar spine condition. Specifically, Respondent contends that Dr. Beatty erred in assigning a Table 53(II)(B) impairment rating and a rating for loss of range of motion. Respondents

As found, Respondent has failed to overcome the DIME physician's 7% permanent impairment rating for the lumbar spine. Dr. Beatty diagnosed Claimant with a lumbar strain, which was also diagnosed by Dr. Burris and Dr. Hughes. While Dr. Primack testified that "low back pain" is not a diagnosis, no credible and persuasive evidence was introduced at hearing establishing that a lumbar strain is not a medically

documented injury. To the extent Dr. Primack disagrees with the diagnosis of a lumbar strain, the ALJ considers the disagreement a mere difference of opinion. The medical records reflect at least six months of reported back pain and rigidity between the date of injury and MMI. The medical records note back pain in February March, July, October November, and December 2015, as well as January, February, April, May, and June 2016. The medical records include mention of either spasms, limited range of motion, stiffness, tension, hypertension or hypomobility in February and April 2015, and January, February April, May, and June, July, August, September and October 2016.

Dr. Beatty found loss of range of motion on his DIME exam. There was no credible or persuasive evidence introduced at hearing that Dr. Beatty's range of motion measurements were not in compliance with the AMA Guides. In fact, Dr. Primack testified that, if Claimant met the Table 53(II)(B) criteria, Dr. Beatty's 2% rating for range of motion loss would be correct. Dr. Beatty's use of Table (53)(II) and assignment of a permanent impairment rating for the low back is also supported by Dr. Hughes.

Based on the totality of evidence, the ALJ concludes that Respondent has failed to establish that it is highly probable Dr. Beatty's 7% lumbar impairment rating is incorrect.

ORDER

It is therefore ordered that:

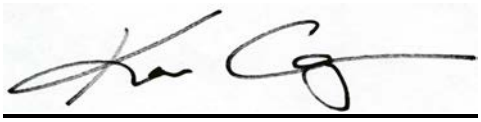
1. Claimant failed to overcome the DIME opinion on the issue of MMI. Claimant's request to overcome the DIME opinion on the issue of MMI is denied and dismissed.

2. Respondent failed to overcome the DIME physician's 7% permanent impairment rating for the lumbar spine. Respondent's request to overcome the DIME opinion on the issues of permanent impairment is denied and dismissed.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 3, 2017



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Respondents have demonstrated by a preponderance of the evidence that they are entitled to withdraw their General Admission of Liability (GAL) that acknowledged Claimant sustained compensable occupational diseases to her right upper extremity during the course and scope of her employment with Employer.

2. Whether Claimant has proven by a preponderance of the evidence that she is entitled to receive authorized medical treatment that is reasonable and necessary to cure or relieve the effects of work-related injuries.

FINDINGS OF FACT

1. Employer is a family-friendly restaurant and entertaining corporation with a location in Denver at the intersection of Interstate 25 and Colorado Boulevard.

2. Claimant has worked for Employer for several years performing various jobs as a Cleaner. Her duties included cleaning kitchen floors, removing trash, washing doors, filling bins with ice in the bar area and general kitchen duties.

3. Claimant testified that on February 2, 2016 she was scooping ice out of an ice machine and developed pain in her right thumb and hand. Claimant specifically asserted that she hit her right thumb against the ice machine and it "twisted backwards" causing shooting pains into her finger and hand. Claimant acknowledged having right thumb and hand pain for a few months prior to the incident.

4. On February 23, 2016 Claimant presented to Porter Adventist Hospital for treatment. She described right thumb pain that had been present after scooping ice for "3 weeks." Claimant did not allege a specific trauma or incident that caused her pain. Instead, Claimant felt that her pain was due solely to scooping ice at work. She was diagnosed with a sprain and received a splint.

5. Following the initial visit to Porter Adventist Hospital Claimant reported her condition to Employer. Employer referred Claimant to Concentra Medical Centers for treatment. Respondents subsequently filed a General Admission of Liability (GAL).

6. Claimant received conservative medical treatment through Concentra. She was referred to a hand surgeon and received injections to alleviate her right thumb pain.

7. Claimant was eventually referred to Eric Tentori, D.O. for treatment. On July 14, 2014 Claimant reported pain that was radiating into her upper extremity that she attributed to the February 2, 2016 incident or her continuing job duties. Dr. Tentori

was concerned that Claimant's symptoms were worsening in the absence of any objective findings.

8. On July 15, 2016 Claimant visited Kathy McCranie, M.D. for an evaluation. Dr. McCranie took a history from Claimant regarding her February 2, 2016 mechanism of injury and pain complaints. Dr. McCranie noted that Claimant attributed her right thumb symptoms to repetitively scooping ice at work. She remarked that Claimant had been experiencing numbness in her index and middle fingers one week prior to her date of injury. Dr. McCranie diagnosed Claimant with trigger thumb.

9. On August 19, 2017 Claimant again visited Dr. McCranie for an examination. Dr. McCranie noted that Claimant's electrodiagnostic testing revealed right median neuropathy that was indicative of Carpal Tunnel Syndrome (CTS). Specifically, testing revealed moderately severe findings regarding both the sensory and motor nerves including chronic denervation in the distal median-innervated abductor pollicis brevis. Dr. McCranie suspected that the findings caused Claimant's ongoing right upper extremity symptoms.

10. On September 12, 2016 Claimant returned to Dr. Tentori for a scheduled follow-up visit. Dr. Tentori noted that a detailed job tasks analysis had not been done to determine causality and ascertain whether Claimant's job activities caused her right upper extremity symptoms. Dr. Tentori ordered a job site evaluation to ascertain the cause of Claimant's condition.

11. On October 25, 2016 and October 29, 2016 Sara Nowotny conducted a Physical Demands Analysis & Risk Factor Assessment for the position of Cleaner at Employer's restaurant. Relying on the Colorado Division of Workers' Compensation *Medical Treatment Guidelines* (*Guidelines*), Ms. Nowotny did not find evidence of any Primary or Secondary Risk Factors involved in Claimant's job duties. Ms. Nowotny specifically commented that scooping ice did not fit within the Primary or Secondary Risk Factors regarding pronation and grip strength. She also noted that Claimant's job of filling ice from ice machines constituted only 15% of her daily work activities.

12. On November 2, 2016 Claimant underwent an independent medical examination with Carlos Cebrian, M.D. Dr. Cebrian reviewed Claimant's medical records and conducted a physical examination. He considered Ms. Nowotny's report as well as a job description to ascertain Claimant's duties. Dr. Cebrian noted that Claimant engaged in a variety of tasks while working for Employer that included scooping ice, cleaning the kitchen, mopping, cleaning offices and removing trash. Claimant reported that she was suffering right thumb and hand pain that began two weeks prior to the February 2, 2016 incident. She denied any specific injury, but attributed her symptoms to her daily, repetitive ice-scooping activities.

13. Dr. Cebrian explained that in order to perform a medical causation analysis for a cumulative trauma condition pursuant to the *Guidelines*, the first step is to make a diagnosis, the next step is to clearly define the job duties and the final step is to

compare the job duties with the delineated primary risk factors. Dr. Cebrian concluded that Claimant had right trigger thumb and right CTS.

14. Dr. Cebrian compared Claimant's job duties with the delineated Primary Risk Factors in the *Guidelines*. He reviewed the Primary Risk Factor Definition Table for Force and Repetition/Duration. Dr. Cebrian noted that the Table requires 6 hours of greater than 50% of individual maximum force with task cycles 30 seconds or less, or sufficient force is used for at least 50% of a task cycle. Additional risk factors are 6 hours of lifting 10 pounds greater than 60 times per hour or 6 hours of use of hand held tools weighing two pounds or greater. Dr. Cebrian concluded that Claimant did not engage in forceful and repetitive activity for an amount of time that meets the minimum threshold in the *Guidelines*. Dr. Cebrian noted that Claimant performed several different activities throughout the day and many of the activities do not meet the minimal force or time duration requirements.

15. Dr. Cebrian noted that an additional Primary Risk Factor category is Awkward Posture and Repetition/Duration. The factor requires 4 hours of wrist flexion greater than 45 degrees, extension greater than 30 degrees, or ulnar deviation greater than 20 degrees, 6 hours of elbow flexion greater than 90 degrees, or 6 hours of supination/pronation with task cycles 30 seconds or less or awkward posture is used for at least 50% of a task cycle. Additional Primary Risk Factors include computer work for more than 7 hours per day or at a non-ergonomically correct work station, continuous mouse use of greater than 4 hours or use of a handheld vibratory power tool for 6 hours or more. Dr. Cebrian determined that Claimant's job duties did not meet any of the Primary Risk Factors. Moreover, Dr. Cebrian explained that Claimant's work activities did not meet the Secondary Risk Factors enumerated in the *Guidelines*

16. Dr. Cebrian remarked that the manifestation of symptoms while at work does not establish a causal relationship with job duties. He explained:

> There is no question that someone with a non-work related trigger finger will experience symptoms while performing activities at work or anywhere else. This is the reasonable medical expectation for the underlying condition. That [Claimant] may have had symptoms when doing certain activities at work is an indication of the underlying disease process and not of a causal relationship between the disease and the work exposure. The fact that symptoms are experienced at work does not require medical inference that work is causal but rather the reasonable and symptomatic manifestation of the underlying condition. . . .

Dr. Cebrian thus concluded that Claimant's right upper extremity symptoms were not directly or indirectly related to her work activities for Employer.

17. On December 23, 2016 Claimant returned to Dr. McCranie for an evaluation. Dr. McCranie received a copy of Dr. Cebrian's opinion and the job analysis from Ms. Nowotny. Dr. McCranie agreed with Dr. Cebrian's determinations and the findings from Ms. Nowotny that there were no Primary or Secondary Risk Factors for

the development of a cumulative trauma disorder in Claimant's job duties for Employer. Specifically, Dr. McCranie noted that Claimant's conditions of right trigger finger and CTS did not constitute cumulative trauma disorders for work-related activities.

18. Dr. Cebrian testified at the hearing in this matter. He discussed the Primary and Secondary Risk Factors enumerated in the *Guidelines*. Dr. Cebrian explained that the key to the *Guidelines* is that the tasks have to be a combination of the force, repetition and duration for a minimum time period. Different activities are not included in calculating the time period. Dr. Cebrian commented that Claimant's job duties did not meet the Primary or Secondary Risk Factors enumerated in the *Guidelines* because they do not involve continuous, repetitive activity. Finally, Dr. Cebrian testified that the combination of repetition, force and cycle time in Claimant's duties as a Cleaner failed to meet the causation requirements for trigger finger and CTS outlined in Rule 17, Exhibit 5 of the *Guidelines*.

19. Dr. Cebrian detailed that CTS occurs when the ulnar and median nerves are compressed around the adipose tissue of the hands and wrists. He remarked that the compression of the ulnar and median nerves reduces the nerve conduction signals through the hands and wrists causing numbness and tingling. Dr. Cebrian also explained the diagnosis of trigger finger and commented that someone with non-work-related trigger finger will experience symptoms when performing activities at work or anywhere else. He summarized that Claimant was properly diagnosed with CTS and trigger finger but the conditions were not work-related. Dr. Cebrian also concluded that Claimant did not sustain any aggravation of a pre-existing, underlying condition. Instead, he noted that Claimant was experiencing the natural progression of her underlying non-work-related degenerative condition.

20. Claimant testified at the hearing in this matter. She explained that she scoops ice more frequently than noted by her medical providers. Claimant commented that she normally scoops ice into several buckets per day and is constantly going back and forth between the kitchen and the bar to fill buckets of ice and re-load the various areas of the restaurant. She specified that it takes her approximately 25-35 minutes to scoop one bucket of ice and she scoops about 6-8 buckets per day. However, Claimant subsequently amended her response and increased the number of buckets she fills to at least 8-10 per day and sometimes in excess of 20. Claimant also noted that she suffered an acute injury on February 2, 2016 when scooping ice and felt her thumb being "'pushed back" and "twisted backwards." Claimant summarized that, although she performs many job activities for Employer, she scoops ice the majority of each shift.

21. Respondents have demonstrated that it is more probably true than not that they are entitled to withdraw their GAL that acknowledged Claimant sustained compensable occupational diseases to her right upper extremity during the course and scope of her employment with Employer. Although Claimant attributed her CTS and trigger thumb symptoms to her work activities, a review of her job duties reflects that they lacked the requisite force or repetition to cause cumulative trauma disorders. Claimant engaged in a variety of numerous tasks throughout each shift. The record reflects that Claimant's tasks as a Cleaner included scooping ice, cleaning the kitchen,

mopping, cleaning offices and removing trash. Rule 17, Exhibit 5 of the *Guidelines* requires a combination of force, repetition and duration. However, Claimant's job duties fail to meet all of the criteria in the *Guidelines* for a cumulative trauma condition.

22. Relying on Rule 17, Exhibit 5 of the *Guidelines*, Dr. Cebrian testified that the combination of repetition, force and cycle time in Claimant's duties as a Cleaner failed to meet the causation requirements for CTS and trigger thumb. He persuasively explained that Claimant did not suffer a cumulative trauma disorder to her right upper extremity as a result of his work activities for Employer. To constitute a cumulative trauma disorder pursuant to the *Guidelines,* Claimant must have worked more than six hours per day with the requisite force and repetition. Dr. Cebrian compared Claimant's job duties with the delineated Primary Risk Factors in the *Guidelines*. He reviewed the Primary Risk Factor Definition Table for Force and Repetition/Duration. Dr. Cebrian noted that the Table requires 6 hours of greater than 50% of individual maximum force with task cycles 30 seconds or less, or sufficient force is used for at least 50% of a task cycle. Additional risk factors are 6 hours of lifting 10 pounds greater than 60 times per hour or 6 hours of use of hand held tools weighing two pounds or greater. Dr. Cebrian concluded that Claimant did not engage in forceful and repetitive activity for an amount of time that meets the minimum threshold in the *Guidelines*. Dr. Cebrian noted that Claimant performed several different activities throughout the day and many of the activities do not meet the minimal force or time duration requirements.

23. Ms. Nowotny conducted a Physical Demands Analysis & Risk Factor Assessment for the position of Cleaner at Employer's restaurant. Her job site analysis supports the opinion of Dr. Cebrian. Relying on the *Guidelines*, Ms. Nowotny did not find evidence of any Primary or Secondary Risk Factors involved in Claimant's job duties. Ms. Nowotny specifically commented that scooping ice did not fit within the Primary or Secondary Risk Factors regarding pronation and grip strength. She also noted that Claimant's job of filling ice from ice machines constituted only 15% of her daily work activities.

24. Dr. McCranie received a copy of Dr. Cebrian's opinion and the job analysis from Ms. Nowotny. Dr. McCranie agreed with Dr. Cebrian's determinations and the findings from Ms. Nowotny that there were no Primary or Secondary Risk Factors for the development of a cumulative trauma disorder in Claimant's job duties for Employer. Specifically, Dr. McCranie noted that Claimant's conditions of right trigger finger and CTS did not constitute cumulative trauma disorders for work-related activities. Based on the persuasive opinions of Dr. Cebrian, Dr. McCranie and Ms. Nowotny that Claimant did not suffer cumulative trauma disorders to her right upper extremity while working for Employer, Respondents are permitted to withdraw their GAL.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-

40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. The test for distinguishing between an accidental injury and an occupational disease is whether the injury can be traced to a particular time, place and cause. *Campbell v. IBM Corp.*, 867 P.2d 77, 81 (Colo. App. 1993). "Occupational disease" is defined by §8-40-201(14), C.R.S. as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

5. A claimant is required to prove by a preponderance of the evidence that the alleged occupational disease was directly or proximately caused by the employment or working conditions. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office,* 989 P.2d 251, 252 (Colo. App. 1999). Moreover, §8-40-201(14), C.R.S. imposes proof requirements in addition to those required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819, 824 (Colo. 1993). A claimant is entitled to recovery only if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id.* Where there is no evidence that occupational exposure to a hazard is a necessary precondition to

development of the disease, the claimant suffers from an occupational disease only to the extent that the occupational exposure contributed to the disability. *Id.*

6. The court of appeals has previously concluded that the burden of proof to establish compensability remained on the claimant even when an employer was attempting to withdraw an admission of liability. However, the Colorado Workers' Compensation Act has since been amended to change the burden of proof when respondents are attempting to withdraw admissions of liability. Specifically, respondents must now prove by a preponderance of evidence that the claimant did not suffer a compensable injury as defined under Colorado law. §8-43-201(1) (2015), C.R.S. Because Respondents filed a GAL, they bear the burden of proof to establish that Claimant did not sustain compensable occupational diseases to her right upper extremity during the course and scope of her employment with Employer.

7. The *Guidelines* provide, in relevant part:

> Indirect evidence from a number of studies supports the conclusion that task repetition up to 6 hours per day unaccompanied by other risk factors is not causally associated with cumulative trauma conditions. Risk factors that are likely to be associated with specific CTC diagnostic categories include extreme wrist or elbow postures, force including regular work with hand tools greater than 1 kg or tasks requiring greater than 50% of an individual's voluntary maximal strength, work with vibratory tools at least 2 hours per day; or cold environments.

W.C.R.P. Rule 17, Exhibit 5, p.16. The duration of force and repetition as a primary risk factor must be greater than six hours at 50% of individual maximum force with task cycles of 30 seconds or less.

8. "Good" but not "strong" evidence that occupational risk factors cause CTS, as set forth in the *Guidelines*, include a combination of force, repetition, and vibration, or a combination of repetition and force for six hours, or a combination of repetition and forceful tool use with awkward posture for six hours, or a combination of force, repetition, and awkward posture. "Some" evidence of occupational risk factors for the development of CTS include wrist bending or awkward posture for four hours, mouse use more than four hours, and a combination of cold and forceful repetition for six hours. W.C.R.P. Rule 17, Exhibit 5, pp. 23-24.

9. The *Guidelines* include a Primary Risk Factor Definition Table for Force and Repetition/Duration. The Table requires 6 hours of greater than 50% of individual maximum force with task cycles 30 seconds or less, or sufficient force is used for at least 50% of a task cycle. An additional Primary Risk Factor category is Awkward Posture and Repetition/Duration. The factor requires four hours of wrist flexion greater than 45 degrees, extension greater than 30 degrees or ulnar deviation greater than 20 degrees, six hours of elbow flexion greater than 90 degrees, six hours of supination/pronation with task cycles 30 seconds or less, or awkward posture for at least 50% of a task cycle. Other Primary Risk Factors include computer work for more

than seven hours per day or at a non-ergonomically correct work station, continuous mouse use of greater than four hours or use of a handheld vibratory power tool for 6 hours or more. Additional risk factors are six hours of lifting 10 pounds greater than 60 times per hour or six hours using hand held tools weighing two pounds or greater.

10. As found, Respondents have demonstrated by a preponderance of the evidence that they are entitled to withdraw their GAL that acknowledged Claimant sustained compensable occupational diseases to her right upper extremity during the course and scope of her employment with Employer. Although Claimant attributed her CTS and trigger thumb symptoms to her work activities, a review of her job duties reflects that they lacked the requisite force or repetition to cause cumulative trauma disorders. Claimant engaged in a variety of numerous tasks throughout each shift. The record reflects that Claimant's tasks as a Cleaner included scooping ice, cleaning the kitchen, mopping, cleaning offices and removing trash. Rule 17, Exhibit 5 of the *Guidelines* requires a combination of force, repetition and duration. However, Claimant's job duties fail to meet all of the criteria in the *Guidelines* for a cumulative trauma condition.

11. As found, relying on Rule 17, Exhibit 5 of the *Guidelines*, Dr. Cebrian testified that the combination of repetition, force and cycle time in Claimant's duties as a Cleaner failed to meet the causation requirements for CTS and trigger thumb. He persuasively explained that Claimant did not suffer a cumulative trauma disorder to her right upper extremity as a result of his work activities for Employer. To constitute a cumulative trauma disorder pursuant to the *Guidelines,* Claimant must have worked more than six hours per day with the requisite force and repetition. Dr. Cebrian compared Claimant's job duties with the delineated Primary Risk Factors in the *Guidelines*. He reviewed the Primary Risk Factor Definition Table for Force and Repetition/Duration. Dr. Cebrian noted that the Table requires 6 hours of greater than 50% of individual maximum force with task cycles 30 seconds or less, or sufficient force is used for at least 50% of a task cycle. Additional risk factors are 6 hours of lifting 10 pounds greater than 60 times per hour or 6 hours of use of hand held tools weighing two pounds or greater. Dr. Cebrian concluded that Claimant did not engage in forceful and repetitive activity for an amount of time that meets the minimum threshold in the *Guidelines*. Dr. Cebrian noted that Claimant performed several different activities throughout the day and many of the activities do not meet the minimal force or time duration requirements.

12. As found, Ms. Nowotny conducted a Physical Demands Analysis & Risk Factor Assessment for the position of Cleaner at Employer's restaurant. Her job site analysis supports the opinion of Dr. Cebrian. Relying on the *Guidelines*, Ms. Nowotny did not find evidence of any Primary or Secondary Risk Factors involved in Claimant's job duties. Ms. Nowotny specifically commented that scooping ice did not fit within the Primary or Secondary Risk Factors regarding pronation and grip strength. She also noted that Claimant's job of filling ice from ice machines constituted only 15% of her daily work activities.

13. As found, Dr. McCranie received a copy of Dr. Cebrian's opinion and the job analysis from Ms. Nowotny. Dr. McCranie agreed with Dr. Cebrian's determinations and the findings from Ms. Nowotny that there were no Primary or Secondary Risk Factors for the development of a cumulative trauma disorder in Claimant's job duties for Employer. Specifically, Dr. McCranie noted that Claimant's conditions of right trigger finger and CTS did not constitute cumulative trauma disorders for work-related activities. Based on the persuasive opinions of Dr. Cebrian, Dr. McCranie and Ms. Nowotny that Claimant did not suffer cumulative trauma disorders to her right upper extremity while working for Employer, Respondents are permitted to withdraw their GAL.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's claim for Workers' Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

Denver, CO 80203

ISSUE

Whether Respondents have demonstrated by a preponderance of the evidence that Claimant was responsible for his termination from employment under §8-42-105(4) C.R.S and §8-42-103(1)(g) C.R.S. (collectively "termination statutes") and is thus precluded from receiving indemnity benefits.

STIPULATIONS

The parties agreed to the following:

1. Claimant earned an Average Weekly Wage (AWW) of $831.25.

2. If Respondents are unable to meet their burden of proof, Claimant is entitled to the aggregate amount of $4,504.22 in Temporary Total Disability (TTD) benefits for the period December 31, 2016 through January 21, 2017 and Temporary Partial Disability (TPD) benefits for the period January 22, 2017 through April 3, 2017.

FINDINGS OF FACT

1. Employer is an appliance delivery and installation company. Claimant commenced employment with Employer on November 1, 2016. He had previously worked for Employer as a temporary employee on assignment from Labor Ready for two-and-one-half weeks.

2. Claimant worked in the inventory section of Employer's warehouse. His primary duties were loading and unloading appliances from trucks. Claimant did not have a supervisory position.

3. On December 7, 2016 Claimant was involved in a verbal altercation with Independent Service Provider (ISP) Adrian Livingston. Quality and Compliance Manager Clark Betz advised Claimant that ISP's were contractors and did not work for Employer. Mr. Betz informed Claimant not to address issues directly with ISP's but to bring concerns or issues with ISP's to him or General Manager Chip LeRoy. Claimant agreed to the procedure.

4. On December 12, 2016 Claimant had another altercation with ISP's Jason Craven and Charlie Vigil. Claimant accused Mr. Craven of hitting a trailer with a truck. Claimant did not present his concerns to Mr. Betz or Mr. Leroy, but another employee contacted Mr. Betz to diffuse the situation. Mr. Betz did not find any damage to the trailer and asked Claimant to drop the issue. Claimant responded with a profanity-laced statement and stormed away.

5. Mr. Betz reported that Claimant continued to have a negative demeanor for the rest of the day and was slamming things around. Claimant testified that he was angry and admitted that he made the profane statement attributed to him by Mr. Betz. He acknowledged that this was not a respectful way to speak to his supervisor and should not have made the statement.

6. Elizabeth Plata was Employer's Warehouse Manager in November and December of 2016. She explained that she was responsible for everything within the building by overseeing warehouse operations. Claimant's job duties in the inventory side of the warehouse were not supervisory. Ms. Plata recalled telling Claimant that this was "his house." She uses the statement with all employees to encourage them to take pride in their work. Ms. Plata was unable to think of anything she said to Claimant that would have suggested he was in a supervisory position.

7. At approximately 10:00 a.m. on December 30, 2016 Claimant entered Ms. Plata's office and confronted her regarding whether there were a sufficient number of trucks on site to haul inventory. Claimant questioned Ms. Plata's authority and decision-making. He became argumentative and confrontational. Ms. Plata asked Claimant to leave her office and he stormed away.

8. Ms. Plata subsequently discussed the incident with Mr. LeRoy. They had previously conferred about Claimant's behavioral issues. They specifically noted that Claimant's behavior was a problem and there were almost daily incidents reflecting his inability to work with others.

9. Later on December 30, 2016 Claimant was working with employee Dalton Davis. Mr. Davis was an African-American employee who had been hired on December 1, 2016 to work on the inventory side of Employer's warehouse with Claimant. While loading trucks Claimant called Mr. Davis "boy" and specifically stated, "know your place, boy, and get back to work." Mr. Davis testified that he interpreted the statement to be racially insensitive and was very upset. He explained that the context of the phrase and the way Claimant used the words was racist.

10. Later in the afternoon of December 30, 2016 employee Maurice Harris visited Ms. Plata's office to report that Mr. Davis was upset because Claimant had called him "boy." Mr. Harris was also upset because Claimant had directed a racial slur toward Mr. Davis. He remarked that Mr. Davis walked out of the warehouse after the incident.

11. During the first 90 days of his employment with Employer Claimant was an "introductory employee." The probationary period is used to determine if new employees are suited for their positions with Employer. On October 30, 2016 Claimant signed an Employee Acknowledgment stating he had read and understood the Employee Handbook. The Employee Handbook contains a section entitled "Introductory Period" that provides either the employee or Employer may terminate employment for any reason during the introductory period.

12. Because Claimant was a probationary employee within his first 90 days there was no required procedure for his termination. Mr. LeRoy noted that Claimant would have received an evaluation had he completed the 90-day probationary period. He considered the incident involving Claimant and Mr. Davis on December 30, 2016 to constitute an escalation of Claimant's prior behavior and inability to work with others. Mr. LeRoy terminated Claimant on the afternoon of December 30, 2016 because he was not a good fit with Employer and failed to work with the team.

13. Claimant testified that he believed he had some authority on the inventory side of Employer's warehouse based on Ms. Baca's comments that the area was "his house." He explained that immediately prior to his verbal altercation with Mr. Davis on December 30, 2016 he was attempting to talk to a driver who was picking up a load from the warehouse. The driver spoke very little English and Mr. Davis kept interrupting Claimant. Claimant explained that Mr. Davis was acting like a child. He disputed that he used the phrase "know your place, boy" and instead told Mr. Davis to "remember who he was talking to." However, he admitted that he called Mr. Davis "boy." Claimant was familiar with the historical context of the use of the word "boy" and aware that people viewed the term as a racial slur. He expressed surprise when he was advised by Mr. LeRoy that he had been terminated because he was not a good fit and did not get along with the rest of the team. Claimant commented that he had never undergone a review to discuss his attitude and job performance.

14. Respondents have demonstrated that it is more probably true than not that Claimant was responsible for his termination from employment and is thus precluded from receiving indemnity benefits. The record reveals that Claimant had multiple altercations with ISPs, co-employees and supervisors during his employment with Employer. On December 7, 2016 Mr. Betz informed Claimant not to address issues directly with ISP's but to bring concerns or issues with ISP's to him or Mr. LeRoy. On December 12, 2016 Claimant had another altercation with ISP's and another employee contacted Mr. Betz to diffuse the situation. Mr. Betz asked Claimant to drop the issue but Claimant responded with a profanity-laced statement and stormed away. Mr. Betz reported that Claimant continued to have a negative demeanor for the rest of the day and was slamming things around.

15. At approximately 10:00 a.m. on December 30, 2016 Claimant entered Ms. Plata's office and confronted her regarding whether there were a sufficient number of trucks on site to haul inventory. Claimant questioned Ms. Plata's authority and decision-making. He became argumentative and confrontational. Ms. Plata asked Claimant to leave her office and he stormed away. Later on December 30, 2016 Claimant was involved in a verbal altercation with employee Mr. Davis. Mr. Davis interpreted Claimant's statements to be racially insensitive and became very upset. He explained that the context of the phrase and the way Claimant used the words was racist. Mr. LeRoy considered the incident involving Claimant and Mr. Davis on December 30, 2016 to constitute an escalation of Claimant's prior behavior and inability to work with others. He terminated Claimant on the afternoon of December 30, 2016 because Claimant was not a good fit with Employer and failed to work with the team.

16. Claimant was involved in two confrontations with ISP's, spoke to supervisors Mr. Betz and Ms. Plata in an argumentative, confrontational and disrespectful manner, and directed a racial slur toward co-employee Mr. Davis. The record reveals that Claimant thus precipitated his employment termination by a volitional act that he would reasonably expect to cause the loss of employment. Accordingly, under the totality of the circumstances Claimant committed a volitional act or exercised some control over his termination from employment. He is thus precluded from receiving indemnity benefits.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Respondents assert that Claimant is precluded from receiving temporary disability benefits because he was responsible for his termination from employment pursuant to §8-42-105(4) C.R.S and §8-42-103(1)(g) C.R.S. Under the termination statutes a claimant who is responsible for his termination from regular or modified employment is not entitled to TTD benefits absent a worsening of condition that reestablishes the causal connection between the industrial injury and wage loss. *In re of George,* W.C. No. 4-690-400 (ICAP July 20, 2006). The termination statutes provide that, in cases where an employee is responsible for his termination, the resulting wage loss is not attributable to the industrial injury. *In re of Davis*, W.C. No. 4-631-681 (ICAP Apr. 24, 2006). A claimant does not act "volitionally" or exercise control over the circumstances leading to his termination if the effects of the injury prevent him from

performing her assigned duties and cause the termination. *In re of Eskridge,* W.C. No. 4-651-260 (ICAP Apr. 21, 2006). Therefore, to establish that Claimant was responsible for his termination, Respondents must demonstrate by a preponderance of the evidence that Claimant committed a volitional act, or exercised some control over his termination under the totality of the circumstances. *See Padilla v. Digital Equipment*, 902 P.2d 414, 416 (Colo. App. 1994). An employee is thus "responsible" if he precipitated the employment termination by a volitional act that he would reasonably expect to cause the loss of employment. *Patchek v. Dep't of Public Safety,* W.C. No. 4-432-301 (ICAP, Sept. 27, 2001).

5. As found, Respondents have demonstrated by a preponderance of the evidence that Claimant was responsible for his termination from employment and is thus precluded from receiving indemnity benefits. The record reveals that Claimant had multiple altercations with ISPs, co-employees and supervisors during his employment with Employer. On December 7, 2016 Mr. Betz informed Claimant not to address issues directly with ISP's but to bring concerns or issues with ISP's to him or Mr. LeRoy. On December 12, 2016 Claimant had another altercation with ISP's and another employee contacted Mr. Betz to diffuse the situation. Mr. Betz asked Claimant to drop the issue but Claimant responded with a profanity-laced statement and stormed away. Mr. Betz reported that Claimant continued to have a negative demeanor for the rest of the day and was slamming things around.

6. As found, at approximately 10:00 a.m. on December 30, 2016 Claimant entered Ms. Plata's office and confronted her regarding whether there were a sufficient number of trucks on site to haul inventory. Claimant questioned Ms. Plata's authority and decision-making. He became argumentative and confrontational. Ms. Plata asked Claimant to leave her office and he stormed away. Later on December 30, 2016 Claimant was involved in a verbal altercation with employee Mr. Davis. Mr. Davis interpreted Claimant's statements to be racially insensitive and became very upset. He explained that the context of the phrase and the way Claimant used the words was racist. Mr. LeRoy considered the incident involving Claimant and Mr. Davis on December 30, 2016 to constitute an escalation of Claimant's prior behavior and inability to work with others. He terminated Claimant on the afternoon of December 30, 2016 because Claimant was not a good fit with Employer and failed to work with the team.

7. As found, Claimant was involved in two confrontations with ISP's, spoke to supervisors Mr. Betz and Ms. Plata in an argumentative, confrontational and disrespectful manner, and directed a racial slur toward co-employee Mr. Davis. The record reveals that Claimant thus precipitated his employment termination by a volitional act that he would reasonably expect to cause the loss of employment. Accordingly, under the totality of the circumstances Claimant committed a volitional act or exercised some control over his termination from employment. He is thus precluded from receiving indemnity benefits.

ORDER

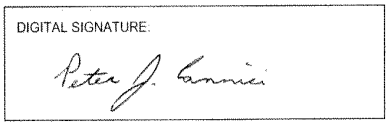
Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant is precluded from receiving indemnity benefits because he was responsible for his termination from employment with Employer on December 30, 2016.

2. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: August 3, 2017.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

The following issue was raised for consideration at hearing:

1. Whether Claimant proved by a preponderance of the evidence that he suffered an injury on June 2, 2016, in the course and scope of his employment for Employer.

FINDINGS OF FACT

1. Claimant is a 61 year old former employee of Employer. Claimant worked for Employer for approximately two years.

2. On June 2, 2016, Claimant was hit on the side of the head by a two inch pipe while working. The two inch pipe was covered in insulation and the pipe was still attached on one end so the pipe did not fall free.

3. William Sears, the Health, Safety and Environmental supervisor for the Employer, responded to and investigated work accidents for Employer. Mr. Sears credibly testified that Claimant suffered a small abrasion approximately the size of a dime, and no larger than a quarter, on the side of Claimant's head in the temple area due to the incident. Claimant was given first aid which included cleaning the wound and placing a band-aid on the abrasion.

4. Mr. Clayton Williams, Claimant's co-worker, provided first aid at the scene and confirmed that Claimant had a small scratch above his eye that was bleeding. Mr. Williams cleaned the wound with antiseptic wipes and put a band-aid on it.

5. Mr. Sears asked Claimant multiple times whether he needed medical treatment, and Claimant indicated he did not need medical attention.

7. After the investigation of the incident, Mr. Sears took Claimant to Concentra for a drug test. Mr. Sears did not observe Claimant acting injured, talking strange or acting like he had a head injury.

8. Claimant initially testified that he could not recall whether he requested medical treatment when he was taken to Concentra. Subsequently, Claimant testified that the reason he did not receive medical treatment was because he was not offered any treatment. Claimant's testimony was not deemed credible.

9. Mr. Sears credibly testified that on the way back from Concentra Claimant confirmed he was fine and did not need medical treatment.

10. Claimant returned to work the next day, June 3, 2016, and worked for five hours without requesting or requiring medical treatment. Claimant was able to perform all his duties.

11. Mr. Williams observed Claimant while he was working and Claimant reported he was fine and did not require any formal medical care.

12. After five hours of working in the morning of June 3, 2016, Claimant was terminated from his employment due to safety rule violations. Following Claimant's termination, he threatened to sue Employer.

13. Claimant reported to Dr. Lawrence Lesnak, Respondents' independent medical examiner, that Claimant had contacted an attorney on June 3 following his termination.

14. On June 5, 2016, Claimant requested medical treatment from Employer for his alleged injuries. Also, on June 5, 2016, Claimant went to the emergency room reporting a head injury. At the time of Claimant's emergency room visit, three days had passed since the June 2 alleged work injury. At the emergency room, there were no acute findings on CT scan or MRI. Nonetheless, based on Claimant's representations of right arm paresthesias, he was given a differential diagnosis of post concussive syndrome.

15. Claimant pursued an OSHA claim against the Employer as a result of the June 2 alleged injury. Claimant's OSHA complaint was summarily dismissed; however, Claimant testified that he has appealed the dismissal.

16. Claimant initially testified that he lost consciousness as a result of the pipe hitting his head. Subsequently, Claimant testified he "probably" lost consciousness. Then, Claimant testified he "maybe" lost consciousness and he really did not know if he lost consciousness. Claimant's testimony that he lost consciousness after the incident lacked credibility.

18. Mr. Williams and Mr. Sears credibly testified that Claimant seemed fine shortly after the incident, and he was coherent and able to talk normally shortly after the incident.

19. Dr. Lesnak credibly testified that, based on all the testimony provided at hearing, there was no mechanism of injury which would have produced a concussion. Dr. Lesnak opined that if there is an insult to the brain, a person will have symptoms immediately thereafter. Dr. Lesnak further testified that Claimant reported to him that he had no symptoms initially after the incident, and Claimant did not have any issues for three days. Dr. Lesnak further opined that this pattern of symptoms is not consistent

with any type of brain injury. Additionally, Dr. Lesnak noted that the brain scans completed three days after the incident showed no acute abnormalities.

21. Claimant testified that he has continued to have problems. Specifically, Claimant alleged that he cannot sleep, his vision is impaired, he has pain in his head, he suffers from depression, and he has had behavioral changes. Yet, despite all these continued complaints, Claimant testified that he returned to work at Kindred Healthcare as an engineer in November 2016. Claimant admitted that he performed physical work as part of his job duties with Kindred Healthcare. Claimant attempted to explain that he was at work, but his capacity was diminished by the work injury and he did not perform all his duties.

22. Dr. Lesnak credibly testified that Claimant's ongoing complaints and medical treatment is not consistent with a head injury. Dr. Lesnak noted that when Claimant went to the emergency room three days after the incident he complained of dizziness, nausea, and vomiting; however, over time, Claimant's symptoms have expanded. Dr. Lesnak opined that Claimant's symptomatology is not consistent with any type of head injury as a patient's worse symptoms would appear first, and then the symptoms would get better.

23. Additionally, Dr. Lesnak opined that Claimant did not sustain a cervical spine injury from the incident. Dr. Lesnak explained that the emergency room records three days after the incident documented Claimant's full range of motion in the cervical spine without tenderness, and there was no clinical indication for imaging of the cervical spine.

24. Dr. Lesnak reviewed the subsequent cervical spine MRI and testified the imaging performed two months later showed normal degeneration of the cervical spine for a 60 year old man.

25. Based on Employer's safety policies, Claimant was required to have work orders for the work he was performing on the pipe; a STA permit and a line break permit were required for the work he was performing at the time of the incident. Mr. Sears requested Claimant's STA and line break permits at the time of the incident and Claimant was initially not able to produce these documents. Claimant left the mezzanine level where the incident occurred, climbed down a 12 foot ladder on his own and left the area. Claimant could not be found by Mr. Sears after he left. Mr. Sears called Claimant on the radio, but Claimant did not respond to inform Mr. Sears where he was.

27. Mr. Sears learned that Claimant drove his scooter back to the work shop where he was found sitting at his desk in the shop writing something. Claimant testified variously that he did return to the shop following the alleged incident, that he did not recall returning to the shop after the incident and that he had the permits all along in his tool bag. Claimant's testimony about leaving the area where the alleged incident occurred lacks credibility.

29. Mr. Sears credibly testified that when Claimant returned to the incident location, he provided Mr. Sears with the STA and line break permits from a pouch on Claimant's scooter. The STA and line break permits were incomplete and not fully filled out.

31. Mr. Sears credibly testified that the Employer ensured that all employees knew the STA and line break permits were required through new-hire orientation, employee training, including classroom training, online training and weekly safety topics. Claimant credibly testified that he was required to have lockouts in place when performing the work he was doing at the time of the incident. Claimant admitted that he needed a red lock, which he did not use.

33. Mr. Sears credibly testified that during his investigation into the incident he learned that Claimant failed to follow the safety rule regarding proper lockout/tagout procedures.

34. Claimant credibly testified that he had signed paperwork which instructed employees to wear a hard hat in the area where the alleged work injury occurred. Claimant admitted he received training on the areas where he was required to wear a hard hat. Claimant admitted he was not wearing a hard hat, as required, at the time of the incident. The failure to wear the hard hat was contrary to Employer's safety policies.

35. Mr. Sears confirmed that Claimant received training regarding appropriate personal protective equipment (PPE) similar to the permits and lockout/tagout training and had a written policy regarding PPE.

37. Mr. Sears credibly testified that Claimant had four safety violations as a result of the June 2, 2016, incident. Mr. Sears indicated that because of the severity of the safety rule violations committed by Claimant, Employer's policy called for termination.

CONCLUSIONS OF LAW

Having entered the Findings of Fact above, the following Conclusions of Law are reached.

1. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979) The facts in a workers'

compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. Section 8-43-201, C.R.S.

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

3. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

4. A claimant's right to compensation initially hinges upon a determination that "at the time of the injury, the employee is performing service arising out of and in the course of the employee's employment." Section 8-41-301(1)(b), C.R.S. The "arising out of" test is one of causation which requires that the injury have its origins in an employee's work-related functions. There is no presumption than an injury which occurs in the course of employment arises out of the employment. *Finn v. Industrial Commission,* 165 Colo. 106, 437 P.2d 542 (1968). The evidence must establish the causal connection with reasonable probability, but it need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 30 Colo. App. 224, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 2993. A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 293 (1951).

5. Whether a compensable injury has been sustained is a question of fact to be determined by the ALJ. *Eller v. Industrial Claim Appeals Office*, 224 P.3d 397 (Colo. App. Div. 5 2009). The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the proximate causal relationship between an incident/injury and the need for medical treatment, plus entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. (2013). See City of *Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *Lutz v. Industrial Claim Appeals Office*, 24 P.3d 29 (Colo. App. 2000).

6. Compensable injuries involve an "injury" which requires medical treatment or causes disability. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). Even if an "accident" occurs at work it must be significant enough to result in an "injury" requiring formal medical treatment or resulting in impairment. *Wherry v. City and*

County of Denver, W.C. No. 4-475-818 (Ind. Cl. App. Office, March 7, 2002). Pursuant to *Wherry v. City and County of Denver*, W.C. No. 4-475-818 (Ind. Cl. App. Off. March 7, 2002), if an accident is not a significant event resulting in an injury requiring more than first aid, claimant is not entitled to workers' compensation benefits.

7. Claimant was admittedly involved in an "accident" at work, when a two inch insulated pipe struck him in the head. However, as Mr. Sears and Mr. Williams both credibly testified, Claimant suffered only a small scratch above his eye that was cleaned and a band-aid was applied. Claimant's inconsistent testimony that he lost consciousness as a result of being struck is not credible. Both Mr. Sears and Mr. Williams credibly testified that after the incident Claimant stated that he was fine. Mr. Sears and Mr. Williams observed that Claimant appeared fine, and he was coherent and spoke in a normal fashion after the incident.

8. Furthermore, Claimant repeatedly declined medical care after the incident. In fact, Claimant did not allege any symptoms or ill-effects from the incident until three days afterwards, and after he had already been terminated from employment. Claimant admitted he returned to work the next day after the incident and worked for five hours, performing his regular duties. At no time did Claimant request medical treatment. Indeed, Mr. Williams credibly testified that he saw Claimant the next day and Claimant specifically stated he was fine. Mr. Sears confirmed that Claimant did not request medical care at the termination meeting.

9. Dr. Lesnak credibly testified that it is not consistent with head injuries to have delayed symptoms. Dr. Lesnak explained that because Claimant had no symptoms for three days, he did not suffer a concussion from the pipe striking his head. Moreover, Dr. Lesnak persuasively testified Claimant's ongoing symptomatology is inconsistent with a head injury in that it is not possible to have no symptoms, then some delayed symptoms and then an expanding and worsening symptom pattern.

10. Therefore, it is concluded that Claimant did not sustain a compensable "injury" as a result of the June 2, 2016 incident, which warranted medical treatment or produced disability. Therefore, Claimant did not sustain a compensable injury which entitled him to benefits.

ORDER

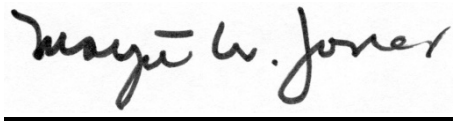
It is therefore ordered that:

1. Claimant's claim is denied and dismissed with prejudice.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail,

as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 3, 2017_



Margot W. Jones, Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Did Claimant prove that he suffered a compensable injury to his right shoulder on December 14, 2016?

If this claim is deemed compensable, the ALJ will address these additional questions:

2. Is Claimant entitled to temporary total disability (TTD) benefits commencing December 14, 2016?

3. Can the ALJ order Employer to reinstate Claimant's charged PTO?

4. Is the arthroscopic shoulder surgery recommended by Dr. Simpson reasonable and necessary treatment for the compensable injury?

STIPULATIONS

1. Claimant's average weekly wage (AWW) is $614.

2. If the claim is compensable, Dr. Jefferson Lloyd and other providers at Emergicare are authorized.

3. If the claim is compensable, Respondents do not dispute Claimant's entitlement to TTD benefits commencing December 14, 2016.

FINDINGS OF FACT

1. Claimant operated a rotomold machine making plastic parts for Employer. The job required Claimant to lift plastic molds up to approximately chest or shoulder-level multiple times per day. The molds weigh between 5 to 45 pounds, depending on the parts being produced.

2. On December 14, 2016, Claimant felt a painful "pop" in his right shoulder while lifting a mold that weighed approximately 15-20 pounds.

3. Due to severe pain, Claimant immediately reported the injury to his supervisor, Bill Doutre. Claimant recalls telling Mr. Doutre he felt a pop, but also said he might have injured the shoulder at his previous job. Mr. Doutre did not recall Claimant mentioning a pop, but recalled Claimant saying he may have hurt the shoulder at work for Employer or at his previous job. In any event, the information Claimant conveyed

was clearly sufficient to indicate a potential work-related injury, because he was referred for treatment forthwith at Employer's designated provider, Emergicare.

4. Several days before December 14, Claimant had mentioned intermittent shoulder pain to his coworker, Jim Valdez. Claimant told Mr. Valdez he might have hurt his shoulder at his last job climbing up and down towers at a wind farm. Mr. Valdez recalls the complaints related to Claimant's left shoulder and does not recall Claimant ever mentioning problems with the right shoulder. Mr. Valdez also noted it was not unusual to be sore after starting a new position on the rotomold machine.

5. Claimant saw Dr. Agnes Flaum at his initial visit to Emergicare on December 14. Dr. Flaum's report notes Claimant "presents with right shoulder pain that has been prevalent at work for the last 2 days, but this morning he was lifting at work and felt a pop in his shoulder." Claimant's active shoulder ROM was reduced in all directions and he reported a pain level of 7. Dr. Flaum diagnosed a right shoulder "sprain," gave Claimant a sling and released him to return to modified duty with "no use of right hand or arm."

6. Claimant saw Dr. Flaum again on December 21, 2016. His shoulder pain had not improved but was actually worse, so Dr. Flaum sent him for an MRI. The MRI showed a bilobed paralabral cyst extending into the supraspinatus fossa, and a small tear of the posterior superior labrum. The rotator cuff was intact. Based on the MRI results, Dr. Flaum referred Claimant to Dr. Michael Simpson for an orthopedic evaluation.

7. Claimant began treating with Dr. Jefferson Loyd at Emergicare on December 28, 2016.

8. Claimant saw Dr. Simpson on January 4, 2017. He told Dr. Simpson he felt a pop in his shoulder while lifting a plastic mold at work. Claimant described severe pain since the episode. He denied any prior history of shoulder problems or shoulder treatment. Dr. Simpson opined the paralabral cyst is likely impinging on the suprascapular nerve, causing Claimant's pain. Dr. Simpson opined "it is impossible to say whether or not his labral tear was acute or pre-existing. However, he was working at the job for approximately four months and I think this would have been very difficult for him to do with this degree of paralabral cyst. Therefore, I think the job he was assigned to which required repetitive lifting to the chest level puts significant strain on his shoulder resulting in development of enlarging paralabral cyst, which is now causing suprascapular nerve compression. Therefore, his pathology and symptoms do appear to be cause[ally] related to the job he was working at the time." Dr. Simpson recommended arthroscopic decompression of the paralabral cyst, a labral repair, and a decompression of the suprascapular nerve. Dr. Simpson requested preauthorization and tentatively scheduled Claimant for surgery on January 18, 2017.

9. Respondents filed a Notice of Contest on January 13, 2017.

10. Claimant has not undergone surgery due to lack of prior authorization.

11. On February 13, 2017, Insurer's adjuster wrote to Dr. Loyd seeking his opinions regarding causation of Claimant's shoulder condition. Dr. Loyd responded that the bilobed cyst was chronic, but the labral tear was acute and resulted from the lifting incident on December 14. Dr. Lloyd subsequently indicated he agrees with Dr. Simpson's surgical recommendation.

12. Although Claimant was released work with restrictions, Employer did not offer Claimant modified duty, and he has been off work since December 14, 2016. Employer paid Claimant for 38.77 hours of paid time off (PTO) from December 15 until December 21, 2016.

13. On May 31, 2017, Dr. Loyd opined that absent any interval improvement in Claimant's condition, the prior work restrictions remain in effect pending surgery.

14. Claimant saw Dr. Jack Rook for an Independent Medical Examination (IME) at his counsel's request on May 29, 2017. Claimant gave Dr. Rook a history of injury consistent with the history described to Dr. Flaum, Dr. Simpson and in his hearing testimony. Dr. Rook opined it was "quite clear" that Claimant's right shoulder condition reflects a work-related injury. Dr. Rook opined the popping sensation likely represented the acute tearing of the labrum. Dr. Rook agreed with Dr. Simpson's surgical recommendation.

15. Dr. William Ciccone Jr. performed a record review for Respondents on June 5, 2016. Dr. Ciccone agreed with Dr. Simpson that the paralabral cyst might be irritating the suprascapular nerve, but thought surgery was premature pending a diagnostic suprascapular nerve block. If Claimant received good relief from the nerve block, Dr. Ciccone suggested needle aspiration of the cyst.

16. Dr. Ciccone opined that Claimant's shoulder condition is not causally related to his employment. Although Claimant experienced increased right shoulder pain while at work, Dr. Ciccone does not believe he suffered any acute injury. Dr. Ciccone opined that labral cyst formation generally occurs after a tear has been present for "a while" and is usually a chronic condition.

17. At the time of his injury, Claimant had been in the rotomolding position for approximately three weeks. Claimant worked without difficulty or limitation until the morning of December 14, 2016. Although Claimant felt intermittent "soreness" in his right shoulder a few days before the injury, this soreness did not impede his ability to perform his duties.

18. Since the morning of December 14, 2016, Claimant has been unable to use his right arm for significant activities due to severe shoulder pain.

19. Claimant's testimony is credible and persuasive.

20. The opinions of Dr. Simpson, Dr. Loyd, and Dr. Rook are more persuasive than Dr. Ciccone's contrary opinions.

21. Claimant proved by a preponderance of the evidence he suffered a compensable injury to his right arm as a result of his work duties on December 14, 2016.

22. Claimant has been continuously disabled and suffered a wage loss as a proximate result of his industrial injury since December 14, 2016.

23. Claimant proved by a preponderance of the evidence that the surgery proposed by Dr. Simpson is reasonable, necessary, and causally related to his industrial injury.

CONCLUSIONS OF LAW

A. Claimant's right shoulder injury is compensable

To receive compensation or medical benefits, Claimant must prove that he is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1), C.R.S.; *see, Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). Claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). The claimant must prove entitlement to benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case are not interpreted liberally, in favor of either claimant or respondents. Section 8-43-201.

The fact that a claimant suffers from a pre-existing condition does not disqualify a claim for compensation. If a claimant's work aggravates, accelerates, or combines with a preexisting condition to produce disability or a need for treatment, the claim is compensable. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990).

Pain is a typical symptom from the aggravation of a pre-existing condition, and the claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by the employment-related activities and not the underlying pre-existing condition. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949). But the mere fact that a claimant experiences symptoms at work does not necessarily mean the employment aggravated or accelerated the pre-existing condition. *Cotts v. Exempla*, W.C. No. 4-606-563 (ICAO, August 18, 2005). Rather, when a claimant experiences symptoms at work, the ALJ must determine whether the subsequent need for treatment was caused by an industrial aggravation of a preexisting condition or due to the natural progression of the condition. *Melendez v. Weld County School District #6*, W.C. No. 4-775-869 (ICAO, October 2, 2009).

As found, Claimant proved he injured his right shoulder while lifting a plastic mold at work on December 14, 2016. Claimant presented as forthright and sincere at the

hearing. As reflected in the medical records, Claimant has consistently attributed the onset of symptoms to lifting a mold that morning. There is no persuasive evidence that Claimant had any limitation in using his right arm before that date, and Claimant's condition appears to have changed significantly on the morning of December 14. Since that day, he has had difficulty using his right arm for even routine activities of daily living.

Admittedly, the testimony from Claimant's co-workers is puzzling, as they have no obvious reason to fabricate their stories. But each witness gave different accounts of what Claimant allegedly said, and when he said it. As a result, crediting any individual witnesses' testimony effectively discredits the others. According to Ms. Mellon, Claimant said he injured his shoulder over the weekend "playing tackle football and rock climbing." She further testified this conversation occurred early in the morning of December 14 while they were picking up their daily assignments at a computer terminal. By contrast, Ms. Rodriquez and Mr. Kerr testified Claimant reported injuring his shoulder while they were outside on their morning smoke break. Both witnesses stated Ms. Mellon was also present, but Ms. Mellon did not mention any conversation during a smoke break. Regarding the alleged mechanism of injury, Ms. Rodriguez testified Claimant said he hurt his shoulder playing football or basketball, whereas Mr. Kerr said Claimant hurt the shoulder "playing around with friends over the weekend" but "did not specify how he did it." In light of these inconsistencies, the ALJ declines to give the co-worker testimony substantial weight.

Furthermore, even if Claimant had done something to his shoulder on the weekend before December 14, he worked on Monday and Tuesday with no difficulty and no outward sign of pain or limitations. Given that the job required extensive use of his upper extremities and frequent lifting of objects to chest or shoulder height, it is not likely Claimant could have worked on Monday and Tuesday of that week if his shoulder was in the condition it was when he was evaluated by Emergicare on Wednesday, December 14. Based on the totality of evidence presented, the ALJ concludes more likely than not something happened to Claimant's shoulder on the morning of December 14, 2016 while he was performing his work duties. Claimant either suffered a new traumatic injury or aggravated a previously asymptomatic pre-existing condition. Either scenario results in a compensable injury.

B. Claimant is entitled to TTD benefits commencing December 14, 2016

A claimant is entitled to TTD benefits if the injury causes a disability, the disability causes the claimant to leave work, and the claimant misses more than three regular working days. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The claimant must establish a causal connection between a work-related injury and the subsequent wage loss to obtain TTD benefits. *Id*. The term disability connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). Impairment of earning capacity may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform her regular employment. *Ortiz v.*

Charles J. Murphy & Co., 964 P.2d 595 (Colo. App. 1998). Once the claimant establishes temporary disability, the right to benefits is measured by the degree of the wage loss, not the claimant's willingness to seek employment or the claimant's hypothetical ability to perform modified employment. *See Black Roofing Inc. v. West*, 967 P.2d 195 (Colo. App. 1998); *Denny's Restaurant, Inc. v. Husson*, 746 P.2d 63 (Colo. App. 1987).

The persuasive evidence shows that Claimant was disabled by and suffered a wage loss as a direct and proximate consequence of his industrial injury. Claimant could not effectively utilize his right upper extremity for work tasks due to pain and range of motion loss. Dr. Flaum opined he could only perform work requiring "no use" of his right arm, and Dr. Loyd continued that restriction pending surgery. Employer did not offer Claimant modified duty, resulting in a total wage loss since December 14, 2016.

Consistent with the above-referenced evidence, Respondents' counsel stated at the hearing Respondents do not dispute Claimant's entitlement to TTD benefits if the claim is compensable.

C. The ALJ cannot order Employer to reimburse Claimant's PTO

Employer paid Claimant wages from December 15 through December 21, 2016 by depleting his accrued PTO. Since Employer "charged" Claimant's earned PTO, Claimant is entitled to a full award of TTD benefits for that period of time. *See* § 8-42-124(2)(a) & (4); *Public Service Co. of Colorado v. Johnson*, 789 P.2d 487 (Colo. App. 1990); *Barnhill v. City and County of Denver*, W.C. No. 4-525-398 (ICAO, August 27, 2003).

The ALJ has no authority to order Employer to reinstate Claimant's PTO leave. *E.g., Nielsen v. Public Utilities Commission*, W.C. No. 4-405-800 (ICAO, May 10, 2000). The propriety of an employer's action in charging a claimant for accrued leave is a contractual matter, and disputes regarding this issue are properly adjudicated in another forum.

D. The surgery proposed by Dr. Simpson is reasonable and necessary

As found, the arthroscopic surgery recommended by Dr. Simpson is reasonable and necessary treatment for Claimant's compensable injury. The ALJ has credited Dr. Simpson's opinion regarding surgery as more persuasive than Dr. Ciccone's contrary opinions. Furthermore, Respondents' objection to the proposed surgery was primarily based on their contention that the Claimant's injury is not compensable. Having resolved the compensability question in Claimant's favor, it follows that the surgery is reasonable, necessary, and causally related.

ORDER

It is therefore ordered that:

1. Claimant's right shoulder injury is compensable.

2. Based on the stipulated AWW of $614, Insurer shall pay Claimant TTD benefits at the rate of $409.33 per week, commencing December 14, 2016 and continuing until terminated according to law.

3. Insurer shall cover all reasonable and necessary medical treatment from authorized providers to cure and relieve the effects of Claimant's December 14, 2016 injury, including, but not limited to, the surgery recommended by Dr. Simpson.

4. Insurer shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

I. Whether Claimant has established by the preponderance of the evidence that she suffered a compensable injury or occupational disease.

II. If Claimant has established that she suffered a compensable injury or occupational disease, whether Claimant is entitled to reasonable, necessary and related medical benefits.

FINDINGS OF FACT

1. Claimant has worked for Employer since 2000. Claimant works as a Sorter/Unloader and is responsible for lifting boxes and bags of clothing and other items, sorting items, and pushing, pulling, and unloading carts.

2. Claimant testified at hearing that, on August 16, 2016, she felt a pop or click in her back while lowering a box of items from a cart to the floor. Claimant testified that the pain subsequently increased by the day. Claimant did not report the incident to Employer at that time. Claimant continued working her regular work duties.

3. Claimant also alleged that she sustained leg lesions with an onset date of August 16, 2016, which was the subject of a separate workers' compensation claim (W.C. No. 5-036-138).

4. Claimant initially sought treatment for her leg pain and leg lesions with her primary care physician at Clinica Family Health. While the visits focused on Claimant's leg condition, a medical record dated September 19, 2016 notes that the review of systems was positive for back pain and leg pain. A subsequent medical note dated September 30, 2016 indicates the review of systems was negative for back pain, and a December 14, 2016 medical record does not reference any back complaints or back findings.

5. Claimant reported her leg lesions and leg pain to Employer on December 15, 2016.

6. That same day, Employer sent Claimant to Hiep Ritzer, M.D. at HeathONE Occupational Medicine and Rehabilitation. Claimant complained of a right leg lesion, right ankle pain, right leg pain, and lower back pain. Dr. Ritzer documented,

> At the end of her work day on August 16, 2016, she 'felt pain and a heavy sensation to her left lower leg, ankle region.' There was no particular injury. Her bags of clothing that she would lift range from 20 to 50 pounds per bag. She has been having pain progressive since that time…She also

> relays that greater than about 5 months ago she has been having lower back pain with the same right leg radiation with difficulty finding comfortable position at night. No particular injury as well. She has not made a formal report of that complaint.

Dr. Ritzer's physical examination of Claimant focused on Claimant ankle and legs, but also noted mild tenderness to palpation in the lower lumbar paraspinal musculature. Dr. Ritzer diagnosed Claimant with a disorder of the skin and right leg pain. Dr. Ritzer placed Claimant on work restrictions and noted "She may need to be evaluated for her lower back and right leg pain under a different claim."

7. On December 20, 2016, Leigh-Ann Jara interviewed Claimant regarding her workers' compensation claim for the leg lesions. Ms. Jara works for Insurer as a Bilingual Claims Professional and testified at hearing on behalf of Respondents. Ms. Jara testified that, during the December 20, 2016 interview, Claimant reported a rash on her leg, as well as pain in her legs and back. Claimant initially indicated to Ms. Jara that her back pain was due to repetitive lifting. When Ms. Jara further questioned Claimant, Claimant referred to lifting heavy boxes on August 16, 2016.

8. Dr. Ritzer reevaluated Claimant for the leg lesions on January 3, 2017. Claimant continued to complain of right lower leg lesions, right ankle pain, right leg pain, and lower back pain. Dr. Ritzer advised Claimant that her back pain needed to be evaluated as a separate injury under a second workers' compensation claim.

9. Claimant completed an accident reporting form for her low back pain on January 5, 2017. Claimant reported that she injured her lower back and right hip on August 16, 2016. In response to the question, "What object or substance directly harmed you?" Claimant's response was, "Unloading thrift items in heavy bags and boxes; or alternatively repetitive motion of years of lifting heavy bags/boxes." On the form, Claimant indicated that she notified her supervisor, Mike Mallet, of the alleged injury on August 24, 2016.

10. Dr. Ritzer reevaluated Claimant on January 9, 2017 for the leg lesions. Claimant's leg lesions were diagnosed as erythema nodosum and determined to not be work-related. Dr. Ritzer discharged Claimant from her care for the leg lesions, but continued Claimant's work restrictions due to Claimant's continued leg and back pain. Dr. Ritzer noted, "There is overlap between her leg pain, which most likely is from the lesions. Initially when she presented she stated that it radiated up from the lesions to her hip and back, and now she is stating that there is some radiation the other way as well."

11. Claimant presented to Dr. Ritzer on January 10, 2017 for an evaluation of her lower back and right hip pain. Dr. Ritzer noted the following regarding Claimant's reported mechanism of injury:

> She felt that it occurred around August 16, 2016. She was taking multiple boxes down from a height of about four feet to the ground repetitively

> when she felt pain to her lower back, which she felt got worse over the following two days. About two days later, she did notify her supervisor, who reported it as an incident. She did feel a pop in the lower back area. She continued working since that time and noticed progressively worsened lower back pain with right hip and leg radiation.

Claimant reported that the boxes weighed between 15 to almost 50 pounds, and that her work entailed a significant amount of repetitive lifting.

12. On physical examination, Dr. Ritzer noted mild tenderness of the lower lumbar paraspinal musculature and lateral hip area. Seated and supine straight leg raise tests were negative bilaterally. Dr. Ritzer assessed a lumbar strain and right hip strain. Dr. Ritzer concluded that the objective findings were consistent with Claimant's history and work-related mechanism of injury. Dr. Ritzer placed Claimant on work restrictions, ordered an MRI of Claimant's lumbar spine and right hip, and recommended Claimant undergo physical therapy.

13. Ms. Jara conducted a second interview of Claimant on January 17, 2017 regarding Claimant's claim for her back. Claimant informed Ms. Jara that she felt a spasm in her back due to lifting a single heavy box on August 16, 2016. When Ms. Jara questioned Claimant further on the mechanism of injury, Claimant stated that she lifted and moved heavy things throughout the day every day. Claimant also reported to Ms. Jara that she did not have any prior back injuries or back pain, and had not been to the doctor for her back problems.

14. Claimant underwent MRIs of her right hip and lumbar spine on January 17, 2017. The MRI of the right hip revealed slight iliac edema adjacent to the right SI joint, and fibrocystic changes along the right anterior femoral head, which was noted, could be associated with cam-type femoroacetabular impingement. No labral tear was identified. The MRI of the lumbar spine revealed mild multilevel facet arthrosis, mild degenerative changes at T11-T12, and sagittal sequences showing trace physiologic or nonspecific free pelvic fluid. There was no posterior disk, central canal stenosis, or neural foraminal stenosis, and no evidence of fractures, spondylosis, or spondylolisthesis.

15. Dr. Ritzer reevaluated Claimant on January 19, 2017. Claimant reported her pain was unchanged. Dr. Ritzer reviewed the MRI results. On physical examination, Dr. Ritzer noted tenderness to the lower lumbar paraspinal musculature with no swelling or tightness. Seated straight leg raise test was negative. Dr. Ritzer continued Claimant's work restrictions and referred Claimant for chiropractic care with Jennifer G. Walker, D.C.

16. Claimant presented to Dr. Walker on January 31, 2017. Dr. Walker documented the following regarding Claimant's reported mechanism of injury:

> She states that on August 16, 2016, she was at work and unloading heavy boxes and bags weighing 40-50 pounds. She felt a pop in her low back

> but did not have instant pain. She states that later that night her pain increased greatly. She did not sleep well that night due to her pain. She states that she let her manager know that she injured her back and she was sent to HealthONE Occupational Medicine and Rehabilitation clinic about a month following her injury.

17. On physical examination, Dr. Walker noted decreased thoracic rotation, decreased lumbar range of motion, lumbar tenderness and clinical evidence of trigger points in the lumbar area reproducing some leg pain. Kemps testing, Nachlas, Ely, SLR and BLR were negative. Yeomen produced low back pain but no radiation. FABRE test produced mild right side low back pain. Dr. Walker remarked that Claimant's "symptom/pain generators appear to be myofascial/myogenic in nature." Dr. Walker concluded that Claimant's complaints appeared to correlate with her account of the injury. Dr. Walker gave an impression of lumbar strain; myofascial/myogenic dysfunction and trigger points in the lumbar paraspinal and gluteal musculature; and mechanical dysfunction in the thoracic, lumbar, and pelvis. Dr. Walker ordered that Claimant undergo chiropractic/myofascial release treatment.

18. In a letter to Respondents' counsel dated April 27, 2017, Dr. Ritzer opined that Claimant's condition was work-related. Dr. Ritzer noted that she reviewed a medical record from Clinica Family Health dated May 26, 2016. Dr. Ritzer stated,

> Based on review of my initial evaluation, as well as the medical record, I would have to say that this is causally related to the incident on August 16, 2016, unless medical records can be produced from her primary care physician from May 26, 2016, onward through August 2016. It may be that the incident described by the patient on August 16, 2016, may have exacerbated her underlying condition, but regardless, an exacerbation of an underlying condition would be treated as a workers' compensation injury.

19. The May 26, 2016 medical record referenced by Dr. Ritzer indicates Claimant complained of back pain to her personal physician prior to August 16, 2016. Claimant presented to Jennifer Manchester, N.P. at Clinica Family Health on May 26, 2016 for back pain. Claimant reported that the back pain was gradual without injury and persistent. Claimant rated the pain at a 10. Claimant reported having back pain for the last three months, with the pain increasing within the last three nights. NP Manchester noted that there were no concerning exam findings and no evidence of 10/10 pain. NP Manchester assessed acute right-sided low back pain without sciatica.

20. Dr. Ritzer testified by post-hearing deposition on June 22, 2017. Dr. Ritzer testified that her April 27, 2017 opinion regarding the work-relatedness of Claimant's condition was based on Claimant's description of the August 16, 2016 incident given to her at the January 10, 2017 evaluation. Dr. Ritzer acknowledged that there were discrepancies in the histories Claimant gave to her and other physicians. Dr. Ritzer acknowledged that Claimant provided contradictory histories to her in different evaluations. Specifically, on December 15, 2016, Claimant told Dr. Ritzer that she had

back pain for five months with no particular injury while on January 10, 2017, Claimant told Dr. Ritzer that she felt a "pop" in her back and felt pain. Dr. Ritzer further acknowledged that Claimant did not report to Dr. Walker on January 31, 2017 that she felt instant pain.

21. Dr. Ritzer testified that if Claimant had given her the same history of gradual onset of pain with no trauma as she reported to Dr. Manchester on May 26, 2016, she would not determine the pain to be work-related. Dr. Ritzer clarified, however, that her opinion as to the work-relatedness of the condition as described in May 2016 and the condition as described in January 2017 were different because the description of Claimant's pain was different in May 2016 and January 2017. Dr. Ritzer stated that Claimant denied numbness to Dr. Manchester in May 2016 but reported burning and numbness to Dr. Manchester in January 2017. Dr. Ritzer then acknowledged that there remained a discrepancy of Claimant's description of the injury given to her in December 2016.

22. Dr. Ritzer testified that Claimant never described the injury as an exacerbation of her preexisting condition or as a repetitive trauma. Dr. Ritzer testified that she did not believe the injury was due to repetitive trauma.

23. Claimant testified at hearing that the bags and boxes she moved at work varied in weight, but weighed approximately 50-55 pounds. Claimant testified that she worked at both the clothing table and the miscellaneous table throughout different periods of her employment with Employer. Claimant testified that she performed her job duties of lifting, moving and sorting seven hours a day. Claimant testified that she experienced back pain prior to August 16, 2016, but the pain was not as bad as it was subsequent to the alleged date of injury. Claimant stated that she believes her back condition is work-related because of the repetitive nature of the job and her condition worsening in August 2016. Claimant testified that she spoke to her supervisor, Mike Mallet about her back condition. Claimant testified that she also mentioned her back problems to the Assistant Supervisor, but did not report it as a work-related incident until later. Claimant acknowledged she had been trained on how to report work-related incidents.

24. Mike Mallet testified at hearing on behalf of Respondents. Mr. Mallet testified that Claimant reported an issue regarding a bite or rash on her ankle to him, but did not report any issue with her back. Mr. Mallet testified that bags and boxes at the clothing station typically weigh approximately 20-25 pounds, while those at the miscellaneous table are "a little" heavier. Mr. Mallet testified that Claimant last worked at the miscellaneous table at least five years ago, and that it was not typical to see bags or boxes weighing 50-55 pounds.

25. Based on multiple inconsistencies and contradictions in Claimant's reports to Employer and to medical providers, the ALJ finds Claimant's testimony is not credible or persuasive.

26. The ALJ credits the testimony of Mr. Mallet and Ms. Jara.

27. The ALJ does not credit the opinions of Drs. Ritzer and Walker on the work-relatedness of Claimant's condition and finds Claimant has failed to prove by a preponderance of the evidence that she suffered a compensable injury or an occupational disease.

28. Evidence and inferences contrary to these findings were not credible and persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, Section 8-40-101, *et seq.*, C.R.S. (the "Act"), is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1), C.R.S. Generally, the claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado*, 717 P.2d 1000 (Colo. App. 1986).

The ALJ's resolution of issues will be affirmed if supported by substantial evidence in the record. Section 8-43-301(8), C.R.S.; *City and County of Denver School District 1 v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). Substantial evidence is that quantum of probative evidence, which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of

conflicting evidence. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

Compensability

A claimant is required to prove by a preponderance of the evidence that at the time of the injury he was performing service arising out of and in the course of the employment, and that the injury or occupational disease was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. The question of whether the claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990).

However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005).

As found, Claimant failed to establish by a preponderance of the evidence that sustained a compensable injury to her low back. While Claimant was diagnosed with a lumbar strain and a right hip strain, there is insufficient credible and persuasive evidence establishing that Claimant's work proximately caused her back condition, or aggravated, accelerated, or combined with a preexisting condition to produce the need for treatment. To the extent Claimant contends she suffered an occupational disease, the ALJ is also not persuaded.

Claimant's reported mechanism of injury is inconsistent throughout the medical records and in her interviews with Ms. Jara. Claimant contends she felt a pop or click on August 16, 2016 and felt worsening pain, but failed to mention her back pain to Employer until December 2016. Claimant initially reported in the medical records that she sustained no particular injury to her back. Claimant subsequently alleged a specific incident occurred, while continuing to also attribute her pain to the heavy lifting and repetitive nature of her employment.

Exhibit 1 of the Guidelines addresses Low Back Pain and provides, in part:

> Given conflicting evidence regarding lifting alone, it would appear that the best evidence exists to support a combination of regular heavy lifting and bent posture as cumulatively causing low back pain. Applying the totality

> of evidence, it would appear that heavier lifting, 25 kilograms or 50-55 pounds and higher, may be considered a risk factor for cumulative low back pain, when combined with flexion and performed 10-15 times per day over cumulative years of exposure.

While Claimant alleged that she lifted 50-55 pound bags and boxes for seven hours a day, the ALJ credited the testimony of Mr. Mallet, who indicated the bags and boxes typically weighed between 20-25 pounds. There is insufficient credible and persuasive evidence Claimant was subject to the risk factors for cumulative low back trauma under the Guidelines.

Drs. Ritzer and Walker's determination that Claimant's condition is work-related is based on the history and description of the mechanism of injury provided to them by Claimant, which has been found inconsistent and incredible. While Dr. Ritzer later opined in her post-hearing deposition that her opinions on work-relatedness were different for Claimant's reported symptoms in May 2016 and January 2017, Dr. Ritzer continued to acknowledge discrepancies in Claimant's reported history on December 15, 2016.

Based on the totality of evidence, Claimant has failed to demonstrate by a preponderance of the evidence that she suffered a compensable injury or occupational disease. As Claimant failed to establish a compensable occupational disease or injury, the issue of Claimant's entitlement to medical treatment is moot.

ORDER

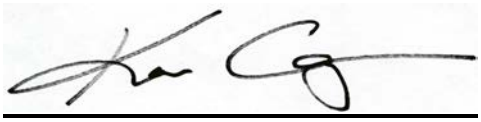
It is therefore ordered that:

1. Claimant has failed to establish by a preponderance of the evidence that she suffered an occupational disease or injury. Claimant's claim for benefits is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 4, 2017



Kara R. Cayce
Administrative Law Judge

1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUE

1. Whether Claimant is entitled to an increase in her average weekly wage ("AWW") based on her earnings from a different employer prior to her commencement of work for Respondent-Employer.

FINDINGS OF FACT

Based on the testimony and evidence presented at hearing, the undersigned ALJ enters the following Findings of Fact:

1. On September 27, 2016, Claimant was hired by Employer, located in Colorado Springs, to work as a CNA ("Certified Nursing Assistant"). Claimant's AWW for work performed for Employer is $426.56.

2. The Claimant was hired at Union Printers Home effective September 27, 2016. (Exhibit A, p. 1). The Claimant's work schedule provided for three days off for one week, followed by four days off for the following week. The Claimant testified that she *intended* to continue working her existing job at St. Mary Corwin in Pueblo, selecting shifts to accommodate those days off from Union Printers Home.

3. The Claimant participated in a two-week temporary training schedule subsequent to her hire by Union Printers Home. The temporary training schedule was Monday through Friday, 8:00 a.m. to 5:00 p.m. The Claimant did not take any shifts at St. Mary Corwin during the temporary training schedule with Union Printers Home.

4. On October 6, 2016, Claimant injured her low back while moving a patient as part of her job duties for Employer.

5. Claimant was referred by her employer to Memorial Health System Occupational Health Clinic with an initial evaluation date of October 11, 2016. The Claimant was evaluated by Dr. Cynthia Lund who assigned work restrictions of light work with lift/carry less than 10 lbs., alternate positions as needed, no patient assists, lifts or transfers. (Exhibit. 3, pp. 15-17).

6. At the time of hearing, the Claimant remained under work restrictions assigned by her Workers' Compensation physician and had not been placed at MMI or released to full-duty without restrictions. (Exhibit. 3, pp. 9-11)

7. A General Admission of Liability was filed by Respondents on March 15, 2017 (Exhibit B). The Respondents admitted for temporary total disability benefits for a

closed period: October 25, 2016 through December 11, 2016. The AWW listed on the General Admission of Liability is $426.56.

8. Prior to commencement of work for Employer, Claimant earned wages from St. Mary Corwin Hospital in Pueblo, CO, as a CAN. Claimant earned $14.11 per hour for St. Mary Corwin Hospital. (Exhibit D, p. 10). The Claimant's gross earnings for 2016 related to her work at St. Mary Corwin totaled $13,789.87. (Exhibit 2, p. 5).

9. After starting work for Employer on September 27, 2016, Claimant did not return to work for St. Mary Corwin Hospital. At no point did Claimant work both jobs concurrently.

10. According to wage records from St. Mary Corwin Hospital, Claimant's last paycheck for hours worked issued on September 24, 2016 (Exhibit D, p. 11). Three days after the issuance of that check, Claimant started work for Employer. Claimant did not receive any earnings for hours worked from St. Mary Corwin Hospital after September 24, 2016. A check was issued on November 5, 2016 for paid time off, based on testimony from Claimant's supervisor at St. Mary Corwin Hospital, Angela Mullins (Exhibit D, p. 10).

11. Angela Mullins testified as Claimant's supervisor at St. Mary Corwin Hospital. Ms. Mullins testified that Claimant was required to schedule shifts online at least 2 weeks before the schedule started, and the minimum requirement for Claimant to maintain her employment was to work at least 4 8-hour shifts per 6-week schedule.

12. According to the attendance records from St. Mary Corwin Hospital, Claimant had "called-off" for her shifts on September 27th, 28th and 30th, 2016. She was scheduled to work shifts on October 26th, 27th, and October 28th, 2016, although Ms. Mullins testified she had no way of knowing when those shifts were scheduled. The attendance records indicate Claimant called-off on October 28, 2016 (Exhibit D, p. 12). While the attendance records indicate that Claimant had scheduled herself for shifts on October 26th and October 27th, her pay records from St. Mary Corwin Hospital do not reflect that she actually presented for those shifts. The last paycheck issued to Claimant for hours worked was dated September 24, 2016 (Exhibit D, pp. 10-11).

13. Claimant testified at hearing that she intended to maintain the same number of hours at St. Mary Corwin Hospital while working full-time for Employer, which included 3-4 8-hour shifts at St. Mary Corwin Hospital each six weeks. Some of the available shifts would be "doubles" or "graveyards", thus enabling Claimant greater flexibility in seeking outside work. Claimant testified that she would have worked 24-32 hours a week at St. Mary Corwin Hospital in addition to her full-time work for Employer but for the work injury. Claimant testified that she intended to work, on average, 40 hours a week for Employer and 32 hours for St. Mary Corwin Hospital, for a total of 72 hours per week.

14. Nowhere in the record is there evidence that Claimant, while working an average of 24 to 32 hours per week at St. Mary Corwin (including some double shifts) sought additional hours to maximize her income, by seeking more shifts at St. Mary Corwin or other health care facilities. Failing that possibility, Claimant did not seek greater income by seeking part time work in, for example, retail or restaurant work.

15. Claimant testified that, if she was released to work with no restrictions, she would be able to return to work for both St. Mary Corwin and Employer if re-hired. She testified that her CNA license was currently active, as of the date of the hearing.

16. According to the State of Colorado website, which serves as the primary source verification of the license from the Colorado Division of Professions and Occupations, Claimant's CNA license expired on January 31, 2017. (Exhibit G). At hearing, Claimant then acknowledged that her CNA license had expired on January 31, 2017.

17. Claimant admitted that she failed to list her complete employment history on her application to a subsequent employer, Service Source, dated November 7, 2016 (Exhibit F, p. 31). Claimant testified that she omitted Respondent-Employer from the application "Because I only worked—I was only there for a few weeks."

18. In this same application, Claimant indicates that in March, 2015, she left a full-time position making $13.00 per hour at University Park Care Center in Pueblo, to begin a part-time position making $11.00 per hour at St. Mary Corwin. She could not recall her supervisor's name from University Park.

CONCLUSIONS OF LAW

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

B. Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceedings is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App.

2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968); *Robinson v. Youth Track*, 4-649-298 (ICAO May 15, 2007).

C. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Calculation of Claimant's Average Weekly Wage

D. Under Colorado's Workers' Compensation Act, the "average weekly wage" is a key part of the formula used to calculate compensation for injured workers, and it is based upon the definition of "wages" provided at section 8-40-201(19). *Industrial Claim Appeals Office v. Ray,* 145 P.3d 661 (Colo. 2006). To determine a claimant's AWW, the ALJ may choose from two different methods set forth in section 8-42-102. The first method, referred to as the " default provision," provides that an injured employee's AWW "be calculated upon the monthly, weekly, daily, hourly, or other remuneration which the injured or deceased employee was receiving at the time of injury." § 8-42-102(2), C.R.S.

E. The default provision in § 8-42-102(2)(a)-(f), C.R.S lists six different formulas for conducting this calculation. Per § 8-42-102(5)(a), the phrase "at the time of injury" in subsection (2) requires the AWW to be determined using the wage earned on the date of the employee's accident. Wages are the money rate at which the services rendered are "recompensed under the contract of hire in force at the time of the injury," § 8-40-201(19)(a), C.R.S.

F. The second method for calculating a claimant's AWW, referred to as the "discretionary exception," applies when the default provision will not fairly compute the employee's AWW. § 8-42-102(3), C.R.S. In such a circumstance, the ALJ has discretion to compute the AWW of a claimant in such other manner and by such other method as will, based upon the facts presented, fairly determine the employee's AWW. *Benchmark/Elite, Inc. v. Simpson*, 232 P.3d 777 (Colo. 2010). Using this discretionary

authority, an ALJ may consider wages from concurrent employment as appropriate, on a case-by-case basis. *Jefferson County Public Schools*, 765 P.2d 636, (Colo. App. 1988).

G. In this case, the parties do not dispute the amount of wages that the Claimant earned working for the Employer. The parties dispute whether the wages Claimant earned from St. Mary Corwin Hospital prior to commencement of employment for Employer should be included in the AWW under this claim. While Claimant frames the issue as one involving "concurrent employment," the evidence offered at hearing shows that Claimant never actually earned wages from Employer and St. Mary Corwin Hospital concurrently. Rather, she asserts that her AWW should be increased based solely on her testimony that she *intended* to work both jobs concurrently, working, on average, 72 hours per week.

H. Claimant testified that she *intended* to work 72 hours a week between the two employers, but there is insufficient evidence that Claimant took sufficient steps to work both jobs at the same time. While Claimant had scheduled shifts at St. Mary Corwin Hospital, there is no evidence as to when those shifts were scheduled. Further, Claimant failed to present to any of the shifts scheduled at St. Mary Corwin Hospital once she started work for the Employer.

I. Claimant's explanation for her expired CNA license, standing alone, is plausible. Once she was able to return to work, this oversight presumably could have been noted and corrected in short order. The failure to list her current employer on her job application is more problematic, as this employer has provided Claimant her highest wage to date, and upon which she is now seeking workers' compensation.

J. Claimant's prior work history does not establish a pattern of conscious income maximization sufficient to impute her average St. Mary Corwin wages on top of her admitted, full-time AWW from Employer. Her stated *intention* of consistently working both jobs in tandem, in two cities, is speculatively optimistic, at best.

K. The overall objective of calculating AWW is to arrive at a fair approximation of claimant's wage loss and diminished earning capacity. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993); *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO May 7, 1997); *Vigil v. Industrial Claim Appeals Office*, 841 P.2d 335 (Colo.App.1992). Because the default method fairly computes Claimant's AWW at the time of the injury in this case, the discretionary method is unnecessary in order to reach the AWW that Claimant asserts she is entitled to.

ORDER

It is therefore ordered that:

1. Claimant's request to increase her AWW based on wages earned prior to the commencement of work for Employer is denied and dismissed. Claimant's average weekly wage (AWW) remains $426.56

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 9, 2017

/s/ William G. Edie
William G. Edie
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

ISSUES

- Whether Claimant has proven that his request for left hip surgery is reasonable, necessary and related to his January 30, 2015 work injury.

PRELIMINARY MATTERS

1. The Parties filed a Joint Stipulated Submission of Exhibits, Exhibits A – KK. These exhibits were also the same exhibits used by the Parties at the deposition of Dr. Ciccone on July 5, 2017.

2. Dr. William John Ciccone, II, a physician board certified in Orthopedics and Level II accredited for Workers' Compensation was the only witness to testify in this case (Depo. Tr., p. 5, l. 12 – p. 6, l. 7). The original, sealed transcript of the deposition of Dr. Ciccone was filed in this matter.

3. Pursuant to the July 12, 2017 Order of PALJ Steninger, the Parties submitted simultaneous written briefs/proposed orders to the main OAC e-mail address for Workers' Compensation at: OAC-DVR@state.co.us on or before July 31, 2017. Only the Exhibits A – KK and the transcript of the deposition of Dr. Ciccone were considered in evidence and referenced in the Parties' written briefs/proposed orders. No subsequent motions were filed to consider additional evidence.

FINDINGS OF FACT

1. Claimant is a 61 year old man (DOB 07/26/1955) who worked for Employer on January 30, 2015. On the date of his injury, January 30, 2015, the Claimant was installing tarp systems on semi-trailers. He was walking along one section of scaffolding to another when he slipped through an opening between the sections. He fell to the left and down about 5 feet and struck his left hip on the corner of the scaffolding (See Exhibit H, p. 21, R, p. 42, and Exhibit FF, p. 96).

2. Claimant was initially evaluated for his work injury on February 2, 2015 by Dr. Frederick Scherr. Claimant reported that he had fallen about 5 feet off scaffolding and landed on his left hip, left lateral side and buttock area. Claimant did not seek medical care over the weekend after the fall but he did take some ibuprofen. Claimant presented on crutches he borrowed from a roommate and complained of pain and discomfort. He reported he had no weakness, numbness, radicular symptoms or back problems. Claimant reported that the left sided hip and leg pain made it difficult to bear

weight without the aid of crutches. Dr. Scherr noted an x-ray of the left hip was negative per the radiologist (see Exhibit I). On examination, Dr. Scherr noted bruising, ecchymosis and swelling over the left hip and buttock area and noted it was tender to palpation. Dr. Scherr offered Claimant prescription pain medication which Claimant declined. Claimant preferred to take OTC Advil. Dr. Scherr returned Claimant to work with a 10 pound lifting, repetitive lifting, carrying, pushing and pulling restrictions and no crawling, kneeling, squatting or climbing with sitting, standing and walking to comfort. (Exhibit H).

3. Dr. Scherr saw Claimant for follow up on February 23, 2015. Claimant reported that he was not working due to his activity restrictions, but was doing home exercises and taking Ibuprofen. Claimant reported he was "doing much better." Claimant reported that he still had pain and there was still a lump on his left hip. He reported difficulty with squatting or kneeling but his gait was improved and he was no longer using crutches. Dr. Scherr assessed a left hip contusion with subsequent hematoma. Dr. Scherr noted that "there is a pretty good, significant hematoma still present there that is probably about 3 cm in diameter." Dr. Scherr also recommended that the Claimant start physical therapy and continued the same work restrictions from the initial visit (Exhibit K).

4. At his initial evaluation for physical therapy with Select Physical Therapy on February 25, 2015 and through March of 2015, Claimant exhibited tenderness on palpation of the greater trochanter and over the large palpable bump to the left of the greater trochanter and problems with hip abduction (Exhibit KK).

5. When Claimant saw Dr. Scherr again on March 23, 2015, he reported that the physical therapy had been helpful and he was better. Dr. Scherr noted that the swelling and the lump had gone down. Claimant reported he was still having difficulty with squatting and kneeling, but "he has really no other complaints at this time." On examination, Dr. Scherr noted good range of motion of the hip with pain and discomfort at the endpoints. Dr. Scherr noted that Claimant had a difficult time squatting secondary to pain or discomfort but that his gait was not hindered secondary to pain. Dr. Scherr recommended continuing with physical therapy and seeing a specialist to see if an injection or additional studies might be of benefit, but Claimant declined and was not interested in an injection or any additional things being done to his hip. Dr. Scherr continued the work restrictions and noted Claimant was not currently working due to the unavailability of light duty work.

6. When Claimant returned to Dr. Scherr for evaluation on April 13, 2015, he continued to report he was improving although he still had difficulty kneeling, squatting and lying on his left side. In checking Claimant's range of motion, Dr. Scherr specifically noted "trouble with abduction." Dr. Scherr recommended Claimant continue with his physical therapy and moved his work restrictions up to 25 pounds lifting, repetitive lifting, carrying, pushing and pulling. Dr. Scherr also strongly encouraged Claimant to see a specialist again and noted Claimant "has again strongly declined" (Exhibit M).

7. On May 13, 2015, after months of refusing to see an orthopedic specialist, Claimant stated “he wants to do something about it” because he complained “that there is just something wrong in there.” Of note, Dr. Scherr did tell Claimant that he “needed to either do something or have the case closed.” Dr. Scherr also noted that Claimant was not really complaining of anything new, just the same pain, soreness and tenderness on the left side. Dr. Scherr recommended an MRI of the hip and continued the work restrictions at 25 pounds (Exhibit N).

8. Claimant underwent an MRI without contrast on May 14, 2015. The MRI was generally unremarkable with no substantial chondromalacia or evident labral tear but the radiologist did note nominal femoroacetabular impingement related morphology of both hips (Exhibit O).

9. When Claimant returned to see Dr. Scherr on June 1, 2015, he reported no new concerns, just continuing tenderness and soreness on his left side. After Dr. Scherr explained options to Claimant, he chose to do more physical therapy as he was still not interested in a hip injection from an orthopedic surgeon. Dr. Scherr advised that he would see Claimant back in 2 weeks and if Claimant was not better he either had to agree to see an orthopedic surgeon or the case would be closed (Exhibit P).

10. On June 15, 2015, Dr. Scherr stopped Claimant’s physical therapy after 4 more sessions as Claimant reported it did not really help. Dr. Scherr assessed Claimant with a left hip contusion and probable trochanteric bursitis with possible impingement interfering with his recovery. The Claimant asked Dr. Scherr if he could just go back to work but Dr. Scherr did not think that made sense since he was still complaining of pain and he wasn’t any better and kept his work restrictions at 25 pounds. The Claimant was to return to Dr. Scherr after being evaluated by Orthopedics (Exhibit Q).

11. Claimant saw Dr. Christopher Isaacs, an orthopedist, at the Center for Spine & Orthopedics on June 19, 2015. Claimant reported he has had persistent pain in his hip since a slip and fall at work. He complained of a soft tissue mass on the posterolateral aspect of the left hip. This note is also the first document of groin pain in the left hip. Prior to this, Dr. Scherr had consistently noted lateral hip pain and buttock or posterior hip pain rather than anterior or groin pain. Dr. Isaacs also noted pain at the end range of motion on internal and external rotation whereas Dr. Scherr had noted difficulty with abduction. Dr. Isaacs recommended a steroid injection into the hip (Exhibit R and for comparison to Dr. Scherr’s prior notes, see Exhibit M).

12. Upon review of Dr. Isaac’s medical note dated June 19, 2015, Dr. Ciccone opined in his deposition that from a medical standpoint, it is not likely that a complaint of groin pain noted for the first time, over four and one half months after the work injury, would be related to the Claimant’s January 30, 2015 work injury (Depo. Tr., p. 18, ll. 3-13). Specifically, Dr. Ciccone testified that, “if a claimant or someone experiences an acute labral tear or acute injury to a joint, you would expect to have the pain in that joint much earlier. It would be an initial complaint” (Depo. Tr., p. 18, ll. 15-18).

13. Dr. George Leimbach performed a left hip intra-articular injection on July 7, 2015 (Exhibit S).

14. Claimant saw Dr. Scherr again on July 14, 2015 and reported that the injection did not really help (Exhibit T).

15. On July 21, 2015, Claimant returned to Dr. Isaacs. Claimant reported that the injection gave him an immediate dramatic relief of the symptoms but this only lasted for a couple of days and then the symptoms recurred. Dr. Isaacs diagnosed degenerative arthritis of the left hip and explained to Claimant that due to his underlying condition, the solution to resolution of the symptoms was likely arthroplasty. Dr. Isaacs also opined that Claimant's underlying degenerative arthritis "has been aggravated by his work injury." (Exhibit U). Dr. Isaac's opinion regarding causation is credible and persuasive. Moreover, with respect to Dr. Isaac's surgical recommendation, Dr. Ciccone credibly and persuasively testified that "[a]rthroplasty is performed for arthritis" (Depo. Tr., p. 19, ll, 17-23).

16. Claimant saw Dr. Scherr again on August 4, 2015 when Dr. Scherr discharged him from care. Dr. Scherr noted that after conservative treatment (physical therapy, MRI and an injection), Claimant reported that he did not get much better. He also noted that after consultation with Dr. Isaacs in Orthopedics, there was not much more to do for the Claimant other than a hip replacement, which Dr. Scherr thought should be done under private insurance. Dr. Scherr opined that Claimant's work incident was a "mild exacerbation" of his underlying arthritic condition. Dr. Scherr also stated that he thought Claimant would have developed this issue at some point in time anyway due to his heavy smoking and lack of exercise. Dr. Scherr placed Claimant at MMI with no impairment because he thought the "etiology is mostly subjective hip complaints that are not related to this work injury" (Exhibit V).

17. On December 4, 2015, Claimant was seen for an IME with Dr. John Raschbacher. In a pain diagram, the Claimant reported his pain at 7/10 on the day of the exam and circled the area on the outside of his hip and his buttocks. Claimant stated that his pain is worse when he tries to roll onto his left side when sleeping or standing up to get out of bed. Claimant reported to Dr. Raschbacher that he has a big bump on his left hip and he has left hip pain where he hit it. Dr. Raschbacher noted left lateral hip pain that is numb once in a while. Claimant reported that he had a hip injection that made his pain worse. Claimant told Dr. Raschbacher that the injection was painful and the pain decreased for two days but then on the third day it felt worse than it had before and he thought he would have to go back on crutches. Claimant also reported to Dr. Raschbacher that the physical therapy did not really help and he felt he could do just as well at home. Dr. Raschbacher noted that his physical examination of Claimant was "somewhat compromised" due to Claimant's reluctance to lie flat. Dr. Raschbacher stated that he would prefer to offer his opinion after a repeat MRI arthrogram of the left hip to characterize the nature of the mass, and to rule out labral tear or other etiology of persistent left hip pain. (Exhibit W).

18. Claimant underwent a left MRI arthrogram of the hip with contrast on January 11, 2016. The radiologist found a 1.4 cm full thickness labral tear localized to the anterosuperior quadrant and the chondroosseous junction. He also noted an anterosuperior femoral head-neck bump-cyst complex consistent with cam-type femoroacetabular impingement (FAI) mechanics (Exhibit X).

19. Dr. Ciccone testified that the left hip MRI with contrast had two significant findings which were a full thickness labral tear along the anterior superior quadrant at the chondro-osseuous junction of the hip and a finding associated with cam-type femoroacetabular impingement. Dr. Ciccone explained that, "the claimant has an anatomy where the ball of the hip is not completely round and does not roll well within the acetabulum. So over time, bones with that type of anatomy tend to cause these labral tears, which can then lead to degenerative changes within the hip." Based on the MRI findings, Dr. Ciccone testified that none of the Claimant's reported symptoms up to this point correlate with the pathology seen on the MRI. In considering the MRI findings and Claimant's clinical presentation, Dr. Ciccone opined that the labral tearing was not acute since there was not significant immediate groin pain and that labral tearing related to the femoroacetabular impingement anatomy would be developmental and not related to trauma (Depo. Tr., p. 21, l. 5 – p. 22, l. 18).

20. After receiving the MRI of the left hip, Dr. Raschbacher prepared an Addendum to his IME dated February 3, 2016. Dr. Raschbacher found that the left hip labral tear was likely related to the work injury but that the FAI impingement mechanics were not work-related. He also found the soft tissue mass on the left lateral thigh was also likely to be a pre-existing condition. Overall, Dr. Raschbacher felt that the Claimant was not at MMI pending review of the MRI findings by an orthopedic surgeon (Exhibit Y). Dr. Raschbacher's opinion regarding the cause of Claimant's labral tear is found to be credible and persuasive.

21. The Claimant was then evaluated on February 24, 2016 by the Division Independent Medical Examiner, Dr. Lloyd Thurston. The Claimant complained of a pain level of 7/10 for 98% of the time and on a pain diagram circled the area of the pain as the outside/lateral aspect of the left hip and buttock. Dr. Thurston did not have the benefit of the February 3, 2016 MRI of the left hip and agreed with Dr. Raschbacher that Claimant was not at MMI and required a left hip and proximal thigh MRI. Dr. Thurston nevertheless opined that he believed the Claimant has a significant tear of the insertion of the gluteus medius which would explain continued pain in this area (Exhibit Z).

22. On February 29, 2016, Dr. Raschbacher issued a second Addendum to his IME. He noted that an MRI of the left thigh did not disclose anything other than fat at the site of the place possibly thought to be a soft tissue mass. Dr. Raschbacher continued to recommend an evaluation by an orthopedic hip specialist (Exhibit AA).

23. Claimant returned to the Healthone Occupational Medicine and Rehabilitation Clinic and was seen by Dr. Ryan Otten who noted that Claimant was previously placed at MMI by Dr. Scherr but that Dr. Raschbacher had subsequently

opined that the Claimant required an orthopedic evaluation for the left hip labral tear. The Claimant continued to report pain of 7/10 but that he was not taking any medications for his condition. Claimant reported he was not working and on SSI disability at this point. Dr. Otten referred Claimant for an orthopedic evaluation (Exhibit BB).

24. On May 25, 2016, Claimant was evaluated by Dr. Brian White, an orthopedic surgeon. Dr. White noted that Claimant has had progressive left hip and groin pain for over 16 months when he fell off a scaffold. He further noted that Claimant has gotten to the point where he feels something needs to be done since he cannot get around or work. On examination, Dr. White noted that Claimant's hip flexion was limited to 115 or so on the left side and 125 on the right side. Dr. White further noted very limited rotational motion due to discomfort and guarding. He also had discomfort with the anterior impingement maneuver. Dr. White opined that the MRI showed CAM morphology over the femoral neck consistent with femoroacetabular impingement and a labral tear with some underlying degenerative changes. Dr. White assessed "left hip femoroacetabular impingement, degenerative labral tear, as well as some degenerative arthritis." While Dr. White noted that Claimant's hip joint did not look horrible, he still opined that the Claimant needed a total hip replacement due to Claimant's decreased function and level of pain since falling off the scaffold. This ALJ credits Dr. White's opinion that the Claimant needs a total hip replacement to treat Claimant's hip pain and limited function which was caused by Claimant falling off the scaffold at work.

25. Dr. Ciccone performed a medical record review on June 14, 2016 reviewing all of the Claimant's medical records to that date and Claimant's x-rays and the May 14, 2015 and January 11, 2016 MRIs of the left hip. After reviewing and summarizing each of the individual records, Dr. Ciccone opined that the Claimant suffered a contusion to his left hip as a result of his work injury. With respect to the pathology noted on the second MRI, Dr. Ciccone disagreed with Dr. Raschbacher regarding the genesis of the Claimant's labral tear. While Dr. Raschbacher opined that the cam-type femoroacetabular impingement (FAI) would not be work related, he found the labral tear likely work related. Dr. Ciccone offered a different opinion in that he explained that in a 60-year old male with FAI anatomy, the diagnosis of a labral tear would be expected and not related to an acute injury. According to Dr. Ciccone, the labral tear is chronic and due to Claimant's preexisting condition. As Dr. Ciccone also notes, the orthopedic surgeons that evaluated the Claimant both noted degenerative changes. Dr. Ciccone opined that it is these degenerative changes causing the Claimant's symptoms and not the labral tear, which itself is degenerative in nature. Further, Dr. Ciccone pointed out that the recommended surgery, a total hip replacement is not the procedure performed for a labral tear, but rather to treat arthritis. (Exhibit EE).

26. The Claimant saw Dr. Michael Striplin for an initial evaluation on January 25, 2017. On examination, Dr. Striplin noted a large (7cm) soft tissue mass over the left hip. He noted that left hip motion was limited and painful. On review of medical records and imaging, Dr. Striplin noted that Dr. White has recommended a total hip

replacement but Dr. Ciccone has opined that the labral tear is unrelated to the injury. After a telephone SAMMS conference with legal counsel for Claimant and Respondents, Dr. Striplin recommended an orthopedic consultation to address both the causality of the hip pain and labral tear and what surgical treatment is appropriate (Exhibit FF and GG).

27. The Claimant was next evaluated by Dr. Michael Ellman, an orthopedic surgeon on February 13, 2017. Dr. Ellman stated that the Claimant "is a 61-year-old gentleman with signs and symptoms consistent with a large left hip labral tear in the setting of early arthritis as well as FAI, two years status post a work-related injury with the acute onset of pain." Dr. Ellman opined there was an acute tear at the time of injury and recommended a total hip replacement versus a hip arthroscopy procedure. He explained that he was a hip arthroscopy expert and did not perform total hip replacements and referred the Claimant back to Dr. White. This ALJ finds Dr. Ellman's opinion to be credible and persuasive regarding the cause of Claimant's labral tear and the need for a hip replacement. (Exhibit HH).

28. In reviewing Dr. Ellman's medical report, Dr. Ciccone testified that, in his opinion, "the left hip labral tear is degenerative in nature and not related to the fall at work." Dr. Ciccone pointed out that Claimant fell and struck the lateral aspect of the left hip with ecchymosis noted. Further, based on the pathology noted in the left hip MRI, Dr. Ciccone stated that a 59-year old man with a long history of the cam-type femoroacetabular impingement (FAI) would almost be expected to have a labral tear on his MRI scan given the amount of time that the impingement had been occurring. Dr. Ciccone additionally pointed out that the specific location of the labral tear on the top edge of the acetabulum is where the most common degenerative effects of FAI start and this is where the tear is located as shown in the Claimant's MRI. Although Dr. Ciccone's opinion provides a plausible explanation for the labral tear, this ALJ does not find it to be persuasive. Both Dr. Raschbacher and Dr. Ellman opined that the labral tear was torn at the time of the work accident and this ALJ credits their opinions over Dr. Ciccone's.

29. The Claimant returned to Dr. Striplin on February 16, 2017. Dr. Striplin noted that Dr. Ellman recommended a total left hip arthroplasty secondary to a labral tear and that the Claimant wished to pursue the left hip surgery (Exhibit II).

30. On May 8, 2017, Dr. Ciccone issued a supplemental report after reviewing medical records he reviewed before and new medical records received since his last report. Dr. Ciccone opined that Claimant's labral tear was degenerative and not acute and not related to the work injury. Dr. Ciccone pointed out that it is undisputed in the medical records that the Claimant fell striking the lateral aspect of his left hip with ecchymosis over the greater trochanter. Dr. Ciccone opined that if the Claimant had suffered an acute labral tear, significant groin pain immediately following the injury would be expected. Dr. Ciccone also opined that the mild groin pain that was noted in later medical records is consistent with the Claimant's hip arthritis. Dr. Ciccone also opined that in a 61-year-old man with cam-type femoroacetabular impingement (FAI) pathology (a pre-existing condition), one would expect to see a labral tear on the MRI

located where the Claimant's tear is, in the anterosuperior quadrant. He further explained that cam-type FAI occurs when an individual has a non-spherical femoral head with a bump of bone that impinges on the acetabulum which causes labral tears and degeneration of the hip. FAI is a developmental abnormality of the hip and is unrelated to trauma, nor does it predispose an individual to labral tearing with trauma. As a result, Dr. Ciccone took issue with Dr. Ellman's opinion that the Claimant suffered an acute labral tear as a result of his work-related injury, especially where the Claimant had minimal complaints of groin pain initially after the injury and has a labral tear in the location where degenerative impingement from FAI occurs naturally. Dr. Ciccone found that the work injury did not, in any way, aggravate or accelerate the already ongoing degenerative process occurring in the Claimant's hip. Dr. Ciccone opined the Claimant was at MMI for the work injury on August 4, 2015 as stated by Dr. Scherr and the Claimant's continued symptoms are secondary to his pre-existing arthritic condition associated with his FAI pathology (Exhibit JJ). This ALJ, however, does not find Dr. Ciccone's opinions to be credible or persuasive regarding the cause of Claimant's labral tear or that Claimant's injury did not aggravate or accelerate Claimant's degenerative hip condition. This ALJ finds that Claimant's work injury did aggravate and accelerate Claimant's degenerative hip condition and was causing Claimant's hip pain and dysfunction.

31. There are conflicting opinions on causation offered in this case as to the relationship of Claimant's symptoms arising out of the work injury and the need for the recommended total hip replacement surgery. However, the ALJ finds that the opinion of Dr. Isaacs is the most credible and persuasive opinion. Dr. Isaacs concluded that Claimant suffers from degenerative arthritis of his hip and his work accident aggravated his preexisting degenerative hip arthritis and necessitated the need for a hip replacement.

32. There are also conflicting opinions as to whether Claimant's labral tear was caused by his work accident. This ALJ finds that Claimant's labral tear was caused by his work accident.

33. There are also conflicting opinions as to whether Claimant's labral tear has in any way necessitated the need for Claimant's hip replacement surgery. This ALJ finds that the need for a hip replacement was caused by the January 30, 2015 work accident which aggravated Claimant's hip arthritis and caused the labral tear.

34. Based on Dr. Isaac's credible and persuasive opinion and the medical records and imaging, the ALJ determines as a matter of fact that the total hip replacement surgery recommended by Dr. Ellman and Dr. White is intended to cure and relieve Claimant from the effects of his work injury of January 30, 2015. The total hip replacement being recommended is intended to address the aggravation of Claimant's hip arthritis and labral tear which were caused by the January 30, 2015 work accident.

35. This ALJ finds that the January 30, 2015 accident was a significant cause of the need for a hip replacement and that there is a direct relationship between the

work accident, Claimant's pain and disability, and the need for the hip replacement.

36. This ALJ finds that the need for the hip replacement is related to the January 30, 2015 work accident and injury.

37. This ALJ finds that the hip replacement is reasonable and necessary to treat Claimant's work accident and injury.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979) The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of Claimant nor in favor of the rights of Respondents and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *Robinson v. Youth Track*, 4-649-298 (ICAO May 15, 2007).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Medical Benefits – Related and Reasonably Necessary

Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. C.R.S. § 8-42-101. However, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. C.R.S. § 8-41-301(1)(c); *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000). The evidence must establish the causal connection with reasonable probability, but it need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 30 Colo. App. 224, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 2993. A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 293 (1951).

All results flowing proximately and naturally from an industrial injury are compensable. *See Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970). However, no compensability exists when a later accident or injury occurs as the direct result of an independent intervening cause. An unrelated medical problem may be considered an independent intervening cause even where an industrial injury impacts the treatment choices for the underlying medical condition. *Owens v. Industrial Claim Appeals Office*, 49 P.3d 1187 (Colo. App. 2002); *Post Printing & Publishing Co. v. Erickson,* 94 Colo. 382, 30 P.2d 327 (1934).

In order to prove causation, it is not necessary to establish that the industrial injury was the sole cause of the need for treatment. Rather, it is sufficient if the injury is a "significant" cause of the need for treatment in the sense that there is a direct relationship between the precipitating event and the need for treatment. A preexisting condition does not disqualify a claimant from receiving workers' compensation benefits. Rather, where the industrial injury aggravates, accelerates, or combines with a preexisting disease or infirmity to produce the need for treatment, the treatment is a compensable consequence of the industrial injury. *Joslins Dry Goods Co. v. Industrial Claim Appeals Office,* 21 P.3d 866 (Colo. App. 2001); *H and H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *Seifried v. Industrial Commission,* 736 P.2d 1262 (Colo. App. 1986). Thus, a preexisting disease or susceptibility to injury does not disqualify a claim if the injury aggravates, accelerates, or combines with the preexisting disease or infirmity to produce the need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). The ICAO has noted that pain is “a typical symptom from the aggravation of a pre-existing condition” and a claimant is entitled to medical treatment for pain as long as the pain was proximately caused by the injury and is not

attributable to an underlying preexisting condition. *Rodriguez v. Hertz Corp.,* WC 3-998-279 (ICAO February 16, 2001).

However, where an industrial injury merely causes the discovery of the underlying disease to happen sooner, but does not accelerate the need for the surgery for the underlying disease, treatment for the preexisting condition is not compensable. *Robinson v. Youth Track*, 4-649-298 (ICAO May 15, 2007).

The question of whether a particular medical treatment is reasonable and necessary is one of fact for determination by the ALJ. *Kroupa v. Industrial Claim Appeals Office, supra*; *Wal-Mart Stores, Inc. v. Industrial Claims Office,* 989 P.2d 251 (Colo. App. 1999). The claimant bears the burden of proof to establish the right to specific medical benefits. *HLJ Management Group, Inc. v. Kim,* 804 P.2d 250 (Colo. App. 1990). Factual determinations related to this issue must be supported by substantial evidence in the record. Section 8-43-301(8), C.R.S. Substantial evidence is that quantum of probative evidence which a rational fact finder would accept as adequate to support a conclusion without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert,* 914 P.2d 411, 415 (Colo. App. 1995).

Prior to the work related accident of January 30, 2015, Claimant did not have any left hip pain. Claimant's left hip was asymptomatic and no one was recommending any medical treatment, let alone a hip replacement. Since the accident, Claimant has had ongoing left hip pain and dysfunction which has required medical treatment. Due to Claimant's ongoing hip pain and dysfunction, a hip replacement has been recommended.

As found, on January 30, 2015, Claimant was installing tarp systems on semi-trailers. He was walking along one section of scaffolding to another when he slipped through an opening between the sections. He fell to the left and down about 5 feet and struck his left hip on the corner of the scaffolding. Claimant was initially evaluated for his work injury on February 2, 2015 by Dr. Frederick Scherr. The Claimant reported that he had fallen off scaffolding and landed on his left hip, left lateral side and buttock area. On examination, Dr. Scherr noted bruising, ecchymosis and swelling over the left hip and buttock area and noted it was tender to palpation.

On May 13, 2015, after months of refusing to see an orthopedic specialist, the Claimant finally told Dr. Scherr that he wanted to do something about his pain complaints. The Claimant underwent an MRI without contrast on May 14, 2015. The MRI was generally unremarkable with no substantial chondromalacia or evident labral tear but the radiologist did note femoroacetabular impingement (FAI) related morphology.

After the MRI, the Claimant saw Dr. Christopher Isaacs, an orthopedist at the Center for Spine & Orthopedics on June 19, 2015 and he recommended a left hip intra-articular injection. The hip injection was performed in July of 2015.

On July 21, 2015, Claimant returned to Dr. Isaacs. It was noted that the injection provided dramatic relief of his symptoms, but that it only lasted for a couple of days. Based on his evaluation of Claimant and the response Claimant had from the injection, Dr. Isaacs diagnosed Claimant as suffering from degenerative arthritis of the hip. Dr. Isaacs went on to state that Claimant's degenerative arthritis has been aggravated by his work injury and that the solution to the problem is an arthroplasty/hip replacement. This ALJ found Dr. Isaacs' opinion regarding causation and the need for surgery to be credible and persuasive.

Moreover, Dr. Ellman opined there was an acute labral tear at the time of injury and recommended a total hip replacement versus a hip arthroscopy procedure. He explained that he was a hip arthroscopy expert and did not perform total hip replacements and referred the Claimant back to Dr. White. Dr. Ellman's opinions were found to be credible and persuasive.

Dr. White, an orthopedic surgeon, evaluated Claimant and stated that Claimant's MRI showed CAM morphology over the femoral neck consistent with femoroacetabular impingement and a labral tear with some underlying degenerative changes. Dr. White assessed "left hip femoroacetabular impingement, degenerative labral tear, as well as some degenerative arthritis." While Dr. White noted that the Claimant's joint did not look horrible, he still opined that the Claimant needed a total hip replacement. Dr. White's opinions were found to be credible and persuasive.

This ALJ concludes that the January 30, 2015 accident caused the torn labrum and also aggravated, accelerated, and combined with Claimant's preexisting degenerative hip arthritis and produced the need for medical treatment in the form of a hip replacement.

This ALJ concludes that Claimant has proven by a preponderance of the evidence that the hip replacement is reasonable, necessary, and causally related to the January 30, 2015 accident.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. The recommended left hip replacement surgery is reasonable, necessary, and related to Claimant's January 30, 2015 work injury.

2. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 8, 2017

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that he suffered a compensable right knee medial meniscus tear during the course and scope of his employment with Employer on April 1, 2016.

2. Whether Claimant has proven by a preponderance of the evidence that he is entitled to receive reasonable, necessary and causally related medical benefits for his industrial right knee injury.

3. Whether Claimant has established by a preponderance of the evidence that he is entitled to receive Temporary Total Disability (TTD) benefits for the period April 1, 2016 through December 1, 2016.

STIPULATION

The parties agreed that Claimant earned an Average Weekly Wage (AWW) of $801.92.

FINDINGS OF FACT

1. Claimant was employed by Employer as a Health Care Technician. His job duties involved working at a residential facility known as Lamar House to provide support, care and activities for developmentally disabled individuals.

2. On April 1, 2016 Claimant arrived to work at Lamar House at approximately 7:30 p.m. He loaded residents into a bus for a trip to the movies. After the movie Claimant was "escorting a couple of residents off of the bus." As he turned to get off the bus his right knee "popped and gave way." Claimant subsequently slid down a few steps.

3. Claimant explained that he was unable to walk or drive after the fall. He immediately contacted Employer and was directed to the Lutheran Medical Emergency Department for an evaluation.

4. Claimant's co-worker Angela Jimenez was present in the driver's seat of the bus when Claimant injured his right knee. She did not directly observe the incident, but stated that she heard a sound when Claimant stepped while walking on the bus. He reacted in pain and reached for a handle. Ms. Jimenez drove Claimant to the Lutheran Medical Center Emergency Department for treatment.

5. The medical records reflect that on April 1, 2016 Claimant underwent a right knee x-ray at the Lutheran Medical Center Emergency Department. The x-ray did

not reveal an acute injury. Claimant was placed in a right knee immobilizer, obtained crutches and received prescription medications.

6. On April 2, 2016 Claimant visited Lutheran Medical Center for an examination. He reported that at approximately 10:45-11:00 p.m. on April 1, 2016 while he was at work he "twisted his right knee while walking down a flight of four steps on a bus." He recounted that he heard a "pop" and his right knee gave out. Claimant noted that he fell to the ground and immediately suffered right knee pain. His pain continued into the morning and he developed mild swelling in the right knee area. After conducting a physical examination, Joanne Marie Edney, M.D. diagnosed Claimant with a right knee strain. Dr. Edney suspected that Claimant injured his right knee medial meniscus.

7. On April 2, 2016 Claimant completed an injury report form for Employer. He noted that he injured his right knee while working for Employer on April 1, 2016. Claimant stated that "while unloading the guys off the bus I turned to walk down the steps. His right knee popped and "gave out so I fell down the steps."

8. The medical records reveal that on April 1, 2016 Claimant had visited personal health care provider Kaiser Permanente for a right knee evaluation. Between 3:04 and 3:06 p.m. Desiree Gonzales, R.N. received a call from Claimant. Claimant complained of "[i]njury to R knee 2 days ago, twisted while walking and heard pop. Pain has increased + edema to inside of R knee. Is able to bear weight. Rates pain 7/10, 8/10 with wt bearing." Nurse Gonzales noted that Claimant preferred an immediate appointment.

9. In a report dated April 1, 2016 at 5:25 p.m. Claimant explained to Sean R. McBrearty, M.D. at Kaiser that he had been suffering right knee pain for two days. Claimant specified that he

> was standing at work, right foot planted, twisted medially, heard pop and had immediate pain of the medial knee. Was able to bear weight and walk immediately after the injury. Over the past 24-48 hours, pain has increased and has had increased swelling in the knee. Medial knee pain throughout the day. Now hurts to put any weight on the right knee. Pain exacerbated with turning to the right.

10. Although the Kaiser records reflect that Claimant called and visited the facility on April 1, 2016, it appears that the records are incorrectly dated. Instead, the records suggest that Claimant visited Kaiser sometime after April 1, 2016 because he recounted that he had injured his right knee at work and his pain had increased over the past 24-48 hours. Construing the April 1, 2016 Kaiser record as improperly dated is also consistent with Claimant's testimony, report to Lutheran Medical Center on April 2, 2016 and the bulk of the other evidence in this matter.

11. On April 4, 2016 Claimant visited Tomm Vanderhorst, M.D. at SCL Physicians for an examination. Dr. Vanderhorst recorded that on April 1, 2016 at about

11:00 p.m. Claimant was helping residents exit a bus after attending a movie. He was "planted on his right foot and turning to the right when he 'felt a pop' in his right knee which buckled and he fell down several steps to the ground." Claimant suffered immediate right knee pain. Dr. Vanderhorst determined that Claimant's mechanism of injury and right knee symptoms were "compatible with a medial meniscus injury." In assessing causality, Dr. Vanderhorst concluded that Claimant's right knee condition constituted a work-related injury. He recommended a right knee MRI.

12. On April 6, 2016 Claimant returned to Dr. Vanderhorst for an evaluation. Based on Claimant's level of pain, employment responsibility concerns and continuing use of narcotic pain medication Dr. Vanderhorst took Claimant off of work pending additional evaluation.

13. On April 12, 2016 Claimant returned to Dr. Vanderhorst for an examination. The MRI revealed an undersurface tear of the right medial meniscus. Dr. Vanderhorst expected a complete recovery without surgical intervention and recommended physical therapy. He assigned work restrictions of "10 minutes per hour combined sitting/standing with use of his crutch" and a maximum of 10 pounds when lifting and carrying. Dr. Vanderhorst also prohibited kneeling, crawling, squatting, climbing and physical confrontations.

14. On May 2, 2016 Claimant again visited Dr. Vanderhorst for an examination. Dr. Vanderhorst noted that Claimant remained off work and elevated his right knee at home. He commented that Claimant was awaiting a transfer of care "per his report."

15. On January 17, 2017 Claimant underwent an independent medical examination with Wallace K. Larson, M.D. Claimant recounted that on April 1, 2016 he had taken residents to a movie and was walking in a bus. While he was turning to the right to go down the steps to exit the bus, his right knee "popped" and "gave out." After reviewing Claimant's medical history and conducting a physical examination Dr. Larson determined that Claimant likely did not suffer an industrial injury in the form of a medial meniscus tear on April 1, 2016. Relying on a medical record from Kaiser dated April 1, 2016, Dr. Larson reasoned that Claimant had suffered a right knee medial meniscus tear prior to his work activities on April 1, 2016. He explained that Claimant's right knee medial meniscus tear likely constituted a degenerative change rather than a specific traumatic event. Nevertheless, Dr. Larson acknowledged that degenerative changes are uncommon in someone who is Claimant's age of 25. He speculated that Claimant suffered an unrelated traumatic right knee injury that was not documented in the medical records.

16. Claimant testified that he ceased working for Employer after the April 1, 2016 incident because he was unable to perform his rigorous job duties due to his right knee medial meniscus tear. In June 2016 Claimant returned to full-time employment at a veterinary hospital. However, after working at the hospital for approximately three to four weeks, he ceased employment. On December 1, 2016 Claimant obtained full-time employment with another employer.

17. Claimant has demonstrated that it is more probably true than not that he suffered a compensable right knee medial meniscus tear during the course and scope of his employment with Employer on April 1, 2016. He testified that on April 1, 2016 he loaded residents into a bus for a trip to the movies. After the movie Claimant was "escorting a couple of residents off of the bus." As he turned to get off the bus his right knee "popped and gave way." Claimant subsequently slid down a few steps. Although Ms. Jimenez did not directly observe the incident because she was in the driver's seat of the bus, she corroborated Claimant's account. She specifically heard a sound when Claimant stepped on the bus. He reacted in pain and reached for a handle.

18. The consistent medical records support Claimant's testimony that he tore his right knee medial meniscus while working for Employer on April 1, 2016. On April 2, 2016 Claimant reported to Lutheran Medical Center that at approximately 10:45-11:00 p.m. while working on April 1, 2016 he "twisted his right knee while walking down a flight of four steps on a bus." He recounted that he heard a "pop" and his right knee gave out. Claimant noted that he fell to the ground and immediately suffered right knee pain. On April 4, 2016 Dr. Vanderhorst recorded that on April 1, 2016 at about 11:00 p.m. Claimant was helping residents exit a bus after attending a movie. He was "planted on his right foot and turning to the right when he 'felt a pop' in his right knee which buckled and he fell down several steps to the ground." Claimant suffered immediate right knee pain. Dr. Vanderhorst determined that Claimant's mechanism of injury and right knee symptoms were "compatible with a medial meniscus injury." In assessing causality, Dr. Vanderhorst concluded that Claimant's right knee condition constituted a work-related injury.

19. In contrast, after reviewing Claimant's medical history and conducting a physical examination, Dr. Larson determined that he likely did not suffer an industrial injury in the form of a medial meniscus tear on April 1, 2016. Relying on a medical record from Kaiser dated April 1, 2016, Dr. Larson reasoned that Claimant had suffered a right knee medial meniscus tear prior to his work activities on April 1, 2016. The April 1, 2016 Kaiser record reveals that Claimant sought a right knee evaluation. Between 3:04 and 3:06 p.m. Nurse Gonzales received a call from Claimant. Claimant complained of "Injury to R knee 2 days ago, twisted while walking and heard pop. Moreover, in a report dated April 1, 2016 at 5:25 p.m. Claimant explained to Dr. McBrearty at Kaiser that he had been suffering right knee pain for two days.

20. Although the Kaiser records reflect that Claimant called and visited the facility on April 1, 2016, it appears that the records are incorrectly dated. Instead, the records suggest that Claimant visited Kaiser sometime after April 1, 2016 because he recounted that he had injured his right knee at work and his pain had increased over the past 24-48 hours. His account of the incident in the Kaiser records is also consistent with his testimony, the description of Ms. Jimenez and the other medical records. Accordingly, Claimant's work activities on April 1, 2016 caused his right knee medial meniscus tear that warranted medical treatment.

21. Claimant has proven that it is more probably true than not that he is entitled to receive reasonable, necessary and causally related medical benefits for his

industrial injury. Claimant explained that on April 1, 2016 he was unable to walk or drive after his fall on the bus. He immediately contacted Employer and was directed to the Lutheran Medical Emergency Department for an evaluation. Claimant subsequently received authorized medical treatment from Lutheran Medical Center and SCL physicians. Based on the medical records and Claimant's credible testimony, Claimant is entitled to receive reasonable, necessary and causally related medical benefits to cure or relieve the effects of his April 1, 2016 right knee medial meniscus tear.

22. Claimant has established that it is more probably true than not that he is entitled to receive TTD benefits for the period April 1, 2016 through December 1, 2016. Claimant credibly explained that he ceased working for Employer after the April 1, 2016 incident because he was unable to perform his rigorous job duties due to his right knee medial meniscus tear. In June 2016 Claimant returned to full-time employment at a veterinary hospital. However, after working at the hospital for approximately three to four weeks, he ceased employment. On December 1, 2016 Claimant obtained full-time employment with another employer.

23. Claimant has not reached MMI, he has not returned to regular or modified employment, he has not received a written release to return to regular employment, and he has not received a written offer to return to employment and failed to begin the employment. Accordingly, based on Claimant's credible testimony and the medical records, Claimant is entitled to receive TTD benefits for the period April 1, 2016, until December 1, 2016 minus any earnings he received while working for the veterinary hospital in June 2016.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Compensability

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAP, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the “logical and recurrent consequence” of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, Oct. 27, 2008), simply because a claimant’s symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that “correlation is not causation,” and merely because a coincidental correlation exists between the claimant’s work and his symptoms does not mean there is a causal connection between the claimant’s injury and work activities.

7. As found, Claimant has demonstrated by a preponderance of the evidence that he suffered a compensable right knee medial meniscus tear during the course and scope of his employment with Employer on April 1, 2016. He testified that on April 1, 2016 he loaded residents into a bus for a trip to the movies. After the movie Claimant was “escorting a couple of residents off of the bus.” As he turned to get off the bus his right knee “popped and gave way.” Claimant subsequently slid down a few steps.

Although Ms. Jimenez did not directly observe the incident because she was in the driver's seat of the bus, she corroborated Claimant's account. She specifically heard a sound when Claimant stepped on the bus. He reacted in pain and reached for a handle.

8. As found, the consistent medical records support Claimant's testimony that he tore his right knee medial meniscus while working for Employer on April 1, 2016. On April 2, 2016 Claimant reported to Lutheran Medical Center that at approximately 10:45-11:00 p.m. while working on April 1, 2016 he "twisted his right knee while walking down a flight of four steps on a bus." He recounted that he heard a "pop" and his right knee gave out. Claimant noted that he fell to the ground and immediately suffered right knee pain. On April 4, 2016 Dr. Vanderhorst recorded that on April 1, 2016 at about 11:00 p.m. Claimant was helping residents exit a bus after attending a movie. He was "planted on his right foot and turning to the right when he 'felt a pop' in his right knee which buckled and he fell down several steps to the ground." Claimant suffered immediate right knee pain. Dr. Vanderhorst determined that Claimant's mechanism of injury and right knee symptoms were "compatible with a medial meniscus injury." In assessing causality, Dr. Vanderhorst concluded that Claimant's right knee condition constituted a work-related injury.

9. As found, in contrast, after reviewing Claimant's medical history and conducting a physical examination, Dr. Larson determined that he likely did not suffer an industrial injury in the form of a medial meniscus tear on April 1, 2016. Relying on a medical record from Kaiser dated April 1, 2016, Dr. Larson reasoned that Claimant had suffered a right knee medial meniscus tear prior to his work activities on April 1, 2016. The April 1, 2016 Kaiser record reveals that Claimant sought a right knee evaluation. Between 3:04 and 3:06 p.m. Nurse Gonzales received a call from Claimant. Claimant complained of "Injury to R knee 2 days ago, twisted while walking and heard pop. Moreover, in a report dated April 1, 2016 at 5:25 p.m. Claimant explained to Dr. McBrearty at Kaiser that he had been suffering right knee pain for two days.

10. As found, although the Kaiser records reflect that Claimant called and visited the facility on April 1, 2016, it appears that the records are incorrectly dated. Instead, the records suggest that Claimant visited Kaiser sometime after April 1, 2016 because he recounted that he had injured his right knee at work and his pain had increased over the past 24-48 hours. His account of the incident in the Kaiser records is also consistent with his testimony, the description of Ms. Jimenez and the other medical records. Accordingly, Claimant's work activities on April 1, 2016 caused his right knee medial meniscus tear that warranted medical treatment.

Medical Benefits

11. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to

produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAP, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAP, Nov. 13, 2000).

12. Authorization to provide medical treatment refers to a medical provider's legal authority to treat the claimant with the expectation that the insurer will compensate the provider. *Bunch v. Industrial Claim Appeals Office,* 148 P.3d 381, 383 (Colo. App. 2006); *One Hour Cleaners v. Industrial Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). Authorized providers include those to whom the employer directly refers the claimant and those to whom an ATP refers the claimant in the normal progression of authorized treatment. *Town of Ignacio v. Industrial Claim Appeals Office,* 70 P.3d 513 (Colo. App. 2002); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). Whether an ATP has made a referral in the normal progression of authorized treatment is a question of fact for the ALJ. *Suetrack USA v. Industrial Claim Appeals Office,* 902 P.2d 854 (Colo. App. 1995).

13. As found, Claimant has proven by a preponderance of the evidence that he is entitled to receive reasonable, necessary and causally related medical benefits for his industrial injury. Claimant explained that on April 1, 2016 he was unable to walk or drive after his fall on the bus. He immediately contacted Employer and was directed to the Lutheran Medical Emergency Department for an evaluation. Claimant subsequently received authorized medical treatment from Lutheran Medical Center and SCL physicians. Based on the medical records and Claimant's credible testimony, Claimant is entitled to receive reasonable, necessary and causally related medical benefits to cure or relieve the effects of his April 1, 2016 right knee medial meniscus tear.

Temporary Total Disability Benefits

14. Section 8-42-103(1), C.R.S. requires a claimant seeking temporary disability benefits to establish a causal connection between the industrial injury and subsequent wage loss. *Champion Auto Body v. Industrial Claim Appeals Office*, 950 P.2d 671 (Colo. App. 1997). To demonstrate entitlement to TTD benefits a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability and the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The term "disability," connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by the claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). A claimant suffers from an impairment of earning capacity when he has a complete inability to work or there are restrictions that impair his ability to effectively and properly perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1)

the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

15. As found, Claimant has established by a preponderance of the evidence that he is entitled to receive TTD benefits for the period April 1, 2016 through December 1, 2016. Claimant credibly explained that he ceased working for Employer after the April 1, 2016 incident because he was unable to perform his rigorous job duties due to his right knee medial meniscus tear. In June 2016 Claimant returned to full-time employment at a veterinary hospital. However, after working at the hospital for approximately three to four weeks, he ceased employment. On December 1, 2016 Claimant obtained full-time employment with another employer.

16. As found, Claimant has not reached MMI, he has not returned to regular or modified employment, he has not received a written release to return to regular employment, and he has not received a written offer to return to employment and failed to begin the employment. Accordingly, based on Claimant's credible testimony and the medical records, Claimant is entitled to receive TTD benefits for the period April 1, 2016, until December 1, 2016 minus any earnings he received while working for the veterinary hospital in June 2016.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant suffered a compensable right knee injury on April 1, 2016 while working for Employer.

2. Claimant shall receive reasonable, necessary and related medical benefits designed to cure and relieve the effects of his April 1, 2016 industrial injury.

3. Claimant shall receive TTD benefits for the period April 1, 2016 until December 1, 2016 minus any earnings he received while working for the veterinary hospital in June 2016.

4. Claimant earned an AWW of $801.92.

5. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or

service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: August 8, 2017.

633 17th Street Suite 1300
Denver, CO 80202

ISSUES

I. Have Respondents produced clear and convincing evidence to overcome the Division Independent Medical Examination ("DIME") opinion of J. Stephen Gray, M.D., that Claimant is entitled to a 17% impairment of the right upper extremity, which would equal a 10% impairment of the whole person?

II. If Respondents cannot prove by clear and convincing evidence the DIME examiner's assignment of impairment is in error, did Claimant prove by a preponderance of the evidence that he sustained functional impairment beyond the arm, at the shoulder, so as to justify conversion of the scheduled impairment rating to a whole person impairment?

III. Did Claimant prove by a preponderance of the evidence that he is entitled to an award of the specific post maximum medical improvement ("MMI") medical benefit of yearly follow up visits with authorized treating physician ("ATP") Michael Simpson, M.D., as recommended by DIME examiner Gray?

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following Findings of Fact:

1. Claimant is employed as a route service representative, driver, and deliverer for Employer and has worked for Employer for approximately 5 years.

2. Claimant testified that he had no right or left shoulder symptoms, pain complaints, or work restrictions, prior to his compensable injury of March 8, 2016.

3. On March 8, 2016, Claimant sustained an admitted compensable injury to his right shoulder while performing work for Employer. He was lifting a bundle of uniforms onto a rack, and felt a tear.

4. On March 9, 2016, following his admitted industrial injury, Claimant reported to ATP Nicholas Kurz, D.O., at Concentra, who recorded a present history of illness as follows:

> 03-09-16: R handed Pt presents as an initial WC injury / R shoulder strain that happened last evening while doing his usual duties when lifting 30-40 lb. bundle if uniforms, pt shares that he hear and felt a tear in his R shoulder, felt immediate pain and has been unable to raise it above shoulder height since. Denies and loss of sensation or grip

> strength as well as any previous R shoulder issues, injury or trauma.
>
> Injury History:
>
> Injury Date: 03/08/16
>
> This is the result of lifting.
>
> Occurred while at work.
>
> Complaint of shoulder pain
>
> Injury History: Injury history as previously documented. Pain is located in the right anterior shoulder, right lateral shoulder, right posterior shoulder and right biceps tendon. Onset was immediately after the injury. The symptoms occur constantly. He describes his pain as sharp and aching in nature. He describes this as a current pain level of 6/10.

(Exhibit 7, p. 24).

5. A MRI of the right shoulder was obtained on March 25, 2016, which revealed supraspinatus tendinosis with full thickness tear and an anterior superior labral SLAP (labrum) tear with an associated large septated and lobulated paralabral cyst. (Exhibit I, pp. 31-33).

6. Dr. Michael Simpson first evaluated the patient on April 5, 2016. At that time he reviewed the Claimant's MRI and noted, among other things, that Claimant had moderate osteoarthritis and a pre-existing labral tear secondary to a large paralabral cyst, he opined that this was unrelated to the work injury on March 8, 2016. Accordingly, Dr. Simpson did not treat the labral tear. (Exhibit 9, p. 60).

7. On April 11, 2016, Claimant treated with ATP Walter Larimore, M.D., also at Concentra, and newly assigned ATP Larimore noted at that evaluation:

> No better. No meds. Tolerating work with restrictions. MRI showed large SLAP with cyst (pre-existing, non-work-related), but also tear of SS with 1.5 cm retraction and severe tendinosis of the long head of the biceps. Also with GH effusion and subscapularis tendinosis. Saw Simpson who is planning scope repair of SS, AC decompression and biceps repair. Icing PRN. PT x1 for HEP. Will continue pre-op. Surgery set for 5/5 with Simpson.
>
> * * *
>
> ASSESSMENT

> * * *
>
> 7. Traumatic tear of supraspinatus tendon of right shoulder (840.6) (S46.811A)

(Exhibit 7, pp. 34-35).

8. On May 5, 2016 Claimant underwent surgery with ATP Michael Simpson, M.D., which surgery included:

> 1. Arthroscopic assisted rotator cuff repair right shoulder with suture fixation of subscapularis tendon tear and anchor-based fixation of supraspinatus tear (29827).
>
> 2. Arthroscopic subacromial decompression, right shoulder (29826).
>
> 3. Open biceps tenodesis, right shoulder (23430).

Dr. Simpson did not repair the preexisting labral tear. (Exhibit 9, p. 63).

9. On July 18, 2016, Claimant saw Dr. Simpson for a post-surgical consult to evaluate his condition. Dr. Simpson opined that Claimant was doing "phenomenally well" following surgery, and noted that Claimant presented with no pain, and no need for pain medications. (Exhibit F, p. 24).

10. Following physical therapy on July 27, 2016, Claimant reported back to Dr. Larimore. At that time Claimant reported that he "feels 100% better. No pain. No Meds. Completed PT." (Exhibit C, p. 14). He was released by ATP Larimore at MMI with no impairment rating, and no recommendation for maintenance medical care. (Exhibit 7, p. 55).

11. On September 12, 2016 Claimant returned to Dr. Simpson, the surgeon, who noted:

> He has been released at this point. He is back to work full duty. He is able to do his job very well. He is not having a whole lot of pain. He still notes issues with overhead activities of his shoulder. Specifically, he cannot throw as he has pain with that….
>
> It does appear to me that at least on examination today he does have some limited range of motion, which would result in some degree of permanent partial impairment. In briefly reviewing impairment rating, I would assess he probably has somewhere between 3% and 5% whole person impairment without doing a formal impairment rating. This will be based

> on some limited range of motion he has in abduction and internal rotation and extension.

(Exhibit 9, pp. 70, 71).

12. On September 30, 2016 Respondents filed a Final Admission of Liability attaching the MMI report of ATP Larimore. (Exhibit 3, pp. 5-7).

13. On October 18, 2016 Claimant timely filed an "Objection to Final Admission of Liability" and "Notice and Proposal to Select an IME." (Exhibit 4, pp. 8-9).

14. On November 19, 2016 Claimant filed his "Application for Division Independent Medical Examination (DIME)." (Exhibit 5, pp. 10-11).

15. None of the medical records prior to or leading up to the DIME reveal that Claimant ever had any evidence of crepitus during any pre or post-surgical examinations. (Exhibits C, D, E, G, and H and Exhibits 7, 9, and 10).

16. On February 23, 2017 Claimant was evaluated by J. Stephen Gray, M.D., for a Division of Independent Medical Evaluation ("DIME") where Dr. Gray noted the following pertinent issues:

> CURRENT SYMPTOMATOLOGY: Mr. Richardson complains of intermittent, moderately-severe, throbbing pain that was graded as a 3-5 on a scale of 0-10. He reports increased right shoulder pain with lifting and reaching. His pain increases with driving. He reports that his pain is improved with exercise. Mr. Richardson takes no medication for his pain.
>
> * * *
>
> Examination of the Right Shoulder: There were four well-healed arthroscopy scars on the right shoulder. There was no evidence of laxity, swelling, sulcus sign, bruising, joint effusion, muscle atrophy, or significant boney abnormality. There was some localized tenderness over the right coracoid process and the subacromial outlet. There was constant mild fine crepitus noted over the anterior right shoulder with certain active rotatory movements. This crepitus did not appear to cause significant pain. There was no significant tenderness to palpation over the right shoulder girdle region, trapezius and cervical musculature. Range of motion of the cervical spine appeared to be within normal limits without reported pain. Impingement signs were positive in the right shoulder. Biceps provocation maneuvers were negative.
>
> * * *

ASSESSMENT:

Work-related right shoulder rotator cuff tear with,

1. Right biceps tear, with tendonitis,

2. Development of right shoulder impingement syndrome,

3. Status-post arthroscopic rotator cuff repair with subacromial decompression and biceps tenodesis.

(Exhibit 6, pp.17-19).

17. At the conclusion of the DIME report, Dr. Gray gave the opinion that apportionment was not appropriate, that "maintenance care is indicated in the case," and that Claimant should be "afforded yearly follow up visits with his orthopedic surgeon." (Exhibit 6, p. 20). Further, it was the DIME's opinion that Claimant was entitled to a "17% impairment of the right upper extremity, which would be equal to a 10% impairment of the whole person." *Id.* Nowhere in the DIME report does it indicate that Dr. Gray contacted the ATP to reconcile the range of motion disparities between his DIME and the ATP's.

18. At hearing, Respondents relied upon the testimony of ATP Larimore, who opined that when he released Claimant at MMI on July 27, 2016, Claimant had full range of motion and was not entitled to an impairment rating. The record is unclear if Dr. Larimore performed ROM measurements himself, as is customary, or if he relied upon the measurements taken by Aaron Pieffer, D. PT. It was the opinion of ATP Larimore that there must have been some intervening event that caused Claimant's condition to worsen, although he testified he had no medical records or other documentation to support such a hypothesis.

19. Dr. Larimore articulated several specific concerns regarding the validity of the DIME process by Dr. Gray:

(1) What event caused the crepitus which Dr. Gray noted, which was not noted by any medical providers previously? Why was Claimant given a significant rating for the crepitus, when that should not have been added to his range of motion ("ROM") rating per AMA guidelines?

(2) Did physical therapy continue between his placement at MMI and the DIME?

(3) What effect did the preexisting SLAP lesion have on Dr. Gray's impairment rating for range of motion?

(4) Why was the uninjured left shoulder impairment rating the same as the injured right shoulder rating? Was the normalization ROM method applied correctly?

20. Claimant retained the services of Ronald Swarsen, M.D., who testified and colored in on Demonstrative Exhibit 11 which portions of the shoulder anatomy were addressed by the surgery which had occurred on May 5, 2016.

21. At Claimant's request, Ronald Swarsen, M.D., also performed a medical records review and testified at hearing. At the time of his records review, he did not have Respondent's exhibits to review. Dr. Swarsen testified that the May 5, 2016 surgery consisted of a rotator cuff repair of the right shoulder with suture fixation of subscapularis tendon tear, anchor-based fixation of supraspinatus tear, an arthroscopic subacromial decompression and an open biceps tenodesis. He also testified from the operative report found at Exhibit 9, p. 63, and highlighted the surgical procedures performed on Demonstrative Exhibit 11, using different colored markers for each procedure depicted.

22. Dr. Swarson explained, at least partially, the anomalies between the APT's impairment ratings and those of Dr. Gray. Although not clearly articulated in the DIME, Dr. Swarson stated that it is not at all uncommon for a compensable injury, and associated repair (such as Claimant's) to aggravate a previously asymptomatic SLAP lesion. This would explain the onset of crepitus between the ATP exam and the DIME.

23. Further, Dr. Swarson opined, the AMA guidelines 3.1j do allow an additional rating for crepitus, if it is not duplicative of the range of motion deficit which is due to the compensable repair itself. Stated differently, if it is a "concurrent condition" (as herein) then there is no "double dipping" if the crepitus is due to the now-symptomatic SLAP tear instead of Dr. Simpson's repair work.

24. Dr. Swarson also does not conclude that the noted ROM deficit is necessarily due to the SLAP lesion rather than the compensable injury and subsequent repair.

25. Dr. Swarsen also credibly testified and explained that two surgical procedures which the Claimant underwent with ATP Simpson "were to structures above the glenohumeral joint" where the bones of the arm join the torso. In this case, and as is demonstrated in orange in Exhibit 11, the coracoacromial ligament was cut to allow greater movement, and a portion of the acromion was removed as well. Two situs of repair, therefore, were above the glenohumeral joint.

26. Dr. Swarsen opined that the shoulder is not part of the upper extremity, although one aspect of the functional impairment at the shoulder is measured by arm motion.

27. The Claimant testified the pain limits him in performing various motions including overhead lifting, driving, dressing and personal hygiene.

28. Based on the credible testimony of Dr. Swarsen and the Claimant, as well as the medical records, the Claimant suffered impairment and his functional impairment extends beyond the arm at the shoulder.

29. The ALJ finds that pain and discomfort caused by the industrial injury and consequent surgery caused functional impairment of structures beyond the arm at the shoulder. This functional impairment manifests itself as pain and discomfort, and it impairs the Claimant in performing various movements including overhead lifting.

30. The Claimant proved it is probably more true that not that he sustained functional impairment beyond the arm at the shoulder and is entitled to an award of permanent partial disability benefits based on DIME Gray's rating of 10% whole person. The Claimant stated that he experiences pain in the front anterior portion of the shoulder between the joint and the neck, in the area on the front of his chest between the shoulder and the neck and in the area of the shoulder joint when he moves the arm in various planes.

31. Respondents have failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Gray that Claimant is entitled to a 17% right upper extremity impairment rating, which would be equal to a 10% impairment rating of the whole person. As credibly testified to by both ATP Larimore and Dr. Swarsen, the difference in ratings is simply that of a difference of opinion. The difference in opinion between the physicians does not rise to the level of clear and convincing error.

32. Claimant credibly testified that he would like to have maintenance follow up visits with Dr. Simpson, one of which already occurred post-MMI on September 12, 2016, and he would like to continue those on a yearly basis as recommended by DIME physician Gray.

33. Claimant also displayed 4 surgical scars resulting from the arthroscopic repair to his right shoulder:

A. A 8 cm depressed circle on the dorsal aspect of the shoulder, darker than the surrounding skin.

B. A one inch, 3 mm wide scar near the front of the shoulder.

C. A 1/2 inch, 2mm wide depression on the outside of the shoulder.

D. A 1/2 inch, I mm wide scar on the front of the shoulder.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured

workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Overcoming the DIME

4. In evaluating a DIME physician's opinion, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998). A DIME physician's determination regarding MMI and permanent impairment consists of his initial report and any subsequent opinions. *In Re Dazzio,* W.C. No. 4-660-149 (ICAP, June 30, 2008); *see Andrade v. Industrial Claim Appeals Office,* 121 P.3d 328 (Colo. App. 2005).

5. A DIME physician's findings of MMI, causation, and impairment are binding on the parties unless overcome by "clear and convincing evidence." §8-42-107(8)(b)(III), C.R.S.; *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAP, July 19, 2004); *see Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAP, Nov. 17, 2000).

6. A DIME physician is required to rate a claimant's impairment in accordance with the *AMA Guides*. §8-42-107(8)(c), C.R.S.; *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117, 1118 (Colo. App. 2003). However, deviations from the *AMA Guides* do not mandate that the DIME physician's impairment rating was incorrect. *In Re Gurrola,* W.C. No. 4-631-447 (ICAP, Nov. 13, 2006). Instead, the ALJ may consider a technical deviation from the *AMA Guides* in determining the weight to be accorded the DIME physician's findings. *Id.* Whether the DIME physician properly applied the *AMA Guides* to determine an impairment rating is generally a question of fact for the ALJ. *In Re Goffinett,* W.C. No. 4-677-750 (ICAP, Apr. 16, 2008).

ATP's Concerns about Dr. Gray's DIME

First Onset of Crepitus recorded at DIME

7. There is no evidence in the record of any intervening injury in the months between the final ATP exam and the DIME. Further, Dr. Swarson explained at hearing, to the satisfaction of the ALJ, that it is unsurprising that the crepitus appeared slowly following Claimant's ATP exam, due to aggravation of this previously asymptomatic SLAP lesion. Because the crepitus could be coming from this recently caused condition, instead of the arthroscopically repaired injuries, the additional 12% crepitus rating was appropriately combined with the 6% ROM rating. Dr. Gray refers to Table 17 of the AMA guides, and describes "*constant* mild fine crepitus over the anterior shoulder with certain active rotary movements". Despite his verbal characterization as *mild,* since it was also *constant,* the 20% factor is appropriate on the Joint Crepitation Severity chart. Applied to the shoulder, it yields 12%. Of note, the critical paragraph proscribing "double dipping" for crepitus and directly associated ROM deficits sits squarely between Table 17 and this Chart. It is not "highly probable" that Dr. Gray ignored this language. The ALJ finds that Dr. Gray (as articulated by Dr. Swarson) correctly applied the crepitus rating cumulatively to the 6% ROM rating.

Continuation of Physical Therapy until the DIME

8. While Dr. Larimore wonders, perhaps with valid reason, if physical therapy continued between his final ATP report and the DIME, the record appears to be silent on this issue. What the record does show is a highly motivated Claimant, who demonstrated a desire to get back to baseline as soon as he could, so he could return to work. Nothing in the record before the ALJ on this concern of the ATP renders the DIME results suspect.

Effect of the Preexisting SLAP Lesion on the ROM Rating

9. As explained by Dr. Swarson, it is certainly possible that the ROM deficit could be due to the compensable injury, and not from the SLAP lesion. Or vise versa. Because the SLAP repair was not done, this is simply not knowable with any certainty. Tie goes to the runner here. The ALJ cannot conclude that Dr. Gray's analysis and application of ROM ratings is highly probably incorrect.

"Identical" ROM ratings for Injured vs. Non-Injured Shoulder

10. While the end results are curious, they are not identical, save the final 6% rating. The only figure which matches between the right and left shoulders is 90 degrees of external rotation, with a rating of "0" for each. The others figures are divergent, simply netting out at 6% apiece on the bottom line. The record does not explain how this might have come about, but it is Respondent's burden to show that the DIME got it wrong. The ALJ cannot conclude that is highly probable that normalization was not correctly done, but if not, that proper normalization procedures by the DIME would have yielded a materially different result.

11. Further, the ALJ concludes in this case that the normalization procedure conducted by Dr. Gray is indicative of his further clinical investigation to solve any disparity between his ROM rating and those used by Dr. Larimore. Dr. Larimore speaks highly of the abilities of Aaron Pieffer and apparently adopted Pieffer's ROM measurements as his own (taken the same day, July 27, 2017, in the identical Concentra Suite #100, and dictated 14 minutes apart) (*compare* Exhibit C, p. 15 and Exhibit D, p. 18). No actual ROM measurements appear in Dr. Larimore's MMI report, and nowhere does it appear that anyone at Concentra conducted normalization studies at all. Dr. Gray did so, and consistent with AMA guidelines.

Conversion to Whole Person

12. Section 8-42-107(1)(a), C.R.S., provides that when an injury results in permanent medical impairment and the “injury” is enumerated in the schedule set forth in subsection (2) of the statute, “the employee shall be limited to the medical impairment benefits as specified in subsection (2).” If the claimant sustains an injury not found on the schedule § 8-42-107(1)(b), C.R.S., provides the claimant shall “be limited to medical impairment benefits as specified in subsection (8),” or whole person medical impairment benefits. As used in these statues, the term “injury’ refers to the part of parts of the body that sustained the ultimate loss, not necessarily the situs of the injury itself. Thus, the term “injury” refers to the part or parts of the body that have been functionally disabled or impaired. *Warthen v. Industrial Claim Appeals Office,* 100 P.3d 581 (Colo. App. 2004); *Strauch v. PSL Swedish Healthcare System,* 917 P.2d 366 (Colo. App. 1996).

13. Under this test, the ALJ is required to determine the situs of the functional impairment, not the situs of the initial harm, in deciding whether the loss is one listed on the schedule of disabilities. *Strauch v. PSL Swedish Healthcare System, supra.* Pain and discomfort that limit the claimant’s use of a portion of the body may constitute functional impairment. *Johnson-Wood v. City of Colorado Springs,* W.C. No. 4-536-198 (ICAO June 20, 2005); *Vargas v. Excel Corp.,* W.C. No. 4-551-161 (ICAO April 21, 2005). The ALJ may also consider whether the injury has affected physiological structures beyond the arm at the shoulder. *Brown v. City of Aurora,* W.C. No. 4-452-408 (ICAO October 9, 2002). Moreover, the AMA Guides’ definitions of the “upper extremity” and the arm and torso do not dictate the “situs of the functional impairment.”

Langton v. Rocky Mountain Health Care Corp., 927 P.2d 883 (Colo. App. 1996); *Lovett v. Big Lots,* W. C. No. 4-657-285 (ICAO November 16, 2007).

14. Section 8-42-107(2)(a), C.R.S., provides for scheduled compensation based on "loss of an arm at the shoulder." The claimant bears the burden of proof by a preponderance of the evidence to establish functional impairment beyond the arm at the shoulder and the consequent right to PPD benefits awarded under § 8-42-107(8)(c). Whether the claimant met the burden of proof presents an issue of fact for determination by the ALJ. *Delaney v. Industrial Claim Appeals Office,* 30 P.3d 691 (Colo. App. 2001), *Johnson-Wood v. City of Colorado Springs, supra.*

15. The ALJ concludes the Claimant sustained *functional impairment* beyond the arm at the shoulder and is entitled to the converted 10 percent whole person impairment rating assigned by DIME Gray. The Claimant has also proved that he sustained injury to structures beyond the arm at the shoulder (the coracoacromial ligament, and the acromion itself), and that these injuries have caused ongoing pain that impairs the function of parts of the shoulder located proximal to the arm at the shoulder. His impairment consists of pain in the front and back of the shoulder, limits Claimant's ability to move his arm in various motions, including overhead lifting, putting on his shirt and personal hygiene.

Maintenance Medical Care

16. Respondents are obligated to provide medical treatment reasonably needed to cure and relieve the claimant of the effects of his injury. § 8-42-101(1)(a), C.R.S. The obligation to provide medical benefits is ongoing where there is substantial evidence in the records of supporting this determination that future medical treatment is reasonable and necessary to relieve the effects of the industrial injury, or prevent deterioration of the claimant's condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988).

17. Claimant has sustained his burden to prove by a preponderance of the evidence he is entitled to the maintenance medical benefit of yearly visits with Dr. Simpson, as recommended by DIME physician Gray, as a reasonable treatment to relieve the effects of his admitted industrial injury and prevent deterioration of Claimant's condition. It is causally related and reasonably necessary, especially in light of the fact that Claimant already has had one post MMI maintenance visit.

Disfigurement

18. Claimant has suffered serious, permanent disfigurement to an area of his body normally exposed to public view, entitling Claimant to additional compensation. §8-42-108(1), C.R.S. The ALJ orders that the Insurer shall pay Claimant $1,300.00 for his visible disfigurement as described in the Findings of Fact. Insurer shall be given credit for any amount previously paid for disfigurement in connection with this claim.

ORDER

It is therefore ordered that:

1. Respondents have failed to overcome DIME Gray's opinion that Claimant sustained a 17% impairment of the right upper extremity, which would equal a 10% impairment of the whole person, from his admitted industrial injury to his right shoulder on March 8, 2016.

2. Claimant has established by a preponderance of the evidence that he sustained functional impairment beyond the arm at the shoulder and is entitled to a permanent partial disability benefit based upon a 10% whole person impairment rating.

3. Claimant has established by a preponderance of the evidence that the DIME physician's recommendation for maintenance medical care follow-ups with the orthopedic surgeon is reasonable, causally related and reasonably necessary to prevent a worsening of Claimant's condition from Claimant's industrial injury.

4. Respondent shall compensate Claimant $1,300.00 for his visible disfigurement as described in the Findings of Fact. Insurer shall be given credit for any amount previously paid for disfigurement in connection with this claim.

5. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Colorado Springs, Colorado 80906

ISSUES

I. Whether Claimant proved by a preponderance of the evidence that she is entitled to post maximum medical improvement (MMI) medical treatment and should be reimbursed for post-MMI physical therapy expenses.

FINDINGS OF FACT

1. Claimant works for Employer as a civil engineer.

2. Claimant suffered an admitted occupational disease in the form of right-sided carpal tunnel syndrome (CTS) with an onset date of October 1, 2013.

3. Claimant underwent extensive conservative treatment. Claimant eventually underwent right-sided CTS decompression on March 4, 2016, performed by S.T. Chamberlain, M.D.

4. Claimant's authorized treating physician (ATP), Marc-Andre Chimonas, M.D., placed Claimant at MMI on June 6, 2016. Dr. Chimonas stated that " [t]he overall pattern with bilateral carpal tunnel syndrome, nodular stenoising tenosynovitis, slightly elevated rheumatoid factor, multiple joint pain is most consistent with an inflammatory condition such as rheumatoid arthritis. Of all these difficulties only the right sided carpal tunnel syndrome meets the division criteria for work-related overuse disorder." Dr. Chimonas determined Claimant had no permanent impairment and no need for post-MMI medical maintenance care. Dr. Chimonas recommended Claimant follow up with her primary care provider for all other medical issues, including what Dr. Chimonas noted may be an underlying inflammatory condition.

5. Respondents filed a Final Admission of Liability (FAL) based upon Dr. Chimonas' determination and denied medical maintenance care. Claimant subsequently requested a Division Independent Medical Examination (DIME).

6. Claimant subsequently returned to Dr. Chamberlain on her own on August 4, 2016. Claimant complained of bilateral wrist and shoulder pain and irritation. Claimant advised Dr. Chamberlain that she had several different opinions about the pain and irritation in her upper limbs and wanted Dr. Chamberlain's advice as to moving forward with a thoracic outlet syndrome (TOS) procedure. Dr. Chamberlain did not believe

Claimant required "any definitive surgical intervention for her thoracic outlet" and advised her that it was merely "a matter of maintenance", she did not appear to require "any definitive treatment" for her symptoms, and gave her a note for physical therapy. Dr. Chamberlain did not address causation for her thoracic outlet symptoms in his August 4, 2016 note.

7. Claimant underwent six sessions of physical therapy at GetWell Physical Therapy for pain in her thoracic spine and brachial plexus disorders between September 13 and September 30, 2016.

8. Carlos Cebrian, M.D., conducted the DIME on September 28, 2016. Dr Cebrian issued a DIME report dated October 18, 2016. Dr. Cebrian concluded that Claimant's only work-related diagnosis was right-sided CTS. Dr. Cebrian found that Claimant's bilateral finger nodules, tenosynovitis, and left CTS are not causally related to the work injury. Dr. Cebrian noted that his examination revealed positive impingement testing bilaterally and possible rotator cuff impingement. Dr. Cebrian opined, however, that Claimant's bilateral shoulder complaints are not causally related to her work. Dr. Cebrian agreed with Dr. Chimonas that Claimant was at MMI on June 6, 2016 and had no permanent impairment. He also found Claimant did not need medical maintenance care and could work in a full and unrestricted capacity.

9. On October 28, 2016, Respondents filed a new FAL based on Dr. Cebrian's DIME report, denying liability for post-MMI medical maintenance benefits.

10. Claimant saw Bennett Machanic, M.D. on January 18, 2017. Dr. Machanic had evaluated Claimant on prior occasions. Dr. Machanic noted that his clinical examination suggested cubital tunnel syndrome bilaterally, left-side CTS findings, and some issues in the brachial plexus. Dr. Machanic opined that Claimant had cumulative trauma disorder in her upper extremities and proposed a surgical approach due to a nerve compression. Dr. Machanic recommended that the treatment be handled in the workers' compensation system. He recommended an EMG, which he performed on March 21, 2017. Dr. Machanic noted that the EMG revealed moderately advanced right and left CTS, pathology over the right lower brachial plexus consistent with possible TOS, and possible TOS or brachial plexus issues on the left. Dr. Machanic noted a worsening of brachial plexus problems.

11. Claimant testified at hearing that since being placed at MMI she has had ongoing problems in her right wrist carpal area and that her pain will radiate up her arm, including her elbow and shoulder. She also testified that she has been undergoing physical therapy which she has paid for post-MMI. Claimant testified that the physical

therapy significantly helps her CTS symptoms, and assists her functionality in the workplace. Claimant further testified that the physical therapy treats both arms from shoulders to wrists.

12. Claimant testified that she is not attempting to overcome the DIME's causation opinion, but is seeking to have medical maintenance care ordered and the post-MMI medical care she has incurred, i.e. the physical therapy from GetWell for her shoulder pain, paid for by the Respondents.

13. The ALJ credits the opinions of Drs. Cebrian and Chimonas over the conflicting opinion of Dr. Machanic and finds that Claimant's only work-related condition is right-sided CTS.

14. The ALJ credits the opinions of Drs. Cebrian and Chimonas over the conflicting opinion of Dr. Machanic and finds that no further medical treatment for Claimant's work-related condition is reasonably necessary.

15. Claimant has failed to prove entitlement to medical maintenance care for her work-related condition by a preponderance of the evidence.

16. Claimant has failed to demonstrate that she is entitled to reimbursement of the medical expenses incurred post-MMI.

17. Evidence and inferences contrary to these findings were not credible and persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, Section 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1), C.R.S. Generally, the claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive

of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado*, 717 P.2d 1000 (Colo. App. 1986).

The ALJ's resolution of issues will be affirmed if supported by substantial evidence in the record. Section 8-43-301(8), C.R.S.; *City and County of Denver School District 1 v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). Substantial evidence is that quantum of probative evidence, which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

Medical Maintenance Benefits

The respondents are liable to provide such medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury." Section 8-42-101(1)(a), C.R.S. Colorado courts have ruled that the need for medical treatment may extend beyond the point of MMI where the claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or prevent further deterioration of her condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609 (Colo. App. 1995). The claimant must prove entitlement to *Grover* medical benefits by a preponderance of the evidence. *Lerner v. Wal-Mart Stores, Inc.,* 865 P.2d 915 (Colo. App. 1993).

As found, Claimant has failed to establish that she is entitled to medical maintenance care. While other medical conditions were noted, Drs. Cebrian and Chimonas credibly opined that such conditions were not work-related, and that the only work-related condition was right-sided CTS. Drs. Cebrian and Chimonas credibly opined that Claimant did not require medical maintenance treatment for her work-related condition. Based on the totality of the evidence, Claimant failed to establish by a

preponderance of the evidence that she is entitled to medical maintenance benefits and reimbursement of physical therapy expenses incurred post-MMI.

ORDER

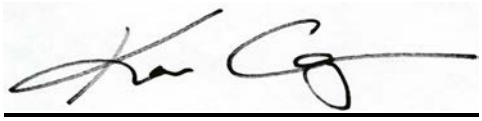
It is therefore ordered that:

1. Claimant has failed to establish by a preponderance of the evidence that she is entitled to post-MMI medical treatment. Claimant's claim for post-MMI maintenance medical treatment and request for reimbursement of post-MMI physical therapy expenses is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 8, 2017



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Did Claimant prove that he suffered a compensable low back injury on December 20, 2016?

If this claim is deemed compensable, the ALJ will address these additional questions:

2. What is Claimant's average weekly wage (AWW)?

3. Is Claimant entitled to temporary total disability (TTD) benefits commencing December 21, 2016?

4. Is Claimant entitled to a general award of medical benefits?

STIPULATIONS

1. If this claim is compensable, Concentra is the primary authorized provider.

2. If this claim is compensable, Respondents agreed Claimant is entitled to TTD benefits commencing December 21, 2016.

FINDINGS OF FACT

1. Claimant works as a security officer for Employer, stationed at Memorial Hospital. His duties include morgue escort, which is called a "Code 6."

2. On December 20, 2016, Claimant participated in a Code 6 with two funeral home employees, Ty McCulley and Jerry Santos.

3. Claimant retrieved a bagged corpse from the freezer on a hospital gurney and rolled it into position beside the mortuary's gurney. The platform of the hospital gurney is a large metal tray, which can be lifted on the side, causing the body to slide onto the mortuary gurney.

4. Claimant was at the patient's feet, Mr. McCulley was at the head, and Mr. Santos was standing on the opposite side of the mortuary gurney to pull the body onto the gurney. As Claimant and Mr. McCulley lifted the tray, Mr. McCulley let go or lost control of his side, causing the body to shift awkwardly. Claimant injured his back attempting to support the body and prevent it from falling.

5. Claimant escorted Mr. McCulley and Mr. Santos out of the facility, and then verbally reported the injury to his supervisor, Christian Trim. The Employer's First Report of Injury confirms that Claimant reported the injury on December 20, 2016.

Regarding the mechanism of injury, the Employer's First Report states "EE was assisting an outside company carry a deceased patient, EE strained lower back by helping lift him."

6. Claimant finished his shift and went home at approximately 10:00 PM. He did not immediately seek medical treatment because he assumed he had a temporary strain. He took ibuprofen and went to bed.

7. Claimant awoke the next morning with intense low back pain, so he went to his chiropractor, Dr. James Thatcher. Dr. Thatcher's contemporaneous medical record dated December 21, 2016 confirms Claimant's account of the injury. The report notes that at approximately 4:00 PM on December 20, Claimant was lifting a dead body in the hospital and the person lifting the other end "dropped" their side. Claimant developed low back pain "immediately," which was initially "mild" but had progressed to a level of 8/10. Dr. Thatcher diagnosed a lumbar strain and gave Claimant work restrictions of no lifting greater than 10 pounds and no sitting longer than 15 minutes at a time.

8. Employer referred Claimant to Dr. Frank Polanco for authorized treatment. At the initial visit on December 21, Claimant reported "he was assisting in lifting a deceased person and pulled his back when the other person on [sic] his side." Examination of the low back demonstrated tenderness, tightness, muscle spasm and limited range of motion. Dr. Polanco gave Claimant a Toradol injection and recommended physical therapy. He took Claimant off work for through December 24, 2016, and opined Claimant could return to sedentary work starting December 25.

9. Also on December 21, Claimant emailed Mr. Trim a written report of injury. Claimant's email states "McCulley was positioned at the head of the deceased patient, and I was positioned at the feet. As I was attempting to assist McCulley with the transfer of the deceased patient onto the mortuary gurney, McCulley let go of the head of the gurney, which in turn left me with the full weight of the deceased patient, along with the gurney. It was at this time that I sustained the injury to my lower back."

10. Claimant was seen at the Memorial Hospital emergency room on the evening of December 22. He reported that he "works here is a security guard and states that when he was helping lift a body for the morgue x2 days ago, the other individual let go of the body and he held the full weight of the body." Claimant was diagnosed with a lumbar strain and advised to "avoid heavy lifting."

11. Claimant was dissatisfied with Dr. Polanco and was allowed to change providers to Concentra. Claimant first went to Concentra on December 27, 2016 and saw Kenneth Ginsburg, PA-C. Claimant described the same mechanism of injury to PA-C Ginsburg. On examination, Claimant had palpable lumbar muscle spasms and limited range of motion.

12. Claimant had a lumbar MRI on January 11, 2017. The MRI showed a right-sided disc herniation at L1-2 displacing the right L2 nerve root, a herniation with

annular tearing at L4-5 abutting the left L4 and L5 nerve roots, an L5-S1 disc herniation with annular tearing, and straightening of the spine compatible with spasm.

13. Claimant underwent an Independent Medical Examination (IME) with Dr. Timothy O'Brien on April 6, 2017 at Respondents' request. Claimant told Dr. O'Brien he injured his back during a body transfer when a funeral home worker let go of his side of the body. Dr. O'Brien opined Claimant suffered a minor lumbosacral sprain/strain, but that many of his findings were "nonorganic" in nature. He opined Claimant had healed from his minor injury and reached MMI before the April 6 examination. Nonetheless, Dr. O'Brien agreed the mechanism of injury was sufficient to cause at least a temporary strain/sprain of Claimant's lumbar spine.

14. Claimant subsequently underwent an IME with Dr. Timothy Hall on May 5, 2017 at his counsel's request. Claimant reported the same mechanism of injury he had described to other providers. Dr. Hall diagnosed a low back sprain with SI joint involvement. Dr. Hall disagreed with Dr. O'Brien's characterization of Claimant's injury is "minor." Dr. Hall indicated he found nothing "nonorganic" about Claimant's presentation.

15. Ty McCulley and Jerry Santos testified via deposition on behalf of Respondents. Mr. Santos is the brother-in-law of the funeral home's owner. He works "off and on" for the funeral home, filling in where needed, including morgue pickup. Mr. Santos testified nothing out of the ordinary occurred on December 20, 2016 when they retrieved the corpse from Memorial Hospital. Mr. Santos testified the funeral home employees do all the work, and hospital employees "never" touch the bodies did not assist with moving the corpses "in any way."

16. Mr. McCulley works as a funeral director for the funeral home. He is also the owner's nephew. Mr. McCulley testified he and Mr. Santos pulled the body from the hospital gurney to their gurney without assistance. Claimant merely stood on the opposite side of the gurneys to brace them so they did not roll apart. He testified there was no incident regarding the body. Mr. McCulley did not recall Claimant mentioning being in pain or exhibiting any outward symptoms of pain.

17. Both medical experts testified at hearing consistently with their IME reports. Dr. Hall stressed he witnessed no "nonorganic" findings on physical examination such as those observed by Dr. O'Brien. Dr. Hall testified he had reviewed the preinjury chiropractic records that were not available at the time of his IME. He opined that the previous records were essentially irrelevant because there was no question of apportionment and he believed Claimant clearly suffered an injury on December 20, 2016.

18. Dr. O'Brien stood by his opinion that Claimant exhibited significant nonorganic findings on examination. Dr. O'Brien reiterated that Claimant suffered only a minor strain as a result of the incident on December 20, which would have healed quickly.

19. Claimant's testimony is credible and persuasive.

20. Claimant proved by a preponderance of the evidence he suffered a compensable injury on December 20, 2016.

21. For the pay periods ending January 8, 2016 through December 22, 2016, Claimant earned gross wages totaling $28,543.98.

22. Claimant's AWW is $548.92.

23. Claimant has been continuously disabled and suffered a total wage loss since December 21, 2016 as a result of his industrial injury.

24. Claimant has not been put at MMI or released to regular duty by any ATP.

25. Claimant is entitled to TTD benefits commencing December 21, 2016.

26. Claimant is entitled to a general award of reasonable, necessary and related medical treatment.

CONCLUSIONS OF LAW

A. Claimant's low back injury is compensable

To receive compensation or medical benefits, Claimant must prove that he is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett*, 33 P.3d 1230 (Colo. App. 2001). Claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). The claimant must prove entitlement to benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case are not interpreted liberally, in favor of either claimant or respondents. Section 8-43-201.

The fact that a claimant suffers from a pre-existing condition does not disqualify a claim for compensation. If a claimant's work aggravates, accelerates, or combines with a preexisting condition to produce disability or a need for treatment, the claim is compensable. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990).

In assessing the credibility of witnesses, the ALJ can consider numerous factors including the consistency, reasonableness or plausibility the testimony, the extent to which the testimony is supported or contradicted by other evidence, the motives of the witness, and the possibility of bias, prejudice or interest. *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); CJI-Civ. 3:16. In this case, none of the lay witnesses can be considered disinterested. The Claimant obviously has a financial stake in the outcome of the case, but Mr. McCulley and Mr. Santos also have incentive

to protect themselves and their family business from potential liability for causing or contributing to Claimant's injury.

With conflicting testimony from lay witnesses on both sides, the ALJ relied heavily on the contemporaneous medical records, employer records and statements. Claimant has consistently attributed the onset of his back pain to an incident that occurred while moving a body in the morgue. He verbally reported the injury to his supervisor shortly after it happened, and submitted a written report the next day. Over the next two days, Claimant recounted the same history to three different medical providers. At the hearing, Claimant presented as forthright and sincere, describing the event in a manner consistent with the history documented in the medical and employer records.

Additionally, Claimant's physical condition appears to have changed significantly since December 20, 2016. Although Claimant has a history of intermittent low back problems and episodic chiropractic treatment, he was working and performing daily activities without limitation immediately before December 20. In early September 2016, his chiropractor noted Claimant's low back pain was 80% improved with good tolerance for sitting, standing and walking. He was discharged to follow-up "PRN," and required no further treatment until December 21, 2016. By contrast, medical records since the date of injury consistently document severe back pain, limited range of motion and muscle spasm.

The ALJ is persuaded that something happened around December 20 to cause the onset of Claimant's severe symptoms, and there is no persuasive evidence of any nonwork-related trigger. Based on the totality of evidence presented, the ALJ concludes the most likely catalyst for Claimant's symptoms after December 20, 2016 was the work-related incident he described.

B. Claimant's AWW is $549.39

Under § 8-42-102(3), the ALJ has discretion to determine the claimant's AWW by any method that will "fairly" calculate the claimant's typical preinjury earnings. The entire objective of AWW calculation is to arrive at a fair approximation of the claimant's actual wage loss and diminished earning capacity as a result of the industrial injury. *Campbell v. IBM Corp*., 867 P.2d 77 (Colo. App. 1993).

As found, Claimant earned gross wages totaling $28,543.98 in the pay periods ending January 8, 2016 through December 22, 2016. This period covers 52 weeks, during which Claimant's wages fluctuated from a low of $426.58 per week to a high of $757.17. Given the variability in Claimant's earnings, the ALJ concludes it is most appropriate to average his wages over a longer period. $28,543.98 ÷ 52 weeks = $549.39.

C. Claimant is entitled to TTD benefits commencing December 21, 2016

A claimant is entitled to TTD benefits if the injury causes a disability, the disability causes the claimant to leave work, and the claimant misses more than three regular

working days. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The claimant must establish a causal connection between a work-related injury and the subsequent wage loss to obtain TTD benefits. *Id*. The term disability connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). Impairment of earning capacity may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). Once the claimant establishes temporary disability, the right to benefits is measured by the degree of the wage loss, not the claimant's willingness to seek employment or the claimant's hypothetical ability to perform modified employment. *Black Roofing Inc. v. West*, 967 P.2d 195 (Colo. App. 1998); *Denny's Restaurant, Inc. v. Husson*, 746 P.2d 63 (Colo. App. 1987).

The persuasive evidence shows that Claimant was disabled by and suffered a wage loss as a direct and proximate consequence of his industrial injury. He has been under restrictions and unable to perform his regular job since December 21, 2016.

Once commenced, TTD benefits continue until one of the terminating events enumerated in § 8-42-105(3). Claimant has not been put at MMI by any ATP, released to regular duty, or returned to work. Although Claimant was released to modified duty, Employer has not offered him any work within his restrictions. Dr. O'Brien's opinion that Claimant is at MMI is legally insufficient to terminate TTD benefits absent a determination of MMI by an ATP or a DIME. *Brown v. Ace Hardware Corp*., W.C. No. 4-791-494 (ICAO, October 22, 2010); *Garcia v. Express Personnel*, W.C. No. 4-587-458 (ICAO, August 24, 2004); *Chaussart v. City of Boulder*, W.C. No. 4-933-742-02 (ICAO, November 14, 2014). Accordingly, Claimant is entitled to TTD benefits from December 21, 2016 ongoing.

D. Claimant is entitled to medical treatment for the compensable injury

The respondents are liable for medical treatment which is reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a); *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997). Where a claimant's entitlement to medical benefits is disputed, the claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999).

Having found the claim to be compensable, it follows that Claimant is entitled to all reasonable, necessary, and related treatment for his industrial injury. Claimant requested no specific medical treatment, so the ALJ will only issue a general award of medical benefits.

ORDER

It is therefore ordered that:

1. Insurer shall pay Claimant TTD benefits at the rate of $366.26 per week commencing December 21, 2016 and continuing until terminated by law.

2. Insurer shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

3. Insurer shall cover all reasonable and necessary medical treatment from authorized providers to cure and relieve the effects of Claimant's December 20, 2016 injury.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 10, 2017

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 4-964-260-01

STIPULATION

At the commencement of the hearing, the parties stipulated that Claimant received an overpayment of $14,709.96, for his receipt of TTD benefits between November 10, 2015, and August 17, 2016, which was the period between Claimant release at maximum medical improvement (MMI) and the date the Final Admission of Liability (FAL) was filed pursuant to the DIME physician's report.

REMAINING ISSUES

I. Whether Claimant has established by clear and convincing evidence that Dr. Stieg's impairment rating opinions are highly probably incorrect and if so what is the correct impairment rating associated with Claimant's industrial injury;

II. Whether Respondents have established by a preponderance of the evidence that they are entitled to credit the value of Claimant's 5% impairment rating against the value of continued TTD payments made to Claimant between the original release at MMI, the DIME and the subsequent FAL in addition to an alleged overpayment in temporary disability benefits paid during the time period of October 2, 2014 through November 9, 2015 while Claimant was working for Specialty Sports.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant suffered an admitted injury to his lower back while working for Employer on July 17, 2014.

2. Claimant testified and the initial medical records indicate that he was shoveling sand off a conveyor belt when he felt a pop in his low back. He developed low back pain and difficulty walking prompting him to report the injury and seek treatment.

3. Claimant has had prior back injuries and has been bothered on and off by back pain in the past.

4. On August 29, 2014, an MRI of the lumbar spine was performed which was interpreted as revealing mild degenerative disc disease with facet involvement with mild bilateral neural foraminal narrowing at L2-3 and minimal narrowing at L3-4.

5. A repeat MRI of the lumbar spine was completed on December 10, 2014. The

results were compared to the prior MRI, after which it was noted that there was an increase in synovitis with reactive edema around the L4-5 facet joint with soft tissue edema "tracks" into the left L4-5 foramen, as well as borderline L4-5 central canal stenosis.

6. On December 18, 2014, Dr. Michael Sparr issued a report regarding the results

of an EMG study which he felt contained findings "consistent with a longstanding sensorimotor axonal and demyelinating peripheral neuropathy and completely unrelated to Claimant's July 17, 2014 work injury.

7. Dr. Sparr saw Claimant on January 26, 2015, at which time Dr. Sparr found:

> "He is diffusely tender to even light touch from L1 through the sacrum bilaterally and over diffuse gluteal muscles. This is evident with only very light skin touch. Waddell's are positive today for axial loading, regional pain complaints, diffuse overreaction. . . ."

8. Dr. Sparr went on to note that the findings of Claimant's MRI showed mild degenerative findings which were inconsistent with his pain and numbness complaints.

9. Plain view x-rays of the lumbar spine obtained at Penrose hospital obtained February 18, 2015 demonstrated "evidence of moderate multilevel degenerative disc and facet joint changes throughout the lumbar spine, and 2-3mm of anterolisthesis at L4-5."[1]

10. Claimant underwent several injections, but he testified that "they didn't do any good."

11. During Claimant's course of treatment, Dr. Scott Primack authored three separate reports concerning various treatment modalities recommended by some of Claimant's authorized treating physicians. In a report addressing the reasonableness and necessity of continued injections, Dr. Primack opined that additional injections were not warranted since a previous set of injections proved unhelpful, and non-diagnostic. He also recommended a follow up EMG/Nerve conduction study to confirm the results of Dr. Sparr's findings.

12. A follow up EMG/NCS was performed on June 22, 2015, by Dr. William Seybold, which verified that Claimant continued to exhibit signs of polyneuropathy, not radiculopathy.

13. In considering and comparing Claimant's negative diagnostic response to a transforaminal epidural steroid injection along with the objective results of the EMG/nerve conduction studies with his MRI findings, Dr. Primack opined that

[1] This information is contained in the Division Independent Medical Examination (DIME) report of Dr. Stieg.

Claimant's continued pain complaints were more reasonably related to a previously diagnosed peripheral polyneuropathy.

14. Dr. Primack also testified that internal fear constructs, i.e. pain behavior associated with Claimant's documented; pre-existing, non-work related conditions could influence his level of effort during motion testing and thus, the validity of his lumbar range of motion measurements.

15. Claimant underwent a Functional Capacity Evaluation (FCE) at Excel Physical Therapy (Excel) on November 8, 2015. As part of this evaluation, lumbar range of motion testing was performed. Claimant's range of motion loss pursuant to this testing totaled 16% whole person impairment.

16. Claimant returned to Colorado Springs Health Partners, his authorized providers on November 10, 2015 where he was evaluated by Dr. Shireen Rudderow on November 10, 2015. Dr. Rudderow placed Claimant at maximum medical improvement (MMI) after receiving conservative care for more than a year noting further that a permanent impairment rating would be received within fourteen days.

17. Dr. Robert Baptist, revaluated Claimant for permanent impairment on December 10, 2015. In his report generated after this encounter, Dr. Baptist wrote that he spoke with Claimant regarding his care noting further that all other treatment providers had considered Claimant at or near MMI. Consequently he assumed that Claimant's care was complete, a fact which Claimant understood and accepted. As part of his evaluation, Dr. Baptist indicated that Claimant's medical situation presented as "very complex." It was noted that Claimant was "almost totally refractory to any treatment modalities" and that his prognosis for improvement was poor. According to Dr. Baptist, Claimant's only "hope for improved pain relief was an implantable spinal stimulator which he recommended as maintenance care.

18. As part of his impairment rating, Dr. Baptist relied upon, but slightly altered Claimant's impairment for range of motion loss as determined by the physical therapist during the FCE as Excel. Specifically, Dr. Baptist found that Claimant's loss of lumbar extension equated to 6% impairment, not 5% as calculated by the physical therapist. Consequently, the full amount of impairment for range of motion loss totaled 17% rather than 16%.

19. Dr. Baptist would go on to supplement the range of motion impairment with 7% impairment for a Table 53 diagnosis citing "moderate degenerative changes" as the basis despite that the MRI's noting the presence of "mild degenerative changes." Additionally, Dr. Baptist provided a total of 8% whole person impairment for motor and sensory nerve impairment which he admitted was somewhat of an arbitrary calculation given that the Claimant was "very difficult to assess." Dr. Baptist combined the various components of Claimant's impairment rating reach a final combined whole person impairment rating of 29%.

20. The existence of a polyneuropathy would prompt Dr. Primack to opine that

Claimant's leg pain was not claim related. Accordingly, Dr. Primack did not consider Claimant to be an appropriate candidate for the placement of a spinal cord stimulator as part of this claim as recommended by Dr. Baptist.

21. Respondents timely challenged the 29% rating and initiated the Division Independent Medical Examination (DIME) process. Dr. Richard Stieg was selected as the DIME physician.

22. On June 21, 2016, Claimant attended the requested DIME with Dr. Stieg.

23. Dr. Stieg undertook a review of Claimant's medical records dating back to 1990. He also performed a physical examination and referenced the amount of motion Claimant had in his lumbar spine. Despite Respondents suggestion otherwise, there is a dearth of evidence to suggest that Dr. Stieg took formal lumbar range of motion measurements. He issued his DIME Report on July 15, 2016. In his DIME report Dr. Stieg agreed with Dr. Rudderow's MMI date of November 10, 2015 and concluded that Claimant was entitled to a Table 53 rating of 5%.

24. As part of his physical examination, Dr. Stieg found that Claimant "tender to some degree over both SI joints, but all provocation testing at the hips [was] negative for the production for radicular pain or SI pain." He also noted that Claimant "[exhibited] 4/5 Waddell's signs with increased back pain being reported on simulated axial load and simulated axial rotation . . . ."

25. Though Dr. Stieg specifically noted that Claimant had "very minimal motions of the lumbar spine in flexion/extension and side bending", he did not include any range of motion measurement worksheets serving to demonstrate that formal "testing" was completed, choosing instead to state:

> I am giving the patient a final impairment rating based on his mild to moderate degenerative lumbar disease. He has no objective evidence of radiculopathy to allow me to offer any impairment for neurological findings. His range of motion testing coupled with Waddell's findings, although technically valid is incompatible with the radiology findings. That coupled with clear cut evidence of symptom magnification (positive Waddell's signs) does not allow for any impairment for loss of range of motion.

26. Based upon the evidence presented, the ALJ finds that Dr. Stieg technically invalidated Claimant's lumbar range of motion measurements secondary to his opinion that the measurements were non-physiologic and incongruent with the objective findings on imaging.

27. Respondents filed a Final Admission of Liability (FAL) based on the DIME report of Dr. Stieg on August 19, 2016. In the FAL, Respondents took credit for the value of Claimant's 5% impairment rating against the value of continued TTD payments made to

Claimant between the original release at MMI, the DIME and the subsequent FAL. After taking credit, Claimant was left with an overpayment which, by stipulation of the parties, amounted to $14,709.96. Respondents also reserved the issue of an additional overpayment of TTD benefits noting, "Respondents retain the right to reimbursement of additional overpayment amounts based on claimant's receipt of TTD benefits while maintaining employment."

28. From the date of injury through the date of MMI, Claimant received $50,883.50 in TTD benefits. During the same time period, Claimant was employed at Specialty Sports where he earned a total of $28,549.78. Based upon the evidence presented, two-thirds of the difference between what Claimant would have made in full duty work with Employer and what he made while working at Specialty Sports equals $37,130.89. Because Claimant was paid TTD benefits in the amount of $50,883.50, but was entitled only to temporary partial disability in the amount of $37,130.89, he has been overpaid in TTD in the amount of $13,752.61. Consequently, Respondents have proven that there is an additional overpayment in TTD benefits paid to Claimant while he was working at Specialty Sports. The evidence presented persuades the ALJ that the total amount of overpayment of benefits in this case is equal to $28,462.57 ($14,709.96 + $13,752.61= $28,462.57).

29. Claimant timely objected to Respondents' August 19, 2016 FAL and filed an Application for Hearing endorsing the issue of "overcoming DIME." Respondents timely responded to the application endorsing issues of causation, apportionment, and overpayment.

30. At hearing, Claimant presented the testimony of Dr. John Hughes, who was endorsed as an expert in occupational medicine.

31. Relying primarily on Desk Aid 11, Dr. Hughes testified that Dr. Stieg's failure to attach range of motion worksheets, whether the range of motion measurements were valid or not, to the DIME report left the report incomplete and fatally flawed. Dr. Hughes also noted that the lack of range of motion worksheets coupled with the content of the DIME raises the appearance that formal range of motion testing was not done. Finally, while he agreed that it was within Dr. Stieg's discretion to invalidate range of motion secondary to the presence of significant pain behavior and being non-physiologic, Dr. Hughes suggested that Dr. Stieg erred in failing to reference another complete, but invalid range of motion study as the basis for his decision to invalidate subsequent range of motion and have the Claimant return for a second round of range of motion measurements as provided for by Desk Aid 11.

32. Dr. Scott Primack testified at hearing as an expert in physical medicine with a sub-specialty in electro diagnostic medicine. Dr. Primack testified in support of the findings of Dr. Stieg's DIME report. In his testimony, Dr. Primack explained that Dr. Stieg's nullification and lack of attachment of range of motion measurement was within his discretion, was in accordance with the Division's Level II accreditation, and was consistent with the AMA Guides, Third Edition Revised.

33. Specifically, Dr. Primack testified as follows:

> And you know, whether you want to put in the work sheets or not, the work sheets are going to be invalid, so I don't think that by not having the work sheet it invalidates all of the work that he did, because he went through some pretty extensive notes.

34. After a discussion of the differing reports and findings of the various treatment providers in the record, Dr. Primack testified that the questions concerning validity of Claimant's pain complaints, range of motion measurements, and diagnosis were nothing more than "physician's different opinions."

35. Based upon the evidence presented, the ALJ finds Dr. Hughes' opinions concerning the validity of Dr. Stieg's DIME report more persuasive than the contrary opinions of Dr. Primack. While the record evidence supports clear differences of opinion between Dr. Baptist and Dr. Stieg concerning Claimant's diagnosis, pain complaints and range of motion measurements, the challenges to Dr. Stieg's DIME opinions are based upon his failure to adhere to established methods/protocols regarding the testing and documentation of range of motion measurements. It is undisputed that Dr. Stieg failed to attach range of motion worksheets to his DIME report. Moreover, the evidence presented persuades the ALJ that Dr. Stieg failed to reference another report wherein range of motion was invalidated or schedule Claimant for a second set of range of motion measurements as referenced by Desk Aid 11.

36. The combination of Dr. Stieg's failure to attach worksheets to his DIME report coupled with his failure to reference/accept another report which invalidated range of motion measurements or bring Claimant back for a second set of measurements constitutes clear and convincing evidence that formal range of motion testing was not done in this case rendering the legitimacy of his opinions concerning the degree of impairment associated with range of motion loss in this case suspect and highly probably incorrect. Consequently, Claimant has met his required legal burden to set Dr. Stieg's opinion regarding impairment associated with range of motion loss aside.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law, and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or

unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Clam Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The ALJ, as fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion). As found here, Dr. Hughes' opinions are supported by the content of the medical record he reviewed and Desk Aid 11. As such, the ALJ finds Dr. Hughes' opinions credible and convincing. Moreover, there is substantial persuasive evidence to support a conclusion that Dr. Stieg deviated from the accepted methodology of the AMA Guidelines, the tenets set forth by the Division of Worker's Compensation in Desk Aid 11 as well as the principles of the Level II Accreditation Curriculum when he completed the DIME in this case. Consequently, the ALJ rejects Dr. Stieg's opinions regarding range of motion impairment as unpersuasive and highly probably incorrect.

Overcoming the DIME Physician's Impairment Rating

C. A DIME physician's findings of causation, MMI and impairment are binding on the parties unless overcome by "clear and convincing evidence." Section 8-42-107(8)(b)(III), C.R.S.; *Qual-Med v. Industrial Claim Appears Office*, 961 P.2d 590 (Colo. App. 1998); *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinion concerning impairment is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995) In other words, to overcome a DIME physician's opinion regarding impairment, the party challenging the DIME must demonstrate that the physicians determinations in these regards are highly probably incorrect and this evidence must be "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo. App. 2002). *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appears Office, supra.*

D. In resolving the question of whether the DIME physician's opinions have been overcome, the ALJ may consider a variety of factors including whether the DIME physician properly applied the AMA Guides. *See Metro Moving and Storage Co. v Gussert,* 914 P.2d 411 (Colo. App. 1995); *Wackenhut Corp. v. Indus. Claim Appeals Office*, 17 P.3d 2002 (Colo. App. 2000); *Aldabbas v. Ultramar Diamond Shamrock*, W.C. No. 4-574-397 (ICAO August 18, 2004). The ALJ should also consider all of the DIME physician's written and oral testimony. *Lambert and Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998). As found here, the ALJ concurs with Claimant's expert (Dr. Hughes) that Dr. Stieg's failure to follow accepted rating protocols regarding the testing and documentation of range of motion loss/impairment renders the his report incomplete and his opinions regarding range of motion impairment fatally flawed.

E. Desk Aid 11, paragraph 5 reminds providers evaluating range of motion impairment to "attach all applicable work sheets to the narrative report and include this information to all legally concerned parties." More importantly, paragraph 10 provides that "[t]o invalidate spinal range of motion impairment, claimants must have two visits" where "[t]wo sets of three measurements must be taken on each visit (12 measurements total)(emphasis in original). However the tip provides that if a "physician performing a Division IME finds range of motion measurements invalid (due to SLR check or for physiologic reasons) such physician may fulfill this requirement by accepting invalidated measurements from other reports in lieu of bringing the claimant back for a second set of measurements." Nonetheless, the tip notes that the "physician must, however, report his/her own initial sets of measurements", referencing the Level II Accreditation Curriculum for range of motion testing for the spine. As found, Dr. Stieg failed to actually reference any formal range of motion testing measurements in his DIME report or follow any of the aforementioned protocols encouraged by the Division of Worker's Compensation and referenced in the AMA Guides and/or Level II Accreditation Curriculum. Respondents' suggestion that Dr. Stieg's explanation of the reasoning he invalidated the range of motion makes the need to attach worksheets "extraneous and immaterial" is unconvincing as it assumes that formal range of motion testing was done in this case and completely ignores the need to cite to a previous report invalidating range of motion or have the claimant return for a second set of measurements. Here, the convincing evidence presented persuades the undersigned that Dr. Stieg did neither. Consequently, the ALJ concludes the DIME in this case is fatally flawed and the opinion of Dr. Stieg regarding range of motion impairment highly probably incorrect.

F. Where the ALJ determines that the DIME physician's opinion has been overcome, the question of the claimant's correct medical impairment rating then becomes a question of fact for the ALJ. The only limitation is that the ALJ's findings must be supported by the record and consistent with the AMA Guides and other rating protocols. Thus, once the ALJ determines that the DIME's opinion has been overcome in any respect, the ALJ is free to calculate the claimant's impairment rating based upon the preponderance of the evidence. *Garlets v. Memorial Hospital,* W.C. No. 4-336-566 (September 5, 2001). In this case, the undersigned concludes that Dr. Baptist's

impairment rating for spinal disorders, i.e. 7% from Table 53 of the AMA Guides to the Evaluation of Permanent Impairment, Third Edition (*Revised*), hereinafter the "AMA Guides", is supported by the record. The written record is replete with reference to moderate degenerative changes revealed by imaging study, including x-ray. Even Dr. Stieg provides the following impression of the lumbar spine: "[m]ild to moderate disc and joint degenerative disease of the lumbar spine without evidence of specific radiculopathy" (emphasis added). Moreover, Dr. Stieg rated Claimant for "mild to moderate degenerative lumbar disease. Regarding the spinal range of motion impairment as determined by Dr. Baptist along with his Table 49 nerve rating is supported by the content of the medical records associated with Claimant's injury, the undersigned concludes that these aspects of Claimant's impairment rating are also supported by the record. While Dr. Baptist calculated 17% impairment for range of motion loss and Claimant has polyneuropathy, Claimant's range of motion measurements were valid and Respondents failed to present evidence of a specific error committed by Dr. Baptist in assigning Table 49 spinal nerve root impairment. Indeed, Dr. Stieg did not opine that Claimant's leg pain was exclusively caused by his polyneuropathy. Rather, he noted simply that the "majority" of Claimant's leg pain was related to polyneuropathy and that while there was a suggestion that Claimant may have radiculitis there was no evidence of radiculopathy. Consequently, he elected not to rate Claimant's leg pain. On the other hand, Dr. Baptist felt that Claimant's imaging supported a finding inflammation and fluid accumulation sufficient to produce an acute radiculopathy. Thus, he elected to rate Claimant's leg pain. Based upon the evidence presented, the ALJ concludes only that there is a difference of opinion between Dr. Baptist and Dr. Stieg as it pertains to these aspects of Claimant's impairment. A mere difference of opinion between physicians fails to constitute error. *See Gonzales v. Browning Farris Indust. of Colorado*, W.C. No. 4-350-356 (ICAO March 22, 2000). Accordingly, the ALJ concludes that Claimant's true impairment ratings causally related to his July 17, 2014 industrial injury is 29% as calculated by Dr. Baptist.

Credits & Overpayments

G. Section 8-40-201(15.5), C.R.S. provides as follows:

> "Overpayment" means money received by a claimant that exceeds the amount that should have been paid, or which the claimant was not entitled to receive, or which results in duplicate benefits because of offsets that reduce disability or death benefits payable under said articles. For an overpayment to result, it is not necessary that the overpayment exist at the time the claimant received disability benefits under said articles.

Thus, §8-40-201(15.5), C.R.S. provides for three categories of possible overpayment: (1) a claimant receives money "that exceeds the amount that should have been paid"; (2) money received that a "claimant was not entitled to receive"; and (3) money received that "results in duplicate benefits because of offsets that reduce disability or death benefits" payable under articles 40 to 47 of Title 8. *See Simpson v. Industrial Claim*

Appeals Office, 219 P.3d 354 (Colo. App. 2009), *rev'd in part on other grounds, Benchmark/Elite, Inc. v. Simpson,* 232 P.3d 777 (Colo. 2010).

H. Respondents bear the burden, by a preponderance of the evidence that Claimant received an overpayment of TTD benefits. Respondents' assertion of the right to recover an overpayment is a factual matter for determination by the ALJ. *Karyn Milazzo v. Total Long-term Care*, *Inc.*, W.C. No. 4-852-795-02, (ICAP Jun. 11, 2014). In this case, the ALJ agrees that Respondents properly preserved the issue of an additional overpayment in their Final Admission and in Response to Claimant's Application for Hearing for Claimant receipt of wages while working at Specialty Sports.

I. Section 8-42-105(3)(b), C.R.S. (2016) mandates termination of TTD benefits when an "employee returns to regular or modified employment." Modified employment is "employment which is modified in accordance with the limitations and restrictions imposed by the attending physician." *Holt v. Hyper Shoppes Colo. Inc.*, W.C. 4-176-897 (ICAP. Nov. 17, 1994). In this case, Claimant was working modified employment within his restrictions at Specialty Sports from October 2, 2014, through November 9, 2015 while receiving TTD. Accordingly, an overpayment occurred because Claimant received TTD benefits in excess of TPD benefits he was entitled to while maintaining employment, and because the excess TTD was "money the Claimant was not entitled to receive." Claimant's undisputed testimony included, in reference to Exhibits A and G:

> Q: This indicates that you received temporary total disability benefits from the period of October 2nd, 2014 to November 9th, 2015. Is that correct?
>
> A: Yes.
>
> Q: And during that period, were you also employed with Specialty Sports?
>
> A: Yes.
>
> Q: And the exhibit -- does Exhibit G accurately reflect the wages you earned during that period of time?
>
> A: Yes.

(Hrg. Tr. 48:25-49:11).

J. It is axiomatic, that when an employee maintains modified employment prior to MMI, Temporary Partial Disability Benefits are the appropriate measure of benefits. *Magnetic Engn'g, Inc. v. Indus. Claim Apps. Office*, 5 P.3d 358, 390 (Colo. App. 2000). Temporary Partial Disability Benefits are awarded at a rate of two third's the difference between Claimant's average weekly wage and those which he was receiving in a modified employment role. §8-42-106(1), C.R.S. (2016). Temporary partial benefits

account for the difference in Claimant's admitted average weekly wage, and the amount of money Claimant earns in a modified duty role. In this case, because Claimant was working modified duty at a wage less than his uncontested admitted average weekly wage, he was entitled to two-thirds of the difference of the wage earned and his admitted AWW. The difference in the amount Claimant received in TTD and that which he was entitled to in TPD was calculated in Respondent's position statement and is not reproduced here for brevity's sake.

ORDER

It is therefore ordered that:

1. The DIME opinions of Dr. Stieg regarding impairment have been overcome and are hereby set aside.

2. Respondents shall pay permanent partial disability benefits to Claimant in accordance with a whole person impairment of 29% as calculated by Dr. Baptist.

3. The stipulation of the parties that Claimant has been overpaid by $14,709.96 is approved. Furthermore, Respondents have proven that an additional overpayment of TTD in the amount of $13,752.61 exists in their favor. Therefore, Respondents are entitled to recover an overpayment in benefits paid to Claimant totaling $28,462.57.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's Supplemental Order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Whether Claimant proved by a preponderance of the evidence that he is entitled to post-MMI maintenance medical care.

FINDINGS OF FACT

1. On November 28, 2014, Claimant sustained an admitted industrial injury while working for Employer. Claimant injured his back while moving luggage. Claimant testified that he felt pain in his neck and down his back.

2. On November 28th, Claimant was evaluated by Candice Sobanski, M.D., the ATP for Employer. Claimant complained of left lower back pain, but he denied radiation of pain into his legs. On the physical exam, Dr. Sobanski found tenderness at level L3 and S1 left paraspinal, as well as left-sided muscle spasms on palpation. Dr. Sobanski diagnosed a lumbar strain, prescribed Ibuprofen for Claimant and ordered physical therapy ("PT").

3. Claimant received PT with Darwin Abrams, PT at Concentra. On December 26, 2014, Claimant reported some improvement, but had mid-back pain. The PT treatments continued. Claimant registered similar complains on January 9 and 30, 2015.

4. Claimant was evaluated by Allison Fall, M.D. on January 23, 2015. Claimant indicated he had right-sided back pain, but no weakness, numbness or tingling in the lower extremities. No visible muscle spasms were found in the thoracic region, however, there was diffuse myofacial tenderness. Claimant's neurological examination was negative. Dr. Fall reviewed Claimant's lumbar MRI, noting there was a disc bulge, which was considered normal for his age. There was no indication of any nerve root compression or other acute abnormality. Dr. Fall's diagnosis was: thoracolumbar myofacial pain. She opined Claimant was deconditioned and not ready for the work he was performing. She recommended PT two times per week for three weeks, but declined to change his work restrictions. Dr. Fall did not prescribe new medications, but decided to review his medications at the next appointment.

5. At the physical therapy appointment on January 30, 2015, Claimant reported he was about the same with his pain at a 7/10. Claimant reported upper back/neck and mid-back pain. The therapist noted Claimant was not making progress towards his goals. His overall progress was slower than expected and he continued to complain of pain which limited his progress.

6. On February 17, 2015, Claimant was re-evaluated by Dr. Fall. He complained of pain in the right thoracic lumbar area. Dr. Fall reviewed Claimant's medications which included Naproxen, ibuprofen, Cyclobenzaprine and Tramadol. Claimant said the only medication which helped his symptoms was Tramadol. Dr. Fall's assessment was thoracolumbar myofascial pain. Dr. Fall administered a trigger point injection and prescribed Gabapentin.

7. Claimant returned to Dr. Sobanski on March 11, 2015, reporting pain 4/10, as well as stiffness. He was not taking any medications. Dr. Sobanski noted diffuse tenderness in the lumbar spine, left and right paraspinal, but not the right sciatic notch. Dr. Sobanski's assessment was L4-L5 disc bulge and lumbar strain. She ordered continued massage and PT, as well as prescribing Cyclobenzaprine.

8. The PT records admitted at hearing documented Claimant received sixteen treatments through March 31, 2015. His medications included Cyclobenzaprine, ibuprofen and Tramadol as of that date. Claimant reported continued back pain at that time.

9. Claimant returned to Dr. Fall for a follow-up on April 28, 2015. Claimant reported pain at 4/10 and said he was not improving. Claimant was still working modified duty. On examination, Dr. Fall noted diffuse complaints of pain in the thoracolumbar region, without correlating findings. There was no spasming and no hypertonicity. Thoracic flexion, rotation, and extension were full. Claimant had no radicular symptoms. Dr. Fall's impression was: thoracolumbar myofascial pain without objective findings. Dr. Fall encouraged Claimant to increase his exercise program and plan to return to regular duty work. She did not schedule Claimant for a follow-up appointment and noted he would follow-up with Concentra. Claimant had no permanent impairment. Dr. Fall documented six additional massage visits were approved. She did not prescribe any medication.

10. There was no evidence in the record that Dr. Fall recommend any further treatment.

11. On May 11, 2015, Claimant was examined by Albert Hattem, M.D. Claimant was complaining of low back pain, but denied radiating leg pain or numbness. Dr. Hattem found slight paraspinous muscle tenderness, full ROM and no neurologic deficits. His impression was: six month history of low back pain in a patient who was employed for one month and had an MRI which was essentially normal. Dr. Hattem referred Claimant for a trial of chiropractic/acupuncture treatments.

12. The ALJ found Claimant did not complain of pain which radiated to his lower extremities to his ATPs.

13. Claimant returned to Dr. Hattem on August 14, 2015. Claimant complained of residual back pain, but no radiating leg pain or numbness. Dr. Hattem determined Claimant was at MMI and had no permanent impairment. He returned Claimant to heavy duty, with a permanent 50 pound lifting limit. Claimant was to

complete the previously authorized chiropractic treatment. No other medical treatment was recommended by Dr. Hattem.

14. There was no evidence in the record that Claimant continued to take prescription medications prescribed by an ATP after August 2015.

15. On March 7, 2016, Claimant underwent a Division of Workers' Compensation Independent Medical Evaluation ("DIME"), which was performed by Gareth Shemesh, M.D. Claimant reported persistent low back pain, especially with activity. He complained of intermittent radiating pain into the lower extremities to the knees. Claimant also reported intermittent numbness and tingling in the same distribution**.** The ALJ notes this was the first report of radicular-type pain. Claimant was taking ibuprofen. On examination, Dr. Shemesh found full range of motion ("ROM") in Claimant's cervical spine. Tenderness to palpation was found in his lumbosacral spine, with limitations in the ROM. Dr. Shemesh assigned a 9% permanent medical impairment.

16. Dr. Shemesh concurred Claimant was at MMI. For maintenance medical care, Dr. Shemesh stated Claimant should continue with active independent home exercises as instructed to him by the physical therapist and continue with over-the-counter NSAIDs as needed.

17. On September 8, 2016, a Final Admission of Liability ("FAL") was filed on behalf of Respondents. The FAL admitted for Dr. Shemesh's medical impairment rating. The FAL denied liability for post-MMI medical benefits.

18. Claimant testified he wished to return to PT for instruction in home exercises. He also wanted to take ibuprofen for his low back pain.

19. As the DIME physician, Dr. Shemesh's opinions regarding maintenance treatment were not binding and not subject to the clear and convincing evidentiary standard. The ALJ determined the opinions of Drs. Hattem and Fall (Claimant's ATPs) were more persuasive regarding the need for treatment after MMI.

20. Claimant failed to establish he was entitled to post-MMI medical benefits. The ALJ was persuaded by the fact that neither of Claimant's ATPs (Drs. Fall and Hattem) recommended further treatment at the time the last evaluated Claimant.

21. Evidence and inferences inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical

benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1),C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). In the case at bench, the focus of the ALJ was on the respective medical opinions on the issue of the need for continuing treatment.

Grover Medical Benefits

The claim for medical treatment beyond the point of maximum medical improvement is governed by *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). In *Grover v. Industrial Commission*, the Colorado Supreme Court authorized maintenance care to maintain MMI or to prevent further deterioration of a Claimant's condition. *Milco Construction v. Cowan,* 860 P.2d 539, 541 (Colo.App. 1992). An award for *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended, nor a finding that Claimant is actually receiving medical treatment. *Holly Nursing Care Center v ICAO*, 992 P.2d 701 (Colo. App. 1999). Claimant must prove entitlement to *Grover* medical benefits by a preponderance of the evidence. *Lerner v. Wal-Mart Stores, Inc.*, 865 P.2d 915 (Colo. App. 1993).

Claimant failed to show he was entitled to post-MMI medical benefits. First, there was no evidence in the record that any of the Claimant's ATPs recommended maintenance treatment. (Findings of Fact 8, 9 and 12). No recommendations for post-MMI treatment were made by Dr. Fall, Dr. Hattem or Dr. Sobanski beyond the previously authorized chiropractic treatments. In addition, at the time MMI was confirmed by Dr. Hattem, no medications were prescribed as part of medical maintenance treatment. (Finding of Fact 12). Both Dr. Fall and Dr. Hattem noted minimal objective findings when maintenance medical treatment was considered. (Findings of Fact 8 and 10). The ALJ found Dr. Shemesh's recommendations concerning maintenance treatment were not persuasive. (Finding of Fact 17). In this regard, Dr. Shemesh's opinions regarding post-MMI medical treatment were not entitled to deference, but considered with the opinions of Claimant's authorized treating physicians. The latter opinions were more persuasive the ALJ.

Second, Claimant's testimony, standing alone, did not meet his burden of proof by a preponderance of the evidence that he was entitled to *Grover* medical benefits. Accordingly, Claimant's claim for *Grover* medical benefits fails.

ORDER

It is therefore ordered that:

1. Claimant's request for *Grover* medical benefits is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-977-440-03

ISSUES

- Whether Respondents have demonstrated by clear and convincing evidence that the Division Independent Medical Examination of Dr. Bennett Machanic, M.D. has been overcome.

- Whether Claimant sustained disfigurement to his right ankle.

STIPULATIONS

- The parties stipulate that if Respondents are unable to overcome the DIME physician's findings that Claimant is entitled to temporary total disability benefits from June 16, 2016 ongoing, subject to applicable offsets including unemployment, and credit for any permanent partial disability benefits previously paid.

- The parties stipulate that the issue of disfigurement for Claimant's antalgic gait, if any, is held in abeyance and the Court will address the issue of Claimant's ankle disfigurement at this hearing.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant is 32 years old and has worked as a laborer for Employer for 6 to 7 years seasonally washing windows and shoveling snow off rooftops in Avon, Colorado.

2. On March 9, 2015, Claimant suffered compensable work-related injuries when he slipped off a sixteen foot and fell landing on concrete.

3. Claimant was immediately taken to the emergency room at Vail Valley Medical Center where he was diagnosed with an acute fracture of his left tibia, and acute fractures of both the right fibula and the right medial malleolus.

4. The emergency room physician, Dr. Hardenbergh, noted that Claimant fell 16 feet from a ladder and landed directly on his feet on the pavement. Dr. Hardenberg's physical examination of Claimant revealed a full range of motion in his neck and upper extremities. Claimant's back was non-tender on examination. Claimant testified that he complained to Dr. Hardenbergh of pain in his lower back, however the medical record does not include that complaint.

5. Claimant was referred to the on-call orthopedic surgeon, Dr. Richard Cunningham, at Vail Valley Medical Center. Dr. Cunningham recommended a non-surgical course with the left knee fracture, but an open reduction and internal fixation of the medial malleolus fracture and syndesmosis disruption due to the proximal right fibula fracture.

6. Dr. Cunningham noted that Claimant's chief complaint was right ankle and left knee pain. He did not note low back complaints. Further, he indicated that Claimant's accident was consistent with an acute lower extremity injury without further orthopedic complications.

7. On March 9, 2015, Dr. Cunningham Claimant performed the following surgical procedures:

- Open reduction and internal fixation of right displaced medial malleolus fracture

- Right ankle syndesmosis disruption

- Closed treatment of left minimally displaced tibial plateau fracture.

8. Claimant credibly testified that he remained in a wheelchair, non-weight bearing, from March 9, 2015 until his second operation. Claimant's testimony is corroborated by Dr. Cunningham's April 27, 2015 follow-up visit.

9. On May 6, 2015 ATP Cunningham surgically removed the hardware used to stabilize Claimant's ankle. The procedure enabled Claimant to "begin weight-bearing on his right lower extremity."

10. Claimant credibly testified that he had some back pain following his injury, but that his low back pain worsened as he stopped using the wheelchair, moved to crutches, and started physical therapy.

11. On October 12, 2015, ATP Cunningham noted:

> Claimant additionally complains of low back pain. He states that this pain has increased more since his activity and PT has increased over the past few months. Originally, we were focused mainly on his ankle and tibial plateau fracture, but as time has progressed his back pain has become more of an issue. His back pain often interferes with his physical therapy of his ankle and tibial plateau fractures. This is a workman's comp case and he is currently not working.

12. On October 12, 2015, ATP Cunningham's Plan noted, "with his continued low back pain, we've decided to order an MRI of his lumbar spine and refer him to Dr.

Raub for further care of his back pain. Once his MRI is approved, we will see him back to discuss the results.

13. However, on October 15, 2015, Respondents informed Dr. Cunningham that "[t]he lumbar area/back is not part of this claim."

14. On November 2, 2015 ATP Cunningham again noted,

> [Claimant] Complains of weakness of the lower left extremity. Denies any pain medication use at this time. He is not currently in formal physical therapy but following a structure home exercise program. He denies any recent acute injury.
>
> * * *
>
> We would like him to follow-up with a specialist for his continued low back pain. This began following his initial work-related injury and is most likely aggravated with the continued knee pain and antalgic gait.

15. In January 2016, Respondents instructed Claimant to obtain a primary care provider to follow through on care for his claim. Claimant began treating with ATP Gary Petry, M.D., at St. Vincent's Hospital – Leadville Medical Center.

16. On January 12, 2016, Dr. Petry evaluated Claimant and noted that Claimant was following up on his workers' compensation injury and that, "Through Dr. Cunningham trying to get MRI due to increase back pain." Dr. Petry opined that Claimant had back pain related to his "worker's description of accident/injury." Dr. Cunningham assessed low back pain, noting

> Pt is here tdy at request of WC to establish care with a PCP. HE has been followed by Dr. Cunningham for ORIF right ankle that has become symptomatic. In addition he is currently going to PT for the injuries he sustained under his WC case and is having increasing pain of his left knee for which he has a Feb. 8th [2016] am appointment with Dr. Cunningham to f/u. Pt states he has had back pain since the accident and that Dr. Cunningham has been requesting a MRI and F/U with Dr. Raub for his back pain but that WC will not approve.

17. On February 11, 2016 Claimant returned to ATP Cunningham who continued to opine that the low back pain was part of Claimant's work-related diagnosis. Dr. Petry noted:

> [Claimant] presents approximately 11 months status post open reduction internal fixation of a right displaced medial malleolus fracture and right ankle syndesmosis disruption and closed treatment of a left minimally displaced tibial

> plateau fracture following a work-related injury. . . . He reports symptoms in his back, ankle and knee. Pain does wake him at night. He also complains of numbness/tingling and weakness of both legs.

Dr. Petry assessed lumbar back pain with radiculopathy.

18. On February 29, 2016 Claimant returned to Dr. Petry who noted, "[Claimant] also, since the original injury, developed a complaint of back pain. Dr. Cunningham ordered an MRI and referral to Dr. Raub, but Workers' Compensation denied this as he had attempted to order an MRI of his back.

19. On March 16, 2016, Phyllis Pennington, D.O., filling in for Dr. Petry at St. Vincent's Hospital noted that the "back is pending review by W/C" and that Claimant had **"**numbness and tingling that could possibly be a component of the low back injury."

20. In early May, 2016 Claimant underwent a third surgery to remove right ankle hardware. At a follow-up visit with Dr. Cunningham, Claimant still complained of "numbness, tingling and weakness of the bilateral legs."

21. On May 19, 2016, Respondents asked Dr. Cunningham whether Claimant was at MMI. Dr. Cunningham responded that Claimant was expected to reach MMI in 2 to 3 months.

22. On June 16, 2016 ATP Cunningham placed Claimant at MMI. However, he requested that Claimant receive a spine evaluation, he maintained a work-related medical diagnosis of "low back pain," and maintained that Claimant needed to see a spine specialist. His note provides,

> At this point post-surgically, his right ankle and left knee show healing as anticipated. He continues to experience . . . pain to his lumbar spine with symptoms of radiculopathy as well as pain into his right groin. Unfortunately, at this point there is not much else we are able to offer Mr. Chavez in the way of treatment. We will place him at MMI today for workman's [sic] comp and have requested an impairment rating. We have also recommended a spine evaluation with Dr. Raub for lumbar radiculopathy.

23. On June 28, 2016, Dr. Petry also placed Claimant at MMI. However, he continued to assess low back pain.

24. On August 9, 2016, Allison Fall, M.D., evaluated Claimant at Respondents' request. She opined that Claimant had suffered a 5% extremity rating for his knee and a 6% extremity rating for his ankle. But she "did not find a work-related injury to the lumbar spine or the hip."

25. Respondents filed a Final Admission of Liability on two occasions. Claimant timely objected. On September 28, 2016 Claimant file an "Application for a Division Independent Medical Examination."

26. On December 21, 2016, Division independent medical evaluator, Bennett Machanic, M.D., evaluated Claimant. Based on his review of medical records and concerning clinical findings, Dr. Mechanic opined:

- Claimant had reached MMI for his right ankle and left knee.
- not at MMI.
- Claimant's work related injuries included his left knee and right ankle with bony abnormalities, an abnormal gait, difficulties with progressive low back pain greater than approximately 6 months.
- He was concerned about findings in Claimant's right foot which raised questions of secondary tarsal tunnel syndrome and the possibility of radicular dysfunction playing a role.
- He noted that previous physicians had noted problems of lumbar radiculopathy, and that previous attempts to obtain imaging of the lumbar spine had not been successful.

27. Dr. Mechanic did not believe that treatment providers had sufficiently evaluated Claimant's right leg for tarsal tunnel syndrome versus lumbar radiculopathy. He also opined that treatment providers had not evaluated Claimant's low back for secondary complications. Therefore, Claimant was not at MMI and those areas needed to be assessed. Dr. Mechanic proposed MRI films of Claimant's lumbar spine and an EMG nerve conduction study of Claimant's right lower extremity.

28. Claimant credibly testified at hearing that he has not yet had a lumbar MRI as requested by Drs. Cunningham, Petry, and Machanic. He expressed a desire to pursue an MRI and treatment of his lumbar spine.

29. Respondents retained Kathleen D'Angelo, M.D., who issued a Respondent-requested medical evaluation report on April 11, 2016 and a subsequent addendum. Dr. D'Angelo's deposition testimony is consistent with her report. Dr. D'Angelo opined that Claimant misled his physician's by not providing the history from his 2003 to 2005 emergency room visits and that the delay in reporting back symptoms indicated that the lumbar condition is not a work-related condition.

30. Dr. D'Angelo testified that even if Claimant had an antalgic gait, as soon as his gait returned to normal, his lower back symptoms would have

resolved. Therefore, she attributed Claimant's numbness and radicular symptoms to the 2005 car accident.

31. The ALJ finds this opinion not persuasive. No persuasive evidence supports a finding that Claimant ever suffered radicular symptoms after his April 21, 2005 car accident until this claim. Claimant reported no such symptoms and sought no treatment during that time frame. The ALJ finds it highly unlikely that Claimant's lumbar and radicular symptoms are attributable to his 2005 dislocated hip.

32. Respondents' exhibits contain medical records for two emergency room admissions at St. Vincent General Hospital.

- The October 2, 2003 admission involved a drug overdose and complications.

- The April 21, 2005 admission involved a left hip dislocation resulting from an automobile accident in which he was driving under the influence of alcohol. Claimant's dislocation was reduced and Claimant required no follow-up care. Claimant credibly testified he had no ongoing symptoms or medical concerns.

33. Claimant admitted in his testimony that he did not disclose these events to his workers' compensation doctors, Dr. Machanic, Dr. D'Angelo, and Dr. Ramos.

34. The ALJ does not find Dr. D'Angelo's opinions to be persuasive. Claimant's 2003 to 2005 emergency room visits were remote in time, did not involve the same body parts as his work injuries, and Claimant had been symptom free for over a decade. The ALJ finds it more likely than not that Claimant either forgot the other events or reasonably believed the other events were not relevant to the treatment of his work injuries.

35. Claimant retained Joseph Ramos, M.D., to perform a Claimant-requested independent medical evaluation. Dr. Ramos opined that the DIME physician was correct that Claimant was not at MMI for his lumbar condition, and that Claimant's lumbar condition is part of Claimant's admitted industrial injury.

36. Dr. D'Angelo's opinion is not well supported by the medical records of Drs. Cunningham, Petry, Machanic, and Ramos regarding the relatedness of Claimant's lumbar condition. Dr. D'Angelo's opinion is called into question, as she credibly testified in deposition that rarely do physicians make a recommendation for a spine specialist when placing an individual at MMI. Dr. D'Angelo's difference of opinion on whether Claimant's lumbar condition is related to his admitted 16 foot fall does not rise to the level of clear and convincing evidence.

37. Based on the totality of the evidence the ALJ finds and concludes that Respondents have failed to establish that the DIME opinion that Claimant's low back was injured in the course and scope of his employment for Employer when on March 9, 2015 he fell 16 feet, landing on his feet is in error by clear and convincing evidence.

38. Based on the totality of the evidence, the ALJ finds and concludes that the opinions of ATPs Cunningham, Petry, DIME physician Machanic and Claimant's medical evaluator Joseph Ramos that Claimant's low back condition was a result of his May 9, 2015 admitted industrial injury are more credible and persuasive than those of Respondents' experts Drs. D'Angelo and Fall.

39. Claimant has sustained a compensable permanent disfigurement as a result of his admitted injuries. Specifically Claimant has a two and one-half inch, highly discolored, raised and broad irregular scar; and a two and one-quarter inch highly discolored, raised and broad irregular scar on his lower right leg.

40. Any determination concerning other issues is premature at this time, as a matter of fact.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the "Workers Compensation Act of Colorado" (Act), Title 8, Articles 40 to 47, C.R.S., is to ensure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to the employers without the necessity of any litigation. C.R.S. § 8-40-102(1). A claimant in a workers' compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Therefore a claimant must prove by a preponderance of the evidence that his injury arose out of and in the course and scope of his employment. C.R.S. § 8-43-201*; City of Boulder v. Streeb,* 706 P.2d 786 (Colo. 1985).

A preponderance of the evidence is that which leads the trier of fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). *Industrial Commission v. Jones*, 688 P.2d 1116, 1119 (Colo. 1984). Proof that something happened at work, without more, is insufficient to carry burden of proof. *Finn v. Industrial Commission*, 165 Colo. 106 (1968). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000). The question of causation is generally one of fact for determination by the Judge. *Faulkner*, 12 P.3d at 846. A Workers' Compensation case is decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ does not address every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

Overcoming the DIME

Section 8-42-101(3.7) mandates that physicians rate an injured workers' impairments using the AMA *Guides:* "On and after July 1, 1991, all physical impairment ratings used under articles 40 and 47 of this title shall be based on the revised third edition of the 'American Medical Association Guides to the Evaluation of Permanent Impairment," in effect as of July 1, 1991." *Id.*

Further, a DIME's findings concerning medical impairment are binding unless overcome by clear and convincing evidence. C.R.S. § 8-42-107(8)(b)(III), *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186-90, 189 (Colo. App. 2002).

Clear and convincing evidence means "evidence which is stronger than a mere 'preponderance,' it is evidence that his highly probable and free from serious and substantial doubt." *Metro Moving & Storage Co v. Gussert, supra*, 914 P.2d at 414 (citing CJI-Civ. 3d 3:2 (1988); *DiLeo v. Kotlnow*, 200 Colo. 119, 613 P.2d 318 (1980)). Therefore, the party challenging a DIME's conclusion must demonstrate that it is "highly probable" that the DIME's impairment rating or maximum medical improvement (MMI) finding is incorrect. *Qual-Med, Inc. v. Indus. Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998)(citing *Metro Moving & Storage Co. v. Gussert, supra*). A party has met the burden or established that a DIME's impairment rating is incorrect only upon demonstrating that the evidence contradicting the DIME is "unmistakable and free from serious or substantial doubt." *Leming v. Indus. Claim Appeals Office*, 62 P.3d 1015, 1019 (Colo. App. 2002).

The enhanced burden of proof reflects an underlying assumption that the DIME, having been selected by an independent and unbiased tribunal, will provide a more reliable medical opinion. *Qual-Med, Inc. v. Industrial Claim Appeals Office, supra*. Since the DIME physician is required to identify and evaluate all losses and restrictions which result from the industrial injury as part of the diagnostic assessments process, the DIME physician's opinion regarding causation of those losses and restrictions is subject to the same enhanced burden of proof. *Qual-Med, Inc. v. Industrial Claim Appeals Office, supra.* Thus, it is well established that the DIME's opinion concerning the cause of the claimant's need for additional treatment is an inherent part of the physician's determination. See *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590 (Colo. App. 1998); *Egan v. Industrial Claim Appeals Office,* 971 P.2d 664 (Colo. App. 1998). Consequently, the DIME's determination of causation is binding unless overcome by clear and convincing evidence.

In this case, the DIME physician has clearly set forth his opinion that Claimant's right leg has not been sufficiently evaluated for tarsal tunnel syndrome versus lumbar radiculopathy and that the low back has not been sufficiently evaluated for secondary complications which developed as part of Claimant's work-related injury. *See*

Claimant's Submission Tab 8, BS 31. In fact, the DIME physician went further to state "in regards to these two areas [right leg – low back] Claimant is 'not at maximum medical improvement' and these complications need to be assessed." *Id.* The DIME physician proposed an MRI of the lumbar spine which MRI had been originally requested by Claimant's ATP on October 12, 2015.

To overcome the DIME doctor's opinion, Respondents were required to present clear and convincing evidence. Respondents have not met this burden through Dr. D'Angelo's testimony or Dr. Fall's one medical report. They were required to produce evidence which showed that it is highly probable that the DIME physician's opinion of causation is incorrect. They failed to meet this burden. See *e. q. Tinker v. Jefferson County School,* W.C. #4-174-632 (ICAO, March 18, 1998). Dr. D'Angelo's testimony that the low back was not injured as part of Claimant's fall from 16 feet is rejected.

As found, Respondents have failed to present evidence which demonstrates that it is highly probable that the DIME's conclusions are incorrect. In the absence of such clear and convincing evidence, the DIME's findings are binding. See C.R.S. § 8-42-107(8)(c), *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998).

Respondents have failed to prove by clear and convincing evidence that the DIME's opinion of causation as to the Claimant's low back and the DIME's finding of "not at maximum medical improvement" was in error.

As a matter of law, any determinations concerning other issues are premature.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. It is therefore ordered Respondents have failed to prove by clear and convincing evidence the opinions of the DIME physician on Claimant's lumbar symptomatology, right leg and the need for treatment are in error.

2. Claimant is not at MMI.

3. Claimant is entitled to the resumption of temporary total disability benefits from June 16, 2016 ongoing, subject to applicable offsets.

4. Claimant is awarded $1,900 for the two disfiguring scars on his right ankle and is permitted to re-apply for disfigurement benefits on his antalgic gait after placement at MMI, if his condition does not improve.

5. Respondents shall pay to Claimant interest at the rate of 8% per annum on all amounts of compensation not paid when due.

6. Any issues not determined in this decision are reserved for future determination.

7. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 10, 2017

/s/ Kimberly Turnbow
Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that she sustained a compensable occupational disease to her left upper extremity during the course and scope of her employment with Employer.

2. Whether Claimant has proven by a preponderance of the evidence that she is entitled to receive authorized medical treatment that is reasonable and necessary to cure or relieve the effects of her industrial injury.

FINDINGS OF FACT

1. Employer owns an apartment complex that consists of 26 buildings. Claimant is a 78 year old female who began working for Employer as a Housekeeper in July 2016. Her job duties involved vacuuming, dusting, scrubbing, climbing ladders, removing trash and other cleaning in apartments. Claimant also cleaned laundry rooms, a clubhouse with a gym and other common areas. She testified that she generally worked about eight hours per day with some overtime.

2. Claimant explained that on approximately November 21, 2016 Regional Maintenance Supervisor Mel Hoffman told her that she would be cleaning the hallways in all 26 buildings on Employer's property in addition to her regular job duties. Cleaning the hallways included scrubbing heater vents, washing all apartment doors, cleaning cobwebs from interior and exterior lighting, vacuuming carpet, sweeping and mopping stairs, washing windows and scrubbing walls.

3. Claimant testified that in December 2016 Mr. Hoffman provided her with a modified schedule that accounted for her additional job duties. She informed Mr. Hoffman that there was too much work for one person and arthritis in her left shoulder and wrist began to flare-up. Furthermore, she remarked that previous employers who had owned the property had employed three housekeepers because of the extensive work required to maintain the facility.

4. From August 1, 2016 to November 30, 2016 Claimant worked an average of 43.1 hours per week. In December 2016 and January 2017 Claimant's average hours slightly decreased to 42.9 and 41.4 hours respectively each week. Claimant's wage records thus reveal that her work hours remained virtually the same despite her increased duties and responsibilities.

5. On December 23, 2016 Claimant visited personal health care provider Megan M. Persson, NP at Lakewood Family Medicine. Claimant reported arthralgias and joint pain. NP Persson noted that Claimant had previously been diagnosed with

osteoporosis in 2014. She diagnosed Claimant with multiple joint pains and suspected rheumatoid arthritis. NP Persson referred Claimant to a rheumatologist and ordered bilateral hand x-rays.

6. On January 4, 2017 Claimant discussed her symptoms with Employer's Disability Manager Kathryn Henderson. Claimant reported that she was having difficulties performing her job duties because of a personal health condition.

7. On January 31, 2017 Claimant reported her left upper extremity injuries to Employer. The First Report of Injury noted that "[Claimant] claimed her work cause[d] her L-shoulder pain due to repetitive scrubbing. [Claimant] has non-ind cond. She is tx for which needs MRI." The transmittal comments with the First Report of Injury noted "This is a non-work related condition. [Claimant] cannot afford her MRI and asked if WC would pay for it."

8. Claimant was directed to Concentra Medical Centers for treatment. She visited Theodore Villavicencio, M.D. for an examination. Dr. Villavicencio noted that Claimant had been performing custodial work for 40 years and had been working for Employer for seven months. He reported that Claimant did not detail any specific mechanism of injury. Dr. Villavicencio remarked that Claimant had a known thyroid disorder and arthritis, had visited her primary care physician, was placed on modified duty and an MRI had been requested. Dr. Villavicencio assessed Claimant with a left shoulder strain. After reviewing her job description he concluded that she did not have a cumulative trauma disorder pursuant to Rule 17 of the Colorado Division of Workers' Compensation *Medical Treatment Guidelines* (*Guidelines*). Dr. Villavicencio reasoned that "I believe this falls more into a lack of fitness for duty given her chronic problems (OA< possible metabolic- thyroid)."

9. On February 7, 2017 Claimant returned to Dr. Villavicencio for an evaluation. He reiterated that Claimant's left upper extremity symptoms were not caused by her work activities for Employer. Dr. Villavicencio determined that Claimant had reached Maximum Medical Improvement (MMI) and released her from care.

10. On March 7, 2017 NP Persson referred Claimant to Jeffrey J. Sabin, M.D. for an orthopedic evaluation. NP Persson commented that Claimant had a history of severe osteoarthritis in her hands and wrists with worsening left shoulder pain.

11. On March 17, 2017 Claimant visited Dr. Sabin for an evaluation. Claimant reported pain in her left shoulder starting in mid-December due to increased work demands and remarked that the pain had steadily progressed. On physical examination Dr. Sabin noted that Claimant exhibited arthritis, back pain, muscle pain, and joint pain and swelling. He diagnosed Claimant with left shoulder rotator cuff impingement tendinitis. Dr. Sabin discussed the natural pathophysiology of Claimant's condition and recommended physical therapy.

12. On May 17, 2017 NP Persson wrote a letter explaining that Claimant's recent medical issues were directly related to the increased demands of her job with

Employer. However, NP Persson did not review Rule 17 criteria, consider Claimant's job description or examine wage records reflecting her work hours.

13. On June 1, 2017 Claimant again visited Dr. Sabin for an examination. He noted that Claimant's MRI results revealed osteoarthritis of the glenohumeral joint, advanced AC joint arthritis and fraying of the posterior superior glenoid labrum. Dr. Sabin explained that Claimant did not have any acute findings and her MRI revealed a long standing degenerative process. He determined that Claimant's left shoulder was simply not in a condition to perform housekeeping work. Nevertheless, Dr. Sabin remarked that Claimant's increased work load likely caused her degenerative changes to become symptomatic. However, Dr. Sabin did not review Rule 17 criteria, consider Claimant's job description or examine wage records reflecting her work hours.

14. On June 26, 2017 Dr. Villavicencio determined that Claimant did not suffer a specific injury while performing her job duties for Employer. He also did not identify any increase in Claimant's work activities based on his discussions with Employer and review of her job description. Dr. Villavicencio concluded that Claimant's injury was not work-related.

15. Claimant has failed to demonstrate that it is more probably true than not that she sustained a compensable occupational disease to her left upper extremity during the course and scope of her employment with Employer. Claimant attributed her left upper extremity symptoms to her increased job duties during November and December 2016. To constitute a cumulative trauma disorder pursuant to the *Guidelines,* Claimant must have worked more than six hours per day with the requisite force and repetition. However, a review of Claimant's job duties reflects that they lacked the requisite force or repetition to cause her left upper extremity injury.

16. Claimant engaged in a variety of numerous tasks throughout each shift. The record reflects that Claimant's job duties as a Housekeeper involved vacuuming, dusting, scrubbing, climbing ladders, removing trash, and other cleaning in apartments. Claimant also cleaned laundry rooms, a clubhouse with a gym and other common areas. On approximately November 21, 2016 Claimant began cleaning the hallways in all 26 buildings on Employer's property in addition to her regular job duties. Cleaning the hallways included scrubbing heater vents, washing all apartment doors, cleaning cobwebs from interior and exterior lighting, vacuuming carpet, sweeping and mopping stairs, washing windows and scrubbing walls. After reviewing Claimant's job description, Dr. Villavicencio concluded that she did not have a cumulative trauma disorder pursuant to Rule 17 of the *Guidelines*.

17. To constitute a cumulative trauma disorder pursuant to the *Guidelines,* Claimant must have worked more than six hours per day with the requisite force and repetition. The Primary Risk Factor Definition Table for Force and Repetition/Duration requires 6 hours of greater than 50% of individual maximum force with task cycles 30 seconds or less, or sufficient force is used for at least 50% of a task cycle. Additional risk factors are 6 hours of lifting 10 pounds greater than 60 times per hour or 6 hours of use of hand held tools weighing two pounds or greater. Based on a review of

Claimant's duties as a Housekeeper, she did not engage in forceful and repetitive activity for an amount of time that meets the minimum threshold in the *Guidelines*.

18. In contrast, NP Persson and Dr. Sabin determined that Claimant's repetitive job duties caused her left shoulder condition. Dr. Persson specifically noted that Claimant's increased job duties caused her to develop left upper extremity symptoms. Moreover, Dr. Sabin remarked that Claimant's increased work load likely caused her degenerative changes to become symptomatic. However, neither NP Persson nor Dr. Sabin reviewed Rule 17 criteria, considered Claimant's job description or examined wage records reflecting her work hours. Based on a review of Claimant's job duties, considering the persuasive medical records of Dr. Villavicencio and applying the *Guidelines,* Claimant has failed to demonstrate that the hazards of her employment caused, intensified, or, to a reasonable degree, aggravated her left shoulder osteoarthritis. Claimant has failed to prove that her left shoulder condition was directly or proximately caused by her employment or working conditions.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. The test for distinguishing between an accidental injury and an occupational disease is whether the injury can be traced to a particular time, place and cause. *Campbell v. IBM Corp.*, 867 P.2d 77, 81 (Colo. App. 1993). "Occupational disease" is defined by §8-40-201(14), C.R.S. as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

5. A claimant is required to prove by a preponderance of the evidence that the alleged occupational disease was directly or proximately caused by the employment or working conditions. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office,* 989 P.2d 251, 252 (Colo. App. 1999). Moreover, §8-40-201(14), C.R.S. imposes proof requirements in addition to those required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819, 824 (Colo. 1993). A claimant is entitled to recovery only if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id.* Where there is no evidence that occupational exposure to a hazard is a necessary precondition to development of the disease, the claimant suffers from an occupational disease only to the extent that the occupational exposure contributed to the disability. *Id.*

6. The *Guidelines* include a Primary Risk Factor Definition Table for Force and Repetition/Duration. The Table requires 6 hours of greater than 50% of individual maximum force with task cycles 30 seconds or less, or sufficient force is used for at least 50% of a task cycle. An additional Primary Risk Factor category is Awkward Posture and Repetition/Duration. The factor requires four hours of wrist flexion greater than 45 degrees, extension greater than 30 degrees or ulnar deviation greater than 20 degrees, six hours of elbow flexion greater than 90 degrees, six hours of supination/pronation with task cycles 30 seconds or less, or awkward posture for at least 50% of a task cycle. Other Primary Risk Factors include computer work for more than seven hours per day or at a non-ergonomically correct work station, continuous mouse use of greater than four hours or use of a handheld vibratory power tool for 6 hours or more. Additional risk factors are six hours of lifting 10 pounds greater than 60 times per hour or six hours using hand held tools weighing two pounds or greater.

7. The *Guidelines* provide, in relevant part:

> Indirect evidence from a number of studies supports the conclusion that task repetition up to 6 hours per day unaccompanied by other risk factors is not causally associated with cumulative trauma conditions. Risk factors that are likely to be associated with specific CTC diagnostic categories include extreme wrist or elbow postures, force including regular work with hand tools greater than 1 kg or tasks requiring greater than 50% of an individual's voluntary maximal strength, work with vibratory tools at least 2 hours per day; or cold environments.

W.C.R.P. Rule 17, Exhibit 5, p.16. The duration of force and repetition as a primary risk factor must be greater than six hours at 50% of individual maximum force with task cycles of 30 seconds or less.

8. The *Guidelines* also specify that:

> Cumulative trauma related conditions of the upper extremity comprise a heterogeneous group of diagnoses which include numerous specific clinical entities including disorders of the muscles, tendons and tendon sheaths, nerves, joints and neurovascular structures. … The mere presence of a diagnosis that may be associated with cumulative trauma does not presume work-relatedness unless the appropriate work exposure is present. … The normal working age population may have non-specific pain complaints that require minimum treatment and may be considered part of the normal aging process. … [I]n cases where there is no specific diagnosis and corresponding work related etiology, the work-up should generally be performed outside of the workers' compensation system.

W.C.R.P. Rule 17, Exhibit 5, p. 6

9. As found, Claimant has failed to demonstrate by a preponderance of the evidence that she sustained a compensable occupational disease to her left upper extremity during the course and scope of her employment with Employer. Claimant attributed her left upper extremity symptoms to her increased job duties during November and December 2016. To constitute a cumulative trauma disorder pursuant to the *Guidelines,* Claimant must have worked more than six hours per day with the requisite force and repetition. However, a review of Claimant's job duties reflects that they lacked the requisite force or repetition to cause her left upper extremity injury.

10. As found, Claimant engaged in a variety of numerous tasks throughout each shift. The record reflects that Claimant's job duties as a Housekeeper involved vacuuming, dusting, scrubbing, climbing ladders, removing trash, and other cleaning in apartments. Claimant also cleaned laundry rooms, a clubhouse with a gym and other common areas. On approximately November 21, 2016 Claimant began cleaning the hallways in all 26 buildings on Employer's property in addition to her regular job duties. Cleaning the hallways included scrubbing heater vents, washing all apartment doors, cleaning cobwebs from interior and exterior lighting, vacuuming carpet, sweeping and mopping stairs, washing windows and scrubbing walls. After reviewing Claimant's job description, Dr. Villavicencio concluded that she did not have a cumulative trauma disorder pursuant to Rule 17 of the *Guidelines*.

11. As found, to constitute a cumulative trauma disorder pursuant to the *Guidelines,* Claimant must have worked more than six hours per day with the requisite force and repetition. The Primary Risk Factor Definition Table for Force and Repetition/Duration requires 6 hours of greater than 50% of individual maximum force with task cycles 30 seconds or less, or sufficient force is used for at least 50% of a task cycle. Additional risk factors are 6 hours of lifting 10 pounds greater than 60 times per

hour or 6 hours of use of hand held tools weighing two pounds or greater. Based on a review of Claimant's duties as a Housekeeper, she did not engage in forceful and repetitive activity for an amount of time that meets the minimum threshold in the *Guidelines*.

12. As found, in contrast, NP Persson and Dr. Sabin determined that Claimant's repetitive job duties caused her left shoulder condition. Dr. Persson specifically noted that Claimant's increased job duties caused her to develop left upper extremity symptoms. Moreover, Dr. Sabin remarked that Claimant's increased work load likely caused her degenerative changes to become symptomatic. However, neither NP Persson nor Dr. Sabin reviewed Rule 17 criteria, considered Claimant's job description or examined wage records reflecting her work hours. Based on a review of Claimant's job duties, considering the persuasive medical records of Dr. Villavicencio and applying the *Guidelines,* Claimant has failed to demonstrate that the hazards of her employment caused, intensified, or, to a reasonable degree, aggravated her left shoulder osteoarthritis. Claimant has failed to prove that her left shoulder condition was directly or proximately caused by her employment or working conditions.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's claim for Workers' Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: August 10, 2017.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-977-440-03

ISSUES

- Whether Respondents have demonstrated by clear and convincing evidence that the Division Independent Medical Examination of Dr. Bennett Machanic, M.D. has been overcome.

- Whether Claimant sustained disfigurement to his right ankle.

STIPULATIONS

- The parties stipulate that if Respondents are unable to overcome the DIME physician's findings that Claimant is entitled to temporary total disability benefits from June 16, 2016 ongoing, subject to applicable offsets including unemployment, and credit for any permanent partial disability benefits previously paid.

- The parties stipulate that the issue of disfigurement for Claimant's antalgic gait, if any, is held in abeyance and the Court will address the issue of Claimant's ankle disfigurement at this hearing.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant is 32 years old and has worked as a laborer for Employer for 6 to 7 years seasonally washing windows and shoveling snow off rooftops in Avon, Colorado.

2. On March 9, 2015, Claimant suffered compensable work-related injuries when he slipped off a sixteen foot and fell landing on concrete.

3. Claimant was immediately taken to the emergency room at Vail Valley Medical Center where he was diagnosed with an acute fracture of his left tibia, and acute fractures of both the right fibula and the right medial malleolus.

4. The emergency room physician, Dr. Hardenbergh, noted that Claimant fell 16 feet from a ladder and landed directly on his feet on the pavement. Dr. Hardenberg's physical examination of Claimant revealed a full range of motion in his neck and upper extremities. Claimant's back was non-tender on examination. Claimant testified that he complained to Dr. Hardenbergh of pain in his lower back, however the medical record does not include that complaint.

5. Claimant was referred to the on-call orthopedic surgeon, Dr. Richard Cunningham, at Vail Valley Medical Center. Dr. Cunningham recommended a non-surgical course with the left knee fracture, but an open reduction and internal fixation of the medial malleolus fracture and syndesmosis disruption due to the proximal right fibula fracture.

6. Dr. Cunningham noted that Claimant's chief complaint was right ankle and left knee pain. He did not note low back complaints. Further, he indicated that Claimant's accident was consistent with an acute lower extremity injury without further orthopedic complications.

7. On March 9, 2015, Dr. Cunningham Claimant performed the following surgical procedures:

- Open reduction and internal fixation of right displaced medial malleolus fracture

- Right ankle syndesmosis disruption

- Closed treatment of left minimally displaced tibial plateau fracture.

8. Claimant credibly testified that he remained in a wheelchair, non-weight bearing, from March 9, 2015 until his second operation. Claimant's testimony is corroborated by Dr. Cunningham's April 27, 2015 follow-up visit.

9. On May 6, 2015 ATP Cunningham surgically removed the hardware used to stabilize Claimant's ankle. The procedure enabled Claimant to "begin weight-bearing on his right lower extremity."

10. Claimant credibly testified that he had some back pain following his injury, but that his low back pain worsened as he stopped using the wheelchair, moved to crutches, and started physical therapy.

11. On October 12, 2015, ATP Cunningham noted:

> Claimant additionally complains of low back pain. He states that this pain has increased more since his activity and PT has increased over the past few months. Originally, we were focused mainly on his ankle and tibial plateau fracture, but as time has progressed his back pain has become more of an issue. His back pain often interferes with his physical therapy of his ankle and tibial plateau fractures. This is a workman's comp case and he is currently not working.

12. On October 12, 2015, ATP Cunningham's Plan noted, "with his continued low back pain, we've decided to order an MRI of his lumbar spine and refer him to Dr.

Raub for further care of his back pain. Once his MRI is approved, we will see him back to discuss the results.

13. However, on October 15, 2015, Respondents informed Dr. Cunningham that "[t]he lumbar area/back is not part of this claim."

14. On November 2, 2015 ATP Cunningham again noted,

> [Claimant] Complains of weakness of the lower left extremity. Denies any pain medication use at this time. He is not currently in formal physical therapy but following a structure home exercise program. He denies any recent acute injury.
>
> * * *
>
> We would like him to follow-up with a specialist for his continued low back pain. This began following his initial work-related injury and is most likely aggravated with the continued knee pain and antalgic gait.

15. In January 2016, Respondents instructed Claimant to obtain a primary care provider to follow through on care for his claim. Claimant began treating with ATP Gary Petry, M.D., at St. Vincent's Hospital – Leadville Medical Center.

16. On January 12, 2016, Dr. Petry evaluated Claimant and noted that Claimant was following up on his workers' compensation injury and that, "Through Dr. Cunningham trying to get MRI due to increase back pain." Dr. Petry opined that Claimant had back pain related to his "worker's description of accident/injury." Dr. Cunningham assessed low back pain, noting

> Pt is here tdy at request of WC to establish care with a PCP. HE has been followed by Dr. Cunningham for ORIF right ankle that has become symptomatic. In addition he is currently going to PT for the injuries he sustained under his WC case and is having increasing pain of his left knee for which he has a Feb. 8th [2016] am appointment with Dr. Cunningham to f/u. Pt states he has had back pain since the accident and that Dr. Cunningham has been requesting a MRI and F/U with Dr. Raub for his back pain but that WC will not approve.

17. On February 11, 2016 Claimant returned to ATP Cunningham who continued to opine that the low back pain was part of Claimant's work-related diagnosis. Dr. Petry noted:

> [Claimant] presents approximately 11 months status post open reduction internal fixation of a right displaced medial malleolus fracture and right ankle syndesmosis disruption and closed treatment of a left minimally displaced tibial

> plateau fracture following a work-related injury. . . . He reports symptoms in his back, ankle and knee. Pain does wake him at night. He also complains of numbness/tingling and weakness of both legs.

Dr. Petry assessed lumbar back pain with radiculopathy.

18. On February 29, 2016 Claimant returned to Dr. Petry who noted, "[Claimant] also, since the original injury, developed a complaint of back pain. Dr. Cunningham ordered an MRI and referral to Dr. Raub, but Workers' Compensation denied this as he had attempted to order an MRI of his back.

19. On March 16, 2016, Phyllis Pennington, D.O., filling in for Dr. Petry at St. Vincent's Hospital noted that the "back is pending review by W/C" and that Claimant had **"**numbness and tingling that could possibly be a component of the low back injury."

20. In early May, 2016 Claimant underwent a third surgery to remove right ankle hardware. At a follow-up visit with Dr. Cunningham, Claimant still complained of "numbness, tingling and weakness of the bilateral legs."

21. On May 19, 2016, Respondents asked Dr. Cunningham whether Claimant was at MMI. Dr. Cunningham responded that Claimant was expected to reach MMI in 2 to 3 months.

22. On June 16, 2016 ATP Cunningham placed Claimant at MMI. However, he requested that Claimant receive a spine evaluation, he maintained a work-related medical diagnosis of "low back pain," and maintained that Claimant needed to see a spine specialist. His note provides,

> At this point post-surgically, his right ankle and left knee show healing as anticipated. He continues to experience . . . pain to his lumbar spine with symptoms of radiculopathy as well as pain into his right groin. Unfortunately, at this point there is not much else we are able to offer Mr. Chavez in the way of treatment. We will place him at MMI today for workman's [sic] comp and have requested an impairment rating. We have also recommended a spine evaluation with Dr. Raub for lumbar radiculopathy.

23. On June 28, 2016, Dr. Petry also placed Claimant at MMI. However, he continued to assess low back pain.

24. On August 9, 2016, Allison Fall, M.D., evaluated Claimant at Respondents' request. She opined that Claimant had suffered a 5% extremity rating for his knee and a 6% extremity rating for his ankle. But she "did not find a work-related injury to the lumbar spine or the hip."

25. Respondents filed a Final Admission of Liability on two occasions. Claimant timely objected. On September 28, 2016 Claimant file an "Application for a Division Independent Medical Examination."

26. On December 21, 2016, Division independent medical evaluator, Bennett Machanic, M.D., evaluated Claimant. Based on his review of medical records and concerning clinical findings, Dr. Mechanic opined:

- Claimant had reached MMI for his right ankle and left knee.
- not at MMI.
- Claimant's work related injuries included his left knee and right ankle with bony abnormalities, an abnormal gait, difficulties with progressive low back pain greater than approximately 6 months.
- He was concerned about findings in Claimant's right foot which raised questions of secondary tarsal tunnel syndrome and the possibility of radicular dysfunction playing a role.
- He noted that previous physicians had noted problems of lumbar radiculopathy, and that previous attempts to obtain imaging of the lumbar spine had not been successful.

27. Dr. Mechanic did not believe that treatment providers had sufficiently evaluated Claimant's right leg for tarsal tunnel syndrome versus lumbar radiculopathy. He also opined that treatment providers had not evaluated Claimant's low back for secondary complications. Therefore, Claimant was not at MMI and those areas needed to be assessed. Dr. Mechanic proposed MRI films of Claimant's lumbar spine and an EMG nerve conduction study of Claimant's right lower extremity.

28. Claimant credibly testified at hearing that he has not yet had a lumbar MRI as requested by Drs. Cunningham, Petry, and Machanic. He expressed a desire to pursue an MRI and treatment of his lumbar spine.

29. Respondents retained Kathleen D'Angelo, M.D., who issued a Respondent-requested medical evaluation report on April 11, 2016 and a subsequent addendum. Dr. D'Angelo's deposition testimony is consistent with her report. Dr. D'Angelo opined that Claimant misled his physician's by not providing the history from his 2003 to 2005 emergency room visits and that the delay in reporting back symptoms indicated that the lumbar condition is not a work-related condition.

30. Dr. D'Angelo testified that even if Claimant had an antalgic gait, as soon as his gait returned to normal, his lower back symptoms would have

resolved. Therefore, she attributed Claimant's numbness and radicular symptoms to the 2005 car accident.

31. The ALJ finds this opinion not persuasive. No persuasive evidence supports a finding that Claimant ever suffered radicular symptoms after his April 21, 2005 car accident until this claim. Claimant reported no such symptoms and sought no treatment during that time frame. The ALJ finds it highly unlikely that Claimant's lumbar and radicular symptoms are attributable to his 2005 dislocated hip.

32. Respondents' exhibits contain medical records for two emergency room admissions at St. Vincent General Hospital.

- The October 2, 2003 admission involved a drug overdose and complications.

- The April 21, 2005 admission involved a left hip dislocation resulting from an automobile accident in which he was driving under the influence of alcohol. Claimant's dislocation was reduced and Claimant required no follow-up care. Claimant credibly testified he had no ongoing symptoms or medical concerns.

33. Claimant admitted in his testimony that he did not disclose these events to his workers' compensation doctors, Dr. Machanic, Dr. D'Angelo, and Dr. Ramos.

34. The ALJ does not find Dr. D'Angelo's opinions to be persuasive. Claimant's 2003 to 2005 emergency room visits were remote in time, did not involve the same body parts as his work injuries, and Claimant had been symptom free for over a decade. The ALJ finds it more likely than not that Claimant either forgot the other events or reasonably believed the other events were not relevant to the treatment of his work injuries.

35. Claimant retained Joseph Ramos, M.D., to perform a Claimant-requested independent medical evaluation. Dr. Ramos opined that the DIME physician was correct that Claimant was not at MMI for his lumbar condition, and that Claimant's lumbar condition is part of Claimant's admitted industrial injury.

36. Dr. D'Angelo's opinion is not well supported by the medical records of Drs. Cunningham, Petry, Machanic, and Ramos regarding the relatedness of Claimant's lumbar condition. Dr. D'Angelo's opinion is called into question, as she credibly testified in deposition that rarely do physicians make a recommendation for a spine specialist when placing an individual at MMI. Dr. D'Angelo's difference of opinion on whether Claimant's lumbar condition is related to his admitted 16 foot fall does not rise to the level of clear and convincing evidence.

37. Based on the totality of the evidence the ALJ finds and concludes that Respondents have failed to establish that the DIME opinion that Claimant's low back was injured in the course and scope of his employment for Employer when on March 9, 2015 he fell 16 feet, landing on his feet is in error by clear and convincing evidence.

38. Based on the totality of the evidence, the ALJ finds and concludes that the opinions of ATPs Cunningham, Petry, DIME physician Machanic and Claimant's medical evaluator Joseph Ramos that Claimant's low back condition was a result of his May 9, 2015 admitted industrial injury are more credible and persuasive than those of Respondents' experts Drs. D'Angelo and Fall.

39. Claimant has sustained a compensable permanent disfigurement as a result of his admitted injuries. Specifically Claimant has a two and one-half inch, highly discolored, raised and broad irregular scar; and a two and one-quarter inch highly discolored, raised and broad irregular scar on his lower right leg.

40. Any determination concerning other issues is premature at this time, as a matter of fact.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the "Workers Compensation Act of Colorado" (Act), Title 8, Articles 40 to 47, C.R.S., is to ensure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to the employers without the necessity of any litigation. C.R.S. § 8-40-102(1). A claimant in a workers' compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Therefore a claimant must prove by a preponderance of the evidence that his injury arose out of and in the course and scope of his employment. C.R.S. § 8-43-201*; City of Boulder v. Streeb,* 706 P.2d 786 (Colo. 1985).

A preponderance of the evidence is that which leads the trier of fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). *Industrial Commission v. Jones*, 688 P.2d 1116, 1119 (Colo. 1984). Proof that something happened at work, without more, is insufficient to carry burden of proof. *Finn v. Industrial Commission*, 165 Colo. 106 (1968). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000). The question of causation is generally one of fact for determination by the Judge. *Faulkner*, 12 P.3d at 846. A Workers' Compensation case is decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ does not address every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

Overcoming the DIME

Section 8-42-101(3.7) mandates that physicians rate an injured workers' impairments using the AMA *Guides:* "On and after July 1, 1991, all physical impairment ratings used under articles 40 and 47 of this title shall be based on the revised third edition of the 'American Medical Association Guides to the Evaluation of Permanent Impairment," in effect as of July 1, 1991." *Id.*

Further, a DIME's findings concerning medical impairment are binding unless overcome by clear and convincing evidence. C.R.S. § 8-42-107(8)(b)(III), *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186-90, 189 (Colo. App. 2002).

Clear and convincing evidence means "evidence which is stronger than a mere 'preponderance,' it is evidence that his highly probable and free from serious and substantial doubt." *Metro Moving & Storage Co v. Gussert, supra*, 914 P.2d at 414 (citing CJI-Civ. 3d 3:2 (1988); *DiLeo v. Kotlnow*, 200 Colo. 119, 613 P.2d 318 (1980)). Therefore, the party challenging a DIME's conclusion must demonstrate that it is "highly probable" that the DIME's impairment rating or maximum medical improvement (MMI) finding is incorrect. *Qual-Med, Inc. v. Indus. Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998)(citing *Metro Moving & Storage Co. v. Gussert, supra*). A party has met the burden or established that a DIME's impairment rating is incorrect only upon demonstrating that the evidence contradicting the DIME is "unmistakable and free from serious or substantial doubt." *Leming v. Indus. Claim Appeals Office*, 62 P.3d 1015, 1019 (Colo. App. 2002).

The enhanced burden of proof reflects an underlying assumption that the DIME, having been selected by an independent and unbiased tribunal, will provide a more reliable medical opinion. *Qual-Med, Inc. v. Industrial Claim Appeals Office, supra*. Since the DIME physician is required to identify and evaluate all losses and restrictions which result from the industrial injury as part of the diagnostic assessments process, the DIME physician's opinion regarding causation of those losses and restrictions is subject to the same enhanced burden of proof. *Qual-Med, Inc. v. Industrial Claim Appeals Office, supra.* Thus, it is well established that the DIME's opinion concerning the cause of the claimant's need for additional treatment is an inherent part of the physician's determination. See *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590 (Colo. App. 1998); *Egan v. Industrial Claim Appeals Office,* 971 P.2d 664 (Colo. App. 1998). Consequently, the DIME's determination of causation is binding unless overcome by clear and convincing evidence.

In this case, the DIME physician has clearly set forth his opinion that Claimant's right leg has not been sufficiently evaluated for tarsal tunnel syndrome versus lumbar radiculopathy and that the low back has not been sufficiently evaluated for secondary complications which developed as part of Claimant's work-related injury. *See*

Claimant's Submission Tab 8, BS 31. In fact, the DIME physician went further to state "in regards to these two areas [right leg – low back] Claimant is 'not at maximum medical improvement' and these complications need to be assessed." *Id.* The DIME physician proposed an MRI of the lumbar spine which MRI had been originally requested by Claimant's ATP on October 12, 2015.

To overcome the DIME doctor's opinion, Respondents were required to present clear and convincing evidence. Respondents have not met this burden through Dr. D'Angelo's testimony or Dr. Fall's one medical report. They were required to produce evidence which showed that it is highly probable that the DIME physician's opinion of causation is incorrect. They failed to meet this burden. See *e. q. Tinker v. Jefferson County School,* W.C. #4-174-632 (ICAO, March 18, 1998). Dr. D'Angelo's testimony that the low back was not injured as part of Claimant's fall from 16 feet is rejected.

As found, Respondents have failed to present evidence which demonstrates that it is highly probable that the DIME's conclusions are incorrect. In the absence of such clear and convincing evidence, the DIME's findings are binding. See C.R.S. § 8-42-107(8)(c), *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998).

Respondents have failed to prove by clear and convincing evidence that the DIME's opinion of causation as to the Claimant's low back and the DIME's finding of "not at maximum medical improvement" was in error.

As a matter of law, any determinations concerning other issues are premature.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. It is therefore ordered Respondents have failed to prove by clear and convincing evidence the opinions of the DIME physician on Claimant's lumbar symptomatology, right leg and the need for treatment are in error.

2. Claimant is not at MMI.

3. Claimant is entitled to the resumption of temporary total disability benefits from June 16, 2016 ongoing, subject to applicable offsets.

4. Claimant is awarded $1,900 for the two disfiguring scars on his right ankle and is permitted to re-apply for disfigurement benefits on his antalgic gait after placement at MMI, if his condition does not improve.

5. Respondents shall pay to Claimant interest at the rate of 8% per annum on all amounts of compensation not paid when due.

6. Any issues not determined in this decision are reserved for future determination.

7. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 10, 2017

/s/ Kimberly Turnbow
Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-038-148

ISSUES

- Whether Claimant sustained a compensable work-related injury on January 20, 2017 while working for Employer.

- Whether Claimant is entitled to medical benefits under this claim.

STIPULATIONS

- The parties stipulated that if Claimant's claim is compensable, her average weekly wage is $783.96.

- The parties reserved for future determination the issues of temporary and temporary total disability benefits.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant is 34 years old and is currently employed by the Colorado Department of Corrections. She works at the Sterling Correctional Facility as a corrections officer in their minimum security section. At hearing, Claimant described her job duties as consisting of "custody control," which includes watching offenders, ensuring that offenders are acting in compliance with the correctional facility's policies, and handling any instances of offender misbehavior or insubordination. Claimant generally works eight and a half-hour shifts for Employer. During Claimant's shifts she generally spends two to three hours on her feet checking on the offenders in their cells and/or completing random "shakedowns," wherein she searches offender's cells for contraband.

2. Claimant testified that she likes her job. She experiences something new every day, and is able to work with a great deal of autonomy, which she enjoys. Claimant's husband also works for Employer, and Claimant testified that she has no intention of leaving her position with the Colorado Department of Corrections.

3. Claimant undergoes routine three and six-month assessments with Employer. Claimant testified that she does well in those assessments and has never been written-up for misconduct of any kind.

4. Claimant contends that she was injured at work on January 20, 2017 during an altercation with an offender who became violent. Claimant testified that at some point after 2:00 p.m. on that date, a new inmate approached Claimant in the unit office to check-in and obtain his cell assignment. Claimant assigned the new inmate a

cell and instructed him to move his belongings to that cell. Shortly thereafter, the new inmate reported back to Claimant that his proposed cellmate would not allow him to move his belongings into the assigned cell. Claimant then called the cellmate into the office to discuss the issue. The cellmate was known to be an aggressive offender capable of assaulting staff. As such, when the inmate became verbally aggressive, Claimant used the intercom system to call for assistance from first responders. Several of Claimant's co-workers and/or supervisors responded to the call, and an altercation, or "use of force," ensued with the inmate.

5. Claimant testified that the first co-workers to respond to her call for assistance were Lieutenant June Poncetta and Sergeant Steven Arfsten. As Lieutenant Poncetta and Sergeant Arfsten attempted to put handcuffs on the insubordinate offender, the offender became violent. Claimant testified that initially, as Lieutenant Poncetta and Sergeant Arfsten were attempting to gain control of the offender, she attempted to assist by using "O.C." on the offender, which is a form of pepper spray. The struggle continued, and additional co-workers arrived to the scene and attempted to assist. Claimant testified that once the offender had been tackled to the ground, she then dropped to the ground and locked her legs around the offender's legs in order to further assist her co-workers. Shortly thereafter, Claimant noticed that other inmates were beginning to congregate around the scene, so she stood back up and verbally instructed the other offenders to re-enter their cells.

6. Claimant testified that immediately after the incident occurred, she had a bruise on her arm and left leg. However, Claimant was optimistic that she would be okay, so she did not initially report any injury to Employer. Instead, Claimant completed her scheduled shift, which ended at 10 p.m., and then went home, where she "[took] it easy" for the remainder of the evening. The next morning, Claimant was very stiff in her back and her bottom was sore. Therefore, she returned to work that morning, reported her injuries to Employer, and completed a report documenting her injuries. At that time, Claimant was still optimistic that she would not require medical treatment. She testified that she reported her injuries to Employer just in case her injuries did eventually require medical attention.

7. A few days after the incident, Claimant did determine that she needed medical attention for her injuries. As such, she contacted Employer and asked where to obtain medical treatment. Pursuant to the direction of Employer, Claimant sought treatment at Banner Health in Sterling, Colorado on January 26, 2017. At that appointment, Claimant notified her medical providers that she suffered from left hip and low back pain from restraining an inmate at work. The medical providers at Banner Health recommended physical therapy, prescribed pain medications, and assigned work restrictions. They also noted in their report that their objective findings were consistent with a work-related mechanism of injury. Claimant testified that she followed-up with Banner Health one more time, but was then forced to discontinue treatment through the workers' compensation system because Respondents denied her claim. Instead, Claimant underwent physical therapy on her own through Apex Network Physical Therapy. At hearing, Claimant testified that the physical therapy has helped. She is not yet feeling completely better, but her pain is no longer constant, as it once was.

Claimant also testified that while she was initially forced to take leave from work due to her work restrictions, she has now returned to work in a full-time capacity.

8. Following the incident with the violent offender on January 20, 2017, the officers involved in the event completed incident reports. Sergeant Nicholas Merrell's incident report states that when he arrived on the scene of the incident, he saw Lieutenant Poncetta, Sergeant Arfsten, Sergeant Navarro, and Corrections Officer Sandoval (Claimant) "with Inmate [Name Redacted] on the ground." Sergeant Merrell also testified at hearing. During his testimony, he initially indicated that he did not see Claimant on the ground with the offender when he arrived to the scene of the incident and that he did not know where Claimant was during the altercation. However, upon further questioning regarding the difference between his testimony at hearing and his written incident report, Sergeant Merrell noted the length of time that has now passed since the incident occurred and indicated that whatever is in his report is correct.

9. Lieutenant June Poncetta also testified at hearing. Lieutenant Poncetta testified that she was hit in the head during the altercation with the violent offender. She also testified that the entire altercation only lasted a matter of seconds, and that during those seconds her primary focus was on restraining the offender. Lieutenant Poncetta testified that she did not see Claimant touch the offender, but also admitted that her recollection of the incident differs from some of the other involved parties, and noted that it is impossible to remember every second of an incident like the one that occurred on January 20, 2017.

10. Christopher Gassaway, who works as a case manager for Employer, was also involved in the altercation and appeared at hearing to testify. Mr. Gassaway testified that "to his knowledge," Claimant was not involved in restraining the offender. However, he also testified that he ran in to assist with the altercation very quickly and did not stop to assess who was present and where, exactly, they were located. Mr. Gassaway did note that *someone* restrained the offender's legs, but he was not entirely sure who that individual was.

11. Sergeant Arfsten, was also involved in the altercation with the offender on January 20, 2017, was also present to testify at hearing. Sergeant Arfsten testified that he was there from the very beginning of the altercation and assisted in the process of bringing the offender down to the ground and restraining him. However, in the course of that process Sergeant Arfsten was hit several times by the offender and as a result he began to bleed from his mouth. He testified that he does not recall seeing Claimant restrain the offender, but he cannot say for certain where she was or what she was doing during the altercation because his primary focus was on the offender. Sergeant Arfsten also testified that someone could have made contact with the offender without his knowledge.

12. At hearing, Sergeant Juan Navarro testified that he works as a supervisor for Employer. At the time that the January 20, 2017 incident began, Sergeant Navarro was walking in the south yard. When he heard a call requesting the assistance of first responders, he reported to Unit 33 where the incident was taking place. Sergeant

Navarro testified that when he arrived, Claimant was at the door of the office giving verbal commands to offenders to get "locked down." However, he noted that he was not present during the entire altercation and he does not have any knowledge regarding Claimant's involvement in the incident prior to his arrival.

13. Finally, Lieutenant Steven Frank testified at hearing. Lieutenant Frank testified that he is a shift leader for Employer. He was present at the Sterling Correctional Facility when the January 20, 2017 incident occurred, but he was not involved in the incident itself. Rather, as a shift leader, he was in charge of reviewing and approving all incident reports completed after the use of force. Lieutenant Frank testified that it is standard protocol for all employees involved in a use of force to complete an incident report. The purpose of those incident reports is to document actions taken by both offenders and staff members, and to hold all individuals involved in a use of force accountable for their actions. Lieutenant Frank testified that it is Employer's policy for all physical contact with an offender that occurs during a use of force to be documented in the subsequent incident reports. He also testified that it is important that each incident report set forth every offender and every staff member involved in the altercation. However, Lieutenant Frank also testified that it would not surprise him to know that several of the incident reports submitted after the January 20, 2017 altercation had omissions and/or errors.

14. Several of the witnesses who testified at hearing admitted that their incident reports were incomplete or contained errors. For example, Sergeant Arfsten testified that Sergeant Navarro was involved in the January 20, 2017 incident, but there is no mention of Sergeant Navarro in his incident report. At hearing, Sergeant Arfsten indicated that his incident report was "just his perspective," and that some things came back to him after he wrote it. Similarly, Sergeant Navarro testified at hearing that at one point during the course of the altercation with the violent offender he held the offender's legs down. However, that physical contact with the offender is not noted in Sergeant Navarro's incident report.

15. Like her co-workers, Claimant completed an incident report following her injury. Claimant's incident report does not note that she was ever in direct physical contact with the offender, as she testified to at hearing. During her testimony, Claimant stated that it is her understanding that incident reports should be "short and sweet."

16. Claimant also testified regarding her medical history at hearing, indicating that prior to the January 20, 2017 incident she was not experiencing any significant pain and was not having any difficulty completing the physical requirements of her work. Claimant did undergo chiropractic adjustments at Lakewood Chiropractic in April 2015 and April 2016, as "tune-ups" done for general maintenance. Claimant noted that she had those adjustments done because she is a 34-year old mother of four children who wears heavy work boots and a 15-pound duty belt at work every day, and that this all takes a toll on her body. Claimant also testified that she has previously been in motor vehicle accidents. However, the last motor vehicle accident in which Claimant was involved took place in 2002. Afterward, Claimant saw a chiropractor a few times, and that treatment completely eliminated her symptoms. At the time of the January 20,

2017 incident, Claimant was not actively seeking treatment for any injuries or body pains.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

Compensability

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102 (1), C.R.S.

A claimant bears the burden of proving by a preponderance of the evidence that an injury occurred within the course of, and arose out of, employment with the employer. Section 8-41-301(1), C.R.S.; *City of Boulder v. Streeb,* 706 P.2d 786 (Colo. 1985). An injury or condition is in the course of employment if it occurred within time and place limits of employment and during an activity that has some connection with the employee's job-related functions. *Wild West Radio, Inc. V. Industrial Claim Appeals Office*, 905 P.2d 6 (Colo. App. 1995). An injury or condition arises out of employment if "there is a causal connection between the duties of employment and the injuries suffered." *Deterts v.Times Pub. Co.,* 38 Colo. App. 48, 552 P.2d 1033 (1976).

A preponderance of the evidence is that which leads the trier-of-fact to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. § 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S.

Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any benefits are awarded. *Faulkner v. Indus. Claim Appeals Office*, 12 P3d 844, 846 (Colo. App. 2000); Section 8-41-301(1)(c), C.R.S. The evidence must establish the causal connection with reasonable probability, not medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission, 491 P.2d 106 (Colo. App. 1971)*. Reasonable probability exists if the proposition is supported by substantial evidence, which would warrant a reasonable belief in the existence of facts supporting a particular finding. *F.R. Orr Construction v. Rinta, 717 P.2d 965 (Colo. App. 1985)*. An award of benefits may not be based upon or denied upon speculation or conjecture. *Deines Bros. v. Indus. Comm'n,* 125 Colo. 258, 242 P.2d 600 (1952).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and

bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the findings in this Order as unpersuasive.

Claimant has proved to a preponderance of the evidence that she was involved in an altercation with a violent offender while working for Employer on January 20, 2017, and that Claimant's involvement included physical contact with the offender that led to injury. This ALJ finds Claimant to be a credible witness. It is reasonable to believe that Claimant would have jumped in to help her co-workers during a violent altercation with an offender, and that her actions led to injury. Moreover, Claimant has no motive to be dishonest about this incident or her injuries. Claimant credibly testified that she is happily employed by Employer and has no desire to end her employment. In fact, Claimant has continued to work for Employer after this incident occurred in spite of her work restrictions, and after the denial of her claim she paid for her own treatment in order to improve her condition. Such actions are consistent with a worker who did, in fact, sustain an on-the-job injury. Furthermore, the day after the altercation occurred, Claimant reported potential injuries to Employer. Given that at that time she was not seeking medical treatment or benefits of any kind, she had absolutely no motive to lie.

In addition to the fact that Claimant is found to be a credible witness, Claimant's testimony is also persuasive because it was corroborated by Sergeant Nicholas Merrell, whose incident report indicates that when he arrived on the scene of the altercation on January 20, 2017, he witnessed Claimant on the floor with the inmate. Sergeant Merrell had no motive to fabricate any part of his incident report, and there is no reason to question its accuracy. While at hearing Sergeant Merrell's testimony initially contradicted his report, he later admitted that his incident report, which was done immediately after the altercation, is more accurate than his memory six months later.

While Sergeant Merrell's incident report and testimony directly corroborated Claimant's testimony, only a small portion of the testimony from Respondents' other witnesses actually contradicted Claimant with regard to the physical contact she made with the offender on January 20, 2017. In fact, most of Respondents' witnesses admitted that Claimant may have made contact with the offender before they arrived on scene and/or could have made contact with the offender without their knowledge. To the very small extent that Respondents' witnesses' testimony did contradict Claimant's contention that she made contact with the offender and suffered a subsequent injury, their testimony is not credited. This is due to the fact that Respondents' six witnesses' testimony was largely in contradiction with one another regarding the specific details of the incident, and at times contradictory to their own incident reports.

In addition to proving that she was involved in the January 20, 2017 altercation and made contact with the inmate during that altercation, Claimant has also proved to a preponderance of the evidence that she sustained an injury as a result of that incident.

Claimant credibly testified that she is generally healthy, and that she was not suffering from substantial pain of any kind prior to the January 20, 2017 incident. While Claimant did undergo annual chiropractic adjustments, those were done for general medical maintenance and are not indicative of a preexisting condition. Likewise, while Claimant has been involved in motor vehicle accidents in the past, the last one dates back to 2002, and Claimant was not actively treating for any injuries sustained in that accident at the time of the January 20, 2017 incident at work. Aside from the January 20, 2017 incident at work, there is nothing to which it would be reasonable to attribute Claimant's ongoing back, hip, and/or buttocks pain. This is reflected by the records from Banner Health, which indicate that Claimant's symptoms were consistent with a work-related injury. Claimant is deemed to have suffered an injury within the course and scope of her employment with Employer on January 20, 2017, and her workers' compensation claim is therefore compensable.

Medical Benefits

A claimant is entitled to authorized medical treatment that is reasonable and necessary to cure and relieve the effects of the injury. § 8-42-101(1)(a), C.R.S.; *Yeck v. Industrial Claims Appeals Office,* 996 P.2d 228 (Colo.App. 1999). A claimant bears the burden to prove by a preponderance of the evidence the causal relationship between the work-related injury and the condition for which treatment is sought. *Snyder v. Industrial Claims Appeals Office,* 942 P.2d 1337 (Colo.App. 1997). Whether the claimant sustained her burden of proof is a question of fact for the ALJ. *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997).

"Authorization" refers to a medical provider's legal status to treat an injury at the respondents' expense. *Popke v. Industrial Claims Appeals Office*, 797 P.2d 677 (Colo. App. 1997). An employer is responsible for medical treatment when, in the normal progression of treatment, an authorized treating physician refers the claimant to other providers for additional treatment. *Greager v. Industrial Commission*, 701 P.2d 168 (Colo.App. 1985). If a claimant seeks treatment outside the chain of authorized providers, respondents are not required to pay for it. § 8-43-404(7), C.R.S.; and, *Yeck v. Industrial Claims Appeals Office, supra.*

As noted above, Claimant has proved by a preponderance of the evidence that the painful symptoms in her back, buttocks, and/or legs and hip was caused by her involvement in the incident that occurred at work on January 20, 2017. Therefore, Claimant is entitled to medical benefits under this claim. The medical treatment Claimant received at Banner Health was related to the compensable injury and done pursuant to the direction of Employer. That medical treatment is therefore authorized, reasonable, and necessary.

ORDER

1. Claimant suffered a compensable injury while working for Employer on January 20, 2017, and therefore, is entitled to medical benefits.

2. Respondents are responsible for the medical treatment Claimant received from Banner Health following her January 20, 2017 injury.

3. Respondents shall pay for ongoing reasonable and necessary medical treatment needed to cure and relieve the effects of the January 20, 2017 injury.

4. The parties' stipulation with respect to average weekly wage is hereby approved. Claimant's average weekly wage is $783.96 unless and until it is subject to adjustment pursuant to law.

5. All matters not determined herein are reserved for further determination.

6. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 11, 2017

/s/ Kimberly Turnbow
Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Whether Respondents are permitted to withdraw their General Admissions of Liability having proved, by a preponderance of the evidence, that Claimant did not suffer a compensable industrial injury or occupational disease.

II. Whether Claimant has proven by a preponderance of the evidence that her average weekly wage (AWW) should be increased to reflect pay raises.

FINDINGS OF FACT

1. Claimant began working for Employer as an independent contractor in May 2014. Claimant then became a permanent and direct employee of Employer in December 2014 when she was hired as a full-time material planning analyst. Claimant was subsequently promoted to her current position, senior supply planning craft and innovation analyst. Claimant testified at hearing that her jobs for Employer have been 100% sedentary.

2. Claimant testified that her annual salary at the time of being hired as a permanent employee was $63,000. Claimant's salary was $66,780 as of April 1, 2016, $76,000 as of late January/early February 2017, and $78,003 as of April 1, 2017 and ongoing.

3. Claimant testified that her current job requires working with numbers, tracking figures in spreadsheets, collaborating with other departments on conference calls, and sending and receiving electronic mail messages. Claimant testified that she works eight to eleven hours a day, five days a week, and that 99% of her work is performed at her desk. Claimant estimates that she spends 95% to 98% of her work day at her desk typing, which equates to over seven hours a day. Claimant classifies herself as a "hunt and peck" typist, using all of her fingers to type and looking up and down from the computer screen to the keyboard. Claimant testified she has never had an issue with productivity or production. Claimant testified that she spends almost all of her day in the computer program Microsoft Excel, writing up projects, and setting production schedules. Claimant testified that she multitasks while on telephone calls and is rarely in meetings away from her desk.

4. Claimant is right hand dominant. Claimant testified that she began experiencing pain in her left shoulder and an increase in headaches during the summer of 2014. Claimant reported the symptoms to her manager, who coordinated an ergonomic evaluation of Claimant's workstation. Claimant testified that several changes were made to her workstation, and that those changes alleviated her symptoms for a period of time. Claimant testified that the left-sided pain returned in approximately early 2015. Claimant

testified that she had been moved to a new workstation and was using a conference room chair. Claimant testified that the pain in her left shoulder worsened, and included a burning sensation in her forearm and aching in her shoulder complex and neck. Claimant stated that she initially only experienced the pain occasionally while at work, but that the pain progressed into constant pain by late 2015.

5. A second ergonomic assessment of Claimant's workstation was conducted on January 6, 2016 which found, among other things, Claimant's back was not properly supported, the armrests of her chair interfered with the correct keyboard position, and Claimant's elbow was not at 90 degrees and her wrists were not straight during keying or using the mouse. Claimant was provided a different chair, and the keyboard and mouse were positioned closer to Claimant to avoid reaching.

6. Claimant reported her symptoms to Employer as a workers' compensation injury on January 22, 2016.

7. On January 28, 2016, Philip Smaldone, M.D. evaluated Claimant at Employer's in-house medical facility. Claimant reported to Dr. Smaldone that the injury did not occur on a specific date or time, and that she had been experiencing pain since the summer or fall of 2014 after starting work with Employer. Claimant reported that she had been experiencing a burning sensation in the left anterior shoulder for the past 1 ½ years, and a burning sensation over the left volar forearm for the past six months. On examination, Dr. Smaldone noted tenderness to palpation over the left anterior shoulder and that pressure caused a burning sensation in the shoulder and forearm. Dr. Smaldone noted that the Adson's test and the hyperextension test for thoracic outlet were both negative. Dr. Smaldone assessed work-related median nerve neuritis and released Claimant to work with no restrictions. Dr. Smaldone recommended that Claimant undergo physical therapy and adjust the ergonomic setup of her workstation.

8. A third ergonomic assessment was conducted by McCallum Physical Therapy, P.C. on January 29, 2016. It was noted that Claimant propped on her wrist when typing with the left hand with her left side bent in the trunk, and that Claimant was reaching forward to reach the keyboard and mouse. It was recommended that Claimant receive an adjustable work station, sit on a pad in her chair to increase her height, and install a keyboard tray to lower her desk. Claimant testified that the ergonomic adjustments made in January 2016 reduced her pain but did not resolve her symptoms completely.

9. Dr. Smaldone reevaluated Claimant on February 11, 2016. Claimant reported fewer symptoms after being away from work and with working on her laptop in her lap. On examination, Dr. Smaldone noted tenderness over the left anterior shoulder with pressure "lightening up" over the left forearm. Dr. Smaldone performed an injection in Claimant's left anterior shoulder and noted resolution of shoulder and forearm pain with tingling over the volar distal forearm and wrist. Dr. Smaldone assessed median nerve neuritis possibly related to thoracic outlet syndrome (TOS).

10. Claimant underwent an EMG of her left upper extremity on February 26, 2016, including measures of primal nerve/brachial plexus. John B. Woodward III, M.D. noted that all studies were normal.

11. Claimant attended multiple physical therapy sessions at McCallum Physical Therapy from February 3, 2016 to April 20, 2016. The physical therapy notes document Claimant's symptoms improved at times and worsened at other times.

12. On March 1, 2016, Eric O. Ridings, M.D. conducted an Independent Medical Examination (IME) of Claimant at the request of Respondents. Dr. Ridings reviewed medical records dated January 28, 2016 and February 11, 2016, the February 26, 2016 EMG, and Claimant's job descriptions. Dr. Ridings also performed a physical examination of Claimant. Claimant reported pain at the right anterior shoulder, burning pain in the left distal volar forearm and wrist, and aching pain in the left upper trapezius extending up into the left side of her neck. Claimant reported that the pain in her upper trapezius and left forearm was nearly constant. On physical examination, Dr. Ridings noted tenderness to palpation in the left cervical paraspinals and left scalene, as well as myofascial tightness in the left shoulder elevator muscles and upper interscapular and thracolumbar regions. Dr. Ridings noted a strongly positive Wright's test with radiating symptoms into the volar distal forearm, and negative results for passive and active provocative tests for medial or lateral epicondylitis.

13. Dr. Ridings disagreed with Dr. Smaldone's diagnosis of median neuritis, contending Dr. Smaldone did not perform any provocative tests for median neuritis, nor did the history or physical examination evidence median neuritis. Dr. Ridings opined that Claimant's clinical evaluation was consistent with the diagnosis of myofascial pain syndrome involving the left upper quadrant, and myogenic TOS as a complication of the myofascial pain syndrome.

14. Dr. Ridings opined that the MTG could not be utilized to determine whether Claimant's myogenic TOS is work-related because the MTG do not specifically address Claimant's diagnosis in the tables that discuss risk factors for diagnoses such as carpal tunnel and de Quervain's tenosynovitis. Dr. Ridings therefore opined that the determination of work-relatedness "must rely on the clinical judgment of the evaluating physician, supported by documentation of a mechanism of injury that would deal with these diagnoses." Dr. Ridings further stated,

> The patient reports a history of 1 ½ years of inappropriate ergonomics at her several workstations, with the primary culprit having her keyboard too high for her seated position. This predictably results in the worker tonically elevating his or her shoulders in order to position the hands properly on the keyboard and mouse. This tonic use of the shoulder elevator muscles and associated muscles about the shoulder frequently results in myofascial pain syndrome as in my opinion it has in this case. Additionally, the patient reports being told that she had poor posture leaning forward with rounded shoulders which predictably leads to multiple areas of myofascial pain, and in particular tightness of the pectoralis minor

> muscles. Therefore, unless there is additional information forthcoming refuting the patient's description of her ergonomic evaluations or revealing some injury outside of the workplace, it is my opinion within a reasonable degree of medical probability that the patient's current diagnoses as discussed above are related to her employment at [Employer].

15. Dr. Smaldone reevaluated Claimant on March 23, 2016. Claimant reported pain in the left trapezius area, left posterior neck, left anterior chest, left shoulder, and left forearm. Dr. Smaldone did not perform a physical exam. Dr. Smaldone assessed myofascial pain involving the trapezius and left neck, and TOS leading to left anterior shoulder and chest pain and pain about the left forearm. Claimant deferred a visit to a thoracic specialist.

16. In an ergonomic assessment follow-up note dated April 5, 2016, Christine McCallum, DPT, noted, "All ergonomic changes (chair, posture, keyboard tray, typing style) have not improved patient symptoms or comfort significantly. Recommend that she be allowed to utilize a fully adjustable sit and stand desk." Claimant testified that she received a sit/stand desk in May or June 2016 and that she subsequently stood one to two hours per day at work on average.

17. Claimant returned to Dr. Smaldone for a follow-up evaluation on April 20, 2016. Claimant reported periods of improvement of her symptoms and periods of exacerbation. Dr. Smaldone assessed myofascial pain syndrome and myogenic TOS and referred Claimant to a TOS specialist at University of Colorado Health Science. Dr. Smaldone ordered Claimant to discontinue physical therapy.

18. On April 22, 2016, Respondents filed a General Admission of Liability (GAL) admitting for medical benefits only.

19. Claimant presented to Natalia Glebova, M.D., Ph.D., at University of Colorado Hospital on May 11, 2016. Claimant reported symptoms on the left-side involving pain in the anterior neck region, volar aspect of her upper arm, back of her neck, and trapezius muscle. On examination, Dr. Glebova noted intact motor strength and sensation and a negative Adson's test. Dr. Glebova further noted that she did not review any imaging or laboratory studies. Dr. Glebova opined that Claimant did not have neurogenic TOS and that surgery was not necessary because Claimant was improving with physical therapy and ergonomic modifications. Dr. Glebova referred Claimant to physical therapist Jason Lund for an evaluation noting, "...sometimes he is able to fix whatever muscle imbalance she has developed due to her poor ergonomic situation at work, and that should help her with her symptoms."

20. Claimant underwent chiropractic treatment in June and July 2016. Claimant also resumed physical therapy sessions in July 2016. Claimant testified that she began experiencing right-sided symptoms in approximately July 2016. A physical therapy note dated July 21, 2016 notes Claimant reported pain in her right elbow and forearm. Claimant also reported experiencing a right-sided migraine headache while at work after an intensive needling session in early August 2016. Claimant testified that she believes

the right-sided symptoms occurred because she stopped using her left arm when working.

21. Claimant continued to treat with Dr. Smaldone. On August 25, 2016, Claimant reported that her symptoms were comparable to those at her presentation, and that she was "experiencing pain throughout the day with no relief from any particular posture activity." Dr. Smaldone ordered an MRI of the cervical spine and an EMG, and referred Claimant to Dr. Phillip Engen. At the direction of Dr. Smaldone, Claimant worked part-time for Employer from August 2016 to February 2017, working four hours a day, five days per week.

22. Respondents filed a GAL on September 12, 2016 admitting for medical benefits, temporary total disability (TTD) benefits from August 26, 2016 through August 29, 2016, and temporary partial disability (TPD) benefits from August 30, 2016 and ongoing.

23. Phillip L. Engen, M.D. evaluated Claimant on September 13, 2016. Dr. Engen noted that Claimant's left-sided symptoms had reduced with workstation modification, but that Claimant had developed similar right upper extremity symptoms. On examination, Dr. Engen noted tenderness to palpation over the left shoulder but no allodynia or hyperpathia, a positive Tinel's test over the left brachial plexus of the left scalene and right scalene, positive Adson maneuvers on the left side, and a positive Roos test. Dr. Engen gave the following impression: myogenic TOS, burning pain likely consistent with a neurogenic origin, and probable bilateral symptoms of TOS. Dr. Engen recommended Claimant undergo Feldenkrais physical therapy and see Dr. Sanders. Dr. Engen also recommended Claimant consider receiving a scalene block, a brachial plexus block, and consider a triple phase bone scan to rule in or rule out a sympathetic component.

24. On October 14, 2016, Richard J. Sanders, M.D. evaluated Claimant for left TOS. Claimant complained of pain in her neck, left shoulder girdle, trapezius, upper extremity, anterior chest wall, and axilla, with intermittent paresthesis in the right axilla, forearm, elbow and lesser amount of pain in the right upper arm. Claimant also reported occipital headaches and minimal paresthesis in the left hand with weakness, poor grip, coldness and color changes. Claimant reported that she did not have a history of symptoms prior to the fall of 2014.

25. Dr. Sanders noted the following on examination: right hand grip 75 pounds, left hand grip 70 pounds; no scalene tenderness on the right with moderate tenderness on the left; Tinel's test over plexus negative on the right and positive on the left; no shoulder tenderness on the right and moderate shoulder tenderness on the left; 180 degrees arm abduction on the left with mild tingling at the wrist and hand; full range of motion in the neck; painful head tilt; Tinel sign and Phalen sign of hands negative on the right and positive on the left; Pronator tunnel and radial tunnel Tinel's test negative on the right and positive on the left; numbness and increased tingling in the left hand at different times when abducting the arms to 90 degrees in external rotation.

26. Dr. Sanders further noted that the upper limb tension test was minimally positive on the right and more strongly positive on the left stating,

> This test was comparable to straight leg raising in the lower extremity. Her positive response on the left is indicative of brachial plexus compression either above or below the clavicle in the thoracic outlet or pectoralis minor areas, or in both areas. The mild response on the right suggests a minimal degree of brachial plexus compression on the right side.

27. Dr. Sanders performed a left pectoralis minor block and left scalene block, noting Claimant had a fair response to the left pectoralis minor block, and a good response to the left scalene block. Dr. Sanders gave the following impression: left neurogenic TOS, left neurogenic pectoralis minor syndrome, minimal symptoms of right neurogenic TOS, and possible mild left cubital tunnel syndrome. Dr. Sanders concluded Claimant's left TOS is due to repetitive stress injury at work at a keyboard. Dr. Sanders recommended Claimant continue physical therapy/home exercises, a possible trial of Feldenkrais therapy, changing typing at work, or surgical decompression of the left thoracic outlet and pectoralis minor areas. Dr. Sanders referred Claimant to Dr. Annest, a thoracic outlet specialist.

28. In a medical note dated October 18, 2016, Dr. Smaldone assessed left neurogenic thoracic outlet, left neurogenic pectoralis syndrome, right mild neurogenic TOS, possible left cubital tunnel syndrome.

29. On November 28, 2016, Claimant presented to Stephen J. Annest, M.D. Claimant complained of headaches, pain in her neck, constant left shoulder aching, pinching in the anterior axilla, sharp pain in her left elbow, heat-like discomfort in her forearm, and weakness and fatigue in her hand. After physically examining Claimant, Dr. Annest assessed brachial plexus disorder, left arm pain and neck pain. Dr. Annest noted alternative options to treatment, including Dragon Speak and Feldenkrais therapy. Dr. Annest made a surgical request and requested Feldenkrais physical therapy for Claimant's right TOS.

30. On December 23, 2016, Claimant saw Jason R. Lund, M.S.P.T., at the Ashbaugh Center for Therapy. Mr. Lund noted that Claimant had objective findings consistent with a TOS diagnosis and would benefit from "skilled PT intervention to overcome her repetitive postural dysfunction that has to affecting the thoracic outlet space."

31. On January 22, 2017, Henry J. Roth, M.D. performed an IME of Claimant at the request of Respondents. Dr. Roth issued an IME report on January 31, 2017. Claimant reported to Dr. Roth that she no longer experienced right-sided symptoms, but that the left-sided symptoms continued and were provoked by exercise, prolonged static postures, movement and reaching with the left arm, materials handling, stress, tension, and work. On examination, Dr. Roth noted, in part, normal range of motion, tenderness in the left arm, no tenderness in the epicondyles, and discomfort in the left forearm from cubital tunnel pressure. Dr. Roth diagnosed Claimant with non-work related idiopathic,

nonspecific, widespread left upper quarter myofascial pain syndrome, depression, and sleep disorder. Dr. Roth opined that there was no relationship between Claimant's condition and her work duties, stating that Claimant's "myofascial discomfort and potential secondary myogenic thoracic outlet syndrome symptoms are not related to an injurious work exposure." Dr. Roth noted Claimant's EMG was normal, and referred to myofascial pain as a "universal and mundane condition" that all persons have.

32. Dr. Roth disagreed with Dr. Ridings' contention that the MTG do not apply to myofascial pain stating, "The principles for the evaluation are the same whether one is dealing with the conditions specifically identified in the Cumulative Trauma Risk Factor Tables or not. The question to be answered is, 'Is there sufficient force and repetition to result in an injury." Dr. Roth opined that there was no mechanical injury to a tendon, ligament, muscle or nerve, and no physiologic abnormality. Dr. Roth noted that myofascial pain can be provoked by prolonged static postures and poor postures, but that myofascial pain is not a sustained pathologic injury. Dr. Roth contended that sitting and standing are "normal activities of daily living and are common to all employment." Dr. Roth contended that Claimant had not improved despite "every conceivable ergonomic adjustment" being made, and opined that it was not medically probable that Claimant's work was the cause of her condition. Dr. Roth stated that Claimant's discomfort with prolonged static postures is "an indication of a personal intolerance and personal condition, not a condition caused by performing activities for which she may not be personally suited for comfort." Dr. Roth opined that it was not medically probable that Claimant's posture caused a sustained pathology or anatomic abnormality sufficient to cause neurogenic TOS.

33. Dr. Roth further referred to Exhibit 3 of the MTG, which addresses TOS, and noted that the majority of patients who present with physical symptoms of TOS do not have vascular or neurogenic TOS and their symptoms are caused by myofascial dysfunction. Dr. Roth opined that there were no primary or secondary risk factors identified in Claimant's ergonomic assessments. Dr. Roth recommended against authorization for thoracic outlet surgery.

34. Dr. Roth testified at hearing on behalf of Respondents as an expert in occupational medicine and internal medicine. Dr. Roth is board certified and Level II accredited by the Colorado Division of Workers' Compensation. Dr. Roth testified that there are three types of TOS: vascular, true neurogenic, and disputed/myogenic. Dr. Roth opined that Claimant does not have neurogenic TOS based on two normal EMG nerve conduction studies and the absence of muscle atrophy or loss of innervations. Dr. Roth opined that Claimant has myofascial pain/fibromyalgia. Dr. Roth further opined that Claimant's condition is not work-related and is the result of Claimant's posture and abnormal anatomy. Dr. Roth stated that Claimant's condition being recalcitrant to ergonomic adjustments and treatment indicate her condition is not work-related. Dr. Roth testified that the MTG are applicable in Claimant's case

35. Dr. Roth opined that there was insufficient force and repetition to result in injury. Dr. Roth further testified, "I think that if you – you could have muscle tension and discomfort from – from prolonged static posture, and – and that might be, you know,

work-related, but that's – but that's only work-related to the degree that you have personal intolerance to a particular position, which is certainly, you know, correctable."

36. Respondents filed a third GAL on March 10, 2017, admitting to medical benefits, TTD from August 26, 2016 to August 29, 2016, and TPD from August 30, 2016 to February 26, 2017.

37. On April 10, 2017, Marc M. Treihaft, M.D. conducted an IME of Claimant at the request of Respondents. On examination, Dr. Treihaft noted normal bulk, tone and strength in Claimant's bilateral upper extremities and intact pinprick over the hands. Dr. Treihaft gave the following impression: "[Claimant's] presentation is compatible with a chronic myofascial syndrome of the left upper extremity. The clinical and electrophysiologic evaluations do not establish a diagnosis of neurogenic thoracic outlet syndrome or median neuritis." Dr. Treihaft recommended Claimant continue physical therapy.

38. On May 22, 2017, Dr. Treifhaft testified by deposition on behalf of Respondents as an expert in neurology. Dr. Treihaft is board certified and Level II accredited by the Colorado Division of Workers' Compensation. Dr. Treihaft testified that there is a difference between neurogenic TOS and disputed TOS. Dr. Treihaft testified that neurogenic TOS would be documented on an EMG, and would also be evidenced by abnormal clinical findings, including atrophy of particular muscles in the hand. Dr. Treihaft testified that, per his standpoint, no one has quite understood or can explain disputed/non-neurogenic TOS. Dr. Treihaft testified that there is no definitive marker for disputed TOS, and that myogenic TOS falls into the disputed TOS category. Dr. Treihaft opined that Claimant does not have neurogenic TOS, based on the absence of positive clinical findings on his physical examination and two normal EMG studies. Dr. Treihaft further opined that there was no evidence of neurogenic TOS in the medical records. Dr. Treihaft also disagreed with the diagnosis of non-neurogenic TOS, referring to non-neurogenic TOS as an "indistinct" and "vague entity without good boundaries and without a means of testing for it."

39. On June 5, 2017, Dr. Sanders testified by deposition on behalf of Claimant as an expert in vascular surgery and TOS. Regarding the terminology, Dr. Sanders testified that he does not use the term "disputed" TOS and that most, if not all, doctors who treat TOS have "totally disregarded the separation of neurogenic into disputed and true." Dr. Sanders testified that four provocative maneuvers, muscle blocks and an appropriate nerve test can be used to make a diagnosis of TOS. Dr. Sanders stated that, while he performed all four provocative maneuvers on Claimant, the medical records indicate Drs. Roth, Treihaft and Glebova did not perform any of the provocative maneuvers on Claimant during their examinations. Dr. Sanders further testified that a diagnosis of TOS cannot be definitively ruled out if the provocative maneuvers are not performed.

40. Dr. Sanders stated that the muscle blocks he performed were positive diagnostic findings indicating Claimant probably has TOS and a mild degree of pectoralis minor syndrome on the left side. Dr. Sanders testified that an appropriate

nerve test to determine a diagnosis of TOS would include measurement of the medial antebrachial cutaneous nerve. Dr. Sanders acknowledged that the EMG study conducted by Dr. Woodward included a normal measurement of the medial antebrachial cutaneous nerve, but testified that the test was incomplete because there was no measurement of the right side. Dr. Sanders contended that normal EMG results do not preclude a diagnosis of TOS, stating that the "majority of nerve testing is normal in patients with otherwise proven TOS."

41. Dr. Sanders further testified that he did not disagree with the diagnosis of myofascial pain because Claimant's "myofascial involvement caused pressure against the nerves" and produced Claimant's symptoms. Dr. Sanders testified that Dr. Ridings' diagnosis of myogenic TOS was basically the same as his diagnosis of neurogenic TOS, and the difference was an issue of semantics. Dr. Sanders explained that he referred to Claimant's condition as neurogenic, which describes a nerve being compressed, while Dr. Ridings referred to Claimant's condition as myogenic, which describes the muscle compressing the nerve. Dr. Sanders further contended that Dr. Annest's diagnosis of left brachial plexus entrapment was effectively the same as his diagnosis of neurogenic TOS.

42. Dr. Sanders opined that Claimant's TOS was most likely a repetitive stress injury that resulted from sitting at a keyboard. Dr. Sanders testified that the failure of ergonomic adjustments to fully alleviate Claimant's symptoms did not change his opinion on Claimant's condition or causation Dr. Sanders acknowledged that abnormal anatomy can predispose someone to developing TOS. Dr. Sanders stated that he had not conducted a subsequent physical examination of Claimant, but agreed that Claimant currently does not have symptoms of TOS or cubital tunnel syndrome on the right side, and that he was unsure whether Claimant would, at this point, have positive findings for TOS syndrome on the left side. Reiterating that he has not conducted a subsequent physical examination of Claimant, Dr. Sanders opined that Claimant is now at MMI and no further treatment is indicated. Dr. Sanders attributed Claimant's improvement to a combination of Claimant working part-time during certain period, ergonomic adjustments, and physical therapy.

43. Claimant testified she did not have any prior issues with or treatment for her neck, shoulder or arm. Claimant testified that her pain is currently manageable and the symptoms have calmed, with some burning sensation in her forearm and neck still present. Claimant attributes her improvement to physical therapy and desires to continue with physical therapy as future treatment. Claimant no longer wants to undergo the once-recommended surgery.

44. Claimant's testimony is found credible and persuasive.

45. The ALJ credits the opinions of Drs. Sanders, Ridings, Smaldone, Engen, and Annest over the contradictory opinions of Drs. Roth and Treihaft and finds that Claimant suffered a compensable injury.

46. Respondents have failed to establish by a preponderance of the evidence that Claimant did not sustain a compensable injury and, therefore, are not permitted to withdraw the GALs.

47. Claimant's AWW is as follows for the applicable time periods:

Time Period	**AWW**
January 22, 2016 – March 31, 2016	$1,211.55
April 1, 2016 – January 31, 2017	$1,284.23
February 1, 2017 – March 31, 2017	$1,461.54
April 1, 2017 – Ongoing	$1,500.06

48. The evidence and inferences inconsistent with these findings were not credible and persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert

testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. V. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability and Withdrawal of a General Admission of Liability

For a claim to be compensable under the Act, a claimant has the burden of proving that at the time of the injury he was performing a service arising out of and in the course of the employment, and that the injury or occupational disease was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. The question of whether a claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). The question of whether the claimant met the burden of proof to establish a compensable injury is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

The Court of Appeals has previously concluded that the burden of proof to establish compensability remained on the claimant even when an employer was attempting to withdraw an admission of liability. However, the Act has since been amended to change the burden of proof when respondents are attempting to withdraw admissions of liability. Specifically, respondents must now prove by a preponderance of evidence that the claimant did not suffer a compensable injury as defined under Colorado law. Section 8-43-201(1), C.R.S.

When evaluating the issue of causation the ALJ may consider the provisions of the MTG because they represent the accepted standards of practice in workers' compensation cases and were adopted pursuant to an express grant of statutory authority. However, the MTG are not dispositive of the issue of causation and the ALJ need not give them any more weight than he determines they are entitled to in light of the totality of the evidence. *See Cahill v. Patty Jewett Golf Course,* WC 4-729-518 (ICAO February 23, 2009); *Siminoe v. Worldwide Flight Services,* WC 4-535-290 (ICAO November 21, 2006).

Respondents seek to modify the issue of compensability as already determined by previously filed GALs. Accordingly, Respondents have the burden of proving by a preponderance of the evidence that Claimant did not sustain a compensable injury.

As found, Respondents have failed to establish, by a preponderance of the evidence, that Claimant did not sustain a compensable injury. The ALJ credited the opinions of Drs. Smaldone, Ridings, Sanders, Engen and Annest, who credibly opined that Claimant's condition is work-related. While there have been different diagnoses, the ALJ concludes that Claimant's work duties caused Claimant's condition or combined with a predisposition to cause the need for treatment. Claimant's condition resulted from the nature of the work she performed. Claimant credibly testified that she typed for seven hours per day. The ergonomic evaluations evidence Claimant was performing her job duties at an ergonomically incorrect workstation. While sitting for several hours may be common, there is insufficient persuasive and credible evidence establishing that typing for seven hours a day at an ergonomically incorrect station is something Claimant would generally exposed to outside of the employment. Claimant credibly opined that she had no issues with her neck, shoulders and back prior to the onset of symptoms.

Based on the totality of the evidence, the ALJ concludes Claimant sustained a compensable injury. Therefore, Respondents have failed to meet their burden of proof and are not permitted to withdraw their previously filed GALs.

Average Weekly Wage

Section 8-42-102(2), C.R.S., requires the ALJ to base the claimant's AWW on his earnings at the time of injury. However, under certain circumstances the ALJ may determine the claimant's AWW from earnings received on a date other than the date of injury. *Avalanche Industries, Inc. v. Clark,* 198 P.3d 589 (Colo. 2008); *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). Specifically, Section 8-42-102(3), C.R.S., grants the ALJ discretionary authority to alter the statutory formula if for any reason it will not fairly determine the claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp., supra.*

Claimant credibly testified that, since the onset of her symptoms, her annual salary increased to $66,780 on April 1, 2016, to $76,000 by February of 2017, and to $78,003 on April 1, 2017. Claimant's testimony with respect to her wages is uncontroverted. The ALJ concludes that a fair approximation of Claimant's wage loss and diminished earning capacity includes Claimant's aforementioned pay increases. Claimant has established entitlement to an increase of her AWW for the applicable time periods as detailed in the above findings of fact.

ORDER

It is therefore ordered that:

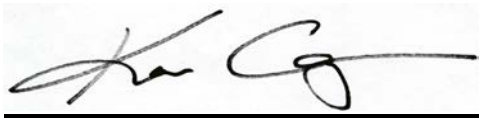
1. Respondents failed to establish by a preponderance of the evidence that Claimant did not sustain a compensable injury. Respondents' request to withdraw their GALs is denied.

2. Claimant earned an AWW of $1,211.55 for the period from January 22, 2016 through March 31, 2016; $1,284.23 for the period from April 1, 2016 through January 31, 2017; $1,461.54 for the period from February 1, 2017 through March 31, 2017; and $1,500.06 from April 1, 2017, ongoing. Claimant's past and future TTD and TPD benefits shall be adjusted and paid accordingly.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 11, 2017



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that she sustained a work related injury on July 25, 2016.

2. Whether Claimant has established by a preponderance of the evidence an entitlement to a disfigurement award.

STIPULATIONS

1. The parties stipulated that Claimant's average weekly wage at the time of the injury was $1,869.00.

2. The parties stipulated that if found compensable, Claimant would be entitled to temporary total disability benefits at the maximum benefit rate from July 25, 2016 through August 6, 2016.

FINDINGS OF FACT

1. Claimant is employed by Employer as a Senior Project Manager and has been so employed for approximately six years. Claimant's job duties are primarily sedentary with mostly sitting and performing computer work. Claimant is a salaried employee and her hours of work are typically between 7:00 a.m. and 3:00 p.m. with extra hours as needed. *See* Exhibit D.

2. Claimant receives two 15 minute paid breaks per day and usually combines the two breaks into one 30 minute break.

3. Claimant regularly uses her 30 minute break to walk near and around a one mile loop outside Employer's building. Claimant does so for exercise and general wellness. At times when she is too busy with projects she does not walk but she typically tries to walk 2-3 times per week.

4. Many of Employer's employees walk outside the building and on the one mile loop that Claimant walks. Employees are seen regularly throughout the day walking the same loop that Claimant walks. Employees tell their managers or someone else in their unit when they are leaving. Claimant always told someone when she was leaving to go walk and brought her cell phone with her during her walk so that she could be reached if needed.

5. There are break rooms on each floor of Employer's building and there are some sidewalk paths on Employer's premises, but there are no exercise or gym facilities in the building or on the premises. Many employees thus walk the larger one mile loop during the day for exercise. Employer does a lot to encourage health and wellness and is aware of the walks taken by its employees.

6. On July 25, 2016 Claimant arrived at work at approximately 7:00 a.m. It was her practice in the summer months to take her break earlier in the morning before it got too hot. At approximately 8:00 a.m. Claimant took her break and let someone in her office know that she was heading out to walk and would have her cell phone with her.

7. Claimant walked out the main door of Employer's building, through the employee parking lot, and stepped onto the sidewalk directly in front of Employer's parking lot to begin her walk.

8. Claimant was approximately one or two steps on the sidewalk when an aggressive bird attacked her. The bird came at Claimant from the sky and hit her several times. Claimant attempted to go closer to a nearby tree to get away from the bird but tripped and fell into the nearby road hitting her face and head on the asphalt.

9. The bird had made a similar attack on another employee. The day after this incident, the property management company for Employer's building put out yellow tape to tape off the area of the bird and the apparent bird nest that it was believed the bird was protecting.

10. When Claimant fell into the road, a car driving by stopped and helped her. The driver drove her back into the parking lot and to the main door of her building. When Claimant entered her office building, she told the security officer Gary to call her supervisor. Claimant went into the bathroom to wash off the blood. Claimant's hand was swollen, face was swollen, and she was in pain. Claimant also decided to lie down on the bathroom floor.

11. Employer's human resources supervisor, Kathy Anselmo, came into the bathroom to check on Claimant. There was an attempt to contact Claimant's husband, but ultimately Ms. Anselmo drove Claimant to a nearby urgent care center.

12. Ms. Anselmo initially took Claimant to the second floor of the urgent care center designated for workers' compensation injuries and made a comment that Claimant had sustained a work related injury. Claimant briefly saw Brian McIntyre, D.O. who immediately directed Claimant to the first floor which was the emergency part of the urgent care center. Ms. Anselmo testified at hearing that she believed the injury had happened in the parking lot and was work related but later found out that it had not happened in the parking lot. Ms. Anselmo testified that she turned in all the information to Insurer and that she had no part in the decision to approve or deny the claim.

13. After going to the emergency part of the urgent care center, Claimant was evaluated by Ronald Linton, M.D. It was noted that her facial lacerations were cleaned and sutured, a facial bone CT did not reveal any acute processes or fractures, and that x-rays of the right shoulder and wrist were negative for fractures. Dr. Linton noted his belief that the right shoulder was a contusion, right wrist was likely a sprain or contusion, and that Claimant needed to follow up with her dentist regarding her teeth. *See* Exhibit 4.

14. The next day, on July 26, 2016 Claimant was evaluated by Dr. McIntyre. Claimant reported that she was attacked by a bird and fell into the street. Dr. McIntyre noted that Claimant had received 8 stitches on the outside of her upper lip and 2 stitches on the inner lip. Claimant reported severe pain and swelling in her lip and oozing of the laceration. Claimant reported that she hit her head hard, had a headache and had pain in her right upper central incisor tooth, back of head pain, stiffness/soreness and achiness of her neck, pain in the right hand and wrist, shoulder pain, and upper back pain. Claimant was wearing a sling and wrist splint that was given to her by the emergency urgent care. Claimant also reported that she broke her glasses during the fall. Dr. McIntyre performed a physical examination and diagnosed: laceration of lip; concussion without loss of consciousness; strain of muscle, fascia, and tendon at neck level; strain of muscle(s) and tendon(s) of the rotator cuff of the right shoulder; and contusion of the right wrist. Dr. McIntyre opined that the causes of the problems were related to work activities. Dr. McIntyre ordered right wrist and hand series x-rays, neck x-rays, and referred Claimant to a plastic surgeon for facial laceration evaluation. Dr. McIntyre opined that Claimant had suffered severe injuries from the fall. *See* Exhibits 5, A.

15. On July 29, 2016 Claimant was evaluated by Dr. McIntyre. He noted that the x-rays were all without fracture or dislocation. He again opined that the cause of Claimant's problem was related to work activities, noted her continued pain, and recommended she attend the scheduled plastic surgery visit and dental visit. Dr. McIntyre opined that he was uncertain whether Claimant's wrist was mainly a contusion and strain injury versus a tear of an internal soft tissue structure. *See* Exhibits 5, A.

16. On August 3, 2016 Claimant was evaluated by Dr. McIntyre. He noted that Claimant would return to modified duty the next day. He again opined that the cause of the problems was related to work activities and noted that Claimant was on a walk, on the same side of the street/sidewalk of the building in which she works and that Claimant was participating in a company-sponsored exercise program. *See* Exhibits 5, A.

17. On August 16, 2016 Claimant was evaluated by Dr. McIntyre. Claimant reported improving slightly but with continued weakness and pain in the ulnar wrist region and weakness of grip and difficulty mousing and typing. Claimant reported her shoulder was improving some and that her upper lip was still very painful with intermittent swelling. Claimant reported a painful bite and that she had a dentist appointment the next day. Dr. McIntyre ordered an MRI of Claimant's right wrist and

recommended that Claimant continue with physical therapy and with the scheduled dental appointment. *See* Exhibits 5, A.

18. Claimant continued to treat and was evaluated by a plastic surgeon and dentist. Claimant eventually had her two front teeth replaced by her dentist. Respondents later denied the claim and Claimant stopped physical therapy as she could not continue to afford to pay for treatment. Claimant reports continued pain and problems in her neck, shoulder, hand, and wrist. *See* Exhibits 6, 7.

19. At hearing, Claimant displayed a scar approximately 1 inch in length between her nose and her upper lip that remains white, red, and raised from the injury despite adequate time for healing.

20. Employer promotes health and wellness for all employees and believes in a work/life balance and that a healthy person will be a better employee. To that end, Employer offers each employee an annual $350 wellness reimbursement for qualifying wellness related items (ex. gym membership fees, fitbit, exercise machine, bicycle, etc). Employer also offers health insurance premium discounts if an employee chooses to participate in certain health tests. Employer also offers various health and wellness challenges and programs that are voluntary for employees to participate in.

21. Employer does not get any benefit in their premiums for providing programs to employees, but it is done for the benefit of their employees. Employer never requires or tells employees what programs to do or how to maintain wellness, but offers different things throughout the year as encouragement.

22. At the time of Claimant's injury, Clamant was involved and enrolled in the Global Corporate Challenge (GCC), a health and wellness program offered by Employer. Claimant's participation in this was completely voluntary, but Claimant received emails about the program from Employer, who initiated it for all interested employees.

23. The GCC was a 100 day challenge with employees being able to sign up in teams of seven. The teams and goals would be to increase activity up to 10,000 steps per day. At day 22 of the 100 day challenge, nutritional advice would begin with GCC nutrition. At day 43, psychological wellbeing advice would begin with GCC balance. At day 57, sleep pattern advice would begin with GCC sleep. The goal was to for the employee to beat the "old" them at the end of the 100 day challenge. As part of the challenge, employees who participated were provided with a GCC pulse device to track their daily activity and steps. Claimant testified that she wore the pulse from the time she woke up until the time she went to bed in order to get to the goal of 10,000 steps per day. *See* Exhibits 13, C.

24. Claimant reported that walking the one mile loop outside and near Employer's building helped her to get steps for the GCC. Claimant also testified that

she liked the daily articles from the GCC on nutrition, sleep, mental health, and reducing stress.

25. Employer encouraged the GCC program and wanted their employees to participate but did not require participation.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

In order to recover benefits the claimant must prove by a preponderance of the evidence that her injury was proximately caused by an injury arising out of and in the

course of her employment. *See* § 8-41-301(1)(b) & (c), C.R.S*.; City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). An injury occurs "in the course of" employment where the claimant demonstrates the injury occurred within the time and place limits of her employment and during an activity that had some connection with her work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991). The "arising out of" element is narrower and requires claimant to show a causal connection between the employment and the injury such that the injury has its origins in the employee's work-related functions and is sufficiently related to those functions to be considered part of the employment contract. *Id.* In order for an employee's action to "arise out of" the employment it is not necessary that the activity be a strict duty or requirement of the employment. Rather if the injury arises out of a risk that is reasonably incidental to the conditions and circumstances under which the employment is usually performed the resulting injury arises out of the employment. *Panera Bread v. Industrial Claim Appeals Office,* 141 P.3d 970 (Colo. App. 2006).

Actions such as eating, sleeping, resting, washing, toileting, seeking fresh air, getting a drink of water and keeping warm have been held to be incidental to employment under the "personal comfort" doctrine. As an example, injuries sustained on the employer's premises while eating lunch are generally compensable under that doctrine because the employee is at a place he might reasonably be, within the time limits of the employment, and engaged in an activity reasonably incident to the work. *In re Question Submitted by U.S. Court of Appeals*, 759 P.2d 17 (Colo. 1988); *Industrial Commission v. Golden Cycle Corp*., 246 P.2d 902 (Colo. 1952); *Ventura v. Albertsons' Inc.*, 856 P.2d 35 (Colo. App. 1992). Underlying this doctrine is the principle that actions taken to satisfy the employees "personal comfort" are necessary to maintain the employee's health, and are indirectly conducive to the employer's purposes. *Ocean Accident and Guaranty Corp. v. Pallaro*, 180 P. 95 (Colo. 1919). It is sufficient if the injury arises out of a risk which is reasonably incidental to the conditions and circumstances of the particular employment. *Phillips Contracting, Inc. v. Hirst*, 905 P.2d 9 (Colo. App. 1995). This includes discretionary activities on the part of the employee which are devoid of any duty component, and are unrelated to any specific benefit to the employer. *City of Boulder v. Streeb*, *supra*; *L.E.L. Construction v. Goode*, 849 P.2d 876 (Colo. App. 1992).

Conversely, if an employee substantially deviates from the mandatory or incidental functions of the employment, such that she is acting for her sole benefit at the time of an injury, the injury is not compensable. *Kater v. Industrial Commission*, 728 P.2d 746 (Colo. App. 1986). In Colorado, the employee is considered to remain in the course and scope of their employment while attending to a personal comfort unless the injury results from a "manifestly reckless or unreasonable hazard, amounting to intentional and willful misconduct, or by disregarding, or disobeying, some warning of danger at the place of the injury or prohibition relating to the thing being done either addressed to the workman or promulgated as a general rule of conduct while on the premises." *Ocean Accident and Guaranty Corp. v. Pallaro, supra; Employers' Mutual Ins. Co. v. Industrial Commission*, 230 P.394 (Colo. 1924).

Respondents argue that at the time of Claimant's injury, Claimant was engaged in a purely personal activity off Employ's premises and was not in the course and scope of employment. Respondents argue that Claimant's actions were a personal and substantial deviation from employment that took Claimant outside of the realm of the personal comfort doctrine. This is not found persuasive. Actions compensable under the personal comfort doctrine include those where the employee is at a place they might reasonably be, within the time limits of employment, and engaged in an activity reasonably incident to the work. Actions taken for one's personal comfort are necessary to maintain health and indirectly are conducive to Employer's goals and purposes. As found above, Claimant works in an office setting, primarily in a sedentary position. Employer encourages wellness and many of Employer's employees take walks around the large loop near Employer's building throughout the day. Claimant does so regularly for exercise and wellness. This is necessary to maintain health and for personal comfort. It is unreasonable for an employer to expect an employee to remain in a sedentary position for 8 hours per day without the need to get up, stretch, or walk. In this case, Employer encouraged such wellness activity both directly through the GCC program, and indirectly through different reimbursement programs they offered. Personal comfort can include eating, sleeping, resting, washing, toileting, seeking fresh air, getting a drink of water, keeping warm, and walking during paid breaks. Walking is an action necessary to satisfy an employee's personal comfort and to maintain an employee's health and is indirectly conducive to an employer's purpose. Claimant has established, by preponderant evidence, that she remained in the course and scope of her employment and that her activity in walking outside Employer's building to begin a short 30 minute walk on the large loop was incidental to her employment and fell within the personal comfort doctrine.

Claimant's activity and walk on the one mile loop is not found to be a substantial deviation from her employment. As found above, there are no exercise facilities on Employer's premises. Claimant's actions were not unreasonable in choosing to get exercise on a paved sidewalk path directly in front of Employer's building. The break Claimant was taking was a short paid break in close proximity to Employer's premises. Employer was aware of Claimant's and other employees' regular breaks that included walking this path and did not restrict the breaks. Weighing all of the evidence, the deviation was not substantial as argued by Respondents and did not take Claimant out of the course and scope of employment.

Additionally, the ALJ also finds that the exercise Claimant was engaged in during work hours is compensable under the factors outlined in *Price v. Industrial Claim Appeals Office of State of Colo.*, 919 P.2d 207, (1996). Respondents argue Claimant was engaged in a recreational activity at the time of her injury due to her participation in GCC and that, therefore, Claimant does not meet the definition of employee at the time of her injury. This is not found persuasive. Section 8-40-301, C.R.S. limits the scope of the term employee to exclude any person while participating in recreational activity, who at such time is relieved of and not performing any duties of employment, regardless of whether such person is utilizing, by discount or otherwise, a pass, ticket, license, permit, or other device as an emolument of employment. At the time of Claimant's injury, she

was not involved in a recreational activity or an activity done for her own enjoyment while not working. Rather, she was in the middle of the work day and was getting some exercise by walking a loop near and around Employer's building. Health and wellness were emphasized and promoted by Employer on a regular basis. Employer encouraged its employees to engage in activities to better their health, relieve stress, and to have a better mental attitude in the performance of their work. The encouragement extended to encouragement to participate in the GCC. Although it was voluntary to sign up for the program, it was encouraged and initiated by Employer. Claimant was participating in the GCC, walked regularly even without the GCC, and through her walks was furthering the business interests of Employer to have healthy and happy employees.

Under certain circumstances, injuries incurred during off-duty exercise mandated or encouraged by an employer might be compensable under the Workers' Compensation Act. *Price v. Industrial Claim Appeals Office of State of Colo.*, 919 P.2d 207, (1996). In order to determine whether an injury suffered by an employee while engaging in an exercise program is compensable under the Workers' Compensation Act, a court should look to the following factors: (1) Whether the injury occurred during working hours; (2) whether the injury occurred on the employer's premises; (3) whether the employer initiated the employee's exercise program; (4) whether the employer exerted any control or direction over the employee's exercise program; and (5) whether the employer stood to benefit from the employee's exercise program. *Id.* Greater weight is given to factors (1) and (2) because these indicia of time and place of injury are particularly strong indicators of whether an injury arose out of and in the course of the employee's employment. *See* Larson, Workmen's Compensation Law § 22.24(b); *Price v. Industrial Claim Appeals Office of State of Colo., supra.*

Here, the ALJ concludes that Claimant's off-duty exercise and the injury sustained is compensable. The injury occurred during Claimant's normal working hours while she was walking just outside Employer's building and while she was exercising in an attempt to maintain her own wellness, which furthers Employer's goals and objectives in having happy and healthy employees. Further, Employer initiated the GCC program in which Claimant was participating at the time and furnished Claimant with a GCC pulse to track her steps. Although Claimant may have been one to two steps off Employer's premises at the time of the injury and although Employer did not exert any control or direction over Claimant's exercise program, the ALJ concludes that the weight of the factors in this case weigh in favor of Claimant. Claimant has established that he injury occurred during working hours, stood to benefit Employer, and occurred while getting steps toward the Employer initiated GCC program. When an employer encourages employees to engage in activities to better their health and wellness and allows employees to take regular walks around a loop near the Employer's premises, an employee can be seen to be furthering the interests of the employer when they take such walks. Here, Claimant sustained an injury while walking which was connected to her participation in Employer's GCC program, and was connected to Employer's overall encouragement of wellness. This injury occurred during the work day and Employer stood to benefit from Claimant's wellness. Therefore, Claimant has met her burden to show that the injury is compensable.

Disfigurement

As a result of her July 25, 2016 work injury, Claimant has visible disfigurement to the body and has sustained serious permanent disfigurement to areas of the body normally exposed to public view, which entitles Claimant to additional compensation *See* § 8-42-108(1), C.R.S. Claimant has a scar approximately 1 inch in length between her nose and her upper lip that remains white, red, and raised from the injury despite adequate time for healing.

ORDER

It is therefore ordered that:

1. Claimant has established by a preponderance of the evidence that she sustained a compensable work related injury on July 25, 2016.

2. Claimant has established by a preponderance of the evidence an entitlement to a disfigurement award. Insurer shall pay Claimant $500.00 for the disfigurement outlined above and shall be given credit for any amount previously paid for disfigurement in connection with this claim.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 10, 2017

/s/ Michelle E. Jones

_____

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-038-148

ISSUES

- Whether Claimant sustained a compensable work-related injury on January 20, 2017 while working for Employer.

- Whether Claimant is entitled to medical benefits under this claim.

STIPULATIONS

- The parties stipulated that if Claimant's claim is compensable, her average weekly wage is $783.96.

- The parties reserved for future determination the issues of temporary and temporary total disability benefits.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant is 34 years old and is currently employed by the Colorado Department of Corrections. She works at the Sterling Correctional Facility as a corrections officer in their minimum security section. At hearing, Claimant described her job duties as consisting of "custody control," which includes watching offenders, ensuring that offenders are acting in compliance with the correctional facility's policies, and handling any instances of offender misbehavior or insubordination. Claimant generally works eight and a half-hour shifts for Employer. During Claimant's shifts she generally spends two to three hours on her feet checking on the offenders in their cells and/or completing random "shakedowns," wherein she searches offender's cells for contraband.

2. Claimant testified that she likes her job. She experiences something new every day, and is able to work with a great deal of autonomy, which she enjoys. Claimant's husband also works for Employer, and Claimant testified that she has no intention of leaving her position with the Colorado Department of Corrections.

3. Claimant undergoes routine three and six-month assessments with Employer. Claimant testified that she does well in those assessments and has never been written-up for misconduct of any kind.

4. Claimant contends that she was injured at work on January 20, 2017 during an altercation with an offender who became violent. Claimant testified that at some point after 2:00 p.m. on that date, a new inmate approached Claimant in the unit office to check-in and obtain his cell assignment. Claimant assigned the new inmate a

cell and instructed him to move his belongings to that cell. Shortly thereafter, the new inmate reported back to Claimant that his proposed cellmate would not allow him to move his belongings into the assigned cell. Claimant then called the cellmate into the office to discuss the issue. The cellmate was known to be an aggressive offender capable of assaulting staff. As such, when the inmate became verbally aggressive, Claimant used the intercom system to call for assistance from first responders. Several of Claimant's co-workers and/or supervisors responded to the call, and an altercation, or "use of force," ensued with the inmate.

5. Claimant testified that the first co-workers to respond to her call for assistance were Lieutenant June Poncetta and Sergeant Steven Arfsten. As Lieutenant Poncetta and Sergeant Arfsten attempted to put handcuffs on the insubordinate offender, the offender became violent. Claimant testified that initially, as Lieutenant Poncetta and Sergeant Arfsten were attempting to gain control of the offender, she attempted to assist by using "O.C." on the offender, which is a form of pepper spray. The struggle continued, and additional co-workers arrived to the scene and attempted to assist. Claimant testified that once the offender had been tackled to the ground, she then dropped to the ground and locked her legs around the offender's legs in order to further assist her co-workers. Shortly thereafter, Claimant noticed that other inmates were beginning to congregate around the scene, so she stood back up and verbally instructed the other offenders to re-enter their cells.

6. Claimant testified that immediately after the incident occurred, she had a bruise on her arm and left leg. However, Claimant was optimistic that she would be okay, so she did not initially report any injury to Employer. Instead, Claimant completed her scheduled shift, which ended at 10 p.m., and then went home, where she "[took] it easy" for the remainder of the evening. The next morning, Claimant was very stiff in her back and her bottom was sore. Therefore, she returned to work that morning, reported her injuries to Employer, and completed a report documenting her injuries. At that time, Claimant was still optimistic that she would not require medical treatment. She testified that she reported her injuries to Employer just in case her injuries did eventually require medical attention.

7. A few days after the incident, Claimant did determine that she needed medical attention for her injuries. As such, she contacted Employer and asked where to obtain medical treatment. Pursuant to the direction of Employer, Claimant sought treatment at Banner Health in Sterling, Colorado on January 26, 2017. At that appointment, Claimant notified her medical providers that she suffered from left hip and low back pain from restraining an inmate at work. The medical providers at Banner Health recommended physical therapy, prescribed pain medications, and assigned work restrictions. They also noted in their report that their objective findings were consistent with a work-related mechanism of injury. Claimant testified that she followed-up with Banner Health one more time, but was then forced to discontinue treatment through the workers' compensation system because Respondents denied her claim. Instead, Claimant underwent physical therapy on her own through Apex Network Physical Therapy. At hearing, Claimant testified that the physical therapy has helped. She is not yet feeling completely better, but her pain is no longer constant, as it once was.

Claimant also testified that while she was initially forced to take leave from work due to her work restrictions, she has now returned to work in a full-time capacity.

8. Following the incident with the violent offender on January 20, 2017, the officers involved in the event completed incident reports. Sergeant Nicholas Merrell's incident report states that when he arrived on the scene of the incident, he saw Lieutenant Poncetta, Sergeant Arfsten, Sergeant Navarro, and Corrections Officer Sandoval (Claimant) "with Inmate [Name Redacted] on the ground." Sergeant Merrell also testified at hearing. During his testimony, he initially indicated that he did not see Claimant on the ground with the offender when he arrived to the scene of the incident and that he did not know where Claimant was during the altercation. However, upon further questioning regarding the difference between his testimony at hearing and his written incident report, Sergeant Merrell noted the length of time that has now passed since the incident occurred and indicated that whatever is in his report is correct.

9. Lieutenant June Poncetta also testified at hearing. Lieutenant Poncetta testified that she was hit in the head during the altercation with the violent offender. She also testified that the entire altercation only lasted a matter of seconds, and that during those seconds her primary focus was on restraining the offender. Lieutenant Poncetta testified that she did not see Claimant touch the offender, but also admitted that her recollection of the incident differs from some of the other involved parties, and noted that it is impossible to remember every second of an incident like the one that occurred on January 20, 2017.

10. Christopher Gassaway, who works as a case manager for Employer, was also involved in the altercation and appeared at hearing to testify. Mr. Gassaway testified that "to his knowledge," Claimant was not involved in restraining the offender. However, he also testified that he ran in to assist with the altercation very quickly and did not stop to assess who was present and where, exactly, they were located. Mr. Gassaway did note that *someone* restrained the offender's legs, but he was not entirely sure who that individual was.

11. Sergeant Arfsten, was also involved in the altercation with the offender on January 20, 2017, was also present to testify at hearing. Sergeant Arfsten testified that he was there from the very beginning of the altercation and assisted in the process of bringing the offender down to the ground and restraining him. However, in the course of that process Sergeant Arfsten was hit several times by the offender and as a result he began to bleed from his mouth. He testified that he does not recall seeing Claimant restrain the offender, but he cannot say for certain where she was or what she was doing during the altercation because his primary focus was on the offender. Sergeant Arfsten also testified that someone could have made contact with the offender without his knowledge.

12. At hearing, Sergeant Juan Navarro testified that he works as a supervisor for Employer. At the time that the January 20, 2017 incident began, Sergeant Navarro was walking in the south yard. When he heard a call requesting the assistance of first responders, he reported to Unit 33 where the incident was taking place. Sergeant

Navarro testified that when he arrived, Claimant was at the door of the office giving verbal commands to offenders to get "locked down." However, he noted that he was not present during the entire altercation and he does not have any knowledge regarding Claimant's involvement in the incident prior to his arrival.

13. Finally, Lieutenant Steven Frank testified at hearing. Lieutenant Frank testified that he is a shift leader for Employer. He was present at the Sterling Correctional Facility when the January 20, 2017 incident occurred, but he was not involved in the incident itself. Rather, as a shift leader, he was in charge of reviewing and approving all incident reports completed after the use of force. Lieutenant Frank testified that it is standard protocol for all employees involved in a use of force to complete an incident report. The purpose of those incident reports is to document actions taken by both offenders and staff members, and to hold all individuals involved in a use of force accountable for their actions. Lieutenant Frank testified that it is Employer's policy for all physical contact with an offender that occurs during a use of force to be documented in the subsequent incident reports. He also testified that it is important that each incident report set forth every offender and every staff member involved in the altercation. However, Lieutenant Frank also testified that it would not surprise him to know that several of the incident reports submitted after the January 20, 2017 altercation had omissions and/or errors.

14. Several of the witnesses who testified at hearing admitted that their incident reports were incomplete or contained errors. For example, Sergeant Arfsten testified that Sergeant Navarro was involved in the January 20, 2017 incident, but there is no mention of Sergeant Navarro in his incident report. At hearing, Sergeant Arfsten indicated that his incident report was "just his perspective," and that some things came back to him after he wrote it. Similarly, Sergeant Navarro testified at hearing that at one point during the course of the altercation with the violent offender he held the offender's legs down. However, that physical contact with the offender is not noted in Sergeant Navarro's incident report.

15. Like her co-workers, Claimant completed an incident report following her injury. Claimant's incident report does not note that she was ever in direct physical contact with the offender, as she testified to at hearing. During her testimony, Claimant stated that it is her understanding that incident reports should be "short and sweet."

16. Claimant also testified regarding her medical history at hearing, indicating that prior to the January 20, 2017 incident she was not experiencing any significant pain and was not having any difficulty completing the physical requirements of her work. Claimant did undergo chiropractic adjustments at Lakewood Chiropractic in April 2015 and April 2016, as "tune-ups" done for general maintenance. Claimant noted that she had those adjustments done because she is a 34-year old mother of four children who wears heavy work boots and a 15-pound duty belt at work every day, and that this all takes a toll on her body. Claimant also testified that she has previously been in motor vehicle accidents. However, the last motor vehicle accident in which Claimant was involved took place in 2002. Afterward, Claimant saw a chiropractor a few times, and that treatment completely eliminated her symptoms. At the time of the January 20,

2017 incident, Claimant was not actively seeking treatment for any injuries or body pains.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

Compensability

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102 (1), C.R.S.

A claimant bears the burden of proving by a preponderance of the evidence that an injury occurred within the course of, and arose out of, employment with the employer. Section 8-41-301(1), C.R.S.; *City of Boulder v. Streeb,* 706 P.2d 786 (Colo. 1985). An injury or condition is in the course of employment if it occurred within time and place limits of employment and during an activity that has some connection with the employee's job-related functions. *Wild West Radio, Inc. V. Industrial Claim Appeals Office*, 905 P.2d 6 (Colo. App. 1995). An injury or condition arises out of employment if "there is a causal connection between the duties of employment and the injuries suffered." *Deterts v.Times Pub. Co.,* 38 Colo. App. 48, 552 P.2d 1033 (1976).

A preponderance of the evidence is that which leads the trier-of-fact to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. § 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S.

Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any benefits are awarded. *Faulkner v. Indus. Claim Appeals Office*, 12 P3d 844, 846 (Colo. App. 2000); Section 8-41-301(1)(c), C.R.S. The evidence must establish the causal connection with reasonable probability, not medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission, 491 P.2d 106 (Colo. App. 1971)*. Reasonable probability exists if the proposition is supported by substantial evidence, which would warrant a reasonable belief in the existence of facts supporting a particular finding. *F.R. Orr Construction v. Rinta, 717 P.2d 965 (Colo. App. 1985)*. An award of benefits may not be based upon or denied upon speculation or conjecture. *Deines Bros. v. Indus. Comm'n,* 125 Colo. 258, 242 P.2d 600 (1952).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and

bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the findings in this Order as unpersuasive.

Claimant has proved to a preponderance of the evidence that she was involved in an altercation with a violent offender while working for Employer on January 20, 2017, and that Claimant's involvement included physical contact with the offender that led to injury. This ALJ finds Claimant to be a credible witness. It is reasonable to believe that Claimant would have jumped in to help her co-workers during a violent altercation with an offender, and that her actions led to injury. Moreover, Claimant has no motive to be dishonest about this incident or her injuries. Claimant credibly testified that she is happily employed by Employer and has no desire to end her employment. In fact, Claimant has continued to work for Employer after this incident occurred in spite of her work restrictions, and after the denial of her claim she paid for her own treatment in order to improve her condition. Such actions are consistent with a worker who did, in fact, sustain an on-the-job injury. Furthermore, the day after the altercation occurred, Claimant reported potential injuries to Employer. Given that at that time she was not seeking medical treatment or benefits of any kind, she had absolutely no motive to lie.

In addition to the fact that Claimant is found to be a credible witness, Claimant's testimony is also persuasive because it was corroborated by Sergeant Nicholas Merrell, whose incident report indicates that when he arrived on the scene of the altercation on January 20, 2017, he witnessed Claimant on the floor with the inmate. Sergeant Merrell had no motive to fabricate any part of his incident report, and there is no reason to question its accuracy. While at hearing Sergeant Merrell's testimony initially contradicted his report, he later admitted that his incident report, which was done immediately after the altercation, is more accurate than his memory six months later.

While Sergeant Merrell's incident report and testimony directly corroborated Claimant's testimony, only a small portion of the testimony from Respondents' other witnesses actually contradicted Claimant with regard to the physical contact she made with the offender on January 20, 2017. In fact, most of Respondents' witnesses admitted that Claimant may have made contact with the offender before they arrived on scene and/or could have made contact with the offender without their knowledge. To the very small extent that Respondents' witnesses' testimony did contradict Claimant's contention that she made contact with the offender and suffered a subsequent injury, their testimony is not credited. This is due to the fact that Respondents' six witnesses' testimony was largely in contradiction with one another regarding the specific details of the incident, and at times contradictory to their own incident reports.

In addition to proving that she was involved in the January 20, 2017 altercation and made contact with the inmate during that altercation, Claimant has also proved to a preponderance of the evidence that she sustained an injury as a result of that incident.

Claimant credibly testified that she is generally healthy, and that she was not suffering from substantial pain of any kind prior to the January 20, 2017 incident. While Claimant did undergo annual chiropractic adjustments, those were done for general medical maintenance and are not indicative of a preexisting condition. Likewise, while Claimant has been involved in motor vehicle accidents in the past, the last one dates back to 2002, and Claimant was not actively treating for any injuries sustained in that accident at the time of the January 20, 2017 incident at work. Aside from the January 20, 2017 incident at work, there is nothing to which it would be reasonable to attribute Claimant's ongoing back, hip, and/or buttocks pain. This is reflected by the records from Banner Health, which indicate that Claimant's symptoms were consistent with a work-related injury. Claimant is deemed to have suffered an injury within the course and scope of her employment with Employer on January 20, 2017, and her workers' compensation claim is therefore compensable.

Medical Benefits

A claimant is entitled to authorized medical treatment that is reasonable and necessary to cure and relieve the effects of the injury. § 8-42-101(1)(a), C.R.S.; *Yeck v. Industrial Claims Appeals Office,* 996 P.2d 228 (Colo.App. 1999). A claimant bears the burden to prove by a preponderance of the evidence the causal relationship between the work-related injury and the condition for which treatment is sought. *Snyder v. Industrial Claims Appeals Office,* 942 P.2d 1337 (Colo.App. 1997). Whether the claimant sustained her burden of proof is a question of fact for the ALJ. *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997).

"Authorization" refers to a medical provider's legal status to treat an injury at the respondents' expense. *Popke v. Industrial Claims Appeals Office*, 797 P.2d 677 (Colo. App. 1997). An employer is responsible for medical treatment when, in the normal progression of treatment, an authorized treating physician refers the claimant to other providers for additional treatment. *Greager v. Industrial Commission*, 701 P.2d 168 (Colo.App. 1985). If a claimant seeks treatment outside the chain of authorized providers, respondents are not required to pay for it. § 8-43-404(7), C.R.S.; and, *Yeck v. Industrial Claims Appeals Office, supra.*

As noted above, Claimant has proved by a preponderance of the evidence that the painful symptoms in her back, buttocks, and/or legs and hip was caused by her involvement in the incident that occurred at work on January 20, 2017. Therefore, Claimant is entitled to medical benefits under this claim. The medical treatment Claimant received at Banner Health was related to the compensable injury and done pursuant to the direction of Employer. That medical treatment is therefore authorized, reasonable, and necessary.

ORDER

1. Claimant suffered a compensable injury while working for Employer on January 20, 2017, and therefore, is entitled to medical benefits.

2. Respondents are responsible for the medical treatment Claimant received from Banner Health following her January 20, 2017 injury.

3. Respondents shall pay for ongoing reasonable and necessary medical treatment needed to cure and relieve the effects of the January 20, 2017 injury.

4. The parties' stipulation with respect to average weekly wage is hereby approved. Claimant's average weekly wage is $783.96 unless and until it is subject to adjustment pursuant to law.

5. All matters not determined herein are reserved for further determination.

6. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 11, 2017

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that referral to a neurosurgeon/neurologist was reasonable, necessary and causally related to his December 7, 2016 back injury.

2. Whether Claimant has proven by a preponderance of the evidence that referral to a pain management specialist was reasonable, necessary and causally related to his December 7, 2016 back injury.

FINDINGS OF FACT

1. Claimant is a 28 year old male who works for Employer as an Assistant General Manager. On December 7, 2016 Claimant suffered an admitted industrial injury to his back while working for Employer. While unloading Christmas trees from a semi-trailer Claimant slipped on a snowy surface. Claimant landed on his back and experienced immediate pain.

2. On December 8, 2016 Claimant visited authorized medical provider Middle Park Medical Center for an evaluation. Dianne Wettersten, PAC noted that Claimant reported 9/10 mid-back pain without radiation. He denied numbness, tingling or weakness in his extremities. X-rays of Claimant's thoracic spine were normal. PAC Wettersten took Claimant off work for the remainder of the week.

3. After receiving additional conservative care Claimant visited Authorized Treating Physician (ATP) Meghan Mont, D.O. at Middle Park Medical Center for an examination on December 22, 2017. Claimant reported that working worsened his back pain. Dr. Mont took Claimant off work and referred him for physical therapy.

4. On January 5, 2017 Claimant visited Mark Paulsen, M.D. at Middle Park Medical Center. Dr. Paulson noted that Claimant experienced severe, sharp, shooting pain to the top of his back that was exacerbated by physical therapy. Dr. Paulsen felt that Claimant's symptoms "are suggestive to me of a skeletal injury, perhaps rib fracture, vertebral fracture etc., thus it would be more appropriate to do a CT scan rather than an MRI."

5. On January 5, 2017 Claimant underwent chest x-rays to rule out a rib injury. The x-rays were negative.

6. On January 6, 2017 Claimant underwent a chest CT scan. The CT scan was normal with no evidence of an acute injury.

7. On January 12, 2017 Claimant visited Dr. Mont for an examination. He reported that his pain level would shoot up so high that it caused him to black out. He also noted that he had been having tingling in his left arm and leg. Dr. Mont noted that Claimant had "possible thoracic spine nerve components. Unclear about paresthesia in the arm and leg.… If explanation not clear, will need specialist consult."

8. On January 20, 2017 Claimant underwent a thoracic MRI. The MRI revealed relatively minor degenerative changes but no evidence of an acute fracture or ligament injury.

9. On January 26, 2017 Dr. Mont referred Claimant for "neurological surgery."

10. On February 2, 2017 Claimant underwent an independent medical examination with John Burris, M.D. Claimant reported 10/10 pain in the mid-back area with no radiation, numbness or tingling. Dr. Burris noted normal vital signs and that Claimant exhibited no apparent distress, communicated with a normal speech pattern and walked with a normal gait. A physical examination was positive only for subjective reports of tenderness. The neurological examination was normal. Dr. Burris diagnosed Claimant with a thoracic strain. He remarked that a thoracic strain typically heals within days to weeks regardless of medical treatment. Dr. Burris concluded that Claimant did not warrant additional medical treatment other than a few sessions of physical therapy because he had a normal physical examination and diagnostic testing.

11. With regard to the neurology request, Dr. Burris determined that the referral was made because Dr. Paulsen and Dr. Mont lacked an explanation for Claimant's pain. Dr. Burris noted that no provider had documented neurologic symptoms or deficits and there was no evidence on diagnostic testing of any disc injury or nerve impingement. He commented that, unless there were specific neurological findings or abnormalities that matched Claimant's examination, a neurology or neurosurgery appointment was not reasonable or necessary. Dr. Burris remarked that, because of the absence of any nerve issues along with benign diagnostic findings, Claimant most likely had a musculoskeletal injury. He recommended treatment through an exercise program and directed Claimant to stay active.

12. On February 10, 2017 Claimant visited Dr. Paulsen for an examination. Claimant reported that his pain worsened every day and he blacks out. He told Dr. Paulsen that he could not work. Claimant could not identify any specific aggravating factors, other than "going to work," and could not describe his blackout spells. Dr. Paulsen specifically commented that Claimant "believes he should not be working as it is clearly making his pain much worse." He determined that the etiology of Claimant's symptoms and severe pain was unclear. Dr. Paulsen also remarked that "I also agree that spine or neurology consultation is appropriate, and we are waiting on approval from the work comp carrier for that."

13. On February 10, 2017 Claimant received an email from Respondent's adjuster Sharmee Jensen explaining that referral for a neurological consultation would

not be authorized. Ms. Jensen stated, "however, you don't have anything wrong with your back that would require any surgery … I am not sure how a neurosurgeon can be of any benefit. Dr. Paulsen or Dr. Mont need to clarify why or how a neurosurgeon would be needed."

14. On February 13, 2017 Ms. Jensen forwarded a copy of Dr. Burris' independent medical examination report to Claimant and emphasized that Respondent would not authorize a referral to a neurologist or neurosurgeon. Ms. Jensen noted that she would also send Dr. Burris' report to Drs. Mont and Paulsen for review.

15. Based on Respondent's denial of a neurosurgery referral Claimant sought recommendations from Middle Park Medical Center. Middle Park Medical Center referred Claimant to Blue Sky Neurology for an evaluation. Claimant subsequently made an appointment to visit Katrina M. Pack, M.D. through his private health insurance.

16. On March 30, 2017 Claimant visited Dr. Pack for an examination. She reviewed Claimant's thoracic MRI and noted relatively mild degenerative changes with no acute injuries. Dr. Pack specifically explained that Claimant's MRI did not reveal any evidence of a fracture, impingement or ligament injury to explain his pain. A neurological examination was normal.

17. On May 25, 2017 Claimant returned to Dr. Pack for an examination. Dr. Pack concluded that Claimant's pain was likely musculoskeletal in nature and referred him to a pain management specialist for additional evaluation. Claimant did not schedule any additional examinations with a neurologist. He has not received any outstanding medical bills from Blue Sky Neurology because bills were paid through his personal health insurance.

18. On June 8, 2017 Dr. Burris conducted a supplemental records review. The review included additional records from Drs. Mont, Paulsen and Pack. Dr. Burris commented that the additional records continued to show Claimant's persistent subjective complaints without objective findings and negative diagnostic work-up were inconsistent with his work injury. He noted that there were no objective findings to support work restrictions or the need for a neurological consultation within the Workers' Compensation claim. Dr. Burris also commented that the treatment recommendations from Dr. Pack, which included a referral to a pain management physician, were not reasonable and necessary.

19. On June 20, 2017 Claimant returned to Dr. Paulsen for an evaluation. He noted that the etiology of Claimant's persistent symptoms remained unclear and there were no objective findings to account for his condition.

20. On June 23, 2017 Claimant underwent a pain management evaluation with Daniel Feldman, M.D. at Integrated Sports and Spine. Dr. Feldman noted that "the [Claimant's] pain is most indicative of thoracic spondylosis but he does have a disc bulging appreciated over T7/8 on his MRI. The [Claimant] may need to consider bilateral

T6/7 and 7/8 facet joint injections for both diagnostic and therapeutic purposes." Claimant's bills from Integrated Sports and Spine were paid through his personal health insurance.

21. Dr. Burris testified at the hearing in this matter. He reiterated that Claimant suffered a thoracic strain on December 7, 2016. However, he has continued to suffer prolonged pain complaints. Dr. Burris explained that there has been no evidence of neurological symptoms or deficits that would warrant a referral to a neurologist within the Workers' Compensation claim. He specified that a neurology referral was not warranted because of the lack of neurological findings and benign diagnostic testing. Finally, Dr. Pack did not find any neurological issues but instead referred Claimant to a different provider for treatment.

22. In addressing Claimant's pain management evaluation with Dr. Feldman, Dr. Burris explained that spondylosis is a general term used to describe back pain with an unknown cause. Because Dr. Feldman had not identified any myelopathy or radiculopathy, Claimant did not have any neurological involvement. Finally, Claimant's small disc bulge was not a pain generator because Dr. Feldman had not recommended an injection at the level of the disc.

23. Claimant has failed to demonstrate that it is more probably true than not that referral to a neurosurgeon/neurologist was reasonable, necessary and causally related to his December 7, 2016 back injury. The record reflects that Claimant's pain complaints to multiple providers have been out of proportion to his physical examinations, inconsistent with observations and unsupported by diagnostic studies. No medical providers have been able to determine a cause of Claimant's severe pain complaints and documented that the etiology of the pain is unknown. Dr. Burris persuasively determined that referral to neurosurgery was made because Dr. Paulsen and Dr. Mont did not have an explanation for Claimant's pain. He noted that no provider had documented neurologic symptoms or deficits and there was no evidence on diagnostic testing of any disc injury or nerve impingement. Dr. Burris commented that, unless there were specific neurological findings or abnormalities that matched Claimant's examination, a neurology or neurosurgery appointment was not reasonable or necessary. He emphasized that a neurology referral was not warranted because of the lack of neurological findings and benign diagnostic testing. Ultimately, neurologist Dr. Pack did not find any neurological issues but instead referred Claimant to a different provider for treatment. Based on the medical records and persuasive opinions of Dr. Burris, Claimant's request for a neurological evaluation is denied.

24. Claimant has failed to prove that it is more probably true than not that referral to a pain management specialist was reasonable, necessary and causally related to his December 7, 2016 back injury. The record reflects that medical providers have been unable to ascertain a cause for Claimant's severe pain complaints. Claimant has undergone extensive examination and diagnostic testing but numerous medical providers have documented that there have been no objective findings to account for Claimant's symptoms. Moreover, Claimant's pain complaints to multiple providers have been out of proportion to his physical examinations and inconsistent with observations.

Furthermore, Dr. Burris persuasively commented that the treatment recommendations from Dr. Pack, which included a referral to a pain management physician, were not reasonable and necessary. He specifically noted that a thoracic strain typically heals within days to weeks regardless of medical treatment. Based on the medical records and persuasive opinions of Dr. Burris, Claimant's request for a pain management evaluation is denied.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAP, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAP, Nov. 13, 2000).

5. Claimant is seeking specific medical benefits in the form of referral to a neurologist and pain management specialist. Prior authorization from Respondent

under Rule 16-10 was not required with regard to the neurology consultation because the referral was made by the ATP. W.C.R.P. 16-5(A)(4), 16-10(B); *Sims v. ICAO,* 797 P.2d 777 (Colo.App. 1990). However, Respondent retained the right to contest treatment by a neurologist. Respondent was asked to provide prior authorization for a neurology consultation. However, Respondent advised Claimant and the medical provider that it would not promise to pay for the neurology consultation on the basis that it was not reasonable, necessary or related Claimant's work injury. There is no evidence that Respondent was ever billed by Dr. Pack for Claimant's treatment. Similarly, there is no evidence that Respondent was ever billed by Dr. Feldman for his treatment. Respondent was thus never in a position to authorize or deny the medical bills under Rule 16-11. Accordingly, the issue is not whether the referrals were within the chain of authorized treatment, but whether the resulting consultations were reasonable, necessary and related to Claimant's December 7, 2016 back injury.

6. As found, Claimant has failed to demonstrate by a preponderance of the evidence that referral to a neurosurgeon/neurologist was reasonable, necessary and causally related to his December 7, 2016 back injury. The record reflects that Claimant's pain complaints to multiple providers have been out of proportion to his physical examinations, inconsistent with observations and unsupported by diagnostic studies. No medical providers have been able to determine a cause of Claimant's severe pain complaints and documented that the etiology of the pain is unknown. Dr. Burris persuasively determined that referral to neurosurgery was made because Dr. Paulsen and Dr. Mont did not have an explanation for Claimant's pain. He noted that no provider had documented neurologic symptoms or deficits and there was no evidence on diagnostic testing of any disc injury or nerve impingement. Dr. Burris commented that, unless there were specific neurological findings or abnormalities that matched Claimant's examination, a neurology or neurosurgery appointment was not reasonable or necessary. He emphasized that a neurology referral was not warranted because of the lack of neurological findings and benign diagnostic testing. Ultimately, neurologist Dr. Pack did not find any neurological issues but instead referred Claimant to a different provider for treatment. Based on the medical records and persuasive opinions of Dr. Burris, Claimant's request for a neurological evaluation is denied.

7. As found, Claimant has failed to prove by a preponderance of the evidence that referral to a pain management specialist was reasonable, necessary and causally related to his December 7, 2016 back injury. The record reflects that medical providers have been unable to ascertain a cause for Claimant's severe pain complaints. Claimant has undergone extensive examination and diagnostic testing but numerous medical providers have documented that there have been no objective findings to account for Claimant's symptoms. Moreover, Claimant's pain complaints to multiple providers have been out of proportion to his physical examinations and inconsistent with observations. Furthermore, Dr. Burris persuasively commented that the treatment recommendations from Dr. Pack, which included a referral to a pain management physician, were not reasonable and necessary. He specifically noted that a thoracic strain typically heals within days to weeks regardless of medical treatment. Based on the medical records and persuasive opinions of Dr. Burris, Claimant's request for a pain management evaluation is denied.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request for referral to a neurosurgeon/neurologist is denied.

2. Claimant's request for referral to a pain management specialist is denied

3. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-035-953-01

ISSUE

- Whether Claimant has proven by a preponderance of the evidence that her right upper extremity conditions are causally related to her work at Employer.

STIPULATION

- If the claim is found compensable, the medical care received by Claimant after November 18, 2016, is reasonably necessary and causally related to the industrial injury.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Employer operates large grocery stores. At all times relevant, Claimant worked as an all-purpose clerk primarily performing nighttime stocking of Employer's shelves. Claimant alleges that sometime in June or July 2016, she began to develop shoulder pain as a result of stocking twenty-pound bags of ice and 24-pack and 32-pack cases of water.

2. Claimant testified that between June 2016 and November 2016, she repeatedly reported both the existence of a shoulder injury *and that the shoulder injury was caused by work* to Store Manager Lucas France, Grocery Manager Jamie Smith, Night Crew Foreman Blair Sullivan, and Assistant Store Manager Jodi Chavez. But none of Employer's management personnel completed Employer's Associate Report Packet or sent Claimant for medical treatment. Claimant's testimony in this regard is not consistent with the credible evidence presented at hearing.

3. Employer's Store Manager Lucas France, Grocery Manager Jamie Smith, Night Crew Foreman Blair Sullivan, and Assistant Store Manager Jodi Chavez testified that:

    - Claimant never reported shoulder problems or any type of injury to them,

    - that corporate policy requires management personnel to complete the Associate Incident Report Packet immediately upon being notified of an injury which may be caused by work,

    - and that if Claimant had reported shoulder problems caused by work they would have completed the Associate Incident Report Packet as per corporate policy.

4. On July 21, 2016, Claimant had an appointment with her personal physician, Arazu Wanna, M.D., of Ponderosa Family Physicians. She complained of right shoulder pain existing for the past 3-4 months, gradually increasing in severity. Dr. Wanna assessed Claimant with "right shoulder pain" and "tennis elbow." Dr. Wanna recommended physical therapy and an x-ray of Claimant's right shoulder joint. No persuasive evidence suggests that Claimant presented the medical records or bills from her treatment with Ponderosa Family Physicians to any of her supervisors or store management.

5. On July 22, 2016, Claimant began physical therapy with CACC Physical Therapy. Claimant returned for one additional physical therapy treatment on August 2, 2016. Claimant was discharged from physical therapy for non-compliance on September 6, 2016. The Case History section of the New Patient Health History Form completed by Claimant with Aurora Central Chiropractic indicates that Claimant stopped physical therapy because it "got to [sic] expensive." However, Claimant testified that she stopped attending physical therapy because a male therapist had "pushed down on [her] chest." No persuasive evidence suggests that Claimant presented the physical therapy reports or bills of her treatment with CACC Physical Therapy to any of her supervisors or store management, or otherwise requested payment for physical therapy from Employer.

6. On October 20, 2016, Claimant sought treatment from Aurora Central Chiropractic. The New Patient Health History Form Claimant completed specifically asked the nature of the injury. Claimant did not mark that it was caused by work. Instead, Claimant checked "Other." Claimant also indicated that the party responsible for payment was "E.D. Hough," not Employer. Under the Medical History portion of the New Patient Health History Form, Claimant indicated that her symptoms were not worse during certain times of the day (i.e. she did not indicate working made her symptoms worse) and that the activities that aggravated her symptoms were "reaching back & down."

7. On November 9, 2016, a phone message from Claimant to Ponderosa Family Physicians documents Claimant requested a referral for an MRI for her right shoulder. The November 14, 2016 MRI showed supraspinatus, infraspinatus and subscapularis tendinosis.

8. On November 15, 2016, Claimant returned to Dr. Wanna, the first visit since July 22, 2016 to discuss the MRI results. The note from that visit states that Claimant "wants me to fill out workers comp paperwork, she states that she has a lawyer helping her with this process and was told to bring it here. he hasn't seen someone through her employer at this point for possible work related injury."

9. Dr. Wanna's November 15, 2016, report documents that Claimant "states that the pain is relieved with rest, has noticed that it is worse with heavy lifting at her job . . Notices worsening of symptoms after lifting heavy objects." This history from Claimant on November 15, 2016, given after being advised to see Dr.

Wanna by her attorney, directly conflicts with Claimant's statements to prior treating physicians regarding the effects of rest and activities that caused her pain:

- July 21, 2016, report of Dr. Wanna indicated Claimant "attempted … rest from work at the grocery store" which did not help;

- July 22, 2016, report of CACC Physical Therapy that Claimant had "been on vacation the last two weeks and her pain did not get better" and aggravating factors "computer use, repetitive motion" (not lifting heavy objects);

- October 20, 2016, New Patient Health History Form completed by Claimant, indicating that her symptoms were not worse during certain times of the day (i.e. she did not indicate working made her symptoms worse) and that the activities that aggravated her symptoms were "reaching back & down" (not lifting heavy objects or reaching overhead).

10. The ALJ finds it more likely true than not that Claimant's statements to Dr. Wanna that work caused an increase in symptoms and rest from work caused a relief in her symptoms were made to support a claim for workers' compensation benefits after being advised by her attorney to see Dr. Wanna.

11. On November 16, 2016, Claimant returned to Employer, specifically reporting a work-related injury in June or July 2016, when she was "stocking 20lb/10lb bags of ice and 24 pk & 32 pack water. Used U Boats stocked to shelves and ice chests." Employer completed the Associate Incident Report Packet on that date.

12. On November 16, 2016, Jodi Chavez completed an Employee Incident Witness Form. She stated that "[Claimant] has never stated to me her manager that she hurted [sic] herself. She's been working every week since then with no issues concerning her shoulder." Ms. Chavez's statement is consistent with her hearing testimony that Claimant had not reported an injury to her shoulder.

13. Employer's witnesses credibly testified that Employer's corporate policy requires:

- management personnel to complete the Associate Incident Report Packet immediately upon being notified of an injury.

- management personnel to be trained on an ongoing basis on the issue of how to proceed upon being notified of an injury.

- that the requirement to report work-place injuries is addressed in employee safety meetings and is posted several places throughout the store.

14. The Administrative Law Judge is unable to find credible Claimant's testimony on this point.

15. Medical records establish that Claimant is 5' 1.5'' tall and weighed approximately 126 pounds. Claimant testified that because of her height, the majority of her work involved heavy lifting above shoulder level. Claimant's testimony is not persuasive, as common-sense dictates that the majority of Claimant's lifting necessarily must be below shoulder level.

16. Claimant's job duties require Claimant to break down loads of product shipped to the store on pallets, place the groceries on wheeled carts called "U-boats", wheel the U-boats to an aisle in the store, and then stock the shelves with the groceries. Claimant testified that the pallets "sometimes" were stacked 6 feet high. Thus, even assuming every pallet were stacked 6 feet high, if Claimant were to begin unloading a pallet from the very top to the floor level, half of her work would have required reaching from six feet to three feet (above shoulder level) and the other half of her work would have required reaching from three feet to floor level (below shoulder level). The same holds true for placing items onto the U-boat. Assuming Claimant loaded the U-boat 6 feet high, half of the items would have been placed on an empty U-boat from floor level to three feet high (below shoulder level) and the other half of the items would have been placed from three feet high to six feet high (above shoulder level). Since Claimant testified that she stocked groceries in all sections of the store, then at least half of Claimant's stocking would have been from floor level (bottom shelf) to 3 feet high, and the other half from three feet high to the top shelf. Thus, even assuming that "above shoulder level" was three feet from the ground up to six feet high, the maximum amount of time Claimant spent using her arms above shoulder level would be no greater than 50% of the time she spent stocking.

17. Furthermore, Claimant testified that she used a step stool to place products on the higher shelves. This further lessens her work above shoulder level to less than 17% of the time.

18. Claimant's hearing testimony contradicts statements she made to medical providers prior to hearing.

19. On April 26, 2017, Carlos Cebrian, M.D., performed an Independent Medical Examination of Claimant. Dr. Cebrian testified that Claimant told him that her job duties did not require much overhead activity, and that her stacking of bottled water required her to stack water from floor level to four feet high. Dr. Cebrian's testimony is consistent with his report, which indicates that "[s]he would stack the water 3-4 high, and would stack in shelves or on the floor."

20. Dr. Cebrian testified for Respondents as an expert in occupational medicine. After reviewing Claimant's medical records, interviewing Claimant, and performing an Independent Medical Examination, Dr. Cebrian testified that Claimant's right elbow tendinitis and right shoulder tendinosis were not caused or aggravated by Claimant's job duties.

21. Dr. Cebrian testified that Claimant's supraspinatus, infraspinatus and subscapularis tendinosis means that these three of four tendons in the rotator cuff complex have lost their elasticity due to degeneration over long periods of time. He found nothing unique about the abnormalities in Claimant's shoulder. He explained:

    - Degeneration is not a wear and tear process.
    - Degeneration takes place at a cellular level and is the result of the body's inability to replace normal tissues as one ages.
    - Degeneration is not the result of external trauma to the tissues but rather to the aging of the cells.

22. W.C.R.P. 17, Exhibit 4, Shoulder Injury Medical Treatment Guidelines, state:

    Given all of this information, it is reasonable to consider that there is some evidence for the following causative risk factors for shoulder tendon related pathology:

    - Overhead work consisting of additive time per day of at least 30 minutes/day for a minimum of 5 years.
    - Work that requires shoulder movement at the rate of 15-36 repetitions per minute and no 2 second pauses for 80% of the work cycle.
    - Work that requires shoulder movement with force 10% or greater of the maximum voluntary force and has no 2 second pauses for 80% of the work cycle.

23. Dr. Cebrian testified that because Claimant's job duties allow her more than 2 second pauses before performing another shoulder movement for the vast majority of her time working, only the first risk factor relating to overhead work is relevant to a determination of whether the job duties caused an aggravation of Claimant's tendinosis. When analyzing work duties involving overhead activity, Dr. Cebrian stated that it is a "very critical point" to understand that only those activities which result in greater than a 90^{o} angle between the humerous (arm bone) and the upper body result in a potential risk for cumulative trauma to the shoulder joint. The term "additive time per day of at least 30 minutes/day" considers only those few seconds that the arm is in greater than a 90^{o} angle during a stocking motion, not the entire stocking motion from the time the Claimant lifts the item to be stocked until the item is placed on the shelf. Dr. Cebrian testified that based on Claimant's own statements to Dr. Cebrian, Claimant's job duties were well below the 30/minutes per day of "overhead work."

24. On November 16, 2016, Respondent referred Claimant to George Kohake, M.D., who originally opined that he could not state that Claimant's job duties caused or aggravated her shoulder condition because he did not have medical records from

Claimant's primary care physician. Dr. Kohake's January 5, 2017, narrative report makes no mention of causation. However, the WC-164 Form Report from the same date, contains a check in the "Yes" column indicating that objective findings are consistent with history and/or work related mechanism of injury. It appears that the WC 164 Form Report was completed on a computer and bears Dr. Kohake's electronic signature, there is no indication that Dr. Kohake completed the WC 164 Form Report or reviewed it before his digital signature was attached. Dr. Cebrian testified that he does not complete his own WC 164 Form Reports, and opined that it is the practice of most occupational medicine physicians to have nurses or office staff complete the forms. Nothing in Dr. Kohake's narrative report suggests that he engaged in any causation analysis on January 5, 2017, or that he had reviewed the medical records from Claimant's primary care physician, which was the reason he could not state an opinion on causation on November 16, 2016. The ALJ finds that Dr. Kohake's WC 164 Form Report is not persuasive evidence of his opinion on causation.

25. Dr. Cebrian's opinion that Claimant's shoulder condition is not caused or aggravated by her work activities is supported by Claimant's condition not improving despite a two-week vacation in July 2016, and not having worked at all since January 2017. Dr. Cebrian testified that if Claimant's tendinosis were caused or aggravated by her job duties, then he would expect that cessation of those job duties would improve her condition. That Claimant's shoulder tendinosis has not improved is persuasive evidence that Claimant's tendinosis exists independent of her job duties.

26. The ALJ finds that Claimant has not met her burden of proving by a preponderance of the evidence that her right shoulder tendinosis is caused or aggravated by her job duties with Employer.

27. Dr. Cebrian further testified that Claimant's epicondylitis was not caused or aggravated by her job duties. Dr. Cebrian performed a detailed causation assessment based on the Cumulative Trauma Conditions Medical Treatment Guidelines effective March 2, 2017, and the guidelines in effect prior to that date, and concluded that Claimant did not meet either the primary or secondary risk factors for development of epicondylitis under either guideline. Claimant presented no credible evidence from any physician or health care provider to support the premise that Claimant's epicondylitis is caused or aggravated by her job duties. The ALJ finds Dr. Cebrian's opinion to be credible and persuasive.

28. The ALJ finds that Claimant has not met her burden of proving by a preponderance of the evidence that her right elbow condition is caused or aggravated by her job duties with Employer.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S.(2016). A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., 2006. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

A pre-existing condition "does not disqualify a claimant from receiving workers' compensation benefits." *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004). A claimant may be compensated if his or her employment "aggravates, accelerates, or combines with" a worker's pre-existing infirmity or disease "to produce the disability for which workers' compensation is sought." *H&H Warehouse v. Vicory*, 805 P.2d 1167, 1169 (Colo. App. 1990). Moreover, an otherwise compensable injury does not cease to arise out of a worker's employment simply because it is partially attributable to the worker's pre-existing condition. *See Subsequent Injury Fund v. Thompson*, 793 P.2d 576, 579 (Colo. 1990).

However, the injury must be a "significant" cause of the need for treatment in the sense that there is a direct relationship between the precipitating event and the need for treatment. *Reynolds v. U.S. Airways, Inc*, W. C. Nos. 4-352-256, 4-391-859, 4-521-484 (May 20, 2003). It is the claimant's burden to prove a causal relationship between the industrial injury and the medical condition for which she seeks benefits. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). The question of whether an industrial injury is the cause of a subsequent need for medical treatment is largely one of fact for determination by the ALJ. *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997).

Shoulder. The ALJ concludes that Claimant has not met her burden of proving that her job duties caused or aggravated her shoulder condition. Dr. Cebrian credibly

testified that tendinosis of the shoulder is a degenerative process not caused by "wear and tear" and that Claimant's job duties did not meet the risk factors to prove aggravation of her shoulder condition. Claimant presented no persuasive evidence in rebuttal to Dr. Cebrian's expert opinion. Claimant's case rests primarily on Claimant's own testimony regarding her overhead activities and the job duties as stated in Dr. Cebrian's report. However, Claimant's testimony as to her job duties is not credible, as Claimant's testimony was inconsistent with multiple entries in her medical records prior to the hearing. Dr. Cebrian testified that job duties as calculated by Employer's job description are not a credible estimate of the Claimant's overhead activities because the job duties totaled to 940% which is not possible.

Dr. Cebrian performed a detailed causation analysis based on the best evidence available of Claimant's job duties and application of those job duties to the risk factors found in the Medical Treatment Guidelines. In addition, Dr. Cebrian credibly testified that if Claimant's shoulder tendinosis were caused or aggravated by her job duties, then it would be expected that cessation of those job duties would improve her condition. That Claimant's shoulder tendinosis did not improve after her two-week vacation in July 2016, or since she stopped working in January 2017, is persuasive evidence that Claimant's tendinosis exists independent of her job duties and, therefore is not caused or aggravated by those job duties.

Elbow. The ALJ concludes that Claimant has not sustained her burden of proving that her job duties caused or aggravated her elbow condition. Dr. Cebrian performed a detailed causation assessment based on the Cumulative Trauma Conditions in the Medical Treatment Guidelines effective March 2, 2017, and the guidelines in effect prior to that date. He concluded that Claimant did not meet either the primary or secondary risk factors for development of epicondylitis under either guideline. Claimant presented no persuasive evidence from any physician or health care provider to support the premise that Claimant's epicondylitis is caused or aggravated by her job duties.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim for benefits is denied and dismissed.

2. Issues not expressly decided herein are reserved to the parties for future determination.

3. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-035-953-01

ISSUE

- Whether Claimant has proven by a preponderance of the evidence that her right upper extremity conditions are causally related to her work at Employer.

STIPULATION

- If the claim is found compensable, the medical care received by Claimant after November 18, 2016, is reasonably necessary and causally related to the industrial injury.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Employer operates large grocery stores. At all times relevant, Claimant worked as an all-purpose clerk primarily performing nighttime stocking of Employer's shelves. Claimant alleges that sometime in June or July 2016, she began to develop shoulder pain as a result of stocking twenty-pound bags of ice and 24-pack and 32-pack cases of water.

2. Claimant testified that between June 2016 and November 2016, she repeatedly reported both the existence of a shoulder injury *and that the shoulder injury was caused by work* to Store Manager Lucas France, Grocery Manager Jamie Smith, Night Crew Foreman Blair Sullivan, and Assistant Store Manager Jodi Chavez. But none of Employer's management personnel completed Employer's Associate Report Packet or sent Claimant for medical treatment. Claimant's testimony in this regard is not consistent with the credible evidence presented at hearing.

3. Employer's Store Manager Lucas France, Grocery Manager Jamie Smith, Night Crew Foreman Blair Sullivan, and Assistant Store Manager Jodi Chavez testified that:

    - Claimant never reported shoulder problems or any type of injury to them,

    - that corporate policy requires management personnel to complete the Associate Incident Report Packet immediately upon being notified of an injury which may be caused by work,

    - and that if Claimant had reported shoulder problems caused by work they would have completed the Associate Incident Report Packet as per corporate policy.

4. On July 21, 2016, Claimant had an appointment with her personal physician, Arazu Wanna, M.D., of Ponderosa Family Physicians. She complained of right shoulder pain existing for the past 3-4 months, gradually increasing in severity. Dr. Wanna assessed Claimant with "right shoulder pain" and "tennis elbow." Dr. Wanna recommended physical therapy and an x-ray of Claimant's right shoulder joint. No persuasive evidence suggests that Claimant presented the medical records or bills from her treatment with Ponderosa Family Physicians to any of her supervisors or store management.

5. On July 22, 2016, Claimant began physical therapy with CACC Physical Therapy. Claimant returned for one additional physical therapy treatment on August 2, 2016. Claimant was discharged from physical therapy for non-compliance on September 6, 2016. The Case History section of the New Patient Health History Form completed by Claimant with Aurora Central Chiropractic indicates that Claimant stopped physical therapy because it "got to [sic] expensive." However, Claimant testified that she stopped attending physical therapy because a male therapist had "pushed down on [her] chest." No persuasive evidence suggests that Claimant presented the physical therapy reports or bills of her treatment with CACC Physical Therapy to any of her supervisors or store management, or otherwise requested payment for physical therapy from Employer.

6. On October 20, 2016, Claimant sought treatment from Aurora Central Chiropractic. The New Patient Health History Form Claimant completed specifically asked the nature of the injury. Claimant did not mark that it was caused by work. Instead, Claimant checked "Other." Claimant also indicated that the party responsible for payment was "E.D. Hough," not Employer. Under the Medical History portion of the New Patient Health History Form, Claimant indicated that her symptoms were not worse during certain times of the day (i.e. she did not indicate working made her symptoms worse) and that the activities that aggravated her symptoms were "reaching back & down."

7. On November 9, 2016, a phone message from Claimant to Ponderosa Family Physicians documents Claimant requested a referral for an MRI for her right shoulder. The November 14, 2016 MRI showed supraspinatus, infraspinatus and subscapularis tendinosis.

8. On November 15, 2016, Claimant returned to Dr. Wanna, the first visit since July 22, 2016 to discuss the MRI results. The note from that visit states that Claimant "wants me to fill out workers comp paperwork, she states that she has a lawyer helping her with this process and was told to bring it here. he hasn't seen someone through her employer at this point for possible work related injury."

9. Dr. Wanna's November 15, 2016, report documents that Claimant "states that the pain is relieved with rest, has noticed that it is worse with heavy lifting at her job . . Notices worsening of symptoms after lifting heavy objects." This history from Claimant on November 15, 2016, given after being advised to see Dr.

Wanna by her attorney, directly conflicts with Claimant's statements to prior treating physicians regarding the effects of rest and activities that caused her pain:

- July 21, 2016, report of Dr. Wanna indicated Claimant "attempted … rest from work at the grocery store" which did not help;

- July 22, 2016, report of CACC Physical Therapy that Claimant had "been on vacation the last two weeks and her pain did not get better" and aggravating factors "computer use, repetitive motion" (not lifting heavy objects);

- October 20, 2016, New Patient Health History Form completed by Claimant, indicating that her symptoms were not worse during certain times of the day (i.e. she did not indicate working made her symptoms worse) and that the activities that aggravated her symptoms were "reaching back & down" (not lifting heavy objects or reaching overhead).

10. The ALJ finds it more likely true than not that Claimant's statements to Dr. Wanna that work caused an increase in symptoms and rest from work caused a relief in her symptoms were made to support a claim for workers' compensation benefits after being advised by her attorney to see Dr. Wanna.

11. On November 16, 2016, Claimant returned to Employer, specifically reporting a work-related injury in June or July 2016, when she was "stocking 20lb/10lb bags of ice and 24 pk & 32 pack water. Used U Boats stocked to shelves and ice chests." Employer completed the Associate Incident Report Packet on that date.

12. On November 16, 2016, Jodi Chavez completed an Employee Incident Witness Form. She stated that "[Claimant] has never stated to me her manager that she hurted [sic] herself. She's been working every week since then with no issues concerning her shoulder." Ms. Chavez's statement is consistent with her hearing testimony that Claimant had not reported an injury to her shoulder.

13. Employer's witnesses credibly testified that Employer's corporate policy requires:

- management personnel to complete the Associate Incident Report Packet immediately upon being notified of an injury.

- management personnel to be trained on an ongoing basis on the issue of how to proceed upon being notified of an injury.

- that the requirement to report work-place injuries is addressed in employee safety meetings and is posted several places throughout the store.

14. The Administrative Law Judge is unable to find credible Claimant's testimony on this point.

15. Medical records establish that Claimant is 5' 1.5'' tall and weighed approximately 126 pounds. Claimant testified that because of her height, the majority of her work involved heavy lifting above shoulder level. Claimant's testimony is not persuasive, as common-sense dictates that the majority of Claimant's lifting necessarily must be below shoulder level.

16. Claimant's job duties require Claimant to break down loads of product shipped to the store on pallets, place the groceries on wheeled carts called "U-boats", wheel the U-boats to an aisle in the store, and then stock the shelves with the groceries. Claimant testified that the pallets "sometimes" were stacked 6 feet high. Thus, even assuming every pallet were stacked 6 feet high, if Claimant were to begin unloading a pallet from the very top to the floor level, half of her work would have required reaching from six feet to three feet (above shoulder level) and the other half of her work would have required reaching from three feet to floor level (below shoulder level). The same holds true for placing items onto the U-boat. Assuming Claimant loaded the U-boat 6 feet high, half of the items would have been placed on an empty U-boat from floor level to three feet high (below shoulder level) and the other half of the items would have been placed from three feet high to six feet high (above shoulder level). Since Claimant testified that she stocked groceries in all sections of the store, then at least half of Claimant's stocking would have been from floor level (bottom shelf) to 3 feet high, and the other half from three feet high to the top shelf. Thus, even assuming that "above shoulder level" was three feet from the ground up to six feet high, the maximum amount of time Claimant spent using her arms above shoulder level would be no greater than 50% of the time she spent stocking.

17. Furthermore, Claimant testified that she used a step stool to place products on the higher shelves. This further lessens her work above shoulder level to less than 17% of the time.

18. Claimant's hearing testimony contradicts statements she made to medical providers prior to hearing.

19. On April 26, 2017, Carlos Cebrian, M.D., performed an Independent Medical Examination of Claimant. Dr. Cebrian testified that Claimant told him that her job duties did not require much overhead activity, and that her stacking of bottled water required her to stack water from floor level to four feet high. Dr. Cebrian's testimony is consistent with his report, which indicates that "[s]he would stack the water 3-4 high, and would stack in shelves or on the floor."

20. Dr. Cebrian testified for Respondents as an expert in occupational medicine. After reviewing Claimant's medical records, interviewing Claimant, and performing an Independent Medical Examination, Dr. Cebrian testified that Claimant's right elbow tendinitis and right shoulder tendinosis were not caused or aggravated by Claimant's job duties.

21. Dr. Cebrian testified that Claimant's supraspinatus, infraspinatus and subscapularis tendinosis means that these three of four tendons in the rotator cuff complex have lost their elasticity due to degeneration over long periods of time. He found nothing unique about the abnormalities in Claimant's shoulder. He explained:

    - Degeneration is not a wear and tear process.
    - Degeneration takes place at a cellular level and is the result of the body's inability to replace normal tissues as one ages.
    - Degeneration is not the result of external trauma to the tissues but rather to the aging of the cells.

22. W.C.R.P. 17, Exhibit 4, Shoulder Injury Medical Treatment Guidelines, state:

    Given all of this information, it is reasonable to consider that there is some evidence for the following causative risk factors for shoulder tendon related pathology:

    - Overhead work consisting of additive time per day of at least 30 minutes/day for a minimum of 5 years.
    - Work that requires shoulder movement at the rate of 15-36 repetitions per minute and no 2 second pauses for 80% of the work cycle.
    - Work that requires shoulder movement with force 10% or greater of the maximum voluntary force and has no 2 second pauses for 80% of the work cycle.

23. Dr. Cebrian testified that because Claimant's job duties allow her more than 2 second pauses before performing another shoulder movement for the vast majority of her time working, only the first risk factor relating to overhead work is relevant to a determination of whether the job duties caused an aggravation of Claimant's tendinosis. When analyzing work duties involving overhead activity, Dr. Cebrian stated that it is a "very critical point" to understand that only those activities which result in greater than a 90^{o} angle between the humerous (arm bone) and the upper body result in a potential risk for cumulative trauma to the shoulder joint. The term "additive time per day of at least 30 minutes/day" considers only those few seconds that the arm is in greater than a 90^{o} angle during a stocking motion, not the entire stocking motion from the time the Claimant lifts the item to be stocked until the item is placed on the shelf. Dr. Cebrian testified that based on Claimant's own statements to Dr. Cebrian, Claimant's job duties were well below the 30/minutes per day of "overhead work."

24. On November 16, 2016, Respondent referred Claimant to George Kohake, M.D., who originally opined that he could not state that Claimant's job duties caused or aggravated her shoulder condition because he did not have medical records from

Claimant's primary care physician. Dr. Kohake's January 5, 2017, narrative report makes no mention of causation. However, the WC-164 Form Report from the same date, contains a check in the "Yes" column indicating that objective findings are consistent with history and/or work related mechanism of injury. It appears that the WC 164 Form Report was completed on a computer and bears Dr. Kohake's electronic signature, there is no indication that Dr. Kohake completed the WC 164 Form Report or reviewed it before his digital signature was attached. Dr. Cebrian testified that he does not complete his own WC 164 Form Reports, and opined that it is the practice of most occupational medicine physicians to have nurses or office staff complete the forms. Nothing in Dr. Kohake's narrative report suggests that he engaged in any causation analysis on January 5, 2017, or that he had reviewed the medical records from Claimant's primary care physician, which was the reason he could not state an opinion on causation on November 16, 2016. The ALJ finds that Dr. Kohake's WC 164 Form Report is not persuasive evidence of his opinion on causation.

25. Dr. Cebrian's opinion that Claimant's shoulder condition is not caused or aggravated by her work activities is supported by Claimant's condition not improving despite a two-week vacation in July 2016, and not having worked at all since January 2017. Dr. Cebrian testified that if Claimant's tendinosis were caused or aggravated by her job duties, then he would expect that cessation of those job duties would improve her condition. That Claimant's shoulder tendinosis has not improved is persuasive evidence that Claimant's tendinosis exists independent of her job duties.

26. The ALJ finds that Claimant has not met her burden of proving by a preponderance of the evidence that her right shoulder tendinosis is caused or aggravated by her job duties with Employer.

27. Dr. Cebrian further testified that Claimant's epicondylitis was not caused or aggravated by her job duties. Dr. Cebrian performed a detailed causation assessment based on the Cumulative Trauma Conditions Medical Treatment Guidelines effective March 2, 2017, and the guidelines in effect prior to that date, and concluded that Claimant did not meet either the primary or secondary risk factors for development of epicondylitis under either guideline. Claimant presented no credible evidence from any physician or health care provider to support the premise that Claimant's epicondylitis is caused or aggravated by her job duties. The ALJ finds Dr. Cebrian's opinion to be credible and persuasive.

28. The ALJ finds that Claimant has not met her burden of proving by a preponderance of the evidence that her right elbow condition is caused or aggravated by her job duties with Employer.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S.(2016). A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., 2006. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

A pre-existing condition "does not disqualify a claimant from receiving workers' compensation benefits." *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004). A claimant may be compensated if his or her employment "aggravates, accelerates, or combines with" a worker's pre-existing infirmity or disease "to produce the disability for which workers' compensation is sought." *H&H Warehouse v. Vicory*, 805 P.2d 1167, 1169 (Colo. App. 1990). Moreover, an otherwise compensable injury does not cease to arise out of a worker's employment simply because it is partially attributable to the worker's pre-existing condition. *See Subsequent Injury Fund v. Thompson*, 793 P.2d 576, 579 (Colo. 1990).

However, the injury must be a "significant" cause of the need for treatment in the sense that there is a direct relationship between the precipitating event and the need for treatment. *Reynolds v. U.S. Airways, Inc*, W. C. Nos. 4-352-256, 4-391-859, 4-521-484 (May 20, 2003). It is the claimant's burden to prove a causal relationship between the industrial injury and the medical condition for which she seeks benefits. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). The question of whether an industrial injury is the cause of a subsequent need for medical treatment is largely one of fact for determination by the ALJ. *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997).

Shoulder. The ALJ concludes that Claimant has not met her burden of proving that her job duties caused or aggravated her shoulder condition. Dr. Cebrian credibly

testified that tendinosis of the shoulder is a degenerative process not caused by "wear and tear" and that Claimant's job duties did not meet the risk factors to prove aggravation of her shoulder condition. Claimant presented no persuasive evidence in rebuttal to Dr. Cebrian's expert opinion. Claimant's case rests primarily on Claimant's own testimony regarding her overhead activities and the job duties as stated in Dr. Cebrian's report. However, Claimant's testimony as to her job duties is not credible, as Claimant's testimony was inconsistent with multiple entries in her medical records prior to the hearing. Dr. Cebrian testified that job duties as calculated by Employer's job description are not a credible estimate of the Claimant's overhead activities because the job duties totaled to 940% which is not possible.

Dr. Cebrian performed a detailed causation analysis based on the best evidence available of Claimant's job duties and application of those job duties to the risk factors found in the Medical Treatment Guidelines. In addition, Dr. Cebrian credibly testified that if Claimant's shoulder tendinosis were caused or aggravated by her job duties, then it would be expected that cessation of those job duties would improve her condition. That Claimant's shoulder tendinosis did not improve after her two-week vacation in July 2016, or since she stopped working in January 2017, is persuasive evidence that Claimant's tendinosis exists independent of her job duties and, therefore is not caused or aggravated by those job duties.

Elbow. The ALJ concludes that Claimant has not sustained her burden of proving that her job duties caused or aggravated her elbow condition. Dr. Cebrian performed a detailed causation assessment based on the Cumulative Trauma Conditions in the Medical Treatment Guidelines effective March 2, 2017, and the guidelines in effect prior to that date. He concluded that Claimant did not meet either the primary or secondary risk factors for development of epicondylitis under either guideline. Claimant presented no persuasive evidence from any physician or health care provider to support the premise that Claimant's epicondylitis is caused or aggravated by her job duties.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim for benefits is denied and dismissed.

2. Issues not expressly decided herein are reserved to the parties for future determination.

3. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 14, 2017

/s/ Kimberly Turnbow
Kimberly B. Turnbow

1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- **Whether Claimant proved, by a preponderance of the evidence, that the arthroscopy, with subacromial decompression, rotator cuff repair and possible biceps tenodesis, for which Dr. Mark Grossnickle has requested prior surgical authorization is reasonable, necessary and related to the admitted December 29, 2015, work injury?**

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. The Claimant is a 57-year old woman with a January 14, 1960, date of birth. **Exhibit A.**

2. On December 29, 2015, the Claimant was employed by the Respondent Employer as an Assistant Manager. **Tr. 10, ll. 18-19.**

3. Claimant was injured in an admitted accident on December 29, 2015, in the course and scope of her employment with the Respondent Employer. Following the accident, Claimant completed the Employer's First Report of Injury on the Employer's behalf. The Claimant described her injury as occurring when, "She was helping a customer and tripped over a box and fell. States her right foot and second toe presenting complaint; Right toe (second toe), left wrist mechanism of injury; Fall or slip injury, fall, slip or trip, NOC, EE went to NextCare Urgent Care for Treatment". **Exhibit A.**

4. Physician Assistant, Stephan Toth, evaluated Claimant at NextCare Urgent Care on December 29, 2015. Claimant's presenting complaints included left hand and right ankle pain. On physical exam, pertinent negatives included bruising, crepitus, joint instability, numbness, popping, spasms, or tingling in the arms. PA Toth assessed "left wrist pain" and a "left wrist sprain". PA Toth prescribed ice, elevation, Ibuprofen and a wrist brace. Claimant was instructed to use the wrist brace less as her wrist motion became more normal and less painful. **Exhibit I, Bates 84-88.**

5. Claimant returned to NextCare on January 5, 2016, reporting no improvement. Claimant reported a new complaint of radiating pain to the left elbow "similar to previous surgical issues in elbow". The diagnosis remained "strain of left wrist". Claimant was instructed to follow up with the same orthopedist [Dr. Bussy] who previously treated her left elbow complaints for a

pre-existing condition. Due to Claimant's failure to improve, she was also referred to orthopedic surgeon, Dr. Mark Grossnickle. **Exhibit I, Bates 89-92.**

6. Dr. Grossnickle evaluated Claimant on February 3, 2016. **Exhibit K, Bates 119.** On February 3, 2016, Dr. Grossnickle opined, "I think [Claimant] has evidence of irritation of her median nerve, but I also think she is getting tendinitis about her thumb from her injury. Claimant's complaints included pain at the base of the thumb, that would "sometimes" radiate up the forearm into the elbow. ***Id.***

7. Claimant continued to treat with Dr. Grossnickle and the physical therapists to whom he referred her, with ongoing complaints consisting of only wrist and thumb pain with occasional radiation to the elbow.

8. On March 9, 2016, Dr. Grossnickle diagnosed Claimant with deQuervain tendinitis and left-sided trigger thumb. For the first time, there is mention of left shoulder pain. **Exhibit K, Bates 130.**

9. On April 7, 2016, Dr. Grossnickle performed a first dorsal compartment release of the left wrist and a trigger thumb release of the left thumb. **Exhibit K, Bates 139.** Dr. Grossnickle referred Claimant to physical therapy on April 20, 2016. **Exhibit K, Bates 140.**

10. Claimant began physical therapy on May 4, 2016. Her reported complaints were of pain in the left wrist. She reported improvement in her thumb pain with surgery. **Exhibit K, Bates 144, 145.**

11. Claimant continued her treatment with Dr. Grossnickle and the physical therapists to whom he referred her, with the ongoing diagnosis of "left wrist sprain". **Exhibit K, Bates 146 through 177.** Claimant also returned to NextCare on July 28, 2016, "to follow up on left wrist", not having been seen since January 12, 2016. **Exhibit I, Bates 99.** On physical exam, the left wrist and hand had full range of motion, except mild limitation of extension, with tenderness along the ulnar side of the left wrist. **Exhibit I, Bates 101.**

12. On August 24, 2016, Claimant complained of left shoulder "stiffness", which Dr. Grossnickle attributed to disuse of the left hand following surgery. **Exhibit K, Bates 178.**

13. On November 30, 2016, Claimant continued to complain of pain in the anterior aspect of the left shoulder. Dr. Grossnickle opined Claimant had "positive impingement especially over the supraspinatus tendon of her left shoulder. She has full range of motion. She has no anterior inferior posterior instability". Dr. Grossnickle recommended an MRI scan to make sure the Claimant "did not damage" her rotator cuff mechanism in the fall. **Exhibit K, Bates 181.**

14. A January 8, 2017, MRI of the left shoulder was performed at Dr. Grossnickle's request. It was read as showing:

    - Rotator cuff tendinopathy. Shallow partial tearing involving the supraspinatus and subscapularis tendons.
    - Tearing of the superior and posterior glenoid labrum.
    - Glenoid cartilage loss with subchondral cystic changes.

    Exhibit J.

15. On January 18, 2017, Dr. Grossnickle evaluated Claimant and recommended an arthroscopy with subacromial decompression and rotator cuff repair of Claimant's partial tear and possible biceps tenodesis. **Exhibit 5, Bates 113.** Respondents denied the request for prior authorization in compliance with Rule 16-11, W.C.R.P. **Exhibit N, Bates 213.**

16. In connection with their Rule 16-11, W.C.R.P., denial, Respondents obtained an IME, performed by Dr. Timothy O'Brien. **Exhibit M.**

17. On May 15, 2017, Dr. Grossnickle testified by deposition as an expert in the field of orthopedic surgery. In the course of his deposition, Dr. Grossnickle reviewed the results of the January 8, 2017, MRI report. Based on his review of the MRI report, Dr. Grossnickle opined, that, "***In the absence of prior injury***," he would attribute the January 8, 2017, MRI findings to Claimant's December 29, 2015, fall. [**Emphasis supplied.] Grossnickle Depo. Tr. 13, ll. 1-14.** Dr. Grossnickle was also asked the following hypothetical question.

    Q. [By Mr. Kennedy]: All right. Hypothetically, let's say she had those exact MRI findings prior to the fall in December 2015. If she didn't have any symptoms in the shoulder prior to that, in your opinion, what would have caused her symptoms – or excuse me – her condition to become symptomatic?

    A. [By Dr. Grossnickle]: I actually don't think she could have had a labral injury and not be symptomatic. So, in that scenario, I'd have a hard time answering that one to say that for sure. Most people with that type of labral tear would be symptomatic.

    Q. So to confirm, if she did have this labral tear prior to December of 2015, it's your opinion that she would have been symptomatic?

    A. It is, yes.

    Grossnickle Depo. Tr. 18, l. 25, Tr. 19, ll.1 1-14.

18. Dr. Grossnickle testified he based his opinions regarding the relatedness of Claimant's shoulder complaints to the admitted December 29, 2015, accident on

his understanding that the Claimant did not have any shoulder problems until the December 29, 2015, accident. **Grossnickle Depo., Tr. 23, ll. 18-24.** In formulating his opinions in the case, Dr. Grossnickle relied exclusively on the history given to him by Claimant and his evaluations of her. He reviewed no treatment notes from any outside providers other than the September 21, 2016, EMG results provided by Dr. Van DeHoven and some unrelated records from Claimant's primary care provider. **Grossnickle Depo., Tr. 24, ll. 3-25.** Claimant continued to treat with NextCare Urgent Care with complaints of left wrist pain, without improvement.

19. Dr. Grossnickle had no independent knowledge of Claimant's prior surgical history, including any history of prior work-related injuries. **Grossnickle Depo., Tr. 25, ll. 17-22.**

20. In connection with a January 5, 2007, injury to the left hand and arm, Claimant underwent a May 21, 2008, left shoulder MRI arthrogram. **Exhibit D, Bates 25-26.** The May 21, 2008, left shoulder MRI arthrogram was read as showing:

    - Focal tear of the superior labrum beginning at the biceps labral attachment and extending toward the posterior superior labrum.
    - Mild to moderate tendinosis of the supraspinatus and infraspinatus with focal mild interstitial tearing involving the posterior supraspinatus and anterior infraspinatus at the conjoined tendon.
    - Left shoulder impingement.

    Exhibit D.

21. Dr. Grossnickle testified that, other than some tendinopathy and partial tearing of the subscapularis tendon, the findings on the January 8, 2017, MRI are consistent with the findings on the May 21, 2008, MRI. Dr. Grossnickle conceded the findings he considered "new" on the January 8, 2017, MRI could be degenerative in nature. **Grossnickle Depo., Tr. 28, ll. 1-25, Tr. 29, ll. 1-6.**

22. In addition to performing an IME, Respondents' IME, Dr. O'Brien, testified at the July 21, 2017, hearing as a Level II accredited physician with expertise in the fields of orthopedics and orthopedic surgery. Dr. O'Brien credibly testified that when taking into consideration improvements in MRI technology, the findings on the May 21, 2008, MRI, as compared to the January 21, 2017, MRI, are virtually identical. Moreover, any increased desiccation seen on the new exam, over the nine-year time span between the studies, would be expected based on aging alone. **July 21, 2017, Hearing Tr. 56, ll. 12-25.**

23. Dr. Grossnickle testified that if, following the May 21, 2008, MRI, Claimant underwent an additional six to eight weeks of conservative care and continued with symptoms, the surgery currently being recommended is very close to the

same surgery he would have recommended in 2008. **Grossnickle Depo., Tr. 29, ll. 7-23.**

24. After being placed at MMI from her January 5, 2007, industrial injury, the Claimant was limited to no lifting, pushing, pulling or carrying greater than 10 to 15 pounds with the left arm. All work was to be done from knee to chest level, with no repetitive or prolonged flexion of the elbow. **Exhibit F, Bates 45-46.**

25. After being placed at MMI for her January 5, 2007, injury, Claimant continued to complain of left shoulder pain. On October 20, 2008, Claimant presented to North Colorado Health Alliance with left shoulder complaints. **Exhibit G, Bates 47-48.**

26. On November 12, 2013, the Claimant again presented to Colorado Health Alliance complaining of pain at a level 7-9/10 "most days" radiating from the left hand to the shoulder. Claimant indicated she had lifting restrictions of ten pounds "for life". Claimant was referred for physical therapy and instructed to return if she failed to improve. **Exhibit G, Bates 56.**

27. On December 3, 2013, Claimant presented to the Northern Colorado Medical Center Emergency Room complaining of left neck and left shoulder pain. She gave a history of "chronic left arm problems" with limited left shoulder range of motion. **Exhibit H, Bates 71.**

28. Claimant returned to Colorado Health Alliance on December 18, 2013, complaining of limited range of shoulder motion due to pain. She was prescribed Gabapentin and a left shoulder MRI was ordered. Claimant was instructed to complete shoulder exercises daily. **Exhibit G, Bates 59-61.**

29. Claimant testified at hearing that prior to her fall at work on December 29, 2015, she did not have any prior left shoulder problems. However, a review of her medical records demonstrates otherwise. As set forth in her medical records, Claimant had prior chronic left shoulder problems since 2007 or 2008. Therefore, Claimant's testimony regarding the onset of her left shoulder problems and the cause of her left shoulder problems is not found to be credible.

30. Dr. O'Brien credibly testified that the Claimant's diagnosis resulting from the December 29, 2015, work injury was a minor left wrist contusion and strain, consistent with the original diagnosis of NextCare Urgent Care. **July 21, 2017, Hearing Tr. 36, ll. 16-21.** Dr. O'Brien's opinions are supported by PA Toth's initial evaluation, which, on physical examination, noted no findings other than the possibility of some minor swelling, no bruising, no bleeding, no break in the skin and radiographs which were negative for any acute injury. **Hearing Tr. 37, ll. 12-25.**

31. Dr. O'Brien credibly testified it is not medically probable that, if Claimant injured her left shoulder in the December 29, 2015, slip and fall, it would have taken until

March 9, 2016, for the left shoulder complaints to first present. **Hearing Tr. 57, ll. 1-14.**

32. Dr. O'Brien credibly testified it is equally medically improbable that, if Claimant aggravated a pre-existing condition in the December 29, 2015, slip and fall, it would have taken until March 9, 2016, for the left shoulder complaints to present. **Hearing Tr. 57, ll. 15-18.**

33. Dr. O'Brien credibly testified that it is not medically probable the surgery for which Dr. Grossnickle requested prior authorization resulted from the "progressive degeneration" of the Claimant's shoulder joint caused by disuse. Claimant did not injure her shoulder in the December 29, 2015, accident. Claimant had a minor wrist sprain or strain that did not impact the shoulder joint. **Tr. 58, ll. 28-25.** Dr. O'Brien also credibly testified that there is no pathology seen on the 2017 MRI that would require a surgery, and based on his exam findings, a surgery will fail. **Tr. 59, ll. 1-8.** In comparing the two MRIs from May 21, 2008 and January 8, 2017, there is no objective evidence of progressive degeneration in Claimant's left shoulder joint that warrants surgery. **Hearing Tr. 59, ll. 9-13.** The Claimant was not a surgical candidate based on the May 8, 2008, MRI, **Exhibit F, Bates 44.** Dr. O'Brien's opinion that surgery is not reasonable and necessary based on the January 8, 2017, MRI, and his exam findings, is found to be credible and persuasive.

34. Dr. O'Brien's credible and persuasive opinion that the surgery being requested by Dr. Grossnickle is not reasonable, necessary or related to the December 29, 2015, accident, is bolstered by the deposition testimony of Dr. Grossnickle.

35. Dr. Hughes performed an IME on behalf of Claimant. He opined that Claimant's need for left shoulder surgery was due to Claimant's disuse of her shoulder due to her original left wrist injury. However, he also indicated that Claimant presented with an "interesting and somewhat confusing medical history." He also recommended that it would be he helpful to have a radiologist perform a comparison between the prior MRI and current MRI. Regardless of Claimant's "confusing medical history", Dr. Hughes opined that the need for surgery is related to Claimant's disuse of her shoulder. This ALJ does not find Dr. Hughe's opinion to be persuasive or credible. This ALJ does not find it credible that the labrum tear and pathology noted on the 2017 MRI as well as Claimant's alleged increase in shoulder symptoms were caused or aggravated by Claimant not using her left shoulder.

36. Claimant did not injure her left shoulder on December 29, 2015.

37. Claimant did not aggravate or accelerate her preexisting shoulder condition on December 29, 2015.

38. Any disuse of Claimant's left shoulder did not cause, aggravate, or accelerate Claimant's left shoulder condition.

39. The December 29, 2015 work accident – and any disuse – did not cause the need for any medical treatment to be directed towards Claimant's left shoulder.

40. Claimant failed to prove, by a preponderance of the evidence, that the left shoulder surgery, for which Dr. Mark Grossnickle has requested prior authorization is reasonable, necessary and related to the December 29, 2015, slip and fall at the Respondent Employer.

CONCLUSIONS OF LAW

General Legal Principals

A. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits, including medical benefits, by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

B. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

C. In deciding whether a party has met their burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensecki v. ICAO*, 183 P.3d 684 (Colo.App. *2008).* In short, the ALJ determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo.App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo.App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo.App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the

testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part, or none, of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968).

Medical Benefits

The requested arthroscopy, with subacromial decompression, rotator cuff repair and possible biceps tenodesis.

D. Claimant is entitled to medical benefits that are reasonably necessary to cure or relieve the effects of the industrial injury. *See* § 8-42-101(1), C.R.S. 2003; *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990).

E. The question of whether the need for treatment is causally related to an industrial injury is one of fact. *Walmart Stores, Inc. v. Industrial Claims Office, supra*. Similarly, the question of whether medical treatment is reasonable and necessary to cure or relieve the effects of an industrial injury is one of fact. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). Where the relatedness, reasonableness, or necessity, of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc*., W.C. No. 4-117-758 (ICAO April 7, 2003).

F. Based upon the evidence presented, the ALJ concludes that Claimant has failed to prove by a preponderance of the evidence that the treatment for which Dr. Mark Grossnickle has requested prior authorization, a left shoulder arthroscopy with subacromial decompression, rotator cuff repair and possible biceps tenodesis, is reasonable, necessary and related to the claimant's admitted December 29, 2015, industrial injury.

G. Dr. O'Brien credibly testified that based on Claimant's MRI and his clinical exam findings, Claimant does not need shoulder surgery. Dr. O'Brien also credibly testified that the MRI findings from 2008 and 2017 are basically the same. Dr. O'Brien further testified that the MRI findings are degenerative in nature and were not caused or aggravated by Claimant's December 29, 2015 work accident

or disuse. Therefore, the evidence presented persuades the ALJ that the surgery for which Dr. Grossnickle has requested prior authorization is not reasonable, necessary or related to the industrial injury.

H. In addition, Claimant's testimony was not found to be credible. Claimant denied having shoulder problems prior to December 29, 2015. However, Claimant's medical records demonstrated Claimant had chronic left shoulder problems since 2007 or 2008. Therefore, Claimant's contention about the timing of her shoulder pain and the cause of her shoulder pain was not found to be credible or persuasive.

I. It should also be noted that Dr. Grossnickle was unaware of Claimant's prior shoulder problems. Claimant's failure to provide Dr. Grossnickle a valid history regarding the extent of her prior shoulder problems tainted Dr. Grossnickle's opinions regarding causation. Therefore, any opinion of Dr. Grossnickle in which he opined Claimant's shoulder condition and need for surgery was caused by the December 29, 2015 accident or disuse was found to not be credible or persuasive.

J. As found, Claimant has failed to prove, by a preponderance of the evidence, that the requested arthroscopy, with subacromial decompression, rotator cuff repair and possible biceps tenodesis is reasonable, necessary or related to the December 29, 2015, accident.

I. ORDER

It is therefore Ordered that:

1. Claimant has failed to prove, by a preponderance of the evidence, her need for the requested arthroscopy, with subacromial decompression, rotator cuff repair and possible biceps tenodesis is reasonable, necessary or related to the December 29, 2015, accident.

2. Dr. Grossnickle's request for prior authorization of an operative arthroscopy, with subacromial decompression, rotator cuff repair and possible biceps tenodesis is denied and dismissed.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed

it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 16, 2017

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Whether Claimant is entitled to Temporary Total Disability (TTD) benefits from November 4, 2016 through June 18, 2017, based upon an assertion that a modified duty position extended to him by Employer was outside of the work restrictions imposed upon him by his treating physicians.[1]

II. A determination of Claimant Average Weekly Wage at the time of his admitted left knee/ankle injury.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant worked for Employer as an over-the-road truck driver hauling chemicals to cement factories. On July 7, 2016, Claimant stepped into a hole after exiting the cab of his truck to conduct a pre-trip inspection twisting his left knee and ankle.

2. Claimant reported his injuries and liability for the same was admitted. Claimant then initiated treatment at Concentra Medical Centers (Concentra) on July 11, 2016.

3. On July 11, 2016, Claimant presented to Concentra with complaints of diffuse left knee pain after a reported "pop" at the time of injury. Physical examination revealed limited range of motion in all planes of movement, grade 2 swelling/effusion, positive medial and lateral McMurray tests along with an equivocal anterior drawer sign leading to a diagnosis by Dr. Randall Jones of a sprain/strain of the left knee and ankle.

4. Claimant was removed from work for the remainder of his July 11, 2016 shift but released to "modified activity" beginning July 12, 2016. Activity modification included working up to 8 hours or greater per day in a seated capacity. Claimant was precluded from driving a company vehicle, was instructed to weight bear as tolerated and to use crutches. He was completely restricted from kneeling and squatting.

5. Claimant was also referred to orthopedic specialist, Dr. Wily Jenkins who evaluated him on July 19, 2016. Dr. Jenkins documented 3+ effusion prompting his recommendation to drain the knee. Following arthrocentesis, Dr. Jenkins injected

[1] The parties stipulated that if Claimant was entitled to TTD benefits that Respondents were entitled to a credit for all Temporary Partial Disability (TPD) benefits paid during the contested time period.

Claimant's left knee with Celestone and Xylocaine. He then recommended continued conservative management, noting further that Claimant was not capable of working in his "usual job capacity." However, Claimant was, according to Dr. Jenkins capable to working in a "completely sedentary capacity if any such work was available to him."

6. On August 29, 2016, Employer, through Lora Smith sent a modified duty position to Dr. Jones for review and approval. The offer identified a position which included duties "all within Claimant's restrictions of "may not drive company vehicle due to functional limitations, must use assistive device-crutch, weigh (sic) bearing as tolerated, no squatting, no kneeling" as assigned to Claimant on August 25, 2016. Based upon a review of the records submitted, the ALJ is unable to identify that Dr. Jones commented on Claimant's restrictions on August 25, 2016. Rather, the last report admitted into evidence commenting on Claimant's restrictions before the modified duty position letter was sent is Dr. Jones' August 16, 2016 clinic note. In his August 16, 2016 report Dr. Jones, in addition to restricting Claimant from driving, kneeling and squatting, noted that Claimant was capable of seated work only. The modified duty offer letter is silent as to the standing requirements necessary to perform the essential functions of the position identified nor does it address Claimant's sitting restriction. Nonetheless, Dr. Jones approved the position on September 2, 2016 and later, the same position, on September 6, 2016.

7. Claimant underwent a second injection of the left knee with Dr. Jenkins on September 13, 2016. Following his injection, Claimant was re-evaluated by Dr. Jones who released him to modified duty in a seated capacity only. Other restrictions remained unchanged from the initial visit of July 11, 2016.

8. Claimant began modified duty at an ARC Thrift Store on September 16, 2016. He testified that he sorted and prepped clothing and other items for re-sale to the public. He reported having to stand for long periods of time while facing clothes and pulling tags. He also testified that he had to squat to place clothing in bins and racks. He testified to increased pain and swelling in the left knee after beginning his modified duty, suggesting that his having to stand and squat were aggravating the condition of the knee.

9. Insurer filed a General Admission of Liability (GAL) beginning temporary partial disability (TPD) benefits on September 23, 2016.

10. On October 11, 2016, Claimant presented to Concentra for a "re-check" of the left knee. He was seen by both Dr. Jones and Dr. Jenkins on this date. Dr. Jones noted that Claimant was standing eight hours in modified duty and that his effusion was "larger." Prior to seeing Dr. Jones, Claimant was evaluated by Dr. Jenkins. Dr. Jenkins noted that corticosteroid injections had failed to provide a great deal of symptom relief. He also noted a "significant amount of swelling" on physical examination, documenting the presence of 3-4+ effusion in the left knee. Dr. Jenkins recommended repeat arthrocentesis. Arthrocentesis withdrew 60 cc's of yellow clear synovial fluid from the knee. Following arthrocentesis an injection of Decadron, Xylocaine and Supartz was

administered. During this encounter Dr. Jenkins also noted that Claimant was "working in a thrift store which entails him being on his feet for the entire workday."

11. Based upon the evidence presented, the ALJ finds that the essential physical functions required of Claimant in the modified duty position extended to him on August 29, 2016, exceeded the restrictions imposed on him by Dr. Jones. Specifically, the ALJ finds that the modified duty position fell outside the requirement that Claimant perform seated work only as documented by Dr. Jones on numerous occasions.

12. Claimant testified that following his October 11, 2016 doctors appointment, his modified duty was changed to include more sitting activity. Nonetheless, he testified that his duties required him to repeatedly get up and down from a seated position and squat down in order to retrieve and/or place items in bins. Based upon the evidence presented, the ALJ finds that Claimant's new modified duty position was not exclusively performed from a seated position as provided for in the October 11, 2016 restrictions imposed by Dr. Jones wherein he noted that Claimant was to engage in "sitting work only." Consequently, the ALJ finds that Claimant's new modified duty also exceeded the restrictions imposed upon him by Dr. Jones.

13. On October 18, 2016, Dr. Jenkins drained the knee for a third time and administered the second of the three injection series of Supartz.

14. On October 25, 2016, Claimant returned to Dr. Jenkins with continued complaints that his left knee was "extremely swollen and painful." Physical examination revealed a recurring "tense effusion" and tenderness in the medial and lateral peripatellar region of the knee. Repeat arthrocentesis was recommended which was completed following sterile Betadine prep. A total of 110 cc's of fluid was removed from the knee after which the final Supartz and Xylocaine injection was administered. Dr. Jenkins noted that Claimant's effusions were "absolutely massive; noting further that "there is no question that [Claimant] is in a significant amount of pain" and is "significantly limited by his problem at the present time."

15. Claimant testified that his persistent worsening pain and swelling beginning around October 11, 2016, became unbearable and interfered with his function. He testified that he verbally reported his pain and dysfunction to his doctors, his modified duty supervisor and his employer. Respondents pointed out that the modified duty offer letter forwarded to Claimant along with the offer provided that Claimant was to contact his assigned supervisor and or Ms. Smith directly if he was being asked to work beyond his restrictions. Respondents suggested that because Claimant did not put his concerns in writing to his assigned supervisor, Ms. Smith or the adjuster assigned to the case and because the medical records are devoid of any specific request from Claimant to change his restrictions/modified duties, that his testimony is unreliable.

16. Despite the change in Claimant's modified duty to accommodate more seated activities, Respondents did not extend an amended modified duty job offer nor did they seek input from Dr. Jones regarding Claimant's physical capacity. Consequently, the ALJ finds that the evidence presented supports a finding that Claimant, while engaging

in additional seated activity, continued to squat up and down repeatedly throughout his work day, not only to stand up and sit down but to place items in bins as described above. The undersigned ALJ is persuaded that this activity continued to aggravate Claimant's underlying knee condition.

17. Claimant testified that he was unable to continue with the activities required to perform his modified duty position after it changed in October, 2016 secondary to pain and continued swelling. Consequently, Claimant testified that he stopped going to work after November 3, 2016.

18. As noted, Respondents suggested that Claimant never informed his physicians, adjuster, modified duty supervisor and/or Employer about his inability to perform his modified job duties. Moreover, Respondents suggested that Claimant stopped appearing for modified duty because he was not being reimbursed for mileage to and from his home and the ARC Thrift Store (ARC) and had no money for gas, assertions that Claimant denied.

19. Claimant submitted a mileage reimbursement request for travel to and from the ARC as well as his physicians' offices. The mileage reimbursement request covers the time period from September 16, 2016 through November 11, 2016. While the request is not dated, the ALJ finds the last date for which reimbursement is requested is November 11, 2016 and the date stamp from Insurer's third party administrator indicates that it was received November 21, 2016. Based upon the dates contained on the reimbursement request, the ALJ finds that the request was, more probably than not, mailed after Claimant stopped appearing for modified duty at the ARC, most likely after November 11, 2016. Furthermore, Claimant's request for mileage reimbursement for travel to/from his modified duty was not denied by the claims representative assigned to the claim until December 13, 2016, long after he stopped appearing for modified duty due to what he testified was a consequence of physical inability. Accordingly, the ALJ finds Respondents suggestion that Claimant stopped showing for modified duty because he was not being reimbursed for travel unpursuasive. The ALJ finds the evidence presented regarding the contention Claimant stopped appearing for modified duty because he had no gas money for travel equally unconvincing. Claimant testified that he raised the issue of having no money for gas at the beginning of his case. The written evidence presented concerning this issue consists a payroll detail for the week of October 9th through October 15th, containing a notation that Claimant did not work for this week long period because he had no money for gas. While Claimant admits that he had no gas for to travel during this week, the balance of the documentary evidence convinces the ALJ that he returned to modified duty work on October 19, 2016 and worked the following days: October 20, 21, 24, 26, 27, 28, 31, and November 1, 2, 3. Moreover, Claimant credibly denied that the travel distance was not the reason he stopped appearing for work. Based upon the totality of the evidence presented, the ALJ is not persuaded that having no money to travel to/from work for a week in early October supports Respondents conclusion that Claimant quit his modified duty position in November for lack of funds to pay for gas.

20. Based upon the content of medical records, the ALJ credits Claimant's testimony to find that the standing and squatting required in his modified duty was outside the restrictions imposed on him by Dr. Jones and was probably irritating his knee causing additional swelling and increased pain. The evidence presented, also persuades the ALJ that Claimant, more probably than not, verbally reported his increased pain, swelling and dysfunction secondary to prolonged standing/repeated squatting to both his physicians and his modified duty supervisor prompting the change in his duties to include more sitting after October 11, 2016. The totality of the evidence presented persuades the undersigned ALJ that Claimant was unable to effectively perform the duties required of his modified duty position and as of November 3, 2016, Employer had not extended to him a modified duty position within his restrictions, including a position that would accommodate seated work only. As found, Respondents' contrary assertions are unconvincing.

21. On December 20, 2016, Dr. Jenkins noted that Claimant was capable of working in a 100% sedentary capacity. No offer of modified duty was extended to Claimant following this appointment.

22. On February 2, 2017, Dr. Jones noted that Claimant was capable of working in a modified duty capacity with restrictions of sitting 75% of the time.

23. On March 2, 2017, Dr. Jones repeated his 75% seated work restriction. Respondents did not extend a modified job offer to Claimant between February 2, 2017 and the March 2, 2017 appointment.

24. On April 3, 2017, Claimant returned to Concentra for evaluation. He was evaluated by Dr. Daniel Peterson on this occasion. Dr. Peterson noted that Claimant was not working as there was no light duty available. On cross examination at hearing, Claimant rejected Respondents' suggestion that modified duty was available based upon the previous positions he had held with the ARC though November 3, 2016, which he testified was not light duty per his restrictions and which he could not tolerate. Dr. Peterson was careful to indicate that Claimant was capable of working modified duty with the following restrictions: "Sitting 75% of the day. May walk briefly and then sit again. Unable to get up and down repeatedly." Despite these specific restrictions, the ALJ is unable to find an amended offer of modified employment extended by Employer after April 3, 2017.

25. Claimant testified that he underwent surgery at the hands of Dr. Jenkins on June 19, 2017. Between June November 4, 2016 and June 18, 2017, Claimant was paid temporary partial disability (TPD) benefits as part of the modified duty work extended to him.

26. In his Supplemental Answer to discovery surrounding the question of Claimant's average weekly wage (AWW), included as part of Claimant's Exhibit 8, Claimant concludes that his AWW is $1,011.64. At the commencement of hearing, Respondents counsel indicated that the wage records obtained and admitted into

evidence support an increase in the AWW above that admitted to in the GAL filed July 21, 2016, September 23, 2016 and July 6, 2017. Respondents specifically acquiesced to the methodology and amount of Claimant's AWW as set forth in Claimant's Supplemental Answer to Interrogatory #6, specifically $1,011.64.

27. Exhibit 8 contains a Second Supplemental Answer concerning the question of Claimant's AWW. As part of his second supplemental answer, Claimant asserts that it is improper to include his first two pay periods (periods ending April 30, 2016 and May 14, 2016) in the calculation of his AWW. As support for his contention Claimant asserts that he did not work the entire pay period ending April 30, 2016, having been hired April 25, 2016. He also notes that he was in training during these pay periods. Consequently, Claimant asserts that the wages earned for the pay periods ending April 30, 2016 and May 14, 2016 do not reflect the wages he would subsequently earn once he began working full time in the field. In considering the evidence concerning Claimant's earnings as a whole, the ALJ finds Claimant's assertions persuasive. Careful review of the record supports that during Claimant's partial week of training and the full training pay period thereafter he earned a total of $1,475.00. Conversely, once released to the field full time Claimant earned $2,600.00 in his first two week pay period ending May 28, 2016. Thereafter Claimant earned consistently more in two weeks while working in the field than he did while in training for the first month of his employment. Accordingly, the ALJ adopts the methodology used to calculate Claimant's AWW as set forth in Claimant's Second Supplemental Answer to Interrogatory #6 to find that Claimant's AWW is $1,217.72. The ALJ finds that this figure most closely approximates Claimant's wage loss and diminished earning capacity at the time of his July 7, 2016 work related injury.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

A. The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979).

B. Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's

testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). As found here, the ALJ credits the testimony of Claimant when superimposed on the content of the medical records to find/conclude that the activity required in the modified duty that Claimant began on September 16, 2016 was outside of his physical capabilities, was likely aggravating the condition of his knee and he informed his physicians and direct modified duty supervisor of the same. The evidence presented supports a reasonable inference that Claimant's duties were then changed. Despite the Claimant to include more seated activity, Claimant testified that he still could not tolerate the required standing/sitting and squatting necessary to continue with his modified duty. The ALJ also finds this testimony credible and supported by the content of the medical records when viewed in their totality. Simply put, Claimant's testimony and the content of the medical records are more persuasive than the contrary suggestions of Respondents that Claimant stopped appearing for modified duty because he was not being reimbursed for mileage and/or had no gas to get to work.

C. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Claimant's Entitlement to TTD

D. To prove entitlement to temporary total disability (TTD) benefits, Claimant must prove that the industrial injury caused a disability lasting more than three work shifts; that he left work as a result of the disability, and the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S., requires Claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by Claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of the earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the Claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

E. In this case, Claimant credibly testified and the medical records support that

he was suffering from increased pain and swelling after beginning modified duty activities which the ALJ concludes was outside of the restrictions imposed upon him, namely that he was to work in a seated capacity only. Despite a change in his duties to accommodate additional sitting, the credible evidence persuades the ALJ that Claimant was unable to physically maintain his modified duty. Although Respondents contend that the medical records do not support such a conclusion, the ALJ notes that a medical opinion is not a prerequisite to proving entitlement to temporary disability benefits. As concluded by the Court of Appeals in *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo.App.1997), the testimony of the claimant, if credited, is sufficient to prove causation and inability to work. Such is the case here.

F. Based upon the evidence presented, the ALJ is persuaded that Claimant was "disabled" within the meaning of section 8-42-105, C.R.S. between November 4, 2016 and June 18, 2017, during which time frame he experienced a wage loss beyond the temporary partial disability paid. Indeed, Claimant established that he was unable to perform the modified duty assigned to him and which he began on September 16, 2016. Further, the evidence presented persuades the ALJ that Employer did not offer other suitable modified duty at any time after Claimant was incapable of continuing with modified duty after November 3, 2016. Consequently, the ALJ concludes that Claimant is entitled to TTD benefits beginning November 4, 2016 and continuing through June 18, 2017, after which TTD benefits were initiated as a consequence of Claimant's June 19, 2017 surgery. *See generally*, *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999); *Hendricks v. Keebler Company*, W.C. No. 4-373-392 (Industrial Claim Appeals Office, June 11, 1999).

Claimant's Average Weekly Wage

G. The overall purpose of the average weekly wage (AWW) statute is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity resulting from the industrial injury. *See Campbell v. IBM Corp., 867 P.2d 77 (Colo. App. 1993); National Fruit Prod. v. Crespin, 952 P.2d 1207 (Colo. App. 1997).*

H. Sections 8-42-102 (3) and (5) (b), C.R.S. (2013), give the ALJ discretion to determine an AWW that will fairly reflect loss of earning capacity. An AWW calculation is designed to compensate for total temporary wage loss. *Pizza Hut v. Indus. Claim Appeals Office,* 18 P. 3d 867 (Colo. App. 2001). *See* § 8-42-102, C.R.S. The best evidence of Claimant's actual wage loss and therefore a fair approximation of his diminished earning capacity at the time of his industrial injury comes from the wage records submitted into evidence. As found here, careful review of the record supports that during Claimant's partial week of training and the full training pay period thereafter he earned a total of $1,475.00. However, when released to the field full time Claimant earned $2,600.00 in his first two week pay period ending May 28, 2016. Thereafter Claimant earned consistently more in two weeks while working in the field than he did while in training for the first month of his employment. Accordingly, the ALJ agrees with Claimant that his training wages should not be included in the computation of his AWW as it artificially lowers the wage calculation to reflect a wage that does not approximate

the wage loss and diminished earning capacity at the time of his July 7, 2016 work related injury. Here, the ALJ adopts Claimant's calculations, which outside of the assertion that training wages should be included in the calculation Respondents agree with, to conclude that Claimant's AWW for purposes of this claim is $1,217.72. The ALJ finds that this figure most closely approximates Claimant's wage loss and diminished earning capacity at the time of his July 7, 2016, compensable work related injury

ORDER

It is therefore ordered that:

1. Respondents shall pay Claimant TTD benefits for the time period extending from November 4, 2017 through June 18, 2017. Respondents are entitled to a credit for all TPD benefits paid during this same time period.

2. Claimant AWW is equal to $1,217.72.

3. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 17, 2017

/s/ Richard M. Lamphere

Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

ISSUES

1. Did Respondents prove by a preponderance of the evidence that Claimant did not suffer a compensable injury in August 8, 2016, thereby entitling Respondents to withdraw their Admission of Liability?

If the claim is deemed compensable, the ALJ will address the following issues:

2. What is Claimant's average weekly wage (AWW), and should bonuses be included in the AWW calculation?

3. Is Claimant entitled to TTD benefits from October 19, 2016 through November 16, 2016?

4. Is Claimant entitled to medical benefits relating to treatment received in October and November 2016 for gastrointestinal issues?

STIPULATIONS

Based on the stipulations of the parties, the only real issues in dispute are compensability and the average weekly wage. If the claim is compensable, the parties stipulated that Claimant is entitled to TTD from October 19, 2016 through November 16, 2016, and is also entitled to reasonable, necessary, and related medical benefits to treat the industrial injury. Stipulated medical treatment includes Claimant's hospitalization and treatment for a perforated ulcer — including associated complications such as a pulmonary embolism — which likely resulted from medications prescribed by his ATPs.

FINDINGS OF FACT

1. Claimant works as a manager for one of Employer's restaurants in Pueblo Colorado. On August 8, 2016, Claimant slipped on a wet floor and fell on his buttocks. The floor was wet from rain water that had leaked from the roof.

2. Claimant immediately felt pain in his low back but finished his shift. He reported the incident via text message to his supervisor, Bryson Nowack, who asked Claimant to complete an incident report. Claimant took approximately a week to complete the incident report because he was unfamiliar with Employer's online reporting system.

3. Employer did not immediately refer Claimant for medical care after he completed the incident report. Eventually, Respondents sent Claimant to Emergicare for authorized treatment.

4. Claimant received intermittent treatment for chronic low back pain since 2007. He treated with Dr. Ali in Florida from April 2007 to August 2008. Dr. Ali's handwritten notes are minimally legible and relatively sparse, making it difficult to discern exactly what treatment Claimant received. However, it appears Claimant was prescribed narcotic pain medication.

5. There are no other records of treatment for back pain until October 2013, when Claimant saw his primary care provider, FNP Laura Darnell for non-radiating low back pain "x2 days." Claimant described the pain as "worsening" but "mild," at a level of 1-4. The physical examination was essentially normal. Nurse Darnell prescribed cyclobenzaprine for muscle spasm to take "as needed."

6. On December 22, 2015, Claimant went to the Parkview Medical Center emergency room complaining of left buttock pain radiating to the left posterior knee. The pain was "intermittent but persistent for 3 weeks." Claimant said the pain started after trying to catch his daughter off a trampoline. Claimant was prescribed a muscle relaxer and oxycodone as needed.

7. Claimant followed up with Nurse Darnell on December 31, 2015, and reported he had been taking OTC ibuprofen, naproxen, and acetaminophen, which were more helpful than the oxycodone. Ms. Darnell gave Claimant a right SI joint injection.

8. Claimant returned to Nurse Darnell on January 6, 2016, stating that the injection, oxycodone and muscle relaxer did not help his pain. He was still taking large doses of NSAIDs. She prescribed Vicodin and Valium, which Claimant filled that day. Claimant subsequently refilled the medication in April 2016.

9. At his April 21, 2016 appointment with Ms. Darnell, Claimant stated the medications were not helping his pain, but the prior injection had given some relief. Ms. Darnell administered trigger point injections and renewed Claimant's prescriptions.

10. On July 13, 2016, Claimant refilled prescriptions for Vicodin and Valium.

11. Claimant saw Ms. Darnell again on July 20, 2016. Although the primary reason for the appointment was a respiratory viral infection, Ms. Darnell documented Claimant was still having sciatica pain and taking Vicodin and Valium "as needed." He did not want an MRI due to the cost. The physical examination revealed pain to palpation of the lumbar paraspinal musculature and the left SI joint.

12. There is no persuasive evidence that Claimant had any work restrictions or was otherwise limited in his ability to perform routine activities during the time he treated with Ms. Darnell.

13. Claimant saw Dr. Jefferson Loyd at his initial visit to Emergicare on September 3, 2016. Claimant told Dr. Loyd he had fallen on a wet floor at work. He reported low back pain and left leg symptoms at a level of 10/10. He also told Dr. Loyd about his prior history chronic low back pain and left leg "sciatica" which was treated by his primary care provider. On physical examination, Claimant had tenderness of the left

paraspinal musculature and decreased lumbar range of motion. X-rays showed mild to moderate degenerative changes but no fracture. Dr. Loyd referred Claimant for an MRI and prescribed medication. He also imposed work restrictions of no lifting greater than 20 pounds and no repetitive bending.

14. Claimant returned to Emergicare on September 6, 2016 and saw Dr. Flaum. He reported ongoing back pain which he rated at 7/10, worse with activities throughout the day. Dr. Flaum administered trigger point injections, prescribed NSAIDs and prednisone, and referred Claimant for physical therapy.

15. Claimant had a lumbar MRI on September 21, 2016. The MRI showed a left-sided disc extrusion at L4-5 and a central disc protrusion at L5-S1.

16. After reviewing the MRI, Dr. Bradley at Emergicare referred Claimant to Dr. Roger Sung for a surgical spine consultation, although the appointment did not occur at that time, for unknown reasons.

17. At his medical appointments in October 2016 Claimant was reporting pain at the level of 9/10 and 10/10. He noted physical therapy was not helping. Dr. Bradley changed Claimant's restrictions to no more than 10 pounds lifting.

18. On October 19, 2016, Claimant was admitted to Parkview Medical Center in Pueblo for severe epigastric pain. He ultimately underwent emergency surgery for a perforated ulcer, which the parties stipulated was most likely caused by medications prescribed by his ATPs. Claimant was readmitted to the hospital on November 3, 2016 due to complications from the previous surgery, including abdominal abscesses, septic shock, a pulmonary embolus and DVT in his left leg. Claimant was discharged again on November 16, 2016.

19. After his hospitalizations, Claimant continued to treat with Emergicare, with minimal benefit. The medical records reflect ongoing severe symptoms and functional limitations despite escalating dosages and types of pain medication, including fentanyl patches.

20. Respondents filed a General Admission of Liability on January 9, 2017.

21. Due to persistent symptoms and the failure of conservative treatment, Claimant had a surgical consultation with Dr. Sung on March 8, 2017. Dr. Sung recommended an L4-L5 microdiscectomy to address the lower extremity radicular symptoms.

22. Claimant underwent an Independent Medical Examination (IME) with Dr. Frederick Scherr at Respondents' request on April 13, 2017. Dr. Scherr assumed that the incident occurred as Claimant described on August 8, 2016, but opined it did not result in a compensable injury. Dr. Scherr noted the medical records did not support Claimant's assertion that his back pain had resolved before August 8, 2016. Dr. Scherr opined Claimant's symptoms were substantially similar before and after the accident, and the accident did not materially aggravate or accelerate his pre-existing condition.

23. Claimant underwent an IME with Dr. David Yamamoto on June 6, 2017 at the request of his counsel. Dr. Yamamoto disagreed with Dr. Scherr's opinions regarding causation. Dr. Yamamoto characterized Claimant's prior back problems as "minor" and "not at all disabling." Dr. Yamamoto opined Claimant's low back and leg symptoms were "markedly increased" since his fall. Dr. Yamamoto opined that the August 8, 2016 incident significantly aggravated Claimant's pre-existing condition.

24. Both Dr. Scherr and Dr. Yamamoto agreed Claimant's gastrointestinal problems and subsequent associated complications were triggered by medications prescribed by his ATPs.

25. The ALJ credits Dr. Yamamoto's opinion that the August 8, 2016 accident aggravated Claimant's pre-existing condition, proximately causing disability and a need for medical treatment.

26. Respondents failed to prove by a preponderance of the evidence that Claimant did not suffer a compensable injury on August 8, 2016.

27. At the time of the injury, Claimant was earning a biweekly salary of $1,350. Claimant also received periodic bonuses. The bonuses are calculated monthly and are primarily based on a percentage of the store's profit after deductions for general and administrative costs. The bonuses are also based on other criteria such as labor, food, service, cleanliness, and product quality. Bonuses are not guaranteed, and sometimes, a store manager may not receive a bonus due to lack of profit or failure to meet the other criteria. Even if the store is profitable, the bonus can be forfeited entirely if the store fails a "mission-critical evaluation" from the Papa John's corporate office.

28. Claimant's wage records from May 2016 through June 2017 show bonuses ranging from a low of $146.35 to a high of $1,577.95. He received no bonus in December 2016 and January 2017.

29. Claimant's periodic bonuses are a "fringe benefit" rather than "wages."

30. Claimant's AWW is $675, with a corresponding TTD rate of $450.

31. Claimant worked modified duty since his industrial injury, except for the period from October 19, 2016 through November 16, 2016 when he was hospitalized due to his G.I. issues.

32. Based on the parties' stipulation, Claimant is entitled to TTD benefits from October 19, 2016 through November 16, 2016.

33. Based on the parties' stipulation, Claimant is entitled to reasonable, necessary, and related medical benefits to treat the industrial injury, including the hospitalization and treatment for a perforated ulcer and associated complications that likely resulted from medications prescribed by his ATPs.

CONCLUSIONS OF LAW

A. Compensability

To receive compensation or medical benefits, a claimant must suffer an injury arising out of and in the course of employment. Section 8-41-301(1); *see also, Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). The injury must directly and proximately cause the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997).

If an industrial injury aggravates, accelerates, or combines with a preexisting condition to produce disability or a need for treatment, the claim is compensable. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Pain is a typical symptom from the aggravation of a pre-existing condition, and if the pain triggers the claimant's need for medical treatment, the claimant has suffered a compensable injury. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949); *Dietrich v. Estes Express Lines*, W.C. No. 4-91-616-03 (ICAO, September 9, 2016).

The Workers' Compensation Act recognizes a distinction between an "accident" and an "injury." The term "accident" refers to an "unexpected, unusual, or undesigned occurrence," whereas an "injury" is the physical trauma caused by the accident. Section 8-40-201(1). In other words, an "accident" is the cause, and an "injury" is the result. *City of Boulder v. Payne*, 426 P.2d 194 (Colo. 1967). Workers' compensation benefits are only payable if an accident results in a compensable "injury." The mere fact that an incident occurred at work and caused symptoms does not necessarily establish a compensable injury. Rather, a compensable injury is one that requires medical treatment or causes a disability. *E.g., Montgomery v. HSS, Inc*., W.C. No. 4-989-682-01 (ICAO Aug. 17, 2016).

Even a "minor strain" or a "temporary exacerbation" of a pre-existing condition can be a sufficient basis for a compensable claim if it was caused by a claimant's work activities and caused him to seek medical treatment*. E.g., Garcia v. Express Personnel*, W.C. No. 4-587-458 (ICAO, August 24, 2004); *Conry v. City of Aurora*, W.C. No. 4-195-130 (ICAO, April 17, 1996).

By filing an admission of liability, the respondents have "admitted that the claimant has sustained the burden of proving entitlement to benefits." *City of Brighton v. Rodriguez*, 318 P.3d 496, 507 (Colo. 2014). If the respondents subsequently seek to withdraw the admission of liability, they must prove by a preponderance of the evidence that the claimant did not suffer a compensable injury. *See* § 8-43-201(1) ("a party seeking to modify an issue determined by a general or final admission … shall bear the burden of proof for any such modification.").

As found, Respondents failed to prove that Claimant suffered no compensable injury in the first instance. Although Claimant had pre-existing low back problems, the persuasive evidence demonstrates that the fall on August 8, 2016 aggravated his underlying condition, causing disability and a need for medical treatment.

The ALJ does not doubt that the incident occurred as Claimant described on August 8, 2016. The ALJ found Claimant's description of the accident at hearing to be credible and persuasive. Claimant also consistently recounted the incident to his supervisor and multiple medical providers, and there are no witnesses or other persuasive evidence to contradict Claimant's account.

Whether the accident proximately caused Claimant's need for medical treatment is a closer call. Claimant had a pre-existing history of back problems, and the ALJ is not persuaded by his assertion that the symptoms resolved before the accident. Furthermore, as Respondents point out, Claimant did not seek medical treatment for nearly a month after the accident. Nevertheless, the totality of the evidence persuades the ALJ that the August 8, 2016 accident aggravated Claimant's pre-existing condition and caused him to need more medical treatment than he otherwise would have required based solely on the pre-existing condition. The persuasive evidence demonstrates Claimant's symptoms were worse after the accident than his preinjury baseline. Claimant requested medical treatment because of his worsened symptoms and Employer obliged. The treatment prescribed by Claimant's ATP's has been more aggressive than the care he received through his PCP before the injury.

Moreover, Claimant's functional capacity appears to have deteriorated substantially as a direct and proximate result of the industrial injury. Although Claimant periodically appeared "stiff" before the injury, there is no persuasive evidence that his pre-existing back pain significantly impeded his ability to perform his regular job. By contrast, as a result of the accident, Claimant has been under restrictions and unable to tolerate the full demands of his job.

B. Average weekly wage

Section 8-40-201(19)(a) defines "wages" as the "money rate at which the services rendered are recompensed under the contract for hire in force at the time of the injury." Section 8-40-201(19)(b) provides that the term wages includes the value of certain fringe benefits such as health insurance, and the reasonable value of board, rent, housing, and lodging. But subparagraph (b) also states wages "shall not include any similar advantage or fringe benefit not specifically enumerated in this subsection (19)."

Meeker v. Provenant Health Partners, 929 P.2d 26 (Colo. App. 1996) sets forth the test for determining whether a benefit constitutes "wages" or an unenumerated "similar advantage or fringe benefit." An employer-paid benefit constitutes wages if it has a "reasonable, present-day, cash equivalent value," and the employee has access to the benefit on a "reasonable day-to-day basis," or has "an immediate expectation interest in receiving the benefit under appropriate, reasonable circumstances."

The ICAO has applied this test in at least two cases to conclude that bonuses paid under a profit-sharing plan do not constitute "wages." In *Yex v. ABC Supply Company*, W.C. No. 4-910-373-01 (May 16, 2014), the panel upheld the ALJ's conclusion that bonuses paid to the claimant should not be included in the AWW. The panel in *Yex* relied on its prior decision in *Orrell v. Coors Porcelain*, W.C. No. 4-251-934 (May 22, 1997). In *Orrell*, the panel held that the value of a profit-sharing bonus was incipient and had no present-day cash value because it was "entirely contingent" on the employer achieving a profit. As a consequence, the profit-sharing plan was seen as a fringe benefit rather than the claimant's wages. The panel rejected an argument that the profit-sharing bonuses should be included under *Simmonds v. Eastman Kodak Co*., 781 P.2d 140 (Colo. App. 1989). The panel reasoned that *Simmonds* was decided under the predecessor version of the statute, before the 1989 amendments were enacted to reduce the types of employer-paid benefits that can be included in the AWW.

The ALJ cannot appreciate a meaningful distinction between Claimant's bonuses and those disapproved in *Yex* and *Orrell*. The store's profit could not be calculated until the end of the month, and until then, the bonus was contingent. Additional barriers to Claimant's immediate expectation of receiving a bonus were the various criteria used in calculating the bonus such as labor, food, service, cleanliness, and product quality. And the bonus can be forfeited altogether if the store failed a "mission-critical evaluation" from the corporate office. The contingent nature of the bonus is underscored by the fact that Claimant received no bonus in December 2016 or January 2017, and the bonuses he did receive fluctuated widely.

Additionally, Claimant had no immediate expectation of receiving a bonus and did not have access to the funds on a day-to-day basis. Consistent with *Yex* and *Orrell*, the ALJ concludes Claimant's bonuses were not "wages" within the meaning of § 8-40-201(19)(a).

Although the ALJ has discretion to calculate a claimant's AWW to "fairly" compensate a claimant for their actual loss of earning capacity, the ALJ can only consider the claimant's "wages" and fringe benefits specifically enumerated in the statute. The discretion afforded by § 8-42-102(3) relates to the "method" by which the AWW is calculated, rather than the items which may be included. *De Bell v. Ikea*, W.C. No. 5-011-040-02 (July 14, 2017).

Claimant was earning a weekly salary of $675 at the time of his injury. Therefore, Claimant's AWW is $675, with a corresponding TTD rate of $450.

ORDER

It is therefore ordered that:

1. Respondents' request to withdraw their General Admission of Liability is denied and dismissed.

2. Claimant's AWW is $675.

3. Insurer shall pay Claimant TTD benefits at the weekly rate of $450 from October 19, 2016 through November 16, 2016.

4. Insurer shall provide all reasonable and necessary medical treatment to cure and relieve the effects of Claimant's compensable injury, including the charges associated with Claimant's hospitalization and treatment for a perforated ulcer and associated complications.

5. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

6. All matters not determined herein (including whether back surgery is reasonable, necessary and related to Claimant's injury) are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 18, 2017

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

1. Claimant seeks to prove by a preponderance of the evidence that her right upper extremity condition is causally related to her November 8, 2016 admitted left wrist injury.

2. Claimant seeks reasonable, necessary, and related medical treatment to cure and relieve the right upper extremity symptoms.

3. Does the ALJ have jurisdiction to address the foregoing issues absent a DIME?

FINDINGS OF FACT

1. Claimant sustained an admitted injury to her left wrist as a result of a slip and fall accident on November 8, 2016.

2. Claimant was initially treated at the Penrose St. Francis Hospital emergency room for a comminuted distal radius fracture. She was placed in a splint and referred to Dr. Patrick Devanny, an orthopedic hand specialist.

3. Claimant saw Dr. Devanny the next day, and he recommended surgery.

4. Respondents authorized the surgery, and Claimant underwent an open reduction with internal fixation procedure on November 11, 2016.

5. There is no indication that Employer ever referred Claimant to a specific physician, and Dr. Devanny has been the primary ATP throughout Claimant's course of treatment.

6. Claimant was off work following surgery from November 9, 2016 through January 21, 2017. She returned work on January 22, 2017 with restrictions on use of her left arm. Employer provided Claimant with various modified duties to accommodate her restrictions.

7. Approximately one week after returning to work, Claimant developed pain in her right elbow and forearm. She was ultimately diagnosed with lateral epicondylitis.

8. Claimant contends that the right upper extremity symptoms are a compensable consequence of the November 8 injury, resulting from compensatory overuse of her arm while working modified duty. Respondents dispute that Claimant's right upper extremity symptoms are causally related to her work.

9. Respondents initially admitted liability for Claimant's injury on a "medical only" basis.

10. On June 6, 2017, the parties entered into a stipulation whereby Respondents agreed to pay Claimant $3,652.24 in TTD for November 9, 2016 to December 19, 2016 and December 23, 2016 to January 21, 2017.

11. Claimant underwent an Independent Medical Examination (IME) with Dr. Timothy Hall on May 4, 2017 regarding her right upper extremity symptoms. Dr. Hall diagnosed right-sided lateral epicondylitis with extensor tendonitis. He opined the diagnoses were directly related to compensating for the injured left upper extremity while performing modified duty after surgery. Dr. Hall recommended treatment intended to improve Claimant's condition.

12. Dr. Devanny placed Claimant at MMI on May 5, 2017. His narrative report states:

> [Claimant] is now at MMI and may work without restrictions. The patient has full range of motion with excellent grip strength comparable to the opposite side as well as full range of motion. The aching pain is likely due to hardware which I would not recommend removing until next fall. At least at this point, the patient is [at] MMI with no restrictions. She will follow-up in the office in September for removal of hardware planning.

13. Because of Dr. Devanny's declaration of MMI, the ALJ lacks jurisdiction to consider Claimant's request for additional medical treatment absent a DIME.

CONCLUSIONS OF LAW

A. The ALJ lacks jurisdiction to adjudicate Claimant's request for additional medical benefits absent a DIME

Sections 8-42-107(8)(b)(I)-(III) provide that

> An authorized treating physician shall make a determination as to when the injured employee reaches maximum medical improvement . . . . If either party disputes a determination by an authorized treating physician on the question of whether the injured worker has or has not reached maximum medical improvement, an independent medical examiner may be selected . . . . A hearing on this matter shall not take place until the finding of the independent medical examiner has been filed with the division.

Taken together, these provisions establish that once an ATP places a claimant at MMI, a DIME is a "mandatory, jurisdictional prerequisite" to a hearing regarding additional medical treatment. *Whiteside v. Smith*, 67 P.3d 1240, 1246 (Colo. 2003).

Absent a completed DIME, the ALJ may not hear or decide any issue that constitutes an actual or constructive challenge to MMI. *Story v. Industrial Claim Appeals Office*, 910 P.2d 80 (Colo. App. 1995).

The ICAO has repeatedly held that "after MMI [is] declared, the ALJ lack[s] jurisdiction to award or deny medical benefits to cure and relieve the claimant's condition." *McCormick v. Exempla Healthcare*, W.C. No. 4-594-683 (January 27, 2006); *see also Eby v. Wal-Mart Stores Inc*., W.C. No. 4-350-176 (February 14, 2001) ("once an authorized treating physician places the claimant at MMI, and ALJ lacks jurisdiction to award additional medical benefits for the purposes of curing the industrial injury and assisting a claimant to reach MMI unless the claimant undergoes a DIME."); *Anderson-Capranelli v. Republic Industries, Inc*., W.C. No. 4-416-649 (November 25, 2002); *Cass v. Mesa County Valley School District*, W.C. No. 4-69-69 (August 26, 2005) ("[i]f an ATP places the claimant at MMI, and ALJ lacks jurisdiction to award additional medical benefits to improve the claimant's condition unless a DIME has been conducted on the issue of MMI.").

Subject matter jurisdiction cannot be conferred by consent or waiver. *Hasbrouck v. Industrial Commission*, 685 P.2d 780 (Colo. App. 1984); *Industrial Commission v. Plains Utility Co*., 259 P.2d 282 (Colo. 1953). Although neither party questioned the ALJ's jurisdiction at the hearing, if a court determines it lacks subject matter jurisdiction, it should address the issue *sua sponte*, regardless of whether the parties have raised it. *E.g*., *People in the Interest of J.C.S.*, 169 P.3d 240, 245 (Colo. App. 2007); *Shelter Mutual Ins. Co. v. Mid-Century Ins. Co*., 214 P.3d 489 (Colo. App. 2008).The ALJ subsequently offered the parties an opportunity to brief the issue of jurisdiction, but the parties declined.

McCormick v. Exempla, *supra*, illustrates the futility of rendering a decision at this juncture. In *McCormick*, neither party raised the issue of jurisdiction at the hearing. After receiving an adverse decision from the ALJ, the claimant asserted the ALJ's lack of subject matter jurisdiction for the first time on appeal. The ICAO rejected the respondents' argument that the claimant had waived the issue, noting that a party can assert lack of jurisdiction "at any point in the proceedings." Ultimately, the ICAO agreed with the claimant's argument and vacated the ALJ's decision.

The ALJ acknowledges that a DIME is not a jurisdictional prerequisite to a hearing on a request for post-MMI medical treatment under *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). But Claimant has not characterized the medical treatment she seeks as *Grover*-type benefits. Furthermore, the treatment recommended by Dr. Hall is intended to *improve* Claimant's condition, rather than merely relieve the effects of the injury and prevent deterioration. Based on the evidence presented, the ALJ concludes that awarding the treatment requested by Claimant would constitute a constructive challenge to MMI in circumvention of the DIME process. *See Story v. Industrial Claim Appeals Office*, *supra*.

It makes no sense to issue a decision by which neither party will be bound. Therefore, the Claimant's application for hearing is dismissed for lack of jurisdiction.

ORDER

It is therefore ordered that:

1. Claimant's request for medical benefits related to her right upper extremity is dismissed, without prejudice, for lack of subject matter jurisdiction.

2. All matters not specifically decided are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 21, 2017

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

1. Did Claimant prove by a preponderance of the evidence that he is entitled to ongoing medical treatment to relieve the effects of his industrial injuries?

2. The specific medical treatments at issue are:

   a. Botox injections

   b. Cervical epidural steroid injections

   c. Bilateral SI joint injections

   d. Prescription medications including Norco (hydrocodone), Nexium, ondansetron, Celebrex, Senna, Imitrex (sumatriptan), tramadol and topical ketoprofen.

   e. Physical therapy

FINDINGS OF FACT

This claim has a long and complex history, and the evidentiary record includes more than 1300 pages of exhibits dating to 1985. Although the ALJ has reviewed all the evidence, it would be neither useful nor desirable to make factual findings regarding the minutiae of Claimant's entire course of treatment during the previous 32 years. Rather, the following findings are intended to distill and highlight the most salient information in the record.

1. Claimant suffered two admittedly compensable injuries in the course and scope of his employment, on December 13, 1985 and April 19, 1991 respectively.

2. On December 13, 1985, Claimant was struck on the side of his head by a 6-7 pound "dummy load" that had fallen from a shelf. Claimant was "stunned" and "dazed" by the incident, but did not lose consciousness. Shortly thereafter, Claimant developed symptoms including headaches, blurred vision, feeling "lightheaded" or "woozy," and difficulty concentrating.

3. Claimant began treating with Dr. Richard Bell, a neurologist, in January 1986. Dr. Bell opined "this gentleman has persistent had symptoms which date back to his head injury almost a month ago. His symptom complex seems to be fairly straightforward and is most consistent with a post-traumatic type of vascular headache syndrome, with associated eye blurring."

4. Claimant treated with Dr. Bell until August 1990 for ongoing symptoms consistent with a head injury. Dr. Bell anticipated Claimant would have ongoing difficulty for many years. Eventually, he referred Claimant to Dr. Roger Davis, a pain management specialist at the Capron Institute for Rehabilitation.

5. Claimant initially saw Dr. Davis in November 1990. At that time, Claimant was also experiencing pain and trigger points in his neck, upper back and trapezius muscles. Dr. Davis diagnosed a mixed headache syndrome with migraines and fibrositis, sleep disturbance, and a closed head injury.

6. In December 1990, Dr. Davis opined Claimant had permanent impairment from the closed head injury from which he "would never fully recover," and two "non-curable" pain syndromes – fibrositis and migraines.

7. On April 19, 1991, Claimant was flying in an airplane for work when the aircraft experienced a sudden altitude change due to turbulence. Claimant experienced a painful popping sensation in his right ear. Claimant's symptoms worsened after this incident, particularly issues with balance/equilibrium.

8. Claimant started treating with Dr. Jeffrey Garrison, a physiatrist, in May 1991. Claimant's symptoms included right-sided head and eye pain, muscle spasms in his neck and back, memory and concentration problems, dizziness and vertigo. Dr. Garrison opined that Claimant's symptoms and cognitive impairments were "consistent with minor brain injury."

9. Claimant was evaluated by Dr. Neiland Olson, an ENT, in July 1991. He complained of decreased hearing, disequilibrium, and tinnitus in the right ear. Dr. Olson initially suspected a fistula, but later testing ruled that out. ABR testing was consistent with a right-sited retrocochlear lesion, and ENG testing showed abnormal pendular tracking, consistent with a central disorder.

10. Claimant underwent a neuropsychological evaluation with Dr. Chris Stewart in July 1992. The test results were "highly suggestive of impairment of higher cortical functions. He exhibits a pattern of impairment on tasks suggesting diffuse cerebral dysfunction involving reduced psychomotor speed impairment and visual motor integration, disrupted attention and impairment of novel problem-solving." Dr. Stewart opined Claimant had suffered significant emotional distress because of the injury and sequelae. He further opined that "while premorbid personality factors may contribute in part to his emotional difficulties, his cognitive deficits and chronic pain clearly have exacerbated any predisposition he may have had for psychological maladjustment."

11. Dr. Garrison testified in a deposition on October 29, 1993. Dr. Garrison opined Claimant's symptoms resulted from the combined effects of the 1985 and 1991 incidents. Dr. Garrison's treatment records reflect similar opinions regarding causation. Dr. Garrison also opined Claimant is not competitively employable because of his injury-related impairments.

12. Dr. Garrison left Colorado Springs in 1993 and referred Claimant to his partner, Dr. Timothy Hall. Dr. Hall was Claimant's primary ATP from 1993 until 2004, and treated diagnoses including a closed head injury, cognitive disturbance, headaches, balance disturbance, vestibular dysfunction, chronic myofascial pain, SI joint dysfunction, and neck pain. Dr. Hall repeatedly documented vertigo, balance problems, and associated falls. Dr. Hall attributed these conditions to the 1985 and 1991 incidents.

13. Dr. Jonathan Woodcock performed an Independent Medical Examination (IME) on August 2, 1994. Dr. Woodcock opined Claimant had "a complicated combination of cognitive, emotional and physical problems. These appear to have started principally with the 1985 head injury and to have increased . . . after his plane ride in 1991." Dr. Woodcock opined that the medical evidence was "consistent with a mild traumatic brain injury with some cognitive and emotional symptoms and disequilibrium following the 1985 incident, gradual subsequent increase in emotional symptoms and pain increasing his impairment and finally producing vocational disability." Ultimately, Dr. Woodcock concluded "I would attribute these factors is secondary sequelae of the 1985 closed head injury. I suspect that he was constitutionally predisposed toward these effects, but that the 1985 injury and its subsequent sequelae lead to stressful symptoms and gradually increasing decompensation on the emotional level."

14. On October 14, 1994, the parties entered into a **"STIPULATION FOR FULL AND FINAL SETTLEMENT AND RELEASE OF ALL CLAIMS."**

15. Paragraph 4 of the settlement agreement provides:

> **Injuries as a result of the [1985 and 1991] accidents . . . include**, but are not limited to, the following:
>
> (a) Head, ears, eyes, neck, back, left hip, and left lower extremity.
>
> (b) Emotional and psychiatric impairment secondary to trauma.
>
> (c) Additional medical impairment as more fully set forth in the reports of the physicians, chiropractors, and other medical vendors who have provided care and treatment for the Claimant's work related injuries. Said reports are incorporated herein by reference.

16. Part of the settlement agreement is devoted to Claimant's ongoing medical needs. Paragraph 5(d) provides, in part:

> The Respondents in W.C. No. 4-109-301 . . . agree to leave medical benefits open for the remainder of the Claimant's life. The Respondents in W.C. No. 4-109-301, agree to pay for all reasonable and necessary medical, surgical, or hospital treatment required by the Claimant arising out of his work-related injuries on December 13, 1985 and April 19, 1991, **including but not limited to, treatment for Claimant's head, ears, eyes, neck, back, left hip, left lower extremity, and psychological and**

> **emotional injuries**. Claimant will not be required to establish whether the care and treatment is causally related to the December 13, 1985 or the April 19, 1991 injuries, as the Respondents and W.C. No. 4-109-301 will be responsible for all ongoing medical care and treatment required by the Claimant's to work-related injuries. (Emphasis added).

17. Paragraph 10 states the settlement agreement "contains the entire agreement between the parties, and the terms herein are contractual and not a mere recital."

18. The Division of Workers' Compensation approved the settlement agreement on November 14, 1994. This agreement constitutes a settlement within the meaning of § 8-43-204 and binds the parties unless reopened based on fraud or mutual mistake of material fact.

19. The ALJ finds the settlement agreement is not ambiguous.

20. Taken together, paragraphs 4 and 5(d) reflect the parties' agreement that Claimant's "head, ears, eyes, neck, back, left hip, left lower extremity, and psychological and emotional injuries" are all compensable body parts under his claims, for which Respondents agreed to provide reasonable and necessary treatment "for the remainder of Claimant's life."

21. The ALJ finds that the language in paragraphs 4 and 5(d) precludes Respondents from asserting that the conditions affecting Claimant's "head, ears, eyes, neck, back, left hip, left lower extremity, and psychological and emotional injuries" are not causally related to the admitted accidents. Respondents retain the right to question whether any particular treatment is "reasonable and necessary."

22. Consistent with the settlement agreement, Respondents covered ongoing medical treatment directed toward Claimant's "head, ears, eyes, neck, back, left hip, left lower extremity, and psychological and emotional injuries" for 20+ years. Respondents' post-settlement behavior reinforces and confirms the ALJ's interpretation of the settlement language.

23. Claimant started receiving cervical epidural injections and bilateral SI joint injections from Dr. Robert Presley in September 2002 on referral from Dr. Hall. The injections provided substantial, albeit temporary, relief of Claimant's symptoms. Claimant received additional injections approximately every 3-4 months.

24. Dr. Mark Meyer took over Claimant's interventional pain management from Dr. Presley in July 2004 and has treated Claimant regularly since then. Dr. Meyer has treated diagnoses including cervical degenerative disc disease with right C5 radiculopathy, bilateral sacroiliac dysfunction, and low back pain. Claimant has continued to benefit from the injections, *i.e.,* approximately 3-4 months of significant pain relief. There is no persuasive evidence of complications or other negative side effects associated with the injections.

25. Dr. William Shaw performed an IME for Respondents on February 26, 2004. Dr. Shaw opined that the vast majority of Claimant's symptoms were nonphysiological and unrelated to the 1985 or 1991 incidents. Dr. Shaw felt Claimant's symptomatology and disability was perpetuated by "a complex confluence of circumstances, including an inattentive insurance carrier, and aggressive attorney, and enabling primary care physician, eager interventionalists, and a host of passive therapy providers." Dr. Shaw opined Claimant "has been caught in a maelstrom since his late 20s and early 30s with resulting severe iatrogenic dysfunction." Dr. Shaw believed the bulk of Claimant's treatment was unnecessary and inappropriate because his problems were primarily psychosomatic.

26. Dr. Hall was removed from Claimant's case in late 2004 as a result of a medical utilization review (MUR). Dr. Timothy Sandell was chosen as Claimant's new ATP to replace Dr. Hall.

27. Dr. Sandell initially evaluated Claimant on November 23, 2004. He was also provided with "5 volumes of medical records to review." Over time, Dr. Sandell reviewed the pertinent portions of the records.

28. Dr. Sandell adjusted somewhat, but largely continued Dr. Hall's treatment regimen. Claimant's treatment has been relatively stable for many years.

29. Claimant underwent an L4-5 discectomy and fusion with Dr. Roger Sung in November 2010. Respondents authorized and covered the surgery. The fusion helped with Claimant's leg symptoms but did not appreciably improve his low back pain.

30. Claimant started treatment with Dr. Lawrence Adams, a neurologist, in June 2011 for his chronic headaches. Dr. Adams tried various medications including gabapentin, Topamax, Lamictal (lamotrigine), sumatriptan, and propranolol. Claimant could not tolerate many of the standard headache medications and had limited benefit from others. Claimant had good response to occipital nerve blocks, but the relief only lasted approximately 3-4 weeks. Additionally, the frequent injections caused a buildup of scar tissue. Therefore, in January 2014, Dr. Adams recommended that Claimant try Botox injections.

31. Claimant began seeing Dr. Adams' partner, Dr. Aparna Komatineni, for Botox injections in February 2014. Dr. Komatineni also started Claimant on Imitrex injections for breakthrough headaches. Claimant receives good pain relief from the Botox injections, which last much longer than the occipital nerve blocks. Dr. Komatineni repeats Botox treatments approximately every three months, an interval that seems to work well for Claimant. Dr. Komatineni has also given Claimant Botox injections in his low back, which have been helpful.

32. Dr. Tashof Bernton performed several IMEs for Respondents between September 2013 and November 2016. Dr. Bernton's opinions are exemplified by the following statements from his reports:

August 13, 2015: "[I]t is abundantly clear that the patient does not require any care which is due to an April 19, 1991, occupational injury at this point in time."

September 11, 2015: "[T]he patient does not require any treatment at this point in time which is due to the occupational injury which occurred in 1985."

September 7, 2016: "There is no basis that the patient requires work-related medical care at this point in time, and the cervical epidural steroid injection and SI joint injections are not required on the basis of any occupational injuries."

November 10, 2016: "[T]he patient currently does not require treatment on a work-related basis for sequelae of either of his occupational injuries, and the complaint currently being treated with the multiple medications and the request for Botox are not work-related.

33. Dr. Bernton testified at the May 4 hearing and in a post-hearing deposition, reiterating and expounding upon the opinions expressed in his reports. In his testimony, Dr. Bernton modified his opinion slightly, stating that it would be reasonable for Respondents to provide a small number of behavioral pain management psychology sessions to "help" Claimant realize his symptoms are all psychosomatic, and help him transition away from active treatment directed to his symptoms. Dr. Bernton opined that either temazepam or clonazepam would be reasonable to treat Claimant's psychological problems, but maintained that all other treatment should be terminated as nonwork-related.

34. Dr. Bernton opined that the 1985 incident was minimal, and to the extent it caused any brain injury "it was on the mildest end of the mild traumatic brain injury spectrum." He believes there is no physiologic basis for any long-term effects from such a "mild" head injury. Similarly, Dr. Bernton opined that the 1991 episode was trivial and caused no injury. Dr. Bernton has opined that Claimant's symptoms are nonphysiological and highly exaggerated. He believes Claimant is most likely misrepresenting his symptoms, but at the very least, his condition is psychosomatic.

35. Dr. Sandell currently prescribes medications including: (1) Norco (hydrocodone) for pain; (2) Nexium for medication-related GI issues; (3) ondansetron for medication-related nausea; (4) Celebrex, an NSAID; (5) ketoprofen, a topical anti-inflammatory; (4) tramadol for pain; (5) temazepam to help with sleep; (6) clonazepam for anxiety; and (7) Senna, a laxative to manage medication-induced constipation.

36. Dr. Sandell persuasively testified that the aforementioned medications effectively manage Claimant's symptoms and maintain his day-to-day functional abilities. When Claimant has been unable to fill his medications due to authorization issues, his pain and anxiety issues have decompensated.

37. Dr. Sandell tries to minimize the number and dosages of Claimant's medications while still maintaining reasonably effective symptom control. Dr. Sandell is

careful to avoid unnecessary or unreasonable cost, while still serving his primary goal of relieving his patient's symptoms.

38. Dr. Sandell has recommended physical therapy approximately once per week, and persuasively testified the therapist provides "some manual therapy that [Claimant] cannot do on his own." Dr. Sandell noted Claimant's condition deteriorates when he does not attend the physical therapy regularly. Although it is unusual for a patient to continue physical therapy for such a long time, Dr. Sandell believes it is appropriate in this case because it helps reduce Claimant's symptoms and maintain function.

39. The persuasive evidence demonstrates that the medical conditions for which Claimant seeks treatment were proximately caused by the 1985 and 1991 accidents.

40. Claimant proved that the medication regimen prescribed by Dr. Sandell is reasonable and necessary treatment for his admitted injuries.

41. It is unclear whether Dr. Sandell or Dr. Komatineni is currently prescribing Imitrex (sumatriptan). In any event, the ALJ finds Imitrex is reasonable and necessary treatment for Claimant's intractable headaches.

42. Claimant proved that periodic Botox injections administered by Dr. Komatineni are reasonable and necessary for his admitted injuries.

43. Claimant proved that periodic cervical ESIs and bilateral SI joint injections provided by Dr. Meyer are reasonable and necessary treatment for his admitted injuries.

44. Claimant proved that ongoing physical therapy is reasonable and necessary treatment for his admitted injuries.

CONCLUSIONS OF LAW

A. The treatment provided by and through Dr. Sandell is causally related to Claimant's admitted injuries.

As found, Claimant proved by a preponderance of the evidence that the medical treatment he seeks is causally related to his admitted industrial injuries. This conclusion is based primarily on two considerations.

First, Respondents voluntarily entered into a binding settlement agreement wherein they agreed to provide all reasonable and necessary treatment for Claimant's "head, ears, eyes, neck, back, left hip, left lower extremity, and psychological and emotional injuries," and agreed to do so "for the remainder of the Claimant's life." The settlement agreement does not simply leave medical benefits open in a generic sense. Rather, it explicitly states defines ongoing work-related treatment to include "treatment for Claimant's head, ears, eyes, neck, back, left hip, left lower extremity, and psychological and emotional injuries." The language in paragraphs 4 and 5(d) precludes

Respondents from asserting that the conditions affecting Claimant's "head, ears, eyes, neck, back, left hip, left lower extremity, and psychological and emotional injuries" are not causally related to the admitted injuries.

Dr. Bernton's opinions regarding causation cannot be squared with the binding agreement Respondents made to cover Claimant's enumerated medical conditions. The appropriate time to question the relatedness of Claimant's "head, ears, eyes, neck, back, left hip, left lower extremity, and psychological and emotional injuries" was **before** Respondents agreed to cover those body parts and conditions "for the remainder of [his] life." Although settlement is entirely voluntary, once a settlement has been agreed to and approved by the Division, it is binding and legally enforceable. The fact that Respondents now regret the terms of a settlement they voluntarily accepted affords no basis to disregard its plain terms.

Second, the persuasive evidence demonstrates that the 1985 and 1991 industrial incidents were the catalysts for Claimant developing headaches, vertigo/dizziness, cognitive deficits, neck pain, SI joint dysfunction and low back pain. Numerous treating and examining providers have opined Claimant's symptoms are related to his accidents, including Dr. Bell, Dr. Davis, Dr. Garrison, Dr. Hall, Dr. Woodcock, Dr. Stewart and Dr. Sandell. Although the precise mechanisms are not entirely clear, the persuasive evidence shows that the incidents at work triggered Claimant's symptoms, particularly headaches, equilibrium/balance issues and chronic myofascial pain. Many of his other physical problems were caused or aggravated by numerous falls related to the well-documented balance issues. The ALJ credits the opinions of Claimant's treating providers over the IMEs. The ALJ rejects Dr. Bernton's opinion that Claimant is either intentionally misrepresenting his symptoms or the symptoms are caused by an unrelated psychological issue. Although psychological factors may play a role in exacerbating Claimant's perception of his symptoms, absent intentional misrepresentation or malingering (which the ALJ does not find to be present) the psychological components are part and parcel of the admitted injuries. Respondents are liable for all conditions and symptoms that were proximately caused by Claimant's accidents, regardless of whether they are unusual or more severe than would be expected from the average worker.

B. Claimant must prove any disputed treatment is reasonable and necessary

The settlement agreement specifically states Respondents will remain liable for "reasonable and necessary" medical treatment for the enumerated conditions. Thus, Claimant must prove by a preponderance of the evidence that any disputed medical treatment is reasonable and necessary. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Hanna v. Print Expediters Inc.*, 77 P.3d 863 (Colo. App. 2003); *Ford v. Regional Transportation District*, W.C. No. 4-309-217 (ICAO February 12, 2009).

C. The medication regimen prescribed by Dr. Sandell is reasonable and necessary

As found, Claimant proved that the medication regimen prescribed by Dr. Sandell is reasonable and necessary. Dr. Sandell persuasively explained the justification for the medications he is prescribing. The ALJ notes Claimant's pain is primarily managed with non-opioid medication such as Celebrex, tramadol, and Imitrex. Although Claimant uses Norco daily, he is on a relatively low morphine-equivalent dosage, with no persuasive evidence of abuse issues. Dr. Sandell has been mindful to avoid escalating Claimant's medication regimen unnecessarily, and the current list of medications is not out of proportion or excessive considering his myriad injury-related problems. Based on the evidence presented, the ALJ concludes the medications are reasonable and necessary for Claimant's admitted injuries.

D. The periodic Botox injections are reasonable and necessary

Claimant proved by a preponderance of the evidence that the periodic Botox injections are reasonable and necessary treatment for Claimant's intractable headaches. Dr. Komatineni's records convincingly demonstrate that Claimant receives substantial relief from the injections for approximately three months. Although Botox injections are typically not considered a first-line treatment for headaches, Claimant has had side effects or poor results with most standard headache medications. The occipital nerve blocks only helped for approximately three weeks and were causing extensive scar tissue formation. The Botox also helps reduce the pain and dysfunction associated with muscle spasms in his low back. Based on the evidence presented, the ALJ concludes the Botox injections are reasonable and necessary for Claimant's injuries.

E. The injections administered by Dr. Meyer are reasonable and necessary

Claimant proved that the periodic cervical ESIs and SI joint injections are reasonable and necessary. Dr. Meyer's records convincingly demonstrate that Claimant receives substantial relief from the injections for approximately 3-4 months. There is no persuasive evidence of any negative side-effects or other complications. It is likely that the periodic injections reduce Claimant's need for medication to control his pain. Based on the evidence presented, the ALJ concludes the approximately quarterly cervical ESIs and bilateral SI injections are reasonable and necessary.

F. Ongoing physical therapy is reasonable and necessary

As found, Claimant proved that ongoing physical therapy is reasonable and necessary treatment for his admitted injuries. Dr. Sandell persuasively testified the therapist provides "some manual therapy that he cannot do on his own." Dr. Sandell also noted Claimant's condition deteriorates when he does not attend the physical therapy regularly. The therapy helps maintain Claimant's function and decreases medication use. Based on the evidence presented, the ALJ concludes ongoing PT is reasonable and necessary.

ORDER

It is therefore ordered that:

1. Insurer shall pay for all reasonable and necessary medical treatment to relieve the effects of Claimant's injuries including, but not limited to, treatment for Claimant's head, ears, eyes, neck, back, left hip, left lower extremity, and psychological and emotional injuries.

2. Insurer shall pay for the medication regimen prescribed by Dr. Sandell and Dr. Komatineni and/or Dr. Adams, including but not limited to, Norco (hydrocodone), Nexium, ondansetron, Celebrex, topical ketoprofen, tramadol, temazepam, Imitrex, and clonazepam.

3. Insurer shall pay for periodic Botox injections administered by Dr. Komatineni to treat Claimant's headaches and back spasms.

4. Insurer shall pay for periodic cervical ESIs and SI joint injections administered by Dr. Meyer.

5. Insurer shall pay for ongoing PT as prescribed by Dr. Sandell.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he sustained a compensable injury to his lower back on February 16, 2017

2. Whether Claimant has established by a preponderance of the evidence that he is entitled to a general award of reasonable and necessary medical benefits to treat his lower back.

FINDINGS OF FACT

1. Claimant was hired by Employer in approximately December of 2016 to perform rock mitigation work. Claimant's duties involved mitigation near highways. As part of his duties Claimant would be harnessed into ropes on a rocky mountainside and would knock loose rocks down, drill holes, install rebar, and performed general mitigation to prevent rocks from falling onto cars and the roadway below the assigned work area.

2. In February of 2017 Claimant was assigned to work near Loveland, Colorado on Highway 34. At this location, Claimant would be harnessed in ropes that were anchored at the top. Claimant would walk down the rocky hillside and/or repel down as needed to perform the mitigation work.

3. Claimant was working full time for Employer with no other jobs.

4. On February 16, 2017 Claimant was performing his general duties at the Loveland Highway 34 site. Claimant was on the ropes and harnessed in. There were two other employees above him and one below him on the ground. The employees, including Claimant, were attempting to set a 25 foot rebar into holes that had been drilled. Rope was tied to the rebar to help guide it. Claimant was attempting to help pull the rebar up. The employees above him lost connection and grip of the rebar and let go of it. Claimant didn't want the rebar to slip and hit the employee he knew was below him and he attempted to hold onto it.

5. At this time, Claimant's hips were facing the mountain and he was twisted to the right, holding onto the rebar which was to the right and behind him. Claimant stopped the rebar from falling.

6. Claimant testified that when this happened he had a lot of adrenaline pumping. Claimant testified that when he got off the ropes he noticed a foot drop and that his toes on his left foot were dragging. Claimant testified that his lower back was

painful. Claimant testified that he could barely lift his leg into a truck after this injury and that he had to use his hands to get under his leg to lift it into the vehicle.

7. Claimant worked light duty jobs for the next week, but by the next Friday, he was in too much pain to continue working and took days off work on Friday and Saturday. Sunday was a scheduled day off with no work. The following week, Claimant again worked Monday through Thursday but had too much pain by Friday to work. Claimant then took one full week off work hoping to recover.

8. Employer was aware of the injury and provided light duty work. Employer, however, did not immediately fill out a report of injury or provide Claimant with a designated provider list. In mid March, Employer told Claimant to take another week off and to go see a doctor.

9. On March 13, 2017 Claimant went to Denver Health Medical Center and was evaluated in the emergency room. Claimant was diagnosed with bilateral low back pain with bilateral sciatica, unspecified chronicity, and with left foot drop. It was recommended that Claimant do no heavy lifting, light duty work, and back stretches daily. Claimant was referred to physical therapy and was referred to an orthopedic surgeon for spine evaluation. *See* Exhibit 4.

10. Claimant did not follow up and either was uninsured or had Medicaid coverage at the time.

11. Prior to the February 16, 2017 incident, Claimant had troubles with his back due to a 2014 motor vehicle accident. Claimant testified that his prior problems included 3 fractured vertebrae, 3 compressed vertebrae, and 4 bulged discs. Claimant testified credibly that these all involved his upper back and/or mid thoracic area. Claimant testified credibly that they did not involve his lumbar spine and that he had never had symptoms similar to the symptoms that he has now in his lumbar spine.

12. Claimant indicated that following his 2014 motor vehicle accident he did not undergo a recommended surgery. Claimant testified that despite not undergoing surgery, he recovered and was able to work after the motor vehicle accident. Claimant testified that he passed a pre-employment physical for Employer that included performing step-ups and carrying 100 pounds back and forth.

13. While employed by Employer, Claimant and other co-workers were put up in hotels near the work location. Claimant was roommates with a co-worker. On February 20, 2017, four days after the injury, Claimant and a co-worker were drinking and got into an argument/fight where they ended up wrestling.

14. On March 27, 2017 Claimant filed a worker's claim for compensation. *See* Exhibit A.

15. On April 13, 2017 Respondent filed an employer's first report of injury. *See* Exhibit B.

16. On June 7, 2017 Respondents filed a notice of contest. *See* Exhibits C, 1.

17. On July 12, 2017 Claimant filed an application for expedited hearing. *See* Exhibits D, 2.

18. On July 19, 2017 a notice of expedited hearing was mailed to the parties, including both Employer and Insurer. The notice provided that the hearing was set for August 22, 2017. *See* Exhibits E, 3.

19. Despite having had notice that a claim had been filed in March, 2017 and that an application for expedited hearing had been filed in July of 2017, Respondents did not obtain counsel to represent them on the claim until August 17, 2017 a mere 5 days prior to hearing. Respondents did not file a response to the application for hearing and did not properly endorse any witnesses.

20. Respondent, at hearing, made a general statement about a belief that the adjuster in this case had some unspecified health problems. However, Respondents were unable to establish that good cause existed to allow a continuance or to allow for the late endorsement of witnesses. Weighing the interest of the parties, the ALJ found no good cause and denied Respondent's request for continuance for further investigation including discovery.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's

testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

The claimant was required to prove by a preponderance of the evidence that at the time of the injury he was performing service arising out of and in the course of the employment, and that the alleged injury was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). The question of whether the claimant met the burden of proof to establish a compensable injury is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant has established by a preponderance of the evidence that he sustained a compensable injury to his lower back on February 16, 2017 while in the course and scope of his employment with Employer. Claimant has established that the injury to his lower back was proximately caused by attempting to install rebar during his work mitigating rocks for Employer. At the time of injury, Claimant's hips were facing the mountain and he was twisted attempting to hold on to the rebar that others had lost their grip on. Prior to the injury, Claimant testified credibly that he had no similar symptoms and that he was able to pass a pre-employment physical for Employer. After the injury, Claimant had pain, difficulty walking with a foot drop, and an inability to continue working in his full time regular duties. Despite having worked for Employer since December of 2016 in a job that was physical, Claimant was unable to continue working the same job after February 16, 2017. After the date of injury, Claimant performed light duty work, took several days off due to pain, and eventually discontinued working entirely. Claimant has established, more likely than not, that he sustained a work

related injury to his lower back on February 16, 2017. Respondents point to the fact that Claimant wrestled with a co-worker four days after the injury as evidence that Claimant lacks credibility. Although not advisable to wrestle with a co-worker after drinking when one has an injured low back, the ALJ does not find the fact that wrestling occurred to negate the probability that Claimant sustained an injury while working on the mountain four days prior.

Medical Benefits

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

Claimant has established that he sustained a compensable work related injury to his lower back. Although there was some testimony about prior back injuries to the upper back and thoracic area, Claimant has established an injury in this case to his lower back with new and different symptoms from those that he had in his upper back following his 2014 motor vehicle accident. Claimant has established an entitlement to reasonable and necessary medical treatment for his lower back as a result of the February 16, 2017 work injury.

ORDER

It is therefore ordered that:

1. Claimant has established that he sustained a compensable injury to his lower back on February 16, 2017

2. Claimant has established that he is entitled to reasonable and necessary medical benefits to treat his lower back injury.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures

to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 24, 2017

/s/ Michelle E. Jones

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

PRELIMINARY MATTERS

This matter came before the ALJ on Claimant's January 6, 2017 Application for Hearing endorsing Permanent Total Disability ("PTD") benefits. Respondents' Response to Application for Hearing dated February 6, 2017 endorsed medical benefits. Claimant also filed a subsequent Application for Hearing regarding whether Claimant's physical therapy was reasonable and necessary. The parties attended a prehearing conference before Prehearing Administrative Law Judge ("PALJ") Robert J. Erickson on March 8, 2017 on Claimant's motion to take a post-hearing deposition of Dr. Kathy McCranie, and Respondents' motion to consolidate issues for hearing. Per his prehearing conference order, PALJ Erickson granted Claimant's motion and denied Respondents' motion.

At the onset of the May 24, 2017 hearing, Claimant indicated that the only issue before the ALJ was PTD. Respondents argued that medical benefits, specifically, Claimant's ongoing use of opioid medication, was also an issue before the ALJ. Respondents also mentioned that there was a separate medical benefit issue of whether Claimant's physical therapy was reasonable and necessary. The parties agreed to proceed on both the issue of PTD and whether Claimant's opioid medication regimen is reasonable and necessary. The hearing was not completed on May 24, 2017 and was re-set for July 10, 2017. At the end of the May 24, 2017 hearing, Claimant's counsel proposed that the parties address all of the medical issues, "including this question about the trainer, the medications, out-of-pocket expenses…" Respondents' counsel agreed.

The reasonableness and necessity of lymphedema treatment was argued in Respondents' position statement; however, such issue was not referenced at the beginning or the end of the May 24 or July 10, 2017 hearings. Additionally, Claimant did not present evidence on the issue or argue the issue in Claimant's position statement. As such, the ALJ determines that the issue of whether lymphedema treatment is reasonable, necessary and related to Claimant's industrial injury is not before the court at this time. The parties may confer on the issue and either party may file an Application for Hearing on such issue.

ISSUES

I. Whether Claimant has proven entitlement to PTD benefits by a preponderance of the evidence.

II. Whether Claimant has proven, by a preponderance of the evidence, that his opioid medication regimen, physical therapy, personal training, and massage therapy are reasonable, necessary, and related to the industrial injury.

III. Whether Claimant is entitled to reimbursement of out-of-pocket expenses for physical therapy and massage therapy.

FINDINGS OF FACT

1. Claimant sustained an admitted industrial injury to his low back on August 25, 1998 while lifting an object out of the trunk of his car. Claimant was forty-four years old on the date of injury. Claimant sustained multilevel lumbar herniated discs at L4-5 and L5-S1 and an annular tear at L3-4. Claimant underwent unsuccessful conservative treatment then underwent a partial laminectomy discectomy on December 26, 2000. Claimant developed scar tissue and his pain worsened. Claimant subsequently underwent a repeat semi-hemilaminectomy, discectomy and foraminotomy on March 19, 2002. Claimant's pain persisted despite numerous additional surgeries and conservative treatment, including, *inter alia*, multiple spinal fusions, cognitive behavioral/biofeedback/relaxation techniques, multiple spinal cord stimulation installations and removals, facet/RF treatments, interventional hardware blocks, and removal of spinal hardware lumbar fusion. Claimant's spine is fused from the sacrum to T-10. Claimant also underwent left and right shoulder replacements. Claimant testified that he has had at least 20 surgeries in connection with the industrial injury.

2. Claimant has been prescribed opioid medication for pain management since he incurred the industrial injury. The type of opioids and the dosages have varied throughout the course of Claimant's treatment. Claimant has been prescribed, among other things, transbuccal fentanyl (Fentora), transdermal fentanyl (Duragestic patches), OxyContin and tapentadol (Nucynta).

3. Since the date of injury to date, Claimant has complained of pain ranging from a 5-10/10, most often at a 7-8/10. Claimant testified that the pain medication does not resolve his pain entirely, but makes the pain tolerable.

4. Throughout his treatment, physicians have recommended both tapering Claimant's opioid medication and continuing the opioid medication. On July 10, 2007, William Shaw, M.D. performed an Independent Medical Examination ("IME") and noted that Claimant was on "unusually high" levels of opioid medication and recommended reduction as tolerated. On July 8, 2008, Brian Reiss, M.D., performed an IME and recommended patient detoxification. On June 19, 2009, Alexander Jacobs, M.D. performed an IME and recommended detoxification with a gradual taper of the "heavy" dose of opioids. On October 9, 2009, Richard L. Stieg, M.D., noted that the "large" amounts opioid medications offered only marginal relief from pain and agreed with the recommendation of inpatient detoxification. On January 7 and 21, 2010, Eric K. Hammerberg, M.D. noted that Dr. Stieg's recommendation of weaning Claimant off narcotics was reasonable if Claimant was interested. However, Dr. Hammerberg stated, "Alternatively, the patient may need to be on narcotics on a permanent basis."

5. On February 1, 2010, Claimant's primary authorized treating provider ("ATP"), Sheldon Goldberg, M.D., noted that there was a plan to taper Claimant's short acting medications. Dr. Goldman participated in a SAMMS conference on April 13, 2013 and

expressed concerns about Claimant's large amount of opioids and indicated the plan was to reduce the transbuccal fentanyl/Fentora. The medical records do not indicate any decrease occurred at that time.

6. On June 13, 2014, Steven L. Wright, M.D. of Colorado Pain and Rehabilitation, LLC evaluated Claimant per a referral by Dr. Goldberg. Dr. Wright noted that Claimant had no addiction issues and that it is "extremely unlikely" Claimant will ever develop an addiction. Dr. Wright noted, "Pain and function benefit are present. Medications are considered necessary for continued benefit." Dr. Wright opined that Claimant's medications were rational and rational in their combination.

7. On July 17, 2014, Kathy McCranie, M.D., performed an IME at the request of Respondents. Claimant rated his pain at 8-9/10. At the time of Dr. McCranie's evaluation, Claimant's prescriptions included, *inter alia*, transbuccal fentanyl/Fentora (short-acting opioid) 4 times per day, fentanyl/Duragesic patches (long-acting opioid) 100 microgram patch every 48 hours and 25 microgram patch every 48 hours, OxyContin (long-acting opioid) 1 every 8 hours, and Nucynta (short-acting opioid) 1 every 8 hours. Dr. McCranie noted that Claimant was on high doses of opioid medications yet continued to report high pain scores stating, "He indicates that these medications do not afford him much, if any relief. In reviewing his medical records there has not been any correlation between escalation of opioid dosing with decrease in pain or improvement in function." Dr. McCranie further noted that Claimant suffered from hyperalgesia in his lower extremities, which Dr. McCranie noted could be a response to the opioids.

8. Referring to the MTG, Dr. McCranie noted that being off of work for more than six months with minimal improvement in function from other active therapies was a relative contraindication for opioid use. Dr. McCranie further noted that Claimant's pain medications exceeded the MTG, which recommend limiting opioids to one long-acting and one-short acting medication. Dr. McCranie further noted that the MTG provide that Fentanyl is not generally recommended for use with musculoskeletal chronic pain, buccal delivered medications should not be used in Claimant's population, and that transdermal medication use is generally not recommended. Dr. McCranie opined that, due to Claimant's lack of functional effect at higher doses or his apparent hyperalgesia, the opioids were not reasonable and necessary and should be tapered.

9. Dr. McCranie performed an additional medical records review on August 14, 2014. Dr. McCranie reviewed Dr. Wright's January 13, 2014 consultation notes. Dr. McCranie disagreed with Dr. Wright's recommendations for continued use of opioid medications, reiterating that the use of Fentora and fentanyl were counter to the recommendations set forth in the MTG. Dr. McCranie recommended that Claimant take only one long-acting and one short-acting opioid medication, and that the medications be tapered.

10. On January 29, 2015, Dr. Goldberg discussed the need to taper off the Fentora (transbuccal fentanyl). He made a referral to physical therapy to determine Claimant's baseline physical capacity in order to have an objective measure of any functional

changes as a result of the tapering. At the initial physical therapy appointment prior to the start of the tapering, Claimant reported difficulty with function, self-care and activities of daily living. He complained of 10/10 pain which decreased to 7/10 after the therapeutic exercises. On February 23, 2015, Claimant reported his legs were really painful and he felt his legs would not support him. He was also complaining of back pain and cramps in his right leg/foot.

11. Beginning February 26, 2015, the Fentora was tapered from 120 to 90 tablets per month. Claimant reported inadequate pain control and decrease in function with the decrease in breakthrough pain medication.

12. On April 8, 2015, Robert Moghim, M.D. performed a Division Independent Medical Examination ("DIME") of Claimant. Dr. Moghim issued a DIME report on April 21, 2015. Claimant reported that his current medication regimen made his pain manageable. At the time, Claimant's medication regimen included, *inter alia*, OxyContin 40mg q8, Nucynta 100mg q8, Fentora Buccal 600ug, Fentanyl 125ug duralgesic, and Lyrica 600 mg daily. Claimant reported being concerned with the focus on Fentora titration, as it helped "change his life for the better." Claimant reported that his least amount of pain was 5/10m which was rare, and that his average pain was a 7/10, "which he is able to deal with so long as his medication regiment remains unaltered."

13. Dr. Moghim noted that Claimant's pathophysiology of the pain transmission and perception pathways were forever altered, and concluded Claimant's prognosis was poor. Dr. Moghim concluded that Claimant has "chronic pain syndrome with clear findings that highlight central sensitization resulting in paresis, sensation loss, ambulatory assistance and hyperthesia/allodynia of the back and legs." Dr. Moghim opined that Claimant required maintenance care in the form of either spinal cord stimulation or maintaining the current drug regimen with physical therapy. Dr. Moghim noted that spinal cord stimulation may be a "very challenging" option due to Claimant's history of extensive back surgeries with extensive scarring. Dr. Moghim also noted that previous spinal cord stimulation generators were removed due to MRI incompatibility, and that previous CT studies evidenced severe spinal stenosis, which typically is a contraindication to neuromodulation. Dr. Moghim noted that, unless the spinal cord stimulator was an option and effective once implemented, he did not recommend changing Claimant's current drug regimen.

14. Dr. Moghim noted that Dr. McCranie recommended discontinuing the opioids based specifically on the MTG. Dr. Moghim acknowledged that the MTG recommend one long-acting and one short-acting opioid medication, and provide that Fentora is rarely used for breakthrough non-cancer chronic pain. However, Dr. Moghim stated that Claimant was an outlier and should not be analyzed with strict adherence to the MTG.

15. Dr. Moghim opined that Claimant was not at MMI, at that Claimant's medications should not be changed or altered, agreeing with Dr. Wright's January 13, 2014 assessment that opioid medications in its current form and dosing "may be the best chance of giving this patient any semblance of a functional life given the lack of so few other treatment options available." Dr. Moghim further noted that denial of

medications could “lead to a significant psychiatric sequealea in this specific subset of patient living with chronic pain.”

16. On April 23, 2015, the Fentora was decreased from 90 to 60 tablets per month. Claimant continued to report increased pain and dysfunction as a result of the decrease in breakthrough pain medication.

17. Dr. Moghim conducted a follow-up DIME of Claimant on July 25, 2016. Dr. Moghim placed Claimant at MMI on June 25, 2016 and assigned a 76% whole person permanent impairment rating. Dr. Moghim reiterated that Claimant’s options were a spinal cord stimulator or maintaining the current drug regimen with physical therapy. Dr. Moghim again opined that Claimant’s medication regimen was acceptable, stating,

> …under usual circumstances I would tend to agree with previous assessments found in the medical records on opioids and chronic pain and very rarely would advocate higher than recommended opioid usages for non cancer chronic pain…But this is an outlier situation as explained herein. Because [Claimant’s] medical course and poor outcome is an outlier situation, I am not certain non cancer opioid guidelines apply to this patient and that strict adherence may do more harm than good.

Dr. Moghim further stated,

> There are significant risks to not adequately treating chronic pain in patients with debilitating functionality and central sensitization phenomenon as I mentioned in my original report. One of the biggest risks can be under treatment of pain symptoms and worsening of functionality. Those risks, along with undertreatment, have been well documented empirically and could lead to significant psychiatric sequelae in this specific subset of patients living with chronic pain which is why this is not a straight forward case.

18. Respondents filed a Final Admission of Liability (“FAL”) on September 6, 2016, admitting that Claimant sustained 76% whole person impairment with an admitted MMI date of July 25, 2016. Respondents admitted for reasonable post-MMI medical care related to the work injury by an ATP. Respondents denied liability for PTD.

19. During a physical therapy session on November 21, 2016, Claimant reported increased pain due to not having enough breakthrough medication. Robert Letendere, PT noted, “His cognitive function impairs his ability to perform independent task (*sic*) with exercise; this also has affected his ability to perform functional testing. His ability to focus on a task is very poor due to his level of pain during exercise or with a specific functional test.”

20. John A. Macurak, M.A. issued vocational evaluation reports of Claimant on November 22, 2016 and December 2, 2016. Mr. Macurak opined that Claimant is unemployable as a result of his August 25, 1998 work injury. Mr. Macurak stated that he was unable to identify any occupation currently listed in the help wanted advertisements

that would be within Claimant's current physical ability or level of skills. Mr. Macurak stated,

> He is unable to engage in his regular duty work assignments and therefore, has lost his ability to earn any wages…Given [Claimant's] extent of his physical limitations, severe pain of 8/10, and working restrictions that have been assigned by his treating and evaluating physicians, which place him in the 'Modified Sedentary' work classification. It is unlikely that he will be capable of securing and maintaining any employment.

21. Dr. McCranie performed an additional medical record review on December 6, 2016, including records from a SAMMS Conference with Dr. Sheldon Goldberg. Dr. McCranie's assessed permanent restrictions, which included the following: no lifting more than ten pounds, limit standing and walking to infrequent with the use of two canes, avoid kneeling and crawling, and avoid or limit bending or squatting. Dr. McCranie is the only physician who provided an opinion as to Claimant's permanent restrictions.

22. Dr. McCranie testified by deposition as an expert in physical medicine and rehabilitation and pain medicine. Dr. McCranie is board certified and Level II accredited by the Colorado Division of Workers' Compensation. Dr. McCranie's testimony was consistent with her reports. Dr. McCranie testified that the Center for Disease Control ("CDC") Guidelines for the Prescription of Opioids recommend keeping opioid dosages under 50 morphine equivalent doses per day (MME/day) and that the recommended maximum is 90 MME/day. She stated that doses over 200 MME/day tripled the chances of a fatal overdose. She testified that the reason the MTG recommend against the use of fentanyl is that it is a very strong drug with a high incidence of overdose. Dr. McCranie stated that in her experience, patients tapering off high levels of opioids do not experience a significant change in their pain levels and might actually improve their level of functioning.

23. Dr. McCranie further testified that Claimant's current morphine equivalent is 525 MME/day which is 5-6 times the recommended maximum. She testified that Claimant is at high risk for a fatal overdose even if he takes his medication exactly as prescribed. She testified his opioid level is not safe and that the minimal pain relief Claimant is receiving does not justify the risk. Dr. McCranie went as far to say that the treatment Claimant is receiving is inappropriate and below the standard of care. Dr. McCranie opined that Claimant's long history of surgeries and chronic pain does not justify his use of opioid medication under the circumstances.

24. Dr. McCranie also stated that the CDC Guidelines and the MTG provide that there should be a clear improvement in function from the opioid use. Dr. McCranie opined that there is no indication that Claimant's function has increased. Dr. McCranie further testified that she does not recommended ongoing passive modalities for Claimant, including physical therapy and massage therapy.

25. Katie Montoya performed a vocational assessment of Claimant on December 14, 2016. Ms. Montoya noted that Claimant's wife reported that his medications are not conducive to productive work. Ms. Montoya further documented, "[Claimant] explained that with his medications, the side effects are minimal at this point, but they result in him having a lower ability to function." Ms. Montoya noted neither Dr. Goldberg nor Dr. Moghim addressed permanent restrictions and stated, "I cannot at this point provide an opinion regarding options for return to work with (*sic*) the consideration as to the opinion of Dr. Goldberg…." Ms. Montoya further stated that Claimant's "subjective report of physical limitations would not be consistent with an ability to work." However, Ms. Montoya noted that Dr. McCranie's opinion allowed for sedentary work. Ms. Montoya opined that Claimant has sedentary level skills for sales and customer service positions, and that such positions are available in the Denver area.

26. On January 16, 2017 Pamela E. Lauer, N.P. at Craig Hospital noted that Claimant became fatigued easily and that, "it takes all day for him to do simple tasks. His pain can be so severe that he is not able to concentrate." NP Lauer opined,

> Due to his significant debilitating back and neuropathic pain, which can be quite distracting for the patient, he has significant difficulty with focus and has to adjust his positioning frequently due to severe discomfort. He is also on significant amounts of pain medication, both routinely and for breakthrough pain, therefore, I do not feel that due to his severe pain and pain management that [Claimant] would be an appropriate candidate for employment.

27. An Interdisciplinary Team Conference was held at Craig Hospital on January 19, 2017 during which it was again determined that Claimant would not be an appropriate candidate for employment "due to severe pain and pain management."

28. On January 18, 2017, Dr. Goldberg noted that Claimant was unable to tolerate any medication tapers at the time. Claimant reported having good pain control 10% of the day. Additional tapering of the Fentora was discontinued due to Claimant's continued reports of pain and dysfunction.

29. On March 22, 2017, Dr. Goldberg attended a SAMMS conference with counsel for Claimant and Respondents. In his notes regarding the SAMMS conference, Dr. Goldberg noted that Respondents indicated the Fentora medication was not indicated by the MTG and questioned the ongoing need for the Fentora. Dr. Goldberg noted that the MTG do not apply to maintenance pain management medications. Dr. Goldberg noted that "[Claimant] has a centralized pain syndrome and an arachnoiditis as well as a spinal cord injury which has been extremely difficult to manage for greater than a decade and that the current medications that he is using is barely maintaining his function." Dr. Goldberg explained that he discontinued the tapering of Fentora because, based on his review of physical therapy records, Claimant's function significantly declined with the decrease in medication. Dr. Goldberg recommended that Claimant undergo a functional capacity evaluation ("FCE") with Kristine Couch, OTR to provide

"as objective as possible evaluation of [Claimant's] abilities from which to make permanent physical restrictions."

30. In a letter to Respondents' counsel dated March 22, 2017, Dr. Goldberg recommended that Claimant transition treatment with a licensed physical therapist to working out three times per week with a personal trainer, and monthly check-in physical therapy visits for at least the next year.

31. Dr. Goldberg's prescription was initially declined. Claimant has paid for the treatment personally. Claimant has spent a total of $265.00 of out-of-pocket expenses for massage therapy and personal training sessions.

32. Claimant testified that he currently works out with a personal trainer twice a week and, while engaging in this treatment, he t must take breakthrough opioid medication because his pain is so severe that he is in tears.

33. Claimant attended over 230 physical therapy sessions beginning April 29, 2013. The physical therapy records evidence that Claimant could complete the physical therapy exercises at times (with medication), and at other times, there was marginal or no significant change in Claimant's function. Claimant's physical therapy sessions included multiple exercises and massage.

34. Claimant underwent a FCE with Ms. Couch on March 24, 2017. Ms. Couch stated that Claimant has excruciating and/or shooting/stabbing pain with an intensity of 8 in his buttocks, foot, lower back, lower leg, upper back, and upper leg. She also noted that Claimant was "frequently observed to fall asleep during paperwork and conversational activities (such as the history and intake portions) of the evaluation…He was observed to frequently lose his train of thought while speaking. He demonstrated significant difficultly accurately following directions for numerous tasks, despite being given verbal direction and demonstration." Ms. Couch further noted that Claimant took oxycodone during the testing, had difficulty completing various tasks, and took multiple due to significant bladder urgency.

35. Ms. Couch's testing revealed that Claimant was able to sit for a maximum of 55 minutes and shifted positions due to pain. Claimant was able to demonstrate standing tolerance of 32 minutes while holding onto objects, including canes. He was able to walk slowly using his canes and was unable to safely walk short distances without their use. Claimant was unable to perform lifting floor to knuckle, and lifting knuckle to shoulder on an occasional basis of five pounds. He was also unable to perform lifting shoulder to overhead on occasional basis. Lifting testing was terminated based on the Claimant's reports of dizziness, low back pain, bilateral lower extremity pain and weakness, buttocks pain and decreased balance.

36. Ms. Couch concluded that Claimant had demonstrated consistent and valid performance in twenty of twenty tests. Claimant's maximum workplace tolerance was less than 4.5 hours. Ms. Couch stated, "[Claimant] completed several tests with errors,

despite being provided with verbal instruction and demonstration. He was unable to identify errors presenting concern for acceptable workplace standards."

37. On April 13, 2017, Mr. Macurak issued an updated vocational evaluation after reviewing additional records, including the January 2017 Craig Hospital medical notes and the March 24, 2017 FCE. Mr. Macurak continued to opine that Claimant is unemployable as a result of the August 25, 1998 work injury.

38. Mr. Macurak testified at hearing on behalf of Claimant as an expert in vocational evaluations. Mr. Macurak testified consistent with his prior reports. Mr. Macurak emphasized Claimant's pain management issues as a significant factor among multiple other factors affecting his ability to earn wages. Mr. Macurak testified that Claimant now has a very difficult time working with others, despite his best attempts. Mr. Macurak stated that Claimant lacked the ability to concentrate, comprehend certain things, and remember technical data formats, and would be a "hindrance" in a customer service capacity. Mr. Macurak again opined that Claimant is incapable of earning any wages in the same or other employment. Based on his vocational research, his personal evaluation of the Claimant, the medical records, and Ms. Couch's FCE, Mr. Macurak opined that the Claimant is permanently and totally disabled. He concluded that the Claimant is unemployable as a result of his August 25, 1998 injury. Mr. Macurak further opined that he was unable to identify any occupation currently available to the Claimant given the totality of human factor analysis within the Claimant's current physical restrictions and current level of skills. He opined that the Claimant would not be able to secure and maintain regular employment; and was unable to identify work the Claimant could perform.

39. Ms. Montoya testified at hearing on behalf of Respondents as an expert in occupational and vocational rehabilitation. Ms. Montoya agreed that the FCE results indicate Claimant cannot perform the full range of sedentary work. Nonetheless, Ms. Montoya considered Claimant's physical restrictions, job history and transferrable skills and opined that there is work reasonably available to Claimant in customer service type positions. Ms. Montoya testified that there are telephonic sales and customer service jobs that Claimant can perform from his home, that are sedentary and allow for changes of position from sitting and standing as necessary.

40. On April 5, 2017, Dr. Goldberg noted that Claimant continued to need pain medications. Dr. Goldberg also prescribed Claimant physical therapy. On May 3, 2017, Dr. Goldberg again noted that he was unable to taper Claimant's mediation at the time due to continual pain.

41. Claimant is a 63-year-old man with a high school education. Claimant completed some college courses but did not obtain a degree. Claimant worked in law enforcement from approximately 1974 to 1981, obtaining certification as a bomb technician. Claimant then began a career in sales and marketing, in which he worked in various capacities until 2010. Claimant was working for Employer as a regional sales manager at the time of injury. Claimant's job included developing and managing sales accounts, providing customer service and technical assistance, and supervising a

regional sales team. Claimant ceased working for Employer in 2000 and subsequently became a partner in another company that sells safety equipment. Claimant testified that, by 2010, he was working five percent of the time and could no longer perform his job.

42. Claimant has been on Social Security Disability Insurance ("SSDI") benefits since 2010. Claimant testified that he has not worked since 2010 and is currently unable to perform his job.

43. Claimant testified that he is constantly in pain, which he described as pins and needles, stabbing and burning sensations. Claimant testified that when he is in pain he does not "hear things straight" and does not accurately write down information in notes. Claimant also testified that he does not sleep well, is constantly tired and easily irritated. Claimant stated that he no longer possesses the "diplomatic skills" he once had.

44. Claimant testified that his pain negatively affects his ability to function, stating,

> A If my pain isn't treated and I've been - - I have that way. I've been that way, when the pain isn't treated, pain takes away your ability to do a lot of things and its your abilities - - takes away your ability to make decisions and issues and, I mean, it's - - I can't - - yeah, I can. Pain takes away just about everything you can think of and the worse pain, the more difficult it is to do anything.
>
> And so do I understand - - the medication has never made it impossible for me to think or to talk about it. But the pain does. I can guarantee right now the pain does.

45. Claimant testified that he ambulates using two canes and can only walk short distances. Claimant was prescribed an electric wheelchair. Claimant testified he also uses a bed similar to a hospital bed, without which he would not be able to get up in the morning. Claimant further testified that he can barely move in the morning and takes a long time to get functional, stating that if he has something to do at 9:00 a.m. he has to get up at 6:00 a.m.

46. The ALJ observed surveillance video of Claimant taken on September 16, 2015, October 26, 2016 and November 26, 2016. Claimant was observed walking his dog and walking to and from a vehicle to various houses or buildings using two canes. Claimant was also observed getting in and out of the passenger seat of a vehicle without assistance and retrieving or placing his canes in the backseat of the vehicle, lifting a backpack from the trunk of a vehicle, and sitting at a restaurant eating with another individual.

47. Claimant testified that he has gone on some personal trips and accompanied his wife on her business trips for his own personal purposes. Claimant testified that he did not perform any work on such trips. Although the company for which Claimant worked after his employment with Employer remains in Claimant's name, Claimant testified he does no work for the company, and receives no salary or dividends.

48. The claimant's demonstrated activities in the surveillance video and testimony regarding Claimant's personal vacations do not persuasively discredit Claimant's premise that he is unable to earn wages in the same or other employment.

49. Claimant's testimony is found credible and persuasive.

50. The ALJ credits the opinion of Mr. Macurak, which is supported by the medical records and Claimant's testimony, over the conflicting opinion of Ms. Montoya and finds that Claimant is unable to earn any wages in the same or other employment. Claimant's industrial injury was a significant causative factor in his current physical and mental limitations, which have rendered Claimant unable to obtain and maintain employment. Employment is not reasonably available to Claimant under his particular circumstances.

51. The ALJ credits the opinions of Drs. Goldberg, Moghim and Wright over the conflicting opinion of Dr. McCranie and finds that Claimant's opioid medication regimen, physical therapy, massage therapy and personal training are reasonable, necessary and related to the August 25, 1998 industrial injury. The medical treatment is reasonably necessary to relieve the effects of Claimant's injury.

52. Claimant has established by a preponderance of the evidence that he is entitled to PTD.

53. Claimant has established by a preponderance of the evidence that the opioid medication regimen, physical therapy, massage therapy and personal training are reasonable, necessary and related, and that he is entitled to reimbursement of the $265.00 out-of-pocket expenses he paid for such treatment.

54. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, Section 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1), C.R.S. Generally, the claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every

inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado*, 717 P.2d 1000 (Colo. App. 1986).

The ALJ's resolution of issues will be affirmed if supported by substantial evidence in the record. Section 8-43-301(8), C.R.S.; *City and County of Denver School District 1 v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). Substantial evidence is that quantum of probative evidence, which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

Permanently and Totally Disabled

To establish a claim for PTD, the claimant shoulders the burden of proving by a preponderance of the evidence that he is unable to earn any wages in the same or other employment. Sections 8-40-201(16.5)(a) and 8-43-201, C.R.S. (2003); *see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). The claimant must also prove the industrial injury was a significant causative factor in the PTD by demonstrating a direct causal relationship between the injury and the PTD. *Joslins Dry Goods Co. v. Industrial Claim Appeals Office,* 21 P.3d 866 (Colo. App. 2001). The term "any wages" means more than zero wages. *See Lobb v. Industrial Claim Appeals Office,* 948 P.2d 115 (Colo. App. 1997); *McKinney v. Industrial Claim Appeals Office,* 894 P.2d 42 (Colo. App. 1995).

In weighing whether the claimant is able to earn any wages, the ALJ may consider various human factors, including the claimant's physical condition, mental ability, age, employment history, education, and availability of work that the claimant could perform. *Weld County School Dist. Re-12 v. Bymer*, 955 P.2d 550 (Colo. 1998). The ALJ may also consider the claimant's ability to handle pain and the perception of pain. *Darnall v. Weld County,* W.C. No. 4-164-380 (I.C.A.O. April 10, 1998). The critical test is whether employment exists that is reasonably available to claimant under his or her particular circumstances. *Weld County School Dist. Re-12 v. Bymer*, *supra*. The question of whether the claimant proved inability to earn wages in the same or other

employment presents a question of fact for resolution by the ALJ. *Best-Way Concrete Co. v. Baumgartner,* 908 P.2d 1194 (Colo. App. 1995).

As a matter of public policy, PTD benefits may be awarded even if the claimant has held, or currently holds, some type of post-injury employment where the evidence shows that claimant is not physically able to sustain the post-injury employment, or that such employment is unlikely to become available to claimant in the future in view of the particular circumstances. *Joslins Dry Goods Co. v. Industrial Claim Appeals Office*, 21 P.3d 866 (Colo. App. 2001).

As evidenced by the medical records, Claimant has an extensive and complicated medical history resulting from the industrial injury. The medical evidence, FCE, Mr. Macurak's testimony, and Claimant's testimony credibly establish that Claimant is unable to earn any wages in the same or other employment, and that there is a direct causal relationship between the industrial injury and Claimant's inability to earn wages. While Dr. McCranie restricted Claimant to sedentary work, the FCE results demonstrates Claimant's functional capacity is less than sedentary. As found, Claimant's vacations and demonstrated activities observed by the ALJ on the surveillance video and at hearing did persuasively discredit Claimant's contention that he is permanently and totally disabled.

In addition to Claimant's physical limitations, Claimant also suffers from mental limitations with respect to concentration, focus and comprehension. Claimant credibly testified to these issues, and his testimony is corroborated by the medical records which, on multiple occasions note the effect of Claimant's pain and pain management on his cognitive function. While Claimant once had a successful career in law enforcement and sales/marketing, Claimant's current physical and mental limitations have rendered him unable to earn any wages in the same or other employment. Mr. Macurak credibly opined that there is not employment reasonably available to Claimant that Claimant could obtain and maintain. Based on the totality of the evidence, Claimant has established by a preponderance of the evidence that he is permanently and totally disabled.

Medical Benefits

The respondents are liable to provide such medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury." Section 8-42-101(1)(a), C.R.S. Colorado courts have ruled that the need for medical treatment may extend beyond the point of MMI where the claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or prevent further deterioration of her condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609 (Colo. App. 1995).

In cases where the respondents file a FAL admitting for ongoing medical benefits after MMI they retain the right to challenge the compensability, reasonableness, and

necessity of specific treatments. *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Ford v. Regional Transportation District,* W.C. No. 4-309-217 (ICAO February 12, 2009). The question of whether the claimant proved that specific treatment is reasonable and necessary to maintain claimant's condition after MMI or relieve ongoing symptoms is one of fact for the ALJ. *See Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

When determining the issue of whether proposed medical treatment is reasonable and necessary the ALJ may consider the provisions and treatment protocols of the MTG because they represent the accepted standards of practice in workers' compensation cases and were adopted pursuant to an express grant of statutory authority. However, evidence of compliance or non-compliance with the treatment criteria of the MTG is not dispositive of the question of whether medical treatment is reasonable and necessary. Rather the ALJ may give evidence regarding compliance with the MTG such weight as he determines it is entitled to considering the totality of the evidence. *See Adame v. SSC Berthoud Operating Co., LLC.*, WC 4-784-709 (ICAO January 25, 2012); *Thomas v. Four Corners Health Care*, WC 4-484-220 (ICAO April 27, 2009); *Stamey v. C2 Utility Contractors, Inc.*, WC 4-503-974 (ICAO August 21, 2008).

As found, the ALJ credited the opinion of Claimant's ATP Dr. Goldberg as to the reasonableness, necessity and relatedness of Claimant's continued use of opioid medications. Dr. Goldberg's opinion is supported by Dr. Moghim's opinion, the medical records, and Claimant's testimony. Although Claimant has struggled with high levels of pain since incurring the industrial injury, Claimant credibly testified that the opioid medications make the pain more tolerable and enable him to function. Attempts at tapering Fentora resulted in increased pain, as reported consistently throughout the medical records. Dr. Goldberg's opinion is corroborated by Dr. Moghim and Dr. Wright. While Claimant is taking more than the recommended dosages of opioid medications, Dr. Moghim credibly opined that Claimant is an outlier. Dr. Goldberg, who has an extensive history of treating Claimant, has deemed Claimant's current opioid medication regimen, along with continued physical therapy and personal training sessions, reasonable and necessary to maintain Claimant's limited functioning.

Based on the totality of the evidence, Claimant has established by a preponderance of the evidence that his current opioid medication regimen, physical therapy, massage therapy, and personal training are reasonably necessary to relieve the effects of Claimant's August 25, 1998 industrial injury. As found, Claimant is entitled to reimbursement of the $265.00 of out-of-pocket expenses paid for such medical treatment.

ORDER

It is therefore ordered that:

1. Claimant is permanently and totally disabled. Respondents shall pay Claimant PTD benefits from June 25, 2016, the date of MMI, and continuing until terminated by law, subject to applicable credits and offsets. These benefits are not subject to a SSDI offset, per Section 8-42-103 (c)(IV), C.R.S., as Claimant is permanently and totally disabled, and the injury on which the PTD award is based occurred prior to Claimant reaching forty-five years of age.

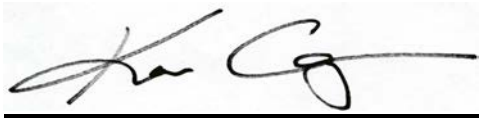
2. Claimant's opioid medication regimen as prescribed by Dr. Goldberg, and the physical therapy, personal training, and massage therapy are reasonable, necessary and related. Respondents shall pay for opioid medication, physical therapy, personal training, and massage therapy as prescribed by Dr. Goldberg or other ATPs. Claimant is entitled to reimbursement of out-of-pocket expenses of $265.00 for such medical treatment.

3. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 25, 2017



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

COURSE OF THE PROCEEDINGS

As a preliminary matter, the ALJ advised Claimant regarding the hearing process and cautioned him about representing himself. After being advised, Claimant knowingly and voluntarily waived his right to an attorney, expressing his desire to proceed to hearing without counsel. Claimant also withdrew the issue of permanent partial disability which was not endorsed in his Office of Administrative Courts Rules of Procedure, Rule 10 Application for Hearing but listed on his case information sheet. The Claimant submitted Exhibit 1. Claimant also testified on his own behalf. Respondents submitted Exhibits A-F.

Respondents objected to the proceedings asserting that all issues, including disfigurement were closed by Claimant's failure to file an application for hearing within 30 days of the Amended Final Admission of Liability. The undersigned overruled the objection and elected to proceed with the hearing affording both Claimant had Respondents the opportunity to present evidence in support of their respective claims.

ISSUES

I. Whether Claimant is entitled to disfigurement benefits.

II. Whether the claim is closed by operation of law, for Claimant's failure to object to an Amended Final Admission of Liability within 30 days of its filing, thereby precluding Claimant's entitlement to disfigurement benefits.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant works as a heavy auto parts delivery driver for Employer. On November 8, 2016, Claimant's left middle finger was caught and crushed between two pallets causing an extensive laceration of the distal pad of the left middle finger.

2. Claimant was treated in the Emergency Room of Memorial Hospital where he received a tetanus shot; his finger was sutured and he was given a prescription for Cephalexin.

3. Claimant subsequently required surgical debridement and was referred to physical therapy to improve the range of motion of the left middle finger post injury.

4. On January 26, 2017, Claimant was placed at maximum medical improvement with permanent impairment by Dr. Randall Jones.

5. Respondents filed a Final Admission of Liability (FAL) dated April 13, 2017 admitting to an 8% rating of the hand. Respondents erroneously calculated the permanent partial disability award using 208 weeks of disability rather than 104 weeks when the injury involves a hand below the wrist. Consequently, Claimant's permanent impairment award was incorrectly calculated to equal $4,907.63.

6. The Division of Workers' Compensation, through Bert Sandoval of the Claims Management Unit issued a letter on May 9, 2017 stating their calculation of the permanent partial disability (PPD) award did not match the admitted amount reflected in the April 13, 2017 FAL, noting further that Respondents "may amend [the] admission per Rule 5-9(A)." Any amended admission was to be filed within 30 days of the April 13, 2017 FAL.

7. In response to the Division's letter, Respondents filed an Amended Final Admission of Liability dated May 11, 2017 admitting for the corrected PPD of $2,453.82. The Amended FAL also contained a notice indicating that any objection to the "benefits admitted or not admitted" must be filed within 30 calendar days or the file would automatically close. Attached to the Amended FAL, was an Objection Form emphasizing that Claimant had 30 calendar days of the date on the FAL to complete the objection form or write a letter to the Division stating his objection. The Objection Form provides direction on requesting a hearing on disputed issues.

8. The Amended FAL was admitted into evidence and careful inspection of the same reflects that $0.00 in disfigurement benefits were paid on the claim. The evidence presented persuades the ALJ that the Amended FAL denied disfigurement benefits. Consequently, the ALJ finds that "disfigurement" constituted a disputed issue which necessitated the filing of an objection along with an Application for Hearing would be necessary to keep open for future determination.

9. Claimant admitted he received the Amended Final Admission but did not respond within 30 days as required because he was hospitalized for an unrelated condition. Relying on advice given to him by the Claims Management Unit, Claimant elected to file an Application for Hearing that he admittedly knew was untimely. The ALJ is not persuaded, based upon the evidence presented, that Claimant's late filing is excusable or due to circumstances beyond his control.

10. Based upon the evidence presented, the undersigned ALJ finds that Claimant failed to file a written objection to the Amended FAL filed May 11, 2017. Furthermore, the evidence presented persuades the ALJ that Claimant failed to file an Application for Hearing within the 30 day deadline as provided for in the

Amended FAL and the Objection Form attached thereto. Rather, Claimant filed an application for hearing for disfigurement only dated June 28, 2017.

11. Based upon the evidence presented, the ALJ finds that Claimant's Workers Compensation Claim assigned Workers' Compensation Claim Number 5-042-455 had automatically closed as to all issues admitted in the May 11, 2017 Amended FAL, including "disfigurement" by the filing of Claimant's June 28, 2017, Application for Hearing- Disfigurement Only.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

A. As noted, Respondents objected to proceeding with Claimant's disfigurement hearing based upon an assertion that Claimant failed to object to the Amended FAL and file an Application for hearing on disputed issues within 30 days of the date the Amended FAL was filed. Consequently, Respondents maintained that the ALJ lacked jurisdiction to hear the claim for additional disfigurement benefits. Based upon the evidence presented, the ALJ agrees with Respondents.

B. Section 8-43-203(2)(b)(II), C.R.S., provides that a claimant's failure to object to a final admission of liability and request a hearing on any disputed issues that are ripe for hearing or request a Division Independent Medical Examination (DIME) within 30 days will result in automatic closure of the claim concerning all admitted liability. As recognized in *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261 (Colo. App. 2004), the purpose of the 1998 amendments to §8-42-203(2)(b)(II), C.R.S. requiring the claimant to request a hearing on disputed issues which are ripe for hearing within 30 days of the FAL, was to require the claimant to contest some issue addressed by the FAL concerning which the claimant can present a "legitimate controversy" by stating the "benefit to which he or she is entitled." *Id*. Thus, the statute inherently requires the claimant to provide notice of the issues that may be in controversy within 30 days. In short, the purpose of § 8-43-203(2)(b)(II), C.R.S. is to provide a method for closing claims without a hearing, while affording the claimant notice of the pending closure and an opportunity to object in a timely fashion. *See Tenorio v. Poudre Valley Hospital*, W.C. No. 4-162-954 (March 18, 1999).

C. Once a case has automatically closed by operation of the statute, the issues resolved by the FAL are not subject to further litigation unless they are reopened pursuant to §8-43-303, C.R.S. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005). In *Nguyen v. Optima Batteries*, W.C. No. 4-422-565 (November 14, 2000), the Industrial Claim Appeals Panel (ICAO) held that a claimant's failure to file an application for hearing concerning the issue of disfigurement within 30 days after the FAL deprived the ALJ of jurisdiction to award additional benefits that were closed by the FAL. *See also, Dalco*

Industries, Inc. v. Garcia, 867 P.2d 156 (Colo. App. 1993) (provisions of § 8-43-203(2)(b)(II) create jurisdictional barrier to consideration of issues which have been closed by failure to timely contest FAL). It is axiomatic that lack of subject matter jurisdiction may be asserted, as it was in the instant case, at any time. *Hernandez v. Swift Newspapers D/B/A Greeley Publishing Company*, W.C. No. 4-570-620 (ICAO, March 8, 2004). As found here, Claimant had actual notice of the Amended Final Admission of Liability dated May 11, 2017 and yet failed to object to the same and file an application for hearing within 30 days. As a result, all issues, including disfigurement, are closed and the ALJ lacks the jurisdiction to award additional disfigurement benefits in the absence of a petition and order reopening the claim. Section 8-43-303, C.R.S. 2000; *Nguyen v. Optima Batteries, supra.*

ORDER

It is therefore ordered that:

1. Claimant's claim for disfigurement benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether Claimant has proven by a preponderance of the evidence that he is incapable of earning any wages and is entitled to receive Permanent Total Disability (PTD) benefits as a result of admitted industrial injuries that he sustained during the course and scope of his employment with Employer on August 24, 2012.

2. Whether Claimant has established by a preponderance of the evidence that he is entitled to receive reasonable, necessary and related medical maintenance benefits designed to relieve the effects of his August 24, 2012 industrial injuries or prevent further deterioration of his condition pursuant to *Grover v. Industrial Comm'n.,* 759 P.2d 705 (Colo. 1988).

FINDINGS OF FACT

1. Claimant is a 37 year old male who worked for Employer as a Controls Engineer involved in programming robots. On August 24, 2012 Claimant suffered admitted industrial injuries during the course and scope of his employment. He was adjusting the sensors on a robot and his partner was programming the device. Claimant's partner engaged the robot and a 12 foot long carbon fiber post struck Claimant in the head and left shoulder. Claimant fell to the ground and landed on his stomach. He suffered a fractured skull, a broken left arm, nerve damage to his ear and broken orbital sockets.

2. Claimant underwent conservative medical treatment for his injuries and returned to modified duty work for Employer within approximately two weeks or on September 10, 2012. However, Claimant expressed concerns about Employer's safety protocols and received another job offer to perform mechanical engineering for a firm identified as Fleetwood. Claimant subsequently resigned his employment with Employer and began working for Fleetwood as a Mechanical Engineer on November 12, 2012.

3. Claimant continued to work for Fleetwood through February 4, 2015. During the period Claimant worked approximately 9-10 hours each day in a highly competitive environment. He designed a robotic system that picked up bottles and deposited them in boxes. Claimant also participated on Fleetwood's softball team, completed home projects and engaged in hobbies.

4. On June 11, 2014 Authorized Treating Physician (ATP) Kevin O'Toole, D.O. determined that Claimant had reached Maximum Medical Improvement (MMI) for his August 24, 2012 industrial injuries. Dr. O'Toole assigned Claimant a 15% whole person impairment rating for sleep and arousal disorders. He specifically noted

"fatigue/daytime drowsiness, managed with Provigil." Regarding Claimant's work activities Dr. O'Toole remarked that "he is able to accomplish his demanding work, but feels that he has to make an extra effort."

5. Claimant subsequently visited psychologist Daniel Bruns, PsyD. for an examination. Claimant reported additional concerns about fatigue. Dr. O'Toole thus revoked his MMI determination on July 3, 2014.

6. Dr. O'Toole referred Claimant to psychiatrist Carol Newlin, M.D./PhD. for an examination. Dr. Newlin prescribed the anti-depressant Wellbetrin and Claimant reported a "180-degree turnaround." On July 31, 2014 Dr. Newlin also prescribed the stimulant Adderall for Claimant's day time somnolence. Notably, Claimant had been working as an engineer for almost two years prior to his prescription for Adderall.

7. On August 27, 2014 Claimant visited the University of Colorado Sleep Center for a sleep study. Claimant specifically underwent a sleep latency test to ascertain the length of time it took him to fall asleep. The test revealed that Claimant exhibited a severely reduced average sleep latency time that was consistent with a diagnosis of narcolepsy. On September 10, 2014 sleep specialist Mark Neagle, M.D. determined that Claimant's "history and sleep study/MSLT findings are consistent with a diagnosis of post-traumatic narcolepsy."

8. On May 21, 2015 Claimant visited Sleep Expert Martin I. Reite, M.D. for an evaluation. He reiterated Claimant's diagnosis of narcolepsy and remarked that "hypersomnia was not an immediate response to the [August 24, 2012] injury but appeared about a year later." Dr. Reite queried whether Claimant's narcolepsy was caused by his industrial injury or was "coincidental and might have occurred anyway." He noted that "post-traumatic narcolepsy has been described but has no pathognomic specifiers." Dr. Reite ultimately commented that, from a treatment perspective, the cause of Claimant's narcolepsy was moot.

9. In an undated report Dr. Reite reiterated that Claimant suffers from narcolepsy and remarked that his condition was "most likely post-traumatic in origin." He explained that narcolepsy "is a serious neurological disorder characterized by excessive and sometimes uncontrollable sleepiness as well as a number of other related symptoms of brain dysfunction." He detailed that the causes of narcolepsy are varied and can be "idiopathic (onset with no obvious cause), familial (genetic influence and running in families), or triggered by viral infections or head trauma (as in [Claimant's] case)." Dr. Reite noted that narcolepsy cannot be cured but can be managed through drugs. He stated that Claimant has failed to adequately respond to drug treatment because of his brain damage after his industrial head trauma on August 24, 2012. Dr. Reite concluded that Claimant is seriously disabled as a result of his narcolepsy and his prognosis is "guarded."

10. On August 26, 2015 Dr. O'Toole determined that Claimant had again reached MMI. He assigned Claimant a 55% whole person impairment rating that was to be combined with a 25% mental health rating he had received from Dr. Newlin. Dr.

O'Toole also awarded Claimant medical maintenance benefits in the form of medication management and counseling with Dr. Newlin for one year.

11. On November 25, 2015 Susan Rosenfeld, M.D. Psychiatry & Neurology, reviewed Claimant's records and considered his claim that he was unable to work. She concluded that "the reported symptoms, clinical findings and treatment plan do not support functional impairment from a psychiatric condition which translates into restrictions or limitations."

12. On November 25, 2015 Stephen Selkirk, M.D., Ph.D, Psychiatry & Neurology, reviewed Claimant's medical records and his claim that he was unable to work. Dr. Selkirk stated, "the Claimant has extensive subjective complaints that are not supported by objective data in the medical record." He concluded that Claimant was not impaired from a neurological perspective and believed that no restrictions or limitations were warranted.

13. On November 25, 2015 Akinkumi O. Ogundipe, M.D. Internal Medicine & Nephrology reviewed Claimant's records and considered his ability to work. After discussing the matter with medical providers Dr. Ogundipe concluded that restrictions or limitations were not supported by the record.

14. On December 15, 2015 Claimant underwent an independent medical examination with Kathleen D'Angelo, M.D. Dr. D'Angelo recommended additional testing to confirm Claimant's diagnosis of narcolepsy. She characterized Claimant's presentation at the evaluation as clean shaven, neatly dressed, interactive, knowledgeable and articulate. Based on the detailed, quoted passages in her report, Dr. D'Angelo was impressed with Claimant's clarity and ability to recall his injury. Because of the incongruity between her experience with head trauma and narcolepsy patients compared to Claimant's presentation, she recommended further testing.

15. On February 9, 2016 Claimant underwent a Division Independent Medical Examination (DIME) with Albert Hattem, M.D. Dr. Hattem determined that Claimant reached MMI on August 26, 2015 and assigned a 39% whole person impairment rating. He noted that Claimant should be prohibited from working in a safety-sensitive position. However, he explained that once Claimant tapered off of Adderall he could "gradually re-engage in the work force, beginning at 2-4 hours per day."

16. On April 14, 2016 Neurologist and sub-specialist in Sleep Medicine Lev Grinman reviewed Claimant's medical records and considered whether he was unable to work. He explained that Claimant had some limitations as a result of his narcolepsy, but the condition did not cause complete functional impairment. Dr. Grinman specifically remarked that Claimant's narcolepsy would prohibit him from operating commercial motor vehicles but there were no other work limitations. He determined that the severity and scope of Claimant's reported fatigue and cognitive complaints were not consistent with the severity and scope of his medical conditions and intensity of treatment. Dr. Grinman also addressed the undated letter from Dr. Reite that described Claimant as "seriously disabled." He noted the letter was very general and provided a

standard overview of narcolepsy but did not include specific objective evidence of impairment supporting that Claimant was "seriously disabled."

17. Susan Kenneally, Psy.D. conducted a neuropsychological evaluation of Claimant on October 20, 2016 and November 16, 2016. She evaluated general intelligence, attention-concentration, memory and language skills. Dr. Kenneally also conducted psychological testing. She concluded that the testing did not reveal any residual cognitive impairment associated with Claimant's August 24, 2012 workplace injury. Dr. Kenneally noted that Claimant's traumatic brain injury has not resulted in persistent deficits.

18. Claimant testified that he feels like he has been up all night every day. He commented that his wife and two young children usually wake him when they leave in the morning. However, he remains in bed until between 10:00 a.m. and 12:00 p.m. When he gets out of bed he eats something, lies on the couch and sleeps. Claimant again awakens when his children come home and then lies down until dinner. After dinner Claimant sleeps on the couch until about 8:00 p.m. and stays awake with his wife until 10:00-11:00 p.m. He noted that his current medications include Bupropion (Wellbutrin XL), Destroamphetamine-amphetamine (Adderall XR), Ondansetron (Zofran), Clomipramine and Zolpidem Tartrate (Ambien PO).

19. On November 15, 2016 Claimant's wife awoke him because he had to take his daughter to school. Because he previously had difficulties remaining awake prior to taking his daughter to school, Claimant went to his garage and spent time trying to make a knife as a gift for his brother-in-law's birthday. He used a forge that he had made prior to his injury. Because Claimant had a problem with the forge he turned it off and took his daughter to school. After he dropped her off he tried to buy a type of screw he needed to put the handle on the knife. When the store in Mead did not have the screw he started to drive to Denver. Before he arrived in Denver his wife called and told him the house was on fire. The fire was caused by the Claimant use of the forge.

20. The Mountain View Fire Protection District investigative report quoted Claimant's wife as stating that Claimant is an engineer who works out of the home. She specifically stated that "[Claimant] is self-employed as a mechanical engineer and currently works from home due to a work related injury…they do not keep their vehicles in the garage at all because it is used for [Claimant's] shop and storage." However, Claimant's wife testified that she told the investigator that her husband was an engineer because that is what he went to school for and did for a living. She denied that Claimant worked at home as an engineer and affirmed that he has earned no wages since leaving Fleetwood.

21. On December 20, 2016 the parties conducted the pre-hearing evidentiary deposition of Mark Neagle, M.D. Dr. Neagle testified that he was a sleep medicine specialist who treated Claimant for narcolepsy. He remarked that only about .04 percent of the population has narcolepsy. Dr. Neagle explained that there are many theories about the causes of narcolepsy that include genetics, environment, toxins and viral infections and "we don't know the exact mechanism." Suspected trauma-induced

narcolepsy is even rarer and neither Dr. Neagle nor his experienced colleague had ever seen a case. Dr. Neagle noted that when he attempted to research trauma-induced narcolepsy he was unable to discover "any great explanation."

22. In addressing Claimant's ability to work Dr. Neagle explained that he was concerned about Claimant's capacity to function as a mechanical engineer but could envision a position that would fit his situation. After additional questioning Dr. Neagle acknowledged that Claimant was impaired as an engineer but not from performing other jobs. He specifically stated "[a]ll I can say is he was impaired as an engineer, I think, based on what our discussions were."

23. On December 27, 2016 psychiatrist Robert E. Kleinman, M.D. evaluated Claimant and conducted a medical records review. Dr. Kleinman reviewed the most recent sleep studies and Dr. Kenneally's report. He considered transcripts of interviews with Claimant's co-workers at Fleetwood. Dr. Kleinman also reviewed the Mountain View Fire Protection District investigation report. He determined that Claimant's activity reflected in the report was inconsistent with the representations of function presented to him and other providers. Based on a review of the four co-employee interviews Dr. Kleinman concluded that Claimant's reported issues at Fleetwood were not related to sleepiness or fatigue but to competency. Dr. Kleinman concluded that Claimant's sleep disorder has not resulted in impairment, restrictions or limitations.

24. On December 28, 2016 the parties conducted the pre-hearing evidentiary deposition of Dr. O'Toole. Dr. O'Toole stated that it was prudent to take Claimant off work because he appeared to be deteriorating and "maybe the cognitive workload was impeding his recovery." By the original MMI date, Dr. O'Toole had treated Claimant for very close to two years "so I was surprised by the later diagnosis of narcolepsy and his degraded condition after that." Dr. O'Toole reiterated his opinion that "I support any reasonable recommendation to allow him to regain his work skills and engage in meaningful work activities." He reviewed a list of vocational options prepared by Respondents' vocational expert Roger Ryan. Dr. O'Toole agreed that Claimant was able to perform 22 of 25 listed job descriptions. However, he determined that Claimant could not return to his former job as a mechanical engineer. The jobs approved included: mechanical drafter, information clerk, hardware salesperson, cashier II, telephone solicitor, tutor, appointment clerk, motor vehicle dispatcher, collection clerk, unarmed security guard, production assembler, parking lot attendant, check cashier, ticket taker, restaurant host, sales clerk, janitor, dining room attendant, tool crib attendant, shipping and receiving clerk, and outside deliverer.

25. Dr. O'Toole reviewed Dr. Kleinman's evaluation and the Mountain View Fire Protection District investigation report. He noted that Claimant was apparently performing more activities than he expected. He stated that "[t]he picture that I had been given up to this point was that he was severely disabled. I'm now seeing some evidence that that may not be the case." He remarked that the information regarding disability that he had relied upon was self-reported. Dr. O'Toole noted that the more recent neuropsychiatric assessment showed "pretty normal" function and was inconsistent with Claimant's reports.

26. On January 26, 2017 the parties conducted the pre-hearing evidentiary deposition of Suzanne Kenneally, Psy.D. Dr. Kenneally testified that her testing did not support Claimant's assertion that he is unable to work. She concluded that she could not state with reasonable medical probability that Claimant's narcolepsy was caused by his August 24, 2012 industrial accident. Dr. Kenneally commented that "we don't have those kind of reliable, repeatable markers for narcolepsy, and we certainly have no way to discriminate if it is caused by traumatic brain injury, is caused by genetic history, or is caused by other trauma….I would say the science is out on this about what we can say." Dr. Kenneally determined that the temporal delay in Claimant's onset of sleep disturbance would be "highly atypical and would argue against it being caused by or related to the [traumatic brain injury]."

27. On February 1, 2017 the parties conducted the pre-hearing evidentiary deposition of Martin Reite, M.D. He stated that Claimant reported excessive sleepiness and severe fatigue. Dr. Reite reiterated that the sleep studies showed that Claimant suffered from narcolepsy. During the studies Claimant went into REM sleep within a short time of lying down to take a nap. Dr. Reite remarked that most people take about 90 minutes and do not enter REM sleep during naps because there is not enough time. He concluded that Claimant could not stay awake on a reliable basis and is at a high risk of unpredictable onsets of sleep.

28. Dr. Reite attributed Claimant's narcolepsy to his traumatic head injury on August 24, 2012. He theorized that Claimant suffers from "chronic traumatic encephalopathy" as a result of his industrial injuries. However, he acknowledged that the condition cannot be definitively diagnosed. Dr. Reite also recognized that "chronic traumatic encephalopathy" could not be proven within a reasonable degree of medical probability as the etiology of Claimant's symptoms. He explained that the only etiology that has been proven as the cause of narcolepsy is Orexin neurons in the brain. The Orexin neuroms are possibly an autoimmune phenomenon or genetic in origin. Ultimately, the question of "is it post-traumatic, or coincidental and might have occurred anyway?" cannot be answered. Dr. Reite summarized that "the majority of people with narcolepsy have not had a history of head trauma." and Claimant could have developed narcolepsy without head trauma. He explained that Claimant requires medications for his narcolepsy condition and associated symptoms of depression, daytime sleepiness and fatigue. Finally, the diagnosis of narcolepsy does not include the presumption of total disability.

29. Dr. D'Angelo testified at the hearing in this matter. She instructs the Level II certification class regarding causation analysis under the Colorado Workers' Compensation Act. Dr. D'Angelo was admitted as an expert in occupational medicine, internal medicine and causation analysis. She testified that she conducted research concerning narcolepsy and head trauma. Based upon the limits of the medical community reflected in the research and Claimant's medical record, she could not establish a causal connection between Claimant industrial injury and his development of narcolepsy. Dr. Reite referenced studies during his deposition that he claimed supported proof of medical causation between head trauma and narcolepsy. However, Dr. D'Angelo determined that they do not reach the conclusions asserted by Dr. Reite.

She specifically noted that the articles do not provide an evidence-based conclusion that narcolepsy is caused by head trauma.

30. Dr. D'Angelo explained that the temporal relationship between Claimant's industrial injuries on April 24, 2012 and his development of narcolepsy symptoms more than one year later was extremely important. Because traumatic brain injuries are acutely symptomatic, the delayed onset of Claimant's narcolepsy symptoms suggests an attenuated causal relationship between his accident and the development of narcolepsy. In fact, Claimant obtained a new job as a mechanical engineer after his industrial injuries and performed well. Moreover, the areas of Claimant's brain that were injured on August 24, 2012 were not likely the regions of the brain to produce narcolepsy. Dr. D'Angelo thus characterized Claimant's narcolepsy as an independent non-industrial condition that was not related to his work activities for Employer on August 24, 2012. Moreover, Claimant's need for narcolepsy medications is not related to his work accident.

31. Vocational Expert Katie G. Montoya testified at the hearing in this matter. On May 3, 2016 she prepared a vocational report to assess whether Claimant was able to work and earn wages. Based on her review of Claimant's educational background, prior work experience and medical records, Ms. Montoya concluded that Claimant was unable to earn any wages in any capacity. Ms. Montoya stated that, when determining if someone is capable of working, the ability to show up on time and be productive is required in almost every job. She acknowledged that from a physical standpoint Claimant has no restrictions that would prevent him from working. She stated that she was aware Dr. O'Toole approved a number of possible jobs, but remarked that a person must be hired to actually try a job. Claimant does not possess the level of alertness required to function in a job. Accordingly, Ms. Montoya concluded that Claimant was unable to earn any wages in any capacity.

32. Vocational Expert Roger Ryan testified at the hearing in this matter. On January 5, 2017 he prepared a vocational report to assess whether Claimant was able to work and earn wages in any capacity. Based on his review of Claimant's educational background, prior work experience and medical records, Mr. Ryan concluded that Claimant was able to work and earn wages in a number of different capacities. He noted that Claimant had developed a number of transferable skills based on his significant educational, work and military experience Mr. Ryan emphasized that Claimant's work at Fleetwood as a mechanical engineer after his industrial injuries reflected that he could function productively in the work environment. He saw nothing in Claimant's formal job reviews that narcolepsy was preventing him from completing his job duties at Fleetwood. Mr. Ryan identified a number of varied positions suitable for Claimant. Dr. O'Toole agreed that Claimant was able to perform 22 of 25 listed job descriptions but commented that he could not return to his former job as a mechanical engineer. The jobs approved included: mechanical drafter, information clerk, hardware salesperson, cashier II, telephone solicitor, tutor, appointment clerk, motor vehicle dispatcher, collection clerk, unarmed security guard, production assembler, parking lot attendant, check cashier, ticket taker, restaurant host, sales clerk, janitor, dining room attendant, tool crib attendant, shipping and receiving clerk, and outside deliverer.

Furthermore, Mr. Ryan explained that the preceding jobs did not constitute an exhaustive list and there were a number of suitable jobs for Claimant because of his extensive background and experience. He identified several jobs that Claimant could perform from home including customer service, telephone soliciting, dispatching, drafting and internet tutoring. Mr. Ryan concluded that, based on Claimant's human factors and work restrictions, he maintains the ability to earn wages in a number of positions.

33. On May 30, 2017 the parties conducted the post-hearing rebuttal evidentiary deposition of Dr. O'Toole. Dr. O'Toole clarified his recommendations about whether Claimant was capable of performing any work. He remarked that "[i]n terms of some of the specific recommendations I had, I think I made those too much off-the-cuff and probably without enough deliberation. And I would not make the same recommendations now." However, Dr. O'Toole acknowledged that there is a possibility that Claimant could perform some very limited work. He stated "it's just a matter if he can find the right opportunity, the right employer where productivity is not going to be very great and time demands are not an issue." Dr. O'Toole remarked that his change in recommendations did not completely prohibit work.

34. On June 2, 2017 the parties conducted the post-hearing rebuttal evidentiary deposition of Dr. Neagle. He explained that the temporal delay between the accident and Claimant's complaints of sleepiness did not change his opinion that Claimant's head injury caused him to develop narcolepsy. He also disagreed with Dr. D'Angelo's testimony that the specific area of the brain that can cause narcolepsy was not damaged. Dr. Neagle stated that damage to one specific area of the brain is not necessary to produce narcolepsy. He emphasized that there was no other potential cause for Claimant's development of narcolepsy besides his traumatic brain injury on August 24, 2012. He did not discover any genetic disposition or virus that could have caused Claimant's condition.

35. Claimant has failed to prove that it is more probably true than not that he is incapable of earning any wages and is entitled to receive PTD benefits as a result of the admitted industrial injuries he sustained during the course and scope of his employment with Employer on August 24, 2012. The record reveals that Claimant has developed a number of transferable job skills through education and experience that render him a suitable candidate for a number of employment opportunities. Initially, Claimant suffered significant head injuries while working as a Controls Engineer for Employer on August 24, 2012. He returned to work for Employer about two weeks after his accident, resigned his position and began employment with Fleetwood on November 12, 2012. Claimant continued to work for Fleetwood through February 4, 2015. During the period Claimant worked approximately 9-10 hours each day in a highly competitive environment. Claimant also began to report fatigue and on July 31, 2014 Dr. Newlin prescribed the stimulant Adderall for his day time somnolence. On September 10, 2014 Dr. Neagle determined that Claimant's history and sleep study warranted a diagnosis of narcolepsy. The narcolepsy diagnosis was later confirmed on repeat sleep testing.

36. Although Claimant has been diagnosed with narcolepsy there is conflicting evidence in the record about whether his August 24, 2012 industrial accident caused the condition. Drs. Reite and Neagle detailed that the causes of narcolepsy are varied and can be idiopathic, genetic, triggered by viral infections or the result of head trauma. They both attributed Claimant's narcolepsy to his traumatic head injury on August 24, 2012. However, the bulk of the medical evidence reflects that it is speculative to attribute Claimant's narcolepsy to his industrial accident. Dr. D'Angelo persuasively explained that the temporal relationship between Claimant's industrial injuries on April 24, 2012 and his development of narcolepsy symptoms more than one year later was extremely important. Because traumatic brain injuries are acutely symptomatic, the delayed onset of Claimant's narcolepsy symptoms suggests an attenuated causal relationship between his accident and the development of narcolepsy. Dr. D'Angelo thus characterized Claimant's narcolepsy as an independent non-industrial condition that was not related to his work activities for Employer on August 24, 2012. Dr. Kenneally also persuasively concluded that she could not state with reasonable medical probability that Claimant's narcolepsy was caused by his August 24, 2012 industrial accident. Dr. Kenneally commented that "we don't have those kind of reliable, repeatable markers for narcolepsy, and we certainly have no way to discriminate if it is caused by traumatic brain injury, is caused by genetic history, or is caused by other trauma." Dr. Kenneally determined that the temporal delay in Claimant's onset of sleep disturbance was "highly atypical" and was likely not related to his brain injuries. Accordingly, based on the significant temporal delay between Claimant's injury and development of narcolepsy symptoms as well as the lack of objective evidence connecting Claimant's head injuries to the development of narcolepsy, Claimant has failed to demonstrate that it is more probably true than not that his narcolepsy was caused by his August 24, 2012 industrial accident while working for Employer.

37. Nevertheless, the critical inquiry in this matter is not whether Claimant's narcolepsy was caused by his August 24, 2012 industrial accident but whether he is incapable of earning any wages in any capacity. Claimant has not demonstrated that his industrial injuries constituted a significant causative factor in rendering him unable to earn wages. Claimant has no physical work restrictions and a diagnosis of narcolepsy does not carry a presumption of PTD. Vocational Expert Mr. Ryan concluded that Claimant was able to work and earn wages in a number of different capacities. He noted that Claimant had developed a number of transferable skills based on his significant educational, work and military experience Mr. Ryan emphasized that Claimant's work at Fleetwood as a mechanical engineer after his industrial injuries reflected that he could function productively in the work environment. He identified a number of varied positions suitable for Claimant. Dr. O'Toole agreed that Claimant was able to perform 22 of 25 listed job descriptions. The jobs approved included: mechanical drafter, information clerk, hardware salesperson, cashier II, telephone solicitor, tutor, appointment clerk, motor vehicle dispatcher, collection clerk, unarmed security guard, production assembler, parking lot attendant, check cashier, ticket taker, restaurant host, sales clerk, janitor, dining room attendant, tool crib attendant, shipping and receiving clerk, and outside deliverer. Furthermore, Mr. Ryan explained that the preceding jobs did not constitute an exhaustive list and there were a number of suitable jobs for Claimant because of his extensive background and experience. Based on

Claimant's human factors and work restrictions, he maintains the ability to earn wages in a number of positions.

38. The bulk of the medical evidence supports Mr. Ryan's determination that Claimant has the ability to earn wages in some capacity. Dr. Grinman explained that Claimant had some limitations as a result of his narcolepsy, but the condition did not cause complete functional impairment. He specifically remarked that Claimant's narcolepsy would prohibit him from operating commercial motor vehicles but there were no other work limitations. Furthermore, the record is replete with medical opinions that significant work restrictions are not warranted. Claimant's sleep disorder has not rendered him unable to function or achieve productive employment.

39. In contrast, Vocational Expert Ms. Montoya concluded that Claimant was unable to earn any wages in any capacity. Ms. Montoya stated that, when determining if someone is capable of working, the ability to show up on time and be productive is required in almost every job. She remarked that Claimant does not possess the level of alertness required to function in a job. Moreover, Dr. O'Toole subsequently disavowed the job recommendations that he approved for Dr. Ryan. However, Dr. O'Toole acknowledged that there is a possibility that Claimant could perform some very limited work where productivity was not emphasized and time demands were not an issue. Moreover, Dr. Reite characterized Claimant as "seriously disabled" as a result of his narcolepsy. Finally, Dr. Neagle explained that he was concerned about Claimant's ability to function as a mechanical engineer but acknowledged that Claimant could perform other jobs.

40. Although medical providers disagree about the extent of Claimant's ability to obtain and maintain employment, the record reveals that Claimant has developed a number of transferable job skills through education and experience that render him a suitable candidate for a number of employment opportunities. Considering Claimant's vocational attributes and human factors including age, education, work history, transferable skills, communication skills and work restrictions Claimant is capable of earning wages in some capacity. Accordingly, the record reflects that employment exists that is reasonably available to Claimant under his particular circumstances. Accordingly, Claimant's request for PTD benefits is denied and dismissed.

41. Claimant has failed to establish that it is more probably true than not that he is entitled to receive reasonable, necessary and related medical maintenance benefits designed to relieve the effects of his August 24, 2012 industrial injuries or prevent further deterioration of his condition. The medical record reveals that it is speculative to attribute Claimant's narcolepsy to his August 24, 2012 industrial accident. Claimant's current medications include Bupropion (Wellbutrin XL), Destroamphetamine-amphetamine (Adderall XR), Ondansetron (Zofran), Clomipramine and Zolpidem Tartrate (Ambien PO). As Dr. Reite noted, Claimant requires the medications for his narcolepsy condition and associated symptoms of depression, daytime sleepiness and fatigue. However, Dr. D'Angelo explained that Claimant's need for narcolepsy medication is not related to his August 24, 2012 industrial injuries. The significant temporal delay between Claimant's injury and development of narcolepsy symptoms as

well as the lack of objective evidence connecting Claimant's head injuries to the development of narcolepsy suggest that his need for medications is not causally related to his work accident. Accordingly, Claimant's request for medical maintenance benefits in the form of medications to treat his narcolepsy and associated symptoms is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Permanent Total Disability Benefits

4. Prior to 1991 the Act did not define PTD. *Weld County School Dist. RE-12 v. Bymer*, 955 P.2d 550, 553 (Colo. 1998). Under the prevailing case law standard the ability of a claimant to earn occasional wages or perform certain types of gainful work did not preclude a finding of PTD. *Id.* at 555. A PTD determination prior to 1991 "turned on the claimant's loss of earning capacity or efficiency in some substantial degree in a field of general employment." *Id.*

5. In 1991 the General Assembly added a definition of PTD to the Act. *See* §8-40-201(16.5)(a), C.R.S. Under §8-40-201(16.5)(a), C.R.S. PTD means "the employee is unable to earn any wages in the same or other employment." The new definition of PTD was intended to tighten and restrict eligibility for PTD benefits. *Bymer*, 955 P.2d at 554. A claimant thus cannot obtain PTD benefits if he is capable of earning

wages in any amount. *Id.* at 556. Therefore, to establish a claim for PTD a claimant shoulders the burden of proving by a preponderance of the evidence that he is unable to earn any wages in the same or other employment. *See* §8-43-201, C.R.S. The phrase, "to earn any wages in the same or other employment," "provides a real and non-illusory bright line rule for the determination whether a claimant has been rendered permanently totally disabled." *Lobb v. Indus. Claim Appeals Office*, 948 P.2d 115, 119 (Colo. App. 1997). Finally, there is no requirement that respondents must locate a specific job for a claimant to overcome a prima facie showing of permanent total disability. *Hennenberg v. Value-Rite Drugs, Inc.,* W.C. No. 4-148-050 (ICAP, Sept. 26, 1995*); Rencehausen v. City and County of Denver*, W.C. No. 4-110-764 (ICAP, Nov. 23, 1993).

6. The term "employment" is defined in the Workers' Compensation Act in §8-40-201(8), C.R.S. This section states that employment is, "[a]ny trade, occupation, job, position, or process of manufacture or any method of carrying on any trade, occupation, job, position or process of manufacture in which any person may be engaged." Section 8-40-201(19), C.R.S. defines "wages" as the money rate for which the employee is to be compensated for services. For purposes of PTD "any wages" means more than zero. *See McKinney v. Indus. Claim Appeals Office*, 894 P.2d 42 (Colo. App. 1995) (determining that the ability to earn wages in "any" amount is sufficient to disqualify a claimant from receiving PTD benefits).

7. A claimant must demonstrate that his industrial injuries constituted a "significant causative factor" in order to establish a claim for PTD. *In Re Olinger,* W.C. No. 4-002-881 (ICAP, Mar. 31, 2005). A "significant causative factor" requires a "direct causal relationship" between the industrial injuries and a PTD claim. *In Re of Dickerson,* W.C. No. 4-323-980 (ICAP, July 24, 2006); *see Seifried v. Industrial Comm'n,* 736 P.2d 1262, 1263 (Colo. App. 1986). The preceding test requires the ALJ to ascertain the "residual impairment caused by the industrial injury" and whether the impairment was sufficient to result in PTD without regard to subsequent intervening events. *In Re of Dickerson,* W.C. No. 4-323-980 (ICAP, July 24, 2006). Resolution of the causation issue is a factual determination for the ALJ. *Id.*

8. In ascertaining whether a claimant is able to earn any wages, the ALJ may consider various "human factors," including a claimant's physical condition, mental ability, age, employment history, education, and availability of work that the claimant could perform. *Bymer*, 955 P.2d at 556; *Holly Nursing v. ICAO,* 992 P.2d 701, 703 (Colo. App. 1999). The critical test, which must be conducted on a case-by-case basis, is whether employment exists that is reasonably available to the claimant under his particular circumstances. *Bymer,* 955 P.2d at 557. Ultimately, the determination of whether a Claimant suffers from a permanent and total disability is an issue of fact for resolution by the ALJ. *In Re Selvage,* W.C. No. 4-486-812 (ICAP, Oct. 9, 2007).

9. As found, Claimant has failed to prove by a preponderance of the evidence that he is incapable of earning any wages and is entitled to receive PTD benefits as a result of the admitted industrial injuries he sustained during the course and scope of his employment with Employer on August 24, 2012. The record reveals that

Claimant has developed a number of transferable job skills through education and experience that render him a suitable candidate for a number of employment opportunities. Initially, Claimant suffered significant head injuries while working as a Controls Engineer for Employer on August 24, 2012. He returned to work for Employer about two weeks after his accident, resigned his position and began employment with Fleetwood on November 12, 2012. Claimant continued to work for Fleetwood through February 4, 2015. During the period Claimant worked approximately 9-10 hours each day in a highly competitive environment. Claimant also began to report fatigue and on July 31, 2014 Dr. Newlin prescribed the stimulant Adderall for his day time somnolence. On September 10, 2014 Dr. Neagle determined that Claimant's history and sleep study warranted a diagnosis of narcolepsy. The narcolepsy diagnosis was later confirmed on repeat sleep testing.

10. As found, although Claimant has been diagnosed with narcolepsy there is conflicting evidence in the record about whether his August 24, 2012 industrial accident caused the condition. Drs. Reite and Neagle detailed that the causes of narcolepsy are varied and can be idiopathic, genetic, triggered by viral infections or the result of head trauma. They both attributed Claimant's narcolepsy to his traumatic head injury on August 24, 2012. However, the bulk of the medical evidence reflects that it is speculative to attribute Claimant's narcolepsy to his industrial accident. Dr. D'Angelo persuasively explained that the temporal relationship between Claimant's industrial injuries on April 24, 2012 and his development of narcolepsy symptoms more than one year later was extremely important. Because traumatic brain injuries are acutely symptomatic, the delayed onset of Claimant's narcolepsy symptoms suggests an attenuated causal relationship between his accident and the development of narcolepsy. Dr. D'Angelo thus characterized Claimant's narcolepsy as an independent non-industrial condition that was not related to his work activities for Employer on August 24, 2012. Dr. Kenneally also persuasively concluded that she could not state with reasonable medical probability that Claimant's narcolepsy was caused by his August 24, 2012 industrial accident. Dr. Kenneally commented that "we don't have those kind of reliable, repeatable markers for narcolepsy, and we certainly have no way to discriminate if it is caused by traumatic brain injury, is caused by genetic history, or is caused by other trauma." Dr. Kenneally determined that the temporal delay in Claimant's onset of sleep disturbance was "highly atypical" and was likely not related to his brain injuries. Accordingly, based on the significant temporal delay between Claimant's injury and development of narcolepsy symptoms as well as the lack of objective evidence connecting Claimant's head injuries to the development of narcolepsy, Claimant has failed to demonstrate that it is more probably true than not that his narcolepsy was caused by his August 24, 2012 industrial accident while working for Employer.

11. As found, nevertheless, the critical inquiry in this matter is not whether Claimant's narcolepsy was caused by his August 24, 2012 industrial accident but whether he is incapable of earning any wages in any capacity. Claimant has not demonstrated that his industrial injuries constituted a significant causative factor in rendering him unable to earn wages. Claimant has no physical work restrictions and a diagnosis of narcolepsy does not carry a presumption of PTD. Vocational Expert Mr.

Ryan concluded that Claimant was able to work and earn wages in a number of different capacities. He noted that Claimant had developed a number of transferable skills based on his significant educational, work and military experience Mr. Ryan emphasized that Claimant's work at Fleetwood as a mechanical engineer after his industrial injuries reflected that he could function productively in the work environment. He identified a number of varied positions suitable for Claimant. Dr. O'Toole agreed that Claimant was able to perform 22 of 25 listed job descriptions. The jobs approved included: mechanical drafter, information clerk, hardware salesperson, cashier II, telephone solicitor, tutor, appointment clerk, motor vehicle dispatcher, collection clerk, unarmed security guard, production assembler, parking lot attendant, check cashier, ticket taker, restaurant host, sales clerk, janitor, dining room attendant, tool crib attendant, shipping and receiving clerk, and outside deliverer. Furthermore, Mr. Ryan explained that the preceding jobs did not constitute an exhaustive list and there were a number of suitable jobs for Claimant because of his extensive background and experience. Based on Claimant's human factors and work restrictions, he maintains the ability to earn wages in a number of positions.

12. As found, the bulk of the medical evidence supports Mr. Ryan's determination that Claimant has the ability to earn wages in some capacity. Dr. Grinman explained that Claimant had some limitations as a result of his narcolepsy, but the condition did not cause complete functional impairment. He specifically remarked that Claimant's narcolepsy would prohibit him from operating commercial motor vehicles but there were no other work limitations. Furthermore, the record is replete with medical opinions that significant work restrictions are not warranted. Claimant's sleep disorder has not rendered him unable to function or achieve productive employment.

13. As found, in contrast, Vocational Expert Ms. Montoya concluded that Claimant was unable to earn any wages in any capacity. Ms. Montoya stated that, when determining if someone is capable of working, the ability to show up on time and be productive is required in almost every job. She remarked that Claimant does not possess the level of alertness required to function in a job. Moreover, Dr. O'Toole subsequently disavowed the job recommendations that he approved for Dr. Ryan. However, Dr. O'Toole acknowledged that there is a possibility that Claimant could perform some very limited work where productivity was not emphasized and time demands were not an issue. Moreover, Dr. Reite characterized Claimant as "seriously disabled" as a result of his narcolepsy. Finally, Dr. Neagle explained that he was concerned about Claimant's ability to function as a mechanical engineer but acknowledged that Claimant could perform other jobs.

14. As found, although medical providers disagree about the extent of Claimant's ability to obtain and maintain employment, the record reveals that Claimant has developed a number of transferable job skills through education and experience that render him a suitable candidate for a number of employment opportunities. Considering Claimant's vocational attributes and human factors including age, education, work history, transferable skills, communication skills and work restrictions Claimant is capable of earning wages in some capacity. Accordingly, the record reflects that employment exists that is reasonably available to Claimant under his particular

circumstances. Accordingly, Claimant's request for PTD benefits is denied and dismissed.

Medical Maintenance Benefits

15. To prove entitlement to medical maintenance benefits, a claimant must present substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve the effects of the industrial injury or prevent further deterioration of his condition. *Grover v. Industrial Comm'n.,* 759 P.2d 705, 710-13 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609, 611 (Colo. App. 1995). Once a claimant establishes the probable need for future medical treatment he "is entitled to a general award of future medical benefits, subject to the employer's right to contest compensability, reasonableness, or necessity." *Hanna v. Print Expediters, Inc.*, 77 P.3d 863, 866 (Colo. App. 2003); *see Karathanasis v. Chilis Grill & Bar,* W.C. No. 4-461-989 (ICAP, Aug. 8, 2003). Whether a claimant has presented substantial evidence justifying an award of *Grover* medical benefits is one of fact for determination by the Judge. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 919 P.2d 701, 704 (Colo. App. 1999).

16. As found, Claimant has failed to establish by a preponderance of the evidence that he is entitled to receive reasonable, necessary and related medical maintenance benefits designed to relieve the effects of his August 24, 2012 industrial injuries or prevent further deterioration of his condition pursuant to *Grover v. Industrial Comm'n.,* 759 P.2d 705 (Colo. 1988). The medical record reveals that it is speculative to attribute Claimant's narcolepsy to his August 24, 2012 industrial accident. Claimant's current medications include Bupropion (Wellbutrin XL), Destroamphetamine-amphetamine (Adderall XR), Ondansetron (Zofran), Clomipramine and Zolpidem Tartrate (Ambien PO). As Dr. Reite noted, Claimant requires the medications for his narcolepsy condition and associated symptoms of depression, daytime sleepiness and fatigue. However, Dr. D'Angelo explained that Claimant's need for narcolepsy medication is not related to his August 24, 2012 industrial injuries. The significant temporal delay between Claimant's injury and development of narcolepsy symptoms as well as the lack of objective evidence connecting Claimant's head injuries to the development of narcolepsy suggest that his need for medications is not causally related to his work accident. Accordingly, Claimant's request for medical maintenance benefits in the form of medications to treat his narcolepsy and associated symptoms is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request for PTD benefits is denied and dismissed

2. Claimant's request for medical maintenance benefits for his August 24, 2012 industrial injuries is denied and dismissed.

3. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: August 28, 2017.

ISSUES

1. Whether Claimant has proven by a preponderance of the evidence that she sustained a compensable left knee injury during the course and scope of her employment with Employer on August 18, 2014 in case number 4-972-238-02.

2. Whether Respondents have produced clear and convincing evidence to overcome the Division Independent Medical Examination (DIME) opinion of Bennett I. Machanic, M.D. that Claimant has not reached Maximum Medical Improvement (MMI) and suffered a 20% whole person impairment rating as a result of her April 8, 2016 admitted left knee injury in case number 5-012-306-01.

3. A determination of Claimant's Average Weekly Wage (AWW).

4. Whether Claimant has demonstrated by a preponderance of the evidence that she is entitled to receive Temporary total Disability (TTD) benefits for the period April 13, 2016 until terminated by statute.

FINDINGS OF FACT

1. Claimant is a 54 year old female who has worked as a Greenhouse Laborer for Employer since 2009. Claimant filed two Workers' Compensation claims involving her left knee that are the subject of this Order.

August 18, 2014 Date of Injury (Case Number 4-972-238-02)

2. Claimant testified that on August 18, 2014 she suffered a left knee injury during the course of her employment while descending a ladder. While carrying garden materials Claimant misjudged the final rung of the ladder and fell onto both knees. Although Claimant notified her supervisor Jesus Padron of the incident she did not report any injury and declined medical treatment. Claimant subsequently continued to perform her regular job duties until she was laid-off for the season in September 2014. Claimant did not obtain any medical care for her left knee from August through November 2014.

3. Claimant returned to work for Employer in December 2014. On December 24, 2014 Claimant told co-worker Letty Calderon that she was going home from work because her leg hurt. When Ms. Calderon asked Claimant if she fell or hurt herself at work, Claimant stated: "No, this happened at home." Another co-worker, Alma Rodriguez, saw Claimant at work sometime after Christmas. Ms. Rodriguez greeted Claimant and asked her what happened because she was on crutches. Claimant responded that she hurt her leg after tripping on some carpet at home. Claimant stated

that she tried to work with her injured leg, but it hurt too much and she had gone to see her personal care physician.

4. Claimant first sought medical treatment for her left knee on December 26, 2014 through Advanced Urgent Care. She was diagnosed with a synovial/Baker's cyst of the left knee. Claimant noted that she had started having pain in the left knee within the past three days and her symptoms had progressively worsened. The physician concluded that there was "no injury." Claimant did not mention any ladder incident at work on August 18, 2014.

5. On January 2, 2015 Claimant visited knee surgeon Mitchel E. Robinson, M.D. at Panorama Orthopedics & Spine Center for an evaluation. Claimant did not mention any work injury on August 14, 2014. Dr. Robinson documented that Claimant presented with pain, crepitus, swelling, decreased range of motion, stiffness, weakness and instability of the left knee. He reported that Claimant "states that the symptoms have been acute non-traumatic" and "began 1 day ago." A physical examination revealed diffuse tenderness, severe crepitation and a negative McMurray's test of the left knee. An x-ray reflected severe tricompartment osteoarthritis. Dr. Robinson injected Claimant's left knee with cortisone. He commented that Claimant might require a total left knee replacement as her symptoms warranted.

6. On January 9, 2015 Employer completed a First Report of Injury regarding the August 18, 2014 incident. Claimant noted that she fell from a ladder and declined treatment through Employer's designated medical provider. The document also noted that Claimant did not lose any time from work as a result of the August 18, 2014 incident.

7. Based on a referral from Dr. Robinson, Claimant visited knee surgeon Aaron Baxter, M.D. on February 5, 2015 for an examination. Dr. Baxter took a history from Claimant that she "injured her left knee *a* few weeks ago while at work. Since then the knee has continued to be painful. She has difficulty weight bearing. There is increased pain at work." Claimant did not mention that she sustained any injury approximately five months earlier on August 18, 2014 when she was descending a ladder at work.

8. Dr. Baxter diagnosed Claimant with degenerative arthritis of the left knee and discussed the possibility of a total left knee arthroscopy. Dr. Baxter did not determine that the need for a total left knee replacement was work-related. He instead suggested that the procedure should be scheduled outside of the Workers' Compensation system because of Claimant's osteoarthritis. Claimant received a left knee injection that provided some relief. She was scheduled for a total left knee replacement but ultimately declined the procedure. Dr. Baxter recommended a return visit when Claimant's left knee symptoms worsened.

9. On August 10, 2016 Claimant filed a Claim for Workers' Compensation for the August 18, 2014 incident. The claim was assigned case number 4-972-238-02.

10. Claimant has failed to prove that it is more probably true than not that she sustained a compensable left knee injury during the course and scope of her employment with Employer on August 18, 2014 in case number 4-972-238-02. Initially, Claimant told Employer that she had fallen from a ladder but declined medical care. She then continued to work her regular, full duty job until September 2014 when she was laid off for the season. Claimant did not seek medical treatment for her left knee until December 2014. She returned to work on crutches and told two co-workers on that she hurt her left knee at home.

11. On December 26, 2014 Claimant sought treatment through Advanced Urgent Care. Claimant noted that she had started having pain in the left knee within the past three days and her symptoms had progressively worsened. Claimant subsequently visited knee surgeons Drs. Robinson and Baxter in January 2015. Instead, Claimant presented to Dr. Robinson on January 2, 2015 with pain, crepitus, swelling, decreased range of motion, stiffness, weakness and instability on the left knee but failed to mention anything about the ladder incident. Claimant told Dr. Baxter that she had injured her knee at work a few weeks before the January 2015 visit. Drs. Robinson and Baxter determined that Claimant might need a left total knee replacement because of her severe, degenerative osteoarthritis. Claimant did not file a claim for Workers' Compensation until August 10, 2016 or approximately two years after the ladder incident. The significant temporal delay, numerous inconsistencies regarding the date of a left knee injury, failure to mention an August 18, 2014 event to medical providers and significant degenerative osteoarthritis renders it speculative to attribute Claimant's left knee symptoms to a fall from a ladder at work on August 18, 2014. Accordingly, Claimant's claim for Workers' Compensation benefits in case number 4-972-238-02 is denied and dismissed.

April 8, 2016 Date of Injury (Case Number 5-012-306-01)

12. Claimant explained that on April 8, 2016 she was walking briskly near an area with flower pots and pallets while working for Employer. Her right foot caught one of the pallets and she fell to the ground on her hands and knees. Claimant remained on the ground for 10 minutes before being helped up by her supervisor and a coworker. Claimant was unable to complete her shift.

13. On April 12, 2016 Claimant presented to Authorized Treating Physician (ATP) Katherine Drapeau, D.O. at HealthONE Occupational Medicine and Rehabilitation with complaints of bilateral knee pain. Claimant specifically reported anterior and posterior pain in her left knee. Dr. Drapeau noted a prior similar injury in which Claimant fell from a ladder. Claimant reported that she was symptom-free prior to the recent fall and rated her current pain at an 8/10 or 9/10. X-rays of Claimant's left knee revealed degenerative joint disease with several loose bodies as well as mildly decreased medial and lateral joint space. Dr. Drapeau diagnosed Claimant with bilateral knee contusions. She prescribed Naproxen, a knee brace and physical therapy. Dr. Drapeau restricted Claimant to only seated work.

14. On May 10, 2016 Claimant underwent a left knee MRI. The MRI revealed a torn medial meniscus.

15. On May 26, 2016 Claimant visited Christopher Isaacs, M.D. for an orthopedic evaluation. Claimant reported that she tripped over a pallet and fell onto her left knee. Dr. Isaacs reviewed the May 18, 2016 MRI that showed complex tearing of the medial and lateral meniscus, mild degenerative changes of the tibiofemoral joint and more significant degenerative changes at the patellofemoral joint. He diagnosed a symptomatic, torn medial and lateral meniscus of the left knee and mild degenerative joint disease. Dr. Isaacs recommended a knee arthroscopy and debridement.

16. On June 14, 2016 James P. Lindberg, M.D. conducted a Physician Advisor review for Insurer. He determined that Claimant's knee complaints were caused by her pre-existing osteoarthritis. Insurer denied Dr. Isaacs' surgical request.

17. On June 21, 2016 Dr. Isaacs sent an appeal to Insurer requesting authorization for Claimant's surgery. He explained:

> Following the event she underwent an MRI which demonstrated complex tearing of her menisci. On the MRI there is an effusion consistent with recent injury. There is no documentation that she had tearing of her meniscus prior to the date of her injury.
>
> I am in receipt of the denial for surgery from Dr. Lindberg. He is denying surgery based on the fact that she had problems with her knee in the past. However, the extent of the problems was not documented. I am not aware of a prior MRI that shows she had a torn meniscus prior to this injury.

18. On August 15, 2016 Claimant underwent a comprehensive independent medical examination with knee surgeon Jon Erickson, M.D. Dr. Erickson engaged in a Level II accredited causality determination and conducted a thorough medical records review. He determined that Claimant's left knee complaints were caused by advanced, chronic, degenerative and pre-existing tri-compartmental osteoarthritis. There was no objective evidence of worsening or aggravation related to the admitted April 8, 2016 knee contusions.

19. On August 31, 2016 ATP Dr. Drapeau placed Claimant at Maximum Medical Improvement (MMI) effective August 15, 2016 for her left knee. She commented that Claimant did not suffer any permanent impairment or require medical maintenance care. On September 2, 2016 Insurer filed a Final Admission of Liability (FAL) consistent with Dr. Drapeau's MMI and impairment determinations.

20. Claimant challenged Dr. Drapeau's MMI and impairment determinations and sought a Division Independent Medical Examination (DIME). On January 18, 2017 Claimant underwent a DIME with Bennett I. Machanic, M.D. He concluded that Claimant had not reached MMI because she required some form of knee surgery. Dr.

Machanic remarked that “the pivotal event is April 8, 2016 but it is not even clear precisely what happened that day.” He explained:

> I think there were significant degenerative changes in the left knee, but the April 8, 2016, event appears to have been the point where significant pathology and ongoing impairment developed. Unfortunately the medical record is rather conflicting whether Claimant had additional injuries or not. Under the circumstances in the absence of preceding MRI studies and better documentation of other injuries, I must say that we cannot easily apportion this and it is easiest and most rational to place the entire situation as of April 8, 2016, but it is not even clear precisely what happened on that day.

21. Dr. Machanic concluded that Claimant suffers significant left knee problems and requires surgery. However, he did not know whether the surgery involved an arthroscopic procedure or a total left knee replacement because the type of surgery was admittedly “beyond my area of specialization and I would defer the surgical choices to the surgeons.”

22. Dr. Machanic assigned Claimant a 49% left lower extremity rating that converted to a 20% whole person impairment rating. The rating included an impairment for arthritis and a meniscus tear. At the end of his report Dr. Machanic recommended that Claimant have medial meniscus tear surgery because the meniscal tears were consistent with the work injury. Dr. Machanic repeated that “I must caution that there are inconsistencies in the record and it is hard for me to accept at face value that everything that I see clinically today is just related to the one injury of April 8, 2016.”

23. On April 18, 2017 Claimant underwent an independent medical examination with Dr. Lindberg. In addressing causation, Dr. Lindberg determined that Claimant’s left knee MRI did not reflect an acute injury. Dr. Lindberg also did not think Claimant’s injuries were traumatic enough to cause the meniscal tears or that the mechanism of injury was consistent with meniscal tears. He concluded that Claimant’s problem was advanced osteoarthritis secondary to age and patellar malalignment. Contrary to Dr. Machanic’s DIME opinion Dr. Lindberg explained that that there was no evidence of an aggravation, acceleration, or exacerbation because Claimant was already symptomatic. Accordingly, Claimant did not suffer an industrial left knee injury on April 8, 2016.

24. Dr. Erickson testified at the hearing in this matter. He maintained that Claimant’s left knee complaints were caused by advanced, chronic, degenerative and pre-existing tri-compartmental osteoarthritis. There was no objective evidence of worsening or aggravation in Claimant’s left knee related to the admitted April 8, 2016 knee contusions. Dr. Erickson noted that “had this minor injury not occurred to her knee it is more likely than not that her symptoms would be identical to what they are right now.”

25. Dr. Lindberg also testified at the hearing in this matter. He maintained that Claimant's left knee complaints were caused by chronic, degenerative and pre-existing osteoarthritis. There was no objective evidence of worsening or aggravation in Claimant's left knee related to the admitted April 8, 2016 injury. Dr. Lindberg commented that Claimant's left knee MRI revealed a chronic, degenerative condition and not an acute injury. He specifically remarked that Claimant's left knee condition was in the same condition that it would have been absent the April 8, 2016 fall.

26. Dr. Lindberg also addressed Dr. Machanic's DIME determination. He explained that physicians are instructed at the Division of Workers' Compensation Level II training course to perform a causality assessment regarding an injury. However, Dr. Machanic failed to perform a causality assessment, violated the Level II training mandate and thus erred in his DIME determination that Claimant has not reached MMI.

27. On June 6, 2017 the parties conducted the post-hearing evidentiary deposition of Dr. Machanic. Dr. Machanic testified that Claimant suffered a left knee injury on April 8, 2016 and required surgical intervention to alleviate her pain. He deferred to surgeons for a determination of the appropriate type of left knee surgery. Dr. Machanic specifically explained that "I am responding to four orthopedic surgeons, but I'm cast in the role, actually, of the referee because I'm a Level II examiner, so I don't really take sides." Dr. Machanic summarized that Claimant suffered from pre-existing left knee structural problems that made her more susceptible to an injury. However, in the absence of a previous impairment rating apportionment was inappropriate. Finally, Dr. Mechanic explained that, because Claimant had not reached MMI and requires surgery, he only assigned a provisional impairment rating.

28. On June 15, 2017 the parties conducted the post-hearing evidentiary deposition of Dr. Erickson. Dr. Erickson evaluated the cause of Claimant's left knee symptoms. In conducting a causation analysis, he considered diagnostic testing, medical records, subjective complaints and medical literature. Dr. Erickson testified that osteoarthritis of the knee joint and progression of symptoms without injury is detailed in the medical literature. Sometimes arthritic knee pain happens with a specific activity and sometimes the knee just starts hurting. "But the thing that is important is that the osteoarthritis is not going to get better over time. It is going to get worse. And as it gets worse, somewhere in there you are going to start having symptoms, which are unremitting . . ." Claimant's minor work-related knee contusions in April 2016 did not cause her left knee symptoms or accelerate the need for a total knee replacement.

29. Dr. Erickson detailed that Claimant required a total knee replacement prior to her April 8, 2016 injury:

> Dr. Robinson may have opined that somewhere down the road [Claimant] would need a total knee replacement, but we have another medical opinion from Dr. Baxter, when he evaluated her, that in April – or February of 2015, that she needs a total knee. He was ready to proceed with scheduling except she declined the offer. So I don't know how we

can make a cogent argument that if she saw an orthopedic surgeon in February 2015, who, after reviewing her imaging studies and listening to her symptoms, was ready to schedule a total knee replacement. How in the world can we say that now it is the result of this injury on April 8th? It just doesn't float."

30. Respondents have produced clear and convincing evidence to overcome the DIME opinion of Dr. Machanic that Claimant has not reached MMI and suffered a 20% whole person impairment rating as a result of her April 8, 2016 admitted left knee injury. Initially, Dr. Machanic concluded that Claimant had not reached MMI for her April 8, 2016 left knee injury because she required some form of knee surgery. However, knee surgeons Drs. Lindberg and Erickson both conducted a thorough records review and engaged in a Level II accredited causality assessment regarding Claimant's continued left knee symptoms. They explained that Claimant's left knee complaints were caused by advanced, chronic, degenerative and pre-existing tri-compartmental osteoarthritis. There was no objective evidence of worsening or aggravation in Claimant's left knee related to the April 8, 2016 admitted industrial injury. In contrast to Dr. Machanic's DIME determination, Claimant reached MMI without any impairment for her April 8, 2016 left knee injury.

31. Drs. Lindberg and Erickson persuasively explained that Dr. Machanic failed to conduct a causality assessment in accordance with the Colorado Division of Worker's Compensation Level II accredited teachings. Dr. Machanic did not provide any analysis to support his conclusion that Claimant's April 8, 2016 injury was the "pivotal event" because it rendered her left knee permanently symptomatic. He also did not explain why he concluded that Claimant's continued symptoms are from the April 8, 2016 incident and not the progression of severe osteoarthritis that Drs. Robinson and Baxter predicted would continue absent subsequent injury. Drs. Lindberg and Erickson persuasively explained that Dr. Machanic, as the DIME physician, was required to analyze causality based upon the Colorado Division of Workers' Compensation Level II accredited teachings, not "pick somebody to believe" and base his opinion on Claimant's statements even when contradicted by the medical records. Notably, Dr. Machanic explained that "we cannot easily apportion this and it is easiest and most rational to place the entire situation as of April 8, 2016, but it is not even clear precisely what happened on that day." Finally, Dr. Machanic erroneously assigned Claimant a 20% whole person impairment rating as a result of her April 8, 2016 admitted left knee injury because her symptoms were the result of the continued progression of severe osteoarthritis.

32. Drs. Lindberg and Erickson persuasively concluded that Dr. Machanic's DIME opinions regarding MMI and permanent impairment were incorrect. Because Claimant's current symptoms are related to the expected progression of the pre-existing and non-work related osteoarthritis, Claimant's is not entitled to a permanent impairment rating. Based on the opinions of Drs. Lindberg and Erickson, Dr. Machanic failed to perform a causality assessment pursuant to the Level II teachings. Instead, Dr. Machanic merely deferred to other doctors because it was the "easiest and most

rational" to attribute Claimant's symptoms to the April 8, 2016 incident. Accordingly, Respondents have produced unmistakable evidence free from serious or substantial doubt that Dr. Machanic's MMI determination and permanent impairment rating were incorrect. Based on the determination of ATP Dr. Drapeau Claimant reached MMI on August 15, 2016 with no permanent impairment.

33. Claimant worked approximately 40 hours per week plus occasional overtime for Employer. She earned $9.46 each hour. In considering Claimant's pay stubs for the period ending January 9, 2016 through April 2, 2016, Claimant earned a total of $7,111.85 from Employer. Dividing $7,111.85 by seven biweekly pay periods yields an AWW of $507.99. Claimant also paid $39.14 each week for health and dental insurance. Adding $507.99 and $39.14 yields a total AWW of $547.13. An AWW of $547.13 constitutes a fair approximation of Claimant's wage loss and diminished earning capacity.

34. Claimant has demonstrated that it is more probably true than not that she is entitled to receive TTD benefits for the period April 13, 2016 until terminated by statute. Respondents have overcome Dr. Machanic's DIME determination by clear and convincing evidence that Claimant has not reached MMI. ATP Dr. Drapeau persuasively concluded that Claimant reached MMI on August 15, 2016 with no permanent impairment. Claimant's entitlement to TTD benefits terminated by operation of law when she reached MMI. Accordingly, Claimant shall receive TTD benefits for her admitted April 8, 2016 left knee injury for the period April 13, 2016 until she reached MMI on August 15, 2016.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the

reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Compensability of August 18, 2014 Date of Injury (Case Number 4-972-238-02)

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAP, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

7. As found, Claimant has failed to prove by a preponderance of the evidence that she sustained a compensable left knee injury during the course and scope of her employment with Employer on August 18, 2014 in case number 4-972-238-02. Initially, Claimant told Employer that she had fallen from a ladder but declined medical care. She then continued to work her regular, full duty job until September 2014 when she was laid off for the season. Claimant did not seek medical treatment for her left knee until December 2014. She returned to work on crutches and told two co-workers on that she hurt her left knee at home.

8. As found, On December 26, 2014 Claimant sought treatment through Advanced Urgent Care. Claimant noted that she had started having pain in the left knee within the past three days and her symptoms had progressively worsened. Claimant subsequently visited knee surgeons Drs. Robinson and Baxter in January 2015. Instead, Claimant presented to Dr. Robinson on January 2, 2015 with pain, crepitus, swelling, decreased range of motion, stiffness, weakness and instability on the left knee but failed to mention anything about the ladder incident. Claimant told Dr. Baxter that she had injured her knee at work a few weeks before the January 2015 visit. Drs. Robinson and Baxter determined that Claimant might need a left total knee replacement because of her severe, degenerative osteoarthritis. Claimant did not file a claim for Workers' Compensation until August 10, 2016 or approximately two years after the ladder incident. The significant temporal delay, numerous inconsistencies regarding the date of a left knee injury, failure to mention an August 18, 2014 event to medical providers and significant degenerative osteoarthritis renders it speculative to attribute Claimant's left knee symptoms to a fall from a ladder at work on August 18, 2014. Accordingly, Claimant's claim for Workers' Compensation benefits in case number 4-972-238-02 is denied and dismissed.

Overcoming the DIME

9. In ascertaining a DIME physician's opinion, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998). A DIME physician's determination regarding MMI and permanent impairment consists of his initial report and any subsequent opinions. *In Re Dazzio,* W.C. No. 4-660-149 (ICAP, June 30, 2008); *see Andrade v. Industrial Claim Appeals Office,* 121 P.3d 328 (Colo. App. 2005).

10. A DIME physician is required to rate a claimant's impairment in accordance with the *AMA Guides*. §8-42-107(8)(c), C.R.S.; *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117, 1118 (Colo. App. 2003). However, deviations from the *AMA Guides* do not mandate that the DIME physician's impairment rating was incorrect. *In Re Gurrola,* W.C. No. 4-631-447 (ICAP, Nov. 13, 2006). Instead, the ALJ may consider a technical deviation from the *AMA Guides* in determining the weight to be accorded the DIME physician's findings. *Id.* Whether the DIME physician properly applied the *AMA Guides* to determine an impairment rating is generally a question of fact for the ALJ. *In Re Goffinett,* W.C. No. 4-677-750 (ICAP, Apr. 16, 2008).

. 11. A DIME physician's findings of MMI, causation, and impairment are binding on the parties unless overcome by "clear and convincing evidence." §8-42-107(8)(b)(III), C.R.S.; *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear

and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAP, July 19, 2004); *see Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAP, Nov. 17, 2000).

12. As found, Respondents have produced clear and convincing evidence to overcome the DIME opinion of Dr. Machanic that Claimant has not reached MMI and suffered a 20% whole person impairment rating as a result of her April 8, 2016 admitted left knee injury. Initially, Dr. Machanic concluded that Claimant had not reached MMI for her April 8, 2016 left knee injury because she required some form of knee surgery. However, knee surgeons Drs. Lindberg and Erickson both conducted a thorough records review and engaged in a Level II accredited causality assessment regarding Claimant's continued left knee symptoms. They explained that Claimant's left knee complaints were caused by advanced, chronic, degenerative and pre-existing tri-compartmental osteoarthritis. There was no objective evidence of worsening or aggravation in Claimant's left knee related to the April 8, 2016 admitted industrial injury. In contrast to Dr. Machanic's DIME determination, Claimant reached MMI without any impairment for her April 8, 2016 left knee injury.

13. As found, Drs. Lindberg and Erickson persuasively explained that Dr. Machanic failed to conduct a causality assessment in accordance with the Colorado Division of Worker's Compensation Level II accredited teachings. Dr. Machanic did not provide any analysis to support his conclusion that Claimant's April 8, 2016 injury was the "pivotal event" because it rendered her left knee permanently symptomatic. He also did not explain why he concluded that Claimant's continued symptoms are from the April 8, 2016 incident and not the progression of severe osteoarthritis that Drs. Robinson and Baxter predicted would continue absent subsequent injury. Drs. Lindberg and Erickson persuasively explained that Dr. Machanic, as the DIME physician, was required to analyze causality based upon the Colorado Division of Workers' Compensation Level II accredited teachings, not "pick somebody to believe" and base his opinion on Claimant's statements even when contradicted by the medical records. Notably, Dr. Machanic explained that "we cannot easily apportion this and it is easiest and most rational to place the entire situation as of April 8, 2016, but it is not even clear precisely what happened on that day." Finally, Dr. Machanic erroneously assigned Claimant a 20% whole person impairment rating as a result of her April 8, 2016 admitted left knee injury because her symptoms were the result of the continued progression of severe osteoarthritis.

14. As found, Drs. Lindberg and Erickson persuasively concluded that Dr. Machanic's DIME opinions regarding MMI and permanent impairment were incorrect. Because Claimant's current symptoms are related to the expected progression of the pre-existing and non-work related osteoarthritis, Claimant's is not entitled to a permanent impairment rating. Based on the opinions of Drs. Lindberg and Erickson, Dr. Machanic failed to perform a causality assessment pursuant to the Level II teachings. Instead, Dr. Machanic merely deferred to other doctors because it was the "easiest and most rational" to attribute Claimant's symptoms to the April 8, 2016 incident. Accordingly, Respondents have produced unmistakable evidence free from serious or

substantial doubt that Dr. Machanic's MMI determination and permanent impairment rating were incorrect. Based on the determination of ATP Dr. Drapeau Claimant reached MMI on August 15, 2016 with no permanent impairment.

Average Weekly Wage

15. Section 8-42-102(2), C.R.S. requires the Judge to determine a claimant's AWW based on his earnings at the time of injury. The Judge must calculate the money rate at which services are paid to the claimant under the contract of hire in force at the time of injury. *Pizza Hut v. ICAO,* 18 P.3d 867, 869 (Colo. App. 2001). However, §8-42-102(3), C.R.S. authorizes a Judge to exercise discretionary authority to calculate an AWW in another manner if the prescribed methods will not fairly calculate the AWW based on the particular circumstances. *Campbell v. IBM Corp.,* 867 P.2d 77, 82 (Colo. App. 1993). The overall objective in calculating an AWW is to arrive at a fair approximation of a claimant's wage loss and diminished earning capacity. *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO May 7, 1997). Therefore, §8-42-102(3), C.R.S. grants an ALJ substantial discretion to modify the AWW if the statutorily prescribed method will not fairly compute a claimant's wages based on the particular circumstances of the case. *In Re Broomfield,* W.C. No. 4-651-471 (ICAP, Mar. 5, 2007). As found, an AWW of $547.13 constitutes a fair approximation of Claimant's wage loss and diminished earning capacity.

Temporary Total Disability Benefits

16. Section 8-42-103(1), C.R.S. requires a claimant seeking temporary disability benefits to establish a causal connection between the industrial injury and subsequent wage loss. *Champion Auto Body v. Industrial Claim Appeals Office*, 950 P.2d 671 (Colo. App. 1997). To demonstrate entitlement to TTD benefits a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability and the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The term "disability," connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by the claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). A claimant suffers from an impairment of earning capacity when he has a complete inability to work or there are restrictions that impair his ability to effectively and properly perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

17. As found, Claimant has demonstrated by a preponderance of the evidence that she is entitled to receive TTD benefits for the period April 13, 2016 until terminated by statute. Respondents have overcome Dr. Machanic's DIME determination by clear and convincing evidence that Claimant has not reached MMI. ATP Dr. Drapeau persuasively concluded that Claimant reached MMI on August 15, 2016 with no permanent impairment. Claimant's entitlement to TTD benefits terminated by operation of law when she reached MMI. Accordingly, Claimant shall receive TTD benefits for her admitted April 8, 2016 left knee injury for the period April 13, 2016 until she reached MMI on August 15, 2016.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's Workers' Compensation claim in case number 4-972-238-02 is denied and dismissed.

2. Respondents have overcome DIME Dr. Machanic's MMI and permanent impairment determinations by clear and convincing evidence. Claimant reached MMI on **August 15, 2016** with no permanent impairment.

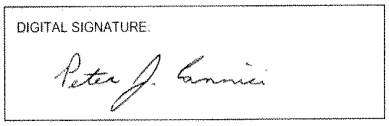
3. Claimant earned an AWW of $547.13.

4. Claimant shall receive TTD benefits for the period April 13, 2016 until she reached MMI on August 15, 2016.

5. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: August 28, 2017.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
633 17th Street Suite 1300
Denver, CO 80202

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-016-648-01

ISSUES

- Whether Claimant has established by a preponderance of the evidence that he sustained a compensable industrial injury as the result of an incident which alleged occurred on April 29, 2016; and

- If compensable, whether Claimant proved entitlement to related, reasonable and necessary medical benefits.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant, a 61-year-old document specialist, has worked for Employer since August 2007. On April 29, 2016, Claimant alleges that he injured his right hip, low back, and right arm when he tripped on a snowbrush while stepping out of a company vehicle.

2. Prior to his alleged April 29, 2016 injury, Claimant had a history of falls and injuries to his low back and hip with associated weakness and muscle atrophy in his right leg. On March 16, 2010, Claimant began treating with Dr. Aschberger due to a slip and fall which occurred at work on February 8, 2010. He complained of right lower extremity weakness, right groin pain, hip pain, and low back pain.

3. On May 17, 2010, Dr. Aschberger found right leg muscle atrophy and weakness when he examined Claimant. He noted Claimant's right leg was smaller compared to his left leg.

4. Imaging studies performed in 2010 revealed a fracture in Claimant's right hip which required surgical repair. However, upon post-surgical examination, Claimant continued to have noted right leg weakness and atrophy. He reported to providers that his right knee would occasionally give out. Claimant was prescribed Lyrica for his persistent right leg, hip, and low back pain.

5. On December 6, 2010, Claimant was placed at MMI and given a 31% lower extremity rating for his right hip and an 11% whole person impairment rating for his lower back. Claimant continued to note significant weakness and atrophy n his right leg.

6. On February 8, 2011, Dr. Gellrick noted in her DIME report that Claimant reported several additional falls to his PCP during a June 18, 2010 examination. Claimant admitted that he had fallen approximately four times due to weakness

in his right leg. Claimant reported an additional fall to Dr. Schwappach during a July 1, 2010 examination.

7. Dr. Gellrick noted during her physical examination that Claimant had multiple abrasions on his left lower extremity from falls due to his right leg weakness and that he had to walk close to walls to avoid falling. She also noted obvious right leg atrophy.

8. On May 5, 2011, Claimant saw Dr. Schwappach for a return examination. Claimant reported that he recently fell down some stairs when his right knee "gave way." Claimant underwent physical therapy and received an injection.

9. Claimant continued to receive maintenance care for his 2010 fall until December 7, 2011, when he experienced his second on-the-job slip and fall with injury to his low back and right hip. Dr. Aschberger noted Claimant was well known to him for persistent right hip pain, low back pain, and right quadriceps atrophy. Dr. Aschberger's January 5, 2012 records note that Claimant had decreased bulk in his right quadriceps.

10. Dr. Aschberger continued to treat Claimant for his December 2011 injury including injections into Claimant's hip and SI joint. Claimant failed to show significant gain from conservative treatment and was recommended to undergo total right hip replacement on May 21, 2013.

11. Claimant continued to note SI joint pain with radiating symptoms into his lower extremity with associated weakness and knee buckling during Dr. Aschberger' June 18, 2013 examination.

12. On April 24, 2014, Claimant noted difficulty ascending stairs and getting in and out of a car and reported needing to assist lifting his right leg with his hand.

13. On May 14, 2014, Dr. Perea examined Claimant noting another fall where Claimant tripped over a step and fell forward injuring his right side.

14. Dr. Schwappach eventually recommended Claimant undergo removal of an osteophyte that had formed around the site of Claimant's surgical plate as he believed it caused Claimant's continued weakness and pain complaints. The procedure was recommended to be approved via internal review. However, Claimant settled his claims prior to undergoing the surgery. Claimant stipulated that he had a 15% whole person impairment to his lumbar spine and a 40% extremity rating impairment to his right hip/leg.

15. On September 18, 2014, at Claimant's last noted workers' compensation appointment for his 2011 injury, he was diagnosed with chronic pain syndrome and his prescription for Lyrica was refilled.

16. On January 27, 2016, two months prior to the alleged date of injury for this claim, Claimant followed up with his primary care provider for chronic pain in his right hip and SI joint. Claimant used Lyrica and Tramadol for pain control.

17. On May 3, 2016, Dr. Danahey at Concentra examined Claimant for his April 29, 2016 fall. X-rays of Claimant's right hip, pelvis and lumbar spine were unremarkable for acute fracture or subluxation. Claimant was diagnosed with a contusion of his right hip, lumbar strain, and a contusion of his right elbow and shoulder. Dr. Danahey recommended Claimant undergo physical therapy and restricted Claimant's lifting to up to 10-pounds occasionally. Employer complied with this restriction and Claimant returned to work at full wages.

18. May 27, 2016, MRI results revealed minimal disc degenerative changes with minimal broad-based disc bulge, bilateral facet arthropathy, and mild epidural lipomatosis at L4-5, with similar findings at L5-S1.

19. On June 20, 2016, Claimant followed up with Dr. Aschberger complaining of pain in his right lower back with radiation of symptoms to the anterolateral thigh with occasional irritation into his foreleg and intermittent tingling into his toes. Dr. Aschberger noted residual weakness with hip flexion on the right.

20. On September 6, 2016, Claimant returned to Dr. Aschberger. Claimant reported a recent increase in pain after a session of dry-needling. Claimant had right-sided pain with facet loading at L4-5 and L5-S1. Dr. Aschberger noted continued findings of SI irritation and an increased amount of irritation with facet irritation. Dr. Aschberger referred Claimant to Dr. Zimmerman for medial branch blocks.

21. On September 29, 2016, Dr. Janssen completed a PA review of the medical branch block request. Dr. Janssen opined Claimant did not meet the criteria for a reassessment for additional injections within 6 months due to not receiving an 80% improvement from prior injections and a lack of objective radiographic findings. As such, Insurer denied the blocks.

22. On December 6, 2016, Dr. Basse completed a Respondents sponsored IME to address causation and whether Claimant had experienced an aggravation of his pre-existing condition. Dr. Basse noted longstanding moderate decreased muscle bulk in his right quadriceps, hamstrings, and gastrocsoleus complex with decreased muscle bulk in the right anterior tibialis and EHL with foot drop. She opined that whatever was causing the muscle atrophy was present prior to his 2010 injury as the distal weakness that was noted immediately after could not have been explained by his diagnosis at the time.

23. Dr. Basse testified that Claimant's distal weakness and right foot drop played a role in Claimants' many falls. She recommended Claimant undergo a complete neurologic examination outside of workers' compensation to locate any progressive or stable lesion that could be treated. Dr. Basse concluded that

whatever was causing Claimant's pain appeared to originate from before his 2010 injury and likely involved the sciatic and femoral nerves without radiculopathy as Claimant's gluteal muscles were not involved. She was unclear whether Claimant had suffered from a new or aggravating condition when he fell on April 29, 2016 as there were no anatomical findings to suggest a new or aggravating condition.

24. Dr. Basse testified via deposition on July 6, 2017. She credibly testified that she reviewed Claimant's medical history dating back to 2010 and opined that Claimant likely suffered from an undiagnosed and non-work-related condition. As support, Dr. Basse noted Claimant underwent extensive treatment to the same body parts and for the same pain complaints without improvement. Likewise, she opined that Claimant's muscle atrophy and weakness were not a result of a slip and fall because Claimant was noted to have atrophy immediately after his initial fall in 2010, and atrophy takes much longer to develop. Instead, she opined that Claimant's foot drop, muscle atrophy, and noted weakness were a likely factor in causing his numerous falls.

25. Dr. Basse also testified Claimant could be suffering from epidural lipomatosis which is a naturally progressing disease which can cause symptoms similar to that Claimant experienced. Dr. Basse noted MRI findings which supported this conclusion.

26. Claimant testified at hearing. Claimant downplayed the number of times he has fallen during the past several years. When first questioned he claimed to have only fallen three times. He testified that the knee buckling and weakness he reported on numerous occasions had only caused him to stumble but not fall to the ground. When confronted with medical records documenting multiple falls, Claimant admitted to falling numerous times due to the weakness in his right leg.

27. When confronted with his April 24, 2014 statement to Dr. Zimmerman that he had to physically assist his right leg when getting in and out of a vehicle, Claimant alleged it was due to his hernia and inguinal nerve issues. However, Claimant had already undergone surgery for both his hernia and inguinal nerve at the time he was required to assist with the movement of his right leg.

28. Claimant acknowledged settling his prior workers' compensation claims and that he did not get treatment, including the recommended surgery.

29. Claimant testified that he continued working full duty for the duration of his alleged 2016 injury and that he continued taking Lyrica at the level prescribed to him in 2010.

30. Claimant has not met his burden of proving by a preponderance of the evidence, that he sustained a compensable injury on April 29, 2016. Claimant has a substantial and documented history of prior falls due to significant weakness in his right leg. These numerous falls have resulted in repeated

complaints to the same body parts with little improvement despite a history of six years of conservative treatment, injections, and surgeries. The ALJ finds Claimant was predisposed to falling prior to the alleged April 29, 2016 fall.

31. The ALJ finds it unlikely Claimant was asymptomatic and without issue prior to the alleged April 29, 2016 fall. Despite Claimant's testimony that he had no issues with his low back or hip for almost two years prior to the alleged date of injury, Claimant has a 40% permanent impairment to his right lower extremity and a 15% whole person permanent impairment to his lumbar spine. Additionally, Claimant was recommended to undergo a third surgical procedure on his right hip. However, when he settled his claims, he did not pursue the recommended surgery. The ALJ finds it unlikely that Claimant's need for surgical intervention resolved without treatment. Rather, it is more likely that his condition continued to progress until the events on April 29, 2016.

32. Likewise, just two months prior to Claimant's alleged work-injury he complained of chronic hip and low back pain which he treated with Tramadol and Lyrica. As such, Claimant's testimony that he was asymptomatic prior to the alleged injury is not persuasive.

33. The more probable explanation for Claimant's fall on April 29, 2016, is that as Claimant shifted his weight onto his right leg, it buckled and gave out, as it had done in the past.

34. Even if Claimant caught his foot on a snowbrush which caused him to fall, Claimant failed to provide any persuasive evidence to support a conclusion that his pre-existing condition was aggravated as a result of an alleged fall.

- Claimant continues to work full duty at full wages.
- The mere presence of pain is not enough to convince this court of a new or aggravated condition.
- Claimant had the same pain complaints as in the past and he continued to take pain medication at the same levels he did prior to the alleged injury.
- Despite numerous treatment modalities, Claimant's condition has failed to improve for over six years and only "resolved" when Claimant accepted settlement and stopped treatment on his own.

These facts lend support to Dr. Basse's opinion that Claimant has an undiagnosed, untreated, and non-work-related condition that needs further evaluation outside of the workers' compensation system and that there simply was no objective evidence to support a new or aggravated injury.

35. As Claimant has failed to prove he suffered a compensable injury, his claim for medical benefits also fails.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

According to C.R.S. §8-43-201, "(a) Claimant in a workers' compensation claim shall have the burden of proving entitlement to benefits by a preponderance of the evidence; the facts in a workers' compensation case shall not be interpreted liberally in favor of either the rights of the injured worker or the rights of the employer, and a workers' compensation case shall be decided on its merits." *See also Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590, 592 (Colo. App. 1998) ("The Claimant has the burden of proving an entitlement to benefits by a preponderance of the evidence."); *Lerner v. Wal-Mart Stores, Inc.,* 865 P.2d 915, 918 (Colo. App. 1993) ("The burden is on the Claimant to prove his entitlement to benefits by a preponderance of the evidence.").

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

In deciding whether the Claimant has met her burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to testimony, and draw plausible inferences from the evidence." *See Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002).

Proof by a preponderance of the evidence requires Claimant to establish that the existence of a contested fact is more probable than its nonexistence. *See Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 (ICAO March 20, 2002).

A compensable injury is an injury which "arises out of" and "in the course of" employment. *See* C.R.S. §8-41-301(1)(b); *Schepker v. Daewoo North*, W.C. No. 4-528-434 (ICAO April 22, 2003).

The Claimant must prove a causal nexus between the claimed need for treatment and the work-related occupational disease or injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the industrial exposure caused the symptoms and consequent need for treatment, or that the industrial exposure aggravated or accelerated any pre-existing condition. Rather, the

occurrence of the symptoms may be the result of or natural progression of a pre-existing condition that is unrelated to the employment, or may be attributable to some intervening cause. *See Owens v. Industrial Claim Appeals Office,* 49 P.3d 1187 (Colo. App. 2002); .*F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995).

Purely idiopathic or personal injuries are generally not compensable under the Act, unless an exception applies. *See Velasquez,* 41 Colo. App. at 202–03, 581 P.2d at 749; *see also Irwin*, 695 P.2d at 765. When it comes to idiopathic injuries, the "special hazard" doctrine represents an important exception to the general rule of non-compensability, under which an injury is compensable even if the most direct cause of that injury is a preexisting idiopathic disease or condition so long as a special employment hazard also contributed to the injury. *City of Brighton v. Rodriguez,* 318 P. 3d 496 (Colo. 2014). The ALJ finds no special employment hazard existed at the time of Claimant's fall which contributed to the injury.

The ALJ finds that Claimant did not suffer a compensable injury on April 29, 2016. Rather, Claimant's significant and documented right leg weakness is the more likely cause of Claimant's fall and Claimant failed to prove the existence of any special employment hazard which contributed to the injury.

Claimant bears the burden of proof of showing that medical benefits are causally related to his alleged work-related injury or condition. *Ashburn v. La Plata School District 9R,* W.C. No. 3-062-779 (ICAO May 4, 2007). Claimant is not entitled to medical care that is not causally related to his work-related injury or is not reasonable or necessary. Respondents do not "implicitly" admit for a disputed condition by paying for medical benefits. *Hays v. Hyper Shoppes*, W.C. No. 4-221-570 (ICAO April 13, 1999). The respondents remain free to contest the compensability of any particular treatment. *Id.* As noted in *Ashburn, supra,* "it has generally been held that payment of medical services is not in itself an admission of liability. This is based on the sound public policy that carriers should be allowed to make voluntary payments without running the risk of being held thereby to have made an irrevocable admission of liability."

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant failed to establish by a preponderance of the evidence that he sustained a compensable injury on April 29, 2016.

2. As the claim is not compensable, Claimant's request for medical benefits is denied and dismissed.

3. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 28, 2017

/s/ Kimberly Turnbow
Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Whether Claimant established by a preponderance of the evidence that she suffered a compensable lung injury or an aggravation to an alleged pre-existing occupational asthma condition due to claimed repeated exposure to dust, mold, mouse waste and/or bugs as reported on October 28, 2016.

II. If Claimant established that she suffered a compensable injury to her lungs, whether she proved, by a preponderance of the evidence, that she is entitled to reasonable, necessary and related medical treatment to cure and relieve her of the effects of said injury.

III. If Claimant established that she suffered a compensable lung injury, whether she demonstrated, by a preponderance of the evidence, that she is entitled to temporary total disability benefits between January 20, 2017 and April 16, 2017.

IV. If Claimant established a compensable injury and if she demonstrated entitlement to temporary disability benefits, what was her average weekly wage at the time of her compensable injury.

Because the ALJ concludes that Claimant failed to establish that she suffered a compensable injury in the first instance or a compensable aggravation of a pre-existing condition, this order does not address issues II-IV.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant is a long time employee of the Department of Corrections having been hired on July 1, 2006. She works as an Administrative Assistant.

2. As it pertains to the issue presented for determination, Claimant has a complicated prior medical history which includes treatment for gastroesophageal reflux disease (GERD), likely associated with a confirmed hiatal hernia and binge drinking. She also has a lengthy cigarette smoking history.

3. On or about January 1, 2010, Claimant was assigned to work at the Four Mile Correctional Center (FMCC) which is part of the larger Canon Minimal Correctional Complex. FMCC houses a fully operational dairy run by the inmates as part of their rehabilitation process.

4. While assigned to the FMCC, Claimant reportedly began to experience respiratory problems, including bouts of bronchitis, post nasal drip, cough and shortness of breath (SOB). Claimant attributed her symptoms to contamination of her workspace from dust and particulates from cow dung and bird droppings which were entering the building by way of the air duct system.

5. On September 18, 2012, Claimant was evaluated by Nurse Practitioner (NP), Lisa Clough who documented the following:

> Has a hx of bronchitis x2 this year. Works for the dept of corrections and has horrible air flow. Always has dust and cow poop blowing and birds droppings. Has been having issues with breathing only while at work. Weekends she is fine. Wants to be tested. Has tried to get a transfer but no one takes her serious. Wants further testing. Has SOB nad (sic) wheezing. Quit smoking in August.

6. Pulmonary Function Tests (PFTs), i.e. spirometry was ordered and completed during Claimant's September 18, 2012 appointment. A smoking history was included as part of the spirometry report. According to the report, Claimant was a smoker of 2 cigarettes per day for 10 years and had quit two years prior to her spirometry testing. According to the spirometry report, Claimant's risk for developing COPD (Chronic Obstructive Pulmonary Disease) was "very high." Claimant's spirometry testing result during her September 18, 2012 appointment was consistent with moderately severe obstruction and her lung age was documented as being greater than 84 years. Claimant was started on Symbicort and given a burst of Prednisone to see if her symptoms would abate.

7. Following her September 18, 2012, appointment Claimant filed a Department of Corrections First report of Injury on September 19, 2012, asserting an occupational disease to her lungs caused by prolonged exposure to dust, dirt and animal feces while working at FMCC. Investigation into Claimant's assertions of exposure to dust and other respiratory irritants was initiated by Employer and she was referred to Centura Centers for Occupational Medicine (CCOM) for evaluation.

8. Claimant was evaluated initially at CCOM on September 19, 2012 by NP Diane Alvies. NP Alvies documented that "almost immediately" with her employment at FMCC, Claimant began to experience "allergy-like symptoms [including] pruritic, watery eyes, cough productive of a yellow/brown mucus, wheezing, sore throat, and a sense of heaviness of her anterior chest." Claimant was noted to be an "off and on smoker", although she reported that she was not currently smoking. Physical examination revealed Claimant's lungs to be clear without dyspnea or wheezing. Work-relatedness was undetermined and Claimant was scheduled for follow-up.

9. Claimant was evaluated by Dr. Richard Nanes on October 4, 2012. She reported being "no better". Dr. Nanes noted that Claimant's lungs were "completely clear to ausculatation." He referred Claimant for evaluation by a pulmonologist.

10. On November 6, 2012, Claimant was evaluated by Dr. Janet R. Suarez of Colorado Pulmonary Associates. Dr. Suarez noted that Claimant was a 51 year old female with a "minimal past medical history in evaluation of cough and shortness of breath." Claimant's abnormal spirometry testing result from September 18, 2012 was noted along with a "normal" spirometry testing result from September 25, 2012. Additional spirometry testing was performed during Claimant's November 6, 2012 appointment which was interpreted by Dr. Suarez as being consistent with a "mild obstructive ventilator defect." A methacholine challenge to six (6) different levels of methacholine failed to demonstrate any evidence of airway hyperactivity. Dr. Suarez opined that Claimant's "history of variable obstruction and improved symptoms when away from work were suggestive of occupational asthma. Consequently, Dr. Suarez recommended environmental testing of the building where Claimant worked. She also recommended that Claimant have no further exposure to the environment suspected of causing her symptoms because "the prognosis in both hypersensitivity pneumonia and occupational asthma is much worse with ongoing exposure."

11. On December 12, 2012, an environmental survey of the building housing Claimant's workspace, as commissioned by Employer, was completed by A.G. Wassenaar, Inc. As part of this study, airborne samples were collected in certain parts of the building, including the air duct filters. Samples collected contained, among other things, fiberglass fibers and "very small amounts of fungus identified as *Cryptococcus neoformans, Chlamydophila psittaci,* and *Histoplasma capsulatum* organisms." Recommendations were made to remove the fiberglass insulation, clean the air duct system and remove the avian droppings from the roof.[1]

12. On December 18, 2012, Claimant presented to the offices of her gastroenterologist with complaints related to ongoing dyspepsia. During her examination, Claimant endorsed the following symptoms: chronic cough, shortness of breath, abdominal pain, and heartburn. It was noted that Claimant was drinking beer and wine four times a week, consuming 3-5 drinks and occasionally more than five drinks per occasion. Based upon the evidence presented, the ALJ finds that Claimant was likely consuming at least 12 beverages containing alcohol and probably more per week. Claimant was assessed as having ongoing dyspepsia in the setting of a hiatal hernia. She was encouraged to stop all alcohol and take a 20 mg dose of Prilosec once daily.

13. Claimant reportedly moved out of the FMCC administration building and into a temporary office in January 2013 while the cleaning and removal of bird droppings and fiberglass insulation were carried out per the recommendations set forth in the A.G. Wassenaar report.[2]

---

[1] This information is contained in the records review section of a report authored by Dr. Clarence Henke in response to concerns that Claimant may have developed histoplasmosis while working for FMCC in 2012.

[2] This information is contained in Dr. Schwartz' independent medical examination (IME).

14. On February 15, 2013, Claimant returned to her gastroenterologist for a follow-up concerning her dyspepsia. During this encounter, Claimant reported continued "burping and reflux" indicating further that she would like consider a trial of stronger proton pump inhibitor (PPI) medication. Claimant also saw NP Clough at the Southern Colorado Clinic on February 15, 2013 with continued complaints of "some SOB and fatigue." Claimant reported the she wanted to quit smoking and requested another spirometry test. Based upon the content of NP Clough's February 15, 2013 medical report, the ALJ finds that Claimant, more probably than not, was actively smoking cigarettes.

15. On March 29, 2013, Claimant returned to NP Clough with continued complaints of wheezing and SOB "all the time." NP Clough noted that Claimant had been moved to a new work environment only one day before her appointment. Chest x-rays obtained during this appointment demonstrated Claimant's lungs to be clear. Claimant was referred to an allergist for additional testing.

16. On May 2, 2013, Claimant returned to Dr. Suarez for follow-up. Claimant reported additional occurrences of bronchitis between her visits. She also reported that her work site had changed in the three weeks preceding her appointment. Nonetheless, she described minimal improvement, but no worsening of her ongoing symptoms.[3] Physical examination revealed Claimant's respiratory effort to be normal without the presence of any wheezes, rales, rhonci or auditory stridor. Dr. Suarez opined that Claimant had a "very minimal smoking history to explain the degree of obstruction and abnormality on methacholine challenge."

17. As noted, the only methacholine challenge testing submitted was interpreted by Dr. Suarez as demonstrating "no significant change" in Claimant's FEV1 with administration of 6 increasing levels of methacholine. Nevertheless, Dr. Suarez would go on to write that Claimant had an "abnormal methacholine challenge suggesting at the very minimum reactive airways if not occupational asthma." Dr. Suarez would close her assessment with the following passage:

> Patient appears to have at the very least an allergy to these known exposures and still has not been ruled out for hypersensitivity. She has symptoms compatible with occupational asthma and has not received appropriate therapy for consistent amount of time.

18. Although NP Clough referred her for testing and Dr. Suarez suggests that at the "very least" Claimant has an allergy to dust, bird feathers and droppings, the record evidence submitted is devoid of any allergy testing results to support/confirm such suggestion.

19. Despite noting that Claimant's hypersensitivity to the offending substances

[3] According to Dr. Suarez's note, Claimant continued to have exposure to the FMCC 1-2 times per week while covering lunches or sickness relief for other staff.

had not been determined by the May 2, 2013 appointment, Dr. Suarez would diagnose Claimant as having occupational asthma during a follow-up appointment on June 6, 2013. During this visit Dr. Suarez notes the following history of present illness: "52 y/o female with work exposure to histoplasma and bird dropping who appears to have developed reactive airway disease with abnormal methacholine challenge." Based upon the evidence presented, no additional spirometry or methacholine testing was done between May 2, 2013 and June 6, 2013.

20. The ALJ finds Dr. Suarez' opinions inconsistent, confusing and unpursuasive. On one hand, she interprets the only methacholine challenge testing performed as causing no significant change in Claimant's FEV1 despite exposure to six different levels of methacholine. Yet, on Claimant's May 2, 2013 visit she concludes that this testing is "abnormal." She also indicates that the results of Claimant's methacholine challenge testing suggest that Claimant has, at a minimum, reactive airways if not occupational asthma despite the fact that she determined that there was no significant change in Claimant's FEV1 to increasing levels of methacholine. Finally she opined that Claimant had at the very least an allergy to the substances to which she had been exposed without the benefit of allergy testing results.

21. A May 9, 2013, CT scan of the chest, as recommended by Dr. Suarez, failed to demonstrate any evidence of interstitial lung disease (ILD) or hypersensitivity pneumonia.[4]

22. On June 4, 2013, Claimant was seen in follow-up Dr. Dr. Nanes. Dr. Nanes documented that Claimant had presented to the clinic for manifested symptoms she reported after the air conditioning to the building where she was working was turned on. According to the report from this date of visit, Claimant reported that she developed chest tightness, coughing and a feeling that her throat was closing along with tingling of her lips. Claimant was noted to be anxious, but her lungs were clear and her heart rate and rhythm were "regular." Dr. Nanes opined that Claimant likely had a panic attack rather than an asthma attack. Dr. Suarez disagreed opining that Claimant may have vocal cord dysfunction leading Dr. Nanes to refer Claimant to an ear, nose and throat (ENT) specialist following a follow-up appointment with him on June 20, 2013.

23. Claimant was evaluated ENT Dr. Catherine Considine on July 18, 2013. Dr. Considine anesthetized Claimant's nose and examined her nasopharynx with a flexible scope. Examination revealed "erythema and inflammation" consistent with GERD which was likely related to increased stress.

24. On August 30, 2013, Claimant returned to Dr. Suarez who noted that she had been seen by Dr. Considine and was found to have erythema and inflammation consistent with reflux. Consequently, Dr. Suarez explained how "reflux disease [could] impact both [Claimant's] voice/vocal cords and breathing or coughing."

25. Based upon the totality of the evidence presented, the ALJ finds Dr. Nanes'

[4] See the June 6, 2013 report of Dr. Suarez.

opinion that Claimant's June 4, 2013 symptoms were indicative of a panic attack and not an asthma attack more persuasive than the contrary opinions that Claimant may be experiencing vocal cord dysfunction caused by asthma as espoused by Dr. Suarez.

26. On October 1, 2013, Claimant was seen in follow-up by Dr. Nanes. Dr. Nanes noted that Claimant had been working at "another facility and [was] still having asthma attacks." Consequently, Dr. Nanes recommended an independent medical examination (IME) noting that "[i]t is truly undetermined if the patient does have occupational asthma." Dr. Nanes released Claimant to "return to her original correctional facility to work."

27. Consistent with Dr. Nanes' release, Claimant returned to the site of her exposure sometime in early October 2013. On October 9, 2013, Claimant presented to CCOM for an "unscheduled" appointment at which time she reported that she had returned to work at FMCC and within 20 minutes "started coughing and developing a deep raspy voice."[5] Claimant was seen by Physician Assistant (PA), Thomas Shepard who discussed the situation with her. Claimant wanted her present condition noted for the record. Claimant also noted that she did not want a return visit scheduled with Dr. Nanes and wished to clear up an error in her record about her smoking history. According to Claimant, she was not an "excessive heavy smoker" as suggested in her medical records. Rather, she reportedly smoked "less than a pack of cigarettes in three weeks."

28. Claimant was evaluated by Dr. Anthony Khalifah in an IME setting, as recommended by Dr. Nanes, on October 28, 2013. Dr. Khalifah noted that Claimant was diagnosed with asthma by Dr. Suarez after a "positive methacholine challenge test on review of her records as well as evidence of airflow obstruction on pulmonary function testing." Dr. Khalifah did not repeat any testing and admittedly did not have "full results from Dr. Suarez's office", yet he felt confident that his differential was "identical" to hers. Consequently, he opined that Claimant had active occupational asthma and recommended that Claimant be "assigned to a different work area."

29. Claimant was reevaluated by Dr. Suarez on November 15, 2013. During this appointment, Claimant reported that she developed chest tightness and SOB with cough within 20 minutes of her return to the FMCC building in October. Repeat spirometry testing was completed and the results were interpreted as "normal."

30. On December 10, 2013, Claimant was placed at maximum medical improvement (MMI) by Dr. Nanes. Confusion regarding permanent impairment would ensue based upon the way Dr. Nanes completed Claimant's MMI report. On March 20, 2014, Dr. Nanes clarified that Claimant did not have any permanent impairment as a consequence of her diagnosed asthma. Specifically, he noted that Claimant had a "very well controlled condition and her most recent spirometry studies are within normal range and therefore she would have a 0% rating."

---

[5] Claimant would later report to Dr. Schwartz that she SOB, itching in her throat and chest pressure within a day of her return to FMCC, See the IME report of Dr. Schwartz dated May25, 2017.

31. Claimant was moved to the Time Comp Unit facility, away from FMCC from January to March 2014. During this time, Claimant was seated next to a room where old inmate files were being shredded. These files were being broken down, scanned and shredded on a full-time basis at the time. Claimant admitted, during her hearing testimony, that she did not know that old files were being broken down and shredded during this time frame. Claimant had no respiratory complaints during her temporary stint at Time Comp. Around April, Claimant was transferred to the Territorial Correctional Facility away from FMCC.

32. On May 9, 2014, Claimant reported to Dr. Suarez that she needed to use a rescue inhaler and had severe bronchospasm when exposed to triggers such as perfumes and dust. Claimant also reported increased symptoms, including labored breathing and voice changes, after returning to FMCC for a training session.

33. On August 15, 2014, Dr. Suarez noted that Claimant was doing quite well. According to Dr. Suarez, Claimant's symptoms had been "well" controlled with low dose Symbicort for several months. Claimant did not report any symptoms during this appointment and had only used her albuterol medication two times since her last visit.

34. On October 2, 2014, Dr. Clarence Henke completed a records review at the request of Respondents. He did no spirometry or methacholine challenge testing. Following review of the available records, Dr. Henke opined that Claimant had the following diagnoses pertinent to the issues for resolution:

- Chronic asthma caused by long standing history of tobacco use, requiring a long history of pulmonary inhalant medications.

- Onset of occupational asthma conditions in 2010 caused by environmental contaminants in the previous dairy office where she worked for approximately one year. No definite diagnosis of histoplasmosis was made.

- Hiatal hernia with gastroesophageal reflux.

- History of alcohol abuse.

35. Dr. Henke would opine that Claimant suffered an "acute episode of occupational asthma caused by environmental contaminants" as identified by the environmental survey completed by A.G. Wassenaar, while working at FMCC. He also opined that Claimant reached MMI on December 10, 2013 without permanent impairment and that she needed "no specific maintenance medical treatment related to the 2012 occupational asthma condition.

36. On December 11, 2014, Claimant returned to her gastroenterologist for

"clarification" of her medical history due to her "[involvement] in a workplace dispute, due to environmental exposures." According to the report from this date of visit, Claimant's medical records were reviewed and an "incorrect" conclusion had been reached based upon interpretation of the data contained in the records. The report does not mention the subject matter of the records review, what data was reviewed and why any conclusions reached were incorrect. An additional reason for the visit included a recheck of Claimant's dyspepsia. Regarding her GERD, the record notes that Claimant had "resolution of symptoms following dietary modifications and lifestyle changes." Claimant was not taking any medication for her reflux disease.

37. Upon careful inspection of the medical records admitted into evidence, the ALJ finds a paucity of reports to suggest that Claimant sought treatment for either her GERD or asthma like symptoms during 2015.

38. Claimant returned to and began working full time in Time Comp Unit in January 2016. As found at paragraph 30 above, old inmate files were being broken down, scanned and shredded at the Time Comp Unit facility when Claimant was temporarily placed there in 2014. Nonetheless, Claimant had no respiratory complaints at that time. Claimant attributed her lack of symptoms to an unproven belief that any files being shredded were not those stored on the semi-trailers which she asserts exposed her to allergens aggravating her occupational asthma.

39. Claimant testified that she began to notice recurrent respiratory problems around the end of March 2016, when the Time Comp Unit began to take old inmate files off the storage trailers for breakdown and shredding.

40. On April 18, 2016, Claimant returned to NP Clough. During this appointment, Claimant reported "struggling with lumbar back pain" without radicular symptoms but which hurt when Claimant went from sitting to standing. No reports of asthma like symptoms were endorsed by Claimant. A review of systems was completed during which Claimant denied chest pain/discomfort, denied cough and denied SOB. Physical examination revealed her lungs to be "clear bilaterally to auscultation."

41. On May 12, 2016, Claimant returned to NP Clough for follow-up concerning her laboratory panel and for right elbow pain. Claimant complained of periodic zapping chest pain but did not report asthma like symptoms, including SOB or coughing. In addition to zapping chest pain, Claimant was reportedly drinking "a lot of beer." It was also documented that Claimant was smoking. Physical examination revealed clear lungs bilaterally. A 12 lead ECG was interpreted as being normal.

42. On May 17, 2016, Claimant reported that dust associated with the work being done with the old files was exacerbating her preexisting occupational asthma.

43. On May 18, 2016, NP Clough completed paperwork that excused Claimant

from having to tear down and shred old files "due to dust particles that can exacerbate her asthma." Claimant was also excused from scanning old files for what the ALJ finds was the same reason.

44. On May 24, 2016, Claimant presented to CCOM complaining of asthma-like symptoms related to the work on the old files at Time Comp. She was evaluated by PA Steven Quakenbush. Claimant reported that she developed wheezing while shredding dusty old files on May 17, 2016. Shredding new files did not cause similar symptoms. Claimant reported being diagnosed with occupational asthma in 2011. Physical examination was unremarkable. PA Quakenbush determined that there was a "51% chance that [Claimant's] self stated exacerbation of wheezing could have been caused by a number of environmental allergens including those outside the workplace. Consequently, he concluded that Claimant's "problem [did] not appear to be related to work activities."

45. On July 5, 2016, Claimant was offered a transfer to another facility but declined citing the added commute associated with accepting the position.

46. Following a long hiatus, Claimant was reevaluated for right upper quadrant (RUQ) pain and dyspepsia by the PA in her gastroenterologist's office on August 5, 2016. It was noted that Claimant reported a 6 month history of RUQ pain after eating. Although Claimant's dyspepsia was noted to be a long term problem, her symptoms had resolved after dietary modifications and lifestyle changes. Claimant reported taking Omeprazole on an as needed (PRN) basis. On this date of visit, Claimant's reported intake of caffeinated beverages, including coffee, tea and soft drinks was documented at 5-6 times a day. Additionally, Claimant was reportedly smoking ¾ of a pack of cigarettes per day and drinking significant amounts of alcohol.[6] Claimant was encouraged to continue dietary and lifestyle modifications, including moderation of her alcohol intake, and instructed to start taking 20 mg of Omeprazole daily for 4-6 weeks.

47. Based upon the evidence presented, the ALJ finds the record concerning Claimant's smoking history confusing. Review of the available records contain indications that Claimant reported that she quit smoking in 2010, while other records after 2010 indicate Claimant to be a "social" smoker. Moreover, some medical records indicate that Claimant quit smoking in 2013, while other records during this period indicate that Claimant "wanted" to quit in 2013 and that she was a current every day smoker as of June 27, 2013. Still other records indicate that Claimant quit smoking in 2014. Records from 2016 indicate that Claimant was a current smoker. At hearing Claimant testified that she began smoking when she was 15 and stopped when she was 26. She testified that she relapsed and began smoking again in 2008. Between 2008 and 2010, Claimant testified that she would smoke 1 cigarette per day. After 2010 Claimant testified that she would smoke an occasional cigarette and after 2015 she quit smoking altogether. Based upon the evidence presented, the ALJ finds Claimant's assertion that she has not smoked after 2015 dubious.

[6] Per the report from this date of visit, Claimant was drinking 1-2 beers 7 times a week and occasionally more than 5 alcoholic drinks per sitting.

48. Based upon the totality of the evidence presented, including the opinions of Dr. Schwartz, the ALJ finds that Claimant's increased use of caffeine and alcohol probably aggravated her pre-existing GERD/dyspepsia causing associated reflux type symptoms.

49. On August 18, 2016, Claimant treated with her primary care provider for anxiety and depression.

50. On September 19, 2016, Claimant was offered another transfer to a different work site but declined due to personal reasons, including what she testified was a conflict with another person who worked in that facility.

51. On September 23, 2016, Claimant was seen in follow-up by the PA in her gastroenterologist's office. A review of systems reveals that Claimant had ongoing complaints of "abdominal pain and heartburn."

52. On October 13, 2016, Claimant presented to the Southern Colorado Clinic (SCC) where she was evaluated by Dr. Scott DeRutter. Dr. DeRutter noted that Claimant presented with complaints of fever and dry cough of five days duration. Claimant denied SOB, nausea and vomiting. Physical examination revealed Claimant's lungs to be clear bilaterally. She had no respiratory distress. Nonetheless, she was assessed as having acute asthmatic bronchitis.

53. Five days later, on October 18, 2016, Claimant returned to the SCC where she was evaluated for a chief complaint of coughing. Claimant reported that she was not sleeping and had a "terrible cough" along with a sore throat and wheezing. Physical examination revealed wheezing and rhonci in the right and left lung. Claimant was provided with medication and instructed to return to the clinic for worsening symptoms or if her symptoms persisted for greater than 3-5 days.

54. On October 28, 2016, Claimant completed a First Report of Injury asserting that "old files from semi trailers [were] being torn down and scanned approximately 15-30 feet from [her] and the dust and mouse (waste) [was] affecting [her] breathing." According to Claimant's first report, she "had occupational asthma since 2012 from working at the FMCC dairy." Claimant also completed paperwork requested by Broadspire, Respondent Employers third party claims administrator, regarding the incident purportedly causing her symptoms. In that paperwork, Claimant noted the following: "Time release is tearing down/scanning/shredding old inmate files that have been stored in semi-trailers at the downtown warehouse for 15+ years that are dirty, dusty, buggy and full of mice and mice droppings. This takes place approx. 10-20 from my desk and has triggered (several) asthma attacks."

55. Claimant also presented to the Emergency Department at St. Thomas More Hospital on October 28, 2016. She reported chest tightness and difficulty breathing. Physical examination revealed no wheezing or retractions; however, Claimant

demonstrated tight breath sounds in all bases. A differential diagnosis was considered for bronchitis and exacerbation of asthma reactive airway disease. Chest x-rays revealed a normal heart size and pulmonary vascularity and clear lungs leading to an impression that Claimant had no acute findings. The overall impression reached in the emergency room was simply that Claimant had difficulty breathing. The record is devoid of an actual diagnosis of asthma, occupational asthma or asthmatic bronchitis. Claimant was provided steroids and instructed to follow-up with "workman's comp."

56. Three days later, Claimant returned to CCOM in follow-up. In the October 31, 2016 report, it is noted that Claimant presented for complaints of SOB, tightness in her chest and coughing she attributed to her exposure to dust and mouse waste while breaking down old files on October 28, 2016. Claimant reported that around 11:30 am on October 28, 2016, she began wheezing at work from dust that goes "everywhere" while old files are broken down. After taking a history and completing a physical examination, PA Quakenbush stated that a causal link between Claimant's symptoms and her workplace was not known.

57. On November 8, 2016, Claimant returned to CCOM where she was evaluated by PA Quakenbush for continued complaints that dust from old files was affecting her breathing. Physical examination failed to reveal labored breathing, rales, wheezes or rhonci. Claimant was returned to unrestricted duty and instructed to follow-up with Dr. Olson on November 9, 2016.

58. Clamant returned to CCOM on November 9, 2016 where she was evaluated by Dr. Olson. During this evaluation Claimant reported continued coughing "particularly at night." Physical examination revealed stable vital signs and no evidence of respiratory distress. She was assessed as having unspecified asthma and returned to work without restriction.

59. On December 5, 2016, Claimant's workers compensation claim was denied as evidenced by a Notice of Contest (NOC). The NOC indicates that Claimant's illness is not work related.

60. On January 26, 2017, NP Clough indicated that Claimant needed to be placed approximately 40 feet from the shredder being used to shred old files to "avoid inhalation of dust." In the alternative Claimant could be moved to a different room to avoid "asthma triggers." NP Clough also excused Claimant from tearing down, scanning and shredding old files."

61. On May 8, 2017, A.G. Wassenaar, Inc. performed an industrial hygiene test at the Time Comp Unit where the old files forming the basis for the instant claim were being broken down, scanned and shredded. The test was performed with more employees than normal breaking down and scanning the old files. Samples were taken directly from the desk of an employee in the process of breaking down and scanning old files. Samples were also taken adjacent to the paper shredder. Testing results revealed the following: No mouse (MUS m 1) allergen associated with mouse urine

above the limit of detection for the sampling and analytical method used for testing was detected. Similarly, no fungal spores associated with *Stachybotrys* (toxic black mold), *Penicillium/Aspergillus* or *Chaetomium* were identified in the indoor samples collected. Moreover, the mold spores collected in the indoors samples were "consistent with the normal outdoor populations for Colorado and were similar to the mold genera identified on the outdoor comparison sample collected during the sampling event." Accordingly, the industrial hygiene report notes: "Based upon the results of the air samples collected, it does not appear that mold growth was significantly impacting the indoor air quality within the office or paper shredder areas." To the contrary, the report indicates that because the mold spores measured in the indoor samples were "low"; the fungal spores detected within the building probably "originated from [being pulled in from] (entrainment) the outdoor air." Finally, the indoor air samples collected contained detectable levels of skin cells and cellulose (paper) fibers which the industrial hygienist attributed to the high activity and number of people breaking down and shredding old files.

62. On May 25, 2017, Claimant was evaluated by Dr. Jeffrey Schwartz, M.D. at the request of Respondents. Dr. Schwartz is a board-certified pulmonologist. He completed a three-year fellowship in pulmonary medicine and is a fellow of the American College of Chest Physicians. Dr. Schwartz currently serves as the Director of Respiratory Therapy at Presbyterian/St. Luke's Medical Center in Denver and has been practicing pulmonary medicine for 35 years. The ALJ finds Dr. Schwartz to be an expert in the field of pulmonary medicine, including asthma and occupationally induced asthma.

63. As part of his IME, Dr. Schwartz obtained a medical history, reviewed records and completed a physical examination. Dr. Schwartz also performed a spirometry test that showed no evidence of airflow obstruction.

64. Upon completion of his IME, Dr. Schwartz concluded that Dr. Suarez' 2012 Occupational asthma diagnosis was in error as the Claimant had no objective evidence of occupational asthma, nor, in fact, asthma of any etiology. In support of his opinion, Dr. Schwartz noted that the symptoms of asthma (intermittent cough, wheezing, chest tightness, and shortness of breath) are not specific to asthma, hence a formal diagnosis of "asthma" requires substantiation of reversible airflow obstruction as demonstrated on pre- and post-bronchodilator spirometry testing where a patient's post-bronchodilator FEV1 increases by at least 12% compared to the pre-dilator FEV1 or as a "gold standard" to establish the presence of airway hyperactivity when a methacholine test is administered and the patients FEV1 falls more than 20% when subjected to a methacholine dose of at least < 8 mg/ml and more typically at a dosage of < 4 mg/ml. According to Dr. Schwartz, Claimant's medical records did not include evidence that pre and post bronchodilator spirometry testing was performed and Claimant's methacholine test (MCT) was negative for airway hyper-reactivity as Claimant's FEV1 never decreased 20% at any dosage of methacholine even when she was subjected to as much 25 mg/ml of methacholine, the maximum dosage allowable. Nonetheless, Dr. Suarez, as noted at paragraph 18 above, would opine that Claimant had a positive

methacholine test which clearly appears to have had an effect on the opinions of Dr. Khalifah and later Dr. Henke leading them to adopt her occupational asthma diagnosis.

65. Dr. Schwartz noted that occupational asthma (OA) is defined as "asthma due to conditions attributable to work exposures and not to causes outside of work. According to Dr. Schwartz, OA is caused by one of two mechanisms. First when there is a "high-level of exposure to a gas, smoke, fume, or vapor with irritant properties, producing acute damage to the lower airways of the lungs that produces the syndrome referred to as reactive airways dysfunction syndrome (RADS) and second, when there has been "exposure to a 'specific workplace sensitizer, defined as an agent that induces asthma through a mechanism that is associated with a specific immunologic response.'"

66. According to Dr. Schwartz, the presence of objective evidence connecting suspected asthma to the workplace is critical to making a diagnosis of OA. Objective causal evidence is important to making the diagnosis of OA because a patient's perception of occupational exposure is often incorrect and that a compatible history from the patient is insufficient for diagnosis and has a low positive-predictive value.[7] Dr. Schwartz notes in his IME report that Claimant "never suffered a high-level exposure to a potential respiratory irritant and she was never shown to be sensitized (allergic) to any agent in her various workplaces." The ALJ finds these conclusions supported by the evidentiary record.

67. Based upon the evidence submitted to him, the ALJ finds that Dr. Schwartz found the medical record lacking the necessary objective evidence to establish that a workplace exposure aggravated Claimant's asserted asthma. To the contrary, Dr. Schwartz notes that outside of subjective complaints the medical reports are devoid of any objective evidence, e.g. spirometry before and after work or peak flow monitoring which demonstrates that Claimant had airflow obstruction that occurred as a result of her workplace environment. Rather, the record, according to Dr. Schwartz, supports that when Claimant was evaluated on numerous occasions for purported acute symptoms associated with alleged workplace exacerbations, she never presented with the "labored breathing, tachypnea, or wheezing characteristic of an acute asthma attack. For these reasons and because the methacholine challenge test was negative, Dr. Schwartz concluded that Dr. Suarez "misdiagnosed" Claimant with OA.

68. Dr. Schwartz concluded that the source of the Claimant's non-specific respiratory complaints, were unknown, but were possibly related to her underlying "severe" GERD. As support for this opinion, Dr. Schwartz cites to another independent

[7] In support of his opinion, Dr. Schwartz cites to a respiratory disease journal articles. See generally Exhibit C and D attached to the Deposition of Dr. Schwartz. These studies include findings suggesting that people with occupational asthma and people without occupational asthma had an equal chance of feeling better away from the workplace as compared to the workplace as a whole. Consequently, making the diagnosis of OA on history alone is unreliable.

study noting that GERD symptoms, are known to mimic asthma symptoms, particularly nocturnal coughing as reported by Claimant.[8]

69. On June 14, 2017, the parties took the evidentiary deposition of Dr. Schwartz. Dr. Schwartz testified that the majority of asthma sufferers don't know the cause of their condition and that allergy testing is a common way to determine the cause of a particular patient's suspected asthma. He referred to asthma caused by something in the outside environment as extrinsic asthma. He also testified that hereditary factors can cause asthma in connection with, and independent of, extrinsic factors.

70. Dr. Schwartz testified that Claimant's asthma like symptom complex is complicated by the fact that she has suffered from bronchitis and has GERD, both of which cause symptoms similar to asthma. Dr. Schwartz also testified that contemporaneous cigarette smoking would be a more likely cause of the Claimant's complaints and symptoms than any workplace exposure. He also testified that psychological factors could be the cause of the Claimant's subjective complaints, and that anxiety, in particular can cause asthma-like symptoms. Consequently, Dr. Schwartz reiterated his opinion that to make a diagnosis of asthma, it is necessary to objectively demonstrate that there's reversible airway obstruction by either having pre and post bronchodilator spirometry performed or administering a methacholine challenge test. In the case of Claimant, Dr. Schwartz noted that pre and post bronchodilator spirometry testing was not done and he testified further that Claimant's methacholine challenge test was negative. Accordingly, Dr. Schwartz restated his opinion that Claimant has not been proven to have asthma and that Dr. Suarez incorrectly diagnosed her with the same.

71. As it relates to Claimant's current claim asserting exposure to contaminants that caused an allergic and or asthma-like condition, Dr. Schwartz testified: "People aren't allergic to dead skin cells or paper dust. So finding that in an office environment would not at all be unusual, and it wouldn't be deemed contamination." Dr. Schwartz went on to testify that in 35 years of practicing pulmonary and internal medicine, he had never seen an allergy to paper dust or dead skin cells. Regardless, the record evidence is devoid of any testing establishing that Claimant has an allergy to either dead skin cells or paper dust.

72. As noted at ¶ 69, Dr. Schwartz testified that bronchitis can cause asthma-like symptoms. As it relates to her reports of exposure to workplace allergens and her frequent bouts of bronchitis, Dr. Schwartz testified that there is nothing present in the Claimant's workplace that would make her more susceptible to bronchitis.

73. Regarding Claimant's GERD, Dr. Schwartz testified: "And so if she has significant reflux disease, which is not always apparent to the patient, then that is a common cause of asthma-like symptoms that fool the patient and fool doctors many

[8] See page 10 of Dr. Schwartz' IME report, citing Porsbjerg C and Menzies-Gow A. Co-morbidities in severe asthma: Clinical impact and management. Respirology 2017; 22:651-661.

times." GERD attacks are randomly occurring, often without the patient knowing, and can be exacerbated by alcohol and caffeine.

74. Dr. Schwartz testified that the Claimant's presentation to the emergency room on the alleged date of injury was consistent with an episode of GERD as well as the aftermath of smoking.

75. Claimant testified that she had good days and bad days with regard to her respiratory complaints while working at Time Comp, meaning that on some days she had no breathing problems and went about her job without problem. She was unable to predict when she would have good or bad days.

76. Claimant testified that irritants encountered outside of the workplace can cause her to have asthma-like symptoms. According to Claimant, perfumes, household sprays, smoke, dirt, and dust can all trigger her to have the aforementioned symptoms. Consequently, Claimant testified that she will often stay home in order to avoid potential exposure to these irritants.

77. Claimant testified that she has not taken her GERD medication regularly, i.e. daily in many years; however, she keeps it on hand in case she needs it to treat symptoms caused by her hiatal hernia. The ALJ infers from this testimony that Claimant still has symptoms which she associates with her GERD/dyspepsia and hiatal hernia.

78. The Claimant testified that her symptoms have largely resolved since Time Comp moved to a different location over Memorial Day 2017. This improvement is in spite of the old files now being shredded in the same room where she currently works as opposed to a separate room across the hall in the former Time Comp location. Claimant attributes her improvement despite the closer proximity to the shredder to being in a larger work area room with vaulted ceilings and better airflow.

79. Mary Carlson, the Administrator of the Time and Release Operations for the Department of Corrections testified that in 2014, during Claimant's temporary assignment in the Time Comp Unit, old files were being brought in from the storage semi trailers at the facility for breakdown, scanning and shredding. She also testified that outside Claimant's claim, there have been no other claims for respiratory conditions out of the Time Comp Unit office.

80. Diana Bergeman, Claimant's current acting supervisor testified that when Claimant began working as a permanent employee of the Time Comp Unit in January 2016, the scanning and shredding project associated with old inmate files was ongoing. She testified that on average 2-3 transitional modified duty employees were breaking down old files during an eight hour shift.

81. Ms. Bergeman testified that she broke down, scanned and shredded old files for a 5-6 month time period before transitioning to managerial duties and that she currently breaks down and shreds old files on an occasional basis. She also reiterated

that no one other than Claimant has filed a claim for "respiratory-based" conditions arising from work in the Time Comp Unit.

82. Ms. Bergeman testified that she is asthmatic. She testified that she has never had an exacerbation of her asthma while working in the Time Comp Unit.

83. Claimant testified on rebuttal that she did not tear down old files during her temporary assignment with the Time Comp Unit in 2014. She also testified that when she returned to the Time Comp Unit in 2016, she had no involvement in tearing down, shredding and scanning old files for the months of January, February and most of March. At the end of March 2016, Claimant testified that she was placed on the schedule to participate in the breakdown of old files in order to expedite the project. According to Claimant that is when she began having trouble with her lungs.

84. The ALJ finds the opinions expressed by Dr. Schwartz to be credible, persuasive and supported by the evidence presented, including the medical records as well as the articles cited and submitted as part of his deposition. The contrary opinions of Claimant, Dr. Suarez, Dr. Henke and Dr. Khalifah regarding Claimant's diagnosis of OA are less persuasive when the evidence presented in considered in its totality. While the ALJ credits the opinions of Dr. Schwartz regarding whether Claimant was properly diagnosed with OA, the issue presented for determination is whether Claimant has proven that her OA, assuming she was properly diagnosed with the same, was aggravated by breaking down, scanning and shredding inmate files.

85. Based upon the evidence presented as a whole, the ALJ finds that Claimant has failed to establish that she suffered a compensable injury or aggravation of an alleged pre-existing occupational asthma due to repeated exposure to dust, mold, mouse waste and/or bugs as she alleged on October 28, 2016. Consequently, the issues of medical benefits, average weekly wage (AWW) and temporary disability benefits need not be addressed.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. The purpose of the Workers' Compensation Act of Colorado (Act), §§ 8-40-101, *et seq*., C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1), C.R.S*. The Claimant shoulders the burden of proving by a preponderance of the evidence that he is a covered employee who suffered an "injury" arising out of and in the course of employment. *Section 8-43-301(1), C.R.S.; Faulker v. Industrial Claim Appeals Office, 12 P.3d 844 (Colo. App. 2000); City of Boulder v. Streeb, 706 P.2d 786 (Colo. 1985); Pacesetter Corp. v. Collett, 33 P.3d 1230 (Colo. App. 2001).* A preponderance of the evidence is that which leads the trier-of-fact,

after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark, 197 Colo. 306, 592 P.2d 792 (1979)*. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. *Section 8-43-201, C.R.S*. A workers' compensation claim is decided on its merits. *Section 8-43-201, supra.*

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting all, part or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968); see also, *Dow Chemical Co. v. Industrial Claim Appeals Office*, 843 P.2d 122 (Colo. App. 1992)(ALJ may credit one medical opinion to the exclusion of a contrary opinion). In this case, the undersigned ALJ concludes that the expert medical opinions of Dr. Schwartz are supported by the medical record and the available medical literature. Accordingly, the ALJ concludes that his opinions are credible and convincing. When the evidentiary record is considered in its totality, the opinions of Dr. Schwartz are more persuasive than the contrary opinions of Drs. Suarez, Henke, Khalifah and Claimant.

C. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability

D. Under the Workers' Compensation Act, an injured employee is entitled to compensation where his/her medical condition is proximately caused by an injury or occupational disease arising out of and in the course of the employee's employment. *Section 8-41-301(1), C.R.S.; Horodyskyj v. Karanian* 32 P.3d 470 (Colo. 2001). The phrases "arising out of "and "in the course of" are not synonymous and a claimant must meet both requirements. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 20 (Colo. 1988). The latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d 379, 381 (Colo. 1991). Thus,

an injury occurs "in the course of" employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co.,* 38 Colo. App. 48, 51, 552 P.2d 1033, 1036 (1976). Here there is little question that Claimant produced sufficient evidence to support a conclusion that her symptoms occurred in the scope of employment. Rather, the question for determination here is whether Claimant's alleged asthma or aggravation thereto arises out of her employment.

E. The term "arises out of" refers to the origin or cause of an injury. *Deterts v. Times Publ'g Co. supra.* There must be a causal connection between the injury and the work conditions for the injury to arise out of the employment. *Younger v. City and County of Denver, supra.* An injury "arises out of" employment when it has its origin in an employee's work-related functions and is sufficiently related to those functions to be considered part of the employee's employment contract. *Popovich v. Irlando supra.* In this regard, there is no presumption that an injury which occurs in the course of a worker's employment also arises out of the employment. *Finn v. Industrial Commission,* 165 Colo. 106, 437 P.2d 542 (1968); *see also, Industrial Commission v. London & Lancashire Indemnity Co.,* 135 Colo. 372, 311 P.2d 705 (1957) (*mere fact that the decedent fell to his death on the employer's premises did not give rise to presumption that the fall arose out of and in course of employment*). Rather, it is the Claimant's burden to prove by a preponderance of the evidence that there is a direct causal relationship between the employment and the injuries. § 8-43-201, C.R.S. 2013; *Ramsdell v, Horn,* 781 P.2d 150 (Colo. App. 1989).

F. The determination of whether there is a sufficient "nexus" or causal relationship between Claimant's employment and the injury is one of fact which the ALJ must determine based on the totality of the circumstances. *In Re Question Submitted by the United States Court of Appeals,* 759 P.2d 17 (Colo. 1988); *Moorhead Machinery & Boiler Co. v. Del Valle,* 934 P.2d 861 (Colo. App. 1996). Proof by a preponderance of the evidence requires the proponent to establish the existence of a "contested fact is more probable than its nonexistence." *Page v. Clark, supra.* Whether Claimant sustained his burden of proof is a factual question for resolution by the ALJ. *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997). In this claim, Claimant alleges that she suffered a compensable injury or an aggravation of an alleged pre-existing occupational asthma due to repeated exposure to dust, mold, mouse waste and/or bugs as alleged on October 28, 2016 while breaking down, scanning and shredding old inmate files. According to Claimant, these repeated activities lead to SOB, wheezing, chest tightness and coughing resulting in the need for medical treatment. Based upon the evidence presented, the ALJ concludes that Claimant's claims are rooted in the legal principals surrounding the manifestation of an occupational disease.

G. Section 8-40-201(14), C.R.S. defines "occupational disease" as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as

> a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

H. This section imposes additional proof requirements beyond that required for an accidental injury. An occupational disease is an injury that results directly from the employment or conditions under which work was performed and can be seen to have followed as a natural incident of the work. Section 8-40-201(14), C.R.S.; *Climax Molybdenum Co. v. Walter*, 812 P.2d 1168 (Colo. 1991); *Campbell v. IBM Corporation*, 867 P.2d 77 (Colo. App. 1993). On the other hand, an accidental injury is traceable to a particular time, place and cause. *Colorado Fuel & Iron Corp. v. Industrial Commission*, 154 Colo. 240, 392 P.2d 174 (1964); *Delta Drywall v. Industrial Claim Appeals Office*, 868 P.2d 1155 (Colo. App. 1993). An occupational disease arises not from an accident, but from a prolonged exposure occasioned by the nature of the employment. *Colorado Mental Health Institute v. Austill*, 940 P.2d 1125 (Colo. App. 1997). Under the statutory definition, the hazardous conditions of employment need not be the sole cause of the disease. To the contrary, a claimant is entitled to recovery if he/she demonstrates that the hazards of employment cause, intensify, or aggravate, to some reasonable degree, the disability. *Anderson v. Brinkhoff*, 859 P.2d 819 (Colo. 1993). In this case, Claimant asserts that she has pre-existing OA as a consequence of exposure to dust, bird feathers and droppings as well as cow dung at FMCC, which she asserts was triggered by repeated exposure to pulmonary irritants (mold, dust, mouse waste and bugs) while working in the Time Comp Unit. According to Claimant, her repeated exposures at the Time Comp Unit caused "asthma attacks" characterized by SOB, chest tightness, wheezing and coughing. Claimant asserts that these "attacks" are compensable because they are fairly traced to the employment as a proximate cause, and they do not come from a hazard to which Claimant was equally exposed outside of the employment. Simply put, Claimant asserts that the conditions under which her work was preformed caused, aggravated, accelerated, and/or combined with her pre-existing OA giving rise to her symptoms, her need for medical treatment and produce the disability for which benefits are sought. Based upon the totality of the evidence presented, the ALJ is not persuaded.

I. A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work or the fact that Claimant may have experienced an onset of symptoms while performing job duties does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. As found here, the totality of the evidence presented, including the medical records and the testimony of Dr. Schwartz establishes that the presence of objective data connecting Claimant's alleged asthma to her workplace is lacking. Specifically, the

necessary testing (pre and post bronchodilator spirometry) to aid in reaching a diagnosis of asthma was not done. Furthermore, Claimant's methacholine challenge test failed to demonstrate changes in Claimant's FEV1 to support Dr. Suarez' conclusion that Claimant has asthma. Finally, there are no results from allergy testing to substantiate that Claimant was shown to be sensitized to any irritant in her various workplaces to support a conclusion that she suffers from occupationally induced asthma. Importantly, the only matter found in the air in the Time Comp Unit but not in the outside environment were dead skin cells and paper dust. The presence of these particulates is expected in any human dwelling and did not exceed normal levels. Crediting the opinions of Dr. Schwartz, the ALJ finds/concludes that dead skin cells and paper dust are not allergens and are not considered contaminants. The presence of these particulates, more probably than not, did not cause of aggravate Claimant's asserted asthma. Indeed, there are other more likely non-industrial explanations for Claimant's non-specific respiratory complaints. It is reported that her mother has asthma. Consequently, she probably has a genetic predisposition to respiratory illness. Furthermore, she has a significant smoking history leading the interpreter of Claimant's initial spirometry to indicate that her risk for developing COPD (Chronic Obstructive Pulmonary Disease) was "very high" and noting her lung age to be greater than 84 years. Claimant was also suffering from anxiety and depression on or around the date of alleged injury and has severe GERD which was likely exacerbated by her caffeine and substantial alcohol consumption as referenced in her medical record on May 12, 2016. Both GERD and anxiety/depression are known to cause symptoms that mimic asthma. Accordingly, the ALJ is not persuaded that Claimant actually suffers from OA or that it was aggravated by her work with old inmate files in the Time Comp Unit.

J. In support of her claims, Claimant argues that there is a temporal connection between her symptoms and her presence at work to establish causation in this matter. However, as explained by a Panel of the Industrial Claims Appeals Office in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (October 27, 2008), a coincidental correlation between a claimant's work and his symptoms does not mean there is a causal connection between a claimant's injury and his/her work. To the contrary, as noted by the Panel in *Scully* "correlation is not causation." Crediting the opinion of Dr. Schwartz, that objective causal evidence is important to making the diagnosis of OA, the ALJ concludes that Claimant's subjective perception of occupational exposure is unreliable, probably incorrect and fails to establish the request causal connection to establish that she suffered a compensable injury. In this case, Claimant worked in Time Comp for approximately six months while the old files were being broken down without any complaint, with three of these months spent stationed next to the shredder being used to destroy the old files. Since her first complaint of workplace symptomology in March 2016, the Claimant continues to have days at work without breathing problems or respiratory symptoms. She cannot predict when she will have a good day or a bad day despite the old files being broken down consistently on a full-time basis. Time Comp has recently moved to a new location where the shredder being used for the old files is in the same room as the Claimant as compared to its location in a separate room across the hall at the time this claim was asserted. Regardless, the Claimant professes to have no symptoms and a general improvement since moving to this new location.

Claimant presented no persuasive evidence to explain how irritants, which she claims triggers her breathing problems and which are present in the workplace every day only cause her symptoms sporadically. Here, the evidence presented supports a conclusion that Claimant has failed to establish the requisite causal connection between her non-specific respiratory symptoms and her work duties in general and more specifically, based upon the air sampling in the Time Comp Unit, that her employment exposed her to a hazard that was more prevalent in the work place than in everyday life or in other occupations. Claimant's failure to satisfy each element of an occupational disease by a preponderance of credible evidence is fatal to her claim. *Kinninger v. Industrial Claim Appeals Office*, 759 P.2d 766 (Colo. App. 1988). Accordingly, her claim for benefits must be denied and dismissed.

ORDER

It is therefore ordered that:

1. Claimant's claim for benefits based is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 8, 2017

/s/ Richard M. Lamphere

Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

ISSUES

- Whether Claimant has established by a preponderance of the evidence that he sustained a compensable industrial injury as the result of an incident which alleged occurred on April 29, 2016; and

- If compensable, whether Claimant proved entitlement to related, reasonable and necessary medical benefits.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant, a 61-year-old document specialist, has worked for Employer since August 2007. On April 29, 2016, Claimant alleges that he injured his right hip, low back, and right arm when he tripped on a snowbrush while stepping out of a company vehicle.

2. Prior to his alleged April 29, 2016 injury, Claimant had a history of falls and injuries to his low back and hip with associated weakness and muscle atrophy in his right leg. On March 16, 2010, Claimant began treating with Dr. Aschberger due to a slip and fall which occurred at work on February 8, 2010. He complained of right lower extremity weakness, right groin pain, hip pain, and low back pain.

3. On May 17, 2010, Dr. Aschberger found right leg muscle atrophy and weakness when he examined Claimant. He noted Claimant's right leg was smaller compared to his left leg.

4. Imaging studies performed in 2010 revealed a fracture in Claimant's right hip which required surgical repair. However, upon post-surgical examination, Claimant continued to have noted right leg weakness and atrophy. He reported to providers that his right knee would occasionally give out. Claimant was prescribed Lyrica for his persistent right leg, hip, and low back pain.

5. On December 6, 2010, Claimant was placed at MMI and given a 31% lower extremity rating for his right hip and an 11% whole person impairment rating for his lower back. Claimant continued to note significant weakness and atrophy n his right leg.

6. On February 8, 2011, Dr. Gellrick noted in her DIME report that Claimant reported several additional falls to his PCP during a June 18, 2010 examination.

Claimant admitted that he had fallen approximately four times due to weakness in his right leg. Claimant reported an additional fall to Dr. Schwappach during a July 1, 2010 examination.

7. Dr. Gellrick noted during her physical examination that Claimant had multiple abrasions on his left lower extremity from falls due to his right leg weakness and that he had to walk close to walls to avoid falling. She also noted obvious right leg atrophy.

8. On May 5, 2011, Claimant saw Dr. Schwappach for a return examination. Claimant reported that he recently fell down some stairs when his right knee "gave way." Claimant underwent physical therapy and received an injection.

9. Claimant continued to receive maintenance care for his 2010 fall until December 7, 2011, when he experienced his second on-the-job slip and fall with injury to his low back and right hip. Dr. Aschberger noted Claimant was well known to him for persistent right hip pain, low back pain, and right quadriceps atrophy. Dr. Aschberger's January 5, 2012 records note that Claimant had decreased bulk in his right quadriceps.

10. Dr. Aschberger continued to treat Claimant for his December 2011 injury including injections into Claimant's hip and SI joint. Claimant failed to show significant gain from conservative treatment and was recommended to undergo total right hip replacement on May 21, 2013.

11. Claimant continued to note SI joint pain with radiating symptoms into his lower extremity with associated weakness and knee buckling during Dr. Aschberger' June 18, 2013 examination.

12. On April 24, 2014, Claimant noted difficulty ascending stairs and getting in and out of a car and reported needing to assist lifting his right leg with his hand.

13. On May 14, 2014, Dr. Perea examined Claimant noting another fall where Claimant tripped over a step and fell forward injuring his right side.

14. Dr. Schwappach eventually recommended Claimant undergo removal of an osteophyte that had formed around the site of Claimant's surgical plate as he believed it caused Claimant's continued weakness and pain complaints. The procedure was recommended to be approved via internal review. However, Claimant settled his claims prior to undergoing the surgery. Claimant stipulated that he had a 15% whole person impairment to his lumbar spine and a 40% extremity rating impairment to his right hip/leg.

15. On September 18, 2014, at Claimant's last noted workers' compensation appointment for his 2011 injury, he was diagnosed with chronic pain syndrome and his prescription for Lyrica was refilled.

16. On January 27, 2016, two months prior to the alleged date of injury for this claim, Claimant followed up with his primary care provider for chronic pain in his right hip and SI joint. Claimant used Lyrica and Tramadol for pain control.

17. On May 3, 2016, Dr. Danahey at Concentra examined Claimant for his April 29, 2016 fall. X-rays of Claimant's right hip, pelvis and lumbar spine were unremarkable for acute fracture or subluxation. Claimant was diagnosed with a contusion of his right hip, lumbar strain, and a contusion of his right elbow and shoulder. Dr. Danahey recommended Claimant undergo physical therapy and restricted Claimant's lifting to up to 10-pounds occasionally. Employer complied with this restriction and Claimant returned to work at full wages.

18. May 27, 2016, MRI results revealed minimal disc degenerative changes with minimal broad-based disc bulge, bilateral facet arthropathy, and mild epidural lipomatosis at L4-5, with similar findings at L5-S1.

19. On June 20, 2016, Claimant followed up with Dr. Aschberger complaining of pain in his right lower back with radiation of symptoms to the anterolateral thigh with occasional irritation into his foreleg and intermittent tingling into his toes. Dr. Aschberger noted residual weakness with hip flexion on the right.

20. On September 6, 2016, Claimant returned to Dr. Aschberger. Claimant reported a recent increase in pain after a session of dry-needling. Claimant had right-sided pain with facet loading at L4-5 and L5-S1. Dr. Aschberger noted continued findings of SI irritation and an increased amount of irritation with facet irritation. Dr. Aschberger referred Claimant to Dr. Zimmerman for medial branch blocks.

21. On September 29, 2016, Dr. Janssen completed a PA review of the medical branch block request. Dr. Janssen opined Claimant did not meet the criteria for a reassessment for additional injections within 6 months due to not receiving an 80% improvement from prior injections and a lack of objective radiographic findings. As such, Insurer denied the blocks.

22. On December 6, 2016, Dr. Basse completed a Respondents sponsored IME to address causation and whether Claimant had experienced an aggravation of his pre-existing condition. Dr. Basse noted longstanding moderate decreased muscle bulk in his right quadriceps, hamstrings, and gastrocsoleus complex with decreased muscle bulk in the right anterior tibialis and EHL with foot drop. She opined that whatever was causing the muscle atrophy was present prior to his 2010 injury as the distal weakness that was noted immediately after could not have been explained by his diagnosis at the time.

23. Dr. Basse testified that Claimant's distal weakness and right foot drop played a role in Claimants' many falls. She recommended Claimant undergo a complete neurologic examination outside of workers' compensation to locate any progressive or stable lesion that could be treated. Dr. Basse concluded that

whatever was causing Claimant's pain appeared to originate from before his 2010 injury and likely involved the sciatic and femoral nerves without radiculopathy as Claimant's gluteal muscles were not involved. She was unclear whether Claimant had suffered from a new or aggravating condition when he fell on April 29, 2016 as there were no anatomical findings to suggest a new or aggravating condition.

24. Dr. Basse testified via deposition on July 6, 2017. She credibly testified that she reviewed Claimant's medical history dating back to 2010 and opined that Claimant likely suffered from an undiagnosed and non-work-related condition. As support, Dr. Basse noted Claimant underwent extensive treatment to the same body parts and for the same pain complaints without improvement. Likewise, she opined that Claimant's muscle atrophy and weakness were not a result of a slip and fall because Claimant was noted to have atrophy immediately after his initial fall in 2010, and atrophy takes much longer to develop. Instead, she opined that Claimant's foot drop, muscle atrophy, and noted weakness were a likely factor in causing his numerous falls.

25. Dr. Basse also testified Claimant could be suffering from epidural lipomatosis which is a naturally progressing disease which can cause symptoms similar to that Claimant experienced. Dr. Basse noted MRI findings which supported this conclusion.

26. Claimant testified at hearing. Claimant downplayed the number of times he has fallen during the past several years. When first questioned he claimed to have only fallen three times. He testified that the knee buckling and weakness he reported on numerous occasions had only caused him to stumble but not fall to the ground. When confronted with medical records documenting multiple falls, Claimant admitted to falling numerous times due to the weakness in his right leg.

27. When confronted with his April 24, 2014 statement to Dr. Zimmerman that he had to physically assist his right leg when getting in and out of a vehicle, Claimant alleged it was due to his hernia and inguinal nerve issues. However, Claimant had already undergone surgery for both his hernia and inguinal nerve at the time he was required to assist with the movement of his right leg.

28. Claimant acknowledged settling his prior workers' compensation claims and that he did not get treatment, including the recommended surgery.

29. Claimant testified that he continued working full duty for the duration of his alleged 2016 injury and that he continued taking Lyrica at the level prescribed to him in 2010.

30. Claimant has not met his burden of proving by a preponderance of the evidence, that he sustained a compensable injury on April 29, 2016. Claimant has a substantial and documented history of prior falls due to significant weakness in his right leg. These numerous falls have resulted in repeated

complaints to the same body parts with little improvement despite a history of six years of conservative treatment, injections, and surgeries. The ALJ finds Claimant was predisposed to falling prior to the alleged April 29, 2016 fall.

31. The ALJ finds it unlikely Claimant was asymptomatic and without issue prior to the alleged April 29, 2016 fall. Despite Claimant's testimony that he had no issues with his low back or hip for almost two years prior to the alleged date of injury, Claimant has a 40% permanent impairment to his right lower extremity and a 15% whole person permanent impairment to his lumbar spine. Additionally, Claimant was recommended to undergo a third surgical procedure on his right hip. However, when he settled his claims, he did not pursue the recommended surgery. The ALJ finds it unlikely that Claimant's need for surgical intervention resolved without treatment. Rather, it is more likely that his condition continued to progress until the events on April 29, 2016.

32. Likewise, just two months prior to Claimant's alleged work-injury he complained of chronic hip and low back pain which he treated with Tramadol and Lyrica. As such, Claimant's testimony that he was asymptomatic prior to the alleged injury is not persuasive.

33. The more probable explanation for Claimant's fall on April 29, 2016, is that as Claimant shifted his weight onto his right leg, it buckled and gave out, as it had done in the past.

34. Even if Claimant caught his foot on a snowbrush which caused him to fall, Claimant failed to provide any persuasive evidence to support a conclusion that his pre-existing condition was aggravated as a result of an alleged fall.

- Claimant continues to work full duty at full wages.
- The mere presence of pain is not enough to convince this court of a new or aggravated condition.
- Claimant had the same pain complaints as in the past and he continued to take pain medication at the same levels he did prior to the alleged injury.
- Despite numerous treatment modalities, Claimant's condition has failed to improve for over six years and only "resolved" when Claimant accepted settlement and stopped treatment on his own.

These facts lend support to Dr. Basse's opinion that Claimant has an undiagnosed, untreated, and non-work-related condition that needs further evaluation outside of the workers' compensation system and that there simply was no objective evidence to support a new or aggravated injury.

35. As Claimant has failed to prove he suffered a compensable injury, his claim for medical benefits also fails.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

According to C.R.S. §8-43-201, "(a) Claimant in a workers' compensation claim shall have the burden of proving entitlement to benefits by a preponderance of the evidence; the facts in a workers' compensation case shall not be interpreted liberally in favor of either the rights of the injured worker or the rights of the employer, and a workers' compensation case shall be decided on its merits." *See also Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590, 592 (Colo. App. 1998) ("The Claimant has the burden of proving an entitlement to benefits by a preponderance of the evidence."); *Lerner v. Wal-Mart Stores, Inc.,* 865 P.2d 915, 918 (Colo. App. 1993) ("The burden is on the Claimant to prove his entitlement to benefits by a preponderance of the evidence.").

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

In deciding whether the Claimant has met her burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to testimony, and draw plausible inferences from the evidence." *See Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002).

Proof by a preponderance of the evidence requires Claimant to establish that the existence of a contested fact is more probable than its nonexistence. *See Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 (ICAO March 20, 2002).

A compensable injury is an injury which "arises out of" and "in the course of" employment. *See* C.R.S. §8-41-301(1)(b); *Schepker v. Daewoo North*, W.C. No. 4-528-434 (ICAO April 22, 2003).

The Claimant must prove a causal nexus between the claimed need for treatment and the work-related occupational disease or injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the industrial exposure caused the symptoms and consequent need for treatment, or that the industrial exposure aggravated or accelerated any pre-existing condition. Rather, the

occurrence of the symptoms may be the result of or natural progression of a pre-existing condition that is unrelated to the employment, or may be attributable to some intervening cause. *See Owens v. Industrial Claim Appeals Office,* 49 P.3d 1187 (Colo. App. 2002); .*F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995).

Purely idiopathic or personal injuries are generally not compensable under the Act, unless an exception applies. *See Velasquez,* 41 Colo. App. at 202–03, 581 P.2d at 749; *see also Irwin*, 695 P.2d at 765. When it comes to idiopathic injuries, the "special hazard" doctrine represents an important exception to the general rule of non-compensability, under which an injury is compensable even if the most direct cause of that injury is a preexisting idiopathic disease or condition so long as a special employment hazard also contributed to the injury. *City of Brighton v. Rodriguez,* 318 P. 3d 496 (Colo. 2014). The ALJ finds no special employment hazard existed at the time of Claimant's fall which contributed to the injury.

The ALJ finds that Claimant did not suffer a compensable injury on April 29, 2016. Rather, Claimant's significant and documented right leg weakness is the more likely cause of Claimant's fall and Claimant failed to prove the existence of any special employment hazard which contributed to the injury.

Claimant bears the burden of proof of showing that medical benefits are causally related to his alleged work-related injury or condition. *Ashburn v. La Plata School District 9R,* W.C. No. 3-062-779 (ICAO May 4, 2007). Claimant is not entitled to medical care that is not causally related to his work-related injury or is not reasonable or necessary. Respondents do not "implicitly" admit for a disputed condition by paying for medical benefits. *Hays v. Hyper Shoppes*, W.C. No. 4-221-570 (ICAO April 13, 1999). The respondents remain free to contest the compensability of any particular treatment. *Id.* As noted in *Ashburn, supra,* "it has generally been held that payment of medical services is not in itself an admission of liability. This is based on the sound public policy that carriers should be allowed to make voluntary payments without running the risk of being held thereby to have made an irrevocable admission of liability."

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant failed to establish by a preponderance of the evidence that he sustained a compensable injury on April 29, 2016.

2. As the claim is not compensable, Claimant's request for medical benefits is denied and dismissed.

3. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Is the left arthroscopic shoulder surgery proposed by Dr. John Pak reasonable, necessary, and related to Claimant's work injury?

II. Did Respondent's comply with W.C.R.P. 16 when denying the request for surgery by Dr. Pak's office?

III. Should Claimant's Average Weekly Wage be adjusted due to the termination of his health insurance benefit?

IV. If the Average Weekly Wage is so adjusted, should Claimant's Temporary Total Disability payments also be so adjusted, and payable on the effective date of the termination of his health insurance benefit?

STIPULATIONS

I. Claimant's Average Weekly Wage is $1008.00, prior to any adjustments which might be made for the loss of health insurance benefits.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ makes the following Findings of Fact:

1. The Claimant was an apprentice electrician who relocated to Colorado from Texas to work for the Respondent Employer. The Claimant testified that he started his employment in early October of 2016. This is an admitted Worker's Compensation claim.

2. The Claimant is a member of the International Brotherhood of Electrical Workers (union).

3. The Respondent Employer is a union shop for its employees.

4. The stipulated AWW is $1,008, not counting any possible adjustments for health insurance.

5. Claimant testified that he's been an electrician for about 6 years and he testified that this is the first injury he's sustained at work during that time period. Claimant testified that he's never filed a workers' compensation claim prior to this injury.

6. The Claimant testified that he was pulling some heavy gauge wire up to the mezzanine level when he felt and heard a pop, followed by a burning sensation in

the inside area of his left shoulder. He initially thought the sensation would pass and continued to work.

7. The Claimant testified that his left shoulder continued to give him discomfort and increased pain when he was performing his work duties. No other events had occurred since this injury which would have contributed to his current symptoms.

8. The Claimant denied any significant pre-existing shoulder problems. He stated that he had had a motorcycle accident approximately 10 years decade before and had surgery. The Claimant testified that he was able to work and perform recreational activities, without significant restriction or pain prior to the incident at Respondent Employer. Claimant further testified that that the pain symptoms from this workplace accident have been different than anything he has experienced prior. He further testified that he cannot now perform the same work duties that he could prior to this injury, without feeling a risk of further injury.

9. Respondent Employer's employee, Kisi Thompson, testified that she received a telephone call from the Claimant's personal physician, claiming that he had hurt himself at work. Ms. Thompson filled out the Employer's First Report of Accident and sent it to Respondent Insurer. She provided claimant with the list of authorized workers compensations physicians.

10. The Claimant testified that he was initially seen by CCOM, the authorized treating facility, and then referred to Dr. David Weinstein for an orthopedic consultation. Dr. Weinstein had reviewed his MRI films and x-rays. He gave the Claimant a cortisone injection and sent him for 6 weeks of physical therapy. Dr. Weinstein saw the Claimant again in January of 2017. The Claimant stated to Dr. Weinstein at this second visit that his pain was less than it had been, and he had increased range of motion after the therapy and injections. However, Claimant still testified at hearing that, despite some improvement, he still cannot reach out or up with weight, as it still causes pain and popping in his shoulder. He is still unable to perform overhead lifting without significant pain.

11. The Claimant testified that he attended a "second opinion" with Dr. John Pak for a second surgical consultation, approximately one month after seeing Dr. Weinstein. He testified that he wants to move forward with the left arthroscopic shoulder surgery recommended by Dr. Pak because he wants to get back to work.

12. Claims Representative Lee Phillips of the Respondent Insurer testified that the authorized treating physician, Dr. Daniel Olsen of CCOM, indicated that the Claimant was still complaining of pain and requested that the Claimant be seen for a second opinion orthopedic consultation. Mr. Phillips testified that he authorized a one-time evaluation by Dr. Pak. He did not authorize Dr. Pak to begin treating the Claimant.

13. Dr. David Weinstein is a board certified orthopedic surgeon. He identified his curriculum vitae at his deposition which was taken for preservation of testimony and entered into evidence at the time of the hearing. Dr. Weinstein specializes in shoulder and elbow reconstruction. He did a fellowship at Columbia-New York Orthopedic Hospital in New York, New York, in 1992 and 1993. Dr. Weinstein has specialized in shoulder surgery in Colorado since 1992. He has written medical journal articles and presented lectures on shoulder surgery. According to Dr. Weinstein's testimony at deposition, the medical literature does not support performing arthroscopic surgery on Claimants who have pre-existing shoulder instability such as the Claimant presented. He stated in his deposition that the proposed procedure is not reasonable and necessary and would not be effective in relieving the effects of a shoulder injury.

14. Dr. David Weinstein issued his first narrative report on November 18, 2016, after reviewing x-rays and an MRI scan. Dr. Weinstein noted significant underlying pre-existing glenohumeral arthritis in the Claimant's shoulder. [Exhibit "B"] Dr. Weinstein indicated that the glenohumeral arthritis had been present for an extended period of time, even prior to the significant motorcycle accident in approximately 2008.

15. Dr. Weinstein noted that the Claimant's pre-existing changes on his MRI scan represented degenerative arthritis and his symptoms were chronic in nature. He believed (and the ALJ so finds) that the Claimant had aggravated his pre-existing arthritic symptoms in his employment with the Respondent Employer and had an inflammation of the rotator cuff. The ALJ further finds that this preexisting condition is now significantly symptomatic as a result of this work injury.

16. Dr. Weinstein explained to the Claimant that his best treatment option was conservative measures, such as physical therapy and injections. Dr. Weinstein's report [Exhibit "B," page 5] indicated that it was very probable that the Claimant would need shoulder replacement surgery for his pre-existing glenohumeral arthritis, but Dr. Weinstein did not believe that it should be part of his workers' compensation injury. Dr. Weinstein referred the Claimant for physical therapy and saw him again on January 11, 2017. His report from that date [Exhibit "B," page 7] showed marked improvement in both strength and range of motion, according to that report. On that date, Dr. Weinstein reported that the Claimant told him that he "had no problems" prior to his injury. However, Dr. Weinstein stated that this was neither credible nor believable based upon his advanced glenohumeral arthritis. He indicated that it would have been "impossible that he had normal mechanics and a normal shoulder prior to the injury." Based upon the Claimant's improvement, Dr. Weinstein recommended that he complete his physical therapy. Dr. Weinstein also indicated that a "shoulder arthroscopy with removal of osteophytes has very little chance of improvement." Although the Claimant would eventually need shoulder replacement surgery, Dr. Weinstein told the Claimant that this would be due to his pre-existing arthritis. Dr. Weinstein discharged the Claimant and recommended that the Claimant return to his usual working activities and to continue with conservative care.

17. Dr. Weinstein testified that arthroscopic surgery, as proposed by Dr. Pak was not reasonable or necessary and would not benefit the Claimant. Dr. Weinstein has seen other patients with the same type of shoulder instability and pre-existing glenohumeral arthritis. Attempted arthroscopic surgery on these patients was unsuccessful. Dr. Weinstein noted that not only has he written an article on this issue, but there were several other medical journal articles which indicated that arthroscopic surgery was ineffective for curing or relieving shoulder strains and aggravations, such as claimant's condition.

18. An operative report (Exhibit "D) and MRI scans from October of 2008 show that the Claimant had left anterior, superior and posterior labral tears and chondromalacia of the glenoid. Arthroscopic repairs of the labral were undertaken and a chondroplasty was performed of the glenoid at that time.

19. The Claimant saw Dr. John Pak, MD, with Front Range Orthopedics on February 7, 2017 for the authorized "second opinion." Dr. Pak's records (Exhibit 3) show that he diagnosed degenerative joint disease of the left shoulder and recommended a shoulder arthroscopy for debridement, decompression, and chondroplasty. He further stated that this procedure was reasonable, necessary, and related to the workplace injury of October 26, 2016. Dr. Pak opined that the MRI of November 9, 2016 provides evidence of an acute injury as a large effusion can indicate acute injury or aggravation. (Exhibit 3, p. 42). Dr. Pak opined that the work place injury of October 26, 2016 brought about/caused the current need for the requested left shoulder arthroscopy. (Exhibit 3, p. 43). Further, Dr. Pak opined that the need for the left shoulder arthroscopy is not the "natural progression" of a pre-existing condition. *Id.*

20. Dr. Pak sent his recommendation and request for authorization of the arthroscopy to the Respondent Employer, Lee Phillips. Mr. Phillips denied the arthroscopy (Exhibit E) in a handwritten note. Mr. Phillips relied upon the January 2017 narrative report of Dr. Weinstein (Exhibit B pp. 7 - 8] as the medical reason for the denial of care. Mr. Phillips declined to get a third opinion as a "tie breaker" for the necessity of this proposed procedure, deciding instead to let the matter be decided by a hearing.

21. Lee Phillips testified that after he sent the fax to Dr. Pak's office he received a phone call from Dr. Pak's office seeking approval of the requested procedure, but he informed them that the requested procedure was denied in that phone conversation. Lee Phillips testified that he informed Dr. Pak's office that there were two different opinions regarding treatment for Mr. Lucas and that the findings needed to be decided by a hearing. Mr. Phillips testified that he informed Claimant of the denied request for surgery with Dr. Pak, "probably just over the telephone." Mr. Phillips further testified that the written denial regarding Dr. Pak's requested surgery was faxed only to Dr. Pak's office (Claimant did not receive a written denial of Dr. Pak's requested surgery). He testified that he had a "phone discussion" with the Claimant on February 16, 2017.

22. Dr. Pak is an orthopedic surgeon, as evidenced by his capacity as a physician at Front Range Orthopedics, the referral for a second opinion for the need for arthroscopic surgery by Insurer, his familiarity with the procedure he recommended to perform for Claimant, and as referenced by Dr. Castrejon's IME Report. (Findings of Fact ¶ 31).

23. Lee Phillips, credibly testified that he was not presented with all of the records when he received the request for authorization but communicated by telephone that they were going to deny the authorization for surgery based upon Dr. Weinstein's opinions that arthroscopic surgery was not medically appropriate and not reasonable or necessary to cure or relieve the Claimant's industrial injury.

24. The Claimant did return to work with restrictions until he was laid off on approximately January 25, 2017. The Claimant was laid off due to his lack of seniority with the company, being a fairly new employee. The Claimant has not applied for other employment since being laid off. He has applied for unemployment through a former employer in the State of Texas.

25. Prior to his lay off, the Claimant was performing lighter electrical work, but including overhead work with electrical fixtures.

26. The Claimant testified that he had received health insurance benefits which were lost after he was laid off from the Respondent Employer. The Claimant testified that he had "benefits" through his union which included health and accident benefits and life insurance benefits. He testified he was unsure of the nature and extent of his benefits and contributions, but found out through a COBRA letter from the union that his health insurance would be terminated around March 1, 2017. He no longer carries health insurance.

27. Kisi Thompson, the Respondent Employer's representative, testified that the Claimant did not receive health and accident benefits through the Respondent Employer. The Respondent Employer would contribute $2.00 per hour to the union for a benefits package which the union would then provide to Claimant. Ms. Thompson was unaware of the details of the union benefits package in Texas and how much of the $2.00 per hour was attributed to health insurance vs. life insurance. The Respondent Employer was not involved in providing health insurance benefits. This was a strictly a union benefit package, according to the Ms. Thompson's testimony. The ALJ finds this testimony to be credible and accurate.

28. Dr. Daniel Olson is the Authorized Treating Physician in this claim. (Exhibit 1). Dr. Olson diagnosed Claimant with a left shoulder sprain of 10/26/2016 and aggravation of pre-existing glenohumeral degenerative joint disease. (Exhibit 1, p.19). Dr. Olson opined that he agrees with Dr. Pak's recommendation/request for left shoulder arthroscopy in this case as the Claimant "has not returned to baseline + it is reasonable to try + clean up any loose bodies, etc." Dr. Olson further opined that the left shoulder arthroscopy requested by Dr. Pak is reasonable, necessary, and related to

the work place injury of October 26, 2016. (Exhibit 1, p. 20). Dr. Olson opined that the work place injury of October 26, 2016 brought about/caused the current need for the left shoulder arthroscopy requested by Dr. Pak. (Exhibit 1, p. 20). Further, Dr. Olson opined that the need for the left shoulder arthroscopy is not the "natural progression" of a pre-existing condition. *Id.*

29. Dr. Miguel Castrejon performed an Independent Medical Examination in this claim. (Exhibit 7, pp. 56 – 61). Dr. Castrejon reviewed all medical records, examined the Claimant, and issued a medical report. On physical examination, Dr. Castrejon noted scapular winging on the left as well as visible atrophy of the supraspinatus. (Exhibit 7, p. 58).

30. Dr. Castrejon diagnosed Claimant with aggravation of pre-existing glenohumeral osteoarthritis, left shoulder; left shoulder impingement syndrome; and altered shoulder/scapular mechanics. (Exhibit 7, p. 59). Dr. Castrejon opined that "prior to these recent symptoms there is no documentation of ongoing medical care, loss of work time, permanent physical limitation or permanent impairment." (Exhibit 7, pp. 59 – 60).

31. Dr. Castrejon opined that the presence of a large joint effusion in the shoulder (shown on the MRI) supports the presence of an acute on chronic change. (Exhibit 7, p. 60). Dr. Castrejon stated that "when reviewing the comments offered by Dr. Weinstein it is quite clear that, although improved, the Claimant had not yet returned to preinjury level." (Exhibit 7, p. 60).

31. Regarding the recommendation for surgery requested by Dr. Pak, Dr. Castrejon opined:

> "Dr. Pak is also a *fellowship trained shoulder specialist* who offered a professional opinion with regard to the claimant's condition. Dr. Pak went one step further by acknowledging that the claimant was too young to proceed with shoulder replacement yet still required treatment for a condition that remained symptomatic and functionally limiting. The surgical treatment offered by Dr. Pak goes beyond 'removal of osteophytes.' Dr. Pak is proposing a surgical procedure that will address the impingement, loose bodies, and cartilaginous changes. Please note that there is no rotator cuff tear present. To allow the claimant to continue with a shoulder that is clearly abnormal with the presence of loose bodies will only, in all medical probability, lead to rotator cuff and further glenohumeral pathology which would not be in the best interest of this 33 year old individual who may not become a candidate for a total shoulder replacement for many years to come." (Exhibit 7, p. 60)(emphasis added).

32. Dr. Castrejon opined that absent the events of October 26, 2016 “it is my professional opinion that the claimant, would not, at this point in time, require surgical treatment for his condition.” (Exhibit 7, p. 61). Dr. Castrejon further opined that “based upon a review of the medical file and my examination of the claimant it is my professional opinion that the surgical recommendation offered by Dr. Pak is medically reasonable, appropriate, and indicated on an industrial basis.” (Exhibit 7, p. 61). Finally, Dr. Castrejon opined that until surgery can be performed, the Claimant should remain on a modified work status with limitations outlined by Dr. Olson. *Id.*

33. The ALJ finds that Claimant, while an imperfect historian, is sincere and credible in his testimony. Claimant has attempted, in good faith, to provide accurate information to his treatment providers. Dr. Weinstein questions Claimant's statements to him at his second visit regarding Claimant's statement that he had "no problems" prior to the accident. However, Claimant was also candid at the first visit in sharing his preexisting arthritic condition, even noting that it preexisted the motorcycle accident. It is unclear from the existing record if clarification was sought by Dr. Weinstein as to what "no problem" really meant in the context of the conversation. The ALJ finds that Claimant lacks the sophistication and knowledge of the workers compensation laws to attempt to game the system.

34. The ALJ further finds that each medical provider referenced in the exhibits is capable, competent, and sincere in rendering their medical opinions to the best of their respective abilities. Reasonable minds can differ.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers’ Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1).* Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers’ compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness’ manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the

case. *Colorado Jury Instructions, Civil*, 3:16. The ALJ, as the fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990) Moreover, the ALJ may accept all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion).

C. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability

D. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAP, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

E. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

F. In this case, all the medical professionals agree that Claimant, while in the course of his employment, aggravated his preexisting medical condition in his shoulder, and that it is now significantly more symptomatic, requiring medical treatment. This injury was not merely the natural progression of his pre-existing condition, and the ALJ so finds.

Proposed Arthroscopic Surgery

G. Dr. Olson, the Authorized Treating Physician in this claim, Dr. Pak, and Dr. Castrejon have all opined that the surgery recommended by Dr. Pak is reasonable, necessary, and related and should be performed. Dr. Olson has treated the Claimant for nearly a year, is aware of all specifics of Claimant's physical condition, and has reviewed all medical opinions in this matter. Dr. Weinstein has even described Dr. Olson as "an excellent physician." Dr. Olson believes the left shoulder arthroscopy requested by Dr. Pak (a fellowship trained shoulder specialist, according to the IME report of Dr. Castrejon) should be performed in this claim. Specifically, Dr. Olson opined that he agrees with Dr. Pak's recommendation/request for left shoulder arthroscopy in this case as Claimant, "has not returned to baseline + it is reasonable to try + clean up any loose bodies, etc." Dr. Olson and Dr. Pak both opined that the work place injury of October 26, 2016 brought about/caused the current need for the left shoulder arthroscopy requested by Dr. Pak. Further, Dr. Olson and Dr. Pak both opined that the need for the left shoulder arthroscopy is not the "natural progression" of a pre-existing condition.

H. Dr. Castrejon opined that absent the events of October 26, 2016, "it is my professional opinion that the Claimant, would not, at this point in time, require surgical treatment for his condition." Dr. Weinstein even stated in his deposition that that for *mild to moderate* arthritis in a shoulder, "it can respond to a shoulder arthroscopy, for sure." (Weinstein Deposition Transcript P. 24, Lines 8 – 10). Dr. Castrejon stated that "when reviewing the comments offered by Dr. Weinstein it is quite clear that, although improved, the Claimant had not yet returned to preinjury level." Claimant's left shoulder condition, while improved with conservative care, has not returned close to baseline over the past 10 months since the date of injury. It is certainly possible that it never will. Claimant's current left shoulder condition also prevents him from working as an electrician at this time.

I. The medical professionals all agree that at some point, Claimant will be a candidate for shoulder replacement- but not now. It could be years, possibly decades. While sincere and capable in rendering his opinions, Dr. Weinstein can only offer conservative treatment, which has possibly reached the limits of its utility already. In the meantime, Claimant is unable to perform his profession, while he was so able before he was injured at work.

J. Respondents have produced no evidence that Claimant's left shoulder condition was symptomatic prior to this work place accident. Dr. Weinstein did not have Claimant's prior surgical records before rendering his opinion, per his deposition. Claimant is 34 years old and testified that he wants to move forward with the recommended surgery in this claim so he can work again. Only time will tell whether Dr Weinstein- or the other physicians-are correct, but Claimant has earned the right to find out. It's his shoulder. Even if this procedure merely improves his condition, and therefore buys him time to become a candidate for replacement later, the ALJ finds, by

a preponderance of the evidence, that this arthroscopic procedure, as recommended by Dr. Pak, is reasonable, necessary, and related to his work accident.

Compliance with Rule 16

K. Because the arthroscopic procedure has been determined, on its merits, to be reasonable, necessary, and related to the work injury, there is no further need to examine Respondent's compliance with W.C.R.P. 16. On a parenthetical note, it seems anomalous that the adjuster would authorize a "second opinion", from Dr. Pak, and then proceed to disregard it.

Average Weekly Wage

L. C.R.S. §8-40-201 sets forth certain definitions. Included in those definitions, is a definition of "wages." C.R.S. §8-40-201(19)(b) states:

> The term 'wages' includes the amount of the employee's cost of continuing the ***employer's*** group health insurance plan, and, upon termination of the continuation, the employee's cost of conversion to a similar lesser insurance plan . . . . (emphasis added)

Herein, the Respondent/ Employer did not provide a health insurance plan for the Claimant. Pursuant to a collective bargaining agreement, Respondent Employer paid two dollars per hour to the union for Claimant's combined benefits, which include both health insurance and life insurance. The ALJ concludes that the Respondent Employer did not provide a group health insurance plan for the Claimant and, therefore, the statutory definition of "wages" is not triggered for inclusion. The $2.00 per hour contribution was plainly a benefit paid on Claimant's behalf. It ended right along with his employment. It could rightly be defined as employer-funded, or employer- subsidized, but it is not the *employer's* group health insurance plan. It is the union's. If the legislature intended 'wages' to include such a benefit as here, it failed to so define it.

M. Further, there was no evidence presented as to what proportion for health insurance the two dollars per hour covered. Although employer-provided health insurance (not present herein) is a part of wages, life insurance is not. There was no proof as to what amount was attributed to health insurance by the union and what amount may have been applied to other unspecified benefits. Based upon this uncertainty, the Claimant has also failed to meet his burden of proof that the COBRA notice requires the Respondent Employer to include the COBRA benefit in the AWW. There is also, through no fault of anyone, a lack of evidence on how the contribution worked.

N. For the aforementioned reasons, the Claimant's Average Weekly Wage is found by the ALJ to be the stipulated amount of $1008.00. No adjustment is made for Claimant's Temporary Total Disability payments.

ORDER

It is therefore ordered that:

1. Respondents shall pay for the arthroscopic left shoulder surgery as proposed by Dr. Pak, and all associated costs.

2. The Claimant's Average Weekly Wage is $1008.00.

3. No adjustment is made to Claimant's Temporary Total Disability payments.

4. The insurer shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

WORKERS' COMPENSATION NO. WC 4-808-859-05

ISSUES

- Whether Claimant proved by a preponderance of the evidence, that her continued treatment with Lyrica, Baclofen and Oxycodone ("opioids") is reasonable, necessary, and related to her workers' compensation claim.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. On September 25, 2009, Claimant suffered an industrial injury. Treatment involved four surgical procedures. On May 2, 2010, Claimant underwent a lumbar fusion surgery; on December 7, 2011, she underwent a revision surgery; and in March 2013, a final surgery to remove the fusion screws. Claimant also had a knee surgery on August 30, 2012.

2. Claimant treated with Dr. Ogin for pain management. Dr. Primack, Dr. Ogin's colleague, performed the initial comprehensive evaluation of Claimant, and noted non-physiologic findings with increased pain behaviors.

3. Claimant's providers have prescribed some form of opioid since 2009.

4. On December 11, 2012, Claimant returned to Dr. Ogin for a follow-up appointment. Dr. Ogin noted that Claimant reported diffuse discomfort in her back and legs, despite a "fairly benign" clinical examination and negative diagnostics. At the December 11, 2012 visit, Claimant provided a baseline urine drug screen. The drug screen was negative for all opioids. This surprised Dr. Ogin, as Claimant had stated that she was on Percocet ("oxycodone").

5. In fact, Claimant was being prescribed oxycodone by Dr. Sanidas. Dr. Sanidas had just increased Claimant's prescription from hydrocodone-5mg to oxycodone-10mg. Dr. Fall testified that this was a significant increase of dosage, particularly given that oxycodone is considered more potent than hydrocodone. Dr. Sanidas prescribed Claimant six 10mg oxycodone per day, distributed as 120 pills for a 20-day supply. Dr. Fall testified that this would not be a recommended amount unless immediately after a surgery, as the opioid is short acting and results in a roller coaster effect.

6. Despite this increase in dosage and potency, Claimant finished her 120 pill, 20-day supply in ten or eleven days, given that she tested negative for oxycodone at her December 11, 2012, appointment with Dr. Ogin, and given that it takes three to four days for opioids to get out of the system for a urine analysis.

7. Claimant credibly testified that she did not give away or sell her medication, and that she took every opioid she was prescribed. Accordingly, in this instance Claimant took 120 pills in ten or eleven days: at least eleven or twelve pills a day, instead of her prescribed six pills per day dose. Dr. Fall testified that this is a substantial increase, for the opioid and the Tylenol that is delivered with the opioid. Dr. Fall testified she was surprised Claimant did not have withdrawal symptoms after stopping her usage, and would have expected them to be present. Withdrawal symptoms include cold sweats, diarrhea, anxiety, tremors, and restlessness. However, Claimant did not present with any withdrawal symptoms at her December 11, 2012 appointment with Dr. Ogin, despite having no opioids in her system.

8. Claimant's medical records establish that she completed her hydrocodone ("Vicodin") dose early. On November 15, 2012, Claimant filled her Vicodin prescription, and received a bottle of 120 5mg pills. The pills should have lasted 20-days, until December 5, 2012. Instead, Claimant sought a refill just twelve days later. This would put her at a pace of twelve Vicodin per day, even though she was only prescribed 6, effectively doubling her dose. When asked whether she was noncompliant by taking her medication in this manner, Claimant testified that she was told to take her medication when she needed it. The ALJ is not persuaded by Claimant's testimony that her doctors advised Claimant to take the medication on her own terms.

9. On February 8, 2013, Dr. Ogin placed Claimant at maximum medical improvement, provided an impairment rating, and recommended maintenance treatment for two years. The maintenance treatment was for medication management to treat flares, and included a recommendation for weaning Claimant off oxycodone within the next six to twelve months. When asked whether her physicians had been trying to wean her off opioids since 2013, Claimant testified that no doctor tried to get her off the drug. However, medical records indicate that Dr. Ogin, Dr. Hompland, and Dr. Mason, with whom she also had opioid agreements, suggested or attempted to wean her off the drug.

10. Dr. Ogin diagnosed Claimant with opioid dependency, and noted that periodic urine drug screens would be necessary if Claimant remained on opioids. On March 8, 2013, Dr. Ogin gave Claimant a second drug screen, which was negative for opioids. Dr. Ogin noted the possibility of drug diversion. He further noted that if there are further noncompliance issues he will look to rapidly wean her off opioids.

11. On April 5, 2013, Claimant returned to Dr. Ogin who noted that Claimant received an additional prescription from Dr. Wong, and advised Claimant that she should not receive opioids from any other physicians. Claimant previously agreed with Dr. Ogin that he was the only doctor that would fill her medication. At hearing, Claimant testified inconsistently with the records that she never sought medication from Dr. Wong. In her records review, Dr. Fall noted that Claimant's act was an additional incidence of non-compliance with her opioid agreement.

12. On April 2, 2013, Claimant's attempted to refill her opioid medication at King Soopers but was denied, as her prior prescription should have lasted another week.

13. On May 3, 2013, Claimant returned to Dr. Ogin and reported "she last had a Percocet yesterday." Claimant testified that she never lied to her doctors about her opioid usage. Yet that same day, Claimant underwent a urinalysis drug screen which was negative for opioids. This was Claimant's third failed drug screen.

14. Dr. Ogin further noted that Claimant did not appear in distress or ambulate with difficulty, but that she exhibited "quite a bit" of grimacing and pain behaviors when he formally examined her. Again, he noted that Claimant had pain with superficial palpation, and that she complained of numbness in a nonphysiologic distribution. Nevertheless, Dr. Ogin renewed Claimant's oxycodone prescription.

15. On May 23, 2013, Claimant presented to Dr. Sanidas for treatment. Dr. Sanidas performed a physical examination and noted no muscle spasms. Claimant requested oxycodone from Dr. Sanidas, stating that she ran out early. Dr. Sanidas refused, explaining to Claimant that she had an agreement with Dr. Ogin, and that only he could fill her prescription. At hearing, Claimant testified that she had not sought medication from Dr. Sanidas.

16. Claimant reported to Dr. Sanidas that she no longer wanted to be treated by Dr. Ogin, as he was rude and hurt her back while performing measurements. Dr. Sanidas noted "I am hearing some complaints about Dr. Ogin's care when the patient suddenly cannot get more narcotics." Dr. Sanidas advised Claimant that she would be discharged from care, and provided Claimant a thirty day window to find another treating physician. At her IME with Dr. Fall, Claimant reported that when she was released from care, they no longer wanted to prescribe her medication, but that she was able to get a different pain management doctor.

17. Claimant sought care with Dr. Scott Hompland, who performed an initial evaluation on June 20, 2013. Dr. Hompland specialized in chronic pain management and addiction issues. At that time, Claimant was off oxycodone, gabapentin and muscle relaxants. Claimant told Dr. Hompland that she never used alcohol, and that the pain medication provides 100% relief of her pain. Dr. Hompland performed a physical examination, did not find muscle spasms, and found her sensation intact with only "vague numbness" in her right leg. Dr. Hompland diagnosed Claimant with possible psychological factors affecting her general condition.

18. Claimant discussed and reviewed an opioid agreement with Dr. Hompland, and had no problems or questions with the demands of the agreement. At hearing, however, Claimant testified that she did not recall signing an agreement, and did not recall any doctor advising her of the dangers of opioids. Dr. Hompland discussed prescribing Nucynta, an opioid that has less dependency qualities and is less addicting than oxycodone. Dr. Hompland gave Claimant a baseline urine drug test. On June 26, 2013, Dr. Hompland provided a written report after a telephone conversation

with Claimant's then-attorney, informing them Claimant tested positive for alcohol, despite her prior statement that she did not use alcohol. At hearing, Claimant testified that she remembered that specific day four years ago. Claimant testified that she remembers drinking one beer because she was out of medicine, but that she didn't consider having a beer "drinking," which is why she didn't tell Dr. Hompland. The ALJ noted inconsistency in Claimant's memory: she recalls that she drank one beer on a specific day four years ago, however, she cannot recall her physicians talking to her about her compliance issues, and cannot remember signing three opioid agreements with three separate physicians. Dr. Hompland opined that Claimant was not going into withdrawal, despite not taking her medications. Based on her presentation while off the medication, he opined that Claimant did not need to be prescribed Gabapentin or pain medicines.

19. On August 28, 2013, Claimant presented to Dr. Kristin Mason for a new patient evaluation, complaining of low back pain, and numbness down the back of her legs. Dr. Mason noted that Dr. Ogin terminated his relationship with Claimant due to her overutilization of oxycodone, and that Claimant was currently getting opioids from Dr. Wong. Dr. Mason understood that Claimant was committed to reducing her opioid usage. Dr. Mason and Claimant discussed the fact that opioids work better when taken less often, due to the phenomena of tolerance.

20. Dr. Mason further noted that Claimant was currently taking oxycodone, and was unable to do her previous recreational activities of basketball and running, and was not doing an exercise program. Dr. Fall notes this indicates a poor level of reported function.

21. On August 30, 2013, Dr. Mason performed a medical records review. In her medical records review, Dr. Mason does not discuss Claimant's failed urine drug screens on December 11, 2012, March 8, 2013, and May 3, 2013. Dr. Mason does not discuss Dr. Ogin's or Dr. Sanidas' findings regarding Claimant's non-compliance with her opioid prescriptions. Dr. Mason also did not discuss Claimant seeking opioids from multiple doctors, despite having an opioid agreement with Dr. Ogin. Dr. Mason specifically says that "no major aberrations in her report of the history or her treatment are noted." Dr. Fall, in her records review, notes that there were multiple aberrations in Claimant's compliance with her opioid agreements. The ALJ finds that Dr. Mason failed to identify numerous red flags marking Claimant's non-compliance with this prescription medication.

22. In her records review, Dr. Mason does discuss Dr. Hompland's findings on Claimant's oxycodone overuse. However, she does not discuss his opinion that Claimant required no further medication for her condition.

23. On September 6, 2013, Dr. Mason decided to continue Claimant's treatment with oxycodone, and had Claimant sign an opioid agreement. Claimant testified that she did not recall signing an agreement, and did not recall the doctor advising her of the dangers of opioids.

24. On October 1, 2013, Dr. Mason prescribed Claimant Lyrica. On December 4, 2013, Claimant reported that she was not sure she saw any difference with the higher dose of Lyrica, but that she was taking it regardless.

25. On October 10, 2013, Dr. Ogrodnick performed a Division Independent Medical Examination ("DIME"). Dr. Ogrodnick performed a physical examination, measuring Claimant's flexion and extension, for purposes of rating Claimant's impairment. In his examination, Dr. Ogrodnick noted a non-physiological decrease in flexion and extension, and opined that it was likely due to psychological overlay. Given Claimant's non-physiological self-limiting behavior, he decided to utilize Dr. Ogin's prior measurements in providing his impairment rating.

26. Dr. Ogrodnick agreed with Dr. Ogin's February 8, 2013 date of maximum medical improvement. For maintenance care, Dr. Ogrodnick opined that a repeat EMG was not warranted given Claimant's "migratory non-physiologic leg complaints," and prior negative EMG and CT scans. Instead, Dr. Ogrodnick recommended care with a pain specialist.

27. Respondents filed a Final Admission of Liability on November 25, 2013, admitting to reasonably necessary medical benefits.

28. Claimant followed up with Dr. Mason on February 4, 2014, and reported losing her medications. Claimant also reported increased pain, so Dr. Mason increased Claimant's oxycodone.

29. Respondents' retained Dr. Raschbacher to perform an independent medical examination (RIME) on March 10, 2014. After examining Claimant and her medical records, Dr. Raschbacher noted that Dr. Hompland, Dr. Ogrodnick, and Dr. Mason all documented Claimant's pain behaviors, and that Claimant's subjective complaints were out of proportion to her physiological findings. Thus, he opined that Claimant's subjective reports of her symptomology and functional abilities are not reliable. Dr. Raschbacher opined that despite her complaints, the Claimant could work and was not permanently disabled. Her further noted that patients outside of the workers' compensation system often recovery from a spinal fusion with no permanent restrictions.

30. On September 16, 2014, Dr. Mason prescribed Baclofen for the Claimant, taking Claimant off her prior prescription of diazepam. On October 14, 2014, Claimant reported that she did not believe the Baclofen was helping. Dr. Mason responded by increasing her dose. Dr. Fall testified that if Baclofen is not effective at a therapeutic dose, it is not the type of drug that would be effective at an increased dose. Dr. Mason noted that Claimant was not taking her oxycodone as prescribed, and was self-escalating her dosing. Claimant requested an increased dose of oxycodone. Dr. Mason discussed tolerance and dependency issues with Claimant, and expressed concern whether Claimant could comply with scheduled medication. Nevertheless, Dr. Mason continued Claimant's prescription. At hearing, Claimant testified that her doctors

did not tell her to only take what was prescribed. Clamant testified that her physicians told her to take the medication when she needed it.

31. On December 9, 2014, roughly one month after Dr. Mason discussed Claimant's non-compliance with the oxycodone treatment schedule, Claimant admitted to taking her daily dose all at once, as opposed to once every 12 hours. The ALJ finds that Claimant demonstrates that she is unable to understand or comply with her physician's orders to take the medication as prescribed.

32. On March 27, 2015, Dr. Mason reviewed a surveillance video that depicted Claimant playing with children, squatting and walking while carrying a baby, in no apparent distress. Dr. Mason opined that Claimant typically appeared in "mild" distress in her office, so Claimant did present differently. Dr. Mason further opined that Claimant's occasional lifting restriction should be increased to 15-20 pounds.

33. On September 18, 2015, Dr. Mason discussed Claimant's employability, after Claimant lost her permanent total disability case, and noted that Claimant's English is "actually pretty good." Dr. Fall, in her records review, opined that Claimant's permanent total disability claim while she was on oxycodone documents the lack of functional benefit from the medication.

34. On February 5, 2016, Dr. Mason noted that Claimant failed her prior urine drug screen, and ordered an additional drug screen that day, opining that any further infractions would result in discharge. This was Claimant's fourth failed drug screen. Claimant also admitted to exceeding her prescribed dose. Dr. Mason responded by increasing Claimant's dose, to ensure Claimant no longer exceeded her prescription.

35. Despite Claimant not being on her medication, Dr. Mason noted that her physical examination "is really unchanged." Dr. Mason also noted the Claimant's sensorium, or mental awareness, was clear. The ALJ notes that Claimant is off her medication, and similar to her visit with Dr. Hompland, does not present with withdrawal or other aggravated symptoms.

36. In a September 27, 2016 report, Dr. Mason noted the Claimant's medication was denied based on Dr. Fall's utilization review. Dr. Mason disagreed with the discontinuation of Claimant's medication, based on the "almost certainty" of withdrawal. Dr. Mason does not address the fact that Claimant did not experience withdrawal symptoms in the past when she was off her opioid medication, including as recently as February 5, 2016. Dr. Fall, in her report, noted that Claimant was completely off her opioid medication on four occasions without withdrawal symptoms, therefore Dr. Mason's concerns were unfounded. Dr. Hompland also noted that Claimant had no ongoing need for her medication, given that she was off them and had no withdrawal symptoms.

37. Despite the utilization review, Dr. Mason continued Claimant's medications, including opioids. Dr. Mason began to slowly wean Claimant off opioids. On November 29, 2016, Claimant reported difficulty with the opioid taper. Claimant told

Dr. Mason that she has to care for her grandchildren, and that any further weaning of her pain medication will make it hard for her to meet her family responsibilities. Given Claimant's emotional and functional status, and the fact that Claimant "has a lot going on right now," Dr. Mason stopped the opioid taper.

38. On December 20, 2016, Claimant again told Dr. Mason that she babysits her grandchildren.

39. On April 11, 2017, Dr. Mason noted that she was unsuccessful in weaning Claimant off her opioid medication. Claimant reported being miserable and dysfunctional while off her medication, yet Dr. Fall only noted that Claimant's back is "somewhat more stiff," and did not note muscle spasms or neuropathic pain. Dr. Mason's physical examination mostly noted that Claimant was emotional and worried.

40. At hearing, Claimant testified that her current symptoms were pain, inability to sleep, and being tired. She further testified that her whole body hurt. Claimant testified that the last time she took the three medications in question was after the first week of April. Dr. Fall testified that Claimant suffered these same symptoms when she was on the medication, and that Claimant's depression, difficulty sleeping, and pain were ongoing.

41. Once Claimant stopped taking the opioids, she felt pain in her back, an inability to move because of the pain, and sore arms and legs. Claimant did not report any withdrawal symptoms, such as cold sweats, diarrhea, anxiety, tremors, or restlessness. Dr. Fall testified that it would be surprising for Claimant not to suffer withdrawal.

42. On direct examination, Claimant testified that she cannot do anything she needs to do because she has to sit down and relax. On cross examination, Claimant admitted that she can drive, that she drives her grandchildren to the doctor, and that she babysits her grandchildren. She initially denied being able to clean the house, make food, and wash clothes. However, this was inconsistent with her responses to interrogatories. Claimant then acknowledged that she does perform them "in [her] house."

43. On direct, Claimant testified that she needs her medication because she has full responsibility for eight grandchildren because her daughter-in-law began serving a twenty year sentence in July, 2017. At the time of the hearing, the grandchildren ranged in age from three months to eleven years old, and the infant was born prematurely and with disabilities.

44. Mr. Fuentes, Claimant's husband, testified that Claimant is not the same woman he married, and that she has changed a lot. Mr. Fuentes testified that nothing has been the same since her accident happened in 2009. Mr. Fuentes testified that Claimant is always mad when she doesn't have her pain medication, and that everything bothers her, and that it is probably because of the pain she is in.

45. Mr. Fuentes observed that she does not cook, wash clothes or clean the house the way she used to. However, the medical records indicate that Claimant struggled to complete her household chores even while on the pain medication. Thus, the ALJ finds that Mr. Santos' testimony does not evidence a change related to Claimant's cessation of medication, but rather addresses the effect of her work injury as a whole.

46. Eric, Claimant's son, testified that Claimant has not been the same since her accident in 2009. Eric testified that when Claimant is not on her medication, her mood swings a lot, and she is always irritated. Eric testified that the medication helped with her irritability. Eric testified that he was kicked out of the house because she did not have her medication. Eric testified that he believes his mother is unhappy when she doesn't have her medication because she is in pain. Dr. Fall testified that Claimant's medication does not treat depression.

47. Eric testified that off the medication, Claimant can't be sociable with family and is always just sitting or lying down. However, while Claimant was on opioids, she said she just watched television and took walks, and that she could not stand for 20 minutes before sitting or lying down. Additionally, at the October 10, 2013 DIME, Claimant was on Percocet and complained of the following to Dr. Ogrodnick:

> One day she feels as though she is going crazy and the next day she feels calmed down. The psychologist told her that she is depressed, but she does not agree. She tried antidepressants in the past…[and] admits to crying without reason 4-5 times over the last two weeks. She feels isolated in her own house and is now uncomfortable in the crowds at family reunions. She has lost interest in dancing, basketball and barbeques.

48. Dr. Fall was admitted as an expert in physical medicine and rehabilitation. Dr. Fall is board certified, and has a practice that specializes in the spine, myofascial pain, and chronic pain. As part of her practice Dr. Fall specifically deals with Lyrica, Baclofen and opioids.

49. Dr. Fall testified that Baclofen is used to treat muscle spasticity. During Dr. Fall's IME, when Claimant was not on medication, Dr. Fall performed a physical examination and did not note any evidence of spasms of the muscles. Dr. Fall also reviewed the medical records, and did not find a spasm issue that would call for treatment with Baclofen. Spasms were not documented when Claimant was known to be off her drugs, at her February 8, 2013 appointment with Dr. Ogin, at her June 20, 2013 appointment with Dr.Hompland, or at her February 5, 2016 appointment and April 11, 2017 final appointment with Dr. Mason. Additionally, Dr. Fall opined that Baclofen would not treat any of Claimant's current symptoms, which are pain, an inability to sleep, and feeling tired. Thus, Dr. Fall opined that continued treatment with Baclofen is not reasonable, necessary or related to her injury.

50. Dr. Fall testified that Lyrica is used to treat neuropathic pain, often described as burning, itching, tingling, or a feeling of bugs on the skin. Dr. Fall noted that there has been no documentation of neuropathic pain. Dr. Fall testified that Lyrica is used to treat an identifiable neurogenic or nerve injury, which is not present in this case, as the records document nonphysiologic findings. Throughout Claimant's treatment, there were no findings of neuropathic pain when Claimant was off her medication. Specifically, neither Dr. Ogin, Dr. Hompland, or Dr. Mason noted neuropathic pain. Dr. Fall noted that Claimant reported that her body hurting all over, which Lyrica is not designed to treat. In her records review, Dr. Fall additionally noted that beyond there being no indication for treatment with Lyrica, it was causing side effects. Thus, Dr. Fall opined that continued treatment with Lyrica is not reasonable, necessary or related to her injury.

51. Regarding opioids, Dr. Fall opined that opioids are inherently dangerous because they decrease the respiratory drive, making the body not want to breathe, which can result in death, intentional or not. They additionally present a critical danger to children. Accordingly, they are closely monitored through the use of opioid agreements, which are guidelines for use that the patient must sign. Opioid agreements state that the patient will only get them from one prescriber, that lost or stolen prescriptions will not be refilled early, and that they are to be taken as prescribed.

52. Claimant did not recall signing any opioid agreements, and testified that her physicians allowed her to take as many pills as needed. Dr. Fall testified that Claimant's testimony supports a decision to no longer prescribe opioids. Claimant was given the agreement multiple times, but was unable to comply. Dr. Fall further noted that Dr. Ogin and Dr. Mason specifically talked to Claimant about her issue with self-escalating her dosage, and yet it continued to occur.

53. Dr. Fall testified that failure to comply with an opioid agreement is a basis for cessation of opioid treatment, and noted that Claimant has repeatedly failed to comply with her agreements.

54. Pursuant to the Medical Treatment Guidelines, Dr. Fall testified that a patient must show objective improved function as a result of taking opioids in order for the drug to be prescribed, given its potential for abuse and side effects. Dr. Ogrodnick noted that Claimant, while on the medication, was not dancing or playing basketball. Dr. Mason noted that Claimant, while taking oxycodone, was unable to do her previous recreational activities of basketball and running, and was not doing an exercise program. Dr. Fall noted that while Claimant was on the medication, she claimed to be permanently disabled and unable to work, yet when she was off medication, Claimant wanted to return to work. These medical providers all point to the lack of objectively improved function as a result of taking opioids.

55. Dr. Fall testified that Claimant is not a candidate for long term treatment with opioids. Dr. Fall testified that the risk of harm from the medication in this instance is too great, particularly given Claimant's history of non-compliance, and apparent inability to aprehend her non-compliance.

56. Dr. Fall testified that opioids are no longer needed to treat Claimant's pain. Dr. Fall testified that Claimant's pain is more consistent with a somatic reactivity type of pain, or pain from internalizing emotional distress. Dr. Fall testified that opioids will not resolve Claimant's depression or mood disorder.

57. Dr. Fall testified that treatment with opioids is not reasonable, necessary or related to her work injury. The major concern has been weaning Claimant off the medication, and putting Claimant back on opioids would be contraindicated given her history of non-compliance.

58. The ALJ finds the contemporaneous medical records more persuasive than the Claimant's testimony. The ALJ finds Claimant's subjective reports of pain not reliable. Drs. Raschbacher and Fall both noted subjective complaints which did not correlate with their findings on physical examination. Additionally, every ATP except for Dr. Mason agreed with this assessment. Most persuasive, however, are the findings of the DIME Dr. Ogrodnick. Dr. Ogrodnick noted Claimant's subjective reporting was not reliable, to the extent that he relied on Dr. Ogin's measurements in order to provide an impairment rating.

59. The ALJ finds that continued treatment with Lyrica is not reasonable, necessary, or related to her work injury, as the Claimant did not present with neuropathic pain when she was off of her medication.

60. The ALJ is persuaded by Dr. Hompland's opinion that Claimant did not require continued treatment with opioids or Gabapentin given that he saw her when she was off the drugs, and that treatment with these medications was not indicated. Dr. Hompland's opinion is supported by Claimant's condition each time she presented for an examination while off the medication. Claimant did not present with symptoms that indicated a need for ongoing treatment, nor did she present with symptoms of withdrawal. Additionally, when Claimant was off her medication she did not present with the spasm symptoms that would indicate the need for treatment with Baclofen.

61. The ALJ finds Claimant has demonstrated repeated and serious non-compliance with her opioid intake. Claimant had four negative urine analysis tests when she was supposed to be on opioids. On these occasions when Claimant tested negative for opioids, she did not present with withdrawal symptoms, despite claiming that she took every pill she was prescribed. Drs. Ogin, Sanidas, Hompland, and Mason all specifically talked to Claimant about complying with her opioid intake. Yet at hearing, Claimant testified that she always complied with her prescriptions, and that her physicians advised her to take the medication as she saw fit. The ALJ is not persuaded that this is a language barrier issue, as Dr. Mason's document that Claimant is a "pretty good" English speaker. Thus, the ALJ finds that Claimant's repeated non-compliance, and her inability to apprehend how to properly take her medication, show that continued treatment with opioids is contraindicated.

62. Claimant did not prove by a preponderance of the evidence that opioids improve her function. She testified to babysitting, driving, and doing chores around the

house while off the medication. The records indicate that while on opioids Claimant watched TV, rested, and had difficulty performing chores. Considering Claimant's lack of documented functional improvement, her opioid non-compliance, and her failure to understand how to comply with physician's orders, the ALJ finds that continued treatment with opioids is not reasonable or necessary.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

GENERALLY

A claimant in a workers' compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. §8-43-201 (2013). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimant nor in favor of the rights of respondents. Section 8-43-201.

This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In addition to determining the sufficiency of the evidence presented, the ALJ evaluates the credibility and probative value of conflicting evidence, including competing experts and inconsistencies in a particular witness' testimony. *Johnson v. ICAO*, 973 P.2d 624, 626 (Colo. App. 1997). In determining credibility, the ALJ should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2005).

MEDICAL BENEFITS

Respondents are only liable for medical treatment that is reasonably necessary to cure and alleviate the effects of the occupational disease. Section 8-42-101(1)(a). The question of whether medical treatment is reasonable and necessary is one of fact for determination by the ALJ. *Kroupa v. ICAO*, 53 P.3d 1192, 1197 (Colo. App. 2002). The claimant bears the burden of proof to establish the right to specific medical benefits. *Wal-Mart Stores, Inc.*, 989 P.2d 251, 252 (Colo. App. 1999). Claimant has not proven by a preponderance of the evidence that she suffers spasticity, neuropathic pain, decreased functionality as defined by the Guidelines, or other symptoms that would indicate continued treatment with Baclofen, Lyrica and opioids, and is therefore not entitled to continued treatment with these medications.

Pursuant to the Medical Treatment Guidelines, the following behaviors are frequently seen in drug-abusing patients placed on chronic opioids:

a. **Requesting more refills than scheduled**; Claimant consistently requested early refills
b. **Signs of mood disorders or other psychiatric conditions**; This is well documented throughout her treatment by various ATPs, including Drs. Ptizer, Hompland, Sanidas and Ogrodnick
c. **Feigns or exaggerates physical problems**; Multiple ATPs noted this issue, including Drs. Primack, Ogin, Sanidas and Ogrodnick, as well as IME physicians Drs. Raschbacher and Fall
d. **Pressures physician by eliciting sympathy, guilt or direct threats**; When Dr. Mason began to taper Claimant off Percocet, Claimant told Dr. Mason she needed to care for her grandchildren, so Dr. Mason continued the prescription because Claimant "had a lot going on." Claimant said the same thing to RIME Dr. Fall. Again at hearing, Claimant said she will have to take care of her grandchildren. This ALJ finds that Claimant may have been attempting to elicit sympathy
e. **Subjective complaints exceed objective findings**; Again, noted by Drs. Ogin, Sanidas and Ogrodnick, as well as IME physicians Drs. Raschbacher and Fall
f. **Attempts to transfer care after a doctor refuses to fill prescription(s) for habit forming medication**. Dr. Sanidas notes that Claimant wanted a new ATP after she was refused further opioids

Rule 17, Exhibit 9 Chronic Pain Disorder (F)(7)(g) at 72.

The Medical treatment guidelines state the following regarding long term use of opioids:

> The medications should be clearly linked to improvement of function, not just pain control. All follow-up visits should document the patient's ability to perform routine functions satisfactorily. Examples include the abilities to perform: work tasks, drive safely, pay bills or perform basic math operations, remain alert and upright for 10 hours per day, or participate in normal family and social activities.

Rule 17, Exhibit 9 Chronic Pain Disorder (H)(6)(a) at 111. This ALJ finds that there is sufficient evidence that Claimant is able to function without the medication, and there is not sufficient evidence to document improvement of function.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant has failed to prove by a preponderance of the evidence that continued treatment with Baclofen is reasonable, necessary and related to her work injury;

2. Claimant has failed to prove by a preponderance of the evidence that continued treatment with Lyrica is reasonable, necessary and related to her work injury;

3. Claimant has failed to prove by a preponderance of the evidence that continued treatment with oxycodone or other opioids is reasonable, necessary and related to her work injury;

4. All future benefits relating to treatment with these medications are denied.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 29, 2017

/s/ Kimberly Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Did Claimant prove by a preponderance of the evidence that she is permanently and totally disabled?

2. Did Claimant prove by a preponderance of the evidence that she is entitled to a general award of medical benefits after MMI?

3. Disfigurement.

FINDINGS OF FACT

1. Claimant sustained an admitted injury to her low back on October 20, 2013 while working as a nurse for Employer.

2. Dr. Daniel Olson at CCOM has been Claimant's primary ATP.

3. After failing conservative care, Claimant underwent a decompression laminectomy at L5-S1 on March 3, 2016 with Dr. Frey. The surgery was helpful, particularly with respect to alleviating her leg symptoms, but she continued to have pain in her low back and sacroiliac joints.

4. On August 31, 2016, Claimant told Dr. Olson she was "pleased" that the leg numbness and tingling had resolved, but was still having some right-sided buttock and low back pain. Dr. Olson referred Claimant to Dr. Stephen Scheper for an SI joint injection.

5. Claimant saw Dr. Scheper on September 14, 2016. Dr. Scheper's report contains conflicting information regarding the severity of Claimant's ongoing back pain. One paragraph says Claimant reported ongoing back pain at a level of 6-7/10, aggravated by bending sitting more than 45 minutes. Later in the report, Dr. Scheper notes "she has been doing much better," and "her low back feels great." Claimant was reportedly walking for exercise regularly. On examination, she was noted to sit comfortably and transition to a standing posture with no difficulty. Standing flexion was unrestricted and painless. Her areas of discomfort were primarily localized to the right L5-S1 facet and the right sacroiliac joint. After reviewing Dr. Frey's operative report, Dr. Scheper recommended a right sacroiliac joint injection.

6. Claimant had the right SI joint injection on October 12, 2016. At the follow-up appointment on November 9, she reported "remarkable" pain relief, although she still had right gluteus pain. Dr. Scheper noted Claimant was "very pleased, and accepting of the likelihood of some chronic low back pain." He advised Claimant to continue her home exercise program and return if her symptoms worsened.

7. Claimant next saw Dr. Olson on December 1, 2016. She reported benefit from the SI joint injection and Dr. Olson recommended ten physical therapy sessions to work on core strengthening and back stabilization. He released Claimant to modified duty with maximum lifting of 10 pounds and no prolonged sitting or frequent bending at the waist.

8. On January 12, 2017, Claimant underwent a "Lift Assessment," which demonstrated an ability to lift and carry 15-20 pounds, depending on position.

9. Dr. Olson placed Claimant at MMI on February 13, 2017. In his Maximum Medical Improvement and Impairment report, Dr. Olson noted that the surgery was "beneficial," and Claimant no longer had leg symptoms. She was still having some SI joint symptoms, and the most recent SI joint injection was providing relief. Dr. Olson calculated a 27% whole person impairment rating. Regarding her permanent work restrictions, Dr. Olson opined "she is limited to 20 pounds lifting on an occasional basis. She may carry 20 pounds. Push 30 pounds. Pull 42 pounds. She should avoid frequent bending at the waist. Pivot and transfer at waist height limited to 20 pounds." He released Claimant from care, noting that "no additional medical [treatment is] anticipated at this time."

10. On June 20, 2017, Claimant's counsel wrote to Dr. Olson and asked him to substantiate several of Claimant's self-described symptoms and limitations. Dr. Olson was noncommittal regarding Claimant's alleged need to miss work intermittently due to fatigue and pain. He was "not sure" whether Claimant would need to leave work and potentially miss the following day. He said the frequency with which Claimant might miss work was "really hard to predict . . . with any high degree of medical probability." Dr. Olson agreed that Claimant can sit for approximately 20-45 minute intervals "depending on the day," and her tolerance for prolonged sitting decreases throughout the day. Dr. Olson opined Claimant needs to change positions as needed.

11. Dr. Olson retracted his previous opinion that Claimant did not require any post-MMI treatment. Specifically, Dr. Olson opined Claimant should retain ongoing access to physician follow-up and SI joint injections to manage flare-ups and maintain her MMI status.

12. Michael Fitzgibbons, MPA, CRC, CDMS, performed a comprehensive vocational evaluation on June 29, 2017 at the request of Claimant's counsel. Claimant described ongoing constant low back pain and occasional numbness in her legs. She also reported depression, leading to a lack of motivation and difficulty leaving her home. She described difficulty with prolonged sitting, standing or walking, needing to change positions frequently. She said she could perform some light household chores with frequent breaks.

13. Mr. Fitzgibbons opined that the limitations outlined by Dr. Olson prevent Claimant from returning to work as a nurse, but would allow her to perform numerous other sedentary and light jobs. But Mr. Fitzgibbons noted other factors that would prevent Claimant from returning to work at any job, such as Dr. Olson's opinion that

Claimant needs to change postures as needed, and her self-reported need to lie down during the day on an unpredictable basis. He opined Claimant's depression would interfere with her ability work. He did not believe Claimant could maintain attendance with sufficient regularity to sustain work. Mr. Fitzgibbons concluded Claimant "does not meet the most basic expectations of competitive employment [and] is unable to resume earning a wage unless her pain and associated symptoms improve significantly."

14. Patricia Anctil, CRC, CDMS, CCM performed a comprehensive vocational evaluation on July 30, 2017 at Respondent's request. Claimant described several adjustments she had made which enable her to complete routine household tasks. She told Ms. Anctil she takes no prescription pain medication, rarely uses OTC medications, and used none for at least a week before the interview.

15. Relying primarily on the limitations outlined by Dr. Olson, Ms. Anctil opined Claimant could return to work in a variety of sedentary and light jobs. Even accounting for a need to change positions as needed, there are many jobs Claimant can do. Although Dr. Olson has not limited the number of hours or days Claimant may work per week, Ms. Anctil also identified part-time employment, which may be appropriate given Claimant's self-reported limitations. Ms. Anctil's report lists numerous sedentary and light occupations, which she described as a representative sample of jobs. Many of the employers have a demonstrated history of accommodating workers with disabilities.

16. Examples of jobs in the Pueblo area that are within Claimant's restrictions and can accommodate a need for postural changes include: customer service representative (Global CallCenter Solutions, Convergys, Innotrac), bank teller (Vectra Bank), telephone support or appointment setter (Sandia Hearing Aid Center), movie theater cashier (Cinemark) and hotel front desk clerk (Super 8 and many others.

17. Ms. Anctil also identified full-time and part-time jobs in the medical field with employers including Innovage, Parkview Medical Center, and Inovalon. Ms. Anctil identified several work-from-home jobs available to Claimant, with employers such as TeleTech@Home, J.Lodge and Asurion. Ms. Anctil noted "based on [Claimant's] subjective reports, at home employment would be an option for her to work a flexible schedule and/or part-time hours."

18. Both vocational experts testified at hearing consistently with their reports.

19. Claimant's assertion that she would miss work in excess of customary tolerances is unpersuasive.

20. Ms. Antcil's opinions regarding Claimant's ability to work and earn wages are credible and persuasive.

21. Claimant failed to prove she is permanently and totally disabled.

22. Dr. Olson's opinions that Claimant needs access to periodic physician follow-up appointments and SI joint injections to maintain her MMI status are credible and persuasive.

23. Claimant proved she is entitled to a general award of post-MMI medical benefits.

24. Claimant has an 8-inch long, irregular and indented surgical scar on the center of her lumbar spine. The ALJ finds that Claimant should be awarded $2,000 for this disfigurement.

CONCLUSIONS OF LAW

A. Permanent Total Disability

A claimant is considered permanently and totally disabled if she cannot "earn any wages in the same or other employment." Section 8-40-201(16.5)(a), C.R.S. The term "any wages" means wages in excess of zero. *McKinney v. Industrial Claim Appeals Office*, 894 P.2d 42 (Colo. App. 1995). To prove permanent total disability, the claimant need not show that the industrial injury is the sole cause of her inability to earn wages. Rather, the claimant must demonstrate that the industrial injury is a "significant causative factor" in her permanent total disability. *Seifried v. Industrial Commission*, 736 P.2d 1262 (Colo. App. 1986). It is not sufficient that an industrial injury merely creates *some* disability which ultimately contributes to permanent total disability. Rather, *Seifried* requires the claimant to prove a "direct causal relationship" between the industrial injury and the disability. *Lindner Chevrolet v. Industrial Claim Appeals Office*, 914 P.2d 496 (Colo. App. 1995).

In determining whether the claimant can earn wages, the ALJ may consider a wide variety of "human factors." *Weld County School District RE-12 v. Bymer*, 955 P.2d 550 (Colo. 1988). These factors include the claimant's physical condition, mental abilities, age, employment history, education, training, and the "availability of work" the claimant can perform within her commutable labor market. *Id*. Another human factor is the claimant's ability to obtain and maintain employment within her limitations. *See Professional Fire Protection, Inc. v. Long*, 867 P.2d 175 (Colo. App. 1993). The ability to earn wages inherently includes consideration of whether the claimant can get hired and sustain employment. *See e.g., Case v. The Earthgrains Co*., W.C. No. 4-541-544 (ICAO, September 6, 2006); *Cotton v. Econo Lube N. Tune*, W.C. No. 4-220-395 (ICAO, January 16, 1997). If the evidence shows the claimant cannot "sustain" employment, the ALJ can find she is not capable of earning wages. *Joslins Dry Goods Co. v. Industrial Claim Appeals Office*, 21 P.3d 866, 868 (Colo. App. 2001).

As found, Claimant failed to prove she is permanently and totally disabled. Rather, the persuasive evidence demonstrates Claimant can sustain employment in a wide variety of sedentary and light occupations. The work restrictions outlined by Dr. Olson in his February 20, 2017 report are persuasive and consistent with other medical evidence, including the January 12, 2017 Lift Assessment. Dr. Olson subsequently indicated Claimant needs the freedom to shift positions, which is a reasonable addendum given her persistent low back pain. There are many jobs that will accommodate the limitations Dr. Olson has outlined.

The ALJ credits Ms. Anctil's opinion that Claimant can sustain work in a variety of sedentary to light occupations, even considering the need for postural shifts. Ms. Anctil identified several occupations compatible with Claimant's residual functional capacity such as hotel desk clerk, movie theater cashier, and customer service representative. Ms. Anctil persuasively explained that these positions allow workers to alternate positions and change posture as needed. Ms. Anctil also identified several work-from-home jobs with employers such as Innotrac, Convergys, TeleTech@Home and J. Lodge. Some of these employers have a history of hiring people with disabilities, including SSDI recipients through the Ticket to Work Program.

The ALJ is not persuaded by Claimant's assertion that she will be incapacitated and unable to report to work or remain at work several times per month. Although that may happen from time to time, the evidence does not show it will happen with sufficient regularity to prevent Claimant from sustaining work in any job. Claimant does not use any strong pain medication and rarely uses OTC analgesics, which undercuts her allegation of recurrent incapacitating pain. Claimant has not tried to work since MMI, so her estimate of the number of days she might miss from work is largely speculative. The ALJ does not doubt that Claimant still suffers from back pain, but the persuasive evidence does not show her pain is so severe to prevent her from earning any wages in any employment.

Based on the evidence presented, the ALJ concludes Claimant can earn wages and is not permanently and totally disabled.

B. Claimant is entitled to a general award of medical benefits after MMI

The respondents are liable for medical treatment from authorized providers that is reasonably necessary to cure or relieve the employee from the effects of the injury. Section 8-42-101(1)(a); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). The need for medical treatment may extend beyond MMI if the claimant requires further treatment to relieve the effects of the injury or prevent deterioration of their physical condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988).

To establish entitlement to *Grover* medical benefits, a claimant must prove that future medical treatment is or will be reasonably necessary to relieve the effects of the injury or to prevent deterioration of their condition. *Hanna v. Print Expediters Inc*., 77 P.3d 863 (Colo. App. 2003). A claimant need not be receiving treatment at the time of MMI to obtain a general award of future medical benefits. *Holly Nursing Care Center v. Industrial Claim Appeals Office*, 992 P.2d 701 (Colo. App. 1989). If the claimant establishes the probability of a need for future treatment, the claimant is entitled to a general award of future medical benefits, subject to the employer's right to contest compensability, reasonableness, or necessity. *Hanna, supra*.

As found, Claimant established the probability of a need for future medical treatment, which entitles her to a general award of future medical benefits. Claimant had back surgery because of her admitted injury, and while her condition improved, she still suffers from residual pain. She received significant benefit from an injection in

November 2016, but injections tend to produce temporary, rather than permanent, relief in a case such as this. Dr. Olson reconsidered his initial opinion regarding maintenance care, and believes it is reasonable for Claimant to have access to physician follow-up and injections for flare-ups. The ALJ has credited Dr. Olson's amended opinions in finding that a general award of *Grover* medical benefits is appropriate.

C. Disfigurement

Section 8-42-108(1) provides that a claimant is entitled to additional compensation if he is "seriously, permanently disfigured about the head, face, or parts of the body normally exposed to public view." As found, Claimant has an 8-inch long, irregular and indented surgical scar on the center of her lumbar spine. The ALJ concludes that Claimant should be awarded $2,000 for this disfigurement.

ORDER

It is therefore ordered that:

1. Claimant's claim for permanent total disability benefits is denied and dismissed.

2. Respondent shall cover reasonable and necessary medical treatment from authorized providers to relieve the effects of Claimant's injury and prevent deterioration of her condition.

3. Respondent shall pay Claimant $2,000 for disfigurement. Respondent may take credit for any disfigurement benefits previously paid to Claimant in this matter.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 29, 2017

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

1. Whether Respondents have established that Claimant refused to travel to Colorado for an impairment rating and examination such that no permanent partial disability (PPD) impairment benefits should be awarded pursuant to § 8-42-107(8)(b.5)(I)(B), C.R.S.

STIPULATIONS

1. Claimant was placed at maximum medical improvement (MMI) by her out of state authorized treating provider (ATP), James Brue, M.D. on October 14, 2016.

2. Dr. Brue is not level II accredited in Colorado.

3. Dr. Brue did not meet the requirements of § 8-42-107(8)(b.5)(I)(B), C.R.S. and did not provide Insurer or Respondents the necessary measurements and information pursuant to the 3rd Edition of the AMA Guides within twenty days of placing Claimant at MMI.

4. Respondents arranged for Claimant to travel to Colorado for the purpose of obtaining an impairment rating by a Level II accredited physician. Respondents set up all travel needs including flight, hotel, and ground transportation for Claimant to travel from Ohio to Colorado for a scheduled impairment rating examination and evaluation with Dr. John Burris set for March 16, 2017.

5. If sanctions of attorney's fees and costs are appropriate and ordered in this case, the parties will later agree to the amount owed without ALJ involvement and/or will set a supplemental hearing on the amount of attorney's fees and costs owed.

FINDINGS OF FACT

1. On October 23, 2014 Claimant sustained an admitted injury to her neck and upper back while working for Employer as a flight attendant.

2. Claimant's treatment was managed by physicians in Ohio, and her ATP in Ohio was James Brue, M.D. Dr. Brue is board certified in occupational medicine and has treated occupational patients for almost 30 years. Dr. Brue is not Level II accredited in Colorado, has no relationship with Colorado, and is not familiar with Colorado law.

3. Dr. Brue regularly rates permanent impairment according to the AMA Guides to the Evaluation of Permanent Impairment, 5th Edition, as that edition is regularly used and accepted in Ohio.

4. In May of 2015 Dr. Brue was treating Claimant and was working toward releasing her to full duty work. He had planned on releasing her to full duty within a week or so. Shortly thereafter, Claimant alleged an injury to her low back while she was in physical therapy for her neck and upper back injury.

5. Due to the new injury, that Dr. Brue believed occurred while performing treatment for her neck and upper back, Dr. Brue did not release Claimant to full duty and continued to treat Claimant.

6. On October 14, 2016 Dr. Brue placed Claimant at MMI. Dr. Brue did not conduct tests required by the revised 3rd Edition of the AMA Guides to the Evaluation of Permanent Impairment to determine Claimant's medical impairment rating within twenty days.

7. On October 31, 2016 Respondents submitted a letter to Dr. Brue in an effort to obtain an impairment rating for Claimant, inclusive of measurements. Dr. Brue responded on November 2, 2016 with a 21% whole person rating per the AMA Guides to the Evaluation of Permanent Impairment, 5th Edition, noting different percentages for the cervical spine, thoracic spine, and lumbar spine. Dr. Brue did not include any range of motion measurements. *See* Exhibit 2.

8. On January 6, 2017 Respondents submitted a letter to John Burris, M.D., a level II provider, noting that Dr. Brue had not listed impairment measurements and was not Level II accredited in Colorado. Respondents asked Dr. Burris perform an impairment rating and requested that he perform the rating at a January 27, 2017 appointment scheduled for Claimant in Colorado. *See* Exhibit 3.

9. On January 19, 2017 a prehearing conference was held between the parties. At the prehearing conference, it was noted that Claimant's provider in Ohio had found her to be at MMI but that he did not conduct, in a timely manner, such tests as required by the 3rd Edition of the AMA Guides to the Evaluation of Permanent Impairment. It was noted that consequently, Respondents had arranged for and would pay for Claimant's return to Colorado for examination. Claimant contended that her restrictions precluded her from returning and that she would require a companion to accompany her if she returned. Respondents had initially moved for an order compelling Claimant's attendance at a scheduled January 27, 2017 evaluation in Colorado. However, at the pre-hearing conference, ***Respondents agreed to reschedule the January 27, 2017 evaluation to take place on or after February 10, 2017 in order to give Dr. Brue additional time to conduct such tests as required by the revised 3rd Edition of the AMA Guides to determine Claimant's medical impairment rating and to submit the test results to Respondents***. The prehearing ALJ ordered that Claimant attend the rescheduled evaluation on or after February 10,

2017 in Colorado unless Respondents received from Dr. Brue, at least one business day prior to the rescheduled appointment in Colorado, such test results as were required by the revised 3rd Edition of the AMA Guides to determine Claimant's medical impairment rating. *See* Exhibit 7.

10. The appointment for evaluation with a level II provider in Colorado was rescheduled for February 24, 2017.

11. On January 30, 2017 Respondents submitted a letter to Dr. Brue. Respondents requested that Dr. Brue perform an impairment rating for Claimant at an upcoming February 3, 2017 appointment. Respondents attached to the letter range of motion worksheets and noted that Colorado law required that a physician provide three range of motion measurements for validity if range of motion impairment was indicated. Respondents also noted that Colorado used the 3rd Edition of the AMA Guides to the Evaluation of Permanent Impairment for impairment ratings and that Dr. Brue was to indicate which edition he used in the impairment rating. *See* Exhibit 4.

12. On February 3, 2017 Claimant was evaluated by Dr. Brue. Dr. Brue noted that Claimant initially injured her cervical and thoracic back when buckled in a stewardess's chair due to severe jarring and bumping. Dr. Brue noted that Claimant underwent extensive physical therapy and was in a work reconditioning and hardening treatment when lifting a heavy suitcase to simulate her activities as a stewardess when she suffered an injury to her lumbar spine with a subsequent herniated disk at L4-L5. Dr. Brue noted that Claimant had continued ongoing pain of the cervical, thoracic, and lumbar spine with numbness and tingling going down into the right lower extremity. *See* Exhibit 1.

13. Dr. Brue performed extensive range of motion testing. Dr. Brue completed the forms submitted by Respondent. Dr. Brue completed Figure 83 for lumbar range of motion, with measurements for lumbar flexion, lumbar extension, straight leg raise (both right and left), lumbar right lateral flexion, and lumbar left lateral flexion. Dr. Brue had three values for each test and noted that each test met validity within ± 10% or 5°. Dr. Brue completed Figure 81 for cervical range of motion with measurements for cervical flexion, cervical extension, cervical right lateral flexion, cervical left lateral flexion, cervical right rotation, and cervical left rotation. Again, Dr. Brue had three values for each test and noted that each test met validity within ± 10% or 5°. Dr. Brue also completed Figure 82 for thoracic range of motion with measurements for angle of minimum kyphosis, thoracic flexion, thoracic right rotation, and thoracic left rotation. There were three values for each test and Dr. Brue noted that each test met validity within ± 10% or 5°. Dr. Brue also completed Figure 84, a spine impairment summary, noting that Claimant had a Table 53 (II)(B) lumbar spine impairment of 5% for the herniated disc at L4-L5. Dr. Brue used the AMA Guides to the Evaluation of Permanent Impairment, 3rd edition and the combined values chart. Dr. Brue opined that Claimant had a 34% whole person impairment for the conditions allowed in the claim pursuant to the 3rd edition. *See* Exhibit 1.

14. Dr. Brue also provided a rating under the 5th edition, which the state of Ohio uses, and opined that the rating under the 5th edition would be 26% whole person impairment. *See* Exhibit 1.

15. Dr. Brue attached his notes that documented the examination and his specific measurements for the lumbar, cervical, and thoracic spine impairment. This information was sent to Respondents. *See* Exhibit 1.

16. On February 14, 2017 Respondents submitted a letter to Dr. Burris. Respondents attached the report from Dr. Brue that included all of Dr. Brue's range of motion measurements including figures 81, 82, 83, and 84 and Dr. Brue's ultimate impairment rating based on the measurements. Respondents asked Dr. Burris to provide an impairment rating based on Dr. Brue's report and Dr. Brue's measurements. Respondents noted that if Dr. Brue's report was insufficient for Dr. Burris to perform an impairment rating, Dr. Burris was to indicate that. The letter noted that the February 24, 2017 appointment could be cancelled if Dr. Burris had enough information to provide an impairment rating. *See* Exhibit 5.

17. On February 15, 2017 an assistant manager at Dr. Burris' office indicated that Dr. Burris needed to see Claimant to perform the impairment rating. There was no indication from the assistant manager as to why Dr. Burris could not perform an impairment rating with the information provided by Dr. Brue. *See* Exhibit B.

18. On February 17, 2017 the parties attended another pre-hearing conference. It was noted that Dr. Burris indicated he needed Claimant to attend the February 24, 2017 appointment and be personally examined. Again, it is not evident why Dr. Burris believed the measurements, worksheets, and rating provided by Dr. Brue was insufficient. Again, Claimant raised the issue that her medical condition prevented her from traveling to Colorado for examination without a companion and her concerns about traveling. The prehearing ALJ ordered that Dr. Brue examine Claimant to determine Claimant's travel status requirements as it related to traveling round trip to Denver for an examination by Dr. Burris. *See* Exhibit 8.

19. On February 22, 2017 Respondents submitted a letter to Dr. Brue noting that Claimant had been scheduled for a medical appointment in Denver, Colorado. Respondents asked Dr. Brue, based on his examination of Claimant and knowledge of her medical treatment, whether Claimant was physically capable of travel roundtrip to Denver, Colorado by air on her own within the permanent work restrictions that he had assigned on or about October 14, 2016. On February 27, 2017 Dr. Brue indicated his answer to the question was "no." *See* Exhibit C.

20. On March 14, 2017 the parties attended another prehearing conference. Claimant again maintained that she was not able to fly by herself to Denver and the prehearing ALJ noted that Dr. Brue indicated Claimant could not travel by air by herself but that he had made no opinion on her ability to travel by other means or with a companion. The prehearing ALJ granted Respondents' motion to compel Claimant to

attend the examination with Dr. Burris in Colorado and allowed Claimant to choose whether she wished to travel by air or Amtrak train. The prehearing ALJ ordered that Respondents provide reasonable travel expenses for Claimant as well as a traveling companion and ordered that Claimant inform respondents if she would be traveling by air or rail and provide any other information required by Respondents to make required reservations. *See* Exhibit 9.

21. Claimant was rescheduled for an appointment with Dr. Burris to be evaluated for an impairment rating on March 17, 2017.

22. Following the prehearing Order and between March 14, 2017 and March 16, 2017, Respondents made travel arrangements for Claimant to fly to Denver on March 16, 2017 and made all necessary ground transportation and hotel arrangements as well so that Claimant could attend the March 17, 2017 appointment.

23. Claimant testified that on March 16, 2016 she attempted to drive to the airport to catch her scheduled flight. Claimant testified that it was a two hour drive from her home to the Columbus, Ohio airport and that while driving she was in so much pain that she pulled over to stretch out and that she just couldn't make it to the airport due to the pain.

24. On June 7, 2017 vocational consultant Katie Montoya issued a report. Ms. Montoya reviewed Claimant's restrictions and limitations imposed by Dr. Brue. Ms. Montoya also reviewed information regarding flight times and modification/assistance provided. Ms. Montoya opined that Claimant had the capacity for both air and train travel and that traveling from Ohio to Denver by air would have been consistent with Claimant's restrictions. Ms. Montoya further noted that if Claimant chose to travel by train, Claimant would be able to sit, stand, or walk as she chose. *See* Exhibit E.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw

plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

PPD Benefits and § 8-42-107(8)(b.5), C.R.S.

The Act provides for the contingency of a claimant living in another state when MMI is reached and the doctor in that state is not Level II accredited. When an authorized treating physician providing primary care who is not accredited under the level II accreditation program makes a determination that an employee has reached MMI and the employee is not a state resident upon reaching MMI, the physician shall, within twenty days after the determination of MMI, determine whether the employee has sustained any permanent impairment and if so, the physician shall conduct such tests as are required by the revised 3rd edition of the AMA Guides to the Evaluation of Permanent Impairment to determine such employees medical impairment rating and shall transmit to Insurer all test results and all relevant medical information. *See* § 8-42-107(8)(b.5)(I)(A), C.R.S. After receipt of the medical information, Insurer has twenty days to appoint a level II accredited physician to determine the employee's medical impairment rating. *See* § 8-42-107(8)(b.5)(I)(C), C.R.S.

The Act also provides that if an employee chooses not to have the authorized treating physician perform such tests or if the information is not transmitted to Insurer in a timely manner, then Insurer shall arrange and pay for the employee to return to Colorado for examination, testing, and rating at the expense of Insurer. The Act provides that if the employee refuses to return to Colorado for examination, no permanent disability benefits shall be awarded. *See* § 8-42-107(8)(b.5)(I)(B), C.R.S.

As found above, Claimant lives in Ohio and is being treated by an occupational physician in Ohio who is not level II accredited in Colorado. Dr. Brue determined that Claimant reached MMI on October 14, 2016. Dr. Brue did not submit tests required

under the 3rd Edition of the AMA Guides to Insurer within twenty days of placing Claimant at MMI as required by statute, and within twenty days only provided an impairment rating under the 5th Edition that did not include range of motion measurements. Since the Respondents did not receive the information required by statute within twenty days, they arranged an appointment for Claimant in Colorado on January 27, 2017 with Dr. Burris, a level II provider, for the purpose of obtaining an impairment rating. Pursuant to statute, had Claimant refused to return to Colorado for examination, no permanent disability benefits would have been able to be awarded.

However, as found above, the parties attended a prehearing conference on January 19, 2017. A that conference, Respondents agreed to reschedule the January 27, 2017 appointment to give Dr. Brue, the out of state provider, additional time to conduct the tests required by the revised 3rd edition of the AMA Guides and to give him time to submit those test results to Respondents. The evaluation with a level II provider in Colorado was rescheduled to February 24, 2017. The prehearing ALJ ordered that Claimant attend the rescheduled evaluation in Colorado unless Respondents received from Dr. Brue, at least one business day prior to the rescheduled appointment in Colorado, such test results as were required by the revised 3rd Edition of the AMA Guides to determine Claimant's medical impairment rating. Respondents sent worksheets to Dr. Brue on January 30, 2017. Dr. Brue conducted the tests required on February 3, 2017 and filled out all of the worksheets. Dr. Brue submitted the results and the impairment rating worksheets, with extensive range of motion measurements, to Respondents. Respondents provided the information to Dr. Burris on February 14, 2017 and the Respondents had the information required more than one business day prior to the scheduled February 24, 2017 appointment. Therefore, Claimant was not under an obligation to attend the February 24, 2017 appointment. For unknown reasons, Dr. Burris indicated through an office manager that he needed to see Claimant in person to perform an impairment rating despite the specific and extensive reports submitted by Dr. Brue.

The Act indicates explicitly that the testing can be performed by an out of state doctor and transmitted to a Level II provider in Colorado for an opinion on impairment. In this case, Dr. Brue performed the tests as requested by Respondents and transmitted the information. Here, instead of requiring Claimant come to Colorado for an impairment rating, Respondents agreed and chose to send worksheets to Dr. Brue and asked him to perform the tests required by the 3rd edition of the AMA Guides. Claimant attended an appointment with Dr. Brue on February 3, 2017, and Dr. Brue transmitted the results as requested. Respondents are now arguing that Claimant should be barred from an award of permanent disability benefits because she refused to return to Colorado for an examination.

This argument is not found persuasive. A bar to permanent impairment benefits on an admitted compensable claim is a severe penalty. The ALJ concludes that the evidence does not indicate a requirement for Claimant to return to Colorado since Respondents agreed, alternatively, that Dr. Brue perform the required testing and transmit it to Respondents. Additionally, Claimant is found credible and persuasive that

she underwent the testing with Dr. Brue and that she did not refuse to return to Colorado for examination. Although there is some testimony and evidence than could result in a different conclusion, Claimant established by preponderant evidence that she attempted to travel to Colorado on March 16, 2017 but was unable to do so due to her pain and limitations. Claimant has not refused to return to Colorado for an examination. Rather, she is limited by her injuries, as supported by information from her treating provider Dr. Brue.

Respondents engaged in conduct indicating at the January 19, 2017 prehearing conference that despite not receiving the required tests from Dr. Brue within twenty days of MMI, they were not requiring Claimant to return to Colorado for testing. Rather, they indicated their intention to allow Claimant to return to Dr. Brue for the testing. Respondents submitted a letter to Dr. Brue asking that he perform the required testing and they provided specific worksheets pursuant to the 3rd edition of the AMA Guides. Claimant attended the set appointment with Dr. Brue and Dr. Brue performed extensive testing and filled out the required worksheets. Dr. Brue transmitted all of this information to Respondents. Respondents knew that because the information was not transmitted by Dr. Brue within twenty days as required by statute, that they could require Claimant to return to Colorado for examination, testing, and rating. Despite this knowledge, Respondents instead voluntarily chose to ask Dr. Brue to provide the correct and required testing.

The ALJ concludes that Respondents have failed to establish that Claimant violated § 8-42-107(8)(b.5)(I)(B), C.R.S. and have failed to establish that Claimant should be barred from permanent disability benefits. Respondents are required to provide the information submitted by Dr. Brue to a level II provider for a determination of impairment rating. It is unclear why Dr. Burris believed the information provided by Dr. Brue was insufficient or why he was unwilling to provide an impairment rating without physically examining Claimant. The information transmitted by Dr. Brue, who is board certified in occupational medicine and has treated occupational injuries for almost 30 years, appears to be exactly the information contemplated by statute and appears to be inclusive of and responsive to Respondents' January 30, 2017 request. If Dr. Burris is unwilling to perform an impairment rating, Respondents may appoint a different level II provider to perform a rating.

If Dr. Burris or another level II provider provides information indicating why the information transmitted by Dr. Brue is insufficient to perform an impairment rating, the parties then would have the ability to seek a hearing to determine whether Dr. Brue shall be required to do more testing or whether Claimant shall be required to come to Colorado. However, at this point, the ALJ concludes that Respondents have the exact information they requested from Dr. Brue on January 30, 2017 and that Respondents have not established that Claimant refused to return to Colorado for examination or that she violated § 8-42-107(8)(b.5)(I)(B), C.R.S. and should be barred from permanent disability benefits

Sanctions

As found above, Claimant did not refuse to travel to Colorado to attend the scheduled appointment on March 16, 2017 with Dr. Burris. Rather, she could not make it to the airport after attempting due to pain and limitations associated with her injury. This is supported by information provided by her treating physician Dr. Brue. Although Respondents incurred costs associated with attorneys' fees, cancellation fees, hotel accommodations, flights, and for the medical appointment itself, the ALJ declines to impose sanctions in this matter and finds Claimant credible and persuasive that she attempted to comply with the pre-hearing order but was unable to do so due to her injury. The opinion of Ms. Montoya is not as credible and persuasive as the opinions and testimony of Dr. Brue and Claimant.

Additionally, it is noted that the parties spent significant time arguing whether or not Claimant was capable of traveling to Colorado. It is unclear why there was no prehearing request to order Dr. Burris to either provide an impairment rating with the information transmitted by Dr. Brue or explain why the information from Dr. Brue was insufficient. The January 19, 2017 prehearing order indicated that Claimant was to travel to Colorado for an examination unless the information required was provided by Dr. Brue. The information was provided by Dr. Brue. Claimant was therefore under no obligation or requirement to travel to Colorado for examination. The subsequent prehearings contemplated Claimant's ability to travel and eventually ordered Claimant to travel to Colorado. However, the ALJ concludes that Claimant was under no obligation to travel to Colorado since the information requested and required under § 8-42-107(8)(b.5)(I)(A), C.R.S. had been provided by Dr. Brue and Respondents had agreed on January 19, 2017 that instead of requiring Claimant to come to Colorado for testing, they would submit a request to Dr. Brue for the required information.

ORDER

It is therefore ordered that:

1. Respondents have failed to establish that Claimant refused to travel to Colorado for an impairment rating and examination such that no permanent partial disability (PPD) impairment benefits should be awarded pursuant to § 8-42-107(8)(b.5)(I)(B), C.R.S.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver,

CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 29, 2017

/s/ Michelle E. Jones

_____

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUES

1.) Whether Claimant proved by a preponderance of the evidence that his cervical spine condition is related to his September 22, 2015, work injury.

2.) Whether Claimant proved by a preponderance of the evidence that the requested medical benefits, specifically, a two-level anterior cervical disc fusion (ACDF) surgery recommended by Dr. Castro, is related to the September 22, 2015, work injury.

FINDINGS OF FACT

1. Claimant is a 57 year old man who is employed by Employer as a truck driver. Claimant suffered an admitted work injury on Tuesday, September 22, 2015, when he was the restrained driver traveling on I-76 driving a 2014 Volvo semi tractor-trailer loaded with 77,000 pounds of freight traveling at approximately 68 miles per hour. As Claimant observed two vehicles merging onto the highway, he moved his truck to the left lane. The first vehicle merged on to the highway remaining in the right lane, but the second vehicle, a Chevrolet pickup truck with dual rear tires, merged onto the highway and continued into Claimant's lane into the right side of his truck. The truck pushed Claimant's vehicle to the left and Claimant hit the brakes coming to a stop. For a period of time the two vehicles were attached, but they became disengaged as Claimant stopped his truck in the left lane of travel. The other vehicle pulled away, and Claimant moved his truck from the left lane to the right shoulder. Claimant felt scared, fearful and excited. He called his employer and the Colorado State Patrol arrived as Claimant was speaking to the police dispatcher.

2. The state patrol officer directed Claimant to move to a truck stop at the next exit.

3. On September 22, 2015, Claimant returned to the terminal about an hour later and told the safety coordinator that he felt a little sore. Claimant felt this over his entire body. He felt more stress on his lower back and most of the pain was in that area. He went home and watched television feeling stiffness in his entire body. The next day he was able to stretch and work through the stiffness. He reported this to the safety coordinator.

4. Claimant worked his normal schedule for the remainder of the week after the accident. On Thursday, September 24, 2015, Employer assigned Claimant a new truck, and he was sent to California. Claimant continued to feel stiffness during this trip.

5. Claimant delivered his load in California on Saturday, September 26, 2015, and stopped at a truck stop to rest before picking up another load. While in California at a truck stop on Monday, September 28, 2015, Claimant felt a shock travel up his right leg and his right leg went numb. The numbness made it difficult for Claimant to return to his vehicle. Once back to the vehicle, Claimant massaged his leg hoping to reduce the numbness and pain in his leg.

6. Claimant first received medical treatment from an authorized workers' compensation physician, Dr. Michael Ladwig, on Wednesday, September 30, 2015. Claimant testified that he reported to Dr. Ladwig stiffness throughout his entire body. Claimant believes he reported pain in his arms and headaches. Claimant also reported numbness in his legs. Claimant felt pins and needles in his legs as he walked, sat and slept and it was these symptoms that gave him the most concern. Despite Claimant's testimony to the contrary, the medical record does not reflect that Dr. Ladwig noted Claimant's complaints of upper extremity numbness or headache until October 26, 2015, when Dr. Ladwig noted Claimant was experiencing headaches, bilateral numbness and tingling in the arms.

7. It was Claimant's understanding that Dr. Ladwig wanted to focus on symptoms generated from the lumbar spine before addressing Claimant's arm, head and neck symptoms. However, there is no record of a treatment plan delaying cervical treatment as Claimant alleges.

8. Claimant had a MRI of his lumbar spine and was referred to Dr. Olsen on October 29, 2015. Claimant alleges that at Dr. Olsen's first visit, Dr. Olsen did an assessment of his neck including physically moving his head. Claimant alleges that this neck examination shot a lot of pain through his arms. However, Dr. Olsen's October 29, 2015, treatment note form Claimant's initial visit contains no such description of an examination of the cervical spine. On this visit, Claimant reported to Dr. Olsen that he sprained his lumbar spine and contused his forearms. Dr. Olsen further reported that Claimant complained of headaches but related those to his constant pain from his back and right leg.

9. On November 23, 2015, Dr. Olsen noted that Claimant reported concerns of tingling and numbness in his right arm. Dr. Olsen's report reflects that Claimant denied neck pain, reporting only intermittent numbness at periods throughout the day on the right side. Dr. Olsen told Dr. Ladwig he needed an MRI of Claimant's neck on November 23, 2015.

10. A December 2015, cervical MRI showed that Claimant has significant stenosis at C6-7 left-sided and bilaterally at C5-6. The stenosis resulted in nerve compression due to severe foraminal narrowing at C4-5, C6-7, and moderate to severe at foraminal narrowing at C5-6. After the MRI, the focus of Claimant's treatment shifted

to the cervical spine as his pain was increasing. Dr. Ladwig treated Claimant's cervical spine with branch blocks and injections over twelve to fifteen months.

11. Claimant did not suffer from problems with his neck, shooting pains into his arms or numbness and tingling in his arms and hands prior to his work injury. Claimant has not needed any medical treatment for his neck due to causes other than the motor vehicle accident.

12. Respondents filed a General Admission of Liability on April 18, 2016.

13. Claimant treated with Dr. Andrew Castro, M.D. on July 11, 2016. Dr. Castro is board certified by the American Academy of Orthopedic Surgeons, is level II accredited by Colorado's workers' compensation system, and has been serving as an orthopedic specialist for 16 years. Claimant was referred to Dr. Castro by Dr. Ladwig and Dr. Olsen.

14. Claimant reported to Dr. Castro the mechanism of his injury was "the sudden onset of jerking sensations in his neck." Claimant told Dr. Castro he had increasing neck pain two days later and that he has had "constant headaches and neck pain." Dr. Castro diagnosed Claimant with cervical radiculopathy or cervical radiculitis due to Claimant experiencing pain into the arms which travel down the outer arm into the forearm and first and second fingers. Dr. Castro credibly opined that Claimant's symptoms are specific to the C7 dermatome and radiculopathy. Claimant has undergone two cervical MRIs. The first MRI was performed on December 4, 2015, and the second was performed on June 15, 2016. Dr. Castro reviewed both MRI films and reports. Dr. Castro opined that the MRI imaging findings support the symptoms of arm pain, numbness and tingling.

15. Despite the fact that Dr. Castro did not have complete records of Claimant's treatment for this claim, Dr. Castro opined that Claimant's cervical spine condition is work related. Dr. Castro testified that he only had knowledge of the mechanism of injury based on the information Claimant provided him. Dr. Castro opined that Claimant suffered an acute injury that is causing his symptoms or otherwise has caused a prior asymptomatic pre-existing degenerative condition to become symptomatic. Dr. Castro opined that Claimant's disc bulge at C6-7 has the appearance of being an acute disc herniation because it is not accompanied by other degenerative markers, like bone spurs.

16. Claimant underwent EMG nerve studies that were negative. EMGs, however, are tests for nerve damage or irritation. Dr. Castro opined that it is possible to have a lot of pain but still have a negative EMG. Dr. Castro found Claimant to be a credible historian.

17. Dr. Castro opined that headaches can be related to neck pain, though neck pain is not the only symptom of a cervical spine injury. Dr. Castro opined that it is

also possible to have nerve root compression that causes radicular symptoms without neck pain itself.

18. On December 9, 2016, Dr. Castro recommended Claimant undergo a two-level anterior cervical disc fusion (ACDF) at C5-6, C6-7.

19. On December 21, 2016, Dr. James Ogsbury, a physician that also specializes in spine surgery, reviewed Dr. Castro's ACDF recommendation. Dr. Ogsbury recommended against the proposed ACDF procedure because he did not believe Claimant's neck problems and symptoms were causally related to Claimant's work injury. Dr. Ogsbury indicated "that for a situation to be considered causally related to a work-related episode, there must be minimal or no symptoms before [the work injury], the mechanism must be consistent with the symptoms, and then the symptoms must develop within about one month of the work-related episode." Based on the medical records Dr. Ogsbury reviewed, he believed Claimant reported neck symptoms two months after Claimant's date of injury.

20. Dr. Ogsbury further opined in a Utilization Review as an Insurer's advisor that "if [Claimant] developed the symptoms truly within a month of the work-related episode, [it] would then fulfill my criteria of being work related."

21. On March 21, 2017, Dr. Michael Janssen also performed a record review regarding Dr. Castro's ACDF recommendation. Dr. Janssen is a spine surgeon. Dr. Janssen indicated that Claimant started experiencing "nonspecific neck and cervical spine myofascial symptomatology" approximately four week after his work injury. Dr. Janssen opined that subsequent MRIs reflected longstanding age related degenerative disc disease. Dr. Janssen further opined that Dr. Castro's recommendation for a three level cervical fusion is non-occupationally related.

22. Dr. Castro disagreed with Dr. Janssen's assessment of Claimant's symptomatology. Specifically, Dr. Castro opined that Claimant's symptoms are "very specific to the C7 dermatome and radiculopathy. . . ." and therefore not myofascial symptomatology. Dr. Castro opined that myofascial symptomatology would be muscular symptomatology like neck pain or pain in the trapezius and shoulders. Dr. Castro opined that myofascial symptomatology is distinctly different from specific dermatomal pain from a nerve root that is being compressed.

23. Dr. Castro opined that the fact there are no changes between Claimant's two cervical MRI findings does not mean that Claimant's condition is necessarily caused by long-standing anatomical degenerative changes alone, and had Claimant's herniated disc condition improved between the two MRIs being performed, cervical surgery would not be considered. Claimant's condition did not improve between the two MRIs, so the condition that needs to be treated surgically is still present, Castro credibly opined.

24. Dr. Castro disagreed with Dr. Janssen on the issue of whether Claimant's symptoms are now present because an underlying condition was made symptomatic as a result of Claimant's work injury. Dr. Castro opined that Claimant's underlying condition was made symptomatic by the work injury and that Claimant's disc herniation at C6-7 is acute because it does not have bone spurs normally associated with a degenerative condition. Dr. Castro opined that Dr. Castro's opinions were found to be more credible than Dr. Janssen's opinions.

25. On February 24, 2017, Dr. Jeffrey Raschbacher performed an independent medical examination (IME) of Claimant at the request of Respondents. Claimant was seen by Dr. Raschbacher one time. Dr. Raschbacher practices occupational medicine and is not currently board certified. In his deposition testimony, Dr. Raschbacher's was admitted as an expert in occupational medicine without objection. His deposition testimony did not contain information regarding his Level II accreditation by the Division of Workers' Compensation, Department of Labor and Employment.

26. Dr. Raschbacher opined that Claimant's complaints of cervical pain are not related to the work injury. Dr. Raschbacher agreed that prior to his work injury Claimant did not complain of neck pain or radicular symptoms. Dr. Raschbacher noted that Claimant has objective findings showing anatomic abnormalities on his cervical MRIs. Dr. Raschbacher said that reports of cervical pain were made for the first time two months after the September 22, 2015, motor vehicle incident. Dr. Raschbacher opined that because of these factors, Claimant's cervical pain complaints were not relatable to the work injury.

27. Dr. Raschbacher further opined that Claimant's radiologic findings do not prove that Claimant is experiencing pain. The doctor opined that Claimant's radiologic evidence of a herniated disk does not guarantee that Claimant's herniated disk is causing his pain.

28. It is found that Dr. Castro's opinions regarding the relatedness of Claimant's cervical complaints and the recommendation for a two-level anterior cervical disc fusion (ACDF) at C5-6, C6-7 are credible and persuasive. The evidence established that Claimant's onset of symptoms met the standard enunciated by Dr. Ogsbury for determination that the cervical condition is related to the work injury. Dr. Ogsbury opined that symptoms of an acute cervical spine injury in order to be compensable would appear within 30 days of the date of the September 22, 2015, motor vehicle accident.

29. The evidence established that Dr. Ladwig's October 26, 2015, medical record supports Claimant's claim that he reported cervical spine symptoms 34 days after his motor vehicle.

30. Dr. Ladwig's October 26, 2015, medical record reflects "bilateral hand and forearm numbness." This report was "within about one month of the work related

episode." Thus, even the standard established by Respondent's IME, Dr. Ogsbury, has been met by Claimant establishing the causal relationship between the September 22, 2015, work injury and Claimant cervical spine condition.

31. It is found that Dr. Ogsbury and Dr. Castro presented more credible and persuasive opinions regarding the relatedness of Claimant's cervical spine condition than Dr. Janssen and Raschbacher.

32. Claimant was found to be a credible and persuasive witness.

CONCLUSIONS OF LAW

General Legal Principles

33. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a workers' compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is evidence that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S.

34. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936).

Causation

35. In this case, the primary question is whether Claimant's cervical spine condition is related to the September 22, 2015, motor vehicle accident. Respondents contend that Claimant's cervical spine condition is not related to the work injury and offer the opinions of Dr. Raschbacher, Dr. Janssen, and Dr. Ogsbury in support of their position. Respondents contend that Claimant's condition is degenerative in nature and not causally related. Claimant argues that the evidence established he reported to Dr. Ladwig complaints of cervical spine symptoms including headaches and bilateral hand and forearm numbness from the beginning. Claimant also relies on Dr. Ladwig's medical record of October 26, 2015, to support his claim that he meets the criteria established by Respondents' IME, Dr. Ogsbury, in that his symptoms appeared within four weeks of the work injury.

36. The claimant was required to prove by a preponderance of the evidence that the conditions for which he seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

37. In this case, Claimant established by a preponderance of the evidence that his cervical spine condition is related to the work injury of September 22, 2015. Supporting evidence of this conclusion includes Claimant's credible testimony regarding the early onset of his cervical spine symptoms which was corroborated by Dr. Ladwig's October 26, 2015, medical record. Dr. Castro's opinions regarding the relatedness of Claimant's cervical spine symptoms were more credible and persuasive than the opinions of Dr. Janssen and Dr. Raschbacher.

Medical Benefits

38. On December 9, 2016, Dr. Castro recommended Claimant undergo a two-level anterior cervical disc fusion (ACDF) at C5-6, C6-7. The evidence established that this procedure was recommended to address Claimant's cervical spine symptoms.

39. Section 8-42-101(1)(a), supra, provides:

> Every employer … shall furnish … such medical, hospital, and surgical supplies, crutches, and apparatus as may reasonably be needed at the time of the injury … and thereafter during the disability to cure and relieve the employee from the effects of the injury.

40. Respondents thus are liable for authorized medical treatment reasonably necessary to cure and relieve the employee from the effects of the injury. Section 8-42-101, *supra*; *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

41. As found, Claimant proved his cervical spine condition is related to the September 22, 2015, work injury. Accordingly, it is concluded that Dr. Castro's recommendation for a two-level anterior cervical disc fusion (ACDF) at C5-6, C6-7 is related to the work injury and therefore Respondents are liable for this medical benefits.

ORDER

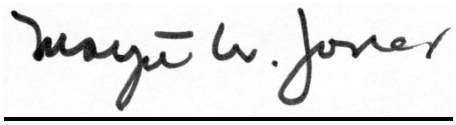
It is therefore ordered that:

1. Respondents shall be liable for reasonably necessary and related medical benefits to cure and relieve Claimant of the effects of the September 22, 2015, work injury, including a two-level anterior cervical disc fusion (ACDF) at C5-6, C6-7.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 29, 2017



Margot W. Jones, Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Whether claimant has proven by a preponderance of the evidence that he suffered an injury to his cervical spine arising out of and in the course of his employment with employer on January 27, 2016.

- If the January 27, 2016 injury is found compensable, whether claimant has proven by a preponderance of the evidence that the medical treatment he received prior to August 9, 2016 was authorized.

- If the January 27, 2016 injury is found compensable, whether claimant has proven by a preponderance of the evidence that medical treatment he received prior to August 9, 2016 was reasonable and necessary to relieve him from the effects of the January 27, 2016 injury.

- Whether claimant has proven by a preponderance of the evidence that the C7-T1 interlaiminar epidural steroid injection (ESI) administered by Dr. Cyril Bohachevsky on November 28, 2016 was reasonable medical treatment necessary to cure and relieve claimant from the effects of the admitted August 9, 2016 work injury.

- Whether claimant has proven by a preponderance of the evidence that the anterior cervical discectomy and fusion from C5 to C7 recommended by Dr. Douglas Orndorff is reasonable medical treatment necessary to cure and relieve claimant from the effects of the admitted August 9, 2016 work injury.

- Whether claimant has demonstrated by a preponderance of the evidence that he is entitled to temporary partial disability (TPD) benefits beginning September 7, 2016 and ongoing.

- If claimant is found to be entitled to TPD benefits, whether respondents have proven by a preponderance of the evidence that claimant is responsible for his termination of employment on September 6, 2016, thereby ending TPD benefits.

- The parties stipulated that claimant's average weekly wage (AWW) is $943.38, through September 30, 2016. The parties also stipulated that beginning October 1, 2016, claimant's AWW is $1,078.33.

FINDINGS OF FACT

1. Claimant worked for employer from January 2014 until September 6, 2016 as the Beverage Manager. In that position, claimant had an office in employer's basement. In the passageway outside claimant's office, the floor slanted. As a result, the passageway had low overhead clearance.

2. Claimant testified that on January 27, 2016, he began walking up the ramp-like walkway while speaking with a coworker, Nicholas Schlau. Claimant testified that when Mr. Schlau asked him a question, claimant turned and in doing so hit his head on the top of the passageway. Claimant testified that he struck his head with such force that he fell to the ground, but did not lose consciousness. Claimant did not report the January 27, 2016 incident to employer at that time. Claimant did not seek medical treatment immediately following the January 27, 2016 incident.

3. Mr. Schlau testified at hearing that he did not observe claimant hit his head or fall in January 2016, but he did see claimant on the ground and assisted him. Mr. Schlau also testified that once claimant was standing Mr. Schlau observed claimant rubbing the top of his head and the back of his neck.

4. On May 4, 2016, claimant sought treatment with Durango Urgent Care and was seen by Michael Guillette, PA-C. At that time, claimant reported that for approximately one month he had intermittent pain in his left shoulder that included numbness and tingling into his fingers on this left hand.

5. An x-ray of claimant's cervical spine taken on May 4, 2016 showed disc space narrowing and small osteophytes at the C5-6 level, and facet joint narrowing and sclerosis at the C7-T1 level. No acute fracture was noted. Mr. Guillette diagnosed cervical disc degeneration, prescribed pain medications, and referred claimant to Spine Colorado.

6. On May 16, 2016, claimant was seen at Spine Colorado by Jamie Nelson, PA-C. At that time claimant reported pain and numbness in his left upper extremity that started "about 5 months ago". Claimant did not report a work related incident to Ms. Nelson on that date. Ms. Nelson diagnosed cervical radiculopathy in the left upper extremity with evidence of disc degeneration at the C5-6 level. Claimant was referred to physical therapy and Ms. Nelson ordered an upper extremity electromyography (EMG) study and a magnetic resonance image (MRI) of claimant's cervical spine.

7. On May 16, 2016, an x-ray of claimant's cervical spine showed moderate disc space height loss at the C5-6 level with no evidence of spondylosis in the cervical spine, with the exception of mild osteophytic spurring at C5-6.

8. Dr. Cyril Bohachevsky conducted an EMG study on May 27, 2016. The EMG showed normal electrophysiologic examination with no evidence of left cervical radiculopathy, no left sensorimotor median neuropathy, and no left ulnar neuropathy at the wrist.

9. On June 1, 2016, an MRI of claimant's cervical spine was performed. On June 10, 2016, Ms. Nelson reviewed the MRI results and noted mild to moderate C5-6 and C6-7 central canal stenosis primarily by broad disc bulge and osteophyte complex; diffuse uncovertebral and facet arthrosis with multilevel forminal stenoses greatest at C5-6 and C6-7; and associated bony reactive change from synovitis and degenerative arthrosis at the right C7-T1 facet joint.

10. Following the MRI, Ms. Nelson diagnosed cervical radiulopathy in the left upper extremity with evidence of severe bilateral foraminal stenosis at C5-6 and C6-7.

11. Claimant returned to Spine Colorado on June 1, 2016 and was seen by Ms. Nelson. At that time claimant had not yet started physical therapy and was provided a prescription to do so. Ms. Nelson also ordered a C7-T1 epidural steroid injection (ESI). On July 12, 2016, Dr. James A. Santos administered an interlaminar epidural injection at C7-T1.

12. On August 8, 2016, claimant returned to Spine Colorado and reported to Ms. Nelson that he was getting relief from the physical therapy and injection. On that date, Ms. Nelson continued to identify claimant's diagnosis as cervical radiulopathy in the left upper extremity with evidence of severe bilateral foraminal stenosis at C5-6 and C6-7. Ms. Nelson provided claimant with work restrictions limiting him to working eight hours per day. Claimant notified Danielle Kirkpatrick, Human Resources Manager with employer, that he had work restrictions. Claimant also testified that although employer knew about his work restrictions, his direct supervisor ignored the restrictions.

13. Claimant testified that he suffered a second injury at work on August 9, 2016. Claimant testified that on that date, he was speaking with someone in the passageway outside his office. While walking up the ramp-like walkway claimant struck the top of his head on the ceiling portion of the passageway. Claimant testified that he immediately felt a jolt of pain in his neck, left shoulder, and left arm.

14. Claimant immediately reported the August 9, 2016 incident to Ms. Kirkpatrick. Employer sent claimant to Durango Urgent Care for treatment and he was seen by Dr. Devon Daney on August 9, 2016. Dr. Daney diagnosed neck pain and exacerbation of cervical stenosis. Dr. Daney restricted claimant from lifting or carrying more than 20 pounds and referred claimant to physical therapy and to Spine Colorado. Claimant testified that he notified Ms. Kirkpatrick of these additional work restrictions. Following the August 9, 2016 work injury, claimant did not miss any work.

15. Claimant testified that on August 12, 2016 he spoke with Patty Button, an adjuster with insurer, regarding the August 9, 2016 incident. Claimant also testified that during that discussion he told Ms. Button about the January 27, 2016 incident.

16. On August 29, 2016, claimant was seen by Ms. Nelson at Spine Colorado. At that time, claimant described the August 9, 2016 incident to Ms. Nelson. Claimant reported pain radiating down below his left shoulder, into his left triceps and down into his left thumb, index and middle fingers. Claimant also reported that physical therapy was helping. Ms. Nelson referred claimant back to physical therapy. Although claimant had described an injury occurring on August 9, 2016, Ms. Nelson continued to identify claimant's diagnosis as cervical radiulopathy in the left upper extremity with evidence of severe bilateral foraminal stenosis at C5-6 and C6-7.

17. Claimant testified that on September 15, 2016 he told Lisa Habegger, adjustor with insurer, about the January 27, 2016 incident. Claimant testified that he believed he had adequately reported the January 27, 2016 incident at that time.

18. On September 28, 2016, respondents sent claimant for an independent medical examination (IME) with Dr. Douglas Scott. Dr. Scott reviewed claimant's medical records, obtained a history from claimant and performed a physical examination in connection with the IME. Following the IME, Dr. Scott issued a report in which he opined that on August 9, 2016 claimant suffered a temporary aggravation of a preexisting condition; specifically cervical neck spondylosis. Dr. Scott further opined that this temporary aggravation would resolve within 6 to 12 weeks. There is no reference to a January 2016 incident in Dr. Scott's September 28, 2016 IME report.

19. On October 16, 2016, claimant reported the January 27, 2016 incident to employer in writing. In that letter claimant referenced his discussions with the insurer's adjustors, Ms. Button and Ms. Habegger.

20. Claimant testified that he did not report the January 2016 incident at the time of the incident because he did not believe he was injured. Later when he began to have shoulder pain he did not connect that pain with the incident in January. When he did connect the two, claimant believed that he had four days to report an injury, and therefore he believed he could no longer report an injury that had occurred months prior. Claimant testified that it was only after he sought legal counsel that he learned that he could still report the January 2016 incident.

21. On October 20, 2016, respondents filed a General Admission of Liability (GAL) for the August 9, 2016 injury and admitted for medical benefits. Respondents have not admitted liability for the alleged January 27, 2016 incident.

22. On November 18, 2016, claimant returned to Spine Colorado and Ms. Nelson ordered a C7-T1 ESI. Spine Colorado requested authorization for this procedure from insurer on November 20, 2016. Dr. Bohachevsky administered the recommended interlaiminar ESI at C7-T1 on November 28, 2016.

23. Dr. Scott performed a medical records review on December 1, 2016 regarding the ESI (which at that time had already been administered) and opined that the ESI was not reasonable medical treatment and not related to claimant's August 9, 2016 work injury. Dr. Scott stated that it is his opinion that the August 9, 2016 injury caused a temporary aggravation of a preexisting condition that resolved by September 30, 2016. Dr. Scott also opined that claimant reached maximum medical improvement (MMI) on September 30, 2016. Dr. Scott also opined that the ESI at C7-T1 is not indicated to treat the temporary aggravation of a preexisting condition. Based upon Dr. Scott's review, respondents denied authorization for the November 28, 2016 ESI.

24. On December 20, 2016, Dr. Douglas Orndorff diagnosed claimant with C5-6 and C6-7 cervical spondylosis, cervical radiulopathy and subjective weakness on the left side. At that time Dr. Orndorff noted that claimant had failed conservative treatment and he recommended that claimant undergo an anterior cervical discectomy and fusion from C5 to C7.

25. Dr. Scott performed a medical records review December 28, 2016 regarding the recommended fusion surgery and opined that the surgery is indicated to treat claimant's chronic degenerative spondylosis and associated nerve root damage that existed prior to the August 9, 2016 injury. Therefore, Dr. Scott opined that the recommended surgery is not related to the work injury. Based upon Dr. Scott's review, respondents denied authorization for the fusion surgery recommended by Dr. Orndorff.

26. On January 26, 2017, claimant returned to Dr. Scott for a second IME. At that time, claimant provided Dr. Scott with a description of the January 27, 2016 incident. On February 9, 2017, Dr. Scott issued an IME report in which he opined that claimant did not suffer a work injury on January 27, 2016. However, Dr. Scott noted that even if claimant had suffered an injury at that time it was a temporary aggravation of an underlying condition and claimant's prognosis following that incident was "excellent". Dr. Scott further opined that although the recommended surgery may be reasonable, it is not necessary because claimant's need for surgery is not related to the August 9, 2016 injury. In support of this opinion, Dr. Scott notes that claimant was "stable" and at MMI on September 30, 2016. Dr. Scott testified by deposition in this matter consistent with his reports.

27. Dr. Orndorff testified by deposition and stated that he believes that claimant suffered injuries to his cervical spine on both January 27, 2016 and August 8, 2016.

28. Claimant resigned from this employment and his last day with the employer was September 6, 2016. Claimant began a new job with Animas Wine and Spirits or September 7, 2016. Claimant testified that his new employment allows him to comply with his current work restrictions.

29. Claimant testified that he resigned from his position with employer because employer was unwilling to allow him to work only eight hours per day as directed by Ms. Nelson. However, claimant did not include this reason in his resignation letter. The ALJ is not persuaded by claimant's testimony regarding the reason for his resignation.

30. Ms. Kirkpatrick testified by deposition in this matter. Ms. Kirkpatrick began working for employer in June 2016. She was not aware of an alleged January work injury until she received claimant's October 16, 2016 letter. Ms. Kirkpatrick agrees that prior to the August 9, 2016 injury claimant notified her of work restrictions involving working only eight hours per day. Ms. Kirkpatrick testified that she believed that claimant was complying with those restrictions.

31. Ms. Kirkpatrick testified that when claimant reported the August 9, 2016 injury to her she provided him a list of medical providers and claimant selected Durango Urgent Care for treatment.

32. Claimant met with Ms. Kirkpatrick on September 6, 2016 for an exit interview. During the exit interview claimant did not list his work injury or work restrictions as reasons for his resignation. Ms. Kirkpatrick testified that claimant did not state that his work injury or related work restrictions were the reason for his resignation. On the contrary, claimant repeatedly told Ms. Kirkpatrick that he was quitting to accept the position at Animas Wine and Spirits because it would allow him more time to spend with his daughter.

33. Claimant testified that his current symptoms include extreme pain in his left shoulder near the scapula with numbness down his left arm into his thumb and first two fingers. He describes the pain as aching and stabbing with a burning in his left triceps. Claimant also testified that he has headaches and stiffness in his neck muscles.

34. Pay records entered into evidence show that while employed with employer claimant was paid a salary of $1,730.16 every two weeks (or $865.38 per week). Claimant testified that he often worked more than 50 hours per week. Pay records from claimant's new employment with Animas Wine and Spirits show that he is paid $801.93 per week and works 45 hours a week. Claimant asserts that he suffered a reduction in earnings when he quit his position with employer and began working for Animas Wine and Spirits.

35. The ALJ does not find claimant's testimony persuasive with regard to an alleged January 27, 2016 work injury. Claimant did not report the alleged January 2016 injury to employer until October 2016, more than a month after his resignation. Additionally, although claimant began seeking medical treatment for his left shoulder in May 2016, the ALJ is not persuaded that claimant was injured at work in January 2016. The ALJ finds that claimant has failed to demonstrate that it is more likely than not that he suffered a compensable injury in January 2016.

36. The ALJ credits the opinion of Ms. Nelson over the contrary opinion of Dr. Scott and finds that claimant has demonstrated that it is more likely than not that the ESI administered on November 28, 2016 was reasonable medical treatment necessary to cure and relieve claimant from the effects of the August 9, 2016 injury.

37. The ALJ credits the opinion of Dr. Orndorff over the contrary opinion of Dr. Scott and finds that the recommended anterior cervical discectomy and fusion from C5 to C7 is related to claimant's August 9, 2016 work injury. The ALJ finds that claimant has demonstrated that it is more likely than not that the recommended surgery is reasonable medical treatment necessary to cure and relieve claimant from the effects of the August 9, 2016 injury.

38. The ALJ credits the payroll records and finds that claimant is not temporarily partially disabled nor has he shown that his work restrictions prevent him from obtaining working. Rather, there is substantial evidence that despite suffering the admitted August 9, 2016 injury, claimant was capable of earning wages immediately after reporting his injury and he continues to be capable of earning wages. Therefore, claimant has failed to establish that it is more likely than not that he is entitled to disability benefits.

39. The ALJ credits Ms. Kirkpatrick's testimony and claimant's resignation letter over claimant's contrary testimony and finds that claimant quit employment with employer to pursue employment that offered a more preferable schedule. The ALJ also finds that claimant's reasons for quitting employment were personal reasons unrelated to the August 9, 2016 work injury. Therefore, claimant exercised some choice or control over the termination of employment. The ALJ finds that respondents have demonstrated that it is more likely than not that claimant is responsible for the termination of his employment with employer.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering

all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., (2015). A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2015).

3. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with" a preexisting disease or infirmity to produce disability or need for treatment. *See H & H Warehouse v. Vicory, supra.*

4. As found, claimant has failed to demonstrate by preponderance of the evidence that he suffered a compensable injury on January 27, 2016. As found, claimant's testimony on this issue is not persuasive.

5. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

6. As found, claimant has demonstrated by a preponderance of the evidence that the ESI administered on November 28, 2016 was reasonable medical treatment necessary to cure and relieve claimant from the effects of the admitted August 9, 2016 work injury. As found, Ms. Nelson's opinion is credible and persuasive on this issue.

7. As found, claimant has demonstrated by a preponderance of the evidence that the recommended anterior cervical discectomy and fusion from C5 to C7 is reasonable medical treatment necessary to cure and relieve claimant from the effects of

the admitted August 9, 2016 work injury. As found, Dr. Orndorff's opinion is credible and persuasive on this issue.

8. To prove entitlement to temporary partial disability (TPD) benefits, claimant must prove that the industrial injury contributed to some degree to a temporary wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Temporary partial disability payments ordinarily continue until either claimant reaches maximum medical improvement or an attending physician gives claimant a written release to return to modified employment, such employment is offered to the employee in writing, and the employee fails to begin such employment. *See* 8-42-106, C.R.S.

9. As found, claimant has failed to demonstrate by a preponderance of the evidence that his work injury led to temporary wage loss. As found, claimant began modified employment immediately after reporting the August 9, 2016 work injury and worked his full schedule and received full wages. Claimant continued to work within his work restrictions at a different employer beginning September 7, 2016 with no loss of wages. As found, the payroll records are credible and persuasive.

10. Sections 8-42-105(4) and 8-42-103(1)(g), C.R.S., contain identical language stating that in cases "where it is determined that a temporarily disabled employee is responsible for termination of employment the resulting wage loss shall not be attributable to the on-the-job injury." In *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 58 P3d 1061 (Colo. App. 2002), the court held that the term "responsible" reintroduced into the Workers' Compensation Act the concept of "fault" applicable prior to the decision in *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Hence, the concept of "fault" as it is used in the unemployment insurance context is instructive for purposes of the termination statutes. *Kaufman v. Noffsinger Manufacturing*, W.C. No. 4-608-836 (Industrial Claim Appeals Office, April 18, 2005). In that context, "fault" requires that the claimant must have performed some volitional act or exercised a degree of control over the circumstances resulting in the termination. *See Padilla v. Digital Equipment Corp.*, 902 P.2d 414 (Colo. App. 1995) *opinion after remand* 908 P.2d 1185 (Colo. App. 1995).

11. Although the ALJ has determined that TPD benefits are not appropriate in this matter, the ALJ addresses the issue of claimant's termination of employment on September 6, 2016. As found, respondents have demonstrated by a preponderance of the evidence that claimant was responsible for his termination of employment. As found, Ms. Kirkpatrick's testimony and claimant's resignation letter are credible and persuasive on this issue. Therefore, even if claimant had been eligible for TPD benefits (which he is not) any such benefits would have ended upon his resignation from employment.

ORDER

It is therefore ordered that:

1. Claimant's claim for compensability regarding a January 27, 2016 injury is denied and dismissed.

2. Respondents shall pay for the ESI administered on November 28, 2016.

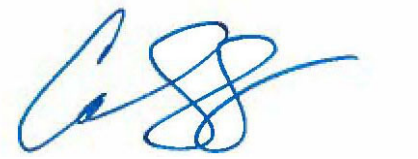
3. Respondents shall pay for the recommended anterior cervical discectomy and fusion from C5 to C7, subject to the Colorado Medical Fee Schedule.

4. Claimant's request for TPD benefits is denied and dismissed.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Dated: August 30, 2017



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, CO 81501

ISSUES

I. Whether Claimant suffered a work-related injury to his left shoulder and neck on August 9, 2016 when he was involved in a motor vehicle accident while driving from Sterling Colorado to Greenwood Village Colorado for a management meeting.

II. Whether Claimant suffered a separate compensable injury to his left shoulder on November 11, 2016, which has been assigned WC. No. 5-046-036.

III. Whether Respondents are liable for Claimant's left shoulder surgery which was performed on January 4, 2017.

IV. Whether Claimant is entitled to temporary total disability benefits starting January 4, 2017.

V. Whether Respondents are liable for Claimant's neck surgery which was performed on May 18, 2017.

VI. Whether Respondents are liable for other medical expenses incurred since August 9, 2016.

VII. Whether Claimant should be penalized for his failure to report his injury pursuant to § 8-43-102(1)(a) from January 4, 2017 through January 30, 2017.

STIPULATIONS

1. W.C. Nos. 5-037-331 (DOI 8/9/2016) and 5-046-036 (DOI 11/16/2016) should be consolidated for purposes of this hearing.

2. If the case is found compensable, the primary authorized treating physician shall be James Hebard, M.D., of Banner Health in Greeley, Colorado.

3. If the case is found compensable, Claimant's average weekly wage is $844.41 and his temporary total disability rate will be $562.94.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant was born on May 25, 1967 and was 50 years old at time of hearing.

2. Claimant worked for Grease Monkey International as an automobile mechanic for 23 years.

3. Claimant's average weekly wage is $844.41 and his temporary total disability rate is $562.94.

4. Claimant lives in Sterling Colorado.

5. At time of the accident, Claimant served as store manager of the Sterling, Colorado Grease Monkey shop, acting as a working foreman. Claimant was a salaried employee and earned $844.41 per week.

6. Claimant testified that the job duties of store manager, to a degree, were accurately described in the "Job Description" published by Respondent-Employer in January 2013 (Claimant's Exhibit 20, p. 167). His duties included repairing and maintaining between 15 and 60 cars per day, with an average of 11 to 12 per day. He worked 11 to 12 hours per day, 5 to 6 days per week. He was required to lift and/or move up to 40 pounds, and probably a lot more weight.

7. Although Claimant is a store manager, his job still requires him to perform physical activities such as change oil, move barrels of oil, stock product, and perform other work on cars. As set forth in his formal Job Description, Claimant is required to frequently lift or move up to 40 pounds.

8. Prior to the alleged injury date, Claimant had no difficulty performing his regular duties, which included moving 55 gallon drums of oil, each of which weighed between 400 and 500 pounds, and which involved rolling and sliding them.

9. Part of Claimant's job duties required him to travel from his home in Sterling, Colorado, to mandatory manager meetings once a month. The mandatory meetings were held the first Tuesday of every month. The meetings took place at either the Longmont Colorado office or the Greenwood Village Colorado office. Except for the mandatory management meetings, Claimant normally takes Tuesdays off. However, as a salaried employee, Claimant was being paid to attend the monthly Tuesday management meetings as part of his job as a store manager.

10. The travel to each monthly management meeting was as the express request of Employer and contemplated by Claimant's employment agreement.

11. The management meetings allowed Employer to go over with each store manager the performance of each store. The meetings also allowed each store manager to see how each store was doing compared to other stores. Therefore, Employer benefitted by having Claimant travel and attend each meeting to go over the performance of each store.

12. Employer scheduled a mandatory management meeting for August 9, 2016. The management meeting was scheduled to begin at 7:00 a.m. at Grease Monkey International, Inc., which is located at 7450 East Progress Place, Greenwood Village, Colorado.

13. The distance between Claimant's house in Sterling, Colorado, and Grease Monkey International in Greenwood Village, Colorado, is approximately 150 miles. Therefore, the travel for the mandatory meeting required Claimant to drive 150 miles from Sterling Colorado to Greenwood Village Colorado and then back to Sterling Colorado the same day for a total of approximately 300 miles.

14. Claimant drove in his personal van on the date of the motor vehicle accident. Claimant considered himself to be working that day. Claimant was wearing his Grease Monkey uniform. As a salaried employee he was being paid and working on the day of the accident.

15. On August 9, 2016, Claimant left his home in Sterling Colorado at approximately 3:30 a.m. to travel to and attend the mandatory management meeting. Claimant started driving west on Interstate 76 towards Greenwood Village, Colorado. Claimant was driving a van and driving 75 miles per hour. Claimant was wearing his seatbelt. There is a large grass median that separates the westbound and eastbound lanes of Interstate 76. At approximately 4:00 a.m., at mile marker 101, Claimant observed an eastbound vehicle drive off the highway and into the median and roll a number of times and eject a person towards Claimant's vehicle. To avoid hitting the ejected person, Claimant forcefully turned his steering wheel to the left. This caused Claimant to drive into the grass median. According to Claimant, this caused him to be bounced around like a pinball. Claimant then forcefully turned the steering wheel to the right and ended up back on Interstate 76 heading west bound. His car went up on two wheels before it righted itself. While taking evasive maneuvers, Claimant's left shoulder and head were thrown against the driver's side door causing the driver's side door frame to bend. Claimant's vehicle then came to a stop in the fast lane of westbound Interstate 76. After the accident, Claimant moved his car from the fast lane and pulled up behind the other person's vehicle which had rolled and had ended up in the slow lane of the westbound lane of Interstate 76.

16. Claimant was in travel status on August 9, 2016 when he left his home at approximately 3:30 a.m and at the time of the accident which occurred at approximately 4:00 a.m.

17. After the accident, Claimant got out of his vehicle and saw the person who was ejected get up and then fall down. He was bloody and had a visibly broken leg. Claimant also saw a women get out of the vehicle with a baby. Claimant called 911 and emergency personnel showed up at the scene.

18. Immediately after the accident, Claimant had neck and left shoulder pain. However, Claimant did not ask emergency personnel for medical treatment since they were assisting the person who was ejected and the other passengers of the car that rolled.

19. Shortly after the accident, Claimant used his cell phone to advise Dwain Williams, his immediate supervisor who was also headed to the manager meeting, and Ron Morrow, Jr., a higher level supervisor, that he had been in an accident that morning and that he would not be able to attend the meeting.

20. A reasonably conscientious manager would have recognized the case might result in a claim for compensation. However, neither of his supervisors advised Claimant to file a workers' compensation claim, neither directed Claimant to go to a medical facility for medical treatment, and neither provided Claimant a list of medical providers to treat any work related injuries.

21. Claimant went to his store later on the date of the accident, but he did not work a full day. Claimant suffered neck pain the same day and night of the accident. The pain was at the junction of the head and top of the cervical spine, and that pain registered 5-6 on a 10 point scale. At that time, he also experienced left shoulder pain at about a 3 level. He vomited, had a headache, and self-treated with Biofreeze and Advil.

22. The day after the accident, Claimant woke up unable to move his head because his neck was too stiff. His shoulder was sore, but he thought he had only bruised it.

23. On August 10, 2016, Claimant went to his personal health care provider, Banner Health, and was treated by Bonnie Hablutzel, N.P. According to the medical report from that visit, Claimant complained of headaches, back pain, neck pain, nausea, and vomiting due to a motor vehicle accident the day before.

24. On August 11, 2016, two days after the accident, Claimant reported his accident and physical complaints to Lisa Post, in Human Resources, and sent her pictures of the accident scene. (Claimant's Exhibit 14, pp. 116-118). A reasonably conscientious manager would have recognized the case might result in a claim for compensation. Ms. Post did not direct Claimant to a designated medical provider and did not provide Claimant a list of medical providers to treat his injuries.

25. On a date uncertain, Claimant filed, or had filed on his behalf, an "Accident Investigation Report" in which the author erroneously cited the date of injury as

August 8, 2016, and listed only "left shoulder" as the "body part injured" in the accident. (Claimant's Exhibit 19). The report also indicates Claimant was driving to a manager meeting when he was hurt in an automobile accident. The report was signed by a "supervisor", "DGarwood." Claimant identified the co-signer as Diane Garwood, who works in Human Resources, but he was not certain about the date of filing.

26. By August 11, 2016, Employer had notice of Claimant's accident and injuries and the Employer did not designate any medical providers.

27. On August 16, 2016, Claimant spoke with an adjuster from Progressive. Progressive insures the vehicle that crossed the median and rolled. Claimant told the adjuster from Progressive that he was injured and that his neck, shoulders, and stomach were hurting.

28. Since Employer failed to designate any physicians to treat Claimant, Claimant returned to N.P. Hablutzel for medical treatment on August 16, 2016.

29. On August 16, 2016, Claimant saw N.P. Hablutzel and complained of neck pain, upper back pain, and headaches. Claimant also complained of abdominal pain from the seatbelt.

30. Claimant testified credibly that he routinely told Ms. Hablutzel about his left shoulder pain, and that he also regularly told his physical therapists about that pain as well. However, the physical therapists treated the neck, and did not treat the left shoulder.

31. Claimant injured his neck and left shoulder during the August 9, 2016 motor vehicle accident.

32. Claimant returned work, but he was unable to perform his regular lifting duties. Instead, he relied on his employees to do the tasks involving heavy lifting or overhead work.

33. Due to the August 9, 2016, shoulder injury, Claimant's left shoulder was in a weakened condition.

34. On November 11, 2016, while trying to loosen a bolt with a wrench, Claimant felt a sharp pain in his left shoulder, and his left arm immediately went slack.

35. Claimant reported the incident to his employer, but he did not file a worker's claim for compensation because he thought the injury was related to the MVA incident, which he originally did not consider to be work-related. Again, none of his supervisors or Human Resources personnel at work advised him to file a worker's compensation claim or gave him a list of designated medical providers to treat his left shoulder.

36. N.P. Hablutzel regularly documented neck pain in her visits with Claimant between August 16, 2016 and November 15, 2016. (Claimant's Exhibit 9, pp. 38-83). In her report dated November 15, she noted that Claimant had injured his left shoulder while he raised his left arm to tighten a wrench. (Claimant's Exhibit 9, p. 38).

37. Although Claimant testified that he told N.P. Hablutzel that he also had left shoulder pain after the motor vehicle accident, such complaints are not noted in the medical records until November 15, 2016, when Claimant presented with shoulder pain which he still associated to the motor vehicle accident of August 9, 2016. The report of N.P. Hablutzel dated November 15, 2016, provides: "he was at work and raised it (sic) arm to tighten a wrench and felt a tear, this was the arm already injured in the MVA."

38. Due to ongoing shoulder problems, Claimant sought medical treatment from Dr. Ramon Perez.

39. Immediately before his surgery, Claimant's pain in his left shoulder measured 7-8 on a regular basis, and his left arm was essentially useless.

40. On January 4, 2017, Claimant underwent left shoulder surgery, which was performed by Dr. Perez. Dr. Perez performed a left shoulder arthroscopic rotator cuff repair, subacromial decompression, and debridement of subscapularis partial tear.

41. In his report of January 4, 2017, Dr. Perez stated that Claimant

> [P]resented with a 5 month history of ongoing left shoulder pain after being involved in MVC 8/8/2016. He had pain to neck and left shoulder immediately after the accident however focused on rehab for the cervical spine since he had some motion in the shoulder. He noted difficulty lifting his left arm above his head and was awkward for him but in November 2016 he was at work doing some overhead work developed sharp pain and subsequent definite inability to lift his arm any longer. He had an MRI obtained which revealed a complete supraspinatus rotator cuff tear. We discussed treatment options for this injury and he elected to proceed with surgical repair.

42. This ALJ finds that need for shoulder surgery was caused by the August 9, 2016, auto accident.

43. While Dr. Perez did not prepare a disability report taking Claimant off work until January 13, 2017 (Claimant's Exhibit 8, p. 17), this ALJ finds that Claimant was unable to work effective January 4, 2017, the date of surgery.

44. Claimant did not seek prior authorization from Respondents for the left shoulder surgery. The shoulder surgery occurred before Claimant filed claims for the August 9, 2016 and November 11, 2016 accidents.

45. After Claimant retained a personal injury attorney he realized that he may have a compensable workers' compensation injury. His worker's compensation attorney filed a claim for compensation for the August 9, 2016 accident on January 30, 2017. (Claimant's Exhibit 6). Claimant testified that the claim was filed within "a matter of weeks" of the time he realized that he might have a compensable workers' compensation claim. Claimant specifically stated that he injured his left shoulder and neck during the motor vehicle accident.

46. Claimant erroneously reported his injury date as August 8, 2016 on the "Accident Investigation Report", and on his Claim for Compensation filed by his attorney on January 30, 2017. He testified credibly that he was confused about the correct date when he reported August 8, 2016 as the date of the MVA.

47. The Colorado State Patrol Accident report dated August 9, 2016 provides support for a conclusion that the actual date of accident is August 9, 2016. (Claimant's Exhibit 1).

48. On May 5, 2017, Claimant also filed a separate claim for compensation for the November 11, 2016 incident that occurred when he was using a wrench at work and had an increase in shoulder pain.

49. Respondents filed Notices of Contest for both claims, on February 6, 2017 and May 19, 2017, respectively.

50. Because symptoms of pain, weakness and numbness continued, and quickly worsened, Claimant sought treatment for his neck with Chad Prusmack, M.D. In a report dated April 6, 2017, Dr. Prusmak documented rapidly worsening upper extremity weakness and neuropathy, and noted that Claimant was now dropping items and had a lot of weakness and numbness into the hands particularly and symptoms fairly clearly into the C6 and C7 distributions. (Claimant's Exhibit 7, p. 5).

51. On April 17, 2017, PAC Whatmore issued a report that was signed by PAC Whatmore and Dr. Prusmack. The report indicates that:

> [B]ased on the [Claimant's] failure to improve with conservative care over the last 6 months, his progressive bilateral arm weakness and the presence of severe stenosis bilaterally in the neck, that he should undergo surgery now to address these issues. Dr. Prusmack recommends that the patient undergo a diskectomy of the C5-6 and C6-7 with insertion of artificial disk at both levels. The need for surgery

is associated with the patient's work related injury on 08/09/2016.

52. Dr. Prusmack performed an artificial disk replacement at C5-7 on May 18, 2017. (Claimant's Exhibit 7, p. 1).

53. This ALJ finds Dr. Prusmak's and PA-C Whatmore's reports credible and persuasive that the neck surgery was reasonable, necessary, and related to Claimant's August 9, 2016 motor vehicle accident.

54. Claimant testified that he elected to proceed with cervical surgery without waiting for a hearing on his workers' compensation claim because he was afraid that he would lose the use of both hands.

55. Claimant did not have any problems with his left shoulder, hands or neck before his industrial accident of August 9, 2016.

56. This ALJ finds that the need for neck surgery was caused by the August 9, 2016, auto accident.

57. Claimant gave a recorded statement to an adjustor at Progressive Insurance on March 28, 2017. (Claimant's Exhibit 16). Claimant's description of his activities just prior to, during, and after the MVA is consistent with his testimony at hearing.
